* Half-year.

† Free of tax.

ceding year. The sum of £18,386 is put to depreciation, against £20,999 in preceding year. The sum of £20,000 is again put to reserve, which makes total reserve £220,000. The ordinary dividend is 10 per cent., while a bonus of 2½ per cent. is paid, making 12½ per cent. for the year, against 10 per cent. for preceding year. The carry forward is £13,694. Balance-sheet shows total assets £1,030,541. Debtors are at £159,539, against £202,973. Stocks stand at £145,283, against £188,152. Cash has risen from £2,445 to £12,621. Investments total £343,819, of which £138,957 is invested in Marriage, Neave, and Co., and £204,862 in War Loan stocks and bonds. In preceding balance-sheet the amount in War Loan stocks and bonds was £154,346. With regard to liabilities, there is no bank overdraft, which was £52,048 in preceding balance-sheet. Creditors stand at £250,147, against £254,095.

MONTÉ VIDEO WATERWORKS.—The results of the working for the year 1925 as compared with the preceding year, are as follows:—

	1924.			1925.			Increase.
	£	s	d	£	s	d	£
Gross receipts	321,661	14	11	346,731	7	2	25,069
Working expenses	148,265	1	0	152,682	14	1	4,417
Net receipts	173,396	13	1	194,048	13	1	20,650

The sum of £40,000 is put to reserve fund, and £17,000 to renewals fund. The ordinary dividend is 8 per cent. for the year. The balance forward is £90,641. The unfavourable rate of exchange has again resulted in a loss during the past year in the remittance of money. The company's business has continued to expand, the number of services being 50,408, an increase of 3,191. The ratio of working expenses has been 44.03, against 46.09 in 1924.

OIL OUTPUTS.

BRITISH CONSOLIDATED OILFIELDS, LIMITED.—For week ending September 15, 1926, production, 35,556 barrels; shipments, 34,292 barrels.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Production for the week ending Wednesday, September 15th, amounted to 946 tons.

VENEZUELAN OIL CONCESSIONS, LIMITED. announce that its production for the week ended September 11, 1926, was as follows:—La Rosa, 32,327 metric tons (previous week ended September 4th, 27,759 metric tons). Maracaibo District, 4,771 metric tons (previous week ended September 4th, 4,755 metric tons). Well R. 88 at La Rosa was brought in on September 11th, producing 250 tons in 24 hours through a ½-inch flow-plug with 600 lbs pressure; specific gravity, 906.

MEXICAN EAGLE OIL COMPANY, LIMITED.—The production for the week ended September 11, 1926, was 147,000 barrels.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Agricultural operations have been favoured by a spell of fine weather, and which has enabled the wheat crop to be safely secured in good condition. General results, however, are somewhat disappointing from a milling point of view, as in many instances the grain lacks strength and colour. Liberal offerings, however, were well absorbed, and prices at a generally firm level. Trade in imported descriptions moved quietly, but tone firm in sympathy with the forward situation. Offers are by no means plentiful, while freight space available has been materially reduced by continued heavy coal chartering from the United States. In the floating and forward section a fair business transpired in parcels, chiefly near positions, at generally steady rates. Feeders, however, remained rather featureless, and although no undue selling pressure arises, the market is well supplied, and slightly lower prices were accepted for most descriptions. Wheat firm to dearer. No. 1 Northern Manitoba quoted 60s, No. 2 ditto 58s 3d, No. 3 ditto 56s, No. 2 hard winter 56s 6d, No. 2 red winter 56s all ex-ship, choice white Karachi landed 57s all per 496 lbs. English new 11s 4d to 15 8d per 112 lbs. Flour steady but quiet. London standard grade 47s 6d, town whites 48s 6d, patents 49s 6d to 50s 6d per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 45s to 47s 6d, Minneapolis 45s to 47s, Australian 43s to 45s 6d per 280 lbs ex-store. Maize again easier. Plate landed 32s, ditto ex-ship 30s 3d, Hessianian landed 34s 6d per 480 lbs. Barley steady but inactive. Californian 35s to 43s, Chilean Chevalier 52s to 62s, ditto brewing 35s 6d to 40s, Australian Chevalier 46s to 48s ex-store, Smyrna 35s to 48s ex-ship per 448 lbs. No. 3 Canadian Western ex-ship 30s 9d, Persian ex-ship 29s per 400 lbs. English new 8s 9d to 16s 3d per 112 lbs. Oats quiet. La Plata landed old 24s 6d, new 24s, ditto ex-ship 22s 3d, No. 2 Canadian Western landed 30s, No. 2 Canadian feed landed 25s, Chilean tawny landed 24s, American 38 lbs landed 26s, mixed feed landed 21s 6d per 320 lbs. English new 8s 2d to 9s per 112 lbs. Millers' offals fully steady. Broad bran quoted 6s 6d, middlings 7s 6d, fine ditto 9s 3d bags included ex-mill, feed oatmeal 7s 9d, light oats 6s 9d, ground oats 12s per cwt free on rail. Oatmeal in fair demand, and prices firmer. London-made flaked 17s 6d, rolled oats 16s 6d, medium also fine cut 16s 6d, coarse also medium pinhead 16s 6d ex-mill per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1926-27, 1925-26, 1924-25, 1923-24:—

	1926-27	1925-26	1924-25	1923-24
Estimated sales of home-grown wheat—				
1 week to September 18	Cwts. 291,205	Cwts. 423,256	Cwts. 176,726	Cwts. 4-6 691
3 weeks to September 18	959,008	1,074,456	390,322	1,199,974
Average price of English wheat per cwt.	s d 11 1	s d 11 6	s d 12 0	s d 8 10

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1922 to 1925:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1926.	Cwts. 389,336	Cwts. 124,119	Cwts. 71,527	s d 11 2	s d 12 9	s d 8 6
Sept. 11	291,205	164,581	78,960	11 1	12 8	8 3
Sept. 18	959,008	19,893	22,352	11 1	12 8	8 3
1922	353,276	94,568	56,366	8 8	10 4	8 7
1923	486,691	39,844	97,186	8 10	11 5	8 8
1924	176,726	404,737	63,641	12 0	17 7	9 5
1925	429,256	277,845	85,415	11 6	13 7	9 8

AMERICAN WHEAT MARKETS.

Markets have remained under the influence of weather reports from the crop areas. After a bout of selling at the end of last week, news of rains and rumours of snowfall impeding grain movements in Western Canada caused a sharp upward movement in prices, No. 1 Manitoba closing on Thursday a full five points above the lowest of the week:—

	Jan. 2, 1925.	Sept. 24, 1925.	Jan. 7, 1926.	Sept. 16, 1926.	Sept. 23, 1926.
Winnipeg (No. 1 Manitoba)—Cents per 60 lbs.	183	125½	160	139½	140½
Chicago (No. 2 Winter)—Cents per 60 lbs.	177	144	176½	156½	156½
(a) October delivery.					
(b) September delivery.					

COAL.

Our Cardiff correspondent writes:—On the Cardiff coal market this week an acute scarcity of supplies has been reported from practically all consuming centres, but particularly in the bunkering business. For immediate delivery at the South Wales ports American run-of-mine coal has been quoted up to 55s, and Westphalian unscreened also up to 55s, while in some districts it is stated that inland supplies for household consumption are ruling up to 70s per ton. At all the important coaling depots considerable increases in prices have been notified to shipowners. At Havre quotations are ruling up to 43s, and at Antwerp 42s 6d, at Las Palmas there has been a jump in little more than a week from 43s 6d to 57s 6d and 60s per ton; while at some British ports as high as between 65s and 70s has been quoted for immediate shipment. These increases in coal prices, however, have coincided with phenomenal activity in the chartering of tonnage for the conveyance of American coal to the United Kingdom, and within three days the fixtures reported have represented an aggregate deadweight of over half a million tons. The number of miners at work in the South Wales coalfield is slowly increasing from day to day, but the total output is still relatively small.

IRON AND STEEL.

The following is extracted from the weekly report of the London Iron and Steel Exchange:—Rather more active conditions have developed. The negotiations to end the coal dispute, although apparently not very promising at the moment, have had a cheering effect upon the market, and this has resulted in some improvement in buying on the part of merchants and consumers. English works are still operating under great difficulties, although their supplies of coal seem more regular. Costs of production are still high, and manufacturers of steel material have had repeatedly to advance quotations during this month, and their example in this respect has been followed by Continental producers. In fact during the past week some of the Continental works have increased prices by several shillings. Notwithstanding the higher quotations, the British finishing works have been obliged to place large orders for semi-finished steel with Continental makers.

Our Middlesbrough correspondent's report, dated September 23rd, is as follows:—Pig-iron.—The production of Cleveland iron is very limited, and as the output is sold out up to the end of October, there is no iron on the market. Business in No. 3 G.M.B. has been done at 93s 6d per ton, f.o.t. for delivery up to end of October. Hematite stocks are now very much reduced, and East Coast mixed numbers are offered at a minimum of 84s per ton. Manufactured Iron and Steel.—There is no change in the position, and owing to the uncertainty regarding post-strike production, local steelmakers have almost ceased to quote. Quotations are nominal as follows:—Steel ship plates, £8; steel ship angles, £7 10s; iron bars, £11 15s; steel rails, £8 10s. Iron Ore.—There is no business in foreign ore, and best Rubio is purely nominal at 21s 6d per ton c.i.f. Tees.

Our Sheffield correspondent writes:—The local industrial position has undergone no change since last week, except that a couple of open-hearth furnaces have been restarted for the purpose of replenishing the exhausted supplies of certain classes of steel. Nine such furnaces out of 70 in the district are now working on outcrop and foreign coal and coke, which is available at rather easier prices. Makers have not turned away much business as there is but little call for mild steel, no large orders being on the market. There is still plenty of outcrop and foreign coal and coke available at rather easier prices. Work has increased in the lighter and finished branches of the steel trade, and some amount of crucible steel is now being melted with Westphalian coke. This coke is extremely expensive, and not particularly suitable for crucible melting. Foundry men, however, find it satisfactory. Crucible makers are only producing as much as meets their immediate requirements, and are careful not to put any into stock. All classes of steel are being sold at a heavy loss to the makers. For supplies after settlement coal sellers are asking advances of 2s and 3s. per ton on the old prices, and several contracts have been placed on such terms. Business is much brisker than it has been in the cutlery and plate branches, where the Colonies are ordering freely.

Our Glasgow correspondent writes:—The position in the iron and steel trade remains very much as it was. New specifications are scarce, and all makers, especially of heavy steel, have full order books, and only await the resumption of work at the local collieries. Neither the blast furnaces nor the steel works are able to make a start under present conditions. Continental coal is in use at several ironworks and at the works of rollers of foreign semi-raw steel, but it is not of a quality that enables a steady output to be maintained. Local engineers and structural firms are busy, one of the latter having just secured a contract for a large number of derricks for shipment abroad, and several other important contracts are impending, but the difficulties of procuring supplies stand in the way in the meantime. Among contracts placed recently is an order for 14 dumb barges to be built by Messrs Harland and Wolff for Messrs Andrew Weir and Co.

Our Cardiff correspondent writes:—The general position in the iron and steel industry is better. Some of the furnaces at the Cardiff works of Guest, Keen, and Nettlefolds, Limited, have been refired, and an agreement involving wage concessions is likely to lead to the resumption of work at the Mannesmann Tube Works, Landore. In the tinplate trade the position is slightly easier, but prices show no appreciable change. Last week's receipts from the works totalled 27,798 boxes, compared with 26,135 boxes in the corresponding week last year, while stocks in warehouse totalled 45,540 boxes, compared with 161,886 boxes last year.

OTHER METALS.

TIN.—A sharp downward movement was registered in tin, due to heavy realisations, while influenced by irregular and easier advices from America and the East, though at the lower prices offerings were well absorbed. Standard cash sold from £313 down to £305 5s to £306 10s; and three months, £303 to £299 and £299 10s. Sales in the East were reported at £311 to £308 10s, £309 and £307.

COPPER also ruled easier, following lower American cables and a slow consumptive demand, though dealings were attended by slight irregularity. Standard cash sold £58 10s 3d to £58 5s; three months, £59 12s 6d to £58 17s 6d.

LEAD opened steady, but later the market assumed a quieter tone, and values gave way slightly on some pressure to sell. Good soft foreign pig, September, sold £32 3s 9d to £31 15s; November, £32 1s 3d to £31 12s 6d; December, £31 18s 9d to £31 11s 3d; and January £31 17s 6d.

SPELTER quiet, and tendency easier on liberal offerings. September, sold, £34 13s 9d to £34 8s 9d; October £34 15s to £34 8s 9d; November, £34 12s 6d to £34 7s 6d; December, £34 13s 9d to £34 5s; January, £34 12s 6d to £34 11s 3d.

ANTIMONY quiet. English special brands, £74 10s to £75; foreign, £64 per ton, ex warehouse.

ALUMINIUM dull. Home delivery quoted £107; export, £112.

WOLFRAM quiet at 14s to 14s 3d per unit, c.i.f.

QUICKSILVER quieter. Spot, £15 15s to £15 17s 6d per bottle.

THE COTTON TRADE.

LIVERPOOL, September 23, 1926.

There has been a steady demand for cotton all the week mainly for outside growths, and up to the issue of the U.S.A. Agricultural Bureau's report this evening at 5 p.m. prices showed a fall of about 35 points. Weather during the past fortnight in the States has been excellent for the growing crop. Spot sales for the week, 17th to 23rd, inclusive were 44,000 bales. Of these 20,000 were American, 2,150 Brazil, 11,250 Peru, 4,050 Egyptian, 4,300 African, 530 East Indian, and 720 sundries. Imports for the same period were 46,064 bales. These included 20,183 American, 4,606 Brazil, 2,440 Peru, 16,354 Egyptian, 325 African, 1,086 East African, and 1,061 sundries. Quotations today are:—American middling, 9.03d; Egyptian sakel, 18d; uppers, 13.25d; Brazil fair, 9.08d; Peruvian G.F. mod.-rough, 11d; smooth, 10.08d; Tinnively F.G.F., 8.15d; West African mid., 8.78d; and East African G.F., 10.50d. The figures of the

U.S.A. Bureau report, published this evening, gave a condition up to September 16th of 59.5, indicating a production of 15,870,000 bales with 2,511,000 bales ginned. After the issues of these figures the market broke nearly $\frac{1}{2}$ per lb.

MANCHESTER, September 23, 1926.

Business has again been of very limited dimensions. Buyers have not shown any disposition to operate on a freer scale. In cloth India continues to provide a considerable inquiry, and restricted quantities of light fabrics have been sold chiefly for Calcutta and Karachi. The opinion is held that when there is more stability in prices India will provide a bigger turnover. No developments have taken place with regard to China. Buying for the Near East and South America has been confined to odd lots. Fine cloths have again moved off fairly well for the Continent. In some weaving districts there is a tendency to reduce output chiefly owing to the coal situation. In American yarns for home use there has been a little more irregularity in quotations. It is expected that spinners will agree to increased short time. Operations in Egyptian counts have been irregular, trade on the whole being unimportant.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The trend of wool values at the present time affords a remarkable example of the influence of foreign competition in the raw material markets of the world. In this country the wool textile industry is suffering from the effects of the prolonged coal strike, and a recent census taken by a trade organisation revealed the unpleasant fact that 47 per cent. of the looms in Bradford are entirely idle, while 13 per cent. are working only four days a week. In these circumstances both spinners and manufacturers are only prepared to buy tops and yarns for immediate requirements. But there is great activity in the French and Italian textile industries, and notwithstanding the financial uncertainty in France, French wool buyers are exceptionally active in all markets. In South Africa, for example, they have forced up prices to a point at which they are completely out of the reach of Yorkshire operators. Both in the primary markets and in London, wool values are so much above the Bradford parity that many firms are obliged to become passive spectators, for they cannot compete with Continental concerns either in the raw wool markets or in the sale of yarns and cloth. A settlement of the coal strike is expected to bring some relief, but there is not the slightest doubt that Yorkshire users are unable to follow the market at the moment. Recent advances in tops and yarns, made absolutely essential by the rise in wool, have had the effect of curtailing demand, and in all qualities the turnover is disappointing. To-day's quotations are very firm, but in nearly every case where business is offered the price is well below replacement cost. This applies in tops, yarns, and piece goods.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The wool sales this week in London have made excellent progress. The catalogues are somewhat miscellaneous, but the numerous second-hand parcels are meeting with the best reception of any so far this year. All offerings are being readily absorbed. The Continent is making the market in Coleman street as in Australia, home trade buyers being often completely outside. As French buyers appear able to pay the higher prices. All straight merino clips are selling uncommonly well. One has only to note the excellent figures forthcoming for Oakwood (29d), Minnie Downs (26d), Darr River Downs (27d), and the big prices for New Zealand scoured merinos to see that the trade is still

anxious to have the best wools and prepared to pay for them. The home trade is often pence per lb below the limits of Continental buyers. Spinners and manufacturers must have some excellent orders for yarns and pieces, otherwise they would not be able to buy wool so extensively and to pay such big figures. Even South African wools this week have met with a slightly firmer market, and are making a shade better prices. The figures realised are not big, and while the clean scoured cost works out fairly high, the basis for the South African greasy wools in London is no more than the prices ruling in Port Elizabeth and Durban. An outstanding feature of the series is the big weights of New Zealand crossbreds, which are being freely absorbed. These wools are meeting with the best reception so far this year, and the opportunity is being provided of getting rid of old stocks at better prices. We think owners of second-hand parcels are doing wisely to meet the market. Values, if anything, are slightly in sellers' favour. Slipes continue to make excellent prices, for a large weight of these wools is being offered. We are very much surprised at the trade being able to absorb so easily the big quantities of slipe wools catalogued, but as most of the wools are now of carding length, there is considerable competition on the part of home trade topmakers.

THE JUTE TRADE.

DUNDEE, September 23.

The returns of the estimated yield from the jute growing districts for season 1926-27, were issued in Calcutta yesterday, giving a total estimated out-turn of 10,888,600 bales, which is the largest crop ever predicted in the history of the trade. As the acreage figures of 3,605,000 acres, as given in the first forecast in July last, have been increased to 3,630,000 acres now under cultivation, there is every reason to expect that the crop has not been underestimated. The yield of fibre per acre is approximately three bales, but the very favourable conditions under which the crop has been grown would lead to the expectation that this will eventually prove to have been calculated on a very moderate basis. The reserve of Calcutta shippers in offering jute for sale has not been disturbed by the record crop estimate, and there is still great reluctance to send offers to this market, especially of native jute. Bids are being solicited by brokers here at $\frac{1}{4}$ for a good single First Mark, and at $\frac{1}{3}$ for 155 for Lightnings, September shipment. There are secured parcels of Daisee assortment offering at $\frac{1}{2}$ 29, and of Tossa assortment at $\frac{1}{2}$ 32, September-October shipment. Already the yarn market shows signs of weakening on account of the large out-turn forecasted, and 8 lb weaves are being offered by spinners at 3s 4d and 8 lb spoils at 3s 5d. Since the beginning of the present month the respective prices have ruled very firm at 3s 5d and 3s 6d, though the payment of the higher rates was not general. Business in jute cloth has been extremely limited during the past week. An easier tendency in raw jute prices has kept buyers off, but manufacturers are none the less firm in their rates of 4½d for 10½ oz 40 in hessians, and 3½d for 8 oz.

HIDE, LEATHER, AND ALLIED TRADES.

The demand for market hides is keen, and all supplies are taken as offered. Prices remain very steady, with a firm tendency, and at the auctions held in Bermondsey on Thursday last best ox hides sold from 6½d to 9d per lb, seconds making 5½d to 8½d. Best cows sold from 5½d to 5½d. Calfskins were firm, best selection making from 6½d to 11½d per lb. Lambskins sold from 2s 3d to 10s and sheep pelts from 5s 6d to 9s each. The European demand for imported hides is good, and values are again appreciating. Russia is operating freely, and sales have been made of best Argentine ox at 8½d, sellers stating that 8½d has been paid subsequently. There is a good demand for all classes of dry hides, and B.A. Americanos are quoted at 11d. Capes are firm at advanced rates, and West Coasts have been very active of late. The Chicago market is cabled as stronger, with best heavy packers now selling at 1½ cents. The demand for sole leather is moderate, and with small stocks at tanneries, prices are very firm. Bends of 8-10 lbs average are wanted by shoe manufacturers, whilst 10 to 12 lbs and over are taken regularly by the repairing section. The upper leather position is uncertain; coloured glacé kid and willow calf are the best sellers, and black kid is again moving off, large parcels having of late been cleared on export account. Shoe manufacturers are not well employed as a whole; orders are for small deliveries, and so far the demand for Russian boots does not seem to be very definite.

THE TIMBER TRADE.

(FROM OUR OWN CORRESPONDENT.)

The continuance of the coal strike has restricted the call for timber during the past month, and traders again have had to rely principally on the building industry. Building woods arrived last month on a larger scale, but there is still a decrease for the year amounting to over 357,000 loads of 50 cubic feet. Stocks, on the whole, are moderate, even for the present limited demand, and would be regarded as small if business were in full stride. Deal sizes are of much smaller stock on the London market than a year ago, and prices show an advance. For battens and scantlings the stocks in London are a little larger than in September, 1925, but on the other hand the im-

proved consumption this year more than levels that increase, and a better demand should become more pronounced within the next few weeks.

Freights are firmer, and are having the effect of strengthening spot values for timber generally. In the free on board market the Finnish and Swedish wood exporters have made large sales throughout the year at prices that could not have resulted in any large profit, although this season they have not had to meet so much competition with Russian supplies. The latter have been imported more moderately and have sold more quickly than in 1925. Large quantities of wood have been received via Danzig, and being cheap in comparison with other European varieties the Polish wood has been in active request throughout the year. We are of opinion that unsold stocks in shippers' hands at large centres of production are lighter than a year ago; which is all to the good of the free on board market; on the other hand, shippers at those wood-exporting ports which are ice-free throughout the year, or nearly so, seem of late years to show much more activity and enterprise in shipping cargoes and parcels during the close season.

Imports of Canadian woods have shown considerable decrease this year, and while general average prices for the European varieties have decreased, those from Canada have gone the other way. The hardwood section of the trade is moving somewhat slowly on account of the state of the furniture industry, and stocks on the whole are of good volume, although nothing untoward in view of expected demand when the country resumes normal activity. Mahogany, both in log and sawn form, has come in rather more freely this year, and the demand is showing strength for the qualities above inferiors.

VEGETABLE OILS AND OILSEEDS.

Markets generally have again been dull and actual business done of only small dimensions. Linseed oil has lacked buying support, and has declined about 20s on the week to $\frac{1}{2}$ 30 15s per ton naked ex Hull mill for spot, later positions being quoted at a small premium. Business in London has been done down to $\frac{1}{2}$ 30 10s, which though low is not the lowest touched in the course of the present year. Cotton oils after an improved trade have fallen away again, current value of crude Egyptian ex Hull mill being $\frac{1}{2}$ 33 15s and of ordinary refined $\frac{1}{2}$ 36 10s. Other vegetable oils are a poor trade, and prices barely maintained. Very little business is passing in linseed, and Plate is a shade lower in all positions on the week, $\frac{1}{2}$ 15 15s being quoted for October-January shipment and $\frac{1}{2}$ 15 12s 6d for new crop, January-February. Prospects of the growing crop in Argentina continue to be officially reported as "excellent." The balance of the old crop remaining for shipment between now and the end of December is put at 340,000 tons, which with 65,000 tons to come from India gives a total of 405,000 tons against 438,000 tons actually shipped in the same period last year. Egyptian cottonseed is easier, and new crop offers at $\frac{1}{2}$ 10 2s 6d for September loading. Some trade in new soya beans, December-January, has been done to the Continent at $\frac{1}{2}$ 11 8s 9d.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—A buoyant market was again experienced. Prices in all directions disclosed a further advance, with sellers more difficult to deal with, as any slackening in demand on Eastern account was counteracted by home consuming requirements being on an extended scale. Rising rates of freightage from producing countries occasioned by the employment of such a large number of vessels to convey coal from America, causes a marked stringency of tonnage in all other trades. Liberal clearances in British refined and Messrs Tate and Lyle's goods raised 3d per cwt. Cubes now quoted 34s 3d to 34s 9d; crushed, 32s 6d; nibs, 34s 9d; granulated, fine and coarse, 30s 10½d; No. 1, 30s 7½d; No. 2, also London and T.L.S., 30s 4½d; ditto, month forward, 30s 3d; yellow crystals, spot, 27s 4½d; caster, finest, 35s 4½d; A, 34s 10½d; B, 32s 9d; granulated from Empire sugar, ex-refinery, 29s 3d. Crystallised West Indian in limited supply, and quoted 29s to 30s; Czecho and Dutch J granulated, spot, 28s 3d; white Mauritius, 27s 4½d. Forward positions dearer, and Continental parcels sparingly offered, while latest crop accounts from the chief producing countries leave a good deal to be desired as saccharine content is calculated to be affected by prolonged dry weather. Czecho granulated, September, quoted 15s 11½d; October, 15s 10½d; November-December, 15s 7½d, f.o.b., Rotterdam. Dutch J, October-December, 15s 9d. Dintelcord, October, done 15s 9d; November-December, sellers, 15s 9d, f.o.b., Rotterdam. Polish crystals, spot, 27s 10½d; November-December, 15s 3d, f.o.b., Danzig. Belgian nominal. Cuban basis 96 per cent., September-October, 13s 9d; Peruvian, 13s 7½d, c.f. and i., U.K. B.R.B. crystals, October-December, 16s 10½d, c. and f., India; January-March, 17s 1½d. White terminal opened stronger with active dealings, but assumed a quieter tone later. September, sold, 14s 8½d to 14s 6d; October, 14s 9½d to 14s 6½d; December, 15s 3d to 15s 1½d and 14s 11½d; March, 15s 7½d to 15s 8½d and 15s 5½d; May, 16s to 15s 9d; August, 16s 3½d to 16s cwt.

COFFEE.—There is only a quiet movement with regard to spot parcels, but supplies continue small, and this helps to keep prices steady. In auction, Kenya, bold, sold, 131s 6d; Arusha, 121s to 130s; Vera Paz, 160s 6d; peas, 166s Maragogipe, 193s to 201s. Superior Santos, prompt, quoted 97s; and No. 7 Rio, 82s, c. and f. terms. Futures dull and easier.

COCOA.—Only moderate transactions on the spot at late rates. Accra, F/F, November-January, sold, 41s to 42s 3d and 41s 9d, f.o.b.

TEA.—Indian auctions during the week amounted to 61,780 packages. All the finer qualities were readily competed for at full

recent rates, but inferior moved quietly at mostly $\frac{1}{2}$ d per lb down. Pekoe, sold, 1s 2½d to 1s 9d; orange, 1s 6d to 2s 3½d; broken orange, 1s 6d to 2s 5d; finest, 3s 1½d. Ceylon auctions 0 22,920 packages engaged good support, at prices showing no material alteration. Pekoe sold, 1s 3½d to 2s 1d; broken orange, 1s 5½d to 2s 3d. The market for new season's China ruled steady, with moderate inquiries. Keemun, sold, 2s to 2s 4d. Ningchows, showing good liquor in cup, went off at 8d to 8½d per lb. Common Monings in the region of 7½d were again in request. Tea continues to meet quite a good market on balance, considering that there is ample room for expansion in Provincial requirements, and which continue affected by the industrial situation. 5,669 packages Java and Sumatra were brought to auction, and with active and well distributed competition, prices frequently moved in sellers' favour, despite some irregularity. Common and low medium were quite firm, and better invoices marking improved quality sold readily at higher figures. Teas for export were well cleared. Pekoe sold, 1s 2½d to 1s 3½d; broken ditto, 1s 1d to 1s 7d; pekoe souehong, 1s 2d to 1s 2½d; orange pekoe, 1s 3½d to 1s 5½d; broken orange, 1s 1½d to 1s 10½d per lb in bond. New season's China steady, quiet.

RICE.—All Eastern grain quiet on European account, but cables from Burma record steadier markets owing to smallness of available supplies, and jungle "Paddy" is firmly held. Two Stars, spot, 16s 4½d to 16s 6d; forward, 15s 9d. S.Q. to Cuba, 15s 9d. Spanish oil, on spot, 21s 6d; forward, 20s 6d. Beans quiet, unaltered. Peas tend weaker. Japanese September-October, 26s 3d; October-November, 26s; November-December, 25s 9d; December-January, 25s 6d per cwt, c.f. and i., London.

SPICE.—Pepper quiet, b t steady. Singapore, black spot, 9½d; Muntok white, 1s 4½d. Lampung, black, 9½d; Lampung, August-October, sold, 8d; October-December, 7½d to 8d. Munok, August-October, sold, 1s 2½d to 1s 3½d; October-December, 1s 2½d to 1s 3d. Pimento, spot, sold, 6½d. Zanzibar cloves, spot, quoted 9½d; August-October, 8½d per lb. Sago flour, November-December, 15s 3d, c.f. and i., U.K. Singapore flake tapioca, November-December, to Havre, 16s 3d per cwt, c.f. and i. terms. Ginger remains very slow.

FRUIT (Dried).—Currants steady, and new crop Patras, sold, 34s 6d to 35s; Gulf, 35s to 36s; Australian, quoted 35s to 43s, as to quality. Sultanas quiet. Smyrna, new crop medium to good, 65s to 68s; fine, 72s; Cape, 63s to 65s; Australian, 64s to 80s. Raisins quietly steady. Valencia, half-boxes, 43s to 45s; quarters, 46s to 80s. Dates quiet on spot, while business in new crop is restricted by high selling limits. Hallowee, first tide, quoted, 32s to 33s; Khadro-wie, 26s; 1st, 21s, landed terms, London. Figs: New genuine, quoted, 35s; Cretans, 78s cwt. Evaporated fruits sell slowly on about former terms. Apricots: Californian, extra choice, quoted 125s; South African, first grade, 140s. Plums, Californian, 30/40's, 68s; 60/70's, 46s; 80/90's, 38s 6d. Pears, Californian, extra choice, 67s 6d; fancy, 77s 6d; Lake County, fancy, 85s. Apple rings, Californian, September-October shipment, 45s, c.f. and i., per cwt.

CANNED GOODS.

CANNED FISH.—Trade without improvement, and prices somewhat irregular. Sardines, Portuguese, ½s, quoted 4s 3d to 6s per dozen tins. Salmon: Red, tall, 1 lb, quoted 45s to 47s; Sockeye, 75s to 80s; tall pink, 25s to 27s. Lobsters, best ½s, 157s 6d to 160s, and ½s, 90s.

CANNED FRUITS quiet, both for spot and shipment parcels. Californian Bartlett pears, 24-2½s, choice, quoted 12s 6d to 13s 6d. Californian peaches, choice, 11s to 13s; seconds, 9s 6d. Californian apricots, choice, 12s 6d to 13s; seconds, 9s 3d per dozen tins. Singapore pines quiet, and barely steady on spot. Italian tomatoes firm forward.

CANNED MEAT.—Market quietly steady. Corned beef, 6s, quoted 38s to 45s, as to quality. Danish lunch tongues, 122s 6d to 135s; American, 140s, with best, 145s to 150s.

CONDENSED MILK.—Machine-skimmed fully steady, but full cream is obtainable at 20s, duty paid.

HONEY.—Rather more interest is shown, and New Zealand sells steadily at 50s to 85s; Australian, 40s to 50s; Jamaica, 35s to 50s; Haiti, 35s to 48s per cwt.

RUBBER.

Market dearer while influenced by sustained consumptive demand and marked absorption of off-grades during the past few days, chiefly on Continental and American account. Sentiment is also woven round the question of unused coupons. Plantation standard sheet, spot, and October, sold, 1s 8½d to 1s 9½d; November, 1s 9½d to 1s 9½d; October-December, 1s 9½d; December, alone, 1s 9½d; January-March, 1s 10d to 1s 10½d; April-June, 1s 10½d to 1s 10½d. To New York, estate sheet, October, sold, 1s 8½d to 1s 9d; October-December, 1s 9½d; ordinary, 1s 8½d lb., c.f. and i.

GENERAL.

SHELLAC.—Quiet and easier. T.N., spot, 175s to 180s; December, 167s 6d per cwt.

COPRA.—Market quiet, steady, with fair inquiries. Straits F.M.S., September-October, quoted $\frac{1}{2}$ 28 3s 9d; October-November, $\frac{1}{2}$ 28 5s; October-December, $\frac{1}{2}$ 28 7s 6d; Dutch East Indies, October-November, sold, $\frac{1}{2}$ 28, and buyers. Ceylon, September-October, done, $\frac{1}{2}$ 29 6s 3d to $\frac{1}{2}$ 29 7s 6d; South Sea Islands, F.M.S., $\frac{1}{2}$ 26 17s 6d; ditto to Marseilles, $\frac{1}{2}$ 27 12s 6d; smoked, afloat, $\frac{1}{2}$ 27; September-October, $\frac{1}{2}$ 26 15s. Manila, to Rotterdam, $\frac{1}{2}$ 27 7s 6d. Palm kernels, October-December, quoted $\frac{1}{2}$ 20 3s 9d ton.

HEMP.—Manila quiet, though buyers of late were more in evidence, but the arrival of the steamer "Cyclops" is awaited with certain interest in order that the trade may ascertain general run of quality of the new grading now in force. J, new grade, October-December, quoted $\frac{1}{2}$ 44; K, sold, $\frac{1}{2}$ 35, and buyers; L 1, $\frac{1}{2}$ 35 10s; L 2, $\frac{1}{2}$ 33 10s; M 1, $\frac{1}{2}$ 32 10s; M 2, $\frac{1}{2}$ 31 10s. New Zealand H.P.F., October-December, quoted $\frac{1}{2}$ 37; fair, $\frac{1}{2}$ 34. Italian P.C., October-November, $\frac{1}{2}$ 59 10s; S.B., $\frac{1}{2}$ 60. African sisal, No. 1, f.a.q., September-November, $\frac{1}{2}$ 42.10s per ton.

was much easier yesterday. The tendency in the discount market was, if anything, a little easier towards the end of the week, though the quotation for three months' bills remains at $4\frac{1}{8}$ per cent. Yesterday's Treasury bills, although a January maturity, were allotted at an average of $4\frac{1}{8}$ per cent., which is much the same as last week.

	Oct. 1, 1926.	Sept. 24, 1926.	Sept. 17, 1926.	Sept. 10, 1926.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	$\frac{1}{4}$ (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	2 (Dec. 3, '25)
Discount, Call	3	3	3	3	2 (Dec. 3, '25)
Houses' Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	2 (Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	..

Thursday's Bank return showed a decrease of £97,300 in the stock of coin and bullion and an increase of £1,542,100 in the note circulation. The Reserve was thus reduced by £1,639,400, the Proportion falling by 1.6 to 28.6 per cent. Market borrowing was reflected in an increase of £3,458,100 in Other Securities, but Government Securities were reduced by £649,900. Public Deposits rose by £2,828,900, and there was thus a decline of £1,705,500 in Other Deposits. Currency notes were increased by £469,800 to £287,857,600, which includes £1,294,600 for notes called in but not yet cancelled. Silver coin in the Redemption Account was reduced by £250,000 to £6,300,000. The fiduciary issue is £230,313,000, or £17,589,500 below the maximum for 1926.

NEW YORK MARKETS.

The month-end settlements and big interest and dividend disbursements have caused a flurry in call money, but it is expected that rates will relax somewhat in the coming week, with money remaining generally firm through the rest of the year. The Federal Reserve statements reveal a sizeable increase in discounting for the System, with the ratio down 0.5 per cent. The condition of the New York bank is little changed, and the feeling now is that the authorities here will be content to maintain a passive attitude for the time being in view of the needs of the exchange market and weakness in certain prices, such as cotton and silver. Trade and industry are maintaining their striking activity, but with no inflationary tendencies, and the share market maintains a waiting attitude, with the public little interested.

THE STOCK MARKETS.

Although prices in certain sections of the Stock Exchange have hardened during the past week, business still remains on a small scale. The Government's offer of conversion to holders of 5 per cent. Treasury bonds maturing next February produced a rise in existing Conversion stocks, since it removed apprehensions of a big issue of the latter in the near future. The failure of the New South Wales loan, of which 84 per cent. was left with underwriters, weakened the Colonial market, and the immediate success of the Hamburg 6 per cent. loan at 93 $\frac{1}{2}$ provided a striking contrast. Home Rails spurted on expectations of an early end to the coal stoppage, and Argentine rails remain fairly firm. The rubber market is steady, but oils are irregular. Industrials as a whole are a little more cheerful, and in the mining section diamonds are strong, though tin shares are still the centre of attraction. The Laras (Sumatra) Rubber issue of shares and debentures was over-subscribed.

THE COMMODITY MARKETS.

Home trade is greatly affected by the stringency of the fuel situation. Supplies of foreign coal are below requirements, and prices continue to advance. In the iron and steel trades a disposition is apparent to withhold important commitments until the strike is settled, and the amount of business passing has diminished. A fair demand for raw cotton has been forthcoming, with prices steadier after the break of last week. Yarn quota-

tions are firm, and there is an increased inquiry for cloth, raw material prices being regarded as on an attractive level for freer operations. Wool prices at the London sales have generally maintained recent levels, but in the West Riding the turnover of yarns and piece goods is disappointing, and is causing some uneasiness. Jute prices are steadier after recent fluctuations, but sales have fallen off. Wheat was quiet to dull early in the week, but has shown subsequent firmness. Sugar prices have again showed strength, the position tending to tighten on the supply side. Coffee is steady, and tea slightly dearer than a week ago. The rubber market has been less active. Among non-ferrous metals, tin has not maintained the advance made in the earlier part of the week, but copper and lead are in steady request.

FOREIGN EXCHANGES.

The foreign exchange market was dull during the week. The general tendency of the principal foreign currencies was to improve, and of the gold exchanges at one time to move in sympathy with the dollar against this country. Some surprise was occasioned in the early part of the week by the widening of the forward rate of the lira from $1\frac{1}{2}$ lira for one month to 7 lira discount, at which latter level business was done. This, however, is understood to have been attributable to the necessity to carry forward several heavy positions, which all fell due at the end of the month, and this is confirmed by the subsequent recovery of the forward rates. New York opened on the 24th at 4.85 $\frac{1}{2}$, and was rather weaker next day at 4.85 $\frac{1}{2}$. On Monday and Tuesday further weakness was shown at 4.85 $\frac{1}{2}$, but a recovery took place on the 29th and 30th to 4.85 $\frac{1}{2}$, and yesterday's rate was decidedly firmer at 4.85 $\frac{1}{2}$. Forward rates are 31-32 cent and 1 cent premium for one and three months. Paris opened weak at 175 on the 24th, but recovered to 174 after touching 176, but was weaker next day at 174 $\frac{1}{2}$. On the 27th, after a weak opening at 176, there was a recovery to 173 $\frac{1}{2}$, with a later relapse to 174 $\frac{1}{2}$ at the close. Forward rates were better at 3 $\frac{1}{2}$ f and 9 $\frac{1}{2}$ f discount for one and three months, and improved still more next day to 3 $\frac{1}{2}$ and 9 $\frac{1}{2}$ discount for the same periods. The spot rate improved to 172 on the 29th, and to 171 $\frac{1}{2}$ on the 30th, and was at 171 $\frac{1}{2}$ yesterday. Forward rates showed a similar improvement at 3f and 9f discount for one and three months on the 30th, and the same quotations prevailed yesterday. Belgian francs followed in the wake of Paris and showed the same improving tendency after some weakness in the early part of the period under review. From 181 $\frac{1}{2}$ on the 24th the rate improved to 180 $\frac{1}{2}$ on the 28th, and to 178 $\frac{1}{2}$ on the 30th, but at the moment of writing the rate is rather worse at 178 $\frac{1}{2}$. Forward rates showed the same improvement as in the case of Paris at a discount of 3f and 7 $\frac{1}{2}$ f for one and three months on the 27th, 2 $\frac{1}{2}$ f and 7f on the 28th, 2 $\frac{1}{2}$ f and 6 $\frac{1}{2}$ f on the 29th, 1 $\frac{1}{2}$ f and 5 $\frac{1}{2}$ f on the 30th, and 1 $\frac{1}{2}$ f and 4 $\frac{1}{2}$ f yesterday. The lira also improved, both spot and forward after the somewhat unexpected deterioration in the forward rates in the early part of the week, which we have referred to above. Spot opened at 132 on the 24th, improved steadily to 126 $\frac{1}{2}$ on the 28th, and to 128 $\frac{1}{2}$ on the 29th. On the 30th there was a reaction, probably as a result of profit-taking, to 129 $\frac{1}{2}$, and this supposition is borne out by yesterday's recovery to 129. Forward rates for one month and three months were at a discount as compared with spot on the dates mentioned as follows:—25th, 5 and 8 $\frac{1}{2}$ lira; 27th, 4 $\frac{1}{2}$ and 7 $\frac{1}{2}$ lira; 28th, 3 and 7 lira; 30th, 1 $\frac{1}{2}$ and 5 $\frac{1}{2}$ lira, but there was a slight weakness yesterday in a discount of 2 and 6 lira for delivery in the same periods. The recovery in these three currencies is attributed in the case of France to official support of the market, in the case of Belgium to renewed efforts at stabilisation, and in the case of Italy to a certain measure of success in the remedial specifics applied. The peseta weakened to 31.95-97 on the 29th, as a result probably of a combination of bear raids and uncertain political factors; but it recovered to its opening level of 31.90-92 on the 30th. The rate was rather weaker again yesterday at 31.93. Amsterdam, Berne, Berlin, and Stockholm all moved slightly against this country to 12.11 $\frac{1}{2}$, 25.10, 20.37, and 22.14 from opening levels rather higher, but Warsaw was

a little weaker at 42-45 after opening at 41-44. Budapest weakened from 27.60 to 27.70, Athens from 407 to 408, Bucharest from 920 to 940 between the 24th and 30th. The other European currencies do not call for remark. Of the South American currencies the peso was very firm, and improved from 45 $\frac{1}{2}$ d on the 25th to 46 $\frac{1}{2}$ d on the 30th, where it remained. The milreis was fractionally weaker at 7 $\frac{1}{2}$ d after opening at 7 $\frac{1}{2}$ d. In the Far East the yen showed a temporary weakness at 1s 11 29-32d on the 28th after opening at 2s 0 1-32d, but recovered again to 2s at the end of the week. Japan has been a considerable buyer of cotton and wool recently, which may account for the decline. The rupee has been very firm throughout at about 1s 5 $\frac{1}{2}$ d, after touching 1s 5 61-64d during the early part of this week. The silver market has seen a succession of sharp falls in values following heavy China selling, with very little buying on the part of India to act as a check. As a result the lowest price since December, 1915, was recorded on the 29th, but there was a further fall of $\frac{1}{16}$ d next day. The China exchanges were weaker as a result, especially Shanghai. Hongkong fell from 2s 0 $\frac{1}{2}$ d on the 24th to 2s 0 $\frac{1}{2}$ d on the 30th, and Shanghai from 2s 8d to 2s 7 $\frac{1}{2}$ d during the same period. Singapore remained unchanged at 2s 3 $\frac{1}{2}$ d.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the twelve days ended September 30th:—

(000's omitted.)		£
EXPENDITURE.	RECEIPTS.	
Supply Services	From Revenue	16,132
Interest, &c., on Debt	Increase in debt	10,038
Sinking Fund		
Sundries		
Increase in Balances		
		26,170

Total revenue for the twelve days ended September 30th amounted to £16,132,000. Customs yielded £3,736,000 and Excise £1,692,000. Estate, &c., duties produced £2,400,000. Property and Income-tax yielded £4,646,000 and Super Tax £520,000. Receipts from the Post Office amounted to £1,750,000. The week's operations increased the National Debt by £10,038,800, and caused the following changes:—

(000's omitted.)		£
Public Department Advances ..	—18,350	
Treasury Bills		+24,565
National Savings Certificates ..		+250
Sundries		+3,573
	—18,350	+28,388

The floating debt was increased by £6,270,000 to £766,181,000.

FINANCIAL YEAR, 1926-1927 (April 1 to September 30, 1926).

£	£
Total Expenditure .. 383,990,051	Raised by Revenue .. 322,266,041
Increase in Balances 2,207,619	Amount borrowed .. 63,931,629
Total	Total
386,197,670	386,197,670

ESTIMATES for FINANCIAL YEAR 1926-7.

£	£
Expenditure	825,727,000
Revenue	824,750,000
Deficit	£977,000

† Revised in Exchequer Return dated July 26, 1926.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Pearson and Knowles Coal and Iron, Anglo-Siam Corporation, Monte Video Waterworks, Clayton Wagons, Hovis and Anglo-Canadian Explorers. The chairman of the Anglo-Siam Corporation referred to the improved financial position of Siam, and was hopeful in regard to the current year's outlook. Sir Peter Rylands, chairman of Pearson and Knowles, dealt with the woes of the steel trade in general and of his company in particular.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE GOVERNMENT AND THE MINES.

THE drift back to the mines is gathering force, the numbers in coal-producing pits amounting at the time of writing to nearly 160,000. The most important development in this connection is the extension of the movement to the die-hard county of Lancashire. At the Atherton Colliery a secret ballot was held under the supervision of a public official, which, with 60 per cent. of the men voting, showed a majority of 3 to 1 in favour of a return to work. This lead has naturally been taken up by neighbouring collieries.

In the meantime, the prospects of a general settlement are almost extinct. The debates in the House of Commons on Monday and Tuesday produced yet another of those kaleidoscopic changes of the situation which have occurred so many times during the last few weeks. Mr Baldwin added nothing new to the discussion. His was the speech of a man who has thrown up the sponge, and its only points of interest were, first, his generous recognition that the Chancellor of the Exchequer was much more likely to settle the dispute than he was himself; second, the renewed declaration that in passing the Eight Hours Act "there was never any question in our minds of a universal eight-hour day," and, finally, the declaration that in refusing to enter into a tripartite conference the owners had "acted with stupidity" and "with a want of courtesy to the Government. Whether such a conference was likely to lead to anything or not, it was their duty to accept that invitation." Mr Churchill, on the other hand, who has now evidently become the main source of vigour and initiative on the Government benches, gave an interpretation of the Government's position which once more revived the possibility of a general settlement. The Government's offer of a national tribunal, described in our last issue, was apparently intended to be a much wider and more far-reaching proposal than anyone imagined from the text of the suggestion, and he made it much more acceptable to the miners by two very important explanations. The first is that where provisional settlements are referred to the Tribunal—which, it will be remembered, can only be done in the case of districts where hours have been increased—the Tribunal may reconsider the question of hours as well as of wages and other conditions, and presumably it might even propose the submitting of alternative plans to a ballot as suggested in our columns last week. This means that the question of longer hours is not necessarily disposed of finally in every case where the men have to make a provisional agreement on a 7 $\frac{1}{2}$ or 8-hour basis. Secondly, after a miners' member had pointed out the weakness of a proposal which ruled out any possibility of reconsidering provisional agreements in districts where hours remained on the old 7-hour basis, Mr Churchill observed that it was always open to the miners' leaders to suggest modifications of the Government's scheme—the implication being that the Government had not closed its mind to the possibility of revision of terms in every coalfield in the country. Mr Churchill has also indicated that the Government is prepared to discuss with the miners the instructions to be given to the Tribunal, which means, in effect, that they would negotiate forthwith on the problem as to what issues are to be treated nationally. These explanations clearly make the Government proposal very much more substantial from the miners' standpoint than they originally appeared.

The miners' executive, however, could not bring themselves to recommend them, though they are clearly all that can be saved out of their inevitable defeat. When the delegate conference met on Wednesday, therefore, the executive laid the situation before it without any recommendation at all, and the conference being equally divided in opinion, passed the decision on to the districts without comment. The latter are to report to a further conference next week, but as no provision is made for a ballot or any systematic canvassing of opinion, and as, moreover, the Government plan leaves many points in obscurity, it is hard to see how the districts can give an intelligent lead; they are more likely to take the line of least resistance, and, in accordance with what has become a habit, repeat the usual veto.

This last phase has emphasised more perhaps than ever the lamentable failure of leadership on the men's side. At the last meeting of the delegate conference three out of four of the officials, including both Messrs Herbert Smith and Cook, were actually absent, having left the country to attend the Miners' International at Ostend for the purpose of raising more money, urging the futile request for a boycott of coal for Britain and pursuing Mr Cook's personal quarrel with Mr Hodges, the secretary of the International. It would be hard to believe in so astounding a lack of sense of proportion were it not that the miners' leaders, both before and throughout the dispute, have repeatedly acted in a similar manner, and by so doing have thrown away chance after chance of achieving a settlement.

In the unlikely event of the miners accepting something on the lines of the Government scheme, the latter will be faced with the determination of the owners to refuse any plans of the kind, and the Government will be face to face with the problem—which was much discussed in the House last Monday—of imposing its will on the industry. The burden of Mr Baldwin's apology was that he cannot compel the owners to reopen their pits any more than he can compel the men to go down the mines. His functions were inevitably limited to those of conciliation. There is much to be said on the vexed question of whether it is wise for a Government to attempt to impose conditions on any industry, a topic which Sir Ernest Benn has contrived to bring to public attention during the summer season. His case against State interference is not unnaturally supported very strongly on the Government side of the House. But it is profoundly untrue to suggest that the Government is impotent on this matter. As Mr Lloyd George pointed out, the responsibility of the owners would have been promptly dealt with during the war, and Mr Lloyd George did not hesitate to say that, in the last resort, he would be prepared to take the mines over temporarily if the owners were obdurate in refusing what the Government considered to be fair terms. In the Eight Hours Act, however, the Government has a much milder weapon, and, reading between the lines, it is quite evident that in passing that Act the Government felt that they were placing the owners under an obligation which would make them amenable to their views. Indeed, in June last the Government would have introduced additional clauses into their Bill if they had doubted their ability to ensure certain conditions in the final settlement. It is for this reason that Mr Evan Williams' obstinacy has created such soreness in official circles. The problem in regard to the owners is, however, fully met by the fact that the Government's own proposal anticipates setting up a body which shall impose conditions on the industry, just as the conditions of three million work-people in various industries throughout the country are to-day fixed by statutory Trade Boards. To the argument that similar means of pressure are not available in the case of the miners, Mr Lloyd George rightly retorted that in the last resort the bargaining position of the worker does not permit him to stand out against economic pressure. He might have explained in elaboration of this point that the Government may play a very important part in overcoming his resistance, as indeed it is doing with the silent co-operation of the masses of the nation, by importing coal, by economising resources, and by rendering impotent in various ways the miner's effort to paralyse an essential service.

TRUSTS AND COMBINES IN COAL, IRON, AND STEEL.

In view of the conclusion this week of an agreement between the four chief Continental steel-producing countries of Europe, which we deal with in a later column, considerable interest attaches to the views on the question of such agreements which are expressed by a correspondent in the following article. His attitude towards the problem is one which is undoubtedly widespread in British industrial circles, and explains the difficulty which those who have endeavoured to bring about working arrangements with other countries constantly encounter. But the pressure of circumstances and the changing con-

ditions of world trade are undoubtedly tending to weaken this traditional attitude. We shall have further occasion to deal with some of these new conditions.

THERE is much misconception about industrial organisation, especially in such matters as national and international combines in the coal and iron group of trades. We have people advocating the unification of our mining industry in the interests of economy. We are advised by some authorities to form a great iron and steel combine, or trust, on the lines of the United States Steel Corporation, in order to cheapen production and advance our export trade. There is talk of the formation of a huge European iron and steel pool, or pact, or agreement, and we are told that if we do not join in the scheme we may be subjected to more intense competition. In the circumstances, a brief review of the general position may be offered without much apology.

It needs to be noted that the unification or trustification idea can easily be carried too far. It is a fact that gigantic organisations have sometimes defeated their own objects. Mere bigness does not always lead to economy of production or strength of organisation.

Take the case of the mammoth Steel Corporation of America, an organisation we are invited to imitate. Before that great trust was formed the United States produced the cheapest steel in the world, and it seemed to be only a matter of time—only a case of increasing productive capacity sufficiently—when America would become the greatest iron and steel exporting country. She was already the second country in exports. The organisers of the Steel Trust got busy. They felt that by bringing every phase of production and business, from mining ore to selling the finished steel product, under a single management, they would economise costs and develop a mighty export trade. Indeed, they boldly declared that they would "annex the world's trade in steel." The cheap steel of America was to be made still cheaper. From second place in foreign trade America was to leap into such a position that it would be a case of America first and the rest nowhere. It was asserted that British and German steel manufacturers would be practically wiped out of neutral markets by the new American trust. To use an Americanism, the United States Steel Trust was going to "lick creation." America had already the cheapest ore and coal and iron and steel; the most efficient plants and the most pushful business men; and the organisation of the mines and works and sales departments under a single and powerful board of directors would put the finishing touches on American steel trade efficiency and competitive power. The Press articles on the matter, printed 25 and 26 years ago, make funny reading to-day. After a quarter of a century of United States Steel Trust operations, the mighty America, with all her vast natural resources, is a very bad fifth in the export trade competition, and her iron and steel manufacturers are pleading—one might almost say whining—for more protection against British, German, and other foreign irons and steels.

One of the most significant facts of modern commercial history is that under the sway of the huge Steel Trust America has fallen from a highly-promising second position to an inferior and unpromising fifth place in the international steel export trade race. America stands beaten by Britain, by France, and by Germany to the tune, in each case, of about 2½ tons to one in exports. Even tiny Belgium beats America by nearly two tons to one. Excluding the business with the neighbouring Canada, and taking simply overseas exports, American steel hardly counts in the international market. We beat the Americans by at least four tons to one outside the North American Continent. This is the very opposite of what was predicted, and confidently predicted, when the United States Steel Corporation was formed in 1901. The alleged unorganised British steel industry has not been beaten, or seriously challenged, by the highly-organised American industry, and nothing but a high tariff wall stands between the American industry and a severe beating on its own ground.

Productive costs have not been reduced by the Steel Trust. They began to increase from the day the trust was formed. Not only was there over-capitalisation and

a failure to obtain the market monopoly aimed at, but the alleged richness and power of the trust caused serious inflations in mining and manufacturing costs. Before the Steel Trust was formed, United States iron ore carried royalties of only a few cents per ton. The organisation of the trust, accompanied as it was by loud boastings, caused wild speculation in ore lands, and the big combine had to pay as much as a dollar a ton mining royalty. Rail and boat rates were put up. State and local authorities levied extra taxation on the trust properties. Workmen demanded wages and officials demanded salaries from the "billion-dollar trust" which they would not have thought of asking from smaller employers. It is scarcely stretching language to say that costs all along the line, from the pit to the finishing mill and the sales office, jumped up as a direct result of the ambitious organisation scheme which was intended to reduce costs. The international competitive powers of the American steel trade have been very seriously weakened by the mammoth United States Steel Corporation. It is not here contended that British steel-makers, if they formed a huge combine, would make all the mistakes made by the organisers of the American Trust, but it is certain that trade unions and other bodies would make bigger demands, and that some of the special factors which make for economy of production, high quality of product, and foreign trade-getting abilities in our case would be weakened, if not killed, by trustification. Incidentally, in our case the nationalisation movement would be strengthened.

Take coal. We are invited to form a great Coal Trust, on lines of the German Coal Syndicate, in order to restore our export trade. What has the German Syndicate done that we should imitate it? The German coal trade, with all its cheap and docile labour, with all its preferential rail rates and cheap water transport, with all its alleged efficient organisation, has never yet beaten the British coal export trade, save during a British strike. The unorganised British coal trade exported 73,000,000 tons of coal in a year before the war. The syndicated German coal trade did not get beyond 34,000,000 tons. Since the war the British coal trade has done as much as 79,000,000 tons of exports in a year. The German Coal Syndicate has not done 25,000,000 tons in any post-war year. Per man employed and per ton of coal raised, the British coal trade pays wages 50 per cent. higher than the German coal trade affords, and still it beats Germany in the market. The statement made in this country recently that the organisation of the German coal trade has "given satisfaction to all concerned" is flatly and thoroughly contradicted by Consular and other authoritative reports.

The so-called reorganisation, or trustification, or unification, of the British mining industry would be bound to fail. It would mean cumbersome and red-tape methods; it would destroy personal or company initiative and interest; it would penalise the most progressive concerns in order to subsidise the least progressive; and stagnation or retrogression would result. The unification of British railways under the group scheme has not made British traders contented. Unification in a competitive and unsheltered trade like coal would prove far more derisory. The gigantic fleet of American ships under the single control of the United States Shipping Board has been a colossal failure.

Turning to current moves for international steel syndicates, what do we find? Many misconceptions and contradictions. It is stated that if Continental European steel-makers succeed in forming the proposed comprehensive combine, and we neglect to join, we shall be crushed between the upper millstone of American competition and the nether millstone of Continental competition. It has just been noted that American trustified competition is little more than a bogey. If the suggested Franco-German-Belge-Luxemburg, &c., iron pact does really materialise, selling prices will be advanced and competition against our products will be less, and not more, keen. It is stated that the pact is needed because productive capacity has outgrown consumptive requirements. Nothing can be more calculated to curtail demands than an increase of selling prices. In any case, American steel-makers will not come into the combine. If they were so disposed, the law would not permit them. With all the European iron and steel-makers in a ring, regulating output and increasing prices,

American competition might then become a serious proposition, and we on this side might lose heavily. It is contended that we would do better to share trade than compete for it. That means two things. It means artificially high prices and a further reduction in the world's purchases of steel—in other words, more unemployment; and it means that the British industry will become a mere unit of an international combine, which would allocate undue proportions of the available business to foreign nations. We have only to turn to the history of the old International Steel Rail Syndicate for proof of this. Before that combine was formed we exported more rails than all competitors put together. That was proper. We made the best rails, and we had the best shipping facilities. We had the most Colonies requiring rails. We had the most capital invested in foreign railways. We had the greatest economic need of a big trade in manufactured exports to balance food imports. Instead of taking measures to enable ourselves to continue to hold the leading position, we joined the syndicate—a trade-sharing scheme. We very quickly fell from a long-leading first place to a poor third position in steel rail exports. Our people were out-voted. Our peculiar needs and rights were ignored. Voting power, bounties and subsidies, tariffs, and all other possible means were used to dislodge British trade from the premier position. It would be just the same if we joined in a more general steel products syndicate. Foreign industries would claim export shares on the basis of productive capacity, ignoring our claim to abnormal exports of manufactures to pay for abnormal imports of food. They would claim progressively increasing shares of the syndicated trade simply because they have secured, in special circumstances, increasing shares before the formation of the combine. We should find ourselves as effectually beaten in trade generally as we were beaten in the single product of steel rails before the war. What British industry cannot secure by purely British efforts it will never obtain as a unit of an international syndicate or trust.

A QUARTER'S NEW CAPITAL.

The September quarter, covering the holiday season, nearly always produces a smaller volume of new capital issues than any of the other three quarters. This year, with the coal stoppage acting as a restrictive force, the drop has been considerable. The total of public issues in the London market in the past three months has been £34½ millions, as compared with £48 millions in the corresponding period of last year. Last year, however, the British Government contributed largely to the total, whereas this year it has not made net borrowings in long-dated form. Excluding British Government issues in the two periods, the issues of the past quarter have been £35½ millions, as against £17 millions a year ago. How this growth was distributed over various categories of borrowers will be seen from the following table:—

(In Million £'s.)

	Total.	British Government.	Foreign Colonial Govt.	British Colonial and Foreign Corpns.	Foreign Railways.	Mines, & Finance, & Exploration.	Rubber and Oils.	Balance Mainly Home Industry.

The British Government figure represents an excess by £1.45 millions of encashments over new sales of National Savings Certificates. Our statistics do not include temporary operations, such as Treasury bills and Ways and Means advances, nor, in the case of borrowers (public or private), do they include moneys raised for redemption or replacement or conversion purposes. The figures which we give represent new money. The figures of the third quarter of the first nine months of this year and last are analysed under a number of groups in the following table:—

Description.	Total, First Half-year, 1926.	Third Quarter, 1926.	Total Nine Months to September 30,	
			1925.	1926.
British Government Loans	£ 7,566,800	£ 7,880,000	£ 38,055,000	£ 6,116,800
Colonial Government Loans	22,969,000	7,880,000	18,414,500	30,849,000
Foreign Government Loans	12,700,500	2,692,500	nil	15,391,000
British corporation and county loans	26,341,800	6,940,000	16,673,000	32,221,800
Colonial corporations	389,000	1,225,000	6,500,000	6,050,000
Foreign corporations	nil	1,225,000	1,350,000	1,225,000
British railways	nil	nil	17,214,000	nil

Patents and proprietary articles	75,000	nil	430,000	75,000
Docks, harbours, and shipping	5,367,000	92,500	1,149,000	5,459,500
Banks and insurance	839,600	nil	3,264,500	839,600
Manufacturing and Miscellaneous	14,389,300	5,183,000	28,663,900	19,572,300
	120,765,200	34,205,300	160,393,600	154,970,500

The main feature of the nine months' comparison is the increase over last year in the borrowings by Foreign and Colonial Governments, which is, of course, the result of the lifting last autumn of the unofficial embargo upon such operations. To that topic we will return later. Meanwhile it may be remarked that domestic issues for general trade and industry in the September quarter were rather larger in volume than a year ago, in spite of the coal deadlock. In the following table we show the leading issues during the past quarter:—

Issued Week Ended, 1926.	Name.	Amount of Issue.	Issue Price.	Price Sept. 29, 1926.
July 3	Belfast Corporation, 5% Stock	2,000,000	99	28-28 dis.
July 10	Union of South Africa, 5% Inscribed Stock	4,000,000	par	28-28 dis.
July 10	Province of Westphalia, 7% Bonds	835,000	98½	28-28 pm.
July 10	Anglo-Canadian Pulp and Paper, 6½% Deb. Stock	1,800,000	99	3-½ pm.
July 17	Morris Motors, 7½% Cum. Pref. £1	3,000,000	par	18/6
July 31	Perak River Hydro Electric Power, 7% Dbs.	1,275,000	96	52-44 dis.
July 31	Counties of Hungary, 7½% Sterling Loan	1,250,000	98	98½
Sept. 18	Gordon Selfridge Trust, 6% Cum. Pref.	1,000,000	par	94-34 dis.
Sept. 18	Do Ord. £1	100,000	par	94-34 dis.
Sept. 18	Lewis's, Limited, 6% Cum. Pref.	1,200,000	par	4-1 pr.
Sept. 25	London Irish Trust, Ord. £10	500,000	par	14/6-15/6 dis.
Sept. 30	New South Wales, 5% Inscribed Stock	4,000,000	par	2-1½ dis.
Sept. 30	State of Hamburg, 6% Sterling Bonds	2,000,000	97	

The Hamburg loan, which appeared and was rapidly over-subscribed on the last day of the quarter, is the second important German issue to be floated in the past three months, the Westphalian loan in July being the other. The success of this offer contrasts with the cool reception of the latest New South Wales loan for £4 millions, of which 85 per cent. was left on the underwriters' hands. British local authorities have been unusually busy in the market for the time of year, Belfast, Coventry, Stockton, Reading, Portsmouth, and Swansea borrowing between them over £6 millions in the quarter. In the nine months British corporations have borrowed nearly twice as much as in the corresponding period of 1925.

We have recently shown in the *Economist* how, owing to the effects of the prolonged coal stoppage, the merchandise trade balance is swinging, temporarily but largely, to our disadvantage. This lends peculiar interest to the question of our ability to lend abroad and to the recent statistics of London's activities in this direction. The following table analyses the geographical distribution of London's new capital in the first nine

months of the present and the three preceding years and of the last two pre-war years:—

Destination of New Capital.	First Nine Months.					
	1912.	1913.	1923.	1924.	1925.	1926.
United Kingdom—Government.....	£ nil	£ nil	£ 68,577,000	£ 9,671,500	£ 38,655,000	£ 6,116,800
Other	36,533,400	25,595,200	35,171,700	49,306,700	81,199,400	76,704,100
British Possessions—Government.....	7,714,900	20,003,800	41,021,600	25,231,000	18,814,500	30,849,000
Other	27,786,900	36,944,200	18,547,700	15,857,000	16,714,200	14,950,300
Foreign countries—Government.....	35,501,800	56,948,000	59,569,300	41,088,000	25,228,700	45,799,000
Other	9,534,500	24,021,500	25,561,900	22,979,900	nil	15,391,000
Grand total	151,030,700	150,321,400	206,682,600	134,616,000	60,393,600	154,970,500

Excluding British Government borrowings, about one-half of the total has this year been devoted to home purposes, as compared with one-sixth in 1913 and less than one-quarter in 1912 and about three-quarters in 1925, when the foreign loan embargo was in force. The position regarding London's lendings abroad this year and in previous periods becomes clearer still if we set out the following details:—

	NINE MONTHS (JANUARY 1 to SEPTEMBER 30.)				
	1913.	1923.	1924.	1925.	1926.
Total of new issues	Mln. £. 150.3	Mln. £. 206.7	Mln. £. 134.6	Mln. £. 160.4	Mln. £. 154.9
Destined for domestic use	25.6	103.7	58.9	119.3	82.8
Destined for British possessions	56.9	59.6	41.1	35.5	45.8
Destined for foreign countries	67.8	43.4	34.6	5.6	26.3

In the nine months we have actually lent overseas nearly £31 millions more than in the corresponding period of last year and only slightly less than in the full year 1925. At the same time, even if one assumes that the Board of Trade's official estimate of our real trade balance is very conservatively framed, the large additions made by the coal stoppage to our excess of merchandise imports, must at best have rendered our margin for overseas lending somewhat exiguous. The autumn campaign of foreign borrowing in London has begun, and if the success of the Hamburg loan should too greatly whet the appetite of other would-be borrowers in Europe a position might easily arise which would cause anxiety to those who direct our financial destinies. The strain on the exchange position this autumn is likely to be unusually severe in any case. On principle we have no liking for embargoes, nor do we wish to see an unnecessary rise in Bank rate; but should a heavy campaign of overseas borrowing develop we can see the possibility, if not the probability, of a situation arising in which our monetary rulers would be justified, or even compelled, to use one or other of these weapons, to inculcate a moderation in overseas lending in keeping with the temporary conditions caused by our industrial troubles.

FRANCE AND THE SAAR.

(BY A CORRESPONDENT.)

At every meeting of the League of Nations petitions are presented from political parties in the Saar Territory complaining of the policy of the Governing Commission, which is alleged to be pro-French, and charging France with using the Commission to subordinate the welfare of the people to its aggrandisement. Since the death of Mr Branting no member of the Council has championed the cause of the Saar people, whose appeals are generally ignored. The German member of the Council will in future represent the people of the Saar and see that their interests are fairly considered. It was quite fitting, therefore, that the Council postponed the consideration of Saar questions until the December session.

The last petition from the chief political parties to the League points out that the Commission continues a pro-

French policy to the detriment of local interests. In other words, that France has exploited the Territory, and has treated it more as a colony than a neutral State, being enabled to do so by the composition of the Commission and a close association with the French Government, which, as such, should have no more right in influencing purely Saar affairs than the British Government.

When we examine the economic situation in the Saar we find that the previous state of prosperity has not been maintained. The decline is due to various causes—disruption of former business connections, the heavy expense which falls on the State railways, post office, and other public services in a small country, the burden which a separate Government involves, and a disorganised currency. The existence of a Mines Administration responsible for the welfare of two-thirds of the population—under an alien government—a sort of *Imperium in imperio*—is a source of disaffection, but should not in itself affect production, which depends on efficient management. The German engineers, managers, and foremen were replaced by Frenchmen. There are vast reserves of coal in the Saar, and the French Mines Administration spent large sums out of revenue in opening up new mines and in improvements. In spite of these developments the production is less than in 1913:—

SAAR COAL MINES ANNUAL PRODUCTION.

1913	1919	1920	1921	1922	1923	1924	1925	1926
1913	1919	1920	1921	1922	1923	1924	1925	1926
13,217,000	8,970,000	9,410,000	9,574,000	11,240,000	9,192,000	14,032,000	12,985,000	13,217,000
—	—33.12	—28.80	—27.55	—15.2	—30.44	+6.15	+1.70	—

It should be explained that there was a three months' strike in 1925. Owing to the strike in England, production has increased this year. In 1913 one-third of the Saar coal was sent to Germany and nearly one-third was consumed locally. Last year only 938,000 tons went to Germany, 3,753,000 tons were consumed locally, France and Alsace-Lorraine only took 920,000 tons. The balance was distributed over a number of countries. Industry generally has suffered because of the Customs barrier raised by France between the Saar and Germany. A wedge has been driven in between the Saar and its natural market, and up to now the Territory has not found compensating outlets for its products in France. In fact, the French industrialists in the same line of business regard the Saar as a competitor, who should not be encouraged.

It is now recognised that the Saar people will vote in 1935 in favour of rejoining the Fatherland, and that at the same time Germany will buy back the mines. France, therefore, foresees difficulties ahead. If France develops the coal mines to the utmost capacity, Germany will have to pay more for them at their then value as settled by independent arbitrators, but will have at the same time a great addition to her mineral wealth. French companies have acquired control of two-thirds of the metallurgical and other works in the Saar in the expectation that the people would prefer to continue the existing régime of economic union with France. But it is more than doubtful whether the Saarois, being thoroughly German, would have ever been reconciled to France; French policy and strategy have succeeded not only in alienating them, but in making them dissatisfied.

The cost of living in the Saar is about the highest on the Continent. The Territory is altogether dependent on the outside world for its food supply. The following figures from a French source give the comparative cost of living in the Saar, in Paris, and in Strasbourg for the first three months of this year:—

1926.	Saar.	Paris.	Strasbourg.
January	542	490	501
February	544	495	503
March	551	497	517

An unstable currency and the fact that payments to German pensioners in the Saar are made in francs instead of marks has caused much dissatisfaction. The Saar has experienced a double monetary infliction. It went through

the German inflation crisis, and France sought salvation and stability by introducing French currency, instead of accepting the policy of the local Advisory Council and adopting either a gold mark or gold franc as the basis. And the Saar shares France's misfortune, which is particularly hard in a country consisting as to 90 per cent. of working people.

Taxation is exceptionally heavy, owing to the causes above mentioned, to the losses on public services, and also to the under-taxation of the coal mines. The Saar Statute annexed to the Peace Treaty provided that the mines should contribute taxes in proportion to their value compared with the total wealth of the Territory. On this basis it is estimated that the mines should contribute one-third of the taxes. Last year, while the Budget provided for an expenditure of 224,000,000 (increased this year to 363,000,000), the Mines Administration only contributed 16,800,000.

On the other hand, France maintains at the cost of the Mines Administration a separate system of schools, which is quite unnecessary unless it is part of a policy of French penetration, and France also pays the cost of the military, although the gendarmes—who are armed—and the communal police are quite adequate to maintain order.

Now that Germany has entered the League and taken her place both in the Assembly and the Council, it is certain that more attention will be devoted at Geneva to these problems.

SOUTH AFRICA AND ITS MINERALS.

(BY OUR JOHANNESBURG CORRESPONDENT.)

JOHANNESBURG, September 1.

The mineral statistics of the Union as published by the Department of Mines and Industries for July are of special interest as showing a total of substantially over £5,000,000, which compares with an average of £4,640,000 for the first six months. The increase on the month is £137,000, and although the output of several mines—most prominently Government Areas—shows an increase the major part of the improvement was due to diamonds, which advanced by £85,200 to £884,650. In turn, this is due to the great expansion in alluvial production, which at £281,000 represented nearly a third of the entire diamond production of the Union. The alluvial yield of diamond diggings in the Transvaal was double that of June. As the result of the proclamation of Elandsputte, and more recently of Treasure Trove, the Lichtenburg district in the Western Transvaal is booming. Mr J. L. Van Eyssen, consulting engineer to Messrs Lewis Smith and Crown Diamond Mines in the Orange Free State, considers that this district will prove the most important alluvial diamond field in South Africa. "Ten weeks ago where there were only two farmhouses, there is now a population, white and black, of 35,000, all engaged in recovering diamonds." These vary in size from 30 carats down to a tenth of a carat, the average value being stated as over 80s. The finds registered in respect of Elandsputte amounted to £165,500 in July, an increase of £119,000 compared with June. The authority already quoted expressed the opinion that the monthly production of this farm is likely to reach £300,000 in the near future. The African and European Investment Company owns 10 farms adjoining this discovery, all covered, or partially covered, with alluvial. The system hitherto has been to work alluvial fields with independent diggers, and their chance of finding a big stone adds romance to what is otherwise a somewhat sordid and uncomfortable existence, but where you have a company controlling a large area, as in this case, the question arises whether it should not be tackled on modern lines—that is, with steam excavators, &c. Against this proposal, it must be recognised that the market cannot absorb an unlimited quantity of stones. Both the producing companies and the Government are becoming distinctly perturbed at the immense growth in alluvial production. Had a large portion of the alluvial stones been won at the Premier Mine the Government would have been entitled to 60 per cent. of the profits; but in the case of alluvial they only benefit to the

extent of licences paid by the diggers, a large portion of which revenue is absorbed by expenditure on police, education, and other services at these sporadic camps. The increase in gold in July was only two thirds that in the diamond production.

For the first seven months of this year the mineral production of the Union is returned at £32,848,140, an increase on the corresponding period of last year of £1,378,433, of which the increase in diamonds accounts for just over three-quarters of a million sterling, and that in gold for the balance. The maintenance of an output of £5 millions per month will bring the year's total up to £57,850,000, which would represent the record mineral production with the exception of that of 1920, which benefited to the extent of no less than £10,950,850 from currency premium on gold, the metal being sold at 115s an ounce in September and December, and at 117s 6d in October and November. If this adventitious source of revenue be deducted, it looks as if the current year's mineral production—taking gold that is at standard price—would be at least half a million better than that of 1920.

For the first time, the Department's statistics give particulars of the sales of platinum. Previously only the output has been given—in April, 841 ounces; in May, 1,052 ounces; in June, 1,080 ounces; and in July, 1,139 ounces. In the earlier months the contents of platinum metals has ranged round about 71 per cent., but on this occasion it is stated at 76 per cent. Details of constituent metals will be given at the end of the year in the annual report of the Government mining engineer. The actual sales in July were 897 ounces, valued at £16,261. It will be seen that the average is only £18 per ounce, which is several pounds less than the ruling quotation in London. Does realisation account for the difference of six or seven pounds? Platinum shipped included other metals of the platinum group and some gold. Sales of coal are well on the way to a million and a-quarter tons a month, with a value of £359,000. Coal is remarkably cheap in South Africa, the value at the pit-mouth in the Transvaal being 5s. per ton, and in Natal (whose coal has a higher calorific value) at 7s 3d per ton. Copper, tin, and miscellaneous minerals have a value of under three-quarters of a million. The only important items in the latter category are asbestos and corundum.

The value and production of minerals for the first seven months of this year and last year were as below:—

		Seven Months.		1926.
		1925.	Value.	
	Output.	Value.	Value.	
Gold	5,746.125	23,795,256	24,407,994	
Silver	566.812	101,583	77,225	
Osmiridium	2,728	76,192	53,248	
Platinum	*897	..	*16,261	
Diamonds	1,598.604	4,613,520	5,368,148	
Coal (sales)	7,678.660	2,281,493	2,274,521	
Copper ore	5,809	292,790	298,075	
Tin concentrates	1,025	155,049	173,080	
Other minerals	..	154,820	179,586	
Total value	..	31,470,703	32,848,138	

* July only.

The gold-mining industry also shows some interesting figures, the tonnage crushed in July, 2,562,675, constituting a record. No less than half-a-dozen mining companies crushed over 100,000 tons, led by the Crown Mines with 229,000 and Government Areas with 208,000, while Randfontein crushed exactly 200,000. For the first time working revenue (at standard price) of the 35 gold mines exceeded £3½ millions, the exact figure being £3,535,400. In spite of the increase in tonnage the profit was not quite so large as in June, totalling £1,140,700. For the seven completed months the profit is returned at £7,438,000, compared with £7,229,000 for the corresponding period of last year. The average profit for the January to June period, 1926, is 8s 8d per ton, or within a penny of the average for the corresponding period of last year, revenue being 5d per ton lower, and a saving of 5d per ton having been effected in working costs. Government Areas made nearly £50,000 more profit than it did this time last year. It produced 23,850 ounces more than its great rival, the New Modderfontein, and made a profit of £230,250, compared with £177,600 earned by the prominent "Corner House" mine. Its output represented no less than 11 per cent. of that of

the whole Rand. Its working revenue is certain to attain £400,000 shortly, while there is just a possibility that its output may reach 100,000 ounces in a favourable month, and that a profit of a quarter of a million sterling will also be earned. Such an earning would represent about 20 per cent. of the aggregate Rand profit, a splendid achievement. For the fourth time this year the gold production was higher than that ever previously attained.

Statistics of the capital of the mining industry in the Union, as at December 31, 1925, appear as an appendix to the Mines Departments' Statistics for July. The nominal capital of the gold mines of the Rand is given at £47,810,670, from which falls to be deducted £1,315,000 reserves, uncalled or unpaid, leaving the net sum of £46,495,750. About 60 per cent. of this—namely, £28,068,875—is in receipt of dividends, while £12 millions is invested in mines which, though productive, are not dividend-paying, and about half that sum in dormant mines. The fact that no new mines are being opened up is conclusively shown by the statement that the capital in developing mines is only £380,000. Among mines in this category is the Central West at Roodepoort. Of the issued capital, as shown, of Rand gold mines, £27,879,250 was issued in respect of property, equipment, shafts, development, &c., and for cash the total was £18,616,500. Debentures to the value of nearly £10,000,000 have been issued from time to time, but the net amount redeemable has now been reduced to £3,621,000. Premiums received doubled the cash capital, the amount being returned at £18,858,500, but two-thirds of this has been written off and the amount outstanding is now only £6,716,350. Out of nearly £5 millions net issued capital in respect of gold mines in outside districts of the Transvaal, only a trifle over a million and a half is in receipt of dividends, while 50 per cent. more than that amount has been invested in mines which are at present not working, a distinctly unsatisfactory result. The balance-sheet of the whole gold-mining industry shows a total of just short of £100 millions. Rand mining properties stand in the books at £23½ millions, shafts and mine development over £20½ millions, and equipment £30½ millions. Over £10½ millions is held in cash, and about a million and a half in stores. Investments stand at less than £1,000,000.

Among Transvaal mines, the second largest item is now under the heading of miscellaneous, which is given as £6,024,000, compared with £4,717,350 for coal mines. A year ago the coal-mining capital was double that in the other category. This is entirely due to the platinum industry, whose net issued capital is given (for the first time) at £3,851,450, about half of which was represented by cash. The net issued capital of mines in the Transvaal is now given at £62,443,500. That for the other provinces is naturally much smaller—namely, for the Cape £6,468,900, Orange Free State £3,664,750, diamonds being the principal item in both cases, and Natal (almost wholly coal) £3,553,069, bringing the total for the Union up to £76,130,250, to which may be added £6,435,930 unredeemed debentures.

CANAL COMPANIES' RESULTS.

THE big canal companies in this country are not often prominent in the investor's mind, owing, probably, to the fact that their shares are seldom subject to violent fluctuation. While, in one respect, existing holders of the various securities may find in this circumstance some cause for satisfaction, in another it is to be regretted, in that the merits of the shares for investment purposes may be overlooked. On the whole, four out of the five undertakings whose figures are analysed in this article can show prosperous and consistent records. Some idea of this will be seen from the following table, which shows the gross receipts of these concerns:—

	1913.	1921.	1922.	1923.	1924.	1925.
Birmingham ..	£ 191,345	£ 254,792	£ 236,516	£ 233,956	£ 234,539	£ 216,699
Grand Junction ..	101,680	128,960	144,993	138,735	142,563	144,651
Manch. Ship ..	1,077,018	1,861,132	1,964,813	1,984,476	2,060,906	2,103,170
Regent's	81,275	111,296	113,086	113,264	127,309	123,708
Sharpness	85,308	71,764	89,575	88,810	90,803	70,490

The Manchester Ship Canal, of course, is the largest of the five companies, and shows the most consistent progress in regard to receipts. But, on a relative basis, it has not much advantage in this respect over the Grand Junction or the Regent's, which have done very well over a fairly long period. Our next table shows the expenditure on operations:—

	1913.	1921.	1922.	1923.	1924.	1925.
Birmingham ..	£ 88,061	£ 194,258	£ 149,551	£ 145,929	£ 130,277	£ 125,183
Grand Junction ..	50,275	76,512	84,598	83,329	85,052	86,246
Manch. Ship ..	720,941	1,324,514	1,186,326	1,194,103	1,229,329	1,251,275
Regent's	38,992	71,182	73,415	64,106	69,141	65,178
Sharpness	33,523	53,901	49,435	48,218	49,966	44,999

These figures are not so satisfactory. At the same time, the increase in operating expenditure has not been out of proportion to that in other branches of trade. Indeed, comparing the sums expended on working with those incurred for 1913, the net rise has not been nearly so pronounced as might have been expected, a fact which indicates that economy has been exercised. Our third table gives net profits realised:—

NET PROFIT after PAYMENT OF DEBENTURE INTEREST, &c.

	1913.	1921.	1922.	1923.	1924.	1925.
Birmingham ..	£ 68,532	£ 23,646	£ 46,906	£ 56,130	£ 72,366	£ 59,621
Grand Junction ..	45,405	44,146	51,825	48,818	51,510	52,405
Manch. Ship ..	34,742	203,511	398,134	464,766	432,170	439,786
Regent's	15,495	15,504	20,848	20,057	27,354	30,471
Sharpness	19,573	Dr 8,371	14,067	14,888	15,482	787

So far as 1925 was concerned, bearing all factors in mind, results were very satisfactory, except in the cases of the Sharpness. The Birmingham, it is true, secured lower net profits, but even then the figure of £59,621 was well above the 1923 level, the increase recorded in 1924 having been somewhat exceptional. The Birmingham and the Sharpness are the only two companies whose 1925 figures are below those of 1913. It is to the credit of the Manchester Ship Canal that the greatest measure of progress can be placed, the 1925 net profits of £439,786 comparing with £34,742 in 1913.

The following are the principal items in the balance-sheets at the end of each of the past two years:—

	Capital.		Balance of Capital Account.	Re-serves.	Cash.	Investments.	Debtors & Loans.	Creditors.
	Deben-ture.	Ord. & Pref.						
Birmingham, 1924 ..	£ 797,400	£ 2,439,575	Dr 266,768	..	£ 43,856	..	£ 31,339	£ 34,086
1925 ..	797,400	2,439,575	Dr 266,962	..	28,670	..	28,670	32,668
Grand Junction, 1924 ..	150,000	1,223,700	..	24,217	5,404	24,738	22,193	22,193
1925 ..	150,000	1,223,700	..	24,342	5,505	25,115	22,193	22,193
Manchester Ship, 1924 ..	9,328,385	9,061,230	Dr 64,037	75,761	569,786	123,042	156,402	156,402
1925 ..	9,421,025	9,051,803	Dr 218,333	56,297	213,573	123,082	105,836	105,836
Regent's, 1924 ..	842,284	1,358,100	Dr 4,639	3,167	14,598	15,163	Dr 3,442	Dr 3,442
1925 ..	842,284	1,358,100	Dr 4,639	14,242	15,549	24,946	Dr 3,442	Dr 3,442
Sharpness, 1924 ..	617,158	633,283	..	97,043	16,780	15,524	56,281	56,281
1925 ..	607,358	633,283	..	88,618	3,013	15,524	35,379	35,379

The Manchester Ship Canal, during the year, borrowed £92,640 at 5 per cent., and also sub-divided its £10 ordinary in £1 shares, a decision upon which we have congratulated the directors on a previous occasion. The following is a tabular record of dividends for 1913 and the past six years:—

	1913.	1920.	1921.	1922.	1923.	1924.	1925.

Do 5% "C" pref.	2½	nil	nil	nil	nil	1½	nil

All the companies have maintained their dividends with the exception of the Sharpness New Docks and Gloucester and Birmingham Navigation Company, which has paid no dividend on its ordinary and three classes of preference stocks for 1925.

Our final table will enable the investor to see at a glance

how these securities have fluctuated in value over a period of years, and the yields obtainable to-day:—

	Amount.	Share or Stock.	Price 1898-1922.	Price July 30, 1914.	Price Sept. 17, 1925.	Price Sept. 30, 1926.	Yield.
Birm'ham Canal, cons.	£ 2,439,575	Stock	146½	99	76½	76½	£ s d 5 6 9
Grand Junction, ord.	1,130,000	"	152½	90	75	72	5 11 0

Do do "C," 5% ..	..	..	..	..	..	..	..

* £10 Shares.

Sharpness ordinary and preference stocks have fallen considerably during the past year as a result of the poor year experienced by this concern. The shares of the Manchester Ship Canal (as noted above) have been split, and are now £1 shares instead of £10. It will be noted that the £10 ordinary shares, on July 30, 1914, were as low as £1 13-32, and the £10 5 per cent. preference shares were at £1 13-32. It is impossible, of course, to tell how far the companies will be able to maintain the progress made in 1925. The general strike and the coal stoppage will undoubtedly adversely affect results for the current twelve months.

THE LEAGUE ASSEMBLY AND ITS LESSONS.

(BY OUR CORRESPONDENT.)

GENEVA, September 28.

THE Assembly of the League of Nations rushed headlong to its close on Saturday night; the Committees were hurried up, and their reports taken in rapid succession in the full Assembly, a process which led to last-minute protests from the British and other delegations that such speeding-up was neither dignified nor conducive to satisfactory results. This is an important matter, which is entirely in the hands of the Assembly delegates themselves, and the time has arrived when the whole question of the procedure of business in the Assembly should be fully considered.

Although most of the captains and kings of the delegations and the Press had departed, last week was not without its importance and its "incidents." Dr Stresemann had his heart-to-heart talk with the German colony in Geneva, and it is a token of the fundamental change in political conditions that this single departure from the prudence observed by the Germans during the Assembly did not cause more serious consequences. It was, of course, nonsense for Dr Stresemann to pretend that the admission of Germany to the League morally absolved her from war-guilt, but the rest of his observations on colonial questions, on the Saar, and on occupied German territory were only a blunt assertion of what is in the minds of the German people as a whole, and he must be allowed the privilege, as well as M. Briand, of paying attention to home opinion. He realised that some toning down of his private exuberance was necessary, and summoned the representatives of the Press the next day to do so. It is fair to him to remember that he spoke towards the close of a very exacting period in Geneva, that his speech came at the end of two social events on the same evening, and that he was speaking in the obviously congenial, and probably convivial, atmosphere of his compatriots.

Another incident was the abuse of privilege by the strange representative of China, who after informing the President that he would like to make a short declaration of four minutes' length, occupied 20 minutes of Assembly time in a violent attack on Great Britain concerning the events of the Yang-Tse River. No notice whatever had been given either to the President or to the British delegation, and the Assembly clearly disapproved of this light-

headed behaviour, which was rebuked with firmness and dignity by Lord Cecil, and inferentially, on a point of procedure, by the President. Lord Cecil also had a sharp passage-at-arms with M. Barthelemy, one of the French delegates, who went out of his way to indulge in a voluble, ill-placed, and none-too-cordial criticism of the British Memorandum advocating a definition of the limits of League activity. Rarely has Lord Cecil shown so indignant a resentment of what he described as a complete misrepresentation of the British view. This studied effort of M. Barthelemy, coupled with an article in M. Loucheur's local Geneva paper accusing Great Britain and America of endeavouring to sabotage the League's efforts towards disarmament—also alluded to by Lord Cecil in the Assembly—left a disagreeable impression, which other members of the French delegation were not slow to appreciate. If, as is frequently said, the French delegation is much cleverer than the British, it is just as well to remember that there is danger in international as well as other spheres in being too clever.

The actual work during the last week was occupied with arbitration, armaments, budget, and with what are known as the social and humanitarian activities of the League, including the adoption of a slavery convention. The Assembly invited the Council to recommend all States to adopt the Locarno Agreements as guiding principles in their foreign policy, and to offer the good offices of the Council for the conclusion of suitable agreements. As political conditions have improved in those parts of Europe with which the Locarno Agreements are concerned, the Assembly considered that the Disarmament Conference, when summoned, should take into consideration the present conditions of regional and general security. There is recognition of the fact that the problem can only be solved by degrees, and that, apart from the matter of reduction and limitation which this Conference might bring about, it must in any case have the immense advantage of transforming into international agreements the degree of armaments of different States, and of thus putting a stop for a definite period to possible competition. The special problem of the control of private manufacture of arms, on which a draft convention has already been framed, is to be included in the programme of the Disarmament Conference if, as is recommended, this Conference is held before the next Assembly. Should this not be possible, private manufacture will be dealt with separately in a special Conference to be summoned as soon as possible. The full Assembly debate on the subject did not add much, but was notable for M. Paul-Boncour's argument, presented for the first time with any force by an official French delegate, that German disarmament was imposed in order that general disarmament might follow. No one could have doubted the sincerity of Lord Cecil's advocacy, in the name of the British delegation, of the cause of disarmament, and of his resentment of the propaganda effort to suggest that Great Britain is a stumbling-block. It is not so easy, perhaps, to accept his view of the peoples of the world thirsting for disarmament, unless it be for the disarmament of others. There is hardly, for example, a great wave of enthusiasm in England for the reduction of the British Navy, which is the only serious consideration for Britain in the way of national armaments.

This Assembly as a whole gives rise to various considerations. Not only does the entry of Germany mark a new stage in the League's development, but it coincides with a narrower scrutiny by the Powers of the progress of League work. The earlier latitude which was left to delegates has been tightened up. In the first years, when the vital things were carefully kept out of League hands, not much really serious thought was given by the Governments to the Assembly; and there was a curious tendency to regard it as something outside strict Government responsibility. That has been gradually changing, and more noticeably this year. It is just as well that delegations should come with full Government responsibility, and while this has tended a little to diminish Assembly fervour and enthusiasm, it has made up for it by the greater authority given to decisions reached. A sign of this is to be found in the useful British action in drawing attention to the importance of ratifying League agreements and conventions. It is of no use working out agreements unless they are acted upon, and the Council

is asked to prepare half-yearly reports as to how things stand in this respect. The entry of Germany has also coincided with a rather marked assertion of strength by the Great Powers. How far this is accidental or how far deliberate it is not easy yet to say, but the question put by a witty German as to whether Germany should play the part of a big small Power or a small big Power in the League has every appearance of being resolved in favour of the big Power theory—and not the small big Power either. An accentuation of the division between great and small Powers would be unfortunate, but it is doubtful whether there will be a definite alignment of this kind. Anyhow, it will be something gained for peace if the five Great Powers find they are able to act together for what would mean an adjustment of opposing interests. In any case, the assertion of the Great Powers is a fact to be noted, but one persistent Assembly delegate can play the Assembly trump card of forcing discussion into the open. Sir Austen Chamberlain and the whole harsh chorus of Mandatory Powers can do their utmost in the Council to lower the prestige of the Mandates Commission, but one, Dr Nansen, can insist on a full review in the Assembly, even though actual results may not be too glowing.

In many respects the work of the British delegation has been open to criticism. On some matters it has been the victim both of propaganda on the part of some of its supposed friends, and of an uncanny habit of hitting the right nail on the head with the wrong hammer. In any case, it is high time that the British Government gave more attention to the composition of its delegation and to its methods of work if it has any care whatever for British reputation in international affairs. It is neither reasonable nor fair to expect Lord Cecil to bear the whole brunt, and it is not easy to believe that he can have his heart in some of the tasks which he has to perform. However, it has been a good Assembly on the whole, and a memorable one.

Notes of the Week.

The Half-Year's Accounts.—We print in full on another page the Treasury's return of revenue and expenditure in the first six months of the current financial year. It is normal for the figures at the end of six months to show a deficit, for the second half is the time of the heaviest revenue collections. At this time last year the deficit was £36 millions, and two years ago £12 millions. But this year the deficit reaches the formidable figure of £61½ millions, expenditure being £384 millions and revenue £322.3 millions. Although definite conclusions as to the final outcome of the Budget should not be based on six months' results, it cannot be said that the prospect is reassuring. For the full year revenue was estimated by Mr Churchill to yield £12.7 millions more than last year, while in the first half it is actually £21.7 millions less than in the corresponding period of 1925. Expenditure, on the other hand, is £4 millions more than in April-September, 1925, whereas for the full year (allowing for £5½ millions of supplementary estimates passed since the Budget date) expenditure was estimated to be slightly lower than for 1925-26. It is natural at first sight to jump to the conclusion that the coal stoppage is responsible for the big drop in revenue, but an examination of the details suggests that its direct responsibility is strictly limited. As a matter of fact, more than the whole revenue decline as compared with a year ago—in fact, £22.1 millions—is due to the drop in the yield of income-tax and super-tax. Tax under these heads was assessed on earnings and income received before the industrial trouble began, and the coal stoppage can only be responsible in so far as it may have been necessary for the tax-collector to allow more than the usual time for payment to firms or persons temporarily embarrassed by the crisis. Customs and Excise, where the effects of the stoppage should show most clearly, actually exceed last year's yield by £2.6 millions, and all the stoppage can have done here is possibly to prevent a larger increase. It may have done so, because Mr Churchill estimated an increase of £11½ millions for the full year under these

heads. Curiously enough, although the economic damage wrought upon the country by the coal dispute has become more intense as the stoppage proceeded, the revenue for the second quarter makes a better showing than that for the first quarter. It was, in fact, slightly above the yield recorded for the September quarter of 1925. Unfortunately, however, the encouragement that might have been derived from this fact disappears as a result of close scrutiny, for the comparatively good showing of the September quarter revenue is due to increases of £7.3 millions in ordinary miscellaneous receipts and of £1.7 millions under receipts from sundry loans. The main heads of revenue do not show the improvement suggested by the total figure. Before leaving the details of the returns we must point out that, although the year's sinking fund was raised by Mr Churchill from £50 millions to £60 millions, the first half-year has only seen allocations of £15.4 millions, as compared with £20.6 millions in the first half of 1925-26. Actually, therefore, the expenditure position is worse than it appears on paper, and had the first half-year borne its proper proportion of sinking fund allowance the deficit would be even more formidable than is shown in the return. The deficit on the half-year of £61½ millions has been met by the Exchequer (excluding one or two negligible items) by the following means:—Treasury bills outstanding have been increased by £99.3 millions, and £3.5 millions have been received on 4 per cent. Treasury bonds; while on the other hand Ways and Means advances have been reduced by £37.4 millions, National Savings Certificates encashments have exceeded sales by £1.5 millions, and Exchequer balances have increased by £2.2 millions. Mr Churchill is obviously faced with something of a struggle to make both ends meet this year, and the taxpayer has also to remember that the full force of the effects of the coal stoppage will fall upon the income-tax receipts of next financial year.

The International Steel Cartel.—The understanding between the French, German, Belgian, and Luxemburg steel masters, which has been under discussion during the summer, has been achieved and signed this week at Brussels. The agreement provides for the allocation of production between the four countries on an agreed percentage; penalties are imposed if production exceeds the quota for the year, and this restriction of output, together with the charge levied for the pool, is expected to raise prices from their present depressed level. The agreement does not provide for joint sales or for direct price regulation, and is clearly intended to stabilise conditions, in the first instance, at all events, mainly in the European market. The following represent as far as is known the terms of the agreement:—

Potential sales will be fixed yearly, and will vary between 26 and 30 million tons for the four countries.

Quotas will be fixed on a basis which was originally—Germany, 43.18 per cent.; France, 31.19; Belgium, 11.63; Luxemburg, 8.23; and Saar, 5.77. It is now understood, however, that when the production total is fixed at 27 million tons Belgium is to have 12½ per cent.; when total production is less than this Belgium's ratio will fall slightly; when the total rises Belgium's ratio will also rise.

Sales will be ascertained quarterly.

Production by each country in excess of its quota is optional, but is subject to penalty. Each country will pay into a common fund an amount of \$1 per ton of ingot steel produced, and for amounts in excess of the potential amount a sum of \$4 per ton. Should the production of a country be less than the potential amount a compensation of \$2 per ton of production below the potential amount will be made.

Accounts will be settled yearly, and any amount then remaining in the fund will be distributed to the countries participating in proportion to their quota percentage.

The amount per ton payable to the common fund may be increased by a majority decision.

Each country will respect the home market of the other signatories.

A contingent is fixed which Lorraine and the Saar may send duty-free into Germany.

Regret has been expressed in European iron and steel circles that Great Britain has not come into the agreement, and it is said that the door is still open to her if she wishes to join. It is, however, not clear that the time is yet ripe for this. Even if Great Britain wished to join, the British steel industry is not yet accustomed to co-operative working, and has not developed the internal machinery for limiting production in accordance with such a plan.

BANK OF ATHENS

Head Office: ATHENS.

Paid-up Capital

Drs. 72,000,000

With Offices in all the principal towns in Greece, Egypt, Cyprus, Crete, and Albania, the Bank extends facilities for Export and Import Trade between Great Britain and the Near East generally.

Enquiries invited.

NEW YORK: BANK OF ATHENS TRUST COMPANY,
25, PINE STREET.

BOSTON: ATHENS BANKERS CORPORATION,
15, KNEELAND STREET.

London: 22, Fenchurch St., E.C.3.

Again, it is by no means certain that the partners in the present agreement are themselves strong enough to do this, and for the moment it may be well to regard the plan as experimental in character. The plan as at present devised is designed to check output and raise prices. It is not the sort of machinery that would be devised if the Continental producers were contemplating a trade war with the British steel industry. Indeed, just as rubber producers, the present agreement might, if pushed far, help rather than hinder British exports. Moreover, neither France nor Belgium, which both export a large proportion of their output, could hope to carry on a prolonged trade war on a "dumping" basis when once the exchanges are stabilised and internal costs normal, for their internal markets are too small in proportion to their total output for such a plan to be practical over any considerable period of time. It is, however, as well to recognise that if the next step were to be in the direction of a joint sales organisation, British trade in its present unorganised condition is as little capable of engaging in a steel war as it is in co-operating in an organised manner with a European combine, and it will not be able to do either one or the other until it has devised some means for concentrating production of different classes of steel in those works best equipped to produce them, and thus reducing costs by running the most efficient works at their full capacity. On the other hand, the steel industry of Europe would undoubtedly much prefer to arrive at an amicable understanding with the British steel industry in regard to exports rather than enter into a prolonged contest. One important reason for this is the strongly established position which British steel holds in Empire markets, which constitute some 40 per cent. of the whole, and from which it would be difficult to dispossess it. British steel-makers will, however, be the first to realise that a new phase in the politics of the industry has opened with this agreement. A wise and far-seeing policy is more than ever needed if our steel trade is to emerge from its long depression.

Monsieur Poincaré in His Old Role.—Monsieur Poincaré is incorrigible. Last week-end he delivered two speeches—one at St. Germain on Sunday, and the other at Bar-le-Duc (in his native Lorraine) on Monday—which breathed the spirit of his weekly utterances during the worst phases of the French occupation of the Ruhr. It is true that Herr Stresemann rashly gave him an opening by a previous reference to the question of "war-guilt." In Germany there is intense feeling on this question, of which every German Government has to take account; and while it is no doubt preposterous for Germans to repudiate all

responsibility for the war, it is equally preposterous to assert, as M. Poincaré does, that the admission of sole responsibility, which Germany was compelled, by *force majeure*, to make in the text of the Versailles Treaty, is the last word on the subject. The last word will not be said till all the public archives of Europe have disclosed their secrets. Meanwhile, it is not at all discreditable to the Germans that they should be extremely sensitive over this question, and if that is nevertheless embarrassing in the present international situation, the Allies have only themselves to blame. It is, therefore, unpardonable that Monsieur Poincaré should once again have rubbed salt into this wound. He not only attributed the whole guilt of the war to "the former empires of Central Europe" (the word "former" may be noted as a small sign of grace). He inflamed the feelings of his Lorraine audience by reminding them of the misdeeds of the Germans during their invasion of French soil. Those German misdeeds rightly shocked, not only the French, who were the immediate sufferers, but the entire civilised world. Yet, during the period between the signature of the Armistice and the delivery of Monsieur Poincaré's speech a week ago, the French themselves have demonstrated that such misdeeds are not confined to wars in which the invaders are Germans. The burning of villages, the cutting down of fruit-trees, the imposition of collective fines, and the wholesale deportation of notables as hostages, have been practised in the mandated territory of Syria, between 1920 and 1926, by the French themselves. When Monsieur Poincaré turned from Franco-German relations in the past to the more relevant question of the present internal condition of France, he displayed the admirable side of his character. He made it clear that his Government intend to carry through their programme of financial economy and administrative reform in the teeth of any number of protests from vested interests. This spirit is essential for the recovery of France, and Monsieur Poincaré may be trusted, more than any other living French statesman, to remain true to it. Yet, indispensable though it is, it is only the negative condition required for the solution of the French financial problem. The Briand-Stresemann scheme brings a new and positive element into the picture; and it would be a tragedy if Monsieur Poincaré's individuality, after securing the negative condition, were to make co-operation in constructive effort, such as that attempted in the Briand-Stresemann scheme, impossible.

Government Conversion Offer.—The Treasury have published this week the terms of an offer of conversion for 110 millions of 5 per cent. five-year Treasury bonds, which are due for payment on February 1st of next year. The offer to the holders is to take up a 4½ per cent. seven-year Treasury bond. The Government is, however, not in a position to make certain of the success of this conversion on to a 4½ per cent. basis, and has to attach to the offer certain important inducements. On conversion holders are to receive £1 in cash, and there is an option attached to the bond of redemption on February 1, 1929, or on any other February 1st until maturity. This option is exercisable either by the Government or by the holder. The offer of £1 in cash may either be regarded as making the issue price 99 with the payment of £100 at maturity, or as a payment of additional interest in advance. In either case it means that the yield is at least 5 per cent. if the bonds are repaid two years hence, but is substantially less if they run for their full term. In the former case the Treasury will, of course, not gain anything in interest, but will gain substantially in the latter event. This device of an option to convert open to both sides means in effect that the Treasury will have to pay on this fraction of the debt a rate of interest depending on the course of interest rates. If the latter rise, the present issue will be presented for repayment, and the Government will have to re-issue at the higher rates. If, on the other hand, the rates fall, the Government will exercise its option and re-issue at lower rates. Compared with other Government short-term securities it is an attractive offer, but the investor cannot count on the present rates for more than a very short time. The year 1926 has been one in which there were very few large maturities of debt, in

comparison with the heavy war bond maturities of the next year or two and the problem of the 5 per cent. War Loan looming ahead in 1929. If conditions had been normal, a start might have been made in dealing with these problems, but the coal dispute has prevented anything being done hitherto. But clearly it would have been unwise to leave the problem of this particular issue unsettled during a winter in which the course of money rates is very difficult to forecast. If rates rise in America or in this country seriously, we might have arrived at the date of maturity in circumstances when rates were very unfavourable. The Treasury had no option but to insure a success now.

Our Index Number.—Our Index Number of wholesale prices as at the end of September shows an increase of 90 points, but, as was the case in August, the rise is due to a further advance in coal prices, quotations for imported coal having again been used. There was also an advance in metals and in certain subsidiary foodstuffs, but these were offset by declines in other directions. The following table shows the changes in each group and in the total:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	%
Basic (avg. 1901-5) ..	500	500	500	400	500	2200	100.0
End July, 1914	579	552	616	464	553	2668	118.6

Sept., "							

* Corrected figures.

In primary foodstuffs movements were mostly downward, but there was a slight increase among other foodstuffs. In the textiles section the feature was the further decline in American cotton as a result of the publication of the official forecast of a bumper yield. Wool prices were a little higher on the month. In the minerals group, apart from the advance in coal, the principal movements were further increases in iron and steel. Stocks of pig-iron are practically non-existent, and steelmakers have almost ceased to quote. Tin is again a little higher, but lead and copper reacted. In the miscellaneous group rubber is a shade higher, but other movements are downward.

The following table shows the changes in each commodity's index number in comparison with the end of August, the figure 50 representing in each case the average price during the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—Fot.	98	-2	Cotton, A	73	-18	Copper	48	-1

Sept., "	154	201	153	207	134	165.5

* Corrected figures.

The minerals group, which for some time showed the smallest increase over the pre-war level, now shows the largest, while textiles have fallen to the lowest place but one.

Cotton Trade Short Time.—Our Manchester correspondent writes:—As anticipated, the mass meeting of spinners of American cotton held in Manchester last Tuesday adopted the recommendation of the Committee of the Masters' Federation that until further notice yarn production should be cut down to 33 per cent. of the full output by working the mills one week in three. The new scale of operations will come into force on Monday next, and it is expected that spinners will close their factories for the next two weeks, and run the machinery full time in the third week, and then carry on by stopping two weeks and working one. It is understood that at the mass meeting about 200 spinners were present, and the resolution was carried almost unanimously, there being only four votes against. On Monday last in Manchester there was a further meeting of the Joint Committee of spinning employers and trade union officials which was set up some time ago to inquire into the depression and make recommendations for the betterment of trade. It was decided that the representatives should report to their respective organisations on the discussions, and it is not intended to call another meeting of the Joint Committee until an application has been received for this to be done from one of the associations represented.

Canada's New Government.—The automatic sequel to the Liberal victory at the Canadian general election has taken place, Mr Meighen resigning the Premiership, and Mr Mackenzie King succeeding him. The latter has lost little time in forming his Cabinet, and the announcement of its personnel has had a quite unusually favourable reception both in Canada and in Great Britain. Of the members about half served in Mr King's recent Cabinet, and of the remainder half served in previous Administrations. Of the men new to Cabinet rank, the most interesting appointments are those of Mr Forke as Minister of Immigration, and of Mr Euler as Minister of Customs and Excise. The entry of Mr Forke into the Cabinet marks the practical fusion of the Liberals with the Progressives, of which party Mr Forke is the leader. Mr Euler, who goes to the Ministry around which so much political fighting has centred, is a German-Canadian, and thus provides Cabinet representation for the considerable German element in the population of the Dominion. One point about Mr Euler's selection is curious in the eyes of observers, for he is a strong Protectionist, and it seems a strange sequel of the victory of the lower tariff party that a man of his views should be posted to the office primarily concerned with Customs duties. But in general Mr King has apparently chosen his team well, and, as he has been given a large majority, Canada is looking forward to a period of capable and stable government. It was feared that the assembly of a new Parliament would prevent Mr King from visiting London for the Imperial Conference. His absence, in view of Canada's implication in constitutional problems that will come up for discussion, would have been very unfortunate. But, happily, it has been made possible for him to attend, Mr Meighen giving a good example of

public spirit in promising that the Conservatives will agree to an arrangement of business which will not call for the Premier's presence at Ottawa during the period of the Conference. Mr Meighen has sprung a surprise by resigning the leadership of the Conservative party as well as the Premiership. He thus chooses to take on his own shoulders the blame for his party's electoral defeat at the polls. Such acts of self-inflicted discipline are rare in politics, as we have been reminded by the electoral history of the last few years in this country. But there is reason to hope that Mr Meighen will continue to occupy a useful and influential position in Canadian public life.

The Trouble in China.—In the following letter, dated September 3, 1926, our Hongkong correspondent throws light on some recent events in China:—"As was the case in July, trade during the past month has been in a state of suspense, and there has been no general resort to smuggling goods through the boycott barrier, such as was carried on with considerable success during the first half of the year. Woollen piece goods are now arriving here in large quantities for the winter season, and, failing the cessation of the boycott, smuggling is the only means of avoiding a serious accumulation of stocks. The Canton Conference, which adjourned on July 23rd, appears to have been abandoned, as no movement towards a resumption has been made by either side. Moreover, at a public gathering two weeks ago, our Governor roundly denounced the Canton Government for allowing the Strike Committee to usurp its authority and functions. The nature of his remarks precludes any further attempt to bring about a settlement by negotiation with the present Canton administration, and his description of the Strike Committee as a group of pirates and bandits aroused a good deal of feeling amongst those who are profiteering by the boycott. The Canton Government went so far as to ordain a week's campaign for the 'Encouragement of the Strikers,' but there was little response on the part of the public to the special collections for strike funds. The strike pickets have now been re-armed, and have been using their weapons to the danger of innocent passers-by. Every night in Canton there is a fusillade in the neighbourhood of the Hongkong steamer, which lies off the Shameen, and Europeans venturing out are exposed to considerable risk. The object of the pickets is to prevent native boats loading country produce for the Hongkong market. There are always large numbers of these craft, and as they creep up under the cover of darkness to the steamer's side the pickets endeavour to stop them by rifle fire. There are usually two or three foreign gunboats in the neighbourhood, but they are unable to interfere, and their work is confined to picking out of the water the dead and wounded Chinese, whose efforts to carry on their ordinary business in face of the boycott have ended in disaster. Swatow, one of the principal Treaty Ports of the South, is now entirely in the hands of the Strike Committee. Despite the utter chaos that prevails there the Maritime Customs Service still functions, and last week-end successfully forced the strike pickets to surrender a consignment of cigarettes which had been seized through the Customs by a German acting as agent for the British owners, and had actually been placed on board. The pickets, who have their own boarding officer, condemned the shipment as contraband, and sent it ashore. The Commissioner of Customs then stepped in, and threatened to close the port if the goods were not returned to the ship. Within 48 hours the order was complied with, and the goods were duly shipped away. The position of the Customs Service in the rebel ports of China is an illogical one, but its authority is respected, thanks to the firm manner in which any encroachment is resisted. At the time of writing attention has been diverted from the boycott to the Civil War now raging in the neighbourhood of Hankow. The rapid progress made by Chiang Kai Shek and his Cantonese troops has completely changed the internal situation. If, as is reported, Wu Pei Fu is a prisoner, and disappears from the scene, then the struggle for supremacy will be waged between Chang Tso Lin on one side and the Christian

neral Feng, with his ally Chiang Kai Shek, on the her. It is presumed that Chiang will not advance north the Yangtze, but will establish himself in Hankow, nding reinforcements, or perhaps a separate expeditionary force, to the assistance of Feng. The intentions

Sun Chuan Fang, who controls Shanghai and the ighbouring provinces, are not clear, but there are possibilities of his casting his lot with Chiang Kai Shek. The nsolidation of these three big forces, two of which are bsided by Russia, is a most serious menace, and, in e opinion of many, intervention by the Foreign Powers nnot be much longer delayed. The restoration of order China is a matter of world-wide interest, and foreign inion here flatly disagrees with Lord Balfour when he

pronounces that China must work out its own salvation. The infinitesimal percentage of the Chinese who claim to represent the nation have no idea of the direction in which they are going, and they are quite blind to the fact that they are mere pawns in the hands of the directors of the world revolution."

The Situation in Greece.—The political life of Greece continues to be troubled by the malady from which it has been suffering for ten years—an inability to forget the past and to think of politics in terms of the present and the future. Though it is now several years since M. Venizelos, realising that he had become a storm-centre,

patriotically retired from public life, and though the unfortunate King Constantine rests in his grave, "Venizelism" and "Anti-Venizelism" are still the rallying cries in the Greek political arena. After the overthrow of General Pangalos—whose dictatorship might be regarded as an extreme form of anti-Constantinianism (so extreme, indeed, that it had attained that plane on which extremes meet)—General Kondylis has put himself at the head of a popular movement in favour of reconciliation and constitutional government. There is every reason to suppose that this movement faithfully represents the present feelings of the great majority of the Greek people. They are all tired of those interminable political vendettas in the internal life of the country, which have so greatly aggravated the calamities produced by foreign wars; and the Anatolian refugees (who amount to about a quarter of the present population of Greece) are particularly eager to see an end of these personal quarrels between the politicians of Old Greece, which are hindering the vital work of economic reconstruction. Hence, when General Kondylis took office the other day on a programme of immediate elections in strict accordance with the existing constitution, there seemed to be some prospect that Greek politics might at last take a turn for the better. That prospect has not yet vanished from sight, but it has already begun to be overclouded. The Constantinian leaders, evidently hoping for a further swing of the pendulum, have now waited upon the President of the Republic, Admiral Konduriotis, and demanded the appointment of a "Cabinet of Work" and the application, in the forthcoming elections, of the simple majority system of voting instead of the system of proportional representation which is at present the law of the land. This is not the right way to get back to the normal, healthy conditions of political life. The only way to achieve this is to keep to the constitutional path without deviating a hair's-breadth either to the Venizelist or to the Constantinian side of it. It is to be hoped that General Kondylis will insist on this, and that he will receive the necessary public support. The Constantinian leaders may be assured that, even if they succeed now in preventing the weary pendulum from coming to rest at mid-point, it will not remain permanently tilted in their favour.

Trade Barriers in Europe.—A very vivid and instructive representation of the obstructions to European trade which have been created by tariffs has been constructed by Sir Clive Morrison Bell, and was on view this week at the Bank of England. The model shows a wall round each country drawn in proportion to the *ad valorem* height of the various tariffs. The calculation of the height of a country's tariff is by no means a simple task, for it involves estimating the price of commodities in order to calculate the incidence of specific duties. Moreover, it is essential to have regard not merely to the goods which enter the country in question, but also the goods which the tariff wall succeeds in keeping out. Our readers will remember that the Balfour Committee on Trade, in a volume published a year ago, made an elaborate calculation which endeavoured to overcome these difficulties, and Sir Clive Morrison Bell has doubtless taken full advantage of the work done by the Committee, and the figures on which his model is constructed tally generally with those and other calculations which have been made. Thus Great Britain and the Netherlands are lowest with an index number of 6; that for Denmark is 7, for Belgium and Portugal 8; France, Germany, and Scandinavia fall in a group of moderate Protectionists with index numbers between 12 and 15; the Central European countries, starting with Austria at 16, Roumania 18, and Bulgaria, 19, rise to 23 for Poland and 25 for Yugoslavia and 27 for Hungary, while extreme protection is represented by Spain with an index of 35 and Russia of 43. The pictorial effect of the model is very striking, the two outstanding features being, firstly, the falling range of tariffs as one proceeds from East to West, starting with the Himalayan barricades of Russia down to the moderate walls (Spain always excepted) of the maritime countries of Western Europe; and, secondly, the dense crowding of high tariff walls in the central section round comparatively small areas which are obviously quite unsuited to be

regarded as complete economic units. The model in this respect would show an amazing contrast if placed side by side with a similar model for the United States, with its colossal area surrounded by a single wall and no internal barriers. The model is much the best device we have yet seen for presenting at a glance the problem of European tariffs.

Australian Iron and Steel Duties.—Our Melbourne correspondent writes:—The Commonwealth Government, immediately before the rising of Parliament, introduced on August 11th increased duties on iron and steel goods, and although there was practically no opportunity for debate, these duties become operative at once, pending final ratification by Parliament. This was protested against by some of the country members, but without practical effect, and no real Parliamentary discussion will, therefore, take place for some months. The alterations in duties are in the intermediate and general rates, and the British preferential tariff is not touched for the present, though the Minister for Customs, Mr Pratten (an extreme Protectionist) foreshadowed future alterations in the latter, "to safeguard the Australian industry against British competition."

Developing Palestine.—Some years ago Mr Rutenberg's concessions in Palestine and his plans for electrical development in that country came in for a good deal of public notice. Three years ago the Palestine Electric Corporation, Limited, was incorporated in Palestine for the purpose of carrying out his plans. An announcement has been made this week to the effect that the capital required for carrying out the Jordan Hydro-Electric works has been definitely secured, that the preliminary work on the scheme will be commenced shortly, and that the board of directors is receiving distinguished reinforcements in the persons of Lord Reading, Sir Alfred Mond, Sir Hugo Hirst, and Mr James de Rothschild.

Johannesburg Consolidated.—The report of the Johannesburg Consolidated Investment Company—popularly known as "Johnnies"—for the year ended June 30th last shows practically no change in net profits, and the dividend remains unchanged at 15 per cent. We append a four-year analysis:—

	June 30.			
	1923.	1924.	1925.	1926.

* Includes £85,000 the proceeds of which were not carried to the Exchequer within the period of the account. Treasury, September 30, 1926.

The dividend is now paid half-yearly, $7\frac{1}{2}$ per cent., free of tax, having been paid in December and June last. The latest allocation, to reserve raises it to £700,000. Profits realised on stocks and shares, dividends, and sundry revenue totalled £773,744, against £775,835 a year ago. The report mentions that the financial resources of the company have enabled the directors to acquire "new and promising interests." This is reflected in the increase of over £500,000 in the holding of stocks and shares, which stand in the books at or under the market prices ruling as at June 30th, no credit being taken for such as figure under their market valuation. The report also refers to the "beneficial effect" of the new Diamond Syndicate. The company has acquired a controlling interest in the Potgietertrust Platinums, Limited, which the directors consider "promises to be the most important producer" of platinum. A trial reduction plant is in course of erection, and is expected to be working at an early date.

UNITED STATES.—BANK RATE PROSPECTS AND THE SHARE MARKET—STEEL INDUSTRY—CROPS—FLORIDA STORM LOSSES.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 21.

DEVELOPMENTS in the markets during the past week have followed expectations with reasonable closeness. Following the September 15th tax date, the usual ease appeared in the call money market. But this ease, as had been anticipated, proved transient, the call rate on the New York Stock Exchange firming up to $5\frac{1}{2}$ per cent. This firming up occurred, consistent with theory, at the time when the commercial demand for credit on account of autumn business began to develop. It would appear that the argument that the higher bank rate, which went into effect in August, would become effective when the autumn expansion occurred, has been justified. Already there has been much talk of a further advance in the bank rate. Such an event certainly is within the bounds of possibility, as the open market has crept up again to what amounts to a parity with the official charge. For the time being, however, the feeling is that further action at New York will be delayed, and that any fresh initiative in the matter is likely to be taken by one of the other Federal Reserve banks. It is realised that the Federal Reserve authorities probably have little desire for dear money *per se*, and that the speculative appetite has received a pretty definite check. At the same time, it is thought that the authorities are not likely to disregard the lead of the open market as they did last autumn, and that any recrudescence of speculative activity would call forth corrective action.

Meanwhile, the share market has continued irregular, with prices swinging backwards and forwards over a moderate range, and with activity also moderate. Railroad shares have remained consistently firm, being supported by the record-breaking traffic movement and by the high level of earnings. Car loadings broke all records in August. As the loadings are still setting records in September, a continuation of the good earning reports is expected. Industrial shares have been highly irregular. Those of the General Motors Corporation (selling *ex* a 50 per cent. stock dividend) have risen to above 150, a price which corresponds to nearly 240 for the old stock, and a new high record. This advance is a response to the remarkable record-breaking sales during August, which point to a continuance of the great earnings of the first half-year. On the other hand the quarterly earnings statements of some of the other automobile companies reflect the keen competition that prevails in the industry. Hudson profits, for example, shrank from nearly \$7,000,000 in the August 31st quarter last year to less than \$2,000,000 in the corresponding quarter of this year. Taking industrial shares as a whole, the market has made a triple top during the last month or so, bullish enthusiasm has been

chilled, and a considerable inclination to trade on the short side has been built up. Meanwhile, brokers' loans have gone on increasing, a circumstance that in some quarters is interpreted as indicating distribution. In the week ended September 15th the increase amounted to \$57,000,000, the significance of this figure being influenced somewhat by the approach of the tax date. In any event, this increase brings the total as reported to the Federal Reserve Bank up to \$2,820,000,000. This figure is \$412,000,000 above the low touched on May 19th, and is \$321,000,000 below the high recorded on January 6th.

Conditions in the steel industry continue remarkably stable. Prices are steady, and production is holding close to the level of the past month or so. The steel makers are optimistic, but are not inclined to try to forecast very far ahead. Some decline in speculative building is being noted, and this is finding a reflection in the truck business. Some of the more conservative truck manufacturers also feel that credit has been too liberally extended in both the truck and bus businesses, and that a phase of readjustment, which will have a healthy effect on the industry, has been entered on.

Nothing has happened to upset the view that the crops generally will be satisfactory. Cotton prices have worked into new low ground, partly on account of hedge selling against the new crop and partly because recent claims of crop damage do not seem to be borne out. Commodity prices as a whole still reflect the absence of inflationary tendencies. The Bureau of Labour statistics index for August, at 149 per cent. of the 1913 average, was 1 per cent. lower than for July. In August of last year this index stood at 160. The latest decline is due principally to weakness in farm products and food. All of the industrial groups were either unchanged or slightly higher.

Much attention has been attracted by the severe storm in Florida. Although it is too early to secure accurate data, it is safe to say that the insurance losses will be relatively small, as the devastated district was not well covered with tornado insurance. In no respect can the present disaster compare, as far as possible disturbing effects on the securities markets are concerned, with the San Francisco and Galveston disasters. As a matter of fact, the markets have paid little attention to the catastrophe. Doubtless, however, the damage will tend to hasten the liquidation of a collapsed boom.

Stories of the possible flotation in this market of German railroad securities for the benefit of the Allies recently have been revived, but apparently with no better foundation than on the previous occasions when these stories have been circulated. Our bankers regard such projects as premature. They point out certain of the difficulties that stand in the way, such as the fact that the securities are mark securities, the necessity for agreement among all the Allies, and the large potential supply of additional securities of the same kind that might be offered.

FRANCE.—ADMINISTRATION ECONOMIES—BANK OF FRANCE BUYING GOLD—EXPORT PRICES—TELEPHONE CONTROL.

(FROM OUR CORRESPONDENT.)

PARIS, September 29.

FURTHER economies in expenditure for administrative purposes have been decreed this week, and it is now becoming clear that the pressure of financial circumstances is opening the road to departmental reforms of a far more sweeping character than had been anticipated. It has been the dream of many modern French statesmen to find means to institute reforms in the administrative machinery of the country that would render it more suitable to present-day conditions. Hitherto, however, the inertia inseparable from all-powerful local interests has rendered all attempts in this direction hopeless. In many respects, in spite of the extraordinarily able recasting of the administrative system that was carried out by Napoleon I., the average French public servant remains exactly what he was under the *ancien régime*, and is a complete stranger to modern ideas of efficiency, initiative and personal responsibility. The plans which are now being worked out for the industrialisation of the tobacco monopoly will prove, it is hoped, to be the forerunners of others for the complete

modernisation of the various departments of the State, with the triple object of securing economy, efficiency and a higher sense of personal responsibility. M. Poincaré has now announced further proposals involving the suppression of a further 153 local Treasury offices, which, it is assumed, have become unnecessary. The suppression of these 153 "recettes" will enable the number of local Treasury officials throughout the country to be reduced by over 700.

The event of the week has been the resumption of the buying of gold by the Bank of France. The bank is acting under a special decree, which authorises it to purchase coined gold and silver on the basis of 114f 60c per louis d'or or 20f. The object of this step is two-fold; first, to enable the Bank to increase its reserve of precious metal, for the purpose of enabling it more effectively to support the franc, and secondly to entice out of its hiding places the enormous mass of gold which is still being hoarded by the population. It will be remembered that during the war the Government appealed to the population to hand in their gold at the Bank as a patriotic duty, and that those who so acted were handed a certificate testifying to their public spirit. There are now widespread complaints to the effect that people who, at the time of the armistice, refused to fulfil their duty by selling their gold at the rate of 5f 50c to the dollar, should now be receiving 35f to the dollar. Against this it is argued that people who take this view seriously misunderstand the facts. Those who patriotically exchanged their gold at the time of the armistice, as a matter of fact, received for it paper francs that had a purchasing power of 90c each, whereas to-day the franc is worth only 15c. In other words, those who sold a louis representing 20f in 1919 received 360 sous for it, whereas those who are now bringing out their hoardings in response to the offer of 114f for a louis are receiving only 342 sous for them. The notes that are being given in payment for the gold are not to be regarded as forming part of the total note circulation, it will be recalled, as each is covered by gold to its full nominal value. By this means, it is held, the trading public will be furnished with the increased number of notes which it requires, in consequence of the higher commodity prices prevailing, without foundation being given for any allegation of further inflation.

The deadly logic of the foreign trade returns is at last arousing the French trading community to the realisation that the country is being impoverished through the practice that has prevailed, since the depreciation of the franc became serious, of allowing export prices to remain appreciably below those prevailing in sound-money countries. Expressed in francs, the value of French imports during the first eight months of 1926 was 54 per cent. more than during the corresponding period of 1925 (while the total tonnage was less than 1 per cent. more), whereas the total value (in francs) of the exports was only 32 per cent. more, in spite of an increase of 8 per cent. in tonnage. Measured by the monthly quotation for the dollar in Paris, the gold value of exports of manufactured goods, which amounted to 645,577,000 gold francs in January, 1925, fell to 551,368,000f in December, and by the end of June to 452,819,000f. If the value of the exports, as measured by export prices, had increased in the same proportion as those of the imports, the eight months' exchanges should have resulted in a favourable balance of over 5,000,000,000f, instead of a deficit of 2,650,000,000f. The returns show that French exports yielded a total of 9,042,500,000f more during the first eight months of 1926 than in the corresponding period of 1925. As a matter of fact, exporters received less in pounds and dollars for their goods, owing to the fall in the purchasing power of the franc, during the same period from 100 to the pound to about 175, while they had to pay for raw materials of foreign origin at constantly increasing prices in francs. There are now indications that exporters are awakening to the real situation, and are beginning to adjust prices to world parities. In the Toulouse region, for instance, manufacturers and merchants are grouping themselves into syndicates for the purpose of placing prices on a more rational basis. Retail traders are adopting a similar policy for the purpose of bringing domestic prices into line with currency factors. The retail section of the Comité Technique de l'Alimentation, at a meeting held at the Ministry for Commerce, decided to organise a

Bureau of Economic and Price Records, under the direction of Professor Roger Picard, of the Faculty of Law. This Bureau will centralise information of all kinds concerning home and foreign prices and kindred subjects, with a view to the development of a coherent policy of prices.

Progress is reported to have been made recently towards the carrying out of the project of the American concern known as the I.T.T.C. (the International Telegraph and Telephone Corporation) for securing control over the French telephone undertakings. These, as is known, form part of the postal monopoly. It has been rumoured for some time that there is a possibility of the telephone system being handed over to private industry, for a long term of years, with the double object of (1) enabling the Treasury to secure a substantial sum in immediate ready cash, and (2) to ensure a complete reorganisation of the French telephones, which are deplorably unsatisfactory from the practical point of view. The French telephone industry is chiefly in the hands of four leading concerns—the Thomson-Houston Company, the Société Ericsson, the Société Industrielle des Téléphones, and the Société du Matériel Téléphonique. The latter is an offshoot of the American concern, the Western Electric. Towards the end of 1925 the I.T.T.C. (the operation being financed by a loan issued by the Morgan Bank) acquired from the Western Electric the whole of the latter company's plant outside the United States and Canada, and thus secured control of the Société du Matériel Téléphonique. The latter, like the other three French companies named, is one of the tenderers for the supply of 40,000 automatic telephone lines which it is proposed to install in Paris as the first step towards the introduction of the automatic system in the capital. In order to secure this important order the I.T.T.C. is reported to have recently acquired the majority of the shares in the French Thomson-Houston Company, which holds the sole right to manufacture in France the Strowger system of automatic telephone appliances, which is the system for the installation of which the recent tenders stipulated. The effect of these operations, apparently, has been to eliminate the element of competition and largely to ensure American success. The effort of the Americans is significant when taken in connection with the recently cabled statements to the effect that the Morgan group has offered the French Government a substantial loan on condition that the administration, supply of materials, and control of construction and exploitation of the telephones in the Paris area be handed over for a term of years to the I.T.T.C. The same American concern, it is announced here, has already secured control over the telephone system for the whole of Spain, by virtue of a Royal decree conceding the entire monopoly to the Compania Telefonica Nacional de Espana, which is a subsidiary of the I.T.T.C.

GERMANY.—AGREEMENT WITH FRANCE—CREDIT—INDUSTRY—IRON AND STEEL—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, September 29.

ON the financial aspect of the "Peace of Thoiry" opinions differ very much. An objection of principle made in most quarters is that any mobilisation of Dawes securities, whether railway or industrial bonds, would prejudice the definitive settlement of the Reparations question by substituting private foreign creditors for the Reparation Commission. As long as Germany's total indebtedness for Reparations is not fixed, such a substitution is considered inadvisable. The Dawes Plan was tentative and experimental; and although as compared with the original fixed claim made by the Allies the Plan was popularly looked upon as an abatement, this is not formally the case, and Germany's ability to execute it is still in doubt. When the question of definitively fixing the claim is taken up, other views than the present may exist not only as to Germany's payment ability, but also as to the relative advantages and disadvantages of Reparations itself. Were the bonds mobilised and converted into private property nothing could modify that part of the claim upon Germany. On transfer possibilities the former Minister of Industry, Dr Julius Hirsch, writes relatively optimistically. Government circles and most financial experts have always

regarded the coming of the cash transfer period with anxiety. In view of the condition of the finances and of the relatively rapid re-accumulation of capital, the internal burden of a home loan for the Saar and Eupen-Malmedy parts of the proposed transaction could easily be borne, or, at least, the Government could substitute a home loan for the foreign loan for domestic purposes which has been pending since last spring.

The condition of foreign trade and of the foreign-payment balance does not indicate that the interest on two new foreign loans could easily be paid. The Institute for Trade Conditions Inquiry, which is attached to the Federal Statistical Bureau, publishes some material enlightening transfers in general. It shows that in the period January, 1924, to June, 1926, there was a deficit on foreign trade (net, after allowing 813 million marks active for Reparations deliveries in kind) of 3,183 million marks. The Reparations total on the passive side was 1,498 millions. The net receipts for services (shipping freights, &c.) were 423 million marks. Allowing for the movement of precious metals and legal-cover exchange, there was a deficit of 5,585 million marks on the payment balance, which was balanced by the net movement of capital. In this movement the items are: publicly issued long-term loans, 2,544 million marks; other loans, 190 million marks; wares credits, 340 million marks; active balance on sales and resales of German real estate and securities, 170 million marks; return of hoarded bank-notes (all in 1924 or 1925), 1,200 million marks; and other capital movements, foreign credits, and foreign investments in Germany, 1,625 million marks active, against which were 37 million marks paid to abroad for amortisation of long-term loans, and 345 million marks movement of the free (not legal-cover) exchange holdings of the Reichsbank. Most of these figures are estimates. The process of return of German capital holdings abroad is stated to have been practically completed. In the first half of 1926 (with a foreign trade surplus of 1,047 million marks) the payment balance on all items, with the exception of movement of capital, was 559 million marks active.

The mobilisation of the railway bonds would, of course, only be an acceleration of a transaction proposed from the first; and the Trustee in his last report of June, though he thought the moment unfavourable, expressed the view that a good reason for mobilisation lay in the possibility of thereby helping to stabilise European currencies. It is assumed that although the German interest liability to abroad on the partially mobilised bonds—about 1,300 million marks—would not exceed 80 million marks, and therefore would be a small factor in the general passivity of the payment balance, foreigners would not invest in the mobilised bonds unless given a formal priority like that attached to the Dawes 800 million marks loan. Doubt is expressed whether, in the present state of the international capital market, and in view of the high prevailing interest rates, 5 per cent. bonds, even although issued at a heavy discount, would look attractive; and whether mobilisation would not be easier and more profitable some years hence, when there is a prospect that 5 per cent. may be the normal rate for a German investment of this high degree of security.

Money has been very plentiful. Day rates, the drop in which proceeded no further in July and August, fell further last week, and reached 3-5 per cent.; and this week the rate has risen only about 1 per cent., in preparation for the month-end settlements, which will present no difficulties. Month-money rates have slightly risen. There is no appreciable increase of the demand for money by industry or trade. A good deal of the day-money available cannot be placed. The new abundance of money is apparently due in part to the flood of foreign credits, and in part to the increasing cash holdings of public bodies, which still act as chief feeders of the money market. The Reichsbank's deposits on the 23rd stood considerably higher than at the same date of any recent month. The yield of the new Prussian foreign loan, and of the Siemens foreign loan which will come in in October, will probably cause still greater fluidity, and in general no stringency is expected in the next few months. The Reichsbank director, Dr Schacht, has made an important statement concerning Bank policy and borrowing. The considerable increase in Reichsbank

circulation—300 million marks between June 23rd and September 23rd—is mainly, said Dr Schacht, due to the incoming of foreign credit, which has correspondingly shown itself in the gold and exchange reserve. The Reichsbank has continued its policy of converting exchange into gold. The increase in circulation so far has been unobjectionable, but it is undesirable that foreign money should come in at a pace exceeding the development of home business. "The increase in Germany's currency circulation has been, in general, caused not by growing production, but by the too liberal acceptance of foreign credit. This development is the cause why the Reichsbank recently abandoned its practice of maintaining the dollar exchange at a fixed price (parity), and entrusted its exchange to the free market. By this means the Reichsbank acquired the possibility of using its influence against a too copious flood of foreign capital." At the time the Reichsbank's step was attributed to a temporary cause, the excessive offers made to it in a particular week of foreign exchange. Dr Schacht denied rumours that the bank proposes to coin gold. "In this question the Reichsbank shares the view of other important countries that the accumulation of gold in a note bank, with occasional free surrender of gold for foreign payments whenever the rate of exchange so demands, is a more satisfactory form of gold currency than the saturation of business with coined gold." Judged by this and other utterances, the Reichsbank considers a reserve which would merely provide the bare gold cover required by the Bank Law of 1924 to be insufficient, and will continue slowly, and when the market is propitious, to convert its foreign exchange holdings into gold.

Unemployment has further declined. Publicly supported unemployed on September 15th were 1,484,000, against 1,549,000 on September 1st. Bankruptcies continue to increase, being 124 in the fourth week of September, against 119 in the second week, and a minimum of 61 in the first. The textile industries have of late supplied from a quarter to about a third of all bankruptcies. This seems to be due to old credit difficulties. The last weeks have witnessed a further improvement in the textile home market, and exports of finished textiles have been increasing for some months. In the months June to August the values of exports of most kinds of yarn and cloth exceeded the average monthly values of 1913. Woollen cloth exports have, in particular, risen. East Europe, South America, and Asia are showing increasing interest in German cloth. The potash industry reports declining business. On the basis of returns so far the year's total sales will not exceed 1,050,000 metric tons (calculated in pure potash), against 1,224,000 tons in 1925. A renewed attempt is being made to raise potash prices, and a new struggle for control is reported to be proceeding in the leading Wintershall concern. The building record for the first half of 1926 shows a heavy decline in the number of new industrial and commercial constructions, a result of the business depression; whereas the number of new dwellings increased considerably.

The Ingot Steel Syndicate is retaining for October its 30 per cent. reduction of output. The real output of late seems to have exceeded this ration. Since the maximum reduction rate (35 per cent.) was altered, the monthly output has increased very largely. In August crude steel output was 1,141,316 metric tons, against 899,087 tons in August, 1925; and the output of rolling-mill products was 907,510 tons, against 868,900 tons. Both figures are much in excess of those of August, 1925, but they are behind those of March, 1925, when production was highest. Steel output in the first eight months of 1926 was 7,460,417 tons, against 8,763,832 tons in the same months of 1925. The joint American-German Commission which has been considering the German Steel Syndicate "export bounties," which led to a United States threat to impose countervailing duties, has rendered a report, which is not yet published. It is understood that no new facts were unearthed; the "bounty" system consists merely in rebates equal to the difference between the higher German home prices and the lower "world-market" prices being granted by the Steel Syndicate to native consuming manufacturers on steel bought for conversion into export goods. As the "world-market" prices (i.e., prices as determined by France and Belgium)

have of late risen, while German home prices remain unchanged, the bounties have been automatically reduced; and if the international Steel Syndicate comes into being the disparity will entirely disappear. Whether the German rebates, which are a matter of private arrangement between two industrial groups, are really bounties is a question of definition. The Americans object in particular to the extension of the rebates to steel rails, as a result of which an American railway company lately gave a considerable order to Krupps. German exports of rails and other permanent way material have greatly increased, being 88,134 tons in 1924, 404,401 tons in 1925, and 246,787 tons in the first half of 1926.

As a result mainly of cheap money, the Bourse has been firm in the last few days; but only steel-coal stocks have risen considerably. The Deutsche Bank's monthly report describes the dullness and decline in quotations which began in the last week of August as being a "digestion pause," due after the rapid upward movements of the preceding weeks; and there are other indications that despite the low dividend yield at present prices of the leading stocks the public is still willing to buy. This attitude towards stocks in spite of the high yield of fixed-interest securities is characteristic of all Central Europe.

ITALY.—COLLAPSE IN STOCK MARKETS—DEFLATION POLICY: CONFLICTING VIEWS.

(FROM OUR CORRESPONDENT.)

TURIN, September 29.

THE deflationist policy announced at the end of August effected something like a stampede in the Stock Exchange markets. Here is a comparison between the closing prices of August (before the news of the new policy) and September prices:—

	Closing Prices for August.	September 28.	Decrease Between Closing Prices for August & September 28.
5 % Consols	89.50	86.90	2.60
3½ % Consols	67.00	66.85	0.15
Bank of Italy	2,530	1,910	620
Banca Commerciale Italiana	1,360	1,024	336
Credito Italiano	874	705	169
Mediterranean Railways Co.	372	340	32
Meridional Railways Co.	750	660	90
General Navigation Co.	644	560	84
Italian Gas Co.	334	260	74
North of Italy Electricity Co.	298	280	18
Sip (electricity)	188	159	29
Vizzola	1,070	870	200
Terni (iron, steel, & electricity) ..	490	410	80
Fiat (motor-cars)	534	378	156
Monte Amiata (mercury mines) ..	400	325	75
Montecatini (fertilisers and chemicals)	240	215	25
Beni Stabili (real estate)	716	580	136
Bonifiche Ferraresi (agricultural land)	546	430	116
Snia (artificial silk)	276	189	87
Châtillon	190	125	65

It is very difficult to say whether so general a collapse was due more to the technical position of the market or to views of the outlook. The stock markets were in an unsound position; too many securities recently issued (the share capital of joint stock companies having increased from 28,260 million lire at December 31, 1924, to 38,897 million lire at July 31, 1926) were left on the hands of underwriters or Bourse operators, failing to be finally placed with firm holders. These fluctuating securities are easily affected by new facts or fears. The theory, on which the bears acted, was this time the inevitability of an industrial crisis and of credit restriction in consequence of the new official deflationist policy. If the lira is to recover from the present level of 18 gold centimes to 20 or 25 or 50, and some even said 100 centimes, a period of dwindling profits or of losses is in sight. Capital values must contract. Industrial concerns capitalised on a basis of 500 lire per share, when the lira is the equivalent of 20 gold centimes, must be scaled down to 200 lire per share if the lira rises to 50 centimes, and to 100 lire if the lira reaches the 100 centimes parity.

Including the branches of its affiliated Institution, The Nationale Bankvereeniging, Utrecht, The Rotterdamsche Bankvereeniging is represented in about 170 places in Holland.

So runs the bearish theory. The reply of the financial Press is that the aims and effects of the Government deflationist policy are greatly exaggerated. Deflation must come, but will be gradual, and be accomplished with due regard to industrial needs and labour employment. The total (banking and State) circulation, which was 20,428 million lire at July 31, 1926, and diminished to 20,076 millions at August 31, will be further reduced by 1,400 million lire before the end of October; but the public need not fear too great a restriction on account of this reduction, as, for various reasons, the notes to be burned had a more or less sluggish circulation. Moreover, the Government was alive to the industrial necessities, and fixed the normal limit of "commercial" circulation at 7,000 million lire, with a supplementary amount of 1,000 million lire, to be issued subject to a tax equal to the whole official rate of discount, plus one-third of it. If to the 8,000 million lire of "commercial" circulation we add other existing amounts, which remain provisionally authorised (State silver coins 1,700 millions, circulation on State account 4,230 millions, circulation on account of the Morgan fund transferred to the Bank of Italy 2,500 millions, circulation on account of the industrial securities Consortium 3,000 millions, circulation on account of the old Banks of Naples and Sicily reserves 1,500), we reach a grand total of 20,900 million lire. This is a theoretical maximum, which will not in practice be reached, but which demonstrates that in case of emergency the Bank of Italy can come to the rescue of industry and of the financial markets with liberal loans.

Notwithstanding all these demonstrations that deflation will come gently, without undue hurry, financial markets remain in a desponding mood. What they would like to know exactly is the limit of the deflation policy. Will the deflation be indefinitely pushed on until the lira regains the old parity, or will it be stopped before? If so, is the intended limit 20 or 25 or 50 centimes? According to the reply given to the above question Stock Exchange quotations must be regulated. No matter what the number of years during which the deflation takes place, if the lira is to be revalued from the present 19 to future 50 centimes the present 500 lire price of a share should be reduced to 200 lire. The slower the process of deflation, the more drastic should be the reduction of Stock Exchange quotations, as industrial concerns will have before them a vista of many lean years.

This theory of the desirability of announcing at once the limit of deflation is not accepted generally by financial writers, among whom the current doctrine is as follows:—The Treasury and the Bank of Italy are acting very judiciously in not disclosing the limit of revaluation. Even if they have fixed the limit—say 25 centimes—they must publicly state that they aim at an indefinite revaluation. If the public interprets them as aiming at a return to old par, so much the better. Speculative sellers of lire will take fright and cover themselves. Italian industrialists, who in past years sold goods against dollars and sterling, and kept big balances in Zurich or London or New York, will be obliged, as in Germany, by the dearth of money to sell their dollars or sterling with a view to keep their business running. The lira will be improving, and, without sacrifice by the Treasury, will come near to the secretly proposed limit. Once this is reached, the Treasury can publish its plans and its monetary policy. The problem is highly controversial, and, without presuming to solve it, I have merely attempted to describe the conflicting opinions current in financial circles.

DENMARK.—TRADE SITUATION—EXPORT SURPLUS—CROP DISAPPOINTMENT—NOTE CIRCULATION.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, September 11.

THE Danish trade situation has not altered appreciably since the publication of the last semi-annual price-index, which, through the reduction of the wages of labour by 5 per cent., brought about a corresponding reduction of the cost of production. A heavy depression still prevails, and the number of unemployed is considerable—about 49,000, according to the latest report. The autumn sessions of the "Rigsdag," commencing early in October, are looked forward to with some excitement. There is no doubt that trade policy questions will dominate the sessions, and the taxation problem will be a very prominent subject for discussion; but the entire political horizon is otherwise rather obscure, as the tension between the Socialistic Government and its radical supporters has increased. From industrial quarters it is continually maintained that protective Customs measures in the form of a so-called "Kriseværn" (emergency-protection) will be required, and these wishes have met with some support from labour quarters, while as yet the policy of the Government is not quite clear and the political possibilities for "emergency measures" have not been elucidated.

Wholesale prices have shown a rising tendency from July to August, the official figures rising from 158 to 162. However, this is principally due to the group "fuel and lubricants," which showed a rise from 140 to 163 as a consequence of the effects of the coal strike in England. Otherwise only animal food and chemical-technical goods show increased prices. As a consequence of reduced supplies, some scarcity of coal has made itself felt in this country. During July coal imports were still further reduced to 104,471 tons, against 111,234 tons in June. During July last year imports of coals were 306,538 tons, or practically three times as much as this year, which shows the restriction caused by the strike.

From the detailed figures it further appears that the imports from the U.K. have been reduced to a minimum. From Northumberland and Durham the shipments were 100 tons, while the total shipments from all the British districts, usually shipping coals to this country, were about 7,000 tons during June. From Germany the shipments were 34,663 tons, against 35,404 tons during the preceding month.

During July imports of all kinds of goods were at a minimum. The total imports during the said month amounted to 107,000,000 kr only, against exports to the total value of 126,000,000 kr, of which 9,000,000 kr were re-exports. The total result for the month was thus an excess of exports of 19,000,000 kr. For comparison it may be mentioned that during June imports amounted to 134,000,000 kr, against total exports of 128,000,000 kr, the result for the said month being an excess of imports of 6,000,000 kr. Each of the preceding months showed excess of exports (3,000,000 kr for May and 22,000,000 kr for April), while in March the excess of imports was 1,000,000 kr only. Total imports during the first seven months have amounted to 909,000,000 kr, while the exports have aggregated 910,000,000 kr, the net result thus being an excess of exports of 1,000,000 kr, while for the same period of last year there was an excess of imports of about 72,000,000 kr. Even in 1925 some of the months showed a balance of trade in favour of Denmark, but it has not happened for many years that a period of any length has shown an excess of exports.

The harvest of cereals is now practically finished, and the return of grain can be judged on the basis of threshing results. It proves that on good soil the quantity of grain is quite out of proportion to the bulk, and that it fails to such an extent that the crops are estimated to be substantially below the average. On poor soils the crops correspond better to expectations, but even here the estimate is below that last reported. The result of the estimate as at September 1st is that the principal crops on the islands are expected to be, on the average, 5 to 15 per cent. below the normal, while in Jutland the returns are estimated to be about, or just above, the average. The disappointment as regards the crops will be serious to many farmers, who are affected by the pre-

sent depression. Agriculture is also affected by the continued weak butter market, partly consequent upon the coal strike in England, and the position is accordingly rather unfavourable, even though agriculture still shows power of adaptation to the difficult conditions.

The reduction of the note-circulation continued during August, even at an increased rate, and according to the figures supplied by the statistical department of the Landmandsbank, the average for this month was as low as 357,300,000 kr, or 15,500,000 kr below that for July, which was the previous low record. As compared with August, 1925, there has been a decline of 66,200,000 kr, the average note circulation being then 423,500,000 kr, while as far back as August, 1924, the note circulation was 451,300,000 kr, or as much as 94,000,000 kr more than this year.

ARGENTINA.—GENERAL DEPRESSION—LOWER EXPORT VALUES: A CAMPAIGN FOR LOWER FREIGHT RATES—THE OUTLOOK.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, August 29.

THERE are two sides to the situation as it presents itself in Argentina to-day. To take first that one which is forcing most attention on the average business man, there is still no sign of any rift in the clouds which have been hanging over trade and industry for some months past. Everywhere merchants and shopkeepers are pulling long faces and complaining of bad times. What free money may be in circulation is mostly going into securities, and especially the Mortgage Bank cedulas, though the better-class industrial issues have not been without a fair meed of support. The bankruptcy return for July showed a rising number of firms in difficulties, the declared liabilities, \$16,491,348, being the highest figure yet recorded this year, and comparing with \$12,097,005 in June, \$8,863,810 in July, 1925, and \$5,109,022 in July, 1924. These figures of liabilities, which take no cognisance of a large increase in the number of private arrangements, bring the total for the year up to \$95,753,485, as against \$66,859,996 in the corresponding period of 1925.

There is nothing really surprising in this phenomenon of stagnant trade when the circumstances are taken into account. The immediate cause, as previously explained, is the over-importation which continued well into the present year. The general imagination had been so intrigued with the prospect of 1926 as an *annus mirabilis* in the financial history of this country that orders poured out for shiploads of merchandise, which the far too large multitude of traders are now contemplating ruefully in their warehouses and on their shelves. This is not going to be such a disastrous year for Argentina as many concluded when the first unfavourable symptoms came in the nature of a cold douche, but, for all that, there are some sadly disappointing factors. For one thing, the price of grain is far below that of last year. Then wheat is moving forward more slowly, though there have been heavier shipments of maize, linseed, barley, and oats, while the figures relating to the meat industry, both as to exports and prices, also compare unfavourably. The British coal stoppage, moreover, is reducing the tonnage supply and sending up freight rates. Perhaps the clearest idea of the situation can be gathered from the following table compiled by the National Statistical Department, showing the exports from January to June, as against the figures for the corresponding half of last year:—

EXPORT VALUES in \$ GOLD.

Letters to the Editor.

BUILDING SOCIETIES AND SUPER TAX.

TO THE EDITOR OF THE ECONOMIST.

SIR,—“Notes of the Week” in your issue of September 11th contain a paragraph which is not, I submit, a fair statement of the position. The overwhelming majority of investors in building societies throughout the country do not get 5 per cent., free of tax, for their money. That rate is advertised by a few societies (chiefly London societies), but many others do not offer so high a rate.

With regard to income-tax, your note seems to convey the wrong impression that no tax at all is paid on building society interest. The present arrangement between the Inland Revenue and building societies is given below:—

“1. The society consents to be directly assessed to income-tax under Schedule D upon the amount credited in the year preceding the year of assessment for, or in respect of, dividends on shares, bonuses, and deposit or loan interest:—

“(a) In respect of any deposit, loan and/or shares of £5,000 or more, in the aggregate, of any depositor, lender, or shareholder.

“(b) In respect of any deposit, loan and/or shares of whatever amount held by, or on account of, or in trust for any limited liability company or other incorporated company or society.

“(c) In respect of any other deposit, loan and/or shares.

“In regard to (a) and (b) on the full amount and at the standard rate of tax, and in regard to (c) on one-half of the full amount, and at one-half of the standard rate of tax.

“In consideration of such direct assessment:—

“2. All property owned by a society, whether let or whether occupied by the society for administrative purposes, and also all property in the society's hands, as mortgages in possession, is to be exempted from income-tax, Schedule A, except as to ground or lease rents, if any.

“3. A borrower who has no taxable income is not to be charged for mortgage interest; if charged, the tax assessed in respect of the mortgage interest is either to be allowed as a double assessment, or repaid by the Commissioners of Inland Revenue.

“4. A borrower who has taxable income is to be relieved from the tax applicable to mortgage interest. Application for relief is to be made to the Inspector of Taxes, and to be supported by a certificate from the secretary of the society as to the amount of mortgage interest paid for the year of assessment. If the application is made before the payment of the tax, relief is to be allowed from the assessment, and if made after payment, relief is to be allowed by way of repayment.

“5. Investors, depositors, and lenders are not to be charged for the dividends or interest they receive; if charged, on proof thereof, they are to be entitled to relief. No repayment of tax is to be made against income derived from investments in, or deposits or loans with, the society, and no certificates of payment of tax in respect of such income are to be issued by the society.”

I would point out that interest paid on shares or deposits over £5,000 is charged at the full rate of tax, as is also all interest paid to corporate bodies, no matter how small their investments may be.

It is contended by building societies that the tax charge they bear in respect of investments of small people not liable to tax is more than adequate compensation to the Inland Revenue for the special tax rate on their larger investments within the agreed limits.

Interest from building societies is, of course, properly returnable for total income purposes and for super-tax assessment. It is, in fact, dealt with exactly in the same way as interest on tax-free 4 per cent. War Loan.—Yours faithfully, September 13th, 1926. BUILDING SOCIETY.

[The position is as stated by our correspondent. But he has somewhat misinterpreted our Note in the issue of September 11th. It did not profess to outline all the varieties of societies and the varieties of strict return to their depositors. It was directed to the narrow point of the suggested evasion of super-tax by the use of this class of investment. We did not mean to suggest that no tax at all was paid on building society investment; the Note referred to the agreement, and assumed that readers of the *Economist* were familiar with its terms. We pointed out in reply to critics that provision had been made to safeguard supertax revenue against two forms of evasion; it was, therefore, entirely in the interests of the building societies, since their excellent work would be prejudiced if any section of the public had grounds for believing that they facilitated tax evasion. The Note, we may add, was based on information drawn from authoritative sources.—Ed. *Econ.*]

Books and Publications.

THE CRIME OF SERAJEVO.*

FOR over twelve years the world has discussed the causes of the war. The bitter debate has gradually softened into a more scholarly inquiry, and, as the passions loosed in 1914 have slowly calmed, closer and more impartial study has won an even truer account from the swelling stream of official and unofficial documents and memoirs.

Dr Seton-Watson's book contains probably the most careful, detailed and objective existing English survey of the murder of the Archduke Francis Ferdinand, and also a most searching examination of the motives and intentions of Austria's and Germany's subsequent policy towards Serbia. It is hard to believe that evidence may still remain undisclosed which will materially alter Dr. Watson's main conclusions. The murder was due to the hatred of Austria which her annexation of Bosnia-Herzegovina in 1908 aroused amongst the Yugoslavs, both in Serbia and in Austria herself, a hatred strengthened by Hungary's policy of repression in Croatia; and the murderers were neurotic Austrian youths of Yugoslav parentage, whose ideas and schemes of assassination sprang from their own brains, although their weapons were partly procured from unofficial Serbian terrorists. Official Serbia neither instigated their crime nor approved it.

To Austria the murder gave a timely excuse for launching the attack on Serbia which was contemplated even during the Archduke's lifetime. Her reckless policy disregarded even the grave risks of general European war, and her duplicity misled Europe until it was too late for mediation. Berlin is depicted by Dr Watson as the aider and abettor of Vienna, petulant and impatient of delay, and apprehensive only at the very last moment lest the help which Germany had promised for the support of Austrian prestige should ultimately suck her into the vortex of aggression.

Dr Seton-Watson possesses a most sympathetic understanding and an intimate first-hand knowledge of South-Eastern Europe. The present volume has grown out of his larger history of Yugoslav nationalism which is now in preparation. This book will undoubtedly illumine the tangled obscurities of problems whose past is generally unknown, whose present troubles Europe, and whose future demands solution. Dr Seton-Watson's account of the crime of Serajevo has contributed to the understanding of the greatest and most pressing question which the world faces to-day: the control of foreign policy in the interests of peace.

BOWLEY ON STATISTICS.*

THE *Elements of Statistics* was first published 25 years ago, and the production of later editions has involved the delicate problem how to keep level with new developments without sacrificing the unity of the original text.

Part II. (Applications of Mathematics to Statistics) was rewritten in 1920, but Part I. (General Elementary Methods) has been allowed to stand substantially the same as in 1901. The present volume is a reprint of the 1920 issue with a few corrections and additions, and practically all the illustrative material relates to the pre-war period.

Obsolescence of material does not necessarily prejudice work whose object is the study of methods rather than the study of facts as such; but it cannot be denied that the value and interest of the book to the public at large would have been much enhanced had the author had time and opportunity to bring his material and his references thoroughly up-to-date. It is disappointing to find that the section on the Census refers to the Census of 1911. The discussion on index numbers ignores the recent revision of the Board of Trade wholesale price index and the review of the whole subject recently undertaken by Professor Irving Fisher, whilst it barely mentions the Ministry of Labour Index of retail prices. The section on Pareto's

* "Elements of Statistics." By Professor A. L. Bowley, Sc.D., F.R.S., Professor of Statistics in the University of London. (London) P. S. King and Son, Limited. Price 18s net.

equation stops short of the interesting verification of the "law" for seven million odd incomes by the Inland Revenue Department, and one would imagine that the science of statistics had nothing whatever to say about national wealth, unemployment insurance, or business forecasting, despite the valuable contributions made by the author himself to these subjects.

The *Elements of Statistics* is not an easy book to read, for the author has an impatient habit of skipping everything he thinks obvious, without waiting to consider whether it will be quite as obvious to his readers. In spite, however, of minor drawbacks, Dr Bowley's book easily keeps first place as the soundest and most comprehensive text-book for the serious student that has yet appeared in this country. Besides being our greatest living authority upon prices and wages, Dr Bowley is our greatest exponent of statistical method in the socio-economic field. It would be hard to find in the whole range of statistical literature any book so closely packed with stimulating thought, and no practitioner who wishes to get beyond the veriest elements of his craft can possibly afford to be without it.

BOOKS RECEIVED.

Encyclopædia Britannica. (London) Encyclopædia Britannica Co., Limited, 125 High Holborn, London.

This consists of the twenty-eight volumes of the standard edition issued in 1911, completed by three new volumes covering the years 1910 to 1926, which have just been prepared under the editorship of Mr. J. L. Garvin. With the addition of an enlarged index volume the whole will form an entirely up-to-date encyclopædia. The three new volumes contain 3,400 pages, with 91 full-page plates, 17 of them in colour, and numerous maps, in addition to several hundred illustrations and diagrams in the text. Bound in cloth, the price is £6 9s 6d a set.

Banking. By Walter Leaf. (London) Williams and Norgate, Limited, 14 Henrietta street. 2s net.

This is the latest addition to the Home University Library of Modern Knowledge. A review of banking, and especially of British banking, from the pen of the chairman of the Westminster Bank, deserves, and will doubtless receive, widespread attention from financial circles and the general public.

To-day and To-morrow. By Henry Ford. In collaboration with Samuel Crowther. (London) William Heinemann, Limited, 20 and 21 Bedford street. 12s 6d net.

This is a continuation of the former volume, "My Life and Work," by the great American industrialist, and we hope to discuss it in a future issue of the *Economist*.

Il Liberismo. By Edoardo Giretti. Tipografia Sociale Editrice, Pinerolo.

A cogent exposition of the subject of Free Trade by a well-known Italian economist.

Health, Wealth, and Population in the Early Days of the Industrial Revolution. By M. C. Buer. (London) George Routledge and Sons, Limited, 68-74 Carter lane. 10s 6d net.

The author is Lecturer in Economics at the University of Reading. A useful addition to economic literature concerning a most important period.

Wage Changes in Various Countries, 1914 to 1925. International Labour Office (League of Nations). P. S. King and Son, Limited. 2s 6d.

A most useful survey of international comparative wage levels. An introductory section, discussing material and methods, is followed by a summary of results, distinguishing skilled and unskilled workers, male and female labour, &c., and an enumeration of wage changes in twenty-nine countries.

Elements of Mathematics. By D. Caradog Jones and G. W. Daniels. (London) Hodder and Stoughton, Limited, Warwick Square. (Liverpool) University Press of Liverpool, Limited. 8s 6d net.

Designed for students whose mathematical training is slender, this book gathers together the elements of mathematics required by the economist and the statistician. Mr Jones is senior lecturer in Social statistics in the University of Liverpool, and Mr Daniels Professor of Commerce and Administration in the University of Manchester.

The Law as to C.I.F. Contracts. By H. Goitein. Second edition. (London) Effingham Wilson, 16 Copthall avenue. 4s net.

A second edition of a book first published two years ago. It is now brought up to date by the incorporation of the results of recent cases.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 12.	October 14.

HOPES of an early settlement, by attrition, to the coal dispute have run high in the Stock Exchange during the past day or two. They served to put a much more cheerful complexion upon Home Railway stocks and upon shares in the iron, coal, and steel list. Business has not been greatly stimulated. It is a general complaint round the House that brokers and jobbers find comparatively little doing, even in those sections where price movements have been so abrupt as to suggest that there must be a lot of trade going on. The Government's offer to holders of short-dated Treasury bonds to exchange these latter into 4½ per cents. of 1934 caused a strengthening of the price of the existing Conversion stocks, because it removed the previous apprehension that there might be a big issue of the latter in the near future. Colonial stocks are weak, in consequence of the underwriters of the latest issued New South Wales 5 per cent. loan being left with 84 per cent. of their obligations. The price of the scrip fell to 1¼ discount. Talk of dearer money, following the developments in the United States, has raised a cautious voice.

In the foreign Government market, one of the features was the prompt closing of the subscription lists on Thursday morning for the new Hamburg Sixes offered at 93½. There continues to be a brisk public demand for foreign bonds yielding anything like 6½ to 7 per cent. The speculative stocks continue to receive attention, Peruvian Corporations being strong, and a gambling demand being noticeable for Russian bonds. Chileans remain heavy, and French issues move within a narrow orbit. Brazilians moved back; Chinese hold their recovery.

The Home Railway market, as already mentioned, enjoyed a spurt, on the expectation of the coal stoppage fizzling out through the process of the men drifting back to work of their own accord. The Argentine railway market was a little disappointed by the declaration of a 2 per cent. dividend on Cordoba Central ordinary stock. Although this came up to the expectations of some of the dealers, it failed to realise the hopes of the optimists, and the price accordingly fell back. Leopoldinas have weakened. The Argentine railway list, apart from Cordobas, holds its ground with tolerable steadiness. A jump in Antofagasta and in Taltals aroused inquiry as to the likelihood of the Chilean Government affording practical assistance to the nitrate industry.

The rubber market is firm. Business begins to look up to some extent, though the manner in which the price of rubber crawls along is not sufficiently exciting to encourage public activity in rubber shares. Laras debenture, offered at 100, rose to 2½ premium. The tea market is better. Not a few of the best-class tea companies are now paying dividends that return rates ranging from 8 to 12 per cent. on the shares at the current quotations, and speculative investors are beginning to recognise this. In the oil market movements are somewhat irregular, with slight recoveries in British Controlled shares. Courtaulds went rather better upon the circulation of the hopes concerning an early termination to the coal dispute, the industrial market as a whole reflecting, with general improvements, the cheerfulness that this inspired. The shipping market is firm, and there has been a recovery amongst insurance shares, upon a little bargain-hunting by those who consider that the fall in prices, produced by the Florida hurricane news, had been overdone. The banking group shows no especial movement.

Tobacco shares went better, though the lively speculation in Godfrey Phillips led to a reaction in the price of the shares, upon announcement of a 10 per cent. interim dividend and the fact that the company is about to take over Abdulla and Co. Carreras have been the most spectacular member of the tobacco market, the price rising very sharply. Sudan Plantations and Hudson's Bays went ahead, Sudans on the expectation of a good final dividend to be declared this month, although the price was ex the interim dividend only last Thursday. Brazilian Tractions turned heavy, after having been up to 126. Distillers' shares are weak, and other brewery issues none too firm, owing to the impression that the brewing industry has reached something like the apex of its prosperity. Advances occurred in newspaper shares, to the accompaniment of a daily increasing crop of rumours. The iron and steel market is better throughout.

Kaffirs have been languid, and the speculation in such shares as Sub Nigels and West Rand Consols is on a lesser scale than it has been recently. De Beers and other diamond shares are strong, in consequence of a promising reference to the outlook just made in the report of the Johannesburg Consolidated Company, whose shares have also gone ahead. The principal business in mines continues to revolve around the tin mines, Malayan shares maintaining their popularity. The carry-over showed that there is a bull account in this department, and each rise in the price of the metal does not appear to produce that vivacity which speculators love to see.

Nigerians are regarded with caution. The Cornish descriptions attract little attention outside their own particular circle of supporters. Some of the Russians are a shade better, but silver shares, Santa Gertrudis especially, went back heavily upon a fall in the price of silver.

NEW ISSUES.

1921	206,136,047	1920	367,549,656	

Treasury Bond Conversion Offer.—This is an offer to holders of 5 per cent. Treasury bonds, due February 1, 1927, of £4 10s per cent. Treasury bonds, 1934, at the rate of £100 £4 14s per cent. Treasury bonds, with a cash payment £1 (payable on completion of conversion) for each £100 nominal of £5 per cent. Treasury bonds, 1927, surrendered. The bonds will be repaid at par in 1934 or in any one of the years 1929 to 1933 inclusive, at the option either of the Treasury or the holder of the bonds. The matter is dealt with more fully under "Notes of the Week."

Swansea Corporation.—This is an issue of £1,000,000 5 per cent. stock, redeemable 1945-52, at £99 10s per cent. Principal and interest is secured on all the estates, rates, revenues, &c., of the corporation. The rateable value is £923,904 (a penny rate producing £3,350), the population is 103,000, the total outstanding debt is £4,411,463, of which £2,030,832 is in respect of reproductive undertakings. Provision has to be made for the redemption of the issue by means of a sinking fund. The proceeds of the present issue will be applied for waterworks, electricity works, small dwellings acquisitions, &c., and for paying off existing loans. This is an excellent trustee security.

State of Hamburg.—This is an issue of £2,000,000 6 per cent. sterling bonds at £93 10s per cent. The State reserves the right to redeem the outstanding portion of the loan in 1931 or thereafter at 102 per cent. An accumulative sinking fund sufficient to redeem at least one half of the loan by maturity is to be applied half-yearly. The bonds will be the direct and unconditional obligation of the State of Hamburg. The State of Hamburg comprises 16,033 square miles, including the City of Hamburg, which is the second largest city in Germany. The State owns properties which are for the most part, it is stated, income-producing, these including the ports and harbours, which are valued at RM 750,000,000. The present total funded and floating debt (other than internal paper mark debt) consists of £854,178 6 per cent. bonds and \$5,000,000 one-year Treasury notes. The revenue and expenditure of the State, in RM, for 1925 were as follows:— Ordinary revenue, 164,736,219; ordinary expenditure, 165,066,745; extraordinary revenue, 1,782,126; extraordinary

COMPANY MEETINGS, &c.

PEARSON AND KNOWLES COAL AND IRON COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The fifty-third ordinary general meeting of the Pearson and Knowles Coal and Iron Company, Limited, was held at the company's offices, Warrington, on the 29th ultimo. Sir Peter Rylands (chairman of the board of directors) presided, and the other directors present were: Mr Henry Harrison, Mr Frank W. Cooper, Mr James Hawson and Mr T. Gerard (director of the collieries and of the associated collieries).

The secretary (Mr A. Brotherton) read the notice and auditor's certificate.

The Chairman: The annual list of shareholders is on the table. The Chairman: The first resolution which I move is that the audited accounts of the Pearson and Knowles Coal and Iron Company, Limited, for the year ended June 30, 1926, now laid on the table and open for inspection, be formally adopted.

Mr Harrison: I beg to second that resolution. The resolution was carried.

The Chairman said: The next resolution is that the report and incorporated accounts of the Pearson and Knowles Coal and Iron Company, Limited, for the year ended June 30, 1926, now laid on the table and open for inspection, be formally adopted.

Before proposing the resolution, the Chairman referred to the death of Mr Gordon H. Fraser and the resignation of Sir Glyn H. West as chairman.

Hitherto the Pearson and Knowles Coal and Iron Company, Rylands Brothers, Limited, and the Partington Steel and Iron Company have been in the hands of three different managing directors, he continued, and while every effort has been made to co-ordinate their activities through a common board of directors and an executive committee, they have worked as three different companies, and the interest of each not completely subordinated to the interest of the whole.

CO-ORDINATION PLAN.

Under the policy which has now been adopted I will retain my position as managing director of Rylands Bros., Limited. I succeed to the position of managing director of the Pearson and Knowles Coal and Iron Company, and as chairman of the whole, with the loyal support of Mr Frank Cooper, which I know will readily be accorded, I will be in a position to co-ordinate the three companies as three departments of one whole.

At this stage I would not desire to make any forecast of results which may be expected. I only hope that when we meet in twelve months' time it will be possible to give a satisfactory account of my stewardship.

The directors cannot view the accounts which they submit to you to-day with satisfaction, but they would ask the shareholders to remember that the two closing months fell into the strike period, during the whole of which time the Partington Steel and Iron Company and the company's collieries were completely closed down, and the operations of Rylands Brothers and the iron department of our own company were seriously affected.

It is difficult to give you an estimate of the loss incurred during those two closing months, but I do not think it would be an exaggeration to say that it must have amounted at least to £30,000-£40,000.

It is perhaps some small consolation that other companies engaged in the same industry are submitting accounts to their shareholders not very dissimilar in the character of their results.

The only other point of importance in the accounts to which I desire to refer is the figure of investments, and the liability in respect of guarantees given in connection with the business of allied companies.

Both those figures are substantial, but both relate primarily to your interest in the Partington Steel and Iron Company. The interest is so large, and the fortunes of the Pearson and Knowles Coal and Iron Company and the Partington Steel and Iron Company so interwoven, that they cannot be regarded other than as one concern. Your directors feel this so strongly that they contemplate submitting, in addition to individual balance-sheets, a combined balance-sheet in future years combining the Partington Company's figures with those of the Pearson and Knowles Company and Rylands Brothers, and perhaps also including the figures of other associated companies.

There are, however, technical difficulties in submitting a combined balance-sheet covering the whole of your interests which will require consideration, and for the present year the directors

decided to present to each of the shareholders a copy of the Partington figures, which the shareholders can read into the figures of the Pearson and Knowles Company.

HEAVY CAPITAL EXPENDITURE.

During the war the Partington Company were pressed by the Government to extend the plant. During the period of control any profits that were enjoyed by the steel trade were largely taken by the Government in the form of taxation, and when the final settlement had to be made with the Government it was necessary to finance the heavy capital expenditure which had been incurred.

The Pearson and Knowles Company holding all the ordinary shares in the Partington Company, it was impossible to raise that finance without the assistance and guarantees of the Pearson and Knowles Company. Financiers naturally regarded the two companies as indistinguishable, and the finances had to be arranged on the security of the whole.

It is for that reason that the guarantees appearing in the accounts of the Pearson and Knowles Company are so large, the fact being that the finance is secured upon the assets of both companies.

In the opinion, therefore, of the directors it is desirable that the position should be made quite clear to the shareholders, and the figures published together, and so more strictly in accordance with the actual facts.

With regard to the other investments I need say little. Since we last met Rylands Bros. have disposed of their interest in the wire rope trade to British Ropes, Limited, a new combination, comprising most of the leading rope makers in the country. At the same time, Rylands Bros. have sold to British Ropes their interest in the Vancouver Rope Company, and they have also sold their interest in Rylands Bros. (Australia) to the Broken Hill Proprietary Company.

The result of these transactions leaves a reserve in Rylands Bros. account representing a capital profit on investments of a substantial character.

Returning to the question of the Partington Company, the steel trade is now left with an enormous amount of redundant plant standing in their books at prices which look high compared with present-day values, and by reason of the increased competition practically all the steel works in the country are working at far

below their capacity and at a correspondingly increased cost of manufacture and reduction in efficiency.

STEEL TRADE'S INTOLERABLE BURDEN.

To make matters worse, the increase in plant has largely been financed by debentures or other fixed-interest bearing debt, and I do not think it an exaggeration to say that, except in a few instances, the steel trade is staggering under an intolerable burden.

Last month the imports of steel rose to the unprecedented height of 315,000 tons, importations from countries enjoying no advantage whatever in technical efficiency for production.

Many of our plants represent the very last word in technical practice. Free Trade may be justified in allowing the free importation of goods that can be produced with greater efficiency in other countries. There may be much to be said from a world's point of view that goods should be produced where they can be produced more efficiently, but I am at a loss to appreciate an argument which permits an efficient industry to be dumped out of existence by artificially assisted competition from other countries where the conditions for production are in no way more favourable.

SIGNS OF IMPROVEMENT.

I am happy to say that there are slight indications of improvement. The stabilisation of the currency in France and Belgium, if it is in fact achieved, must be accompanied by gradually rising prices in terms of British currency, while there is an indication that the present level of values is far from satisfactory to the Continental makers.

In the meantime the excess of production, unless controlled, must weigh heavily upon the industry.

I would like to see some international arrangement calculated to adjust the capacity to produce more accurately to the capacity of the world to consume.

Looking back upon the past, it may be that if we could set the clock back, and have been able to foresee the future when we were in negotiation with the Government for the extension of the plant, we would have flatly refused to have entertained the Government's proposals. I feel, however, that the directors cannot be fairly blamed for lack of foresight. They were not alone in their confident hope of the future, and in the stability of the industry—a hope which was widely shared throughout the steel trade, and, indeed, in other industries as well, and it only remains for us to struggle with courage with the great depression with which we are at present faced, and trust that the small gleam of promise which I have indicated may develop and reveal brighter days in store.

The adoption of the accounts was seconded by Mr. Harrison, and carried unanimously.

A brief discussion followed, during which several questions affecting the company were asked and answered by the chairman. Messrs F. W. Cooper, J. Hawson and T. Gerard were re-elected directors.

CLAYTON WAGONS, LIMITED.

IMPROVED RESULTS, DESPITE YEAR'S DIFFICULTIES.

The sixth ordinary general meeting of Clayton Wagons, Limited, was held, on the 28th ultimo, at Winchester House, Old Broad Street, London, Mr H. Langham Reed (chairman of the company) presiding.

The secretary (Mr F. G. Williams) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The important item, and the one that will appeal to you most, is the profit and loss account, which shows a trading profit of £20,722 11s 1d; from this sum must be deducted bank interest amounting to £3,966 7s, leaving £16,756 4s 1d, which compares with a credit balance of £727 19s 4d for the previous year. The board have decided to set aside the sum of £14,177 7s for depreciation, an item that did not appear in the previous year's accounts, as it was included in the amount by which the value of the properties was written down when the reorganisation of the company's capital took place in October, 1925. The depreciation provided for is, in the opinion of the board, ample at the present stage. Further, it has been decided to write off the total cost of the reorganisation of the capital, amounting to £1,059 6s 7d. After providing for these three items, there is a credit balance of £1,519 10s 6d, which it is proposed to carry forward.

From the progress of the business up to May, 1926, the board had every hope of being able to put more satisfactory results before you. Trade generally showed a tendency to revive from the depression that was crippling all branches of the heavy industries. The railway companies drew up extensive programmes for the purchase of new rolling stock, and motor-car manufacturers issued large demands for drop forgings and stampings, and we secured our fair share of the orders. Unfortunately, however, the declaration of the general strike in May brought about a cessation of

SECURITY FIRST

ROYAL INSURANCE COMPANY, LIMITED

6 HEAD OFFICES: LIVERPOOL AND LONDON.

these activities, and the continuance of the coal strike once more plunged industry into a state of uncertainty. This strike especially has thrown a heavy extra expenditure on to the debit side of the accounts. Prior to its outbreak we were paying an average of 21s 6d per ton for suitable English forge coal, whereas since the strike we have been paying from 50s to 60s per ton for Silesian coal of inferior quality. So far we have been able to carry on in these adverse circumstances, but, as the strike continues, new difficulties are continually arising, and we may very shortly be unable to obtain important components of our manufactures, such as steel sections, unless we purchase them abroad. Our stocks of British steel sections are now being exhausted, which we fear may seriously curtail our output in the rolling stock section of our business in the immediate future, unless the coal strike should happily be settled quickly.

FORGE WELL OCCUPIED.

During the year under review we were fairly busy in all departments until the outbreak of the strike. In the forge we have been very well occupied. In specialising in forgings for the motor trade, which is now enjoying increasing prosperity, we have made many new and valuable customers, and we believe that we have established a permanent department of the business that will show satisfactory results in the future.

In addition to the ordinary run of drop forgings, we have secured the manufacture of, and introduced, two specialities in the motor trade that are being very generally adopted. The first is the Rubury front wheel brake, and the second the "Dewandre" Vacuum Servo brake, which has met with immediate and pronounced success. This Servo apparatus has been standardised on several well-known makes of British cars for next year's models, and orders and inquiries are being received in increasing quantities. Both these specialities are becoming a very important side line in the company's business, and have been of material help in keeping our forge and machine shops in full operation.

In the railway rolling stock department we have been fairly busy, but prices have remained on a low level and foreign competition has been severe. We have received substantial orders for carriages and wagons from the home railways and the South African Government, while others which we had a reasonable hope of securing were, in view of the uncertainty of delivery as a result of the strike, placed on the Continent. The situation in the coal-fields has also materially affected the demand for wagons, inquiries for which have been few, and those ordered have been placed at unsatisfactory prices.

CURRENT YEAR'S PROSPECTS.

With regard to the present year it is, of course, impossible to prophesy. The whole situation remains entirely dominated by the coal strike, and I think he would be a rash man who, in the present state of affairs, would be prepared to say how long these intolerable conditions are likely to prevail. We have a fairly full order book, and but for the strike we all feel that the company is making solid and continuous progress, but with the difficulties of operating the works increasing daily it is very inadvisable to forecast the immediate future.

The report and accounts were unanimously adopted.

THE ANGLO-SIAM CORPORATION, LIMITED.

SUCCESSFUL YEAR—INCREASED BONUS.

STRONG AND LIQUID POSITION.

The twenty-ninth annual ordinary general meeting of the Anglo-Siam Corporation, Limited, was held at 5 St Helen's place, London, E.C. 4, on Tuesday, September 28th, Mr J. M. Ryrie, the chairman of the corporation, presiding.

Before dealing with the balance-sheet and profit and loss account, the Chairman referred to the activities of the year under review, and pointed out that, although the profits were slightly higher than those of the previous year, enabling the directors to recommend an increase of 2½ per cent. on the bonus, the corporation had suffered at more than one of its branches owing to the steady decline in various commodity prices, while the unfortunate condition of affairs in China had had a depressing effect on business generally at Bangkok.

IMPROVED PRICES OF TEAK AND RICE.

On the other hand, the corporation had benefited from a moderate rise in the prices of teak and rice, while the increased

shipments of rice to Japan and Java in particular had counter-balanced to some extent the falling off in the demand from China.

Profits from the sales of teak were on the whole satisfactory, and as a matter of interest the Chairman mentioned that a new and up-to-date sawmill was in course of erection at Bangkok.

The results of the Singapore business constituted a record, but it was disappointing that only comparatively poor profits had been derived from the Indian branches.

THE ACCOUNTS.

Referring to the accounts, the Chairman remarked that the balance-sheet indicated a strong and liquid position, particularly in view of the further addition to the reserve for contingencies, although the reduction in the total figures reflected a smaller turnover in some directions.

Mr Ryrie then pointed out that, although the directors were recommending an increase of 2½ per cent. in the bonus, he would like to make it clear that this is not to be taken as an indication that a similar recommendation will be made in future years.

IMPROVED FINANCIAL POSITION OF SIAM.

After paying a tribute to the staff for their devotion to the interests of the corporation, the Chairman referred to the new treaties with Siam, and dealt with the improved financial position of that country as disclosed in the report on the Budget for 1926-7, and which, as a result of economies and without any fresh taxation, promises to result in a surplus.

In Mr Ryrie's opinion the conclusions arrived at by the Royal Commission on Indian Currency and Finance are not only in the best interests of India, but are calculated to assist international trade, whilst, he said, the recommendation to stabilise the rupee at 1s 6d gold on the basis of a gold bullion standard appeared to him sound.

OUTLOOK FOR THE CURRENT YEAR.

Although the outlook for the current year was still uncertain, good deliveries of timber at Bangkok were assured, and with a satisfactory monsoon in India, and in spite of less favourable trading conditions at Singapore, Mr Ryrie said he was hopeful that the results of the year's operations will be satisfactory.

The directors' report and statement of accounts for the year ended March 31, 1926, were adopted, and final dividends of 3½ per cent. on the preference shares and 12½ per cent. together with a bonus of 12½ per cent. on the ordinary shares were declared, making a total distribution of 32½ per cent., less tax, on the ordinary shares for the year.

Mr Henry Bateson was re-elected a director and Messrs Turquand, Youngs and Co. were appointed auditors for the current year.

MONTE VIDEO WATER WORKS COMPANY, LIMITED.

URGENCY OF THE NEW CONTRACT.

The forty-seventh ordinary general meeting of the Monte Video Water Works Company, Limited, was held, on the 28th ultimo, at the offices, 52 Moorgate, London, Mr James Anderson (chairman of the company) presiding.

The secretary (Mr W. A. Waite) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and statement of accounts, said: In the circular of March 31st last, the stockholders were informed that the contract signed between the Uruguayan Minister of Public Works and the company's representative under date of October 7th last, providing for extensive additions to the company's works and plant was then under consideration of the Chamber of Deputies, and it was hoped that a favourable decision would be arrived at shortly. The directors, in the expectation that a decision would not be unduly delayed, considered it desirable to defer convening our general meeting, so that when it was held we should be in a position to give the stockholders full particulars of the contract as passed, and also inform them as to the proposed method of raising the new capital required. Unfortunately, our anticipation of an early decision has not been fulfilled.

Although the contract was the result of an agreement arrived at between the company and a Government Commission after prolonged study, its various clauses have been the subject of protracted debates in the House of Deputies, the ground traversed by the Commission being again gone over step by step by the members of the House of Deputies. This determination on the part of the House to go very fully into the merits of a contract affecting the public interest is, of course, very much to their credit, and it would be quite welcome to us also except in this respect, that the delay involved may result in serious inconvenience to the public through a shortage of water next summer.

The accounts show satisfactory results. The gross receipts show an increase of £25,069, whilst the increase in the working expenses

only amounted to £4,417. The net receipts are £20,651 in excess of those of last year—an increase of about 12 per cent. These improved results are in the main due to the extension of the company's business.

Nearly three years ago, when the services numbered only 45,650, we informed the Government that in the opinion of our engineers the plant was fully loaded, having regard to the margin of safety usually regarded as imperative in works of such vital necessity as waterworks. The authorities were not satisfied that the company's allegations as to the supply capacity of the present plant were well founded, and instructed their own engineer to investigate and report. That official reported that in his opinion the company's plant could supply other 7,300 services, whereupon the Government instructed the company to take on further applications for services up to that figure, the Board of Health remaining with the technical responsibility for such increase. Although this assumption of responsibility by the Board of Health relieves us of responsibility, we cannot but feel considerable anxiety in the matter. Up till now our plant has stood the extra strain very well, and the supply to the city has been maintained without interruption. At the same time, we do not like working with a low margin of safety, and it will be a great relief to us when the new pumping main is laid down and at work.

In this specially good year, after paying our usual dividend of 8 per cent., we are able to appropriate £40,000 to the reserve fund, bringing it up to £370,000, to place £17,000 to the renewals fund, and to add £8,697 to the carry forward, which now reaches the substantial sum of £90,641. These results you will, I hope, find satisfactory. The profits this year, however, cannot be regarded as altogether normal.

The report and accounts were unanimously adopted.

ANGLO-CANADIAN EXPLORERS, LIMITED.

IMPORTANT DEVELOPMENTS IN CANADA.

The fourth ordinary general meeting of the Anglo-Canadian Explorers, Limited, was held, on the 24th ultimo, at 6 Queen street place, London, the Hon. Lionel Holland (chairman of the company) presiding.

The secretary (Mr W. L. Bayley, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that it was proposed to increase the capital to £325,000 by creating 25,000 £1 shares. The subscription of 20,000 shares at par had been guaranteed by two of the largest shareholders, but all shareholders would have an opportunity to subscribe. The purpose was to complete and consolidate the most important of their mining interests in Canada—holdings in valuable properties which had been amalgamated in a company registered in Manitoba, the Central Manitoba Mines, Limited. The year had been marked by developments of great consequence and of favourable augury. It had been the purpose, if developments warranted it, gradually to obtain a still more substantial interest in the Central Manitoba mining area of 560 acres, covering about 7,000 feet along the strike of the Wad lode. Mr Thomas Pryor, in a recent report on the property, wrote: "The great strength of the lode, coupled with the ore shoots already disclosed by trenching across the exposures on surface; make this mine a very promising proposition, warranting vigorous exploration to bring it to a producing stage as soon as possible."

Already down to the 125 feet level well over 100,000 tons of 10 dwt ore had been proved, and this tonnage was being rapidly

increased as the level continued from the Eclipse shaft. Some 1,600 feet west work from the Growler shaft showed the grade of the ore to be excellent. Of the territories adjoining the Kitchener group the west group of ten claims was chiefly valuable on account of the likelihood of the Wad lode entering it. The Hope or Eastern group had very real importance, and the achievement of the year was the union of these neighbouring properties into one large undertaking. Central Manitoba Mines, Limited, had now a capital of \$4,500,000 of which \$3,310,000 was issued, Anglo-Canadian Explorers holding \$1,500,000—equal at par to their whole nominal capital. Interesting developments during the current year were anticipated.

The company's other holdings and interests were enumerated in the annual report of Mr Arthur D. Miles, issued with the directors' report.

The report and accounts were adopted and the proposed increase of capital was approved.

HOVIS, LIMITED.

GOOD RESULTS—INCREASED PROFITS.

The ordinary general meeting of Hovis, Limited, was held at Caxton Hall, Westminster, London, on the 28th ultimo, Mr A. H. Dence, the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said that at the time of the general strike the milling trade was included as an important part of the scheme for holding up the nation's food supplies. The company's working men at all the town mills left their work, but the remaining staff—managers, sub-managers, mill managers, clerks, travellers, agents—turned to with enthusiasm. The Hovis mills were kept running, the transport was continued, and orders were executed as received. Indeed, at one period during the crisis a record for daily deliveries was set up. The divisible net profits of the year exceeded those of the previous year by £6,700. The debenture interest and preference dividends had been paid, together with 10 per cent. on the ordinary shares, and they proposed to pay a bonus in December; £20,000 had again been placed to reserve account and £5,000 to a benevolent fund; and the carry forward would amount to £13,694, against £16,694 last year.

SATISFACTORY EXPANSION OF BUSINESS.

The business continued to develop and expand in the most healthy manner. They knew that Hovis bread stood pre-eminent in quality, value, and food content, and having that faith themselves, they were able to press its virtues upon the public with enthusiasm and confidence. There was still plenty of scope for the enterprise. In Great Britain alone 95 per cent. of the sales of bread were white, the remaining 5 per cent. being Hovis, brown bread, and other varieties. The year had seen further extension of the properties. Motor and van-building work had been acquired at Nottingham, Catford, and Southend. The mills were well equipped with the most up-to-date machinery, they were all kept spotlessly clean, and they ran in pleasant rivalry one with the other, which made for increased efficiency and economy. At Trafford Park a new 800 h.p. engine had been installed for driving the mill, and in spite of the coal strike it had been kept running. The country mills at Haverhill, Hedingham, Newbury, and Andover had all had a successful year. The Lincoln mill was a very fine property, and since it was taken over Hovis sales had shown a very satisfactory increase.

Mr T. C. Fitton (managing director) seconded the motion, which was unanimously adopted.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £45,000,000 in Treasury Bills were opened on Oct. 1, 1926, and the total amount applied for was £55,050,000. For bills at 3 months, dated Monday to Friday, £98 16s 2d, and above in full; Saturday, £98 16s 5d, about 48 per cent. and above in full. The amounts allotted were in bills at 3 months, £45,000,000.

Date.	Amount Offered.	Amount Applied For.	Treasury Bills at 3 Months. Average Rate.	4% Treasury Bonds. Average Price.

MINING OUTPUT STATISTICS FOR AUGUST, 1926.

BROKEN HILL, BLOCK 14.—During the four weeks ended July 31st 3,498 tons of this company's ore were treated at the mill of the Broken Hill Proprietary Company, and produced 693 tons of lead concentrates and 455 tons of zinc concentrates. **MOUNT LYELL.**—During the four-weekly period ended Sept. 13th the mill treated 9,191 tons of ore, producing 2,975 tons of concentrates. **TRANSVAAL (Working Profit).**—The total estimated working profit of the gold mines of the Transvaal for the month of August, 1926, amounted to:—Witwatersrand, £1,084,070; Outside districts, £19,331 total, £1,103,401. The estimated working profit in July, 1926, was:—Witwatersrand, £1,140,718; Outside districts, £17,675—total, £1,158,393. **SUPRIMA CORPORATION, LIMITED.**—During the four weeks ended Sept. 18, 1926, 9,946 tons of Central and Junction Mines ore, together with 1,176 tons of slimes, were milled at the Central Mine, producing 1,851 tons of lead concentrates

(including 142 tons from the delecting plant), which assayed 43 ozs silver, 62 per cent. lead; together with 2,115 tons of zinc concentrate, assaying 9 ozs silver, 6 per cent. lead, 49 per cent. zinc per ton; and 598 tons of special slimes, assaying 10 ozs silver, 17 per cent. lead, and 9 per cent. zinc per ton.

Capital Subscribed : : : Y45,000,000
Capital Paid Up : : : Y39,375,000

Head Office - - - - - TAIPEH, FORMOSA.
London Office - 25 OLD BROAD STREET, E.C.2

BRANCHES:
Amoy, Batavia, Bombay, Calcutta, Canton, Foochow, Hankow, Hongkong, Keelung, Kobe, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tientsin, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

Reports and Notices.

The registered offices of the Kensington and Knightsbridge Electric Lighting Co., Limited, is now Pelham street, London, S.W. 7. Telephone, Kensington 7041.

In consequence of the rebuilding of the premises, 1 Gresham buildings, E.C. 2, Mr J. T. Segrue states that his address and that of the City News Agency, Limited, on and after September 27, 1926, will be 9 Queen Victoria street, E.C. 4. Telephones: City, 8470 and 8444.

We are informed that, owing to rebuilding of 1, Gresham buildings, W. H. G. Catherall (late R. A. Knight and Co.), advertising contractor, has removed to 9 Queen Victoria street, E.C. 4. Telephone, City 8470.

RUBBER, &c.

BAJOE KIDOEL RUBBER AND PRODUCE.—The report for year ended March 31, 1926, shows that the rubber harvested was 1,403,023 lbs, against 1,010,070 lbs in preceding year. The average net price realised was 2s 0.66d per lb, against 1s 4.39d per lb. Cost of production was 10.65d per lb, against 10.6 per lb. Profit amounted to £111,836, against £63,414 in preceding year. The dividend is 45 per cent. for the year, against 25 per cent. for preceding year. The sum of £10,000 is again put to reserve. The carry forward is increased from £20,978 to £23,392.

MANBAU (F.M.S.) RUBBER.—The net profit for the year ended June 1926 amounted to £34,701, against £12,447 for 1924-25. The total dividend for the year on the participating preference and on the ordinary shares is 35 per cent., against 15 per cent. After writing off capital expenditure of £1,821, and allowing £1,000 for depreciation, and placing £3,000 to reserve, the balance to be carried forward is £3,610, subject to directors' additional remuneration. The crop was 573,000 lbs, against 300,871 lbs.

STRAITS PLANTATIONS, LIMITED.—The number of coconuts harvested for the year ended June 30, 1926, was 7,338,146, which produced 1,716½ tons of copra, costing £10 6s 3d per ton, f.o.b. port of shipment. The average net price realised for the copra, shipped weight, after deducting freight, insurance, landing and all sale charges, was £23 3s 4d per ton. The net profit was £21,897, against £20,651 in preceding year. The ordinary dividend is again 15 per cent. for the year. The sum of £7,000 is transferred to reserve account, against £1,000. The carry forward is £5,795.

SUNGKAI-CHUMOR ESTATES.—The report for year ended June 30, 1926, reveals a net profit of £44,861, as compared with £17,218 for 1924-25. It is proposed to pay a final dividend of 15 per cent., making 40 per cent. for the year (against 17½ per cent.), and to transfer £7,500 to reserve. After deducting £1,000 for directors' extra remuneration, a balance of £21,152 remains to be carried forward, against £24,732 brought in. The crop of rubber accounted for is 657,851 lbs, against 388,205 lbs. Costs were equal to 7.69d per lb, against 9.72d per lb, and the average net sale price was 1s 11.94d. per lb, against 1s 7.33d.

MISCELLANEOUS.

BEECHAM ESTATES AND PILLS.—The profits for year ended June 30, 1926, amount to £271,141, against £301,489 for period from May 22, 1924, to June 30, 1925. The ordinary dividend is again 10 per cent. The sum of £27,500 is put to a general reserve, and £3,944 is placed to a special reserve fund, making a total special reserve of £27,620. Cash is now at £93,954, against £83,815. Debtors and stocks amount to £215,787, against £107,715. Goodwill, formulae, and trade marks amount to £1,226,344.

GERMAN BONDHOLDERS' PROTECTION ASSOCIATION.—Lt. Col. Ivor M. Rosenbaum has been appointed chairman of an association for the protection of German bondholders, whose offices are c/o Lawson, Son and Co., 3 London Wall buildings, London, E.C. 2. All German bondholders are requested to forward full particulars and face value of their holdings to the chairman at this address.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

A spell of fine weather has enabled farmers to clear the ground and make a good start on ploughing for autumn cultivation. Threshings are proceeding actively, but returns are by no means satisfactory in many districts, as the percentage of sound milling wheat is below expectations. The general tone of the market, however, ruled steady, and all best samples found a ready sale. Imported descriptions were in fair request for spot and near at hand lots at full rates owing to firm c.i.f. offers. In the floating and forward cargo section buyers for the most part continue to hold off, but offers are put forward rather sparingly owing to continued scarcity and dearth of freightage from most exporting countries, consequently rates were fully maintained. A steamer of white Pacific October 1st-15th shipment sold to the Continent at 43s 6d. All feeding stuffs moved off slowly, with values occasionally the turn in buyers' favour. Steamers of Plate maize arrived sold 29s 4½d, January shipment 29s 9d per 480 lbs, and Azoff/Black Sea barley October to Bristol Channel 29s 6d per 400 lbs, all c.i.f. terms. Wheat firm. No. 1 Northern Manitoba quoted 59s 6d, No. 2 ditto 58s 3d, No. 3 56s 9d. No. 2 hard winter 57s 3d, all ex-ship, choice white Karachi landed 58s, all per 400 lbs. English new 11s 4d to 11s 8d per 112 lbs. Flour quiet. London standard grade 47s, town whites 48s, patents 49s to 50s per

sack delivered in the Home Counties, with 6s to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 45s to 47s 6d, Minneapolis 45s to 47s; Australia 43s to 43s 6d per 280 lbs ex-store. Maize maintained. Plate landed 31s 6d to 31s 9d, ditto ex-ship 30s to 30s 3d, Bessarabian landed 34s 9d per 480 lbs. Barley quiet, but feeding sorts steadier. Californian 34s 6d to 43s, ditto Chevalier 50s, Chilian Chevalier 52s to 62s, ditto brewing 35s 6d to 40s, Australian Chevalier 46s to 48s ex-store, Smyrna 35s to 48s ex-ship per 448 lbs, No. 3 Canadian Western ex-ship 31s 6d, Persian ex-ship 29s, Russian landed 31s 6d per 400 lbs. English new 8s to 17s per 112 lbs. Oats steady, quiet. La Plata landed new 23s 6d, ditto ex-ship 22s. No. 2 Canadian Western landed 30s, No. 3 28s 6d, No. 2 Canadian feed landed 26s, Chilian Tawny landed 24s, American 38 lbs landed 24s 9d, ditto 36 lbs 24s 6d, mixed feed landed 20s 6d per 320 lbs. English new 8s 2d to 9s per 112 lbs. Millers' offals steady. Broad bran 6s 9d, middlings 7s 9d, fine ditto 9s 6d, bags included, ex-mill, feed oatmeal 7s 9d, light oats 6s 9d, ground oats 12s per cwt free on rail. Oatmeal in fair demand at easier prices. London-made flake 17s, rolled oats 16s, medium also fine cut 16s, coarse also medium pinhead 16s ex-mill per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1926-27, 1925-26, 1924-25, 1923-24:—

	1926-27	1925-26	1924-25	1923-24
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to September 25	372,154	442,262	259,678	452,342
4 weeks to September 25	1,341,162	1,539,698	650,000	1,652,316
Average price of English wheat per cwt.	s d	s d	s d	s d

IRON AND STEEL.

The following has been extracted from the weekly report of the London Iron and Steel Exchange:—The position is almost unchanged from that which has existed for the past few weeks, excepting that there is a disposition apparent in all directions to withhold important commitments until the coal dispute is settled. The actual amount of business passing has diminished. This is particularly noticeable in the case of Continental steel material, as not only has the advance in the quotations of the Continental steel-makers checked business, but there is little inclination on the part of buyers to purchase at current rates for forward delivery. The production of British pig-iron is still insignificant, and the supplies of Continental iron are by no means large. Continental quotations for semi-finished steel material continue to advance, and the difficulties of doing business have been increased by the wide variation in the prices quoted. Many of the Continental steel works are behindhand with deliveries to this country, and as a consequence production at several of the British finishing works has been hindered.

Our Middlesbrough correspondent's report, dated September 30th, is as follows:—Pig-iron.—Until the coal strike is settled there is not likely to be any change in the iron and steel position in this district. There are no stocks in makers' works, and the production of the few furnaces in blast has already been sold up to the end of October. Small consumers are able to obtain truck loads locally, for which the price is now quoted at 102s 6d per ton for Cleveland No. 3 G.M.B. and 83s 6d for East Coast mixed numbers hematite f.o.t. makers' works. Manufactured Iron and Steel.—One local works are working part of their plant on imported semi-manufactured material, and other works making sheets are still going, but until the fuel supply can be assured, the ordinary output cannot be restarted. Quotations are nominal as follows:—Steel ship plates, £8; steel ship angles, £7 10s; iron bars, £11 15s; steel rails, £8 10. Iron Ore.—There is no business whatever; one cargo of Mediterranean ore is now being discharged under exceptional circumstances.

Our Sheffield correspondent writes:—The new restrictions on the tonnage of fuel supplied to industry are not likely to cause much inconvenience in this district, although they may affect the lighter and finished branches to some extent. In the heavy department the tendency is to curtail operations. The effect is seen in an increase of unemployment this week. The position and outlook of the large concerns producing raw and semi iron and steel is rapidly becoming critical. A good deal of work is still being done in the tool branches, and there is a seasonal spurt in cutlery, plate and household hardware. The building trade continues brisk.

Our Glasgow correspondent writes:—Pig-iron and heavy steel plants are still idle. The imported coal used by re-rollers and sheet makers being unsuitable, both in quality and in price, it will not be possible to do anything at these works until the supplies of local fuel are normal. Pig-iron is very scarce and dear, and foundries are only purchasing from the small available stocks when absolutely compelled. Prices of all cast iron manufactures have been advanced in consequence of the increase in costs. Ship-builders and structural engineers are in many cases practically at a standstill for want of manufactured steel. A certain amount of sectional material is coming in from the Continent, but until local supplies can be obtained many important contracts are hung up. A contract for a new coasting steamer for the Clyde Shipping Company, Limited, has been received by Messrs. D. and W. Henderson and Co., Limited, of Glasgow. Several other important orders are pending, and the outlook generally for all branches of trade, as soon as the strike is ended, is encouraging. Black and galvanised sheets are in steady demand, and makers are fulfilling orders in strict rotation, being in some cases booked up for the remainder of the year.

Our Cardiff correspondent writes:—The fear of a tin famine is causing anxiety to steel and tinplate makers, and another difficulty is the high price of foreign coal. Approximately 50 per cent. of the tin works are operating at present, but the high costs of production are threatening a suspension of work at some of the mills. Current prices of tinplates have been ruling up to 22s 6d to 23s per box for prompt shipment, but for October delivery quotations are from 1s to 1s 3d lower. There has been a slight increase in the tinplate supplies received at the dock warehouses, and at the beginning of the week the stocks totalled 54,307 boxes, as against 60,744 boxes the previous week. Steel bars are unchanged at £86 5s, as compared with £6 per ton for foreign bars. Galvanised sheets are also unaltered at £16 10s to £16 15s per ton.

OTHER METALS.

TIN.—The market developed renewed strength during the early part of the week, due to stimulating advices from America and the East, together with lighter weekly stocks, so that holders for the most part adopted reserved measures. A reaction occurred later, however, under realisations, and most of the advance was lost, but closing again strong and in demand. Standard cash sold at £307 10s-£315 and £308 5s to £315, three months £300-£304 5s and £299 10s. Sales in the East were reported at £307 5s to £311 to £309 and £304.

COPPER.—In fair request and values registered a slight improvement, with dealings chiefly confined to cash and near dates. Standard cash changed hands at £58 5s-£58 11s 3d and £58 6s 3d, three months £59 to £59 5s and £59 2s 6d. LEAD.—Steady and in better demand, but closed easier. Good, soft foreign pig, October, sold £31 12s 6d-£31 13s 9d-£31 8s 9d,

November £31 11s 3d to £31 7s 6d, December £31 12s 6d-£31 15s-£31 6s 3d, January £31 8s 9d-£31 5s per ton. SPLITTER generally quiet. October sold £34 12s 6d-£34 11s 3d, November £34 11s 3d, December £34 7s 6d-£34 11s 3d and £34 10s, January £34 7s 6d-£34 10s and £34 8s 9d ton. ANTIMONY quiet. English special brands £74 10s-£75, foreign spot £63 to £63 10s ton. ALUMINIUM dull. Home delivery £107, export £112 ton. QUICKSILVER maintained. Spot £15 17s 6d per bottle. WOLFRAM quiet at 14s to 14s 3d per unit c.i.f. TIN PLATES firm. I.C. Coke prompt delivery 22s, and forward 20s 9d per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, September 30, 1926.

The demand for spot cotton has been fair during this week, sales of American being about half the total quantity. Prices have been fairly steady since the issue of the Bureau report, but quotations are about some 35 points lower. During the week it was announced that the Federation of Master Spinners had decided to curtail production still further, and that mills using American cotton would work only one week in three. Spot sales for the week 24th to 30th instant inclusive were 37,000 bales. Of these 18,220 were American, 2,250 Brazil, 7,500 Peru, 3,420 Egypt, 3,860 African, 900 East Indian, and 850 sundries. Imports for the same period were 45,186 bales. These include 30,861 American, 142 Brazilian, 10,428 Peruvian, 274 Egyptian, 3,314 African, and 167 sundries. Quotations to-day are:—American middling, 8.09d; Egyptian Sakel, 17.00d; uppers, 12.10d; Brazilian fair, 8.34d; Peruvian G.F. mod-rough, 10.00d; smooth, 9.34d; Tinnivelly F.G.F., 7.55d; East African G.F., 9.75d; West African middling, 8.04d.

MANCHESTER, September 30, 1926.

Owing to continued uncertainty with regard to values the market has again presented an unsettled appearance. The opinion is gaining ground, however, that prices are now on an attractive level for freer operations. Some expansion in cloth inquiry has been experienced. Although trading has not been important, a larger turnover has occurred in light fabrics, especially dhooties for India, with a few more sales in grey shirtings. Unsatisfactory advices have been received from China, the auction sales in Shanghai being still suspended. Fine goods have been purchased in moderate quantities for the Continent and the United States. Quotations in American yarns towards the close of the week have been firmer on the decision to increase short time in the mills, and some spinners have met with an improved demand, especially in the finer counts. Operations in Egyptian yarns remain irregular, and in most quarters there is distrust of current rates.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—There is a general belief that home trade will revive when the coal dispute is settled, but this expectation is not in itself sufficient to induce spinners and manufacturers to look ahead and buy against possible requirements. The whole tendency throughout the industry is to work on hand-to-mouth lines, and not even the strength of the raw material market at the present time encourages anything in the nature of speculative buying. The turnover in both tops and yarns is disappointing, and the lack of new business in piece-goods is causing a good deal of uneasiness in manufacturing circles. The real fact is that wool, both in the primary markets and in London, has been advanced in price purely on account of the keenness of the Continental and Japanese demand, and a level has been reached at which it is impossible for home trade users to compete. There are indications that business could be done at the old level, but it is certain that present-day conditions in the consuming centres of this country do not warrant any higher prices. In these circumstances, the best that can be said of this market is that all quotations are very firm, but prices obtainable are below replacement costs. Increased difficulty is being experienced in keeping machinery employed. There is some demand for crossbred yarns for Germany, and the improved conditions in that country hold out hope of a steady expansion in demand. The piece-goods trade is dull, and competition from imported goods is again becoming acute.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The sales have been continued under favourable conditions. Wool has been in good demand, and the same buying interests have been in evidence as during the first two weeks of the auctions. The selection of wools has also been a very creditable one, some good new clips being catalogued from Queensland and equally acceptable wools from New South Wales and other States. Offerings of New Zealand crossbreds have also been large and various, meeting with a ready response on the part of buyers. It is too much to expect higher prices; in fact, we report prices as steady and firm. Here and there less desirable wools have been picked up at a fraction under the extreme rates of the series, but all good wools showing quality and character have continued to sell at full recent rates. The whole market is encouraging when viewed from a seller's standpoint, and wool is selling in Coleman Street at a higher level than can be made for tops in consuming markets. That France and Germany continue to buy on a large scale shows that extraordinary requirements must exist, and no doubt the Continental buyers are purchasing to tide them over a fairly long interval until supplies from overseas become adequate. We think that the policy of sellers should be to meet the market, and so get rid of all old stock.

Last Monday saw the opening of the new season's sales in Melbourne, where values appear to be on about the same parity as at Sydney. We should say that Adelaide was greatly below the clean costs cabled from Melbourne, but even Adelaide proved to be a very good market, the various marks cabled by Elder, Smith and Co., Limited, providing the trade with some interesting and instructive information. Bradford topmakers purchased fully half the offerings. The clip is spoken of as being better than the majority expected. Good warp 64's are going to cost out of Adelaide 4s 2d, out of Melbourne 4s 3d, and fully that price out of Sydney. Ordinary 64's tops are going to cost about 2d less, and to-day good average 64's tops can be bought in Bradford at 4s to 4s 1d. Cables to hand this week from South Africa show that the market there is inclined to be a little easier. Still, prices in South Africa are distinctly above those ruling in Australia, and why they should be so is difficult to understand. It cannot be long before all selling centres at the Cape must fall into line with those in Australia, Durban being the nearest to-day.

THE JUTE TRADE.

DUNDEE, September 30.

Since the receipt of the forecast figures last week prices of raw jute have fluctuated, but at the moment a steadier tendency is in evidence. The official statement by the Director of Agriculture for Bengal simply confirms the figures of the district returns, estimating a crop of 10,888,600 bales from an area of 3,630,000 acres. No comments are made regarding reported damage to the crop by insects and bad weather. A fair business was done at Dundee on Friday last, but since then only a few small sales have been concluded. The value of first marks actuals, which this season are not very readily offered owing to scarcity of good

THROUGHOUT THE FAR EAST, AND IN NORTH AMERICA, AUSTRALIA AND NEW ZEALAND.

quality arriving from Calcutta, has ranged from £34 to £36, according to mark. Lightnings have shown a decided drop in value this week, buyers being able to purchase at £2 less than the opening rates. Good marks are offered at £30 10s for October shipment, while Daisee is also lower at £28 10s for good marks of assortment, October shipment. There has been extremely little doing in the yarn section, and buyers are not even offering to do business at 3s 4d for common 8 lb cops and 3s 5d for 8 lb spools. Jute cloth business still rules quiet. Manufacturers are quoting 4½d for 10½ oz 40 ins and 3½d for 8 oz, and a buyer with an order has the possibility of placing same at a little less, especially for delivery some time forward. A fair business has been transacted in Calcutta goods on spot here, and up to 30s 3d has been done for 10 oz 40 ins, and 26s for 8 oz. The spot supply is now very limited, and sellers are scarce.

CHEMICALS AND FERTILISERS.

The chemical market shows a distinctly better tone at the close of the month, with a fairly active inquiry on export account. In view of the continued uncertainty, however, business is limited to small orders for immediate requirements. Some small changes in prices are recorded, particularly in the fine chemical group, where reductions have taken place in the case of products likely to be affected by changes in the Safeguarding Act. In the coal-tar products, continued firmness is noted, with many lines only quoted at nominal rates in the absence of supplies; carbolic acid, creosote oil and pitch are much dearer. Of the industrial chemicals, lead nitrate and acetate, arsenic, oxalic acid, lithopone, red lead, sal ammoniac and zinc oxide are all higher in price. Cheaper quotations are noted in acetone, barium chloride, prussiate and permanganate of potash, acetate and nitrite of soda, tartaric acid, and white lead. Fertilisers are a quiet market, with some inquiry for ground rock phosphate and basic slag. Comparative quotations are as follows:—

	1926.			
	Oct. 1.	Sept. 2.	Aug. 5.	July 1.
Ammonium sulphate	£ 8 d	£ 8 d	£ 8 d	£ 8 d
Arsenic, white powdered	11 9 0	11 7 0	13 1 0	13 1 0

HIDE, LEATHER, AND ALLIED TRADES.

The home hide market remains steady, with supplies rather less, and prices tending to advance. At the auctions held in Bermondsey on Thursday, prices were very steady, best ox selling from 6½d to 9d, and seconds from 6d to 8½d per lb. Best cows sold from 5½d to 5½d, calfskins in best selections again making from 6½d for heavy to 11½d for lights. Lambskins sold from 2s 3d to 10s, and sheep pelts from 5s to 9s 3d each. The imported hide market is rather quiet, as tanners are waiting events at the Shoe and Leather Fair, which opens in London next Monday at the Agricultural Hall. Prices are advancing, and best Argentine regorifics are now quoted at 8½d for ox hides, 9d being asked for Montevideos, with no business reported. The Chicago position is cabled as strong, with heavy native steers selling at 16 cents. Trading in sole leather this week has been rather quiet, but merchants are pressing for deliveries, stocks in warehouses being low. The demand from shoe manufacturers runs mainly on 10-12 lbs bends from dry hides, repairers taking a heavier class in quite good parcels. Prices of both bends and offal are firm, and a settlement of the coal strike will probably mean an advance in price all round, as the demand for stout artisan boots will at once be apparent. The boot and shoe trades are much affected by the prolonged coal strike, and orders are for small parcels only. Much is expected as the result of the fair, as an influx of provisional orders is certain when the coal trouble is out of the way.

VEGETABLE OILS AND OILSEEDS.

Rather a better tone has obtained, and business in the past day or two has been more active than for some time. Linseed oil has now recovered to £31 per ton naked ex Hull mill for "spot" and delivery to December in sympathy with a firmer seed market and on a better demand from consumers. Cotton oils are again easier, Egyptian crude having declined to £33 5s and ordinary refined

to £36 10s ex Hull mill prompt, but demand is far from good. Palm kernel oil has fallen away to £40 and castor oil (first pressure) is lower at £42 10s. In the oilseed section there has been a revival of interest in linseed. Plate earlier in the week was done at £15 2s 6d on passage, but has since advanced to £15 10s afloat and £15 15s October-November. For new crop £15 10s is now asked, but few transactions appear to have taken place so far. Calcutta to London is firmer at £17. Black Egyptian cottonseed has eased off materially, current value being about £9 12s 6d, October loading. Some business in Soya beans to the Continent is reported at £11 10s, August-September.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Market again buoyant on steady consumptive inquiries and rising prices for the raw product, supplies of which gradually become tighter. A stimulating factor in the situation is also to be found in the belief that the European beet crop will come down lighter in quantity than expected owing to prolonged dry climatic conditions. Reports from Czechoslovakia, Belgium, and France are far from satisfactory, but Germany may secure an increased yield. English-grown granulated continues to be well sought after with business in Cantley, Ely, Ipswich, Colwick, Poppleton

Felstead, and Spalding at 29s 9d to 29s 6d; Kidderminster, 30s 6d; Cupar, 29s 9d. British refined in steady supply, and prices again raised 3d per cwt. Messrs Tate and Lyle's cubes, 35s to 35s 6d, as to quality; crushed, 32s 9d to 33s 3d; nibs, 35s 6d; granulated, stoved, 33s 7½d; fine and coarse grain 31s 7½d; No. 1, 31s 4½d; No. 2, also London and T.L.S., 31s 1½d; ditto month forward, 31s; granulated from Empire sugar, ex refinery only, 30s. Yellow crystals, spot, quoted 28s 1½d; caster, finest, 36s 1½d; A, 35s 7½d; B, 33s 6d. Crystallised West Indies, 30s to 31s. Czechoslovak granulated, spot, sold, 28s 7½d, 28s 6d, 28s 6½d; November-December, 16s; April-May, quoted 16s 9d, f.o.b., Hamburg. Dutch J. spot, 28s 7½d; October-December, quoted 16s 3d, f.o.b., Rotterdam. Belgian crystals, November-December, 15s 10½d, f.o.b., Antwerp. Polish ditto, 15s 4½d, f.o.b., Danzig. Cuban basis 96 per cent., October, 14s, c.f. and i., U.K. B.R.B. crystals, October-December, to India, 16s 10½d; January-March, 17s 3d, c. and f. terms. White terminal section active, and prices again higher. October, sold, 15s 9½d to 15s 1½d and 14s 10½d; November, 15s 3½d to 15s 4½d and 15s 3½d; December, 15s 6½d to 15s 7½d and 15s 4½d; March, 16s to 16s 1½d and 16s; May, 16s 4½d to 16s 1½d; August, 16s 6½d to 16s 9d and 16s 5½d cwt. 2,000 tons white Mauritius, October-November, sold, 18s 9d; 1,000 tons B.W.I., 96 per cent., October, 17s, c.f. and i., U.K.

COFFEE.—There was a fair off-take of spot parcels during the week, and general steadiness governed the market. Kenya, bold, sold,

12rs 6d to 143s 6d; peas, 129s 6d to 146s. Arusha, bold, 132s. Kilimanjaro, bold, 133s 6d to 155s 6d. Urumbi-Congo, 130s. Future delivery market dull.

COCOA.—Only moderate transactions in spot goods at late rates. Accra, F/F grade, November-January, sold, 41s to 41s 6d, f.o.b. terms.

TEA.—In auction during the week rather over 61,000 packages Indian were catalogued, and met with good competition for all descriptions at full to slightly dearer rates. Common to medium, 4d to 4d per lb higher. Pekoe, sold, 1s 3½d to 2s 6d; orange, 1s 6½d to 2s 7½d; broken orange, 1s 6½d to 2s 1½d; fine to choice, 3s 1d to 3s 8½d. Ceylon sales of 23,370 packages also aroused brisk support, and with quality continuing to improve, rates were mostly ½d to 1d per lb dearer. Pekoe sold, 1s 3½d to 2s 6½d; orange, 1s 6½d to 2s 7½d; broken orange, 1s 6½d to 2s 1½d; fine to choice, 3s 1d to 3s 8½d. New season's China met with fair patronage. Good to fine Keemun sold, 1s 10d to 2s 2d; Ching-Wo, 1s 8d. Low Monings have been in demand at 7½d to 7½d per lb. In auction, 5,067 packages Java and Sumatra were offered, and with a very strong demand common and medium teas ruled ½d to 1d per lb dearer, and finest kinds 1d to 2d. Leaf grades were well sought after for export. Pekoe sold, 1s 3d to 1s 4½d; broken, 1½d to 1s 9d; pekoe souchong, 1s 2½d; orange, 1s 5d to 1s 8d; broken orange, 1s 1d to 1s 6½d per lb, in bond.

RICE.—No new feature to note, Burma grain steady, but European demand quiet, with moderate interest shown in S.O. to Cuba at 16s. Spanish oiled, spot, 21s 9d; September-October, 20s 9d, c.f. and i., London. Reported damage to Italian crop is negligible according to latest advices. Beans dull. Madagascar butters, on spot, 21s to 23s, as to sample. Peas steady. Japanese, September-October, 25s 9d; October-November, 25s 6d per cwt, c.f. and i., London.

SPICE.—Pepper generally quiet. Black Singapore, f.a.q., August-October, quoted 8½d; Lampung, August-October, sold, 8½d; October-December, 8½d; Muntok, August-October, 1s 3½d; October-December, 1s 3½d. Steady buying orders circulating for Zanzibar cloves, on spot, for fair quality at 9½d, forward positions being comparatively slow. Pimento, spot, 7½d paid per lb. September-October, quoted 62s 6d per cwt. Sago flour, November-December, 15s 3d, c.f. and i., U.K. Tapioca steady. Singapore flake, November-January, to Havre, 17s. Desiccated coconut, spot, halves, sold, 40s 9d per cwt.

FRUIT (Dried).—Currants: There is a fair demand for new fruit, but selection so far is somewhat limited. Old crop, however, moves off slowly. Pyrgos, quoted 32s; Patras, 34s to 35s; Gulf, 35s to 37s; Australian, 35s to 45s, as to quality. Sultanias quiet. Smyrna, new crop, medium to good, 65s to 70s; fine, 72s; Australian, 60s to 76s. Raisins in fair demand at steady rates. Valencia, half-boxes, 45s; quarters, 46s to 84s. Dates in fair request on spot, and firm forward. Hallowee, first tide, quoted, 33s; Khadowie, 23s 6d; Iar, 21s, landed terms, London. Figs: New genuine, quoted, 34s 6d to 40s; layers, 60s to 77s 6d. Evaporated fruits generally quiet. Apricots: Californian, extra choice, quoted 122s 6d; South African, first grade, 140s. Plums, Californian, 30/40s, 68s; 60/70s, 43s; 80/90s, 38s 6d. Pears, Californian, extra choice, 62s 6d; fancy, 72s 6d; Lake County, fancy, 80s. Apple rings, Californian, September-October shipment, 47s 9d, c.i.f., per cwt.

CANNED GOODS.
CANNED FISH.—Demand slightly better, and prices steady for most descriptions. Sardines, Portuguese, 1½s, quoted 4s 3d to 6s per dozen tins. Salmon: Red, tall, 1 lb, quoted 47s to 48s; Sockeye, 80s to 81s; tall pink, 26s to 27s. Lobsters, best ½s, 157s 6d to 160s, and 1½s, 90s.
CANNED FRUITS in quiet request, and tendency easier in some instances. Californian Bartlett pears, 24-2½s, choice, quoted 12s 6d to 13s 6d. Californian peaches, choice, 11s to 13s; seconds, 9s 6d. Californian apricots, choice, 12s 6d to 13s; seconds, 9s 3d per dozen tins. Singapore pines in better request on spot, while firm for shipment. Italian tomatoes firm and in moderate demand.

CANNED MEAT.—Market quietly steady. Corned beef, 6s, quoted 38s to 45s, as to quality. Danish lunch tongues, 122s 6d to 135s; American, 140s, with best, 145s to 147s 6d.

DOMINION OF CANADA
THREE-AND-A-HALF PER CENT. LOAN,
1909-34.

For the purpose of preparing the Interest Warrants due 1st December, 1926, the BALANCES will be STRUCK on the evening of the 1st November, 1926, after which date the Stock will be transferred ex-dividend. Coupons must be left for examination between the hours of 10 and 2 o'clock (Saturdays excepted) three clear days prior to payment being made. Forms for listing coupons may be had on application on and after 15th November, 1926. For BANK OF MONTREAL, Financial Agents of the Government of the Dominion of Canada.

G. C. CASSELS, Manager.
47, Threadneedle Street, E.C.2.
1st October, 1926.

BELDING PAUL AND
CORTICELLI SILK COMPANY, LTD.
FIVE PER CENT. FIRST CONVERTIBLE
DEBENTURES.

Belding-Corticelli, Limited, announces that the COUPONS falling due 1st November, 1926, on the above-mentioned Debentures may be PRESENTED on or after the 18th October, 1926, between the hours of 10 and 2 o'clock (Saturdays excepted) at the Bank of Montreal, 47, Threadneedle Street, E.C.2. Three clear days required for examination. Lists may be obtained on application at the Bank.

CONDENSED MILK.—Machine-skimmed remains steady, but full cream is rather quiet at about 20s, duty paid.

HONEY.—Market steady, with rather more inquiry. New Zealand quoted at 50s to 85s; Australian, 40s to 50s; Jamaica, 35s to 50s; Haiti, 34s to 48s per cwt.

RUBBER.

This market remained quiet, and prices easy, with certain liquidation still in force of the October position. Plantation standard sheet, spot, and October, sold, 1s 9d, 1s 8½d, 1s 9d; November, 1s 9½d, 1s 9d, 1s 9½d; December, 1s 9½d, 1s 9½d, 1s 9½d; January-March, 1s 9½d, 1s 10d, 1s 9½d; April-June, 1s 10½d to 1s 10½d per lb.

GENERAL.

SHELLAC.—Market firm. Fair T.N., spot, 180s; December, sold, 175s to 182s 6d per cwt.

GAMBER.—Market dull. Block, September-October, 29s per cwt, c.f. and i., U.K.

COPRA.—In moderate request, and steady. F.M.S. Straits, September-October, quoted £27 7s 6d; October-November, £27 11s 3d; November-December, £27 16s 3d. Dutch E.I., October-November, sold, £27 7s 6d. Ceylon, ditto, quoted £28 17s 6d; South Sea, £26 5s; Cebu, £26 7s 6d. Palm kernels, afloat, Liverpool, quoted £19 7s 6d; November-January, £19 18s 9d ton.

JUTE.—After closing last week with a decided upward tendency, the market reacted since, mainly due to pressure to sell from Calcutta, and in which Lightning quality figured largely. Some irregularity ensued at times. Firsts, August-September, £32 to £30 10s, and £29 17s 6d; September-October, £31 to £28 5s; October-November and November-December, £30 10s, £28 15s, £29, and £28 2s 6d. Lightnings, August-September, sold, £29 5s to £26 10s, £26 15s, and £25 15s; September-October, £28 to £25 10s. Hessians and twills met a dull market.

HEMP.—Manila not pressed for sale, and steady despite slackness of consuming demand. J. new grade, October-December, quoted £44 10s; K, also L 1, £37, and others at proportionate figures. New Zealand and African sisal dull and unaltered.

TALLOW.—Messrs Colchesters and Woolner write on September 29th as follows:—The tallow market was quiet during the week, and prices are 6d to 1s lower to-day. Several resale parcels, offering at a time when buyers were few, had a depressing effect, but little business resulted. Meanwhile, importers have become less disposed to make further concessions. At auction to-day 531 casks tallow were offered, and 63 were sold. Quotations are:—Australian mutton: Fine, 44s; good to fair, 43s to 42s; dull to dark, 40s 6d to 38s 6d; hard, 43s 6d. Australian beef: Fine, 43s; good to fair, 42s 6d to 40s 6d; dull to dark, 39s 6d to 37s 6d; sweet, 45s. Present shipment from Australasia: Good mixed, 42s 6d. Present shipment from South America, 42s. The market letter is lower, tallow, 6d; stuff 6d. Town tallow, 38s 6d per cwt. Rough fat, per 8 lbs, 2d; melted stuff, 28s per cwt. Quotations are:—Town, 38s, net cash, naked, ex works. Country: Frail casks, 38s; home melted, shipping casks, net, f.o.b., good coloured, 41s; fair to dull, 39s to 37s 6d. Bone fat: white none; pale none; benzine, 33s 6d; melted stuff, 33s 6d, f.o.b.

MISCELLANEOUS.—Cocoanuts quoted 22s 6d per 100. Coir yarn, Ceylon, £21 10s to £37; Cochin, £24 10s to £49; Ceylon bristle, £18 to £23; cinnamon leaf oil, 5d; citronella, Ceylon, 1s 7d; Java, 2s 4d.

METROPOLITAN CATTLE.—September 30.

British Beasts, per stone of 8 lbs to sink the offal. Sheep, per stone. Owing to foot and mouth disease regulations only 134 sheep were entered for sale at 8/8 to 9/-.

LONDON POTATO MARKETS.—September 30.

the scarcity of money, and in view of the steady efflux of gold which has occurred this week. It is suggested that recent shipments of gold to the Continent represent the removal of funds previously invested here in bills. If this is so the Continental demand for bills, which has been so prominent a feature for several months, is likely to become smaller. Yesterday's quotation for three months' bills was 4½ per cent., and the Treasury Bills were allotted at an average of 4½ per cent.

	Oct. 8, 1926.	Oct. 1, 1926.	Sept. 24, 1926.	Sept. 17, 1926.	Previous Rate and Date Changed.
Bank Rate	5 %	5 %	5 %	5 %	4 (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	2 (Dec. 3, '25)
Discount, Call	3	3	3	3	2 (Dec. 3, '25)
Houses (Notice	3½	3½	3½	3½	2½ (Dec. 3, '25)
Market rate (3 months' bills)	4½	4½	4½	4½	..

Thursday's Bank return showed a reduction of £967,800 in the stock of coin and bullion and a contraction of £284,100 in the note circulation. The Reserve was thus £683,700 lower, the Proportion falling by 0.6 to 28 per cent. Other securities increased by £692,300, and Government securities were £375,300 lower. Government disbursements are reflected in a decline of £5,379,000 in Public Deposits, and an increase of £5,678,100 in Other deposits. Currency notes were increased by £2,912,800 to £290,770,400, which includes £1,293,900 for notes called in but not yet cancelled. The fiduciary issue is £233,226,500, or £14,676,000 below the maximum for 1926.

NEW YORK MARKETS.

Our New York correspondent cables:—A fairly sharp reaction has carried the share market to levels below the worst of the last two months. The volume of selling has been fairly large, and professionals have been active. Apart from the weakness of cotton prices, which is serious for the South, there is little in the news from the business world to account for the reaction. Judge Gary has made an optimistic statement on the prospects for the steel industry, forecasting an increase in the unfilled orders of the Steel Corporation for September. Railway car loadings and general trade are maintained at a high level. The belief grows that the Federal Reserve authorities are satisfied with the credit situation and will not take restrictive measures. The weekly statements reveal a large reduction in discounts. The reserve ratio for the whole system is 1.1 per cent. higher at 73.7 per cent. Our bankers are optimistic regarding the prospects of Belgian currency stabilisation, and expect an announcement about credits soon. The commodity price index numbers of *Dun* and *Bradstreets* both rose slightly in September, their firmness being chiefly due to food products.

THE STOCK MARKETS.

A rather heavy tone pervaded the markets as a whole this week, and business generally was quiet, the miners' ballot results and the short-lived London dock strike being restrictive influences. Home rails in particular were adversely affected. The competition of a heavy new issue campaign was responsible for dulness in British Government stocks. In the foreign market falls in Brazilians were general, some Chinese issues were weak, and Japanese were marked down on the terms of the Tokio loan. Canadian Northern income bonds advanced on the settlement scheme. The rubber share market was quieter, but prices of the best issues remain steady, and in the oil market the tone was generally weak. Speculative sales caused a strong reaction in Courtaulds, while Imperial Tobaccos were heavily bought on bonus expectations. Iron and steel shares weakened towards the end of the week, but London Electricity Supply shares enjoyed an all-round rise. The Kaffir market was dull, with the Cape selling some of its favourites. New issue results were varied. The Tokio loan of £6 millions was speedily over-subscribed, this, following on the success of the Hamburg loan, revealing the taste of the investor for attractive foreign issues, of which more are pending. The Swansea loan, on the other hand, met with a poor reception, 43 per cent. being left with the under-

writers, while, in the absence of official figures, it is believed that only 25 per cent. of the Wolverhampton loan was subscribed by the public.

THE COMMODITY MARKETS.

Business in the majority of markets has been on the quiet side this week. The output of British coal is slowly increasing, but is still far from meeting demand, and prices reflect the general tightness of the position. The limited production of British steel works is readily absorbed, but the formation of the European cartel has caused buyers generally to adopt a waiting attitude. Heavy selling has taken place in cotton futures, and though the yarn and cloth position shows a slight improvement, the breakdown of the extended short-time arrangements of the Master Spinners' Federation has served to enhance the prevailing element of uncertainty. The London wool sales have closed with values steady, but below the best levels of the series. New business in wool textiles, however, is of small dimensions. The wheat market has shown slight firmness, though demand has not markedly widened. Sugar is steady, with a satisfactory demand from the consumer's side, but coffee is quieter, and tea has not maintained the activity shown in the early days of the week. The rubber market has revealed no marked tendency. Among non-ferrous metals, tin has again been firm, but copper and lead have declined owing to the market's inability to absorb the large quantities offered.

FOREIGN EXCHANGES.

The foreign exchange market was quiet during the week, with occasional liveliness for short periods. The general tendency of the principal Continental exchanges was to improve, but the peseta steadily depreciated for reasons which are not at first sight apparent. In the absence of precise information we must presume that this weakness reflects the general uncertainty as to Spain's internal stability and the feeling that a rigid censorship may conceal some elements in the present situation. The milreis also developed considerable weakness, due, it is said, to a demand for sterling by the Banco de Brazil in connection with sterling bills. Otherwise, except for the reactions of the Chinese exchanges to the rise and fall of silver, the market revealed no particular feature. The dollar rate was fairly steady, with an improving tendency at the close, and the narrowing of the forward rates after January shows that the prospects of sterling are regarded favourably in the world's markets. Opening on the 1st at 4.85½-½, there was a slight weakness next day at 4.85½-½, but the opening rate again prevailed on the 4th. A slight improvement to 4.85 5-32-7-32 followed next day, but there was a reaction on the 6th and 7th to 4.85½-½. Yesterday there was a firmer tendency at 4.85½, forward rates being ½ cent and 5-32 cent premium for one and three months. After that they are rather narrower. Paris opened at 172½-½ and weakened to 173½-½ next day. On Monday, however, there was an improvement to 171½-½, and this being continued the franc stood yesterday at 168½. Forward rates showed the same tendency, the discount for one and three months' delivery yesterday being 2½ and 7 francs, as compared with 3½ and 9 francs on the 6th and 3½ and 10 francs on the 4th. The popular response to the appeal to sell gold and silver to the Banque de France no doubt helped the improvement in some degree. Brussels improved similarly from 178½-179 on the 1st to 178½-178 on the 4th. There was a further improvement to 176½-177 on the 6th, and to 175½-½ on the 7th on the pronouncement by the Finance Minister of his further stabilisation proposals, and the news of his proposed visit to London. The rate was very firm yesterday at 174½. Forward rates for one and three months at ½ and 1½ francs discount are very much better than those prevailing earlier in the week, viz., 1 franc and 3 francs on the 6th, and 2½ and 5½ francs on the 4th. The lira continued its recent improvement almost without interruption, and here again the narrowing of the forward rates indicates the increased confidence in the future strength of this currency. Opening at 128½-129½, the rate improved to 128½-½ on the 6th, and to 126-126½ on the 7th. Yesterday's spot rate was 122½, with forward rates for one and

three months at 1½ and 4½ lira discount, as compared with discounts of 2 and 6 lira on the 6th, and 3 and 7 lira on the 4th. The peseta, as stated, depreciated steadily. At the moment of writing, this tendency has become rather aggravated. The rate was 32.03 on the 1st, 32.23 on the 4th, 32.30 on the 6th and the 7th, and was 32-54 yesterday. Amsterdam is weaker at 12.12½, against an opening level of 12.11½, and Switzerland also at 25.11, as compared with 25.09½. Berlin is unchanged at 20.36½, Stockholm a little weaker at 18.15, as is Copenhagen at 18.27½. Oslo and Warsaw remained unmoved throughout at 22.14-22-15 and 42-45 respectively. The drachma improved from 409 to 403, and the leu improved also from 935 to 909 with the opening of the cereal export season. Constantinople was weaker at 940, against the opening level of 935. Of the five American exchanges, the milreis developed weakness on the 6th at 7½d, as compared with the opening rate of 7 13-32d. This weakness continued at 7d on the 7th, and 6 31-32d yesterday. Buenos Aires also showed some weakness at 45½-18 yesterday, after opening at 46 on the 1st. The rupee was firm throughout at 1s 5 29-32d-1s 5½d, and at one time was even better at 1s 5½d-1s 5 31-32d on the 2nd. Yesterday it eased off slightly to 1s 5½d. The yen was fractionally weaker yesterday at 11½d-2s 0½d, after opening 1s 11½d-2s 0½d. The silver market again witnessed several sharp falls in the price of silver, after an opening rise due to buying on Indian account. Later, both India and China came in as heavy sellers, and prices broke ½d and ¾d on successive days. Some buying steadied prices again at the end of the period under review, but the market is weak and the outlook uncertain. Hongkong and Shanghai both reflected the depreciation of silver, the former declining from 2s 0½d on the 5th to 2s on the 7th, and the latter from 2s 7d to 2s 6½d on the same date.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A small charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE INTERNATIONAL STEEL PACT.

THE conclusion of an agreement in the European iron and steel industry for the regulation of production is not only a landmark in the history of a great industry, but it has also brought into prominence the whole question of the conditions which are to govern international competition in the near future. In view of the extreme difficulties which in England beset the older established of our great export trades, these questions are deserving of the most careful consideration both by statesmen and by the responsible heads of British industry. In our last week's issue, in which we gave details of the new cartel, we also printed an article by a correspondent which reflects a widespread attitude of mind in British industrial circles towards the general question of trade combinations or agreements. According to this view, Great Britain has maintained her position in world markets in spite of the activities of either national or international trusts and cartels. It is argued that the United States Steel Trust, though flourishing behind its own tariff wall, completely failed to capture any large share of the world's iron and

steel export business; that in spite of the German coal cartel Great Britain has remained the world's greatest coal exporter, and that, on the other hand, in the cases where we did enter into agreements with Continental producers before the war—as, for example, the Rail Syndicate—our share of trade steadily dwindled. Thus, arguing from experience, it is held that we have the best chance of regaining our former foreign trade predominance if we rely on the doctrine of the survival of the fittest and unregulated competition.

These arguments are, however, far from giving a fair view of the facts. The Steel Corporation was never designed primarily as a device for winning export business, but as a stage in the development of America's enormous internal industry. Since its formation the steel industry of America has expanded in volume far more in proportion than has the British steel industry. Moreover, while it is true that the United States is only fourth or fifth on the list of steel-exporting countries, she imports next to nothing, whereas Great Britain imports to-day, as we imported before the war, a very large total amount. In 1913, in 1924, and in 1925 the tonnage of America's net iron and steel exports (exports minus imports) exceeded those of Great Britain. One of the outstanding facts about our foreign trade is that while we may be maintaining our position in international trade generally, we do a dwindling percentage of the world's commerce in such trades as the iron and steel industry, the textile industry, and to a less extent the coal industry. Our economic progress in recent years does not justify our assuming the complacent attitude that we have nothing to learn from our competitors in the way of organisation.

The steel industry is, perhaps of all others the one in which there is the least ground for satisfaction. A survey of the world's resources shows that with an increasing population world production of cereals, of other food, of textiles, rubber, oilseeds, and even fuel (than's to the development of oil production) have all increased as compared with pre-war output. The production and consumption of the metal industries alone has remained stationary, and in the case of iron and steel is actually less than before the war outside the United States. The main reason for this is the fact that as a result of the impoverishment of Europe there is less saving than there used to be, and consequently less investment of capital in buildings, in railway development at home and overseas, in factory extensions (which were, of course, enormously fostered during the war), while shipping was created so far in excess of normal requirements during the war on account of the submarine campaign that the shipbuilding industry has been the most depressed of all industries for half a decade. This lack of demand for iron and steel can only correct itself slowly.

Looking at the other side of the shield, the iron and steel producing capacity of the world very markedly increased in all countries during the war, in the boom of 1920 in England, and in the inflation boom of subsequent years in Germany. The disproportion between productive capacity and demand would alone tend to produce periods of acute competition, while disturbing elements in European trade, such as the Ruhr occupation and the incalculable results of monetary chaos, have rendered this competition fitful, and intensely disturbing in its effects. The result of these conditions is that iron and steel prices generally are less than 20 per cent. above the pre-war level, as compared with a general price level, say 60 per cent. above, while pronounced variations have taken place in the exports of different countries. None of the steel works of Europe has, therefore, been able to maintain that full and steady output which is the essential condition of economical production.

It is therefore not surprising that opinion in France and Germany, which has for some time been leaning toward the view that in the unsettled state of world commerce some degree of stability might be obtained by international agreements, has been particularly interested in the possibility of an understanding in the steel industry. As between these two countries the case was particularly strong, seeing that the unity of the Rhineland coal and steel area, which had been more or less attained before the war, was abruptly shattered by the Peace Treaty, and both parties had obviously much more to gain by re-establishing

lishing something like the old interchange of coke for ore than by each endeavouring to build up his own industry on a self-sufficing basis. Luxemburg and Belgium are, of course, intrinsically parts of this metallurgical area. Almost from the time of the Peace Treaty onwards, therefore, there have been conversations between the various parties, sometimes private, sometimes more or less official, and occasionally embracing Great Britain. From one point of view, therefore, the present agreement is simply a repairing of one of the fissures in the European economic structure made by the Peace Treaty.

The agreement, however, has much more far-reaching implications than this, seeing that it is an expression of the view now prevalent on the Continent that international agreements, whether made through the industrial organisations concerned or by or with the concurrence of national governments, are an improvement on the method of simply fighting for international trade by unrestricted competition, or alternatively by the device of tariff wars.

The form of the present agreement, however, without doubt raises some suspicions. Economic progress is rarely advanced by checking production and maintaining prices, and the device of giving a monetary inducement to restrict output and of penalising increased production is nothing more or less than our old friend the policy of *ca'canny* which is so severely condemned when practised by workpeople. It must be admitted that there are times when this may be sound policy, just as in the labour world there may be periods when organised short-time may be to the benefit of all concerned. At the same time the plan is one which is properly regarded with the gravest suspicion, and as one which needs to be most carefully watched. Clearly, if carried too far, it is a prejudice to the consumers of the products in question. In the present instance, for example, the future course of steel production will be watched with acute interest not unmixed with anxiety by the finishing industries of the Continent as well as by all countries which depend upon imported steel. An impartial adjudicator would undoubtedly agree that steel prices should be higher than they have been in the recent past; but, clearly, it might be dangerous if the decision as to how far they should rise should, in fact, be entirely in the hands of the producers themselves. A second big objection is that the type of organisation proposed tends to temper the severity of competition, and has the effect of keeping in existence firms, or even districts, which would otherwise go under. It thus slows up the evolution of a more efficient industry.

These arguments are, however, less valid as between nations than as between individual firms within a country, particularly in such cases as the present, where it seems likely that in a few years the world's demand for steel will rapidly expand and give ample employment to the industry of all countries. It, moreover, should not be difficult to prevent abuse in the case of international agreements. The first line of defence against abuse is, of course, that such arrangements should be publicly known. There is no responsible person concerned in the promoting of these agreements who believes that it is possible for arrangements on such a vast scale to be made without their details being revealed, and it is common knowledge that the present discussions have been carried on with the concurrence, and indeed the approval, of the governments concerned. If, later on, there should be any sign of an undue raising of prices, such agreements may have to be submitted to international discussion, in which the case for the consumer may be fully presented, while there are some of their defenders who would submit them for international approval. Clearly the whole problem of control needs the most thorough and careful study. As regards these agreements and the question of efficiency, the point does not really arise directly from the international agreement itself; but it is important that the national organisations, which are an essential condition for the carrying out of such agreements, shall be based, not on a plan which merely distributes production over existing works, but on some method which tends to concentrate production in the most efficient works and puts a high premium on economical costs. This, after all, is the most essential point in the problem of industrial organisation.

This leads us to the question of the attitude of the British steel industry towards the present agreement. There is room for two opinions as to whether it would be wise for Britain to enter into a pact of this kind. In point of fact, however, our abstention is at the moment due to the practical consideration that the British steel industry is not sufficiently organised to be able to regulate British production. For the moment it seems likely that our steel industry will benefit from the new pact on account of the rise of prices and limited output which it involves. If it should appear, however, in the near future that we gain ground at the expense of Continental producers in neutral markets, it is highly probable that some attempt will be made to enlarge the present agreement in order to deal with international trade in steel. When that stage is reached, it will be imperative for our steelmasters to decide whether they are to co-operate with the new organisation or to compete with it.

It happens that the conclusion of this pact is being followed by a meeting this week-end between some representative British and German industrialists who are conferring at an English country house. The British team will include Sir Robert Horne, Mr Evan Williams, Sir Thomas Royden, Mr Goodenough, Sir Hugo Hirst, and the president and past president of the Federation of British Industries, while the German representatives include leaders in the front rank of the coal, steel, textile, dyestuff, and shipping industries. The meeting is not official, though it has been arranged with the knowledge of the two Governments. Nor are the participants authorised to speak officially on behalf of the industries in which they are engaged. It is not, therefore, to be expected that it will evolve any very specific plan of co-operation. It is rather a case of establishing friendly contact. But it is clear that the new agreement and the many questions of industrial politics which it raises will give the conference ample scope for a friendly exchange of views.

BRITISH POLICY IN THE MEDITERRANEAN.

A SUGGESTIVE paper under this title has been contributed by Sir Frederick Maurice to the last issue of the New York quarterly, *Foreign Affairs*. The expert knowledge of the contributor, and the high distinction of the journal in which his paper appears, entitle his thesis to attentive consideration.

Briefly, the thesis is as follows. Every international *mise en scène* must have its bogie, and now that the Russian, German, and Japanese bogies have had the stuffing knocked out of them, the British Press and public are on the look out for a new bogie-hole in the Mediterranean. As evidence, Sir Frederick Maurice adduces the striking fact "that there is to-day a greater display of naval strength in the Mediterranean than there has been in all the varied and adventurous history of the sea"; and he traces the effect of this concentration of armaments, and of anxiety, in the Mediterranean upon British policy in Egypt—the country which commands the south-eastern exit from that land-locked sea. In his view, the Mediterranean bogie has frightened the British Government into a desire to keep a permanent British garrison in Egypt, when a dispassionate consideration of the technical questions involved would show that this garrison is unnecessary. It is unnecessary, first, because Egypt is almost invulnerable to attack by land—especially now that a British mandate has been established over Palestine and Transjordan; secondly, because the Suez Canal, which gives Egypt her place in the scheme of British Imperial communications, would be protected in a naval war from the distant bases of Malta on one side and Aden and Perim on the other, and not by warships anchored in the Canal itself or by batteries planted on its banks; and, thirdly, because, even if the passage through the Canal were to be closed in time of war, the damage to British interests would be slight. Sir Frederick points out that, for modern ocean-going steamers, the Cape route to India, Australasia, and the Far East is hardly slower than the Suez route, and is so much less perilous to merchant shipping in this age of submarines that, in war-time, the balance is definitely in its favour. He demonstrates this

BANKING FACILITIES

100 Broadway

New York City

point by recalling that "from March 7, 1916, the Mediterranean was closed by the British Government to all traffic which could use another route."

If Sir Frederick's thesis is sound, its importance is very great, since it opens the way towards an Anglo-Egyptian settlement. For both Great Britain and Egypt a settlement is highly desirable; but the gulf between the *de facto* situation, in which Great Britain holds all the cards, and the programme of the Egyptian Nationalists, who demand that all the cards shall be transferred to their hand, has hitherto defied repeated attempts to bridge it. If, however, Great Britain can really afford to discard the British garrison in Egypt, there are the makings of a square deal. The essence of the situation is that either party has a vital interest at stake, and that either party has insisted on safeguarding its own vital interest by an arrangement which the other party finds unacceptable. The British interest is security of passage through the Suez Canal, and the British Government has insisted on safeguarding it by the maintenance of British forces at Cairo and Alexandria, which the Egyptians feel to be incompatible with their national independence and sovereignty. The Egyptian interest is security of obtaining an adequate supply of irrigation water from the Nile and its tributaries, and the Egyptian Nationalists demand that this interest shall be safeguarded by the re-establishment of extensive Egyptian political control over the Anglo-Egyptian Sudan—a demand which Great Britain cannot accept because it would be a breach of her moral partnership for the welfare of the Sudanese people. A bargain has hitherto been impossible because neither party has been willing to make a single important concession in exchange for an equivalent concession on the other side. If, however, the British Government felt itself able to offer the withdrawal of the British garrison from Egypt, the Egyptians might perhaps be ready, in return, to accept the *status quo* in the Sudan, which is *de jure* under an Anglo-Egyptian condominium, while *de facto* it is being administered by Englishmen and garrisoned by British and Sudanese units. Each party would then hold the other to a certain extent at its mercy. The British would be in a position to deprive the Egyptians of the Nile waters, the Egyptians to deprive the British of the passage through the canal; but, just because these two potential weapons would be in different hands, either party would be extremely unwilling to bring them into play. Moreover, the practical certainty that neither weapon would in practice be used could be clinched by international guarantees. The allocation of the Nile waters could be entrusted, by treaty, to an international board, while the *régime* of the canal could be assimilated to those of the Black Sea straits or of the European international rivers.

The opening up of this prospect makes it well worth our while to get rid of the war-bogie in the Mediterranean which at present bars the way, and Sir Frederick Maurice carries conviction when he demonstrates that this bogie, when you come to grips with it, turns out to be as unsubstantial as its predecessors. At the same time, it

would be a mistake to infer from Sir Frederick's argument, which refers to war and rumours of war, that in all respects the current estimate of the international importance of the Mediterranean is exaggerated. From a general point of view, it can hardly be disputed that the Mediterranean is more important in 1926 than it was in 1826, and still more important than it was in 1726. For example, an argument in regard to the Suez Canal which is valid in war-time does not necessarily hold good under the normal conditions of peace. Indeed, there are strong indications that, under normal conditions, the economic importance of the short cut through the Mediterranean from Europe and Southern Russia to India, East Africa, Australia, and the Far East is increasing. It is significant that international traffic is no longer content to take this short cut only by water, but has been experimenting in the supplementation of the Suez Canal by air routes, automobile routes, and railways. The German project of the Baghdad Railway was interfered with by the War, but the post-war period has seen the opening of an air route from Egypt to India via Iraq and the Persian Gulf, and of an automobile route from the Mediterranean coast to Baghdad and Tehran via the Syrian desert. This is strong evidence that the importance of the Mediterranean as a zone of transit has not yet reached its maximum, and it is also clear that the Mediterranean is becoming a centre in itself for the radiation of human and material energy. As the oil fields of the Old World are opened up they are found to converge upon the Mediterranean from every quarter; and as the economic, cultural, and political influences of North-Western Europe spread in wider and wider circles from their point of origin, they are re-awakening the Mediterranean peoples to new life. The revival of Italy, Greece, and Turkey on one coast is matched by the revival of the Arabic-speaking peoples on the other. From the Rif to Angora and from Milan to Damascus the Mediterranean countries are astir with new life. Let us hope that Sir Frederick Maurice is justified in his belief that the energies thus released will be able to find a peaceful outlet.

THE POSITION OF HOME RAILWAY STOCKS.

IN view of the complications set up by the general strike and the five months' coal stoppage, holders of the junior stocks of the four British railway companies may well be excused if they are puzzled as to the dividend prospects for the current year. Substantial reductions were made in the interim dividends on the ordinary stocks of the Great Western and London Midland and Scottish companies. In the first half of the year the gross receipts of the companies showed a decrease of nearly £12 millions as compared with the first half of 1926, a sum which cannot possibly have been made good by such savings in expenditure as resulted from reductions of services and staff during and after the general strike. In the past three months gross traffics show a further

decline, and the total reduction to date is in the neighbourhood of £22 millions. Lower dividends for the current year must, therefore, be expected, the extent of the cuts depending, of course, upon the extent to which the directors decide to make further inroads upon their reserves.

While the immediate outlook is thus distinctly uncertain, we are on firmer ground in looking rather farther ahead and examining the prospects of Home Railway ordinary stocks over the next few years. Considerable attention has been directed to this problem by means of a thorough and widely circulated memorandum prepared by Messrs Buckmaster and Moore. This document examines at considerable length the question of the ability of the companies to earn their standard revenue with or without an increase of rates and charges. It may be recalled that the Railway Rates Tribunal, set up under the Railways Act, 1921, is to fix the standard charges at such a level as will produce, for each amalgamated group, such an amount as will yield, with other sources of revenue and with economical and efficient working, an annual net revenue to be called the "standard revenue." It has also to fix an "appointed day" as from which the standard charges are to become effective. The Tribunal has by now determined, *inter alia*, (i.) the proper working expenses of the four groups for "A" year (the first year after the "appointed day"); (ii.) the standard revenue which has to be raised in that year, over and above such expenses. The sum of these two accounts (which may be called the "gross revenue") is thus ascertained. It is now engaged in fixing the standard charges at such a level as to yield this gross revenue. It has not yet fixed the appointed day, but May or July, 1927, may be taken as the earliest date, and January, 1928, as (barring extraordinary accidents) the most remote.

The following table compares the standard revenues as fixed by the tribunal on the principles laid down in the Act of 1921 in comparison with the actual net revenues of each of the four groups in the last two years:—

	Standard Revenue.	1924 Net Revenue.	1925 Net Revenue.
L.N.E.R.	14,602,533	11,718,000	10,129,000
L.M. and S.	19,991,122	18,626,000	18,002,000
G.W.R.	8,132,713	7,453,000	7,108,000
S.R.	6,331,561	6,319,000	6,416,000
Total	49,057,929	44,116,000	41,655,000
+ say	500,000		
	49,557,929		

Thus the standard revenue exceeds the revenue of 1924 by £5,440,071 and that of 1925 by £7,902,929. The addition of £500,000 to standard revenue is an allowance which may possibly have to be made in respect of capital expenditure incurred since 1923. The figures given in the table do not include any sums taken from free or compensation reserves to maintain dividends, or, indeed, any sum not earned.

The all-important question is, however: Can the standard revenues be realised? According to Sir R. Wedgwood, general manager of the London and North-Eastern Railway and chief expert witness for the railways before the Tribunal, the railways cannot in the aggregate realise the standard revenues within £3 millions, whatever they may do with their rates. Of this deficiency, £2½ millions will be borne by the London and North-Eastern, the Southern Railway will realise its "standard" with a little over, and the other two will have a moderate deficiency. Even this result is only secured by making the increases which the railways are proposing. If the charges remain as at present, the revenue in "A" year would be still lower by £4,332,000. Sir R. Wedgwood is asking authority for standard charges from the present 50 per cent. to approximately 60 per cent. over the pre-war level. The writer of the memorandum pertinently asks "what possible advantage the railways can hope to get from such powers if granted? The railways, presumably, charge as much as they dare at present, and that is about 50 per cent. over pre-war. How can they profit by being allowed to charge 60 per cent. over pre-war? Who would pay it? In any case, the railways have been free, so far as the Railways Act goes, to charge 60 per cent. (and, indeed, 100 per cent.) over pre-war any time in the last two or

three years. If people are willing to pay it, why have the railways not charged it? If people are not, of what value can the right to charge it be in future?" As a matter of fact, the right of the railways to raise their rates is challenged by the traders, who have agreed to the reductions made step by step after claims had been submitted to the tribunal. If the doubt as to the companies' power has been a deterrent, and if 50 per cent. has proved bad business, it may be that the power to charge 60 per cent. in "A" year will increase the earnings of the companies materially, but whether to the extent Sir R. Wedgwood suggests seems doubtful. In any case there is likely to be a great outcry in these hard times against an increased handicap on industry in the form of higher freight rates. But the more practical consideration from the standpoint of the value of railway shares is whether higher rates will in fact produce increased revenue. The drift on to the roads in the case of all kinds of lighter traffic is in full swing, and in the case of heavy traffic which cannot leave the railway higher rates may quite well check business. The principle of standard revenue is open to grave objection as a method of railway control, but for the purpose of the present discussion the issue is not so much one of equity as the fact that the principle must in practice give way to the over-riding consideration that in the end revenue is limited to what the traffic will bear.

But there is another powerful factor helping to bridge the gap between standard and present revenues—namely, anticipated savings in working expenses. These may be expected to result, firstly, from the benefits of amalgamation, which are only just beginning to be felt, and, secondly, from the strike and its failure. It is suggested that a permanent reduction of staff to the extent of about 4 per cent. will be rendered possible, and given effect to in consequence of the strike. This should yield a total saving of nearly £4 millions, which is clear gain, with no loss of gross earnings to set against it. The "working expenses" for the four companies were finally fixed by the Tribunal before the strike (and the resulting reductions in expenses) could be taken into account. Nor is there any machinery for revising the "working expenses" figure in the light of the strike until "A" year, a revision in that year not taking effect until "B" year. Even in "B" year the companies would be entitled to an allowance of 33½ per cent. on any economies they may effect after the date when their working expenses were first fixed. The estimated savings from a 4 per cent. cut in personnel (even if the raising of rates and other economies afford no benefit at all) will more than bridge the gap which divides the net revenues of the L.M.S.R. in 1924 from their standard revenue; and would bridge it to the extent of three-quarters in the very much worse year 1925. In the case of the Southern Railway (which has already exceeded its standard revenue) it would enable the company to earn about £500,000 more than its standard revenue in "A" year, 20 per cent. of which would enter into the company's increased standard for "B" year. In the case of the G.W.R. it would bridge the gap between its 1924 net revenue and the standard revenue. The L.N.E.R. alone would continue to fall materially short of its standard revenue. Whether these economies will in fact be realised will be much clearer when the year's accounts have been issued, and it is possible to see how the expenses account of the railways are developing. In and after "A" year the railway shareholder will secure part only of future economies. But apart, therefore, from the savings that are being realised at the present time—which are in the nature of a substantial windfall—the future of British railway stocks depends upon the achieving of steady economies as a result of amalgamation and upon an increase of rail-borne traffic as a result of trade development. Finally, there remains a possible course of benefit to the shareholder in the probability that the railways have, in fact, been extremely conservative in the charging of depreciation, replacement, &c. It may well be that these various influences may enable standard revenue ultimately to be attained.

The standard revenues, if fully distributed, after meeting all prior charges, would give dividends of over 4 per cent. on L.N.E.R. deferred stock, of 7½ per cent. on L.M.S. ordinary stock, of nearly 8 per cent. on Great

Western ordinary, and of 2½ per cent. in Southern deferred. If the "standard" is in practice attained within reasonable time it would appear that, taking the long view, three of the four stocks are at present under-valued. Present quotations are compared below with the highest and lowest since 1923:—

	Highest.	Lowest.	Oct. 8, 1926.
Great Western, ord.	118½	81	87½
L. and N.E., deferred ..	39½	15½	17½
L.M.S., ordinary	118½	69½	72½
Southern, deferred	46½	34	45½

Thus all but Southern deferred are near the bottom of the curve.

THE WHEAT SITUATION.

A LEADING feature of the wheat market at present is the general absence of excitement. This summer's harvests have generally come out along the lines which the trade expected. There have been a few minor disappointments, but no developments of a sensational character. A comfortable surplus of supplies over requirements is anticipated for the current season, and no extensive movement in world prices is looked for at the moment. Europe is expected to call for larger imports than last season, but the North American countries, on which the lion's share of the demand will fall during the next few months, should be in a position to provide them without undue pressure, thanks largely to a considerably increased yield in the United States this year.

The following table is based on figures given in the most recent Report of the International Institute of Agriculture,* and shows the estimated acreage and yield of various countries north of the Equator.

ESTIMATED WHEAT ACREAGE AND PRODUCTION.
(000's omitted.)

	Acreage.			Yield (Centals of 100 Lbs.).		
	Average, 1920-24.	1925.	1926.	Average, 1920-24.	1925.	1926.
England and Wales..	1,820.5	1,499.6	1,592.0	35,199.8	30,464.0	31,606.4

Czechoslovakia ..	7,533.3	1,526.8	1,545.7	20,055.7	246,825.9	21,401.1
Canada	21,571.6	21,972.7	22,853.0	204,019.7	237,366.0	375,899.2
United States	40,157.0	31,269.0	36,803.0	355,112.2	162,525.0	127,265.4
States. Spring crop	19,676.8	20,931.0	20,884.0	145,941.7	162,525.0	127,265.4
India	29,258.0	31,774.0	30,470.0	198,598.4	194,969.6	22,324.6
Egypt	1,423.9	1,379.7	1,531.6	21,548.8	21,748.8	11,464.1
French Morocco ..	2,146.5	2,620.8	2,651.5	12,332.5	14,330.1	11,464.1
Algeria	3,367.7	3,608.0	3,732.1	14,030.9	19,602.5	14,109.6
Totals (including other countries)	169,911.1	170,049.0	175,389.5	1,467,068.7	1,550,711.9	1,596,125.8

The 1926 figures are provisional, being based on estimates made up to the middle of last month. The figures for France and the Soviet Union were not to hand when the table was compiled, but it is unlikely that they will seriously upset the general conclusions to be drawn. The world's yield, north of the Equator, will in all probability be slightly larger than in 1925, and nearly 10 per cent. above the average for the five years 1920 to 1924. There has been, however, an important change in distribution as compared with a year ago. Europe's bumper harvests of 1925 have not been repeated, though the total yield is very little below that of the "good" year, 1923, and is well above average level. Canadian crops are satisfactory, and not much below last year's, though bad weather has caused the harvest to be seriously protracted, and the crop may not grade as highly as was expected. The United States, however, has greatly improved upon last year's unsatisfactory figures, so far as quantity is concerned. The net result is that while the estimated yield from 23 European countries totals 591.8 million centals, against 634.0 millions last year, and an average of 493.7 millions for 1920-24, Canada and the United States together may account for some 742.6 million centals, as compared with 646.7 millions, and 705.1 millions respectively.

The "deficiency" countries in Europe are, in fact, already importing rather more wheat than at this time last

* "International Crop Report and Agricultural Statistics, September, 1926." (Rome) International Institute of Agriculture.

year. Total shipments to Europe in the first eight weeks of the current season (*i.e.*, from August 1 to September 25, 1926) reached an aggregate of 52.2 million centals, against 49.2 millions in the corresponding weeks of last year. There would appear, however, to be little doubt that a fairly comfortable surplus of supply over all possible demand should eventually be registered, provided the growing crops of countries like Australia and Argentina realise what is expected of them. Broomhall estimates the world's total import requirements during the season August 1, 1926, to July 31, 1927, at the equivalent of 422 million centals, of which Europe will account for 346 millions. The available surplus of the wheat-exporting countries is put by the same authority at 490 million centals, made up as follows:—Canada, 182 millions; United States, 120 millions; Argentina, 72 millions; Australia, 53 millions; India, 10 millions; Russia and the Danube countries, 24 millions each, and other countries about 5 millions. These figures must, of course, be conservatively interpreted, as the season has yet far to go. The Argentine and Australian estimates are naturally tentative, but in view of the generally satisfactory reports from these countries they may be accepted as reasonably near the mark, pending more definite information.

In these circumstances, no wide movements in prices are likely unless unexpected developments occur, as was the case last autumn, when the failure of Russian exports to reach the somewhat optimistic level on which the market had based its calculations, and disappointing Argentine and Australian estimates, produced a sharp upward twist in prices in November. The nigger in the wood-pile this year is the very considerable rise in shipping freights, which is largely due to the protracted British coal strike. A representative rate for a full cargo from Atlantic Coast ports of Canada in mid-September last year would be about 2s 10d a quarter (480 lbs). In the middle of last month the rate was nearer 4s 8d, having risen by over 2s since April last. The resulting tendency to limit purchases to some extent, pending the conclusion of the coal stoppage and the return of more normal conditions in the freight market, has partially set off the increased cost of ocean transport, but the European consumer has not been able entirely to escape the consequences of England's industrial troubles.

ORGANISING THE COPPER TRADE.

(FROM A CORRESPONDENT.)

THERE is a marked disposition in the metals market here to seize upon all rumours from New York tending to show that the proposed Copper Export Trading Association, designed to stabilise prices in the industry, is, after all, coming to naught. Dispatches from New York frequently reflect the view in the copper market there that the numerous postponements of the formal hearings which must be held before the Federal Trade Commission can issue a licence under the Webb Pomerene Act have really been paving the way to a gradual abandonment of the ambitious project. Perhaps a word or two, not too dogmatic, may clarify the situation.

To begin with, while New York is betting that the new "cartel" of copper producers will never materialise, it is significant that Boston—judging from the firmness of copper shares on that market—is very decidedly betting that it will. When it comes to copper, it is Boston that talks, not New York. The whole scheme for combining the world producers into an export sales organisation originated in the bank parlours of Boston, and it is fair to assume that those political difficulties which seem so obvious to New York have been anticipated in Boston. Several "bull markets" have reached their heights and receded in New York without in the least disturbing those copper shares which are so strongly held in Massachusetts and other New England states. This has a certain evidential value.

Secondly, while the croakers in New York have been busy burying the new concern before it was even started, Mr T. Wolfson, chairman of the proposed association, has been moving cheerfully through Europe signing up nearly everybody he has approached. A recent dispatch

from Brussels said that Mr Wolfson had signed up all the subsidiaries of the Union Minière du Haut-Katanga; that means that they have agreed to sell their copper through the new organisation when it gets under way. But it was only in August that a London market letter pointed out that Katanga would never join the new group; it would stand out with Rio Tinto and the Miami, a bulwark against the world "trust"! Frankly, it rather looks as though Mr Wolfson might succeed in signing up, not the modest 90 per cent. of the world's production—as stated a few months ago—but something considerably higher. His offer to the various producers is probably extremely attractive.

It is quite possible that the hearing before the Federal Trade Commission, now scheduled for October, will be postponed until well into November, after the congressional elections. This would be quite in accord with American practice, and would, indeed, be an act of the merest prudence since the Administration would not greatly relish facing the election charge that it was about to license a predatory copper trust. But after the elections were out of the way, it would be only reasonable for the new association to outline its objects and demand a charter under the Act of Congress permitting American companies to combine for export sales. To the inevitable cynical reply that the association is, at bottom, a "trust" which intends to exploit the domestic as well as the foreign consumer, it should not be very hard for the Boston bank parlours to make an effective reply.

For the truth is that from the standpoint of the big American producers it is the foreign market—especially the European market—which needs stimulating. It may surprise most people to know that even in the field of electric light and power copper is being severely crowded in the United States by aluminium wire, which has been found excellent for high tension power transmission lines. Household use of copper in the United States is sharply limited by the refusal of the servantless American housewife to keep it cleaned and polished. (The almost universal adoption of aluminium ware in America is eloquent on this point.) The use of copper for domestic plumbing encounters similar difficulties. But both those fields may profitably be exploited in Europe through the usual methods of extensive advertising, by bringing the middlemen up sharply on their toes, by sales campaigns "scientifically" projected, and so forth, while the ordinary industrial uses of copper can also easily be increased. In the consumption of this and other non-ferrous metals it is Europe that has lagged behind its former pre-war rate of increase, and not the United States.

So, without stretching the facts at all, one may quite reasonably postulate an "export sales" company quite under the terms of the Webb Pomerene Act. It may be argued that that Act never contemplated the issue of an American licence to a group which included Spanish, Chilean, Belgian, and other producers. This is true, but again one may fairly conclude that those responsible for the new enterprise have a suitable answer ready for that. It is quite possible that the licence would be issued only to the Americans, but that would not prevent them from making any practical arrangements they wished with their foreign associates.

In short, by the time another year has rolled by we may find the copper bugaboo of 1926 a mere familiar of the market-place, feared by none except, perhaps, the metal speculators.

THE ECONOMICS OF THE HIRE-PURCHASE SYSTEM.

(BY A CORRESPONDENT.)

THE many-sided effects of the wide extension of the hire-purchase system are more than a merely academic question; the interested student of it may now find in America a complete working out of the plan under all conditions except those of a great industrial depression or a widespread credit stringency. But whether the effects of the plan as they have worked out up to date constitute a situation where an economically favourable verdict can be given is a most difficult question. Those who believe the plan has been a good thing, and who claim that it has

been responsible for a large part of the admittedly great business prosperity of the past three or four years, point to enlarged bank clearings, lack of unemployment, general diffusion of motor cars and other evidences of individual prosperity to support their view that the plan has not been overworked, and has been a sound means of keeping the United States fully engaged in its industries.

But it must be admitted that those who believe the whole business is based on an economically false foundation are the same critics who have generally been proved correct in judging American business tendencies in the past. The tremendous volume of sales on the instalment plan results in the creation of a huge mass of credit that must be handled elsewhere than by the manufacturers and sellers of the goods represented by the chattel mortgages given in return for the motor cars, pianos, clothing, jewellery and the other articles in the long list that may be purchased by this method. This credit is passed on by the sellers of the goods either to banks with which they have established relations or to one of the many "finance" companies which have been established solely to cater to this sort of business.

Those familiar with American banks and their history know that they may be roughly divided into two classes—those always willing to take a chance and those which never take a chance. It is well known that in times of stress—and they have been frequent in the history of the United States—the first group are always found leaning heavily on the shoulders of the second group. The point to be made here is that the banks of the second group avoid all connection with the hire-purchase system as if it were the plague, while the group which is ever ready to take a chance is now engaged in that pastime.

It is impossible to secure any really accurate figures showing the extent to which the hire-purchase system is being used in the United States. All that can be done is to assemble, from representative groups in some of the industries in which the plan is mainly used, statistics that give a reasonably accurate view. In the nature of the case, understatement as to the amount of business done in this manner is more likely than overstatement. In an endeavour to find out just what the facts are, one of the most conservative Trust Companies in New York used its facilities to collect data on this subject. Its figures are for the year 1924, and it is admitted by everyone that the use of the hire-purchase plan was greater in 1925, and so far in 1926, than in 1924. Although practically every commodity can be purchased by this plan, called in America the partial-payment system, it was only feasible for the company's investigators to work on the eight lines of merchandise generally associated with hire-purchase. The summary for 1924 turned out as follows:—

	Retail Value.	%	Value Sold on Time Payments.
1. Automobiles	2,910,082,505	75	2,182,561,878
2. Washing machines ..	88,000,000	75	66,000,000
3. Vacuum cleaners ..	69,000,000	65	44,850,000
4. Gramophones	70,000,000	80	56,000,000
5. Furniture	100,000,000	(Approx.)	765,000,000
6. Pianos	400,000,000	40	160,000,000
7. Jewellery	300,000,000	25	75,000,000
8. Radio	300,000,000	13	39,000,000
	3,937,082,505		3,293,411,878

It is believed that a later investigation would show larger figures in almost every line, and that the total, including important items such as women's fur garments, now very largely sold on time, would be at least a third larger than the figures given.

According to Mr George W. Norris, Governor of the Philadelphia Federal Reserve Bank, instalment-plan credit now constitutes about 25 per cent. of the current credit in the United States. If it were bank credit it would be under the influence and control, rigid when necessary, of the Federal Reserve system. Actually, however, it is absolutely uncontrolled. Great sums of idle capital searching for remunerative investment in the United States have been invested in the finance companies which purchase and undertake the collection of the notes signed by the purchasers of hire-purchase merchandise. These companies are now so numerous that they have a national association organised to look out for their interests and to oppose movements designed to restrict or control their operations. The large profits that have been earned by

many of them render them loath to curtail their business. The size of these profits is undisputed, and will be readily recognised if inquiries are made as to the actual rate of interest which purchasers of merchandise under the hire-purchase plan are required to pay.

The point which is now causing concern to many American bankers, economists, and public men is the fact that if there should be for any reason a widespread business depression, the country would be faced with a larger amount of frozen credit than paralysed the country in the depression of 1920-21. It is estimated roughly that \$5,000,000,000, or £1,000,000,000, worth of goods were bought in 1925 to be paid for in 1926, and an equal amount is being bought this year to be paid for in 1927. On this point Governor Norris says:—"In other words, 1925 has borrowed \$5,000,000,000 worth of business from 1926, and—assuming that it is already 30 per cent. paid for—is going to absorb probably \$3,500,000,000, or 5 per cent., of the national income of 1926 to pay for it. If this performance can be repeated in 1926, all will be well, but it manifestly makes the whole situation less sound. The manufacturers and merchants of the country, instead of knowing that there is either a shortage of goods, or nothing more than a current consumption of goods, know that the people have bought in 1925 all that they could afford to pay for, and nearly \$5,000,000,000 more."

It may be interesting to turn back to the conclusions reached by the institution which assembled the figures for 1924 quoted for the eight industries listed above. This institution made the investigation simply to ascertain so far as possible what the facts are, and not to prove or disprove any of the disputed economic points involved. The final paragraphs of its report are:—

"From our investigation of this subject we do not feel that it is possible to arrive at any definite conclusions which would cover the entire field. Broadly speaking, it seems to us that instalment buying is justified in so far as the purchase of necessities is concerned. While automobiles in many cases do not come within the category of a necessity, yet, nevertheless, in the main they have done so much for the health, enjoyment, and efficiency of the people as a whole that to condemn their sale on the instalment plan would hardly seem to be justified. Due to the tremendous volume of production of automobiles, which has rendered possible drastic reduction in price, there is now on the market a car for almost every purse."

"The dangers in the situation would not seem to be susceptible of any broad or all-embracing corrective measures. The necessary brakes must be applied in individual cases, if not by the dealer or the manufacturer, then by the finance company or the commercial bank. The careful extension of credit by all of the parties concerned will probably do much toward keeping out the evils which are bound to be present in any system so widespread as instalment selling, and if that is not done the disastrous results, which are the inevitable consequence of unwise merchandising, will be experienced to the extent to which such laxity has been allowed to prevail."

In considering the above two paragraphs, it may be well to remember that they are the cautious remarks of a very conservative institution not wishing to disturb anyone unduly in a country where the instalment plan has already reached the most extraordinary volume. Their application to this country is as yet hypothetical. The thinking bankers of America realise that a condition and not a theory confronts them, whereas with us the situation has yet to be moulded either for good or evil.

WELWYN GARDEN CITY.

THE opening this week by the Minister of Health of a main line station on the London and North-Eastern Railway marks an important stage in the evolution of Welwyn Garden City. In spite of having commenced its career at the very moment of the post-war slump, this important social experiment has already attained a very large measure of success, thanks largely to the vigour and enterprise of its managing director. With an ultimate objective of 50,000

inhabitants, it is already a substantial village of 5,000 persons, and is growing at the rate of 1,500 a year. There are near London and other great cities many admirably laid out dormitories but Welwyn is one of two towns in Great Britain designed in accordance with real garden city principles, the fundamental notion of which is that we should not only decentralise the sleeping of our great urban populations, but should decentralise their work also. This principle is urged on many grounds, such as the healthy conditions under which factory work may be carried on, and the possibility that out of hours the worker may enjoy the healthy advantages of the country. It provides for the provision of the town with fresh vegetables from an agricultural belt which can never be built upon, while, on the other hand, it will ultimately provide the amenities of social life which can be attained in a town which is itself of substantial magnitude, and is near a metropolis. But, perhaps, the strongest argument of all for the principle is to save the enormous waste involved for many millions of the population in spending one to two hours in travelling to and from work. Industry gets the benefit of these social advantages in better work, in addition to the opportunities for abundant space, cheap land, and low rates.

Such considerations as these were clearly foremost in the mind of Mr Chamberlain on Tuesday. He laid emphasis on the essential difference between a Garden City and a Garden Suburb. The latter, he pointed out, "must always be an appendage of a great town, and the people who lived in it must be transported, morning and evening, to their work. Transport is one of the insoluble problems of our great cities. But in a garden city we have a self-contained unit in its perfection. If we multiplied Welwyn Garden cities indefinitely they would solve what, for the want of a better name, was called the housing problem. We cannot hope to be able to build, in proximity to existing factories and places of industry, houses such as we should like to see, for the simple physical reason that there is not room. There is only one alternative, and that is to build new factories in proximity to new houses. That was the problem which Welwyn was in process of solving." Mr Chamberlain concluded his speech by pointing out to manufacturers, struggling with the burden of high taxation, the advantages of Welwyn and the low level of rates there in force, and by stating his personal view that the Government should lend its assistance to the development of garden cities on the Welwyn principle.

Welwyn is, however, interesting not merely as embodying the garden city as distinct from the garden suburb principle. The company is making a number of experiments which may one day exercise a great influence on municipal finances. The company is limited in its dividend, and can, therefore, never become a profiteering institution at the expense of the town whose interests, moreover, are further safeguarded by the presence on the board of certain civic directors. The profits of the company in exploiting what is in effect a land monopoly must ultimately go back to the town in increased amenities which will involve a reduction in rates. In the case of Welwyn, however, the land monopoly has been deliberately used in other ways to establish the company's finances on a firm basis. A number of public services, including the establishment of a large and growing general stores run on modern and up-to-date lines, a hotel and restaurant, a building business, a transport company, nursery garden, cinema, and several other undertakings, have been organised as subsidiaries of the parent company itself, and a share of the excess profits of these undertakings over a certain sum goes to the parent company, and, therefore, ultimately back to the town. No leases are granted which will permit competition with these organisations, and the town will itself have ultimately to decide between the advantage to its own finances of the monopolisation of these services and the benefits of competitive services. But for the present the system is likely to establish the finances of the company on a paying basis at a much earlier date than would have been the case in other circumstances. Mr Neville Chamberlain's speech shows that the Government is watching this experiment with great interest. The initiative was one taken entirely by private enterprise, and the concern is a joint stock company of the ordinary type. The experiment should show whether it is possible to combine the offering

of the necessary inducements to private capital with plans permitting the exploitation of monopoly privileges based upon the ownership of land in the communal interests.

The event of this week inclines us to hand bouquets all round—to congratulate Welwyn on passing an important milestone in a short history which is full of promise; to congratulate Mr Chamberlain on his recognition of the value of the Welwyn venture; and, finally, to congratulate the directors of the London and North-Eastern Railway on their acquisition (albeit overdue) of a site which has natural and geographical promise of becoming an important railway junction in the future.

Notes of the Week.

A Counsel of Despair.—The delegate conference of the Miners' Federation has taken a step this week which ensures that the great dispute of 1926 shall fade away into guerilla warfare, and that the mines will resume work in a bewildering confusion of local arrangements. The Government's offer, which would have preserved some semblance of a national settlement, was rejected by the Conference after receiving Mr Baldwin's intimation that the offer would lapse this week. No other conclusion was possible after the adverse expression during the week-end of opinion in the districts which had received no lead from either the executive or the delegates and with the miners who had returned to work either absent or barred from taking part. Officially it is stated that the adverse vote was 737,000 to 42,000, though no intelligible meaning can be attached to figures which are produced on no uniform plan, and represent block membership of lodges or districts. In the only district, however, in which a ballot was taken there was a very large majority against acceptance, and the fact of substantial rejection is not in doubt. But the two hundred delegates went further. Against the advice of Mr Herbert Smith they accepted, by a three to one vote, the proposal of the South Wales delegates to intensify the fight by withdrawing all safety men, endeavouring to secure an embargo on foreign coal, ordering the cessation of work on outcrops, calling on all trade unions to make a special levy, undertaking a national propaganda campaign to bring out the men who had returned, and vesting the further conduct of the dispute in the Federation, who will, if need be, supersede district organisations. For this policy there is obviously much to be said from the point of view of its advocates. There are clearly only two courses now open to the miners—either to make peace on the best terms possible, or to try to win by any available means. The Conference had rejected the only hopeful line of general agreement, and did not apparently consider the only remaining possibility, viz., to instruct the men to return on the best terms they could get locally. But the policy of intensifying the war is clearly a counsel of despair, which, in any case, could only have succeeded at a much earlier stage of the contest. In the first place, it is suicidal. Whatever terms are made, the industry is faced with the need of restriction, and many of the men will never be employed again. If the pits are flooded, it is only another nail in the coffin of the older districts. Secondly, it is certain to fail. The safety men, who mostly do not belong to the Federation, will not come out, with some exceptions, and even if some of the men withdraw, emergency measures will be adopted to save the pits; the hopes of an embargo are almost nil, and the display of divided counsels is not likely to secure any increased support from the trade union movement generally. Indeed, the plan is so obviously futile that on Friday the Conference shirked action by referring it once more for ratification by the districts. This does not mean that the decision is unimportant. It will embitter the last stages of the dispute, lead to violent antagonisms in the coalfields, and delay the restarting of industry by perhaps some weeks and so prolong the hardship that is being suffered not only by the miners, but by large numbers of others who are being kept idle by the dispute. This deplorable conclusion is the final proof of the impotence and futility of the leadership of the miners. The officials have, in fact, virtually confessed their inability to end the matter, and thus left

the field open to the leaders of the minority movement, who eagerly stepped into the breach. Some people still persist in regarding the much-advertised Mr Cook as a sort of modern Pied Piper of Hamelin, who has led the miners off into the mountain playing on his slogan. But his influence on policy has latterly been by no means a decisive one. The events of the last two months have, indeed, revealed the dour and obstinate Mr Smith as a much more serious obstacle to peace than "that impulsive young man" who has made many efforts to open up the way of retreat without having the qualities of courage and statesmanship that are required for this most difficult of tasks. But even Mr Smith, whose policy of negation has proved so disastrous, is now pushed aside by the hot-heads, who can have no hope that a policy of violence can produce any better terms, but are determined to break some crockery before the fight is over.

Parties and Policies.—We have reached the period of the year when, with holidays well over, there is a stirring in the political camps. This year, it is true, the close season has been broken by two short emergency sessions of Parliament and by a flood of oratory (chiefly on the Labour side) aroused by the disastrous prolongation of the coal stoppage. However, between now and the re-assembling of Parliament in November, we shall see the usual autumn campaign of platform speeches by the leaders of the three parties. Mr Baldwin set the ball rolling at Scarborough on Thursday night, when he addressed a demonstration in connection with the annual Conservative Conference held there this week, and Lord Oxford will enter the fray next week with a speech at Greenock on Friday. At the Conservative Conference only two subjects aroused real enthusiasm or heat. The first, which appears to arouse intense feeling within the party, is the minor question of the restriction of hours of sale of intoxicants at clubs. Conservative clubs are the backbone of the Conservative party organisation, and their universal demand for a removal of these restrictions (although the brewers, whose support also means much to the party, cannot be expected to favour it) is one to which the leaders are forced to give some semblance of attention. The other subject is one of first-class political importance, namely, the revision of the law as it affects trade unions. The resolution adopted by the Conference was as follows:—

That in view of the experience afforded by the general strike of May, 1926, this conference is of the opinion that the present state of the law relating to trade unions constitutes a menace to national security, while depriving the individual of political and industrial freedom, and that this conference therefore urges the Government to introduce legislation to amend the law:—(1) To make illegal any strike called without a secret ballot of the members of the trade union affected; (2) to increase the security of the individual worker against victimisation and intimidation on account of his political beliefs; (3) to make mass picketing and the picketing of a man's private residence illegal; (4) to require the national accounts of trade unions to be audited by certified chartered accountants.

The strength of feeling on the subject was so strong that the Conference showed great impatience with Sir Leslie Scott when he pointed out some of the practical difficulties involved. The handling of this problem will impose a severe test upon Mr Baldwin's sagacity. He promised in his speech on Thursday to introduce legislation, his words were carefully weighed, and on the whole unexceptionable, but it remains to be seen, when the promised Bill is drafted, whether he and the hotter heads among his rank and file are within measurable distance in their ideas on what amendments in the law are advisable. The line of Government action on this point may easily play a very big part in influencing the next election. For the rest the Prime Minister's speech was rather dull, consisting mainly of a defence of the Government's action in connection with the general strike, and a catalogue of its achievements since taking office. The credit taken for work in the European sphere of international politics was, perhaps, not greater than the facts justify; but his long exposition of the Government's doings in relation to agriculture was unconvincing; while his silence on the question of the coal dispute may be taken as an eloquent confession of failure. One passage, in which Mr Baldwin developed the theme that the burdens thrown on to the country by industrial disputes put social reform financially out of court for the

present, obviously presents Lord Oxford with a theme for his Greenock speech. That speech is the more important because it will be the first public pronouncement by the Liberal leader since his dramatic excommunication of Mr Lloyd-George after the general strike. Since that startling incident the rank and file of the Liberal party have shown something like a unanimous demand for the restoration of unity in the party and the suppression of sectional quarrels. Lord Oxford received a deputation on the subject from the Candidates' Association this week, and promised to deal with the question at Greenock. Meanwhile he has been publicly urged by Lord Beauchamp, the leader of the party in the House of Lords, to close the Liberal ranks. Lord Oxford's decision whether to adhere to the ex-communication, or to bow to the wishes of the party for conciliation, will have an important bearing on the developments of political party alignments in the near future.

Imperial Conference and Preference.—The advance guard of Dominion and Colonial representatives has arrived in London, and exchanges of opinion are on foot in preparation for the formal opening of the Conference on October 19th, by which time the newly elected Canadian Premier, Mr Mackenzie King, and his colleagues will have reached these shores. The supreme importance of the Conference will lie in the political rather than the economic sphere. Its proceedings are likely to mark an important stage in the constitutional development of the British Commonwealth of Nations, for among the problems to be discussed are those of Governorships, of diplomatic representation in foreign capitals, and of foreign policy generally, including vital questions arising out of the Locarno treaties and the evolution of the League of Nations. On the economic side, too, there are wide fields to be explored, including those of migration and communication. We have no doubt, also, that the occasion of the Conference will again be used by the Protectionist school in this country for a fresh campaign in favour of a widespread extension of Imperial Preference. Existing obstacles to such extensions are familiar to the people of this country, and we do not anticipate that Mr Baldwin, even under the pressure of his strongly Protectionist Colonial Secretary, Mr Amery, will so far forget the lesson of the 1923 election as to play at all seriously with fiscal fire. He is also bound by definite pledges, which preclude any fundamental change in policy. Nevertheless, it is as well that the business men of the country should be alive to the danger of a tariff campaign, such as is likely to arise in certain quarters in connection with the forthcoming Conference. We therefore welcome the issue by the Manchester Association of Importers and Exporters of a Bulletin containing a resolution and a letter sent to members of the Cabinet principally concerned with matters of trade policy. Their object is to lay stress upon the necessity for the greatest possible measure of freedom in the international exchange of goods and services, and they deal especially with the problem of Empire preferences. "Were it possible for Great Britain," they write, "to impose a duty on goods coming from foreign countries and to grant a preference to the Dominions for such goods, still the volume of the Dominion produce sold would be limited to the capacity of our purchasing power. As long as the Dominions continue their policy of enforcing prohibitive duties for the purpose of protecting their own home industries, our purchasing power is correspondingly weakened, and the volume of imports of Dominion produce into this country is automatically curtailed, and any benefit the preference might be designed to promote is practically frustrated. On the other hand, our exports of coal and manufactures to other countries which are now large purchasers would be diminished if we were not able to take a free supply of their raw materials and food in return for the economic production of British manufactures for home and overseas trade." There is nothing new about these arguments, but the moment is timely for the re-statement of such truths as these and the following:—"The enforcement of trade within the Empire by arbitrary and unscientific devices will be, at best, lop-sided; but if left to the natural development along well-tried British

lines, in due course, with a gradually increasing population derived from British stock in the Dominions, a healthy and well-balanced trade throughout the Empire will grow up and flourish." The concluding sentences of this section of the Bulletin contain an appeal for freer trade within the Empire:—"Inter-Imperial trade implies mutual responsibilities, and as this country must, at all costs, have cheap food and materials, if our manufactures are to be sold against the present keen universal competition and our purchasing ability is to be strengthened, it becomes more important now than ever that Free Trade within the Empire should, as far as possible, prevail, even at the cost of mutual sacrifices. I am, therefore, to express the hope that the deliberations at the Imperial Economic Conference will lead to the removal of all needless barriers against a free and full circulation of goods and services in all parts of the Empire."

Air Progress.—The past week has seen three events which suggest contradictory comments on the progress of man's conquest over the air as a sphere of safe transport. At the end of last week Mr Alan Cobham (now very rightly and deservedly Sir Alan) alighted on the Thames after a 28,000 mile flight to Australia and back. This remarkable achievement, carried through without any breakdown, suggested that great strides had been made in aeronautics, and the suggestion is undoubtedly true. But an ironical reminder of the work still to be accomplished was quickly provided by two subsequent happenings. Twenty-four hours after the triumphal return from Australia a French air liner fell, a mass of burning wreckage, in Kent, passengers and crew all perishing. Moreover, on Thursday Sir Alan himself, taking the comparatively trivial air trip to Manchester to attend a civic reception, was compelled to make a forced descent at Nuneaton, narrowly escaped a fatal accident, and failed to keep his appointment. "Much is done, but much remains to do."

Yet Another Safeguarding Committee.—A few weeks ago a Committee was appointed to investigate the tariff claims of the fancy leather goods trade. Now another claimant has satisfied the Board of Trade that it has a *prima facie* case sufficient to warrant examination by a Committee under the Safeguarding of Industries Act. This time the claimant is the British Pottery Manufacturers' Federation, which asks for the imposition of an import duty on "table-ware of translucent pottery." The Committee which is to hear the claim, the Board of Trade announces, is to consist of Sir Philip Henriques, Lady Askwith, and Mr George Hayhurst. The secretary to the Committee is Mr F. W. Hammond, Board of Trade, Great George street, Westminster, S.W. 1, to whom all communications relating to the work of the Committee should be addressed.

New Capital Issues in the United States.—Through the courtesy of Messrs Dillon, Read and Co., Chicago, who have cabled the preliminary figures for the past nine months, we are able to give the following comparative table of new capital raised in the United States in the first nine months of each of the past three years:—

	(000's omitted.)	1924.	1925.	1926.
Companies	2,411,148	2,959,263	3,379,352	
Foreign Governments	243,945	364,631	289,519	
Farm Loan	154,400	110,797	94,875	
Municipal	1,103,425	1,047,183	1,279,347	
Canadian	126,755	38,658	53,792	
U.S. Possessions....	6,035	4,176	8,288	
	4,045,708	4,524,708	5,105,173	

The high level of trade activity in the United States has brought with it a substantial increase in the raising of new capital. The increase in the total is due to a growth in domestic requirements. The figure for company borrowings alone at well over £600 millions sterling in the past nine months is truly enormous. American municipalities are also increasing their demands in the market. Foreign Governments, on the other hand, have raised less than last year. Canadian borrowings in New York, although ahead of last year, are well behind the 1924 level.

Shipping Freight Index Number.—Whole cargo charter rates rose substantially during September in comparison with August, as will be seen by reference to the table below. For the fifth successive month there was an absence of quotations for outward coal cargoes from the United Kingdom, and it became necessary in consequence to have recourse again to the method, pursued since April, of computing the Index by two separate calculations, which are set out below. The figures in black type show the results obtained by interpolating for each of the coal routes, normally included in the Index, the last available routes—viz., those current in April. The italic figures indicate the results secured on the basis of the available freight quotations—i.e., omitting the usual coal routes. According to these figures, it will be seen that, taking homeward routes alone (the italic figures), the Index Number for September shows a rise of 6.92 per cent. compared with August, while the Index figure, including the April coal routes, is 4.57 per cent. above the figure for the previous month calculated in the same way:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913).....	100	100	100	100	100	100	100
Average, 1913.....	110.03	113.09	123.37	106.29	117.38	127.89	116.34
February, 1920.....	814.31	529.89	757.52	744.81	587.02	712.16	690.95
December, 1920.....	268.90	277.17	244.10	256.72	286.72	347.18	280.14
December, 1921.....	160.06	164.07	163.72	144.43	141.25	166.47	156.67
December, 1922.....	137.09	135.15	129.19	122.61	136.08	159.34	136.57
December, 1923.....	134.04	132.72	120.09	124.35	125.07	144.21	130.08
December, 1924.....	117.44	129.18	119.45	119.76	129.29	161.13	129.38
December, 1925.....	116.98	121.57	117.03	110.05	110.10	154.90	121.77
January, 1926.....	115.92	114.12	116.10	119.58	102.78	135.53	117.00
February, ".....	116.52	97.85	114.86	118.52	95.05	119.29	110.35
March, ".....	115.88	93.37	116.94	114.57	87.92	96.14	104.14
April, ".....	112.40	95.00	116.57	109.16	83.90	97.03	102.34
May, ".....	111.41	102.60	118.71	107.90	78.12	99.70	102.58
June, ".....	110.81	108.04	121.06	120.43	98.33	92.88	108.04
July, ".....	110.91	116.16	134.42	119.80	98.76	124.83	117.45
August, ".....	111.81	127.83	133.66	119.59	100.88	151.34	124.15
September ".....	112.07	141.30	144.29	121.68	104.08	154.90	129.82

The month's changes in the Index of each group and sub-group (coal freights excluded) are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade.....	124.19	..	S. America—outwards	167.09	+ 21.26
Foreign Governments	117.95	+ 12.70	India—outwards	100.21	+ 4.18
Farm Loan.....	140.30	+ 12.47	Far East, &c.	104.05	+ 3.17
Municipal.....	140.30	+ 12.47	Australia	151.90	+ 3.56

The most noteworthy feature of September was continuance of exceptionally heavy chartering for the conveyance of American coal to Great Britain, rates in this connection rising during the month by more than 30 per

cent. Such a vast amount of tonnage was engaged in this attractive business that other important homeward markets were largely denuded of cargo space, and values jumped in nearly every direction. Particularly was this the case at the Plate, where a good demand was dealt with at rates which, on account of limited available tonnage, advanced rapidly, especially for nearer positions. The movement of grain from the Black Sea and Danube also proceeded at considerably improved figures, while American grain shippers, in competition with coal, had to pay substantially more for space. Other markets, including Mediterranean and Bay of ports, were generally quiet, though higher freights had to be conceded in most cases where actual business was transacted. The relation of the Index to the average for 1913 may be seen from the following table, the italic figures for the past five months being those obtained with coal freights:—

Month.	(1913 = 100.)	1923.	1924.	1925.	1926.
January	114.05	117.11	114.49	100.57	100.57
February	112.73	123.78	115.96	94.85	94.85
March	115.23	122.09	106.63	89.51	89.51
April	115.45	117.22	104.24	87.97	87.97
May	114.55	114.27	98.23	88.17	88.17
June	106.82	108.62	91.74	92.87	92.87
July	103.39	103.75	94.90	89.76	89.76
August	100.16	104.43	95.87	100.95	100.95
September	103.04	110.50	98.19	99.71	99.71
October	107.86	115.55	99.49	106.71	106.71
November	111.21	112.76	102.23	105.53	105.53
December	111.81	111.21	104.67	111.59	111.59
Mean for year	106.69	113.44	102.22	112.53	112.53

Whatever may be the economic ills accompanying the high cost of sea-borne goods attributable to the coal stoppage, the latter unfortunate event has undoubtedly proved an undisguised blessing to owners of "tramp" shipping, who have been enabled not only to increase materially the earnings of tonnage already on active service, but also to provide fairly remunerative employment for vessels which otherwise would have languished at the idle buoys.

Cotton Trade Short Time.—Our Manchester correspondent writes:—The latest recommendation of the Masters' Federation with regard to short-time in the spinning mills using American cotton has not been loyally observed, and on Tuesday last in Manchester the Committee decided to cancel the scale of working the mills one week in three and recommended a return to the former plan of a working week of 24 hours, which is equal to half-time. Some surprise has been expressed at this development. From Monday last all the factories should have closed down for a fortnight, but it was found that in the Oldham area out of about two hundred mills only about eighty had followed the recommendation. It is now realised that the Federation overstepped the mark in recommending so great a reduction in output. Numerous employers cannot afford to limit production on a larger scale, as owing to the fall in prices there is a danger of yarn contracts being cancelled if deliveries are behind time.

Our Consumption of American Cotton.—The annual circular of the Liverpool Cotton Association for the season ended July 30th shows that during the twelve months the average price of middling American cotton in Liverpool was 10.77d per lb, against 13.76d in the previous season. With regard to Egyptian cotton the average price for fully good fair Sakellarides during the twelve months ended July was 20.05d per lb, against 29.82d per lb in 1924-25. The consumption in Great Britain of American cotton during the past season was 1,986,822 bales, against 2,231,910 bales in the previous year. There was a remarkable increase in the consumption of Brazilian cotton, the total being 132,697 bales, against 38,606 bales in the previous year. There is always great interest in the proportional distribution of American cotton. Last season Great Britain took 14.81 per cent., against 14.58 per cent. in the five years 1920-

25. In the period of 1885-90, however, Great Britain used over 41 per cent. Last year the United States consumed 48.63 per cent., against 51.69 per cent. in the five-year period of 1920-25. In the period 1885-90, however, the proportion was less than 33 per cent.

Manchester Textile Exhibition.—Visitors to the Textile Exhibition held in Manchester this week, writes a correspondent, must have been impressed with the display of artificial silk, and with the whole-hearted manner in which the cotton manufacturers of Lancashire are taking up the new fibre and utilising it to embellish their own productions. The trade in cotton and artificial silk mixture fabrics is growing at an exceptional rate, and as one technical manufacturing difficulty after another is put out of the way, the future of the industry promises to become better. Artificial silk in Lancashire is not now treated as a novelty; it is regarded as a very serious proposition, and a conversation with a typical firm of Lancashire cotton manufacturers exhibiting here was most illuminating. The impression gained was that the manufacturers realised that in the future the Lancashire cotton trade would have to concentrate more and more on high-grade and novelty fabrics, and for this there was nothing better known than the embellishment provided by artificial silk used either as a warp or as a weft with cotton or worsted. Whilst it was agreed that the new trade was growing, it was felt that the present unsatisfactory state of the cotton trade was holding artificial silk development back. As a result of this, the full effects of the reduced price of artificial silk yarn had not yet been felt. When, however, the turn comes in the demand for cotton goods, it is believed that a great impetus will be given to the trade in mixture fabrics. In other sections of the exhibition were shown garments made of what, for want of a better name, must be described as pure artificial silk. By this description is meant that the cloths do not contain any textile other than artificial silk. The fabrics produced are really most attractive, and with the initial difficulties of washing and laundering out of the way, there is an ever-increasing demand springing up. A considerable number of the dresses to be submitted to Her Royal Highness the Duchess of York by Manchester firms are composed of artificial silk, and this in some measure indicates the high position in which the fabric now finds itself. Another interesting exhibit was the first piece of artificial silk ever made. This was on the stand of the "Textile Recorder," and bore an inscription showing that the real discoverer of artificial silk was the famous inventor, the late Sir Joseph Swan, and not, as is generally supposed, the Count de Chardonnet. Swan discovered and utilised artificial silk as a result of experiments made with the object of finding a suitable filament for electric lamp bulbs.

Electricity Supply Shares.—The Kensington and Knightsbridge Electric Supply Company convenes meetings of its shareholders for the consideration and passing of resolutions that shall enable the capital to be reconstituted in accordance with the provisions of the new Act. In the notice calling the meeting this important statement occurs:—It is the present intention of the board, if the proposed resolutions are passed, to capitalise £189,000 of the company's reserves and to distribute the same to the ordinary shareholders in the proportion of £9 of new capital in respect of every £5 now held. To facilitate this distribution, it is also proposed to divide the existing ordinary shares of the nominal value of £5 each into five shares of £1 each. Kensington and Knightsbridge shares are amongst the few remaining in this group which are of the nominal value of £5 each. The directors propose that £9 shall be added to each share, and, afterwards, that this should be split into 14 shares of £1 each. The market valuation, on the basis of the dividends whose payment is regulated by the provisions of the Act, is that the new shares will be worth anything from 22s 6d to 25s, and the price, which was £14 before the announcement, immediately rose to £16. Other shares have followed suit. One of the next companies to declare its intentions is thought likely

to be the Westminster Electric, whose reserves are expected to make a pleasant showing to the shareholders. Shares in any of the London electric lighting companies have suddenly become more precious than platinum, and as difficult to acquire. Holders decline to sell. Buyers are insistent in demands which, in most cases, cannot be supplied. Proprietors of shares in all the London companies are cherishing hopes that may not be entirely realised. Experience of the disappointment that waited upon stockholders in certain of the water companies when the undertakings were taken over by the Metropolitan Water Board counsels caution in the erection of anticipations that may prove to be exaggerated in some few of the London electricity supply undertakings.

The Rise in Tin.—For two consecutive weeks the volume of trading in tin has been of very large dimensions, and speculative transactions have played an important part. Buying on the part of consumers has, on the whole, however, been on a considerable scale, with good takings on American account, while the Continental demand has been decidedly more active within the last few weeks. Current supplies have not only been easily taken care of, but home stocks have been again reduced to 1,460 tons. Stocks practically everywhere are at a low ebb, and in view of the continuation of a large world's consumption, it is not surprising that sellers of the metal have become more exacting almost daily on the basis of high c.i.f. prices secured by either Straits or Java shippers up to fully £316 a ton, as reported on Thursday. An appreciation of nearly £9 a ton was recorded for standard cash tin last week to £315 15s, and the price reached £319 on Thursday this week, followed by three months' metal up to £308 5s, from which only a slight reaction has ensued. The two latter high records compare with about £272 and £271 10s respectively at the end of June last. In but little more than three months there has, therefore, been a big appreciation, but the tendency of the market favours the establishment of still higher records not seen since the phenomenal boom in 1920. The fact that the visible supply disclosed the comparatively small increase of 700 tons for last month to about 13,500 tons, was mainly due to better Straits shipments of 6,529 tons, while the total deliveries were more than maintained against the previous month, and on this showing the market was the more quickly influenced by the forecast of a reduction in the Straits shipments this month to about 5,500 tons. The shortage of available supplies thus threatens to become more acute, although more normal shipments might be expected for November and December. Straits shipments in the last quarter of last year were rather heavy, averaging well over 7,000 tons a month, so that allowing for fair average contributions from Java and other sources, together with, say, between 17,000 and 18,000 tons from Malaya for the current quarter, indications are in the direction of unabated stringency in the matter of supply and demand. Producers, with hardly any exception, are obviously making substantial profits, but the fact remains that the progress of the world's production is still disappointing as compared with last year in spite of the inflated price. America cannot afford to remain out of the market for very long at any time as clearly indicated by her large needs from month to month and her reserve stocks, which, with the tin afloat to American ports, do not represent much more than one month's consumption.

Canadian Northern Debenture Scheme.—Holders of the 5 per cent. income charge convertible debenture stock of the Canadian Northern Railway will not, we imagine, show much reluctance in accepting the scheme prepared for dealing with the issue. The proposals may be briefly summarised as follows:—(a) Each stockholder is to receive in exchange for his present holding an equal nominal amount of a new stock, the principal and interest of which would be unconditionally guaranteed by the Canadian Government; (b) interest on the new stock at the rate of 4½ per cent. per annum will accrue as from May 6, 1930, the first payment to be made on November 6, 1930; (c) the new stock will be repayable at par on May 6, 1970, with an option to the company for redemption at par at

any time after May 6, 1940, on three months' notice. While it is true that interest on the new stock will not begin to bear interest until 1930, it must be realised, as the stockholders' committee points out, that prospects of interest payments on the present stock between now and 1930 are negligible. In adopting the scheme at the forthcoming meeting, therefore, stockholders would not be sacrificing anything in the shape of interest rights, while, on the other hand, they would be securing a settlement equal to repayment in 1930, as the committee believes "it is reasonable to assume" that the new stock "will be worth at least par on May 6, 1930." Thus, not only would the present element of uncertainty be removed, but stockholders would be in possession of a first-class Dominion Government security. The fact that holders are asked to forgo rights of redemption in 1930 is perhaps open to criticism, and may prove to be the subject of some discussion. Those who claim that this right should not be withdrawn have some ground for complaint. As things are at present, the terms of the trust deed securing the existing debenture stock preclude the holder of less than £103 of stock voting on a poll. The company, however, expresses a desire that no stockholder, however, small, should be in this position. It has accordingly been decided to alter the voting rights under the trust deed in order to give every holder of stock one vote on a poll in respect of each \$5 or £1 of stock held. The meeting is called for November 4th next.

Harrisons and Crosfields.—There is considerable cause for satisfaction to be found in the report of Harrisons and Crosfield, the well-known rubber company secretaries, for the year ended June 30th last. The figures, which are set out in comparative form below, reflect to some extent, of course, the high rubber prices ruling at the beginning of the year:—

	1913-14.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.
Net profit.....	£ 134,269	£ 164,466	£ 149,138	£ 192,711	£ 242,475	£ 276,902	£ 339,113
Brought forward	23,879	37,873	44,525	45,114	66,526	70,707	75,736
Preference dividend ..	158,148	202,339	193,663	237,825	309,001	347,609	414,849
Prof. ord. div. (10%) ..	27,500	37,800	37,800	37,800	37,800	37,800	37,800
Management shares ..	30,000	100,000	100,000	100,000	100,000	100,000	100,000
Reserves, &c.	35,118	5,941	1,250	2,500	20,998	43,129	69,154
Deferred ord. shares ..	14,073	3,499	18,929	12,000	22,000	30,000	37,000
Carried forward	35,530	44,525	45,114	66,526	70,706	75,736	82,093

The item of freehold and leasehold property as shown in the accounts has declined from £809,642 to £690,924, while loans also have gone down from £109,945 to £57,734. Against this, however, a new item of £237,311 appears in the balance-sheet in respect of shares in associated companies, while the cash holding has advanced from £64,943 to £114,625. Investments figure for £1,493,453, against £1,607,274, while bills receivable have more than doubled at £266,661. The bank overdraft has been reduced from £202,962 to £142,813, and acceptances on behalf of clients are given at £125,349, in contrast with £4,713. The balance-sheet discloses a strong financial position. Reserves amount to £493,000.

Clerical, Medical, and General Life Office.—The accounts of this life assurance society are made up for the year ending June 30th, and those for the year ended June 30th last close the quinquennium. At yesterday's annual meeting the chairman, Mr Francis E. J. Smith, was able to give a record of very satisfactory progress during the past five years. New life assurances have been effected for the net sum of £6,643,895, an increase of £1,063,514 over the figures of the preceding five years. The premium income has risen from £549,784 to £668,011, and the net interest income from £288,220 to £404,573. The life assurance fund has grown from £6,940,603 to £8,991,878, an increase of two million pounds, whereas in no previous quinquennial period has an increase of even one-half of that sum been recorded. The total claims by death were £1,623,915, as compared with £1,593,705 five years ago. They thus remained at a very moderate level and a record mortality profit resulted. The net existing assurances on June 30, 1926, were 25,796 in number and, including bonuses, £20,524,856 in amount. There were also in existence 684 immediate annuities involving the annual

payment of £47,866 and 836 deferred and reversionary annuities securing £71,432 per annum. As regards the valuation, Stock Exchange securities were worth £179,692 in excess of the book values at June 30, 1926. The book values of the remaining assets also provide a large margin of value. On the liability side the actuarial valuations of life and annuity contracts have been conducted throughout on the assumption of 2½ per cent. interest throughout, whereas the average earned in the quinquennium has been £4 12s 9d per cent. The total net liability is calculated at £7,991,662, so that there is a net surplus of £1,000,216. To this amount is added the sum of £65,676 already paid for interim and intermediate bonuses, so that the full profit of the quinquennium is seen to be £1,065,892. Of this sum the directors declare £1,028,630 as the divisible surplus of the quinquennium, and carry forward the balance of £37,262 as undivided profit. The assured are entitled to £925,767, representing nine-tenths of the divisible surplus, and after deducting £40,676 already paid for intermediate bonuses, the amount to be now distributed amongst them is £885,091. This sum is sufficient to provide bonus allotments on a substantially higher scale than any previously declared. The general principle of division in force is to allot the surplus as a percentage of the annual premiums paid during the last five years, together with an additional percentage based upon the total number of premiums in respect of which bonuses have previously been declared. Bonuses are declared in the form of reversionary additions to the sums assured, but in cases where the title is clear the reversionary bonuses may be surrendered for cash or applied to reduce or extinguish the premiums. Such an option may be exercised at any time. The rates of bonus are not uniform, it being a feature of the company's system that a higher rate of premium entitles the assured to a higher scale of bonus. The 1926 allotment is equivalent to an average cash bonus on all whole-life policies of over 45 per cent. In the past year new assurances were 1,751 in number for a total sum of £1,488,516, total premium income being £668,011, a decrease of £4,321 owing to the smaller amount of single premiums received. The gross rate of interest earned was £5 7s 10d per cent., and the net rate £4 13s 9d per cent., against £4 15s 4d per cent. in the preceding year, and £4 12s 9d per cent., the average net rate earned during the quinquennium. The expenses of management represented £14 0s 8d per cent. of the premium income against £14 7s 5d per cent. in the previous year. After transferring £50,000 to the superannuation fund, the life assurance fund was increased by £527,197, the largest annual increase in the society's history. In future the financial year is to end at December 31st in accordance with the general practice of insurance companies.

Renong Tin.—Our mining correspondent writes:—Although the dividend total is 35 per cent., as against 30 per cent., in respect of the year ended June 30, 1925, the results of the past session proved scarcely up to expectations. Delay was experienced in the reconstruction of the No. 3 dredge at Rasa; and while the No. 2 machine, which commenced operations at Rasa in March, 1925, gave a much larger output than before, the total yield showed some reduction. Thanks, however, to the advance in the price of the metal, the revenue was a trifle higher at £105,100, and the balance available became swollen by the inclusion of £7,600, provision for income-tax not required. On the other hand, special appropriations absorbed somewhat less than before. Thus, after payment of the increased dividend, a balance of £17,240 remains to go forward, as against £15,600 brought in—the former amount being subject to directors' special remuneration. It may be recalled that from its original property at Renong the company has paid dividends totalling nearly 200 per cent. The expectation had been entertained that there would still be a year or two's work there for the old No. 1 dredge; but in September the machine had another breakdown, and the directors decided that it was not worth while to resume work. The current year will be, at any rate to some extent, another transition period; but when work is in full swing at Rasa the outputs should be satisfactory and costs lower than of late.

Mount Elliott.—A new financial scheme is put forward on the part of this Australian undertaking. On the present occasion it is proposed to cancel £4 of each £5 ordinary share, of which 243,000 are in issue. After the reduction has been confirmed the capital will be raised again to its present amount of £1,750,000 by the creation of 972,100 ordinary shares of £1 each, of which, presumably it is intended to issue part, although nothing is said on the point. It may be recalled that the company's properties comprise various groups of mines in North Queensland. During last financial year their number was added to by acquisition of the neighbouring Mount Cuthbert mines, on what are described as "most favourable terms." The ore reserves in these properties are estimated at 193,500 tons, averaging 6.84 per cent. copper. No work having been done on the company's original properties, the ore reserves remain as last reported—namely, 1,876,000 tons, averaging 4.63 per cent. A substantial interest is held in the Dobbin and Cloncurry Mines. Some time ago a project was set on foot for an amalgamation, or, at any rate, arrangement, with the Hampton Cloncurry undertaking, which has been in a state of suspended animation for some time, but no agreement resulted. The last dividend paid by the Mount Elliott was 5 per cent. in 1913. Having regard to labour and other conditions in Australia, it is not practicable to take a very rosy view of the future. The Mount Lyell makes its profits chiefly out of fertilisers; the parlous position of the Mount Morgan was referred to a few weeks ago.

Sherwood Starr.—The report to June 30th of this Rhodesian enterprise emphasises the extent to which the current market price of the shares is based upon possibilities. Owing to the change in the character of the ore the profit amounted to no more than £19,600, as against over £49,000 for 1924-25, and of the former sum only about one-half was distributed in a dividend of 10 per cent., the balance being required for expenditure in connection with the additional plant. In respect of 1924-25 a total of 45 per cent. was disbursed. At 74,000 tons the ore reserves show some expansion, albeit still representing not much over two years' supply for the mill; the value of 17.4 dwts indicates a falling off. Recently a wide and rich ore body has been opened up at the fifth level. Much depends upon whether this extends in length and continues at depth. Meantime, the 5s shares are quoted at 22s 6d.

UNITED STATES.—COTTON CROP—MONETARY OUTLOOK—SHARE MARKET POSITION—BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 28.

WITH trade and industry maintaining a steady pace, and with the share market fluctuating irregularly within a narrow trading range that has contained it for nearly eight weeks, attention has been attracted by manifestations of weakness in the cotton and silver markets. A pronounced reaction in cotton, which has carried the October delivery below 14 cents a pound—the lowest price that has prevailed since 1921—is easily attributable to the last Government crop report. It will be recalled that after the early reports had forecast a large crop, southern interests and cotton brokers declared that unfavourable weather would very considerably reduce the yield. The Government report also reflected the poor summer weather, the estimated crop being reduced from the 15,635,000 bales predicted on June 25th to the 15,166,000 forecast on the basis of the September 1st condition. Meanwhile many of the private estimators were talking of as low a yield as 14,500,000 bales, while brokers were encouraging speculative buying on the basis of these bullish claims. A very great improvement in the weather during the first half of September undermined the foundation below this weak bull position, but full realisation of what had happened did not come until the Government announced on September 23rd that on the

basis of the September 16th condition the crop promised to reach 15,810,000 bales. Incidentally, the Department of Agriculture took advantage of this occasion to announce that it would discontinue the practice, initiated this year at the request of southern politicians, of adding supplementary estimates giving maximum and minimum possibilities on the basis of the experience of the past several years. These supplementary estimates evidently proved something of a boomerang, as they showed the possibility of greater additions than subtractions from the current estimates. In any event, the indication of the bigger crop caused immediate and pronounced weakness in cotton prices, the loss since the report was published amounting to about 2 cents a pound. Much talk now is heard of the price being down to the cost of production, and of the unfavourable influence that this situation will have on business conditions in the cotton-growing areas of the south.

Little probably need be written from this side of the water on the silver situation, with which your markets are amply familiar. However, it is worth noting that the weakness in cotton and silver has called attention afresh to the decline that has occurred during the past nine months in the general level of commodity prices, and served to relate this decline to the question of central banking policy. In some quarters these developments are considered to lend strength to the view that Federal Reserve discount rates are likely to be moved up with considerable reluctance. Certainly the Federal reserve authorities, known to be sympathetic to the restoration of the gold standard throughout the world, would not be enamoured with a hard money policy *per se*. Neither would they, as intelligent persons familiar with economics, be likely to believe in a deflation policy in the world's great creditor country. Accordingly, the argument runs that with speculation in the share market curbed, as it assuredly has been, and with the Congressional elections coming on, the Reserve authorities will be content to run along with the existing situation in the money markets, meanwhile being liberal in meeting the legitimate demands of autumn and holiday trade. Whatever be the validity of this argument, the fact remains that for the moment Wall Street is less inclined to look for an upward revision in the official charge for money.

Certainly the share market has been showing little disposition to break out on either the up or down sides. The trading range in which it has held for nearly two months amounts, on the average, to only three or four points. During this period average prices have come to the same high level three times, and have declined to the same bottom in the same number of instances. At the present writing the market is approaching this top level for the fourth time, and, it must be confessed, with little convincing indication of going through. Volume, meanwhile, has been moderate, and public participation noticeably restricted. Professionals have been experimenting on both sides of the market, but with limited success. On the decline, the market has become oversold without developing much real liquidation. The rallies that have accompanied short covering have failed to carry through. Uncertainty with regard to the Federal Reserve discount rates has been one restraining influence. The even keel on which business has continued to run (indications of marked improvement or diminution being absent) has been another. Brokers' loans, which rose

by some \$57,000,000 in the week ended September 15th, fell by a similar amount in the week ended September 22nd. The call rate on the Stock Exchange has responded to the month-end demands by running up to 5½ per cent. But the speculative public continues to await some clearer indication of what is to come before taking a position.

Railway car loadings for the week ended September 11th, the latest for which statistics are available, fell off because of Labour Day holiday, but still exceeded one million cars, and ran 55,000 cars ahead of the corresponding week of 1925. Activity in the steel industry is being maintained at recent levels, or at about 85 per cent. of capacity, and prices are steady. Prosperity is somewhat unevenly divided among the automobile manufacturers, with General Motors doing a phenomenal business, but the aggregate volume of the business remains very large. August production, as reported to the Department of Commerce, amounted to 424,000 units, of which 379,000 were passenger cars and 45,000 were trucks. These figures compare with a total of 252,000 units in August, 1925, of which 216,000 were passenger cars and 36,000 were trucks. Some expectations continued to be entertained of a decline in the volume of speculative building, partly because of the view that the housing shortage occasioned by the war has been made up, and partly because of signs of redundancy in the building market. The failure of a banking house that floated some \$65,000,000 of real estate mortgage bonds during the past few years has revived scepticism over the methods employed by some of these houses, and may have a cooling influence on speculative enterprise.

Our bankers are interested in the reports of the conversations between Briand and Stresemann, but are not disposed to build inflated hopes on them. They appreciate the practical difficulties in the way of the proposed sale of German railway securities for French account, and consider these proposals premature. Meanwhile they are not losing sight of the importance of European stabilisation, and, bearing in mind Belgian possibilities, are hoping that the French Government will be prepared to take decisive steps along this line. Their attitude in respect to this matter may be described as hopeful rather than optimistic.

FRANCE.—INTER-ALLIED DEBTS—FOREIGN CREDITS —THE BANK'S GOLD PURCHASES—WHEAT PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, October 6.

THE question of the inter-Allied debt settlement has now assumed the position of first importance in the financial restoration of this country, and to-day, so far as can be seen, there is every probability that M. Poincaré will make the ratification of the Mellon-Bérenger agreement the next essential step in his programme. The decrees putting into execution the long list of departmental economies have been promulgated and only await ratification by Parliament, one of whose first duties this will be on the meeting of the Chambers. Deputies and Senators are now expected to be called together either during the last week in October or, more probably, the first week in November, and there is every likelihood the *décrets-lois*, as to which the question of confidence will be posed by the Government, will be duly ratified.

The way will then be clear for the question of the ratification of the Mellon-Bérenger and Churchill-Péret agreements concerning the American and British debt settlements. M. Dariac, the president of the sub-committee of the Chamber Finance Commission which has the duty of reporting to the latter on the question of ratification of the agreements, has had a long interview with M. Poincaré, and has informed him that his sub-committee expects to be able to examine the 700 or more documents forming the dossier to be considered, and to report to the full Finance Commission on or before the end of next week. M. Poincaré is understood to have urged the chairman of the sub-committee on debts to expedite the work as much as possible in view of the fact that until formal ratification of the agreements has been given, it will be difficult, if not impossible, for

the next stage in the programme of financial restoration to be proceeded with. This next stage, of course, is the stabilisation of the franc, which it is now recognised can only be accomplished with the aid of foreign credits. These credits, which will serve as a *masse de stabilisation*, must necessarily be secured from the American bankers, who may thus be regarded as controlling to that extent the whole situation. It may be taken as certain, however, that ratification by the French Chambers, important for the franc as the obtaining of credits is, will in no circumstances take the form of a mere confirmation of the agreements as they now stand. French opinion seems to be determined that no Government shall be allowed to place the country in a similarly subordinate position to American capital, so far as its economic situation is concerned, to that now occupied by Italy. The embodiment of some kind of safeguard and transfer clauses, it may be taken for granted, will be insisted upon by both Chambers unless means are found to induce the American and British Governments, as an alternative, to consent as a condition of ratification forthwith to pledge themselves to further revision of the terms in the near future.

The manner in which the Bank of France has taken the money market in hand (as it was expected to do by those who have followed M. Poincaré's plans closely) was strikingly shown last week, on the occasion of the end-of-the-month settlement, when 11 per cent. and 14 per cent. were the rates exacted for carrying over in the *parquet* and the *coulisse* respectively. Cases were reported in which the rate was as high as 18 per cent. In view of the fact that sterling was simultaneously falling, it was evident some powerful agency was deliberately restricting credits in francs, and it was argued that the Bank had begun to put the brake on the tendency which has existed here for some years for prices to be constantly on the rise, and that this attempt at slowing down is merely an effort to ease in advance the inevitable developments that will follow the effort at stabilisation. Reports that the movement in the exchange and the rise in carry-over rates on the eve of the settlement were due to Government action formed the subject of a communiqué by the Minister of Finance, denying this statement and asserting that no foreign currency descriptions have recently been thrown on the exchange market as the result of official instructions.

Purchases of gold and silver coin from the public by the Bank of France are being made in large quantities, and it is believed the total amount of precious metal that is being drawn from its hiding places by the bank's readiness to pay 19f 75c per gramme for fine gold and 59c per gramme of silver will prove to be even larger than had been anticipated. An official statement shows that during the first three days after purchasing began the amount bought from the public at the head offices and one of the Paris branches of the bank alone totalled 6,769,365f. Since then queues of from 50 to 300 people have been waiting outside the very numerous branches of the bank in Paris and throughout the provinces in order to change their precious metal for paper.

It is semi-officially announced that the pending loan of 3,000 million francs for the consolidation of a portion of the National Defence Bonds, the subscription lists for which will open to-morrow, is already certain to be heavily over-subscribed, and that the lists will be closed long before the date originally announced. A written statement handed by M. Poincaré to the presidents of the Finance Commissions of the Chamber and the Senate respectively indicates that the Government have every reason to be satisfied with the extent to which confidence has already returned. Not only is taxation coming in surprisingly well, but during the six weeks between the beginning of August to the middle of September the public absorbed, on balance, a net total of 1,786,000,000f of fresh Defence Bonds. Since July 22nd the debt due to the bank has been reduced by 1,700,000,000f, and the available legal margin, which had been reduced to the last million in July, is now sufficient to remove anxiety as to the situation of the Treasury. The situation is vastly better, superficially speaking, than it was a very few weeks ago, and for this the Government must be congratulated. At the same time, it is obvious that these results alone will count for little unless the further

steps that are contemplated are speedily taken. It is common knowledge that further inflation was avoided at the end of July only by an exceptional arrangement made with the banks, by which money to meet payments due at the end of the month was secured. At the same time, the floating and short-term debt has been increased by some 3,000 millions, owing to the absorption of 1,700 odd millions of fresh Defence Bonds by the public and the loans taken up from Switzerland and Holland. Even if the outcome of the pending loan, however, is merely to consolidate these 3,000 millions, or their equivalent, it is indisputable that on balance the effect of the recent operations is entirely beneficial.

The fact that the excessive price of wheat, in spite of many recent favourable factors, not only shows no sign of falling, but is actually still rising, is exciting a remarkable amount of attention; but the Government, in view of the preponderance of agriculturists in the Chamber, is apparently unable to find a remedy. M. Binet, who was Minister for Agriculture a few months ago, recently urged that the selling price of wheat should be fixed by law, as it seems impossible to induce the growers to reduce their prices. Last year, at the beginning of the harvest, home-grown wheat was selling at 120f per quintal, but to-day this same grain, produced at the same cost for labour and manure, is quoted at over 235f. M. Victor Boret, another former Minister of Agriculture, recently insisted that this price of the staple food of the nation is due to the greed of the French peasant. M. Binet agrees, and alleges that the growers have deliberately kept their wheat back for the purpose of creating an artificial shortage. He had the courage to warn the local wheat growers at an agricultural association dinner at which he was the guest that unless they amended their ways they would find the price of their product fixed by law on a basis that would give them a return considerably below present prices. The veiled reply of wheat farmers in several parts of the country has taken the form of a threat to reduce appreciably the area laid down under wheat.

Unofficial estimates of the beet sugar crop for 1926-7 indicate that the total yield will be about 625,000 tons, or some 50,000 less than last year. The reports of periodical weekly analyses of the roots by the sugar manufacturers' central committee show that the average yield from the beet is appreciably lower than last year owing to the long period of dry weather this season. As it was found necessary during the past year to import 475,000 tons of foreign-grown sugar to meet the requirements of France and her non-sugar-producing colonies (which may be estimated as totalling 1,150,000 tons, of which 900,000 tons are consumed in France itself), it is probable this country will have this year to purchase 525,000 tons of foreign-grown sugars to meet her needs.

GERMANY.—THOIRY DISCUSSION—INTERNATIONAL STEEL—FINANCES—CREDIT.

(FROM OUR CORRESPONDENT.)

BERLIN, October 6.

THE unfavourable reception so far given in the United States to the plan for mobilising the Reparations Railway Bonds mainly with American capital has not caused any surprise here. German observation of late has been that while America is a good place for private borrowing for productive purposes, the ground for financing of European governmental deals, however sound these deals may be, is not favourable. That seems to be the result of American *ennui* with everything connected with the War and the Peace Treaty. The consideration that French currency reform, an event in itself desired everywhere, could be facilitated by the immediate payment of a large sum by Germany to France could not be expected to win over American sentiment. The United States has not been willing to grant France a direct loan for this purpose except on conditions which France seems unwilling to accept, but indirectly an investment of American money in the mobilised bonds would have the same effect.

The Minister for Industry, Dr. Curtius, has commented not very optimistically on the subject. In a speech at

BANK ESTABLISHED IN 1864.

BUSINESS WITH SCANDINAVIA.

Cologne he warned against confusing "the extremely big and complicated question of mobilisation of up to two milliards marks of railway bonds" with the general solution of the Reparations question and with the regulation of international debts. The partial abandonment of the transfer clause protection, which would be necessary once the bonds become private property, raises, said Dr. Curtius, a very grave issue. "Finally, however strong our desire may be for the liberation of the Rhineland, two principles must stand unchangeably firm in the coming negotiations: no new additional burdens and no prejudicing of the definitive solution of the Reparations question." Dr. Curtius also declared that the loss which would be suffered through issue of the 5 per cent. bonds at a discount must be borne by "the creditors." These views hardly seem compatible with successful negotiations. As long as the total Reparations Debt is not fixed, there can be no way of making the Ally creditors bear a loss upon the bonds issue. The bonds issue would certainly to some extent prejudice a "definitive solution." The payments so far made for Reparations are of the nature of annuities, but the mobilisation would mean the irrevocable surrender by Germany of a capital asset. If a German cash payment for acceleration of the return of the Saar mines is not an additional burden, that having been provided for in any case, the repurchase of Eupen-Malmedy cannot be regarded in the same light. German public opinion is not favourable to "prejudicing" the Reparations settlement because it holds, with some reason, that the relative advantages and disadvantages of Reparations to the Allies have never been properly weighed; and out of this it draws with less reason the conclusion that the "definitive solution" may be the abandonment of the whole claim, except in so far as it may have been already met at the date of the solution.

The foundation of the International Steel Cartel has been well received. The abstention of the British steel industry has long been taken for granted, and it cannot be said that it caused either satisfaction or dissatisfaction. Apart from the doubt as to whether this kind of centralised authority would fit British traditions and methods, and from the fact that Great Britain has no centralised home authority, must be noted the obstacle that the now internationally-organised steel works present a geographically compact unit of which Great Britain could form no part. After the political change in the status of Alsace-Lorraine and the Saar, and the entry of Luxembourg into the Belgian Customs system, the new Cartel in part only aims at restoring pre-war conditions. For the present, it seems, the Cartel can do no harm to British heavy metal or metal-consuming industries. The ostensible main reason for the foundation, the adaptation of output to demand, is only a way of expressing the "adaptation of prices to profit-making"; and, in fact, the aim of the Cartel is, *visà* adaptation of output, to raise the low so-called "world-market prices" conditioned by French and Belgium exchange conditions to the higher German home level. To some extent the Cartel may have come too late for this purpose, because the "world-market prices" have been steadily rising, owing to exchange conditions and to the increasing European demand. The German Steel Syndicate's system of supplying raw materials for native export manufactures at the lower "world-market prices" (in fact, at a considerable loss), and its system of directly exporting materials at losing prices, in no way favour British trade; and they have been the subject of American threats of countervailing duties. This system

will soon cease, though it appeared from the agreement now come to between the syndicate and the Association of Iron-Consuming Industries that the disparity is to disappear "gradually." It is possible that later the Cartel may operate against British interests, because the more remunerative prices promised will help the Continental steel industry to carry through comprehensive schemes of "rationalisation" now under way. Indeed, during the course of the negotiations the public was propitiated with promises that the ultimate result would be cheaper steel all around.

The Association of Iron-Consuming Industries, in spite of the bounties given to its members on raw materials purchased for export manufacturing, watched the negotiations with some distrust. It has now come to an agreement covering all matters with the home Steel Syndicate. The agreement provides that the international agreement is not to be exploited for the purpose of further raising the (already high) German home steel prices; but the home steel industry, and with it the steel-consuming industry, reserve their rights to draw "a fair profit" from a possible new trade boom. The South-German industries are to get cheaper materials than the North, in the same price ratio as before the war. The Cartel foundation is not to be allowed to injure the export of German metal manufactures. The association is not to agitate for a reduction of the steel import duties. The sanctioning of the international Cartel by the German Government will be contingent upon the granting by France of import facilities for German metal manufactures. These facilities must be "at least equivalent to *de facto* most-favoured-nation treatment" (formally, France does not grant most-favoured-nation treatment). Simultaneously, the new German Steel Trust (*Vereinigte Stahlwerke A.G.*) has undertaken not to extend its present activities in finishing-manufacturing, and the German steel companies which are not in the Trust will give a similar guarantee. This means the definitive abandonment of the Vertical Trust system. With this every material question concerning interests of the steel producers and manufacturing consumers seems settled. It is, however, characteristic of Continental methods that although all this is practically a public transaction, involving as integral parts "governmental sanction," a particular Customs policy, and a Commercial Treaty, the ultimate home consumers are not consulted. The whole affair is to be a division of spoils with State support. Were this not the motive the necessary putting of the industry on a self-supporting basis and the "adapting" of output to demand could have been attained by free competition, with the resulting elimination of a great many inefficient undertakings.

The Finance Ministry's latest monthly return, which, according to the new system, is displayed in Budget form, shows:—

Millions of Reichsmarks.		
	August.	April-August.
Ordinary Budget—		
Revenue	682.4	2,955.2
Thereof Taxes	651.4	2,817.4
Expenditure	546.3	2,793.8
Thereof Subventions	205.2	962.9
Surplus	136.1	161.4
Monthly shares of 1924-25 Surpluses ..	30.6	153.0
Total Ordinary Surplus	166.7	314.4
Extraordinary Budget—		
Revenue	7.7	1.1
Expenditure	74.7	266.0
Thereof Reparations	20.0	104.1
Deficit, to be covered by Loan	74.7	264.9

The supplementary return for the Budget of 1925-26 shows in August revenue nil, expenditure 38.4 million marks; in April-August revenue 4.58 million marks, expenditure 264.4 million marks. The large August surplus on the Ordinary Budget is due mainly to exceptional yields of income and company income taxes. Provisionally the deficit on the extraordinary account has been met out of Treasury cash holdings, but also 100 million marks has been borrowed from the funds of the Post-Check Department.

Short-term money has been in heavy demand, the maximum rate rising to 7½ per cent., but the market to-day has been easier as the result of the return of money borrowed for stock settlements. There is so far no sign of a permanent stiffening of the money market. The Reichsbank's return for the last week of September shows

a moderate increase in discounts, by 145 million marks to 1,383½ million marks; and the usual large month-end increase in circulation, by 452 million marks to 3,251 million marks. The increase in advances, by 135 million marks to 142 million marks, which is exceptionally large even for a month-end return, is due to the fact that the rate for day money, which is normally considerably below the Reichsbank advances rate, this time reached or exceeded it. The return shows a new considerable increase of 31,315,000 marks in the gold reserve, while slightly more than that sum has been brought from abroad to Berlin. In the first three quarters of 1926 the chief Reichsbank totals have moved (average figures, the month-end fluctuations being ignored):—

	Millions of Marks.	
	Jan.	Sept.
Discounts (without rediscounts)....	985.6	1,292.5
Advances	6.7	42.7
Circulation	2,557.5	3,013.4
Deposits	808.7	687.2
Gold	1,227.8	1,556.1
Exchange (legal cover part).....	392.0	477.0

The percentages of gold cover and gold and exchange cover in September were both higher than in January, but were lower than earlier in the year.

The Prussian Trade Ministry's monthly report for August shows improvement in most industries, and emphasises that gains in certain branches resulted from the British coal strike. Bankruptcies in September numbered 451, against 476 in August, 1,950 in February, and 10,813 in all 1925. The Bourse has been firm, the only reactions being apparently due to profit-taking; but again the important gainers were the speculative favourites, and most of these have not reached their high points of late August.

AUSTRIA.—DR RAMEK'S POSITION—CIVIL SERVICE WAGES — ECONOMIC POSITION — CROPS — CENTRALBANK AFFAIR—STOCK MARKETS.

(FROM OUR CORRESPONDENT.)

VIENNA, October 1.

THE position of the Cabinet of Dr Ramek becomes more and more difficult. Through its awkward attitude before the Parliamentary Committee which is investigating the "Centralbank affair," and through the disagreements between the Viennese and the Styrian groups of the Christian Socialists Party, the present Government has lost all authority not only with the public, but even in its own party. The Social Democrats take advantage of the various abuses which were exposed by the investigations into the "Centralbank affair"; unduly exaggerating these unpleasant facts, they go so far as to accuse their political opponents of corruption, and cast unfounded suspicion upon public institutions controlled by the Government. At the same time, they are directing their efforts towards developing the Vienna Municipal Savings Bank into a powerful Socialistic Bank in order to compete with the other banks. Thus there is an imminent danger that the political conflict may spread to the range of finance and economics. Under these circumstances there is no doubt that the present Cabinet cannot remain in power for long. As regards its successor, the only question is whether Dr Seipel thinks the right moment has come to place himself at the head of a new Government. His first Cabinet's object was to reconstruct the shattered State finances; his second one would have the task of restoring order to the politics of the country and preparing for general elections.

The political differences raised by the "Centralbank affair" have so far prevented the issue of 64 million A.S. Treasury bonds by which the Government intends to reimburse itself for the sums advanced to the "Centralbank"; for the same reason it was also not possible to pass the revision of taxes on beer and wine. The problem of the State officials still causes great difficulties.

Although the Government had declared that the financial position of the country made it impossible to raise salaries and wages, and that, therefore, only a bonus amounting to one half-month's salary will be granted, involving a total expenditure of 25 million A.S., some Radical groups of post officials are not satisfied with this settlement, and intend putting pressure upon the Government by organising a post and telegraph strike.

Though one cannot speak of an improvement, economic conditions have certainly not become worse during the month under review. The number of unemployed decreased by 2,000, this being mainly due to the increased building activity. Also in the iron and steel industry a slight temporary improvement could be noted. Negotiations are now in progress with the Czechoslovakian, Hungarian, and Yugoslav iron industries in preparation for the International Iron Agreement. All industries are suffering from the fact that Austria's foreign trade has been falling off for some time, and that the home market is much too restricted to absorb the national production. The figures of the balance of trade for the first half of this year show that the excess of imports over exports, which was £10,150,000 in the first half of last year, rose to £15,290,000; in the same period the value of exports fell from £26,900,000 to £23,500,000, whilst the value of imports rose from £37,050,000 to £38,800,000. The decline in the exports is mainly due to the great reduction of exports to Germany and Poland. In order to revive foreign trade the formation of an Export Credits Guarantee Institute with a share capital of 5,000,000 Austrian schillings is in preparation, in which the principal Vienna banks and insurance companies and the Vienna Chamber of Commerce will participate.

The cereal crop of this year seems—if the estimates so far published are correct—not to be unfavourable, although it is below that of the good year 1925. The following table shows the figures for 1926 as compared with last year:—

	1925.	1926.
	Tons.	Tons.
Wheat	290,400	268,900
Rye	550,100	457,600
Barley	200,600	197,200
Oats	388,400	435,200

The bad results of shipping business on the Danube during recent years have induced the Austrian and Hungarian Danube navigation companies to come to an agreement, under which from October 1, 1926, the freight service on the river will be run by both companies jointly.

The crash of the "Centralbank der deutschen Sparkassen" still preoccupies public opinion. Owing to the Government guarantee, the depositors will not suffer any loss, but the investigation carried through by a Parliamentary Committee has shown not only that the management of the bank had been very bad, but that also that sometimes its actions had been too much influenced by politicians of the majority parties. Another important feature is the reform of the Post Savings Bank, with which the Government entrusted the president of the National Bank, Mr Reisch. This reform has become necessary partly because the organisation of the Post Savings Bank is still adapted to the conditions of pre-war Austria, and therefore much too cumbersome for the present restricted conditions, and partly because the bank had incurred losses on various occasions when it had been invited by the Government to support banks which had come into difficulties.

The improvement that set in on the Stock Exchange in August has been steadily maintained during September, and the market was firm in most departments, particularly in coal and breweries shares; also fixed-interest pre-war stocks, in which there had been a slump at the beginning of the month, recovered. Conversations are going on with a view to the introduction of forward transactions on the Vienna Stock Exchange. Conditions on the money market, which had been very easy during September, became slightly stiffer at the end of the month, and discount rates rose from 5½ per cent. to 6 per cent., which, however, is still 1 per cent. below the bank rate. The foreign exchange market showed but little fluctuations.

CZECHOSLOVAKIA.—POLITICAL CONDITIONS—TAXATION REFORM—TEXTILE INDUSTRY—SUGAR—COAL.

(FROM OUR CORRESPONDENT.)

PRAGUE, September 23.

SINCE the resignation of the Coalition Government and the appointment of the Ministry of Officials last spring, the internal political situation in Czechoslovakia has been extremely complicated. No party or group of parties seems strong enough to produce a stable majority. The Czechoslovak parties, which divided a few months ago into a *bourgeois bloc* and a Socialist *bloc*, have found it impossible to carry on without the support of the National minorities; but these latter hesitate to take any part in the real work of the Government. The Social Democrats have refused to consider the question of an All-National Party, declaring their determination to consolidate all the Socialistic parties—Communists excepted—of all nationalities, into one party. The Socialists are further so divided among themselves that they cannot be said to constitute a decisive factor at the present moment. Under these circumstances, the continuance in office of the present Ministry of Officials by means of *ad hoc* majorities seems inevitable, though the coming election for the Presidency in March next makes it essential that a real parliamentary Government should be in power.

Despite the uncertainty of the political situation, great efforts are being made by the Ministry of Finance to bring about taxation reforms, which have long been needed. Such reforms imply the unification, codification, and simplification of the various laws now operating in various parts of the republic. Taxes uncollected at the establishment of the republic still remain to be dealt with, while the political administration has yet to work out definitely the degree of autonomy (especially financial) to be granted to the respective territories now forming this State. The whole system of direct taxation needs recodifying, and the position of the various local authorities should be revised. Such changes will not be easy, especially as they must be carried out at a time when many branches of industry are passing through a serious crisis.

The textile industry has been particularly badly hit during the last few months, and this is of great national concern, when it is realised how important a part this industry plays in the national life. It may be seen in the following figures:—

Year.	(In Millions Kc.)			
	Total Imports.	Textile Imports.	Total Exports.	Textile Exports.
1924.....	15,855	5,201	17,053	5,625
1925.....	17,594	6,242	18,799	6,487

Or, put in another way, 35 per cent. of imports and 33 per cent. of exports were represented by textiles in 1924, and in 1925 34.2 per cent. and 34.4 per cent. respectively.

While many reasons applicable to conditions prevalent in the whole world market may be given in the case of this present crisis, there can be no doubt also but that the high tariff walls, built up around each of the States of Central Europe, have much to do with it.

The long-delayed commercial treaty between Czechoslovakia and Hungary may do much to alleviate the position. Czechoslovak textiles and Hungarian cereals, especially, stand to benefit under the most-favoured nation treatment, which is embodied in this temporary arrangement, which came into force on September 1st. In 1925 Czechoslovakia's exports to Hungary were valued at 1,177 millions Kc, and her imports at 1,120 millions. Czechoslovak textiles exported to Hungary amounted to 600 million Kc, while Hungary sent grain and flour to Czechoslovakia to the value of 700 million Kc. In view of the fact that the Hungarian duties upon Czechoslovak textile goods were exceptionally high, amounting in certain cases to between 60 per cent. and 80 per cent. of the value of the goods, the new agreement should be of considerable benefit to this State. The Czechoslovak-German conversations on the question of a commercial treaty between the two States have also just been resumed. The temporary suspension of negotiations, due to the raising of the German duty on malt on August 1st, is not likely to be permanent.

The returns for the period January-July, 1926, show a favourable balance of trade, despite the adverse results of

the earlier quarter of the year:—Imports (in million Kc) were 8,675, exports 9,242, giving an excess of exports of 567. Transport through the Danube-river-ports belonging to Czechoslovakia has greatly increased during the last twelve months (even though one-third less foreign goods have been transported). This traffic increased during 1925 by 34,613 tons, or 30 per cent.

Reports from the sugar beet areas show that the favourable weather of the last few weeks has resulted in a steady increase in the weight and sugar content of the ripening beet. Compared with last year, the weight of the root is less (373, as against 473 grammes); but the sugar content is greater, 15.20 per cent. as against 14.90 per cent. last year. In the eleven months of the present season, Czechoslovakia has exported 1,048,830 tons of sugar, which represents an increase of 66 per cent. over the figure for a similar period last year.

The production of coal in the Ostrava-Karvin coalfield, which is the most important in Czechoslovakia, increased by 30.55 per cent. in August last. In July the production was 707,040 tons, and in August 923,022 tons, the increase being mainly due to the greater demand made by the export trade.

GREECE.—COMMERCIAL TREATIES—ASSIGNED REVENUES—NEW COMPANIES—NATIONAL BANK'S MORTGAGE LOAN—ECONOMIES—POLITICAL SITUATION.

(FROM OUR CORRESPONDENT.)

ATHENS, September 16.

CABLE advices from Paris announce that, as a result of negotiations which had been conducted in Paris for some time lately, a commercial treaty has been concluded between France and Greece. This treaty will replace the provisional commercial agreement entered into between the two countries in February, 1924. Similar agreements have also been signed, some days ago, with Sweden, Yugoslavia, and Belgium, while it is expected that negotiations with Italy will be resumed shortly.

The returns of the International Financial Commission for the first seven months of 1926 show total receipts from assigned revenues of Drs 1,641,739,670. As compared with the corresponding period of last year, these receipts present an increase of Drs 297,921,409. An analysis of these returns shows that, while the yield of monopolies corresponds to the estimates, that from Customs has substantially fallen short of them, as a result of decreased imports due to the economic depression of the country. However, the yield of the assigned revenues, whose surpluses are utilised for the increase of the service of the debt, is ample enough to warrant payment in full of the service of the gold loans (old debt), in view also of the depreciation of the French franc.

From a statement of the Ministry of Commerce, it appears that, during the first half of this year, the constitution of 55 limited liabilities companies has been approved of, as against 42 companies in 1925 and 24 in 1924. The capital of these new companies amounts to Drs 1,278 millions, of which 672 millions have been paid up.

Following a similar loan issued last year, the National Bank of Greece is offering to public subscription a new mortgage loan of 200 million drachmae at 7 per cent. per annum, repayable by half-yearly drawings, and divided in 800,000 bonds of 250 drachmae each. Bonds drawn at par carry a premium of 50 drachmae each. Moreover, 18 bonds will be drawn every half-year, payable with profits of 800,000 drachmae in all, the first-drawn bond winning 400,000 drachmae. As lottery loans are popular in Greece, it is expected that, as was the case last year, this issue will be over-subscribed. The proceeds of the loan will be utilised by the bank for advances against mortgages and loans to various municipalities, port authorities, communities, road funds, &c.

The Government has decided to establish again the Ministry of National Economy, which, though extremely useful, was dissolved by General Pangalos for reasons of economy, though the annual saving from the abolition of that Ministry would be insignificant as compared with the economies which could be effected by reducing the Budgets of the War Ministries. A cutting-down of the expenditure of these Ministries has been repeatedly de-

manded recently by the political leaders and various bodies representative of public opinion, as well as by the Press.

The disappearance of the last mark of the dictatorship—the regiments created for its support—has produced general satisfaction. For these forces were a constant menace to the Government and the internal peace of the country. General elections are expected to be held on October 24th. There is now a controversy between General Kondylis, the Prime Minister, and some of the political leaders and the Press, the latter demanding, if a Coalition Government is impossible, a purely service, non-political, cabinet, and elections with the "majority" as against the "proportional" system, which the Government has decided to adopt. Whatever the importance of this disagreement, and of the possibilities it involves, it is in any case beyond doubt that, under the pressure of public opinion, considerable progress has actually been made towards internal peace and the return to constitutional methods of government.

CANADA.—GENERAL ELECTION—WESTERN GRAIN CROP—MARKETING PROBLEMS—BUSINESS CONDITIONS—MINING INDUSTRY—RAILWAY EARNINGS—STOCK MARKETS.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 20-26.

The general election, which was held on September 14th, resulted in the decisive defeat of the Conservative Government of Mr Arthur Meighen, and it will make way this week for a Ministry which Mr Mackenzie King, the leader of the Liberal party, will be called upon to form. The Liberals, with 118 out of 245 seats, are just short of possessing a moiety of the House of Commons, but they can rely upon the steady support of a dozen Progressives who ran as "Fusionist" candidates and received the imprimatur of local Liberal associations. So a reasonably stable Administration, which will be in possession of a good working majority in the House of Commons is assured, and for a termination of the intrigues and other evils associated with minority Governments the country at large is thankful. But it would be folly to minimise certain very disturbing and ominous aspects of the election. Every effort was made to induce French-Canada to abandon the political solidarity which it has shown since 1917, but all in vain, and the massed effect of the French-Canadian vote gave the Liberals about 80 seats. On the other hand, wherever voters of British stock were predominant, in Nova Scotia, the English counties of New Brunswick, the Southern Counties, and industrial cities of Ontario and British Columbia, the Conservatives prevailed by huge majorities. Manitoba and Alberta went largely Progressive through apprehensions of the higher tariff which the Conservatives threatened to put in force, and in Saskatchewan the Liberals carried most of the seats through the skilful leadership of Mr Dunning and with the aid of the American and foreign vote. The cold fact is that for the moment the French-Canadians have discovered the trick of controlling the government of Canada; they have only to vote in a solid bloc and pick up allies elsewhere through quarrels about the tariff and other issues and their position is secure. But the racial politics which characterised the contest in many parts of Canada are bound to provoke reprisals, and the election has really done little to solve the fundamental problems of Canada. However, Mr Mackenzie King has now another opportunity to prove his mettle as a statesman, and he ought to be able to form a reasonably competent Ministry, if he has the courage to discard some of the weaklings of his old Cabinet.

The Western wheat crop is still experiencing its usual vicissitudes. After being sorely afflicted by drought in July, it made, thanks to timely rains and cool weather, a wonderful recovery in August, and the latest survey of the Bureau of Statistics, based on conditions as September 1st, forecasted a total wheat yield of 399 million bushels, which was an advance of some 72 million bushels over the estimate for August 1st. Harvest operations, despite a certain shortage of labour, proceeded satisfactorily, and by the end of the first week in September the reaping of wheat in Manitoba and Saskatchewan had been

virtually completed and 50 per cent. of the Alberta crop had been cut. But there then descended torrential rains all over the prairies, and there was a severe snowstorm and quite heavy frost on September 15th in Alberta. As a result, reaping and threshing operations were completely halted, and only now has clear, sunny weather arrived to permit their resumption. The uncut wheat in Alberta has suffered very severely, and the grade of what was in stock elsewhere has suffered severely. It is yet too early to estimate exactly what damage has been incurred, but for many farmers there will be a serious impairment of grade, and there is now always danger of further loss from snowstorms and frosts. However, the damage done has given a spurt to grain prices, and they are still rising sharply. In Eastern Canada harvesting was abnormally late, and there too heavy rains have done considerable damage; but the crop yields, on the whole, are well up to the average, and the farming community has no reason to be dissatisfied. The fruit crop happens to be excellent, and the yield of apples is both abundant and of high quality.

The problem of markets for the exportable surplus of farm produce is still causing some anxiety. Through a variety of causes, of which the most important are the industrial troubles in Britain and the currency depression in countries like Italy and France, the buying demands of Europe have been very limited in character, and export shipments of cattle, butter, and cheese have shown a serious falling off compared with last year's figure. During August, also, exports of wheat flour were 230,000 barrels below the corresponding figure in 1925—a decline of 50 per cent.—and prices have dropped sharply, but there are prospects of an improvement in the coming months. European buyers of wheat have been filling their needs from the very abundant crop of Texas and Oklahoma, and although there has been a little relief in the past fortnight, the grain congestion, which was afflicting the port of Montreal at the end of August is likely to be aggravated once the new crop begins to reach the seaboard in substantial quantities. One factor in the situation is the scarcity of shipping, which is attributed partly to the British coal strike; in recent years tramp steamers have been bringing cargoes of British coal to the St Lawrence ports and taking back Canadian grain. This year, however, there has been no British coal to bring, and the tramps have been drawn to American ports to take American coal to Europe and elsewhere. As a result, an even larger proportion of Canada's grain crop than usual will move to American ports *via* Buffalo, which has become the strategic grain-handling centre of North America.

In certain lines there have been seasonal declines, but on the whole business is holding up very well, and the weekly carloading figure continues to be well ahead of the figure for the corresponding date in 1925. Autumn goods are moving in large volume, and merchants are reported to be abandoning their policy of hand-to-mouth buying, and placing substantial orders for future delivery in order to safeguard themselves against delayed shipments. This in turn has resulted in heavier purchases of raw material by manufacturers and increased employment. The steel plants and equipment companies, while not yet working up to capacity, are reasonably active and are benefiting by substantial orders from the railway companies, whose increased earnings justify extensive replacement of rolling stock and plant. The building boom which was a feature of the summer months, is now slackening off, and there are signs that some cities are now overbuilt, both with regard to residences and business accommodation, but a great deal of new construction work is in progress in connection with power dams and hydro-electric enterprises. The great American corporation, the International Pulp and Paper Company, is still extending its Canadian sphere, and the latest rumour is that it is negotiating for the purchase of the E. B. Eddy Company of Ottawa, which, in addition to being the leading manufacturer of matches in Canada, is also a large producer of newsprint. The pulp and paper industry generally continues to flourish and expand, and there seems no difficulty about the disposal of its output.

The mining industry continues to make a very valuable contribution to the country's prosperity. Government returns show that for the first half of 1926 the output of metals and non-metallic minerals, including coal,

gas, and oil, was valued at \$98,395,788, which represents an advance of \$8,048,000, or 8.9 per cent. over the total for the first half of 1925; gains were practically general, but the most substantial advances were recorded in copper, gold, lead, coal asbestos, natural gas, and crude petroleum. The output of gold in Ontario alone for the half-year reached a new high record of \$15,588,991, which is an increase of more than one million dollars over the \$14,506,219 produced in the first half of 1925. Prospecting work and development of mining properties is being vigorously pushed ahead, the market for metals is holding up well, and the labour situation is satisfactory. The high hopes raised by the discoveries at Red Lake near the western boundary of Ontario have not so far been realised, and Dome Mines, a company which has been very successful in the Porcupine field, has given up the options which it held on a large block of claims. But this new goldfield is still the scene of a good deal of activity, and its sponsors will not admit that the results obtained are disappointing.

Railway earnings continue to be exceptionally good. For the first seven months the net earnings of the C.P.R., placed at \$17,877,823, show a gain of 60 per cent., and those of the C.N.R. placed at \$17,536,998, record the phenomenal increase of 210 per cent. If the latter are maintained at the same rate for the rest of the year—which, thanks to the crop movement, is the most profitable period for the railways, they should provide enough to meet all the obligations due to the public.

At the beginning of September there was almost a boom in the stock markets, and the paper and other stocks made striking advances. The election did not cause any serious disturbance, although the textile and steel groups which stood to profit by a Conservative victory experienced a certain reaction. During the last week, however, the market has been sluggish, and inclined to show a reactionary tone, many mining stocks experiencing sharp recessions. The banks, trusts, and insurance companies have plenty of money for loans and investments, and ample local capital seems available for industrial expansion and new enterprises of sound character.

Letters to the Editor.

TRUSTS AND COMBINES IN COAL, IRON, AND STEEL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The writer of the article in your issue of October 2nd is representative of a type of industrialist who believes in the policy of free and glorious independence for individual concerns, and to whom the policy of unity and combination is anathema. The arguments which he puts forward are strongly made and have a convincing air of finality, but they do not all stand the test of analysis.

When he says that "the trustification idea can easily be carried too far" and that "mere bigness does not always lead to economy of production or strength of organisation" I am at once in agreement with him. Without going to America for an example, we have numerous instances in our own islands of industrial groupings which have been quite the reverse of successful, and in the iron and steel industry of Britain to-day there are several examples of this kind. The writer, however, has failed to distinguish between a unity of interests and policies formed by the flotation of a new company or combine, in which the older concerns lose their identity, and the unity obtained by a combination of individual companies who retain their separate existence.

The new International Raw Steel Combine which was formed on September 30th comes under the latter category, and in my opinion is infinitely more formidable on that account. Individual freedom is retained to a very large extent, and only on the broad question of control of output is unity pronounced. Your contributor's analogy of the United States Steel Corporation is a very unhappy one for his argument. It is hardly conceivable that a writer so well informed otherwise could be ignorant of the fact that the United States Steel Corporation does not control the steel industry of the United States, and yet his whole argument rests on that assumption! I have not the latest statistics beside me at the moment, but I am fairly safe in asserting that the United States Steel Corporation does not control more than 60 per cent. of the steel output of America. At any rate, I can give figures for

the years 1919 and 1920, which show the proportion in those years to be less than 50 per cent. Here are the figures:—

	1919.	1920.
	Tons.	Tons.
Steel ingot production, U.S.A.	34,671,232	42,132,934
U.S. Steel Corporation Production	17,200,373	19,277,960

What, then, becomes of the argument that the Steel Corporation of U.S.A. is responsible for the small and decreasing proportion of the export trade of the world which the U.S.A. possesses? The real explanation is to be found elsewhere, chiefly perhaps in the huge internal steel demand in the States, and in the high wages (and consequently high costs) which prevail there.

Unlike your contributor of last week, I strongly hold the opinion that only in a national policy of unification, of control of output, of allocation of orders and of development is there hope for the future of the British steel trade. The creation of a steel Trust on the lines of the Vereinigte Stahlwerke or the United States Steel Corporation is not advocated, rather is it condemned, because we know from experience that the result would most probably be an over-capitalised, top-heavy, uneconomic structure, which would be ill-fitted to stand the stress of world competition. Nor is it urged that the British steelmakers should join the International Raw Steel Combine, and for this reason, among others. The Continental steel trade is based largely on a theory of mass production, and the individual concerns are usually designed as complete units with that end in view. Many of the British works, on the other hand, have developed on specialist lines, and few of them, except perhaps on the North-East Coast, are complete units. Control of the British steel trade as part of a European combine would, therefore, quite conceivably act unfairly towards those firms who specialise in what may be called higher-grade steels, and to whom mere output is of lesser importance than quality.

I submit that the unorganised British steel trade is possibly in grave danger, but that with efficient organisation and wise control it can hold its own with the rest of the world.—I am, Sir, yours, &c.,

CHARLES B. RIGG.

Glasgow, October 5th, 1926.

BANK CONTROL IN ITALY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I beg leave to call your attention to a number of inaccuracies in the article on Bank Control in Italy in your issue of the 11th instant, pages 417-418. On page 418, second column, your correspondent says with reference to the transfer of the proceeds of the Morgan loan to the Bank of Italy: "The gold reserves of the bank will thus be increased by 90 million dollars, of 455 millions gold lire, to a total of 2,400 millions gold lire. The bank will in return cancel 2,500 millions paper lire of their advances to the Treasury." He further says under heading (3): "In the successive State Budgets, beginning with the 1926-27 Budget, a yearly sum of 500 millions lire will be included for the withdrawal and cancellation of a corresponding sum of bank notes issued on State accounts."

It is not true that in either of these cases the amounts of paper lire mentioned will be cancelled. On the contrary, in both cases the paper lire may, and according to official declarations will, be left in circulation. The belief expressed by your correspondent did indeed prevail for a number of days, and was naturally the cause of considerable preoccupation. The total debt of the Treasury to the Bank of Italy for paper issues being about a third of the total circulation, to reduce the circulating medium by one-third even in eight years, as your correspondent says, would provoke a grave disturbance in Italian trade and industry. The only deflationary measures adopted by the Government are the second noticed by your correspondent, that is the cancellation of 400 million lire of 25 lire notes and the replacement of 5 and 10 lire notes by silver coins, and another overlooked by him which consists in the immediate retirement from circulation of 500 million lire in Treasury notes (Buoni Ordinari del Tesoro) or cash, and the retirement of the same sum in Treasury notes or cash at the end of October, 1926. As to how fast and how far the deflation thus begun will be carried on the Minister of the Treasury, Count Volpi, has only said that it will be continued as rapidly and as completely as the public interest shall allow.

The repayment of the Treasury debt to the Bank of Italy will have one beneficial result, which I am somewhat surprised that your correspondent did not mention. In his letter, published in your issue of July 10th, page 70, he very properly observed that the Treasury utilises the best portion of its Budget and cash surpluses in keeping a big deposit at the Bank of Italy, and that this public deposit is the source from which the Bank of Italy draws the means to make larger advances to commerce and industry. The danger lies, as he remarked, not so much in the balance of payments or in the Budget situation as in the risk of an increase in note issue consequent upon an unforeseen obligation causing the

Treasury to withdraw deposits from the Bank of Italy. Obviously, this danger is much lessened by the repayment of the Treasury's debt to the bank.—Yours faithfully,

Milan, September 16th, 1926. H. EDMISTON.
[We have referred Mr Edmiston's criticisms to our Turin correspondent, who makes the following comments upon them:—"The 'numerous inaccuracies' which Mr Edmiston finds in my letter arise either from misinterpretation of my words, or simply from the impossibility of foreseeing facts or statements subsequent to the date of writing. (1) I never said that the transfer of 90 million dollars of the Morgan loan will reduce by 2,500 millions lire the amount of the paper issue, but only that by it the amount of the advances of the Bank of Italy to the Treasury will be reduced by 2,500 lire. Mr Edmiston simply restates what I had said. (2) In my letter dated September 21st I noted that the present reduction of paper issue is limited to 1,400 millions lire (400 millions by cancellation of 25 lire notes and 1,000 millions on the score of the Consortium for industrial securities). As to the further cancellation of notes by yearly instalments of 500 millions lire Budget contributions, I merely stated that by that means in eight years all the note issue on State account 'should' disappear. 'Subsequent' authorised statements made clear that the reduction of State debt to the bank will be followed by a correspondent reduction of the circulation only if the reduction can be carried out without industrial crisis. As soon as these statements were made public I noted them in my letter of September 21st. (3) The Treasury current deposits at the Bank of Italy had already been reduced from 2,630.0 millions lire at April 30th to 938.6 millions August 20th, i.e., to a more normal figure. Obviously, the repayments from the Treasury to the bank consequent upon the end of August monetary decrees cannot result in any big reduction of the figure of the previously reduced public deposits."—Ed. Econ.]

Books and Publications.

MR HENRY FORD AND HIS METHODS.*

WHY are wages so much higher in America than in Europe? And why, in particular, can Mr Henry Ford pay a minimum wage of \$6 a day to 200,000 work-people? These are two of the questions answered in the remarkable book written, or perhaps inspired, by the maker of the Ford car. Mr Ford believes strongly in paying high wages, because he wants a big market for his goods, and thinks that workmen should be able to buy the thing they make. His way of meeting a trade depression is not to cut down wages, but rather to raise them with the aim of increasing purchasing power and thereby filling the channels of trade with goods on the way to the consumer. However, he will not hear of our familiar terms—a "living wage" or a "standard wage"; but he escapes trouble with trade unions because he pays higher wages than other employers. He thinks that our English trade-union leaders are seriously mistaken, especially over their "make-work theory," and he does not allow his workmen to tie themselves to particular jobs on our English principle of demarcation.

Mr Ford holds that a manufacturer's first aim should be to serve the public, not to make profits. At the same time, he regards profits as essential; there must also be a margin so that the business may grow, for if it does not grow it will die. Profits come when the public is served; but the manufacturer must share them with his customers, who in their turn will buy more of his goods and send his profits still higher. Another of Mr Ford's guiding principles is: "Avoid waste of materials or of labour"; many pages are devoted to showing how small savings have been made in one process after another. Mr Ford believes that any method of manufacture can be improved, especially if it is one with ancient traditions like glass-making. His glass-making experience (page 44) is instructive, and so are his new processes of treating flax and making linen cloth. Among other things he took over a railroad, which had an operating ratio of 125 per cent., cleaned it up, raised the rate of wages, and brought down the ratio to 60 per cent.

Cleanliness is another of Mr Ford's hobbies. He does not permit dust, dirt, or smell in any factory, engine-room, or quarry, believing that his men have better health,

* "To-day and To-morrow." By Henry Ford, in collaboration with Samuel Crowther. (London) William Heinemann, Limited. 12s 6d net.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised ... £3,000,000
Paid-Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,512,884

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted on application.

On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.

JAMES STEUART, Chief Manager.

work which is intended to be historical, but they are sufficient to arouse a suspicion that the author may be weak on questions of detail. Inasmuch as the book possesses real value, this fault is greatly to be regretted.

GERMAN AGRICULTURAL CREDIT.*

THE Rentenbank-Kreditanstalt is a credit institute established in 1925 in order to provide agricultural credit organisations with capital which would have to be obtained from abroad. Agricultural circles in Germany felt that the work of the Rentenbank and the reorganised Reichsbank had been mainly in the interests of trade and industry—the statutes of the Reichsbank stipulating that bills discounted by the bank should be first-class commercial bills. The Government was obliged to pacify the politically influential agriculturists, hence the new credit institute. Dr Proehl's book is a good commentary on the Act establishing the bank, including a description of the most important agricultural banks and other credit organisations.

BOOKS RECEIVED.

Oppenheim's International Law. Vol. II. Disputes, War and Neutrality. Fourth edition. Edited by Arnold D. McNair. (London) Longmans, Green, and Co., Limited, 39 Paternoster row. 42s net.

Recent years have in a unique degree been prolific of changes in International Law, and the task of bringing out a new and up-to-date edition of the late Professor Oppenheim's famous treatise must have been a heavy one. In Dr Arnold McNair the publishers have secured a man pre-eminently qualified to perform it, and the work will retain its place among law "classics."

Volksgesundheit im Krieg. Von Prof. Dr Clemens Pirquet. (London) Oxford University Press, Warwick square. Vols. I. and II.

A new volume in the series "Economic and Social History of the World War," issued by the Carnegie Endowment for International Peace. This work is devoted to a consideration of the effects of the war—both during and since the war—on the health of the people of Austria and Hungary. It includes chapters on the health of the army in the field, the loss of life among children and young people, and the spread of disease in general.

The English Poor in the Eighteenth Century. By Dorothy Marshall. (London) George Routledge and Sons, Limited, 68-74 Carter lane, E.C. 12s 6d net.

Gives an account of the effect of the Poor Laws on the lives of the masses of the poor in the eighteenth and the latter part of the seventeenth century, and also of the contemporary attitude towards poverty. The study has involved laborious research into the works of contemporary writers, into parish papers, county records, and Quarter Sessions minutes. It is attractively illustrated.

Commercial Education. By Sir William Ashley. (London) Williams and Norgate, Limited. 5s net.

This book surveys the scope of commercial education as it exists at present in this country. It describes the remarkable new developments in commercial training in the German and American Universities, and applies the lesson derived therefrom to the British Universities. Sir William was formerly Professor of Commerce in the University of Birmingham.

Business Economics. By Sir William Ashley. (London) Longmans, Green, and Co., Limited, 39 Paternoster row. 2s 6d net.

We have to acknowledge two books this week from the pen of Sir William Ashley. The first, on commercial education, has been noted above. *Business Economics* consists of three lectures delivered last month at the Commercial College of Copenhagen. Sir William explores the subject of overhead charges, and shows how

* "Die Deutsche Rentenbank-Kreditanstalt." Von Dr Jur. Hans Proehl. Verlag für bargeldlosen Zahlungsverkehr. Berlin, 1926.

more self-respect, and work their best amid pleasant surroundings. One great aid to all this is the use of power. In England the man usually goes to his work; Mr Ford brings the work to the man. Transport, again, is an important factor; Mr Ford does not put his car together until the parts have got near the place where it is to be sold, because parts can be packed close and carried far more cheaply than cars. On another point he rejects our English theories, believing that small plants turn out goods more cheaply than large plants; he has found, too, that he need not build his factories near a labour market; indeed, he gets better work in the country. While we talk about allotments, Mr Ford finds that some of his workmen can carry on real farms in their spare time. On the other hand, he wants to treat farming like other forms of production; indeed, he runs his large farm at Dearborn on factory lines—electric milking, clean stalls, and so on.

Although Mr Ford's ideas find their full expression in the United States, he is also applying them, so far as local conditions permit, in his twenty-eight plants in other countries. In Cork his high, regular wages have had extraordinary moral and political effects on men who used to be given to rags, whisky, and revolutions. It is needless to say that Mr Ford has no belief in tariffs or Government help for trade in any form. He thinks that most of our recent social legislation, especially insurance, has been a mistake. Few English will, perhaps, agree with the whole of the book. But all will read it with great interest.

HISTORY OF COMMERCE.*

UNTIL comparatively recent years, commerce and economics alike have been badly served by the historian. In the schools and universities the study of history usually means the study of political history, and even though it has been impossible to exclude economic factors from their purview, such factors have been introduced more as a series of isolated instances than as a connected whole. Yet few students can gain a real grasp of the principles of economics and commerce unless they study the history that lies behind them, and hence all books of this kind are greatly to be welcomed.

The author sets out to deal with the history of commerce from the days of Egypt, Babylon, and the Phœnicians, and to cover every quarter of the world. The task he has set himself is clearly a large one, and though on the whole he has achieved success, the book is inclined occasionally to suffer from a lack of proportion. This was probably inevitable. The demands of space rendered it difficult to enter into detail to any great extent, yet detail was necessary, if only for purposes of illustration and to render the survey interesting and intelligible. Again, the amount of historical data available varies from period to period, and this has hampered the author in his attempt to preserve a due sense of proportion.

The value of the book lies in the way in which the author has shown how many of the questions of the present day find their counterpart in former times. The development of modern power and machinery, and the opening-up of new quarters of the globe, have had an enormous effect, but yet many of the old doctrines and beliefs, greatly modified though they are, still remain, and in perhaps unconsciously revealing this fact, the author has performed a notable service. His treatment of the present-day situation is, however, in one or two respects open to criticism. For example, he suggests that post-war years in England have witnessed a gradual drift away from Free Trade, but he omits to make any mention of the 1923 election. His allusion to the Federal Reserve System in the United States is also misleading. There are not, as he says, 12 Federal Reserve Boards, while the authorities of a Reserve Bank would be slightly surprised to learn that their chief function is to ensure that their district "shall be sufficiently supplied with currency." Also, the Dawes Scheme was not devised for the sole objects of rehabilitating German industry and providing a stable currency. These may be small blemishes in a

* "The History of Commerce." T. G. Williams. (London) Sir Isaac Pitman and Sons. 5s net.

they influence business policy, especially with regard to price, scale, and range of operations, methods of distribution and wage systems.

The Stock Exchange. By Charles Duguid. Completely revised by E. D. Kissan. (London) Methuen and Co., Limited. 3s 6d net.

The late Mr Duguid's well-known book on the Stock Exchange first appeared in 1904, ran through several editions, and was revised shortly before the war. Since then, of course, great changes have taken place, and Mr Kissan, the City editor of the *Daily Mail*, has embodied all these changes in his revised edition, which otherwise retains as much as possible of the original text.

Foreign Exchange and Foreign Debts. By Hubert C. Walter. (London) Methuen and Co., Limited, 36 Essex street. 6s net.

More than half this book deals with the actual and technical aspects of the exchange and currency. The latter part deals with the depreciation and stabilisation of the German mark, the fall of the franc, Britain's resumption of the gold standard. The general question of currency stabilisation is also discussed, and a final chapter deals with international debts. The author, who gives particulars of the Dawes plan, and Anglo-American debt arrangement and other settlements, severely criticises Mr Baldwin for his settlement of the Anglo-American debt in 1922.

Die Welt in Zahlen. Von Wl. Woytinsky. (Berlin) Rudolf Mosse-Buchverlag.

This is the fourth volume of a series entitled "Die Welt in Zahlen," and deals exclusively with industrial statistics from the international standpoint. The earlier chapters treat of industry in the various countries of the world, whilst the latter chapters are concerned with individual industries, coal, oil, metals, textiles, and chemicals. Numerous statistics are given throughout the book, these being further supplemented by graphs.

La Grande-Roumanie. Par C. G. Rommanhoeller. (La Haye) Martinus Nijhoff, 9 Lange Voorhout. 6.50 fl. A French work on Roumanian finance, economics, and social development.

Complete Practical Income-tax. By A. G. McBain. Second edition. (London) Gee and Co., Limited, 6 Kirby street. 7s 6d.

Second edition of a book first published in May, 1925. A special chapter incorporates the provisions of the Finance Act, 1926, and the book has also been brought up to date in accordance with recent case law or Board of Inland Revenue rulings.

Denmark, 1926. (Copenhagen) Ministry of Foreign Affairs.

An official Danish year book, published in English and containing many articles and a mass of information about the country, its people, and its economic activities.

The Empire Cotton-Growing Review. October, 1926. (London) A. and C. Black, Limited, 4 Soho square, W. 1. 1s.

The Annals: Markets of the United States. (Philadelphia) American Academy of Political and Social Science, Woodland avenue. \$2.

Report of the Third International Shipping Conference, 1926. (London) International Shipping Conference, 28 St Mary axe.

A summary of the discussions, resolutions, and business done at the conference which was held in London last April.

A Short Italian Dictionary. By Alfred Hoare. Vol. II. (London) Cambridge University Press, Fetter lane. 10s 6d net.

This is Volume 2 of the dictionary—being English into Italian.

International Crop Report and Agricultural Statistics. September, 1926. (Rome) International Institute of Agriculture.

The World Wheat Situation, April to July, 1926: Wheat Studies of the Food Research Institute. Vol. II. No. 10. (California) Stanford University.

Economic and Political Survey. Vol. II. No. 2. September, 1926. (Paris) The Reference Service on International Affairs of the American Library in Paris, 10 Rue de l'Elysée.

Foreign Affairs. October, 1926. Vol. 5. No. 1. (New York) 25 West 43rd street. \$1.25.

The contents of the October issue are well up to the usual high standard. Among many interesting articles are included "Prospects of Anglo-American Friendship," by A. G. Gardiner, "Are American Loans Abroad Safe?" by Henry M. Robinson, "The Reconstruction of Hungary," by Sir Arthur Salter.

The Banker. October, 1926. (London) Eyre and Spottiswoode (Publications), Limited. 1s.

Containing articles on "The Cost of Industrial Friction," by R. Hon. William Graham, "The Proposed Indian Reserve Bank," by R. Langford James, and "The National Savings Movement," by R. Hon. J. E. B. Seely.

The Empire Review. October, 1926. (London) Macmillan and Co., Limited. St Martin's street. 2s.

State of New York Insurance Report: Part. II. Life Insurance for the year ended December 31, 1925.

A statistical insurance handbook.

League of Nations: Publications of the International Labour Office, Geneva. January, 1926.

Der deutsche Volkswirt. October 1, 1926. (Berlin) Bellevuestrasse 14. Rm. 1.

This is the first number of a new weekly newspaper dealing with economic and political subjects generally. The present number includes the following articles—Politik und Wirtschaft von Gustav Stolper; Stewerkraft und nationale Zukunft von Joseph Schumpeter; Veredelung der Kohle von Dipl.-Ing. F. zur Nedden, &c.

International Labour Office Studies and Reports: Industrial Conditions and Labour Legislation in Japan. By Iwao F. Aynsawa. 2s. **Stabilisation of Employment in the United States.** By J. R. Bellerby. 2s. **Methods of Conducting Family Budget Inquiries.** 1s 6d. **Methods of Compiling Statistics of Industrial Disputes.** 1s. **Methods of Collective Agreements.** 10d. (London) P. S. King and Son, Limited, 14 Great Smith Street, Westminster, S.W. 1.

These volumes contain a mass of information which deserves to be more widely known. The publications of the International Labour Office fall roughly into two classes: Detailed studies of conditions in particular countries, which are usually prepared by experts of the nationals concerned; and expositions of the comparative statistical methods employed in compiling the labour statistics of a large number of countries. The above list includes representative works of both categories published during the present year, and may be recommended to the attention of all concerned with labour questions.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 12.	October 14.

BUSINESS in the Stock Exchange is running on quiet lines, and the excitement in the tin share market has not been so pronounced this week as it was at the end of September. New issues met with varying success. The subscription list for the £6 millions of Tokyo Five-and-a-Halves closed promptly. A substantial premium is quoted upon the new Laras (Sumatra) 7 per cent. debenture. Underwriters of the new Wolverhampton loan expected to get about 75 per cent. Several other corporations are known to be in the market as borrowers; two or three important foreign loans are also imminent. The trouble which developed and subsided in connection with the dock strike had an unfavourable effect upon home railway stocks.

There is not so much talk as there was about the likelihood of money becoming dearer, but the competition of other securities makes its influence felt upon British Government stocks, the prices of which are inclined to be dull. In the foreign market a long string of falls in Brazilians and a shorter one in Japanese Government issues stand out with prominence. Japanese Government bonds were put down, in consequence of the new Tokyo 5½ per cents., which carry the Japanese Government guarantee, being relatively cheaper than the existing loans. French railway bonds are better, and there has been further buying of the speculative order in Germans.

The home railway market is weak, in consequence of the labour troubles already mentioned. Canadian Northern in-

come bonds and several other Canadian railway stocks have advanced, though Grand Trunk Pacific debenture scarcely moved. The Argentine railway market keeps tolerably good as regards its investment stocks, but the more speculative issues are disposed to droop. A sharp rise occurred in Antofagasta ordinary stock on the maintenance of the same interim dividend as that declared a year ago, 3 per cent., and this announcement had a cheering effect upon shares in the nitrate-producing companies, most of which are better on the week. United of Havana strengthened, and other foreign railways are somewhat neglected.

The rubber share market has slipped back into quietude, though prices are well maintained in the cases of the good stocks. Speculative descriptions have gone back a trifle on sales by disappointed bulls. Tea shares lean to the heavier side, and the oil market shows a series of falls, for which it is difficult to find any sound reason other than that of the market being overhung by the general tone of heaviness which prevailed in the House for the greater part of the week. Brazilian Traction and the "Lowenstein" stocks weakened upon vague reports of an accident to that redoubtable gentleman.

Scarcely a ripple disturbed the shipping section. Insurance shares were barely influenced by the increase, generally expected, in the Commercial Union dividend. Banking shares are steady, and Trust companies' stocks continue in demand. One of the industrial features is an all-round rise in the shares of the London electricity supply companies. This is due to an announcement by the Kensington and Knightsbridge of the manner in which it intends to distribute its reserve funds. Kensington shares rose to £2, and the rest of the list strengthened in proportion. Gas stocks are unchanged. A violent break in Courtaulds followed sales of the shares by the speculative division, who turned their money into Imperial Tobacco shares on the strength of the expected bonus being near at hand. Godfrey Phillips fell back, and other tobacco shares are none too good.

The iron and steel market kept up fairly well until the last day or two, when fears of a drastic reorganisation scheme from the Armstrong Company led to an offering of shares throughout the list. Cable construction and electrical equipment issues are still somewhat dull in consequence of the idea that the coal stoppage must be affecting profits, though it is said that most of the concerns are exceedingly well supplied with orders. No changes of consequence occurred in breweries. A lively jump in Marconis had the effect of bringing in sellers, and the full advance was not held. The textile market is uninteresting. Snia Viscosa fell back in sympathy with the drop in Courtaulds.

Kaffirs have been subdued and dull. The Cape turned a seller of some of its recent favourites. Paris sold Central Mining as freely as, until this week, she had been buying the shares. Gold-producers' shares gave way under the leadership of Meyer and Charlton, which flattened because of the steady decline in the company's profits. Chartered lack support from their usual faithful followers. The Malayan Tin market proved capricious and wayward. Some of the prices have improved considerably; the majority show small declines. West Africans attracted no new attention, but in Cornish tin shares Wheel Kitty became suddenly popular. Shares in the companies connected with silver mining are weak by reason of the slant in the price of the metal. Russians enjoyed spasms of strength. Burma Corporations drooped along with silver shares, in spite of buying orders from the East. Rio Tintos have been very spasmodic in their movement.

The Stock Exchange managers have declared an interim dividend of £3 per share, less tax, being the same as that of a year ago.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded		154,970,501

1921 .. 216,326,547	1920 .. 367,549,656

City of Tokyo.—This is an issue of £6,000,000 5½ per cent. loan, 1931-61, at 8½ per cent. Principal and interest is unconditionally guaranteed by the Imperial Japanese Government. The City undertakes to establish a fixed cumulative sinking fund, beginning in 1931, and calculated to redeem the entire loan at latest by 1961. The value of city property in 1925 was 383,295,074 yen, and the total debt on July 31st of this year was £8,072,720, 87,303,500f, and 183,240,936 yen. Of these sums, £5,220,300, 87,303,500f, and 121,354,623 yen are in respect of reproductive undertakings. Annual revenue and expenditure for the fiscal years 1918-19 to 1926-27 is given, the estimates for 1925-26 and 1926-27 being revenue 290,064,228 yen and expenditure 274,693,956 yen and revenue 337,683,669 yen and expenditure 333,625,985 yen respectively. The population in 1925 was 1,995,567. The proceeds of this loan will be applied to the repayment of the short-term debts, amounting to £3,000,000, and also towards meeting expenditure in respect of reconstruction work rendered necessary by the earthquake in 1923. The prospectus would serve as a useful model for some of the Overseas Dominions. An excellent foreign issue, which was well received.

Wolverhampton Corporation.—This is an issue of £1,500,000 5 per cent. stock, redeemable 1946-56, at £99 10s per cent. Principal and interest are secured upon all the estates, property, rates and revenues of the Corporation. Provision has to be made for the redemption of the issue by means of a sinking fund. The rateable value of the borough is £606,000—a penny rate producing £2,366; the estimated population is 108,800. As from April 1st next year the borough will be enlarged by the inclusion of adjoining areas, and rateable value and population will be increased. The total outstanding debt is £3,300,705, of which £1,186,363 is in respect of reproductive undertakings. The gross profit upon the trading undertakings for the year ended March 31, 1926, was £175,919. The proceeds of the present issue will be applied for waterworks, electricity works, street improvements, &c., and for paying off existing loans. An excellent issue.

Caldwell's Paper Mill Company, Limited.—Authorised capital £425,000, divided into 7 per cent. cumulative first preference shares of £1 each, 100,000 8 per cent. cumulative second preference shares of £1 each and 150,000 ordinary shares of £1 each. This is an issue of 125,000 7 per cent. cumulative first preference shares of £1 each at par, and 50,000 ordinary shares are being offered to the ordinary shareholders at a premium of 7s 6d per share. The company was formed in 1920 to acquire the business of Caldwell and Co., of Inverkeithing, Fife, which was established in 1893. A controlling interest in the ordinary shares was acquired in the early part of 1925 by the Inveresk Paper Company, Limited. The proceeds of the present issue and of the issue of the ordinary shares will be used in extensions and for general purposes of the company. On the basis of the balance-sheet for 1925, the surplus assets over liabilities exceed £283,000. Profits, after charging all expenses of carrying on the business, including directors' remuneration and depreciation of fixed assets at the rate of £10,000 per annum, but before charging interest and taxation, are certified to have been as follows:—thirteen months ended October 31, 1923, £33,965; twelve months ended October 31, 1924, £17,556; twelve months ended October 31, 1925, £32,498; and for six months ended April 30, 1926, £21,918. To what extent the paper-making industry has become stabilised is a difficult question for the investor to answer.

Clyde Paper Company, Limited.—Share capital £525,000, divided into 300,000 ordinary shares of £1 each and 225,000 7½ per cent. preference shares of £1, while there is a 6 per cent. first mortgage loan of £100,000. This is an issue of 225,000 7½ per cent. cumulative preference shares of £1 each at 21s per share. The company has been formed particularly to acquire the business of the Clyde Paper Company, Limited, papermakers, near Glasgow, which was established seventy years ago. Profits, after charging all management expenses, including remuneration of managing directors, depreciation, and (in 1920) Excess Profits Duty—and crediting (in 1921) Excess Profits Duty recovered—but before charging income-tax, corporation profits tax, directors' fees

and interest, are certified to have been as follows:—1920, £68,879; 1921, £27,432; 1922, £88,532; 1923, £64,188; 1924, £64,706; and eighteen months to June 30, 1926, £70,795. There is an expert valuation of the company's property, plant and machinery at £455,960, and the net assets are stated to be £517,000. The purchase price is £507,500, payable as to £207,500 in cash and/or 7½ per cent. cumulative preference shares of £1 each at 2½ per share credited as fully paid up, and £300,000 in £1 ordinary shares credited as fully paid up. A fair industrial offer.

United States and General Trust Corporation, Limited.—For general information purposes the above company publishes particulars of an issue of £350,000 5 per cent. debenture stock, redeemable at par in 1976. There is an issued capital of £1,050,300, consisting of £630,000 5 per cent. cumulative preferred stock and £420,300 deferred stock. The debenture stock will be secured as a second floating charge upon the whole undertaking and assets of the corporation, present and future, including its uncalled capital, if any, by a trust deed. This floating charge is to be a charge ranking next after the 4½ per cent. debenture stock, of which £700,000 is at present outstanding. The right to issue further 5 per cent. debenture stock is reserved. It is stated that permission to deal in and an official quotation for the stock on the London Stock Exchange will be applied for in due course. Prospectusless.

Verellen, Limited.—Share capital £300,000, divided into 150,000 7½ per cent. cumulative participating preference shares of £1 each and 150,000 ordinary shares of £1 each. The preference shares are entitled to a further non-cumulative dividend of 2½ per cent. after the payment of 7½ per cent. on the ordinary shares, and also to participate to the extent of one-third in the surplus profits for any year. This is an issue of 100,000 7½ per cent. cumulative participating preference shares of £1 each at par. The company has been formed particularly to acquire the business of cigar-makers and cigarette and pipe tobacco manufacturers carried on by Verellen Frères, of Marché Saint Jacques, Antwerp, Belgium, which was founded in 1868. An expert valuation places the value of freehold properties, plant, machinery, fixtures, and stock at £214,752. Profits, before deducting income-tax, depreciation or partners' salaries, are certified to have been as follows:—1925, £32,613; and 1926, £28,955. These figures are converted at the rate of 120f to the £ and 175f to the £ respectively. The purchase consideration is £187,500, payable as to £57,500 in cash and as to the balance of £130,000 in fully-paid ordinary shares; the promotion expenses are satisfied as to £12,800 in cash and by 20,000 fully-paid ordinary shares, together with an option to subscribe for preference shares. Profits when compared with issued capital are not on a generous scale.

Parkinson Stove Company, Limited.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. There is an issued share capital of £300,000, divided into 100,000 ordinary shares of £1 each and 200,000 7 per cent. cumulative preference shares of £1 each. Dividend on the preference shares and repayment of capital are guaranteed by Parkinson and W. and B. Cowan, Limited (the parent company), subject to the condition that the parent company can terminate on any dividend date the whole of their future liability under such guarantee by offering to purchase the preference shares at a premium of 10 per cent., plus accrued dividend, and completing such purchase in all cases in which the offer is duly accepted. The Stove Company was incorporated as a private company in 1907, and was converted into a public company in August, 1926, its business being the manufacture of and dealing in gas fires, gas cookers, &c. The consolidated balance-sheet of Parkinson and W. and B. Cowan, Limited, and its subsidiary and associated companies as at March 31, 1926, shows surplus of assets, exclusive of goodwill, over liabilities, inclusive of debentures, of £676,992. The combined profits of Parkinson and W. and B. Cowan, Limited, and its subsidiary and associated companies for the last four years (excluding the proportion of the profits of one subsidiary applicable to the holding of outside shareholders), after providing for all charges, including debenture and other interest and depreciation, but before charging income-tax and corporation profits tax, are certified to have been as follows:—1923, £61,527; 1924, £74,086; 1925, £76,952; 1926, £72,220. These figures include profits received from sale and property and investments and income-tax credits. Application is being made to the Birmingham and Edinburgh Stock Exchanges for permission to deal in the preference shares. Prospectusless.

Fletcher and Cartwrights, Limited.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. There is an issued share capital of £240,000, divided into 240,000 shares of £1 each, and there are £232,100 7½ per cent. first mortgage debentures outstanding. The company owns the amalgamated business formerly known as Fletcher and Co. and as Cartwrights, Limited, of South Africa. The former was established in Cape Town in 1844 as general drapers and dealers in soft goods and the latter in Cape Town in 1836 as grocers, confectionery dealers,

and hardware merchants. Amalgamation was effected in 1922, Cartwrights, Limited, acquiring the assets of Fletcher and Co., free of all encumbrances, for £333,900, of which £100,000 was payable in cash. The amounts available for dividends on the ordinary shares, less the amounts of interest payable on the debentures outstanding, are stated to have been as follows:—1924, £20,549; 1925, £22,809. A dividend of 6 per cent., free of South African tax, has, it is stated, been declared for each of those years. Application is being made to the London Stock Exchange for permission to deal in the ordinary shares. Prospectusless.

United Stone Firms (1926), Limited.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. There is an issued share capital of £160,000, divided into 130,000 7½ per cent. cumulative participating preference shares of £1 each, and 600,000 ordinary shares of 15 each. The participating rights of the preference shares entitle them to an extra dividend up to 2½ per cent. when 10 per cent. has been paid on the ordinary. The company was incorporated in September of this year particularly to acquire United Stone Firms, Limited, of Bristol, whose principal business is the production and preparation of stone for building and engineering, &c. The company's properties consist of about 138 acres freehold, about 123 acres leasehold, and the fee simple and mineral rights over about 234 acres, and include eleven equipped quarries now in active production and twenty-one partly-developed quarries. An expert valuation of permanent and temporary buildings, fixed and loose plant, &c., is given at £85,350, while the auditor's certificate places the value of the assets on June 30, 1926, at £247,695. Profits, after charging all expenses except directors' and management remuneration, head office expenses, interest, depreciation, taxation and non-recurring expenses, are certified to have been as follows:—1922, £16,639; 1923, £13,661; 1924, £15,743; 1925, £19,169; and six months to June 30, 1926, £11,177. The purchase price payable by the company to the vendors (United Stone Firms, Limited) for the assets acquired by the company, including the benefit of trading from January 1, 1926, is £150,000, to be satisfied as to £130,000 in cash and as to the balance of £20,000 by the allotment to the vendors or their nominees of 400,000 ordinary shares of 15 each in the capital of the company credited as fully paid up. The preliminary expenses are estimated at £7,800. Prospectusless.

Ordern Coal Mines, Limited.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. There is an issued capital of £100,000, divided into 100,000 shares of £1 each. The company was incorporated in May, 1925, for the purpose of acquiring a coal concession in the Municipality of Alacer do Sol, District of Lisbon, Portugal, and comprises about 27,000 acres of land. A small output of coal is now being obtained, it is stated, and the coal is transported by mule carts to the main line railway, a distance of ten miles. It is now proposed to connect the mines with the main line, and it is further proposed to erect workmen's cottages and colliery plant. The company's manager is stated to have estimated the amount of coal in the visible area in excess of 4,000,000 metric tons. The consideration payable for the transfer of the concession was 35,000 shares credited as fully paid, already issued. Prospectusless.

Kassa Mining Co., Limited.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. There is an authorised capital of £80,000, divided into 320,000 shares of 5s each, those issued numbering 120,474 fully-paid and 13,390 partly paid. The company was incorporated in 1919 particularly to acquire mining property in the North Ropp River Valley in Nigeria, comprising, including an area applied for, 10.94 square miles. The purchase consideration was £60,000, payable as to £30,000 in cash and the balance by the issue of £120,000 5s shares credited as fully-paid. Later 40,000 shares of 5s each were credited as fully paid up in satisfaction of the sum of £10,000 then remaining owing in respect of the £30,000 cash consideration, while 18,025 shares, on which 3s 3d was paid, were credited as fully paid in consideration of services rendered. In June of this year the Court sanctioned the reduction of capital from £80,000 to £32,000 by writing off 3s on each of the 320,000 shares. The resolution authorising this course provided for the issue of further shares, and since then 5,864 shares of 5s each have been credited as fully paid in satisfaction of certain debts. Prospectusless.

Kent (F.M.S.) Tin Dredging, Limited.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. The authorised share capital is £105,000, divided into 1,050,000 shares of 2s each, of which 414,400 shares are issued. The company was incorporated in England in August, 1926, particularly to acquire a sub-mining lease of about 610 acres of Kent Estate, Kuala Lumpur, in the State of Selangor, F.M.S., and about 45 acres of mining land, to be held under mining leases direct from the Government. The purchase consideration is £5,800, payable in cash, the allotment of 270,600 shares of 2s each in the company to be

treated as fully-paid, and the right to offer 365,000 shares at par to the shareholders in Jelantoh Tin, Limited. The preliminary expenses are estimated at £1,500. Prospectusless.

proposed to pay an intermediate bonus, not only on claims but on the surrender of all participating policies. Thirdly, on new assurances no extra premiums would be charged in the case of naval and military officers, or for foreign residence, except in cases of special hazards. He wished to acknowledge the great assistance derived from their alliance with the Employers' Liability Assurance Corporation. In the past quinquennium alone they could trace nearly a million of insurance as directly due to the alliance.

In conclusion, he said that during the long period of prosperity preceding the war the Society had paid a consistently high rate of bonus, but had placed before everything else the building up of immense reserves, and it was upon the sure foundation of "safety first" that they based the confidence with which they spoke of future bonus prospects.

The report and accounts were unanimously adopted.

MANCHESTER HIPPODROME AND ARDWICK EMPIRE, LIMITED.

SATISFACTORY RESULTS DESPITE INDUSTRIAL DEPRESSION.

The twenty-third ordinary meeting of the shareholders of the Manchester Hippodrome and Ardwick Empire, Limited, was held on Tuesday, the 5th inst., at the Stoll offices, Coliseum buildings, London, W.C., Sir Oswald Stoll (the chairman) presiding.

In moving the adoption of the report and accounts, the Chairman said: Our profits for the year are substantially higher than those of the preceding year. They are quite satisfactory for a time of industrial depression.

Many people consider that profits like ours are proof that there is no industrial depression. That idea gains ground because industry does not seem so necessary as it was for providing people with money to spend. Nowadays, many millions of pounds are being distributed under the Government's social obligations. These millions are spending power, and they are distributed for little or no productive effort. Then there is a further distribution exceeding £200,000,000 net, after deduction of income-tax. This is being distributed annually among the holders of war securities. A great deal of this spending money is left at a loose end, because it cannot be invested in industry lest it should be lost and probably a great deal more lost with it. Very few forms of production can be made to pay.

NEED FOR MONEY FROM PRODUCTIVE INDUSTRY.

Much of this money naturally comes the way of theatres. But one would feel much happier about our future if it could come to us through circulation in a round of highly prosperous productive industry, instead of being free to come only by leaving productive industry alone.

This spending money is composed of paper money, promises to pay, and legal obligations to pay. It is nearly all mere paper, and paper is a very poor substitute for prosperous productive industries.

This paper may please the unthinking person just as well as real money, but if it came through a process of producing wealth it would be truly earned, not merely printed. If printed paper itself were real wealth, nobody need ever have worked.

All such paper is safe only when it is engaged in turning the wheels of a full measure of productive industry. But it is not doing that now. It is engaged in consumption far more than in production, and therefore a breakdown more or less severe is certain. It will be observed that the board has written down our investments by close upon £6,000 out of revenue. The value of our assets, however, is well above the balance-sheet figures. Notwithstanding the sacrifice provided for, we are able to maintain our dividend and to increase our carry forward.

THE RESOLUTION.

I beg formally to move: "That the directors' report, balance-sheet, and profit and loss account for the year ended June 30, 1926, be approved and adopted, and that the balance of £52,556 14s 4d at credit of profit and loss account be dealt with as follows:—(1) In paying a dividend for the second half of the year at the rate of 10 per cent. per annum, less income-tax, which will absorb £3,600; and (2) in carrying forward to the current year's account, subject to the managing director's remuneration for the past year, tax on final dividend and liability for excess profits duty, the balance of £48,956 14s 4d."

Mr. George F. Reynolds seconded the motion, which was carried unanimously.

Sir James W. McCraith, J.P., the retiring director, and the auditors having been duly re-elected, the proceedings then terminated.

GOVERNMENT RETURNS, &c.

TREASURY BILLS AND BONDS BY PUBLIC TENDER.

Tenders for £45,000,000 in Treasury Bills were opened on Oct. 8, 1926, and the total amount applied for was £50,150,000. For bills at 3 months, dated Monday to Friday, £98 15s 8d, about 41 per cent. and above in full; Saturday, £98 16s 0d, and above in full. The amounts allotted were in bills at 3 months, £45,000,000.

(c) Participation of surplus profits for year ended June 30, 1924. (f) Maynards. The dividend of 12½ per cent. absorbed the same sum as this 50 per cent., i.e., £48,700. † Tax free.

Reports and Notices.

The board of directors of the Madras and Southern Mahratta Railway Company, Limited, have appointed Mr. George Deuchars, C.I.E., M.Inst.C.E., late Government Director for Indian Railways, to the vacancy on the board caused by the death, on August 16th last, of Mr. L. R. Windham Forrest.

Mr. Harry E. Day, late director and managing-director of W. Goodacre and Sons, Limited, has joined the board of Day Brothers and Vincent, Limited.

RAILWAYS.

BUENOS AYRES AND PACIFIC RAILWAY.—The gross receipts for year ended June 30, 1926, amounted to £7,555,746, against £7,876,140 for preceding year. Working expenses were reduced from £5,366,153 to £5,290,591. Net receipts amounted to £2,265,155, against £2,509,987 in preceding year. The difference in exchange remittances amounted to £70,219, against £203,338. The ordinary dividend is again 7 per cent. The carry forward is increased from £295,142 to £352,233.

BUENOS AYRES WESTERN RAILWAY.—Gross receipts for year ended June 30, 1926, amounted to £4,961,273, against £4,753,600 in preceding year. Working expenses amounted to £3,190,937, against £3,091,156. Net receipts were £1,770,336, against £1,662,444. Exchange loss on remittances amounted to £99,409, against £171,158. The ordinary dividend is 7 per cent. for the year, against 6 per cent. for preceding year.

CENTRAL ARGENTINE RAILWAY.—The gross receipts for year ended June 30, 1926, amounted to £11,261,375, against £11,567,907 for preceding year. Working expenses were reduced from £8,063,513 to £7,869,033. Net receipts amounted to £3,392,342, against £3,504,394, less £146,312 for remittance exchange account, leaving £3,246,030. The net receipts for year 1924-25 amounted to £3,504,394, less £322,252 for remittance exchange account, leaving £3,182,142. The dividend on the ordinary stock is 6 per cent. for the year, and 6 per cent. is also paid on the deferred stock. These dividends are the same as for the year 1924-25. The carry forward is £140,797. A special resolution accompanies the report to increase the capital to £46,794,468 by the creation of 500,000 new shares of £10 each in 6 per cent. cumulative convertible preference shares.

RUBBER, &c.

NORTH LABIS (JOHORE) RUBBER AND PRODUCE.—The report for year ended June 30, 1926, shows that by the issue of 20,720 new

shares in October, 1925, the capital of the company was increased to £129,909. The premium of 10s each on these shares has been added to reserve account, bringing that up to £20,369. The crop of rubber was 508,656 lbs, against 308,769 lbs. The average net sale was 1s 10.22d per lb, against 1s 8.38d per lb in previous production was 7.12d per lb, against 7.68d per lb in previous year. The net profit amounted to £32,323, against £18,260. The sum of £4,631 is put to reserve. The ordinary dividend is 20 per cent., against 12½ per cent. The carry forward is £18,073.

BATU RATA (SUMATRA) RUBBER PLANTATIONS, LIMITED.—The following table shows crops and dividends for the past 14 seasons:—

Season.	Crops. Lbs.	Divs. %	Season.	Crops. Lbs.	Divs. %
1912-13	112,045	.. 5	1919-20	556,645	.. nil
1913-14	180,351	.. 5	1920-21	502,977	.. nil
1914-15	252,473	.. 12½	1921-22	397,816	.. nil
1915-16	368,755	.. 20	1922-23	416,503	.. 10
1916-17	496,917	.. 22½	1923-24	415,607	.. 12½
1917-18	466,002	.. 12½	1924-25	472,674	.. 15
1918-19	471,108	.. 10	1925-26	664,785	.. 27½

The net profit for year ended June 30, 1926, is £40,001, against £14,811 in preceding year. Cash has risen from £9,349 to £12,109, and investments from £13,089 to £30,832, of which £30,732 is in British Government securities.

PATANI PARA PLANTATIONS.—The crop for year ended June 30, 1926, amounted to 479,322 lbs, against 345,516 lbs in preceding year. The average price was 2s 0.64d per lb, against 1s 9.19d per lb, and cost of production was 8.4d per lb, against 8.37d per lb. Net profit rose from £15,302 to £28,651, and the dividend from 10 per cent. to 25 per cent. Cash has risen from £5,705 to £12,361. The company has £5,000 in 4½ per cent. Treasury bonds, 1930-32, at cost, £4,996.

TEBOLANG RUBBER ESTATE.—The crop of rubber accounted for during year ended June 30, 1926, is 306,802 lbs, against 284,123 lbs in preceding year. The average net sale price, including the estimated value of the unsold portion of the crop, was 1s 10.60d per lb (equivalent to 2s 0.60 per lb, London landed terms). This price compares with 1s 6.46d per lb in preceding year. The cost of production free on board at port of shipment, including staff commission, depreciation, &c., was 8.54d per lb, against 9.75d in the previous year. Net profit has risen from £9,002 to £23,406, and the ordinary dividend is 20 per cent., against 10 per cent. in preceding year. The carry forward is £8,175.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

A spell of fine weather has enabled farmers to make good progress with field work, but rain is needed to facilitate the preparation of the seed-bed. All cereal crops have been safely secured, and with threshings proceeding on an active scale liberal supplies of native wheat were offering at the principal statute markets. Prices ruled firm, with a hardening tendency for all dry samples. Imported descriptions slightly irregular, while in moderate request. In the floating and forward cargo section only a limited inquiry prevailed, but prices were largely nominal. Steamers of white Pacific afloat sold 53s 9d to 53s 6d to Continent and Mediterranean. Feeders generally dull. Steamers of Plate maize afloat sold 29s 10½d to 29s 3d per 480 lbs, and a cargo of Scotch barley to Antwerp, October shipment, at 200s per ton. Wheat firmer. No. 1 Northern Manitoba quoted 59s 6, No. 2 ditto 57s 9d ex ship, choice white Karachi landed 58s 6d, all per 496 lbs. English new 11s 2d to 11s 6d per 112 lbs. Flour quiet. London standard grade 48s, town whites, 49s, patents 50s to 51s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 45s to 48s, Minneapolis 45s 6d to 47s 6d, Australian 43s 6d to 44s per 280 lbs ex store. Maize steady. Plate landed 31s 9d, ditto ex ship 30s, Bessarabian landed 34s 9d per 480 lbs. Barley quiet, but feeding sorts firm. Californian 34s 6d to 43s, ditto Chevalier 50s, Chilian Chevalier 52s to 62s, ditto brewing 35s 6d to 47s, Australian Chevalier 45s to 48s ex store, Smyrna 35s to 48s ex ship per 448 lbs. No. 3 Canadian Western 32s 6d landed, Persian ex ship 29s, October shipment 28s 3d, Russian landed 32s 6d per 400 lbs, English new 8s to 17s per 112 lbs. Oats firm. La Plata landed new 24s, ditto ex ship 23s, No. 2 Canadian Western landed 30s 3d, No. 3 28s 9d, No. 2 Canadian feed landed 26s, Chilian tawny landed 24s 6d, American 38 lbs landed 25s, ditto 36 lbs 24s 6d, mixed feed landed 21s per 320 lbs, English new 8s 2d to 9s per 112 lbs. Millers' offals firm. Broad bran 7s, middlings 8s, fine ditto 10s, bags included, ex mill; feed oatmeal 7s 9d, light oats 6s 9d, ground oats 12s 3d per cwt. free on rail. Oatmeal in fair demand and fully steady. London made flaked 17s, rolled oats 16s, medium also fine cut 16s, coarse also medium pinhead 16s ex mill per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1926-27, 1925-26, 1924-25, 1923-24:—

	1926-1927	1925-1926	1924-1925	1923-1924

AMERICAN WHEAT MARKETS.

Prices on the whole have had a downward trend, owing largely to the quietness of export demand. Weather in the wheat areas has also shown some improvement, and the Canadian crop appears to be threshing out better than some people had expected. A

somewhat better export demand, reinforced by the belief that European consumers must draw more largely on overseas supplies in the next few weeks, led to more active conditions later in the week—

(a) October delivery. (b) September delivery. (c) December delivery. Visible supplies of wheat in Canada, 22,417,000 bushels, show an increase of 7,252,000 bushels, as compared with the previous figures. Supplies a year ago stood at 22,334,000 bushels.

COAL.

Our Cardiff correspondent writes:—There has been no material change on the Cardiff coal market this week. The supply of fresh-wrought coal is slowly increasing. Though too drifts and levels are being worked, production from these outcrops is very small, and so far has had no appreciable effect on the general supply position. The number of miners who are signing on under the owners' terms is, however, increasing daily, and there are prospects of a resumption of work next week by one or two important collieries. In a letter to the Coal Committee of the Cardiff City Corporation the Mines Department has indicated its unwillingness to institute control over prices, though it is willing to investigate cases where charges appear excessive.

IRON AND STEEL.

The following is extracted from the weekly report issued by the London Iron and Steel Exchange:—Quiet conditions have developed, and these are generally attributed to the formation of the European Steel Cartel and the subsequent upward movement of prices. At the weekly meeting of the Exchange it was reported that while the demand experienced by the British works was more than could be satisfied in the conditions prevailing in the industry as the result of the coal strike, the formation of the European International Steel Combine had caused a hesitating tone to develop. Buyers generally have adopted an attitude of marking time so far as they are able to until the Continental position has become more settled. On the other hand, it is expected that Continental quotations will advance rapidly for a time, but it remains to be seen how far the combine can maintain its quotations if more normal conditions develop in this country. The fuel position has apparently become much easier. In one or two cases steelworks have accepted orders for immediate rolling for the first time since the strike began. In the case of semi-finished materials, however, the British producers are entirely dependent upon the supply

of material from the Continent, and the recent high prices are fully maintained, and it is difficult to obtain steel for reasonably early delivery. In the finished steel department Continental prices have jumped several shillings this week, but buyers are withholding orders until the situation becomes clearer.

Our Middlesbrough correspondent's report, dated October 7th, is as follows:—Pig-iron: Makers are sold out up to the end of the month, and as merchants are in a similar position, there is no prompt iron on the market. For small lots for forward delivery makers are asking 112s 6d per ton, No. 3 Cleveland G.M.B. Hematite is almost as scarce, but the price is not so dear, the minimum being 87s 6d per ton East Coast mixed numbers. Manufactured iron and steel. Restricted operations continue at some of the local steelworks, but are liable to cease at any moment. There are now no official quotations for steel, but iron bars remain at £11 15s per ton. Iron ore: Best Rubio is nominally 21s 6d per ton c.i.f. Tees, but there is no business passing.

Our Sheffield correspondent writes:—The steel trade position continues to worsen, owing to fuel shortage and losses on production. Cases in which makers have been able to secure any advance on finished prices are rare. Sellers of pig-iron and mild steel have ceased to quote for delivery after the settlement, as the future of costs is so uncertain. Some contracts for pig-iron at a considerable advance of prices had previously been fixed. Coal is expected to be 3s per ton higher than the pre-strike prices. The South Yorkshire Bar Iron Association has advanced the minimum quotation for bars from £11 10s to £12 10s, delivered to local works. Unemployment has increased considerably in the Sheffield district during the past two or three weeks, notwithstanding that work has been found for a good many cutlery and plate operatives who had long been idle. These branches are moderately active on seasonal orders, but the tendency to reduce further prices of stainless knives is deplored. Some very cheap varieties of such goods are being made by mass methods. It is claimed by the pioneers of this movement there is a great field of trade at home and abroad for low-priced stainless cutlery as yet untapped.

Our Glasgow correspondent writes:—Steel makers here have found it necessary again to advance their prices for forward delivery. Steel plates are now quoted £8 2s 6d per ton and angles £7 12s 6d per ton delivered Clyde area. Re-rollers' sections are also advanced, the basis price for bars being now £8 15s. These, however, are made from Continental billets, and definite dates of delivery can generally be quoted. Inquiries are fairly numerous, and an exceedingly busy period is ahead when the works are once started. Pig-iron prices are more or less nominal, as stocks are now at a low level and no production is taking place. Several substantial orders have been booked by sheet-

makers, both for black and galvanised varieties, for delivery in two to three months after the return of normal conditions at the pits, and the demand from abroad is steady. Foreign billets and sheet bars are difficult to procure, and prices asked are 15s to 20s higher than those quoted a month or so ago.

Our Cardiff correspondent writes: The output of tinplates is improving. Official returns show that in the week ending October 5th receipts at the docks and warehouses were larger than in any week since June, amounting to 74,107 boxes, as compared with 51,027 boxes in the previous week and 39,659 boxes in the week ended September 21st. Inquiry is moderately active. The Asiatic Petroleum Company has placed a contract for 250,000 boxes for the first three months of 1927. Prices for stock plates are firm at from 22s to 23s 6d, but for November shipment manufacturers are guaranteeing deliveries on the basis of from 21s 6d to 21s 9d. The increasing price of coal, as well as of block tin, are, however, disturbing. Galvanised sheets are unchanged at £16 10s to £16 15s, and tinplate bars at £6 5s.

OTHER METALS.

TIN.—The market again displayed firmer features, sellers being reserved in face of a steady demand, and higher foreign advices, though some irregularity occurred at times due to profit-taking, while closing weaker. Business comprised standard cash at £318 10s, £316, and £318 10s, £315 10s, and three months £306 5s, £303 10s, and £308 5s, finally £303 15s. Sales in the East were reported at £316, £313, and £315 15s.

COPPER opened steadier, but values since declined on heavy realisations, easier American advices, and lack of demand. Standard cash sold from £58 7s 6d to £57 7s 6d, and three months £59 to £58 3s 9d.

LEAD generally lower on selling pressure, though offerings were fairly well absorbed. Good soft foreign pig, October, sold £31 7s 6d to £30 7s 6d, November £31 3s 9d to £30 7s 6d, December £31 3s 9d, £30 10s, January £31 2s 6d to £30 6s 3d.

SPELTER slightly irregular, while barely steady on balance, with moderate sales. October was dealt in at £34 10s, £34 12s 6d, and £33 18s 9d, November £34 10s, £33 17s 6d, December £34 8s 9d to £34 10s, £33 17s 6d, January £34 8s 9d to £33 17s 6d.

ANTIMONY quiet. English special brands quoted £74 10s to £75 and foreign £62 to £62 10s, ex warehouse.

ALUMINIUM dull. Home delivery £107, export £112 ton.

WOLFRAM quiet at 14s to 14s 3d per unit, c.i.f.

QUICKSILVER firmer. Spot quoted £16 10s per bottle.

TIN PLATES steady. I.C. coke prompt quoted 22s to 22s 3d, and forward 21s to 21s 6d per box, f.o.b. Swansea. It was reported that the Asiatic Petroleum Company had placed an order in Wales for 250,000 boxes.

THE COTTON TRADE.

LIVERPOOL, October 7, 1926.

Spot cotton has continued in fair demand, but at lower prices, middling being almost a penny less than a week ago. In the futures market hedge selling has again been in evidence, both here and in New York. Spinners seem to be holding off the market. Early in the week the recommendation of the Federation of Master Spinners that mills using American cotton should work only one week in three was withdrawn. Crop prospects remain favourable. During the week several private estimates of the coming Bureau Report were published, and in many cases showed an advance of 800,000 to 1,000,000 bales on the previous estimate. The average estimate puts the crop at 16,276,000 bales, and the market here has fully discounted this figure. Spot sales for the week 1st to 7th inst. inclusive were 40,000 bales. Of these 20,080 were American, 2,850 Brazilian, 7,750 Peruvian, 2,800 Egyptian, 310 East Indian, 5,520 African, and 690 sundries. Imports for the same period were 43,495 bales, of which 23,510 were American, 564 Brazilian, 9,338 Peruvian, 8,346 Egyptian, 220 East Indian, 1,051 African, and 466 sundries. Quotations to-day are mid-American 7.17d; Egyptian Sakel 15.70d; uppers, 11.38d; Brazil fair, 7.47d; Peru, G.F., moderate-rough, 9.50d; smooth, 8.47d; Tinnivelly, 6.75d; East African G.F., 8.85d; and mid. West African, 7.17d.

MANCHESTER, October 7, 1926.

Trading in yarn and cloth has been very unsettled in view of the falling tendency in raw cotton prices. There is a feeling in many quarters that values are near the bottom, but steadiness will be required to show itself for a certain period before the confidence of merchants can be restored. In cloth for abroad India has provided a considerable inquiry, but only a restricted turnover has taken place, most of the offers being unworkable. There are indications, however, that buyers and sellers are approaching each other more closely. Auctions have been resumed in Shanghai, but only limited quantities have been sold, and fresh business of importance for China is not in sight. Printing and finishing styles have attracted a fair amount of attention for the Continent, with a slightly improved demand in a variety of goods for the Near East, whilst a certain amount of necessary buying has been reported in home-trade fabrics. An irregular tone continues in the yarn market.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Owing mainly to the continued good support of Continental buyers, the Colonial wool sales closed in London yesterday with values steady, though below the best point of the series. The lack of activity in Yorkshire has exercised a restraining influence upon home-trade buyers throughout. Prices of wool are well above the ideas of spinners and manufacturers, and the majority continue to buy only such small weights as are essential for immediate requirements. Wool continues to sell well, and at prices which pay top-makers to sell in the bale or in matchings rather than in tops. The turnover in tops has been on a more restricted scale this week, but quotations are steady at about last week's rates. The demand for yarns is negligible, prices offered being much too low. There is no material change in the general run of spinners' quotations, but there is not sufficient new business to afford a reliable guide to market values. New business in piece goods is also very disappointing, and manufacturers are again finding great difficulty in keeping their looms employed. In most cases new orders are small in quantity, and are for very prompt delivery.

The financial recovery of Germany may be regarded as one of the most remarkable developments since the war, and there are now indications of an improvement in the demand for yarns for

export to the Continent. This is a really good augury, and if Germany can resume once more the place occupied formerly as a distributor of crossbred yarns to Near Eastern countries, and if, also, crossbred wool itself continues to move on approximately the present basis, there is no reason whatever why all supplies should not be readily absorbed and profitable business done.

The London auctions have been characterised by the offering of large quantities of second-hand wools returned from the United States, Bradford, and the Continent. These wools have included both merinos and crossbreds, and substantially better prices have been realised than were bid at auctions held earlier in the year. This has proved a great help to the importers, and except, perhaps, in the case of the lowest qualities, serious losses have been escaped. There is now a better prospect than at any time this year of further supplies of merinos being successfully handled.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The fifth series of London sales closed last Wednesday with values for practically all descriptions of raw material on a higher level than in July. The outstanding advances are in fine greasy crossbreds, which have improved about 10 per cent.; in greasy merino and fine crossbred lambs, which are fully 10 per cent. dearer; and in good New Zealand crossbred lambs, which also show an improvement of 10 per cent. The only depreciation is in scoured merinos and crossbreds, though these have frequently sold at par, and were no more than 5 per cent. down. The whole course of the London market has been sound and healthy. Bradford topmakers have been compelled to operate carefully, values for their particular styles during the earlier part of the series being distinctly above what could be realised plus combing charges. The London market has again shown its importance as giving a lead to prices, for the original cost of wool there has been above that current in Australia on the same date, and importing firms have bought judiciously there after having sold forward at home.

All classes of wool are in a strong position, and, considering the actual level of prices paid for the wools which have suffered the slight decline named above, even these cannot be regarded as selling really unsatisfactorily. Practically all descriptions are now on a level which should appeal to Colonial growers, and it is unwise to anticipate any definite further upward movement. After the close of the next London series the time will be upon the trade for dealing with another crossbred clip from New Zealand. Crossbred wool is now on a reasonable basis from the users' point of view, and the interest shown therein by Continental firms in the course of their operations in London shows either that they have no little confidence, or that they have definite outlets for wool of lower qualities than those in which they have been accustomed most to operate.

THE AUSTIN MOTOR CO. LTD.,
LONGBRIDGE, BIRMINGHAM.

HIDE, LEATHER, AND ALLIED TRADES.

Domestic hides were steady to a slight advance at the auctions held in Bermondsey this week, all ox and heifer hides, with the exception of best light and second heavy, making last sale figures. The two classes mentioned made more money, as did second light cows, and both classes in bulls. Calf skins were a stronger market, and all firsts and seconds record advances ranging from ½d to ¼d per lb. Wools sold at from 5s 8d to 9s 6d, and hogs at from 2s 3d to 10s 6d per skin. The general tendency all round is strong. The imported hide position is firm, with best Argentine fregorifics quoted at 8½d, Russia and the United States being still in the market. Dry hides are firm, and dry B.A. Americanos have been sold to the Continent at 11d to 11½d. Cables from Chicago report the hide market as firm, best heavy packers now making 16 cents. All leather trade activities have this week been transferred to the Shoe and Leather Fair at the Agricultural Hall, Islington. The attendance has been well up to the average, and visitors have been in evidence from France, Belgium, Germany, Italy and Roumania. It is difficult to gauge exactly what business has transpired, but when the prolonged coal strike is taken in account the results can be accounted good on the whole. With the price of hides steadily rising, and stocks of leather small, tanners were not at all disposed to cut prices, and it was reported that large parcels of bends and offal had been sold, light bends securing a decided advance. Split hides were also quotably dearer, whilst upper leathers were firmly held. Taken altogether, the leather market was a hesitating one; neither merchants or shoe manufacturers felt inclined to commit themselves very far ahead, but the feeling was general that once the coal strike is out of the way, the demand for leather is bound to be brisk, and that in all probability there will be an advance in prices. Inquiries for boots and shoes were frequent from overseas visitors, and as export trade is badly wanted, even the small orders booked were very welcome.

VEGETABLE OILS AND OILSEEDS.

Markets generally are only moderately active. Linseed oil has not maintained last week's advantage, and has again declined to about £30 per ton naked, ex Hull mill, on spot. Demand from consumers is hard to mouth. Cotton oils meet with a poor inquiry, crude Egyptian offering freely at £33, and ordinary refined at £36. Rape oil is easier, and is meeting with increased competition from Oriental rape oil imported in bulk. In the oilseed section, linseed has been in anything but active request from crushers, and in easier Argentine advices Plate has receded to £15 5s afloat, and £15 7s 6d October landing, with new crop offering at £15 2s 6d for January-February shipment. Calcutta linseed to London has been done at £17, October-November. At a lower range of prices cottonseed has been in better request from the trade, latest business in new Egyptian having been done at £9 5s, October, and £9 7s 6d November loading. New Bombay, on passage to Hull, has been done at £7 2s 6d. The Continent is again a buyer of Soya beans at £11 2s 6d, September-October.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—General stability characterised the market, and business on consumptive account proceeded on more active lines. Confirmation was forthcoming that cutting of the Cuban crop will not commence until January 1st next, whereas hitherto it was generally accepted that grinding operations were meant. No change was made in quotations of British refined, and clearances were on an extended scale. English-grown passes into consumption quietly. Cantley, Ely, and Ipswich, 29s 6d; Colwick, Poppleton, Soalding, and Felstead, 29½d; Kidderminster, 30s 3d. Imported descriptions sold more freely. Czecho and Dutch J granulated, 28s 6d. Crystallised West Indian in but retail supply. Forward parcels sparingly offered and firm. Czecho granulated, November-December, 16s; April-May, 16s 8½d, f.o.b., Hamburg. Meyer, October, 16s 7½d, f.o.b., Hamburg. Dutch J, ready, 16s 9d; October, 16s 7½d; November-December, 16s 1½d, f.o.b., Rotterdam. Belgian crystals, November-December, 15s 10½d, f.o.b., Antwerp. Polish crystals, November-December, 15s 4½d, f.o.b., Danzig. White Mauritius, October-November, quoted 18s 9d. Cuban, 95 per cent., October, 14s; Peruvian, 13s 10½d, c.f. and i., U.K. Indian demand still slow. B.R.B. crystals, October-December, 16s 9d; white Java, January-March, 17s 7½d, c. and f. terms, India. White terminal firmer, with sustained buying in force. October, sold, 15s to 15s 10½d and 14s 10½d; December, 15s 6½d to 15s 7½d and 15s 4½d; March, 15s 11½d to 16s 0½d and 16s; May, 16s 3d to 16s 3½d and 16s 1½d; August, 16s 7½d to 16s 8½d and 16s 6d cwt.

COFFEE.—Business proceeds on quiet lines, but recent rates were maintained as available supplies, particularly of the finer qualities, remain on a small scale. In auction, Jamaica mountain-grown sold, bold, 20s to 23s; middling sizes, 19s 6d; peas, 200s; Colombian bold colory, 150s to 155s; Vera Paz Maragogipe, 200s; Mocha nipped long berry, 130s. Future delivery market dull and easier.

COCOA.—Only small spot transactions at about late rates. Accra, F/F, November-January, sold, 41s 6d to 41s, f.o.b.

TEA.—Indian auctions during the week amounted to 57,280 packages. There was a brisk demand in the early part of the week, and common and low medium teas ruled firm to ¾d and frequently ¼d per lb dearer, fine commanding extreme rates. On Wednesday, however, a quieter tone prevailed, and slight weakness was discernible. Pekoe, sold, 1s 3½d to 2s 1d; orange pekoe, 1s 3d to 2s 5½d; broken orange, 1s 5½d to 2s 8d; fine to choice, 2s 10d to 3s 6d. Ceylon sales amounted to 19,400 packages, which evidenced a decidedly quieter demand. Lower qualities were mostly from ¾d to ¼d per lb

lower, but really fine and tippy teas fetched steady rates. Pekoe, sold, 1s 3½d to 2s 1d; orange, 1s 7d to 2s 3d; broken orange, 1s 7½d to 2s 6d. Statistical position has become decidedly heavier. London landings last month approximate to 55½ million lbs, deliveries only 35½, and stocks increased to over 158½ million lbs. New season's China in quiet request, but rates generally steady. Good Keemuns, sold, 1s 7d to 1s 9d; fine, 2s 2d to 2s 4d; Panyongs, 1s 3d to 1s 4d, and Lapsang souchong, 2s 11d to 3s. There was good inquiry for the 5635 packages Java and Sumatra offered in auction, and recent rates were maintained. Pekoe, sold, 1s 2½d to 1s 3½d; broken ditto, 10½d to 1s 9½d; pekoe souchong, 1s 2½d to 1s 3d; orange pekoe, 1s 4½d to 1s 6½d; broken orange, 1s 3½d to 1s 6½d; flowery broken orange, 2s 1d per lb.

RICE.—There is nothing new to record in this market. Shippers ask steady prices, but buyers are reticent. Two Stars, spot, London, 16s 6d; forward, 15s 10½d; S.Q., to Cuba, 16s 3d. Spanish oiled, on spot, 21s 6d; October-November, 20s 3d. Beans slow. Madagascar butters, spot, 20s to 21s 6d, as to quality. Peas very unsettled for Japanese, and September-October, quoted 25s 3d per cwt, c.f. and i., London.

SPICE.—A firm market for pepper, with fair inquiries. Black Singapore, spot, quoted 9½d; Lampong, spot, 9½d; August-October, sold, 8½d to 8½d; October-December, 8½d; January-March, 8½d. Muntok, spot, held for 1s 5d; L.S., August-October, sold, 1s 4d; October-December, 1s 3½d. Pimento, spot, 7½d. Zanzibar cloves, spot, 9½d; August-October, 8½d per lb. Sago flour, November-December, U.K., 15s 4½d. Singapore flake tapioca, November-January, to Havre, 17s per cwt.

FRUIT (Dried).—Currants: There is a fair business passing, and the assortment offering is on a larger scale. Pyrgos, quoted 32s; Patras, 34s to 35s; Gulf, 35s to 37s; Australian, 35s to 45s, as to quality. Sultanias quiet. Smyrna, new crop, medium to good, sold, 64s to 72s; Australian, 60s to 76s. Raisins steady for best samples. Valencia, half-boxes, 42s to 45s; quarters, 46s to 55s. Dates in better demand for shipment, and market firm. Business during the week included Hallowee, first tide, at 30s; Khadrowie, 26s; Siar, 18s 9d; Siar, second tide, 18s 3d; cartons, first tide, 32s, landed terms, London. Figs: New genuine, quoted, 33s to 34s; layers, 60s to 75s. Evaporated fruits quiet. Apricots: Californian, extra choice, quoted 12s 6d; South African, first grade, 140s. Plums, Californian, 30/40's, 68s; 60/70's, 46s; 80/90's, 38s 6d. Pears, Californian, extra choice, 62s 6d; fancy, 72s 6d; Lake Country, fancy, 80s. Apple rings, Californian, September-October shipment, 47s 9d, c.f. and i., per cwt.

CANNED GOODS.

CANNED FISH.—General tone steady, with moderate inquiries. Sardines, Portuguese clubs, quoted 4s 6d per dozen tins. Salmon: Red, tall, 1 lb, quoted 47s to 48s; Sockeye, 80s to 81s; tall pink, 27s to 28s. Lobsters, best ½'s, 162s 6d, and ¼'s, 95s to 100s. Crayfish, ½'s, 78s; ¼'s, 51s per case. Herrings, 7s per dozen tins.

CANNED FRUITS.—General trade without improvement, but prices about steady. Californian Bartlett pears, 24-2½'s, choice, quoted 12s 6d to 13s 6d. Californian peaches, choice, 11s to 13s; seconds, 9s 6d. Californian apricots, choice, 12s 6d to 13s; seconds, 9s 3d per dozen tins. Singapore pines quiet on spot, but forward position is strong. Italian tomatoes firm but quiet.

CANNED MEAT.—Market quiet. Corned beef, 6's, quoted 38s to 47s, as to quality. Danish lunch tongues, 122s 6d to 135s; American, 140s, with best, 147s 6d.

CONDENSED MILK.—The situation in regard to skimmed is still unsatisfactory to packers, but there is an increased consumptive demand for full cream.

HONEY.—Market steady, but generally quiet. New Zealand, however, sells steadily at 50s to 85s; Australian, quoted 40s to 50s; Jamaica, 34s to 50s; Haiti, 34s to 48s per cwt.

RUB ER.

A quiet state of affairs pervaded the market, with fractional weakness discernible in prices. Plantation standard sheet, spot, and October, sold, 1s 9d to 1s 8½d; November, 1s 9½d; December, 1s 9½d to 1s 8½d; January-March, 1s 10d; April-June, 1s 10½d to 1s 10½d lb.

GENERAL.

SHELLAC.—Market firm. T.N., spot, 180s; December, sold, 177s 6d; November-December, steamer, quoted 172s 6d cwt.

COPRA.—A quieter tone prevailed, and prices tended weaker. F.M.S. Straits, October-November, to Rotterdam, quoted £27 6s 3d; November-December, £27 8s 9d. Dutch E.L., October-November, £27 12s 6d; Ceylon, £28 10s; Cebu, £26 5s; Manila, £25 15s; South Sea, £25 15s. Palm kernels quiet. November-January, to Liverpool, quoted £19 12s 6d ton.

JUTE.—Business proceed on quiet lines, and prices disclosed some irregularity at times, but are firm on balance. Arrivals of new crop

ZADRUŽNA GOSPODARSKA BANKA D.D.

(The Co-operative Economic Bank & Savings Co., Ltd.)

at LJUBLJANA, JUGOSLAVIA.

BRANCHES: Bled, Celje, Djakovo, Maribor, Novisad, Sarajevo, Sombor, Split, Sibonik. Foreign Correspondents for Yugoslavia of The American Express Company, New York, and agencies: National Bank of South Africa, Pretoria; Commercial Bank of Australia, Melbourne, and branches.

Remittances to and from Yugoslavia. Bills collected. Banking and Exchange Business of every description transacted.

LIVERPOOL is the foremost cash wheat market in the world. Chicago is the "futures" market. Trading in wheat futures on the Chicago Board of Trade, in 1925, totaled 18,048,510,000 bushels. 87.5 per cent of all the trading in wheat futures in the United States was in the Chicago wheat pit. The total wheat crop of the United States was 3.7 per cent of the volume of futures traded on the Chicago market. Conditions the world over, both present and future, affect the price range. In fact, the prices of wheat futures and of cash wheat show the closest sort of parallelism, day in and day out

fortable. The discount market has been very quiet, but rates have hardened to $4\frac{1}{2}$ per cent. for three months' bills, the market being influenced by the steady drain of gold to the Continent. The Bank return, however, shows that the gold stock is over £1½ millions higher than at this time last year. Yesterday there were some heavy cash displacements, including the payment of some £4 millions in War Loan and Treasury bond interest.

	Oct. 15, 1926.	Oct. 8, 1926.	Oct. 1, 1926.	Sept. 24, 1926.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	4 (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	2 (Dec. 3, '25)
Discount Call	3	3	3	3	2 (Dec. 3, '25)
Houses Notice	3½	3½	3½	3½	2½ (Dec. 3, '25)
Market rate (3 months' bills)	4½	4½	4½	4½	..

Thursday's Bank return showed reductions of £691,400 in the stock of coin and bullion, and of £888,700 in the note circulation, and the Reserve was thus £197,300 higher. The Proportion, however, was a shade lower at 27.9 per cent., Public Deposits having risen by £3,809,300, while Other declined by £2,896,800. Government securities increased by £2,545,000, but Other securities were reduced by £1,819,400. Currency notes for the week were reduced by £322,200 to £290,448,500, which includes £1,293,600 for notes called in but not yet cancelled. The fiduciary issue is £232,904,600, or £14,997,900 below the maximum for 1926.

The statement of average weekly balances of the London clearing banks for September, which is printed in full on a later page, shows a further contraction in deposits to the lowest point since May, as may be seen from the following comparison of the aggregate figures of the nine English banks:—

	Dec. 1925.	Mar. 1926.	June 1926.	July 1926.	Aug. 1926.	Sept. 1926.
Capital and reserves	121.0	123.6	124.2	124.4	124.1	124.4
Acceptances	108.2	100.6	87.8	85.2	82.4	81.5
Deposits (incl. undiv. profits, &c.)	1,646.6	1,587.6	1,630.1	1,646.7	1,634.1	1,623.3
Total liabilities	1,875.8	1,812.0	1,842.1	1,856.3	1,840.9	1,829.2
Coin, notes, balance at bank, and cheques in course of collection	256.2	236.2	250.9	243.6	240.0	235.0
Money at call	117.8	109.7	131.4	118.7	117.9	113.3
Investments	286.1	272.3	267.9	270.9	271.9	272.6
Discounts	251.0	187.2	210.4	233.0	226.1	218.3
Loans and advances	846.8	876.3	873.2	874.0	871.7	877.4
Cover for accept., premises, &c.	138.1	130.4	118.3	116.1	113.3	112.6
Total assets	1,876.0	1,812.0	1,842.1	1,856.3	1,840.9	1,829.2

The total of loans and advances has again moved up, and is now at the same level as in May last, this increased demand for accommodation having been met by a reduction in discounts. For the fourth month in succession investments show an increase, but cash and money at call are both lower.

NEW YORK MARKETS.

Our New York correspondent cables:—The share markets are steadier after a week of reaction, due in part to an overbought condition, and in part to unfavourable interpretations as to the effect on business likely to be produced by the record-breaking cotton crop. There is less concern in regard to the outlook for credit, and it is now thought unlikely that there will be any immediate change in the New York Reserve Bank's discount rate, since its policy will probably be in favour of easy money conditions. The weekly statements show the effect of preparations for the mid-month dividend and interest payments, Treasury disbursements amounting to \$150 millions. Discounts both for the system and for the local bank are substantially higher, the reserve ratio being 73.1 per cent. for the system and 78.9 for New York. The cotton market is steadier on plans to finance orderly marketing of the staple and to prevent frantic dumping. There is evidence of curtailment in some manufacturing lines, but the steel industry is well maintained.

THE STOCK MARKETS.

The Stock Exchange has passed a rather erratic week. The industrial department has monopolised considerable attention, but the gilt-edged market has kept very steady, there having been a good deal of buying of War Loan, which will be marked ex-dividend fairly soon. Home

rails have not moved very much, and Argentine rails keep steady. Rubbers are quiet, but oil shares revived on the Anglo-Persian dividend and bonus announcement. Shipping issues were depressed by the drop in the Royal Mail dividend. The tobacco groups have kept up fairly well, but the approach of the Olympia Show has failed to stimulate the motor section. Kaffirs are dull, but the further rise in the price of tin has produced further activity in Malayan tin shares. The issue of preference shares by Swears and Wells (1926), Limited was over-subscribed.

THE COMMODITY MARKETS.

Though prospects of an early and general settlement of the coal dispute are still wanting, a certain expansion of business has taken place in some of the commodity markets this week. The limited supplies of home-produced coal which are available continue to bring firm prices, and as imports from abroad are still inadequate to demand, quotations for prompt delivery have been fully maintained. The high prices asked for Continental steel after the formation of the Cartel have not been maintained, but a fair business has been done at the low levels subsequently established. British producers are still largely out of the picture, except in a few branches, such as tinplate, in which about 60 per cent. of the works are in operation. Cotton prices have recovered after a fresh fall, and a slightly better tone characterises the cloth and yarn markets. Lack of demand from consumers is somewhat severely limiting operations in the wool textile trade, but in jute an excess of new orders, coming at a time when stocks were unusually low, has produced markedly active conditions. Wheat continues firm, with a steady volume of inquiry. Demand for sugar has been quiet. Similar conditions have obtained as regards coffee and tea, while the rubber market remains largely featureless. Tin has advanced after a weak opening, and copper and lead have again been actively dealt in.

FOREIGN EXCHANGES.

The Foreign Exchange market was more active during the week, the marked improvement of the Oslo rate being the principal feature. Of interest also were the improvements in the peseta and the lira. The latter was, however, accompanied by some startling fluctuations between 115 and 123, which seems to indicate rather less confidence than has recently been the case, and this is supported by the widening of the forward rates. Paris shows little change on balance, but was inclined to be erratic. Brussels improved gradually on rumours of foreign credits and better prospects of stabilisation. New York opened weakly at 4.85½-1½ on the 8th, and was weaker at 4.85 5-32-7-32 on the 9th, but returned to the opening levels on the 11th. On the 14th a definite improvement set in at 4.85½-1½, and yesterday the rate was firm at 4.85½, with forward rates at 1½c and ¾c premium for one and three months. Paris opened at 168½-8, and improved next day by ½, but fell back again on the 11th to 168½-3, after touching 167½. Further weakness at 168½-169 followed on the 12th, and 171-171½ on the 13th. On the 14th there was a rally on the better return issued by the Banque de France, which showed a reduction of 562 millions in the note issue and of 650 millions in advances to the State. The improvement continued yesterday, with the rate at 168½, but there is a feeling abroad that some of this recent rise is based on sentiment, and perhaps even on successful publicity. Brussels opened at 174½-175½, and improved fractionally day by day to yesterday's level of 172½. Italy, after opening with a marked improvement to 122½-123 on the 8th, as compared with 126-126½ the previous day, improved still further to 120½-126 on the 9th. On Monday this continued to 117½-118, after 115 being touched during the day. A set-back occurred in Tuesday and Wednesday to 121-121½, after touching 123. There was a rally to 119½-120 on Thursday, and yesterday this was carried further to 119½. These changes may be taken to reflect the amount of confidence placed. Oslo opened the week rather less firm at 22.16-22.17, and showed little signs of any violent change at 22.15-22.16 next day, or at 22.13-14 on Monday. After that, however, there was a sudden appreciation to 21.25-21.28 on rumours of a plan for stabilising the krone at 21.00. Once started the movement went forward irresistibly, Copenhagen improving also in sympathy, and

the rate was 20.88-20.92 on the 13th, and 20.28-20.32 on the 14th, when it was stated that the Bank of Norway was a buyer of sterling at 20 only. Yesterday's rate at 20.25 was very firm. Copenhagen improved from 18.26½ to 18.21, Stockholm from 18.15 to 18.13, Geneva from 25.12 to 25.10 during the week, but Amsterdam weakened slightly from 12.12½ to 12.13. Berlin at 20.38½ is also weaker, after opening at 20.37½. The peseta is considerably better on balance at 31.60, after being as low as 31.40 on Thursday, as compared with the opening rate of 32.45. None of the other European currencies call for remark. Of the South American exchanges the milreis at one time recovered to 7d on Monday, after opening the week at 6½d, but it weakened again towards the close to 6 27-32d on Thursday and 6½d yesterday as a result of the prevailing uncertainty as to the President's stabilisation policy. Buenos Aires improved on the opening levels of 45½-1½ to 45 27-32-29-32 on the 14th, but is lower again at 45½. In the Far East the rupee opened rather weaker at 1s 5½d on the 8th, and has weakened further to 1s 5 27-32d yesterday. The yen is unchanged on balance at 1s 11½d, after touching 1s 11 31-32d and 1s 11 29-32d during the week. The silver market established new low levels for silver, spot at 25½d on the 8th being the lowest since November, 1915. India and China were both sellers on a fairly large scale. Some bear covering rallied the market a little next day, and when India came in as a buyer on Monday prices again improved, and markets closed steady but quiet. With China selling and India buying alternatively on the two following days there was on balance no change, but on the Thursday heavy selling of spot by China and of forward by America and the Continent brought prices down again by ½d and ½d to 25½d for spot and at 25½d for forward. The Chinese exchanges were weak with silver, Shanghai falling from 2s 6½d-2s 7d on the 8th to 2s 6½d on the 14th and Hongkong from 2s 0½d-½d to 1s 11½d-2s 0½d during the same period. Singapore also is fractionally weaker at 2s 3 27-32d, as compared with the opening level of 2s 3½d.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the nine days ended October 9th:—

(000's omitted.)			
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	13,854	From Revenue	18,775
Interest, &c., on Debt	24, 91	Increase in debt	14,441
Sinking Fund	576	Decrease in Balances	6,344
Sundries	325		
	38,860		38,860

Revenue for the nine days ended October 9, 1926, amounted to £18,074,900, as against £19,161,700 for the ten days ended October 10, 1925. Customs yielded £2,786,000, against £3,204,000, and Excise £1,795,000 against £2,263,000. Estate, &c., Duties produced £2,090,000, against £1,150,000. Property and Income-tax yielded £4,975,000, against £7,316,000, and Super Tax £550,000, against £820,000. Receipts from the Post Office amounted to £950,000, against £1,400,000. Receipts from Sundry Loans brought in £2,272,900, against £271,300. Ordinary receipts yielded £914,000, against £812,900, and Special receipts £660,000, against £944,500. The nine days' operations increased the National Debt by £14,441,200, and caused the following changes:—

(000's omitted.)			
	£		£
Treasury Bills	-11,939	Public Department Advances ..	+27,850
National Savings Certificates ..	- 550		
Sundries	- 920		
	-13,409		+27,850

The floating debt was increased by £15,870,000 to £782,051,000.

FINANCIAL YEAR, 1926-1927 (April 1 to October 9, 1926).

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Buenos Ayres and Pacific Railway, Central Argentine Railway, City of San Paulo Improvements and Freehold Land, Harrisons and Crosfield, and Sungkai Chumor Estates.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE IMPERIAL CONFERENCE.

A LITTLE more than three years have passed since the representatives of the members of the British Commonwealth of Nations gathered in conclave in Downing street. That conference of 1923 was memorable as the first gathering of the kind since the Great War, and it was faced by a host of problems, political, constitutional and economic, raised not merely by the passage of the best part of a decade, but also by the tornado which had swept across the world from 1914 to 1918. Many of the problems of 1923 remain, and the past three years have seen developments of them that call for immediate and statesmanlike handling. In one respect, however, the scene has quite unmistakably changed. Mr Baldwin, who as Prime Minister welcomed the delegates in 1923, and will welcome them again on Tuesday, can hardly fail to have this change imprinted upon his mind. Three years ago the question of Imperial Preference loomed large at the conference, and its proceedings must be supposed to have been the deciding factor in persuading Mr Baldwin that the economic salvation of this country and of the Empire could only be achieved by the imposition by Britain of a general tariff, coupled with a wide extension of preferences within the Empire. On the strength of this conviction, as we all remember, Mr Baldwin plunged into a general election and was submerged. The turn of fortune's wheel, fortuitously accelerated by the Labour Government's mishandling of the Russian question, restored him to power within the year. But the people had spoken, and Mr Baldwin, bowing to their will, bound himself by a pledge to make no radical departure from our present fiscal system. From the Mother Country, therefore, no fiscal proposition of importance is possible at the forthcoming conference. What other member of the Commonwealth will raise the question in acute form? Certainly not India. Mr Bruce, of Australia, interviewed on reaching our shores, reviewed the tasks of the Conference without mentioning the subject. He brings no demand for extended preferences, nor is it possible to believe that Mr Mackenzie King, the newly-elected Premier of Canada, is bringing it with him across the seas. To the great Dominions British prosperity is a vital consideration, and their representatives, anxious at Britain's industrial troubles, must be more interested in measures to get British industry on its legs than in proposals to hamper it by raising production costs. Imperial preference, we believe, will not be a live issue, and the Conference will be the better able to concentrate upon its important work, if the red-herring of tariffs is not, as it was three years ago, drawn across its path.

This does not mean that the Conference has no significance on the economic side. Questions of immigration, of communications, and of Empire marketing afford important fields for constructive discussion, and will, no doubt, receive it. But it is undoubtedly on the political side that the Conference of 1926 will meet with its principal tasks. Here the problem is divided into two clearly defined sections of inter-Imperial relations and of Empire relations with the outside world. In the first section Lord Byng's action in Canada and other recent events in Australia and South Africa have brought to the front in new form the problem of reconciling Dominion autonomy with the Imperial partnership. But from no quarter is revolution-

any change suggested or separation effectively canvassed. Of this aspect of the Imperial problem it may be said that we have, as often before, reached a stage where the unwritten elastic constitution of the Empire requires here and there a judicious stretching or a minor readjustment; nor should such stretchings or readjustments present any difficulties which goodwill and statesmanship cannot easily overcome. Questions of Governor-Generals and their relations to the Home Government, or of the status of the Privy Council as the final Imperial Court of Appeal, may be delicate and bristle with minor difficulties, but they are not of the calibre to create a rift in the lute of Imperial harmony. "There could have been in the past," says Mr Bruce, "and there can be now no form of written constitution suitable to our progressive advancement. Had there been a written Empire Constitution during recent years it would either have been shattered by the circumstances arising out of the war or, alternatively, it would have wrecked the Empire. It is in the elasticity of our relations that safety lies.....On the question of our internal relations within the Empire I anticipate no difficulty or serious divergence of view."

Far more difficult and intricate, it must be admitted, are the problems which the delegates will face when they come to discuss the broader question of the relations and the conduct of the relations of the Commonwealth and its constituent parts with the rest of the outside world. The problem is not new, but it has a new acuteness which may be said to date from the revelation which the Chanak incident provided of the fact that the system of joint Imperial conduct of foreign policy, successful so long as the Imperial War Cabinet was in existence, would not work in days of peace. Chanak revealed in dangerous form the lack of adequate inter-Imperial consultation, and the problem was fully reviewed by the 1923 Conference. But in spite of the resolutions then passed, it cannot be said that the machine is as yet working satisfactorily, and in the meantime the assumption by Great Britain of increased European obligations under the Locarno Treaties has made the improvement of the machine a question of more pressing importance. Other aspects of the problem are the lead which Canada has taken in concluding her own treaties and establishing her own Embassy at Washington and South African pressure for a freer hand. Canada's position in relation to Imperial problems we have recently discussed (*Economist*, September 18th), and we propose in a future issue to say something of the special position of South Africa. Here we may confine ourselves to the general question. Broadly speaking, what is required is merely a development of the present position on the basis that, while each member of the Commonwealth is at liberty to conduct what one may call its local-external affairs without reference to others, neither the Mother Country nor any of the Dominions should enter into any commitments or arrangements seriously affecting the whole or other parts, without giving previous information and opportunity of consultation. To that doctrine, we imagine, all the delegates would in a broad sense subscribe, for the obligation which it suggests is a common and elementary duty in partnership. But the devising of machinery to assure the necessary dissemination of information and the desired liaison work is not so easy. Co-operative work at Geneva reduces the scope of the problem, but does not solve it. Successive British Governments have long been anxious to create a liaison system in London by a transmutation of the present system of High Commissionerships. But suspicion and jealousy of Downing street influence are still very much alive in various quarters, and Mr. Baldwin would naturally prefer to await concrete proposals from the Dominions on the point. But here again there is every reason to hope that the elasticity of the Imperial relationship will vindicate its power of adaptation to new problems. We extend to our distinguished visitors from overseas a welcome that is more hearty because we believe that they all come in a spirit of sincere co-operation, and that, working in that spirit with our own Ministers, they will find no insuperable difficulty in adding one more cog to a machine which, on the whole, has worked with a smoothness which is amazing in view of the tremendous world changes of the past decade.

GREAT BRITAIN AND CHINA.—I

THE profound unrest in China, which came to the surface in the Revolution of 1911, has manifested itself with increasing violence and increasing complexity; and these tendencies have been reflected in the attitude of those foreign nations that have a stake in Chinese trade. The largest stake is still held by Great Britain; and China's malady has called forth a number of contradictory diagnoses and incompatible schemes of treatment from English people concerned, whether in China or at home. Perhaps the only point on which there is general agreement is the urgent necessity for the British Government to put into operation some clear and constructive policy. There is no time to be lost, for China is full of irresponsible but well-equipped military leaders, and at any moment the turmoil of the civil war between the rival factions (not to speak of the deeper disturbance arising from the psychological revolution through which the Chinese people are passing) may incidentally create some irretrievable breach between China and Great Britain. Any British policy that is to have a chance of success must fulfil three conditions. It must be broadly acceptable to British public opinion and to Chinese public opinion, and it must be based on the objective facts of the situation, viewed dispassionately and in perspective.

The best—because the most "matter-of-fact"—starting points are the present position of Chinese securities on the British market and the latest returns of China's foreign trade. Let us begin with four leading Chinese securities: the 5 per cent. loan of 1896, the 4½ per cent. loan of 1898, the 5 per cent. reorganisation loan of 1913, and the 5 per cent. stock of the Shanghai-Nanking Railway. There is a striking divergence between the fortunes of the first two and the last two of these four securities during the past half-dozen years. The 1896 and 1898 loans, which stood at 85 and 70 respectively in 1921, stand at the same figures to-day; and even when allowance is made for the fact that they ought normally to appreciate as they approach maturity, the outstanding fact is their substantial stability. On the other hand, the 1913 loan and the Shanghai-Nanking Railway stock, which stood at 74 and 61½ respectively in 1921, have sunk to-day to 60 and to 50. It is not without interest to remember that even these two stocks are of better standing than appears on the surface. The Shanghai-Nanking Railway has been little interfered with, it is known to have good reserves, and an effective administration, with good foreign assistance, is still maintained. The service of the 1913 loan, in spite of the action of the Tuchuns in withholding much of the pledged salt revenues, has been regularly met from other revenues. This differentiation is not arbitrary, but reflects the investors' experience during the intervening period. The Tuchuns recklessly interfere with the railways in their military operations, and latterly they have been helping themselves to the revenues of the Salt Gabelle, on which the 1913 loan is secured. The earlier loans, however, are secured on the Maritime Customs; and so far the Tuchuns, though perpetually embarrassed for ways and means, have kept their hands off the Customs revenue. Here we strike one of the fundamental facts in the Chinese situation. There is a method, or at least a discrimination, in the Chinese madness (or what appears to be madness when seen through Western eyes). The anarchy, wide-ranging though it is, is bounded at some point by a certain sense of responsibility; and though this boundary is often hidden below the horizon, its existence should never be forgotten.

Indeed, if the structure of Chinese society did not rest on some very solid foundations of common-sense and industry, it would be impossible to explain the most recent statistics of Chinese trade. There is a great deal to be learnt from the Report and Abstract of Statistics for 1925, which was published by the Inspector-General of Chinese Customs a few days ago. In the aggregate foreign trade of China as a whole, from 1916 to 1925 in-

clusive, there has been a steady rise, whether the tendency be measured in terms of customs revenue or of the value of the goods imported and exported. The customs revenue totalled Hk. Tls. 37,764,311 in 1916, and 70,725,667 in 1925. The net value of foreign trade totalled Hk. Tls. 998,204,361 in 1916 and 1,724,217,881 in 1925. A conversion of these figures into gold values might flatten the curve, but would not destroy the steadiness of its upward tendency. The genuineness of this tendency is confirmed by evidence, which comes from practically every part of China, of an increase in the individual family's purchasing power and of a rise in its standard of living; and an increase in the productive power of the country is indicated by the relative increase in the contribution of exports to the total volume, both of trade and of customs receipts. For example, in 1925 the receipts from import duties were less than in the previous year, but the receipts from export duties increased, with the result that the aggregate receipts exhibited an increase of over Hk. Tls. 270,000. Although the customs returns up to date are not yet published, it is understood that the increase is still being maintained.

These figures, however, only tell half the story. In order to learn the other half we must take note of the relative increases and decreases in the shares taken in this trade by different regions of China and by different foreign countries. There has been a marked decline in the trade of Canton and Shanghai, which does not show in the figures for China as a whole, because it has been more than counterbalanced by an increase in the trade of Dairen and Tientsin, two of the north-eastern ports; and there has also been a marked decline in the British share in the China trade, which has been offset by an increase in the Japanese share. The two sets of facts are, of course, related, since the north-east is Japan's sphere of influence, where she is pushing forward the cultivation of valuable crops for export, like the soya bean,* maintaining and expanding a regular railway service for the transport of this agricultural produce to the coast, exploiting mineral resources and developing manufactures, while British trade in the centre and south has been grievously handicapped by boycotts, strikes, and the sterilisation of transport services. For instance, "during the September quarter [of 1925], when the crisis at Shanghai was in its most acute stage, there occurred at Tientsin a sensational increase in the importation of Japanese piece-goods." The collection of customs revenue in 1925 showed at Tientsin an advance of Hk. Tls. 1,535,000 on the previous year, and at the Manchurian ports an advance of 1,850,000, while at Shanghai and Canton it showed respective declines of Hk. Tls. 1,524,000 and 785,000. Again, Great Britain and Hongkong, which had respectively contributed 13.14 per cent. and 28.65 per cent. to the foreign imports of China in 1916, contributed only 9.65 per cent. and 18.27 per cent. in 1925, whereas the Japanese contribution rose from 29.98 per cent. to 31.06 per cent. At Shanghai, in 1925, "the British flag alone was responsible for a drop of some two million tons [of shipping], which was not fully compensated for by an increase of about 469,000 tons under the Japanese flag, of about 181,000 tons under the Chinese flag, and by some minor increases under the flags of other countries."

The economic rise of Manchuria explains itself. Manchuria is a country of vast and gradually developing natural wealth, with an expanding Chinese population, an effective Chinese civil administration, and with Japanese skill and enterprise engaged in making the most of the economic opportunity. Yet this opportunity in Manchuria does not altogether explain the increase in the volume of Japanese trade with China. From 1915 to the Washington Conference her hold over Manchuria was a hindrance rather than a help to Japan in her dealings with China. Japanese experience from 1915 to 1921—like British experience between 1922 and the present time—proves uncontestedly that the governing factor to-day, in any foreign nation's dealings with China, is the Chinese state of mind. If the Chinese people is nursing a grievance—

* In 1925, beans and bean products contributed 18.27 per cent. to the total value of Chinese exports.

whether justly or not—against a particular foreign nation, that nation will not do good business in China, however great its advantages in other respects, until the Chinese sense of grievance has been removed. This fact is certain, and, in view of it, it is interesting to consider how it is that, since the Washington Conference, Great Britain has slipped into Japan's place as "principal foreign bug-bear" on the Chinese stage.

INDUSTRIAL PROFITS.

OUR quarterly statistics of the profits of industrial companies can hardly yet be expected to bear any marked effects of the coal stoppage, since the latter in most cases only covers a small part of the financial years of the various companies, while in not a few instances the accounts under examination were closed before the industrial troubles began. But while an expansion in net profits is shown, the percentage increase is the smallest recorded for two years, and it is significant that the total increase is more than accounted for by one group, namely, rubber plantation companies. During the past three months the profit and loss accounts of 256 industrial joint-stock companies have been analysed in our weekly table, and these show aggregate net profits, after payment of debenture interest, &c., of £24,059,581, an increase of £650,377, or 2.8 per cent. over the profits disclosed by the same companies in their preceding financial year. This increase is considerably smaller than that recorded in any of the four previous quarters as may be seen from the following table:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in		Increase.	
		1924-25.	1925-26.		
		£	£	£	%
Third quarter	233	17,772,534	18,626,799	854,265	4.8
Fourth quarter	340	32,012,191	34,074,192	2,062,001	6.4
First quarter	460	48,026,891	51,691,026	3,664,135	7.6
Second quarter	442	55,834,678	60,489,439	4,654,761	8.3
	1,475	153,646,294	161,881,456	8,235,162	7.3
Third quarter	256	23,409,204	24,059,581	650,377	2.8

The third quarter of the calendar year is always the least prolific in its crop of company reports, owing, probably, to the holiday season, and the periods covered by the accounts which do appear are more scattered than is the case with the other quarters. For example, while many of the reports which have come under examination during the last three months refer to the year ended December 31st last, a substantial proportion relates to the financial year ended March 31st last, while during September a considerable batch of reports is published by those companies whose accountants' departments are less dilatory than the average. We cannot, therefore, attempt to draw any conclusions from these figures as to the effect of the general strike, and of the coal stoppage upon the earnings of industry. The average profit per company disclosed in the past quarter works out at £94,000, as compared with £137,000 in the June quarter, which indicates that not only are fewer reports published, but that they include a smaller proportion of the big concerns.

Since the last quarter of 1922 there has been an unbroken series of increases, but even so the declines recorded in the slump of 1920-21 have barely been made good, as may be seen from the appended list of quarterly percentage changes in net profits:—

	1920.	1921.	1922.	1923.	1924.	1925.	1926.
First quarter	+26.9 ..	+3.5 ..	-43.4 ..	+41.4 ..	+8.7 ..	+9.1 ..	+7.6 ..
Second quarter	+37.8 ..	-8.4 ..	-33.7 ..	+22.1 ..	+3.0 ..	+11.1 ..	+8.3 ..
Third quarter	+41.9 ..	-42.4 ..	-23.5 ..	+65.2 ..	+2.3 ..	+4.8 ..	+2.8 ..
Fourth quarter	+27.1 ..	-52.9 ..	+3.9 ..	+11.4 ..	+13.3 ..	+6.4 ..	..
	+32.6 ..	-20.1 ..	-29.0 ..	+30.6 ..	+6.6 ..	+8.7 ..	..

Thus the heavy consecutive decreases recorded in the third quarters of 1921 and 1922 were followed by a substantial recovery in 1923, but this did not restore the figure to the 1920 level, and in the past three years the increases have been comparatively small.

In the next table the figures for the past quarter are classified into a number of different groups:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	Number of Companies	Reports Published in Quarter Ended September 30.		Increase.		Decrease.	
		1925.	1926.	£	%	£	%
Breweries	18	8,446,315	8,446,426	71	..	..	..
Gas	6	154,886	194,894	40,008	25.9	..	..
Hotels, restaurants, &c.	3	136,054	118,921	..	..	17,133	12.6
Iron, coal, and steel	29	1,345,179	1,155,824	..	..	189,355	14.1
Land, mortgage, &c.	20	839,244	512,043	..	..	327,201	38.9
Rubber, &c.	58	1,410,342	3,311,69	1,901,027	134.8	..	..
Shipping	7	12,219	1,328,808	116,609	9.6	..	..
Shops and stores	4	424,532	445,736	..	..	46,896	9.5
Tea	8	484,548	383,969	..	..	100,579	20.8
Telegraphs	3	48,274	113,304	65,030	134.8	..	..
Textiles	9	1,580,163	796,776	..	..	783,387	49.5
Trust companies	8	659,709	506,683	..	..	153,026	23.2
Waterworks	4	129,295	157,561	28,266	21.9	..	..
Miscellaneous	79	6,470,454	6,587,67	116,913	1.8	..	..
	75	23,409,264	24,059,581	650,377	2.8	..	..

The importance of this table lies in the fact that it discloses the explanation of the increase in aggregate net profits. If the rubber and tea companies be eliminated we find that there is a net decrease in profits of £1,150,071, or 5.4 per cent. Of this decrease a large proportion is accounted for by the textile and iron, coal and steel groups, though in the case of the latter the fall is not so large, for it follows a series of declines resulting from the prolonged depression in the iron and steel trades. The decrease in the textiles group is nearly all accounted for by the figures of two companies, the English Sewing Cotton Company, and the Calico Printers' Association, whose net profits fell from £450,129 to £269,002, and from £700,304 to £216,218 respectively. The figures in the land, mortgage group were largely influenced by Leach's Argentine Estates, whose accounts for the year ended March 31st last showed a loss of £74,110, as compared with a net profit of £118,083 in the preceding year. In the tea group the decline is spread fairly evenly over the eight companies, but the increase in the shipping section is largely due to the figures of the Argentine Navigation Company, whose net profits were £213,690, as compared with a loss of £322,081 in the preceding year. The shops and stores group includes Lipton, Limited, whose net profits declined by £57,000.

The next table shows the distribution of profits in each of the past five quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1925.	£	£	£	£
Third quarter	18,676,799	11,930,751	64.0	3,260,519
Fourth quarter	34,074,192	20,292,366	59.5	8,659,707
1926.				
First quarter	51,691,024	30,496,402	58.9	11,896,223
Second quarter	60,489,439	37,052,402	61.2	10,926,867
Third quarter	164,881,456	99,772,421	60.5	31,743,366
Fourth quarter	24,059,581	15,774,324	65.6	4,187,455

It is, perhaps, surprising to find that the dividend policy has been less conservative in the past three months than in the four preceding quarters, for under prevailing conditions directors need offer no excuse for increasing reserves at the expense of dividend payments. Some explanation of the high percentage shown as going to ordinary shareholders in the past quarter, however, is again afforded by the rubber companies, which paid over £3½ millions to ordinary shareholders. But even so the next table does not wholly remove the unfavourable impression created by the last line of the table above, for we find that, with few exceptions, the amounts reserved, which include additions to balances carried forward, are on a scale which appears quite inadequate:—

	Net Profits.	Ordinary Dividend.	Preference Dividend.	To Reserve, &c.
1925.	£	£	£	£
Third quarter	18,676,799	11,930,751	64.0	3,260,519
Fourth quarter	34,074,192	20,292,366	59.5	8,659,707
1926.				
First quarter	51,691,024	30,496,402	58.9	11,896,223
Second quarter	60,489,439	37,052,402	61.2	10,926,867
Third quarter	164,881,456	99,772,421	60.5	31,743,366
Fourth quarter	24,059,581	15,774,324	65.6	4,187,455

The shipping and telegraph groups have adopted a reasonably conservative policy, and the waterworks have reserved a substantial proportion of profits. On the other hand, the textile companies pay out nearly the whole of their net profits to ordinary shareholders, having depleted reserves almost to the extent of the amounts required for preference dividend. It must be borne in mind, of course, that the figures of one or two companies can often upset the percentage figures of any group, and it is, therefore, unfair to suggest that the textile group as a whole has not followed a sound financial policy. In the case of the iron, coal and steel group we find that a few companies whose reports, covering the year to June 30th last, appeared in September are mainly responsible for the reduction in reserves, and in balances carried forward. The three hotel and restaurant companies have repeated the previous year's rate of ordinary dividend, but this has absorbed a considerably larger proportion of net profits. The percentage of profits paid to rubber shareholders is high, but as the aggregate amount of preference capital is small, the resources of the companies are swollen to the extent of 18 per cent. of profits.

In the next table we give the ratio to total ordinary and preference capital of net profits and of amounts reserved in each of the past five quarters:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1925.	£	£	£
Third quarter	189,651,020	18,676,799	3,260,519
Fourth quarter	276,290,069	34,074,192	8,659,707
1926.			
First quarter	453,009,241	51,691,024	11,896,223
Second quarter	53,173,126	60,489,439	10,926,867
Third quarter	236,594,126	24,059,581	4,187,455

There is a falling in both these ratios, but in each case the figure is higher than it was 12 months ago.

The average rates paid on the three classes of capital quarter by quarter since the beginning of 1923 are set out below:—

AVERAGE RATES PAID.

	On Debenture Capital.				On Preference Capital.				On Ordinary Capital.			
	1923	1924	1925	1926	1923	1924	1925	1926	1923	1924	1925	1926
1st quarter	4.31	4.82	4.63	4.65	5.7	5.3	5.3	5.4	9.2	9.6	10.5	10.9
2nd "	5.08	5.17	5.40	5.14	5.4	5.5	5.8	5.8	9.9	10.1	9.9	11.7
3rd "	4.90	4.77	4.96	5.02	4.3	4.9	5.0	4.8	9.8	9.0	9.2	10.5
4th "	5.03	4.94	5.30	..	5.4	5.8	5.6	..	9.6	10.0	11.0	..
Year	4.9	4.92	5.11	..	5.3	5.4	5.5	..	9.3	9.8	10.3	..

The average rate of ordinary dividend in the past quarter is the lowest since this time last year, but compares favourably with the average of previous years. Our readers need hardly be reminded that these figures represent rates paid on nominal capital, and do not indicate the yields obtainable on industrial securities.

The final table gives the average rates paid by each of the groups in the past quarter, together with the average rate on ordinary capital shown in our analysis a year ago:—

	Debenture Capital.	Preference Capital.	Ordinary Capital.	Rate of Div. % per year ago.
Breweries	12,415,954	12,279,644	36,291,259	17.5
Gas	712,858	300,000	2,683,670	4.6
Hotels and restaurants	427,722	125,000	1,032,829	10.7
Iron, coal, and steel	4,849,430	6,809,395	19,919,295	5.4
Land, mortgage, &c.	7,221,761	3,306,776	7,432,256	4.8
Rubber, &c.	800,206	503,880	11,131,948	23.4
Shipping	2,179,350	4,147,945	9,594,485	3.2
Shops and stores	1,181,630	3,096,350	2,269,170	8.7
Tea	78,002	133,000	1,115,325	27.4
Telegraphs	..	..	850,000	6.5
Textiles	6,104,680	12,065,551	10,358,909	7.6
Trust Companies	1,222,422	1,492,390	4,352,012	9.0
Waterworks	553,831	9,905	1,117,000	8.0
Miscellaneous	14,211,459	41,615,938	42,650,921	7.1
	52,067,165	85,787,754	150,806,372	10.5

The high rate of dividend shown on the preference capital of rubber companies is due to the fact that some of it is of the participating order. Eight of the fourteen groups show a reduction in the average rate of ordinary dividend, the prominent exception being the rubber group.

BRITISH CARS AND OVERSEAS MARKETS.

NEXT week the 1926 Motor Exhibition, organised by the Society of Motor Manufacturers and Traders, Limited, will open at Olympia. We are told that it will be epoch-making, not only because the day of the £100 car has arrived, but because it will go down to history as the battle-ground of the nations for supremacy in the automobile markets of the world. So far as the home market is concerned British manufacturers appear to be more than holding their own. But what of the overseas markets? Are they devoting any attention to the requirements of motorists in distant parts of the world, where the state of the roads renders the car designed for the smooth surfaces of the roads of this country almost useless? In conversation with visitors from Argentina, Australia and South Africa during the past few days, the uselessness of the ordinary British light car for anything except the main streets of the large towns in these countries has been emphasised, and the question asked: Why are the British manufacturers so slow to appreciate the requirements of overseas motorists? Do they not realise that valuable markets are being lost to the United States?

The reason for America's lead in this respect lies, of course, in the fact that American cars are designed primarily for roads similar to those in South America and the British Dominions, and the car supplied to the American buyer fills the bill equally well overseas. The British manufacturer, on the other hand, owing mainly to the horse-power tax, has concentrated largely upon the lower-powered light car, admirably suited to home conditions, but not fitted for the demands made upon them by users in newer countries.

So far as finished cars are concerned, the trade returns show a distinct falling off in the first nine months of this year in exports of both private and commercial cars, although exports of chassis continue to expand. The numbers are set out below:—

	BRITISH EXPORTS.		
	1924.	1925.	1926.
Touring cars	7,581	12,441	10,415
Commercial vehicles	8,846	13,646	11,300
Chassis	1,828	5,838	10,229

The total value figure for the past nine months was £6,363,300, as £6,787,800 in the first nine months of 1925. The decline in exports has been accompanied by a much heavier decline in imports, the number of touring cars imported in the nine months having fallen from 27,729 to 7,593; last year's figure was, of course, unduly swollen by heavy imports in anticipation of the reimposition of the McKenna duties. It would therefore appear that the British manufacturer has been gaining on foreign competitors in the British market. This is borne out by the following table, which shows the proportion of domestic trade in private cars secured by British manufacturers:—

	New Vehicles Licensed.	British Built.	Imports and Assemblies.	Proportion of Home Trade Secured by Home Factories.
1922 ..	71,759	35,266	35,493	49
1923 ..	99,230	62,122	37,108	62
1924 ..	124,814	89,669	35,145	70
1925 ..	157,223	108,121	49,102	69

It is estimated that there are at present approximately 357,000 commercial vehicles in Great Britain, including taxi-cabs, buses, lorries, &c. This represents an increase of 37 per cent. over the number in 1923, when 45 per cent. were British built, 45 per cent. British assembled, and 10 per cent. of entirely foreign origin. In 1924 the percentage of British-built vehicles had risen to 55 per cent., and of British assemblies had fallen to 35 per cent., while in 1925 British built vehicles represented 56 per cent., and British assemblies 34 per cent. Thus the British manufacturer is securing a reasonably satisfactory proportion of the home market in the realm of both private and commercial cars. But how much farther can the British market be expected to expand? Is it reaching its saturation point? According to the World Automobile Census conducted by the United States Department

WESTMINSTER BANK LIMITED

Affiliated in Ireland: Ulster Bank Limited

THE BANK is represented by Branches or Agents in all the principal cities and towns of the United Kingdom and has correspondents throughout the World

Head Office: 41 LOTHBURY, LONDON, E.C.2

of Commerce, cars in the United Kingdom are owned at the rate of one to every 55 of the population, from which it was calculated that there was an average of one car for each person with an annual income of £420 or more. From that it is deduced by "Commerce Reports" that, taking into account the heavier tax burden in Great Britain, the higher selling price of cars, the greater cost of fuel, &c., along with the narrower distribution of purchasing power, as compared with the United States, it would seem inevitable that the saturation point will soon be reached." The remedy for this suggested by our American friends is the education of the "better financed" British motoring public to a more rapid turnover of cars. "A renewal of their cars every one or two years would make used cars more readily and cheaply available for those of smaller means. In other words, there being no prospect in the near future of reducing operating costs, nor of augmenting British incomes, the extension of motor-car ownership must come through making cars available to persons in the classes whose income is less than £420 a year—say down to £250. This can be done only through a lowering of the initial cost of cars, and one method of attaining this result is to increase the supply of used cars." It is added that this development is handicapped by the fact that the average British owner keeps his car a long time. For example, 50 per cent. of the cars built five years ago are still in use, and statistics show that after a certain period the rate of disappearance decreases—there are on the roads of Great Britain to-day 280,000 horse-power of motor cars which were constructed before 1913. This is a great tribute to the qualities of the British car. But is it not time that these qualities were given a fair test under the conditions that prevail overseas? The finest engine from Coventry may be of no avail when exceptionally bad roads have proved too much for springs and axles not designed for rough work. Surely it is time that our manufacturers devoted some part of their energies to meeting the requirements of overseas customers. They will have to adopt a less independent attitude, but if the American calculations are right, and the home market is approaching saturation point, the financial future of the British motor industry depends upon the ability of our manufacturers to adapt part of their plant to the production of cars which can compete on an equal footing with those of their American competitors.

BREWERY PROFITS.

BEER consumption continues to increase as far as this country is concerned. According to figures supplied to us by the United Kingdom Alliance, the production of beer in Great Britain during recent years has been as follows:—

	Standard Barrels.	Bulk Barrels.
1913	31,705,000	33,960,000
1922	18,766,000	24,216,000
1923	19,486,000	24,989,000
1924	20,731,000	26,437,000
1925	20,863,000	26,600,000

In spite of widespread unemployment, the figures continue to advance, although they are still below the 1913 levels. It is not altogether surprising, therefore, to find that most brewery companies continue to record substantial profits during the past twelve months. The export figures for beer and ale for the year ended June, 1926, show a sale of 289,310 barrels at a price of £1,407,814. This is an increase of 8,903 barrels, and £93,310 over the figures for the similar period in 1924-5.

A number of important undertakings have recently issued their accounts, and we have selected ten representative undertakings, for the purpose of a review of results achieved, whose year in most instances ends on June 30, 1926. Our first table shows the net profits during the past four years, and the amount carried forward:—

Name of Company.	Net Profits, after Payment of Debenture Interest.				Carried Forward.			
	1922-23.	1923-24.	1924-25.	1925-26.	1922-23.	1923-24.	1924-25.	1925-26.
Arthur Guinness, Son, & Co.	2,046,911	2,389,625	3,039,096	2,614,919	594,198	718,822	832,918	731,837
Barclay, Perkins, and Co.	181,139	152,063	198,194	214,266	41,592	44,356	56,390	58,896
Bass, Ratcliff, & Grettton.	389,223	463,058	455,868	464,570	63,571	93,429	6,097	97,473
Hoare and Co.	186,379	207,658	279,932	372,641	5,146	7,541	4,259	7,610
Mitchells & Co.	404,471	414,433	501,221	521,908	220,772	243,808	248,301	271,356
Threlfall's Brew.	288,527	295,269	301,816	317,012	244,563	263,314	288,613	329,127
Watney, Combe, Reid, and Co.	690,718	702,527	1,198,490	1,135,117	215,372	185,203	213,608	245,411
Whitbread & Co.	175,085	164,812	198,034	210,905	319,532	342,489	394,676	437,652
Wm. Hancock and Co.	42,399	58,173	62,413	41,494	16,288	12,510	25,224	26,019

The best results, it will be seen, were achieved by Mitchells and Butler, Hoare and Co., Whitbread and Barclay Perkins, while Bass, Ratcliff and Grettton also secured higher net profits. Arthur Guinness, on the other hand, recorded a decline in net profits, the reason for which is not given in the report. This latter concern, though conducted in the Irish Free State, represents nevertheless one of the keystones of the British brewing industry. In most cases, it will be observed, these brewing undertakings are carrying forward larger amounts to the next accounts.

The following table gives an analysis of principal liabilities and assets during the past two years:—

May 31, '25	710,000	329,383	216,324	1,087,778	150,669	15,069	1,703	81,366	
May 31, '26	715,000	431,700	199,932	1,151,782	147,504	36,618	1,703	80,239	

During the year Watney, Combe capitalised £796,351 of reserves, thus restoring the deferred ordinary stock to its original figure of £3,185,410. This must surely be as satisfactory to the directors as to the shareholders. Several of the companies reduced loan capital. In the case of William Hancock, the balance-sheet shows that the £192,454 of 4 per cent. debenture stock has been eliminated, while mortgages have been reduced from £69,275 to £31,700. There is, however, a new item of £400,000 of 6 per cent. debenture stock. On balance creditors are lower, as also are debtors, but properties and plant and cash show an upward tendency, though stocks, generally speaking, are lower. Not much change occurred in the totals of investments, except for Watney, Combe, Reid, which increased its holding of Treasury bills from £197,752 to £791,316, and Whitbread, which put £100,000 more into Government and £23,000 more into trade investments. Our next table shows the available

balance after payment of debenture interest and how it was utilised during the past two years:—

			Available Balance, after Payment of Deb. Int.	Pre-ference Dividend.	Ordinary Dividend.	To Reserve, &c.	Carried Forward.
Arthur Guinness, Son, & Co.	June 30, '25	3,752,918	120,000	2,400,000	400,000	832,918	
June 30, '26	3,451,837	120,000	2,400,000	200,000	731,837		
Barclay, Perkins, and Co.	Mar. 31, '25	234,990	72,000	81,600	25,000	56,390

Mitchells and Butlers.	June 30, '25	745,029	46,875	349,853	100,000	248,301	
June 30, '26	769,209	48,000	349,853	100,000	271,356		
Threlfall's Brew.	June 30, '25	565,130	26,518	250,000	..	288,612	
June 30, '26	605,645	26,518	250,000	..	329,127		
Watney, Combe, Reid, and Co.	June 30, '25	1,383,692	86,528	533,556	550,000	213,608	
June 30, '26	1,348,725	84,378	668,936	350,000	245,411		
Whitbread & Co.	June 30, '25	540,523	46,257	99,590	..	394,676	
June 30, '26	615,631	46,257	130,322	..	437,052		
William Hancock and Co.	May 31, '25	74,924	20,700	24,000	5,000	25,224	
May 31, '26	66,719	20,700	20,000	..	26,019		

The contraction in the profits of Arthur Guinness is reflected in the reserve allocation, which is halved at £200,000. Neither Threlfalls nor Hancock make any appropriation, but the provisions made by other companies seem to be comparatively generous.

Our final table shows ordinary dividends in past three years, also comparative prices and present yields:—

Name and Amount.	Ordinary Dividends.			Prices.			Present Yield.
	1913-24.	1924-25.	1925-26.	Oct. 31, 1925.	Oct. 29, 1925.	Oct. 14, 1926.	
Arthur Guinness, ord. stk.	% 26 1/2	% 32 1/2	% 32 1/2	493 (m) 5 1/2	730 (m) 5 1/2	670 (m) 5 1/2	15 0 9
Barclay, Perkins, & Co.	% 8 000	% 8 000	% 8 000	5 1/2 (m) 5 1/2	5 1/2 (m) 5 1/2	5 1/2 (m) 5 1/2	6 16 3
Bass, Ratcliff, & Grettton (£1)	13 1/2	13 1/2	13 1/2	2 1/2	2 1/2	2 1/2	15 10 9
Hoare and Co. (£1)	10	10	10	2 1/2	2 1/2	2 1/2	3 9 6
Mitchells & Butlers (£1)	10 1/2	11 1/2	13 1/2	1 1/2	2 1/2	2 1/2	14 14 6
Threlfall's Brewery (£1)	20	20	20	2 1/2	2 1/2	2 1/2	7 9 0
Watney, Combe, Reid, & Co. (£1)	20 (a)	17 (b)	17 (b)	26 1/2 (c)	37 1/2 (d)	26 1/2 (e)	6 10 6
Whitbread & Co. (£1)	10	10	10	13 (k)	64 (k)	64 (k)	6 19 6
William Hancock (£1)	10	12	10	10 (n)	10 (n)	11 (n)	8 0 0

(a) Paid on a larger capital of £2,389,059. (b) Paid on a capital of £1,185,410. (c) £10 shares. (d) Price of 4 1/2 per cent. Cum. Pref., Ord. Stock. (e) Price of 10 p. per cent. Cum. Pref., £4 Shares. (f) On capital of £2,389,059. (g) On capital of £1,185,410.

All the undertakings, with the exception of William Hancock, were able to maintain dividends at the 1924-25 rate, and Whitbreads was able to pay 3 per cent. more. Watney, Combe maintained its former distribution on the capital as increased. The yields on such shares as those of Hoare and Co., and Bass, Ratcliff and Grettton, are on the low side, and the general list of yields suggests confidence among investors that the present prosperity is not ephemeral.

LAND POLICY AND PALM OIL IN WEST AFRICA.

(BY A CORRESPONDENT.)

DURING the past few years the shadow of the Far-Eastern menace, the plantation palm oil of Sumatra, threatening the West African industry, has lengthened, and is viewed with much apprehension in many quarters; although some recent information on the Sumatra plantations, notably an investigation by M. Henry, of the French Colonial Administration, would seem to indicate that the real substance behind the shadow is less formidable than has been commonly supposed. However this may be, it is in any case indisputable that considerable progress has been made in Sumatra on up-to-date scientific lines, and there is no doubt that the West African industry, especially that of Nigeria, is extremely inefficient, wasteful, and primitive, and stands in urgent need of drastic reformation not only at its root, that is to say, in the system of land tenure and control, but also in other respects.

Mr Ormsby-Gore, in the report of his visit to West Africa, just published (Cmd. 2744, H.M. Stationery Office, price 3s 6d), devotes a special chapter to the palm oil industry, mainly Nigerian. It is of considerable interest, but not altogether convincing. In his view native land rights are paramount over every other consideration, and he makes an unnecessarily large bogey of "compulsion." In practically every civilised country to-day it is accepted as a fundamental principle that whoever owns or controls

the land must put it to the best use, and bring it to maximum productivity, or make room for those who can; and another principle of like rank and importance is that every able-bodied man must work. These great and irrefragable principles are morally compulsory, even if not always legally enforceable. Moreover, the compulsory acquisition of land in England in the interests of the State has long been recognised. It is not, of course, possible in one short article to deal fully with the great complex problem of native land rights in Africa, but the approach to that problem would be greatly simplified and facilitated if certain salutary principles accepted in Great Britain and other countries could also be accepted for West Africa. Those who have made a thorough study of the Swaziland case recently decided against Sobhuza II. by the Privy Council, whereby the scandalous expropriation of native land rights, including dispossession of sacred lands and tombs of former kings, has been confirmed, will know what real value is to be attached to the Government's paternal sentiments towards the West African native, and will be nauseated by such an exhibition of hypocritical inconsistency. In Swaziland the natives can be dispossessed by Order in Council, driven from their most sacred domains, and their unfortunate ruler be ruined by legal expenses at the hands of the highest tribunal in this country. In Nigeria they can burn down every year a large proportion of their oil palms with impunity (see Mr Ormsby-Gore's Report, p. 105), whilst British capital and enterprise, perfectly ready without any direct help from the Government to repeat in Nigeria the great work done in the Congo, to the highest and most lasting benefit of the native, stand by impotent. Our harassed and over-taxed industrialists are everywhere surrounded and shackled by compulsion and hydra-headed legislation. The Nigerian native may do what he likes with the land, and work or not as he chooses.

Doubtless there is a great deal to be said for native ownership, especially in Nigeria, and it has many powerful advocates, such as Sir Hugh Clifford, Sir Fredk. Lugard, and others (see article on Native Races and the Land, *Economist*, April 18, 1925, pp. 740-1); but the real point at issue is whether it is wise to limit economic development so very narrowly to one form of activity only, agriculture, and to one particular kind of agricultural organisation, small-holdings; whether it is necessary entirely to exclude European participation and enterprise in its best forms; and whether such entire exclusion is consistent with that far-sighted and statesmanlike policy of African development which has been frequently expounded of late, and which consists in a careful blending of what is best in European civilisation with the best traditions and customs of African life. Such blending seems destined to play the leading part in African social and economic growth. It is well expressed in the great Achimota experiment, and in the recent address of Sir Gordon Guggisberg to the Gold Coast Legislative Council at Accra. If then the best and most enduring features of our civilisation are to be skillfully intermingled with African culture and social life, would not this blending be particularly happy and desirable in regard to the land and its attendant industries? Is it not possible to combine the best and highest forms of European industrialism with native land rights and aspirations, and so save the native from the hardship and monotony of one single form of economic structure represented by small-holding idealism carried to excess? In time the European element might recede; that time is not yet.

It is by no means certain that all the natives, even in Nigeria, would wish to be smallholders. Under present conditions they find it very difficult to compete in the world markets for palm oil and kernels. In the recent speech of the chairman of the Niger Company, he said:

"In Belgian territory the scientific production of palm oil is now, at the end of its fourteenth year, reaching large proportions, and I am glad to say that the pioneer and principal producer is your subsidiary company—the Huileries du Congo Belge. In French Africa every inducement is offered to commercial concerns to erect mills on most favourable terms. In the East your company is persistently invited to use its experience and organisation. In Sierra Leone an enlightened British Colonial Government has taken a decided step in the right direction."

The chairman, Mr Hyslop Bell, went on to say that the new Governor of Nigeria regarded the Sumatran menace as one that cannot be lightly ignored, and that any satisfactory solution must permit the extraction of as large a percentage of oil as is obtained in the Belgian Congo and in the East. The principle simply is that the land and its allied industries shall be worked to optimum efficiency in the interests, not exclusively of despotic concessionaires and private profit, but of the whole community. This principle must be of world-wide application—it has been generally accepted for English agriculture. Can the land in West Africa form an exception?

Concerning the present deplorable waste and inefficiency in the native West African palm-oil industry there is little need to speak. It is well emphasised in the latest despatch from Sir Ransford Slater dealing with the Sierra Leone palm-oil industry, especially in that section of it in which Mr Dawe describes the frightful waste caused by fire, a waste far greater than that caused by the pernicious practice of tapping for palm wine. Contrast this with the valuable work undertaken by the Huileries du Congo Belge, established by the late Lord Leverhulme, and now an associate of the Niger Company. In the face of incredible difficulties this company, some 15 years ago, began its work in the depths of the Congo forests. It established plantations; it built oilmills; it planted nurseries for experimental plant selection work; it evolved new and better varieties of oil palms giving larger yields of better quality oil; it built schools, hospitals, and houses for the natives—veritable garden cities; it built roads and railways, cleared and drained swamps and waged ceaseless war against malaria and the dreaded mosquito and other sinister pests. The natives could still have their own gardens and holdings, with all these inestimable advantages super-added. Why and how should these things necessarily be incompatible with native small-ownership to any extent desired? It should not be beyond the wit of man to reconcile the supposed antagonistic schools, representing European plantations on the one hand and native ownership on the other. If the best elements in European and African life cannot be mingled here, it is difficult to see where a more fitting opportunity can be found.

THE COTTON TRADE.

THE past quarter has been another disappointing period for cotton spinners and manufacturers. One of the chief reasons for the absence of improvement has been the continuance of the coal strike. All employers have been seriously handicapped by the high prices for fuel. It is rather surprising that production has been possible on the scale reported, and it was never anticipated when the dispute began last May that a settlement would not have been reached by this time. It may be said that during the past three months weaving production has been at about 60 per cent. of the full capacity, whilst the output in the mills spinning American cotton has been reduced to 50 per cent., with a production in the Egyptian spinning section of about 75 per cent. Another adverse factor has been the considerable decline in raw material rates, and as is usual in a falling market buyers of yarn and cloth have been cautious, their policy being to purchase from hand to mouth. The reduction in values has been a serious matter for all firms at home and abroad who hold stocks, and the depreciation must mean important losses.

Remarkable developments have taken place with regard to the cotton crop in the United States for this season. Although the growth is later than last year the plants have experienced very favourable conditions, and it is now practically certain that the output will be of record dimensions. The latest Government estimate is for a production of 16,627,000 bales. This compares with the previous biggest crop of 16,100,000 bales. Naturally in trading circles sentiment has been very bearish. On June 30th the quotation for Middling American on the spot in Liverpool was 9.30d. During July there was a tendency for rates to harden, and 10.02d was posted on the 30th. In the early part of August there was a downward movement to 9.35d on the 13th, but this was followed by an

advance to 10.36d on September 8th. Reports as to future supplies then became very promising, and considerable selling took place, with the result that by September 29th the price had fallen to 8.07d. There has been a further fall since the beginning of this month, the quotation on the 13th being 7.11d. Rather varied advices have come through relating to the crop in Egypt, and the position of prices has been complicated by the action of the Government in purchasing from time to time. The latest official estimate of the yield is 6,836,000 cantars, but private firms believe that the output will be larger. The growth for last season in Egypt was a record at 8,009,000 cantars, the previous biggest crop being 7,684,000 cantars in 1913-14. On June 30th the quotation for Fully Good Fair Sakallaris Egyptian cotton on the spot in Liverpool was 16.05d. After a slight decline there was an advance to 16.40d on July 30th. Towards the end of August there was an upward movement, and 18.35d was posted on September 6th, with 18.55d on the 16th. Prices then began to give way, and reached 16d on October 4th, with 15.55d on October 13th.

The trade done during the quarter in piece goods for abroad has been discouraging. There has been an absence of enterprise on the part of merchants, with a tendency in all quarters for only limited quantities to be bought. This attitude of buyers has been largely due to distrust of prices, and the anticipation of more favourable opportunities of purchasing. Manufacturers have been harassed by the coal situation, and many contracts have been missed owing to sellers not being able to promise definite delivery terms. Our customers abroad have not been prepared to agree to a strike clause in contracts. India has provided a persistent inquiry, and now and again fair lines have been booked in the lighter styles, but grey staples have been generally neglected. The decision of dealers in Calcutta not to make forward purchases for several months has been generally effective. Fortunately, another good monsoon has been experienced, and stocks in the bazaars are not particularly heavy. From a business point of view China has been almost a closed market, and it is rather surprising that any trade at all can be done. Owing to the disturbed conditions, it is quite impossible for dealers in Shanghai to send goods to the up-country districts. In the middle of September the auction sales in Shanghai were suspended for three weeks, but they have now been resumed. Merchants complain, however, of the limited clearances and poor prices. Fresh business for the Near East has been within a small compass, and stocks in Egypt continue heavy. Only occasional support has been given by South America, but now and again a fair amount of business has been done for West Africa. During the past month some improvement has shown itself in the sales for the Continent in fine fabrics. The home trade houses have been inclined to keep their stocks as low as possible.

The following table gives the exports of cloth from the United Kingdom for the nine months ended September in the last three years, and the pre-war year of 1913:—

	Yards.	£
1913	5,350,278,900	73,659,119
1924	3,341,388,800	114,899,318
1925	3,359,041,900	115,915,823
1926	3,009,287,700	91,595,369

It may be mentioned that in the first quarter of this year shipments of cloth were 1,125,756,100 square yards, but in the next three months there was a decline to 914,301,500 square yards, whilst the amount for the September quarter is 969,230,100 square yards.

Owing to the coal strike, spinners of American yarns in the middle of June began to work the mills half-time, and this scale of curtailment of production has continued. The state of trade was considered by the Masters' Federation towards the end of September, and it was recommended that members should increase short time by running their mills only one week in three, thus limiting output to 33 per cent. of the full. A mass meeting of spinners was held when this proposal was adopted. In accordance with the scheme, the federation requested the members affected to close their mills for a fortnight from October 4th. It was at once found, however, that the recommendation was not being loyally observed, and the new schedule of working hours had to be abandoned. The

federation, however, urged spinners not to exceed half-time running. An important development has been the establishment by the Masters' Federation of minimum prices for standard counts of American yarns, this scheme coming into operation on August 16th. On the whole this movement has been a success, and has certainly been of considerable benefit to spinners. In many cases, however, the minimum prices are not equal to the cost of production. Trade demand during the quarter has not been at all satisfactory. More companies have had to put forward reconstruction schemes to the shareholders, and the mill share market has been dull and weak. Further progress has been made in the formation of the Cotton Yarn Association, Limited, which is being promoted for the purpose of grading yarns and fixing minimum prices. The company has been registered, and directors are now being elected by ballot. It is rumoured, however, that the promoters are not meeting with the support expected, and there is some doubt as to whether the association will be successfully established. Trade in Egyptian yarns has been very patchy. Now and again quite a substantial business has been done, but there has been a tendency for margins to suffer, and the position of most firms is less satisfactory than three months ago. There has not been any general activity in export yarns, and most of the buying has been in small lots.

The following is a comparative table of yarn shipments from the United Kingdom, the figures being given for the nine months ended September for the last three years, and for the same period in the pre-war year of 1913:—

	Lbs.	£
1913	154,761,700	11,022,055
1924	123,319,700	20,836,107
1925	139,821,500	23,193,162
1926	124,924,400	16,258,525

Since the beginning of this year there has been a tendency for our foreign trade in yarn to fall off, the shipments in the first quarter being 48,477,600 lbs, with 39,458,000 lbs in the June quarter, and 37,018,800 lbs in the September quarter.

The depression in the cotton industry has lasted for five years. During this time there have been several occasions when traders have anticipated a revival of demand, but they have met with disappointment. Latterly important developments in the situation have taken place, and there is now undoubtedly more ground for believing that a definite improvement is in sight. American cotton prices are now cheaper than for over five years back. With regard to manufactured goods there is one difficulty, in that prices are considered dear in relation to raw material rates. This is due to the heavy overhead charges of all producers. Most of the spinning mills and weaving sheds are running very little more than half-time, and this, of course, is very costly. Coal is about three times dearer than in the spring. Numerous concerns, owing to their financial position, have to pay big charges for interest on loans and overdrafts. These factors are important now that Lancashire is meeting with much severer competition from other countries. There is not likely to be any definite trade revival until there is a general settlement of the coal dispute. Uncertainty still exists as to future prices for raw material. There is every likelihood, however, that when in this respect there is greater stability a buying movement of some volume will show itself in manufactured goods.

THE GERMAN STEEL INDUSTRY.

THE recent European Steel Pact, followed by the discussions between English and German industrialists last week-end, has roused renewed interest in the industrial organisation of Germany, and in the economic situation in that country. The annual report* by the British Commercial Secretaries in Berlin on German economic conditions, which is always a most valuable standard work on

* "Report on the Economic and Financial Conditions in January, 1925-26." By Mr. J. W. F. Thelwall, M.C., assisted by Mr. C. J. Kavanagh, Commercial Secretaries in Berlin. H.M. Stationery Office. 4s 6d net.

German progress, is thus particularly timely, and will doubtless be studied in England with more than usual care. Mr Kavanagh's section on the progress and organisation of the iron and steel and allied trades is so pertinent to recent events that we have extracted freely from it in the following article.

The report points out that 1925 was for Germany a year of extreme economic gravity, and that the "purification" crisis, which involved untold bankruptcies and failures, and even took toll of some very important industrial enterprises, was its dominant feature. Nevertheless, the iron and steel industry performed the remarkable feat of producing more than 12 million tons—which is not far short of the pre-war output for present Germany. The amount of steel retained for home consumption was as much as in 1924, and though, owing to the change of boundaries, comparison with 1913 is difficult, it is estimated that present Germany consumed in 1925 from 85 to 90 per cent. of her pre-war requirements. Even in the export markets, which were hard hit by the low level of prices caused by the depreciation of the French franc, Germany nevertheless contrived to export some three million tons, though at prices which were far from profitable.

The only adequate explanation of an activity which, for a deflation crisis, can only be characterised as good, is to be found in the development of the financial situation. The restriction of credit on the part of the Reichsbank was delayed in its influence upon the commerce of the country partly by the influx of foreign loans and partly by the manufacture of credit by means of trade bills, which exceeded all prudent proportions and which ultimately caused a severe reaction, first in merchanting circles and then in industry. A rising price tendency continued over the first six months of the year, after which the continued pressure of credit restriction and the utter collapse of confidence in bills of exchange forced German industry to contract its operations. In the heavy metal trades the reaction followed sooner than in other branches, and the development of the curtailment coefficient of the Ingot Steel Association shows the influence. For January and February it stood at 10 per cent., for March to May 15 per cent., June 20 per cent., July 25 per cent., August onwards 35 per cent.

As regards industrial organisation, the statistics given in the report illustrate the difference in the scale of production in Germany as compared with England. For example, with only 80 furnaces in blast, Germany produced more than the United Kingdom, which had more than double that number in operation.

During the period very great attention has been concentrated on the so-called "rationalisation" of production; that is, the operation of units of a group in such a way as to achieve the maximum efficiency of working. Everywhere in the German metallurgical and engineering trades very serious study is being devoted to the efficiency of production; transport arrangements are being overhauled and brought into line with mass production programmes. The technical re-equipment of the large steel works has been pressed forward, and plant not fitting in with the requirements of modern mass output ideas has been to all intents and purposes discarded or laid idle, so that the present-day steel units in operation are composite examples of the latest technical improvements.

This policy has undoubtedly largely contributed to the comparative stability of the German market under extremely unfavourable circumstances, but it has not been able as yet to put the industry on its financial legs. The balance-sheets of the large firms in the trade show a heavy fall as compared with pre-war profits, and no dividends, though in most cases the firms have been able to add a little to their reserves. Comparison with the pre-war situation is peculiarly difficult in the case of foreign trade, owing to the change of national boundaries, but Mr Kavanagh thinks that exports for present Germany at about three million tons are somewhere near pre-war level.

The most important section of the report is, however, the description of the developing organisation of the iron and steel industry. At the time the report was written the recent pact had hardly advanced at all, but the problem of reduced European requirements and increased capacity was exercising German manufacturers, who felt that unrestricted competition was likely to deal all producing countries a severe blow.

Very serious efforts were therefore made to bring about the understanding which has recently materialised. The problem was complicated by the special difficulties of those parts of the European steel area which had been broken off from the former German Empire. The most difficult of all, perhaps, was the position of the Saar. German industrialists realise that special consideration must be paid to the works there, partly for political

motives and partly for the sake of placating the industries of Southern Germany which formerly drew their sources of material from the Saar. It is true that if Saar products were allowed duty free to Germany it might be regarded as a concession to France, who would otherwise be under the necessity of marketing these products herself. But, on the other hand, German industrialists are anxious to foster the closest economic interests between the Saar and Germany. The situation has already developed by the admission of the Burbacher Huette and Rothe Erde works to the German Ingot Steel Association. The Roechling works, which are purely German, have for some time past been members of the German associations. Again, Luxemburg and Lorraine would be badly hit if they were not allowed to retain some of their long-standing markets in Germany. It was thought when this report was being written that these points would be amicably arranged, provided that any imports into Germany from France and Luxemburg should be distributed through Germany by means of the German iron and steel associations, and that the amount should be based on imports in 1922, 1924, and 1925. This problem of the import quota has now been settled by the International Pact.

The steel-consuming industries of Germany have been kept informed of what is going on, and efforts made to satisfy them that their interests would not be harmed by an international agreement, "the object of which would not be to increase prices on the home market but to bring the present export prices into some relation with costs of production."

The preliminary condition of all these plans is, however, the adequate organisation of the industry internally. The progress made in this connection may be discussed under four heads, namely:—(1) The Ingot Steel Association; (2) various syndicates for regulation of production and prices of semi-finished and finished products, railway materials, &c.; (3) the export rebate system for finishing trades; (4) the Ruhr Steel Trust.

Ingot Steel Association.—Immediately after the war the old and powerful Steel Syndicate was dissolved largely as the result of the loss of Lorraine, Luxemburg, the Saar, and Silesia. Those works that remained to Germany were caught up in the movement for the organisation of vertical combinations such as the Stinnes concern. On the achievement of stabilisation, however, this plan of associating steel works with finishing industries was found to be an inadequate protection against excessive competition and price variations, and there occurred, therefore, a reversion to the old horizontal system of agreements covering all the works in a particular industry. The existence of large groups, however, controlling everything from the raw material to the finished product led German manufacturers to seek a more elastic form of horizontal syndicate than the rigid organisations of pre-war days. The first essential step in the new development was the formation, in November, 1924, of the Ingot Steel Association, which provides for a general control of output. After considerable discussion the association succeeded in assigning participation quotas to the various works, and since that time German steel output has been controlled by the use of the monthly coefficient mentioned above. If a member exceeds his contingent for two consecutive months he is pledged to pay into the management account 25 marks per ton on all excess production. Provision is, however, made to permit members temporarily or permanently to amalgamate their participation with other members, an arrangement which will make possible the concentration of production in the most efficient works.

Other Syndicates.—The organisation of the Ingot Association has been followed by the creation of syndicates and conventions in most other products.

The movement has continued and associations have now been formed for all the more important products. In addition to those already reported, syndicates or conventions have now been formed for wire rod, drawn wire, bar iron, hoop iron, thick plate, dynamo plate, fittings, rivets, welded tubes and flanges. The negotiations for the formation of a wire-rope syndicate have not yet been completed, but, in spite of the difficulties in regard to quotas, it is expected that they will shortly be brought to a satisfactory conclusion. For medium and thin plate, however, all efforts to form a syndicate have proved unsuccessful.

Export Rebates to Finishers.—One of the most interesting features of the whole system is that it permits of

special facilities being given to consumers of steel who are exporters:—

With a view to stimulating export trade in finished materials, negotiations were begun as far back as the end of 1924 for the introduction of an export bounty scheme. After conversations extending over some nine months an agreement was concluded between the iron working-up industry (the so-called AVI) and the Ingot Steel Association concerning the supply to the members of the former at world market prices of steel, semis, bar iron, girders, plates, permanent way material, &c., for finishing and export. The rebate, amounting to the difference between German home prices and world market prices, is made in the form of a claim certificate to the finishers which entitles them to draw supplies free of payment to the extent of the amount of the certificate. Its scale is devised to put the German exporter on an equality with his trading rivals drawing upon Continental supplies.

Export rebates were made retro-active to March, and since the conclusion of the agreement have been fixed monthly. In view of the sharp fall in world market prices and the increase of inland prices consequent upon the formation of associations in the producing industry, considerable increases in the rebates were made in September, in which month the Upper Silesian works, embracing Oberbedarf and the Oberschlesische Eisenindustrie in Gleiwitz, also participated in the agreement.

Negotiations were undertaken with a view to extending the agreement to quality plates, but no settlement could be reached with the Ingot Steel Association. In October, however, the scheme of bounties was applied to supplies to German shipyards.

The extent of the rebate is well exemplified by the following figures, which give the prices per ton for May, 1926, as laid down by the joint committee of producers and consumers:—

	(In Marks per Ton.)		
	Bounty in Mar.-June, 1925.	Export Basic Price in May, 1926.	Bounty in May, 1926.
Ingot steel	5	90	10
Blooms	5	92	15
Billets	6	95	15
Sheet billets	6	98	15
Sections	17	98	24
Bar iron	15	102	24
Universal plate	12	119	20
Hoop iron	7-50	122-50	25
Wire rod	12	115	20
Permanent way material—			
(a) Light	6	106	25
(b) Heavy	12-50	130	18
Gas and water pipes	..	310	55
Thick plate	..	115	24
Boiler plate	..	142	24
Middle plate	7	117-50	12
Thin plate—			
Over 1 mm.	10	135	15
Under 1 mm.	10	155	15
Dynamo plate	25	260	40
Transformer plate	25	680	45

The difference between the first column, showing the bounty paid twelve months previously, and the final column, is an indication of the growing margin between internal German and world export prices.

The Ruhr Steel Trust.—This organisation, which was formed in May, 1926, has come into existence primarily because of the excess capacity of production which had previously led to the formation of the Ingot Steel Association. Under the steel restriction scheme, although all of the great works of the Ruhr were fully equipped for production, none of them was fully employed.

The expansion of the concerns had resulted in an uneconomic situation; the exchange between the associated works of the concerns, often situated at comparatively long distances from each other, of raw and semi-finished materials, the export of materials from works ill-adapted by reason of their geographical position for such trade, the multitude of merchandising organisations, all contributed to increased costs. With a view, therefore, to reducing costs of production by concentration in those works best suited to the requirements by reason of their plant and geographical situation, negotiations were begun in the middle of last year between the five largest of the Rhenish-Westphalian works—namely, the Thyssen, Krupp, Phoenix, Deutsch-Luxemburg, and Rhein Stahl concerns, for some form of amalgamation. The Klockner, Gutehoffnungshütte, Hoersch, Mannesmann, and Stumm concerns were also invited to participate, but decided to remain outside. Krupp also withdrew from the negotiations in view of the family nature of their concern.

The factor governing the whole of the amalgamation, apart from the participation quotas, which question also bristled with difficulties, was that the taxation incident to a fusion of this nature was prohibitive, and for several months negotiations were conducted as to the best form in which such an amalgamation could be effected. In October negotiations had so far progressed that it was decided to form preliminarily an Investigation Company, under the title of the Vereinigte Stahlwerke A.G., with a provisional capital of 50,000 marks, for the purpose of the preparation of the final amalgamation contract and the solution of the taxation

question. Provisional participations were based on the participation quotas of the various companies in the Ingot Steel Association and Rhenish-Westphalian Coal Syndicate and on wages and turnover, the participation quotas of the works in the Ingot Steel Association alone proving an insufficient index in view of the large coal holdings and varying financial strengths of the different concerns. Negotiations extending over several months were, however, necessary before the quota question could be finally settled, as the reconciliation of the various claims proved to be no easy matter. The preliminary investigation company was not finally registered until February, 1926, to enter into activity on April 1st. In March the negotiations which had been conducted with the Government concerning the fusion tax led to a reduction, and the way was cleared of one of the chief obstacles. In May the preliminary investigation company was converted into the final company, the Vereinigte Stahlwerke A.G., with a capital of 800 million marks, distributed over the various founding companies in relation to their participation quotas. These quotas and capital participations are shown in the following table:—

	Percentage Participation	Marks.	Total.
Rhein-Elbe Union—			
Gelsenkirchen Bergwerks A.G., Gelsenkirchen	15-1	120,800,000	
Deutsch-Luxemburgische Bergwerks und Huetten A.G., Bochum	15-1	120,800,000	
Bochumer Verein fuer Bergbau und Gusstahlfabrikation, Bochum	9-3	74,400,000	
Thyssen Werke	39-5		316,000,000
Phoenix—	26-0		208,000,000
Phoenix A.G. fuer Bergbau und Huettenbetrieb, Dueseldorf ..	23-65	189,200,000	
Vereinigte Stahlwerke Van der Zypen und Wissener Huetten, Koeln-Deutz (excluding mines)	2-35	18,800,000	
Rhein Stahl—	26-0		208,000,000
Rheinische Stahlwerk A.G., Duisberg-Melderich (exclud'g mines)	8-5	68,000,000	68,000,000
			800,000,000

The seat of the company has been fixed at Dueseldorf, but, in order to give consideration to the claims of the Ruhr district and to the coal holdings, the administration of the coal mines will operate from Essen. District departments will then be formed for coal and steel, and it is provided that, notwithstanding the closer union in the central administration of the whole technical, commercial, and financial direction, the works themselves shall be left as large a measure of independence as possible.

The merchandising of the iron and steel products is to be undertaken by the large merchandising companies of Thyssen, Rhein Stahl, and Deutsch-Luxemburg, whereas the coal trade will be concentrated in the hands of Messrs Raab, Karcher, and Co., a subsidiary concern of Gelsenkirchen.

Although the trust embraces powerful members, there are a considerable number of important concerns which are not participating. The trust itself controls an output capacity of nearly 6,000,000 tons of ingot steel, or some 44 per cent. of the total participations in the Ingot Steel Association, and nearly 34,000,000 tons of coal.

THE LABOUR PARTY CONFERENCE.

(FROM A CORRESPONDENT.)

THE country has heard the voice of Scarborough and the voice of Margate. At Scarborough the Conservative Conference revealed the mind of the Government's supporters. The two problems which are uppermost in Conservative circles are Trade Unionism and the House of Lords, for of 43 resolutions on the Conference agenda, 12 were devoted to the former and 7 to the latter. At the Labour Party Conference at Margate the question of the House of Lords was never raised, and the threatened attack on existing trade union rights was the subject of only a short debate which left the clear impression that the Labour movement will gladly accept the Government's challenge, and, as the resolution on the subject expressed, it will confidently await the result.

The Labour Party Conference was mainly concerned with the party's agricultural policy and rural propaganda, with the mining situation, and with large questions of international policy.

The chairman's address came as a surprise both to the public and the delegates. With a history of rebellious action against the executive, over which during the past year he presided, Mr Robert Williams opened the Conference with a speech which met with violent opposition from the left wing. On the whole, the Conference approved it. It declared for political as against industrial action, supported Mr Cramp's recent declaration on the general strike, "Never again," and asked for a considered and reasonable policy of advance.

If the Communists received short shrift in the chairman's address, they won even less consideration from the Conference. The only real issues before the delegates were the determination of the party executive not to allow the question of the expulsion of Communists to be reopened, and the action of the executive in disaffiliating local Labour parties which have not carried out the policy of the Liverpool Conference of last year on this question. On both questions the Executive was supported by an overwhelming vote of the Conference. Margate was, indeed, the completion of the rout which began at Bournemouth at the recent Trades Union Congress.

On the discussion dealing with the mining situation attempts were made to commit the party to a levy of the unions, and an embargo on foreign coal. The platform, however, with support from speakers on the floor, refused to take action which would have infringed upon the rights and responsibilities of individual trade unions and the Trades Union Congress. At the same time, the conference showed its practical sympathy with the miners by an extraordinarily handsome collection and by adopting a resolution supporting the proposals for the nationalisation of mines, submitted by the Miners' Federation to the Samuel Commission, with the support of the Labour Party Executive and the Trades Union Congress General Council.

A whole day was devoted to the agricultural policy which had been finally formulated during the past year. New voices were heard in the conference. Delegates from rural constituencies, together with the representatives of the unions primarily concerned, had an unprecedented "field day." Plans were discussed for more active propaganda in the countryside. Repeatedly the point was driven home that a Labour majority was an impossibility until a proportion of the rural constituencies had been captured. After the conference a definite campaign is to be organised.

For the most part the floor supported the platform—in other words, the general body of delegates supported the Executive. There is at Labour Conferences an anti-platform element, which is almost invariably steam-rolled by the votes of the big organisations, which are a steady influence on the conference. Only on one question during the past week was the Executive beaten, and then, curiously enough, on the question of birth control. Last year resolutions on this subject came before the conference, and the Executive therefore excluded those sent in this year by operating the standing order which gives them discretion to bar questions on which decisions have been taken for three years. After a stiff struggle, the Executive won on this question, and therefore the resolutions did not stand part of the agenda. But the enthusiastic advocates of the policy of making the matter a party issue girded up their loins for a further attack, which took place on the section of the Executive's report declaring that the matter was not one of a party political nature, and that therefore it should be left to individual judgment. It was proposed that the section should be referred back, and after a keen debate the motion to refer back was carried by a very narrow majority. The standing orders committee of the conference, however, reported that this did not mean a declaration of policy in favour of the principle. The conference agreed, and instructed the new Executive to consider the question and report to the next conference.

The range of subjects covered by the conference was wide; but the resolutions carried were on the whole modest and moderate. There were moments of excitement, which have received a good deal of publicity in the newspapers. They were, however, but lively interludes in several days of earnest debate. It has been what the

party regards as a good conference. There was sufficient liveliness to avoid dull monotony, and sufficient steadiness to avoid rash decisions. The conference, apart from its gloomy view of the present mining situation, was optimistic. It was not "high falutin'." Several months of office, the general strike, and the mining stoppage have provided food for thought. The old irresponsible spirit which thrives on propaganda has given way to a sense of responsibility. The conference envisaged the next Labour Government, and judged the proposals which came before it with an eye to their practicability.

Notes of the Week.

Lord Oxford's Resignation.—The speculation that has been rife for the last few weeks as to the way in which the differences which arose this summer in the Liberty party would develop, has now been set at rest. Lord Oxford has satisfied himself that unity cannot be effectively maintained under a system of rival authorities with separate organisations and separate funds, and has therefore written to resign after 18 years of leadership. The letter in which this decision is conveyed to the party states that Lord Oxford considers that, in view of the national danger which the general strike involved, the attitude which he took up in May last was justified, and he finds nothing to qualify in his letter to Sir Godfrey Collins on June 1st, in which he expressed his grounds of dissent from the line taken by Mr Lloyd George in the House of Commons. Lord Oxford does not propose to retire from public life, and expresses the hope that he may still be of some service to the State and Liberalism. But he points out that he is now in his seventy-fifth year, and while his health is now fully restored, "the anxieties and responsibilities of leadership ought not to be undertaken or continued by anyone who cannot be reasonably certain that he can stand the strain." This decision thus brings to a close the official political career of one who has for an exceptionally long period played a leading part in English public life. This is not the occasion to estimate the importance of the influence which Lord Oxford has exercised on British politics from the time when, as a rising young barrister, he wrote political leaders for the *Economist*, to the period of his greatest influence when he occupied the position of head of the strongest Liberal Government of modern times, and finally, played the supremely important rôle of bringing the nation as a united whole into the Great War with its finances sound, and its forces in a state of readiness and efficiency. The news of Lord Oxford's resignation will be received with personal regret by men of all parties, among whom he has long since established an enviable reputation for integrity, steadfastness, and great political judgment. His action will not substantially alter the position in the Liberal party, for if precedent is followed no leader will be appointed to succeed him, but the party will carry on as it did after the resignation of Lord Rosebery, with a leader in the Commons and a leader in the Lords. But if the party is to fill the rôle which is awaiting it in the political life of the nation, it is highly important that all concerned should devote their attention in the next few months to solving the problem of competitive organisations.

The Coal Dispute Drags On.—The failure of the Miners' Delegate Conference last week to give any decisive lead to the districts has had two quite natural results. The first is that the drift back to the mines continues, the numbers reported to be working on Thursday being 230,000, out of the 1,100,000 normally employed. The second is that the executive announced on Thursday that the districts have endorsed the policy of withdrawing the safety men and of intensifying the struggle by a vote of 460,150 to 284,336. The farcical method of block voting on which in the absence of a ballot these figures are compiled makes them quite meaningless, the more so since the large numbers of miners who have gone back to work have no say in the matter. But it was not to be

expected that those who did attend the lodge meetings should have turned down the bellicose policy approved last week by the Delegate Conference. Whether the policy will be carried into effect, and if so how, is a very different matter. Clearly the executive will encounter a refusal from the other trade unions to put an embargo on coal or to make a levy in support of the miners, and with so large a minority vote it is not practical to envisage that the policy of intensifying the struggle can really be carried on by a fraction of the miners alone. It must, however, not be assumed that the decision is an unimportant one, for it means that the general resumption will be delayed, and that we may have many misadventures before there is peace. The men who are back are working keenly to make up for lost time, but even in the Midlands there are still 50,000 men out, and these include the extremists, who are likely to cause most trouble when they get back to work. We do not know whether importance is to be attached to the warning which Mr Cook has given from time to time to the effect that men nursing a grievance can in a hundred little ways obstruct the work of the mine by sabotage or by nourishing dissatisfaction. The mine managements may well have to face much more difficult conditions when all have returned to work. Moreover, the problem of the export districts remains practically untouched. The return to work is becoming very pronounced in Lancashire, and is already appreciable in Yorkshire, but there are still very few men working in Northumberland and Durham and in South Wales. We are therefore by no means out of the wood yet, and we shall be fortunate if our forecast of a general resumption by about mid-November is achieved.

The "Broadlands" Meeting.—The *communiqué* issued to the Press in connection with the meeting of German and British industrialists at "Broadlands" last week-end confirms our forecast that this first meeting would not do anything very much more than establish contact between two teams of leading industrialists from the two countries. On neither side were the individuals authorised to make commitments for their respective industries, no specific programme had been drawn up, and the task of the conference was clearly to ascertain by general discussion what were the topics upon which further conversations might usefully be carried on. The *communiqué* states that existing conditions in both countries occupied a considerable part of the time of the conference, and full and frank expositions of the peculiar difficulties with which productive enterprise has to contend were presented by those who spoke for the industries with which they are associated. Existing agreements for international co-operation in several industries were systematically surveyed, the main object of the conference being to examine the prospect of mutual assistance in re-establishing prosperous industries in Europe and in augmenting the opportunities of profitable employment. Emphasis was laid upon the disparity between the productive capacity of industrial nations following upon the war and the reduced purchasing power of most of the communities of the world. The conference decided to form a standing joint committee, composed of an equal number of representatives of both countries, to pursue the investigations of the various subjects discussed, and further meetings of the conference are in contemplation. Even if no concrete arrangements were ever to emerge from such discussions, they are themselves of value. It could not, for example, fail to be helpful to both sides to discuss their respective experiences in trading with Russia, and clearly very specific advantages might one day follow if it led to an agreed credit policy or even ultimately to joint enterprises in that country. It is also clear that each of the groups represented, of which the chief were shipping, iron and steel, coal, chemicals, and textiles, have many common problems, and might in many ways take co-operative action for the development of international trade, and it must necessarily have been the case that most of the discussions must have been carried on in these separate sections. On more general topics the conference doubtless took up and discussed the problem of trade barriers of all kinds, in the course of which the Germans doubtless gave expression to the new

currents of opinion that have been moving in Germany in the last two years on this subject. The important point for the moment, however, is that a new form of contact has been established, and that this exchange of ideas will help to make it clear whether, and if so to what extent, there is a common attitude towards the post-war problems of international trade. This and similar meetings between industrialists of other nations should improve the chance of useful results emerging from the Economic Conference of the League of Nations which is likely to be held next year.

The Hohenzollern Nuisance.—It is a pity—not only for Germany but for Europe—that the Hohenzollerns should have attracted attention again, and this just at a moment when European affairs seem at last to be shaping on constructive lines. We do not take the Hohenzollerns tragically, because we do not believe that, at this stage, their private affairs or personal escapades can seriously interfere with the march of events. Nevertheless, the recovery of Europe is so painfully slow and difficult a business that any impediment to it, however petty, excites just resentment. The first of these Hohenzollern affairs is the passage through the Prussian Diet, during the past week, of a Bill to ratify the agreement regarding the private property of the Hohenzollern family, which has been negotiated by the Prussian Government. The debate has been stormy, but it is far better to finish with this matter, which has dragged on for years, perpetually reviving old controversies and old bitterness. Though the terms of settlement have been attacked as over-generous to the late dynasty, we should judge that the settlement is cheap at the price. On the other hand, an unfortunate effect has been produced by the Prussian Government's announcement that the castle of Homburg has been placed at the disposal of the ex-Kaiser as his residence in case he should return to Germany. It is true that the Minister of Finance added that his return was not imminent, and the Dutch Government has since intimated that the question has not been raised in any form. A more foolish, but also more serious, affair is the escapade of the eldest son of the ex-Crown Prince, who during the September manoeuvres served incognito in the ranks of an ex-Guard Regiment of the Reichswehr, with the collusion of the commanding officer and the knowledge and connivance of General von Seeckt, the then "Chef der Meeresleitung" (Commander-in-Chief). The disquieting feature of this incident was the sequel. The news of the escapade leaked out, whereupon General von Seeckt categorically denied to the Federal Minister of Defence, Herr Gessler, that the incident had occurred, and allowed Herr Gessler to announce this denial in the Reichstag. Afterwards, of course, the fact of the Prince's participation in the manoeuvres was confirmed, and President von Hindenburg accepted General von Seeckt's resignation. The escapade was a futile thing in itself, for crowns lost in the Great War are not to be recovered by such easy methods, and, besides, the whole pre-war position of the House of Hohenzollern was an anachronism which it would hardly be possible to rehabilitate when once the continuity had been catastrophically broken. The disturbing fact is that a Prussian officer in so responsible a position as General von Seeckt should reconcile it with his conscience—from whatever motives of *camaraderie* or *esprit de corps*—so flagrantly to deceive his civilian chief, especially when the matter in question—handled as he had handled it—was calculated to do real damage to the interest of his country. As things have turned out, we do not think the damage will be great. Herr Gessler and President von Hindenburg have both behaved not only correctly, but with vigour and courage. Nevertheless, the incident will not bear repetition.

Nine Months' Overseas Trade.—If the September returns of overseas trade do not realise the worst fears aroused by the August figures they do none the less reveal the blows dealt at our international commerce by the continuation of the coal stoppage. Here is the comparison of the value figures for September, and the nine months with those of the corresponding period of 1925:—

MONTH of SEPTEMBER.				
	1925.	1926.	Increase (+) or Decrease (—) in September, 1926.	
Imports	£ 97,934,748	£ 101,724,341	+ 3,789,593	+ 3.9
British exports	60,734,868	50,680,003	— 10,054,865	— 16.5
Re-exports	10,525,830	8,082,661	— 2,443,169	— 23.2
Total exports	71,260,698	58,762,664	— 12,498,034	— 17.5
Excess of imports over exports	26,674,050	42,961,677	+ 16,287,627	+ 61.1

NINE MONTHS ENDED SEPTEMBER 30TH.

	1925.	1926.	Increase or Decrease in 1926.	
Imports	£ 965,469,132	£ 905,386,984	— 60,082,148	— 6.2
British exports	579,258,406	495,944,800	— 83,313,606	— 14.4
Re-exports	112,850,815	92,702,917	— 20,148,698	— 17.9
Total exports	692,109,221	588,646,917	— 103,462,304	— 14.9
Excess of imports over total exports	273,359,911	316,740,067	+ 43,380,156	+ 15.9

August showed an import surplus £25½ millions greater than in August, 1925; the increase in September, as will be seen above, was £16½ millions. Altogether the past two months have yielded an import excess of £85½ millions, or over £42 millions per month, as compared with a monthly average of about £33 millions for last year and the first half of the current year. Coal itself naturally again played a large part in September, imports having been £7½ millions, and exports negligible, while in September, 1925, exports were £3.6 millions, and imports negligible. Incidentally, it is an illustration of the inelastic character of the trade returns that the normal ten pages are allotted to the 5,225 tons exported, but no information is given regarding the 3,940,900 tons imported. Last month's exports of cotton yarns and manufactures were less in value by £3½ millions than a year ago, while exports of iron and steel manufactures show a drop of £1.7 millions. For the nine months the decrease under these three export heads, coal, cotton, and iron and steel, amounts to £60 millions. In the following table we show how certain leading British exports have fared as regards quantities in comparison with last year, the figures being divided into two periods, namely, the four pre-strike months and the five months that have since elapsed:—

BRITISH EXPORTS.				
	January to April.		May to September.	
	1925.	1926.	1925.	1926.
Coal	17,462,134	17,481,236	20,002,681	1,497,643
Cotton piece goods	1,575,121,000	1,407,533,100	1,783,920,900	1,601,754,600
Cotton yarn	66,339,500	62,884,000	73,482,000	62,040,400
Woolen tissues	47,466,100	40,861,900	56,643,000	51,265,700
Worsted tissues	18,822,800	15,940,200	17,559,900	17,222,800
Machinery	167,257	167,840	213,926	190,841
Motor cars	6,387	6,030	7,259	5,270
Iron and steel (total)	1,233,673	1,396,730	1,465,311	1,072,847
Pig-iron	162,436	176,680	157,896	86,872
Steel	46,905	15,923	30,981	11,559
Railway material	127,818	161,520	172,253	119,577

The list is not unsatisfactory throughout. Worst tissues, for instance, make a comparatively better showing in the past five months than before the strike; while the drop in machinery is not so large as might have been expected. For the nine months the value of re-exports is down by £20 millions, compared with the corresponding period of 1925; but lower prices for raw materials, especially wool, cotton, and rubber, contribute substantially to the decline. September imports of bullion and specie were £4 millions, against exports of £2 millions; for the nine months imports at £36.1 millions exceeded exports at £21.8 millions by £14.3 millions. Import and export value figures under a number of heads are set out in the statistical section of this issue.

Cotton Prices and Supply.—Our Manchester correspondent writes:—At the end of last week users of cotton throughout the world received another shock when the American Government estimated the crop for this season at 16,627,000 bales, against the forecast a fortnight earlier of 15,810,000 bales. The report was much better than expected, and prices in Liverpool fell over ¼d a lb. The plants this season are late, and this is reflected in the smaller ginnings than last year, the total up to date being

5,369,000 bales, against 7,126,000 bales a year ago. Although there is every probability of a record output, the cotton has not yet been secured, and the weather in the belt during the next few weeks is important. Some authorities believe that, given favourable conditions, there is a possibility of a growth of nearly 18,000,000 bales, whereas the previous biggest production has been 16,100,000 bales. If a long view is taken recent developments are favourable to Lancashire trade, but holders of manufactured goods, as a result of the depreciation in values, have been hit rather severely. This week the Egyptian Government has estimated the cotton crop for this season at 6,836,000 cantars, against the record production of last season of just over 8,000,000 cantars. Official forecasts are generally on the low side, and in trade circles it is expected that the crop will not be less than 7,250,000 cantars.

Lloyd's Shipbuilding Returns.—Lloyd's Register shipbuilding returns for the September quarter are decidedly unsatisfactory from two points of view. Tonnage commenced and under construction fell sharply, owing, it must be assumed, to the coal stoppage; and of the growing motor tonnage of the world, the share being built in British yards is disquietingly low. The tonnage under construction in Great Britain and Ireland—774,797 tons—was 66,541 tons less than at the end of June, 1926, and about 234,000 tons less than the tonnage building 12 months ago. The tonnage on which work was suspended at the end of September, 1926, amounts to 107,498 tons, which is about 26,000 tons more than at the end of September, 1925. The present totals are the lowest recorded since June, 1909, and are 1,115,000 tons below the average tonnage building during the 12 months immediately preceding the war, i.e., 1,890,000 tons. An enormous decrease is shown in the tonnage commenced during the quarter, namely:—68,327 tons, as compared with 168,483 tons during the second quarter of 1926. The tonnage launched during the present quarter—207,741 tons—is 36,016 tons higher than that for the previous three months. The total merchant tonnage building in other countries, at 1,075,900 tons, is about 53,000 tons less than at the end of June, 1926. Thus the tonnage under construction abroad exceeds by 301,103 tons the tonnage building in Great Britain and Ireland. The figures for the leading countries abroad are:—Italy, 278,764 tons; Holland, 160,604 tons; France, 134,985 tons; Germany, 127,321 tons; and United States 119,723 tons. Perhaps the most interesting part of the returns is a table showing Britain's position in the world's construction of steamers and motor-ships. The comparison reads as follows:—

	Steamers.		Motor-ships.	
	No.	Gross Tonnage.	No.	Gross Tonnage.
Great Britain and Ireland	123	499,938	46	272,606
Other countries	131	453,261	125	596,903

These figures represent tonnage actually under construction at the end of the September quarter. Britain is holding her position well as regards steamer construction, but has failed to secure a satisfactory share of the world's motor-ship building. In this branch the Italian figure is remarkable. Italian yards are building 27 motor-vessels of 221,681 gross tons, the average size being, as will be seen from a comparison with the British figure, far larger than the average in the British yards.

Iron and Steel in September.—In spite of the continuance of the coal stoppage, the National Federation of Iron and Steel Manufacturers report that there were still five blast furnaces in operation at the end of September, and that the production of pig-iron amounted to 12,500 tons; on the eve of the stoppage there had been 147 furnaces blowing, and the production of pig-iron in April was 539,100 tons. Owing to increased supplies of fuel, either home or imported, the output of steel ingots and castings increased from 52,100 tons in August to 95,700 tons in September; the output in April had been 661,000 tons. It is interesting to compare production during the present stoppage with that during the three months' stoppage in 1921. On that occasion the production of pig-iron for the whole three months was only 75,000 tons;

while in the first three months of the present stoppage nearly twice that amount was produced. In the case of steel only 80,000 tons were produced during the stoppage of 1921, as against 112,000 tons in the first three months of the present stoppage. In 1921 the number of blast furnaces in operation was reduced to one, while, as stated above, five furnaces have managed to continue throughout the present stoppage. Steel production fell to the low level of 3,000 tons in June, 1921, whereas on this occasion production in the fifth month of the stoppage amounted to 95,700 tons. Exports of iron and steel during September fell to 160,200 tons, compared with an average of 361,000 tons in the first quarter of the year. Imports, on the other hand, have increased, and amounted to 445,700 tons compared with an average of 236,200 tons in the first quarter of the year. Naturally a large proportion of the imports were of semi-finished material; the imports of pig-iron amounted to 61,500 tons; billets, blooms and slabs 99,800 tons; and sheet and tinplate bars 89,300 tons. On the other hand, the imports in some lines of finished steel reached substantial proportions, the imports of plates and sheets amounting to 38,400 tons; steel bars, rods, &c., 37,000 tons; and girders, beams and joists to 19,700 tons. The following table compares imports and exports of iron and steel in the months affected by the coal stoppage in 1921 and 1926:—

	Imports.		Exports.	
	1921.	1926.	1921.	1926.
	Tons.	Tons.	Tons.	Tons.
March.....	156,100	258,500	148,900	406,500
April.....	102,100	261,800	160,100	313,000
May.....	81,900	166,600	99,000	273,800
June.....	84,500	233,400	64,700	231,300
July.....	103,600	270,900	64,000	243,900
August.....	141,500	315,100	76,500	163,700
September.....	206,100	445,700	133,300	160,200

It will be seen that Continental countries were not then in a position to take advantage of the English coal stoppage, and that in the third month of the stoppage in 1921 imports were only 84,500 tons, while in 1926 imports reached the record figure of 445,700 tons in September.

Ministry of Labour Report.—Although the Ministry of Labour has existed as an independent Department for some years, the Report of the Ministry for 1925 is only the second annual Report which has been published. Fortunately, we may now look forward to its regular publication. Since it was carved out of the Board of Trade the Ministry of Labour has extended its original activities and added new ones. The Report for 1925 explains the work of the Industrial Relations Branch in the sphere of conciliation, arbitration, and inquiry, outlines the administrative work of the Ministry in connection with the State scheme of Unemployment Insurance and its administration of the Trade Boards Acts, deals with its activities in relation to employment and unemployment and the training of the unemployed, summarises the work of the Statistical Branch, and reports on the Department's International Labour Division. The appendices, which run to over 30 pages, contain in a convenient form valuable labour statistics. The Report indicates a steady growth of the work of the employment exchanges. In 1922 839,633 vacancies were notified, and 697,036 vacancies were filled. Each year since both figures have increased. Last year 1,480,820 vacancies were reported, and 1,279,292 were filled. This increased volume of work, it is admitted, was to some extent due to increased trade activity since the worst days of 1922; but, according to the Report, "substantially also it represents a continuous improvement in the methods of the Department and a growing appreciation of the part that the exchanges can play in industry when properly supported." There has been a development of special placing arrangements to meet special circumstances—e.g., the recruitment of seasonal workers in holiday resorts, fruit and pea picking, &c. Special arrangements are also made for the docks. The work of the Juvenile Employment Committees has grown considerably, but the activity of the Juvenile Unemployment Centres remains on a very restricted scale. In 1925 the average attendance at these centres varied between 6,874 and 9,673. The Central Committee on Women's Training and Employment has continued its work. Since its inception and up to December 31, 1925, 39,899 women have been dealt with. Over 29,000 women have taken the

homecraft course. The total expenditure up to the end of last year was £535,968, of which sum £321,800 was provided by State grants. In addition, the Department has a scholarship scheme for providing professional or semi-professional training for women whose earning capacities have been injuriously affected by conditions arising out of the war. In respect of 4,009 individuals £404,209 has been expended. The industrial training scheme established after the war for ex-service men is now gradually coming to an end, there being 2,929 in training last year, as against 6,810 in 1924. In all nearly 96,000 men have come under the scheme. A new development last year was the opening of four training centres to provide a six months' training for young men who, owing to the war and the subsequent trade depression, have had little or no opportunity of gaining experience in the use of tools. Two of these centres are residential and two non-residential. The former have an eye on training men for rural employment at home or for emigration to the Dominions. Though the work of the Ministry of Labour in relation to unemployment naturally occupies first place in the public mind, a perusal of the Department's second annual Report reveals the varied activities of the Department in the settlement of industrial disputes and the determination of wages in Trade Board trades, as well as in the compilation of industrial statistics.

Home Crops.—The monthly report of the Ministry of Agriculture and Fisheries states that except in some hill districts the corn harvest was completed by the third week of September, and the grain was generally secured in good condition. Wheat is usually of good quality, and, except in a few districts where it was exposed to storms or rather heavy rain, was stacked as a rule in good condition. Barley is variable; the quality is usually good, especially on the lighter soils, but a fair proportion of the grain was weatherbeaten and discoloured in many districts. Oats are usually of good quality, and except where laid by the heavy rains in the summer were generally harvested in very satisfactory condition. Winter oats appear better than the spring varieties. Wheat has not yielded so well as anticipated a month ago, being now estimated at 16.7 cwt per acre, or $\frac{1}{2}$ cwt below the ten years' average. Barley is only slightly lower than last month's estimate, and at 16.3 cwt per acre is still about $\frac{1}{2}$ cwt per acre above the ten years' average. Oats appear to be the best of the three main cereal crops, and the yield per acre over the whole country is now estimated to be slightly over 16 cwt per acre, or about $\frac{1}{2}$ cwt per acre above the ten years' average. Beans are estimated at 14.9 and peas at 14.8 cwt per acre. The former is nearly $\frac{1}{2}$ cwt per acre below average and the latter rather more than 1 cwt per acre above average. The lifting of potatoes was general over the whole of the country by the end of September, and in some south-eastern districts was practically completed. The tubers are often small, and disease is fairly general over the important potato areas in the east of the country, and in these districts yields will be much below average. Over England and Wales the yield is estimated at 5½ tons per acre, or a little more than $\frac{1}{2}$ ton below the ten years' average. Turnips and swedes grew well during the month, but attacks of mildew were fairly common amongst the latter. The yield is forecast at nearly 14½ tons per acre, or just over $\frac{1}{2}$ tons per acre above the ten years' average. Mangolds are generally a very good crop, and over the whole of the country a yield of about 20 tons per acre is expected, as compared with the ten years' average of 19 tons per acre. Sugar beet is healthy and vigorous generally, and has continued to grow well. In spite of a tendency in places to run to seed, it is a very satisfactory crop. Lifting has begun. The revised forecasts of the production of this year's crops are set out in the table below. It is to be borne in mind, however, that these forecasts are based on estimates made at the beginning of October, and are consequently subject to modification.

	1925.		1926.		Forecast.	
	Acres.	Tons.	Acres.	Tons.	Acres.	Tons.
Wheat.....	1,500,000	1,593,000	1,360,000	1,360,000	1,332,000	938,000
Barley.....	1,318,000	1,150,000	1,010,000	1,010,000	1,500,000	1,500,000
Oats.....	1,868,000	1,861,000	1,379,000	1,379,000	2,708,000	2,708,000
Potatoes.....	493,000	499,000	3,214,000	3,214,000	10,902,000	10,902,000
Turnips and swedes.....	806,000	786,000	9,198,000	9,198,000	6,838,000	6,838,000
Mangolds.....	359,000	338,000	7,130,000	7,130,000		

In many districts the dry state of the land prevented the ploughing of leys, but good progress was made with the cleaning of fallows and ploughing of stubbles, which are generally quite as forward as usual. Very little winter corn has yet been sown.

The Week's Dividends.—Of the important dividend announcements made this week, one at least appears to have been unexpected by the market. This was the declaration made on Thursday by the Anglo-Persian Oil Company of a final dividend of $12\frac{1}{2}$ per cent., making $17\frac{1}{2}$ per cent. for the year, as against $12\frac{1}{2}$ per cent. for the previous year, together with a bonus distribution of one new share for every two held. It may be recalled that the British Government holds £5 millions of the ordinary shares. Various reserve funds are credited with £1,800,000, and a balance of £1,955,450 is carried forward, so that the company must have had a highly successful year. Evidence of the market's surprise is afforded by the fact that the price of the shares closed at over 5½, a rise on the day of over 10s. Earlier in the day some disappointment had been caused in the oil market by the Burmah Oil Company's announcement of an interim dividend of 10 per cent., against $12\frac{1}{2}$ per cent. a year ago, it apparently having been expected that the latter rate would be repeated, although the capital has been increased by a share bonus of one share for every three held. The shipping section was rather depressed by the announcement of the directors of the Royal Mail Steam Packet Company that owing to "the depression of trade having been greatly intensified by the Coal Strike" no interim dividend will be paid on the ordinary stock of the company. For the past four years an interim dividend of 2 per cent. has been paid, but the final dividend for 1925 was reduced from 4 to 3 per cent., making 5 per cent. for the year, against 6 per cent. for the four preceding years. The passing of the half-year's dividend on the 4 per cent. cumulative preference shares of Sir W. G. Armstrong Whitworth and Co. caused no surprise after the recommendation of the directors last May that no final dividend be paid on any of the preference shares. The dividend of United Dairies, Limited, for the year to June 30th last is reduced from 14 to 10 per cent., but the past year's profits have to bear the cost of a half-year's dividend on £500,000 of new 6 per cent. preference capital issued in November last. Another electricity supply company—the St. James and Pall Mall Electric Lighting Company—proposes to re-organise its capital by giving shareholders £11 from reserves for each £5 share which they now hold, and that when this is done the £16 shall be divided into 16 shares of £1 each.

Australian Finance.—It is a matter of serious concern to all who realise the importance of developing the economic connections between Britain and the Dominions that on the London market, which plays so important a rôle in the financing of Australia, serious criticisms have been current in recent years of the condition and methods of Australia's finances. The pamphlet published this week by Messrs Cooke and Davenport,* which epitomises the facts and summarises the points of criticism is therefore timely, for though what these gentlemen have to say may not be altogether palatable to our Australian visitors, it is very much to the good that the matter should be brought out into the open and frankly discussed. The pamphlet shows that Government expenditure in Australia has reached the high figure of £33 8s 9d per capita (1924-25). Of the total expenditure of the Commonwealth and the States almost one-fifth is out of loans, and in some States it is more. In 1925-26 total expenditure increased by 12 per cent., that out of revenue rising by 8 per cent., and that out of loans by 35 per cent. In a growing country capital expenditure may be a wise and profitable investment. But when it is on a very heavy scale it needs to be scrutinised with care. In the case of the States, 27 per cent. of expenditure went to pay interest on public debt, and over 30 per cent. in the working

* "Australian Finance." By Sidney Russell Cooke and E. H. Davenport. Pelican Press. 1s.

of the railways, which are not paying their way. Of the States' expenditure out of loans incurred up to June 30, 1925, 47.9 per cent. went to railway and tramway construction, 14.3 per cent. to waterworks, 12.4 per cent. to lands purchased for settlement, 9.1 per cent. to harbours, rivers, roads, &c., the balance including some State trading schemes which have been operated at a loss. In 1924-25 the States' undertakings produced a net revenue of £19,460,080, yet the interest on the States' debts, which are supposed to be raised for "productive" purposes, amounted to £29,380,551. It is true that a large part of Australian borrowing is due to the war but the total public debt of the Commonwealth and the States has increased by 43 per cent. since 1918, while the increase of that of the States since that date is 54 per cent. The total net debt of Australia on June 30, 1925, amounted to £965.4 millions, or £164 per capita. In addition to the question whether this large debt has been wisely spent, Australia has been criticised for not making proper provision for redemption. At June 30, 1925, the States' accumulated sinking funds only amounted to £18,630,951, or 3 per cent. of the gross debt for the States, and the writers point out that none of the sinking funds definitely provide for drawings or purchases of stock in the open market. "When a loan falls due part of the sinking fund may be applied in redemption, but so inadequate are the funds accumulated that a State normally issues a new loan to pay off old subscribers. Not only that, but more than one Australian State has been fairly suspected of raising a new loan in order to pay the interest on the old ones." We have repeatedly called attention in the past to the inadequacy of the sinking fund provisions in many Australian Government issues, as well as to the meagre nature of the information afforded the investor in the prospectuses. We heartily endorse the plea, with which the writers conclude, that in each Australian prospectus there should be given (1) full particulars of the condition of the borrower's finances; (2) proper provision for a sinking fund for repayment within a specified period by means of drawings or purchases; (3) a schedule of the items on which the money will be spent, with the approximate amounts. While it is not denied that Australia needs a large amount of money for development, the public debt has become unwieldy, and its continued growth will constitute a serious danger unless proper provision be made for the redemption of each new loan. Australia, as Mr Keynes has pointed out, has been enabled by the Trustee Acts to borrow money on more favourable terms than have countries outside the Empire. It would be very regrettable if these facilities permitted the growth of a lax standard of finance.

Stock Exchange Commission Rules.—The Stock Exchange Committee, after many weeks of close deliberation of the subject, have altered one of the Rules relating to minimum commissions. A Stock Exchange correspondent writes: The alteration is of minor consequence compared with the importance of an addition, which reads:—

A broker may not share his commission with an agent who advertises for Stock Exchange business in the public Press in Great Britain, Northern Ireland or the Irish Free State. A broker may not share his commission with an agent who issues circulars in Great Britain, Northern Ireland or the Irish Free State respecting Stock Exchange business to other than his own principals.

The new additions will be presented for confirmation at the meeting of the Stock Exchange Committee on Monday week, October 18th, and, if passed, will come into force at the beginning of next January. The Rule is widely drawn, but it is the logical sequel to existing Stock Exchange legislation. In spite of the absence of ambiguity in the language, uncertainty and misapprehension have arisen, more especially amongst those who are in the habit of transacting Stock Exchange business through the agency of bankers. The advertisements of the banks, in the public Press and in circulars available to anyone who cares to ask for them, habitually announce that they, the banks, undertake business in Stock Exchange securities. The proposed Rule prohibits Stock Exchange brokers from making any return of commission upon business introduced by any agent who adopts either of these methods of

publicity. It forbids return of brokerage upon business sent to Stock Exchange brokers by firms like Wheelers, of Leicester, or the Investment Registry, or well-known outside brokers, in the City, who advertise for orders. It drives a shrewd blow at the advertising bucket-shop whose circulars start off with weighty words about the War Loan, and which finish with a fulsome puff of some oil or other ramp. Indeed, there is nothing improbable in the assumption that the addition to the Rule is proposed less in consideration for Stock Exchange ends than in the desire to promote protection for the public. The banks, which, after all, are the best-known agents for Stock Exchange business, have at heart the interest of the public as closely as the Stock Exchange has, and anything which promotes this end can be assured of their ready support. The proposed enlargement of the existing Rule will act as a powerful safeguard to that section of the public which most requires protection—namely, those men and women who fall ready victims to allurements of any swindler's fairy-tales of fortunes awaiting the people who will deal in stocks and shares with the advertiser. It is to be noted that the Stock Exchange Committee do not forbid their members to deal with agents who advertise: what the addition proposes is that no return of commission shall be permitted. And agents are not always altruists.

Northern Ireland Affairs.—Our Belfast correspondent writes:—The North of Ireland Parliament reassembled on Tuesday, when reference was made by Mr Milne Barbour, the Minister of Commerce, to the coal position in Belfast. The shortage of supplies has been acute, and it is stated that at one time stocks in the city amounted to only 1,000 tons. Apparently storms over the week-end delayed the arrival of vessels carrying coal, but the position is now greatly improved. The Motor Vehicle (Traffic and Regulation) Bill and the Marketing of Eggs (Amendment) Bill came up for second reading. The former measure is designed to provide for a more comprehensive and better control of road traffic. The maximum speed limit of 20 miles an hour is withdrawn, and reliance is placed upon the main offence of driving to the public danger, the penalties for which are greatly increased. The prohibition of pillion-riding is also foreshadowed by the issue of an Order under the Act. It is stated that the number of licensed motor vehicles in Northern Ireland has increased from 13,500 in 1921 to 30,000 at the present time. The Marketing of Eggs (Amendment) Bill, which passed its second reading, makes certain administrative improvements in the principal Act, and deals with the sale of eggs by weight and the marketing of stale or dirty eggs. The legislation in connection with the egg trade which has been passed by the Northern Ireland Parliament is a noteworthy attempt to improve the conditions of marketing of Ulster agricultural produce. The abuses to which the marketing of eggs is subject, as brought out in the Report upon egg marketing in England and Wales which was published by the Ministry of Agriculture and Fisheries some time ago, were widespread in Ulster a few years ago. The Committee on the National and Industrial resources of Northern Ireland, which inquired into the position of the Ulster egg trade in 1923, found that the "practice on the part of large numbers in all sections of the trade of holding up eggs with the object of securing higher prices at particular periods of the year and the indifferent and careless methods of packing eggs for export, constitute a menace to the Northern Ireland egg trade." With the object of safeguarding the interests of the trade, the Committee recommended that every wholesaler and exporter of eggs should be required to hold a licence from the Northern Ireland Ministry of Agriculture, and the Marketing of Eggs Act was passed in 1924. Under this Act no wholesale dealer or exporter is allowed to market eggs without holding a licence from the Ministry, and is required to comply with the rules made under the Act which deal with the proper grading, testing, and packing of eggs. It may confidently be claimed that the Act has already, during the period of a little over 18 months since it came into operation, led to a very great improvement in the condition in which Ulster eggs are marketed.

The New Czechoslovak Cabinet.—For the first eight years of its existence the Republic of Czechoslovakia has been ruled by governments composed exclusively of Czechs and Slovaks. The national coalition of the five principal Czech parties—ranging from clericals and agrarians at one end of the scale to Social Democrats at the other—proved unable to maintain itself in the long run in view of acute differences on economic questions, and continuity in general policy only became possible by recourse to cabinets that were virtually colourless and in no real sense representative of the political parties. Government by officials, however, can hardly continue indefinitely in a Parliamentary State, and it has been apparent for some time that the political alignments of the future will be in terms of political and economic ideas rather than on the narrower basis of nationality. The introduction of protection for the agrarian interests early in the present year much hastened this process, and this week a new Cabinet has been formed from the Czech-German majority groups in the Chamber, with the Czech agrarian leader, M. Svehla as Prime Minister. Three other ministers belong to this party, while the portfolio of Posts and Telegraphs falls to a German agrarian. Two Czech Clericals become Ministers for Railways and Public Welfare respectively, and a German Social Christian is the new Minister of Justice. The advent to office of representatives of the German minority is without doubt the most promising feature of the new Cabinet, which should thus be assured of a safe majority in Parliament. This coalition of "bourgeois" groups opens a new chapter in the Parliamentary history of the Republic. Continuity of policy in foreign affairs and finance is, however, guaranteed by the fact that Dr Benes and Dr Englis still retain their places in the Cabinet.

The Economic Situation in Austria.—Confirmation of the view of the position in Austria set forth recently in our Danubian Supplement is afforded by an economic correspondent, who has critically examined the trade and other statistics. He writes as follows:—Since 1924 Austria has been passing through a severe and prolonged crisis. In the past year and in the first half of 1926 the number of unemployed has been particularly high, and pessimism very intense in Austria. When the experts of the League of Nations—Mr Layton and Mr Rist—in the autumn of 1925 came to the conclusion that the increase of unemployment did not signify a decrease of industrial production, but that it was to some extent a result of labour-saving methods, they found little credence. Since that time, however, evidence confirming this view has been forthcoming. For example, though the average number of unemployed in the first six months of 1926 was 21.6 per cent. higher than in the same period of 1925, yet the imports of industrial raw materials in the same periods show an increase of 14 per cent. in weight and of 3.4 per cent. in value. The difference between the figures for weight and value is due to the fact that the wholesale index has decreased by 15.5 per cent., and the industrial price index by 10 per cent. Again, the import of coal has increased a little, though home production and the utilisation of water power have risen. Further symptoms are the increases in the clearing figures in the first half of 1926 as compared with 1925. At the National Bank the turnover on cheque account was higher by 49.5 per cent., at the post saving office by 14.2 per cent., at the Saldierungsverein (the clearing house of the banks) by 34.4 per cent. The settlement of Stock Exchange transactions is done by the Giro- und Kassenverein. There the increase was 80.8 per cent. This increase is particularly remarkable because the share index (based on prices of all industrial shares) was lower in the first half of 1926 than in 1925. However, in recent months the share index has been rising. Since June also the wholesale index, and particularly the index of foodstuffs has risen, though prices are still much lower than a year ago. Curiously enough, the cost-of-living index has not risen at all for two years, in spite of great changes in wholesale prices. Indeed, the cost-of-living index is only 3 per cent. over the pre-war level—a fact which is only partly due to the Rent Restriction Act. This cheapness of living is certainly a main cause of the increase in the number of foreign visitors coming to Austria—an increase which was

very marked in July and August. A remarkable feature of the trade figures for the first half of 1926 as compared with 1925 is the increase of imports of foodstuffs (9.3 per cent.), of cattle (8.3 per cent.), and of manufactured products (14.3 per cent.). All these figures refer to weight, but the value figures for all three items have also increased (by 4 per cent., 0.1 per cent., and 14.5 per cent. respectively). This latter increase, in spite of the lower price level, seems to show that more expensive articles have been imported. In any case, home consumption must have increased, in spite of the great extent of unemployment. It has already been mentioned that the import of raw materials has risen (14 per cent. weight, 3 per cent. value). This can only be explained either by increased home consumption or by the filling up of stocks, for exports were lower. The export of manufactured articles has decreased by 6 per cent. in weight and by 12½ per cent. in value. A matter which has attracted much interest is the question of our balance of payments. The deficit of the trade balance has again increased by almost 50 per cent., and has reached the large amount of 526 million schillings in six months. Austria certainly has a large invisible income in her balance of payments. Yet the excess of imports seems large for a small country. It may, however, be that the real deficit is much smaller. It is a well-known fact that the same goods when passing the frontier are valued higher by the importing country than by the exporting country, because the former has an interest in the import duties. A comparison of Austrian statistics with those of Germany, Czechoslovakia, and Hungary shows a difference of about 21 per cent. in favour of Austrian exports. If this should hold good for the total of exports, the trade deficit would really be only a-half of the official figure.

Austrian Industrial Companies.—A comparison of the gold balance-sheets of 75 Austrian industrial companies shows that the total capital (share capital plus reserves) in 1914 amounted to 793 million Austrian shillings, and in 1925 to 745 million shillings. The present capital is only 6 per cent. lower than the pre-war capital, which shows that the industries have been much more successful in maintaining or restoring their capital than the Austrian banks. Some branches have even increased their capital considerably over the peace level, e.g., paper mills by 52.8 per cent., mines by 57 per cent., electricity works and electrical engineering by 10.9 per cent. On the other hand, the building trades (including building materials) have lost 39.6 per cent., textiles 30.7 per cent., breweries 30.3 per cent., machinery works 12 per cent., iron and metal works 8.8 per cent. A remarkable feature is that in all cases reserves form a much greater part of the total capital than before the war. According to the law on gold balance-sheets, all assets and liabilities had to be revalued on a gold basis, and almost all companies thought it a wise measure to have a small share capital and high reserves which, of course, enables them to pay higher dividends. Thirteen iron and metal works before the war had reserves to the extent of 22.5 per cent. of the share capital, while now the reserves amount to 62 per cent. The individual increases were:—Machinery from 12½ per cent. to 51 per cent., electricity from 11 per cent. to 72 per cent., textiles from 9 per cent. to 57 per cent., breweries from 8 per cent. to 55 per cent., paper from 23 per cent. to 65 per cent., building trades from 22 per cent. to 84 per cent., mines from 1.4 per cent. to 50 per cent., victuals and sugar from 1 per cent. to 45 per cent.

The Pan-European Movement.—A correspondent writes:—In Vienna has just been held the first Pan-European Congress. The largest concert hall of this city was packed; prominent politicians, economists, and intellectuals from all European nations took part, and the impression on public opinion within and outside Austria was a strong one. This favourable result is mainly due to the enthusiasm and energy of Count Coudenhove, the creator of this movement. His idea is that the European States should form a sort of closer union within the League of Nations. His original proposal was that this union should not include Great Britain and Russia because both States had their main interests outside of Europe.

THE FIRST NATIONAL BANK OF BOSTON

24, OLD BROAD STREET, LONDON.

The definite resolutions of the Congress went still farther, and formulated the aim as a union of all European States who desire to join for economic and political purposes, based on equal rights and peace. Most economists have pointed out that the present state of extreme protectionism and mutual jealousy in Europe is most harmful for all States concerned. The evil demon of Europe is the exaggerated sense of national prestige and economic independence. Behind all the peaceful declarations of certain statesmen there is a good deal of distrust and even insincerity. Big armies are considered absolute necessities, as well as economic preparedness for war. Therefore, high tariffs are maintained, partly for revenue purposes, partly for making the country independent from abroad, and for enabling the governments to make the consumer pay the bill without his noticing it. A Pan-European Union would certainly be the salvation out of this chaos of economic and moral disintegration and confusion. The most complicated questions of Europe could best be settled among the European nations themselves, and very far-distant nations of another continent will hardly possess the necessary intimate knowledge, interest, and authority to be of any great service, except perhaps as arbitrators in certain disputes of international right. But it cannot be decided on principles of international law whether the tariffs or any other internal measure of a State constitute a grave international nuisance. At the Paris Peace Conference it should have been possible to safeguard the common interests of Central Europe by economic clauses, e.g., by fixing a maximum percentage of tariffs, by forbidding import prohibitions, by providing a common currency, by internationalising the big coal basin which has aroused so much strife between Germans, Poles, and Czechoslovaks. Perhaps it would have been sufficient then to make financial help for economic reconstruction dependent on the adoption of such clauses by the States concerned. After the Peace Conference, of course, it was too late. One must be satisfied if only a small part of such a program can be achieved in future by agreements between the nations. This will require extraordinary patience, goodwill, tenacity, and energy. It is to be hoped that the Pan-European movement will be an efficient instrument of international goodwill and co-operation. In his concluding speech, Count Coudenhove set great hopes upon converting the 500 leading politicians of Europe, following in this the example of the philosophers of the eighteenth century, and Robert Owen, who believed that the world could be reformed by winning the mighty of the earth. Yet an enlightened despot of that time was freer in his resolutions than a party-leader of to-day, who very often is a slave of public opinion. The meeting just held at Vienna certainly impressed public opinion very much.

The Outlook in Guatemala.—A correspondent writes:—The death of the President, Dr José María Orellana, who would ordinarily have served until February, 1928, should not seriously disturb political or economic conditions. His legitimate successor, the First Vice-President, General Lazaro Chacón, is not only a thoroughly capable administrator, but one equally determined to maintain the public peace. Following upon the stormy days of Manuel Estrada Cabrera, who died not long ago in captivity after having remained for four years a voluntary prisoner in the Presidential palace, where alone he deemed himself to be safe from his countless enemies, Guatemala has enjoyed an

almost unprecedented period of tranquillity. This interlude allowed the people of a naturally rich and productive country to devote themselves to cultivation and other industries without the continual fear of destruction of their handiwork by invading armies of this or that militarist, ambitious to occupy the chief magistracy. The late Dr Orellana, who overthrew General Carlos Herrera in 1921, and was subsequently elected, by an overwhelming majority of the people, constitutional President, had effected much to promote the economic welfare of the people. So far as present conditions are concerned, the rather poor outlook that had been noted at the beginning, and which continued up to the end, of the second quarter of the year has been reversed to a very considerable extent by economic conditions during the past three months. An improvement, much appreciated but not generally expected, has occurred in the coffee crop. This means much in this country, the coffee harvest, as in other of the neighbouring States and Venezuela, forming the principal article of export. Towards the end of June there were beneficial rains, while during July and August, sunshine, almost uninterrupted, was met with. The consequences have been a strong and full-berried crop, which, taken with a good wheat harvest, has brought about a materially better state of things. The price of coffee has been maintained, notwithstanding the amplitude of the harvest, and the crop has all been contracted for. Unfortunately, however, it has not been possible to overtake completely the heavy damage occasioned by grasshoppers earlier in the year. The spring corn crop was then entirely ruined, a calamity which necessitated temporary importation to the amount of 10,000 tons of corn from neighbouring and the United States. It also meant the impoverishment of many local planters. These latter were unable to find any relief from among the local banks. The fruit trade promises a fairly speedy revival from the depression under which it had laboured, owing partly to smaller crops and partly to a drop in the market value of bananas.

A Copper Exporters' Combine.—A correspondent writes:—Dispatches this week from New York announced that the long-awaited combination of copper producers, to be known as "Copper Exporters, Inc.," had obtained a charter from the State of Delaware and the blessing of the Federal Trade Commission authorising it to function as a combination of copper exporters under the Webb-Pomerene Act. Among the producers associated with it are Rio Tinto, the British Base Metals Corporation, the subsidiaries of the Union Minière du Haut Katanga, as well as "French and German companies." Only the Japanese companies and the Amercian, Miami, hold aloof—the former because they habitually sell their entire monthly output of 6,000 short tons in Japan, and Miami for reasons not disclosed. Of the copper available for world markets, the new group controls probably close to 97 or 98 per cent.; there has never been so complete a cartel as this in the world before. However, that the new organisation is rather a loose one is suggested by the discreet official statement that "an effort will be made to sell direct to consumers, except where conditions make it desirable to sell through distributors." This will be understood to refer to the exception made on behalf of Rio Tinto, which has selling arrangements of its own. Another evidence of discretion not lost upon the apprehensive consumers has been the steady increase in American production since last June, when hue and cry was raised that the companies were deliberately curtailing output. In the seven months to August 1st, primary copper production in the United States amounted to 1,010,924,000 lbs, compared with 996,598,000 in the same period last year, an increase of 14,326,000 lbs, which August and September totals have still further increased, though without touching the somewhat extravagant peak of April and May production. Broadly speaking, American members of the new cartel show a determination to "go good." Nevertheless, the big consumers of copper in the United States are rapidly arming against them. The electrical goods manufacturers, heretofore divided into three different bodies, came together on September 26th in an amalgamation to be known as the National Electrical Manufacturers' Association, with a membership

embracing 270 of the leading companies. The president of the General Electric Company is president of the new association, which, rather pointedly, has established a "division on supplies" with a separate board of governors. This is distinctly serving notice upon one and all that, whatever may happen abroad, the domestic supply must not be trifled with. That, indeed, is the main problem confronting "Copper Exporters, Inc." Under the Webb-Pomerene Act, the association may neither "enhance nor depress" the domestic price of copper. But to stabilise prices abroad without disturbing them at home is not too easy. The combine, one may assume, will walk warily. Manufacturers in Great Britain, Germany, and Italy have already shown a lively interest in the new association, but, even though they obviously do not enjoy as much protection as American consumers of copper do, they should not too hastily assume that they are to be led straightway to the slaughter. For to tell the truth, the metal markets to-day are too speculative for the taste of many manufacturers. Both in the United States and in Europe there is an immense amount of hand-to-mouth buying, and that sort of buying is always accompanied by stories, true or false, of the market being "rigged" this way or that. If the new cartel should lead to a joint organisation, on international lines, of both producers and consumers, then long-time contracts could be made and the present more or less anarchic situation cleared up.

Bolivia and the Tin Boom.—Apart from the evidence of a general revival of economic prosperity in Bolivia, following upon a period of depression occasioned by political unrest, the appreciation in the selling price of tin has beneficially affected several branches of local industry and commerce, writes a correspondent. The unexpectedly good price realised for the white metal has brought, in a greater or less degree, fresh means of expenditure and additional employment to numerous classes of the working community, notwithstanding a temporary suspension of operations at some among the more important mines in the Department of La Paz. At the price level of £200 per ton tin, operations are found profitable; thus, at the present high market value, and with a world's prospective increased demand for a further period, conditions in Bolivia appear to be particularly bright. The greater part of the tin mined, representing between 60 and 75 per cent. of Bolivia's total exports, and therefore forming the source of the greater part of the country's revenue, has been shipped to the United Kingdom; Germany, however, has taken a not inconsiderable quantity of the tin, lead, and silver outputs. The quotations for tin on the London market are watched with the greatest interest at La Paz, and the rise from £270 for July to £313 for September will permit of the expansion of several enterprises in different directions, notably some long overdue railway extensions and road building. Lead remains an unstable market, but in other metals, in silver and its ores, in copper and in bismuth, a pronounced recovery is reported. While many small businesses are still suffering, general conditions of Bolivian trade are satisfactory. The crops have proved better than was at one time expected, and import requirements of flour from the United States and Chile, and of sugar from Peru will decline. The Indian population, largely engaged during the past few weeks upon bringing in the good harvest, are well content; the results of their efforts this year, and their prospects for next season, are the best guarantee for the maintenance of internal peace.

Tin Activity.—Operations in this metal, after having been more subdued towards mid-week, again assumed very large dimensions on Thursday, when prices were run up by £6 7s 6d for cash and near delivery to about £319, despite bear tactics overnight in the New York market, and some little concession in the Eastern markets. Home stocks have remained very low, and the visible supply at the end of this month may easily disclose a renewed small decrease if the very moderate estimates of Straits shipments at 5,500 tons turn out approximately correct. As indicated by the official returns of exports from the Federated Malay States, which amount to 34,194 tons for

the nine months to the end of September, as against 34,986 tons for same period in 1925, production there this year is still disappointing. Sentiment this week was in some degree influenced by the growth of activity in other metals, particularly copper, dealings in which seem like being restored to dimensions more in line with the much larger consumption going on in this metal since the news came to hand on Tuesday this week that the copper producers' scheme, which is to control well over 90 per cent. of the world's production, had received the sanction of the American Federal Trade Commission. Operations by the "American Copper Exporters Incorporated," which is the name of the new concern identified with the control scheme, are expected to be started within the next few days.

Industrial Insurance Premium Arrears.—The Prudential Assurance Company announces that, subject to certain easy conditions, industrial branch policyholders can have the arrears of premiums that have accumulated during unemployment resulting from the coal dispute deducted from the bonus on their industrial branch policies, instead of having to forfeit the benefit of the payments already made, or suffering a reduction in the capital amount of their insurance. The concession will, we imagine, be taken advantage of very widely. Upon re-entering employment the policyholder has his arrears reduced to four weeks, and will only have to meet the regular weekly payments; the outstanding balance will be covered by a suitable deduction to be made when a claim arises. In the case of a with-profit policy this deduction will be made, not from the sum assured, but from the bonus thereon, and as the bulk of the insurances issued by the Prudential are of this description the value of the concession is substantial. The deduction can be cancelled by a suitable payment at any time before a claim arises. Most of those affected by the coal dispute will resume work under a heavy burden of liability, but under this scheme the way has been made easy for them to maintain their policies in force. The company is to be congratulated on this valuable contribution to the solution of the very serious financial problem that will confront so many thousands of miners and others when they once more begin to draw their weekly wage.

Ebbw Vale Notes.—Little surprise has been caused by the announcement of the directors of the Ebbw Vale Steel, Iron and Coal Company to the effect that holders of the company's 8 per cent. seven-year notes, which mature on January 1, 1928, are to be asked to sanction an extension of the maturity date to January 1, 1938. It is further proposed that as from June 30th last interest on the notes shall be payable only to the extent that cash representing net earnings as from April 1, 1926, is available, "net earnings" meaning gross receipts on revenue account after deducting working expenses, cost of maintenance and repairs, allowances for bad and doubtful debts, interest on 6 per cent. mortgage debentures, bank loans and other interest bearing debts, depreciation and debit balances brought forward. The directors point out that the company's iron and steel works and collieries (including those of the subsidiaries) have been standing since May last, "and until the men in the coal trade are back at work and adequate supplies of coal are obtainable there is no prospect of a resumption of profitable operations." In view of the recent condition of the coal and steel trades, the redemption of these notes at maturity was not by any means certain, apart from the coal stoppage, and the noteholders have no option but to accept the situation, which puts them on a footing very different from that foreshadowed in the original prospectus, and which is practically equivalent to that of preference shareholders. That the market did not anticipate redemption of the notes at par at the due date in 15 months' time is indicated by the fact that they have lately been quoted in the neighbourhood of 70.

British Controlled Oilfields.—About a month ago the directors of British Controlled Oilfields issued a very frank statement on the position of the company, which we

discussed in the *Economist* of September 18th. Comment thereon is now offered by the voting trustees of the company in a statement published this week. The two most important points made by the directors were:—(1) That out of \$45 millions of capital, \$30 millions had been lost; (2) that "if it be desired to put this company on to a sound footing, a drastic reduction of capital is essential." The voting trustees take exception to these conclusions. They say: "The necessity for a reconstruction of the company's finances is clearly a matter for the directors to decide, and so far no suggestions have been submitted by them to the trustees for consideration, but on the facts at present available the trustees are unable to agree with the conclusions of the present board or that losses have been incurred as set out in the directors' recent statement." Lord Buckmaster and his colleagues showed, among other things, that in 1919 the company purchased by the issue of \$4,375,000 preferred stock, and \$15,000,000 common stock rights in Ecuador and Costa Rica, which turned out to be wholly invalid. Do the voting trustees deny that statement? Their remark that they are unable to agree with the directors' account of losses sustained by the company needs a good deal of explanation. Between them the two published statements reveal a situation in the constitution of the company which is surely unique in the history of company finance. The shareholders—who are really not shareholders at all, but only "certificate holders"—have no control over the management. Nor, it would appear from their statement, have the voting trustees, for they say that "the management of the company's affairs does not come within the ambit of their powers." This, however, seems to be an overstatement, for under the trust deed they are directed to use their voting power "to the best of their judgment in the interests of the company to the end that its affairs shall be properly managed." It is their function annually to appoint a board of directors, though they were not responsible for the appointment of the first board. Obviously, the whole system is unsatisfactory in the extreme, and the trustees themselves are considering whether the dissolution of the Trust is not desirable. One point of which the voting trustees provide a timely reminder is that the original trustees included important nominees of Ministers, and that the advertised aim was to keep the shares entirely in British hands. This, no doubt carried great weight with the public, who have burnt their fingers in this concern.

Uruguayan Railways.—The report for the year ending June 30, 1926, of the Central Uruguayan Railway, and its extensions, shows that its net receipts have risen by 1 per cent. The year was in many ways unfortunate as the summer was exceptionally dry, and the early winter months have been wet; in the face of this double difficulty the company has done remarkably well, for its increased profit was secured in spite of a rise of 6 per cent. in gross expenditure. Results for the combined system for the past 13 years are summarised in the following table:—

Year.	Gross Receipts.	Expenses.	Profit.	Percentage of Expenses to Receipts.
	£	£	£	%
1913-14	1,103,229	622,727	480,502	56.44
1914-15	946,767	562,684	384,083	59.43
1915-16	1,088,956	669,208	419,748	61.45
1916-17	1,178,602	771,433	407,169	65.45
1917-18	1,542,320	1,010,288	532,041	65.50
1918-19	1,792,804	1,219,680	573,113	68.03
1919-20	1,892,902	1,245,944	646,958	65.82
1920-21	1,879,630	1,504,995	374,635	80.07
1921-22	1,891,302	1,207,917	683,385	63.87
1922-23	1,989,203	1,172,769	816,434	58.96
1923-24	2,102,656	1,252,765	849,891	59.58
1924-25	2,074,710	1,307,709	766,803	63.04
1925-26	2,120,333	1,345,380	774,953	63.45

The rise of 2 per cent. in gross receipts is largely due to increased receipts from goods traffic. Stock products brought in £193,350 (an increase of 10 per cent.), and wool £156,044 (an increase of 20 per cent.). Goods traffic as a whole showed an increase of 2 per cent. at £1,029,761, representing 49 per cent. of the total income. Passenger traffic fell off by 1 per cent., and this is attributed to a

decline in long-distance and first-class passengers; there was a 3 per cent. increase in the number of journeys made; in all it added £460,940 to the income. Live stock traffic totalling £459,648 showed an increase of 7 per cent. Total working expenses were 6 per cent. higher than last year. This increase was evenly spread amongst the permanent ways and works department, repairs to bridges and culverts, running shed staff, wages and rolling stock maintenance. Locomotive expenses were £413,183, an increase of £17,767, but this was reasonable in view of the 6 per cent. increase in train miles. Indeed it represents a rise of only 4.5 per cent., attributable to the lower consumption of fuel and the slight fall in fuel prices. The company now has 106 oil-burning engines, as compared with 89 in 1925, and this left only 11.2 per cent. of the mileage to be covered by coal-burning locomotives. The drought from October to March led to exceptional expenses for water, but this charge should not arise in the future, the company having set about the construction of a reservoir at Nico Perez. Rolling stock maintenance £79,872 shows a decrease of 4.96 per cent. Considerable renewal works were undertaken to cover the arrears of lean post-war years; £324,179 was spent thus, and new capital works were carried out at a cost of £36,503. Separate figures for the main line and the extensions are given below:—

	Gross Receipts.	Working Expenses.	Profit.	Percentage of Expenses to Receipts.
	£	£	£	%
Central Uruguay	1,467,739	1,028,690	439,049	70.09
Eastern Extension ..	329,750	152,011	177,739	46.09
Northern Extension..	171,799	81,604	90,194	47.50
Western Extension ..	151,045	83,075	67,971	55.00

The increase in net profits on the Eastern extension was £7,534, and on the Northern £7,133. On the Western extension there was a decrease of £744. After paying fixed charges and interim dividends on the preference and ordinary shares the main line accounts showed a balance of £148,747. Payment of a final 2½ per cent. on the 5½ per cent. preference shares and of 3½ per cent. on the ordinary shares (making 6½ per cent. in all, as against 6 per cent. last year) absorbs £92,000, and a balance of £56,747 is carried forward. The northern extension paid 6½ per cent., as against 6 per cent. last year, and the Eastern 9 per cent., the same as a year ago.

A Burdett S.O.S.—A correspondent writes: The Burdett Wireless, Limited, to which reference was made in the *Economist* of July 10, 1926, and September 25, 1926, is in a much worse way than the directors have hitherto admitted. Last year, it will be remembered, a large amount of capital was obtained from the public, and the prospectus anticipated profits of at least £60,000 a year. The deferred shares of 1s each rose to over 5s, and then mysteriously began to fall. The reason for the fall was obvious when the first report was issued this summer, for there was no £60,000 profit to record, but, on the contrary, a small loss. At the meeting the chairman did his best to soothe the shareholders, and told them that if only they would behave, if only they would not appoint a committee of investigation, all could yet be well. The shareholders did behave, and their reforming instinct was satisfied by the election to the board of one new director. Last month the directors confessed that they were short of cash, and in spite of a bank mortgage of £50,000 they asked for powers to create a further £50,000 of debentures, powers which the shareholders gave them. But it is one thing for shareholders to agree to debentures being issued, and another thing to subscribe one's own cash for them; and it now appears that the £50,000 has not been provided, the response of the shareholders to the request for subscriptions being "negligible." This is admitted in a most urgent circular sent round this week to the shareholders, who are told that they do not realise the gravity of the position, and that unless another £10,000 is put up by them the company is faced with liquidation. This, then, is the history. In 1925 the company is floated; the public are promised £60,000 a year

in profits; and a very considerable sum of capital is provided. In 1926 all the capital has gone and the company must either scrape together another £10,000 or liquidate. The issuing house responsible for this calamitous flotation is Close Bros. and Co., of Moorgate street, which has retained, and still retains, a more or less intimate connection with the company's management, and cannot dissociate itself from the disaster. Is it too much to suggest that the issuing house which offered this venture to the general public, and the directors whose management has brought the company to the edge of the precipice, have a moral liability which they have not so far discharged? That the shareholders are shy of sending good money after bad is natural enough; but if the directors are as certain of the security offered as they pretend to be, let them, in conjunction with the issuing house, at once back their opinion and do something towards redeeming their failure by taking steps to find the required new capital.

Electrolytic Zinc.—Our mining correspondent writes:—The cabled summary of the report to June 30th shows a further, albeit modest, expansion in the average daily output of zinc, this figuring at 128 tons, as against 126½ tons for 1924-25. But while the zinc production at 46,580 tons represents only a small increase, the yield of lead totalled 8,000 tons, as against 7,030, and silver 1,179,000 ounces, in place of 929,500. After the transfer to reserve of the slightly enhanced sum of £145,000, the net profit figures at £553,000, as compared with £510,100. In respect of 1924-25, 11½ per cent. was paid on the preference and ordinary shares and 6 per cent. on the deferred ordinary shares. For last year 12 per cent. has been disbursed on all classes of capital. Liberal allowances have again been made to reserves and for special outlays, leaving the increased balance of £182,700 to go forward, subject to the final dividends. A satisfactory account is given of the operation of the superphosphate plant and of the company's proceedings generally. On the basis of last year's dividends, the participating preference shares—the ones chiefly dealt in on the London Stock Exchange—show a yield of 6½ per cent.

Transvaal Gold Output.—The gold output of the Transvaal mines during the month of September, 1926, amounted to 839,939 ounces of fine gold, as compared with 843,854 ounces in August. The amount produced during the month of September, 1925, was 797,247 ounces. The following table shows the monthly output for the past seven years:—

	1920.	1921.	1922.	1923.	1924.	1925.	1926.
January..	Fine Oza. 670,503	Fine Oza. 661,593	Fine Oza. 639,728	Fine Oza. 764,469	Fine Oza. 796,768	Fine Oza. 823,692	Fine Oza. 796,270
February..	625,330	558,137	639,728	704,970	760,617	753,925	753,324

Total	8,153,625	8,114,516	7,020,110	8,133,060	9,597,634	9,599,702	..

The following table shows the number of natives employed at the end of the last few months by members of the Witwatersrand Native Labour Association and Contractors:—

	Dec., 1925.	Mar., 1926.	Apr., 1926.	May, 1926.	June, 1926.	July, 1926.	Aug., 1926.	Sept., 1926.
Gold mines	166,385	181,204	183,828	183,905	183,092	182,262	184,032	185,063
Coal mines	16,606	16,190	16,212	16,246	16,448	16,848	16,827	16,782
Diamond mines ..	3,705	5,957	5,834	5,766	6,054	6,099	5,818	5,500
Total	186,696	203,351	205,874	205,917	205,594	205,009	206,677	207,345

The number of natives employed in the gold mines has increased, but there is a further decline in the number employed at the diamond mines.

THE fifteenth annual conference of the British Commercial Gas Association is to be held in Newcastle-upon-Tyne on Monday, Tuesday, and Wednesday, October 25th, 26th, and 27th, under the presidency of Mr John E. Cowen, J.P., who is prominently associated with several important colliery and steel undertakings in the North.

A SERIES of lectures on South African trade will be given at the City of London College, White street, Moorfields, E.C. 2, on alternate Mondays in October and November, commencing on October 18th, at 5.30 p.m. On that date Dr Bruwer, of the South African Delegation to the Imperial Conference, will give a lecture on the "English Market for South African Commodities." Other lecturers are A. Canham, Esq., the late Trade Commissioner; W. Cullen, Esq., LL.D., and E. H. Clifford, Esq.

Oversea Correspondence.

UNITED STATES.—SHARE MARKET BREAK—BUSINESS CONDITIONS—JUDGE GARY—MONEY AND COMMODITY PRICES—FRENCH FINANCE.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 5.

At the moment considerable attention is being given to a break in the share market, more particularly because of the fact that the market has held within a narrow trading range for nearly two months. With the market "making a line" for such a period, traders have been keen to see on which side a new trend would break out. Toward the end of last week the bull party made a fairly pretentious attempt to carry prices through the upper limit of the trading range. Little public participation was, however, attracted, and the effort failed. During the past two days a rather large volume of selling developed, and the market looked weaker than for some time. The weakness was shared by rails and industrials, and transactions to-day reached the two and a-half million share mark. Meanwhile, the statistics on brokers' loans tabulated by the Federal Reserve Bank show that the total increased some \$50,000,000 in the week ended September 29th, a circumstance that was interpreted in some quarters as indicating further distribution from strong to weak hands. At \$2,813,000,000 the brokers' loans were \$404,000,000 above the low of May, and \$328,000,000 below the high of January. Traders still are waiting to see what the trend will be. The reaction is rather more impressive than its predecessors of the past eight weeks, but has not gone far enough yet to really unsettle confidence.

Very little change has become apparent in the industrial and business situations. The steel industry still is operating at approximately 85 per cent. of capacity, and prices remain steady. Judge Gary, of the United States Steel Corporation, granted an interview to the newspaper men to-day in which he declared that prospects for the steel and industry, and for general business, were excellent both for the remainder of this year and for next year. The Judge let the journalists understand that the unfilled orders of the corporation would show a moderate increase for September. It will be recalled that a small decrease occurred during August after July had shown the first increase since the previous December. Asked whether the corporation was likely to increase its dividend, or to declare an extra dividend, the judge said that with a view to meeting severe competition, it would be unwise to put the corporation in a position where it could be overwhelmed. He added that "It won't be so very long before I will be off the board anyway, but while I am connected with the corporation's business I don't want to do anything that might jeopardise the business of the corporation." He declined to enlarge on his reference to his membership on the board other than to say that it "didn't mean anything at the present time." Rumours have been circulated several times during the past year to the effect that the Judge intends to resign, but these rumours have been discredited among his close friends.

The movement of money rates over the month-end has been in line with expectations. The call rate on the Stock

Bishopsgate, E. C. 3

Exchange firmed up to 6 per cent. on September 30th, the October 1st interest and dividend disbursements amounting to about \$500,000,000. To-day the Stock Exchange rate dropped back to 4½ per cent., which probably is too low. Meanwhile, time money has firmed up to a 5 to 5½ per cent. basis. A moderate firming at this season has been expected, but Wall Street now feels that a further increase in the Federal Reserve Bank's discount rate is not imminent. This belief is based partly on the decline in speculative activity on the Stock Exchange, and partly on the theory that the foreign exchange and domestic commodity price situations favour a passive rather than an actively restrictive attitude on the part of the Federal Reserve authorities. Incidentally, the first of the commodity price indices to reveal the September movement, that of Bradstreet, shows a gain of 0.7 per cent. in the average level, this following a gain of 0.4 per cent. in August that ended a decline that started in the previous December. The September gain was due principally to rallies in breadstuffs and livestock. The movement among industrial commodities was distinctly irregular. Continued weakness in cotton, which carried the December delivery below 13 cents, has caused misgivings with regard to the basis for prosperity in parts of the South. If the present price level prevails many of the growers are likely to suffer a loss on the year's operations. However, it is pointed out that some compensation should be derived from the stimulus that low prices should give to cotton goods consumption. The textile mills have been feeling the need of such a stimulus for several years.

Cables from Paris reporting the French reaction to the Briand-Stresemann conversations, have been examined carefully by our bankers. As there is little prospect that any German railway bonds can be sold in this market at this time our bankers hope that the French Government will not be distracted from the need for prosecuting energetically the programme of financial reform and monetary stabilisation. It is realised that as memories of the last big slump in the franc grow dim Poincaré's task becomes more difficult. It also is noted that some reports suggest

that the French Premier seems inclined to bargain for a large loan on the railway bonds against ratification of the Mellon-Berenger agreement. This brings to mind what seems to Americans a curious French tendency to regard debt ratification and franc stabilisation as measures that in some way constitute a favour to America for which France should have compensation. The matter is, of course, regarded here in quite a different light. Our view is that the French will be by far the chief gainers by ratification and stabilisation, and that they will be the chief sufferers from a failure to ratify. In fact, our bankers fear that unless the French Government makes good progress in putting into effect the report of the committee of experts, it may face another difficult period for the franc.

FRANCE.—POLITICS—ALLIED DEBTS—BUDGET—COAL, IRON, AND STEEL—PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, October 13.

It now appears to be settled that the Chambers will re-assemble on November 4th, and there is some reason to believe that the coming session, which at one time promised to be exceptionally uncertain in its developments, will pursue its normal course in an atmosphere of confidence and persistent serious effort to place the nation's finances on a sound basis. Deputies and Senators have found, while in contact with their constituencies, that public opinion is little disposed to tolerate any attempts to revive the sterile party quarrels that characterised the last and several previous sessions, and that undoubtedly cost the country dear by accelerating the disastrous fall in the franc that may be said to have begun with the victory of the Cartel des Gauches at the last general elections. Fear of the elector undoubtedly prevented the imposition of adequate taxation for a period of over two years, and the general loss of confidence, through threats of confiscatory legislation brought the Treasury to within an ace of bankruptcy last July, as was frankly admitted by M. Painlevé in his remarkable speech last Sunday. The next general elections are now within measurable distance, and fear of the revenge of the electors in the near future is now proving the beginning of wisdom in the minds of a large proportion of the Deputies on whom responsibility for the disastrous results of the Cartellist policy must be laid. The fiasco that has attended the effort of a substantial number of Radical Socialists to intimidate the Government into withdrawing its plans for the reform of the judicial system is significant, and foreshadows that M. Poincaré and his colleagues will have little real difficulty in securing the ratification by Parliament of the work they have already done.

The question of Allied debt settlement still dominates the situation, but here again there is ground for believing that the outlook is now considerably brighter. Exactly what reasons brought about the almost sudden conversion of the Government last week, and induced the Cabinet to decide to support the ratification of the Bérenger-Mellon agreement, is not clear, but it is now apparently practically certain that, with or without "reserves," ratification will be accorded before many weeks have passed. The question will not be formally raised, it is understood, either through diplomatic channels or otherwise, until the American elections are over at the beginning of November, but there is no doubt informal *pourparlers* are already in progress between Paris and Washington, and that a settlement that will, in the result, be more favourable to this country than the agreement suggests will be reached in the near future. The fact that France has already begun to make payments under the Washington agreement (as also under the Péret-Churchill agreement) is suggestive.

M. Poincaré a few days ago communicated his Budget plans for 1927 to the Finance Commission of the Chamber, which has already begun considering them. The draft of the Budget foreshadows a total revenue of 39,960,481,480fr., and expenditure amounting to 39,349,274fr., thus forecasting a surplus of slightly over 700 millions. These totals, as might be expected from M. Poincaré, are based on realised facts as to revenue, and he has been careful not to follow the example

set by more than one of his recent predecessors at the Ministry of Finance, who inflated their revenue estimates by allowing therein for possible increased returns from existing sources that were not always realised. Colossal as M. Poincaré's draft estimates are, they yet do not comprise the whole of the fiscal effort that France will be called on to make during the coming year. The expenditure on and the revenue from the tobacco monopoly and the interest and redemption services connected with the National Defence Bonds, which were formerly included in the Budget estimates, will in future be left out of account and dealt with entirely separately by the new autonomous Caisse d'Amortissement. But for this modification the total estimated expenditure would not be a shade under 40,000 millions, but about 43,000. Another omission concerns the maturity of 3,018,000,000fr. of 6 per cent. 1922 Credit National Bonds, which fall due for redemption or renewal (at the desire of the holders) next February, and of 4,587,000,000fr. of 3 and 5-year 1922 Treasury Bonds, which become due on September 25th next. M. Poincaré has purposely omitted from the expenditure side of his Budget this heavy extra total of over 7,500 millions, on the ground that there is no reason to believe that holders will demand repayment to anything like this sum, and that "anxious as we are to extinguish the public debt in masses, it would not be wise to impose on the national wealth a burden that would be susceptible of compromising its development."

The draft Budget for 1927 provides for debt reduction totalling 8,174,000,000fr., made up as follows:—

	Francs.
Debt redemption inscribed in the Budget	3,132,965,118
Contribution towards redemption of foreign debt maturing in 1927, drawn from receipts from the Dawes Plan	1,542,000,000
Debt redemption by means of the resources delegated to the Caisse d'Amortissement	3,500,000,000
	8,174,965,118

"We have," M. Poincaré states, "the unshakable determination henceforward to put on one side all question of appealing to the Bank of France to meet the needs of the State." He also insists that the Government is determined to pay off as rapidly as possible the debt owing by the State to the Bank.

Coal production figures for August, which are now available, show that the total output during the month (26 working days) was 4,364,831 tons, as compared with 4,381,366 tons during the same number of working days in July. The average daily output was 167,878 tons (with a total of 312,363 miners), as compared with an average of 136,147 tons in 1913 (with a total personnel of 203,208) 121,064 tons in January, 1923, 144,680 tons in January, 1924, 160,445 tons in January, 1925, and 170,048 tons (with a personnel of 315,204) in January, 1926. The total output during the first eight months of 1926 was 34,223,936 tons, corresponding to a total annual output of 51 million tons, against 48 millions in 1925 and 45 millions in 1924. The Nord and Pas de Calais coalfield during August had a total average daily output of 105,979 tons, or 14,682 tons a day more than in 1913. The average daily production from the collieries within the old French frontiers in August was 151,733 tons, or 15,585 tons more than the daily average before the war. The Lorraine collieries brought into France as the result of the war yielded a total of 16,145 tons a day. The total production of metallurgical coke during August was 322,303 tons, or 75,000 tons more than the average monthly output in 1913.

The monthly returns issued by the Comité des Forges show that during August there was an appreciable increase in the output of iron and a similar fall in the production of steel, as compared with the previous month. The total output of iron was 813,503 tons, as compared with 791,542 tons in July, while the output of steel was 704,447 tons, as against 718,109 tons in July. The number of blast furnaces in operation was 153. The total output of iron during the first six months of the year was 4,570,092 tons, as against 4,090,990 tons (equivalent to an increase of 11 per cent.) during the corresponding period of 1925, and of steel 4,060,715 tons, as against 3,567,367 tons (or an increase of 14 per cent.) during the first half of 1925.

The Minister for Agriculture has settled the controversy that has been prevailing for some weeks as to the amount of shortage in this year's wheat harvest by publishing the following official estimates (in quintals) of the 1926 crops:—

	1925.	1926.
Wheat.....	89,904,820 ..	67,659,730
Rye.....	11,090,750 ..	8,461,080
Meslin.....	1,239,320 ..	1,112,980
Barley.....	10,267,810 ..	11,760,450
Oats.....	47,558,070 ..	61,283,150

The Minister states that the flourmills since the beginning of September have been overwhelmed with old wheat, and about 4,000,000 quintals of foreign corn have been imported under the special measures recently taken by the Government. A saving of between 7,000,000 and 8,000,000 quintals of grain will be effected by the compulsory use of 10 per cent. of wheat substitutes in breadmaking flour, and an increase in yield will be effected by the imposition of a rate of extraction equivalent to 77 kilogrammes per hectolitre, as against 75 kilos in the past. The Minister therefore estimates that the total shortage will not be more than about 12,000,000 quintals. It should be mentioned that the area under wheat this year was 5,462,790 hectares, as against 5,613,840 in 1925.

The index figure for wholesale prices at the end of September, which has now been issued by the Statistique Générale, is returned as 804, as compared with 785 in August, 854 in July (which constitutes the record high figure), 646 at the end of December, 1925, and 567 at the end of September last year. The detailed comparative figures (based on 100 as representing the index figure in 1914 for 45 commodities, of which 20 are foodstuffs and 25 industrial materials) are as follows:—

Nature of Articles.	Number of Categories.	Index Figures at End of		
		July.	Aug.	Sept.
General index figure.....	45	854	785	804
Products of French origin	29	733	722	743
Do foreign origin	16	1,074	902	912
Foodstuffs (general figure)	20	703	672	706
Vegetable foodstuffs	8	788	745	801
Animal foodstuffs	8	552	544	554
Sugar, coffee, cocoa	4	861	804	846
Raw materials (general figure)	25	985	885	889
Minerals and metals	7	1,025	919	941
Textiles	6	1,147	940	939
Various	12	863	831	827

The dissection of the 45 commodities into categories, according as they are of native or foreign origin, is a new feature of this return, which is eloquent as to the repercussion of the exchange situation on prices. The index figure of retail prices in Paris at the end of September is returned as 590 (a rise of three points on the month), as compared with 431 in September, 1925, and 408 in January, 1925 (since when it has been steadily rising). The Belgian figure for retail prices at the end of September was 684 (as against 637 in July), and the Italian 660 (as against 654).

GERMANY.—ANGLO-GERMAN TRADE NEGOTIATIONS—TRUSTS—CREDIT—LABOUR—AGRICULTURE—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, October 12.

THE unofficial Anglo-German trade conference has excited great interest here, and has tended to increase the prevailing optimistic sentiment about the business future. It causes no surprise, however, that the communiqué issued by the holders of the conference should be couched in very general terms, and should emphasise the desire to improve European trade conditions rather than the possibility of international co-operation by specific industries or groups of industrial concerns. In spite of the formation of the International Steel Cartel, or perhaps because this Cartel, though in a relatively favourable industrial branch, came into existence only after prolonged and difficult negotiations, the German business public has not very much confidence in international agreements for the improvement and protection of particular industries. It is remarked that the German and British dyes industries,

though in both countries practically controlled by single concerns, failed after years to come to a definite agreement; and it is not believed that such diversified and weakly organised branches as textiles, to mention only one domain of Anglo-German competition, could possibly agree upon a common policy. The position with coal is more promising owing to the nature of the commodity, the proved possibility of national organisations, and the fact that only a few countries play in this branch any considerable rôle; but here, as in steel, the lack of a central British organisation, armed with authority, remains the obstacle. The traditional and practical obstacles in Great Britain against national organisations of individual industries are fully appreciated here; they are, indeed, often represented to be factors of strength in British trade. If in Germany such organisation is not so difficult, it is not quite as easy as might be inferred from the existence of the well-advertised coal, steel, and potash syndicates. After the war (as, indeed, before it in the potash branch) the State had to take a hand; and the last renewal of the coal syndicate was made possible only by State compulsion upon outstanding concerns to join. Complete national organisations for all industries were a chief feature of the semi-Socialistic "Plan-Economy" associated with the name of the former Ministry of Industry Wissell; but this comprehensive and symmetrical plan was abandoned.

The prevailing German view is that national industrial organisations can in general only be created by State intervention and compulsion, and nobody expects this from Great Britain after, with certain exceptions, it failed in the more favourable soil of Germany. Without national organisations, it is assumed, there could be no binding international agreements, and without such agreements there could be no co-operation, abstention from competition, division of markets, or regulation of output or prices. While less competition might appeal to single industries and industrial concerns here, as in Great Britain, there would be no general support for the theory that it would conduce towards the amelioration of European industrial and labour conditions. As less competition seems to promise an abatement of the political antagonism associated in the past with the struggle for markets, the "Week-end at Romsey," as it is called here, has had a good sentimental effect on Germans; but it is harder for them to think of non-competitive business than to think of competition dissociated in the public mind from antagonism.

The trade Press here inclines to attribute the conference to reviving British fears of German economical predominance; and figures are published to show that in the industries immediately concerned Germany has of late gone ahead. That is certainly true as regards coal, the metal industries and dyes, and of late the German export of textiles has greatly increased. Germany, however, has at least as strong motives as Great Britain for maintaining cordial relations and for preventing competition, if that is possible, from taking acute demonstrative forms. German industry will soon want more capital, and it does not like being wholly dependent upon the United States. Certain industries have been badly hit by British safeguarding of industry, and these fear an increase of Protection in England. The Reparations question, it is realised, must come up again, even if the present provisional settlement does not break down within its term of years. Industrial and trade conditions must be the basis of any definitive Reparations settlement; and Germany might lose considerably if when the time comes her relations with England, which will probably be governed by trade interests, were bad. Hence any concrete developments of last week's conference would be welcomed here; but it is not clearly seen what the developments would be.

The coal situation continues to be favourable. An actual shortage exists, and coal from the Ruhr sent to the Upper Rhine has been brought back for shipment from Rotterdam. The average output of the last weeks keeps around the high level of August. Coal exports in August totalled 3,973,743 metric tons; in the months January-August 16,683,605 tons, against 13,645,850 tons in all 1925, and 2,795,090 tons in all 1924. Exports of iron and steel and goods thereout (excluding machinery) in January-

August totalled 3,436,880 tons, against 3,548,773 tons in all 1925, and 1,955,110 tons in 1924. Exports of pig-iron, tubes, and wire show considerable rises. Imports of iron and steel and wares thereout (except machinery) totalled 693,383 tons in January-August, against 1,448,577 tons in all 1925, and 1,324,011 tons in 1924. The trade balance in this branch has greatly improved. Exports of dyes this year will show a considerable increase over those of 1925. Figures are:—1926, January-August, 95,896 metric tons; all 1925, 125,358 tons; 1924, 92,684 tons; 1913, 217,697 tons. Exports to Great Britain and the United States are still only a fraction of the pre-war, but those to the Netherlands were 14,659 tons in January-August, 1926, against 8,104 tons in all 1913, and those to Sweden and Russia have also increased. The Dyes and Nitro Trust is negotiating further large sales to Russia. Negotiations are under way for a fusion of the six leading watch and clock concerns. This industry concluded a price-regulation convention in 1918, which has lapsed. A table-glass syndicate is also being considered. About half of the table-glass industry (measured by output) is already organised in a Rhenish-Westphalian syndicate, and two smaller syndicates exist. Reports as to further coming domestic and international trusts or cartels may be taken with reserve. One such report speaks of a Franco-German aluminium cartel, another of an international electrotechnical cartel. The earlier story of a German domestic electrotechnical trust has been denied, although at the last congress of this industry some form of combination was recommended by leading speakers.

Money again became cheap at the beginning of this week. The day money rate fell to $4\frac{1}{2}$ per cent. In general the quarter-end disturbance was overcome more slowly than usual. The private discount rate has been reduced (for 56-90 days) to $4\frac{1}{2}$ per cent., but remains unchanged at 5 per cent. for shorter terms. In this branch of credit very little business is done. The disparity of interest rates inclines the commercial banks to grant current account credits. The Rentenbank's return for September 30th shows circulation of 1,496,854,485 Rentenmarks, against 1,498,521,873 Rentenmarks one month earlier. Since the coming into force of the liquidation law, 583,324,098 Rentenmarks have been withdrawn from circulation. Circulation of all currencies on August 31st was 5,304 million marks, against 5,281 million marks one month earlier. The volume of outstanding credits from the Reichsbank, private note banks, and Rentenbank, on August 31st was 2,040 million marks, against 1,969 million marks one month earlier. Mortgage credits show considerable development, the circulation of mortgage bank bonds having risen by 380 million marks in the first half of 1926. Mortgage money is still, however, relatively hard to get. On city real estate is seldom lent more than 50 per cent. of the present much-shrunken value, and the interest, including various commissions and charges, is 9 per cent. or more. Bourse rumours of fusions among the leading commercial banks circulate. It is believed that these rumours are unfounded, but that negotiations have been going on for some sort of arrangement tending to reduce administration costs, which are stated to be higher than those of similar banks abroad.

The official wholesale prices index, on the 6th, was 128. The lowest monthly index figure of 1926 was 118.3, reached in March. The *Frankfurter Zeitung's* monthly index shows for September 30th (100 in 1913) 127.27 for manufactured goods, against 126.90 on August 30th. This is the first rise after a long drop from 141.07 on December 31, 1925 (high point 143.79 end of April, 1925). Labour Ministry statistics show only 72 strikes in the first quarter of this year, against 332 in the corresponding period of 1925; number of employees affected, 18,448, against 129,033; working days lost 277,529, against 1,095,390. Lock-outs numbered 9, against 50; number of working days lost 282,809, against 432,797. The most numerous strikes were in the wood and building industries. Since the beginning of the industrial revival there have been some signs of Labour unrest. The Hansa Shipping Company has decided to double its capital, from 16 to 32 million marks. This concern, with 250,000 tons shipping, comes third among German shipping companies.

The yield per area of the chief crops, oats excepted, is

reported at considerably less than last year. Yield per hectare in double-centners (1-10th metric ton) of winter-wheat was 19.1, against 21; winter rye, 15.9, against 17.2; spring barley, 17.3, against 17.5; oats, 18.9, against 16.2. The area under the chief crops (in 1,000 hectares) was:—

	Present Area.				
	1913.		1925.		1926.
Winter wheat	33,201		29,761		27,788
Winter rye	94,534		79,650		73,985
Spring barley	28,701		22,819		22,911
Oats	76,803		55,845		65,696

The total yield of bread cereals is estimated at 732,400 metric tons less than in 1925; that of fodder cereals at 1,006,300 tons more.

Stocks had a moderate rise last week, and yesterday and to-day were very active and firm. The home public has re-entered the market, and yesterday saw considerable foreign buying. The *Frankfurter Zeitung's* stocks index for October 9th (100 at beginning of 1925) shows 120.86, the highest of the year, against 58.31 on January 2nd. The English trade conference had a stimulating effect. Most of the inactive stocks, hitherto neglected by speculators, have had considerable rises. Dyes Trust (Farbenindustrie) to-day reached 315, and some of the other speculative stocks have passed their highest points of August.

GREECE.—THE SALONICA EXHIBITION—ITALO-AMERICAN SYNDICATE—REVENUE RETURNS—MILITARISM—FOREIGN EXCHANGES.

(FROM OUR CORRESPONDENT.)

ATHENS, October 9.

THE first International Exhibition of Salonica was officially opened on October 3rd. Various foreign countries participated, and it is generally considered here that the exhibition constitutes a first step towards better relations among the Balkan States, and, consequently, a contribution to international goodwill and peace.

Cable despatches from Rome recently announced the foundation of an international syndicate by a group of American and Italian banks and industrial companies, and a Greek bank. It is understood that the initiative of this enterprise is due to Mr Gianini, an American banker of Italian descent, who represents the Bank of Italy of San Francisco, and other affiliated institutions, and Mr Loverdos, general manager of the Banque Populaire in Athens. The latter, in a statement to a Press representative, said that the purpose of the syndicate is the carrying out, on a large scale, of public utility works in Greece, such as road construction, drainage, port, railway and other kindred works for the development and exploitation of the national wealth of Greece. The necessary capitals will be furnished by the members of the syndicate which will start with an initial capital of £3,000,000. How far these somewhat pretentious schemes will be realised it remains to be seen. They have met with a cool reception, both for economic and political reasons.

Returns of Government revenue for the first four months of the current financial year give a total of 9,209 million drachmae. Unfortunately, no figures exist for the expenditure of this period. According to the original estimates, the Budget should balance. While, however, revenue is falling short of estimates, there is no indication of a similar reduction in expenditure. Nor could such a decrease be expected, in view of the high level of foreign exchanges, and the increasing cost of living. In the Budget the amount required for the service of the public debt in gold was estimated on the basis of Drs. 370 to the pound sterling, with a reserve of Drs. 150,000,000 against a possible rise of the exchange. However, exchange on London has been fluctuating for several months between 400 and 450 drachmae. On the other hand, the cost of living has continued its upward movement, having risen from 1,673 in January to 1,832 in September, the basis figure being 100 for 1914.

But for the dictatorship of General Pangalos, the economic and financial situation of Greece would have been better. From a comparative statement of the budgets of various countries, published some time ago in the *Economikos Tachydromos*, it is clearly shown that

Greek military and police expenditure is double the average amount spent by other European countries in proportion to their Budget revenue. According to ex-Premier Mihalacopoulos, the administration of the army is suffering from swollen staffs. The Greek army includes over 6,500 officers—that is, about the same number as the Yugoslavian army, though the population of Yugoslavia is nearly twice as large as that of Greece. The navy list includes 47 admirals in retirement, the total number of retired officers being greater than that of those in active service by 50 per cent. There are also 150 generals on the pension list, most of whom are not only capable officers, but also sufficiently strong for active service. Eloquent as these figures are, they show only a small part of the incalculable harm, moral as well as material, thus far done to the country by militarism. It is a general wish of the people that the army should refrain in future from mixing in politics. And it is hoped that the forthcoming elections, by restoring parliamentary government, will put a definite end to a state of things that was pushing the country to the edge of a precipice. The optimism created by this anticipation is reflected in the rates of foreign exchanges, which, as the political horizon is getting more clear, are gradually improving. Exchange on London fell yesterday to Drs. 394, and declined further to-day to Drs. 385.

CANADA.—THE NEW MINISTRY—CROP POSITION—GENERAL BUSINESS CONDITIONS—WHEAT POOLS—THE FISHING INDUSTRY—THE STOCK MARKETS.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 4.

Now that the general election is over and a Ministry which commands a good working majority in the House of Commons is established in power, the country is prepared to give it a fair trial, and looks for skilful and courageous treatment of some pressing problems. For his Cabinet Mr Mackenzie King has relied chiefly upon the personnel of his former Administration, most of whom go back to their old portfolios. From Ontario he has brought in two good recruits—Mr Malcolm, a furniture manufacturer, who becomes Minister of Trade and Commerce, and Mr Euler, an editor, who will undertake the house-cleaning of the Customs Department; both are competent politicians and generally trusted, but both are also avowed high Protectionists, and will strengthen that wing of the Cabinet. If a seat can be found for him, an even better recruit will be brought in as Minister of Defence in the shape of Colonel J. L. Ralston, of Nova Scotia, an able lawyer with a fine war record. But it is not clear from his public record why Mr Heenan, the new Minister of Labour, was selected for this particular post; while in the case of the all-important portfolio of Minister of Immigration it is to be surmised that the appointment of Mr Forke was primarily dictated by the need of ensuring the allegiance of the Liberal-Progressive group. The Department of Finance will once more be in the hands of Mr J. A. Robb, whose skilful exposition of his last Budget's merits played no small part in the Liberal victory; he is popular with all classes, and commands the confidence of the banking and commercial community.

The Government has created some consternation by cancelling a series of contracts into which the Meighen Ministry had entered, including a large new hotel for the Canadian National system at Vancouver. It takes the ground that the Meighen Government had no legitimate status, and was incapable, therefore, of making valid contracts; but it is understood that various parties who have suffered by the cancellations intend to test the question in the courts. This week Premier Mackenzie King and his Minister of Justice, Mr Lapointe, are leaving to represent Canada at the Imperial Conference, and as the Opposition has promised to give every accommodation for the smooth conduct of public business it is now thought that it will not be necessary to call Parliament before December, or perhaps until after Christmas.

There is still considerable anxiety about the fate of the Western grain crop. The weather throughout the greater part of September was very unfavourable for harvesting

and threshing operations, and although it turned fine during the latter half of last week and outdoor work was resumed in many districts, winter is now perilously near, and a very large quantity of grain is still standing in the fields. Moreover, the unthreshed grain has suffered a good deal of damage through sprouting and bleaching, and, although it will be impossible to ascertain the exact amount of loss incurred until the grain is actually threshed, it will run into millions of dollars. Eastern Canada has also been experiencing an excessive rainfall during the past month, and there has been a substantial deterioration in the quality of the yield of many crops. As a result the impression now prevails that while the quantity yield of the field crops of 1926 will be quite satisfactory, the monetary returns to the farming community are likely to be less than in 1925, and as a result there may be some recession of business activity during the winter.

At present, however, both wholesale and retail merchants report a satisfactory volume of business, and most of the major manufacturing industries are operating well up to capacity. The cotton industry has been well provided with orders, and the new price-lists which have just been issued show reductions ranging from 5 to 7½ per cent. The boot and shoe industry, which has been hampered by labour troubles and irregular prices, is reported to be working now on a better basis; hide and leather markets have both become firmer, and some tanners of sole leather have orders in excess of their capacity. The production of motor vehicles, although now showing the usual seasonal decline, established a new high record for the first half of the year. The woollen and worsted goods business is still passing through a difficult period, but wool prices are now firmer, and there has been some improvement in the volume of orders. A renewal of equipment buying by the railroads and the greater activities of the farm implement and motor industries are enabling the iron and steel plants to fare better than they were doing at the parallel date in 1925, and although the building boom has slackened off, there is still a fairly good demand for construction steel.

The problem of export markets for farm produce is still causing some difficulty. The European demand for grain is of a very fluctuating character, but some 60 steamers are under charter to take out grain before the St. Lawrence navigation season closes. There has been some slight betterment in the export and domestic demand for flour, and also in the export movement of cheese, but up to date the shipments of the latter commodity are still 100,000 boxes below the corresponding figure for 1925. However, the pulp and paper industry, whose career of progressive expansion still goes on, is helping to maintain the export trade figures at a very satisfactory level; of newsprint alone the output of Canadian mills for the first seven

months of 1926 is estimated at 1,056,790 tons, which is a gain of more than 22 per cent. over the figure for the corresponding period of 1925.

The co-operative wheat pools in the prairie provinces are still flourishing, and will this year again control the disposal of at least 60 per cent. of Canada's wheat crop, besides a large quantity of coarse grains. Last year preliminary steps were taken for an extension of the principle of producers' pools when representatives of the Canadian wheat pools met in conference at St Paul, Minn., with delegates from similar organisations in the United States and Australia. Now Mr H. W. Wood, the president of the Alberta wheat pool, is in Australia conferring with the leaders of the pool movement there, and he has given an interview in which he asserts that, if the wheat-growers of Canada, Australia, the United States, and Argentina, controlling as they do the greater part of the world's exportable surplus of wheat, can only organise themselves in an international pool, they can ensure the orderly marketing of their product and achieve great benefits for themselves. A director of the Saskatchewan wheat pool is on a similar mission in Argentina, and announcement has been made that on March 16th of next year there will be held an international conference at Kansas City, at which the whole question of co-operative marketing will be discussed and an exchange of opinions will take place on such subjects as crop reporting, contract renewals with farmer members, elevator systems, &c. It is also the intention of the promoters of this conference to issue invitations to representatives of Russia and India.

The fishing industry plays an important part in the economic life of Canada, and, taken all round, the catch for the year is satisfactory. The annual salmon pack in British Columbia is now far enough advanced to ensure canners a profitable year, and the total pack of all grades may just exceed the total for 1925. On the Atlantic seaboard the bank fishermen have fared well, but the shore fishermen have had to be content with light catches. The lobster catch is about the same as in 1925, and the market in Britain has greatly improved. The Newfoundland fishermen have had in recent weeks large catches of cod, and there is a strong demand in the United States for both refined and common cod oil, prices for which are keeping high. Generally speaking, fishermen regard prices for fish as poor, and are inclined to hold their catches rather than sell at present.

The stock markets have had spells of activity varied by intervals of dullness, but there is still a steady demand for the better class of power and pulp and paper stocks. In the bond market a firmer tendency in the Dominion tax-free issues has been visible.

JAPAN.—BUDGET SURPLUS—EARTHQUAKE RECONSTRUCTION—AUGUST TRADE RETURNS—COMMODITY PRICES.

(FROM OUR CORRESPONDENT.)

TOKIO, September 10.

THE national accounts for the fiscal year closed March 31st, which were published on August 25th, disclosed a surplus of 546,383,000 yen, the revenue amounting to 2,071,371,000 yen, and the expenditure to 1,524,988,000 yen. This shows an increase of 490,909,000 yen in comparison with the original estimate for that year, but a decrease of 56,019,000 yen with that of the previous year. Tax revenue and receipts from Government enterprises reveal a substantial increase; income-tax produced 24.9 million yen more than in the year 1924-25, though it was largely offset by the shortcomings of Customs and Excise, while the receipts of Post Office and State monopolies were respectively 39.8 and 4.7 millions higher. On the expenditure side there was an all-round decline in departmental expenditure, a total decrease of 205,106,000 yen, as compared with the estimates for the year, and of 100,035,000 yen with the previous year. This is mainly accounted for by economy in Civil Services and the retarded progress of the reconstructional works in the earthquake-damaged districts, while the fighting services also have not spent so much as they asked for. Despite the

huge surplus of 546 million yen, however, as 339.5 millions has already gone to the current year, and some 130 millions has been otherwise earmarked, only 70 or 80 millions can be available for the next fiscal year against the new charges of 230 millions asked for by the spending departments.

The third anniversary of the earthquake and fire of 1923 was duly observed on September 1st. But after three full years little progress has been made in the reconstruction works in the damaged districts in Tokio, owing partly to the frequent changes of municipal authorities, and partly to strong objections on the part of landowners and tenants to the requisition of land for the widening of streets and squares. According to the official report, of 53 principal streets to be newly built or repaired, 31 have been under construction, and of 121 byways only 23 are in course of building. Of 481 bridges to be rebuilt, 30 have been completed, 61 are under construction, and the rest remain uncommenced. Only 21 per cent. of the canal repairs have so far been finished. A considerable portion of the money to be appropriated for the reconstruction works approved in 1925-26 Budget has, therefore, been left over unspent, as noticed above. At such a rate of progress as this, it is feared the restoration of the capital will not be completed by the end of 1928, as had been anticipated. The new Mayor is expected to make vigorous efforts to help forward the reconstruction.

The trade returns for August show for the first time in the year a favourable balance of 18,627,000 yen, imports amounting to 158,914,000 yen, and exports to 177,542,000 yen. As compared with the corresponding month of last year, both imports and exports disclose a fairly serious decline, imports decreasing by 32,335,000 yen, and exports by 50,642,000 yen, and the excess of exports over imports being 18,307,000 yen lower. The decline in imports is mainly accounted for by raw cotton and rice, which have decreased in value by 34 and 15.4 million yen respectively. On the export side, raw silk and cotton yarn and manufactures account for the best part of the decline, having fallen off in value by 23.3 and 10 millions respectively. In the case of raw silk the decline is largely a matter of price, while smaller Chinese takings are responsible for the decreased cotton exports. Making full allowance for the advanced value of the yen, there is no room for encouragement in these trade figures. It is now more than doubtful whether the year's adverse balance on the visible trade figures will be reduced far below 300 millions, as had been sanguinely anticipated in some quarters at the beginning of July.

The upward tendency in commodity prices which had developed in June was short-lived. The Bank of Japan's wholesale index number in August recorded a drop of 2.42 points, reducing the total to 236.04, as compared with 236.46 in July, and 264.79 in August, 1925. The gain made in June and July was more than offset by the loss in August. The August figures illustrate the business decline which has shown itself anew in all directions during the summer months.

Letters to the Editor.

THE ECONOMICS OF THE HIRE PURCHASE SYSTEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I was interested in the article in your last week's issue on "The Economics of the Hire Purchase System." I think your correspondent's prejudices are against the system, but the conclusions of the investigators to which he refers, while not so enthusiastic as some American commentators, are certainly not hostile to the system as a whole. In fact, they merely echo what has been the opinion of America generally, viz., that the business must be kept within controllable limits, and the extension of credit carefully scrutinised.

There are few things in the world not subject to abuse, and you will find advocates of Hire Purchase credit who are quite alive to the fact that danger will ensue if the system is operated on unsound lines. A successful Hire Purchase system postulates careful investigation into the credit standing of the applicants—the fixing of a minimum deposit or down payment sufficient to make applicants ponder seriously before committing themselves—and such limitation of the period of credit as to render improbable any violent change in the financial position of the applicant. I do not think that anything further than this can be read into the investigators' conclusions, and with them I am happy to agree.

The division of American Banks into those who take chances and those who do not, or those who finance Hire Purchase and those who do not, is a mere general assertion which requires substantiation before being accepted; so does the statement that instalment selling in America is to-day criticised by critics who, the past has shown, have the gift of prophecy.

I know something of American Banks, and I know a good deal of Hire Purchase financing by American Banks, and unless your correspondent excludes from his list of conservative banks most, if not all, of the really important American Banks, then his statement is frankly untrue. And as such it is calculated to mislead. As I doubt the propriety of mentioning the banks I have in mind by name in this letter, I enclose a list for your personal information. Each one of these banks, to my personal knowledge, is providing, and willingly providing, enormous sums or other credit facilities for the purpose of financing Hire Purchase business in America.

Your correspondent quotes Governor Norris to this effect: "The manufacturers and merchants of the country, instead of knowing that there is either a shortage of goods or nothing more than a current consumption of goods, know that the people have bought in 1925 all that they could afford to pay for, and nearly 5,000,000,000 dollars more."

I think that the reasoning here is utterly fallacious and misleading. It implies that all Americans who purchase on time payment spend their income as they get it. It does not take into consideration that many people in the United States buy on the instalment plan because instalment buying has become a habit. Instalment buyers in the United States do save, as I hope to show immediately, and it is possible that a great number of people in America using the instalment plan do so because they do not want to upset investments, and not because they have not the capital. If the inference of Governor Norris were correct it would be reflected in the figures showing the general saving habit of the American citizen.

Here are some figures for the consideration of your correspondent. In 1900 savings bank deposits in the United States amounted to rather less than 2,500,000,000 dollars. In 1924 these deposits had increased to almost 8,500,000,000 dollars. The number of depositors in 1900 was slightly over 6,000,000, and in 1924 the number was nearly 14,000,000.

In 1900 the number of families owning their own homes was slightly over 7,000,000. In 1920 the number had increased to almost 11,000,000. In 1900 building and loan associations numbered about 5,300, with a membership of nearly 1,500,000. In 1923 these had increased to about 10,700, and the number of members to nearly 7,200,000. In 1900 life insurance in force in the United States was approximately 8,500,000,000 dollars; in 1923 this had increased to more than 53,000,000,000 dollars.

These figures do not indicate that the American has forgotten the virtue of thrift, and I do not think that a people with this record need cause any concern or solicitude on the part of their well-wishers.

I have had considerable experience of financing Hire Purchase business, and in practically every instance the instalments have been paid with comparative ease, and to a great extent the money which settled these monthly instalments would otherwise have vanished on ephemeral enjoyments. The payment of the instalments has impelled the people to save money, and at the end of the period they have found

themselves with so much capital in the form of the merchandise acquired.

Your correspondent thinks that the application of the Hire Purchase system to this country is as yet hypothetical, and that while America is dealing with a condition, we in this country are still in the academic region of theory. That may be true, but conditions are urgently insisting on theory being put into practice. To take the motor-car industry, for example, one of the features of the post-war period has been the large increase in production—especially as regards light cars. I do not think your correspondent will deplore this increased output, and consequently reduced prices. But if the only avenue of distribution is to be that of cash on delivery the outflow of the factory will require to be considerably diminished—diminished to an extent which will not only prevent expansion, but close down some factories, increase unemployment, and raise prices, to say nothing of its effect on export trade.

A great part of Hire Purchase credit in this country is absorbed by commercial people, who use it instead of ordinary open credit. There is no danger in this: the danger rests in extending the credit to the man of insufficient means for the acquisition of luxury articles. But if the business is conducted on the lines which I have already indicated, there seems to be little to fear. In my experience the number of people who apply for Hire Purchase credit who are not justified in asking it is very small indeed, and the number who, having obtained it, default during the currency of the transaction is practically negligible.

Like every other system of credit or merchandise distribution it is open to abuse, but the blunt economic facts must correct its abuse automatically. Merchants cannot go on indefinitely parting with their merchandise to bad credit risks: a very short time of such tactics would send them to the bankruptcy court: banks or banking companies obviously will not provide funds to finance unsound business. Occasional mistakes may be, and doubtless are, made, but that is inevitable in any business.

Hire Purchase is sound both economically and socially. By its means manufacturers and traders may instal new plant: procure cheap and more efficient transport. The wider distribution permitted by the use of Hire Purchase makes it possible to produce at lower and continually lower cost, thus persistently widening the market, both at home and abroad: creating more and more wealth in the shape of goods: bringing all sorts of merchandise more and more within the grasp of people who otherwise would never have owned such merchandise. By its means people purchase homes, furnish them, provide themselves with the means of production, the means of increasing their earning and productive power. As a matter of plain fact, all the ramifications and implications of Hire Purchase are simply not understood by many people who boldly set out to discuss and criticise. After all, the system is merely a system of credit, but it has the advantage of being a secured credit so far as the merchant or bank is concerned. The only thing which determines whether credit is good or not is its justification. Credit cannot be condemned solely on the method of its extension.

And its justification is something which can only be decided by the merchant supplying the goods, with the assistance and the corrective influence of the bank financing the movement of the merchandise. If the merchant and the bank wisely administer the credit it is good: if they do not, then within a certain time they will go out of business, and others may profit by their experience.

The trouble with most people who write on, but without real experience of, Hire Purchase is that they appear to start with the preconceived notion that Hire Purchase is only availed of by those who ought not to purchase the goods concerned. That is sheer nonsense. If it were true, Hire Purchase as a system would have disappeared long ago, because the merchants selling their goods on Hire Purchase and the banks financing them would have been out of existence.

For many years I have taken a great interest in this subject because the banking company of which I am managing director has financed Hire Purchase transactions to the extent of millions sterling, and foreign banking companies with which I am associated have also had a unique experience of Hire Purchase finance. Consequently, I have seen most of what has been written on the subject. And far too much of it, both in America and in this country, has been written by theorists without any practical experience of Hire Purchase, but with very decided prejudices.

We are all concerned that production should be increased and new methods of distribution brought into operation. I regret to think that Hire Purchase as such a method has not received in our commercial community the consideration it deserves. No one wants to follow America slavishly, but we will not do ourselves justice if we resolutely close our eyes to the commercial hints she may give us.—I am, &c.,

DR LEAF ON BANKING.*

A BOOK on banking by a great banker is a rare and important addition to financial literature, and Dr Leaf's contribution to the Home University series is worthy of the high reputation, as a scholar, an artistic producer of apt phrases, and a lucid exponent of difficult subjects, of the chairman of the Westminster Bank. Simple, clear, and comprehensive, it is just the book for the large class of readers whose horizon has been so effectively widened by the publication of this excellent series. Starting with the earliest developments of banking, it proceeds through central banking, as illustrated by the Bank of England and the Federal Reserve system, to a luminous survey of the London money market and its chief components—the banks, accepting houses, and discount firms and companies—ending with an interesting chapter on bank organisation, which includes a few valuable sentences on banking as a career.

Into this mass of closely compressed information Dr Leaf has succeeded in introducing the always brightening element of controversy. In his preface he strikes the argumentative note, saying that the past century has seen the "transfer from banks of deposit of the power of the 'creation of credit' as expressed in the expansion or contraction of the currency, and its concentration in the hands of the State, delegated wholly or partially to State Central Banks." By those who regard bank deposits as potential currency and cheques as currency, Dr Leaf's view will hardly be accepted, and his argument on the subject is most unlikely to convince them. "It has indeed been argued," he says on p. 102, "that every loan by the banks creates a deposit," and he thinks that he has demolished this contention when he shows that during a certain period an increase of nearly 30 millions in the loans and advances of the Big Five banks was accompanied by a large decrease in their deposits. But the loans of the banks which create deposits are not merely those contained in the "loans and advances," but include also those expressed in their discounts and investments. During the period under consideration the banks' discounts were reduced by 37 millions, and their investments by 26 millions. The banks thus cancelled a large amount of credit on balance, and this cancellation was reflected in the decrease in their deposits. Dr Leaf maintains that "the creation of credit in one direction is only made possible by a corresponding cancellation of credit in another." But is this necessarily so? If the Big Five, when these extra advances were required by their customers, had made them without reducing their discounts and investments, all that would have happened would have been that they would have shown an abnormally low proportion of cash to deposits. It might not have been prudent to do so, but there was no impossibility about it, and the noisy school which contends that "the trader has a right to loans from his bankers on terms practically dictated by themselves" would probably have applauded the proceeding. Nobody contends that the banks' power to create credit is unlimited; but that they have the power, subject to the dictates of prudence and experience, seems to be admitted in another passage in the book. In discussing the great growth of Treasury bills during the period of inflation, Dr Leaf relates that "in the earlier stages of the process the banks used to wonder whether the market was not being flooded with Treasury bills beyond its power of absorption. But it soon became apparent that the money thus borrowed was only a creation of credit; the sums borrowed were at once disbursed to the public, and came back to the banks in the form of additions to their customers' deposits, and so the circle went on continually expanding." And this is exactly what happens when, instead of taking up Treasury bills, the banks lend to their customers, or discount bills for them, or buy investments from them—the sums come "back to the banks in the form of additions to their customers' deposits."

* "Banking." By Walter Leaf, Litt.D., D.Litt. Williams and Norgate.

THE ENCYCLOPAEDIA BRITANNICA.*

THE appearance of three new volumes of the *Encyclopædia Britannica* is the event of the publishing year. Shortly after the Armistice three fresh volumes appeared. These are now withdrawn from sale, and replaced by three new ones. This course has involved much cost and labour, but it is obviously the right one. For the past five years have created a new perspective, and written a hundred and one new chapters in every phase of life. It does not require a fertile brain to picture the magnitude of the task which confronted Mr J. L. Garvin in the production of the new volumes. The most recent decades have seen in every direction changes unparalleled in any period of similar length. The world has been shaken by the greatest war in history. The whole map of Europe has changed. The Hohenzollerns and Hapsburgs have fallen. The economic and financial balance between the old world and the new has been re-tilted. Think of the changes in China, Russia, India, Italy, Egypt, and test the development outside the political sphere by remembering that aeronautics and wireless have come, and come to stay.

Obviously the task was immense. But as one turns over the leaves of the three new volumes one becomes more and more impressed with the success with which Mr Garvin has performed it. The old *Encyclopædia Britannica* standard, high as it was, has at least been amply maintained. The great public turn to this work for the authoritative word on every subject. To judge whether they will get it from the new volumes it is only necessary to mention a few contributors and their subjects:—Dr Stresemann on the Locarno Pact; Mr Ramsay MacDonald on the British Labour Party; Colonel House on the Paris Peace Conference; M. Caillaux on world recovery; Dr Benes on the Little Entente; Viscount Haldane on British Education; Mr Henry Ford on mass production; Senator Marconi on wireless; Einstein on time and space; Sir J. J. Thomson on the electron; and, not to omit the lighter subjects, Mr P. F. Warner on cricket and Mlle. Suzanne Lenglen on lawn tennis. The extension of the list would merely show that first-rate authority has everywhere been mobilised, and the result is three volumes that are invaluable, nay, indispensable, not merely as works of reference for the writer and reader, but to every thinking man and woman.

BOOKS RECEIVED.

The First Year of the Gold Standard. By T. E. Gregory. (London) Ernest Benn, Limited, 154 Fleet street. 3s 6d net and 5s net.

An important book, in which the Sir E. Cassel Professor of Banking and Currency in the University of London reviews Britain's return to the gold standard, the world situation in which it took place, and its world effects. This volume was the basis of an address given by the author to the British Association in August.

Railway Rates. By Philip Burt. (London) Sir Isaac Pitman and Sons, Limited. 6s net.

The author was formerly deputy general manager of the North-Eastern Railway, and his book is an expert examination of railway rate problems, with special reference to the Railway Rates Tribunal and the changes arising out of the "revolutionary" Act of 1921.

Discriminating Duties and the American Merchant Marine. By Lloyd W. Maxwell. (New York) H. W. Witson Company. (London) Sir Isaac Pitman and Sons, Limited, Parker street, Kingsway.

A historical study of the use of discriminating duties in American commercial policy, leading to the following conclusion:—"She used the duties only as a temporary expedient to assist in developing a status of amicable accord among the commercial nations with whom she had intercourse, and as soon as the desired status seemed assured she discarded the weapons with which the struggle had been won."

Unemployment. By Geo. W. Mullins. (London) Longmans, Green and Co., 39 Paternoster row. 6s 6d net.

Literature on unemployment is so voluminous that a new addition requires special merit to justify itself. Mr Mullins' greatest merit is a very obvious sincerity. His analysis of causes is frequently unorthodox, though interesting. But on the question of remedies he is weak, the proposals which he puts forward being over-tinged both with protectionism and idealism.

* "Encyclopædia Britannica." (London) Encyclopædia Britannica Co., Limited, 125 High Holborn, London. Three new volumes. Price 26s 6d

Modern Industrial Tendencies. By Sir Chas. W. Macara.

(Manchester) Sherratt and Hughes, 34 Cross street.

This volume consists mainly of reprinted newspaper articles, and is primarily concerned with the problems of the cotton trade, in which Sir Charles has so long been a prominent figure. But the author has much to say on other phases of the industrial problem, and in his preface makes a brief incursion into the subject of Europe's debts to America.

Industrial Conflict. By F. W. Ogilvie. (London) Oxford University Press. 1s 6d net.

An essay on the problem of industrial strife, examining the relations now existing between the State and industry, and pleading that a remedy should be found for the absence of organisation by which industry as a whole can deal with industrial affairs.

Labour Migration in England, 1800-50. By Arthur Redford. (London) Longmans, Green and Co., Limited. (Manchester) University Press. 15s net.

A studious survey of movements of population during the period of the "industrial revolution." The author is the Sir Ernest Cassel Lecturer in Commerce in the University of London.

The Bankers' Republic. By J. L. Chastenot. Translated from the French by C. H. Douglas. (London) Cecil Palmer, 49 Chandos street, Covent Garden. 6s.

Those who are acquainted with Major Douglas's credit theories will expect to find in the book, which he has thought it worth while to translate from the French, a virulent attack on the banking system and the evils of international finance, and they will not be disappointed.

George Unwin. A Memorial Lecture. By G. W. Daniels. (London) Longmans, Green and Co., Limited. (Manchester) University Press. 2s 6d net.

An intimate appreciation of a notable economic historian.

Twenty-five Years of International Trade Unionism. By J. Sassenbach. (London) Labour Joint Publications Department, 33 Eccleston square. 1s 6d.

This book has been written in accordance with the instructions of the I.F.T.U., Amsterdam, for the occasion of the celebration of its 25th anniversary.

Le Mezzogiorno Caratteristiche Dei Vasti Mercati. By Ugo Caprara. (Milan) Soc. An. Istituto Editoriale Scientifico.

Statistical Abstract for British India from 1915-16 to 1924-25. (Calcutta) Government of India Central Publication Branch. 3s 9d.

Includes statistics relating to area and population, finance, education, emigration, foreign trade, &c.

Republic of Poland: Annual of Statistics of the Ministry of Finance, 1924. Warsaw.

The Rand's 40 Years: Special Commemoration Number of the South African Mining Review. (Johannesburg) 70-71 Permanent Buildings. 1s.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 26.	October 28.

Stock Exchange business has been proceeding on spasmodic lines, and markets have moved in erratic fashion. The industrial department monopolises a good deal of attention, but gilt-edged stocks are better as a whole, on the removal temporarily of fears which profess to look for an early rise in the Bank rate. The recent failure of the New South Wales 5 per cent. four million sterling loan and the very tepid welcome accorded to several corporation issues have apparently laid a restraint upon the aspirations of other borrowers, although new foreign issues are taken readily, their prices commanding a premium in nearly every case when the market starts.

People are buying the War Loan on account of the inclusion of the half-yearly interest, due on December 1st, that will be taken from the price in about ten days' time. Australian Colonial loans have been heavy, on account of the criticism levelled against the manner in which most of the Colonies have been borrowing. But recovery ensued, and on the week no particular changes are left. Home railway prior-charge stocks are steady, and in the corporation list the recently issued stocks can be purchased at small discounts.

Brazilian bonds gave way, owing to another decline in the value of the milreis. Chinese bonds continue flat by reason of

BARCLAYS BANK

LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business.

Traders interested in the Foreign Markets are invited to correspond with

THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

the sporadic fighting reported from the country. Peruvian Corporations, after a sharp drop, picked up again on the anticipation that the report now about to appear will show a dividend on the preference stock. The new Tokio 5½ per cents. opened at 1½ths premium and rose to 1 premium, and the latest Hamburg scrip has mounted to 2½ premium. German bonds have been exceptionally active, the internal issues being in continual request on behalf, it is said, of the German Government for cancellation purposes. This is one of the market rumours to account for the strength of these stocks.

The home railway market benefited from the extremely straight talk indulged in by Mr J. H. Thomas, Mr Ben Tillett, and some of the other Labour leaders at the conference meetings held this week, in which the leaders demonstrated the futility of the Miners' Federation hope for getting financial assistance from other unions that are themselves hard up. The Argentine Railway stocks are steady, and United of Havana, after an abrupt fall, recovered quite as rapidly on the announcement of the expected 3 per cent. dividend, which makes 5 per cent. for the year. Nitrate railways and nitrate producing shares are very languid.

The rubber share market keeps tolerably steady, it being argued that, in order to maintain the present standard of output for the quarter which begins on November 1st, the consumers will have to put up the price of the product to the neighbourhood of a florin per lb during the next fortnight. Tea shares are inclined to be dull, and in the oil market the declaration of a reduced dividend on Burmah Oil, in spite of this being on a larger capital, led to a fall in the price of the shares. This decline was stayed by the announcement of an unexpected bonus share issue by the Anglo-Persian Oil. Anglo-Persians rose 15s in a breathless jump.

United Dairies dropped several shillings on the decline in the final dividend, which made 10 per cent. for the year, against 14 per cent. in respect of the previous twelve months. Electric lighting shares have been good, turning slightly dull, however, in the middle of the week as shareholders came in willing to take advantage of the rises which have occurred rather than to wait for the reorganisation of their companies' finances. The St James' and Pall Mall proposes to give £11 to every £5 share out of reserves. Royal Mail ordinary fell back several points on the passing of the interim dividend, and this had an unfavourable effect upon other shipping issues. Ebby Vale notes and shares fell heavily on the announcement that repayment of the notes will be postponed.

The tobacco market kept up fairly well, and amongst textiles Courtaulds, after a drop to 5—they were 7½ at one time earlier this year—made a mild recovery. Nueras have gone up hand-over-fist on reports that the company is going to be taken over by one of the bigger brethren. In the brewery market, Glasgow and Edinburgh joined in a sudden demand for distillers' shares, though when the buyers were satisfied the price quietly reacted. Motor shares have moved but little, in spite of the expectation that the forthcoming Show at Olympia will be one of the most interesting of its series. Banking, insurance and trust companies' stocks are holding their prices.

The Kaffir market is dull, in consequence of lack of business. Chartered keep good and show a rise on the week. The dividend is expected to be 1s 9d per share when announced next year. Diamond shares are rather spasmodic in their movements. Rio Tintos enjoyed a sharp spurt on the increase in the dividend; the full extent of the rise was not maintained. Malayan tin shares are still the most active in the mining departments, though speculative interest in this market has fallen away to a great extent. The shares of several new companies have recently been introduced. Tin has achieved a record high price since the war. A little activity developed amongst Russians. Some of the copper shares went ahead, and prices in the lists of silver-producing shares are disposed to recover, after the fall which took place in sympathy with that of the metal itself.

The death of Mr William Edward MacLagan last Sunday, at the age of 68, has robbed the Stock Exchange of a very popular broker, and the sporting world of a Rugby footballer who captained Scotland eighteen times in international matches.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel Street, Strand, London, W.C. 2.

COMPANY MEETINGS, &c.

CITY OF SAN PAULO IMPROVEMENTS AND FREEHOLD LAND COMPANY, LIMITED.

FINANCE FOR DEVELOPMENT.

The fourteenth ordinary general meeting of the City of San Paulo Improvements and Freehold Land Company, Limited, was held, on the 12th instant, at Winchester House, Old Broad Street, London, Mr Herbert Guedalla, F.C.A., chairman of the company, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the valuation reserve account showed a decrease of £42,173, and stood at £1,276,623. When land was sold the difference between the old book figure, and what he might term the new valuation, was transferred from valuation reserve account to land sales account, which latter contained the surplus realised on land sales after deduction of all expenses. The net surplus realised in Brazil during the year under review was £34,567. A further £3,000 on account of development expenses had been written off. Adding the balance brought forward of £147,492, there was a total of £182,060, and, after deducting £4,488 for London office expenses and directors' remuneration, there was left a net credit on land sales account of £177,571, representing slightly more than 10 per cent. of the issued capital of the company. The valuation reserve account was a very real and actual reserve.

At the date of the balance-sheet there was left unsold of what was termed their saleable lands 1,123 acres, and they held a further 664 acres upon which a very small value was put. Pacaembu, consisting of 165 acres, represented their most valuable property, upon which they had been spending a great deal of money in development. The next most important property at the moment was Lapa, consisting of 346 acres, where much money had been expended with a view to development for factory sites and a moderate class of house. Negotiations with the Sorocabana Railway for the construction of a station on their Lapa property had been satisfactorily concluded, and this should greatly assist an earlier realisation of the property. With reference to their Bexiga property, they hoped at any time that the negotiations for the construction of a new and important avenue would be satisfactorily concluded, the result of which would assist greatly the valorisation of the estate, which consisted of 17 acres, and was their nearest property to the centre of the town.

FINANCE.

They were looking further ahead and legislating for the development of the large Pinheiros and Butantan properties. With this object in view they had been carefully examining the question of finance, and the result of their deliberations was the recommendation, which had been approved by some of the principal shareholders who had been consulted, of the creation of a first mortgage debenture issue for an amount not to exceed £500,000. When the capital of the company was reorganised the directors agreed that, without the shareholders' permission, no mortgage on the land should be created, and during the intervening period from the receipts on account of land sales the company had been enabled gradually to develop some of its estates. To facilitate the land sales, however, it had been necessary to make loans for house construction, and for this purpose the San Paulo Mortgage and Finance Company was formed with an ordinary capital of £100,000 nominal (all held by the San Paulo Improvements Company), and an authorised debenture issue of £200,000. These debentures had been sold from time to time and the proceeds invested in house construction loans on the company's property in San Paulo.

DEBENTURE ISSUE.

At the present moment the San Paulo Mortgage and Finance Company debenture holders had not only the specific security of the house construction loans, but also the security of the assets represented by £100,000 ordinary capital of the company. Those assets consisted of book debts in San Paulo for land sold amounting to about £100,000, and in addition, as the house construction loans were made, the San Paulo Mortgage Company were also creditors of their company. To expedite sales and to increase the funds available for house construction they had in view at least another £150,000, and the directors had come to the conclusion that the simplest course was to create a direct debenture issue for £500,000, out of the proceeds of which their indebtedness of about £200,000 to the Finance Company would be discharged, and the

SECURITY FIRST
ROYAL
INSURANCE COMPANY, LIMITED
HEAD OFFICES: LIVERPOOL AND LONDON.

balance utilised for house construction loans and the development of the property. Subject to the shareholders' approval, they were negotiating at present for a syndicate to purchase the whole issue, which would carry 7½ per cent. interest, and should any shareholder desire to participate in the issue he was asked to communicate with the secretary.

He thought that if this period of financial stress in San Paulo had not intervened, realisations would have shown more satisfactory results during the past twelve months. Their company held a high reputation, and, without being unduly optimistic, it was not too much to anticipate improvement and sustained increase in sales, with a result representing a first return on the capital of the company.

The report and accounts were unanimously adopted, and the directors were empowered to create a mortgage on the fixed assets up to a sum not exceeding £500,000.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LIMITED.

SATISFACTORY YEAR DESPITE BAD WHEAT CROP.

The ordinary general meeting of the Buenos Ayres and Pacific Railway Company, Limited, was held, on the 15th instant, at Winchester House, Old Broad Street, London.

The Viscount St Davids, who presided, said that with regard to the results of the past year, the wheat crop had been a failure, so that they had had little over a half the normal crop for export. On the other hand, the result from wine was a record one, so that on balance they had a fairly satisfactory year. The total receipts from wheat, maize, oats, linseed, and all other kinds of grain and empty bags were only 11½ per cent. of the whole, and that in a year when they were able to pay the stockholders 7 per cent. As regarded the work on the line during the past year, they had been going steadily on with their policy of putting 100-lb rails in the important sections of the line. That work was always going on. Also they had been going on with stone ballasting. For the last 20 years they had been doing as much stone ballasting as possible, with the result that no other line in the Argentine Republic, as regarded road bed, could be compared with theirs. In the past year they had entirely stone-ballasted 142 miles, and, in addition, they had covered with stone against dust a further 23 miles. He thought that to do that without interfering with the general traffic on the line was pretty nearly a record.

With regard to their oil company, which had been started as a speculative venture in conjunction with the Southern and Western Railways, that now looked as if it was going to turn out very well indeed. As regarded fuel, they had of late been using coal, but it was perfectly clear that with the development of oil in the Argentine Republic, and of their own oil in particular, the time must come when all the railways would be thinking of giving up coal and taking to oil fuel. When they did so, it would be a very bad day for the miners in England and Wales in the exporting districts, and he would especially call the attention of the exporting districts of Great Britain to the fact that, if they were not careful, oil would replace coal permanently in South America.

With regard to the Argentine Transandine Railway, which at one time they had worked, but which had now been taken away from them, and was working on its own account, it had been supposed of late years that the large sum of money expended on that line by the Argentine Government had made the line good in almost every variety of weather, but during the last two years they had had heavy snowstorms and avalanches, and the line had had to be closed possibly more during those two years than ever before. He was convinced that if there was a reasonable prospect of the line being open the tourist traffic was capable of considerable development, and if the people in charge of the Argentine Transandine line could not provide a proper route, somebody else sooner or later—and not very late—would have to do it for them. It was the business of the B.A. and Pacific Co.

With regard to the prospects for the current year, he could only see one doubtful point, and that was that during the current year wages would undoubtedly be considerably higher than they had been during the past year. On the other hand, they had had a bad wheat crop, and it was only reasonable to suppose that they would have a better one, and he would be disappointed if the results of the current year were not at least as good as those for the past year. The report and accounts were unanimously adopted.

HARRISONS AND CROSFIELD, LIMITED.

ANOTHER SUCCESSFUL YEAR.

SOUND DEVELOPMENT ON CONSERVATIVE LINES.

Mr H. Eric Miller, the chairman of Harrisons and Crosfield, Limited, opened his speech at the annual meeting of the company, on the 14th instant, by paying a tribute to the memory of Mr Charles Heath Clark, whose wise leadership in the past had paved the way for the excellent results now submitted.

Mr Miller then referred at some length to the general position of the company. He showed that the previous record profit figure had been exceeded by over £80,000 this year, and observed that the improvement in profits should not be attributed altogether to the prosperity enjoyed by rubber-growers during the year. "I must point out," he said, "that our business covers a wide field, and that we are not by any means dependent for our results on the fortunes of one industry only. The financial position of the company is a strong one, and this facilitates sound development, which it is the policy of the board to continue on conservative lines. As regards the investments of the company, which, in addition to Government securities, consist mainly of shares and debentures in tea, rubber, and other companies of which we are agents, they are, as usual, entered at or under cost, and their aggregate market value was at June 30th, and still is, largely in excess of the figure at which they stand in the accounts."

POSITION OF RUBBER INDUSTRY.

Reviewing the rubber industry, Mr Miller estimated that total exports from producing countries would not exceed 600,000 tons during 1926 (about 100,000 tons more than the 1925 figure), and that something like 565,000 tons of this would be absorbed by manufacturers. "World stocks of crude rubber," he said, "have increased by 30,000 tons since the beginning of the year, and the steadiness of the market is an indication that their augmentation is welcomed by the trade. As, however, there is reason to believe that during this year a considerable number of spare tyres have been put on the road and not replaced, whilst a large number of cheap tyres containing reclaimed rubber have gone into use in the U.S.A., the present stocks of crude rubber are none too high." Mr Miller referred to the continued increase in the output of motor-buses and in the proportion of balloon tyres and of closed cars as compared with other types; further, he gave some figures of automobile production, and anticipated that the United States alone would turn out four million new cars this year, and that the total world registration would be 27 millions. "In view of the fact that no material increase in production can be looked for until new areas come into bearing, any possible addition to world stocks of crude rubber during 1927 should be nursed to provide for the further expansion in the use of rubber-shod vehicles, which can be confidently foreseen."

TEA INDUSTRY.

Mr Miller then dealt at length with the position of the tea industry, and again laid stress on the question of quality and the higher proportionate value of better-grade teas. "For reasons of climate," he said, "elevation, and soil, the quality produced in different tea-growing districts is very wide in range, whilst the quality from individual estates varies during the year according to seasonal weather changes, rapid growth increasing quantity at the expense of quality, and vice-versa. Hence arises the necessity for large stocks from which to select the ingredients for blends of uniform character. Tea producers have learnt that careful manufacture pays, and the general standard of preparation is good, except during the period of heaviest production, when plucking labour and factory accommodation are apt to be over-taxed."

VALUE FOR MONEY ONLY SOUND PRINCIPLE.

"During the last quarter of a century we have seen a retrograde change in the standard by which values of most consumable articles are judged. Nowadays the test seems to be lowest possible retail price, regardless of consequential reduction in quality. The sooner we get back to the only sound principle of insisting on value for money, whether the value be expressed in quality of material or quality of labour, the better for all. I am thankful to say that in our own business we are on this footing, with results which are satisfactory to all concerned."

Mr. Miller, with a plea for a raising of the level of efficiency throughout the nation, concluded by saying Harrisons and Crosfield might claim that in a modest way they were making a real contribution to the welfare of the country and the Empire.

The report was unanimously adopted, and a final dividend of 30 per cent. was declared on the deferred ordinary shares, making 40 per cent. for the year.

CENTRAL ARGENTINE RAILWAY, LIMITED.

INCREASE OF CAPITAL APPROVED.

The ordinary general meeting of the Central Argentine Railway, Limited, was held, on the 14th instant, at River Plate House, London.

The Chairman (Lord Forbes, P.C.) said that the outstanding features of the year under review had been the sudden and unexpected disaster to the wheat crop, the large maize and linseed crops, the reduction of traffic in livestock, the increase of wages, and the improvement of exchange. On the whole, they had good reason to be satisfied that, in a year when the wheat crop was so short as to cause a decrease in freights amounting to £749,000, they were still able to show a balance of net revenue slightly exceeding that of the previous year. The transfer from profits of £200,000 to the credit of renewals fund account was supplementary to the 2½ per cent. credited to that fund under the Mitre Law, which they found in practice was not altogether sufficient. Every effort had been made to curtail working expenses, and they were less by £130,000. The improvement in the rate of exchange had resulted in a loss of only £146,000, compared with £322,000 and £517,000 in the two preceding years.

With regard to the prospect of the railways for the ensuing year, on August 17th the general manager informed the directors that there were some 2,400,000 tons of grain stored at or in the vicinity of the company's stations, which was 650,000 tons more than the estimated quantity on hand 12 months previously. He therefore anticipated that traffic receipts would be maintained satisfactorily until the end of 1926, when they would commence carrying the new crops. The prospects for next crops so far were good, but one hesitated to say assured, in view of the disaster caused by rust which overtook the wheat crop at the end of October last year. If, however, normal weather conditions prevailed, the prospect was good.

The report and accounts were unanimously adopted. Resolutions were also submitted for the creation of £5,000,000 of new capital in the form of 6 per cent. cumulative convertible preference shares.

The Chairman said that if the resolutions met with the approval of the stockholders, it did not follow that the board had the intention of making an issue on the present occasion to the full extent authorised. That would be a matter for consideration to be dealt with according to the circumstances. Apart from the debit balance of capital account, they had the prospect of requiring capital for extensions of lines, new stations, and marshalling yards, and an obligation falling due on February 1st of \$15,000,000 of notes issued in America during the war.

The resolutions submitted were duly approved.

SUNGKAI-CHUMOR ESTATES, LIMITED.

SUCCESSFUL YEAR—INCREASED PROFIT.

The twentieth ordinary general meeting of the shareholders of the Sungkai-Chumor Estates, Limited, was held, on the 11th instant, in the Council Room of the Rubber Growers' Association, 2 Idol Lane, London, Mr H. Eric Miller presiding.

The Chairman said: It is with pleasure that your directors put before you a statement which again shows a gratifying increase in the profits earned by the company, the result for the year 1925-26 being £27,643 better than for the preceding year. It is now proposed to pay a final dividend of 15 per cent., less income-tax, making 40 per cent. for the year, absorbing £39,941 16s 10d. The addition remuneration due to the directors under the articles of association is £1,000. These appropriations dispose of all but about £4,000 of the year's profits, and the directors propose to transfer to the reserve account this amount, and to encroach on the carry-forward to the extent necessary to make up a total transfer of £7,500. The carry-forward will then amount to £21,151 14s 1d, or over 20 per cent. of the company's capital.

"With the automatic relaxation of restriction, the past year's crop shows a large increase, and the cost of production is considerably lower at 7.67d per pound. The average sale price was 2s 2.01d, London landed terms, or 1s 11.94d net.

"For the increased crop additional smoking accommodation was needed, and the total expenditure for the year on buildings and machinery amounted to £2,213 13s 5d, besides £1,528 15s 4d on

development of the land. The amount written off the value of buildings and machinery for depreciation was £691 13s 7d.

"The shortage of labour anticipated in my speech to you a year ago was felt throughout the country, and for a time neither of our estates had as many coolies as the managers would have been willing to employ, but both had enough labour to keep all essential works up to date. Both properties continue to be upkept in excellent order, and the visiting agent's reports show that they are in good condition.

"Tapping is still being done on conservative lines, and the directors have no intention of departing from this principle.

"With regard to sales, you will be interested to know that we have sold forward, of the 1926-27 crop, 145,600 lbs at an average net price of 2s 2.36d per lb, equivalent to 2s 4.35d per lb, London landed terms. Of the 1927-28 crop 35,840 lbs have been sold forward at an average net price of 2s 4.25d per lb, equivalent to 2s 6.31d per lb, London landed terms. The general outlook for our industry is healthy, and you may rest assured that we have a loyal staff, who, under the sound guidance of our visiting agent and agents in the East, will maintain the high standard of efficiency which we set ourselves."

Mr J. McNeile Miller seconded the motion, which was carried.

BANK OF POLAND.—In zloty (000's omitted).

ASSETS.	Sept. 30, 1926.	Sept. 23, 1926.	Sept. 15, 1926.	Aug. 31, 1926.	Aug.
---------	--------------------	--------------------	--------------------	-------------------	------

We are informed that Mr A. A. Roberts, director of Heppells, Limited, the London chemists, has contracted to purchase nearly all the share capital of the S.A. des Drogueries d'Egypte (established 1887), and further contracted to purchase the United Drug Stores of Egypt, comprising the businesses of Gannage et Fils (established 1886) and the New British Drug Company. The

combined net assets are said to be about £312,000, the average annual net profits since 1915 £31,100, and the combine will own six wholesale drug houses, four wholesale depots, and 27 large drug stores, constituting a monopoly of wholesale drug trade and large drug stores of Egypt and Palestine.

RAILWAYS.

BUENOS AYRES GREAT SOUTHERN RAILWAY.—The report for year ended June 30, 1926, shows that gross receipts amounted to £12,749,097, as compared with £11,577,595 in preceding year. Working expenses amounted to £8,190,206, against £7,752,294. Net receipts amounted to £4,558,891, against £3,825,301. The exchange loss on remittances was £197,446, against £375,786, leaving an available balance of £4,361,446, as against £3,449,515. The ordinary dividend and bonus is 8 per cent., against 7 per cent. for preceding year. The carry-forward is £178,634.

ENTRE RIOS RAILWAYS.—The gross receipts for the year ended June 30, 1926, amounted to £1,425,087, against £1,326,883 in preceding year, an increase of 7.4 per cent. Working expenses and net receipts also increased by 7.4 per cent. Working expenses amounted to £867,375, against £807,461, and net receipts being £557,713, against £519,423. The ordinary stockholders receive a dividend of 6 per cent. for the whole year. The company had paid nothing on its ordinary stock since the 1½ per cent. paid for the year 1910-11. The sum of £100,000 has been transferred to general reserve, and a balance of £51,147 carried forward.

BANKS.

ANGLO-SOUTH AMERICAN BANK.—The net profit for year ended June 30, 1926, amounts to £471,714, as compared with £431,022. The sum of £414,025 is brought forward from previous year, making a total of £886,639 available. The dividend for the year is again 10 per cent., less tax, absorbing £349,386. The sum of £25,000 is added to the staff pension fund, and £125,000 is applied in reduction of cost of capital employed in South America and other countries, and £12,228 is placed to legal reserve in Chile. A balance of £375,025 is carried forward. The balance-sheet has been drawn up to show the assets and liabilities at branches in local currencies converted to sterling at the rates of the day on London ruling on June 30, 1926, instead of at par rates of exchange as hitherto. Total assets amount to £61,967,918. Cash is at £5,081,525. British Government securities stand in balance-sheet at £7,366,342. Foreign Government, railway, and other securities are at £2,383,542. Bills receivable amount to £8,869,970. Holdings in other banks total £5,465,670. Advances amount to £19,520,899. Deposits amount to £34,824,312.

BANK OF NEW ZEALAND.—The board of directors have passed a resolution creating 1,406,250 new shares of £1 each with no further liability. Holders of the ordinary shares are entitled to subscribe for 937,500 new shares, carrying a fixed dividend of 7½ per cent. per annum, and the Crown is entitled to subscribe for the remaining 468,750 shares, carrying a fixed dividend of 6 per cent. per annum. All the new capital in respect of dividend and repayment of capital ranks next after the preference "A" shares. The transfer books of the bank will be closed from October 8th to 24th, both inclusive, to permit of the issue to ordinary shareholders of 468,750 of the new shares in the proportion as near as may be of one new share to eight existing ordinary shares. Payment is to be made by four instalments of 5s each per share on December 31, 1926, June 30, 1927, December 31, 1927, and June 30, 1928, respectively. Interest at the rate of 5 per cent. per annum will be allowed on instalments paid in advance.

RUBBER, &c.

HOSCOTE (MALAYA).—The report of the year ended June 30, 1926, shows a profit of £38,978. This is the company's first year, and it paid a dividend of 12½ per cent. subject to income-tax. Preliminary expenses were written off, general reserve was credited £2,500, taxation reserve £2,000, cash and investments stand at £74,974. Of this £11,814 is cash in hand or at banks, £30,000 is in Treasury bonds, and £30,000 in 5 per cent. War Loan. Sales for the period reached £72,168.

LEWA.—The report of the year ended June 30, 1926, shows a profit of £5,449 as against £2,148 in 1925. The preferred shareholders again received a 10 per cent. dividend. The balance-sheet discloses cash at £139 against £896, an increase of £1,900 in sundry debtors, that amount now standing at £3,945, and investments steadfast at £19,134. These are in Amboni Estates, Limited, but 8,000 of the 19,800 shares are held by Rowe, White, and Co. as collateral against advances.

MISCELLANEOUS.

BRITISH TANKER COMPANY, LIMITED.—The profit and loss account for year ended March 31, 1926, reveals a net profit of £393,385, to which is added £88,459 brought in, making £481,844 available. The ordinary dividend of 10 per cent., free of income-tax, absorbed £400,000, leaving £81,844 to be carried forward, subject to corporation profits tax. Since the last report the company has been made a public company, and the capital has been increased to £4,000,000 by the creation of 1,000,000 new shares of £1 each, and these were all subscribed by Anglo-Persian Oil Company, Limited, at par. In December last an issue was made of £4,000,000 5½ per cent. 10-year first debentures at 97 per cent., proceeds being applied in repaying advances previously made by Anglo-Persian Oil Company, Limited, towards the cost of building the company's fleet. The whole of the discount on the debentures and the expenses in connection with the issue have been written off against the profits for the year. Total assets are £9,018,000. Cash stands at £405,392.

WENTWORTH HOTELS.—The report of the year ended June 30, 1926, shows a net profit, after payment of debenture interest, of £68,185, as against £67,473 in 1925. This profit, together with £45,179

carried forward from 1925, leaves an available amount of £110,364; this has been utilised to pay a dividend of 15 per cent. on the ordinary shares. The sum of £5,000 has been put to reserve fund. Cash has fallen from £57,245 in 1925 to £50,023. Stocks and debtor balances have decreased from £68,619 to £51,168, and investments of £10,506 (£14,374 at cost) in the company's 4 per cent. first mortgage debenture stock have been made. The total reserve fund is now £130,000.

MANCHESTER LINERS, LIMITED.—After providing for all charges (including preference dividend), and including the balance brought forward from last year, the amount available for year ended June 30, 1926, is £79,298. The ordinary dividend is again 10 per cent., free of income-tax, absorbing £44,520, leaving a balance of £34,778 to carry forward. Balance-sheet shows cash at £35,786, against £80,212 in preceding balance-sheet. Sundry debtors are at £73,113, against £57,942. General reserve remains at £500,000.

S. INSTONE AND CO.—The report for the year ending June 30, 1926, shows a profit of £1,019, as against £28,564 in 1925. The balance brought forward being £23,188, there is an available balance of £24,206; in 1925 this stood at £74,363. Cash has fallen from £12,390 to £7,094, and stocks on hand have been entirely used up; in 1925 they were valued at £3,202. Investments (less depreciation) stand at £30,142, against £30,860.

Austin

OLYMPIA, October 22nd—30th, STAND No. 70

PRICES REDUCED! QUALITY BETTER THAN EVER!

These are two facts which unite to make an Austin, more than ever, the wisest motoring choice. Since their introduction twenty-one years ago these cars have maintained a constant lead in point of value, but never has it been more conspicuous than in the current models. Send now for details of them: then, when the Show opens on the 22nd, see them on Stand 70.

THE LATEST MODELS are to be seen in the Showrooms of our principal Distributors throughout the country, as well as at our own spacious London premises.

479-483, OXFORD STREET, W.1.
(near Marble Arch.)

† Free of tax. n Also distribution of 10 per cent., being realised proceeds of capital accretions.

per 112 lbs. Millers' offals firmer. Broad bran 7s, middlings 8s 3d, fine ditto 10s 3d, bags included, ex-mill, feed oatmeal 8s 9d, light oats 7s 3d, ground oats 12s 9d per cwt, free on rail. Oatmeal tends firmer. London-made flaked 17s, rolled oats 16s; medium, also fine cut, 16s; coarse, also medium pinhead, 16s ex-mill per cwt.

AMERICAN WHEAT MARKETS.

Fluctuations have been confined within narrower limits this week. A bearish American official report was offset by information reflecting on the quality of the Canadian crop, and the advent of unfavourable weather in the belt tended to prevent any sagging of prices. Much the most important factor, however, was enhanced buying pressure from overseas, the impact of which will fall chiefly on America and Canada for some weeks to come.

(a) October delivery. (c) December delivery.

Visible supplies of wheat in Canada, 29,284,000 bushels, show an increase of 6,867,000 bushels as compared with the previous figures. Supplies a year ago stood at 27,570,000 bushels.

OTHER METALS.

Tin.—The market opened weaker, due to easier foreign advices and freer offerings. Later prices advanced sharply on stronger foreign cables, while buyers were more in evidence. Standard cash sold £315 to £311 15s and £321, and three months £304 to £301 and £308 10s. Sales in the East were reported at £314 5s to £315 10s, £314 10s, and £318.

Copper.—A firmer market, the tone being influenced by the report of Government sanction in America for co-operative action in establishing the price of domestic copper on foreign

markets. Dealings here were on a larger scale, particularly forward positions. Standard cash changed hands at £57 10s to £59 8s 9d, near dates £58 11s 3d to £59 15s, and three months £58 2s 6d to £60 6s 3d.

SPIRIT firmer, with improved inquiries. October, also November and December, sold £34 2s 6d to £34 12s 6d, January £33 18s 9d to £34 10s, February £34 to £34 10s.

LEAD dealer on increased buying orders in view of larger fuel supplied available. Good soft foreign pig, October, sold £30 10s to £31 16s 3d, December £30 7s 6d to £31 13s 9d, January £30 7s 6d to £31 11s 3d ton.

ANTIMONY steady. English brands quoted £74 10s to £75; China crude, November-December, nominally £36, regulus £50 ton.

ALUMINIUM quiet. Home delivery £107, export £112 ton. **WOLFRAM** steady, and affloat quoted 14s 9d per unit. **QUICKSILVER** firm. Spot quoted £16 10s per bottle.

IRON AND STEEL.

The following is extracted from the weekly report issued by the London Iron and Steel Exchange. Markets are still disturbed by the industrial conditions in this country, and by the fact that the Continental steel trade has not yet settled down to the operations of the newly formed cartel. The position of British manufacturers has become increasingly difficult. The recent advance in the price of Continental fuel has made its use almost prohibitive to the manufacture of many classes of steel, and has placed those firms which were under contract to deliver such material in an awkward position, as the use of foreign coal would result in a serious loss. On the Continent the high prices which were quoted immediately after the formation of the cartel merely drove buyers out of the market, and practically no business was done for some days. As a consequence quoted prices for Continental steel fell sharply, and this week further reductions have been made. At the ruling prices

a fair amount of business has been done, as buyers seem to regard the present quotations as being on a reasonable basis.

Our Middlesbrough correspondent's report, dated October 14th, is as follows:—Pig-iron: Famine conditions prevail so far as Cleveland foundry iron is concerned. The small production is all sold for this month, and merchants and foundries are having great difficulty in securing even small parcels for November. No. 3 G.M.B. is now quoted 17s 6d per ton f.o.t. With regard to hematite, nominally mixed numbers are about 8s 6d per ton, but there is very little available, stocks having been greatly reduced. Manufactured iron and steel: At one or two local steel works a limited output is being maintained, and the demand is so strong that substantial premiums are being paid. The following are approximate quotations:—Steel ship plates and angles, about £8 12s 6d; steel rails, about £8 5s; iron bars, about £11 15s. Iron ore: This is an idle market, and best Rubio remains nominally at 21s 6d per ton c.i.f. Tees.

Our Glasgow correspondent writes:—The situation remains unchanged. Advances which were intimated by steel and iron manufacturers recently are being firmly maintained owing to the certainty of dearer fuel. Coal being produced in the district is not yet available for industrial purposes, and there is no encouragement to operate the steel and iron plants which have now been idle nearly six months. Continental material has advanced in price, and, as early delivery of this is now practically impossible, consumers are experiencing the greatest difficulty in carrying on. Inquiries have been more numerous, probably in view of the hopes of an early cessation of the coal troubles. Among recent contracts obtained locally is one for twenty locomotives for the Antofagasta Railway, South America, placed with the North British Locomotive Company, Limited. It is also reported that Messrs Orr, Watt, and Co., Limited, Motherwell, have secured the contract for the erection of a bridge over the L.N.E.R. main line at East Linton, the value of the contract being fully £12,000.

Our Sheffield correspondent writes:—The tendency in the local trades towards curtailment of activity continues. Fuel supplies

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

vailed with regard to Manila. J. October-December, changed hands £46 10s; K and L 1, £40 10s to £41 10s; L 2, £37 to £37 10s; M 1, £36 to £37; M 2, £33 to £33 10s; D.M., £27 to £27 10s. New Zealand, fair, October-December, quoted £35. African sisal, No. 1, f.a.q., £43.

SHELLAC.—Market firm. T.N., spot, 180s; December, 172s to 175s; March, sold, 171s to 175s; November-December, steamer, quoted 170s per cwt., c.f. and i. terms.

COPRA.—Market quiet, and trend of prices weak. F.M.S. Straits, October-November, to Rotterdam, quoted £26 15s; November-December, £27; December-January, £27 5s. Dutch East Indies, October-November, £26 8s 6d; Ceylon, ditto, £28 5s; South Sea, £25; Cebu, £25 17s 6d. Palm kernels steady. November-January, quoted £19 15s; December-February, £20 per ton.

TALLOW.—Messrs Colchesters and Woolner write on October 13th as follows:—The tallow market was quiet during the week, and prices are barely steady to-day. Although there were occasional private sales there were not sufficient buyers to render it advisable to offer by auction. Quotations are:—Australian mutton: Fine, 44s; good to fair, 43s to 42s; dull to dark, 39s 6d to 37s 6d; hard, 43s 6d. Australian beef: Fine, 43s; good to fair, 42s 6d to 40s 6d; dull to dark, 38s 6d to 37s; sweet, 45s. Present shipment from Australasia: Good mixed, 41s. Present shipment from South America, 41s 3d. The market letter is unchanged. Town tallow, 38s 6d per cwt. Rough fat, per 8 lbs, 2d; melted stuff, 28s per cwt. Quotations are:

—Town, 38s, net cash, naked, ex works. Country: Frail casks, 38s home melted, shipping casks, net, f.o.b., good coloured, 40s 6d; fair to dull, 38s 6d to 37s 6d. Bone fat: white none; pale none; benzine, 32s 6d; melted stuff, 33s, f.o.b.

MISCELLANEOUS.—Cocoanuts quoted 22s per 100. Coir yarn, Ceylon, £21 10s to £37; Cochin, £24 10s to £49; Ceylon bristle, £18 to £23; cinnamon leaf oil, 5d; citronella, Ceylon, 1s 7d; Java, 2s 4d.

METROPOLITAN CATTLE.—October 14

THE MONEY MARKET.

THE money market opened the week under fairly comfortable conditions, but the easier tendency did not last long, the calling in of fairly large amounts by the joint-stock banks producing some stringency in mid-week, when the rate for short loans ranged from 4½ up to 5 per cent. Thereafter, however, there was some relaxation, and loans over the night were obtainable down to 4 per cent.

The discount market, though still quiet, has been affected by the decline in the American exchange and the further loss of gold, and rates have been firm throughout the week, in spite of a Continental demand for bills, which continue in short supply. Yesterday's quotation for three months' bills was $4\frac{1}{2}$ per cent., and the Treasury bills were allotted at an average over 4 27-32 per cent. against $4\frac{1}{8}$ per cent. last week. While apprehensions of a rise in Bank rate have been lessened by the easing of the credit position in New York, the possibility of a change in an upward direction depends upon gold movements during the next few weeks. The condition of the exchanges at the moment points to further withdrawals.

	Oct. 22, 1926.	Oct. 15, 1926.	Oct. 8, 1926.	Oct. 1, 1926.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	$\frac{1}{4}$ (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	2 (Dec. 3, '25)
Discount Call	3	3	3	3	2 (Dec. 3, '25)
Houses Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$ (Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{2}$	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	..

The Bank return showed a decline of £78,100 in the gold stock, and a reduction of £631,900 in the note circulation, so that the Reserve was £553,800 higher. With a small expansion in liabilities, the Proportion was unchanged at 27.9 per cent. Government securities were reduced by £484,9000, Other securities rose by £1,913,000, and Public Deposits by £595,000, so that Other Deposits expanded by £1,380,200. Currency notes were reduced by £1,742,832 to £288,705,300, which includes £1,293,100 for notes called in but not yet cancelled. The fiduciary issue is £231,162,200, or £16,740,300 below the maximum for 1926.

NEW YORK MARKETS.

Weakness in the share markets continues, with rallies as an oversold condition develops. There are some signs of slowing down in industry, much of which is seasonal. The steel trade reports fewer new orders, and motor manufacturers are working on reduced programmes. Railroad traffics, however, are maintained at record levels, and retail trade is good. The liquidation in the share markets lessens the demand for funds, and thus offsets the approach to the highest level of industrial demand for accommodation. It is not now expected that the Federal Reserve bank will increase its discount rate. The weekly statement shows a heavy reduction in discounts, an increase in gold reserves, and a decrease in circulation. The reserve ratio is 85.4 per cent. for New York, and 74.1 per cent. for the whole system. A mild interest is taken in the European Tariff Manifesto. Wall Street opinion favours it as likely to assist European trade, and commentators point to the advantages of the free inter-State trade in this country. Belgian financing is expected early next week.

THE STOCK MARKETS.

The general tendency of the stock markets has been dull, mainly owing to the continuance of the coal dispute, but partly on vague fears of dearer money. The gilt-edged market has inclined to dullness, and home rails are heavy, but there has been a fair amount of business in the foreign market, Turkish bonds being prominent. There were a few bright features in industrials. Marconis rose sharply on the success of the beam system, and Ever-Ready shares were strong on dividend anticipations. Nobels were in demand on rumours of the chemical fusion which was announced yesterday. Tobaccos and electricity shares were lower, but motor shares attracted some attention on account of the Motor Show. Rubber shares have eased a little in sympathy with the commodity and tea shares are mostly lower, but oils have improved. Kaffirs have weakened, and the tin group has suffered a reaction. The Sunderland Corporation loan for £1,000,000 and the issue of preference and ordinary shares by Phillips Rubber Soles, Limited, were over-subscribed.

THE COMMODITY MARKETS.

A scarcity of foreign coals has developed at importing centres this week. The exhaustion of Continental stocks is increasing the demand for American coal, freights have again risen, and for the first time in the history of South Wales Spanish coals have been received at Cardiff. British iron and steel is difficult to obtain, and 120s per ton has been paid for small lots of Cleveland pig-iron. Continental manufacturers decline to quote for near delivery, and home consumers are unwilling to buy forward. With American cotton selling at less than 7d a pound, buyers of yarn and cloth have been reluctant to place orders, pending greater price stability. Raw wool quotations have not been fully maintained at overseas centres, and with home trade showing considerable dullness, British prices have declined over the week. Wheat prices are firmer, the rise in freight charges having persisted as regards shipments from America and Canada. The sugar market is quiet, and the same remark applies to coffee, but fine teas continue in good demand. Rubber is dull and featureless. Among non-ferrous metals, tin has declined on realisations; copper and lead are also lower.

FOREIGN EXCHANGES.

There was a good deal of activity in the foreign exchange market during the week, the feature being the recovery of the French franc, the movements of which at times were sensational. Belgian francs also improved materially, as did the lira, the fluctuations of the latter being only less striking than those of Paris. All these currencies fell away slightly yesterday, but the sharp appreciation of the franc has already elicited protests from the French exporter, who has, of course, up to now benefited by depreciation. The hard lesson that stability is the only condition which can benefit the community as a whole has apparently yet to be learnt in France as it has been already elsewhere. The dollar rate was weaker, probably from seasonal causes, and not, as is stated, French buying of dollars, a theory which is hardly supported by the strength of the franc. The peseta, though better, is hesitant. The steady improvement of Oslo has continued. The dollar rate opened at 4.85 $\frac{1}{2}$ on the 15th, and remained there on Saturday and Monday. On Tuesday a rather sharp decline to 4.84 $\frac{1}{8}$ -4.85 $\frac{1}{16}$ followed, and further weakness was shown next day and on Thursday at 4.84 $\frac{1}{8}$ - $\frac{1}{4}$. Yesterday there was a better tendency at 4.84 $\frac{1}{8}$ middle, forward rates for one and three months being either side of par. This is explained by the fact that the considerable sale of forward dollars at the immediately previous rate was sufficient to neutralise the natural tendency towards a premium on forward delivery. The franc opened rather better at 168 $\frac{3}{4}$, but fell $\frac{1}{2}$ next day. On Monday there was a better tendency with an opening rate of 168 $\frac{1}{2}$, and a closing rate of 167 $\frac{1}{2}$. On Tuesday this continued, Paris opening at 165 $\frac{1}{2}$ and closing at 166 $\frac{1}{2}$. On Wednesday there was a sensational improvement of 5 francs, and the rate closed at best at 161 $\frac{1}{2}$. Thursday was equally sensational, 157 $\frac{1}{2}$ being touched after the market opening at 159 $\frac{1}{2}$, but there was a reaction and the closing rate was 161 $\frac{1}{2}$. Yesterday some weakness betrayed itself at 162 $\frac{1}{2}$, but forward rates were strong at 1 $\frac{1}{4}$ and 3 $\frac{1}{4}$ francs discount for one and three months. Brussels moved on parallel, though less sensational, lines at 173 $\frac{3}{4}$ on the 15th and 173 on Saturday and Monday, following the visit of the Belgian representatives to London in connection with credit arrangements. Belief in the imminence of stabilisation improved matters still further to 171 $\frac{1}{2}$ on Tuesday and 170 $\frac{1}{2}$ on Wednesday. A reaction set in on Thursday, and yesterday the rate was back to 173 $\frac{1}{4}$, forward rates being, however, strong at $\frac{1}{2}$ and 1 $\frac{1}{4}$ francs discount. The lira opened firm at 119 $\frac{1}{2}$ on the 15th, and was better at 118 $\frac{1}{2}$ on Saturday and 116 on Monday. On Tuesday 113 $\frac{1}{2}$ was touched before closing at 114 $\frac{1}{2}$. Next day there was a sharp jump to 111 $\frac{1}{2}$, and this was maintained on Thursday, a tendency to react being evident here also at 111 $\frac{1}{2}$ yesterday. Forward rates are, however, strong at 2 $\frac{1}{2}$ and 5 $\frac{1}{2}$ lire discount. It is generally believed that the movement of these three currencies has been rather overhastened, and an attitude of reserve is therefore indicated. Oslo improved steadily from 20.27 to 19.50, Stockholm from 18.14 to 18.13, and

Copenhagen from 18.24 to 18.22. Berlin, after moving against us to 20.36 on Wednesday, on the announcement of the increase by £2,000,000 in the gold holding of the Reichsbank, closed weaker on balance at 20.38, as did Geneva at 25.13. The peseta opened weakly at 31.95, and went to 32.15 on Saturday, and to 32.00 on Wednesday, after some improvement on Monday and Tuesday. Though stronger at 31.90 yesterday, it is hesitating and uncertain, in reflection of internal political conditions. The drachma fell away to 400 on Monday and Tuesday, and was weaker by 2 points yesterday than the opening rate of 397. Bucharest was better at 905, against an opening of 915. Other European currencies call for no remark. In South America the weakness of the milreis is reacting on the coffee market, 6 $\frac{1}{2}$ d being touched on Saturday, the lowest level for some time. At 6 $\frac{1}{2}$ d yesterday there are no signs of strength, and Buenos Aires is fractionally weaker at 45 $\frac{1}{2}$ d. In the Far East the rupee remained very firm at 1s 5 $\frac{3}{4}$ d throughout, whilst the yen was even firmer at 2s 0 $\frac{3}{4}$ d yesterday, against the opening level of 2s 0d. The silver market was very weak, prices falling daily from the opening until Thursday, when there was a slight recovery. China was a heavy seller, as was at one time the Continent, and prices were on Monday lower than at any time since November, 1915. The Chinese exchanges followed silver, Hongkong receding from 1s 11 $\frac{3}{4}$ d to 1s 9 $\frac{1}{4}$ d, Shanghai from 2s 5 $\frac{1}{2}$ d to 2s 3 $\frac{1}{2}$ d, Singapore also depreciated by $\frac{1}{16}$ d to 2s 3 $\frac{1}{16}$ d.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 16th:—

EXPENDITURE.		(000's omitted.)		RECEIPTS.	
Supply Services	5,715	£	From Revenue ..	10,573	£
Interest, &c., on Debt	5,692		Increase in debt ..	2,644	
Sinking Fund	422				
Sundries	1,140				
Increase in Balances	248				
	13,217			13,217	

Revenue for the week amounted to £10,573,200, against £17,469,400. Customs produced £1,681,000, against £1,441,000, and Excise £2,480,000, against £6,935,000. Estate, &c., duties yielded £2,180,000, against £940,000. Property and income-tax brought in £1,820,000, against £2,454,000. Special Receipts yielded £150,000, as compared with £3,000,000 in the corresponding period. The week's operations increased the National Debt by £2,644,100, and caused the following changes:—

(000's omitted.)		£	
Public Department Advances ..	4,400	National Savings Certificates	+ 50
Sundries	493	Treasury Bills	+ 7,487
	4,893		+ 7,537

The floating debt was increased by £3,085,000 to £785,136,000.

FINANCIAL YEAR, 1926-1927 (April 1 to October 16, 1926).

£		£	
Total Expenditure ..	435,820,096	Raised by Revenue ..	350,914,224
		Decrease in Balances ..	3,888,918
		Amount borrowed ..	81,016,954
Total	435,820,096	Total	435,820,096

ESTIMATES for FINANCIAL YEAR 1926-7 †

£		£	
Expenditure	825,727,000	Revenue	824,750,000
Deficit	£977,000		

† Revised in Exchequer Return dated July 26, 1926.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Anglo-South American Bank, Buenos Ayres Great Southern Railway, Buenos Ayres Western Railway, Central Uruguay Railway Company of Monte Video, Inveresk Paper, Goode, Durrant and Co., and Frederick Hotels. At the meeting of the Inveresk Paper Company the chairman gave a full and interesting review of the company's activities, including the acquisition of several illustrated papers and periodicals. Mr R. J. Hose, at the meeting of the Anglo-South American Bank, surveyed the position in the bank's principal field of operations.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a review of the results of the 1924 Wage Census in the iron, steel and engineering trades of Great Britain.

EUROPE'S TRADE SHACKLES—A PLEA FOR FREEDOM.

"TRADE is not war, but a process of exchange.....in time of peace our neighbours are our customers.....and their prosperity is a condition of our well-being." We need hardly say that the *Economist*, which throughout its long career has in and out of season endeavoured to insist that economic policy should be based upon this simple truth, wholeheartedly welcomes the weighty and brilliant "Plea for the removal of the restrictions on European Trade" which was issued on Wednesday last. This document, which we print in full on a later page, would in any case command attention for the conciseness and clarity with which it sets out the fundamental issues of international trade. It is bound to exercise considerable influence on the Government of Europe because of the very great weight and authority of the men who have put their signatures to it. But it will assuredly rank as one of the great economic documents of history, chiefly because there has never been any declaration of economic policy—outside the decisions of official conferences—which has had so powerful an international backing.

The document is signed by over 200 persons representing some 16 countries. In the first place, there are the heads of a dozen Central Banks, including those of Great Britain, Germany, and Italy, the chief neutral States of Europe, with the notable omission of Spain, and certain countries of Central Europe. These signatures are of special importance, for the heads of Central Banks, though not usually Government officials, are, nevertheless, in charge of institutions the primary purpose of which is not to make profits for their bank, but to look after in the public interest the monetary basis on which the economic life of each country depends. Being free from direct political influences and unattached to the interests of particular groups or industries, the Central Banks are in a peculiarly favourable position for judging what is needed for the public well-being. Moreover, in present circumstances these Banks, which are entrusted with the difficult problem of securing monetary stability, have good reason to know how much they are hampered in carrying out their primary function by the existence of trade barriers. The signatories include a very strong representation of other banks and other financial houses in every country. The idea, however, that while bankers and people in commerce may appreciate the case for Free Trade, industrialists invariably see the need for Protection, is not borne out by the list of signatories. In the case of Great Britain there are the signatures not only of the chairman of Lloyds and three leading shipowners, but three men connected with the coal industry, seven from the metallurgical group of industries, including the chairman of Vickers, the chairman of Wm. Beardmore, and Sir Glynn West recently chairman of Armstrongs. There are two railway magnates, and, of course, an important representation of the Lancashire and Yorkshire textile industries. Clearly the British list could have been almost indefinitely extended. But a more im-

important point for English readers to appreciate is that the list includes the heads of the chemical, electric, and steel trusts in Germany, two important steel manufacturers of Austria, the heads of the largest steel-producing concern in Belgium, the leading representatives of the textile, sugar and steel industries of Czechoslovakia, the leaders of the chemical, silk, cotton, and coal industries of France, the chief officers of the Fascist organisations of Italian industry, together with the presidents of the Fiat and Snia Viscosa companies, and a representative of the Association of Mining Industries in Upper Silesia. There is naturally a strong representation in all quarters of the shipping interests. Such a list of names could not possibly have been got together on a matter of mere academic interest. The "Plea" is conclusive evidence that this problem of trade barriers is regarded as a real and urgent problem. The force of this contention is not weakened in any way by the reservations made by the French and Italian signatories, who point out that monetary difficulties and other obstacles to free commerce, such as subsidies and barriers to the movement of emigrants, &c., are also hindrances to the recovery of trade.

The Plea has been endorsed at a meeting of the Council of the International Chamber of Commerce, which met this week in Paris, and its arguments supported by facts which the Chamber has been collecting. In an important statement by the acting president, Sir Alan Anderson, which included a summary of the economic conditions in the countries which are members of the Chamber, Sir Alan prefaced his remarks by declaring that "To move goods, men, and ideas is to civilise. We claim for the trade between nations that it is the sovereign agent to improve the lot of mankind, and that it does not deserve to be barred out as it is to-day. We say that the first of trade barriers is the lack of a stable token with which to trade, and the next the rivalry of one State against another, which bars trade and so damages everyone. Our national committees report facts as they see them. They state no policy, but together they prove, or seem to me to prove, that we are right when we urge that nations must pull down their barriers before trade can revive." Sir Alan then proceeded to illustrate his thesis from the reports on the effect of trade barriers of various countries, which will later be laid before the International Economic Conference of the League of Nations by Sir Arthur Balfour.

We are not simple enough to suppose that the tariff walls of Europe will fall down at the blast of the trumpet, even when blown by such competent instrumentalists as the two hundred distinguished signatories of the present plea. It was in 1820 that the merchants of London presented to Parliament their famous petition for the abolition of the restrictive system; but it was not until 1860 that the last protective duties of one tariff were finally swept away. Moreover, the pages of the *Economist*, from its formation in 1843 to the present day, show how unremitting are the efforts of those interested in particular industries to seek opportunities of sheltering themselves from the winds of competition by protective measures imposed at the expense of the public. The present plea—representing though it does a widespread recognition of the folly of Europe's present practices—cannot be expected to do more than change the trend of international trade policy. Nevertheless, it is more than a small mercy that the beginnings of a change are manifested. The next step is with the International Economic Conference, which is expected to meet at Geneva next year, and is, by the issue of this manifesto and all that it means, invested with a far greater importance than it might otherwise have possessed.

SOUTH AFRICA AND THE BRITISH COMMONWEALTH OF NATIONS.

At the opening meeting of the Imperial Conference last Tuesday, the spokesmen of the United Kingdom, the Dominions, and India set forth, in a general way, their respective points of view. All the speeches were carefully and moderately phrased—as, indeed, was to be expected from statesmen of such experience, holding such responsible positions—and all but one of these speeches

have been accepted by the Press and public in Great Britain as authoritative expressions of views which are more or less common to all parties concerned. The one speech which has excited comment is General Hertzog's, and there has been a tendency to contrast it, somewhat unfavourably, with the pronouncements of the other Dominion Prime Ministers—for example, Mr Bruce. A contrast there certainly was, yet perhaps not precisely of the nature which at first sight would appear. The first impression may be that General Hertzog has diverged from the line taken, for example, by Mr Bruce, by raising more awkward and delicate questions; yet this judgment will hardly bear examination. Mr Bruce eschewed questions of political status and concentrated on economic relations; and we submit that, in the present situation of the Commonwealth, economic relations are the more dangerous ground of the two. We do not at all criticise Mr Bruce for entering on this ground. The Commonwealth would not long endure if its members shrank from a frank exchange of opinions concerning the most difficult problems that lie ahead of us. We merely suggest that the contrast between Mr Bruce's and General Hertzog's attitudes as reflected in their speeches was not a contrast between tact and its opposite or between an attitude of solidarity and an attitude of particularism, but rather a contrast between a forward-looking and a backward-looking standpoint. The problem of inter-Imperial economic relations, with its bearing upon the traditional economic policy of the United Kingdom, is, we believe, one of the difficult questions of the future. On the other hand, we believe that the problem of South African nationalism is essentially a question of the past, which will rapidly be crowded out of the minds of the South Africans themselves by problems more urgent and more vitally affecting their national welfare.

"The corner-stone of the Empire," said General Hertzog, "is the goodwill of those who compose it..... South Africa is anxious to possess that will equally with every other member of the Commonwealth; but that will can be assured for the future only if she can be made to feel implicit faith in her full and free nationhood on the basis of equality with every other member of the Commonwealth. That implicit faith she does not possess to-day, but she will possess it the moment her independent national status has ceased to be a matter in dispute and has become internationally recognised."

We respectfully suggest that several of the statements made by the South African Prime Minister in this passage reflect past controversies and feuds rather than present conditions or future problems and dangers. In what respect is the present status of the South African Union inferior to that of other members of the Commonwealth? Like every other State represented at the Imperial Conference (with the exception of the Irish Free State, which did not exist on January 10, 1920), South Africa obtained international recognition of her independent national status when she was enrolled as an original member of the League of Nations. She had the advantage of Canada in having a mandate assigned to her; and she had the advantage of the United Kingdom inasmuch as her mandate for South-West Africa was placed in the "C" class, in which the Mandatory Power has greater freedom of action than in mandates of the "A" and "B" classes, such as were assigned to the United Kingdom and to France. But this mention of mandates at once raises the very pertinent consideration that an "independent national status" involves not only advantages and privileges, but burdens and responsibilities, for nations who boldly launch their ship of State upon the high seas of international relations. Take the South African mandate for South-West Africa, which has been not only difficult and costly to administer, but has on certain occasions placed South Africa in an unenviable position, when she has had to account for her stewardship to the League of Nations. Had the responsibility for South-West Africa, like that for Swaziland, Bechuanaland and Basutoland, been assigned to the United Kingdom, the South Africans would have been spared at least one bad quarter of an hour. We do not for a moment suggest that, on a long view, this would have been a preferable

arrangement. We believe that the art of independent nationhood can only be acquired by practice, and we sympathise with the desire of the South Africans to obtain opportunities for this practice. We simply point out that independence means responsibility.

Looking to the future, one can easily discern that the responsibilities and anxieties of the South African Union are destined to be serious. To test this, it is only necessary to glance at an up-to-date and competent account of the country and its problems—for example, Mr Manfred Nathan's "South Africa from Within," which was published the other day.* Mr Nathan significantly divides his book into two parts: a "historical retrospect," coinciding with General Hertzog's field of vision, as we see it, and a description of "South Africa as it is." As we read this latter part we again have the feeling that the problems here brought to light were unaccountably absent from General Hertzog's mind while he was making his speech in Downing street last Tuesday.

What, after all, is the position of "South Africa as it is"? It is surely a position of such difficulty, and even danger, that South Africans simply cannot afford to aggravate the problems of the present and the future by sentimentally keeping alive the problems of the past.

The Dutch-descended and British-descended citizens of the Union, between whom the old nationalism still maintains a barrier, number between them little more than one million and a half, and this tiny handful of discordant white men is "up against" nearly five million black men in the territories of the Union alone. This figure does not include the three-quarters of a million of "coloured" (i.e., cross-bred) persons and Asiatics, or the black population in the enclaves still directly administered by the Colonial Office (a population which, by itself, outnumbers the white population of the Union). The "colour problem" in South Africa is infinitely more serious than it is in the United States. In the United States the coloured population (including the cross-breeds) amounts to less than one-eighth of the total population; it is not being reinforced by immigration, and it is separated from the main body of the black race by the Atlantic Ocean. On the other hand, the South African whites not only constitute less than a quarter of the total population in their own country. The black population, which outnumbers them at home, extends across tropical Africa in a solid, unbroken mass, from the territories of the Union to the southern edge of the Sahara. In this situation, can the English and Dutch South Africans possibly afford to go on indulging in national controversies among themselves?

Again, would the South Africans be well-advised to push to logical extremes their undoubted rights as citizens of a Dominion? It is a commonplace that no country with Dominion status is now held within the empire by any other band than its own free will. In this respect, South Africa is on precisely the same footing as Canada. Yet the Canadians, who "live in a fire-proof house," would run much less danger than the South Africans if they relinquished their Imperial insurance policy. As regards both Europe and the Pacific, Canada has interests which are identical with those of her mighty neighbour the United States; and a Canada which had severed all connection with the British Commonwealth might still rest secure that these interests would be protected. On the other hand, a completely independent South Africa would have to rely entirely on her own resources, and she would then become acutely aware that, besides clinging uneasily to the tip of Black Africa, she had an open flank towards the Indian Ocean. The political questions raised by Indian immigration into South Africa are just as dangerous as those raised by Japanese immigration into Canada and the United States. Could South Africa deal with such problems alone? Is it not to her permanent advantage to remain a member of a great Commonwealth of nations which contains not only white peoples of the same racial stock as the South African whites, but also India and a chain of Tropical African dependencies? Within the Commonwealth both the native problem and the Asiatic problem which beset South Africa, can be handled by free and friendly negotiation, on terms honourable to all parties. Once break this link, and South Africa's horizon, towards

tropical Africa, and towards the Indian Ocean, becomes as deeply overcast as the American and Canadian horizon towards the Pacific. Canada, with the United States at her side, could probably brave the storm without having Great Britain behind her. Could South Africa do the same? We should like to learn General Hertzog's views on this important matter.

ASQUITH.

THE last sentence of the letter in which Lord Oxford announced his resignation of the leadership of the Liberal Party was the one that aroused a general welcome, for in it he stated his intention to continue to take part in the public life of the country. It is easy to understand that one who has borne the burdens which, for so long a period, Lord Oxford has carried on his shoulders should feel at the age of 75 that the time had come to lay aside such a burden as that of the leadership of a divided and embarrassed Party. Having laid it down he will, however, remain for many years, we trust, a leader among our active Elder Statesmen. To attempt anything in the nature of a political obituary is therefore, happily, out of place. Nevertheless, the surrender of Party Leadership, held for eighteen years by one who was Prime Minister through the greatest crisis in our history, is a milestone by which the contemporary chronicler must pause and meditate.

What place among England's Statesmen history will accord Lord Oxford as present observer, with the dust of recent battles still in his eyes, can pretend to foresee. But on three points we may venture with some confidence to anticipate future judgments, if only because upon these points there is no difference of opinion to-day even among political partisans of the fiercest antagonisms. The first is that he achieved what probably no other man could have done when he brought Britain into the war as a united country; the second, that he is incomparably the greatest Parliamentarian of our times; the third, that by his integrity, honour, high purpose, unselfish loyalty to colleagues, and scrupulous fairness in party conflict, he sensibly raised the tone of public life in this country.

These claims are so widely accepted that few words are needed to support them. Had a Conservative Government been in power in 1914, would there not, without question, have been a strong anti-war party through the early days of the struggle? Had not a man of Mr Asquith's peculiar gifts held the Premiership, would not the Liberal Cabinet, and with it the whole rank and file of the Party, have split in twain? We have yet to meet any inside observer of the politics of those days who would venture a negative to either question. Through those perilous days, almost up to the eve of the *coup d'état* of 1916, it was a commonplace in all political camps that "Asquith is the only possible Premier to unite the Parties and the country." On the second point that we have made above dissent is scarcely to be feared. There is, indeed, only one name that the memory can suggest as even a distant rival of Mr Asquith's as a "House of Commons man." In using this phrase we have in mind not merely oratory and personal prestige, but a constant and a conscious support and vindication of the Parliamentary system. The third point, that he raised the tone of public life, has been freely testified to in the past few days by political friend and foe alike, and by none more emphatically than by that most bitter of political foes, Lord Carson.

Of many statesmen it is easy to say that it is for one or two definite acts, decisions, or pronouncements, or for the espousal of one definite cause that their names will be remembered. With what in particular, we wonder, will posterity inseparably link the name of Asquith. It may be with his unshakably constant championship of Free Trade, or with his dauntless fight for Irish Home Rule, a policy consummated at last by a Government consisting entirely of those who in this matter had been his irreconcilable opponents. It may be with the programme of social reform initiated by the powerful Liberal Government of 1906 onwards. It may be with

* John Murray. 12s net.

his vital decision that if Germany invaded Belgium, Britain would at once plunge in to support both her and France. It may be for the Parliament Act which, by curtailing the veto of the House of Lords, made Liberal legislation effective and a Labour Administration a possibility. For his contemporaries the choice is difficult, for it is embarrassed by intimate memories and partisan predilections. But let us apply this test. Let us take as the qualities that are most generally associated with the name of Asquith, courage, dignity, probity, sagacity, eloquence. Three occasions on which these qualities were most strikingly displayed leap at once to the mind. First, the great speech in the House of Commons on the August Bank Holiday of 1914; second, the decision (and its announcement to Parliament) at the height of the Irish crisis to meet the Curragh threat by personal assumption of the post of Minister for War; third, and to the minds of many the greatest of all, the silence—more eloquent than volumes of speech—with which he accepted his supersession in 1916.

When Mr Asquith followed Mr Balfour into the House of Lords the House of Commons lost the second of the last two survivors of the scholarly tradition of political orators. Both, happily, will figure prominently in the classic debates in the Upper Chamber which in the next year or so are expected to range around the problem of constitutional reform. It is ironical, perhaps, but fitting, that the author of the Parliament Act should make his voice heard in the assembly whose reform he initiated but did not consummate. In these impending debates Lord Oxford will have one more opportunity of enunciating the faith in Parliamentary institutions which from his earliest political days up to the General Strike of this year has been so constantly a guiding star of his public career. Let us remember, too, those of us especially who are critical of his actions which have led up to his retirement, that it was this very faith (coupled, perhaps, with undue reliance on the judgment of biased councillors) which caused his last Party decision, which was also one of the comparatively few miscalculations made in an exceptionally long and exacting life of political responsibility. Our hope, shared, we believe, by the whole country, is that Lord Oxford, freed from the burden of leadership and the rough and tumble of electoral strife, will find himself able the more generously to contribute to the counsels of the nation the practical wisdom that can only be the fruit of such a ripe experience and so full a service as his. As for the Party whose leadership he lays down, it is to be hoped that it will devote its energies to the pursuit of unity, in the attempt to promote which Lord Oxford has met with his greatest political failure. The world has never been in greater need than it is to-day of real Liberalism; and in the affairs of our own country there is abundant room for a strong and united Party pursuing a true Liberal policy.

ECONOMIC PROSPERITY AND THE MOTOR INDUSTRY.

THE Motor Show which opened at Olympia this week seems likely to herald in a year of still further expansion in the British motor industry. Our economic difficulties may possibly have the effect of curtailing the expected development of the home market, but it is evident that manufacturers are making a big effort to make fresh headway in export markets. The growing importance of the motor in the economic life of every nation lends increasing importance to the factors influencing this industry. There are still some who regard motoring mainly as a luxury, in which the nation in present circumstances can ill afford to indulge, while others are worried about the question of whether we are near to "saturation point" and must expect to see a setback in the near future.

Such themes will no doubt be the topic of conversation in interested circles for a long time to come, and it is interesting to look at them in the light of American experience. Mr Henry Ford, for example, in his latest

book,* asserts that America does not possess its 20 million motor-cars because it is prosperous, but is prosperous because it has been. "The general prosperity of the country, in spite of bad farm years, is in direct proportion to the number of automobiles.... That is inevitable, for you cannot introduce such a vast amount of developed power into a country without the effects being felt in every direction. What the motor-car does, among other things, quite apart from its own usefulness, is to familiarise people generally with the use of developed power—to teach what power is, and to get them about and out of the shells in which they have been living." Again, "I am convinced that the remarkable prosperity of the United States is in a large part due to this added horse-power, which, by freeing the movements of men, also frees and awakens their thoughts."

Mr Ford tells us that up to December 1, 1925, his factories had, through cars and tractors, added to the world nearly 300 million mobile horse-power, or about 97 times the potential horse-power of Niagara Falls. The whole world uses only 23 million stationary horse-power, of which the United States uses more than 9 million. These are stupendous figures, and make those claimed with justifiable pride by our largest car manufacturers appear very small. At present there is one motor-car in this country to every 48 persons; in America there is one to every 5.98 persons. None but an unreasonable optimist would suggest that the proportion of cars to population in this country can be increased to that of the United States. But we are inclined to think, and no doubt Mr Ford would agree, that were this country passing through a state of industrial prosperity the motor-car owning population in Britain would be considerably larger than it is. And perhaps, as Mr Ford claims, our prosperity would then be enhanced by the growth in the use of motor-cars. But it is difficult to accept the contention that an increase in domestic transport, of itself, can bring prosperity, especially to a country that is struggling along a rough road in the valley of industrial depression. A view very different from that of Mr Ford is set out in a letter from a correspondent printed on page 682. But it is possibly somewhat unfair to take the general argument and apply it to our present particular case. No one will deny the benefits to civilisation brought by the introduction of the railways, and although the part played by the motor-car in commercial transport is relatively small in comparison with the revolution brought about by the steam locomotive, it has supplemented the transport services of the railways on a very substantial scale. To this extent, therefore, and taking the long view, Mr Ford's argument has much to be said for it.

In comparing England with America, however, we have to bear in mind that the greater density of population in these islands makes the road problem a more difficult one for us than for America, which has still enormous scope for road building. At present, however, even with its enormous area, America has only 500,000 miles of first and second-class road for its 20 million cars, or 40 to the mile. Other "passable" roads amount to 2½ million miles—giving a ratio of 6½ cars per mile of road of all kinds. In Great Britain we have a million cars for 40,000 miles of classified road, or 25 cars to the mile (40 vehicles to the mile if we include motor-cycles), but if we take account of our 180,000 miles of road of all kinds the ratio is about 5½ cars per mile (or 8½ vehicles, including motor-cycles). If, however, the figures were analysed by districts they would doubtless show that America has a much greater car density in its more densely peopled areas than has Great Britain. Whether these figures indicate any difficulty in the near future on the ground of insufficient road space we cannot here discuss; but in this connection Mr Ford makes the interesting point that his output, colossal though it is, would only suffice to meet the requirements of existing Ford owners on the assumption that every Ford car is replaced in six years. Clearly the American industry must continue on an enormous scale even to meet the need of "replacements."

The American industry is, however, clearly undergoing some very instructive developments. According to an article on the motor trade, published by "Moody's Invest-

* "To-day and To-morrow." Reviewed in the *Economist* 6 October 9th, p. 590.

tors' Service," of New York, conditions in the American automobile industry just now are irregular, varying from record-breaking prosperity for some companies to actual depression for others. "Besides this, there is uneasiness felt in many quarters over the extension of instalment buying. Ford competition is being felt less than formerly by other low-priced cars; automobile prices are being reduced; exports are gaining, registrations are exceeding the supposed saturation points of the past." For the first eight months of 1926 the car output in the United States was 2,893,779, against 2,529,981 in the corresponding period of last year; the "truck" output was 366,059, against 319,439; and the total 3,259,838, against 2,849,420. Some interesting figures are given of the outputs of the two greatest producers. Ford production during the first half of this year was 858,972 cars and trucks, as compared with 943,535 for the first half of 1925, the share in the total output of the industry being put at 35.1 per cent., as compared with 42.8 per cent. for the year 1925 and 51.1 per cent. for 1924. Moody's adds, however, that it is not improbable, "in view of Ford's price-cutting habit, and of some small improvements which are being made in the car, that his proportion of the total may again rise to 38 or 40 per cent." The share of General Motors in the aggregate output has substantially increased this year. For the first eight months this concern's sales to dealers were 857,961 cars and trucks, and the American output 3,259,838, so that its share in the total business was about 26.3 per cent., against 19.2 per cent. in 1925 and 16.2 per cent. in 1924. However, the General Motors' share in 1909 was 22.3 per cent., from which it gradually fell to 9.4 per cent. in 1916, then recovered to 21.3 per cent. in 1918, fell to 12.8 per cent. in 1921, and recovered to 19.5 per cent. in 1923. Thus there have been violent fluctuations in this company's share of the aggregate business, and past experience does not warrant the assumption that its share is hereafter going to show permanent stability or consistent growth.

The battle between these two giants of the American motor trade forms the subject of an enlightening article in a recent issue of the *New Republic*, of New York (September 15th). Here it is pointed out that General Motors is in many respects in accord with the Ford policy. It makes good articles cheaply, seeks large sales volume rather than large profit margins, invokes standardisation and mass production, pays wages probably as high as Ford's. In 1919 the 85,980 employees of General Motors turned out 391,738 cars. In 1925 the number of employees had shrunk to 83,278, while the output had more than doubled. The future may be precarious for either Mr Ford or General Motors, or both, as the approach to the saturation point intensifies competition. But what is more likely is that a depression in the industry would drive out the weaker competitors, and while causing temporary loss to the large concerns would leave them in a stronger position than ever. But the writer points out that in important respects General Motors differs radically from the Ford Motor Company. "It was not originated, and is not now owned and controlled, by a genius of production. Its formation and history are intimately connected with financial reorganisations and stock market speculations. Its principal owners are not now supremely interested in nothing else than the manufacture of motor cars. It distributes a large share of its earnings to those not active in the business. Its board of directors and finance committee smack strongly of banker control.... This does not mean that General Motors has acquired its strength through methods partaking of monopoly, as have many of the country's great corporations. It has no control of raw materials, it owns no crucial basic patents, it partakes in no agreements or understandings for the limitation of production, it has not arisen on the foundation of a protective tariff. The manufacture of automobiles is quite obviously a keenly competitive business. This Wall Street merger has, in a free field, become a successful rival of Ford through the use of Ford's own technical methods. That is not saying that if it eventually competes its way to a monopolistic position it may not fall back on the easier way. But so far it has not been able to do so."

The struggle for supremacy between these two great concerns is not purely a matter of domestic interest, and

developments will be keenly watched by industrialists in all parts of the world. Manufacturers here are, of course, vitally concerned in America's export business in cars, but it is a matter of less concern to the American manufacturer, amounting to little over 10 per cent. of total output. In the first six months of this year General Motors exported 10.03 per cent. of the cars produced, as compared with 12.07 per cent. for the whole of 1925 and 11.04 per cent. in 1924 and 4.79 per cent. in 1922. Moody's remark that "as an outlet for any large expansion, or as a basis for hoping that our own industry will escape the effects of the next general business depression, wherever this occurs, this export business is not sufficient, and is not likely to become so."

Of the twelve American motor companies which have published profit figures for the half-year, six show increases and six decreases, and without the General Motors figures a decrease in net earnings in comparison with 1925's is shown, amounting to 7.6 per cent. Including General Motors, the increase is 13.9 per cent.

GREAT BRITAIN AND CHINA.—II.

WHY, since the Washington Conference, has Japan ceased to be the "principal foreign bugbear" in the eyes of the Chinese, and why has Great Britain been cast for this unenviable rôle?

Japan—to consider her first—has profited by an unpleasant experience, retrieved a false step, and deliberately paid a stiff price for an object which she had made up her mind to secure. Japan's unpleasant experience was the dismal failure of the policy of the mailed fist, which she tried in 1915, when the European Powers were preoccupied with their own war, and when China seemed to offer a free field for Japanese ambition. Long before the European Powers and the United States were at leisure to turn their attention to the Far East again, the Chinese had substantially checkmated the Japanese by their own characteristic, and most effective, methods of passive resistance. The Washington Conference registered Japan's defeat, and gave her the occasion for making a more or less dignified withdrawal; but Japan only retreated in order to make a better leap in a less clumsy style. Ever since the Washington Conference she has borne the pin-pricks of the now somewhat exultant and exuberant Chinese with studied impassivity; and the combined virtues of Buddhism and Christianity have seldom been practised with such perseverance or with such success in the pursuit of enlightened self-interest. During these troubled years in China, Japanese as well as British ships have been shot at and commandeered, and Japanese nationals have suffered all those losses, inconveniences, and indignities which have been inflicted on British subjects, but the Japanese Government has steadfastly looked the other way, and its policy has been rewarded by a steady increase in Japanese trade.

This is how Japan has retrieved her position in China, but how has Great Britain lost hers? Certainly it is not the Japanese who have blackened our faces. They may have looked on with a certain complacency while we have been getting into trouble and their own trade returns have been increasing; they may have made up their minds that if any foreign nation again attempts to use the "big stick," it shall not be Japan this time, but Great Britain. Fundamentally, however, Japan and Great Britain have a common interest as the two principal foreign nations that trade with China, and the Japanese realise this fact, and act upon it, as well as we.

Does Great Britain, then, owe her present unpopularity in China to the malicious propaganda of some other Power—for example, Soviet Russia? There is no doubt that, ever since Ambassador Karakhan arrived in China in 1922, the Soviet Government has been deliberately striving to undermine Great Britain's position there; but the British, like other European nations, often flatter Soviet Russia by attributing greater success to her endeavours than she actually achieves. It is true that in China, at this moment, Russian influence makes a brave show. In the north-west the

Nationalist Dictator Fêng, and in the south the Nationalist Government at Canton, have taken Russian money and availed themselves of the services of Russian experts and organisers. Yet there is no evidence that these momentary protégés of the Soviet Government have become converts to Bolshevism, or even that they intend to work in concert with the Russians for any long period. Living, as all these Chinese dictators and provisional Governments do, from hand to mouth, they take what they can get from any quarter and give as little as possible in return. Russian influence over the Nationalists is a very flimsy façade, and it is safe to prophesy that it would collapse if the civil war were to result in the supremacy and security of the Nationalist Party. This Russian influence cannot be compared for a moment with the material hold which Japan possesses in Manchuria, any more than the assistance received from Russia by Fêng and by the army of Canton can be compared with the assistance which the Northerners received recently from Japan, in those operations in which they compelled Fêng's army to retreat north-westwards over the passes. The true test of Russia's present strength or weakness in China is her position in Manchuria, where she is "up against" Japan, and here her recent record is one of continual discomfiture. While Japan pushes her control of railways farther and farther into the Russian zone, the Russian management of the Chinese Eastern Railway has to submit to arbitrary, humiliating, and ruinous treatment at the hands of the Manchurian administration, with its effective Japanese backing. Japan is fast winning from Russia the political and material ascendancy over what is still nominally the Russian zone in Manchuria, and the China Maritime Customs Report for 1925 shows that the foreign trade of Manchuria is rapidly being diverted from the Russian frontier stations to the Japanese port of Dairen.

Thus we should be flattering Soviet Russia if we attributed our present unpopularity in China entirely to her machinations; and, what is more dangerous, we should be flattering ourselves. We must face the fact that the principal cause of our unpopularity is our own traditional position, and that, if Russian influence were to be eliminated from China to-morrow, we could not recover popularity or our trade without revising our own point of view. This is not to assert that our behaviour has been unreasonable, but rather that our policies have not kept pace with the times, and that Russian propagandists have seen how to take advantage of our inelasticity.

British public opinion about China, so far as it exists, is inevitably coloured by the views and feelings of the British communities in China, and those communities are still unduly dominated by what may be called "the Treaty Port state of mind." It is not exactly the fault of the British communities that this state of mind prevails among them. It is the natural effect of the isolated and transitory environment in which they have grown up; but though it would be unjust, unchivalrous and unprofitable to blame them in their present difficult position, it is right to suggest to them that their position will go from bad to worse unless they make an effort to readjust their outlook upon China and the Chinese to the facts as they are to-day. In China this "treaty-port system" (which is inevitably taken for granted by those who have grown up under it) is really a hot-house plant. It was imported, less than a century ago, ready-made from the Levant, after China had been compelled to open her doors to foreign trade by the application of force. Even in the Levant, where it is at home, this system, with its extra-territorial jurisdiction and its treaty-made tariff maxima, is now in its last agonies. The capitulations are contrary to the spirit of the age, and it is not reasonable to suppose that they can be maintained in China when the victorious Allied Powers have been deprived of them in Turkey, and when the defeated Powers—Soviet Russia as well as Germany—have forfeited them everywhere, China included. The British communities in China are bound sooner or later to face the fact that the sheltered and privileged position from which they have hitherto done business with the Chinese is doomed; and at the same time they may draw fresh hope from the great probability that an unavoidable loss of security will be more than compensated by an increase of opportunity for any Westerners in China who can adapt themselves to doing business with the Chinese

on an equal footing, out in the open. The "treaty-port system" stands for a limited amount of business on privileged terms—a mediæval way of doing business which is an anachronism in the modern world, with its wholesale industrial methods and its notions of nationalism and democracy.

The capitulations are like a *cap-à-pie* suit of fifteenth-century plate armour—all very well, so long as the Chinese were armed with the primitive bow and arrow, but an encumbrance, and no protection, now that they have possessed themselves of machine-guns, field-guns, aeroplanes and wireless communications. Yet the "treaty-port habit of mind" inclines the Englishman in China, when he describes the machine-gun in the hands of the Chinese, and the Chinese taking aim, to pull down his vizor, clasp on an extra breastplate, and stuff the joints in his armour with strips of chain-mail—without reflecting that all this extra armour is quite useless against bullets that could pierce it as if it were so many layers of brown paper. The extra armour simply immobilises the Don Quixote who puts it on, and so makes him an easier target for the marksman. The safer, as well as the bolder, method of defence is to throw the armour off before the other man has time to fire, come forward to meet him, man to man in the open, and see if you cannot come to terms with him before you have given him time to make war on you.

What, then, should be the British policy in China in concrete terms? Our first aim should be to persuade the other non-Chinese parties to the Washington Treaties to join us in an active attempt to restore peace between the warring factions in China, and to re-create from among the real leaders in the country a new Central Government which will thus combine responsibility with power. It would be useless to wait for one faction to restore the unity of China by defeating all the rest. The balance appears to be too even for any military decision. It would be not only useless but disastrous to back some single faction, for experience has shown that any Chinese leader who has once made himself the instrument of foreigners can never hope to retain the support of the Chinese people. The civil war must be ended by negotiation, since it cannot be ended by force, and in a Chinese "peace by negotiation" Great Britain and the other foreign Powers interested in China have a part to play which may be honourable and profitable to all concerned. They can act as honest brokers between the rival Chinese leaders; they can enlist Chinese public opinion in the cause of peace by holding out as the prize of attaining peace the abolition of foreign privileges and the provision of credit for purposes of reconstruction; and in this they will find their own reward. When peace is restored in China, and when the resentment of the Chinese people against the foreigner—a resentment which now lights upon each foreign nation in turn—has been extinguished by the abolition of unwelcome conditions, the foreign trade of China, which is making headway even now, may be confidently expected to increase by leaps and bounds.

ARGENTINE RAILWAYS.

At the beginning of the financial year 1925-26 conditions in Argentina appeared favourable. There was still a large quantity of grain awaiting transport, and the exchange position was more stable. Good weather gave rise to hopes of an abundant harvest in 1926, and at the beginning of this year considerable optimism prevailed in business circles. But before many weeks had passed estimates of some of the crop yields were amended in a downward direction, and there was a pronounced swing towards pessimism. Recent figures, however, show some improvement. It is true that during the six months ended June 30th last exports of wheat compared with the corresponding period of 1925, declined by 22 per cent., and meat by 38 per cent. Against this, however, maize shipments rose by 54 per cent., linseed by 142 per cent., wool by 53 per cent., and barley by 124 per cent. This recovery in the second half of the year naturally benefited the great railway companies. The outlook for the current

year, too, is regarded as good. The area sown with cereals is estimated at some 8 per cent. over last year, and as weather conditions have proved favourable up to the present, a better yield than last year is expected. Our first table gives a record of dividend distributions by the four principal railway companies operating in Argentina:—

Company.	1913-14.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.
	%	%	%	%	%	%	%
B.A. and Pacific, ord. ...	nil	nil	nil	7	7	7	5
Do 5% 2nd non-cum. pref.	5	nil	5	5	5	5	5
B.A. Great Southern ...	5	4	4	7	7	6	7
B.A. Western ...	5	4	4	7	6	6	7
Central Argentine, ord. ...	5	4	4	6	5	6	6
Do deferred ...	5	nil	nil	6	6	6	6

There is nothing startling in this list of dividends, but it is an excellent one none the less, both the Great Southern and the Western having each been able to distribute 1 per cent. more, and all the others to maintain payments. In the next table the results for 1925-26 are set out, together with comparative figures for some years past:—

	Pacific.	Southern.	Western.	Central.
	£	£	£	£
Gross receipts 1925-26 ...	7,555,746	12,749,097	4,961,273	11,261,375

* Including losses on exchange.

Both the Pacific and the Central secured lower gross receipts than in 1924-25, although the Southern and Western companies were able to record increases under this heading. In the case of the Pacific it must be remembered that, owing to the transfer to the Southern of the Bahia Blanca line, four months' figures of the latter were included in the Pacific's accounts for 1924-25, and these, of course, are not incorporated in the current accounts. The experience of the Southern, indeed, was particularly satisfactory, the rise, as will be seen above, having been from £11,577,596 to £12,749,097. As regards working expenses, we find that the two companies whose gross receipts were lower were able to effect economies, while the increase in the gross receipts of the other two was accompanied by a similar movement in expenses. Thus we find that, with the exception of the Central, whose expansion in expenses was larger than its gain in receipts, the figures of net receipts are better than in the previous year. As regards losses on exchange, it is pleasing to note a general scaling down of the figures. In the case of the Western, the exchange loss on remittances was reduced from £171,157 to £99,409; in the case of the Southern from £375,786 to £197,446; of the Pacific from £203,338 to £70,220; of the Central Argentine from £322,252 to £146,312. The Southern took advantage of the opportunity to create a special reserve of £250,000 for any contingencies which may arise in connection with the Bahia Blanca and North-Western Railway, which it now controls, and to transfer £200,000 to the general reserve, which, on the last occasion received no appropriation.

The next table distinguishes the receipts for passenger train traffic and goods traffic, giving a comparison with the figures for 1924-25:—

	Passenger Train Traffic.			Goods, Merchandise, and Live Stock.			Total (Including Miscellaneous).		
	1925-26.	Inc. or Dec.	%	1925-26.	Inc. or Dec.	%	1925-26.	Inc. or Dec.	%
B.A. Pacific ...	1,809,167	— 575	— 0.03	5,604,11	236,492	4.0	7,555,746	320,394	4.1
B.A. Gr. Sthn. ...	4,140,911	+ 187,490	4.5	7,652,754	+ 783,178	10.4	12,749,097	+ 1,171,502	10.1
B.A. Western ...	1,460,496	+ 26,176	1.8	3,349,890	— 185,383	5.9	4,961,273	+ 207,673	4.4
Central Arg. ...	3,567,025	+ 101,835	2.9	7,238,700	+ 397,042	5.2	11,251,375	+ 306,532	2.6

As will have already been gathered, the B.A. Great Southern and Western companies were the only undertakings whose total traffics increased. The Pacific was exceptional in that both its passenger and goods traffic showed a falling off. The Southern shows the largest increase, the percentage being 10.1.

The changes in total receipts are compared in the table below with those of recent years:—

	1913-14.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.
	%	%	%	%	%	%	%	%
B.A. Pacific ...	— 12.7	+ 30.8	— 16.4	+ 8.9	+ 16.1	+ 5.29	— 13.7	— 4.1
B.A. Great Sthn. ...	— 16.8	+ 30.1	— 8.4	+ 3.6	+ 13.9	+ 13.3	+ 6.6	+ 10.1
B.A. Western ...	— 13.0	+ 41.0	— 21.1	+ 1.1	+ 13.3	+ 6.3	— 3.7	+ 4.4
Central Arg. ...	— 6.6	+ 41.1	— 0.2	— 3.1	+ 12.8	+ 6.6	+ 1.8	— 2.6

	1913-14.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.
	%	%	%	%	%	%	%	%
B.A. and Pacific ...	62.63	69.69	85.68	71.24	63.26	64.28	68.13	70.02
B.A. Great Sthn. ...	58.56	69.19	81.33	74.34	61.99	60.44	66.96	64.24
B.A. Western ...	58.82	69.48	90.88	78.72	66.18	62.62	65.03	61.32
Central Arg. ...	58.54	67.66	79.82	78.26	67.66	66.20	69.71	69.88

The best record in the matter of receipts over the past four years is that of the Great Southern, and this company, it will be observed, can now show the lowest ratio of expenses to receipts at 64.24 per cent.

The next table shows a classification of expenditure:—
(00's omitted.)

	Running Expenses.		Maintenance.		General and Miscellaneous.	
	1924-25.	% of Revenue.	1924-25.	% of Revenue.	1924-25.	% of Revenue.
Pacific ...	£ 2,890.3	36.7	£ 2,819.8	37.3	£ 1,961.8	24.9
Great Southern ...	3,744.5	32.3	3,984.6	31.3	2,887.9	24.9
Western ...	1,636.9	34.4	1,629.9	32.8	1,030.9	21.5
Central ...	4,003.2	34.6	4,022.9	35.7	3,032.5	26.2

With its substantial traffic increase the Great Southern has been able to reduce its ratios of running and maintenance expenses, while for the Pacific these figures are higher in both cases.

Our final table shows the gross receipts for the first 14 weeks of the year 1925-26, together with prices of ordinary stocks compared with a year ago and the present yield:—

	Gross Receipts, 14 Weeks to Oct. 13, 1926.	Increase or Decrease.	Prices of Ord. Stocks.			Present Yield.
	£	%	End of Oct., 1924.	End of Oct., 1925.	Sept. 30, 1926.	%
B.A. and Pacific ...	1,807,000	+ 25,000	82½d	84½d	89	7 15 9
B.A. Great Southern ...	2,631,000	+ 45,000	88½d	90½d	101½	7 17 9
B.A. Western ...	1,138,000	+ 52,000	82½d	79½d	89	7 17 3
Central Argentine ...	2,911,000	+ 21,000	76½d	74½d	77	7 17 0

The favourable outlook in Argentina, and the recent increase in traffic receipts, as shown above, are reflected in prices of the stocks, which are higher now than they have been for some time past. Yields, however, are still on the generous side, and it is reasonable to assume that if recent progress is maintained they will show a further narrowing tendency.

Although neither the Cordoba Central nor the Entre Rios companies are included in this group, the achievements of these undertakings for the past year are worthy of reference. In November last the Cordoba Central was reconstructed, the capital being reduced by £813,724 to enable certain debit balances to be written off. Apparently this operation was effected at a propitious moment, for the report for the year to June 30th last shows an increase in gross receipts of 3.77 per cent. This increase was accompanied by an improvement in exchange, resulting in the balance available showing a considerable increase.

Gross receipts totalled £3,490,762, compared with £3,363,848. Expenses took £2,458,237, against £2,335,887, the net receipts being £1,032,525 compared with £1,027,961. Interest, &c., received was £35,608, against £22,263. Loss on exchange absorbed £45,244, compared with £119,010. After meeting debenture interest, &c., there remains £387,433, as against £248,284 last year, the latter going to reduce the debit balance. The ordinary income stock receives 2 per cent., less tax, leaving £8,321 to be carried forward. No payment has been made on the ordinary stock since December, 1913.

The Entre Rios report for 1925-26 also showed an improvement. Gross receipts rose by 7.4 per cent., and as working expenses advanced by a similar percentage, the net receipts were higher by 7.4 per cent. The loss on exchange was reduced from £38,584 to £18,682, and the reserve received £100,000, against nothing in the previous year. The ordinary shareholders received a total payment of 6 per cent., which is the first distribution since 1910-11, when only 1½ per cent. was disbursed by the company.

As usual, the directors of the Buenos Ayres Great Southern, Pacific, and Western companies have to record satisfactory progress in the exploitation of Argentina's oil resources, an enterprise in which most of the railway companies are interested. The production of oil by the Ferrocarrilera Company, in which the three concerns are jointly interested, amounted to 137,400 tons for the year, compared with 70,435 tons for the previous 12 months. Viscount St Davids, at last week's meeting of the Great Southern, stated that prospects for the petroleum undertaking are excellent. "As regards fuel," he continued, "we on our line have of late been using not oil but coal, but it is perfectly clear that with the development of oil in the Argentine Republic, and with the development of our oil in particular, the time must come when all of us will be thinking more or less of giving up coal and taking to oil. Well, when we do it will be a very bad day for the miners in England and in Wales who live and work in the exporting districts, and I would especially call the attention of the exporting districts of Great Britain to the fact that if they are not careful oil will replace coal, and will do so permanently in South America."

THE PLIGHT OF NEW ENGLAND'S TEXTILE INDUSTRIES.—I.

(BY A CORRESPONDENT.)

PEOPLE who cherish the idea that the United States presents an unbroken sea of prosperity from Cape Cod to San Diego might revise their opinions after a study of the conditions in the area known as New England, which comprises the States of Maine, Vermont, New Hampshire, Massachusetts, Rhode Island, and Connecticut. After the primary stage of pioneer settlement had passed, New England attained wealth and prosperity through her ships, her fishing industry and her lumber trade, and when these declined she became the chief seat of manufacturing industry in the Republic. For many years the bases of her economic life have been the boot and shoe and cotton and woollen industries, and for one hundred years in each of these she was the dominant factor. The boot and shoe industry of New England, although nowadays it only produces one-half of the footwear made in the United States, is still in a reasonably prosperous condition, but her two great textile industries are faring less fortunately.

She still produces one-half of the output of woollen goods of America, and possesses one-third of the country's cotton mills, but neither industry is in a satisfactory condition, although both are protected by high tariffs against foreign competition. Undoubtedly the cotton industry is in the worse plight. Every week there is recorded the failure of one or two mills, or the bankruptcies of several houses engaged in some correlative line of enterprise either as carders, converters, jobbers, or wholesalers. Others that have escaped bankruptcy show very serious decreases in their profits; for instance, one of the largest mill groups declared in its recent financial report that it had incurred a loss of \$520,819 in 1925, and an additional loss of \$202,709 in the first half of 1926. As a result, the banks

have been very chary about lending support to cotton firms, and the weaker mills are in constant financial difficulties. Investors, following the lead of the banks, are fighting shy of purchasing textile stocks whose prices have been falling sharply; stocks of one mill which had a market value of \$165 a few years ago are now appraised only at \$2 each. Very few of the mills are paying dividends out of their earnings, and corporations which a few years back at the height of the war-time boom were distributing stock dividends of 100 per cent. are now paying 1 per cent., or scraping up low dividends from their accumulated surpluses.

Fall River and New Bedford have between them 7,440,000 spindles, almost one-fifth of all the spindles in the United States, and the Boston *Herald* recently carried the following item:—

"A survey of the cotton mills in New Bedford indicates that the plants were operating approximately 70 to 75 per cent. of their normal capacity in the weaving departments, with the spinning departments falling 20 to 25 per cent. below this level; mill authorities in Fall River placed production at slightly more than 50 per cent. of the normal."

Cotton, a trade publication, reports that in Fall River, in 1925, only .68 per cent. was paid by 14 out of 37 corporations, the lowest average since 1912, and last June the Boston *Globe* reported that for the New Bedford mills the "average yield per share for the quarter on a capitalisation of \$70,028,100 is approximately \$1.18, or less than \$5 for the year. Returns for the half-year are the smallest in more than ten years."

A census of Fall River taken last June revealed a loss of 2,000 in population, and an increase in empty tenements of over 900. In Lawrence, another cotton textile centre, a local paper on July 3rd printed an assessor's survey, which showed that of the 36,000 people normally employed in local textile industries there were at that time 9,000 totally unemployed and 4,000 more on part time. But yet the fact remains that, despite this serious depression in New England's cotton industry, there has been no real decrease of spinning activity in the United States for the simple reason that there has been an enormous expansion of the cotton industry in the Southern States.

The *American Wool and Cotton Reporter* of April 15th last tells something of the story in the following passage:—"In 1897 there were less than 4,000,000 cotton spindles in the South, with an investment of approximately \$100,000,000, and giving employment to 50,000 people. To-day there are more than 1,200 mills in that section, with 17,180,302 spindles, representing an investment of more than \$1,000,000,000, and giving employment to over 300,000 operatives. Within the past quarter of a century the Southern industry has increased 318 per cent., as compared to only 40 per cent. in the older New England industry. And this growth has been continuous, for approximately 530,000 spindles were installed in Southern mills in 1925, as compared to 400,000 in 1924."

In competition with New England the South has many advantages. The average tax levied in Alabama is only \$1.55 per \$100, against \$2.54 for Massachusetts, \$2.51 for New Hampshire, and \$2.13 for Rhode Island, and Alabama points the moral with an advertisement headed, "Move that mill down South to Alabama, then pay your dividends from taxes saved."

In addition, the South offers a much lower scale of wages and labour laws, which place no obstacles to continuous operation of factories night and day. Massachusetts, on the other hand, has a law which restricts women and minors to a 48-hour week, and absolutely forbids the employment of a woman after 6 p.m., whether or not she has worked at all during the day.

It happens, however, that New England has to a certain extent been the architect of her own decline, for she has been exporting capital in large quantities to build up the mills of the South. To-day most of the great New England textile corporations have Southern branches, and the Alabama Power Company recently carried the following full-page advertisement in a textile paper. It was headed, "What a relief," and said:—

"Now that the ———— Manufacturing Company has started operations in Alabama, what a relief they must find it to be able to experiment freely with economic methods of

production. What a relief to be confident of workmen amenable to any proposed changes, and eager to co-operate in any measures, whether this means operating 20 looms or 40 to the operative."

Labour in the Southern mills is mainly drawn from the black or poor white population, and it is largely unorganised. On the other hand, in most of the New England textile towns the trades union spirit is strong, and time and again the workers have struck when mill-owners attempted to meet the lower Southern prices by making each operative tend more machines. When one such strike took place recently, the mill-owners promptly announced that they intended to rush work on a new factory in Alabama which they were constructing and fill their orders there.

But other factors beside Southern competition are responsible for the slump in the New England cotton industry. During the war and post-war boom the cotton manufacturers allowed their industry to undergo an extravagant expansion, and they failed to equip their organisations to meet changed demands and styles after the war. The over-expansion was the result of a mad race for production supremacy among cotton manufacturers which began about 1912, and only the artificial prosperity created by the war prevented the present depression from making itself felt sooner. The high wages which prevailed in every American industry, even remotely connected with the war from 1914 onwards generated a huge purchasing power, and many manufacturers were misled into the belief that the tremendous market which was thereby created would be permanent. This abnormal market took up the surplus of over-production, and encouraged further expansion, but when the post-war adjustments had to be made, wages returned to a more normal level, and the abnormal purchasing power disappeared, with the result that the market, for which provision had been made in the way of production, could not absorb the quantity of goods offered it.

At the same time, there was a radical change in the class of goods demanded. Women, for instance, instead of fulfilling hopes that they would return to the use of longer skirts, and increase the consumption of cotton, practically abandoned cotton for clothing purposes, and turned to silk or artificial silk because it was more luxurious and not much more expensive. Manufacturers did not sufficiently appreciate the effect of these changes in fashion, and mills found themselves carrying heavy stocks. Wholesalers and jobbers were also confronted with a retail market which had been upset by these changes, and retailers, loaded up with stocks for which there was no longer a brisk demand, were uncertain what the consuming public would next order. So they began a policy of hand-to-mouth buying, and this, of course, retarded the consumption of the excess stock held in the mills. Orders for new types of goods came in, but they were mostly in small lots, and production costs were accordingly increased. This practice of small lot manufacturing had the effect of raising retail prices, and now the cotton men are disposed to allocate part of the blame for their distress upon the retail merchants who, they assert, have kept the prices of cotton goods at so high a level that the public has found it profitable to use silks.

THE GERMAN STEEL INDUSTRY AND ITS CUSTOMERS.

INTERESTING light is thrown on the relations between the German signatories of the New International Steel Pact and the steel-using industrialists of Germany by a joint statement contained in a recent number of "Stahl und Eisen," the substance of which is as follows:—

The negotiations for an international steel understanding have led to an agreement between the steel-producing industries of Germany, France, the Saar, and Luxemburg for the purpose of forming an international Steel Syndicate. In addition, an agreement has been concluded with the steel producers of France, the Saar, and Luxemburg, which provides for the import of certain quantities of pig-iron, steel, and rolled products from these countries into Germany. Details of this latter agreement have not yet been reported. The conclusion of these agreements permits the hope that the European steel market, which in recent years has experienced extreme

dislocation, will become more stable, to the advantage of both producers and consumers. It is further expected that the economic and political relations between the participating countries will be thereby improved. Since the German steel-consuming industries fear that international co-operation between the steel-producing industries might result in unintentional reactions and grievous harm to the German steel-consuming industries, numerous conversations have been held between leaders of the two parties before the conclusion of the International Agreement was reached on the following questions, which take account of the economic needs of both sides:—

(1) The aim of the International Steel Association shall be the adjustment of production to consumption and the control of export prices for iron. The association shall under no circumstances confine itself merely to the regulation of the reciprocal deliveries in the home markets of the countries participating in the Pact, but shall primarily endeavour to avoid mutual under-bidding in the export markets for steel, which has often led to special profits for the consuming industries of foreign countries as compared with the steel-consuming industries at home.

(2) The association shall not cause a rise in home prices of the German syndicates or trading combines, although the steel-producing industries as well as the steel-consuming industries do not debar themselves from benefiting by a change in the general situation. Concurrently with the raising of export prices the difference between export and home effective prices shall be reduced, and as soon as possible completely eliminated. In order to meet the needs of South German conditions the steel import contingent taken by Germany from Lorraine, Luxemburg, and the Saar will be supplied to the German selling syndicates, but sold through the existing normal supply channels. Further, the price policy for steel in South Germany shall be so arranged that the pre-war relation between South German and North German prices, which has in the past been responsible for the creation of the local industry, shall be maintained. The export of the German steel-consuming industries shall not be prejudiced by the international agreement.

(3) In order to establish the necessary connection between the International Steel Pact and the official commercial treaties, the two industries concur in the understanding that the approval by the German Government of the private steel negotiations is contingent upon securing in the Franco-German official commercial treaty within a reasonable time such tariff treatment on the French side for the exports of the German iron-consuming industry (including at least *de facto* most-favoured-nation treatment) that favourable export possibilities to France will be secured. For the same reason in the special negotiations with the French and the Belgian-Luxemburg industries the right shall be provided to give notice at any time to terminate the agreement relating to the contingents to be taken by the German steel trade from these countries in the event of the Franco-German or Belgo-German treaties expiring or not coming into force.

(4) The Ruhr Steel Trust realises that the restriction of the steel-producing and the steel-consuming industries each to its own region of production is in the interests of healthy economic development and of desirable co-operation and understanding between the groups of industries, and in a special agreement with the association of the steel-consuming industries has already declared its intention of not expanding beyond its present share in the consuming industries. Since the consuming industries consider any further interference of the steel-producing industries into the finishing trades would be adverse to their interests, the representatives of the steel-consuming industries express the hope that all other concerns in the steel-producing industries will associate themselves with the declaration of the Ruhr Steel Trust.

(5) In view of the importance of the international steel negotiations for the steel-producing industry, the steel-consuming industry declares itself ready, despite the previously mentioned fears, to place no difficulties in the way of these international associations so long, as in accordance with the terms and in the spirit of this agreement, no harmful results follow for the steel-finishing industries. In this connection the steel-consuming industries will not seek to promote any alteration of the present German steel tariff rates so long as these tariff rates are indispensable for the steel-producing industry as a foundation of its international negotiations. In case of any difference of opinion which may arise in the interpretation by either side of these agreements, a mutual understanding shall be arrived at by negotiation.

A PLEA FOR THE REMOVAL OF RESTRICTIONS UPON EUROPEAN TRADE.

The following is the text of the manifesto issued under the above title on Wednesday last by leading bankers, merchants, and manufacturers of Europe and the United States.

We desire, as business men, to draw attention to certain grave and disquieting conditions which, in our judgment, are retarding the return to prosperity.

It is difficult to view without dismay the extent to which tariff barriers, special licences and prohibitions since the war have been allowed to interfere with international trade and to prevent it from flowing in its natural channels. At no period in recent history has freedom from such restrictions been more needed to enable traders to adapt themselves to new and difficult conditions; and at no period have impediments to trading been more perilously multiplied without a true appreciation of the economic consequences involved.

The break-up of great political units in Europe dealt a heavy blow to international trade. Across large areas, in which the inhabitants had been allowed to exchange their products freely, a number of new frontiers were erected and jealously guarded by Customs barriers. Old markets disappeared. Racial animosities were permitted to divide communities whose interests were inseparably connected. The situation is not unlike that which would be created if a confederation of States were to dissolve the ties which bind them, and to proceed to penalise and hamper, instead of encouraging, each other's trade. Few will doubt that under such conditions the prosperity of such a country would rapidly decline.

To mark and defend these new frontiers in Europe, licences, tariffs and prohibitions were imposed, with results which experience shows already to have been unfortunate for all concerned. One State lost its supplies of cheap food, another its supplies of cheap manufactures. Industries suffered for want of coal, factories for want of raw materials. Behind the Customs barriers new local industries were started, with no real economic foundation, which could only be kept alive in the face of competition by raising the barriers higher still. Railway rates, dictated by political considerations, have made transit and freights difficult and costly. Prices have risen, artificial dearness has been created. Production as a whole has been diminished. Credit has contracted and currencies have depreciated. Too many States, in pursuit of false ideals of national interest, have imperilled their own welfare and lost sight of the common interests of the world by basing their commercial relations on the economic folly which treats all trading as a form of war.

There can be no recovery in Europe till politicians in all territories, old and new, realise that trade is not war but a process of exchange, that in time of peace our neighbours are our customers, and that their prosperity is a condition of our own well-being. If we check their dealings, their power to pay their debts diminishes and their power to purchase our goods is reduced. Restricted imports involve restricted exports, and no nation can afford to lose its export trade. Dependent as we all are upon imports and exports, and upon the processes of international exchange, we cannot view without grave concern a policy which means the impoverishment of Europe.

Happily there are signs that opinion in all countries is awaking at last to the dangers ahead. The League of Nations and the International Chamber of Commerce have been labouring to reduce to a minimum all formalities, prohibitions and restrictions, to remove inequalities of treatment in other matters than tariffs, to facilitate the transport of passengers and goods. In some countries powerful voices are pleading for the suspension of tariffs altogether. Others have suggested the conclusion for long periods of commercial agreements embodying in every case the most-favoured-nation clause. Some States have recognised in recent treaties the necessity of freeing trade from the restrictions which depress it. And experience is slowly teaching others that the breaking down of the economic barriers between them may prove the surest remedy for the stagnation which exists. On the valuable political results which might flow from such a policy, from the substitution of goodwill for ill-will, of co-operation for exclusiveness, we will not dwell. But we

wish to place on record our conviction that the establishment of economic freedom is the best hope of restoring the commerce and the credit of the world.

DESCRIPTION AND BUSINESS STANDING OF THE SIGNATORIES.

AUSTRIA.	
OSCAR BERL	Merchant.
DR OTTO BOHLER	Steel Manufacturer.
DR SIEGMUND BROSCHE	Chemical Manufacturer.
DR PAUL HAMMERSCHLAG	Oesterreichische Credit-Anstalt für Handel und Gewerbe.
ALFRED HEINSHEIMER	Managing Director Vienna Bank-Verein.
MAXIME KRASSNY-KRASSIEN	Chairman Niederösterreichische Escompte-Gesellschaft.
DR ARTHUR KRUPP	Berndorfer Metallwaren-Fabrik.
JULIUS MEINL	Manufacturer.
LUDWIG NEURATH	Oesterreichische Credit-Anstalt für Handel und Gewerbe.
DR REDLICH	Ex-Minister.
DR RICHARD REISCH	President Austrian National Bank.

HELMER STEN	General Manager Aktiebolaget Svenska Handelsbanken.
K. A. WALLENBERG	Chairman Stockholms Enskilda Bank.
MARC WALLENBERG	Chairman Swedish Bank Association.

SWITZERLAND.

G. BACHMANN	President Banque National Suisse, Zurich.
FREDERICK DOMINICE	Adm. Union Financiere de Geneve.
LEOPOLD DUBOIS	Chairman Société de Banque Suisse.
ALBERT LOMBARD	Vice-President Swiss Association of Bankers.
RUDOLF SARASIN	President Chamber of Commerce, Basle.
CARL SULZER SCHMID	President Gebrüder Sulzer Aktien-gesellschaft, Winterthur.

UNITED STATES.

GATES W. MCGARRAH	Banker, New York.
J. J. MITCHELL	President Illinois Merchants' Trust Co., Chicago.
J. P. MORGAN	Messrs. J. P. Morgan and Co., New York.
THOMAS N. PERKINS	Delegation of the Citizens of the U.S.A., Member of the Reparation Commission.
MELVIN A. TRAILOR	President First National Bank, Chicago.
ALBERT H. WIGGIN	President Chase National Bank, New York.

The Imperial Conference Opens.—On Tuesday the Imperial Conference opened at 10 Downing street, the first day's proceedings consisting of a speech of welcome by Mr Baldwin and replies by the overseas Premiers. The former reviewed the problems for discussion, to which we devoted an article last week, and gave the Conference a motto in the words attributed to St Augustine: "In essentials, unity; in non-essentials, liberty; in all things, charity." The Dominion replies followed a general line of harmony, the only discordant note being struck by General Hertzog, whose statement of South Africa's position we discuss in an article in this issue. Wednesday was devoted entirely to a comprehensive survey of foreign affairs by Sir Austen Chamberlain. The session was held in secret, as will be that of Monday next, when the Conference will discuss Sir Austen's statement. On Thursday the Conference turned to questions of inter-Imperial trade. Sir Philip Cunliffe-Lister, the President of the Board of Trade, and Mr Amery, Secretary of State for Dominion Affairs, both made lengthy statements. The former gave figures of inter-Imperial trade and made claims for the results of the new preferences which require careful examination. But the main feature of the speeches of both Ministers was the insistence on methods, other than preference, for increasing Empire trade. Questions of shipping, marketing, publicity, and research were the main themes. Yesterday the economic discussion was continued, but the official reports are not available at the time of going to press. So far one point which stands out clearly, not only in the Conference proceedings but in the numerous speeches made by the Dominion Premiers at a series of banquets whose frequency promises to embarrass our visitors, has been that tariff and preference problems are kept conspicuously in the background. Indeed, the remarks of the President of the Board of Trade in defence of past action are so far the only direct reference to the question, and no overseas delegate has thrust it forward. This conforms with our expectations, but it marks a very important change from 1923, and is a good augury for solid and successful work by the Conference on other and more practical lines. The work on trade problems will now mainly be delegated to committee. As for the main Conference, next week should bring it face to face with its principal tasks, for on Monday the overseas delegates will outline their position regarding issues of foreign policy, especially those which arise out of the Locarno Treaty.

Coal Deadlock Persists.—Another week has passed and practically no progress has been made in the coal dispute. Mr Cook and his fellow-officials have spent the week in a campaign to stem the tide of the return to work and to bring miners out again. These efforts have had varying results in different districts. Here more men have gone back, and there men who were working have come out. He has, at any rate, been more successful than King Canute, for the figure of those at work is now only 234,000, against 230,000 a week ago. In the chief export districts the net return to work is trivial; Scotland stands as firm as ever; in Lancashire and North Wales there are 1,300 fewer men at work than a week ago. Moreover, the Leicestershire miners' officials, who had recently led a return to the pits, have now agreed to support the policy of the Miners' Federation, and Leicestershire is to be the scene of an intensive effort over the week-end by the Federation leaders. Rumours of a new move by the Government were current in mid-week, but have been officially denied. Thus, while the economic loss to the country piles up apace, the end of the dispute seems as far off as ever. The owners' vision of the drift back to the mines growing rapidly into an avalanche, and even our own expectation that normal resumption of work might take place by mid-November, are fading away, and unless something tangible emerges from the conference between the miners' leaders and the General Council of the Trade Union Congress, which is proceeding as we write, the outlook remains as black as ever. In these circumstances, importance attaches to a letter appearing in the *Times* of

yesterday from Mr Arthur Pugh, whose year of office as chairman of the Trade Union Congress has just ended. The voice of Mr Pugh commands attention, not merely because of the part he has played in the industrial troubles of the past six months, but from the fact that the Iron and Steel Trades Federation, of which he has long been secretary, owes in no small measure to his conciliatory powers a remarkable absence of strikes or lock-outs in the great industry with which he is concerned. Mr Pugh makes an appeal to reason and common sense. He describes the losses imposed upon the country already by the coal dispute and pleads for an effort to avoid the more desperate effects of the "fight to a finish" with which we are now faced. Mr Pugh's cry is "Back to the Report." "Given the opportunity," he says, "there is no responsible representative of the Trade Unions but will willingly co-operate in an endeavour to effect a temporary arrangement that will enable the mines to resume production pending a permanent national agreement being worked out on the basis of the Coal Commission's Report." The appeal comes late, very late. Again and again inept leadership has robbed the miners of a chance to obtain a settlement on such a basis as Mr Pugh advocates. Will they listen to reason now? Nevertheless, the alternative is still so deplorable that we cannot but re-echo the first words of Mr Pugh's letter. "Is it too late?" Even at this late hour, if the miners' leaders would go back to the Report, as constantly through these months we have urged them to do, the Government could hardly evade the responsibility of implementing their original acceptance of the Report, and the owners, with their visionary time-table of a rapid return to work going obviously and seriously wrong, may be the more disposed than of late to choose wisely between a real settlement and all the immeasurable consequences of a very prolonged and bitter war of exhaustion. In which direction the interests of the country lie, whether on a short or a long view, there can be no shade of doubt. May we not at long last hope for some glimmerings of leadership and consideration for the nation's well-being?

The Crisis in Soviet Russia.—It is as difficult as ever to obtain clear and trustworthy information regarding internal affairs of the U.S.S.R., and, in commenting upon the present crisis (which is obviously of first-class importance), it is therefore safest to confine attention to certain general features which have emerged through the mist. The crisis seems to have been brought about by the coincidence of three distinct controversies—the controversy over the internal organisation and discipline of the Russian Communist Party, which has been the mainspring both of the Soviet Government and of the Third International; the controversy over the question whether the resources of the U.S.S.R. are to be exploited in the interests of Communist propaganda abroad, or whether the Third International is to be made to serve the interests of Russian foreign policy; and the controversy over a question of internal Russian politics, that is, whether the interests of the tiny industrial proletariat or those of the vast mass of the peasantry are to receive first consideration. Stalin, who dominates the party in power, and who appears to be winning in his contest with a heterogeneous opposition led by Zinoviev and Trotsky, is reported to be an autocrat and a realist. As an autocrat, he stands for maintaining that rigidly solid party formation which imposed itself upon the Bolsheviks half a dozen years ago, when they were struggling for existence against a world of enemies, but which is no longer a necessity of existence for them to-day. As a realist, he is in favour of directing Russian foreign policy in accordance with Russia's material interests as a State and a country, instead of sacrificing Russian interests for the sake of propagating Communism beyond the frontiers. And, again, as a realist, he is opposed to any further measures for promoting the material interests of the Russian industrial proletariat at the expense of the peasantry, who vastly outweigh the urban minority both in numbers and in productivity. The crux of the situation is that the urban proletariat, though from the economic point of view it is an almost parasitical excrescence upon agricultural Russia, is the political element from which the

phalanx of the Russian Communist Party is recruited; and if the Party were to come down on the side of the opposition leaders, it would make little immediate difference what the political sympathies of the peasantry might be. On this point, therefore, Stalin may be expected to compromise by maintaining the proletarian minority in their present position of privilege, though without attempting to increase their privileges or to stem the tide which is setting irresistibly towards a predominance of the country over the town. He will probably compromise, again, on the question of party discipline, which becomes harder to maintain as foreign pressure relaxes, and as the internal balance of political power shifts to the country from the town. If Stalin wins definitely, we may see Russia revert to a tempered and undoctinaire, but none the less effective, autocracy, which may differ little in essence from the autocracy of Peter the Great or Nicholas the First.

The Return of Dr Seipel.—The fall of the Ramek Ministry in Vienna has been followed by the return of Dr. Seipel to office. His Cabinet includes four members of the late Cabinet, and, in addition, Dr. Dinghofer, a member of the Pan-German party, who was prominently associated with the movement for re-union with Germany, Dr. Kienböck, who was Dr. Seipel's former Minister of Finance, and Herr Schmitze, who was also a member of the last Seipel Cabinet. Politics in Vienna have lately been getting into somewhat troubled waters, and Dr. Seipel will at once have to turn his attention to the difficult question of dealing with the Civil Servants, whose renewed agitation for increased salaries, if acceded to, would make very much harder the task of maintaining Budget equilibrium. In his statement of policy, Dr Seipel referred to "the great need to extirpate root and branch the unsavoury and corrupt practices that of late had been tainting public life in Austria"; he declared his intention in dealing with State servants "to remain mindful of his country's agreement with the League of Nations in regard to the preservation of Budget equilibrium"; he commented with favour on the demand that was being raised for the removal of restrictions upon European trade, and agreed that such a step was necessary, and, finally, declared that he would promote the social legislation sponsored by the Opposition. If he failed in his programme he would seek an early general election. Socialist speakers, however, expressed a lack of confidence in Dr. Seipel's promises in view of the personnel of his Cabinet. Dr. Seipel has no easy task in front of him, but the knowledge that Austria has once more at the helm her strongest and most experienced politician, who steered her successfully through the much more critical and difficult reconstruction crisis, will undoubtedly do much to create confidence abroad that she will overcome her present difficulties.

A Great Journalist.—We offer our congratulations to Mr C. P. Scott, proprietor and editor of the *Manchester Guardian*, on the attainment of his 80th birthday and on the completion of 55 years' work in the editorial chair. The occasion was marked by the presentation of his bust by Epstein to the City of Manchester, and by a series of tributes from public men of this and other countries, which, while remarkable for their warmth and diversity, are merely an adequate expression of gratitude for a great public work performed by a man of outstanding vision, courage, and charm.

Employment in September.—There was a further small improvement in employment during September, although as a whole it continued to be seriously affected by the stoppage in the coal mines. According to the *Ministry of Labour Gazette*, among the 11.9 million workpeople insured under the Unemployment Insurance Acts in Great Britain and Northern Ireland, the percentage unemployed at September 20th was 13.9*. This compares with 14.2* at August 23rd, and 12.0 a year ago. The total number of registered unemployed at the end of September was approximately 1,582,000*, as compared with 1,606,000* at the end of August, and 1,401,000 at the end of September 1925. Among the members of trade unions, the per-

centage unemployed at the end of the month was 13.6*, as against 13.3* per cent. at the end of August, and 11.4 per cent. a year ago. The following table gives the monthly movements in trade union figures for some years past:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1920.	1921.	1922.	1923.	1924.	1925.	1926.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	2.9	6.9	16.8	13.7	8.9	9.0	10.6
February ..	2.0	1.6	8.5	16.3	13.1	8.1	9.4	10.4
March	1.9	1.1	10.0	16.3	12.3	7.8	9.0	10.1
April	1.7	0.9	17.6*	17.0	11.3	7.5	9.4	10.0
May	1.9	1.1	22.2*	16.4	11.3	7.0	10.1	13.2*
June	1.9	1.2	23.1*	15.7	11.1	7.2	12.3	12.9*
July	1.9	1.4	16.7	14.6	11.1	7.4	11.2	13.2*
August	2.0	1.6	16.3	14.4	11.4	7.9	11.4	13.3*
September ..	2.3	2.2	14.8	14.6	11.3	8.6	11.4	13.6*
October	2.2	5.3*	15.6	14.0	10.9	8.7	11.3	..
November ..	2.0	3.7	15.9	14.2	10.5	8.6	11.0	..
December ..	2.6	6.0	16.5	14.0	9.7	9.2	11.0	..

* Excluding workpeople in the coal-mining industry who ceased work owing to the dispute.

Employment remained bad in the iron mining, pig-iron, iron and steel, tin plate, heavy engineering, shipbuilding, cotton, lace, jute, linen, pottery and glass bottle industries. It was on the whole good with skilled workers in the building trades and in agriculture. Most improvement, however, was shown in the pottery and wool textile industries.

Cost of Living.—At October 1st the index number of the Ministry of Labour stood at 74 per cent. above the level of July, 1914. This shows a rise of 2 per cent. as compared with the figure for September 1st, and a fall of 2 per cent. as compared with the corresponding figure last year. The following table shows the monthly movements of the index figure over a number of years:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items. (Food, Rent, Clothing, Fuel, and Light, &c.)

1st Day of	1918.	1920.	1921.	1922.	1923.	1924.	1925.	1926.
Jan.....	85.90	125	165	92	78	77	80	75
Feb.....	90	130	151	88	77	79	79	73
March....	90	130	141	86	76	78	79	72
April....	90.95	132	133	82	74	73	75	68
May.....	95.100	141	128	81	70	71	73	67
June.....	100	150	119	80	69	69	72	68
July.....	100.105	152	119	84	69	70	73	70
Aug.....	110	155	122	81	71	71	73	70
Sept.....	110	161	120	79	73	72	74	72
Oct.....	115.120	164	110	78	75	76	76	74
Nov.....	120.125	176	103	80	75	80	76	..
Dec.....	120	169	99	80	77	81	77	..

For food alone the index stood at 63 per cent. This compares with 62 per cent. at the beginning of September, and 72 per cent. a year ago. The rise in the index number was chiefly due to advances in the prices of coal, gas, eggs and milk.

A Chemical Trust.—It is announced that negotiations are in progress for the formation of a new company for the purpose of acquiring by exchange the shares of Brunner, Mond, and Co., Limited, Nobel Industries, Limited, British Dyestuffs Corporation, Limited, and the United Alkali Company, Limited, and co-ordinating and developing their businesses and resources "on broad Imperial lines." The boards of the respective companies have passed resolutions agreeing in principle to a scheme, the details of which will shortly be settled. This is one of the largest industrial amalgamations ever arranged in this country. The paid-up capital of Nobel Industries, Limited, itself a combination of about 30 companies, is nearly £16 millions, that of Brunner, Mond, and Co. nearly £14 millions, that of British Dyestuffs £4½ millions, and that of the United Alkali £3½ millions. Nobel Industries, it may be mentioned, owns a substantial shareholding in the General Motors Corporation of America. In the past week or two the shares of the four companies have been active on fusion rumours, but in their official announcement the directors advise their shareholders "not to be influenced by market rumours, but to await the recommendations that are about to be put before them by their respective boards."

The Copper Combine.—A correspondent writes:—Copies of the formal statement announcing the formation of the new combine, Copper Exporters, Inc., have now arrived in this country. They reveal the complete membership of the company to be as follows:—Members: American Metal Co., American Smelting and Refining Co., Anaconda Copper Mining Co., Calumet and Arizona Mining Co., Calumet and Hecla Consolidated Copper Co., Copper Range Co., Inspiration Consolidated Copper Co., International Minerals and Metals Co., Kennecott Copper Corp., Mother Lode Coalition Mines Co., Nevada Consolidated Copper Co., New Cornelia Copper Co., Nichols Copper Co., Old Dominion Co., Phelps Dodge Corp., Quincy Mining Co., Utah Copper Co., and United Verde Copper Co. Foreign associates: Aaron Hirsh and Sohn, British Metals Corp., Cerro de Pasco Copper Corp., Chile Copper Co., Gransby Consolidated Mining, Smelting and Power Co., Greene-Canea Copper Co., Mansfeldscher Metallhandel A.G., Manfeld A.G. fur Berghau und Huttonbetriebe, Metallgesellschaft, Rio Tinto Co., Societe General Metallurgique de Hoboken, Societe General de Minerais, South American Products Co., and Union Miniere du Haut-Katanga. As forecasted by the writer a fortnight ago, the licence is issued solely to the American members, hence the officers and directors of the combine are all Americans.

Silk Duties and British Exports.—On July 21st, in the House of Commons, Sir Robert Horne stated that "we have an enormously increased export trade" in manufactured silk goods. The silk section of the London Chamber of Commerce have investigated this statement, and reported thereon to the Chamber, which this week issues a statement containing the following figures:—

EXPORT OF PURE SILK PIECE GOODS for the YEARS ENDING MARCH 31, 1925 and 1926.

	Quantities (Sq. Yards.)	Value. £
1925	2,920,031	684,826
1926	2,755,014	627,579

RE-EXPORT OF PURE SILK PIECE GOODS for the YEARS ENDING MARCH 31, 1925 and 1926.

	Quantities (Sq. Yards.)	Value. £
1925	11,656,774	2,318,301
1926	5,638,552	1,124,624

EXPORT OF MIXED SILK PIECE GOODS for the YEARS ENDING MARCH 31, 1925 and 1926.

	Quantities (Sq. Yards.)	Value. £
1925	2,292,960	613,759
1926	1,688,384	392,815

RE-EXPORT OF MIXED SILK PIECE GOODS for the YEARS ENDING MARCH 31, 1925 and 1926.

	Quantities (Sq. Yards.)	Value. £
1925	2,595,253	556,022
1926	1,668,291	341,362

The figures speak for themselves. So far from supporting Sir Robert Horne's assertion, they show that a very formidable blow at our export trade has been dealt by the duties which Mr Churchill imposed in his first Budget.

Cotton Yarn Minimum Prices.—In the middle of August the Master Cotton Spinners' Federation put into operation their scheme of basic minimum prices for American yarns. At the meeting of the committee, this week, writes our Manchester correspondent, it was decided to revise the scheme. In the original figures the basis for cotton futures was 9.50d per lb, but owing to the decline in values this has been altered to 7.50d. No change has been made in the working costs. With regard to the minimum selling prices, there has been a reduction of 1.75d per lb. This means that the margin for spinners has been widened by ½d per lb. The action of the committee confirms the reports of the last week or two that spinners have improved their position, and it is understood that the sales and deliveries recently have been larger than the limited output.

The Shipping Freight Boom.—With no immediate prospect of a general resumption of work in the British coal fields, and with rapidly diminishing stocks available for export from Continental coal-producing countries, there has developed during the past week renewed demand for tonnage on an enormous scale to load coal from United States ports. On Tuesday alone 40 steamers, represent-

ing approximately 300,000 tons, are known to have been chartered for loading dates ranging as far forward as Christmas. This burst of chartering, which brought the total tonnage absorbed for carriage of American coal during the past four months up to a figure not far short of 10 million tons, found the market in a state of acute shortage of tonnage, and quotations for the voyage to Europe ranged as high as 36s per ton for prompt despatch, while from 25s to 32s was paid for December loading, these figures contrasting with an average rate of 14s to 19s per ton during August, and 15s to 27s in September. As a result of this phenomenal situation—which has so dislocated the world's cargo shipping trade that not only are grain exporters everywhere confronted with increasingly short supply of vessels, but high prices are actually being offered for tonnage to transport Australian coals to South America—the freight market as a whole is experiencing an artificial boom bearing some resemblance to war-time prosperity. How marked has been the rise in values may be appreciated from the following list of representative routes, in which current rates are contrasted with those ruling (a) immediately before the coal stoppage, (b) in the corresponding month of last year:—

Route.	October, 1925.	April, 1926.	Current Rate.
Canada-U.K. (grain per qr.)	3 4 ..	2 9 ..	6 6
Plate-U.K./Cont. (grain per ton) ..	16 6 ..	18 6 ..	42 6
Black Sea-U.K. (grain per ton) ..	12 6 ..	12 9 ..	26 0
Australia-U.K. (grain per ton)	41 9 ..	26 3 ..	50 0
U.S.A.-Italy (coal per ton)	\$2.70 ..	\$2.45 ..	\$7.10

Other recent fixtures include United States (grain) to Italy at 32 cents per 100 lbs, against 13 cents last April; Egyptian cottonseed to England, 21s, against 11s two months ago, while even in the case of the Indian market, where trade is deplorably small in volume so far as whole cargoes are concerned, quotations are substantially above their recent level. Generally speaking, it may be said that the most important charter rates are 100 to 150 per cent. higher than last spring, and given the probably heavy requirements of grain shippers during the next few months, the cost of ocean transport, should the coal stoppage be much further protracted, is likely to rise to a point substantially affecting commodity prices. From the point of view of the shipping industry, it must, of course, be remembered that coal bunker prices have increased by anything up to 200 per cent., and the liner companies, engaged in regular sailings with passengers and general cargo, are being adversely affected by the present position, except in so far as a proportion of their cargo liners can be diverted from their usual business to take advantage of the favourable charters available in the open market. For the "tramp" owner, when all allowance is made for the loss of round voyage revenue under present conditions of abnormal "one-way" business, the situation to-day represents a welcome, if temporary, period of profitable employment for vessels, following on so many lean years.

Taxation and Revenue in the United States.—A correspondent writes:—The revenues of the United States, as the result of the continuance of widely diffused business prosperity, are showing an extraordinary buoyancy which Mr Winston Churchill must envy. Preliminary estimates now being sent out from Washington indicate that, despite the very substantial reductions of the income-tax rates made by the last Budget, the income-tax collections for the first quarter of the current financial year, ending September 30th, will be in the neighbourhood of 535 million dollars, which is a gain of about 100 million dollars over the returns for the parallel quarter of 1925. On September 16th alone no less than 140 million dollars of income-tax payments were received, the highest total for any single day since 1920, when income taxation was at its peak. The increase in income-tax receipts is easily offsetting the declines in other sources of revenue, due to reductions made by Congress in miscellaneous rates, and the repeal of most of what were known as "the nuisance taxes." Moreover, other sources of taxation show expanding yields; in August, for example, the Treasury collected 22 million dollars in cigarette taxes, which is a gain of 3 million dollars over the sum realised in August, 1925. Yet the September and December quarters are in-

variably less fruitful in tax returns than the March and June quarters, and as a result the Secretary of the Treasury, who in the spring had uttered gloomy forebodings about a possible deficit, can look forward to a substantial surplus. When the last Budget was framed Mr Mellon proposed taxation cuts which would entail a sacrifice of 300 million dollars of revenue, and when the Democrats, anxious to outbid the Republicans as tax-reducers, produced a scheme for reductions totalling 500 million dollars, he rejected it, and when he eventually agreed to raise the aggregate of the cuts to 365 millions, he entered a caveat that this scale might destroy the possibility of a surplus for the year 1926-27. Now that a surplus is assured, the Democrats are trying to make party capital out of the situation, and are pointing out that if their plan had been accepted, there could have been a greater alleviation of the taxpayers' burdens. But although the Treasury is now prepared to forecast, instead of a deficit, a surplus of some 185 million dollars, both President Coolidge and Mr Mellon have issued statements to the effect that no further cuts will be contemplated in the next Budget, and that such surplus as is available will be used for an additional liquidation of the public debt.

Norway Repeals Prohibition.—At the outbreak of the great war in 1914 total prohibition was introduced in Norway by a temporary decree. In 1919 a general referendum was held, resulting in a vote of 489,017 for the retention of the measure, and 304,673 against it. Prohibition was accordingly made permanent. In the past seven years, however, experience of the working of the prohibition law in Norway has been anything but satisfactory. It first of all led her into commercial difficulties with wine-exporting countries. Then a great smuggling campaign developed, much contraband liquor being "run" into the country from Germany. Vigorous measures taken by the Norwegian authorities have slowly and steadily reduced the volume of the smuggling trade, but at the same time a substantial increase took place in the home production of spirits. It is estimated by the Oslo correspondent of the *Times*, for instance, that there are 1,000 illicit stills in operation all over Norway. The failure to enforce the law was so glaring as to suggest a very formidable public opinion against prohibition, and the suggestion has been proved to be true by the new referendum taken this week. The result of this popular vote has been a large anti-prohibition majority. According to the latest available figures, 504,000 votes were cast against prohibition, and 393,000 in favour. Thus the verdict of 1919 is emphatically reversed as the result of seven years' experience of an unsuccessful experiment, and the Prime Minister of Norway has announced that he will prepare for introduction in the Storting of a Bill for the abolition of the restrictions.

International Telegraph Press Tariffs.—At the International Telegraph Conference, which was held in Paris in the autumn of 1925, a concession was made to the Press which may have important results upon the transmission of market reports and of commercial news generally. The concession comes into force on November 1, 1926. Hitherto Press telegrams have been accepted for international transmission at half the ordinary rates, but only after 6 p.m. and before 9 a.m. By special arrangements between certain European countries the hours were extended to 12 noon. The reason for the restriction was that Press telegrams could only be conveyed at the cheaper rates when the lines and cables had finished the work of the day. Recent developments of increased speeds of working and of adding to the number of co-incident routes on one wire have added enormously to the capacity of the communications and the Administrations considered that the time had arrived for removing the restrictions. It will now be possible to send Press telegrams during the course of the Continental bourses, and we may expect a development to follow which will result in the distribution of information by means of which a wider public will be kept in closer touch with market movements. It may also mean, in days when newspapers go to press earlier than they used to do, that we shall be able to obtain fuller information with better opportunities

for commenting on that information than under the restricted service which has obtained since the beginning of international telegraphy.

Swiss Trade Depression.—Our Geneva correspondent writes:—The Swiss foreign trade returns for the third quarter of the present year are not very gratifying, though exports were somewhat higher owing to a slight improvement during the month of September. During the quarter ending September 30th the value of imports reached £23,890,241, compared with £25,895,316 during the corresponding period of 1925, and exports totalled £17,989,621, as against £19,497,250 in 1925. The figures of foreign trade (converted into sterling) were as follows for the first three quarters of the year:—

	Imports.	Exports.
First quarter.....	24,389,440	17,154,440
Second ".....	22,968,339	17,638,683
Third ".....	23,890,241	17,989,621

Compared with the corresponding period of 1925, the results of the first nine months of 1926 show a drop of £3,720,000 in imports and of £9,480,000 in exports. A disquieting sign is that the drop in imports mainly concerns raw materials, fuel and oil, which shows that there is some slackness in industry. On the other hand, while there was a reduction of £9,480,000 in exports—nearly 15 per cent.—the quantity of goods exported only dropped by 10 per cent., owing to a decrease in sale prices; that is, a reduction from 631,770 tons in 1925 to 568,065 tons in 1926. For that same period the monthly average of exports is £5,864,651, while it was £6,795,811 in 1925—a record month on account of the boom which preceded the application of the McKenna duties in England—but it is even inferior to the average of 1922 and 1923—the lowest record years since 1920—when it was respectively £5,871,913 and £5,867,270. The unsatisfactory economic situation is further shown by a fresh increase in the number of bankruptcies, which totalled 470 up to the end of September, as against 589 for the whole of 1925. Unemployment is also on the increase. At the end of August there were 11,818 applications for work and 1,969 offers of employment. In September applications rose by 7 per cent., while offers of employment decreased by 3 per cent. In normal years there is a drop in the number of unemployed in this season, so that the present increase can only be ascribed to a general depression. The situation in the metal industry has become very critical during the last four weeks; exports are generally on the decrease, and, in the country itself, that industry has to face foreign competition, which is greatly helped by the low rate of exchange; this is in particular the case for French, Belgian, Italian and Czechoslovakian products. It is very much feared that several Swiss metal works will be compelled to close down two days a week if new orders are not more abundant within a short period. The situation is growing worse and worse in the embroidery industry, which has not been saved by the grant of a Government subsidy. That industry employed 71,000 hands in 1920, and exported to a value of £16,440,000, while it now employs 35,000 workers and exports to a value of £5,280,000. There is now a plan for establishing a special bureau at St Gallen—the embroidery industry centre—to attempt to create or promote new industries. The general outlook is very gloomy, and much concern is felt in all industrial circles, as the prospects for the coming winter are by no means hopeful, though it is expected that export trade will benefit from the application of the new trade agreement with Germany, which comes into force in January next.

United Dairies.—Although the United Dairies, Limited, secured lower net profits during the year to June 30th last than in the previous twelve months, the fall was not of serious extent, and on the whole the company may be considered to have done very well. The directors attribute the decline in earnings to the bad state of trade generally and the increased costs consequent upon the prolonged coal strike. Another adverse factor—although of a different character—was the conversion of the retail milk trade during the year from cans to bottles. This, it is reported, has added considerably to the expenses,

which increase has not been passed on to the consumer." In the following table will be found a comparative record of the position of the undertaking over a number of years:—

Year Ended June 30.	1921.	1922.	1923.	1924.	1925.	1926.
Prof. capital...	£1,652,564	£1,881,674	£1,893,243	£2,059,339	£2,243,272	£2,753,918
Ord. do.	1,798,677	2,027,125	2,038,403	2,121,397	2,221,380	2,223,926
Paid share cap.	3,451,241	3,908,799	3,931,646	4,180,736	4,464,652	4,977,844
Calls in advance	..	..	..	41,539	..	..
Net profit	356,186	452,692	468,623	506,542	509,146	459,469
Div. on ord shs.	12½%	12½%	12½%	14%	14%	10%

The reduction in the ordinary dividend from 14 to 10 per cent. seems to be more a matter of prudence than of essential retrenchment. The policy seems to us to be a wise one, for the directors have preferred to write off the expenses of the issue of preference shares amounting to £22,313 and to carry a larger balance forward. Further evidence of the desire of the board to consolidate the position of the company is apparent from the fact that during the period under review debentures of subsidiary companies totalling £113,600 have been paid off. Another pleasing feature is the modification of the form of the balance-sheet, a reform the desirability of which we have urged on several occasions in the past. What actually has been done is to separate the loans to subsidiary companies from the investments. Similarly, amounts owing to subsidiary companies are shown under a separate heading. No allocation is made this time to the reserve fund, the appropriation of £79,446 to which last year brought the total up to £500,000. There has recently been heard a number of complaints from shareholders in the larger joint-stock undertakings that the facilities for attending annual meetings or of obtaining adequate reports of the proceedings are insufficient. This question, apparently, has received the consideration of the board of United Dairies, at the foot of whose present report is a statement to the effect that "the proceedings at the general meeting will be reported in the *Times* (financial section) on October 30th."

United Steel Companies.—The latest report of the United Steel Companies, covering the year to June 30th last, shows that the position of this undertaking is becoming steadily weaker. The main figures of the accounts are compared below, and show the extent of the fall in profits:—

	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.
Gross revenue.....	711,146	388,034	504,633	530,301	201,837	20,618
Administration expenses and income-tax.....	81,485	148,026	156,501	159,792	160,125	163,221
Interest.....	146,254	..	..	..	..	..
Net profit.....	483,407	240,008	348,032	370,509	41,712	Dr 149,603
Brought forward.....	80,381	308,293	440,743	666,149	903,082	823,913
Reserve and written off preference dividend.....	563,788	548,301	788,775	1,036,658	944,794	844,530
Ordinary dividend.....	32,021	79,890	122,626	133,577	120,881	160,400
Carried forward.....	308,290	440,473	666,149	903,081	823,913	520,909

Prospects of the company getting back to the dividend-paying stage seem farther off than ever. According to the profit-and loss account—which is not shown separately—gross revenue has fallen from £201,837 to £20,618. The latter item has charged against it debenture and obligation interest of £163,221, which is only met with the aid of the sum of £823,912 brought in from 1925. Actually, however, even this showing, poor as it is, does not reveal the full extent of the decline as the 1925 figure was arrived at after providing £81,656 for depreciation. The latter fund receives no allocation this year, the directors stating that "consideration of this question has been adjourned until the works are again in operation and industry is in a normal condition." At the same time, a special appropriation is this time made in respect of a reserve equivalent to the losses for the year of subsidiary companies whose capital is owned by the company. This absorbs £37,306. In addition, payments made under the guarantee of the preference dividend of the United Strip and Bar Mills requires £95,212,

against £93,000. The board reports that the iron and steel trades have experienced during the year even worse conditions than prevailed during the previous twelve months. Nor can we see much hope during the current period, for the accounts under review only reflect the effects of the first two months of the coal stoppage, during which time, it is reasonable to suppose, the company had the benefit of stocks of fuel. The dividend on the 6 per cent. cumulative preference shares is in arrear from January 1, 1922.

The Drapery Trust.—In December last the Drapery and General Investment Trust, Limited, was formed to acquire holdings in various drapery stores, including Plummer Roddis, Limited, Marshalls, Limited, Pettigrew and Stephens, H. C. Russell, Limited, and also Selincourts. The authorised capital is £3,600,000, and £2,000,000 was offered for subscription in December last, of which £600,000 was in 6 per cent. debenture stock, £600,000 in 7 per cent. cumulative preference shares, and £800,000 in ordinary shares. Meetings of the debenture stockholders and preference and ordinary shareholders have now been convened, at which resolutions will be submitted for repaying the debenture stock and simplifying the capital. It is proposed to redeem the debenture stock at 103, and holders of a considerable amount of debenture stock having agreed to subscribe at par for an equal amount of preference shares, the authorised preference capital is to be increased from £1,500,000 to £2,500,000, to which participating rights up to 8 per cent. are to be given. In their circular letter the directors mention that the company's business continues to expand on the lines originally contemplated and that they anticipate shortly requiring to issue further share capital to finance certain purchases. We imagine that the existing preference shareholders will raise no objection to the proposals which improve their position, since the prior charge of 6 per cent. on the debenture stock, together with a further 1 per cent. for sinking fund, will be removed. It is stated that the holders of "a large block of ordinary shares have expressed their willingness to give to the preference shareholders the further participation in profits." A further proposal to be submitted for sanction relates to the shortening of the title to Drapery Trust, Limited, "it being the policy of the board to employ the company's funds solely in the acquisition and development of interests in drapery stores and kindred businesses." It was stated yesterday that negotiations are in progress for the acquisition of a controlling interest in Bobby and Co., Limited.

British General Insurance Fusion.—The directors of the British General Insurance Company announce that a provisional agreement has now been entered into between this company and the Commercial Union Assurance Company, Limited. The agreement provides for the purchase by the Commercial Union of British General shares, payment to be partly in 5 per cent. debenture stock, and partly in cash on the basis of £2 debenture stock and a cash payment of 15s 6d for each British General share transferred. The principal will be redeemed at the end of 30 years at par, subject to the right of the Commercial Union, at any time on giving six calendar months' previous written notice, to redeem the stock in whole or in part at 105 per cent. Interest will be payable half-yearly on April 1st and October 1st, the first half-yearly payment being due on April 1, 1927. The dividend on 100 British General shares at the present rate of 30 per cent. is, after deduction of income-tax, £6, whilst the interest on £200 debenture stock and £77 10s cash calculated at 5 per cent., less income-tax, is £11 2s, or an increase of 85 per cent. Apart from obtaining debenture stock, shareholders will be relieved of their present uncalled liability of 15s per share. The British General will continue to operate as a separate company under its present board, chief officers and staff. The offer is conditional on its acceptance by the holders of 85 per cent. of the shares, or such less proportion as the Commercial Union may consider sufficient. The directors have unanimously decided to accept the offer on their own behalf, and they strongly recommend its acceptance.

Ebbw Vale Notes.—At the meeting of the holders of the 8 per cent. seven-year notes of the Ebbw Vale Steel, Coal and Iron Company, held on Thursday, the resolutions agreeing to modification of the rights of the holders were passed in an amended form by a large majority. It had already been made clear that the interest, if not paid, should be cumulative, and on Wednesday, by an arrangement in a noteholders committee, the following additions to the resolution had been made:—"That no dividend shall be paid on any part of the share capital of the company unless there shall have been first set aside out of the profits of the company and carried to a fund for the redemption of notes by purchase or drawings a sum at the rate of £100,000 for each financial year of the company then completed from and including the financial year commencing on April 1, 1927; that any of the notes not redeemed prior to January 1, 1928, shall be redeemed at a premium which shall be calculated at the rate of 1 per cent. for each year or part of a year expired between January 1, 1928, and the date of redemption; that one duly qualified person to be nominated by a majority (reckoned according to their holdings of notes) of the insurance and trust companies holding notes to the nominal value of £5,000 or more shall be co-opted to the board of the company by the directors." The number of votes recorded against the amended proposals was 951, against 76,855 in favour, or 23,780 without the votes of subsidiary companies.

United Havana.—The accounts of the United Railways of the Havana and Regla Warehouses (for the year ended June 30, 1926) show a decrease in net revenue of £821,828. This poor showing was the result of the severe crisis affecting the sugar industry, and, through it, the whole island. In the hope of relieving the situation, the Government passed two measures, one of which, the reduction in railway tariffs, had a further marked effect on the earnings. Dividends of 5 per cent. were paid, but at the expense of reserves, £100,000 being borrowed from the equalisation of dividends account. £222,842 were carried forward. The following table gives comparative figures:—

	1922-23.	1923-24.	1924-25.	1925-26.
	£	£	£	£
Railway receipts	3,765,534	4,296,094	4,969,617	3,950,106
Railway expenses.....	2,463,264	2,688,548	3,059,235	2,981,345
Ratio	(65.42%)	(62.58%)	(61.56%)	(75.48%)
Other receipts (less charges)	1,302,270	1,607,546	1,910,382	968,761
	71,893	217,540	64,386	24,993
Fixed charges, &c. (less sundry inc.)	1,374,163	1,825,086	1,974,768	993,754
To reserve	793,061	820,928	850,091	602,802
Dividends	350,000	425,000	425,000	Dr 100,000
Ordinary rate	571,123	636,691	702,250	504,555
	6%	7%	8%	15%

It will be seen that railway receipts fell by £1,019,511, while expenses fell by but £77,890, the ratio of expenses to receipts thus rising from 61.56 per cent. in 1925 to 75.48 per cent. Total passenger receipts dropped £254,439, or 18.58 per cent.; parcels, luggage, and mails showed a decrease of £22,281, or 11.17 per cent., and goods and livestock produced £2,257,165, as against £2,858,555. This drop is entirely due to the falling off in the goods, livestock having brought in £10,981 more than in 1924. The decrease in goods traffic was very general; sugar declined 26 per cent., but building materials, 21.76 per cent., coal and oil, 21.84 per cent., general merchandise, 18.88 per cent., were not far behind. Apart from the rise in livestock traffic, forest products showed the smallest reduction, falling no more than 8.4 per cent. The expenditure for the year, as mentioned earlier, decreased by £77,890; this was partially accounted for by genuine reductions resulting from the decreased business, but some £41,000 came from reduced maintenance charges, the general manager claiming that these were justified, and that "the stock and equipment has been maintained in good working order." Increased expenses of £28,500 in locomotive running are accounted for by the rise in the cost of oil-fuel. The general manager points out that the present

amounted to 31,375,000f, or 2½ millions more than a year ago. Income-tax yielded 454,830,500f in September, or 338,027,000f more than in September last year, from which it may be inferred that this tax, which it has always been found difficult to acclimatise in France, is at last finding its proper rhythm.

The foreign trade returns for September show that the balance continues to be increasingly favourable. Exports had a total value of 5,196,684f (as compared with 5,543,483f in August, and 5,244,187f in July), while imports amounted to 4,625,367f (as against 5,235,332f in August and 5,016,083f in July). Although both exports and imports fell off appreciably in September (the drop in exports being 347 millions and in imports 610 millions), the balance in favour of this country was over 571 millions, as compared with 308 millions in August and 228 millions in July. Exports in September had a total tonnage of 2,628,995 tons (or 230,872 tons less than in August and 71,173 tons less than in September, 1925), while imports were 3,648,848 tons (or 234,059 tons less than in the previous month and 555,040 tons less than in September, 1925). The detailed figures for the first nine months of the year are as follows:—

	First Nine Months of		Difference in 1926.
	1925.	1926.	
	Francs.	Francs.	Francs.
Imports—			
Foodstuffs	6,540,342,000	8,405,519,000	+ 1,865,187,000
Raw materials	19,166,348,000	29,996,243,000	+ 10,829,895,000
Manufactured goods ..	3,842,234,000	5,889,336,000	+ 2,047,102,000
Totals	29,548,924,000	44,291,098,000	+ 14,742,174,000
Exports—			
Foodstuffs	2,563,812,000	3,498,359,000	+ 934,547,000
Raw materials	8,897,929,000	11,790,733,000	+ 2,892,804,000
Manufactured goods ..	20,858,571,000	27,418,163,000	+ 6,559,592,000
Totals	32,320,312,000	42,707,255,000	+ 10,386,943,000

The figures show that while exports have increased by 32 per cent. during the nine months, imports have increased by about 50 per cent. The "visible" balance of French foreign trade during the nine months resulted in a surplus of imports to the value of 1,583,843f, compared with a surplus of exports amounting to 2,771,388,000f during the corresponding period of 1925.

GERMANY.—ECONOMIC MANIFESTO—CURRENCY AND CREDIT—STEEL INDUSTRY—RAILWAYS CORPORATION—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, October 20.

THE manifesto of financiers and business men in favour of freer international trade has been well received here in quarters which already favoured Free Trade or lower duties, but in industrial and agricultural quarters not much interest is shown, and naturally no alarm. In Germany these interests are too strongly entrenched to feel any necessity to defend Protection and trade restriction in general. They are active only when concrete questions of international trade policy come up for immediate decision. It might, however, be claimed that the views expressed in the manifesto are German official or majority views, because the Federal Economical Council, representing all classes and interests, twice last year expressed itself almost in the same words. Here, as in the disarmament question, there is always a majority for on condition that the other side begins or reciprocates. Since the war Germany has certainly lost more than she gained from European and American Protection and trade restriction. But though the Economical Council, with much public support, was very emphatic, and although its views were expressed in direct connection with the provisional Tariff Bill then pending, the Council duly found, when the concrete questions came up, that new duties and increases of old duties were necessary. While certain of the increases of specific duties did no more than restore the *ad valorem* incidence of the pre-war (1902) tariff, others, such as those on motor-cars, were adopted as new "educational Protection," and the reimposition of the food duties was an emphatically Protectionist measure, which had behind it only the usual Protectionist argument that important

industries must be kept alive. The Government is now preparing a general tariff, which will not be ready until 1928. This tariff, it is assumed, will also bring an increase of duties at least sufficient to counterbalance the price rise, but apart from that the revision will take into account changes in the international distribution of production, and will provide protection against foreign industries which have increased their competitive power since the old tariff was framed. While Germany is not a high-Protectionist country, there is no sign that she will take any initiative in the direction of the new manifesto. The circumstance that most other important countries have higher duties than hers will be regarded as sufficient reason for inviting these others to begin.

The Manifesto is represented in some quarters here as primarily a British move. Great Britain, it is proclaimed, as a country which is still in principle Free Trade, is making a last effort to avoid abandoning her old policy; if the present European obstacles to trade freedom are maintained, she will go over to all-round Protection. This opinion is supported by references to the Imperial Conference. It is ignored that the imputed British view that Free Trade for a particular country is practicable only when it is everywhere in force would itself be a reversal of the traditional British standpoint. Although heads of the three greatest German industrial undertakings are among the signatories to the Manifesto, it is emphasised that most of the signatories are financial experts and practitioners, and it is seen that therein lies the weakness of the Manifesto as a means of determining policy. German banks have large interests in, and considerable control over, industry; but tariff policy is determined by the immediate industrial and agricultural interests, and tariffs are framed or modified, without regard to questions of principle or for the general international advantage, on the basis of often very doubtful facts and figures presented by expert industrial organisations to inept politicians.

Germany is no exception to the Continental rule that fiscal interests actively or passively oppose freer trade. The good state of the finances is largely due to big yields by import duties. Since the currency stabilisation these yields have largely exceeded estimates:—

	(000's omitted.)	
	Estimated.	Received.
	Marks.	Marks.
1924-5	160,000	356,568
1925-6	500,000	590,462
1926 (April-September)	290,000	414,031

In the current financial year the excess receipts from Customs will make up for deficits from certain other taxes. At present the sugar interests are agitating for the doubling of the import duty, with the ostensible aim of raising the prices for sugar-beet, and so increasing the sown area, which has declined in those areas where farming is conducted on a large scale. Given higher home prices, it is argued, the big pre-war sugar export might be restored on a dumping basis.

Gross receipts from taxes in September were 544,881,951 marks. Figures for the first half of the financial year are:—

	(000's omitted.)	
	Half-Year.	Estimated
	Marks.	Marks.
All taxes	3,359,610	6,465,300
Thereof direct	2,235,334	4,506,000
Customs and Excise	1,124,100	1,959,300
Reparations pledged	1,092,128	1,907,000

The yield of direct taxes fell a little short of half the year's estimate, the yield of indirect taxes considerably exceeded it. This is mainly due to Customs, although all Reparations taxes, except tobacco, and most of the other indirect taxes yielded more than half the year's estimate. The yields of the chief taxes were:—

	(000's omitted.)	
	Half-Year.	Estimated
	Marks.	Marks.
Income	1,093,044	2,100,000
Corporation income	197,784	250,000
Property	116,268	400,000
Sales	430,669	982,000
Traffic—Passenger	91,626	170,000
Goods	67,635	155,000

The two wines taxes, the most important of the non-Reparations indirect taxes, yielded 18,379,985 marks out

of 24,000,000 marks estimated for the year. Yields of the Reparations-pledged taxes were:—

	(000's omitted.)	
	Half-Year.	Estimated
	Marks.	Marks.
Customs	414,054	580,000
Tobacco	301,095	655,000
Sugar	142,168	265,000
Beer	142,307	235,000
Spirits monopoly	92,554	172,000

The Reichsbank's weekly return for October 15th shows a larger decline in note circulation than is usual in this part of the month. Circulation dropped by 167½ million marks to 2,972 million marks. The gold reserve increased by the relatively large sum of 36,309,000 marks; the reserve of legal-cover exchange declined by 64,839,000 marks. The money market, in contrast to that of New York and London, has been extremely fluid. The supply of day money yesterday were so large that good borrowers were offered it at any interest rate they cared to pay. The two private discount rates have remained unchanged at 4½ and 4¼ per cent. The preparation of new export credits for Russia is under way, one being to facilitate agricultural exports and livestock for breeding. Numerous Russian orders are reported, and it is estimated that 200 millions out of the 300 millions export credit will be taken up by the end of the year. Deals under this credit scheme already sanctioned include machine tools for 17,800,000 marks, mining equipment for 19,300,000 marks, and smelting and rolling-mill equipment for 8,400,000 marks. The money market shows no sign of being affected by the industrial revival, which continues to progress.

The industrial concentration movement continues, particularly in the metal industries. A mid-German steel trust is being prepared by the Linke-Hofmann-Lauchhammer concern. The Rhenish-Westphalian fine-steel producers have formed a "study corporation," with the aim of preparing for a formal fusion. Closer combination is being negotiated between the locomotive manufacturers, who, since March, have been loosely associated in a union. The railway-car trust negotiations are making progress. The chief aim of all these combinations is the now popular "rationalisation" of production methods. When necessary the less efficient works are closed down. Negotiations for a potash trust are being conducted with the Ministry of Industry. Trustification of this branch would involve abolition of or modification of the existing potash syndicate, a compulsory organisation, and would, therefore, require legislative sanction. The "rationalisation" of the iron and steel industries had made considerable progress even before the recent foundation of the Western Steel Trust. This is particularly the case in the pig-iron and steel branches. The production per furnace and per employee has very rapidly risen. Since September, 1925, pig-iron production per workman is stated to have risen 37 per cent., steel production 44 per cent. The number of blast furnaces in operation declined from some 138 in 1924 to 96 at present, but the average monthly production has increased. Pig-iron production in September was 880,015 metric tons, against 850,208 tons in August and 734,935 tons in September, 1925. The output for the first three-quarters of 1926 was 6,660,059 tons, which is 1,300,000 tons behind that of the same period of 1925. The Ingot Steel Syndicate works are producing considerably more than Germany's quota under the new International Steel Cartel, and it is believed that they will not reduce production, but will pay the fine of \$4 a ton, part of which will, however, be returned at the half-yearly liquidations of the Cartel's funds. Shipbuilding activity has somewhat improved, owing mainly to foreign orders, and to repair work resulting from the recent storms.

The Bourse has been continuously active and firm. Trading has assumed a pronounced boom character. On some days last week the turnover of stocks (for which, however, no figures are compiled) was believed to exceed that of the inflation years. Yesterday the favourite stocks rose violently. The new upward movement has lasted, with only slight reactions, since early September. The bi-monthly returns of the leading seven banks for August 31st shows prolongation credits totalling 472,600,000 marks, against 82,100,000 marks a year before, and 53,700,000 marks on February 28, 1925. The

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,512,884

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted on application.

On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEUART, Chief Manager.

Reichsbank is understood to have given the commercial banks an unofficial hint as to the need for caution in this matter. Foreigners continue to buy stocks.

NORWAY.—MONETARY CONDITIONS—THE RISE IN THE KRONE—PROHIBITION.

(FROM OUR CORRESPONDENT.)

OSLO, October 14.

THE accounts of the Norwegian State Railways for the financial year 1925-26 have recently been published, and disclose a deficit in the estimated surplus of about 7 million kroner, which is chiefly due to reduced earnings, expenditures showing a reduction of about 4 millions as compared with the original estimate.

Figures of the Joint Stock Banks for August (published by the Statistical Bureau) reveal an increase of cash and deposits with the Norges Bank of 4.3 million kroner, while loans show a decrease of nearly 28 millions. In spite of the recent reduction of bank rate, deposits are increasing slowly but steadily, and now amount to about 1,900 million kroner. These easy money conditions, which are illustrated further by recent conversions of old loans at more favourable rates, have rightly been ascribed to the stability which has hitherto—under the regulating influence of the Norges Bank—characterised the exchange situation. It was, therefore, rather a surprise that the bank, on the 12th inst., announced its intention of discontinuing the purchase of foreign exchange at the rates hitherto maintained. This step was taken in full understanding with the Ministry of Finance, and the reason must be sought in the fact that unexpected and rather heavy selling orders have lately been forthcoming from inland holders of sterling and dollars, and, at the same time, renewed activity in foreign speculative quarters has been perceptible. Sterling yesterday was quoted 21, and to-days' rate was fixed by the Norges Bank at 20. The general feeling is that the krone will reach par value very soon, but, of course, a reaction may set in at any time.

It is obvious that this sudden rise of the krone will quite seriously affect shipping trade and industry, although it is believed that, as far as our exporters are concerned, most of them had already disposed of their sterling and dollars by forward sales. On the produce exchange the krone rise occasioned an immediate decline of prices for nearly every commodity.

After nearly seven weeks' stoppage the paper mills are again working, the mill-owners and the workers having agreed to submit all general claims to a court of arbitration. A number of particular claims have been settled after nine days' negotiations, but it is likely that the altered exchange situation will influence and impede the ultimate solution of the conflict. However, transactions in pulp and paper are scarce, and will continue so as long as the British coal strike is still unsettled.

Much interest is being taken in a plebiscite which will take place on October 18th next with reference to prohibition on spirits. There has been a partial or complete prohibition on spirits and certain kinds of wine during the last decade or so, and a plebiscite on this question has also been taken previously (1919), the result of which was a majority of 16 per cent. for prohibition. Since then public feeling has certainly undergone a change, chiefly on account of disappointment as to the efficiency of the

prohibition; but still there are many devout adherents to prohibition, and as both the Communist and the Socialist Parties have joined the prohibitionists, it is difficult to form any opinion as to the result of this plebiscite.

JUGOSLAVIA.—HARVEST—FOREIGN TRADE—STATE FINANCE—BANKING.

(FROM OUR CORRESPONDENT.)

BELGRADE, October 11.

FINE weather during August and September, together with abundant moisture in the parts not damaged by floods and storms, have combined to make the 1926 harvest in Yugoslavia the fourth improvement in succession. There has been an all-round increase in the yield of corn, official figures giving barley at 4,021,000 quintals, as compared with 3,950,000 in 1925; rye at 2,100,000 quintals, as against 1,997,000; and oats at 3,739,000, as against 3,450,000 last year. Wheat alone shows a decrease, the yield being 21,217,910 quintals, as compared with last year's 21,404,300, a difference of 200,000 quintals. Maize, however, promises to give nearly 40,000,000 quintals, which is even more than last year's bumper crop of 37,900,000 quintals. In general, thanks to constantly improving cultivation, corn yields may be said to be on the increase. Thus, wheat harvest for the years 1922-1924 read:—1922, 12.1 million quintals; 1923, 16.6 millions; and 1924, 15.7 millions; while 1925 and 1926 record over 21 millions. Similarly, giving 100 as the figure for 1922 for other cereals, rye has increased to 182.8, barley to 166.8, oats to 141.1, maslin to 190, and spelt to 151.7.

The export surplus for the season is estimated at 25,000 trucks of wheat, 80,000 of maize 5,000 of other cereals, 5,000 of haricot beans, 3,000 of bran, 2,000 of potatoes, 5,000 of prunes, and 4,000 of other fruit. Of other exports, cattle are expected to yield 730 million dinars (horned beasts 350 millions), eggs 600 millions, meat 350 millions, and timber 720 millions, the total of all available exports being estimated at 8,200 million dinars.

In spite of this, trade still stagnates, as the export figures for July and August show:—

	1925.		1926.	
	Tons.	Mill. Gold Dinars.	Tons.	Mill. Gold Dinars.
July.....	291,494	51.4	347,410	41.2
August	371,180	70.5	330,340	49.3

Although trade seems to have been better in September, it is still far from satisfactory. The import figures for the first half of 1926 show that the trade balance is slightly favourable, imports being 345.1 million gold dinars, as against 359.4 million of exports. The volume of trade, however, is lower than during the same time in 1925, when imports amounted to 388.3 million gold dinars.

While it is true that relief from this stagnation is being obtained from foreign credits, of which an influx has again been noticeable this autumn, and from the fall of agricultural prices, from an average index figure of 1,861 in 1925 to 1,466 in August, 1926 (index figures of *Priredni Pregled*, Belgrade), no great improvement can be expected until impetus is given by a new and comprehensive economic policy on the part of the Government. Here, too, the constant atmosphere of impending changes and possible crises is no small hindrance.

The only real reform hitherto has been the cutting of expenses below the Budgetary estimates. This the Minister of Finance has been obliged to do in view of the decrease of revenue. Total receipts for the months January to April, 1926, have amounted to 3,177 million dinars, as compared with 3,379 millions during the same month last year, or 6 per cent. less. The decrease was even greater in May, namely, 437 millions, as against 529 millions last year, a difference of 16 per cent. The same tendency is likely to persist also during June, July, and August, the months of floods and storms, and their first after-effects. It is obvious, therefore, that the Government must turn its attention from purely political to economic difficulties if it wishes to survive. It is noteworthy in this connection that rumours of an impending enlargement of the Radical-Raditchist coalition, in order to obtain a strong working majority in Parliament, are constantly current.

The influx of credits should also be assisted by the formation of the new Anglo-International Bank, which has its headquarters at Belgrade. Banking business as a whole tends to increase in spite of a difficult year. The number of banks has increased from 651 in 1924 to 666 in 1925, while the total turnover for 1925 was 16,000 million dinars, as against 13,000 millions in 1924 and 11,500 millions in 1923. Capital has increased from 1070.1 million dinars to 1322.5 millions, while the total net profit was 294.5 million dinars.

INDIA.—MONETARY CONDITIONS—JUTE PRICES—COTTON TARIFF—TAXATION PROBLEMS—RESERVE BANK SCHEME.

(FROM OUR CORRESPONDENT.)

CALCUTTA, September 30.

MONETARY conditions, as now envisaged, offer the prospect of comparatively cheap money throughout the busy season. Jute will be plentiful; it will be relatively cheap compared with last year; and it will be extremely slow in coming forward. In consequence, there should be a reduction of approximately 25 to 30 crores in the finance required for this crop alone. Raw materials of Indian origin promise, indeed, to reveal an all-round fall in value. In the five months April-August the total visible balance of trade has declined to 13½ crores, compared with 48½ crores in the corresponding period last year.

A deflation of seven crores has been effected in the past two weeks, making, with the eight crores retired in April, a total of 15 crores this year. The Secretary of State has thus been able to replenish his balances without disturbing conditions here, and it is understood that further remittances will be effected in the same fashion as the need arises. Bombay has registered the usual protest, with the usual lack of any solid basis for complaint, and with the usual result of leaving official policy totally unaffected. In extenuation of the querulous pessimism of the western capital, it may be observed that Fate has lately played its enterprises some scurvy tricks. An inquiry in the nature of a Coroner's inquest is in progress relative to the expensive and ill-conceived Back Bay project; a special Tariff Board has been constituted to decide whether its cotton manufacturing industry is suffering from internal weakness or external violence, and, in face of the vigorous competition of Karachi, even the port is losing trade, necessitating drastic administrative economies in order to avoid losing still more. Bombay, therefore, looks out upon the commercial world to-day almost without hope. Its sky is clouded, without the smallest patch of blue. At the moment it conveys the impression of being a city of lost causes. It has lost the battle of the ratios—unless it snatches a last-moment victory in the new Legislative Assembly. The evidence in the Cotton Tariff Board inquiry does not flatter its hope of a higher tariff. It is also fighting a losing battle in opposing the establishment of the projected Reserve Bank.

Although the dying Legislative Assembly refused to discuss the recommendations of the Taxation Inquiry Committee (members preferring to avoid so dangerous a topic until after the impending General Election), the point of view expressed by the spokesmen of the Finance Department evoked quiet approbation, and emphasised anew the satisfactory position in which central finances are now entrenched. The Finance Member declared that he looks forward to the day when—with the early extinction of the whole of the provincial contributions, and with some improvements introduced into the Meston Settlement which will give greater elasticity to provincial revenues—the provinces will be able, without extra taxation, to carry out many of the plans on which progressive Ministers have set their heart for ameliorating the lot of their peoples, and the Central Government may be able to assist them in the best way open to it by carrying further the relief of the burden of the central taxpayer, already happily begun in the reduction of the salt tax and the abolition of the cotton Excise duty, not to mention the reduction of railway tariffs, all of which

have been secured in the life-time of the present Assembly. The report, as the same authority went on to remark, brings out in a striking way the changes which the last ten or twelve years have introduced into the taxation system of India. In the year 1913-14, of the total tax revenue (including land revenue) of India, 35.42 per cent. came from land revenue, only 12.99 per cent. came from Customs, and 3.52 per cent. from taxes on income. Owing to the introduction of the reforms, exact comparisons between 1913-14 and to-day are a little difficult, but approximately the figures for 1923-24, the latest year for which accurate data can be given, are: from land revenue 20.75 per cent., from Customs 24.30 per cent., from taxes on income 12.30 per cent. Concerning the incidence of taxation, in 1902-3 the cultivator paid Rs.2.10 and the non-cultivator Rs.1.8. In 1913-14 the cultivator paid Rs. 3.1 and the non-cultivator Rs. 2.5. In 1922-23 the cultivator paid Rs. 4.12, and the non-cultivator Rs. 6.5. As the index number of wholesale prices in Calcutta rose from 100 in 1914 to 180 in 1922, it will be seen that the increase in total taxation per head at the end of 1922-23 was largely accounted for by the fall in the value of money, and it is doubtful whether the real burden on the cultivator was any higher in 1922-23 than in 1913-14.

Endeavouring to forecast the story of taxation in India in the years before us, the Finance Member reiterated that for the Central Government the first task is to complete the process of extinguishing the provincial contributions and to make such minor modifications in the Meston Settlement as, without any serious inroad on the resources of the Central Government, will add some additional flexibility to those of the Provinces. During this period the Central Government can hope to do little in regard to taxation beyond effecting some minor adjustments here and there and taking some steps not so much to increase as to prevent the falling off of the yield from direct taxation. Thereafter, the Central Government will direct its policy to reducing the proportion of indirect taxation to the whole, with its eye on the one hand on the necessity for a margin in the event of an emergency, and on the other hand upon the needs of the Provinces, which it would try to meet by so adjusting the burden imposed by central taxes as to increase taxable capacity in relation to provincial needs. The Provinces meanwhile will have the advantage to start with of relief from provincial contributions, and, perhaps even more, of the fact that with the extinction of those contributions they will be less subject to the error of looking to encroachment on Central resources as a means of meeting their provincial needs. They will turn to their own wide powers of taxation for the sinews of their war on disease and ignorance, and will be helped in the development of their resources by the concurrent progressive reduction of the level of central taxation.

In non-official circles it is hoped, and indeed expected, that the next Budget will yield not only a further substantial reduction in provincial contributions, but, on the commercial side, a 10 per cent. reduction in the import duty on motor-cars, and the allocation of the whole yield of the motor import duties (now yielding about a crore of rupees per annum) to a Road Board, working in alliance with provincial road authorities, in a manner approximating roughly to the relations of the County Councils and the Road Board in Great Britain. If any variation occurs in the import duties on cotton manufactures, it can only be in the form of preferential duties, since denunciation of the Indo-Japanese Trade Convention is totally out of the question, and would involve repercussions utterly disproportionate to the relatively minor economic adjustments the Government of India is invited to effect. The Currency Bill will be laid before the new Legislative Assembly early in 1927, and will doubtless precede the Budget statement, which will be affected materially by the decision taken. Little doubt is entertained in well-informed quarters that the 1s 6d ratio will be placed on a statutory basis. A Bill to establish a Reserve Bank, and to give effect to certain other recommendations of the Currency Commission, may also be looked for. It is fairly clear that the Imperial Bank is not indisposed to fall into line with the scheme—subject, of course, to generous recognition of the genuine sacrifice it is invited to make and of the heavy responsibilities it will still be expected to shoulder when the new bank comes into operation.

ARGENTINA.—BUSINESS CONDITIONS—FOREIGN TRADE—CROPS—PENSIONS LAW REPEALED—DEBT CONSOLIDATION—TRAMWAYS.

(FROM OUR CORRESPONDENT.)

BUENOS AYRES, September 26.

BUSINESS in general remains stagnant, for the simple reason that the market has for months been overstocked with imports which could only be cleared off quickly under conditions of abnormal prosperity, and with the present dearth of money there are more sellers than buyers. The root difficulty, of course, is that Argentine produce is not commanding anything like the same prices which were forthcoming last year in the world markets, and although there is no logical reason why it should the reaction on our financial position is none the less disconcerting. It is, at any rate, satisfactory to note that the Government is alive to the necessity of meeting the changed conditions. As already advised, the executive not long ago recommended Congress to adopt the 1926 Budget as applying also to 1927, the object being to prevent the waste of valuable time. More recently, however, the Finance Ministry has forwarded to the Budget Committee of the Chamber of Deputies an estimate of the revenue for the forthcoming year to serve as a basis for fixing the expenditure, which estimate takes into account an average reduction of \$3,000,000 per month in the Treasury receipts to date, as compared with last year, and President Alvear and his Ministers are now engaged in studying the possibilities of economies.

The export statistics for the first seven months of the year are:—

	Value (Gold Pesos).		Difference.
	1925.	1926.	
Livestock	224,086,670	203,501,798	— 20,584,872
Agricultural	310,739,160	282,197,812	— 28,541,348
Forestral	12,454,520	11,310,222	— 1,144,298
Others	9,719,650	8,828,887	— 890,763
Totals	557,000,000	505,838,719	— 51,161,281

	Volume (Tons).		Difference.
	1925.	1926.	
Livestock	885,810	868,441	— 17,369
Agricultural	5,017,247	6,075,551	+ 1,058,304
Forestral	236,156	182,456	— 53,700
Others	275,608	273,292	— 2,316
Totals	6,414,821	7,399,740	+ 984,919

The figures for the period January-June showed a drop of \$51,219,269, and a rise of 769,547 tons.

Shipments of cereals and linseed are higher than during the same period to date last year, although wheat is still lagging behind, and but for the import price factor there would be a different tale to tell. In this connection the latest estimate of the Agricultural Department showing the area (in hectares) under grain cultivation this year will be of interest:—

	1925-26.	1926-27.	Average.
	1925-26.	1926-27.	1921-26.
Wheat	7,768,990	7,740,000	6,813,800
Linseed	2,509,450	2,640,000	2,114,410
Oats	1,292,530	1,270,000	1,077,331
Barley	364,200	387,000	293,678
Rye	202,590	210,000	153,718
Birdseed	34,600	28,800	20,091
Total	12,172,360	12,275,000	10,473,028

The increase in area since the year 1912-13 is given as 2,098,300 hectares, or 20.6 per cent.

There is another return by the same department which is worthy of mention. This relates to sugar, for the most part grown in the Tucuman district. The crop for the year 1925-26 was the largest in the history of the republic, being 145,006,556 kilos more than in the preceding year, and 206,955,000 above the average of the past ten years. That is to say, the refineries crushed 5,592,458,252 kilos of cane which yielded 393,693,024 kilos of sugar, or 1.62 per cent. of the world production, as against 1.09 per cent. in 1924-25.

A sensible step taken by the Chamber of Deputies this month was to wipe the National Pensions Act of 1923 off the Statute Book. That highly unpopular and ill-advised measure was long overdue for extinction, and, in fact, it is now more than a year ago since the Senate wisely de-

cided to wash its hands of a legislative freak which had so little to recommend it, and had been so roundly condemned by public opinion. The monthly contributions, although technically compulsory, had dropped from \$1,600,700 in January of last year to \$52,500 in December, and to a mere \$24,000 last month, but for all that one was never quite sure what might happen so long as this sword of Damocles was still threatening. Meanwhile the repealing law, which provides that the contributions must be returned within a period of six months, has raised rather an awkward problem for the Government. The accumulated contributions are said to amount to \$26,781,376, while \$27,998,678 is in hand, but of this figure no less than \$27,547,596 appears as the present value of bonds in which the funds have been invested as provided by the law, and the objections to their realisation within the next half-year are obvious. The executive, however, is engaged in studying ways and means of regulating the Chamber's decision so as to cause the least possible prejudice to the interests of the Treasury, and one way out of the difficulty is suggested by the reported willingness of a considerable number of the industrial and business concerns affected to accept repayment in bonds in lieu of actual cash.

The Budget Commission of the Chamber has just decided to recommend a Bill authorising the Executive to issue bonds up to \$350 millions paper for the purpose of consolidating the debt owing to the Banco de la Nación. These are to be entitled the Internal Consolidation bonds of 1926, and will bear 5½ per cent. interest and 4 per cent. cumulative amortisation. The bank will receive the issue direct from the Government at a provisional rate of 95 per cent., and any difference between this and the rate at which they are placed, which must not be less than 93 per cent., will be debited or credited to the account of the Executive Power. Consolidation schemes are at present in the air, as yet another is being submitted by the Executive of the Buenos Ayres Province, in a Bill under which that body would be authorised to contract one or more loans, external or internal, up to a nominal amount of \$95½ millions paper. In the case of internal loans the price of issue to the bankers would be not below 85 per cent., while not less than 87 per cent. is stipulated for any foreign issue. In the former case the interest would be 6 per cent. and amortisation 1 per cent., and in the latter 7 per cent. and 2 per cent. respectively.

A new and somewhat startling development in the controversy between the Anglo-Argentine Tramways Company and the Buenos Ayres Municipality has been introduced by the presentation of preliminary proposals on behalf of a British syndicate, headed by Lord Amptill, for the construction of an underground tramway system in the city and suburbs on the basis of a 10 cents fare, as against the 15 cents rate which the Anglo-Argentine Company has been insisting on before proceeding with its provisional concession. This new proposal asks for a 90 years' concession, and undertakes to deposit a guarantee of £50,000, and to complete four sections stipulated within periods ranging from three to six years. Pending the receipt of further details from London by mail, it is too early to say what effect this is likely to have on the Anglo-Argentine Company's position, but whatever may be the outcome it is to be feared, judging from past experience, that considerable further delay will occur before steps are taken to satisfy the crying need for a solution of the traffic problems of this city.

Letters to the Editor.

BRITISH CARS AND OVERSEAS MARKETS.

TO THE EDITOR OF THE ECONOMIST.

SIR.—The article "British Cars and Overseas Markets" in your issue of October 16, 1926, gives certain impressions which it is very desirable to correct at a time when public attention is focussed upon the motor industry in this country. It is now certain that much of the talk of the "unsuitability" of British cars for overseas markets is due to unconscious distortion of hostile propaganda which has no basis in fact. A proof of this is to be found in the fact that British motor vehicle exports in 1924 were double those of 1923, and in 1925 were double those of 1924. The merits of British cars are, in fact, being increasingly recognised in many important markets

to an extent which has even begun to embarrass our American competitors.

It is, of course, true that in total volume our car exports are still only a fraction of those of the United States, but a start must be made somewhere, and the fact remains that our annual rate of increase has been latterly greater than that of the United States. It would seem that your correspondent himself has been indirectly prejudiced by his conversation with our visitors from overseas. Surely the statistics of exports for the nine months ended September for 1924, 1925 and 1926 quoted by him cannot be accepted without any qualification. Has he overlooked the fact that more than half the 1926 period has been overshadowed by, firstly, the General Strike, and then the coal strike, which have made it impossible for many concerns to complete existing orders? From the following table it will be seen that in the first quarter of 1926 the export position was much stronger than in the corresponding period of the two previous years. Even since the General Strike motor exports have held up better than those of most British industries.

NUMBER OF UNITS EXPORTED FROM GREAT BRITAIN.

		Cars.	Commercial Vehicles.	Chassis.	Total.
1924—First quarter	..	629	102	168	899
Second "	..	844	102	194	1,142
Third "	..	1,053	216	247	1,517
Fourth "	..	1,126	155	359	1,640
1925—First "	..	1,497	146	494	2,137
Second "	..	1,362	149	617	2,129
Third "	..	1,287	106	841	2,235
Fourth "	..	1,777	113	1,299	3,189
1926—First "	..	1,551	117	1,384	3,053
Second "	..	968	77	884	1,929
Third "	..	952	100	1,141	2,193

Nor is it true that no attention is being paid to requirements of overseas conditions. The average modern British car of standard track has a ground clearance and springing equal to that of the average American vehicle, statements to the contrary notwithstanding. As far as power is concerned, it must be remembered that the great bulk of cars used even in overseas markets are used in towns where the light high-efficiency British engine is as suitable as it is in this country. In any case, it would be impossible for every British manufacturer to run a special overseas model. Mr Ford himself, in his latest book, says that even his plant is not large enough to make two cars.

Space does not permit me to go at length into the justification for the prophecy of impending saturation of the British home market made by the United States Department of Commerce. It will be sufficient to say that there are as good reasons for differing from that opinion as for holding it. But whether there is a considerable expansion yet to be expected in the home market or not, British manufacturers should not, and in fact do not, neglect overseas markets.—I am, dear Sir, yours faithfully,

B. H. GLADSTONE, Secretary.
The Association of British Motor Manufacturers, Limited,
London, S.W. 1, October 18th, 1926.

ECONOMIC CONSEQUENCES OF THE CAR.

TO THE EDITOR OF THE ECONOMIST.

SIR.—The visitor to the Motor Show at Olympia, if he can detach himself from the contemplation of machinery and upholstery as he pushes his way up and down the aisles of that wonderful exhibition opened yesterday, can find a good deal of cause for reflection, apart from comparison of one car with another, this year's models with those of 1925. Each successive show is hailed by motor makers and by the Press as marking a new high-water mark in value, a new plimsoll-line of price. The crowds who come from all parts of the country to the Motor Show are composed of people who, in the majority of cases, take a direct, personal interest as motorists, receptive of new ideas that lead to the purchase of some car of later pattern than that already owned. These willing buyers are ready to spend money on cars all of which have one quality in common—that of rapid and considerable depreciation. Savings which in pre-war years would have gone as a matter of course into the purchase of securities and property, put by against old age, ill fortune or the rainy day, are to-day exchanged without a qualm for what is now regarded as a necessity rather than a luxury. Were further excuse needed to disguise and extravagance, the buyer would declare that his action is good for trade, and, quoting him, that it thereby acquires merit. Good for trade in many ways beyond the engineering, coachbuilding and accessory industries; good for the trades connected with petrol, rubber, inn-keeping, road making, and the multitude of minor businesses which cluster around the larger branches of trade. If railways suffer by the competition thus provoked, this is but the effect of resistless progress. If new habits are formed and new outlets afforded for energy and pleasure, these also are but indications of the unceasing march of evolution. Motoring, even in its most modest manner, means the expenditure of money. The initial price of a car may prove a comparatively small proportion of its cost for running over several years. Leaving to others the discussion of the un-

questioned benefits, usefulness and saving of time, strain and labour which motoring brings, it is not entirely beside the point to observe the sub-conscious influence which motoring exercises upon the nation through its effect upon the individual citizen. Were one quarter of the money now expended upon private cars, with all its sequelæ of bills for hotels, restaurants, tyres, oil, petrol and the like, to be saved and invested in British Government stocks, the demand would cause a corresponding rise in the values of the securities, and a consequent advance in the credit of the country. The argument, and the retort to it, could be pushed to limits of logical absurdity, but, without either pedantry or pessimism, the observant economist will be led to recognise that the cult of the car has a direct bearing upon practical finance and investment. It increases the cost of a man's living, and so renders that man anxious to buy stocks and shares which will return higher yields than are compatible, he is well aware, with safety. Motor-cars call for insurance and licence charges; these add to the burden of taxation to meet which the spirit of speculation is constantly stirred. The car increases the speed of life as it does that of traffic and transport, and it begets in even a contented mind the wish, if not the desire, to keep abreast of modernity by exchanging last year's model for the latest exhibit on the stands of Olympia. The war, and its mismanagement by the spending departments of the nation, sowed seeds of extravagance in the individual as well as in Whitehall, and the economic consequences of the car may be suggested as the theme of a book which would vie in interest with the pleasure and the enjoyment to be derived from the ownership of a motor.—Yours, &c., L. W.
London, E.C., October 22nd, 1926.

Books and Publications.

CREDIT RATIONING IN GERMANY.

DR RUDOLPH DALBERG, who has been the official in charge of currency and credit questions in the Ministry of Public Economy in Berlin since 1922, has recently published a collection* of selected articles written and lectures delivered during the last four years. This book cannot, of course, be said to give by any means a complete history of the period with which it deals—the final stages of German inflation and stabilisation—but it reveals the ideas which inspired an influential official and the observations are based on first-hand experience. Moreover, Dr Dalberg has considerable theoretical interests, and endeavours to expose underlying economic principles.

Why was it that stabilisation succeeded in Germany in the late autumn of 1923, in spite of the fact that 1,200 million rentenmarks were utilised to pay officials, i.e., for covering a deficit in the Budget, and no foreign credits had been obtained as in the case of Austria? Dr Dalberg replies that the whole German people and all public bodies backed the rentenmark, and that thus confidence was created. It is true that the question of confidence is of outstanding importance, but Dr Dalberg's reply does not throw much new light on the problem. It would be interesting indeed if Dr Dalberg, with his great experience, would make a special study of the central problem of German stabilisation. An outsider can only presume that the attitude of the leading industrialists who, incidentally, owned the greater part of the Press, played a decisive rôle.

One of the most interesting articles in Dr. Dalberg's book deals with the question of discount policy and credit rationing. His main argument is that if the Central Bank were to rely only on the rate of discount for the restriction of note circulation, a rate of interest of, say, 20 per cent. would be necessary. But such a high rate would probably lead to a violent economic crisis which would involve the downfall of just and unjust alike. Given all the difficulties of the transitional period, there was no guarantee that the best firms would be able to surmount the crisis.

This is no doubt a very strong argument, especially as it might be expected that after a certain time the money market would be easier, and the rate, which was at first maintained by means of a rationing policy, would become the natural rate on the market. That is, moreover, what actually happened. The Reichsbank rationed the amount of credit (Kreditkontingent) to be

granted to each of the commercial banks, and the commercial banks distributed that amount of credit amongst their customers. In that way the rate of interest was kept low in expectation of an increase in the volume of credit made possible by an increase in note circulation, the influx of foreign credits and the resumption of savings.

The rationing policy has, however, certain drawbacks which are not so clearly pointed out by Dr Dalberg. The rationing of capital among existing firms has unfortunately had the effect of prolonging the lives of many weak enterprises that ought to disappear as soon as possible. Capital given to such firms may be considered as wasted, and to waste capital in a period of acute scarcity appears to be mere stupidity. But no policy is an unmixed blessing.

Dr. Dalberg says in the introduction to his book that the German experience may be of value to other countries that have not yet stabilised. Certainly it may; but there is a great danger of neglecting to ascertain whether conditions are the same. Would it, for instance, be possible to carry out in France a rationing policy similar to that adopted in Germany? In order to reply to that question, we must first consider what were the conditions that made such a policy possible in Germany. Put briefly, one might say that the success of the German policy was due to inflation, which had wiped out the deposits in banks and the public debt, and thus made the Reichsbank the only source of credits in Germany. Rationing of credits means that an individual firm cannot obtain as much credit as it could employ with profit. It will then seek other means of obtaining funds. If there are sources of credits other than the banks, the rationing system will break down. In France, for instance, holders of Treasury bills and National Defence bonds may demand cash when the bills and bonds fall due. Deposits in banks may be withdrawn. The Central Bank would not secure such complete control of the market as would be necessary for a successful rationing policy. In Germany the supply of foreign credits at one time made rationing by the Reichsbank more difficult, for any German who had obtained foreign *valuta* could sell the foreign drafts to the Reichsbank against German marks. When the foreign *valuta* increased, the Reichsbank had to restrict the credits granted to the Commercial banks.

As in France it would no doubt prove impossible to carry out a policy of credit rationing, the Bank of France would have to utilise the discount rate for the restriction of credits. A relatively high bank rate must be accompanied by a corresponding rate on the floating debt of the State. It would probably be in the interest of France to pursue a resolute policy; the supply of floating capital has not been so much reduced in France as it was in Germany after inflation, and stabilisation in France would, therefore, be a much simpler affair than in Germany.

IS CIVILIZATION SATURATED?*

THE author's thesis is hardly a new one, though he treats it in a new way. He is attempting to uphold the old doctrine that social and material progress is inevitably discontinuous, and that at the present moment the time is growing ripe for the advances made during the past 150 years to be succeeded by a period of stagnation, if not of actual regression. In his introduction he calls attention to a surfeit of material progress and indulgences, of wealth and credit, of reform and education, and so on, and argues that this must end in subsidence and decline. Whether or not he is right in his forecast time alone can show. His arguments and evidence, however, are in several respects open to doubt.

Much of the book is based upon the growth in the power of labour, and he attempts to show that this growth will soon entail a decline in national and world productivity, simply because the labouring classes will not be content to devote their whole energies to production in the future as they were in the past. He acknowledges the economy in labour effected by the increased use of machinery, but

* "Deutsche Währungs- und Kreditpolitik, 1923-1926." Verlag von Reimar Hobbing. Berlin.

* "Saturated Civilization." Sigmund Mendelsohn. (New York) The Macmillan Company. 7s 6d net.

here, again, he leaves the impression that he thinks that machines have reached their limit of development. In any case, he seems inclined to lay upon organised labour a larger share of the blame than is deserved. It is not necessary to have overmuch faith in human nature to reject the view that universal suffrage, universal education, and labour's establishment of its claim to a voice in the conduct of affairs are no more than signs that the world has reached saturation point.

The book is disappointing in that it has no constructive element. It does not, for example, emphasise sufficiently the great gain to humanity arising from the wider diffusion of wealth. It does not recognise that what is needed is a still wider diffusion, coupled with a greater degree of equilibrium between the various grades of Society. It makes no suggestions as to how these objects could be attained. In short, the author seems obsessed with his one idea of saturation, and is inclined to welcome it and prove its truth in an almost fatalistic spirit.

BOOKS RECEIVED.

The Islanders. By Archibald Hurd. (London) Cassell and Co., Limited, La Belle Sauvage. 3s 6d net.

In all respects a most excellent little book. In the short span of 91 pages Mr Hurd reviews all the economic implication of our island position; and does so with a charm of style and a clearness of exposition that will commend the book even to those to whom problems of the trade balance or sea-power are alarmingly mysterious. Neither tariffs nor Free Trade are mentioned, but the volume as a whole is a valuable and concise presentation of the fundamental requirements of our trade policy. It should be widely read, and we commend it to headmasters as the handiest medium for conveying to the youthful mind a clear picture of how Britain lives. Our only criticism, a very minor one, is that on page 26 Mr Hurd takes a too unfavourable view of the trade balance.

Contracts in the Local Courts of Medieval England. By Robert L. Henry. (London) Longmans, Green and Co., 39 Paternoster row. 16s net.

An erudite study in legal history. The author is Judge in the Mixed Courts at Alexandria, and was formerly Professor of Law at the Universities at Louisiana, Illinois, Dakota, and Iowa.

The Mind of the Millionaire. By Albert W. Atwood. (London) Harper Brothers, 35 Gt. Russell street. 7s 6d net.

In this book a prominent American journalist examines the psychology of the rich man. "What," he asks, "keeps millionaires at work after they have amassed a fortune?" He answers the question in very readable style, and with voluminous references to personal examples. Good light reading, with flashes of real insight into human nature and economic truth.

The Third British Empire. By Alfred Zimmern. (London) Oxford University Press, Warwick square, E.C. 4. 6s net.

Why has the British Empire survived in an age which has witnessed the disruption of so many Empires? In what form has it survived? How has it been transformed, constitutionally and psychologically, by the events of the last twelve years? What are the real ties which bind it together to-day? These are the main questions to which the author seeks an answer in this volume. He gives reasons for believing that the new relationship between the nations of the Commonwealth, so far from weakening the unity of the Empire, has greatly strengthened it, setting it forth on a new lease of life with its constitution and activities adapted to the changed conditions of the post-war world.

This book of great topical and historical interest is composed of a course of lectures delivered at Columbia University, New York.

The Motor Industry of Great Britain. 1926. Published by the Society of Motor Manufacturers and Traders.

This booklet is a valuable collection of the principal statistics which concern the British motor industry, including numbers in the chief countries of the world, productions, consumption of rubber and tyres and motor spirit, road mileage, and overseas trade. It is to be produced annually in future in an improved and extended form.

The Brotherhood World. October-December, 1926. (London) Brotherhood World, 1 Charing Cross. 6d.

An excellent publication, containing an interesting contribution from the pen of Sir Josiah Stamp.

Report of the Preliminary Survey of the Mazaruni and Puruni Diamond Fields, British Guiana. March-December, 1925. Part I. By H. J. C. Conolly. (London) Crown Agents for the Colonies, 4 Millbank.

Rapport au Ministre des Finances: Opérations de 1919 à 1923. (Paris) Imprimerie Nationale.

League of Nations: Memorandum on Balance of Payments and Foreign Trade Balances. 1911-1925, Vol. I. *Balance of Payments and Review of World Trade.* (London) Constable and Co., Orange street. 5s.

The Edinburgh Review. October, 1926. (London) Longmans, Green and Co., Limited, 39 Paternoster row. 7s 6d net.

Contains articles by Mr Harold Cox on the Imperial Conference, by Sir A. D. Hall on Food and Population, and Air Problems of the Empire, by Major-General Sir F. H. Sykes.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
October 26. October 28.

THE weekly graph of Stock Exchange prices shows vivid deflections both above and below the line. The general tendency of the House has been dull, for which the root reasons are the fear of dearer money and the continuance of the coal dispute. On the other hand, there are bright exceptions, more particularly in the industrial market. Business is quiet on the whole, although here, as with prices, the volume of orders has been very erratic; some firms spent an active week, while others did no more than a bread-and-butter business. Paris has been a persistent and a pressing seller of inter-bourse issues.

The meeting of the Imperial Conference is hardly a factor, nor did the issue of the Bankers' Manifesto arouse any particular interest in the markets, where the latter was regarded as being too academic for it to exercise any direct influence over current quotations. There is some little talk of a possible rise in the Bank rate, which served to depress the prices of Conversion, War Fives, Consols and other British Government, corporation and gilt-edged stocks. The market in Australian securities has recovered to some extent from the flurry occasioned by the recent criticism of Commonwealth finance. The Sunderland subscription lists closed in advance of their full time. Home railway prior-charge stocks show a heavy tendency, in sympathy with the dullness in the companies' ordinary and deferred stocks.

A good deal of trade is doing amongst foreign bonds, where Peruvian Corporations, the new Tokyo and Hamburg loans, Brazilians and Germans have attracted their own particular circles of interested followers. Brazilians have given way. Peruvian Corporations went flat, on fresh selling by holders who wanted to take their profits before the report appears, but the stocks were absorbed without difficulty. Turkish Unified have been strong and active, on the statement that the Turkish delegates are on their way to Paris to settle the terms over which so much negotiation has taken place. Mid-European bonds are easier and Mexican show falls. Unconfirmed reports stated that another earthquake shock had occurred in Japan.

The home railway market is dull, in consequence of the deplorable traffics that continue to be published week by week,

and which render the dividend outlook for the second half of 1926 anything but cheerful. Exceptionally, Districts are better. Canadian Railway stocks are somewhat lower. Argentine Railways improved, on the cheerful speech at the Buenos Ayres Great Southern meeting on Wednesday. Brazilians have been disposed to droop, and Nitrate Railways, together with nitrate producing shares, show a tendency to decline for want of supporting interest.

The rubber market is a little easier, in sympathy with the dullish tendency in Mincing Lane due to piling up of the stocks of the raw article. An announcement is expected to be made almost immediately by the Colonial Office in regard to what is called the "coupon" rubber, and the bullish party maintain that such a statement would probably be favourable to the industry. Tea shares are lower. The oil market enjoyed a spurt as a reflection of the strength shown by Anglo-Persians after the bonus announcement. It is asked in the various markets whether the severe shrinkage in the price of silver, the metal, may not affect the earnings of some of the companies that trade largely with the East. This last reason is responsible for further declines in the prices of certain of the Eastern banking shares.

Marconis enjoyed a spectacular jump, upon the news that the beam system has proved a great success in connection with the Bodmin station of the Canadian Marconi Company to be opened for traffic on Sunday next. Ever-Ready shares provided another feature of strength, thanks to dividend expectations. British Generals were strong in advance of the announcement that the Commercial Union has made an offer to acquire the shares. The price fell back upon official publication of the proposals. Brazilian Traction slumped on sales from Brussels, but recovered from the worst. The tobacco market exhibited heaviness as the advent of contango-day brought in selling from holders who do not like the industrial outlook. The land section has been heavy, Hudsons Bays and Sudan Plantations leading a fall. Westminster Electric lost 8s before there was a mild recovery, the drop being due to the directors' proposal to capitalise reserves in such a manner as will give two new shares for every three shares now held. The rest of the London electric lighting list is sympathetically lower. Duff Developments have held most of their rise. Motor shares attracted attention because of the opening of the annual show, and Morris preference advanced.

The Kafir market shows a string of uninteresting movements, most of them being in the downward direction. Paris has pressed for sale De Beers and other diamond shares; Chartered and Rand Mines. The tin group underwent an all-round reaction as the end of the account drew on, but late on Thursday afternoon a recovery set in, and the shake-out appeared to have done the market good. In the West African market Kaduna Syndicates have been a feature of strength, with other shares doing little more than mark time. San Francisco Mines have been weak, and apart from a rise in Colombian Mining the tendency of miscellaneous mining shares has been dull. Some interest revived in lower-priced West Australians. Rio Tintos have fluctuated as violently as ever, a brisk recovery following upon a previous drop. Nothing of consequence has happened in the shares of other base metal companies.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and reports and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

City of Leicester.—This is an issue of £1,500,000 5 per cent. stock at £99 10s per cent., redeemable 1947-1957. The principal and interest is secured upon all the estates, property, rates and revenues of the Corporation, and a sinking fund will be established. The rateable value of the city is £1,452,800, a penny rate producing £5,550; the estimated population is 242,100. The total net outstanding debt is £6,849,000, of which £5,075,000 is in respect of reproductive undertakings. The gross (or trading) profit of the trading undertakings of the Corporation for the last financial year was £318,126. The proceeds of the present issue will be applied for electricity works, waterworks, sewerage, sewerage disposal works, &c., This is an excellent trustee investment.

Sunderland Corporation.—This is an issue of £1,000,000 5 per cent. stock at 99, redeemable 1946-1956. Principal and interest will be secured on the borough fund and rate and a sinking fund will be established. The rateable value of the borough is £785,224, a penny rate producing £3,016; the population is estimated at 167,000. The total outstanding debt of the Corporation, including £1,255,626 relating to reproductive undertakings (after deducting redemption funds available), is £1,891,531. The proceeds of the present issue are required to meet expenditure in connection with the electricity undertaking, street improvements, bridges, paying off existing loans, &c. This is a good trustee investment. Oversubscribed.

Phillips Rubber Soles, Limited.—Capital £600,000, divided into 240,000 7½ per cent. cumulative preference shares of £1 each and 360,000 ordinary shares of £1 each. This is an issue of all the above at par. The company has been formed to take over the business of Phillips Rubbers, Limited, together with the issued shares in Phillips Patents, Limited, Premier Waterproof and Rubber Company and Guide Bridge Rubber Company. Combined profits, after charging all expenses of the businesses, including advertising, depreciation, and directors' remuneration, but before deducting income-tax and corporation profits tax and excluding inter-company dividends, are certified to have been as follows:—1922, £110,708; 1923, £116,016; 1924, £134,288; and 1925, £106,425. Total net assets, excluding goodwill, patents, trade marks, &c., are given as £300,484. The purchase consideration is £600,000, payable in cash. A fairly good industrial speculation.

P. C. T. Construction Company, Limited.—Issued share capital £249,439, divided into 35,000 7 per cent. cumulative guaranteed preference shares of £1 each and 214,439 ordinary shares of £1 each. This is an issue of 715,000 7 per cent. cumulative guaranteed preference shares of £1 each, which are unconditionally guaranteed as to both capital and dividend by Provincial Cinematograph Theatres, Limited. The surplus assets of the latter company are given as £2,500,000, while net profits, before providing for depreciation, are certified to have been as follows:—1924, £146,433; 1925, £231,496; and 1926, £248,117. The P.C.T. Construction Company was incorporated in 1919 under the name of Picture Playhouses, Limited. In August of this year Provincial Cinematograph Theatres, Limited, acquired practically the whole of the issued ordinary shares, and now hold 35,000 preference shares, and the name was changed to its present form. It is not intended that the company shall acquire or operate cinema theatres, but that the proceeds of the present issue shall be advanced at interest from time to time as required by Provincial Cinematograph Theatres, Limited. In referring to the guaranteeing company, Provincial Cinematograph Theatres, Limited, the prospectus states, "the previous history of the company does not serve as a useful guide in estimating the security of this issue."

Illustrated Newspapers, Limited.—Share capital £3,200,000, divided into 1,800,000 7 per cent. cumulative preference shares of £1 each and 1,400,000 ordinary shares of £1 each. This is an issue of the above at par, applicants for preference shares having the right to apply for one ordinary share for each six preference shares allotted. The company has been formed to acquire the *Graphic*, the *Drapers' Record*,

The Sphere, The Tailor, Men's Wear, The Bystander, Eve, a part interest in the *Illustrated London News and Sketch*, and the whole of the issued share capital of Horton Kirby Paper Mills, Limited. The Inveresk Paper Company, Limited, is selling to the company the foregoing properties and shares in their entirety for £3,167,079, without any intermediate profit, but has reserved the right for itself and associated companies to apply for 1,100,000 ordinary shares of the company in cash at par, which they have exercised. The company has agreed to make an offer for the outstanding balance of the preference and ordinary shares in the *Illustrated London News and Sketch*, Limited, and the purchase price required will be provided out of the issue of £340,000 6 per cent. first mortgage debenture stock. Aggregate net profits, before charging income-tax and corporation profits tax, are certified to have been as follows:—1923, £293,180; 1924, £286,702; and 1925, £299,103. The capitalisation of modern newspapers based on profits of the past three years is a problem meriting careful consideration before the shrewd investor takes up shares.

United Diamond Fields of British Guiana, Limited.—Capital, £500,000, divided into 500,000 shares of £1 each. This is an issue of 480,000 shares at par. The company has been formed to acquire and develop five diamond areas, of a total of over 20,000 acres, situated in the Mazaruni, Puruni, Potaro, and Cuyuni districts in British Guiana. An agreement has been concluded by which the company's entire output will be purchased for cash; the agreement also provides that the company shall participate in the profits from the resale of all diamonds. The present issue is estimated to provide approximately £67,000 in cash for development and working capital. The purchase consideration is £362,000, payable in cash. The prospectus is one that will not tempt shrewd investors.

Federation Tin Mines, Limited.—Capital £200,000 divided into 200,000 shares of £1 each. This is an issue of 170,000 shares of £1 each at par. The company has been formed particularly to acquire the Federation Tin Mines, situated at South Heemskirk, Tasmania. The mining leases comprise a total area of 428 acres, and the assets include a crushing battery, with buildings, plant and machinery. The present issue will provide approximately £60,000 for capital expenditure and working capital. The purchase consideration is £125,000—payable as to £35,000 in cash and as to the remaining £90,000 by the allotment of shares credited as fully paid. Optimistic estimates and voluminous information are given. A speculation.

The Kellner-Partington Paper Pulp Company, Limited.—In order to comply with Stock Exchange regulations, particulars are advertised of the above company. There is an issued capital of £1,510,305, divided into 600,000 5 per cent. cumulative preference shares of £1 each and 910,305 ordinary shares of £1 each. There is also a debenture capital of £1,230,000 6 per cent. guaranteed mortgage debenture stock, which is being issued in conversion of the balance of the £1,500,000 7½ per cent. guaranteed first mortgage debenture stock. The stock will be secured by a specific charge on company's land, buildings, plant, &c., and a floating charge on the remaining assets, present and future. Payment of interest, sinking fund and principal in the event of the stock becoming payable will be unconditionally guaranteed by Aktieselskapet Borregaard, which holds the entire ordinary capital and practically the whole of the preference shares. The stock will be redeemable by sinking fund, by which redemption will be completed in 1956. The Kellner-Partington Company was formed in 1889, and owns forests, paper and pulp mills in Norway and Austria. The company's audited net profits, before charging debenture interest, income-tax, depreciation, and the expenses of the 7½ per cent. stock, are stated to have been as follows:—1923, £248,710; 1924, £250,347; and 1925, £269,142; and those of the guaranteeing company, but not including the dividends received from this company, as follows:—1923 (fifteen months), £345,884; 1924, £292,920; and 1925, £311,566. Prospectusless.

Hyde's Bird Seeds (R. Hyde & Co., Limited)—In order to comply with Stock Exchange regulations, particulars are advertised of the above company. There is an issued share capital of £150,000, divided into 75,000 8 per cent. cumulative preference shares of £1 each and 75,000 ordinary shares of £1 each. The company was incorporated in 1920, and acquired the business of a former company, known as R. Hyde and Co. (1918), Limited. The purchase consideration was £150,000, which was satisfied by the allotment of 74,993 preference shares and 75,000 ordinary shares. Under the above agreement the company also paid the debts of the former company, amounting to £16,349. Profits, after making adjustment for interest in suspense, but before providing for depreciation of investments, income-tax, or corporation profits tax, are certified to have been as follows:—1923, £21,486; 1924, £23,248; 1925, £19,986; and 1926, £20,624. Dividends on the ordinary shares have been 15 per cent. for 1923, 10.75 per cent. for 1924, 15 per cent. for 1925, and for 1926 15 per cent. and a bonus of 15 per cent., each dividend less tax. Prospectusless, but with more information than usual for this type of flotation.

COMPANY MEETINGS, &c.

INVERESK PAPER COMPANY, LIMITED.

FURTHER DEVELOPMENTS.

NEW CAPITAL PROPOSALS.

FLOTATION OF ILLUSTRATED NEWSPAPERS, LIMITED.

REVIEW OF SUBSIDIARY UNDERTAKINGS.

MR WILLIAM HARRISON'S SPEECH.

An extra-ordinary general meeting of the members of the Inveresk Paper Company, Limited, was held on Friday, the 15th instant, at the North British Hotel, Edinburgh, Mr William Harrison, L.L.B. (chairman of the company), presiding.

The secretary read the notice convening the meeting and the resolutions to be proposed, which were as follows:—

RESOLUTIONS.

1. That the capital of the company be increased to £1,200,000 by the creation of 300,000 additional preference shares of £1 each ranking for dividend as from the respective dates of the calls and payments in respect thereof, and upon the dissolution of the company and in all other respects *pari passu* with the existing shares of the company, and 350,000 additional ordinary shares of £1 each ranking for dividend from the respective dates of the calls or payments in respect thereof, and in all other respects *pari passu* with the existing ordinary shares of the company.

2. That the said additional preference shares of £1 each be offered in the first instance at par to the members of the company holding preference shares registered on October 15, 1926, in the proportion of one new share for each preference share held by them, and upon the footing that the full amount of each preference share taken up shall be paid to the company by instalments as follows:—

2s 6d per share on application.
7s 6d per share on allotment.
10s per share on December 31, 1926.

And that such offer be made by an offer specifying the number of preference shares to which the member is entitled and limiting the time (not being less than ten days) within which the offer, if not accepted by payment of the sum payable on application, will be deemed to be declined, with power to the board to have the issue of the preference shares underwritten by any parties with whom they may make arrangements for an underwriting commission not exceeding 1 per cent.

3. (a) That of the said additional 350,000 ordinary shares the directors be authorised to allot 50,000 to the Graphic and Bystander, Limited, at a premium of £1 5s per share, and 50,000 shares to Mr William Harrison, the chairman of the company, at a like premium, such shares to be paid for in cash, and at the same times and by the same instalments as the ordinary shares mentioned in sub-clause (b) hereof.

(b) That the balance of the said additional ordinary shares—that is, 250,000 ordinary shares—be offered in the first instance at a premium of £1 5s per share to the members of the company holding ordinary shares registered on October 15, 1926, so that each ordinary shareholder shall be entitled to an allotment of one new share for each share held by him and upon the footing that the full amount of each ordinary share taken up, plus the premium (making together £2 5s per share), shall be paid to the company by instalments as follows:—

10s (including 7s 6d on account of premium) on application.
£1 (including 17s 6d on account of premium) on allotment.
15s on December 31, 1926.

And that such offer be made by an offer specifying the number of ordinary shares to which the member is entitled, and limiting the time (not being less than ten days) within which the offer, if not accepted by payment of the sum payable on application will be deemed to be declined, and that the board be empowered to dispose of the ordinary shares not taken in response to such offer as they consider expedient in the interests of the company.

4. That pursuant to article 113 (e) of the company's articles of association this general meeting hereby ratifies and confirms the action of the directors in entering into the following contracts:—

(a) Dated September 23, 1926, between the Sphere and Tatler, Limited, and the company.

(b) Dated September 23, 1926, between the Amalgamated Trade Publications and the company.

(c) Dated September 23, 1926, between Sir John Reeves Ellerman, Bart., C.H., and the company.

(d) Dated September 28, 1926, between the Graphic and Bystander, Limited, and the company.

THE CHAIRMAN'S SPEECH.

The Chairman (who was received with applause) said: As one of the resolutions to be submitted to you at this meeting contains a reference to an allotment to myself of 50,000 new ordinary shares of £1 each at the price of 45s per share, for reasons stated in the circular dated September 6th already sent to you, I do not think it proper for me to propose the resolutions, and I will therefore leave this formality to one of my colleagues in due course.

In view of the fact that we are to-day asking you to agree to the company's capital being increased by £650,000, you will naturally expect me to give you an account of our stewardship, and to review the present position of the company and its subsidiaries, and in particular to give you our reasons for the step which we have recently taken in purchasing the world-renowned illustrated papers and other periodicals already disclosed to you, which has necessitated this proposed increase in our capital.

I will first give you in chronological order the steps which we have taken during recent years to build up what is undoubtedly to-day one of the largest and most successful concerns in the paper trade, not only of this country, but also abroad.

CARRONGROVE PAPER COMPANY, LIMITED.

In the early part of 1924 we acquired a controlling interest on favourable terms in the well-known Carrongrove mills. Since then we have considerably extended these mills under the able direction of Mr William Wallace, by the erection of a large new coating factory, and we are now busily engaged on further extensions. We estimate that the value of our investment in ordinary shares to-day in this particular mill is at least £100,000 in excess of the cost price to us, and we look forward to an increasing revenue from this concern.

THE NEW NORTHFLEET PAPER MILLS, LIMITED.

In the spring of 1924 we purchased this five-machine mill, situate on the Thames, from the receiver of the Northfleet Paper Mills, Limited, for the sum of approximately £100,000 for the mill buildings and plant. This represented one-fourth the amount at which the assets purchased stood in the books of our predecessors. We are now concentrating on remodelling this mill under the direction of Mr Wallace and installing new steam boilers of the latest type, and two large new turbines. We are also installing two new wide machines, 174 and 120 inches in width respectively. When this work is completed, the output of this mill should amount to 400 tons of fine papers per week, and we look to turning this concern into a valuable subsidiary with a net earning capacity of £80,000 per annum.

We expect to find an assured market for 150 tons per week of our output from this mill by supplying another of our subsidiaries, the British Vegetable Parchment Mills, with the body paper which they will require for parchmentising.

BRITISH VEGETABLE PARCHMENT, LIMITED.

After very careful consideration we decided at the beginning of this year to proceed with the erection of a large new factory, 600 ft long by 150 ft wide, alongside the Northfleet mills, for the manufacture of vegetable parchment paper. This country and the colonies have been large consumers of this special paper for many years, but the whole of this trade has hitherto been left entirely to foreign manufacturers. It is hoped to complete this new factory early in the New Year.

Through the International Pulp and Chemical Company, Limited (of which I shall have something to say presently), we are already owners of a factory producing parchment papers in Germany, and this has given us the advantage of enabling us to send our own practical paper-makers out to be trained on the most modern lines. We therefore anticipate no difficulty in making our new undertaking a success from the commencement of our working

operations. This new factory will be capable of supplying not only the whole British market, but also a large part of our Colonial market.

CALDWELL'S PAPER MILL COMPANY, LIMITED.

In the spring of 1924 we acquired a controlling interest in this company, which had suffered in 1921 and 1922 severely by reason of the slump in heavy stocks of raw materials which they held. Since we acquired control we have financially assisted this company, thereby enabling it to spend very large sums of money in the installation of new machinery and plant, with the result that our investment has more than doubled in value. Taking full advantage of the unique position of this mill, which is situated at Inverkeithing Harbour, we are now negotiating with the Admiralty for the purchase of additional land, which will enable us to erect a pier at deep water, and thus to bring in ocean-going steamers with our raw materials and ship our manufactured goods. This scheme will effect very large savings in freight. The Caldwell board has just placed, with our full approval, an order with one of the leading British firms of paper machine makers for what will be the largest esparto machine in existence. To provide the necessary funds to carry out the large new extensions which we have in hand at this mill a new preference share issue was made last week, which was promptly over-subscribed. Having seen most of the best paper-mill sites in Europe and the United States and Canada, I am of opinion that our site at Inverkeithing is second to none. If the Government accede, as I believe they will, to the sale of the necessary sea frontage, Caldwell's should in the near future become the largest paper-making centre for fine papers in Great Britain, and one of our most profitable undertakings.

ANNANDALE AND SON, LIMITED.

In June, 1925, we acquired about 98 per cent. of the ordinary share capital of this company, famed for its high-grade linen papers. Since its association with us this company has made considerable progress, and I think it is not an overstatement to say that to-day the net liquid assets of this company are nearly sufficient to cover the cost of our holding without placing any value on the mill plant and machinery.

HENRY BRUCE AND SONS, LIMITED.

In August, 1925, in conjunction with the Carrongrove Company, we acquired the share capital of this mill, which occupies a leading position in the trade for featherweight paper, a quality which is used in the publishing trade for printing books. During the present year we have settled certain claims for overpaid taxation amounting to approximately £45,000, and this amount, taken into account with the favourable terms of purchase, reduces the total cost of this mill to us to the extremely low figure of about £140,000.

BACKHOUSE AND COPPOCK, LIMITED.

Towards the end of 1925 we acquired this Macclesfield business, which is well known for the quality of its specialities in coated papers and pasted boards, and in the spring of 1926 we formed a new private company with a capital of £130,000, divided into 8,000 7½ per cent. cumulative preference shares and 50,000 ordinary shares. Of this capital we subscribed for the whole of the 50,000 ordinary shares at par. The net profits of this business have been very consistent, averaging about £25,000 per annum.

INTERNATIONAL PULP AND CHEMICAL COMPANY, LIMITED.

In January, 1926, we negotiated the purchase for the sum of £781,430 of 21,000 out of a total of 22,000 shares of 800 gold marks each in the Koholyt A.G., owning five large freehold factories in Germany, engaged in the manufacture of high-grade chemical pulp, paper, chlorine and other products used largely in the manufacture of paper. In February, 1926, we formed the International Pulp and Chemical Company, Limited, with a capital of £1,000,000, consisting of 600,000 8 per cent. cumulative participating preference shares and 400,000 ordinary shares, the latter of which we and our associates subscribed for in cash at par. The International Company is, therefore, through its holding of the share capital of Koholyt A.G. above referred to, entitled to practically the entire property of that German company. We regard this purchase as one of our most valuable investments. The Koholyt Company, of which we did not assume active management until March 1st last, had been run from an administrative point of view by our predecessors on lines which, in my opinion, left room for substantial improvement. In addition, the company's net earning capacity was adversely affected by trade loans at exorbitant rates of interest, which were then prevalent in Germany by reason of the financial crisis through which that country had just passed.

On taking over control we immediately took the necessary steps to crystallise that company's floating trade indebtedness into two hands at about 6 per cent. interest, and thus effected a large saving in interest, and we are concentrating on other important internal economies of a most drastic nature which will be reflected

in our net future earnings. The fruits of our labours, however, will only be apparent in the current year of the Koholyt Company—that is to say, from July 1, 1926—and as our products are well sold over the financial year ending June 30, 1927, we look forward with every confidence to reaping a handsome return on our investment, which will eventually find its way into the treasury of the Inveresk Company, and thus materially increase our profits for 1927 and in the future.

This year I have paid numerous visits to Germany in connection with the Koholyt works there, and have had many opportunities of observing at first hand the economic situation in that country. With reference to conditions in Germany, I have on more than one occasion recently told you of the gigantic strides which that great nation has made subsequent to the stabilisation of its currency. Since the insane and tragic state of affairs created in our country by the coal strike during the past six months, Germany, from my own observations, has made still greater progress, which has been certainly accelerated by the suicidal policy pursued by the extreme section of the miners' leaders in Great Britain. Cheap coal is the very lifeblood not only of our industry, but also of every other industry in Great Britain, and it is only right that I should disclose to you the grave and intolerable burdens which we have been forced to carry since May 1st, and are still carrying. Anticipating trouble in the coal industry, we laid up at our mills ample stocks to provide against any strike of normal duration, and therefore our actual loss is less than it would otherwise have been. It is sufficiently serious, however, when I tell you that from actual figures compiled I find that the general strike and the coal strike have cost us and our associated companies £80,000 up to date. I think it my duty to inform you and the preference shareholders in your associated company, the International Pulp and Chemical Company, Limited, that on a conservative estimate which my colleagues and I have personally made we value the net assets of the Koholyt Company at not less than £3,000,000.

NEW MERTON BOARD MILLS, LIMITED.

This mill, after being completed in 1925 at a cost of over £300,000, came to grief for want of working capital. It was purchased by us from mortgagees for the sum of £37,500 in July last. It is at present being entirely remodelled at an estimated cost of £50,000 under the direction of my colleague, Mr Wm. Wallace. It is expected that this mill will be ready to start up in January next, and, as our shareholders are aware, we have formed a public company to run it with a paid-up capital of £120,000, of which there are 80,000 7 per cent. preference shares and 40,000 ordinary shares. The whole of the latter we hold, having subscribed for them in cash at par. The production of this mill will be dealt with by our subsidiary company, Backhouse and Coppeck, Limited, who are large consumers of paper boards such as are produced at the Merton works. Mr Wallace values this mill when remodelled at £200,000.

MORRIS AND CO. (GLASGOW), LIMITED.

Some months ago it came to my knowledge that an attempt was being made to corner or secure a monopoly of raw esparto grass. If this attempt had succeeded, it would have had a very serious effect on the output of our group, which consumes nearly two-thirds of the esparto grass produced. I had always been alive to this danger, and it was absolutely essential to safeguard our supplies of raw material. With this object in view some months ago we agreed to acquire for ourselves and our associated companies a three-fifths interest in the share capital of this well-known and long-established firm of esparto growers. This company holds to-day leases for a period of years of over 1,400,000 acres of esparto fields in Algeria. We are entitled to take the whole crop from these fields at what is practically cost price. Mr Morris and Mr Miller have been appointed joint managing directors of this company for a period of years, and two of my colleagues and myself are joining the board of Morris and Co. (Glasgow), Limited.

ILLUSTRATED NEWSPAPERS, LIMITED.

As you will have gathered from what I have already stated, it has been our settled policy to acquire on advantageous terms a group of leading paper mills, and to safeguard their position with assured supplies of raw materials produced under our own control. Similarly, it was always in my mind that an indispensable adjunct to this policy was an assured market for a large output for our manufactured goods, also under our control. I therefore came to the conclusion some months ago that it would be a great advantage to your company and its associated mills if I could acquire for them a group of leading British illustrated papers and periodicals. This, as you know, has now been accomplished. In the spring of the year negotiations were opened with Sir John Ellerman for the purchase of a controlling interest in the *Illustrated London News* and the *Sketch*, the acquisition of the *Sphere* and the *Tailor, Men's Wear, Eve, the Drapers' Record*, and other papers controlled by him. Before proceeding further

with the negotiations I visited the United States and studied conditions there. I returned convinced that if these papers could be acquired on reasonable terms it was good policy on our part to proceed with the purchase. These negotiations were successfully concluded some three weeks ago.

After these terms had been arranged, an opportunity arose of purchasing the *Graphic* and *Bystander* on terms subject to a condition by Sir Edward Iliffe on behalf of the *Graphic* and *Bystander*, Limited, that the Inveresk Company, Limited, should give an option to apply for 50,000 of the new ordinary shares of your company at the same bonus terms at which they are now being offered to you—namely, 45s per share. This option has already been exercised, so you will be asked to pass a resolution confirming that transaction.

The combined profits of the papers just purchased for the past three years average about £300,000 per annum, but with economies in contemplation I think we can safely expect a net profit from them of at least £350,000. We are forming immediately a new company under the style of *Illustrated Newspapers, Limited*, and an opportunity will be offered you shortly of subscribing to this new undertaking. It is agreed that the Inveresk Company shall apply for and get allotted in full 1,100,000 of these ordinary shares at par. The preference shares of the new company will be offered to the public shortly through the Charterhouse Investment Trust, Limited, which has agreed to underwrite the preference shares. Applicants for preference shares will have the right of allotment of one ordinary share for every six preference shares applied for by them, and we have stipulated that there shall be no underwriting of these 300,000 ordinary shares, and that the Inveresk Company and its associated companies and friends shall take up all ordinary shares (if any) not applied for.

Addressing you as shareholders of the Inveresk Company, I should once more like to emphasise the great advantages which will accrue to your company and its associated companies from the regular and large market assured for its manufactured paper through close association with the papers purchased.

AN ESTIMATE OF PROFITS.

With the assistance of my colleagues, I have carefully investigated the results which should accrue from now on to your company through its own manufacturing profits and those of its subsidiaries. We estimate our gross revenue on a full normal year's running at approximately one million pounds, and after deducting therefrom depreciation, debenture interest, and preference dividends, &c., and creating reserves in all our subsidiary companies, we estimate that there should be approximately available for dividends in the Inveresk Company a balance of £400,000, subject to creation of reserves in our company, which, I may point out, will stand at the end of this year at nearly £600,000—that is to say, almost equal to the 600,000 ordinary shares of your company. Included in these 600,000 shares are the 350,000 new ordinary shares which it is now proposed to issue.

OLIVE AND PARTINGTON, LIMITED.

But the time has not yet come for making final estimates in connection with the Inveresk Company, and you will perhaps understand why I say this, and what is in my mind, when I inform you that late last night, within an hour or two of starting for Edinburgh, I concluded negotiations which have been in progress for some considerable time for the purchase of the ordinary share capital of what is, perhaps, one of the most famous names in British paper-making—Olive and Partington, Limited. Ladies and gentlemen, I am not in a position to disclose any figures at this meeting, but two things I do want to say about this latest acquisition—the first is that, compared with the magnitude of the business, the amount of money we shall be called on to provide is very small indeed; and the second is that my colleagues and I are confident that we can reorganise this company's plant so as to show greatly improved results. I might add that this acquisition will involve no issue of share capital to the public, as the owners are quite content to leave the bulk of their money in the company in preference shares. I think that may be regarded as a signal tribute to the confidence which those who really know the trade place in Inveresk management.

In conclusion, I think it is incumbent upon me to tell you that the general strike, in which our workers were at the time involved, has left us all feeling better men, and I must state that to-day we are proud of the loyalty and esteem which exist in our mills and the whole-hearted manner in which all our workers are putting their backs into their work, and it only remains for me to tell you that when we come to discuss with you the distribution of future profits (not including, of course, this year of strikes) you will give me and my colleagues your support in the creation and maintenance of a workers' welfare fund, so that it can be truly said that our workers receive in addition to their fixed wages some share of the profits they help to create. I will now ask Mr. Pike formally to move the resolutions which have been read to you.

MR PIKE'S SPEECH.

Mr George A. Pike said: It is the usual practice for the chairman at the close of his speech to move the adoption of the resolutions, but having regard to the fact, as already stated by Mr Harrison that resolution 3 (a) proposes to allot to him as chairman of our company 50,000 new ordinary shares at a premium of 25s per share, Mr Harrison has requested me to put the resolutions to this meeting, which, after I have made a few remarks, I shall have much pleasure in doing.

We have all, I am quite sure, listened with the greatest pleasure, interest and satisfaction to the very able and lucid speech which our esteemed chairman has made, and we are convinced by the facts that have been placed before us that our company stands in a unique and prosperous position, which, I am sure we all agree, is mainly due to the enterprising foresight and ability of our chairman.

I do not think that Mr Harrison will object to me stating that in respect to some of the most important acquisitions of our company, particularly the International Pulp and Chemical Company, and the *Illustrated Newspapers*, I have been closely associated with him in investigating the value of such acquisitions. I say this merely because it enables me to confirm to you what he has stated as to the facts and figures of these investments.

CAPITALISATION OF ILLUSTRATED NEWSPAPERS, LIMITED.

With regard to the latest purchase—namely, the *Illustrated Newspapers*—which you will be asked at this meeting to confirm, I have no hesitation in saying that as a financial transaction alone the deal is undoubtedly a profitable one for our company. Consider for one moment the facts: Our chairman has stated that the net profits of the whole of the periodicals acquired amount to about £300,000 per annum, which may probably be increased by economies now under consideration. The share capital of the new company will be 1,800,000 £1 7 per cent. preference shares, and 1,400,000 £1 ordinary shares, of which our company will hold 1,100,000 of the ordinary. The preference dividend will amount to £126,000, leaving a balance of at least £174,000. Assuming that a dividend of 10 per cent. was paid on the ordinary shares, this would absorb £140,000, and there would still remain a considerable amount to carry forward; but that is not all; a further most important factor, so far as our company is concerned, is the increase of the output of paper of our own and associated mills to supply the requirements of these periodicals.

With regard to our company's holding in the International Pulp and Chemical Company, a substantial dividend on the ordinary shares for the short period ended June 30th last has been received this week. Mr Harrison, together with Mr Condie Sandeman and myself, have just returned from a visit to the Koholyt works in Germany, and from the figures we have carefully investigated we are confident that the profits for the current year will be considerably augmented, and which, if maintained, will enable the International Company to increase its future dividends.

I feel certain that it will afford you the greatest pleasure to pass the proposed resolutions, and especially the resolution No. 3 (a) allotting to Mr Harrison the 50,000 new ordinary shares at the same price as they are offered to you, as a mark of your sincere appreciation and thanks to him for the most valuable services he has rendered to our company.

With regard to the allotment of 50,000 new ordinary shares to the *Graphic* and *Bystander*, Limited, at the issue price of 45s per share, I realise that this amounts to a very considerable sum which will be obtained by Sir Edward Iliffe. This, of course, really means that he valued his papers at a higher price than the figure of £400,000, and looks to obtain the difference in the value of the shares he acquires above their issued price. In any case, it shows Sir Edward Iliffe's confidence in the future of our undertaking.

I now have the pleasure to propose the adoption of the resolutions Nos. 1 to 4, which have been read to you.

Mr T. D. M. Burnside seconded the resolutions, which were carried unanimously.

Mr Galloway proposed a vote of thanks to the chairman, which was carried unanimously with enthusiasm.

WORKERS' WELFARE.

The Chairman said: The subject of workers' welfare is a matter which touches me very deeply indeed, and it is one I intend to concentrate on so far as our mills are concerned. I am a great believer in participation by workers in the profits of a successful undertaking. Only on Monday in Berlin we started a welfare fund for our German workers. We are putting on one side for them next year £10,000, and we intend in 1927 to put into operation a workers' welfare fund at every mill we possess. If, after a very large dividend is paid to shareholders, you give some interest to the workers, I am convinced you are going to get it back many times.

Now I thank you for your confidence. Might I say this? I have often wondered, as chairman of the Inveresk Company and all those mills that are associated with it, what a shareholder thinks. He gets a big dividend, and I suppose he thinks: "Well, these directors have only got to turn the handle and the dividend warrants flow out at the end of the year!" Would you just bear this in mind—the extraordinary difficulties we have had to face this year; coal, which we get in the form of duff at about 6s a ton, cannot now be invoiced under that category at all. We receive it, I think, invoiced as silt (and the proper name for silt is dirt) at 22s to 24s a ton. It has no calorific value, and the men I pity to-day are our stokers at our various mills trying to get up steam with this extraordinary stuff. They work like Trojans, and it is for that reason I say that the British workman is sound at heart.

DIVIDEND ESTIMATE.

We are getting very near the end of our financial year. It may be we shall change it to November 30th instead of October 31st. As we have now become a really big holding company, we will probably fix the financial year of every subsidiary company, including the Illustrated Newspapers, so that their financial year shall end at October 31st. We shall get, in the future, a month intervening, and get our dividends from our large number of holding companies into our future accounts, but, notwithstanding the coal strike and the fact that our profits are diminished by £80,000 in consequence, so sound is the Inveresk Company and the subsidiaries it possesses to-day, I anticipate we will be able for this year of strikes to considerably increase the ordinary dividend of 15 per cent. paid last year. I am not going to commit myself at the moment, but I should say that we will pay you 25 per cent. and then have substantial reserves over next year. With all these things coming into operation, the success of the Inveresk Company should be far greater than it has ever been.

The proceedings then terminated.

ANGLO-SOUTH AMERICAN BANK, LIMITED.

SATISFACTORY RESULTS OF A DIFFICULT YEAR.

POSITION AND PROSPECTS OF SOUTH AMERICA.

The thirty-eighth annual general meeting of the Anglo-South American Bank, Limited, was held, on the 19th instant, at Winchester House, Old Broad street, London, Mr Robert John Hose (the chairman) presiding.

The secretary (Mr C. J. Shea) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: It is a significant and disquieting sign of the times that, at meetings of this nature, increasing attention has perforce to be devoted to the effects of politico-labour developments, however much business men may desire to confine their deliberations to their own particular activities. Thus, on this occasion I have to say that the whole commercial situation in this country during the past months has been overshadowed by the general strike and the stoppage in the coal industry, and there can be no question that the present state of affairs is very grave. The prolongation of the coal stoppage has necessarily deferred a general revival in trade, while the necessity of importing foreign supplies of coal at high prices has enhanced in a dual manner the adverse balance of our international payments.

ARGENTINA.

With regard to South America the past year has not, generally speaking, been marked by increased commercial prosperity, markets having been still adversely affected by the continued unsettlement in Europe, particularly in regard to the exchange position of several of the leading currencies. On the other hand, definite advancement has been made in the modernisation of financial machinery, such as the adoption of centralised banking systems in certain Latin-American countries. The unfavourable effect upon business of the continued unsettlement in Europe has been nowhere more in evidence than in Argentina. In general, however, there can be no question that the economic and financial situation of Argentina is sound. The following cable just received from our Buenos Aires branch summarises present conditions in the Republic:—

"General trade is beginning to show signs of recovery, and the harvest outlook is promising. Pasturage is excellent, and cattle are in good condition, although prices are low. The hide market displays a firm tendency. The wool outlook is favourable. Exports of cotton are at the highest level ever recorded, although prices are declining. Shipments of dairy produce are maintained, with values lower. The exchange market is firm. Monetary conditions are easy, and for some time past Stock Exchange quotations have shown an advancing tendency, although at the moment

the tone is dull. Labour conditions continue tranquil, the building trades are still active, and railway traffics are well maintained."

CHILE.

In Chile the period covered by the bank's financial year has been one of sustained interest in all spheres of activity. A consistent growth in the commerce of Chile continued to characterise the foreign trade of the country during 1925. Labour conditions have been quiet, and for many months there seemed prospects of better trade, based on the settled political conditions and the monetary and financial reforms which came into operation at the beginning of the year. The brighter outlook, however, has been somewhat obscured owing to the shrinkage of sales effected in the all-important nitrate industry. The fact must be faced that Chilean nitrate has now no longer its former monopoly in the fertiliser markets of the world, and that modern methods must be adopted in all branches of the industry in order to meet the growing competition from synthetic nitrogenous fertilisers. Reports from leading scientific authorities give every reason for believing that the world demand for all kinds of fertilisers will show great and consistent expansion in years to come, owing to the universal impoverishment of the soil. Provided, therefore, that the Chilean industry is, by the adoption of up-to-date methods, placed on a basis enabling it to resist existing competition, there is no reason why it should not share in the future increased sales of nitrogenous fertilisers. It is encouraging to note the development which is taking place in the sources of national wealth other than nitrate. This is particularly observable in the consistent expansion of the copper mining industry, and Chile now occupies second place among the copper producing countries of the world.

With regard to the fiscal position of the country, the present Government has recently taken drastic steps to effect economies, and, in order to adjust the Budget position and to pay off outstanding deficits, as well as partly to consolidate existing indebtedness, they contracted about a week ago with United States bankers for the issue in New York of long-term loans for the equivalent of about £13,000,000, and their expectation is that in the year 1927 the Budget will be balanced. The past year has witnessed a turning point in the monetary history of the Republic. The new central bank of issue, the Banco Central de Chile, commenced operations in January last, and has proved entirely successful. In addition, there came into effect at the beginning of this year the General Banking Law, regulating the operations of banks under strict Government supervision, and there is no doubt

that the administration of this new measure will have beneficial results on the whole conduct of banking in the Republic.

The following cable, just received from our Santiago branch, summarises present conditions in the Republic:—"The establishment of the Banco Central de Chile and the stabilisation of exchange continue to operate to place business conditions on a more stable basis, and are leading to the adoption of sounder commercial methods. It is confidently anticipated that the joint efforts of the executive and the Legislative Chambers towards balancing the Budget will achieve favourable results. There is less pessimism prevalent regarding the future of the nitrate industry. Business in general is very quiet, and money is inclined to be more plentiful at easier rates. The bond and share markets are quiet, but good-class securities are buoyant in tone. Agricultural prospects are favourable. The labour situation is quiet, although the figures of unemployment tend to increase."

PERU AND MEXICO.

General economic conditions in Peru have been adversely affected by the low prices ruling for its principal exports, namely, sugar and cotton. Mexico is at present suffering from severe business depression, but it is a country of rapid changes, and there can be little doubt that it needs only two or three years of freedom from political and labour troubles and repressive legislation, with due protection for individual enterprise, to regain that measure of prosperity to which it is entitled by reason of its great natural resources.

Spain is undergoing a transitional period of development, and the termination of the Moroccan campaign should result in a very great reduction in national expenditure. The Spanish Government has recently decreed increased duties on certain imports, including iron and steel goods, and it is sincerely to be hoped that some arrangement may be come to shortly to avoid this further handicap to British industry, especially in view of the fact that Great Britain remains by far the most important customer for Spanish products.

Although the compilation of the balance-sheet by the new method naturally affects the sterling totals, the adoption thereof makes little difference to the ratio of any one item to another. The change in system, however, makes it very difficult to compare figures in the present balance-sheet with those of the previous year. Thus, although there is an apparent decrease in the figure of current, deposit, and other accounts, there is in reality a moderate increase. Acceptances on account of customers show this year an expansion, and, as this item represents the movement of commodities, any growth therein is naturally always a source of satisfaction to us.

There is a certain decrease in the total of cash and of bills receivable, but these items are naturally affected by the new system of rendering accounts in the same way as other items in the balance-sheet, and it will be found that we hold in these liquid assets about 43 per cent. of our liabilities to the public by way of current, deposit, and other accounts. Advances are in reality higher than the corresponding figure a year ago, and I may tell you that these are well distributed over the various countries in which the bank operates. Both gross profits and charges show an increase. The expansion in gross profits, however, is greater than that in charges, so that we show an increase in net earnings of just over £40,000.

ASSOCIATED COMPANIES' RESULTS.

With regard to the position of our associated institutions, the dividend of the British Bank of South America, Limited, for the year 1925 was maintained at 10 per cent. The board of the Commercial Bank of Spanish America, Limited, has again deemed it advisable to place the working profits for the year ended June, 1926, to contingent account rather than to declare a dividend. Since the date of our balance-sheet branches of our bank have been opened at certain places in Colombia, Nicaragua, Ecuador, Guatemala, Venezuela, and Salvador, where the Commercial Bank of Spanish America formerly had offices. This decision was taken after consideration by the boards of directors of both banks, and is a normal development in the policy of consolidation of the bank's interests, which the directors are consistently pursuing. The Banque Anglo-Sud Americaine, Société Anonyme, Paris, has again declared a dividend of 7½ per cent. for 1925, while the amount carried forward into the current year's accounts has been substantially increased. The Anglo-South American Trust Company, New York, records satisfactory results in the second year of its operations, and the profit realised has again been added to its resources.

The dividend of the Banco de A. Edwards y Cia for the year ended June last has been maintained at 16 per cent., and a further allocation has been made to reserves.

The Banque Generale Belge again records an expansion in

profits, which enabled the directors further to increase the dividend to 15 per cent., as against 14 per cent. in 1924, and 12 per cent. in 1923.

The reports and accounts were adopted.

CENTRAL URUGUAY RAILWAY COMPANY OF MONTE VIDEO, LIMITED.

SUCCESSFUL RESULTS—INCREASED PROFITS.

The ordinary general meeting of the Central Uruguay Railway Company of Monte Video, Limited, was held, on the 19th instant, at River Plate House, London.

Mr Frank Henderson (the Chairman) said that the gross receipts, £1,467,739, showed an increase of £19,570 over those of the previous year, and were only some £3,400 short of the company's record year of 1924. The total expenditure had increased by £25,342, leaving the net profit lower by £5,772, or 1.30 per cent. The net result, after taking into account exchange losses—which were only £1,858, compared with £84,476 in the previous year—was a balance of £437,191, compared with £360,346.

The company had during the year been subjected to a severe Press campaign against the ruling railway tariffs, and had been accused of exploiting the public and burdening the industries of the country with transport rates that they could not bear. The directors, upon careful examination, considered none of these charges substantiated, and had published very accurately reasoned articles refuting them. In looking back over the company's record, no one could dispute the statement that their enterprise had been the greatest factor of development in enabling the Uruguayan Republic to attain the enviable position which it occupied among the nations of the world to-day—a service which had been rendered for an average return on its ordinary stock of only 4 per cent.

With regard to the outlook, the general manager was of the opinion that, in spite of the traffic during the two opening months of the current year having been adversely affected by heavy and continuous rains, there was no reason why the final results should be less favourable than those now submitted. Referring to Press comments with regard to the dividend on the ordinary stock of 6½ per cent. for the year, the Chairman said it would have been quite easy to make a larger distribution, but most unwise in view of the expenditure to which they were committed in the way of renewals.

The report was unanimously adopted.

GOODE, DURRANT AND COMPANY, LIMITED.

RESULTS OF A DIFFICULT YEAR.

TRADING CONDITIONS IN AUSTRALIA.

The twenty-eighth ordinary general meeting of Goode, Durrant, and Co., Limited, was held, on the 19th instant, at the registered office of the company, 27 Milton street, London.

Mr J. Albion Williams, chairman of the company, presided.

The secretary (Mr D. M. Jackson, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: I am sure you will all have read with deep regret of the losses we have sustained during the past year by the death of our two colleagues, Mr William Lowe and Mr Wilfrid Stow. These gentlemen were associated with us for many years in the management of the company's business in Australia, and were highly esteemed by their colleagues and in Australian commercial circles generally. Following the custom which has done so much to build up our business, we are bringing forward younger men who have been trained by us, and we consider satisfactory arrangements have been made for the future management, thereby ensuring, as far as possible, the prosperity of the company.

YEAR'S PROFIT, £47,000.

Turning to the balance-sheet, we regret a further falling-off in the amount to the credit of the profit and loss account. Many influences have operated against profitable trading, particularly in the Eastern States of Australia, but we have been successful in reducing the stocks carried in the Commonwealth to the extent of £77,500 as compared with last year. This reduction has entailed a certain sacrifice of profit, and, in view of all the circumstances, we feel that the profit for the year, amounting to £47,006 17s 6d, is satisfactory.

You will note that we have paid off the mortgage item of £15,500, and that cash creditors have been reduced by £11,000. Slight additions have been made to freehold properties, and fixtures, fittings, plant, and motors. The item in respect of

The ANGLO-SOUTH AMERICAN BANK

4 Moorgate, E.C.2

motor-cars has been added to fixtures and plant at the request of the company's auditors, it having previously been included in sundry debit balances. Bills receivable held are £16,000 more, and the cash in hand is £39,000 more than last year, and we consider our liquid position good.

I now propose:—"That the directors' report and the audited balance-sheet for the financial year ended July 20, 1926, be received and adopted."

Mr W. E. Pennick seconded the resolution, which was carried unanimously.

DIVIDEND RESOLUTION.

The Chairman proposed:—"That dividends at the rate of 7 per cent. per annum and 10 per cent. per annum be declared and paid on the preference and ordinary shares respectively, including the interim dividends paid in April last, that the sum of £10,000 be placed to the general reserve fund, and that the sum of £12,696 7s 8d be carried forward to next year."

The resolution was seconded by Mr F. Simonett, and unanimously agreed to.

On the motion of Mr S. G. Durrant, seconded by Mr J. C. Gait, the re-election of Mr James Albion Williams and Mr William E. Pennick as directors of the company was unanimously agreed to.

The Chairman proposed:—"That Mr William Swinstead Rose be elected a director of the company."

Mr W. E. Pennick seconded the resolution, which was carried unanimously.

Messrs Newman Ogle, Ashworth, and Co. were reappointed auditors for the ensuing year, and a cordial vote of thanks to the chairman and to the staffs in London and Australia terminated the proceedings.

FREDERICK HOTELS, LIMITED

SATISFACTORY RESULTS OF A DIFFICULT YEAR.

The annual general meeting of the Frederick Hotels, Limited, was held, on the 22nd instant, at the Hotel Great Central, London, Mr Ronald Peake (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—"The results of the year's trading are not quite so good as they were in the previous year, but this is due to the general strike, the coal strike, and their after effects.

The net profit for the year, after paying the debenture interest, amounted to £65,184 5s 11d, which, with the amount brought forward from the previous year, gives an available sum of £110,363 12s 6d. The preference dividend for the year, amounting to £27,500, has been paid. An interim dividend of 5 per cent. on the ordinary shares, paid in March, absorbed £10,312 10s, and we now recommend the transfer of £5,000 to reserve (making it £130,000) the payment of a final dividend of 10 per cent. on the ordinary shares, making 15 per cent. for the year, and to carry forward to the current year the balance of £46,926 2s 6d.

With regard to the balance-sheet, you will note that the properties account has been reduced by £3,072 6s 7d. This sum represents the proceeds of the sale of part of the furniture from the Hotel Burlington, Dover. The hotel itself has not yet been sold, but we hope to sell it at an early date.

You will notice, no doubt, that the amount we recommend should be carried to reserve is less than in former years. Your directors consider that having regard to the large sums of money that have been spent in recent years, and are still being spent, in keeping the hotels in good repair and well up to date; also seeing that the debenture debt has been reduced by £150,000, there is no longer the necessity to increase the reserve fund at the same rate as formerly.

With regard to the current year, we have now completed nearly four months' trading, and our seaside hotels have, so far, done their normal business. The Hotel Majestic, at Harrogate, has also had a satisfactory season. The coal strike, however, still has an adverse effect on the business of the London hotels. There is no doubt that England was left out of the itinerary of many American visitors to Europe this year because of their fear that conditions in this country would be abnormal. We draw our clientele not only from tourists and holiday-makers, but from business men engaged in coal, iron, ship-building, and the textile industries, and our prosperity is to some extent dependent on theirs. I can assure you, however, that we shall get our fair share of whatever business is going, as the reputation of our hotels has never stood higher in the estimation of the public than it does to-day.

The resolution was carried unanimously.

BUENOS AYRES GREAT SOUTHERN RAILWAY COMPANY, LIMITED.

SUCCESSFUL YEAR—GOOD PROSPECTS.

The ordinary general meeting of the Buenos Ayres Great Southern Railway Company, Limited, was held, on the 20th instant at River Plate House, London.

The Chairman (Mr H. C. Allen) said that the gross receipts, at £12,749,096, showed an increase over last year's record of £1,171,501. The expense ratio was slightly lower, so that the net operating profit, after allowing for loss on exchange, was £911,930 better than for the previous year. The sum of £250,000 was being set aside out of the year's revenue to create a special fund as a reserve for any future contingencies in connection with the Bahia Blanca and North-Western Railway and its subsidiary companies. They were also transferring £200,000 to the credit of the general reserve fund, which would then stand at £1,164,000, and they recommended a balance dividend of 4 per cent., with a bonus of 1 per cent., on the ordinary stock. Ample allocations had been made to the various funds for renewals, insurance, &c., the total amount to the credit of these funds being £6,964,000, as compared with £6,057,000. They had in London cash and bills aggregating £3,359,000, as against £1,050,000.

The coal stoppage in this country did not find them altogether unprepared. For some months they had been accumulating supplies in the Argentine, which were obtained at very advantageous prices, and, when contract shipments ceased, had more than six months' requirements on hand or in transit. In the past few weeks they had had to purchase some half-a-dozen cargoes of North American coal, which were obtained at fair prices.

The harvest results were not up to expectations owing to various adverse conditions in different districts, but the results with regard to this company had been so good that they had had a record year. One new type of wheat showed so much promise that there was good reason to hope its cultivation might be of enormous importance to the zone on the company's system served by the Bahia Blanca and North-Western Railway. Taking all things into consideration, he thought they might reasonably look forward to equally satisfactory results for the current year.

The report was unanimously adopted.

BUENOS AYRES WESTERN RAILWAY, LIMITED.

GOOD RESULTS DESPITE BAD CROPS.

The thirty-seventh ordinary general meeting of the Buenos Ayres Western Railway, Limited, was held, on the 19th instant, at River Plate House, London.

Sir Henry Bell, Bart., who presided, said he was sure that after studying the figures and statements submitted relating to the year's working the stockholders would come to the conclusion that the results were satisfactory. They suffered disappointment because the wheat harvest, which, until the last moment, promised to give splendid results was attacked by rust, and consequently the yield both in quality and quantity was not up to expectations. Maize did not yield the harvest anticipated, and its transport was delayed by a spell of damp, warm weather, which necessarily affected the grain. In spite of these drawbacks and the drop in the receipts from the cattle traffic, due to the abnormal activity during the previous year on account of drought, the gross receipts had increased by £207,673, of which amount they retained £99,781. The available balance of £860,336 had enabled the directors to place £100,000 to the general reserve fund, to recommend a final dividend of 4 per cent. on the ordinary stock, making 7 per cent. for the year—an increase of 1 per cent. on the twelve months—and to carry forward £66,429 as compared with £57,053. Particularly gratifying features in the improved showing had been the more favourable results of working the Buenos Ayres Midland Railway and the decreasing exchange loss on remittances.

Summarising his impressions of his recent visit to the Argentine, the Chairman said that they had in the Western Railway an exceedingly valuable property, which was situated in some of the finest agricultural zones in the Republic. The railway was in good condition and was efficiently managed. Argentina was a great and progressive country with vast tracts of fertile territory as yet untouched awaiting further development; she was gradually working her way through the troubles which were the aftermath of the Great War, and not only were all sinking fund and interest payments on foreign loans met without difficulty, but floating indebtedness had been considerably reduced during the past twelve months. With regard to the prospects for the coming year, a cablegram received on Saturday stated that the crops, camps, and livestock were in excellent condition, and prospects were favourable for the coming season.

The report and accounts were unanimously adopted.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

ARRIVALS.	£	WITHDRAWALS.	£
Oct. 16 ..	nil	Oct. 16—Bars sold ..	141,000
" 18—S. Africa ..	500,000	" 18—Switzerland ..	8,600
" 19 ..	nil	" 19—Bars sold ..	23,000
" 20 ..	nil	" 19—Holland ..	6,000
" 21 ..	nil	" 20—Bars sold ..	367,000
" 22 ..	nil	" 21—India ..	16,000
Total ..	500,000	" 21—Bars sold ..	35,000
		" 22—Bars sold ..	139,000
		Total ..	764,000
		Net withdrawals, £264,000.	

Messrs Samuel Montagu and Co. write on October 20th as follows:—

GOLD.

India and the trade took only a small portion of the £945,000 bar gold available this week in the open market, the remainder being bought on account of the Continent. The fall in the German exchange to below parity has resulted in considerable quantities of gold being exported to that country, though naturally the margin of profit is a small one. At the moment of writing the exchange with New York is close to the export point. The net withdrawal from the Bank of England during the week under review was £138,000, thus decreasing the net influx since January 1, 1926, to £8,991,000, and increasing the net efflux since the resumption of an effective gold standard to £2,604,000. Advice from New York states that a shipment of \$2,000,000 gold is reported to be on the way there from Japan.

SILVER.

During the week prices have fallen with rapidity. The weakness of the China exchanges has been very marked, and silver was sold on China account every day. The amount would have been larger had not the price dropped below limits imposed upon unexecuted selling orders. Some Indian bear operators seized the opportunity of closing contracts, but the main portion of Indian bear sales remains open in expectation of still lower quotations. Bears, therefore, failing some important fresh factors such as an unexpected coinage demand, are favourably placed. In other words, if the world's production is sold in advance by bears, producers must keep pace with the fall, or sit on their output, which, with world markets depressed by the Indian Currency Commission's report, can hardly hatch a profit. The fact that there is a premium of 1s 4d on cash silver—a larger difference than has obtained for a long time—shows how the support of the market is mostly wing to the bear position.

When the *Wall Street Journal* refers to a possibility of the "release of the huge hoards stored away in India privately or centuries back, and which is estimated to total at least 1,000,000,000 ounces," it is a sign that America is seriously perturbed at the silver situation, although the private holdings of the Indian people are by no means likely to be affected. A succeeding paragraph states: "The matter of placing the uppee on a gold basis in India was to come before the Parliament of both nations in the early part of next year

BURMA CORPORATION, LIMITED (Incorporated in India).—During the month of September 29,822 tons of ore were mined, including 1,334 tons of high-grade ore. 26,000 tons of ore were milled in the treatment plant, producing 9,401 tons of lead concentrates. 9,165 tons of lead-bearing material, including 1,313 tons of high-grade ore, were melted in the blast furnaces, producing 4,206 tons hard lead for treatment in the refinery. Refinery products were 4,273 tons refined lead and 365,606 ounces refined silver. Of silver production 44,867 ounces were recovered from the treatment of copper matte. Experimental zinc plant produced 4,298 tons zinc concentrates, assaying 13.5 per cent silver, 71 per cent lead, and 45 per cent zinc. In addition to the above 900 tons copper matte were produced from the treatment of accumulated smelter by-products, and 4,225 tons copper ore. 90 tons of elemental lead were also produced. Included in the tonnage of refined lead is 316 tons recovered from the smelting of copper ore.

MOUNT LYNELL.—During the four-weekly period ended Oct. 13th the mill treated 3,333 tons of ore, producing 2,818 tons of concentrates.

San Francisco Mines of Mexico, Limited.—For September: Ore treated 13,480 tons, residues treated 9,890 tons, lead concentrates produced 2,160 tons, and zinc concentrates produced 4,382 tons. Estimated net smelter return on lead concentrates £184,633 (U.S. currency), and on zinc concentrates £152,662—total £337,295. Operating expenses, £113,471. Estimating operating profit, £223,824. Estimated expenditure, £29,023. (Office note.—This return includes £14,030, being amount of valuations of products over valuations in respect of previous months.)

Zinc Concentration.—Sept.—Lead concentrator treated 22,419 tons of ore, producing 4,291 tons of lead concentrates and 3,908 tons of zinc concentrates. Estimated gross profit with lead at £24 and zinc at £26 10s per ton, £12,448. In zinc (or silver) for each £1 fluctuation in price of lead, £2,974; in the price of zinc, 872s.

RAILWAYS.

CORDOBA CENTRAL RAILWAY.—Converting Argentine currency into sterling at par, the results of the year ended June 30, 1926, as compared with those of the previous year, were as under:—

	1924-25.	1925-26.
Gross traffic receipts ..	£ 3,363,848	£ 3,490,762
Working expenses ..	2,335,887	2,458,237
Net receipts ..	1,027,960	1,032,525
Percentage of working expenses ..	69.44 %	70.42 %

The sum of £80,000 is transferred to general reserve, and £5,000 to London staff pension fund. The dividend on the ordinary income stock is 2 per cent. The carry forward is £8,321. The average rate of exchange received for remittances was 45.85d to the peso, as compared with 43.68d in the previous year, the par rate being 47.62d. The realised loss on exchange during the year was £45,244, as compared with £119,010 in the previous year.

TALTAL RAILWAY COMPANY, LIMITED.—Gross receipts for year ended June 30, 1926, amounted to £248,509, against £323,364 for preceding year. Expenses were reduced from £156,520 to £142,325, leaving a profit on working of £106,184, against £166,844 in 1924-25. The sum of £18,948 is put to income-tax

suspense account. The ordinary dividend is 6 per cent., free of income-tax, against 9 per cent., free of income-tax, for 1924-25. The carry forward is increased from £18,965 to £47,038, the board explaining this increase in carry forward is due to their having had regard to the uncertainty of the immediate future of the nitrate industry, and to the serious reduction in gross receipts since the close of the financial year.

RUBBER, &c.

CENTRAL SUMATRA RUBBER ESTATES.—The crop of rubber accounted for during the year ended June 30, 1926, amounted to 420,082 lbs. The average net sale price was 2s 1.70d per lb, as compared with 1s 10.94d per lb for the previous year. The cost of production was 11.78d per lb, as compared with 11.94d per lb for the previous year. In consequence of conversions the issued capital of the company is now as follows:—3,311 cumulative preference shares of £1 each fully paid, £3,311; 16,689 ordinary shares of £1 each fully paid, £16,689; 800,880 ordinary shares of 2s each fully paid, £80,088—£100,088. In order that all the ordinary shares of the company may be of the same denomination, it is proposed to split each of the 16,689 ordinary shares of £1 each into 10 ordinary shares of 2s each. The profit secured is £21,307, against £11,619. The ordinary dividend is 20 per cent., against 10 per cent. Cash and British Government securities stand at £48,102, against £35,965 in preceding balance-sheet.

GELANG BESAR RUBBER PLANTATIONS.—The profits for year ended June 30, 1926, amounted to £26,055, against £12,607. In preceding year preference shareholders received 49 per cent., less tax. In the latest report they receive 1½ per cent., less tax. The ordinary shareholders receive 12½ per cent., against nothing in preceding year. The sum of £4,000 has been put to reserve. Cash has risen from £2,742 to £7,308, while the company has £42,832 in British Government securities, against £28,215 in preceding balance-sheet.

INSULIND (SUMATRA).—The report for the year ended June 30, 1926, shows a profit of £30,104, which together with the £3,092 brought forward makes £33,195, comparing favourably with £20,606 of 1925 (of which only £13,037 was annual profit). Cash has increased from £8,944 in 1925 to £15,258. Investments £5,022 remain stationary, being wholly in Treasury bonds. Produce on hand has doubled, and now stands at £17,630.

KAMUNING (PERAK) RUBBER AND TIN.—The report for the year ended June 30, 1926, shows a profit of £81,506, against £31,020 in 1925. When to this sum has been added £9,927 brought forward from 1925, the available balance stands at £91,433, against £40,289 in 1925. Of this profit £10,000 has been appropriated to general reserve. The ordinary dividend is 30 per cent., as against 12½ per cent. in 1925. Cash has risen from £9,577 to £19,510. Investments are now £69,226, of which £67,147 are in British Government securities. This compares favourably with 1925 when investments stood at £53,285, of which British Government securities claimed £47,199.

LAWAS (SARAWAK) RUBBER ESTATES.—The net profit for year ended June 30, 1926, is £34,807, against £22,893. The ordinary dividend is 50 per cent., against 35 per cent. for preceding year. The carry forward is £4,322. During the past season a crop of 580,909 lbs of rubber was secured, as against 471,434 lbs for previous period. The gross average price realised for the portion sold was 2s 2.33d, which compares with 1s 9.11d per lb for previous year.

SENGAT RUBBER ESTATE.—The report for the year ended June 30, 1926, shows a profit of £39,137, as against £14,844 in 1925. Dividends of 18½ per cent. (as against 11½ per cent.) were paid. Cash stands at £17,501. In 1925 it was £14,133. Investments are valued at £5,288, an increase of £5,050; £5,038 is in 5 per cent. War Loan, the remaining £250 being in preferred and deferred ordinary shares in Vultex, Limited. Sundry debit balances have increased by £50 and produce unsold valued at £18,191, compares with £7,031 for the same item in 1925.

STRATHISLA (PERAK) RUBBER ESTATES.—Crop of rubber for year ended June 30, 1926, amounted to 627,932 lbs, as against 330,776 lbs in preceding year. Sale price was 1s 9.66d per lb, against 9.13d per lb. Net profit rose from £12,062 to £38,152. The sum of £8,000 is put to reserve account. The ordinary dividend is 40 per cent., against 15 per cent. Carry-forward is £7,216. Cash and British Government securities stand at £20,161, against £11,318.

SUMATRA PEARA RUBBER PLANTATIONS.—The report for year ended June 30, 1926, reveals a net profit of £88,680, as compared with £52,380 for preceding year. The ordinary dividend is 37½ per cent. for the year, against 25 per cent. for preceding year. The sum of £7,039 has been put to reserve against nothing a year ago. The carry forward is £10,189, subject to directors' extra remuneration. Total crop was 1,457,561 lbs, against 1,136,595 lbs in preceding year. The crop cost 6½d per lb f.o.b.

and realised a net average price of 2s 0½d per lb, as compared with 7.12d per lb and 1s 9.44d per lb respectively for 1924-25, the cost in both cases including estate staff commissions. The total reserve fund is now £44,000. Rubber in stock is at £44,075, against £40,102. Investments are shown separately and total £67,949, against £38,587. Of the total of £67,949 the sum of £65,899 is in British Government securities. Cash is at £19,397, against £28,930 in preceding balance-sheet.

SUNGEI BAHRU RUBBER ESTATE.—The report for year ended June 30, 1926, resulted in a profit of £32,997, against £17,320 in preceding year. The sum of £2,000 is written off buildings and machinery account, and £1,000 added to general reserve. The ordinary dividend and participating preference dividend is 20 per cent., against 10 per cent. The carry-forward is £2,640, against £596 brought in.

SUNGEI KARI (SUMATRA) RUBBER ESTATE.—Net profit for year ended June 30, 1926, is £32,742, against £15,068 for preceding year. The ordinary dividend is 30 per cent., against 20 per cent., and the carry forward is £7,237. Cash has risen from £8,566 to £15,847.

MISCELLANEOUS.

ANGLO-SCOTTISH AMALGAMATED CORPORATION, LIMITED.—The directors' report for the period ended December 30th states that the net profits, after deducting expenses, administration, taxation, and directors' fees, amount to £57,491. This the directors recommend should be appropriated as follows:—The placing to reserve of £10,765, raising that account to £50,000; the payment of a dividend on the ordinary shares of 5 per cent., less tax, absorbing £27,317; and the carrying forward of the balance, £10,408. The report states that the liquidation of the assets taken over from the Anglo-Scottish Trust, Limited, the Atlantic Trust, Limited, the Status Investment Trust, Limited, and the Egyptian

† Free of tax.

£58,215 as against £80,150. The company has increased its lands and buildings, &c., from £758,838 to £781,867, and paid 15 per cent. on its ordinary shares. Investments total £1,069,067, against £1,044,709. They are all in British Government securities. Creditors are at £503,323, against £603,813. Reserve account remains at £450,000.

MONTEVIDEO TELEPHONE COMPANY.—The report for the year ended July 31, 1926, shows a profit of £37,886, as against £32,831 in the preceding year. This, when added to the £14,583 brought forward from last year, leaves an available balance of £52,469. A dividend of 8 per cent. was paid (against 7 per cent.), £20,000 was carried to reserve, and £15,000 carried forward. Cash stands at £7,182, and investments £187,784.

RAFAEL TUCK AND SONS.—The report for year ended April 30, 1926, shows a net profit of £36,420, against £37,613 for preceding year. The dividend on the ordinary shares is again 8 per cent. The sum of £800 is transferred to special dividend reserve fund, and £2,500 to staff pension fund. The reserve accounts now are:—Capital reserve, £8,845; special dividend reserve, £65,919; general reserve, £40,042. Cash is at £40,473, against £31,009. Debtors are at £84,735, against £77,927. Creditors are at £60,397, against £55,009. Investments in Government, Colonial, and other stocks are at £43,675, against £73,865. Stock stands at £68,970, against £59,610.

SMITHFIELD AND ARGENTINE MEAT COMPANY, LIMITED.—The report for 1925 shows a profit balance of £132,016, against £99,468 for 1924. This increases the credit balance carried forward to £231,584. The reorganisation at Zárate is completed, and the works are now equipped with all the latest up-to-date machinery. The revaluation of the company's works in Argentina has been made, and results are now incorporated in the balance-sheet. The long outstanding taxation questions with the authorities have all been satisfactorily settled. The directors regret that the unfortunate differences among the companies interested in the Argentine overseas meat trade still continue. Cash has risen from £48,762 to £77,673.

S. SMITH AND SONS (MOTOR ACCESSORIES), LIMITED.—A meeting of the debenture holders of the above company has been called for the purpose of passing a resolution postponing drawings and sinking fund contributions until October, 1927, and January, 1928, respectively, and substituting 1939 for 1938 as the final redemption date. The directors explain that whilst the business has made steady progress during the past twelve months, it is not yet in a position to set aside such a large sum as is necessary for the sinking fund provided by the trust deed, as all present resources are required for the development of the business. The debentures are chiefly held by the company's bankers, only a small part having been subscribed by shareholders. The banks have been consulted and agree to the proposals.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions were favourable, and good progress was made with ploughing and sowing operations. Supplies of native wheat were fairly large at most of the principal Statute markets, while general quality showed improvement. A very firm tone governed the market during the week, values responding to a sharp advance in forward quotations, while offers were sparingly made. Buyers, however, were reluctant to follow the upward trend, and business was of a restricted character. In the floating and forward cargo market shippers were obliged to raise their limits in sympathy with higher American and Argentine advances occasioned by the scarcity of and enhanced rates ruling for

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Business conditions in the iron and steel trades are still unsettled, and very little material is available for near delivery. The uncertainty regarding the costs of production when work is resumed by the steel works and the difficulty of obtaining delivery of foreign steel, together with the high price demanded, are, however, causing buyers to withhold orders. Many of the British manufacturers are refusing to accept business for delivery after the coal strike. Continental manufacturers are either unable or unwilling to quote for near delivery, but, on the other hand, consumers in this country are reluctant to buy forward. As a result, there is a strong tendency in all directions to mark time. The high prices quoted by Continental makers after the formation of the cartel have weakened, but are above those ruling in the middle of last month.

Our Middlesbrough correspondent's report, dated October 21, 1926, is as follows:—Pig-iron.—Makers of Cleveland pig-iron have sold the present small output for some weeks ahead. Merchants who have any iron to dispose of have been placing small lots of No. 3 G.M.B. at 120s per ton, f.o.t. A fair business is being done in Continental iron. The ordinary standard grades of East Coast Hematite are unobtainable, but there are a few off-grades at 85s to 87s 6d per ton. Manufactured Iron and Steel.—A certain amount of work is being carried out by local steelmakers, but until the strike is settled there can be no improvement. There are no definite steel quotations, but iron bars are put at £11 5s per ton. Iron Ore.—No change has occurred in the position, and best Rubio is purely nominal at 21s 6d per ton, c.i.f., Tees.

Our Sheffield correspondent writes:—While the volume of work in the local industries does not fall off greatly, the scarcity of steel material and the financial aspect have become more acute. Costs are steadily rising, while any considerable advance on selling rates is quite out of the question. Cleveland foundry pig has gone up to £6 per ton, and is now dearer than the superior hematite pig. In the lighter branches the execution of a good many orders has been brought to a standstill by the exhaustion of stocks of hard basic and acid billets, file steel billets, and various alloy steels. The motor industry has obtained the various steel parts it consumes so far, but several of the suppliers are no longer able to execute orders. The local trade is working on outcrop coal and Westphalian coke, no British coal having come into the district. A little coke is, however, being made in Derbyshire and Lancashire. Contracts for Durham foundry coke for delivery after the settlement have been negotiated

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1926-27, 1925-26, 1924-25, 1923-24:—

AMERICAN WHEAT MARKETS.

The advent of colder weather has had a stimulating effect on prices this week, frosts being reported from various parts, whilst snow has interrupted threshing. Towards the end of the week, however, absence of export business, bearish Australian crop advices, and selling by professionals owing to the scarcity of ocean freight room, and the dearth of freight rates caused a slight setback.

	Jan. 2, 1925.	Oct. 22, 1925.	Jan. 7, 1926.	Oct. 14, 1926.	Oct. 21, 1926.

(a) October delivery. (c) December delivery.

Visible supplies of wheat in Canada, 29,883,000 bushels, show an increase of 599,000 bushels as compared with the previous figures. Supplies a year ago stood at 27,153,000 bushels.

COAL.

Our Cardiff correspondent writes:—There has been an acute scarcity of foreign coal supplies, particularly for prompt deliveries on the Cardiff market this week. The result has been a further stiffening of prices. Silesian and German coals have been quoted up to 65s c.i.f. South Wales ports, and American run-of-mine up to 57s 6d. Owing to the exhaustion of stocks on the Continent and the increase in inland consumption steps are being taken to restrict exports, and British consumers are consequently being compelled to increase their demands for American coals as well as to search for new sources of overseas supplies. For the first time in the history of South Wales Spanish coals are being imported. Advances from Hampton Roads report phenomenal pressure on the shipment facilities, and there are detentions to shipping extending up to two and three weeks. Moreover, both the f.o.b. prices of American coals and the cost of freights to the United Kingdom have advanced appreciably. The local scarcity, however, is being slightly eased by the increasing outputs of the levels and collieries that are at work in South Wales, and these are reported to be more numerous than at any other period since the strike began.

at 35s per ton at ovens, which compares with 29s down to April. Demand for German coke is now falling off, and users are buying all kinds of fuel with extreme caution. The lighter trades are not ill-supplied with orders, and seasonal demand is keeping the cutlery and plate factories fairly busy.

Our Glasgow correspondent writes:—It now appears unlikely that any of the larger steel plants will be able to resume operations before the end of the year, even if the coal stoppage comes to an end at an early date. Some firms, when on full production, require several thousand tons of coal per week, and arrangements for supplies will occupy a considerable period after the miners resume work. Meantime business is at a low ebb. Deliveries of Continental material are unsatisfactory, and most of the structural firms have orders in hand on which work has been completely suspended through lack of sections. The amount of pig-iron left in store for disposal is negligible. A small output of wrought iron is being maintained at several works, and is easily disposed of. Re-rollers and sheet makers are working spasmodically owing to fuel difficulties, both as regards quantity and quality. Inquiries for all classes of iron and steel are numerous, and prospects generally for post-strike business are better. Recent contracts reported include an order for three steamers for the Irish Channel service, which have been placed with Messrs. William Denny and Brothers, Limited, by the London, Midland and Scottish Railway Company.

Our Cardiff correspondent reports:—In the tinplate industry production is improving, and is now approaching normal proportions. The volume of business is accordingly expanding, but owing to the high prices of tin and of foreign fuel manufacturers have been compelled to intimate to the workmen the withdrawal of the bonus of 7½ per cent. which they have been paid since 1921. For prompt positions tinplate prices are ruling up to 23s 6d per basic box and up to 21s 9d for forward positions. The price of steel bars has been raised from £6 5s to £6 15s. A fair quantity of tinplates has been shipped during the past few weeks, but the stocks in warehouses amount to 49,652 boxes, compared with 123,422 boxes in the corresponding week of last year.

OTHER METALS.

TIN.—Tin market slightly irregular, but values pursued a downward course owing to persistent realisations, though offerings were fairly well absorbed. Lower American and Eastern cable advices also exercised a depressing influence. Dealings were recorded in standard cash at £316-£317 to £310, and three months £305-£303-£306 and £304 15s. Sales in the East were reported at £314 10s-£311 10s and £312 10s ton.

COPPER.—Copper weaker on liberal selling orders, though at the lower range of prices a fairly large turnover resulted. American markets quiet and easier, which was duly reflected on this side. Standard cash sold at £58 17s 6d to £58 10s, three months £60 2s 6d to £59 6s 3d ton.

LEAD.—Values were lower as offerings continue in excess of requirements. Good, soft foreign pig, October, sold £31 5s to £30 17s 6d, November £31 5s-£30 12s 6d, December £31 5s to £30 10s, and January £31 5s to £30 7s 6d and £30 12s 6d ton.

SPELTER.—Irregular but easier on balance, with moderate dealings. October sold £34 10s to £34 5s, November £34 7s 6d-£34 5s, December £34 7s 6d to £34 1s 3d, January £34 8s 9d to £34 2s 6d, February £34 7s 6d to £33 18s 9d per ton.

ANTIMONY.—Steady quiet. English specials £74 10s to £75, foreign spot £62 to £63 per ton.

ALUMINIUM.—Dull. Home delivery £107, export £112 per ton.

WOLFRAM.—Easier, forward quoted 13s 6d to 14s per unit, c.i.f.

QUICKSILVER.—Firmly held. Spot £16 15s to £16 17s 6d per bottle.

TIN PLATES.—Firm. I.C. coke prompt quoted 23s 3d to 23s 6d, and forward 21s 9d to 22s per box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, October 21, 1926.

Spot sales for the period 15th to 21st (inclusive) were 47,000 bales. Of these 24,480 were American, 2,300 Brazilian, 7,000 Peru, 8,000 Egyptian, 4,200 African, and 1,020 sundries. Imports for the same period were 83,000 bales. These were composed of 66,357 American, 1,154 Brazil, 9,148 Peru, 3,131 African, 3,561 East Indian, and 449 sundries. Quotations to-day are:—Middling American, 6.83d; Egyptian F.G.F. Sakel, 14.80d; uppers, 10.70d; Brazil fair, 7.18d; Peru G.F. mod-rough, 9.00d; smooth, 8.18d; Tinnivelly, 6.45; East African G.F., 8.60d; and West African middling, 6.88d.

MANCHESTER, October 21, 1926.

Trade developments continue to be checked by the falling tendency of prices, and until there is more stability buyers are afraid to place orders of any weight in yarn or cloth. The undercurrent of inquiry indicates, however, that a considerable business is being done when conditions are safer. Scattered sales are being made for India in piece goods, with rather more offers than for China. Operations for China remain very restricted. The demand for Egypt is being maintained, although the price has been firmer in quotation. Some spinners have sold more yarn, and there is less stock about than two or three weeks ago. There has not been much activity in Egyptian spinnings.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The Trade generally remains under a cloud, and so far as the home market is concerned matters will doubtless tend to go worse so long as the coal dispute continues. Reports from all parts of the country reveal a depressing state of affairs in the clothing trade, and it is recognised that it will be a very long time before the disastrous effects of the strike are overcome. The spending power of the public is being reduced, and textiles are always among the first of the ordinary commodities of life to suffer from the draw-in of purse strings. Demand for cloth is limited to very small lots for immediate or early delivery, and the only section of the industry in which there is any activity is that devoted to the production of fancies. This is exemplified in the relatively good demand for such goods as tweeds, and it is noteworthy that the mills in the Scottish Border centres are comparatively well employed. In the ordinary trade, however, wholesale fabric buyers are indifferent. A slight ease in wool values in Australia this week has weakened the position of topmakers, and all quotations are easier, notwithstanding the fact that prices in Bradford are below the replacement level. But even lower values do not stimulate demand, and it is obvious that no buying movement of any magnitude will develop under existing conditions. Spinners are experiencing great difficulty in running their machinery, and there is very keen competition for the comparatively small amount of business on offer.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The outstanding feature of the wool trade this week is the cable information indicating lower values at all selling centres in Australia and South Africa, though prices at Port Elizabeth and East London have been higher than those ruling for the same class of wool even in Sydney. France has been responsible for the extraordinary figures paid for 70-80's Cape wools. It would seem that those who are able to offer their clips early in the season will fare the best. Everything seems to be shaping for a repetition of the course of events during the past two years—very satisfactory prices during the first two months of the season, followed by a gradual decline. So far as home trade buying is concerned, it would seem as if Bradford topmakers have been out of the picture both at the Cape and Australia, particularly the former. Durban has been a cheaper market than either East London or Port Elizabeth, and it would now seem that Australia has taken a turn for the worse, a 10 per cent. decline being reported at Perth last Tuesday compared with the previous sale on September 21. An irregular and easier market is also reported from Melbourne and Sydney. We consider that the slight decline can be taken as evidence that French buyers are less eager to operate, and that Germany and the home trade are determined to have cheaper wool or leave the market entirely to France. No doubt by this time the more urgent requirements of the trade have been covered, and with a big weight of wool still to be catalogued we are not surprised at the slight ease of prices. Bradford is freely discussing whether wool will be purchased in Australia to bring in good 64's tops at 3s 9d. We cannot hear of that price being taken as yet, although it is commonly reported that average 64's have been sold for January-February delivery at 1d more. We have reason for saying that good broken fleece and shaffy pieces and bellies have already been bought to bring in 64's at that price, and there are those who entertain the view that the lowest point has not yet been touched. If so, it would induce home topmakers to cable out to Australia big buying orders, for would be a good thing for growers and the trade generally, for everybody wishes to see a general development of trade. We should say that half the machinery in the West Riding is either standing entirely or running short time, and the outlook from a manufacturing standpoint is anything but satisfactory.

HIDE, LEATHER, AND ALLIED TRADES.

Steadiness continues in the market for domestic hides, and at the auctions held in Bermondsey on Thursday the whole of the offering was cleared at the following figures:—Ox and heifers: best 6½d to 9d, seconds 6d to 8½d; cows, 5½d to 5¾d; bulls, 5½d to 4½d. Calfskins were a firmer market, best selling at from 6½d to 12½d, showing an advance of from ¾d to 1½d per lb. Woolskins made from 5s 8d to 9s 6d, and hogs from 2s 3d to 10s 6d each. The demand for foreign hides from this country appears to lack life, and tanners will not attempt to increase their input in view of the uncertainty of finding a market for the finished leather. Prices for frigorifics, however, remain firm, slightly higher prices being recorded for Argentine ox, which are now quoted at 8½d. Saladero hides are of little interest at the moment, business for shipment being restricted until the new season's goods come forward. Purchases of sole leather are conducted with a great deal of caution. The main difficulty seems to be to supply the right goods at the right price, shoe manufacturers all the time being on the look-out for light weight bends at a low figure. Bellies and shoulders are a fairly satisfactory market, with stocks low. The market for upper leathers is improving slightly, the feature of the week being a much better call for patent leathers for the shoe trade. The Russian boot is accounting for a fair amount of business in the cheaper grades of calf leathers, as also in the case of coloured glacé kid. The boot and shoe trades find business a little better, and certain districts have done tolerably well since the Shoe and Leather Fair.

THE TIMBER TRADE.

FROM OUR OWN CORRESPONDENT.

Since our notes in the *Economist* last month the timber market has still further favoured spot holders of North of Europe building woods. The imports were again much lighter last month, the total decline from January-September amounting to 373,128 loads (of 50 cubic feet), compared with the corresponding period of last year. The demands from the building trade have continued very satisfactory, colliery troubles considered, whilst the ever-rising freight rates have had the effect of enhancing spot values, and at the same time restricting forward buying. With stocks of the above descriptions on the United Kingdom market moderate under present trade conditions, it is not unreasonable to anticipate a still further firmness in values for timber which, up to a few weeks ago, could not be described in any way as high.

The building trade seems to progress despite industrial unrest in the coal industry, and that the spirit of confidence is still maintained in the country is exemplified by the fact that last month plans were passed for buildings outside the L.C.C. area of an estimated cost of £5,666,100, as compared with £3,343,700 in August, 1926, and £5,056,500 in September, 1925, and for the third quarter of the year are of about the same value as for the corresponding period of 1925. This speaks volumes for the promising outlook in the building industry, and, when general trade is restored, for the possibilities of a much larger consumption of wood.

As regards the free on board market for timber from the North of Europe, the higher values of building woods on the spot have not favoured shippers. The latter are under the impression that they have been forestalled by the shipowners with their higher transport charges, as the United Kingdom market especially cannot stand increases on a large scale in both freights and timber. In the Canadian woods section of the market the demand on the whole is not satisfactory, although prices are firm. Imports of spruce have declined considerably this year, the European varieties being in close competition, and no doubt that to no small extent has had the effect of reducing imports of spruce from Canada during the troublesome months through which the country has been passing. The hardwood markets have also shown a stronger tendency on the spot. Mahogany logs of good grade and condition have increased in value, whilst imports were much lighter in September. The lower grades, however, continue to be neglected, although it would not surprise us to see some activity as soon as labour troubles are once more in the background. Other hardwood logs have declined in import volume this year, which has had the effect of keeping the markets firm. In sawn hardwoods the enormous quantities usually to hand from the U.S.A. have suffered a severe decline, which is all to the good of spot sellers. Smaller supplies are also to hand from Canada. All fresh parcels are coming over at increased freight rates, thereby automatically stiffening spot values.

VEGETABLE OILS AND OILSEEDS.

Markets have been more active this week. Linseed oil has been in better demand from the consuming trades, and values have advanced sharply in sympathy with seed, a rise of 40s per ton being recorded. Closing prices on Thursday are £32 5s per ton naked ex Hull mill for spot and all positions to January-April. Cotton oils have met with a good trade, and crude Egyptian is firmer at £32 10s, with ordinary refined at £35 10s. Other seed oils are about unchanged, and palm kernel oil a trifle dearer. In the oilseed section Plate linseed has advanced 10s to 15s per ton owing to the marked rise in freight rates from Argentina and on reports of unfavourable weather. A fair business has been

recorded, up to £16 being paid by Antwerp, Hamburg, and Rotterdam for October-November shipment. English combers are not following the market, nominal value here being £16 to November-December, with new crop quoted £15 12s 6d January-February. South Russian linseed to Hull has been done at £15 5s, October-November, and Riga at £14 7s 6d, same position. Egyptian cottonseed is steady and dearer at £9 10s spot and October loading, a good business having transpired below this figure.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—There was little or no change in the position of actual parcels. Consumptive demand at the moment is quiet, but prices hold together fairly well, as no undue pressure of supplies is felt. Definite news as to crop damage by hurricane *sawit* from Cuba. Indian markets remain quietly steady. There is a steady movement with regard to English-grown granulated, and previous quotations were repeated by most factories. Ely, Ipswich, and Cantley, also Wittington, 29s; Colwick, Poppleton, Spalding, Felstead, and Peterborough, 29s 3d; Kidderminster, 29s 9d; Kidderminster, January-March, 30s; Colwick, &c., January-March, 29s 6d, all ex factory. Ely and Ipswich, 28s 9d, ex store, London. Of British refined, Messrs Tate and Lyle's quotations remained unaltered. Imported kinds steady. Czecho and Dutch J granulated, spot, 28s 3d; white Mauritius, 28s. Forward positions quiet but held for full rates. Czecho granulated, ready for shipment, 16s 1½d; November-December, 15s 6d to 15s 7½d, f.o.b. Hamburg. Dutch J, ready, 16s 3d, f.o.b. Rotterdam. Belgium and Polish crystals firm but quiet. Cuban basis, 96 per cent., October-November, 13s 6d; Peruvian ditto, 13s 4½d, c.f. and i., U.K. White terminal opened quieter, but subsequently ruled steady. A fair amount of business resulted, November, sold, 14s 9½d to 14s 10½d; December, 15s 0½d to 15s 3d; March, 15s 6d to 15s 8½d; May, 15s 9d to 16s; August, 16s 4½d per cwt.

COFFEE.—The market is generally quiet, partly owing to the limited quantity of fine qualities on offer. These realise full prices. Common and medium slow, as export requirements do not extend. Small supplies of mountain-grown Jamaica sold at 20s 9d for bold, and 18s 2s medium; peas, 192s; Kenya, bold, 135s to 145s; peas, 128s to 153s; Santos, on quay terms, 107s to 110s 6d. Futures dull and easier.

COCOA.—Spot market quiet, unaltered. Accra, F/F, November-January, sold, 42s 6d to 42s cwt, f.o.b.

TEA.—Some 65,800 packages Indian were auctioned during the week, and met with fair competition. Good to fine parcels cleared readily at recent rates to a fractional advance, but medium and common ruled ¾d to 1½d lower in most instances. Included were some high-grown Travancore teas, and these realised rather firmer rates. Pekoe, sold, 1s 2d to 1s 11½d; orange, 1s 6½d to 2s 8d;

ABRIDGED PROSPECTUS.

A copy of the Prospectus has been filed with the Registrar of Joint Stock Companies. The Subscription List will close on or before Wednesday, the 27th day of October, 1926.

P.C.T. CONSTRUCTION COMPANY LIMITED.

(Incorporated under the Companies Acts, 1908-1917.)

SHARE CAPITAL		ISSUED
AUTHORISED.		(including the shares now offered)
750,000	7 per Cent. Cumulative Guaranteed Preference Shares of £1 each	£750,000
250,000	Ordinary Shares of £1 each	£214,439
1,000,000		£964,439

715,000 Seven per cent. Cumulative Guaranteed Preference Shares of £1 each

UNCONDITIONALLY GUARANTEED AS TO BOTH CAPITAL AND DIVIDEND

BY
Provincial Cinematograph Theatres Limited.

PAYABLE AS FOLLOWS:—

An Application	2s. 6d. per share
On Allotment	2s. 6d. per share
On the 14th December, 1926	5s. 0d. per share
On the 14th February, 1927	5s. 0d. per share
On the 31st March, 1927	5s. 0d. per share

The dividends on the Preference Shares will be payable half-yearly on the 31st March and the 30th September. Three pence half-penny per share, representing interest at the rate of 7 per cent. per annum on the amounts payable on application and allotment from the date on which the amount payable on allotment is due, and upon the instalments from their due dates of payment until the 31st March, 1927, inclusive, will be paid on that date. The Preference Shares will rank for dividend as from the 1st April, 1927, and the first full half-yearly dividend will be paid on the 30th September, 1927.

The Preference Shares carry the right to a fixed Cumulative Preferential Dividend at the rate of 7 per cent. per annum on the amounts for the time being paid up thereon. On a winding-up the holders of the Preference Shares are entitled to be paid all arrears of Preferential Dividend down to the commencement of the winding-up, and also to be repaid in priority to the holders of the Ordinary Shares the amount paid up on the Preference Shares, with interest at the rate of 7 per cent. per annum from the commencement of such winding-up until actual payment. They are not entitled to any other rights in the profits or assets of the Company.

The Articles of Association reserve to the Company the right of issuing further shares, ranking *pari passu* in all respects with the Preference Shares now being issued, but Provincial Cinematograph Theatres, Limited, has agreed that it will not without the consent of an Extraordinary Resolution of the holders of the 7 per cent. Cumulative Guaranteed Preference Shares of the Company guarantee either such further Preference Shares or shares of other companies, unless the net profits (before providing for depreciation) of Provincial Cinematograph Theatres, Limited, for its financial year next preceding the issue of such shares as certified by its auditors shall have amounted to at least four times the annual dividend on the shares of this and any other company then guaranteed by Provincial Cinematograph Theatres, Limited, together with the further shares intended to be so issued and guaranteed.

MIDLAND BANK LIMITED are authorised, as Bankers of the Company, to receive at their Head Office, 5, Threadneedle Street, London, and Branches, applications for the above-mentioned 715,000 7 per cent. Cumulative Guaranteed Preference Shares of £1 each at the price of £1 per share, payable on the dates and by the instalments above mentioned.

Applications from existing Shareholders of the Company and of Provincial Cinematograph Theatres, Limited, and associated companies will receive special consideration.

Directors:

THE RT. HON. LORD ASHFIELD, P.C. (Chairman), 43, South Street, Park Lane, London.
WILLIAM EVANS, 123, Regent Street, London.

Auditors:

GEORGE A. TOUCHE & CO., Basilston House, Moorgate, London.
Secretary and Registered Office:
E. A. CRISP, New Gallery House, 123, Regent Street, London.

Trustees for the Holders of the 7 per cent. Cumulative Guaranteed Preference Shares:
ROYAL EXCHANGE ASSURANCE, The Royal Exchange, London.

By a Deed, dated the 22nd day of October, 1926, Provincial Cinematograph Theatres, Limited, unconditionally guarantees to the holders of the Preference Shares of P.C.T. Construction Company, Limited, the payment of the Preferential Dividend payable thereon and the repayment on a winding-up of the capital paid up thereon with interest at 7 per cent. per annum to the date of repayment. This guarantee constitutes an obligation ranking in priority to the whole of the share capital of Provincial Cinematograph Theatres, Limited.

The following certificate has been received from the Auditors of the Guaranteeing Company:—

"To the Directors,
P.C.T. CONSTRUCTION COMPANY, LIMITED,
New Gallery House, 123, Regent Street, London, W.1.
Atlantic House,
48, Holborn Viaduct, London, E.C.1.
22nd October, 1926.

Gentlemen,
As Auditors to Provincial Cinematograph Theatres, Limited, we hereby certify that the net profits (before providing for depreciation) of that Company for the past three years were as follows:—

Year ended 31st January, 1924	£146,432 11 8
Year ended 31st January, 1925	£231,496 1 10
Year ended 31st January, 1926	£248,116 19 4
or an average of	£208,681 17s. 7d.

Yours faithfully,

(Signed) HUBBART, DUROSE & PAIN,
Chartered Accountants."

The average net profits of the Guaranteeing Company for the past three years is therefore sufficient to cover the dividend on the whole of the Preference Shares (amounting to £52,500 per annum) approximately four times. In spite of unfavourable trade and labour conditions, the net profits for the first seven months of the current financial year to the 31st August, 1926, exceed those for the corresponding period of the previous year.

A further increase in profits may be expected as a result of the additional facilities provided to Provincial Cinematograph Theatres, Limited, by the present issue.

Provincial Cinematograph Theatres, Limited, has no Debentures outstanding. Its surplus assets, after deducting all liabilities (including mortgages amounting to £634,164), as disclosed in the Balance Sheet as at 31st January, 1926, amounted approximately to £2,500,000.

Prospectuses and Forms of Application may be obtained from the registered office of the Company and of Provincial Cinematograph Theatres, Limited, or from the Company's Brokers or Bankers, or from any of the Theatres owned or controlled by Provincial Cinematograph Theatres, Limited.

THE MONEY MARKET.

CONDITIONS in the money market at the beginning of the week were not comfortable, and with some calling in of funds by the joint-stock banks short loans commanded from 4½ up to 5 per cent. The enormous applications for the Belgian loan on Wednesday, however, had the effect of increasing the supply of loanable funds, and short loan

rates fell to $3\frac{1}{2}$ per cent., while weekly fixtures, which cover the turn of the month, went on at 4 per cent. The discount market has remained fairly firm, with $4\frac{1}{2}$ per cent. the general minimum for three months' bills, though towards the end of the week there were signs of a slight tendency to weaken on a recrudescence of Continental demand for bills. The steady drain of gold has continued, the net efflux since the readoption of the gold standard now amounting to £4,111,000. Yesterday's Treasury Bills were allotted at an average of $4\frac{1}{2}$ per cent., which compares with 4.27-32 per cent. a week ago.

	Oct. 29, 1926.	Oct. 22, 1926.	Oct. 15, 1926.	Oct. 8, 1926.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	$\frac{1}{4}$ (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	2 (Dec. 3, '25)
Discount, Call	3	3	3	3	2 (Dec. 3, '25)
Houses Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$ (Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	..

Thursday's Bank return showed a reduction of £1,280,900 in the stock of coin and bullion and an increase of £357,100 in the note circulation. The Reserve was thus £1,638,000 lower, the Proportion falling by 0.6 to 27.3 per cent. Government securities increased by £1,390,000, but Other securities were £2,678,200 lower, and as Public Deposits declined by £2,446,300, there was a decline of £493,700 in Other Deposits. Currency notes were reduced by £1,089,900 to £287,615,400, which includes £1,292,500 for notes called in but not yet cancelled. The fiduciary issue is £230,073,000, or £17,829,000 below the maximum for 1926.

The Bank of Norway reduced its rate of discount on Tuesday from 5 to $4\frac{1}{2}$ per cent. The Czechoslovak National Bank also made a reduction—from 6 to $5\frac{1}{2}$ per cent.—on the same day.

NEW YORK MARKETS.

Our New York correspondent cables:—The share markets are showing a steadier tone on favourable developments, such as the record earning statements of the United States Steel Corporation, General Motors, and the leading railroads covering nine months, the higher dividends just declared or in prospect, the unprecedented movement of railroad traffic, and easier money tendencies. The recovery is restrained, however, by the imminence of Congressional elections and some further decline in the steel and motor industries. Credit conditions are easy, following the passing of mid-month operations, but the approach of the end of the month settlements is beginning to make itself felt. The week's statements of the Reserve System and of the local bank show a moderate increase in discounting on this account, and the ratio for the System fell to 73.6 and for New York to 83.5 per cent. The Belgian stabilisation plans were well received, and the investment market eagerly snapped up the bond issue. Bankers are hopeful that early action will be taken by France and Italy in regard to currency stabilisation.

THE STOCK MARKETS.

The outstanding event of the week has been the issue and heavy over-subscription of the Belgian loan for £7½ millions in 7 per cents. at 94. Dealings in the scrip are expected to open on Tuesday. The gilt-edged market is inclined to be a little better, and the deduction of the interest from the price of 5 per cent. War Loan brought in a little business. The rise in the value of the franc produced an improvement in French bonds, but other foreign Government securities are mostly lower. Home rails took a favourable turn on brighter coal prospects, and Argentine railway stocks have held up well, but United of Havana remain weak. The Colonial Office statement as to output for the next quarter had little effect upon rubber shares, which remain dull. Oil shares, on the other hand, have been good under the lead of Anglo-Persians. Shipping shares have risen on the boom in freight rates, and the iron and steel market is better, but Marconis have reacted and electricity shares are easier. Nobels have shown conspicuous strength. Tin shares have given way

on the fall in the price of the metal. Kaffirs have been under the influence of Paris, which has alternated between buying and selling.

THE COMMODITY MARKETS.

Conditions continue to show little change as a whole, slight increases of activity in some markets having to be set off against declines in others. Coal prices have again had an upward trend, though arrivals at Cardiff of tonnage with American cargoes have been more numerous. A brisk demand exists for iron and steel, but the difficulty of obtaining delivery is restricting business. The low price of cotton is now attracting buyers, while in the cloth market a considerable demand has been met with from India. Wool is slightly easier in overseas centres, but British textile manufacturers are still finding it necessary to restrict their output as a result of high working costs and the unsatisfactory state of order books. Jute quotations maintain higher levels than were expected. Wheat prices are firm owing to increasing freights rather than any upward tendency in producing countries. Steady support has been forthcoming for sugar, but coffee and tea have moved quietly. Rubber has attracted little attention in the last week of the current "restriction" quarter, and prices show slight change. Among non-ferrous metals, tin opened firm, but later developed irregularity, while copper reacted on a revival of speculative interest after an easy opening. Lead has been dealt in on a fair scale.

FOREIGN EXCHANGES.

There has been slightly less activity this week in the foreign exchange market. Interest has, of course, centred on the Belgian stabilisation, and general satisfaction is expressed that Belgium should have taken this step, not only for her own sake, but as a definite movement towards the restoration of normal conditions on the Continent. The return to a gold exchange standard is achieved by means of a new unit of account, the "belga," for foreign exchange transactions only, which has a gold content of .209211 grains fine gold and is fixed by law as the equivalent of 5 paper francs. In Belgium itself the franc remains the sole legal currency, but the convertibility of the note issue is restored. The new parity of exchange is 35 belgas (i.e., 175 francs) to the £ sterling. The secret of the new parity had been well preserved, and it would seem as if the market had anticipated a slightly lower rate since the quotation fell from an opening figure of 173½ on the 22nd to 171½ at one time on Saturday. On Monday, however, as the stabilisation details became known, the rate moved up to 174½. On Tuesday the stabilisation decree came into force, and the belga was quoted for the first time, the rate being 34.83½. The belga, therefore, stood at a slight premium over sterling, which is, of course, slightly depreciated in terms of gold at the moment. Sentiment also played its part, as was shown on the following day, when the rate rose to 34.86½, in spite of the success of the Belgian loan. On Thursday the rate was unchanged, but yesterday morning it fell again to 34.85½. In Paris the downward movement continues, assisted by the reported declaration of M. Poincaré that a lower rate was necessary before stabilisation could be undertaken. As a result there has been a large demand for francs in Paris duc, in part, it is believed, to the return of much of the capital exported earlier in the year when confidence in the franc was at its lowest. It is understood that advantage has been taken of this opportunity to strengthen the official reserves of foreign currency. From 161½ on the 22nd, the rate fell to 158½ by Monday, and, after a slight reaction to 158½ on Wednesday, to 154½ at Thursday's opening. Forward rates have narrowed to a discount of 50 centimes for one month and 2½ francs for three months. In Italy the rate fell further over the week-end, from 111 on the 22nd to 106½ at one time on Tuesday. How far this movement was artificial it is difficult to say, but a reaction occurred at this low level, and the rate rose to 113½ on Wednesday. A good Bank of Italy statement, however, showing a reduction in advances to the State and an increase in reserves brought the rate down to 110½ again

on Thursday. New York, after a slight fall over the week-end, has been remarkably firm, with a demand for sterling on any sign of weakness, which is attributed in part to the transfer of the proceeds of the New York portion of the Belgian loan to Brussels via London. From 4.84½ on the 22nd the rate fell to 4.84½ on Saturday and to 4.84½ on Monday, since when it has remained steady at that figure. Forward rates show little change at par to 1½ cent premium, both for one and for three months. Amsterdam has been steady around 12.12½, but Switzerland has risen on balance from 25.13½ to 25.14, and Stockholm from 18.14 to 18.14½. Madrid has fluctuated somewhat, rising as high as 32.21 on Saturday, and then, after touching 31.92 on Monday, rising slowly again to 32.09. Berlin is fairly steady around 20.38½, and gold shipments to Germany, like that made on Thursday to Canada, are believed to be special operations rather than ordinary market transactions. Of the other European exchanges there is little of interest to be said, except in Oslo, where the rate has risen from 19.36½ to 19.45. In the East, the rupee has weakened fractionally from 1s 5 29-32d to 1s 5½d, while the yen has improved from 2s ¾d to 2s ¼d. The silver market has witnessed a rise in prices on speculative buying from China. Shanghai, after rising from 2s 4½d to 2s 5½d by Wednesday, relapsed again to 2s 4½d on Thursday morning, but Singapore has been steady around 2s 3½d. In South America, Rio showed a firmer tendency over the week-end, but reports of political disturbances, though discounted, led eventually to a slight set-back from 6½d to 6¾d. Buenos Aires also fell fractionally from 45½d to 45¼d, and Monte Video from 49½d to 49¼d. Valparaiso has depreciated from 39.42 to 39.56 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 23rd:—

(000's omitted.)		
EXPENDITURE.	£	RECEIPTS.
Supply Services	8,200	From Revenue 15,904
Interest, &c., on Debt	1,071	
Sinking Fund	417	
Sundries	442	
Increase in Balances	19	
Decrease in debt	5,755	
	15,904	15,904

The Revenue for the week amounted to £15,903,700, as compared with £12,686,700 in the corresponding week last year. Customs were higher at £3,207,000, against £3,168,000, while Excise amounted to £7,375,000, against £3,684,000. Property and Income-tax brought in £1,621,000, against £1,080,000, and Super Tax £340,000, against £570,000. Ordinary Receipts were only £600, as compared with £274,700, and Special receipts £87, as against £200,000. The week's operations reduced the National Debt by £5,755,000, and caused the following changes:—

(000's omitted.)		
£		£
Public Department Advances ..	7,000	Treasury Bills + 1,795
National Savings Certificates ..	50	
Sundries	500	
	7,550	+ 1,795

The floating debt was reduced by £5,210,000 to £779,926,000.

FINANCIAL YEAR, 1926-1927 (April 1 to October 23, 1926).

£		£	
Total Expenditure ..	445,949,440	Raised by Revenue ..	366,817,896

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Entre Rios Railways, United Railways of the Havana and Regla Warehouses, Assam Railways and Trading, Argentine Great Western Railway, United Steel Companies, Drapery and General Investment Trust, Argentine Light and Power, Lanka Plantations, Sungei Kari (Sumatra) Rubber Estates, Sumatra Para Rubber Plantations, Sengat Rubber Estate, United Dairies, Raphael Tuck, and Herrburger Brooks. At the meeting of the United Steel Companies Mr A. O. Peech gave an interesting review of conditions in the iron and steel industry, and was hopeful in regard to the outlook.

COAL POLICY AND DISLOCATION.

THE periodic re-assemblies of Parliament for the purpose of prolonging the Emergency Powers Regulations, of which the third has taken place this week, have each in turn been looked forward to as possible occasions for a successful peace move in the coal dispute. Each, including the latest, has been disappointing and abortive. Indeed, one would have to search many volumes of *Hansard* to discover a debate more sterile than that which took place on the coal dispute in the House of Commons last Monday. Mr Clynes led the attack on the Government, in a speech that did nothing more original than accuse Mr Baldwin of siding with the owners, and urge him to make a new effort to bring the parties together. He was followed by Mr Lloyd George, who devoted most of his speech to the familiar ground of the loss to the nation and the futility of a peace by surrender; and, in reply, the Prime Minister, while defending himself against charges of partiality, revealed a complete bankruptcy of policy and ideas, and merely reiterated the Government's refusal to take any new step. "It is not for the Government," he said, "to advise the contending parties how they should settle what is, and must remain, an industrial dispute of the first magnitude. It is for them to do it." On the lips of a Premier who had always preached and practised non-interference by Government with industry such a statement would at least have the merit of consistency. But it is surely a wretched confession of failure and despair when made by a Government which has given £23 millions to the industry, appointed a Royal Commission whose report it accepted, and repeatedly intervened without success in the struggle from which it thus apparently determined to stand completely aloof. Mr Baldwin is on safe ground when he attributes the failure to reach a settlement to the ineptitude of the leaders on both sides. Nor, until there is a change in the trend of leadership, is there any hopeful line for the Government to pursue. But it is one thing to say that no opportunity for intervention exists at the moment, and quite another thing to say, as Mr Baldwin most explicitly said (if words mean anything), that the Government stand out of the struggle, and would remain spectators to the bitter end. We suggested last week that Mr Pugh's letter to the *Times* advocating a policy of "back to the Report," might even at this late hour open the door to negotiations. Such a prospect might have been advanced if Mr Baldwin had included in his speech even the lightest phrase suggesting that if the miners would follow Mr Pugh's lead the Government would implement its acceptance of the Report. Instead, the speech was utterly devoid of hope in any direction, and left the country to face the prospect of complete certainty of a slow and intensely costly progress through the remaining stages of a war of attrition to a peace which could possess no element of satisfaction or durability.

Subsequent events, however, suggest that Mr Baldwin either did not mean his words to bear a bald literal interpretation, or else that he has changed his mind. For since the debate in question he has so far concerned himself with the dispute as to interview the members of the T.U.C. Council, and to promise to see them again, if and when they can show that they are in a position to speak for the miners. The T.U.C. Council are seeking to obtain the necessary authority to negotiate, and to this

end arranged to meet the miners' delegates yesterday. At the time of writing the upshot of the meeting is not known, but upon it depends what would seem to be the last chance of avoiding a fight to a finish. Mr Churchill, too, in a speech at Loughton on Monday night, gave the lie direct to Mr Baldwin's statement, and said: "The Government are ready to use their good offices to bring together both parties.....We are even ready to legislate if one or other of the parties makes demands which are outrageously unfair." Who speaks for the Cabinet? Mr Baldwin or Mr Churchill? The Premier throws well-merited stones of condemnation at the leadership of the owners and miners; but is he not himself living in a glass house?

Meanwhile, the economic loss to the nation swells steadily. Our Trade Supplement last week and the reports which we publish regularly from commercial and industrial centres reveal cumulative effect and diverse ramifications of the fuel trouble. Indeed, it is clear that there will be widespread disturbance if the stoppage is very much prolonged. Well over 100 million tons of output have been lost—which is roughly 26.5 per cent. of Europe's annual production. Britain, which in 1925 supplied some 36.3 million tons to Europe, is becoming an important importer on a very large scale. Naturally the dislocation is no longer confined to British industry. It may be said to be world-wide. Ocean freight rates have for the time being been put completely out of gear. Heavy charterings for the carriage of American coal have left grain exporters everywhere short of tonnage at their busy season. The freight rate for grain from Canada to Britain has jumped up to 6s 6d per quarter, against 3s 4d a year ago, while the rate from the River Plate to Britain shows an even greater advance at 42s 6d per ton, against 16s 6d in October, 1925. These are only two illustrative examples of a general dislocation of international shipping. On the Continent of Europe the visible effects of Britain's coal stoppage are spreading, and in many places there is developing a shortage of fuel supply more serious than our own. In Denmark stocks are so short that rationing has begun in Copenhagen. In Austria the supply has sunk so low that the Government has called a conference to consider measures to prevent severe hardship in the winter. From Warsaw the *Times* correspondent reports as follows:—"The increased export of coal from Poland has adversely affected the home market, which during the past week has been inadequately supplied, and gas works in Galicia were about to import coal from Czechoslovakia. The matter was taken up yesterday by the Cabinet, who decided to order the Polish Railway to serve exclusively the Polish coal market during the forthcoming week, and not a single train will carry coal for export abroad." These few random instances are of themselves sufficient to show that interest in the curtailment of the mining struggle is not confined to one industry or one country, but to many activities in many parts of Europe and the world. There are, it is true, coal producing areas abroad which are reaping a rich harvest from our difficulties. But, just as the basic difficulties of our own coal industry were not only not removed but were ultimately enhanced by the boom which followed the occupation of the Ruhr, so to-day the Ruhr and other areas which are momentarily benefiting may realise that the aftermath which they will have to face will more than counterbalance the temporary help derived from an artificial demand.

What are the prospects that the end is in sight? The pace of the drift back to the pits has of late been somewhat accelerated. Last week we could only record an increase of 4,000 in the total number of miners at work. This week has seen an addition of nearly 28,000. Of a total of 1,107,000 employed before the dispute, about 266,000, or nearly one-quarter, have now resumed, including the safety men who were never withdrawn. The acceleration is most pronounced, as in recent weeks, in Notts, Derby and Leicester, where over 86,000 out of a normal total of 131,500 are now at work. The Yorkshire figures are a little better, but in Scotland and in the great export districts of South Wales and Northumberland and Durham progress is still exceedingly slow. In these three areas together there are still less than 60,000 men at work out

of a normal total of some 560,000. The fact of the matter is that in the districts where the best terms were offered, and where unionism was weakest, the men have substantially given way; but that elsewhere the owners' confident belief that if any appreciable number resumed the men's resistance would collapse, has been completely falsified. If the rest of the men dribble back as slowly as the first quarter of a million it will be next August before the mines are fully at work again. This is the hard fact with which the Government is faced at the end of six months.

In the face of this situation, it is impossible for the Government to continue indefinitely to adopt a policy of drift. In a matter of vital importance to the whole nation a point must come where the Government must decide for itself what are the right and fair terms on which the mines should open, and use all the manifold resources at its disposal to enforce them. *Salus populi suprema lex.*

FINANCIAL RECONSTRUCTION IN BELGIUM.

By a Royal decree dated Monday, October 25th, the Belgian National Bank was required forthwith to redeem its notes in gold or gold exchange at the rate of 5 Belgian francs to 0.209211 grammes of pure gold. The means for enabling it to do this were assured by the grant to the National Bank of a credit of 35 million dollars by a group of other Central banks and by the stabilisation loan of 100 million dollars issued on behalf of the Belgian Government on Wednesday, the proceeds of which are to be handed by the Belgian Government to the Bank in part repayment of its debt. By thus tying the franc to gold Belgium joins the growing group of "hard-money" countries in Europe, and retrieves the failure of the attempt to stabilise her currency which she made last spring.

This latest effort at financial reconstruction is of considerable international interest, for while it has been necessary for Belgium to seek the co-operative assistance of other countries, she has been able to obtain this assistance without any formal control over her internal finances. This is an important departure from the schemes adopted in Central Europe which involved a League of Nations control and from the rehabilitation of Germany under the Dawes control scheme. A further point of interest is that it involves for the first time the co-operative action of the Central and Reserve banks of Europe and New York, a form of collaboration which, it will be remembered, was foreshadowed by the Genoa Conference. In the League schemes great importance has quite rightly been attached to the fact that the Finance Committee of the League consisted of people acting not in their business capacity, but as trustees of Europe's welfare, and it is difficult to believe that such large measures of control as the League exercised could have been entrusted to any body that was not completely disinterested. The need of a temporary surrender of sovereign rights does not arise in the case of Belgium, but it is perhaps worth pointing out that the consortium of Central banks which has played so important a part in the present scheme also consists, not of a mere group of creditors, but of men whose primary function is to safeguard the stability of their national currencies and to keep them in their fixed and proper relations to one another. They are, in fact, the permanent guardians of Europe's currency system. The issue of the stabilisation loan through leading financial houses has also interested a wider circle of the banking community in the success of the scheme.

The present stabilisation plan is not one which has been evolved by any outside body, but is essentially a Belgian product, built up in the light of the very full and varied experiences through which European countries have passed in the last few years. At the same time, the National Bank of Belgium has had to satisfy the other Central banks that in its charter and in the arrangements it had made with its Government it has full powers and adequate resources for carrying out the plan of currency stabilisation entrusted to it. The Belgian Government, on its side, has also had to satisfy the financiers responsible for raising the loan that appropriate measures have been taken for balancing the Budget and maintaining equilibrium. The Government's assurances are contained in the letter to the bankers printed in the prospectus.

Having received these various assurances, and having satisfied themselves of Belgium's ability to carry out her intentions, the bankers have no further responsibility in the matter except perhaps the moral obligation to make the task of the Bank of Belgium as easy as possible whenever opportunity offers. With the monetary resources now placed at her disposal, Belgium shoulders full responsibility for maintaining a sound and stable currency, and for preserving her public finances in a solvent condition. In this task she has the good wishes of the world at large. We look with confidence to see it successfully carried through by a nation which has faced much greater crises without flinching, and shown not many years ago that it was possessed of unusual qualities of patience and determination.

The chief features of the plan are the provisions which have been made for balancing the Budget, the redemption of the State's debt to the bank, and the institution of the new currency standard. As regards the first of these, the letter in the loan prospectus which is signed by the Minister of Finance and by M. Francqui rehearses:—That the internal floating debt has already been reduced from 6,300 million francs to 2,153 million francs under the plan for conversion into the preference shares of the Belgian National Railway Company, inaugurated at the end of July last; that full provision has been made to meet the external floating debt of Belgium out of funds already in hand; that an autonomous institution has been set up to undertake the amortisation of Government debt from special taxes voted for the purpose, from the proceeds of the sale of the remainder of the preference shares of the railway and from the sale of Government property; that steps have already been taken to put the railway on a paying basis by raising rates and fares; that the Government is confident that the expenditure of 1926 will be met from current income, and that debt repayments to the extent of 600 million francs will be possible (after taking credit for the proceeds of floating reparation bonds to the extent of 512 millions); and that the Government undertakes to present to the House a balanced Budget for the year 1927, including under the heading of expenditure sinking fund payments sufficient to reduce the public debt by 1,350 million francs.

As regards the position of the National Bank, our Belgian correspondent, writing on October 25th, points out that it will be in a much stronger position than was possible under the plan of the early spring. He writes:—

The National Bank will have a better control over the money market; it now definitely disposes of a foreign loan of 100 million dollars; the bulk of the floating debt has been consolidated, and the State is assured of abundant sources of income, thanks to the substantially increased taxes of all kinds.

The present metallic reserve of the bank, which up till now had been reckoned in pre-war francs, will now be indicated in terms of present francs, and the nominal increase of about 1,900 million francs resulting from this re-valuation will be abandoned to the State, after deduction of 600 million francs, which will serve to repay the balance of the external floating debt still existing. As the State will further be credited with 3,400 million francs, being the proceeds of the stabilisation loan which it hands over to the bank, the present debt of the State to the bank will be reduced from 6,700 to 2,000 million francs. This balance of 2,000 millions will be paid off as soon as possible, and may not be increased in future.

The National Bank is bound to maintain a gold and gold exchange reserve equal to at least 40 per cent. of its liabilities at sight, of which a minimum of 30 per cent. must consist of gold.

This percentage will probably be much exceeded, seeing that against an amount of slightly over 10 million francs of notes and deposits the bank disposes of the following reserves: stabilisation loan, 3,400 million francs; gold, 2,000 millions; foreign exchange (after deducting 600 millions for repayment of foreign floating debt), 600 millions, making together 6,000 million francs, or a reserve ratio of 60 per cent.

The third feature of the plan is the introduction of the new currency unit to be called a Belga, which is equal to five francs. It is fixed at about 35 to the £, and will henceforth appear exclusively in the official exchange quotations. If and when the Bank issues new Belga notes the holders of francs will be entitled at any time to obtain them at the rate of five francs to one Belga. The notes will be convertible at sight in metal (but not in gold coin) or in foreign exchange at the option of the Bank. It is unfortunate that this plan should add yet another to the many monetary units of Europe, and that the exchange rates should be fixed at such points that it is difficult to see any likelihood of converting them all in

a simple and readily understood way into a common unit such as that which prevailed in the Latin monetary union. The Belga at 35 to the £ is very close to but not quite equal to the new Austrian schilling, whose parity is about 34½. The stabilised Hungarian pengo is at about 27.82 to the £, and the rates at which the currencies of other countries with pegged exchanges have settled down are at the most inconvenient ratios to one another. This complication adds another difficulty to international trade, but it is, after all, a matter of secondary importance compared with the need for stabilisation.

The success of the Belgian loan in London has been phenomenal, the over-subscription being probably the largest of any loan issued since the war. This is, of course, no indication whatever of the amount of money available for investment in Belgium or anywhere else, but is a ludicrous result of the growing practice of putting in excessive applications for a loan which is likely to be over-subscribed and will perhaps go to a premium. One large broker is said to have applied for an amount as large as three times the amount of the whole loan, while applications for ten times the amount which it was desired to take up were a fairly common rule. The over-subscription is therefore an indication of nothing more than the conviction that, in view of the auspices under which the loan was floated and of the conditions of the stabilisation scheme, the loan was certain to succeed, and was being issued on terms very favourable to lenders. Indeed, these terms have already been criticised as too severe; but in this connection two points have to be borne in mind. The first is that, in view of the failure of the attempt to stabilise the Belgian currency last spring and of the doubts expressed in many quarters whether it would be possible to stabilise the Belgian franc while the French franc remains still unstabilised, it was essential to run no risk of failure. Indeed, on the previous occasion there was some disposition in Belgium itself to question the necessity of the measures proposed to her for putting her finances in order. On the other hand, the experience of the summer quite changed the outlook of the Belgian people. Belgium, like Great Britain, but unlike France, is a country essentially dependent upon the importation of foreign food supplies, which she pays for by unusually large exports per head. She is an industrial country whose whole economic existence is bound up in international trade, and the drawbacks of a fluctuating currency are very quickly brought home in such circumstances. The public support for the stringent measures taken by the Government this year have been ample evidence of this change of opinion, and the Government was itself quite clearly of opinion that it was worth paying a very considerable price to ensure the success of this second effort. The other consideration is that after Belgium settled her debt with America she borrowed in that country, and the rate at which she could borrow on the present occasion was primarily governed by the price at which these bonds are selling in the American market, seeing that 50 million dollars of the present stabilisation loan has had to be floated in that country (the balance is made up of £7½ millions in England, £1½ millions in Holland, 32 million francs in Switzerland, and 9 million kroner in Sweden). It would appear from the success of the loan in London that England rates Belgian credit a little higher than does the American market. The amount of the loan floated this week is a large one for a small country like Belgium, but, fortunately for her, she is not overburdened by colossal war debts. The present issue, which amounts to nearly £3 per head, brings her external debt up to £22 per head, while her internal debt is £24 per head, making a total of £46 per head, a capital sum which is a little more than one year's purchase of her national income, which has recently been estimated at about £40 per head per annum. This is not unduly heavy in comparison with the debt burden of Great Britain, which is £175 per head, against a national income of about £93 per annum. The fact, however, must not be overlooked that although our total burden is much heavier, only £20 per head of it is a foreign debt. Belgium may, however, still expect to get substantial receipts from Reparations, which will enable her to meet her obligations.

There remains one feature of the scheme to which,

perhaps, attention should be drawn. Among the list of Central and Reserve banks co-operating in the plan, which includes in addition to the Federal Reserve Bank of New York the Central banks of Austria, England, Germany, Holland, Hungary, Japan and Sweden, there appears also the name of the Bank of France. This fact clearly shows that the central institution in France realises the necessity of stabilisation by returning to a gold or gold exchange standard, and it may reasonably be assumed that its influence will now be exerted in favour of a similar plan for France. Moreover, it would not, perhaps, be altogether a rash deduction that its co-operation would hardly have been given unless the bank had satisfied itself that its action was agreeable to the French Government.

THE IMPERIAL CONFERENCE AND THE ECONOMIC PROBLEM.

ANYONE who will take the trouble to turn over the pages of the record of proceedings at the Imperial Economic Conference of 1923, and will then compare the opening speeches made on that occasion with those delivered last week by the President of the Board of Trade and the Dominion Premiers, will be struck at once by one decided difference. The problems discussed, the general ground covered, are very much the same as in 1923. The difference is one of emphasis. Three years ago, out of all the devices for the increase of inter-Imperial trade that were discussed, outstanding emphasis was laid on the device of preferential duties. This year preferences have been mentioned, as indeed they must be in any Imperial trade discussion, but they do not loom large in the picture, and the tone of the remarks concerning them has changed.

Let us test this change by the manner in which it is exhibited in the speeches of two protagonists who were present at both conferences. In 1923 Sir Philip Cunliffe-Lister (then Lloyd-Graeme) said: "We have definitely established the principle of Imperial Preference in our own more limited fiscal system. We wish to apply that principle within the scope that is practicable for us, so as to stimulate still further the development of Imperial products and Imperial resources.....On our part we shall certainly approach the question of preference with a strong desire to increase our mutual trade, ready and willing to take what action is possible for us....." These phrases were the tiny cloud on the horizon which rapidly overcast the political sky; for within a few weeks of their utterance Mr Baldwin had plunged for a wide scheme of tariffs and preferences and had been rejected at the polls. Last week Sir Philip contented himself with a defence of preferences already accorded, but made not the slightest hint of extension. The emphasis was placed elsewhere. Speaking of the development of inter-Imperial trade, Sir Philip said: "If I were asked to name in a sentence the most important factors in securing this development, I think I should be inclined to say migration, transport, sanitation." The change is as welcome and helpful as it is clearly marked.

The second test is supplied by the comparison of the opening speeches made by Mr Stanley Bruce, Prime Minister of Australia, in 1923 and 1926. In 1923 Mr Bruce covered page after page of the official report with a discussion of tariffs, which amounted, in the public view at any rate, almost to a request for a widely extended preference system. In discussing possible measures he went so far as to say: "I must give my first choice to a tariff on foodstuffs and raw materials with preference to the Dominions." To Mr Bruce was popularly attributed the influence which drove Mr Baldwin to his disastrous tariff plunge. He has since unequivocally repudiated the idea that he came here to try to change Britain's fiscal system. We accept his disavowal; but the fact remains that his public speeches in London in 1923 gave the general impression of a demand for preference. In 1926 the change is very clearly marked. In the lucid and constructive speech delivered at the Conference last week only minor and narrative reference was made to tariffs, and the emphasis of his statement was placed in quite a

different direction, namely, in the argument that the greatest economic interest of the Dominions was to see Britain climb out of her industrial troubles on to the firm ground of prosperity. We do not wish to misinterpret Mr Bruce, but we are almost disposed to read between the lines of his speech the realisation that the imposition of tariffs with a consequent increase of production costs is not the best means to achieve this end. Here are his words: "What we are trying to see to-day is where are the markets for Britain in the future, since the development and progress of the Dominions, certainly of Australia, absolutely depend upon the purchasing power of Britain, and that purchasing power can only be ensured if Britain is maintaining her commercial position, if her people are in employment, and if her purchasing power is increasing in relation to the increase of the production that we have to dispose of."

We have insisted at some length upon these two examples of changed attitude because we believe them to be not unrepresentative of the movement of opinion. In this connection we may call attention to a long article in the *Economic Record* of Melbourne, the journal of the Economic Society of Australia and New Zealand, in which Professor F. C. Benham, of the University of Sydney, investigates the Australian tariff and its effects in Australia, and reaches definitely free-trade conclusions. But, to return to the Conference, it is impossible even for a tariff enthusiast to base upon the Imperial delegates' speeches the slightest claim that any demand for preference is being made by the Dominions. The proceedings in 1923 and at previous conferences did lend colour, at least, to such a claim.

We are glad, therefore, to think that effective work by the present Conference on important problems such as migration, settlement, transport, communications, marketing, sanitation, research, the dissemination of information regarding market requirements, will not be impeded by the diversion of attention to controversial fiscal doctrines. Before we pass from the subject, however, we must revert to the speech of the President of the Board of Trade. This contained some figures relative to the growth of inter-Imperial trade, which require a good deal of annotation. Sir Philip's statement was as follows:—"In the first half of 1926 one-third of our imports came from the Empire. In the same period nearly half of our exports went to the Empire. Both these figures include trade to and from the Irish Free State. To obtain a fair comparison with the pre-war period that trade must be excluded. But even so, the figures are hopeful and suggestive. In 1913 the Empire proportion of our imports had risen to 31 per cent. In the last 12 months the proportion was 24.87 per cent. In 1913 the Empire took about 37 per cent. of our exports; in the last 12 months the Empire took about 42 per cent. This volume of trade is enormous in itself; but when we consider the relative population of the Empire and the rest of the world the proportion and the growth are still more remarkable. And when we visualise the further possibilities of development we must find hope and encouragement in a difficult time." The picture painted by Sir Philip, unfortunately, owes some of its brightness to the statistical method adopted. He is not guilty of mis-statement, but is open to a charge of *suppressio veri*. He has based his comparison too narrowly, selecting for his purpose one pre-war year (1913) and one post-war year (1925-26). In order to obtain a proper perspective it is necessary to spread the comparison over longer periods. For this purpose we append a table showing the Empire's share in Britain's import and export trades over various periods:—

EMPIRE'S SHARE OF BRITISH TRADE.			
	Empire's Share of Imports.	Empire's Share of Exports.	%
Average, 1903-13.....	23.6	35.2	
1913.....	24.9	37.2	
Average, 1919-21.....	31.7	35.5	
1922.....	31.7	39.7	
†1923.....	27.6	37.2	
†1924.....	27.0	37.8	
†1925.....	29.8	39.3	
†Year ended June 30, 1926.....	30.4	41.5	
† Excluding trade with Irish Free State.

If the 1903-13 average, or the 1919-21 average, be compared with the average of the last three calendar years, 1923-25, the result is by no means so encouraging as that produced by Sir Philip's method of selecting individual years. In 1923-25 the rest of the Empire supplied 28.5 per cent. of Britain's imports, as compared with 31.7 per cent. in 1919-21 and 23.6 per cent. in the pre-war decade. Similarly, the Empire's share in Britain's export trade rose from 35.2 per cent. in 1903-13 to 35.5 per cent. in 1919-21 and to 38.7 per cent. in 1923-25. The figures are not such good material for satisfaction as those of Sir Philip. There is, moreover, another side to the question, which Sir Philip mentioned, but did not illustrate with statistics. It is that during the period covered by these comparisons the total trade transacted by the Dominions has grown very largely. Of that increase in total Dominion trade Britain has not maintained her share. Here are some figures bearing on the point, which we have compiled from the League of Nations Memorandum on Balance of Payments and Foreign Trade Balances, 1911-1925* :—

Imports Into	Per Cent. from Great Britain.			Per Cent. from Other Countries.		
	1913.	1924.	1925.	1913.	1924.	1925.
Canada	21.3	19.0	17.7	78.7	81.0	82.3
South Africa ..	56.8	51.5	50.0	43.2	48.5	50.0
New Zealand...	59.7	51.1	52.0	40.3	48.9	48.0
India	64.2	54.4	52.3	35.8	45.6	47.7
Australia	51.8	45.2	43.9	48.2	54.8	56.1

Exports From	Per Cent. to Great Britain.			Per Cent. to Other Countries.		
	1913.	1924.	1925.	1913.	1924.	1925.
Canada	49.9	37.0	38.6	50.1	63.0	61.4
South Africa ..	88.7	61.4	56.2	11.3	38.6	43.8
New Zealand...	78.9	79.9	79.8	21.1	20.1	20.2
India	23.5	25.5	22.2	76.5	74.5	77.8
Australia	44.3	38.1	42.7	55.7	61.9	57.3

Precise deductions from these figures should be cautiously made, because they are open to the same objection as those of Sir Philip, in that they deal with single years. They are, nevertheless, indicative of a definite, and in many cases a formidable, downward trend in the share of the total trade of the Dominions enjoyed by the Mother Country. This fact lends emphasis to, if it has not inspired, the strong insistence with which both Mr Bruce and Mr Coates, the Premier of New Zealand, have pleaded with British manufacturers to make a closer study of the individual requirements of Dominion markets. Both have directed their plea to the motor industry in particular, but it is applicable in some, if lesser, degree to a wide range of British export industries.

GREAT BRITAIN AND CHINA.—III.

WHAT is the future of China, and what is the future of British trade with her? As things are, these two questions can only be answered in the form of very tentative speculations. Yet speculations, of a sober and rational kind, are the presupposition of policy, and, as has been suggested in a previous article in this series, a definite British policy in China, and towards China, is a crying need. Therefore some speculation is unavoidable; and our first question—the future of China—evidently comes before our second—the future of British trade. In attempting to peer into the future of China we may obtain valuable guidance from her past. The recorded history of China dates back at least 3,000 years, and the last 2,000 out of the three seem to shape themselves, when we look at them in perspective, into something like a regular rhythm. Since the warring States of the ancient Chinese universe coalesced into one Chinese universal empire in the third century B.C., Chinese society has never again permanently fallen apart into its constituent elements. There have been bouts—almost regular pulsations—of disintegration and anarchy. Sometimes these bouts have lasted for several centuries; for China, like Nature, lives her life in the grand manner, and is prodigal of time and energy. So far, however, each bout, however long drawn out, has ended in the rebirth of a United China—a rebirth in which the foregoing period of storm and stress has found its explanation and its reward. Through this cycle of dissolution and rebirth China perpetually renews her vitality. Once upon a time the sorceress Medea possessed a magic cauldron, and if you allowed her to chop you up and boil you, she could bring you out of the cauldron—if she chose—a new man. China is a Medea who periodically performs this terrifying operation upon herself—hitherto with unflinching success. What is her secret? Sometimes, at any rate, she appears to season her witch's cauldron, when it is on the boil, with secretions from the thyroid glands of a foreign devil. For example, after the China of the Han had cast herself into the seething pot there emerged in due course the China of the T'ang, fortified by a life-giving tincture of exotic Buddhism. And ever since we "barbarians of the South Seas" first landed on the Chinese coast, modern China seems to have been ruminating as to whether a tincture of our life force might serve her purpose in her next rejuvenation. Under the Mings and Manchus she very nearly decided to take the Western tincture in the form which the Jesuits offered. As it is, she appears to be taking it, a century or so later, in the alternative form of the industrial revolution. In 1911, after mature deliberation, she made her habitual plunge into the revolutionary cauldron, and how soon she will emerge this time only China knows. She may take months or years or generations, but it is safe to reckon that, sooner or later, she will triumphantly emerge with an infusion of our industrial civilisation in her blood and with her physique reinvigorated. At present

China presents, to the uninitiated Western observer, a spectacle of mere distraction. There is not only war between province and province, tuchun and tuchun, faction and faction, there is a rift between class and class. The mass of the Chinese people to-day belongs to the peasant class—the vegetative element in the Chinese soul which, through each successive rejuvenation, continues to sow and reap and somehow miraculously keeps alive. Then there are the educated classes—among whom the unresolved discord between the old life and the new is visible at this moment in the contrast between the Western-educated students and the Confucian literati. Finally, there are the Chinese of the Treaty Ports, whose interests are largely bound up with the transitory privileges of the resident alien. The age-long safeguards of the Chinese system (drastic remedies for shocking evils) do not apply to them. The tuchun who has made himself too odious hurries to the shelter of the Treaty Ports with his ill-gotten gains. The political agitator seeks refuge there. The merchant hugs his money and property there, against the insistent demands and blandishments of his family and his town or province—which have their own methods of providing for the redistribution of wealth. But these divisions will ultimately be overcome, China will re-emerge with a new unity, and at the same time with a new harmony between the latest elements assimilated from the West, and those diverse but delicately adjusted elements from other cultures which she has assimilated at earlier stages in the long history of her civilisation. The attainment of this inner harmony is China's own affair, and she has proved time and again that in this matter she is well able to look after herself. A question which is more speculative, but in which British interests are more closely concerned, is whether the new China, when she emerges in her own good time, will live on harmonious terms with foreigners, particularly with ourselves. In plain language, what is the future of British trade with China when China settles down?

It is already clear that the future of business in China lies with the Chinese. They want to do it, and they are competent to do it. They know that the foreigner can assist them for the present by his experience of foreign markets, credits, banking facilities and modern business organisation. They will learn from him, and use him, so long as he will work with them. They may even be ready to lean on him—realising, perhaps, that he has something strong and stable in his personality—and they may even be led by him along the road of reason; but they will not be driven by him nor work with him if he insists on domination. The experienced foreigner has a great opportunity during the next few years. By respecting Chinese susceptibilities he can to a great extent determine, in his own favour, the nationality of the foreign goods purchased by the four hundred millions. This wisdom of the dove is the new-found wisdom of the Japanese. But the foreigner's future in China, on a larger view, lies in teaching the Chinese how to trade; and for this, even more emphatically, mutual goodwill and mutual forbearance are essential. The Chinese, like other people, will do part of their learning by the inconvenient method of trial and error. In this way they will learn, for example, that their paramount need is to develop their production, their means of communication and their exports, and that cheap capital and low tariffs are likely to be their best safeguard against exploitation. Ultimately (and perhaps before very long) the Chinese will do their own trade direct with foreign countries, and will dispense with the help of the present instructor-middleman. Fortunately such a development happens to be also in the ultimate interest of British trade—as distinct from the trader living in China. It is not for us to hurry the pace—the Chinese will barely be induced not to force it. What we have to do is to recognise the facts and be ready to meet them—preferably half-way.

In this voyage of exploration along a new line of thought and a new line of policy, the British communities in China are the natural pioneers. This is so for two reasons. They have more experience to contribute towards a successful solution of the problem, and more assets to lose in case of failure, than the mass of the British nation living at home. In prognosticating that the trader will disappear, we do not mean that, inexorably, the British

communities in China will be ruined or rooted out. Far from it. They can not merely hold their ground under the new conditions, but can prosper under them more than they have ever prospered before, if only they pass from the defensive to the offensive by keeping abreast or ahead of the times.

If, however, it is true that the initiative in striking out a new line of policy in China should come from the British communities in China, it is no less true that Great Britain, and the British people at home, have a very important stake in the issue. In order to realise this we have only to remind ourselves of our general position, at this moment, in the world. What has been the basis of our long-enjoyed and now gravely menaced national prosperity? It is that we invented the industrial system and reaped the inventor's profit in gaining a century's start while the new technique was being learnt laboriously by the rest of the world. The profits of that century have been princely; but from a single economic achievement, however great, we cannot expect to draw an assured income in perpetuity. Recurrent effort, recurrent re-adaptation, is always and everywhere the price of immortality; and—short of rejuvenating ourselves in Chinese fashion—the time has arrived for us to renew our vitality and retrieve our fortunes by the less sensational methods which are native to our character. We have now lost that particular start which we gained a century ago. The rest of the world has now learnt to follow where we showed them the way; and the industrial system, in its pristine form, is no longer our monopoly. Therefore, it is time for us to gain a second start by so improving our methods of production and our methods of trade as once again to leave the rest of the world behind us. We must specialise upon producing goods and providing services in the forms which the world demands, but which the rest of the world has not yet mastered. In this direction, assuredly, lies our economic future; but such specialisation is only profitable on one condition. For those goods and services in which we specialise we must have a wider market than that which we have hitherto regarded as ample for our needs, and this market must be secure. Where are great new markets to be found in a world whose resources have so rapidly been developed? The great virgin market of the future is China, from the moment when her peace and unity are restored and her life is renewed by a prudent and temperate infusion of Western life-force. With insight and courage on both sides, Great Britain and China may yet have a great future in partnership with each other.

THE BRITISH CHEMICAL TRADE.

While the market is waiting for the announcement of the terms of amalgamation of the new Chemical Combine, considerable interest is being shown in the industrial position and prospects of the British Chemical Trade as a whole. These are briefly reviewed by a correspondent in the following article.

THANKS in no small measure to the energy and foresight of its leaders, the chemical trade and industry of this country finds itself to-day in a comparatively favourable position. Affected, in common with every other industry, by the depression resulting from the coal strike, it has been able to maintain a high rate of output, and thus keep down the level of unemployment within it. Of the workpeople engaged, approximately 12 per cent. are not working at the present time, compared with 9 per cent. a year ago. Despite the general increase in manufacturing costs, it is interesting to note that market prices have experienced very little fluctuation on the whole, while the average level has advanced only by a narrow margin. This policy has considerably assisted the home industries that are most nearly allied to the chemical industry, namely, the soap, oil, explosives, paint and paper industries. In all of these, with the exception of the explosives industry, the progress of which is so closely bound up with the mining industry, conditions are fairly satisfactory. In contending with the many adverse factors in overseas markets during the past year, exporters also have been aided by the

general stability in manufacturers' quotations. The continued uncertainty prevailing in various Continental countries, coupled with the unrest in the Far East, has not, therefore, exerted so oppressive an effect; while other important markets like the Colonies and South America have proved very loyal. The trade figures for the nine months to September 30th show British exports of chemicals, dyestuffs, and allied products to have fallen in value from £17,946,000 in 1925 to £16,817,000 in the current year. But this decline is principally due to the reduced exports of ammonium sulphate—a coal distillation by-product—the production of which has diminished very considerably in past months. On the other hand, there is an appreciable increase in the value of chemical products imported into this country, which is a not unexpected development.

One section—the fine chemical industry—still requires State assistance, having been unable to establish itself sufficiently firmly during the past five years of "safeguarding." In spite of considerable opposition, the expiring Safeguarding of Industries Act (Part I.), 1921, was renewed in August last, and the 33½ per cent. import duty imposed on over 5,000 "key" chemicals for a further ten years. Certain proposed modifications caused some uneasiness among consumers here, and in consequence the market in several products has displayed much uncertainty. In the first place, the Board of Trade was expected to issue a supplementary list of new chemicals the manufacture of which has commenced in this country since the passing of the Act, but it appears that determined efforts are being made to introduce other products of a very controversial character, and even to re-introduce those products which were struck out of the original list after appeal. Naturally, the appearance of this list is awaited with keen interest, and the continued delay gives support to the belief that a large number of not necessarily new products is concerned. The second and more important aspect of the case relates to the issue of Treasury Orders exempting products not made in the United Kingdom from liability to duty. Under the relevant section many applications for such exemption have been made, since the onus lies upon the user, but not a single Order has yet been published. One outstanding instance is that of oxalic acid, which is not made in this country, and, although the Government is quite well aware of this fact, the duty has not yet been removed. There is no apparent reason why exemption orders in this and similar cases could not have been granted two or three months ago. Merchants, therefore, are refusing to import and pay duty on such products, and, on the other hand, consumers refrain from taking up existing stocks unless absolutely necessary. The present position is extremely unsatisfactory, and, although more than two months have elapsed since the renewal of this part of the Act, the Board of Trade has given no indication of what action it intends to take.

In industrial chemicals, while output has been well maintained, consumption has fallen somewhat owing to the depression in many using industries. The alkali products have changed very little in price in the home market, and the constant presence of cheaper imported material has a further steadying influence. Potash chemicals are mainly imported, and recent events in the Continental industry lead to expectations of higher prices in the near future. In the bichromates domestic manufacturers are feeling the effects of American competition, business conditions being very keen. On turning to the sulphuric acid industry, and those which it serves, the situation is rather depressing. Production in 1925 was already declining, and this year shows a further shrinkage in spite of lower prices. The chief outlet for acid is in the manufacture of ammonium sulphate and superphosphate for use as fertilisers. For the reason already mentioned the output of the former has fallen, but a growing proportion is now being made synthetically at Billingham by a process which dispenses entirely with the use of sulphuric acid. As to superphosphate it is interesting to observe that the output has not fallen to anything like the extent prophesied at the Safeguarding Inquiry some 18 months ago. For the 12 months ended June 30th last the production of superphosphate in home factories, at 518,000 tons, declined only by 4 per cent. on the previous year. Nitrate of soda appears to be losing ground steadily in the United Kingdom, both for use as a fer-

tiliser and as a raw material for nitric acid manufacture. Here, again, new processes are influencing the position, and a large plant is being erected by the United Alkali Co. for the manufacture of nitric acid from atmospheric nitrogen. In other directions also, notably the iron and steel industry, the consumption of sulphuric acid has fallen—temporarily, no doubt, but inevitably. For some months now coal-tar products have been scarce and at high prices, but the volume of exports of crudes has kept up well to 1925 levels, and values are even higher for the whole group. In the home market there is some disinclination to buy at the current quotations, but it is only fair to point out that previous to the general strike coal-tar residuals were for some time sold at a loss.

During recent months indications have been unmistakable that the large chemical manufacturing interests were leaning more and more towards the idea of co-operation on the lines followed on the Continent and in the United States, where fusions involving the equivalent of many millions sterling have been effected in the chemical industry. In the United Kingdom this movement has culminated within the last few days in the merger of Messrs Brunner, Mond and Co., Limited, the United Alkali Company, Limited, Nobel Industries, Limited, and the British Dyestuffs Corporation, Limited. It is not without significance that the fine chemical industry is not included in the combine, as in the parallel case of the German I. G. Farbenindustrie, though industrial chemicals, fertilisers, explosives and dyestuffs are all covered. But the inclusion of the Dyestuffs Corporation may be the prelude to an adjustment which will eventually bring pharmaceutical and fine chemicals within the ambit of its operations. Primarily, this movement is designed to ensure the preservation of the export market, and in its representative capacity the new company will have much greater facilities for securing this end. There are, however, new markets for chemical products constantly emerging within the United Kingdom. Two such expanding markets are artificial silk and beet sugar manufacture. Another outlet is the cellulose-lacquer industry, which is rapidly establishing itself in this country. There is, indeed, every indication that when normal conditions are restored a period of great prosperity awaits the chemical industry.

THE "BEAM"—A TASK FOR THE EMPIRE CONFERENCE.

OF all the achievements of modern science the annihilation of distance is that which more than any other distinguishes the civilisation of the present day from that of any previous epoch in the world's history. The process is becoming so familiar that we cease to marvel at it, and allow great changes to be introduced almost without comment. We can hardly fail, however, to note that this week is a landmark in the evolution of long-distance communication by reason of the introduction on Monday last of the "beam" system of wireless communication between England and Canada. This new device is the result of another great contribution by Mr Marconi to the science of wireless, which makes it possible to control the direction of wireless waves and by means of a "reflector" to despatch from a comparatively low-powered

plant a "beam" of waves in a given direction which can be picked up in, say, Canada within an area of some thirty miles only from the spot on which the beam is directed. The new system will take the place of high-powered stations in the Imperial wireless chain the development of which has had so chequered a career. Before Christmas it is expected that the system will be working from England to South Africa, to India and to Australia, and ultimately between these Dominions also. The new development is of great scientific interest; but we are here primarily concerned to note its economic and political consequences. The Post Office, who are operating the scheme at the English end, have announced that the price to be charged for the new service is not to exceed more than two-thirds of the cable rates in force in 1924 in the cases of South Africa, Australia and India; but that the rate to Canada will be the present cable rate. This statement at once brings out the important point that the new plan has great economic advantages over the existing cable system, and introduces a form of competition which may become of the first importance to the cable companies. In this connection a very significant remark was made last week by the Post Office representative, who, in speaking of the rate to Canada, observed:—

The reason for the different condition in the case of Canada is that the rate from Great Britain to Canada has recently been reduced from 1s to 9d a word, and it was not considered that a further reduction of the rate would be justified.

The matter was discussed some months ago between the Post Office and the Canadian Marconi Company, and a proposal was made by the Post Office for some reduction in the wireless rates between Great Britain and Canada; but the company could not secure the co-operation of the companies which conducted the inland telegraph services in Canada, and the proposal has had to be dropped. The existing cable and wireless rates for all classes of traffic—full rate, deferred, night letter telegrams, weekend letter telegrams, and Press—will, accordingly, be adopted on the "Beam" service to Canada.

The telegraphic arrangements to Canada involve, on the one hand, the cable companies, which compete keenly in service but not in rates, and on the other the two great Canadian railway systems along whose lines the telegraph system of Canada is worked, and the land part of the new telegraph system must clearly use these same overland lines. It would appear that the attempt of the Post Office to cheapen prices has run up against obstruction at some point in the existing system. The cheapening of these rates is, however, so enormously important in developing contact within the Empire, and, indeed, with all distant countries, that it would be disastrous if any monopolistic influences were to check progress in this direction. The Imperial Conference is pre-eminently the body to give its attention to this important matter.

The significance of the new development is, however, only fully revealed by the fact that the Post Office is offering to send to Canada wireless letters (i.e., letters handled through the ordinary postal machinery on land, but dispatched by wireless across the ocean) at the surprisingly low rate of 1½d a word. Within reasonable range of the wireless station at Montreal this will mean that messages will be transmitted in one or two days instead of ten. This is much the lowest rate ever charged for telegraphic communication to Canada, and will unquestionably increase very greatly the volume of business and journalistic messages sent by a rapid route. The importance of this method of communication will be of even greater significance when the method is applied to Australia, and the time may soon arrive when the printing of matter received by mail from the Antipodes will be as obsolete as the hansom cab. We would add that our periodical analyses of the balance-sheets of cable companies show that they are in a strong position to embark upon a period of keen competition, for in many cases their cables have been written down to nothing. On the other hand, new up-to-date cables that are being laid are capable of carrying an enormously increased number of messages. We look confidently forward, therefore, to considerable reduction in the cost of long-distance communication by all methods, and do not doubt that with enterprise on the part of the cable companies they will be able successfully to meet this new competition. Just as the gas companies are today stronger, and not weaker through having to meet the

competition of electricity, so the cable companies will be able to adapt themselves to the new conditions. They will doubtless even find ways of enlisting the new force in the improvement of their own services. Indeed, as we go to press we learn that the Eastern Telegraph Company has entered into an agreement with the Marconi Company for the erection of a wireless station in Greece.

THE PLIGHT OF NEW ENGLAND'S TEXTILE INDUSTRIES.—II.

(FROM A CORRESPONDENT.)

THERE has been in New England a strange conservatism about business methods, which is in striking contrast to the policy pursued by the textile leaders in the Southern States. There a strong spirit of co-operation prevails in the cotton industry, and through different organisations the manufacturers have been studying the market and creating new fields for cotton sales. One proof of this is to be found in the streets of Southern cities, where a new cotton hot-weather suit has virtually displaced the old type of linen clothing. There are also plans afoot for starting fashion shows all over the South to persuade women to return to the use of cotton, and the possibilities of every foreign market have been carefully explored. In New England it has been suggested as a remedy for the local industries that the cotton mills should join in purchasing the plants of the textile machinery companies, and put an end to further expansion of the industry in the South by curtailing machinery sales.

The tariff issue also enters into the situation, and most cotton manufacturers, while desiring to maintain or increase their own schedules, are now anxious for a reduction of the tariff on everything but cotton products. They are inspired to this attitude by the belief that a lower tariff would decrease the living expense of workers and make labour cheaper; but it is doubtful if this hope will be realised, for the average wages of a cotton textile worker are, if anything, lower than in other industries. The tariff certainly has had the effect of keeping back an inflow of imported goods which would probably have completely wrecked the New England cotton industry, but to-day most of the cotton goods imported into the United States are of a class not manufactured in the Republic, and even their volume is decreasing, for there was a drop of 50 per cent. in cotton imports into the United States during the first half of 1926.

Involved as it is in these difficulties, the cotton industry now looks for succour to an organisation known as the Cotton Textile Institute, which has recently been formed by a group of textile men representing all branches of the industry in both the North and the South. It is a co-operative organisation, framed on the model of the Steel Institute, and has for the main object of its existence the scientific study of the textile market and the dissemination of useful trade information among its members. It was formed at the suggestion of Mr Hoover, the Secretary of Commerce, and is enrolling members in the expectation that it will bring under its ægis half of the 38,000,000 spindles in the cotton industry. Each spindle will be assessed at 1 cent, which would give the association a working capital of at least \$180,000. For its president and director there will be chosen some outstanding figure who is not connected with the cotton trade, and he will be endowed with almost autocratic powers.

The position was offered to Secretary Hoover himself, but he declined, and now the founders of the institute are contemplating an offer either to Mr Owen D. Young, of the General Electric Company, or to Mr J. A. Perkins, of the Farmers' Loan and Trust Company, of New York. There are some cotton men in New England who scoff at the idea of the institute, and assert that the problem of improving the cotton industry is for the individual mills to solve. There are other manufacturers in the South who look upon the organisation as an attempt to enlist the South for the salvation of the North, and they contend that the New England cotton industry is on its last legs, and might as well be allowed to languish to complete ruin. At present the South has its own cotton institute, which

is doing on a small scale what the new textile institute hopes to accomplish with a more elaborate programme, and it is apparent that many Southern spinners will await results before they join the larger institution. But all the portents point to great difficulties in reviving the cotton industry of New England, and it is freely prophesied that within a few years cotton manufacture will be largely controlled in the Southern States, which already have 45 per cent. of the looms in the industry, and are producing about 65 per cent. of the nation's cotton goods.

The plight of the woollen industry in New England, although by no means so serious, is far from satisfactory, and many of the causes which have brought difficulties to the cotton industry are responsible for its condition. Its production experienced an abnormal expansion during the war, and enormous profits were reaped. Then soon after the arrival of peace it discovered that not only was it seriously overgrown, but that a substantial proportion of its normal pre-war market had disappeared through the gradual abandonment of the use of wool for wearing apparel. Various factors contributed to this change. Artificial silk grew rapidly in favour with women, and fur manufacturers managed to cheapen their products and popularise them. Furthermore, the increasing use of central heating plants in offices and private residences tended to diminish the use of heavy woollen clothing as being too uncomfortable. Generally speaking, also, American people began to spend less money on clothes and more on motors, radio sets, and other luxuries. There was a time when the social status of an individual was rated by the quality of his clothes, but nowadays in the United States it is determined by the quality of his motor-car, and many men and women are content to wear old clothes as long as they will hold together, provided they can get an up-to-date motor-car every second year.

However, some authorities contend that although there has been a general decrease in the profits of New England's woollen mills, a considerable number of them are still making money, and that the pessimism which prevails among manufacturers is due to their reluctance, after becoming accustomed to high profits during the war years, to accept normal returns. The woollen workers at Passaic, New Jersey, who went on strike against a 10 per cent. wage decrease, declared necessary by the employers on account of depression in the trade, employed Mr Jett Lauck, a well-known radical economist, to investigate the situation of the industry, and last summer he laid a very vigorous indictment against the woollen manufacturers before the Senate Committee on Education and Labour.

He contended that they were using a tariff averaging 73 per cent., which now exists on woollen goods, for their own profit, and that the workers got no benefits for it, and he estimated that while the millowners were making from 50 per cent. to 97 per cent. on their investments, and at the same time paying starvation wages. He also charged that the woollen mills were demanding absurdly high prices from the consumer, and stifling consumption, but the manufacturers, while they admit that prices are high, lay the blame upon other shoulders. They maintain that the chief factor in the high level of prices is the tariff on raw wool. Unlike the duty on the finished commodity, which varies according to the value of the product, the tariff on raw wool is a flat 35 cents per pound regardless of the fact that its selling price may range between 25 cents and \$1.50 per lb, according to the quality. The rate does not seem extravagant until it is realised that when wool is washed and cleaned it frequently shrinks 50 per cent., and sometimes as much as 80 per cent., and the result is that by the time the wool is ready for treatment in the mills the tariff levy has brought the price of the raw material up 100 per cent. in many cases. Now the United States only grows one-third of the wool which it consumes, and the protectionist tariff is therefore bound to play a large part in enhancing prices for the consumer. Under these circumstances many woollen manufacturers are anxious that the tariff on wool should be revised, so that the duty would be levied not at a flat standard rate, but according to the actual value of the cleansed wool, and there seems little doubt that such a change would lead to lower prices for the finished products, and a better demand for them. But one serious obstacle to any such

change lies in the fact that the chairman of the Finance Committee of the Senate is Senator Reed Smoot, of Utah, a State which is one of the chief producers of wool, and is profiting greatly by the present scale of duties on the raw product, and he is a past master in blocking legislation which does not suit the interests of his constituents. The woollen manufacturers of New England ought to have a powerful spokesman at Washington in Senator W. M. Butler, of Massachusetts, who is a close confidant of President Coolidge, and managed the last Republican campaign. A very rich man, he has extensive interests in the woollen industry, but he happens to be exceedingly unpopular with his colleagues in the Senate, and also to be a hidebound high protectionist, who can think of no other form of relief for the woollen industry but a further increase in the duties on the finished products. Such a proposal would be strenuously opposed both by the Democrats and the Republicans from many middle-western States, and it would be unpalatable to many woollen manufacturers. Among the richer classes in the United States there is what almost amounts to a craze for British woollens, and clothing of indigenous origin is despised as unfashionable. Not a few manufacturers, therefore, cater to this sentiment by exporting their goods to Britain, and then re-importing them so that they can put the brand "imported" upon them, and these enterprising people would be hurt by an increase in the tariff. Accordingly there is little likelihood that it will be attempted, although Senator Butler, who is running for re-election in Massachusetts in November, is reported to be holding out hopes that it may be consummated. But the sum of the matter is that at present the cotton and woollen manufacturers of Britain have no serious cause to envy the fortunes of their brethren and competitors in New England.

THE HONOUR OF PARLIAMENT.

ON Tuesday last the British House of Commons, under the skilled guidance of Sir A. Holbrook, successfully vindicated its own honour and by a substantial majority decided publicly and emphatically that it is an assembly of invariably sober men. This is a result that will give satisfaction to every person of goodwill, and the warm congratulations of all admirers of the House of Commons are due to those members who forced the matter on to the attention of the public at home and abroad.

The facts themselves are simple. It appears that at some obscure temperance meeting Dr Salter, Labour Member for Bermondsey, had been making a speech on the history of the temperance movement in England, and finished his survey with a statement that though England is more sober than she was, she is not yet completely sober, and that he had actually seen different members of all parties in the House of Commons on the very premises of Parliament under (as the saying goes) the influence. This disgraceful slander on what is admittedly the finest collection of legislators in the world might, and probably would, have passed unnoticed; but by the special intervention of Providence there was a gentleman of the Press in the room when the statement was made, and he reported it in the *Daily Express*. Thanks to this chance and to the watchfulness of Sir A. Holbrook, whose tact and discretion in the matter are beyond praise, an outraged House of Commons was able to give full publicity to the speech, and to nail by a substantial majority the lie to the counter. By a good working majority the House of Commons has broadcast to the listening Earth the story of its own respectability.

Except for the contumacy of Dr Salter, who against all tradition refused obstinately to qualify in Westminster what he had said in Bermondsey, the debate was on a very high level. True there were signs of nervousness here and there when some member unnecessarily challenged Dr Salter to mention a few names, but the episode passed off, and the right note was struck again in the Prime Minister's frank and manly speech. "We all know about it," he declared, "but we don't talk about it. We draw a veil of reserve over it. (Cheers)," and as a natural corollary he announced his intention of voting

with Sir A. Holbrook, whose resolution took the following form:—

That the speech of the member for West Bermondsey is a gross libel on the members of this House, and a grave breach of its privileges.

Out of a total membership of 615, 247 M.P.s voted against Dr Salter and 95 for him, so we get a result that is statistically rather interesting. We are to infer that 95 M.P.s think they have seen their fellow-members intoxicated; 247 think they have not; while the balance of 273 non-voters are doubtful what standard of sobriety to apply.

It is one of the qualities of a great debate to stimulate the imagination, and this debate was no exception to the rule. As an experiment in self-vindication by resolution, it opens up vistas of possibilities. In our mind's eye we see Dean Inge at some secular gathering, or the former rector of St Martin's at a wireless service, declaring that they have known clergymen who were smug and unctuous in their manner. We see the whole body of clergymen stirred by the slander. We see the Bishop of London moving a resolution in Convocation that the charge of unctuousness brought against some members of the clergy is a gross libel; and after the demand for names has been suppressed, we see Convocation by a handsome majority adopting the motion that no clergyman has ever been known to be unctuous.

And the thing does not stop with the legislators and the clerics. Self-approbation by resolution is open to every profession, and our imagination toys with a few of the motions that may and, probably will, be passed by various bodies now that the fashion has once been set. Here are a few resolutions that spring to the mind at once:—

The Bar Council:—That no barrister ever has accepted a fee without being present in Court to earn it.

The British Medical Association:—That no medical man has ever attempted to advertise himself by indirect methods.

The Bookmakers' League:—That no bookmaker has ever been known to welch.

The Bricklayers' Union:—That no bricklayer has ever laid less than the largest possible number of bricks in a day.

The Institute of Journalists:—That no journalist has ever been known to split an infinitive.

The list can be indefinitely lengthened, and opens wide fields of inexpensive and convincing propaganda.

This unfortunate article shows how dangerous it is to start a theme without seeing the end of it. It opened, in a mood of admiration and respect, as an attempt to uphold the authority, dignity, and sobriety of the House of Commons and to justify the ways of Parliament to man. But as the argument has developed the objective has receded, and we close with the miserable feeling that on Tuesday last the British House of Commons, under the skilled guidance of Sir A. Holbrook, made itself supremely ridiculous.

Notes of the Week.

The Week's Work of the Imperial Conference.—The most important sessions of the Imperial Conference this week have been held in camera. On Monday a discussion took place on Foreign Affairs, the Dominion delegates giving their views on the statement made last week by Sir Austen Chamberlain. A published statement announced the establishment of a Prime Minister's Committee to examine problems of Imperial foreign relations. On Tuesday, also in secret, problems of Imperial defence were considered, and yesterday the individual question of naval defence was discussed in a meeting held at the Admiralty. Thus the Conference has settled down to its chief business. There has also been a considerable volume of work by sub-committees concerning forestry, research work, overseas settlement, mandates, and economic policy. Apart from the Prime Minister's Committee, referred to above, separate committees have been established to deal with the following subjects:—Overseas Settlement, Nationality and Passports, British Policy in the Antarctic, Anglo-French Condominium in the New

Hebrides, Economics, Workmen's Compensation, Imperial Air Communications, Research, Forestry. The one Plenary Session held in public was devoted to the question of Imperial Air Communications. The session opened with a long statement by Sir Samuel Hoare, the Secretary of State for Air. In his interesting review of immediate plans for extending Empire air routes he did not add very much to the information given recently by Sir Eric Geddes at the annual meeting of Imperial Air Ways, Limited, and discussed in the *Economist* of September 25th. But his statement developed a new interest when he threw out the suggestion of a chain of air services all round the Empire to which the various Dominions should for themselves add fresh links in co-operation with a central plan. This important proposal, of what Sir Samuel called the "mosaic" system of building up services, it is understood was well received by the Dominion Premiers, whose full speeches, however, have not at the moment of writing been published. On three other points Sir Samuel's statement is of general interest. He proposed that an Imperial Air Conference should be held between now and the date of the next Imperial Conference at some "central" point in the Empire. In a matter where development is so rapid the suggestion is a wise one. Secondly, the Minister's estimate of immediate possibilities in shortening the time taken by journeys deserves attention. "There is to-day no technical or operational reason," he said, "why, by aeroplane or airship, London should not be brought within a fortnight of the farthest cities and territories of the Empire. There is no technical reason why the journey to Canada should not be reduced to 2½ days, the journey to India five days, to Cape Town six days, to Australia 11 days, to New Zealand 13 days." On these claims the Conference was invited to cross-examine the experts. The third point to which we refer is the emphasis placed by Sir Samuel on the degree of safety achieved in aeronautics. British services, he said, had flown 5,000,000 miles for four fatal accidents, while freight insurance rates for air transport are less than half those charged for surface transport. Contrasting this record of what are still the early days of flying with the early days of railways, Sir Samuel said: "Let me remind you, in comparison with this record, that the Press in 1845 commented with grim irony that the 'largest item in railway returns bids fair to be the list of the killed,' and even seven years later, in 1852, declared that 'railway accidents are the staple of our newspaper reading.'" From one aspect this was the most important passage in Sir Samuel Hoare's statement, for the use of air passenger transport will only develop in proportion to the confidence of the general public in its safety; and as yet the man in the street has not reached the frame of mind enjoyed by Mr Bruce, who regards a 500-mile flight as no more serious a matter "than the hiring of a taxi-cab."

A Fiscal Object Lesson.—Full justification is given this week to the protest made by sugar refiners against the bounty of £26 10s per ton on white sugar produced from home-grown sugar beet, for Messrs Tate and Lyle, the leaders of the British refining industry, have announced that their Plaistow works, employing 3,600 men, has been closed down, and that a similar fate threatens their factories at Silvertown and Liverpool. In a statement to the Press Sir Leonard Lyle, chief managing director of the company, while complaining of the "dumping" of foreign sugar, laid the chief blame for these occurrences on the subsidy granted by the British Government to home beet sugar factories. It is not long since Mr Churchill proudly pointed to the home industry as "a growing child." The description is correct. Last year 50,000 tons of white sugar was produced from home-grown beet; for this year the estimated production, according to Sir Leonard, is 150,000 tons. "We do not oppose," says Sir Leonard, "the subsidising of the new industry, but we do think it unfair to bolster up what may prove to be an inefficient industry and neglect an industry which has, under the fiercest competition, proved its ability to hold its own against the world." This week's event confirms our view as to the indefensibility of the home beet sugar bounty; but it also teaches a wider lesson. It illustrates

the general and unassailable truth that any artificial interference with trade, whether by tariff, preference, or subsidy, produces ramifications of effect which will do serious damage somewhere. The advocates of this particular subsidy, which has had such disastrous effects, always pleaded as one of its principal aims increase of employment at home. If it has created work in one direction, it is sending 3,500 men, and probably another 4,000 in the near future, from one firm alone into idleness. Here, indeed, is an object lesson in the inevitable results of un-economic fiscal experiments.

Northern Ireland and the Imperial Conference.—Our Belfast correspondent writes:—At the beginning of last week a statement was issued by the Government of Northern Ireland explaining the constitutional position of the Province with regard to the Imperial Conference. Under the Government of Ireland Act, 1920, matters relating to the succession to the Crown, the making of peace and war, the Navy, Army and Air Force, treaties or relations with foreign States or with other parts of the Empire, trade with any place outside Northern Ireland, &c., were reserved to the Imperial Parliament, and therefore the Province does not enjoy separate representation at the Conference which is now being held. As regards the constitutional problems with which the Conference has to deal, Northern Ireland is not directly concerned, and her interests are the same as those of the mother country. With the economic questions which are being considered by the Conference, however, she is very deeply interested. For as an important supplier of foodstuffs to the British market, her interests are threatened by any development which places colonial produce in a favoured position to compete with home produce in Great Britain. The assurance that the annual grant of £1,000,000 which is being administered by the Empire Marketing Board will be used for the encouragement of the marketing of home produce equally with that of the Dominions is therefore regarded with special interest. Mr Amery remarked, when dealing with the work of the Empire Marketing Board, that "the producer in this, the oldest of all the Dominions, should be included as well as the producer in other dominions. Indeed, the position would be an absurd one if the newest Dominion, the Irish Free State, were specially helped in the markets of this country and Northern Ireland and Great Britain did not receive a parallel measure of encouragement." Agricultural produce from Ireland, North and South, is still indiscriminately marketed as Irish. If the part of that produce exported from the Free State were alone to receive marketing assistance the Northern farmer would have a legitimate cause for complaint. But the recommendation of the Imperial Economic Committee, made in their first report, was that precedence should be given in the British market for foodstuffs in the following order:—First, home produce; second, Dominion and Colonial produce; and, third, foreign produce. The Ulster farmer may thus claim that, along with his fellow-agriculturists in Great Britain, he has a first call upon the Empire Marketing Board. The importance of this fact is apparent when it is remembered that in the years ended May 31, 1924 and 1925, the net exports of cattle to Great Britain amounted respectively to 108,000 and 162,000. During 1924 1,355,000 great hundreds of surplus eggs were sent to Great Britain, and poultry, dead and alive, to the value of nearly £500,000, while the average quantity of potatoes shipped across the Irish Channel from Ulster amounts to approximately 150,000 tons annually. There is also a smaller but not insignificant trade in other classes of agricultural produce—bacon and hams, oatmeal, butter, and grass seeds.

American Cotton Crop.—Official and private reports relating to the American cotton crop for this season continue very favourable, and there is no doubt whatever but that the yield will be the largest ever known. At the beginning of this week the Department of Agriculture of the United States Government published its eighth report on the growth, which indicated a production, exclusive of lint, of 17,454,000 bales. The forecast was rather

better than expected, the general idea in trade circles being 17,200,000 bales. Owing to the crop this season being late, considerable interest was taken in the ginning return, which showed 8,722,000 bales up to October 17, as compared with 9,519,000 bales at the same time last year. This report was scarcely equal to expectations. On the whole the statistics were interpreted as being bearish, but on the reopening of the New York and Liverpool markets after the figures became known there was practically no change in prices. The markets were undoubtedly supported by extensive buying orders. Traders throughout the world are still confused by the situation, and many people believe that lower values will be experienced. It is recognised, however, that cotton at 13 cents in New York is much below the cost of production. The American Government has appointed a special committee to deal with the position, and an attempt is being made to finance stocks to the extent of 4,000,000 bales. Farmers are also being urged by the Government officials and bankers to cut the acreage for next season by 25 per cent. In Lancashire trade circles there is a confident feeling that a larger business is about to be done in manufactured goods, and certainly the low prices ruling will enable dealers and merchants to replenish stocks on a favourable basis. Spinners and manufacturers, however, are seriously hampered by the coal situation, and this week there have been increasing complaints of the scarcity of fuel.

The Chemical Combine.—The terms of amalgamation of the new chemical combine have not yet been published, and in the meantime the market hardly knows what to do with the shares. The fluctuations of the last few days have reflected this state of uncertainty, as the following table shows:—

	End August	Oct. 15.	Oct. 22.	Oct. 25.	Oct. 27.	Oct. 29.
Brunner Mond Ord.	38/9	36/-	40/1½	40/9	41/-	40/8
Do 7½ % Cum. Prf.	27/6	28/-	28/-	28/3	28/-	27/9
Nobels Ord.	30/-	29/9	34/-	35/3	35/3	36/-
Do 6 % Cum. Prf.	21/3	21/-	21/-	21/6	22/-	23/-
Do Def.	13/9	13/6	17/-	18/-	19/3	19/6
Alkali Ord.	33/9	30/-	36/3	36/10½	36/3	36/-
Do 7 % Cum. Prf.	20/7½	21/-	22/-	22/6	22/3	22/3
Dyestuffs Ord.	12/-	14/6	17/-	17/6	17/-	17/-

The announcement that negotiations were in progress was made on October 22nd, and any rise prior to that date must be attributed to "intelligent anticipation." The market evidently expects the amalgamation to affect prospects favourably, but it is evident that it considers British dyestuffs will get the greatest assistance in coming under a big umbrella. The market valuation of the whole combine is shown in the following table:—

	Issued Capital.	Price Oct. 25, 1926.	Present Market Value.
Brunner Mond—	£		£
Ordinary	9,787,000	40/9	19,942,844
7½ % cum. pref.	4,000,000	28/3	5,650,000
	13,787,000	..	25,592,844
Nobels—			
Ordinary	8,039,129	35/3	14,168,964
6 % cum. pref.	6,480,407	21/6	6,968,587
Deferred ord.	1,455,642	18/-	1,310,062
5 % 1st debenture stock	1,750,000	103½	1,811,250
	17,727,160	..	24,258,363
United Alkali—			
Ordinary	900,000	36/10½	1,743,750
7 % cum. pref.	2,825,240	22/6	3,178,395
5 % debenture	2,723,810	92½	2,519,515
	6,449,050	..	7,441,660
British Dyestuffs	4,775,580	17/6	4,178,629
Grand total	42,739,690	..	61,471,496

The capitalisation of the new company may, of course, be on quite a different nominal basis, but on the above figures the issued capital is still below the total of the largest British industrial concern—viz., Lever Bros., whose issued capital is £64 millions.

The Artificial Silk Industry.—A correspondent writes:—On October 22nd there was opened at Aintree, near to Liverpool, the important artificial silk factory erected by the British Enka Artificial Silk Co., a subsidiary of the Dutch Enka Co. This event marks an important step in the history of the industry in this country. In the first place this is the first, and for some time at least will be the only, foreign firm to build here, despite the forecasts made after the imposition of the Customs Duties. In Holland it is understood that production costs are about the same as in England, and it is therefore worth while manufacturing here. In the case of other countries, however, notably Italy, costs of production are less than in this country, and as all production in England is subject to the excise duty, the establishment of an English factory is not an economic proposition at present. The British Enka Co. have been largely financed by the Union Corporation, and as a result British investors are very closely interested in the venture at Liverpool. The company enjoy the advantages of the experience of the parent company, who have been producing artificial silk since before the war, and who have an enviable reputation both for quality of product and for financial success. The Dutch company have a fully equipped sales organisation in this country, which has been handed over to the new concern, and have further advantage in the fact that their yarns are already known and appreciated by a wide circle of buyers. The factory at Aintree will eventually be capable of producing some 20,000 lbs of silk per day, and will thus produce very nearly as much in one day as the majority of the newer companies hope to do in a week. For these reasons they will prove formidable competitors to our English producers, though the additional employment provided for English workers is very welcome.

Rubber Restriction.—At the beginning of this week the Colonial Office issued the expected statement as to the regulations affecting the export of rubber from Malaya and Ceylon, to come into force as from November 1st. According to this statement it is not contemplated that any change shall be made in the new regulations for at least twelve months, but if it is decided at the end of that time to continue the temporary policy of restriction for a further period, any changes then considered desirable may be made. The new regulations are as follows:—

(1) If the average price of rubber in London is less than 1s 9d a pound, but not less than 1s 3d a pound, during any quarter, the percentage of standard production which may be exported at the minimum rate of duty for the ensuing quarter will be reduced by 10.

If, however, the reduction to be effected under this regulation is a reduction from a figure of 100 per cent., the reduced percentage for the ensuing quarter will be 80.

(2) If such average price for any quarter is not less than 1s 9d a pound, but less than 2s a pound, there will be no change in the percentage for the ensuing quarter.

If, however, in each of three consecutive quarters such average price is not less than 1s 9d a pound, the percentage for the ensuing quarter will be increased by 10.

(3) If such average price for any quarter is 2s a pound or over, the percentage will be increased by 10 for the ensuing quarter.

If, however, the increase to be effected under this regulation is an increase from a figure of 80 per cent., the increased percentage for the ensuing quarter will be 100.

(4) If such average price is below 1s 3d a pound in any quarter, the percentage will be reduced to 60 for the ensuing quarter.

(5) If such average price is over 2s a pound in any quarter, the percentage will be increased to 100 for the ensuing quarter.

(6) In no case will the percentage be increased above a figure of 100 or decreased below a figure of 60.

We have all along condemned the restriction policy as economically unsound, and the decision to keep the maximum percentage at 100 is particularly open to criticism. The objective of the new regulation is apparently to keep the price of rubber between 1s 9d and 2s per lb, but it remains to be seen whether this will be achieved. The announcement had little effect on the share market, disappointment apparently being felt that the official statement included no provision for dealing with the surplus of export coupons. Some discussion has been aroused by messages from Singapore, which state that the new standard production has been fixed at 300 lb per acre, instead of the existing 400 lb. Such an alteration would have an important bearing on the future working of the scheme.

British Steel Trade Prospects.—In his interesting and lucid speech to the shareholders of the United Steel Company, of which a full report will be found in a later column, the chairman struck a note which, in view of the present standstill in the industry, was a comparatively optimistic one. The United Steel Company—a war creation which constitutes one of the largest combines in the trade—has had to establish its position in the worst possible conditions. But Mr Peech was able to show that there is some merit in bigness, for while the Workington end of the combine has been in the depths, the Lincolnshire end has helped the concern to tide over the depression. In both cases plant developments are in full progress, and Mr Peech was able to announce that the great steel plant at Appleby is expected to come into operation next year. The chief interest of the speech was, however, the comments made on future prospects. Mr Peech briefly referred to the great war expansion of plant, the shrinkage in demand through world impoverishment, and the dislocation of the steel market through inflation first in Germany and later in France and Belgium. But world demand is definitely reviving, Germany has had stable money since 1924, and with Belgium following the same road there is reason to believe that steel prices will soon be adjusted once more on a more normal basis than in recent years. The speaker then went on briefly to refer to the recent International Steel Pact, and observed in carefully chosen words that “the movement which has been initiated abroad is one with which we in this country must have considerable sympathy, and one which in conditions which we could regard as adequate and appropriate we should feel inclined actively to support.” Clearly there are some, at all events, of our steelmasters who are willing to consider the possibility of coming to an arrangement with Continental producers. Mr Peech added that if the world's steel consumption had increased at a normal rate there would have been not overproduction, but an insufficiency of plant capacity. The speaker made the interesting announcement that in connection with their South Yorkshire collieries his firm have entered into an arrangement with some of their neighbours to form a joint selling agency.

The Actuary in Commerce and Industry.—The Chancellor of the Exchequer was the principal guest at the annual dinner of the Institute of Actuaries held on Thursday last, October 21st, and in the course of his speech in proposing the toast of the institute he paid a well-deserved tribute to the services of distinguished members of the institute rendered to the State in connection with the social legislation of the last twenty years, and emphasised the ever-increasing importance to the Government of actuarial knowledge and research. This observation led Mr Churchill to speak of the glimpse which the actuarial science gives us into the vital statistics, and to give a picture of the British population in 1970. Another interesting feature of the evening was the suggestion made by the president, Sir Joseph Burn, that the services of actuaries can be employed with advantage by the larger commercial and industrial firms. The successful organisation of a business to-day largely depends on the knowledge derived from statistics and the suggestion that the actuary can help the industrialist in the collection of his statistics, and, even more important, the correct interpretation of them, was also urged by Mr Geoffrey Marks, a past president of the institute, in proposing the toast of “Trade and Commerce.” The work of the actuary, once largely restricted to life insurance policies, is undoubtedly widening in its scope. The friendly societies providing sickness benefits look to him for guidance, and a great many employees' superannuation funds have been established during recent years and are being successfully administered under actuarial advice. The social problems of to-day are being attacked with the aid of actuarial science, and there is a fruitful field for further work here, and there is little doubt that the solution of many of the difficult industrial and economic problems of to-day can also be aided by the actuary. The thought is, at any rate, a stimulating one, and we agree with Sir Max Muspratt, the president of the Federation of British Industries, who, replying for Trade and Commerce, spoke of the value he as an industrialist

had experienced from co-operation with the accountant and the actuary, and commended the proposal to business men.

Stock Exchange Membership.—The Stock Exchange rule which comes into force next New Year's Day, prohibiting return of commission by members of the London Stock Exchange to any agents that advertise for Stock Exchange business, may have wide-reaching effects in the future. At present, writes a Stock Exchange correspondent, these have been hardly discussed, because the matters that arouse Stock Exchange attention are usually of import more immediate than this far-sighted legislation implies. Outside agencies bring a good deal of business into the House by advertising for it. They claim, as a matter of course, half the commission charged by the broker, whose ratio of expenditure to his takings may equal, in dull times, as much as the half commission is worth. If, as a result of the rule quoted above, a larger volume of orders is diverted direct to the Stock Exchange instead of passing through agents, this should make for the popularising of a broker's business, because of its increased capacity for remuneration. The total membership of the Stock Exchange is less than 4,000 men, comparing with 5,550, the maximum membership reached some years before the war. For the financial year to March, 1927, there have been so far about 105 new candidates for membership. A good many deaths have occurred during the seven months of the Stock Exchange year that ends to-day. Two notable Stock Exchange figures, Mr Alfred J. Baker and Mr. Francis A. Govett, passed away this week—the first a greatly respected Father of the House; the second, a broker closely identified with West Australian and other company work. Probably the number of new entrants to the House is at least double that of the losses sustained by members' death or retirement. Stock Exchange shares, with £25 paid, have attained the comparatively high price of 138, ex the dividend of £3, less tax, payable next Tuesday. Membership can be obtained at half entrance fees if an apprenticeship of four years has been served as a clerk in the House. This has led in the past to some members entering their sons or relations as Stock Exchange clerks as soon as the boys left school and were ready to go on to the Universities. By the time that the 'Varsity course was completed, the prospective Stock Exchange member had already done a good part, nominally, of his four years' service in the House, although he might have scarcely set foot within the markets. A recent ruling by the Stock Exchange Committee will probably restore to the rule its original intention, which becomes the more valuable in view of the probable expansion of orders under the alteration of the rules, and the prohibition against the return of brokerage to agents who advertise for Stock Exchange business.

Our Plywood Imports.—Plywood is the youngest child of the timber trade. As our readers probably well know, it consists of thin wood veneers glued top and bottom to, and at right angles to the grain of, a centre piece or core—thus three-ply, five-ply, seven-ply, and so on, the crossing of the grains adding enormously to its strength in comparison with thicker solid wood. It is used extensively, *inter alia*, in the building of aeroplanes. The plywood industry of the United Kingdom during its childhood, writes a correspondent, has been floundering on its way to success, but since those engaged in the trade here have formed themselves into an association, the youngest of the many sections of the Timber Trade Federation of the United Kingdom, the trade has developed greatly, and is progressing on safer lines. One of the many problems that has confronted the plywood trade from its inception has been that of keeping supplies from abroad and demand in close connection, and hitherto it has been no easy one to solve, owing to the lack of statistical information available between manufacturers, distributors, and consumers. As an example, the Board of Trade returns include plywood under the vague heading of “wood manufactures,” which naturally contains many articles made of wood that have no relation to plywood, the strong qualities of which are supplemented by the additional advantage that it can be supplied in long lengths

BANCO ALEMAN-ANTIOQUENO

Head Office:
Medellin, Republic of Columbia, South America.
Established 1912.

On June 30th, 1926:

Capital Paid up \$2,000,000
Reserves and Undivided Profits \$1,015,700

Branches: Armenia C., Barranquilla, Bogota, Bucaramanga, Cali, Honda.

European Office: Bremen (Germany), Domshof 17/18.
GENERAL BANKING BUSINESS.

and widths that are unobtainable with the solid wood. Lack of statistics in the plywood industry is now being overcome to a large extent, for we understand that the Plywood Section of the Timber Trade Federation has arranged with H.M. Customs and Excise Statistical Office to receive monthly returns of the registered imports of plywood into Great Britain and Ireland from the several wood countries of consignment. Quantities and values to the end of August this year were as follows:—

	Quantity. Sq. Ft.	Value. £
January	21,502,025	143,165
February	13,811,871	101,589
March	16,479,024	110,142
April	29,104,751	221,355
May	17,146,189	110,715
June	21,325,738	137,066
July	20,462,356	144,709
August	15,955,624	106,660
	155,787,578	1,075,401

The movement to throw more light on the plywood trade is also finding active supporters amongst manufacturers abroad, who have hitherto produced large quantities with little regard to whether the material was in large stock in the distributors' and/or consumers' hands. The manufacturers of plywood in Finland are acting in concert, as, we believe, are also those of Sweden, so that very shortly our Custom House statistics of imports will be supplemented by official returns of quantities of plywood exports by at least two of the principal plywood manufacturing countries, to be followed, it is hoped, by others in Europe and the American Continent. In this way the state of the plywood trade in the United Kingdom (the largest consumer of plywood on this side of the world) and Europe will be gauged much more easily, as is the case with the trade in ordinary imported timber, although here, again, there is room for great improvement.

Oilseed-Crushing Industry.—The oilseed-crushing and vegetable-oil industry has been enabled to continue operations with imported coal and oil fuel, but trade is far from satisfactory and a period of depression is being experienced. This has become more marked in recent weeks, during which there has been a steady falling off in demand for the industry's products, both at home and abroad. Imports of oilseeds, &c., in the past two months were only 228,000 tons, as against 286,500 tons in August and September last year, and while imports of oils have shown a tendency to increase, exports in September exhibited a substantial decrease. Prices also have continued in a downward direction through lack of demand. Taking the nine months January-September, however, the position on the whole is less unsatisfactory than it might have been, though it seems out of the question that imports of oilseeds, &c., this year can now reach the level of 1925. To date the gross imports of oilseeds, nuts and kernels into the United Kingdom are 1,148,283 tons, as against 1,346,281 tons in the corresponding period of last year, the decline of 197,998 tons being equal to 14.7 per cent. Arrivals of linseed at 290,000 tons are nearly 34,000 tons better than a year ago, but against this there are decreases under every head, some comparatively small, others very large, notably soya beans and nuts and kernels. Prices of Plate linseed have dropped to the region of £15 per ton c.i.f., notwithstanding an advance in freight rates equal to about 20s, as compared with what might reasonably have been expected had outward

coal cargoes been obtainable; but, even so, demand is very poor. The Argentine surplus available for export on October 1st is officially returned at 378,000 tons, which is larger than anticipated, and this and 60,000 tons to come from India before the end of the year suggests that supplies will be ample to meet world requirements. Another important factor influencing the market is the encouraging prospects for the new Argentine crop to commence shipment in January. The area is even larger than last season, and should the harvest justify the recent reports of "excellent," it appears quite possible that we shall see another yield of around two million tons—a second "record." The new Egyptian cottonseed is now moving off and a lower level of prices is causing it to be taken up fairly well. The new American crop is estimated to produce over five and a-half million tons of seed, or about 200,000 more than last season, whereas a few weeks ago it would be at least that amount less. This, of course, has not been without influence on values in America and elsewhere. Exports of vegetable oils from the United Kingdom in the nine months consisted of 18,851 tons refined and 82,991 tons unrefined, as against 17,198 tons and 74,710 tons respectively. A feature has been the large shipments of refined cotton oil and of palm kernel oil, the latter especially, America being a large buyer. There have also been larger exports of soya oil, but linseed oil is about 1,100 tons down, and at 18,200 tons is only 6,200 tons in excess of the imports of this commodity from abroad. Generally, imports of vegetable oils have been larger, consisting of 16,330 tons refined and 153,327 tons unrefined, as against 12,923 tons and 131,780 tons. As usual, fully 50 per cent. of the aggregate is coconut and palm oils and the rest mainly seed oils, which can be produced in the mills in this country. Soya oil at 39,200 tons shows to what extent shipments of oil in bulk from the Far East are taking the place of shipments of beans—to this country at any rate. Our exports of oilcake in the nine months at 809,300 tons show a substantial advance, but imports of foreign-made oilcake are very heavy, and at 366,260 tons are 21,500 tons higher than a year ago.

Anglo-Persian Oil Report.—At £438,232 the net profits of the Anglo-Persian Oil Company for the year ended March 31, 1926, exceeded those of 1924-25 by £811,265. This is an increase of 22 per cent. following upon an increase of 42 per cent. in the previous year, and is equivalent to 39 per cent. on the then ordinary capital of £8,950,000. The ordinary share dividend for the year is increased from 12½ per cent. to 17½ per cent. The sum of £1,500,000 is applied to general reserve, £100,000 to amortisation reserve, £228,100 to extra depreciation, and £200,000 to debenture stock redemption reserve. The sum of £3,663,128 previously standing in the balance-sheet under the heading of share premium account has been placed to general reserve, which, together with the appropriation of £1,500,000, now stands at £5,163,128. Of this total general reserve, £4,475,000 is to be capitalised in the form of bonus ordinary shares, and distributed fully paid among ordinary shareholders in the proportion of one in two. The trading results and distributions over the last seven years are shown in the following table:—

periods of the company's history. In respect of 1923-24 the rate relapsed to 5 per cent., but rallied the succeeding year to 7½ per cent. To what the increase in last year's profits is due cannot be stated; they figure at £142,300, as against £115,500. After payment of the final dividend for 1925-26, the increased balance of £17,900 will remain to go forward. The company's more important holdings are in the Loangwa Concessions, Rhodesian and General Asbestos, Shamva Mines and South American Gold and Platinum. In the former speculative interest has just revived. The Asbestos Company goes from strength to strength. The output of the S.A. Gold and Platinum Company continues to expand, but the Shamva has fallen upon less prosperous times. Smaller interests are in the Bwana M'Kubwa and the Falcon. The outstanding feature of last year's operations was the acquisition of an eighteen months' option on the Wanderer mine in Selukwe district. After having produced gold to the value of about £1,500,000, this property was abandoned. In 1922 the claims were taken up again, and the Gold Fields' consulting engineer describes as "promising" their prospects of turning into a large mine of medium grade. On last year's dividends the shares yield nearly 10 per cent., and they appear a very reasonable speculative holding.

A PAPER ON "The Report of the Indian Currency and Finance Commission, 1926," will be read by Sir James Brunyate, K.C.S.I., C.I.E., before the Royal Society of Arts on Friday, November 12th. Sir James Brunyate was Secretary to the Government of India Finance Department from 1913-17, and a Member of the Council of India from 1917-24. Mr F. C. Goodenough, Member of the Council of India and chairman of Barclay's Bank, Limited, will preside at the meeting, which will begin at 4.30 p.m. Applications for tickets to attend the meeting may be made to the Secretary, Indian Section, Royal Society of Arts, John street, Adelphi, W.C. 2.

UNITED STATES.—SHARE MARKET BREAK CONTINUES—THE OUTLOOK—AMERICA'S DEBTS TO EUROPE—BANKERS' TESTIMONY—BANKERS AND EUROPE'S TRADE BARRIERS.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 19.

THE past week has seen a further development of the break in the share market. The volume has remained moderate rather than of the first magnitude, but the leading shares have been depressed five or ten points more and the rallies have been insubstantial. United States Steel common, for example, which sold at a high of 159 this summer, and which, when I last wrote, had gone slightly below 142, sold below 135 to-day. General Motors common, whose top this year was 173½, to-day sold off to 142½, which is about 6 points below the low level of a week ago. Railroad shares have been showing better resistance during the past week, but industrials generally have shown a tendency to slip off gradually in response to the weakness among the market leaders. In short, the reaction has developed in a typical manner, and the question that now interests traders is its probable depth and duration. So far the bears have made fairly easy progress, and the movement doubtless has gathered a certain momentum that suggests further weakness. On the other hand, business news is not at all bad, while the money situation does not seem to be disturbing.

The latest report on brokers' loans in this district, for one thing, shows that in the week ended October 13th this form of accommodation dropped \$82,000,000. This brought the total down to \$2,727,000,000, which is some \$400,000,000 below the January high, and \$319,000,000 above the lowest recorded in May. Meanwhile the report on the condition of member banks throughout the country showed that total loans on stocks and bonds were \$34,000,000 lower on the week. Accordingly it would appear that the liquidation in the share market is having

its logical effect on the banking and money positions. At the same time it seems perfectly clear that speculative initiative, except on the short side, has been pretty well killed. Under these circumstances there seems no reason whatever for assuming that the speculative situation is such as to suggest further restrictive measures by the Federal Reserve authorities. Meanwhile the weakness in cotton and silver, two commodities on which important districts of this country are more or less dependent, has continued. For that matter a softening tendency is observable among commodity prices generally. Oil and gasoline prices have been weakish, and it is understood that a cut of 25 cents a barrel in mid-continent crude is on the way. Here again the picture does not suggest the need of restrictive measures with respect to credit. If precedent were to be followed, in fact, the Federal Reserve authorities might be relied on to give prices the support of liberal supplies of credit. These observations should not be interpreted as suggesting that a lower discount rate is on the way; there is nothing to suggest that that is on the cards now. They do suggest, however, that the Reserve banks are likely to take a liberal attitude with regard to the use of their discounting facilities, and that any further hardening in the money market is likely to be moderate.

With further progress in European stabilisation apparently near at hand, our bankers have been interested in the remarks of Mr R. C. Leffingwell, formerly Assistant Secretary of the Treasury in charge of fiscal affairs, and now a partner in J. P. Morgan and Co., that were contained in an address delivered to the Investment Bankers' Association at Quebec on October 14th. Discussing the "flight of capital" from Europe, Mr Leffingwell, said:—"While, then, there has been a steady flow, during and since the war, of capital from America to Europe, there has been an important return flow of capital from Europe to America. Our banks are heavily indebted to the banks and private depositors of paper money countries, for deposits are debts, a fact which some people forget. There are large European investments in American securities and purchases for European account of European securities issued here. While Americans are glad to have these deposits and transfers of capital to the United States, and we profit by them, and a good part of our prosperity has been attributed to easy money resulting from them, we must not overlook the fact that European deposits represent a debt from America to Europe, and paradoxically, as I have said, from banks and corporations of America to banks and individuals of the most poverty-stricken countries of Europe, those who have not yet, or only recently, been able to put their currencies on a gold basis." After pointing out the difficulty of estimating the value of these debts, Mr. Leffingwell observed that "Neither the trade balance nor the direct paper money inflation to meet deficits and debts measurably account for the foreign exchange depreciation that has taken place." Therefore, he concludes that there exists a very important factor of safety for the future in the foreign balances created in favour of the nationals of paper money countries during the period of inflation. "Though I cannot hazard an estimate of the amount of these balances," he added, "I suppose that they greatly exceed in the more important instances the amount of the loans floated in our markets since the war."

Plainly this experienced observer believes that the large balances now here will be important reserves to support the restoration of the gold standard in such countries as Belgium, Italy, and France.

Support for this point of view also was furnished by the testimony of Mr Dwight W. Morrow, also of J. P. Morgan and Co., before the Senate Committee on Finance last June. Asked whether France did not owe a great deal here on open account, and asked if he would try to guess at the total, Mr Morrow replied: "No, and it is very hard to do, but if I were guessing I would guess that just the reverse is true to-day. I would guess that the current-credit balance was very heavily in their favour." Asked whether this was due to the attempt to transfer capital in this direction, Mr. Morrow replied: "Because of the depreciating franc strong pressure is exerted upon them to keep their bank balances out of the country. That is what happened in Germany when the Dawes plan was put

into operation, the thing that gave it its best chance of success in the first year was that in addition to the public foreign loans there was a rush of German capital back into Germany, because for the first time in several years it was safe to take it there. If a German sold anything here he kept his balance here until he absolutely had to have it, because he knew its value here, and he did not know its value at home. I think something of the same situation exists to-day with reference to France."

Our bankers are much interested also in the free trade manifesto just published in Europe. They point out that in this respect Europe now is worse off than before the war, and say that part of our extraordinary prosperity is due to the fact that we have here in the United States one of the largest free trade areas in the world. As to this country's modifying its tariff policy, no great expectations are entertained. The tariff has become something of an article of faith here, and further economic experience probably will have to accumulate before the country is prepared for a change.

FRANCE.—POLITICS AND DEBTS—STABILISATION—SHRINKING TRADE—EXPORT PROHIBITIONS.

(FROM OUR CORRESPONDENT.)

PARIS, October 27.

THE date of the reassembly of the Chambers is to be fixed, according to report, at Friday's meeting of the Cabinet, and it is probable that either the first or the second Tuesday in November will be decided upon, more likely the latter. There are fresh signs of a revival of party warfare by Radicals, who are discontented with the resolutions passed at the Bordeaux Congress for a truce pending the righting of the financial situation, and by the Socialists, who are this week holding a congress, at which their attitude to the Poincaré Government is being considered. The discontented Radicals, led by M. Malvy, are apparently endeavouring to force a discussion of the debt ratification question at the earliest possible date, in the hope that this will prove embarrassing to the Cabinet. M. Poincaré, on the other hand, appears to be carefully marking time, in view of the pending elections in America and of developments that are occurring here in the direction of definitely solidifying opinion on the question. So far as can be seen, opposition to ratification of the agreements in their present form is by no means diminishing in strength, and there is a possibility that the debate in the Chamber on this question may be postponed until after the New Year.

Meanwhile, both politicians and the business world are closely watching the Belgian effort to stabilise the currency, the outcome of which cannot but have a considerable influence on French plans. M. Poincaré remains enigmatic as to his exact intentions, and no hint has yet been given as to whether he will opt for stabilisation somewhat on Belgian lines, or for revalorisation of the franc on a similar basis to the plan on which Italy is working for the gradual revalorisation of the lira. It is possible that the Premier and Finance Minister is waiting to gauge the respective success of the two neighbouring Governments before committing himself. In which case the question arises: what will be his policy if both experiments should prove unsatisfactory? So far the Belgian effort has been received here with distinct sympathy, but there is a good deal of speculation as to whether the plan will survive the economic reaction which is the inevitable consequence of any kind of stabilisation. The violence of this reaction, it is held, will depend largely on currency tendencies here; for if French production costs, based on stabilisation at 150, are found to have fallen below those of Belgian industry (based on 175) the danger to the latter would be serious.

The Bank of France last week began to buy foreign currency, and thus commenced the constitution of the *masse de stabilisation* that is expected to give such solid support to the effort the country is making to emerge from financial anarchy. The purchase of gold currency is continuing satisfactorily, the total acquired having now exceeded 900,000,000f. Last week's Bank statement disclosed that the State's debt to the Bank had been further reduced to 150,000,000f, while the note circulation was returned as 443½ millions less. The figure returned as

the total of the note issue, however, does not include the 900,000,000f of paper which the Bank has paid out for its gold coin purchases, this being excluded from the conventional total on the ground that the whole of these extra notes are fully covered by bullion.

Speaking generally, the outlook continues increasingly satisfactory. Confidence is steadily growing, and proof of this is afforded by the fact that a large proportion of the capital (estimated at not less than 30,000,000,000f) which was sent or kept out of the country by investors or exporters who had been rendered nervous by the predatory policy of the Cartel, has already been repatriated and transformed into francs. This return of capital into France is given as one of the reasons for the recent substantial improvement in the franc. Against this must be placed what many people regard as the first symptoms of an economic crisis, as revealed by the shrinkage in the volume of foreign trade, as recorded in the Customs returns for last month. The total tonnage of the imports for September was 234,000 tons less than in August and 550,000 tons less than in September, 1925, while exports were 230,000 tons less than in August and 71,178 tons less than in September, 1925. The significance of these figures lies in the fact that they mainly concern raw materials, the essentials of future activity. Imports of raw materials last month were 463,147 tons less than in September, 1925. The policy of restricting credits appears to have had the direct result of forcing the country to live on its stocks, thus paving the way for future crises, which can only complicate the task of financial restoration.

In view of the paradoxical fact that although the purchasing power of the franc is steadily rising the cost of living continues to soar, drastic action has been taken by the Government with a view to bringing down the prices of common necessities. During the past few weeks the retail sale prices of potatoes, eggs, milk, butter, meat, fruits and vegetables have been constantly on the upward grade. The reason at first given by the authorities and the Press was that producers, middlemen, wholesalers and retailers were all exacting monstrous rates of profits, and a large number of prosecutions were initiated throughout the country with a view to check this form of illegality. As a result, however, of evidence put forward by traders which showed that high domestic selling prices were largely due to shortage of available domestic supplies consequent on very largely increased exports, the Government has now taken action to prevent many categories of food supplies from leaving the country. Export statistics show that enormously increased quantities of farm produce have crossed the Channel from Normandy during the past few months. At yesterday's sitting of the Cabinet it was decided to prohibit by decree the further exportation of potatoes (except seed potatoes, in regard to which the exporter must import double the quantity of ordinary potatoes in compensation for the limited quantity he is permitted to export), live cattle, fresh meat, butter, fresh milk and cream, and bread-making cereals. Live and dead poultry are excepted from prohibition.

GERMANY.—INTERNATIONAL TRADE RELATIONS—REICHSBANK POLICY—STEEL DEVELOPMENTS—INDUSTRY—SEPTEMBER FOREIGN TRADE—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, October 27.

INTEREST in the international manifesto in favour of freer trade has fallen into the background, but the foundation of the British chemicals trust and the proposed British steel fusion attract general attention. The Steel Cartel's creation has shown that international co-operation in important branches is a practicable aim, and British combinations are necessary for the extension of that. The prospect of adoption of freer trade by Germany is smaller than it was last year before the reimposition of the Food Duties. After years of struggle the public has got the notion that agriculture and industry are naturally opposing interests, and that protection of one finds a necessary corrective in protection of the other. In the discussion of last year's "Minor Tariff," by which the Food Duties

were reintroduced, this conviction played a considerable rôle; even the Socialists were weakened in their opposition to the Food Duties by their ambiguous attitude towards industrial duties. There is very little chance of the Food Duties being revoked. The official theory is that free food would depopulate the country; and the argument that this would be prevented by land reform and by a gradual change in the kinds of agriculture carried on is, though advanced by very competent authorities, usually ignored. The reimposition of the Food Duties has probably done more than anything else to rivet protection generally on Germany, whose interest in industrial duties is limited to certain articles, on most of which moderate duties suffice. This condition tends to favour international co-operation in particular branches. The International Steel Cartel presupposed protection for steel, and, in fact, could not be operated on its present basis without protection. The same seems to be true of chemicals and dyes, in which German-British agreement would, in addition to technical co-operation, presumably provide for regulation of output. The Protectionists here have nothing at all against such agreements which, they believe, would in the end operate against the principles laid down in the Free Trade manifesto.

The President of the Reichsbank has made a long statement as to the Bank's policy, and as to credit generally. He declared strongly in favour of increased acceptance credits by the commercial banks, in so far as genuine commercial transactions lie behind them. The Reichsbank discounts these without limit. The commercial banks' August balance-sheets show acceptances totalling only 314 millions marks, as against 2,000 millions in August, 1913. The Reichsbank desires the reintroduction of German acceptances into the international credit circulation. Dr. Schacht strongly defended his gold accumulation policy. The Bank, he said, must be ready to export gold for maintenance of the reichsmark exchange. "The fact that we attribute importance to gold instead of exchange is based on the conviction that gold in the Reichsbank's vaults is always somewhat better than dollar balances in American banks." The export of gold when necessary for exchange correction attracts attention internationally, which is not the case with transfers of exchange. The redistribution of America's gold is in the interest of the world generally, not merely in America's. Dr. Schacht severely criticised the independent credit-giving policy pursued with the accumulated funds of the Posts, Railways Corporation, and social insurance authorities. These authorities act as their own bank directors, and they do their own banking instead of directing their funds to the central credit institute. The chief complaint is against the Railways Corporation, and its bank, the Verkehrskreditbank. The Railways Corporation replies that the Reichsbank president in 1925 consented to the present system of handling railway funds separately; and that its suggestion that the Reichsbank should maintain a representative in the Verkehrskreditbank with a veto right where Reichsbank policy is involved was rejected. Dr. Schacht proceeded to criticise excessive borrowing from abroad. This borrowing threatens to turn the Reichsbank into a mere "conversion bureau" for handing out notes without limit against the foreign exchange, the proceeds of these foreign loans handed in. The Reichsbank has more foreign exchange than it needs. It lately answered affirmatively the question of the Reparations agent whether it could supply exchange for transfers; but this abundance is illusory, because as a result of the heavy borrowing abroad, a shortage in the exchange necessary to meet the increasing interest burden will later be felt. In this connection the Finance Ministry has issued a warning against the practice of municipalities in raising foreign short-term credits without permission and in selling abroad parts of their internal mark loans. Foreign creditors here risk loss because both long and short-term foreign loans by public authorities are invalid without State sanction.

The industrial revival develops slowly. The number of publicly supported unemployed fell in the second half of September from 1,483,018 to 1,395,333. The percentage rate of decline in unemployment has risen in all of the last half-monthly report terms. The number of bankruptcies, after rising in the second week of October,

fell again in the third. Nearly half of all bankruptcies are in the textile and leather branches. Steel output in September totalled 1,144,182 metric tons, against 875,933 tons in September, 1925. The Steel Syndicate has raised the production ration for November to 80 per cent. of capacity (70 per cent. in October). The entry of the smaller Central European countries into the International Cartel is expected. The original members of the Cartel are already negotiating for alterations of the total output ration and of the respective national quotas. The ultimate output figure of 29,278,000 tons is, it is understood, to be applied to the current quarter year instead of the original figure of 25,278,000 tons, which was based on actual production in the first quarter of the year. If this is done, Germany's share will increase automatically from the original 40.46 per cent. to 43.18 per cent. The home steel market shows little change; the export market continues to improve.

The foreign trade balance for September was passive owing to very large gold imports; omitting precious metals on both sides, there was a small export surplus, which was due to a heavy decline in foodstuffs imports, as against which total exports were practically the same as in the preceding month:—

Wheat imports declined by 54 million marks, coal exports declined by 10 million marks, but coke exports increased by seven million marks. Exports of finished textiles declined by six million marks, of iron and steel other than machinery by three million marks. Machinery exports increased by eight million marks. Exports of toys have increased in the last two months.

The Bourse continues active and, on the whole, firm, though the general quotation level rose only slightly last week. There is a continuing demand for steel, coal, shipping, and banking securities. Shipping stocks have been kept firm by the fusion of the German-Australian-Kosmos group with the Hamburg-America, for which purpose Hamburg-America will increase its capital by 55 million marks. By this fusion the Hamburg-America's tonnage will be increased to 879,000. The Deutsche Bank's index for all stocks in the different groups quoted in Berlin shows that between the beginning of the year and October 9th bank stocks rose on an average 80.8 per cent., and industrial and shipping stocks 117.78 per cent.

POLAND.—FOREIGN TRADE—PRICES—COAL EXPORTS—BUDGET ESTIMATES FOR 1927-28—CIRCULATION—THE TRADE BARRIER MANIFESTO.

(FROM OUR CORRESPONDENT.)

WARSAW, October 23.

THE trade statistics for the last two months seem to indicate that Poland's favourable trade balance has passed its peak, as may be seen from the figures below:—

	(Million Gold Zlotys).		Excess of
	Imports.	Exports.	Imports.
June.....	63.5	102.9	39.4
July.....	65.8	120.9	55.1
August.....	92.1	128.6	36.5
September.....	85.4	114.7	29.3

A further accentuation of this movement is very probable. The great excess of exports since September of last year has been mainly due to the relatively low price level which was the result of the decline of the zloty. Foreign exchanges rose more rapidly than prices, so that the export trade was stimulated by a special premium resulting from the high foreign exchanges, while the same phenomenon acted as a barrier against foreign competition on the home market. The margin from which Polish trade drew its advantages is slowly disappearing. The price level is increasing, while the dollar exchange is maintained on a relatively stable level of 9 zlotys. The following table shows recent changes in the index numbers of wholesale and retail prices:—

	Wholesale Prices.	Retail Prices.
April.....	166.6	227.6
May.....	181.2	246.6
June.....	174.6	243.7
July.....	166.6	232.8
August.....	173.2	237.4
September.....	177.2	246.4

Retail prices of articles of food have increased since September of last year by more than 30 per cent. The working population is everywhere asking for an increase of wages, and it is impossible for the employers to resist this movement.

During recent months the Polish export trade has benefited greatly by the English coal strike. The export of coal, which amounted to 734,000 tons monthly during the first half-year, increased to 1,835,000 tons in July, and to 1,925,000 tons in August. In September exports fell to 1,811,000 tons. This decline is due to transport difficulties which made it impossible to cope with the great coal freight demand. The autumn is the most difficult period for the railways, as great quantities of wagons are needed for the transport of potatoes and of cereals. This makes it impossible to put at the disposal of the mines the emergency rolling stock which they require. In consequence, though foreign orders for coal are not smaller than during the previous months, the export of coal is decreasing.

The Government has presented to the Diet the budgetary estimates for 1927-28 (from April 1st to March 31st). The expenditure is put at 1,899 million zlotys, as compared with 1,631 million zlotys actually expended in 1924 and with 1,880 millions in 1925. Taking into account the great rise in prices which has taken place during the past year, the estimated expenditure figure for 1927-28 may be regarded as 20 per cent. smaller than the amount which was at the disposal of the Government in 1925-26.

The principal revenues are distributed in the budgetary estimates as follows (million zlotys):—Administrative revenues, 1,207.6; net revenues from Government undertakings, 95.0; alcohol monopoly, 275.0; tobacco monopoly, 270.0; salt monopoly, 32.0; matches monopoly, 8.7; State lottery, 8.6. Amongst the expenditure items the Ministry of War, with 622.8 million zlotys, ranks first. The next in importance are:—Ministry of Education (292.6 millions), Ministry of the Interior (179.0), Public Debts (145.0), Ministry of Finance (100.0), War Pensions (101.4), Ministry of Justice (89.0), Ministry of Labour (56.3), &c. It may be questioned if the estimates of revenues are not too optimistic, if they take sufficiently into account the difficult economic situation of the country. The lack of any cash reserves makes the balancing of the budget especially difficult. I have several times drawn attention to the fact that the great quantity of Treasury notes and of silver and other coins which are in circulation (now 460 millions) is too great compared with the amount of notes issued by the Polish Bank (573 millions). A new law which has been promulgated is intended to mollify the abnormal situation. The maximum limit of Treasury notes has been fixed at 460 millions, so that new issues are rendered impossible. Every six months no less than 5½ million zlotys are to be withdrawn from circulation until the total amount of Treasury notes and small coins reaches the level of 12 zlotys per head of population. The old Treasury notes of 2 and 5 zlotys are to be exchanged for a new issue of 5 and 25 zloty notes, which will be called State notes, and which will be legal tender to the amount of 1,000 zlotys. Hitherto the limit has been 100 zlotys.

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up \$25,000,000
Surplus \$35,000,000
Undivided Profits \$6,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world, bringing them into contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
2 and 3, Crosby Square
Bishopsgate, E. C. 3

The Bankers' Manifesto, which was published this week, did not meet with a favourable reception in Poland. The Federation of Polish Industries, Commerce and Finance, in a proclamation, lays special emphasis on the fact that Polish industry is not a new creation which originated after the war without any local foundations. According to the opinions of the Federation, the home market of 30 millions affords a sufficient basis for the development of local industrial undertakings. The proclamation agrees with the thesis of the manifesto that freedom of exchange is the surest guarantee of a development of world trade and credit. It adds, however, that international exchange is composed of four factors: Labour, capital, raw material and manufactured goods. According to the opinion of the Federation freedom of exchange cannot be restored in one domain alone, but must be extended to other domains.

ROUMANIA.—OPENING OF PARLIAMENT—RETURN TO TWO-PARTY SYSTEM—CROP YIELDS AND GRAIN EXPORTS—EXCHANGE AND TRADE BALANCE.

(FROM OUR CORRESPONDENT.)

BUCHAREST, October 16.

THE autumn opening of the legislative houses, which had been fixed for yesterday, has been postponed until November 14th. In the absence of any official explanation regarding the reason for suspending the opening of Parliament, the Press assumes that, in the first place, General Averescu has not yet come to a decision regarding the reorganisation of his Cabinet, and, secondly, that the Premier has not yet been able to draw up a legislative programme for submission to the Chamber. No one ever imagined that the present Government was in any sense a strong one, but that it is not strong enough after being in office for more than six months even to draw up and submit to Parliament a list of measures has caused something of a shock. With the recent fusion of the Transylvania Nationalists and the Peasants (the parties

of the Left), the political situation has been greatly clarified, and it is generally expected that Roumania's return to the two-party system will be brought about upon the retirement of the present Government by the absorption of General Averescu's People's Party (the Governmental party) into the Bratianu-Liberal group. Since it is generally assumed that Premier Averescu holds his present office only by grace of the Bratianu group, and since the People's Party has never had a definite policy nor a Parliamentary programme, a fusion of the People's with the so-called Liberal Party (the party of the Right) would seem to be entirely logical. While the re-alignment of political groups will cause unsettlement, and possibly disorders, during the next few months, the political life of the new kingdom will ultimately stand to benefit greatly by the restoration of the two-party system, with two parties having positive—and widely differing—legislative programmes. The new National Peasant group is understood to be in favour of a second expropriation of the land, the post-war agrarian reform laws not yet having satisfied the appetite of the peasants.

As at October 7th, the Ministry of Agriculture estimates the present year's crop out-turn—shown here in comparison with the 1925 yields—to have been as follows:—

Grain.	Area Planted.		Yield in 1925.	Estimated Yield for 1926.
	1925.	1926.		
	Hectares.	Hectares.	Metric Quintals.	Metric Quintals.
Wheat	3,300,887	3,327,487	28,506,047	30,444,810
Rye	270,481	295,623	2,031,477	2,909,567
Barley	1,704,064	1,551,567	10,193,278	16,632,936
Oats	1,184,847	1,078,149	7,400,625	11,603,649
Maize	3,930,780	4,075,432	41,591,467	51,657,155

While the latest estimates on the yield of the principal grains for the present year show a substantial scaling down of the Ministry of Agriculture's earlier figures (5,000,000 quintals in the case of wheat, 3,000,000 of barley, and about 1,000,000 of oats), grain merchants and exporters seem to be overwhelmingly of the opinion that the October 7th estimates are still too high. One authority, in fact, states that, instead of this year's wheat crop yielding a surplus available for export of some 1,300,000 metric tons—as was at first estimated—Roumania will have little more than enough wheat for meeting domestic requirements until the 1927 harvest. Maize, however, will provide a substantial export surplus—probably not less than 2,000,000 tons—but very little of this will be moved out before the reopening of the Danube next spring. In addition to higher railway freight rates and poor transport conditions in general, the scarcity of shipping and greatly increased ocean freight rates resulting from the coal strike in Great Britain are causing serious embarrassment to Roumanian grain exporters. With steadily declining grain prices a disorganised transport service, an acute scarcity of money, and other unfavourable factors to contend with, it is not surprising that the outward movement of grain this autumn is much below what had been hoped for.

Thanks in large part to the exchange collapse earlier in the year, when the £ rose to 1,500 lei (the present quotation is around 900), exports of grain and oil during the first eight months of 1926 show a substantial increase over the corresponding period of 1925. The official figures are as follows:—

Exports of—	(Metric Tons.)	
	January 1st to August 31st.	1925. 1926.
Grain	502,221	915,026
Oil products	491,271	878,796
Timber	1,526,359	1,400,214
Cattle (head)	249,703	180,131

This increase in exports, combined with a contraction in imports resulting from tariff increases and the diminished purchasing power of the internal market, has helped to turn a foreign trade deficit of 1,867 million lei in the first eight months of 1925 into an "active" balance of 1,817 millions for the same period of 1926. This is the main reason for the rise in lei exchange during recent weeks. An "active" commercial balance of 1,817 million lei, however, is less than one-half what Roumania needs for the services of her foreign debt charges in one year, so

that, unless the outward movement of grain increases considerably before the closing of the Danube—or unless foreign loans are obtained in the near future—it is hardly to be expected that lei exchange will maintain its present high level through the winter—particularly as foreign debt payments are understood to reach their peak towards the end of the year, when, under normal conditions, autumn grain exports have built up a good reserve of foreign credits.

TURKEY.—FOREIGN EXCHANGE—FREE ZONE—SMYRNA FRUIT CROP.

(FROM OUR CORRESPONDENT.)

CONSTANTINOPLE, October 16.

NOTWITHSTANDING the threat of drastic Treasury measures lately foreshadowed by the leading Government organs, no effective remedy has yet been devised for bringing the Turkish lira back to the point around which it should normally be fluctuating by no more than a few piastres a day at this time of year. Recourse was had by the "Bourse" in the early days of September, as outlined in my last letter, to the official "pegging" of the pound sterling at 910, but after a week's trial it was manifest that this measure was merely making matters worse by keeping sellers off an uncovered market. The embargo was, therefore, removed and sterling at once started rising, reaching 970 in two days. The four-figure limit would undoubtedly have been attained and probably passed had not the Government at last decided to take the only practical step which could retrieve a situation which was rapidly becoming critical—and that was considerably to curtail the Treasury's demand for sound exchange, which the market was not in a position to supply without seriously affecting the rates to the detriment of the national currency. At the time of writing, sterling is back to about 945 and the market is calm. All hope would, however, appear to have vanished, for the time being, of seeing it down to approximately 850, round about which figure the pound should normally be ruling at this season of the year.

A special Commission has been sitting in Constantinople for some weeks past for the purpose of inquiring into and reporting to the Government on the feasibility of creating a "Free Zone" in the Port of Constantinople. But few years have elapsed since the old Turkish capital was an important transit-repository for sea-borne trade converging on it from several quarters of the globe for eventual distribution to adjacent land-locked countries and also to Roumania and Southern Russia. How this pre-eminent position came to be lost—how every effort is now apparently to be made to regain it—affords an apt illustration of the good man who carefully barred his stable gate after his horse had taken to the fields. Among the numerous motives which have impelled the Government to appoint this Commission, the principal one must unquestionably be sought in the manner in which Turkey herself has handled and has tried to grapple with economic and maritime problems which have apparently been beyond her. The law respecting coast-wise trade, for instance, although the outcome of a very natural desire to see the national flag predominant in territorial waters, had the unfortunate effect of almost driving the foreign flag off the local seas before the Turkish mercantile marine was in a position to fill the gap and cope with domestic traffic. Level-headed, moderate Turks themselves now recognise that the step taken by the Government in this matter was premature and ill-timed—but the damage has now been done, and this year, at all events, Turkish shippers of Turkish produce in Turkish ports have been appealing for Turkish shipping facilities in vain. Time will no doubt bring its own remedy in the shape of increased Turkish tonnage, but Constantinople, in the meanwhile, has suffered as much by the change as Trebizonde, Samsoun, Mersina, Adalia, and Smyrna.

The exclusive centralisation in the hands of the "Port of Constantinople Monopoly" of all shipping operations involving towage, watering, bunkering, pilotage, lighterage, stevedoring, labour, and the whole host of attendant formalities which must be carried out before a ship can finally be turned round, has had the undesirable

effect—an inevitable one whenever competition is suddenly eliminated—of sending up charges to such a degree that Constantinople is now one of the most expensive harbours in the world in which freighters can operate. Neighbouring ports within a practicable radius have not been slow to take advantage of the golden opportunity thus afforded to them, and the loss in foreign tonnage incurred by Constantinople has been turned into gain by the Piræus, Salonica, even Port Said, Genoa, and Trieste. This is the situation which it is now hoped to remedy by the creation of a "free zone" with all that this term implies, the building of quays, docks, warehouses, decauvilles, &c. The scheme would necessarily involve considerable capital outlay, and, in default of Turkish capital, the money must obviously come from abroad. Here, therefore—apart from all other considerations, of which there are many—lies the crux of the whole problem. Will foreign markets or capitalists feel sufficiently attracted to Turkey as a possible field for sound investment, until she herself has proved her soundness, her good faith, and her will to respect her moral obligations by coming to some reasonable arrangement with her old, pre-war foreign creditors? Time alone will show.

Those interesting articles of food so freely drawn upon by the British housewife round about Christmastide—the raisin, the sultana, and the fig—have for many decades formed one of the staple products of the Western Anatolian soil. Shipments of sun-dried fruit from Smyrna to the Continent of Europe, the United Kingdom, and the States, have at times exceeded an annual value of as much as 8 million pounds sterling. Although the abundance of the raw fruit is attributable in the main to the bounty of nature, the curing, manipulating, and packing of the finished article call for a display of some skill and technical knowledge on the part of man.

The sale of this year's crop is reported to be encountering serious difficulties. So far as the raw fruit is concerned, the harvest has been abundant, but the quality only middling to fair. Foreign importers are holding back, and the Turkish producer is left wondering why the world markets will not come up to the price-level at which he means to sell. So far as the U.K. is concerned, the Turk has not yet had it sufficiently brought home to him that British-grown dried fruit—the produce of the Dominions and Colonies—has, with the possible exception of the fig, seriously displaced the Turkish article on the home market, and that Empire fruit enjoys certain tariff advantages which the Turkish raisin and the sultana do not. So far as America is concerned, the Turkish trade has received a severe blow by a Federal bye-law subjecting Turkish fruit to inspection by the Agricultural Department before it can be passed as fit for human consumption. American importing houses, therefore, hesitate to open, as they formerly did, irrevocable bankers' credits in favour of Smyrna shippers for produce which may be refused admittance unless it can pass a severe test.

The probable truth of the matter is that, with the exodus of practically the whole Christian element from the Smyrna region as a result of the Greco-Turkish Exchange of Populations Scheme, the best growers, the deftest manipulators, and the most experienced packers have been swept away, to be replaced by an element of the population which has still considerable ground to cover before it can attain to their standard of proficiency.

AUSTRALIA.—BANK BALANCE-SHEETS — THE INSURANCE YEAR—CROP OUTLOOK.

(FROM OUR CORRESPONDENT.)

MELBOURNE, September 23.

THE balance-sheets of the fifteen ordinary banks in Australia and New Zealand (exclusive of the Commonwealth Bank of Australia) for various dates ranging up to June 30, 1926, show a further increase since last year in the shareholders' funds, resulting partly from the usual additions to reserves out of profits and partly from fresh issues of capital. The total paid-up capital of the fifteen banks is now £41,083,732, and reserve funds and undivided profits £32,337,822, together £73,421,554, against £70,920,243 a year ago and £42,035,016 in 1919. The latest total thus shows an increase of over £31 millions as compared with

MOODY'S INVESTORS SERVICE, Ltd.,
70, Cornhill, E.C.3.

seven years ago, while during the same period the liabilities to the public have increased by about £79½ millions, namely, from £299,165,279 to £378,538,376. The ratio of liabilities to shareholders' funds has declined during the seven years from about 7 to 1 in 1919 to about 5½ to 1 in 1926. During the last year discounts, advances, &c., have increased by about £12½ millions, the latest total being £260,756,273, against £248,196,825.

A compilation of the accounts of life assurance offices with head offices in Australia and New Zealand (inclusive of business done in England and some other parts of the Empire) shows that the new business in the ordinary department for 1925 was approximately £47 millions and in the industrial department about £14½ millions, these figures comparing with approximately £45 millions ordinary and £14½ millions industrial for 1924, and about £42 millions ordinary and £14 millions industrial for 1923. These figures show considerable increase since 1919, when the new ordinary business was about £29½ millions and the new industrial business about £7½ millions. While the older offices continue to receive the greatest following of new policyholders, there has been a great increase in the number of new proprietary offices, most of which have acquired large figures by means of extravagant expenditure. The formation and proceedings of these institutions are almost unregulated, as most of them are registered in New South Wales, where there is no law dealing with life assurance companies such as was enacted in England in 1870, and where the ordinary Companies Act is little if anything in advance of the English 1862 Act. Other States have legislated on life assurance after the model of the English 1870 Act, but the want of a Commonwealth Act applicable to the whole of Australia is badly felt. The Commonwealth Government has so far done nothing in the way of legislation on this point, though the Federal Constitution over a quarter of a century ago gave it power to do so. Apprehension has been felt in life assurance circles lest the unrestricted formation and heavy expenditure of new life offices should lead to results which would be followed by extreme legislation of a merely political character that would burden and cramp the conduct of the business by the sound concerns.

The total premium income in the ordinary department or 1925 (or the nearest dates available to represent the year) was £11,869,874, against £10,939,798 for the previous year, and interest £6,119,014, against £5,734,061, the net interest yield being nearly 5½ per cent., after deducting all taxes. The gross assets in respect of ordinary and industrial and some minor departments amount to £137,526,805, against £128,978,684 for the previous year, about 58½ per cent. of the assets being invested in Government and municipal securities and about 20½ per cent. in loans on mortgage. These proportions compare with pre-war proportions of 32 1-10 per cent. of securities and 43 1-10 per cent. of mortgages for 1914. Included in the assets are establishment accounts, goodwill, premium paid on share purchases as a means of virtual amalgamation, and other intangible assets for an aggregate of about a million sterling in the case of a number of the younger offices. Notwithstanding this growth in the number of the proprietary offices, the lion's share of the business continues to be conducted by five purely mutual offices, which in 1925 received about £31½ millions of new ordinary business, or nearly two-thirds of the total, and held assets amounting to about £105½ millions, or over three-fourths of the total assets.

The weather during the last few days has taken an unfavourable turn, and the rather sudden change from cold to warm and dry weather has raised the question of the crop outlook. No immediate anxiety is felt, but a fair amount of showery weather in September and October is essential to a good result, even after allowing for the excellent progress made during autumn and winter.

Letters to the Editor.

BRITAIN'S SHARE IN WORLD TRADE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the August number of the "Monthly Review" issued by the Westminster Bank, there was an interesting article on present economic conditions, entitled "Can Britain Retain Her Trade?" The writer suggested "that certain recent utterances have been inspired by an unduly sombre view of British trade prospects. Given," he said, "the necessary spirit of goodwill and honest endeavour on the part of those concerned, we believe that Great Britain can retain her due share of the world's trade, though the rise of powerful competitors with large natural resources and an extremely efficient industrial organisation will render the task anything but easy. It will certainly call for the abandonment of such hindrances to free development as obsolete trade methods, arbitrary standards of life having no relation to economic facts, and the fatal tradition of bitterness between the several partners in production."

These conditions are, of course, essential, and without them recovery would be difficult, if not impossible. With them, as the writer of the article pointed out, the task is anything but easy. He put the United States, Germany, France and Japan, in that order, at the head of his list of our commercial rivals, and, adding figures compiled by a Dutch inquirer, Mr J. Penink van Oudeland (and already published in the *Economist*) to those issued by the League of Nations, he gave a table showing the percentage of the world's trade obtained by the countries named.

Proceeding to comment on the figures, he remarked that, while the share of this country is stationary at about 15 or 16 per cent., the United States has practically doubled her share in the last fifty years, Germany and France have lost part of theirs, and Japan has considerably increased hers. Space will not permit the reproduction of the arguments given for concluding that "America is bound to grow in economic stature for many years to come," but, with your permission, the following observations bearing on this conclusion may be made.

The interpretation of trade statistics must always be difficult, there being so many causes which influence international trade, its ultimate direction being the resultant of all these causes. Amongst them, however, war must be held to be one of the most important. The late Sir Robert Giffen laid down the sound rule that statistics must be studied historically. In the period of half-a-century covered by the table referred to above we see the importance of this rule. In 1875, for instance, the effect of the Franco-German War was still evident in the high share which England had of the world's trade, and the effect of the American Civil War in the low figure shown for the U.S.A., in which country there had been in 1873 a financial panic followed by a severe depression. The Russo-Turkish War of 1877-8 gave an impetus to American agriculture which reacted on trade and fulfilled the prediction of the *Times* correspondent at Philadelphia, writing in April, 1877, that "the whole fabric of American commercial prosperity will be given renewed vigour by the firing of a gun on the Danube and the most serious protracted and widespread depression that has yet visited the United States removed." From 1895 to 1913, while British trade slightly declined, the war in South Africa being no doubt in some degree responsible, a steady rise occurred in the share of the United States and of Germany. To a great extent the trade of each of these countries reacts on the trade of the other. Preparations for future conflict undoubtedly had an influence in increasing German trade in the years prior to 1913, and this is shown, too, in the American figures. As the writer of the article remarks, "to regard 1913 as a typical pre-war year would be misleading." The 1924 figures show America to have gained almost the first place, and Germany to have dropped back from the second to the fourth.

During the Great War production, principally in America, was stimulated to an absolutely unprecedented extent. The "shift of economic preponderance," by which "one became the new rich and the other the new poor," is a permanent shift if Europe only remains at the level of 1913. Lord Liverpool, in a debate on the means of extending the foreign trade of the country, said: "During the war, as the principal neutral State and during part of

it the only neutral State, had increased in wealth, in commerce, in arts, in population, in strength, more rapidly than any other nation ever before increased. But now the world was at peace, and America must retrograde to a certain extent. He stated those facts to show that the distress which had fallen not upon one or two countries, but upon the whole world, was the result of political convulsions, and to show the nature of the distress existing. It could be removed by time alone, and any rash measures adopted to satisfy a popular clamour would only continue, if not perpetuate, this evil." That passage is just as applicable to-day as it was a century ago. There is only one way in which the ravages of war can possibly be made good and the economic balance readjusted, and that is by increased industry and economy on the part of individuals in the countries which the war has impoverished. Those which it has enriched have also their part to play, but it is scarcely adequate to suggest, as according to one of your contemporaries it is suggested, that "the only thing they can offer as a cure for the economic subordination of Europe and the unhappy psychology that accompanies it," is "a lofty and urbane statesmanship which in deed as well as words shall constantly give evidence of kindness and tolerance towards us."—I am, Sir, yours faithfully, S. A. PLAYNE.

MORE ECONOMIC CONSEQUENCES OF THE CAR.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Possibly a more serious consequence of the car than those of a purely economic nature, as pointed out by a correspondent in your columns, lies in the restriction of the marriage and birth rates that so often is adopted to finance it. The number of cars in the United Kingdom is in the neighbourhood of a million, and that is about the number of income-tax payers of £400-£500 a year and over.

As the use of even a cheap car, including depreciation, must be about £50 a year, but is generally about £100, it is clear that to the owner of £500 to £1,000 a year the easiest methods of "economising" are the reduction in savings to the unmarried (or avoidance of marriage), and in additions to the family of the married.

As this reduction will be effected so largely in the ranks of the professional classes, a further decrease must occur in that and similar stocks, in addition to the fall already produced by taxation on behalf of the working (and striking) classes. That these stocks are of great value to the race and State seems unquestionable.—Yours, &c., G. S. P.

Books and Publications.

AMERICA AND THE WAR.

MR ALEXANDER NOYES, well known on both sides of the Atlantic as one of America's most sane and clear-sighted financial writers, has been induced, by many urgent requests from those to whom his "Forty Years of American Finance" is familiar, to continue it in a book covering the war period. The result is a narrative describing, with all Mr Noyes's calm detachment and penetrating observation, the series of events which culminated in the extraordinary change in the relations of the United States to the rest of the world. As everyone knows, this change was the emergence of America from the condition of a borrowing country, largely dependent on Europe for capital for the development of its industry, into the position of world creditor, with enormous debts owing to it from the chief Governments of Europe, and with a holding of gold "which," as Mr Noyes says, "notwithstanding repurchase of Europe's holding of our own securities, had brought into our bank vaults before the end of 1924 half of the world's available stock of gold." This "reversal of the old economic order" is common knowledge, but the steps by which it happened, and the devices by which American production and finance adapted itself to this revolution as it happened, make a story that is highly important to America's debtors, and is extremely interesting as handled by Mr Noyes. He writes clearly and quietly, without a trace of the flamboyant exultation which would have been only natural, of the insatiable demand from the belligerents, and from other countries which the belligerents had formerly supplied, for goods from America at any price, and for money from American investors to pay for them with; and of the eager activity with which American industry faced the task of supplying the goods

"The War Period of American Finance, 1908-1925." By Alexander D. Noyes. Putnam.

and America's newly devised monetary system—constructed by a happy accident just in time to do the work—arranged the financing first of the gigantic export trade to all parts of the world, and then of America's own participation in the war. It was, from every point of view, a wonderful performance, which loses nothing by being described in unsensational terms, and with due attention to such mishaps as inevitably accompanied it—such as chaos of conflicting government "priority orders," which reduced railroad deliveries to such confusion that hopelessly side-tracked cars had to be lifted out of the blockaded inland yards by cranes, while "the congestion of ocean terminals compelled the unloading of freight in open fields 20 or 30 miles back."

Most interesting of all, however, we find Mr Noyes's account of American after-war conditions, and of the amazing miscalculations that led to the boom of 1919-20, and its consequent collapse and cancellation of contracts. The same things, of course, on a smaller scale, were happening all over the world, but the gigantic stage on which the farcical tragedy was played in America makes its story there particularly thrilling. How the banking system there or anywhere else stood up against the enormous losses through which it had to nurse its customers during the reaction is one of the marvels of financial history, and Mr Noyes lays due stress on America's good fortune in having provided herself, just in time, with an elastic banking machinery. With their keen advertising instinct, the Americans organised their "consumers' strike" with spectacular effect. There were "country-wide organisations known as overall clubs and old clothes clubs, whose membership was pledged to buy no more new wearing apparel until prices should come down." In April New Yorkers watched an economy parade up Broadway, in May the city government of New Orleans undertook to proclaim a special holiday which it called Old Clothes Day, on which speeches should be delivered to urge suspension of buying." It is a thrilling story of the behaviour of a great people taking the greatest economic opportunity that fortune ever granted to any nation. Let us hope that Mr Noyes's next instalment will describe an equally interesting use of the gigantic power that the United States have now secured.

SOME LEAGUE PROBLEMS.

PUBLISHED annually since the conclusion of the war—this is the seventh issue—the British Year Book of International Law* provides summaries of the decisions of tribunals and of events of international significance; it also contains reviews of books and a bibliography, but, preceding the pages devoted to these matters, and occupying two-thirds of the volume, is a series of essays dealing with questions mostly of current interest. Written by publicists of established reputation, these comments on some of the international problems now engaging attention are a valuable feature. For the full understanding of questions of everyday practical and business importance inquiry in the region of international affairs is now not infrequently necessary, and publications of this kind should appeal to an increasingly large circle of readers.

Varied in subject as are the essays, many of them naturally resemble each other in that they discuss developments connected with the League of Nations. Thus Dr Arnold McNair examines the question whether the Council of the League can, by a majority, request the Permanent Court to give an advisory opinion, pointing out that, if unanimity is not needed, there is already in existence a degree of obligatory jurisdiction which will be effective in the majority of cases. Upon this point divergent views have been expressed. Sir John Fischer Williams' subject (arising out of the question of Mosul) is "Sovereignty, Seisin, and the League," while Mr Norman Bentwich comments on the new nationality systems which have been created in relation to mandated territories detached from Turkey. Sir Frederick Pollock, writing on the Permanent Court of International Justice, records the impression that its method and temper have been judicial and impartial, and it has firmly resisted attempts to tie its hands by captious exceptions or pettifogging arguments on minor points. A number of other contributions, including Pro-

fessor Pearce Higgins' paper on visit, search, and detention of merchant ships during war, do not refer to the League. Professor J. L. Brierly, in his article on the draft code of American international law, appears to be unsympathetic to American activities, and strangely so also to the codification movement in general. The importance of further steps being taken by the League towards the codification of international law was, it will be recalled, much emphasised at the recent meeting of the Assembly of the League.

One article which discusses in a striking manner a number of questions arising in connection with the League system has not yet been mentioned. This is "International Administration," by Mr C. Delisle Burns. "Not only," he points out, "does administration arise out of laws, but laws (rules, regulations) arise out of administration." Referring to the number of new Governmental offices or Ministries set up in recent years, the article points out that "the new administrative offices and methods are not generally an extension of State power, but of State services, and similarly, in the international sphere, the new international organisations, such as the League, are in the main extensions of State services, not of State power." The work done, it is remarked, is not, however, like that of some older bodies, defined beforehand, and administration in the League system has led to new steps in international law. Working out point after point, Mr Burns reaches his conclusions. Without attempting to summarise his article, the last sentence or two may be quoted. "The League," Mr Burns considers, "is not a super-State; it is the necessary extension of each State in the formation of a world system of government. The Secretariat is the national and inevitable outcome of the increasing extent and complexity of modern government. And as administration within the State is a source of new law and of new types of law, so international administration may affect the extent and character of international law."

BOOKS RECEIVED.

Fifty Years of Parliament. By the Earl of Oxford and Asquith, K.G. In two volumes. (London) Cassell and Co., Limited. £2 10s.

A review of half-a-century of Parliament by an ex-Prime Minister, an Elder Statesman, and the greatest Parliamentarian of our times, is more than a publishing event—it is a historical event. We hope to discuss these volumes in a future issue.

Prime Ministers of the Nineteenth Century. By F. J. C. Hearnshaw. (London) Macmillan and Co., St Martin's street, 12s 6d net.

A symposium to which studies of eight Premiers, from Canning to Salisbury, are contributed by well-known authorities, including Professor Hearnshaw (who edits the volume), Sir Charles Oman, Mr H. W. V. Temperley, and Mr Ramsay Muir. The studies in this volume were originally delivered in the spring of this year as lectures at King's College, London.

The Vanished Empire. By B. L. Putnam Weale. (London) Macmillan and Co., Limited. 15s net.

A timely and interesting book, in which the author discusses the historical reasons for the collapse of Chinese civilisation, and also gives a detailed record of very recent events.

The Meaning of Democracy. By Ivor Brown. (London) R. Cobden-Sanderson, 17 Thavies Inn, Holborn. 6s net.

A revised edition of a book which first appeared in 1920. Few words are more loosely used than "Democracy." Mr Brown's object is to clarify confused issues and analyse the real meaning of this term and of such other terms as Liberty and Equality. A thoughtful study, not the least useful part of which is the concluding paragraph insisting that the real work of democratic

government is carried out by a handful of people, and appealing for a larger number to share the burden of active participation.

The Economic Revolution in British West Africa. By Allan McPhee. (London) George Routledge and Sons, Limited, 68-74, Carter lane. 12s 6d net.

This study fills a gap in the economic literature of the Empire development, and deals with trade, transport, finance, land, currency, natives, and health, to each of which subjects a chapter is devoted. The author concludes with the verdict that "candid investigation of the history of the economic development of British West Africa in the last 30 or 40 years proves beyond doubt that England has passed through supreme trials with flying colours." Future dangers are frankly examined, and the publication of the book to coincide with the session of the Imperial Conference is timely.

A View of Sierra Leone. By F. W. H. Migeod. (London) Kegan Paul, Trench, Trubner and Co., Limited, 68-74 Carter lane. 31s 6d net.

Mr Migeod is an extensive traveller in Africa, on which he has written several books. In this volume he gives an account of the Mende people as he saw them. Appendices give specimens of the languages of the various tribes which the author met. Twenty-four illustrations and a map are included.

The Chronicles of a Contractor, being the Autobiography of the late George Pauling. Edited by David Buchan, with an Introduction by J. O. P. Bland. (London) Constable, 10-12 Orange street. 10s 6d net.

The story of a battle through life, from complete obscurity and poverty to achievement and wealth, always possesses human interest. This volume adds to this interest a wealth of anecdote and travel experience, ranging almost literally from China to Peru. A frank and very human book.

Depreciation, Reserves, and Reserve Funds. By Lawrence R. Dicksee. (London) Gee and Co., Limited, Kirby street. 6s net.

A valuable addition to "The Accountant's Library" by a recognised authority, dealing with a very important branch of company finance.

The Canada Year-Book, 1925. (London) Canada House, Trafalgar square.

The Canadian Ministry of Trade and Commerce official statistical annual of the resources, history, institutions, and social and economic conditions of the Dominion. Indispensable to the student of Canadian affairs.

Poland's Economic Development. By Prof. Francis Bujak. (London) George Allen and Unwin. 3s net.

A brochure of an historical nature tracing various aspects of Poland's development from early historical times up to the present day, with a chapter on the current situation. A map is included.

English Composition and Banking Correspondence. By L. E. W. O. Fullbrook-Leggatt. (London) Sir Isaac Pitman and Sons, Limited, Parker street, Kingsway. 5s net.

Primarily a text-book for use by candidates for the examinations of the Institute of Bankers. The latter part of the book would repay study of those more advanced in the banking world, and also of journalists whose style needs correction.

Die Regelung der Volksernährung im Kriege. Von Dr Hans Loewenfeld-Russ. (London) Oxford University Press, 11 Warwick square, E.C.4. M. 15.60.

This volume is the latest addition to the series entitled "Economic and Social History of the War," issued by the Carnegie Endowment for International Peace. It deals with the means of subsistence, e.g., grain, flour, sugar, vegetables, meat, &c., in Austria in pre-war days, how these were affected during the war period, the subsequent trend of development, and the extent to which the needs of consumption are satisfied. The arguments are, in many cases, supported by statistical tables.

Grundriss der Theoretischen Ökonomik: Teil I., Einführung in der Theoretische Ökonomik. M. 3.50. Teil II., *Grundsätze der Theoretischen Nationalökonomik.* M. 5.00. Von Franz Oppenheimer. (Jena) Gustav Fischer.

Part I. is an introduction to the theory of economics, and is chiefly concerned with the problems of production. Part II., intended for more advanced students, discusses the problems of distribution.

International Labour Review, October, 1926. (London) George Allen and Unwin, Limited, 40 Museum street. 2s 6d net.

International Crop Report and Agricultural Statistics. October, 1926. (Rome) International Institute of Agriculture.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
November 9. November 10.

THE outstanding feature of the week has been the remarkable reception accorded by the public to the Belgian 7 per cent. loan of 7½ million pounds offered at 94. There was a tremendous scramble for the bonds, and rough estimates put the over-subscription at thirty to forty times. Dealings will probably start on Tuesday, and the Stock Exchange looks for a premium of about 4 points at the outset.

Deduction of the interest from the price of the 5 per cent. War Loan brought in a little extra business, and, with the monetary outlook clearer, prices in the Consol market are inclined to be better on balance. There is still a good deal of undigested stock in the market for home Corporations, though this will no doubt disappear as investment absorbs the floating supplies, although other borrowers of similar calibre are expected to make their appearance in the near future.

French National bonds have risen considerably, owing, of course, to the improvement in the value of the franc, but various other foreign Government securities show unfavourable changes on the week. Chinese bonds have gone back, owing to the continued condition of unrest in the country. Brazilians are generally easier, and, in the Mid-European group, there was some little selling by holders said to be wanting the money in order to reinvest it in the new Belgian Sevens.

Home Railway stocks developed strength during the latter part of the week, on renewed talk of the coal dispute reaching an early termination. Argentine Railway stocks have held their levels. United of Havana remains weak by reason of the unsatisfactory conditions that obtain in the sugar trade. Paraguay Central "D" is a better market, on the assumption that the company will be shortly declaring its full £6 5s per cent. dividend on this stock. Nitrates are not expected to show any particular movement during the next few months.

In the rubber market a weakening of Rubber Trusts was associated with the interim dividend announcement of 5 per cent. The rest of the rubber share market is tepid and uninteresting. The Colonial Office statement in regard to output is considered likely to leave the price tolerably stable for some time to come. The tea market is uniformly heavy. Oil shares have been good, under the leadership of Anglo-Persian and the other giants in the group, while Phoenix, of the speculative shares, further advanced.

The shipping market shows pronounced strength. It is said that the companies are getting high freight rates for coal, &c., imported into this country. The iron and steel market is a little better, owing to the expectation of a settlement being arrived at in the coal dispute, and this latter consideration has played some part in assisting recovery in other popular industrial shares. Ever Ready enjoyed a somewhat dramatic jump, on talk of a possible bonus issue, and the hopes of a similar melon in the case of the Imperial Tobacco Company served to maintain the prices of the shares, but Godfrey Phillips weakened. Dennis Motors declined, in spite of the directors' decision to return 10s per share of the capital, in addition to paying 20 per cent. dividend, making 25 per cent. for the year.

Marconis came back after their somewhat sensational soaring, and cable stocks, which underwent a sharp decline, recovered to a slight extent. The electricity supply market is easier, in consequence of disappointment felt with the reserves distribution proposed by the Brompton and Kensington Company. Lively dealings in Employers' Liability arose around rumours of the company being coveted by one or two of its bigger brethren. The motor list has been little affected by the success of this week's show at Olympia. Brewery and kindred stocks are disposed to sag for want of support. Amongst new shares, Phillips Rubber Soles, which were marketed this week

for the first time, rose from 2s premium to about 5s 3d. There has been a good deal of activity, without much net change in prices, amongst newspaper shares. In the shares concerned with the big chemical merger Nobels showed conspicuous strength. Tate and Lyle went back on the closing of the company's refinery at Plaistow.

The South African market has been under the domination of Paris, whose offering of and bidding for De Beers provided the tune with which most of the other shares in the list kept in time. A mild slump was followed by recovery, in which some of the gold-mining shares joined, though net movements in the latter are comparatively slight. The tin share market has given way, tin itself falling to the near neighbourhood of £300 per ton, and disappointing the expectations of those who had looked for an immediate rise to £320. West Africans managed to maintain a fairly firm front, and there has been no particular development amongst the Cornish varieties. Rio Tintos followed the call of Paris. Canadian silver shares were allowed to droop, the Dominion paying no particular attention to the list, and other base-metal shares have been neglected.

The Stock Exchange will be closed next Monday, November 1st, in accordance with a usage the authentic origin of which is veiled in a century-old mist. Kindly cynics recall that the date is All Saints' Day.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

ISSUES OF THE WEEK—

Amount previously recorded 167,070,636

NATIONAL SAVINGS CERTIFICATES.

April 1, 1926, to October 23, 1926, Dr £2,050,000.
Net sales week ended October 23, 1926, Dr £50,000.

Belgium Stabilisation Loan.—This is an issue of £7,250,000 7 per cent. sterling bonds at £94 per cent., redeemable 1936-56. Principal and interest are the direct obligation of the Belgian Government, payable without deduction for Belgian taxes, present or future. The bonds are redeemable by means of an accumulative sinking fund of 1 per cent. per annum. The proceeds of the loan will be paid directly to the National Bank of Belgium, thus reducing by an equivalent amount of francs the debt of the Government to the Bank. These funds received by the Bank will be devoted by it to the immediate stabilisation of the currency. Other parts of the stabilisation loan are being issued in U.S.A., Holland, Switzerland, and Sweden, while credits have

been arranged by the central and reserve banks of a number of countries. The external debt of Belgium, inclusive of the stabilisation loan and of inter-governmental debt, is given as the equivalent of approximately \$833,872,000, and the internal debt of the Government, including all guaranteed debt, as 32,645,421,741f. On the basis of the actual receipts and expenditures of the State in the first eight months of the current year, it is stated that the Government will be able to meet 1926 current expenditure by means of current income, and the Government undertake to present to the House of Representatives Budgets for the year 1927, the aggregate expenditures and receipts of which are in balance. The issue, which was subscribed many times over, is discussed in a leading article in this issue.

Rotherham Corporation.—This is an issue of £750,000 5 per cent. stock at £99 per cent., redeemable 1948-1958. Principal and interest is secured upon all the properties, rates, and revenues of the Corporation, and there will be provision for the redemption of the issue by means of a sinking fund. The rateable value of the borough is £360,014, a penny rate producing £1,375. The outstanding debt is £2,817,984, of which £2,135,831 is in respect of reproductive undertakings; the gross (or trading) profit upon the trading undertakings for the year ended March 31, 1926, was £214,590. The population is estimated at 70,600. The proceeds of the present issue will be applied for waterworks, electricity works, street improvements, housing, sewerage, &c., and for paying off existing loans. This is a good trustee investment.

City of Auckland.—This is an issue of £500,000 5½ per cent. debentures at 99 per cent., redeemable 1959. The whole of the issue is a direct obligation of the city, and is also secured, as to £200,000, by a special rate of 7½d in the £ on the annual rateable value of all the rateable property in the city, and as to £300,000 by a similar special rate of 4½d in the £. A sinking fund of 1 per cent. per annum will be provided. The annual rateable value for 1926 was £2,130,178, and the revenues £1,415,690, while in addition there are assets valued at £7,318,644. The public debt of the city is £5,965,276, of which £3,590,470 is revenue-producing; the estimated population of the city and suburbs is 191,000. Of this issue £200,000 is a second instalment of a street improvements loan, 1924, of £710,000, and the remaining £300,000 is a first instalment of the Consolidated Loan of 1926 for £500,000, authorised for waterworks extension and tram tracks improvements. Although not without attraction, the rate offered does not err on the side of generosity.

Portsmouth Gas Company.—Particulars are advertised for general information purposes of the above company. There is an issued share capital of £651,232, together with an issued loan capital of £323,806. The latter figure includes £170,000 5 per cent. debenture stock, repayable at par in 1951, which the company has sold, it is stated, at 95 per cent., less ¼ per cent. commission, to Messrs Cohen, Laming, Hoare, Prospectusless.

Debenhams Securities, Limited.—Capital £3,500,000, divided into 1,500,000 6 per cent. cumulative participating preference shares of £1 each and 2,000,000 ordinary shares of £1 each. This is an offer for sale of all the preference shares at 22s 6d per share; 500,000 shares, however, have already been applied for by the vendors. The shares carry the right to a further dividend at the rate of 1 per cent. per annum for each 1 per cent. per annum distributed to the ordinary shareholders, with a maximum of 10 per cent. The company has been formed for the purpose of acquiring the whole of the issued ordinary shares of Debenhams, Limited, "with the object of securing continuity of management." Debenhams, Limited, was formed in 1905 to acquire the business of Debenham and Freebody, and has since acquired the businesses of Marshall and Snelgrove, Harvey, Nichols, and Co., Limited, and J. and E. Bumpus, Limited. The company's issued share capital, together with the £771,302 5½ per cent. outstanding debenture stock, amounts to £5,490,427. £500,000 being in "A" 10 per cent. ordinary shares and £500,000 in "B" ordinary shares; these are now being acquired by Debenhams, Limited. Profits, after making all necessary adjustments, are stated to have been as follows:—1923, £618,244; 1924, £624,649; 1925, £689,783; and 1926, £706,256. The articles of association at present provide for a payment of 30 per cent. of the profits, after paying the preferred ordinary dividend, to the credit of a participation fund for the benefit of those engaged in the management or conduct of the business. This percentage in future will be reduced to 15 per cent. The purchase price payable for the "A" and "B" ordinary shares is given as the whole of the preference shares and 1,999,993 of the ordinary shares, but the vendors have agreed to pay to the company £75,000 in cash to cover preliminary expenses. The offer has paid £1,637,500 for the preference shares, besides paying the expenses of the offer, including underwriting. The practice of offering preference shares to the public secured on ordinary shares in an associated undertaking is a development which should be watched closely by conservative investors.

UNITED STEEL COMPANIES, LIMITED.

RESULTS OF A DIFFICULT YEAR.

STEEL INDUSTRY—POSITION AND PROSPECTS.

The ninth ordinary general meeting of shareholders of the United Steel Companies, Limited, was held on the 25th instant, at the Royal Victoria Hotel, Sheffield, under the chairmanship of Mr A. O. Peech.

The notice convening the meeting and the auditors' report were read by Mr A. Blackmore, the routine director and secretary.

The Chairman, in moving the adoption of the report and balance-sheet, after dealing with items in the balance-sheet and profit and loss account, said: We have come through a year much worse in many ways than the previous one, and having regard to the conditions under which we had to work, in common with other undertakings engaged in the heavy steel and coal trades, we consider the result not unsatisfactory. It will, of course, be in your minds that these conditions include the cost of the general strike and the coal stoppage during May and June.

I will now comment briefly upon the operations during the year at our various works and upon their present position. It must be remembered that operations were almost completely at a standstill throughout May and June, owing to the general strike and the coal stoppage. The Coal Inquiry and the resulting negotiations during the months leading up to the present stoppage seriously handicapped the normal course of general trade and materially affected the business of all our branches. With regard to steel, our total production for the year was in the neighbourhood of only 700,000 tons, a total figure large in itself and satisfactory from the point of view of its proportion to the total output of the country, but a tonnage which is disappointing from the point of view of its relation to our total productive capacity of more than one and a-quarter million tons.

Taking first our Sheffield works of Steel Peech and Tozer, Limited, and Samuel Fox and Co., Limited, the trade in special quality steels of these two companies has been maintained throughout the year at a rather higher tonnage level than was the case in 1925, while Templeborough works were able to operate during most of the ten working months of the year on a basis of roughly 60 per cent. of full capacity. With regard to both the special quality steel and the bulk tonnage of ordinary billet steel, prices during the year were very low. It is a matter of common knowledge that the price of steel in this country is to-day only some 17 per cent. higher than the price ruling pre-war, as against a corresponding increase of at least 50 per cent. in the case of other commodities.

LINCOLNSHIRE WORKS.

With regard to our Lincolnshire works, I am glad to say that the Frodingham Company has been able to operate during the ten months to the end of April at full capacity, and, under the circumstances, with satisfactory results. In this case again, however, prices throughout the year declined steadily, and notwithstanding the most economical production profits did not nearly reach the level which should reasonably be expected in normal conditions.

The old portion of the plant of the Appleby Iron Company has again been operated on the basis of two blast-furnaces out of four, providing a sufficient supply of pig-iron to meet the requirements of our Sheffield steel works and the very restricted demand from outside customers. I mentioned to you in October of last year that the board had at that time practically completed arrangements for funds to finish the large new steel work extensions at Appleby. These arrangements were carried through on satisfactory terms shortly after that statement was made, and the work has proceeded steadily since that time, and we expect that the new plant will come into operation progressively throughout 1927. You are aware of the great natural advantages which are controlled by the Appleby Company in connection with these new steel works, and I feel sure you will appreciate the importance of our holding such a strong position in the North Lincolnshire district, which is regarded by many authorities as the district likely to take an increasingly prominent place in the iron and steel production of this country.

At the Butlin works the foundry department only has operated during the year, with results showing a small loss.

I now come to the Cumberland properties; and in regard to these the position has given the board and the local management considerable anxiety for some time. The iron and steel works, collieries, coking plants, and ore mines are interdependent. The trade on which these properties rely is chiefly export, of which up to a few years ago Workington had a considerable tonnage. It is

common knowledge that owing to the reduction in purchasing power since the war our foreign customers have been compelled greatly to reduce their railway developments. Their indents have been comparatively small, and the Continental competition for this business, owing to depreciating currencies, brought about prices which were impossible to the manufacturers in this country. The amount of export business, therefore, which it was possible for Workington to obtain has been small, and such as it was it has had to carry the disadvantage of the cost of shipment elsewhere than at Workington in consequence of insufficient shipping accommodation at Workington. Home business also for iron and steel has been on a very restricted scale.

LABOUR CONDITIONS IN WEST CUMBERLAND.

In addition to lack of trade, the labour situation at the collieries in West Cumberland had been difficult for some considerable time. These difficulties came to a head in July of last year in a strike which completely dislocated the coal, coke, and ore production of the area and lasted for six weeks. After this trouble was composed, production proceeded until May 1st this year, when work at the collieries and mines came to a complete standstill, in common with the others throughout the country. The iron and steel works ceased operations at the same time.

The future prosperity of West Cumberland depends entirely on a permanent and economic arrangement for the regulation of colliery wages in that district. Given such an arrangement, I am glad to be able to say that there is a brighter side at Workington, from which the board are expecting improvement in many ways. During the past two years considerable modifications and improvements have been made in the blast-furnace plant, and when they start up again we believe it will be on better economic conditions than have existed hitherto. The construction of the new dock, to which we are looking for considerable relief in cost upon export material, as well as upon incoming material for iron making, has advanced rapidly during the present summer, and there is every prospect of its being available for use in the early part of next year.

MORE HOPEFUL OUTLOOK.

There are signs of increase in the volume of railway development abroad, and therefore signs of more work, signs that competition is lessening, and therefore signs of better prices. These indications of more work on better terms, taken in conjunction with lower operating cost, more settled conditions in the collieries and mines, and the use of the facilities of our own dock (with which the works are directly connected over our own land) instead of conducting our export trade through other ports at considerable expense, are encouraging. We are therefore looking forward, when work is resumed, to much more satisfactory times at Workington.

In referring to our collieries and coking works at Rothervale, it is necessary to have regard to the general position in South Yorkshire. It is not fully realised that the difficulties which have existed over the year in connection with the South Yorkshire coal trade have been greater than in any other district in the country. In the export market, on which its newer collieries are largely dependent, it has had to meet the same competition as the districts which in the mind of the public are more commonly connected with the export of coal.

At the same time, the average distance which the coal has to be carried, both for export and for inland consumption, is greater than is the case in any other coalfield, and it will be readily appreciated that for this reason the increase in railway rates over those charged in 1914 constitutes a larger addition per ton of coal sold than has to be borne by its competitors. In spite of these handicaps, which have the effect of depressing the prices realised from the sale of coal at the collieries, it has had the additional handicap of paying wages and receiving a Government subsidy regulated by the prosperity of its more fortunate neighbours in what was known as the Eastern Federated Area.

It is of vital importance to the South Yorkshire coalfield that in the settlement of the present dispute the future method of regulating wages should have regard only to its own conditions. Under the circumstances which have prevailed in the district, the results from the Rothervale Collieries and Coking Works, taken as a whole, may be regarded as satisfactory. I should perhaps mention one other matter in connection with the Rothervale branch: We have decided, in conjunction with some of our neighbours, to form a joint organisation for the sale of the coal which it produces. The organisation, which will commence to operate on November 1st, will be known as the Rotherham and District Collieries Association, Limited. Our partners in this association will be John Brown and Co., Limited, and the Dalton Main Collieries, Limited, and the annual output of coal of all the parties will be rather more than 4,000,000 tons.

GENERAL TRADE POSITION.

Turning now to the position of trade generally, I should like to give you an appreciation of the situation as I see it now. Ever since the collapse of the boom period in 1920 the coal, iron, and heavy steel trades have experienced the deepest depression, relieved temporarily by the improvement which occurred after the occupation of the Ruhr by the French in 1924. It is, I think, necessary to take your minds back to the commencement of those times in order to obtain a clear view of the situation to-day, as, however important such temporary improvements or more acute depressions may be in the day-to-day business of a large concern such as ours engaged in the heavy industries, it is possible to observe the real trend of trade and of the conditions under which our trade is carried on only by reference to a fairly long period.

The governing factor in the iron and steel trades in these past five years has, I think, definitely been the large increase in manufacturing capacity which occurred during the war years, not only in this country, but throughout Europe generally, and which was occasioned by the need for rapid and intense production of steel for armament purposes. The increase in productive capacity was, I think, proportionately greatest in this country, although in Germany, France, and Belgium very considerable additions were also made to the pre-war steel-making plant. In the case of all these countries it has been necessary to turn from the manufacture of war materials to output for purely commercial purposes, and the difficulty in making this change in the direction of the output of these plants has been magnified enormously by the concurrent reduction in the purchasing power of those countries upon which we depended largely in pre-war days for the consumption of our exported output.

While at first glance it might be thought that this reduction in purchasing power must have been confined to those countries which were actively engaged in the European war, the financial structure upon which the trade of the world is maintained is so complex that the reduction in wealth of the belligerent nations has undoubtedly affected even those neutral nations from whom large quantities of supplies were purchased during the war.

SOUTH AMERICAN RAILWAYS.

We find, for instance, that the great South American Republics such as Brazil and the Argentine, who were large buyers of railway materials and of steel for general development purposes, have been unable during the past five years to maintain development on anything like the normal progressive lines which characterised their history in the ten years before 1914. As regards the Far East, which also in pre-war days used to absorb large quantities of finished steel, the reduction in demand which has been evident during the past three or four years must perhaps be assigned to other causes—mainly the disturbed political position in China. As regards our colonies and dependencies, there has been since the war a very well-marked tendency in Canada, South Africa, India, and Australia to foster the development of the steel and iron trades in their own countries, and much has been done by way of bounties and tariffs to protect these local industries and to reduce the importation of steel both from this country and from other European competitors.

While these factors have been operating against us in regard to our export trade, the home trade in this country has been literally devastated by the dumping of enormous quantities of steel from the Continent, which has been rendered easy by the increasing depreciation of European currencies in terms of sterling. Up to 1924 our steel trade suffered mainly in this respect from the depreciation of the German mark, while the competition of France and Belgium was not so acute. The stabilisation in 1924 of German currency may almost be said, however, to have synchronised with the beginning of serious depreciation in French and Belgian currencies, which has more or less continued without material interruption.

FRENCH AND BELGIAN COMPETITION.

During the past two years our main competitors in our home markets have been France and Belgium, and the conditions of trade produced by this competition have resulted in price movements in this country which have been almost fantastic. For many years prior to the war it was possible to forecast within comparatively narrow limits price movements in the iron and steel trades over a period running certainly into months, and one might almost say into years, and the changes which occurred were restricted to those which followed purely from temporary alterations in the normal course of supply and demand. So far are we removed from these conditions that the normal working of the laws of supply and demand may be said to have been almost suspended during the past five years—that is to say, the fluctuations

in prices caused by circumstances extraneous to these economic laws have completely swamped the effect of any temporary reduction in demand or increase in supply.

We have suffered enormously from the competition of these countries, the dominating factor of which has been the rate of exchange.

These remarks, I think, give you a fair *résumé* of the conditions which have governed our trade during the past five years, and I have felt impelled to place them before you to-day, particularly because the incidence of the coal stoppage is so prominent in the public mind that it is apt to obscure all other considerations. While I do not wish in any way to minimise the effect of this stoppage in regard either to our own position or to the trade of the country generally, I think that it must be brought into proper relation to the larger question of the position of world trade as it affects the production and sales of coal, pig-iron, and steel.

Viewed from this angle, while it is true that very heavy losses have resulted from the lamentably prolonged dispute in the British coal trade, there is no reason to believe that the dispute is more than a temporary setback to these great basic industries in this country, and a setback which may, in large measure, ultimately be overcome by greatly increased production, and by the cultivation of more harmonious relations between those engaged in all these industries.

SUPPLY EXCEEDS DEMAND.

The fundamental difficulty to which I have referred still, however, confronts our trade—that is to say, the problem of relating the enlarged productive capacity of this country, and of Europe generally, to the diminished effective demand which exists to-day. The recent developments on the Continent which have been given such prominence in the Press during the last few weeks, and which are aimed at the close regulation of the output of France, Luxembourg, Belgium, and Germany will certainly tend to remove from the market for steel much of the unrestricted competition which has characterised the past two or three years. How far these developments may go it is, I am afraid, quite impossible to predict to-day. Their course is being watched very carefully by ourselves and by other large producers in this country, and the possibility of the British steel trade taking an active part in them is a matter of serious concern to those of us who control the more important productive plants in this country.

For obvious reasons it is impossible for me to do more than touch upon this subject at this meeting, but I think it proper to say that the movement which has been initiated abroad is one with which we in this country must have considerable sympathy, and one which in conditions which we could regard as adequate and appropriate we should feel inclined actively to support. Had the normal rate of increase in consumption which obtained in pre-war years continued up to the present, the output capacity of all available plants would have been inadequate to meet the world's needs. It is not unjustifiable optimism to believe that the loss which makers have experienced in their output in recent years can be and will be made up before many years have passed by an increase in the rate of demand, which is bound to arise if the needs of the world are to be met.

VAST RESOURCES.

Now, in regard to our own position in these matters which I have discussed, the report states clearly the results of the year's working and the outgoings which have had to be met, and we are considerably poorer than we were a year ago. The diminution in reserves, after providing for debenture and obligation interest, sinking funds, payment in respect of United Strip and Bar Mills, and the reserve against losses of subsidiary companies, is practically £300,000. I really do consider, however, that the results of the past year are far from being unsatisfactory when due consideration is given to all the exceptional conditions with which we have had to contend.

The output capacity which we control, amounting to some 1,250,000 tons of steel and correspondingly large tonnages of pig-iron, coal, coke, ore, and other products, requires for the successful operation of our plants a large and steady demand. I would remind you that few other companies control such vast resources, both in raw materials and in manufacturing plant, as we do, and, furthermore, that our plant includes much of the most modern type to be found in operation in any country. It is our firm conviction that large and modern plants will yet enjoy considerable prosperity, and we look forward, despite the losses of the coal strike and the intense disappointment of seeing shattered, owing to the coal stoppage, those hopes with which our trading year opened, to steady improvement in the prosperity of the company.

During these months of inactivity orders have continued to come in, and when it is again possible to reopen our works, with adequate supplies of fuel at reasonable prices, we shall commence operations with a much larger tonnage of work than has been in hand for a long time.

Mr W. Benton Jones seconded the resolution, which was adopted.

ENTRE RIOS RAILWAYS COMPANY, LIMITED.**RECORD YEAR—FAVOURABLE PROSPECTS.**

The ordinary general meeting of the Entre Rios Railways Company, Limited, was held, on the 25th instant, at River Plate House, Finsbury Circus, London, Mr Follett Holt, M.Inst.C.E. (the chairman), presiding.

The secretary (Mr W. J. George) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: This is the first meeting at which your directors have been able to place before the ordinary stockholders a satisfactory result. The net earnings for 1924 were £451,000, for 1925 £519,000, and for 1926 £557,000, showing progressive, but not extraordinary, increments. During 1924 and 1925, however, the debt to the first preference stockholders, incurred in a time when we were working with a ruinous tariff, had to be paid off, but the past year, being free from this incubus, the balance of revenue enables the ordinary stockholders to be rewarded for their long patience.

The year, indeed, proved a record one. The railway carried more passengers, cereals and general goods traffic than ever before, earning a net revenue which has enabled the directors, after making a substantial allocation to reserve, to recommend a dividend of 6 per cent. on the ordinary stock. We must continue to follow a policy of strengthening the financial position, for we shall always have river competition to face, and, in order to obtain a fair share of business, it will remain necessary for the railway to provide for all time not only good, but cheap, transport. It was the short haul to and from the many port towns which made the working of the railway so difficult in the old days, the long and remunerative haul having been won solely through our train ferry enterprise. It is, therefore, most satisfactory to find that we carried in our trains on these ferries last year no less than 554,000 tons of paying traffic, including 82,000 passengers and 876,000 animals, all long-distance haul.

LOW CAPITALISATION.

I think it may be said that our railway is exposed to more competition than any other in Argentina, but, fortunately, salvation is found in the low capitalisation per mile of line. Our capital works out at approximately £11,400 per mile, so we have in this respect an obvious advantage when comparisons are made with companies capitalised at 50 per cent. at least over this figure.

This brings me to the physical condition of the railway. We started with 379 miles of very weak track, the average weight of rail being 47½ lbs to the yard; no part of the line was ballasted or fenced, and the rolling stock was scarce and of small hauling or carrying capacity. Now the length of our system is 728 miles; the average weight of rail has been raised to 64½ lbs; we have 422 miles ballasted; the line is fenced, and the rolling stock is well up to modern standard. We are planning to carry out during the next five years a substantial programme of stone ballasting and relaying in order to meet the ever-increasing requirements, and to secure permanent improvement in running conditions.

If we want to obtain the best results for Argentina and for its railways, we must all pull together. Amongst other directions where I think the closest co-operation is called for is in the problem of immigration. Senor Ramos Mexia, while in Europe, explored this subject in Italy and elsewhere, and we believe that a practical plan will be evolved which should have far-reaching effects.

PROSPECTS.

As to our immediate prospects, even allowing for the loss of traffic caused by the dislocation of the train ferry service, higher fuel costs and the higher scale of wages now in force, they appear to be favourable at the present time. Last year, Entre Rios, losing a great part of the wheat, secured a heavy linseed crop; but our railway, in addition to its own large internal trade, carried, among other items, 98,000 tons of timber, 20,000 tons of yerba, and the rather amazing total of 59,000 tons of oranges, all coming not from our own system but from the railways with which we now connect through our extensions north and south. We must bear in mind that the outcome of the crops is still an important factor in our receipts, and especially this year, in view of the fact that up to the present we are behind in earnings, due to the loss of one of our train ferries. In our opinion, the company having attained financial stability and serving directly and indirectly, as it now does, large areas of land with ample room for profitable development, there is little risk of the advent of any prolonged setback. We may have seasons of bad crops, but, given ordinary and peaceful conditions in the Argentine and Paraguay, we believe that we can look forward with confidence to an operating and

financial future which will be entirely satisfactory to all concerned in the welfare of the railway and of the company.

The following cable has been received from the general manager:—"Harvest prospects very favourable; area sown approximately equal that last year; linseed especially gives promise good crop; camps in excellent condition for livestock."

The report and accounts were unanimously adopted.

UNITED RAILWAYS OF THE HAVANA AND REGLA WAREHOUSES, LIMITED.**EFFECTS OF THE CYCLONE.**

The twenty-ninth ordinary general meeting of the United Railways of the Havana and Regla Warehouses, Limited, was held, on the 28th instant, at Winchester House, Old Broad street, London, the Rt. Hon. Lord Ashfield, P.C. (the chairman) presiding. The London manager and secretary (Mr W. J. Maslen), having read the notice convening the meeting and the report of the auditors,

The Chairman said, in the course of moving the adoption of the report and accounts: I am sure it will be your wish that I should refer to the disastrous cyclone which visited Cuba during the past week. The damage which it caused was confined to the districts served by your railways, and I feel sure you will desire to associate yourselves with your directors and officers in an expression of deep sympathy with the Government and the people of Cuba in the loss of life and injuries which they have suffered as a result of this unfortunate and lamentable event.

The gross receipts of the railways amounted to only £3,950,000, or less by £1,019,500 than those for the previous year, while expenses amounted to £2,981,000, a decrease of only £78,000. Putting these results in another way, gross receipts decreased by 20 per cent., and expenses by only 2½ per cent. The ratio of expenditure to receipts for the year was 75.48 per cent., and for the previous year 61.56 per cent.

The net revenue for the year, without making any provision for reserves, is only equal to 3½ per cent. on the ordinary stock. This result would not justify your directors in recommending the payment of any further dividend for the year under review. But fortunately the conservative policy which the board have pursued in past years has provided a fund which can properly be used to augment the sum available for this purpose in an exceptionally lean year, such as the one through which we have just passed, and your directors are therefore able to recommend the payment of a further dividend of 3 per cent. This will make the rate of dividend for the year 5 per cent., compared with 8 per cent. in the previous year, when our fortunes were at a much higher level. To pay this further dividend of 3 per cent. it is necessary to transfer £100,000 from the equalisation of dividends account to the available balance in the profit and loss account, and to reduce the amount carried forward into the next year's account by £14,600, when compared with the amount brought into the accounts for the year under review.

LOW PRICES FOR SUGAR.

The cause which has operated to the disadvantage of your undertaking, and which affords a true explanation of the impaired financial results for the year under review, may be summarised in one sentence: the very low prices ruling in the sugar market for the last two years. It is estimated that the value of the crop last year was roundly \$230,000,000, compared with an estimated value of about \$300,000,000 for the crop of 1924-25, and of \$400,000,000 for the crop of 1923-24. These figures disclose a very severe decline in the value of the crops for the last two years, and amount in money to no less than \$270,000,000, a sum quite large enough to affect the economic equilibrium of a State much larger than the Republic of Cuba.

It may not be of much consolation to you when I tell you that we are not alone in our misfortune. In October, 1925, the position of the sugar industry was such that President Machado invited the railway companies in the Island to lend assistance to the industry by reducing railroad rates, and after several conferences certain reductions in our rates were agreed to. These new rates came into force in January, 1926. At that time the market price of sugar stood lower than it does to-day by nearly half a cent a pound, and we felt that this compelled us to respond to the President's wishes. These provisional rates were in force for nearly one-half of the year under review, and have entailed a very heavy loss for our company, and I might add that so far in the current year they have hit us even more severely still. On the other hand, a fresh situation will arise a few days hence, when we are due to submit to the Government our proposals for definite new tariffs, which are to rule for the next year ahead.

When I attempt to review the prospects for the immediate future, I find myself confronted with a task of exceptional diffi-

FIRE INSURANCE

Covers the material damage to your buildings, stock and machinery, but it

DOES NOT COVER

the payment of rent, rates, taxes, salaries to permanent officials, interest and other standing charges during the period of reconstruction, nor does it guarantee your expected net profit. This is covered by insurance against

LOSS OF PROFITS

which begins where Fire Insurance ends.

INSURANCE CO., LTD.**

Head Office: 1, Dale St., Liverpool. London: Chief Office: 1, Cornhill, E.C.3.

General Manager & Secretary—Hugh Lewis.

culty. The position was sufficiently obscure before the cyclone. We have, of course, been in constant communication with our general manager regarding the position, and our latest advices show that, so far as this company is concerned, the principal damage is confined to buildings and their contents, and to the telegraph system, the damage to track and rolling-stock having been comparatively slight. So far as it can be estimated at present, our general manager places the cost of repairing the damage on your company's system at something in the neighbourhood of £100,000.

The report and accounts were unanimously adopted.

ARGENTINE GREAT WESTERN RAILWAY COMPANY, LIMITED.**INCREASE OF CAPITAL APPROVED.**

The ordinary general meeting of the Argentine Great Western Railway Company, Limited, was held, on the 26th instant, at Winchester House, Old Broad street, London, to receive and consider the accounts and balance-sheet to June 30, 1926, and for the ordinary business of the meeting, and also for the purpose of considering, and if thought fit passing, resolutions increasing the capital of the company and amending their articles of association.

The Rt. Hon. Viscount St Davids (chairman of the company) presided.

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen, the Buenos Ayres and Pacific Company has paid its shareholders 7 per cent. as usual, and, therefore, we pay our shareholders 6 per cent.—also as usual. During the past year we have been proceeding with the development of the property. We have opened two small branches—together making 42 miles of line—and we have two other small branches, which total 43 miles, almost completed.

As regards further developments we have been going on with our new workshops and running sheds at Mendoza, and with the doubling of the line between Alto Verde and Palmira. You will notice that we have set out in the report proposals for a fresh issue of capital. Somebody has suggested that this has come rather soon after the last issue. But you will doubtless have noticed that we still have a debt owing to the "Pacific" company from whom we have been borrowing, and I would point out to you that between 1910 and 1925—that is 15 years—we made no fresh issues of capital at all. You will, accordingly, understand that our capital account really needed some replenishing.

As regards the prospects, these, up to the present time, are satisfactory.

On the "Pacific" line we are at the present time using coal; we are using coal not only on the "Pacific" but also on the Argentine Great Western, naturally, as our system is included in the "Pacific." At the meeting of the "Pacific" the other day I warned people in England that the management of the "Pacific" would very shortly have to consider the question of changing permanently from coal to oil because of the coal troubles in England and because of oil developments in the Argentine. If the people in the coal trade on both sides here who spend their time in wrangling cannot learn the lesson in this, it is a great misfortune to the country.

The report and accounts were unanimously adopted.

The resolution increasing the capital of the company and amending the articles of association were carried unanimously.

**ASSAM RAILWAYS AND TRADING COMPANY, LIMITED.
ANOTHER RECORD YEAR.**

The forty-sixth ordinary general meeting of the Assam Railways and Trading Company, Limited, was held, on the 27th instant, at Winchester House, Old Broad street, London.

Sir Walter R. Lawrence, Bt., G.C.I.E., G.C.V.O., C.B., presided, in the absence, through indisposition, of Mr George Turner, M.E. (the chairman of the company), and read the speech which had been prepared by that gentleman, in the course of which he said that the board had again the pleasant duty of congratulating the shareholders on a very satisfactory account. It showed a profit even larger than last year's, which was a record year, and in this result all the departments of the company had borne their share. The railway profit was considerably greater than any they had published before. Operating expenses had come down to 53.50 per cent. of the receipts, as against 64.33 per cent. in the previous year and 74.49 per cent. in 1923-24. The management in India were of opinion that they could look forward to a steady increase in the earnings for some time.

The company's collieries had not had such a good year as the railway. The new collieries were ready to produce coal and were only waiting for the approach lines, which should be completed and joined up during the coming cold weather. There seemed every prospect that the Namdang Tea Company, in which they held a five-sevenths interest, would do well this season.

The net revenue account showed that after bringing in the balance carried forward last year, paying all the debenture interest and preference dividends, and providing for fire insurance, and a sum for renewals and replacements, they had £101,661 to deal with, as compared with £90,603 last year. The dividends on the "A" stock absorbed £50,400 of this, and the board recommended that another £10,000 should be written off the discount on debentures. They had already paid an interim dividend of 4 per cent. on the "B" stock, and recommended a final dividend of 6 per cent., making 10 per cent. in all, as compared with 9 per cent. last year.

The report and accounts were adopted, and the dividends recommended were approved.

**HERRBURGER, BROOKS, LIMITED.
GOOD RESULTS—STRONG POSITION.**

The sixth annual general meeting of Herrburger, Brooks, Limited, was held, on the 27th instant, at the Midland Grand Hotel, London.

Mr F. B. Allen, who presided in the absence of the chairman, through illness, said he thought it would be agreed that the result of the past year's working was quite satisfactory. In spite of strikes during the last three months of the financial year, the company had made 4,341 more actions than in the previous year, although the turnover was down to the extent of £2,400. That was accounted for by the policy the board had adopted of always meeting the trade wherever possible in the reduction of prices. The balance-sheet disclosed a strong financial position. The investments, all of which were in Government securities, had increased by £23,982, and brought in between £7,000 and £8,000 per annum, equivalent to over 3½ per cent. on the share capital. If the suggestions embodied in the report were approved, the balance of trade marks, secret processes, &c., account would be extinguished, and goodwill would appear as £25,000. This carry-forward of profit and loss would then be £66,750, and it would be seen that this item of goodwill, which was considerably below what might be taken as its true value, was not only fully covered, but, even were it written off, the balance of profit and loss would still appear as £41,750. Since the inception of the company the item of trade marks and goodwill had been reduced by £91,582, while mortgages and loans which had been paid off amounted to £21,235, or a total of over £112,000. In addition, during that period the price of the actions sold by the company had been reduced by 44 per cent., which he thought was a very satisfactory aspect. The quality and reputation of the British piano had never been better than at the present moment, and as practically all the makers were exclusive users of the company's actions, they felt they could take some little credit for this position of affairs. Comments had appeared in the Press that wireless might have some detrimental effect upon the piano trade. His view was that, as with the gramophone industry, it was more an assistance than a hindrance. They had received quite a number of letters from educational and professional people with regard to the article manufactured by the company, and in all cases educational authorities, in their specification, always included Herrburger, Brooks actions. The prolonged coal strike had a considerable retarding effect on trade generally, and the piano trade in common therewith, but not to the extent that would be expected in a trade usually designated as a luxury trade.

The report and accounts were unanimously adopted.

LANKA PLANTATIONS COMPANY, LIMITED.

CONTINUED PROGRESS AND PROSPERITY.

The forty-sixth ordinary annual general meeting of the Lanka Plantations Company, Limited, was held, on the 27th instant, at the offices of the company, 12 Fenchurch street, London, Sir Stanley Bois (chairman of the company) presiding.

Mr C. G. Bois, the representative of the secretaries (Messrs. Robertson, Bois and Co.), having read the notice convening the meeting and the report of the auditors,

The Chairman said: I have again the pleasure to move the adoption of a report and accounts which register, as I think you will agree, a continuance of progress and prosperity, although it will be seen that our main product—tea—has not done quite so well for us as was at one time expected, the crop showing a falling off of 50,561 lbs as compared with last season, due, as I mentioned in my remarks about a year ago, to a period of droughty and unfavourable weather. Furthermore, the net average price shows a drop of a trifle over ½d per lb as compared with last year, the decrease, as explained in the body of the report, being fully accounted for by the fall in the market during the latter half of the period under review. In addition to this, the average rate of exchange has been ½d in the rupee higher than in season 1924-25, so that our all-in cost per lb has also increased, and correspondingly lessened our margin of profit.

During the past season we were able to obtain the remunerative price of 15 11d per lb for our tea during the first half thereof under the contract reported when last I addressed you, but this came to an end on December 31, 1925, and no further forward contracts were or could be advantageously entered into in view of the uncertainty of the market. As regards rubber, you will observe that our report indicates a very big increase in our proceeds from this product—namely, £23,011 9s, as against £7,850 16s 5d. The crop obtained, 163,743 lbs, was nearly double that for the previous year, and the handsome average price of 28 9.73d per lb was attained, mainly from our having been so fortunate as to sell forward three tons a month from January-June at 4s 3½d per lb. The expenditure on rubber was slightly higher, owing to the necessity for bringing our Arnhall rubber once more into the tapping round. If we can look forward to realising the present average price for our output (even although for the time being it will only be 80 per cent. of our full assessment), we may regard our rubber holding as a valuable potential addition to our profits, although we cannot, of course, look forward to another "bumper" season such as we have had in the period under review. Our cocoa crop was less than that obtained last season, which mainly accounts for the reduction in the proceeds; the average price also showed a reduction from 72s 10d to 66s 2d per cwt.

THE DIVIDEND.

Turning to the accounts, after providing for the dividend of 6 per cent. on the preference shares and an interim dividend of 10 per cent. on the ordinary shares, already paid, there remains at credit of profit and loss account the sum of £33,070 16s 9d, and the board recommend the payment of a final dividend of 20 per cent. on the ordinary shares, making 30 per cent. for the year. In view of the reserve account standing at the figure of £45,000 and of our liquid cash position, it has not been thought necessary to recommend any addition thereto. I may mention that the expenditure in Ceylon includes the payment of a bonus to the retiring manager of Thotulagalla estate, who had been with the company for over 20 years, and the directors propose, as heretofore, to meet out of their additional remuneration the bonuses to superintendents for the past season.

CURRENT YEAR'S OUTLOOK.

As regards the outlook for the current season, our tea crop for the first three months shows an increase of some 26,000 lbs as against the same period in the previous season, while rubber is about the same. It is somewhat early to judge whether this improvement in the tea crop will be maintained or exceeded, but, with anything like normal weather, there is reason to hope that it may be. As regards cocoa, which is produced on our Yattawatte estate, the estimate is for some 900 cwt, as against only 715 cwt harvested in the season under review, the falling off of 185 cwt having been due chiefly to the dry weather experienced during January and February, so that in regard to this crop we are obviously very dependent upon the weather.

There has recently appeared a report by the Food Council to the President of the Board of Trade on wholesale tea prices, and it is interesting to note that the Council can find no material grounds for criticism of the producers beyond the suggestion that fine plucking "has been used for the purpose of artificially restricting supplies." So far as Ceylon in general is concerned, and this

company in particular, our plucking policy has invariably been directed to obtaining such leaf as can be manufactured into the best tea that that estate is capable of producing, having regard to its elevation and condition.

I think we may reasonably look forward to a continuance of remunerative prices, although, as I have remarked in previous years, the steadily growing cost of production automatically restricts our margin of profit.

Dr Peter Chalmers Mitchell, C.B.E., seconded the resolution, which was carried unanimously.

THE ARGENTINE LIGHT AND POWER COMPANY, LIMITED.

PROGRESS OF COMBINED BUSINESSES.

The eighteenth annual general meeting of the Argentine Light and Power Company, Limited, was held, on the 29th instant, at Winchester House, Old Broad street, London, Sir George Alexander Touche, Bt., C.B. (chairman) presiding.

The Chairman said that the economic and financial conditions in Argentina during the year covered by the report were favourable, although the volume of business was restricted.

Referring to the Cordoba Electric Supply business, he said they derived the motive power for their two hydraulic stations in Cordoba from the waters impounded by the San Roque Irrigation dam. From April, 1925, to the beginning of July in the same year, the level of the water in the San Roque Irrigation dam was lower than during the same period of the previous year, and the water supply was restricted from May 12th to August 24th. From October, however, heavy rain-falls raised the levels of water in the San Roque Lake, and they had obtained a sufficient supply. The number of units sold, including those used by the tramways, totalled 21,741,467, as compared with 20,361,101 in the previous year, an increase of 6.78 per cent. They had record receipts, both gross and net. The number of their customers for electric light at the end of the year totalled 13,711, as against 12,200 at the end of the previous year, and 6,892 at March 31, 1918. As to the Cordoba Tramways, taking the system as a whole, they again had record figures in both the gross and net receipts.

Alluding to the results of the business of the subsidiary companies, he said the gross receipts of the combined businesses in Cordoba and Santa Fe for the year to March 31st last were £573,724, the expenses £272,623, and the net receipts £301,101. These figures were before allowing for depreciation, loss on exchange, and certain other charges. It was satisfactory to report that during the first five months of the current financial year the results showed a further satisfactory advance. After making provision for wear and tear on a fairly liberal scale, and providing £9,317 for loss on exchange, charged in the accounts of the subsidiary companies, the revenue derived from these companies, and other sources, totalled £215,076.

No loss on exchange fell to be charged in the accounts of the holding company. In the previous year loss on exchange totalled £29,499, and £5,367 of this was applicable to the holding company's profit and loss account, the credit to which was £192,545. The figure of £215,076, therefore, properly compared with £187,177 a year ago. Deducting interest on the debenture stock, £58,451, and London expenses and taxation, including the small expense of the issue of preference shares, they had a balance of £136,521, compared with £108,306 in the previous year. To that balance of £136,521 there was to be added £15,133 brought forward at April 1, 1925, making a total of £151,654. Against that was charged the debenture stock sinking fund, £12,777, in accordance with the terms of the trust deed, and the dividend, less tax, on the preference shares for the year, £52,242, while there was transferred to share capital redemption fund £7,500, and to general reserve £35,000.

The balance left after various transfers was £44,135, out of which they proposed to apply £29,606 to the payment of a dividend at the rate of 4 per cent. (subject to deduction of tax) on the ordinary shares of the company, in respect of the year to March 31st last, leaving £14,528 to be carried forward. In regard to the proposed change of the name of the company, at present he could only say that negotiations were in progress, which, if concluded in the way they anticipated, would give the company an opportunity of enlarging the scope and basis of its business, and extending its operations outside Argentina. The maturity of these proposals would lead to further negotiations with public authorities, which made it advisable that the company should not be limited by its name and title to operations, however important, in one country only. He moved the adoption of the report and accounts.

The resolution was unanimously carried.

A resolution changing the name of the company to the Atlas Light and Power Company, Limited, was carried.

UNITED DAIRIES, LIMITED.

QUALITY AND CLEANLINESS THE FIRST CONSIDERATION.

The annual meeting of the United Dairies, Limited, was held, on the 29th instant, at Connaught Rooms, Gt. Queen street, London, Mr J. H. Maggs presiding.

The Chairman, in the course of his speech, said: The net profit after eleven years' continuous increases shows a falling off of £49,676. Whilst we must all regret this decline, it will probably not have come as a surprise to those of you, and they are probably the majority, who are in close touch with the milk trade. Had I made a prophecy at this time last year I should have had little hesitation in forecasting a fair increase in profits, and considering the increased business done, we might legitimately have expected even more; in fact, our monthly figures for the trading companies right up to February were ahead of the previous year.

IMPROVED METHODS OF DELIVERY.

In the conversion of our retail deliveries from cans to bottles we necessarily incur increased expenses. For one thing, the whole system of delivery changes; not only is the pasteurising and bottling plant entirely new, but distribution is concentrated, and in place of a large number of small yards with a few rounds going out from each, distribution depôts are provided at which up to as many as 70 rounds are centred. Until the change-over is completed we are for a time carrying two sets of premises and depreciations, but as the old yards are vacated we are rapidly letting them on advantageous terms.

The fallacy of low-priced milk being the same thing as cheap milk cannot be emphasised too often. Unsafe milk is dear at any price. There is no article of food to which considerations of purity, quality, and measure apply more strongly than to milk. Forgive me if I emphasise the importance of the disc bearing the word "Pasteurised," because it is important to remember that not all bottled milk bears this hall-mark of the Ministry of Health's approval.

Another factor in the reduction of our profits was the increased production of milk as compared with the liquid milk sales. From Christmas onwards we had mild weather, which stimulated production and depressed consumption. The loss on converting milk bought at winter prices into cheese or condensed milk, to be sold at prices which are fixed in competition with the Colonies and foreign countries, is always serious.

PRUDENT POLICY.

Now, previous to deciding on the rate of dividend to be recommended, we received a good deal of gratuitous advice to the effect that whatever the prospects for the current year, we ought to maintain the same rate as before. The board did not share that opinion, and, in my view, rightly so. In times like the present, prudence, I maintain, should be our watchword, and in spite of the fact that our profits would have enabled us to distribute nearly the same dividend as before, we felt it would not be in the real interest of the shareholders to do so.

Our business is, I believe, fundamentally sounder than ever. Never has the quality of the goods we manufacture and sell been higher, and the service we are giving, both in the wholesale and retail milk trades, is far above anything that has hitherto been attempted on a large scale in this country.

MILK PRICES AND COSTS.

I should like on this occasion to deal in my speech with the recent activities of the Food Council respecting the increase in the price of milk in September. First let me say that we have good ground for believing that the Food Council's investigation of the costs of milk distribution has not yet been completed or even begun. In these circumstances it is surely a departure from all judicial precedent to deliver judgment before evidence has been heard or even sought.

Now I must take you back to September, 1925. After protracted negotiations which at one time reached a deadlock, it was clear that the producers would not accept a price for their milk that would allow the trade to distribute milk at prices of 7d and 6d per quart for winter and summer respectively, and finally an agreement was arrived at based on milk being retailed at 7d for eight months and 6d for four months—the alternative was to charge 8d for part of the winter. It was considered to be in the interest of all parties, not least the consumers, that the winter price should at no time exceed 7d, and that the balance should be spread over the summer, with the intention that the producers should recoup their winter losses during the ensuing summer. Whether this was equitable or not I leave the public to judge, but on September 1st, when we raised the retail price by 1d per quart, the farmers' milk price to us was raised by that self-same amount. The Food Council's argument seems to be this: because you consented to lose 4d a gallon in April, you should, therefore, be equally willing to lose 4d a gallon in September.

The report was adopted.

ROYAL INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

RAPHAEL TUCK AND SONS, LIMITED.

SUCCESSFUL RESULTS—NEW FEATURES.

The annual general meeting of Raphael Tuck and Sons, Limited, was held, on the 27th instant, at Winchester House, London, Mr Gustave Tuck (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, after paying a tribute to the late Sir Adolph Tuck, said: They were this year celebrating the twenty-fifth year of the company, and it was the sixtieth year of the existence of the business. He doubted if the original founder of the firm—his late father, Raphael Tuck—could have anticipated its remarkable growth. In this connection it was impossible to emphasise too strongly the importance of the gift of imagination and the power of foresight in business enterprise.

POPULARITY OF COMPANY'S PRODUCTIONS.

Christmas and greeting cards again stood in the forefront of their publications. They showed the same quality and beauty of production that had distinguished them hitherto, and they sustained the high traditions of the past. They continued to increase in popularity with every section of the public.

Their book department was making satisfactory progress. "Father Tuck's Annual" was now in its twenty-ninth year, and preserved in the vigour of manhood all the charm and interest that endeared it to its readers in its youth. A notable publication this year was "The Book for Boys," a foreword to which had been kindly contributed by Dr Cyril Norwood, the new headmaster of Harrow; "Face your life with a stout heart and a smile, boys of our country; great is your inheritance; make it greater and nobler yet."

As to calendars, these beautiful and necessary missives of good will and friendship had increased in popularity to a large extent during the past year and were again increasing this year.

Picture postcards had taken on a new lease of life, and they were issuing some very beautiful designs, which had captivated the public. The pity, however, was that the Government had not yet seen its way to restore the halfpenny postcard postage. Were this done it would, he felt confident, send up the sale of postcards by their millions. We had a very farseeing Postmaster-General, and he would do well to take his courage in both hands and accede to the popular demand.

Referring to the picture department, the Chairman said that the old-established firm of Lefevre had recently disposed by auction of their stock of etchings and photogravures. Among these were the whole of the works by the late Dendy Sadler. The company had been fortunate in acquiring about 60 of the original plates and copyrights of this famous artist's works. They had also been able to purchase a very large number—practically all that were offered—of the copyrights owned by Messrs Lefevre of world-renowned etchings and engravings, including those of Sir Alma Tadema's beautiful paintings and of the wonderful works of Rosa Bonheur, the most famous of animal artists.

STAFF PENSION FUND.

When his late brother, Sir Adolph, celebrated his seventieth birthday two years ago he presented £5,000 of Raphael Tuck and Sons ordinary shares to form the nucleus of a staff pension fund. He died before the pension scheme was settled, but the directors proposed now to bring the scheme into operation, using his £5,000 and the accumulated interest as the nucleus of the fund. As Sir Adolph had this so dearly at heart, they intended, with the permission of the shareholders, to increase his gift by £2,500 out of this year's profits as a tribute to his memory. The scheme would be a contributory one, and the details were now being worked out by experts. He hoped to be able a year hence to inform the shareholders that the fund was in full working order, and that the members of the staff would receive a substantial benefit by participating therein.

In conclusion, the Chairman said that, when all allowances had been made for the trying times through which the commercial world was passing, they might congratulate themselves on the fact that they had been able to rise above difficulties and steer their ship safely through troubled waters.

Sir Arthur Conan Doyle seconded the resolution, which was carried unanimously.

SENGAT RUBBER ESTATE, LIMITED.**IMPROVED RESULTS.**

The sixteenth annual general meeting of the Sengat Rubber Estate, Limited, was held, on the 26th instant, at 24 Rood Lane, London, Mr Eric Maxwell (chairman of the company) presided.

The Chairman said: Last year we were allowed to export 378,916 lbs, which cost us, including allowance for depreciation and London charges, 10.46d and netted 18.22d. This year our allowance has been 633,178 lbs, which, including all charges, cost us 8.78d, and has netted 18.19d, and with the increased crop which resulted in a cheaper production and the higher price we have the substantial profit of £39,137 5s 5d, against £14,843 19s 9d last year. For next year we have an estimate before us of 746,725 lbs, which we do not expect to be allowed to export, but we now know what restrictive measures are to be exercised for the next 12 months. These measures were published in full in yesterday's papers, and I would refer you to them.

The latest reports we have on the property are very satisfactory. We learn that improved cultivation is being carried out, and tapping is being carefully done, and the bark renewal gives entire satisfaction, that weeding is in first-class condition, the planted area being free from lallang and coarse growth, that pests and diseases are carefully watched and the present condition is due to the very effective work against diseases carried out during the last few years. Our total acreage stands as it did in our last report, though the area of 91 acres described then as "not yet tapped" has now become mature.

We have a forward contract running from January-December, 1926, of 13 tons per month at an average of about 15 9d c.i.f. New York, and we have another contract of 5 tons per month from January-December, 1927, at 2s 9d on the same terms. This latter contract will pay all the estate costs and leave us with a large balance of rubber as profit.

I now beg to move the adoption of the report and accounts as presented, and to propose that a final dividend of 3d per share, less income-tax, be paid on October 28, 1926, making, with the interim dividend of 1½d per share paid on April 23rd, a total of 18½d per cent. for the year.

Mr J. L. Loudoun-Shand seconded the resolution, and it was carried unanimously without question or comment.

SONGEI KARI (SUMATRA) RUBBER ESTATE, LIMITED.**INCREASED PROFITS—STRONG POSITION.**

The seventeenth annual general meeting of the shareholders of the Songei Kari (Sumatra) Rubber Estate, Limited, was held, on the 27th instant, at the registered offices, 7 Martin's Lane, Cannon Street, London, Mr W. Arthur Addinsell (chairman of the company) presiding.

Mr J. Lewis, on behalf of the secretaries (Messrs Bright and Galbraith, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: It is gratifying to be in a position to record the fact that the net profit for the past year, after providing for depreciation, amounts to £32,741, being an increase over the previous year of £17,673.

The average sale price realised was 2s 2½d per pound, and the rubber harvested advanced from 268,687 lb to 404,550 lb.

You are doubtless aware that the restriction year closes with the end of this month. On Monday last the Colonial Office announced new regulations for governing the rate of export for the ensuing year, which I think all branches of the industry can consider favourable, and, in spite of the newspaper paragraphs to-day, I have it on excellent authority that the manufacturers in America are equally satisfied. In my opinion, these new regulations should tend towards greater stability in market prices. The more important announcement dealing with the reassessment of standard productions, which is known to be under consideration, is still to be made, and I can therefore only say now that the directors will give any new scheme which is brought into operation full consideration before deciding this company's future policy.

The board are pleased to recommend the payment of a final dividend, which will result in 30 per cent. being distributed, as compared with 20 per cent. last year. The results accrued fully justify this recommendation, and you will note that this will absorb only £43,300 out of a total profit of £32,741 earned during the year. After meeting the usual reservations, including £2,436 for income-tax payable in Sumatra, there will remain a net carry-forward of £4,532, as compared with £584 brought in.

The book cost of our property and buildings, plus the cost of acquiring our investment in Tanah Datar, amounts to £69,981, against our issued capital of £78,000. The intrinsic value of the

estate alone is, of course, considerably above the book value. It is abundantly clear, therefore, that the financial position of the company is on a sound basis. Before leaving the accounts, I should like to draw attention to the amount of dividend received from our investment which shows a very handsome return, apart from the capital appreciation for which no credit in the accounts is taken.

The whole of the planted area available in the company's concession having been planted up for some years, there is no change to record. The company is, however, indirectly, the owner of additional land, by reason of its investment in shares of Tanah Datar Rubber Estate, Limited.

Dealing with the year now current, although it appears that we may not secure such a high average net price for our rubber, we should normally harvest an increased crop. On the other hand, assuming the company continues to follow the restriction regulations and that these provide for a reduction in the rate of export during the ensuing quarters, this must have some effect, not necessarily adverse, to our year's working. Provided there is no severe break in the market price of rubber, I see no reason why the company should not maintain its dividend record.

Mr Thomas A. Gallie seconded the motion, which was unanimously adopted.

SUMATRA PARA RUBBER PLANTATIONS, LIMITED.**RECORD YEAR'S EARNINGS.**

The nineteenth annual ordinary general meeting of the Sumatra Para Rubber Plantations, Limited, was held on the 29th inst., in the Council Room of the Rubber Growers' Association (Inc.), 2-4 Idol Lane, London, Mr H. A. Barrett (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the earnings of the year easily constituted a record for the company, being £36,300 more than in the preceding year—their previous best—and enabled the directors to recommend a total dividend distribution of 9d per share, or 37½ per cent., as compared with last year's distribution of 25 per cent. He had heard expressions of disappointment that a larger share of the profits was not being devoted to dividend purposes, but the directors' decision had been taken with full knowledge of the company's circumstances.

They had harvested a total quantity of 1,427,561 lbs of rubber at a cost of 6½d per lb f.o.b., as compared with last year's cost of 7.12d. An improvement had also to be recorded in the disposal of their produce, which had realised a net average price of 2s. 0½d. per lb, as compared with 1s. 9.4½d. Viewing the variable and difficult rubber market experienced during the year under review, he considered that their net average of 2s 0½d was commendable. The net profit was £88,680, and after paying the final dividend of 5d per share, they were carrying forward £6,665, making, with the balance brought forward from the previous year, a total undivided profit of £10,188. The balance-sheet showed invested funds of £67,948, as compared with £38,586 at the close of the previous year. Those investments were not out of proportion to their future requirements, as they had an extensive planting programme in hand.

Following a visit by Mr Hadow, a development programme had been drawn up, designed to increase the planted area to roughly 6,500 acres, and a good start had been made. As to the current year, they were budgeting for a crop of 1,600,000 lbs, but the

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Cold and unsettled weather has prevailed over the United Kingdom during the past week, but rains proved favourable for ploughing and preparing seed-beds. Supplies of English wheat have been sufficient for requirements, and prices tended in growers' favour. Imported descriptions, however, were somewhat irregular in value, and except for best Canadian grades recent top rates were not maintained. In the floating and forward cargo section dull conditions continued. Near positions remained steady, but distant loadings were the turn easier in anticipation of an early settlement of the coal strike. Steamers of No. 1 Northern Manitoba November sold 62s to 62s 3d, and No. 2 ditto 60s 9d to 61s, white Pacific afloat 57s 6d, South Russian loading 60s to 62s as to sample, and South Australian January-February 15th sold to North Africa at 59s 3d. Maize firmer, and cargoes of La Plata September-October sold 32s to 32s 9d per 480 lbs c.i.f. terms. Wheat quiet and slightly irregular. No. 1 Northern Manitoba quoted 68s, No. 2 ditto 66s 6d, No. 3 64s 3d, No. 2 red winter 61s 6d, No. 2 mixed Durum 60s, choice white Karachi 62s 6d ex-ship, all per 496 lbs. English 12s-12s 8d per 112 lbs. Flour quietly steady. London standard grade 52s, town whites 53s, patents 54s-55s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 48s-50s 6d, Minneapolis 48s 6d-51s, Australian 45s-46s 6d per 280 lbs ex-store. Maize closed easier. Plate landed 34s 6d, ditto ex-ship 32s 9d, Bessarabian landed 37s 3d per 480 lbs. Barley firm. Californian 38s 6d-46s, ditto Chevalier 50s, Chilian Chevalier 42s-62s, ditto brewing 38s-48s, Australian Chevalier 48s-50s ex-store. Smyrna 35s-48s ex-ship per 448 lbs. No. 4 Canadian Western 33s ex-ship, Persian ex-ship 39s 9d, landed 31s 6d, Californian grinding 34s 6d per 400 lbs. English malting 30s-17s 6d, with choice up to 20s, feed 9s-9s 6d per 112 lbs. Oats sparingly offered. La Plata landed 28s, ditto ex-ship 25s 6d, Chilian tawny landed 28s 6d-30s, mixed feed landed 25s per 320

HARRISONS & CROSFIELD, LTD.

1923	430,038	626,921	87,628	9 1	10 7	8 8
1924	324,559	631,742	149,256	13 0	17 5	10 7
1925	308,463	611,629	75,572	10 3	12 1	9 1

AMERICAN WHEAT MARKETS.

Conditions in the American wheat markets show little change. Prices have fluctuated slightly, but remain at much the same level as a week ago. Export demand is poor, due chiefly to the scarcity and dearth of ocean freights. A report from the Prairie Provinces stating that little damage has resulted from the recent bad weather has had a distinctly bearish influence. Weather conditions are now generally favourable.

	Jan. 2, 1925.	Oct. 29, 1925.	Jan. 7, 1926.	Oct. 21, 1926.	Oct. 28, 1926.

(a) October delivery. (c) December delivery.

Visible supplies of wheat in Canada, 32,668,000 bushels, show an increase of 2,785,000 bushels as compared with the previous figures. Supplies a year ago stood at 27,634,000 bushels.

COAL.

Our Cardiff correspondent writes :—There has again been a very serious shortage in the supply of coal and prices have been further increased. For spot position there is practically little free coal, foreign or native, available, but during the past few days purchases of American coal have been taking place for shipment in December and January at prices ranging from 8 to 8 1/2 dollars per ton f.o.b., and for fuel cargoes for November shipment at between 7s and 7s 8d per ton c.i.f. Bristol Channel ports. Owing to the scarcity of small coals, practically all the patent fuel works at Cardiff have ceased operations, but in the Swansea district one or two factories are still operating. The arrivals of tonnage with American cargoes are becoming more numerous, imports at Cardiff now amounting to about 70,000 tons per week. The outputs of the levels and collieries at work in South Wales are slowly increasing, but for this the pit-head prices are ruling by arrangement with the local authorities from 50s for through coals to 55s 60s for large coal.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange :—Trading conditions have become more difficult, and although there is a brisk demand, especially for pig-iron and semi-finished materials, the volume of business passing has become restricted owing to the difficulty of obtaining delivery. It was reported that prices showed a wide variation, and that for prompt delivery consumers were willing to pay substantial premiums. Serious inconvenience is being occasioned by the delays in shipping material from Antwerp and other Continental ports. Irregular working is the rule at practically all the British steel works which are now producing. The Continental steel works have again advanced their prices for forward delivery, the uncertainty regarding fuel supplies making steel manufacturers reluctant to sell forward.

Our Middlesbrough correspondent's letter, dated October 28, 1926, is as follows :—Pig-iron : There is no increase in the production of Cleveland foundry pig-iron, but while merchants are able easily to dispose of any parcels of No. 3, which they are in a position to offer at 120s per ton f.o.t., some customers are less inclined to pay this figure, under the impression that prices have touched the top. There is no quotation for ordinary mixed numbers East Coast hematite iron; only small parcels of off-grades are obtainable at varying prices. Manufactured iron and steel : There are now no fixed prices for manufactured iron and steel, and only one or two works have been able, with difficulty, to maintain operations on imported material. Iron ore : There is no change in the position, and best rubio is nominal at 21s 6d per ton c.i.f. Tees.

Our Sheffield correspondent writes :—A further depletion of supplies of raw material have occurred. No basic steel is being produced, and one of the few acid furnaces operating has been stopped for want of coal. Difficulty has arisen in the prices of foreign crucible steel sections owing to a sharp rise in the prices of foreign coke. A good deal of work is awaiting execution at the billet makers; the failure of supplies of high-grade special steels is causing much inconvenience at some engineering works, and is hindering the execution of important orders. Users would be prepared to pay high prices for supplies. Numerous orders for ordinary steel are being rejected because of the low limit of prices which the buyers are prepared to pay. No English coal or coke is coming into the district. Iron and steel workers have now abandoned hope of a resumption of normal activities during the present year, even should there be a sudden settlement of the dispute. The season demand for cutlery and plate has fallen off very considerably, and some firms are short of work. The demand for stainless steel continues to be on a large scale. More electric steel melting furnaces are working to-day than at any time during the last four or five years. There is a slump in the ferro-alloy market, and nothing is passing in heavy steel scrap. Odd lots have been bought by steelmakers at the low figure of 5s, and is being put in stock in readiness of the restarting of open-hearth furnaces.

Our Glasgow correspondent writes :—The market remains quiet, but the coal situation being slightly more hopeful a better feeling

prevails. Stocks of all classes of materials are practically exhausted. Imported materials are difficult to procure on account of congestion at Continental ports, and very high prices are paid for any steel or iron procurable from stock. Malleable iron works are turning out small tonnages of bars, which are immediately secured by engineers and wagon builders, who have good orders under execution. The makers of steel sheets are unable to meet the demands of consumers owing to restricted output resulting from inferior fuel. Steel makers have intimated an increase of 5s per ton for post-strike delivery of ship plates, sections, and joists, the new prices for delivery in the Clyde area being :—Ship plates, 8 2s 6d and sections and joists 7 12s 6d. Recent contracts received in this district include an important order for large planing machines and other machine tools which has been placed by the New Zealand Government Railways with Messrs. Loudon Bros., Limited, of Johnstone. The plant is required in connection with new workshop extensions.

Our Cardiff correspondent writes :—Owing to increasing costs of production, largely due to the prices of tin and fuel, there has been a slight decrease in the number of mills operating in the South Wales tinplate industry. For prompt shipment the prices of tinplates have been increased to 24s 6d per box, galvanised sheets to 17 1/2 17 10s per ton, and tinplate bars to 7 1/2. There has been a slight increase in the volume of the export trade, and stocks, at 59,990 boxes, are over 10,000 boxes greater than a week ago. The manufacturers have intimated to the workmen the withdrawal of the bonus wage of 7 1/2 per cent. which has been in force since 1921.

CUMBERLAND IRON.

There is at last some business being done in the hematite pig-iron market, the feeling that the coal stoppage must shortly come to an end being largely responsible for the concern among consumers that they can no longer delay the covering of the needs that will arise during the first two or three months after restarting. Makers are not averse from entering into contracts for delivery spread over a period not extending beyond the first quarter of next year, and they are so well off for orders that they can look forward to relighting all the furnaces that were in blast in April last, and probably three or four more. A further rush of buying is regarded as certain directly the furnaces are put in draught, but it looks as if it may be the middle of December at earliest before output can be restored to the level at which it stood before the coal trouble began. Prices are, of course, higher, as a rise in costs is almost sure to take place at first, and Bessemer mixed numbers are quoted at 4 1/2 16s per ton delivered at Glasgow, 4 1/2 15s 10d per ton delivered at Sheffield, 5 1/2 7s 6d to 5 1/2 15s per ton delivered at Birmingham. For low phosphorus iron to analysis 5s per ton has to be added to these figures. Values are even bigger for any iron that can be spared out of the little stocks that remain. A few thousand tons are still lying in workyards in the district. Ferro-manganese is in more active request, and 2,000 tons of ferro and spiegel have recently been sold. Ferro-manganese is quoted at 15 10s per ton. As to the steel trade, all that can be said is that the orders on the books represent a tonnage that will take three months to roll, and the plant at Workington will be kept continuously employed until the end of March. Rails are 8 10s per ton, sleepers 10 10s per ton, fish-plates 12 10s per ton. Very little native ore is being raised in either South or West Cumberland. The coal trade is idle, the three pits that are working having so small an output that there is no coal to spare for the industries or for the coking plants.

OTHER METALS.

TIN.—The market for tin opened with a firm tone on higher Eastern cables, combined with a steady demand, but later a good deal of irregularity was noticeable, and a sharp decline was registered, due to liquidations. Standard cash sold at 311-306, 306 10s-296, three months 305 10s to 294. Sales in the East were reported at 313 to 318 10s.

COPPER commenced easier on lack of support, but later re-acted on buyers becoming more prominent and a revival of speculative interest, closing weak however. Standard cash changed

hands at £58 10s-£58 3s 9d, £58 12s 6d, and £58, three months £59 8s 9d-£59 2s 6d, £59 7s 6d, and £58 13s 9d.

LEAD somewhat unsettled, with dealings on a fair scale. Good soft foreign pig, October, sold £30 5s, November £30 11s 3d, £30 5s, and £30 7s 6d; December, £30 11s 3d to £30 3s 9d, and £30 12s 6d; January, £30 12s 6d to £30 3s 9d; February, £30 10s to £30 5s, and £30 2s 6d.

SPELTER.—Moderate sales were recorded, but prices were subject to slight irregularity. October sold £34 2s 6d, £34 1s 3d; November, £34 2s 6d-£33 17s 6d, and £34 2s 6d; December, £34 2s 6d-£33 15s and £34 1s 3d; January, £34 1s 3d-£33 13s 9d and £34; February, £33 15s to £33 18s 9d ton.

ANTIMONY dull. English special brands quoted £74 10s to £75, and foreign spot £59 to £60. November-December sellers £52 ton c.i.f.

ALUMINIUM slow. Home delivery £107, export £112 ton.

QUICKSILVER firm. Spot quoted £17 per bottle.

WOLFRAM.—Forward 13s 6d to 14s per unit.

TIN PLATES firm. I.C. coke spot 25s-25s 6d, forward 23s-23s 6d per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, October 28, 1926.

Cotton has been in good demand during the week, and prices show very little change. The Bureau report estimate issued on Monday last gave a crop of 17,454,000 bales, with 8,722,000 bales ginned. An increased estimate was generally expected, and buying orders from those anticipating a decline prevented any shrinking in prices. The trade has bought forward contracts very freely, and outside investment buying has been attracted by the low value of cotton, which is now at a price which will not pay the grower. The U.S.A. Government's offer of a loan to farmers, banks, &c., will probably be taken advantage of, but the lack of suitable storage room is likely to be felt. Prices of Egyptian cotton have also fallen, and arrangements have been made by the Egyptian Government and the banks for loans to cotton growers on very easy terms. Quite a fair demand has sprung up for Egyptian cotton, but this is being met by hedge selling. Spot sales for the week 22nd to 28th (inclusive) were 48,000 bales. Of these, 27,400 were American, 4,150 Brazil, 7,000 Peru, 3,800 Egyptian, 5,100 African, 60 East Indian, and 400 sundries. Imports for the same period were 90,604 bales, divided as follows:—64,246 American, 9,277 Peru, 15,427 Egyptian, 668 African, and 986 East Indian. Quotations to-day are:—American middling, 6.71d; Egyptian Sakel, 14.40d; uppers, 10.50d; Brazil fair, 7.01d; Peru G.F., moderate rough, 9.00d; smooth, 8.01d; Tinnivelly, 6.20d; East African G.F., 8.40d; and West African middling, 6.66d.

MANCHESTER, October 28, 1926.

A larger inquiry continues to be experienced in the market, and in some quarters there has been an increase in the amount of business done. Numerous buyers, however, are not convinced that bottom prices have been reached, and there are certainly no indications of any definite rise in raw material rates. In the cloth section a considerable demand has been met with for India, with more activity in light fabrics for Calcutta, some of the buying being speculative on the part of local merchants. Offers in sized shirtings have tended to improve, but not much trade has been done. The outlook for China business is no better, and orders have been confined to small lots in fancy. There are complaints from some weaving districts of the coal position becoming worse. American yarn quotations have been firmer, and a larger business has been put through, especially in medium counts. Stocks are distinctly smaller than for some time back. Slightly more activity has also shown itself in Egyptian spinnings.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market is inactive, and it seems improbable that anything short of a settlement in the coal dispute will bring relief. Wool is certainly cheaper in the primary markets, especially in the ordinary topmaking sorts usually described as Bradford-style wools, but this is insufficient to stimulate interest under existing conditions. Mills are being run with difficulty owing to lack of orders, and with short-time working and excessively high coal prices overhead charges are abnormally heavy. Most qualities of merino tops are about 1d cheaper on the week. A good warp 64's can now be bought at about 4s, and an average top at 1d to 2d less, according to quality. A buying movement might possibly develop if users could be assured of more settled industrial conditions, but no one will cover more than immediate requirements at present, and the usual forward commitments which are a feature of the trade at this season of the year are conspicuous by their absence. Crossbred tops are also easier, and for actual business concession could doubtless be obtained on quoted prices. Spinners continue to complain of the lack of new business, and competition from imported yarns is being very keenly felt in the hosiery districts. Quotations for yarns have eased in sympathy with tops, but even so manufacturers do not seem disposed to order any weight. The only section in which there is any activity is that engaged on mixtures, for which there is a steady demand. A small amount of business is being done in crossbred yarns for Germany, but prices are cut very fine. There is no improvement in the demand for piece goods, though fancy worsted continues to sell fairly well where quick delivery can be given.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The sales have been continued in Australia and South Africa under fairly good conditions, although easier prices are reported from all selling centres. We are not surprised, as the present state of the wool textile industry in England and America leaves very much to be desired. True, things have improved somewhat across the Atlantic, but quieter markets and declining values in Yorkshire are bound to have some effect upon Boston, and we understand that during the week cables have been received in Bradford and London reducing limits on the orders in hand to buy clothing wool, noils, and wastes. This is clear evidence that Boston dealers do not intend this season to be left with large stocks of dear raw material. Very few cables have been received from Australia mentioning American buying, though we expect that now Geelong has opened America will buy fairly considerable quantities of favoured wools. Like everyone else, she wishes to be in at the bottom, particularly as she did not do particularly well out of last season's purchases, some of which, in fact, are still for sale as second-hand parcels.

The news from Sydney this week is that values are the turn in buyers' favour, although there is nothing very serious by way of a decline. Still, business is being done only at lower limits, and judging from the cables Bradford importing topmakers must be able to cover their cheaper sales. It is as yet too early to talk about the next London sales, but there will have to be a very different temper in the market if anything approaching last sales prices are forthcoming for either merinos or crossbreds. We have still the significant fact that wool markets everywhere are dominated by active Continental competition, and everybody would have preferred to see the home trade buying more extensively. The amazing feature is that wool is dearer in South Africa. The clip is spoken of as an excellent one. South African prices are apparently fully 2d. clean, above those ruling in Australia, which must evidently be due to the very fine spinning character of the clip.

THE JUTE TRADE.

DUNDEE, October 28, 1926.

The future course of prices of raw jute is still obscure, and values are maintaining a level quite contrary to all expectations. Irregularity in quotations is the main feature, sellers of certain qualities being firmer one day and easier the next. The imports of the fibre into Calcutta are keeping up to normal, but the quality is reported to be poor. Prices are showing no signs of coming down to a point when spinning and weaving could be carried on at a profitable level. First marks are still in the vicinity of £35 to £36, and lightnings at from £29 10s. to £30, October-November shipment. Daisee assortment is quoted at from £29 to £29 10s, Daisee-2 at £31, and Daisee-3 at £27 15s, while Tossa-2-3 is from £32 10s to £33, Tossa-2 at £34, and Tossa-3 at £32 for good marks, all October-November. There is little passing in yarns.

and Individual Circumstances.

Write for particulars to:—

48, GRACECHURCH STREET, LONDON, E.C.3.

Spinners are finding it difficult to secure the payment of 3s 4d for common 8 lb crops and 3s 5d for 8 lb spools, but they are fairly well employed, and can afford to wait. Twist is from 5½d for 3-ply 7 lb, sacking 24 lb weft at 4½d, and 8 lb chains at 5½d. Rove is being sold in only small lots at £33 10s to £36 for 48 lbs, and £23 10s to £25 for 200 lbs. A fair inquiry is being made for all kinds of jute cloth, but business on the whole is slow. Quick delivery is mostly desired, and this manufacturers cannot give very easily, owing to the large business which was done, especially in light weights, a few weeks ago. Manufacturers are quoting 4½d for 10½ oz 40 in, and 3½d for 8 oz, which are the lowest limits possible. Calcutta goods have fallen off in demand, but the market has ruled firm. On spot 32s is quoted for 10 oz 40 in, and 8 oz is only obtainable in trifling lots at 27s 6d.

HIDE, LEATHER, AND ALLIED TRADES.

Ox and heifer hides made last sale figures at the auctions held in Bermondsey last Thursday, best selling at from 6½d to 9d per lb, and seconds at from 6d to 8½d per lb. Cows were ½d per lb dearer for firsts, seconds, together with bulls, making last prices. Calf skins were steady at recent figures, while wools made from 5s 10d to 10s, and hogs from 2s 3d to 10s 6d per skin.

The market for foreign hides has assumed a very quiet aspect. The tendency is for lower values, but the increase in the cost of freightage keeps values on about the same level. African hides are firm in price, with sales taking place in common dries. The slight improvement in the demand for sole leather continues, and in certain quarters a further appreciation in turnover has been noted this week. Demand continues for light and medium-weight bends in the commoner grades. Bellies and shoulders are quite a good selling line, and all supplies coming forward are readily disposed of. Offers of considerable quantities are being received on this market, but the figures mentioned are considered too high. The upper leather demand is chiefly centred around coloured kid and willow in the cheaper grades suitable for the Russian boot trade, and in this direction a fair amount of business is being done. Black glaced kid and patent accounts for a moderate amount of business, while lining leather are in request all the time at prices which show advances all along the line. In boot and shoe manufacturing trade conditions are better than for some weeks back. Orders are coming to hand more frequently and for larger

VEGETABLE OILS AND OILSEEDS.

The advance in sea freights has affected practically all branches of the oil and seed markets. Linseed oil has followed the trend of seed, and has been erratic, values ranging around £32 per ton naked ex-Hull mill, for prompt and this year's delivery, with actual business done both above and below that figure. Consumers, however, are only tardy buyers. Cotton oils have been in good request, and are firmer. Crude Egyptian is offering at £33 10s (old) and £34 10s (new), and technical refined at £37. In the oilseed section linseed is scarce and dearer in near positions, up to £16 5s having been paid for Plate, October-November shipment, while new crop for January-February loading has advanced to £15 17s 6d. High freight rates are largely responsible for the present level of prices, since there is a big unsold balance of old crop still awaiting shipment—more than ample for world needs. More attention has been paid to Indian linseed, Calcutta having been done to London at £17 16s 3d, and to the Continent at £17 15s October-November. Cottonseed is scarce on spot, and commands a substantial premium over seed for shipment, the latter now quoting £9 15s for Egyptian, November. Soya beans have been done to the Continent at £11 10s, November-December.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—There was no fresh development in this market. Steady support was accorded both British refined and English-grown granulated at previous quotations. Ely and Ipswich, ex store, London, 29s 3d. Imported kinds slightly weaker for continental granulated, and Czecho, also Dutch J, sold, 28s 4½d. Forward positions met a quiet market. Czecho granulated, ready, 16s 1½d; November-December, 15s 9d to 15s 10½d, as 10 mark f.o.b. Hamburg. Dutch J, ready, 16s 3d; November-December, 16s f.o.b., Rotterdam. Belgian crystals, November-December, 15s 6d, f.o.b., Antwerp. Polish crystals November-December, 15s 3d, f.o.b., Danzig. The market generally quiet and easy. November, sold, 14s 9½d to 14s 10½d; December, 15s 1½d to 15s 4½d; January-March, 15s 6d; March, 15s 8½d. May, 15s 11½d; August, 16s 3d to 1s 4½d per cwt.

COFFEE.—Business moves quietly, partly owing the fact that supplies of really attractive qualities are limited and which hampers the home trade. On export account there is no improvement in demand. Costa Rica, new crop, bold, sold, 16s 6d; Kenya, bold, went at 13s 6d to 15s 6d; Arusha, bold, 13s 6d to 43s; Kilimanjaro, bold, 12s 4d to 14s 6d. Futures after advancing sharply sufficed a setback. Meantime business is reduced to a minimum.

COCOA.—Only small sales in spot lots at previous rates. Accra dearer forward, and November-January F/F sold, 42s 6d to 48s, f.o.b. TEA.—During the week 60,750 packages Indian were offered in auction, and experi need a quiet demand, with the exception of some really attractive tinny Assams. These sold firmly, but otherwise the market was 1½d to 1d per lb lower. Pekoe, sold, 1s 2d to 2s 1d; orange pekoe, 1s 3½d to 2s 5½d; broken orange, 1s 3½d to 2s 8½d; finest to choice, 3s 0½d to 4s 0½d. Ceylon: auctions of 18,000 packages came to a slow market, and prices in most instances were ½d

to 1d lower. Pekoe, sold, 1s 2d to 2s 1d; orange, 1s 4½d to 2s; broken orange, 1s 5d to 2s 5½d. Business in China teas very quiet, but sellers adhered to steady asking prices. Some Keemums, sold, 1s 4d to 1s 6d; and finer qualities, at 2s 4d to 2s 6d. Panyongs made 1s 4d to 1s 6d; fine souchongs, 2s 10d to 3s. Java and Sumatra auctions totalled 5,930 packages, which met a very irregular and quiet market, at mostly ½d to 1d per lb decline. Pekoe, sold, 1s 1½d to 1s 2½d; broken ditto, 1d to 1s 9½d; pekoe souchong, 1s to 1s 1½d; orange pekoe, 1s 0½d to 1s 4½d; broken orange, 1½d to 1s 4½d; flowery broken orange, 2s 0½d per lb, in bond.

RICE.—Complete stagnation continues in this market, due in a great measure to the high rates of freightage now ruling. Two Stars, spot, London, 16s 6d; Spanish oil, 21s 3d. Beans quiet but steady. Japanese peas, September-October, 25s 9d; October-November, 25s 4½d per cwt c.i.f. and i., London.

SPICE.—Pepper in demand, and market again dearer. Black Sinapore, spot, 50d, 10½d to 11½d; Lampong, spot, 11½d; ditto, August-October, 15 0½d; October-December, 11½d to 15 0½d. January-March, 15 0½d. Muntok, spot, 1s 8d; August-October, sold, 1s 6½d to 1s 7½d; October-December, 1s 7½d; January-March, 1s 7½d lb. Tellicherry, January-March, quoted 11s; Aleppy, 110s per cwt, c.i.f. and i. terms. Cloves dull, unaltered. Zanzibar, spot, 9½d to 10d; November-January, 9d. Pimento, spot, 7½d per lb; September-October, 70s per cwt. Sago flour, January-February, to U.K., 16s 6d. Singapore flake tapioca, November-January, sellers, 17s 6d. Desiccated coconut spot, 41s per cwt.

FRUIT (Dried).—Currants continue in demand, and market firm. Pyrgo, quoted 32s 6d to 33s; Patras, 35s to 36s; Gulf, 35s to 40s; Vostizza, 50s to 60s; Australian, 38s to 45s, as to quality. Sultanias quietly steady. Smyrna, medium to good, 66s to 72s; fine Cretan, 75s to 85s; Australian, 60s to 76s. Raisins fairly steady. Valencia, half-boxes sold, 42s; quarters, 43s to 57s, as to quality. Dates firm, with a good demand. Hallowee, first tide, 31s; Khadrowie, 21s; jar, 18s 6d; carions, 34s to 40s. Figs steady. Lacouns, 100s to 130s; layers, 62s to 75s. Evaporated fruits meet with good support. Apricots: Californian, extra choice, quoted 122s 6d; South African first grade, 140s. Plums, Californian, 30/40's, 66s; 60/70's, 46s; 80/90's, 38s 6d. Pears, Californian, extra choice, 62s 6d; fancy, 72s 6d; Lake County, fancy, 80s. Apple rings, Californian, September-October shipment, 47s 9d, c.i.f. per cwt. Almonds sell freely at full rates.

CANNED GOODS.

CANNED FISH.—Market generally quiet, but late rates were maintained. Portuguese clubs quoted 4s 6d per dozen tins. Salmon quiet. Red, tall, 1 lb, quoted 47s; tall pink, 27s to 28s. Lobsters in small supply. Best ½'s, 160s to 162s 6d; and ¾'s, 9s to 95s. Crayfish, ½'s, 76s to 77s; ¾'s, 49s to 50s per case. Japanese crab steady. Herrings, 7s per dozen tins.

CANNED FRUIT.—Market quiet and uninteresting, with prices tending in buyers' favour. Bartlett pears, 24-2½'s, choice, quoted 12s to 12s 6d. Californian peaches, choice, 11s 6d to 12s 3d; seconds, 8s 9d. Californian apricots, choice, 12s 6d; seconds, 9s 3d per dozen tins. Singapore pines firm, but quiet, while forward quotations are well held. Italian tomatoes firm.

CANNED MEATS sell steadily. Corned beef, 6's, quoted 38s to 45s, as to quality. Danish lunch tongues, 120s to 152s 6d; American, 142s 6d, with best, 147s 6d.

CONDENSED MILK.—Machine-skimmed firmer, with full-cream unaltered, while there is a good inquiry for the best brands of evaporated milk.

HONEY.—Market dull, with ample supplies on offer. New Zealand, however, moves off steadily at 50s to 85s; Australian, quoted 40s to 50s; Jamaica, good set light ambers, 46s, and manufacturing kinds, 40s; San Domingo, 34s to 46s.

RUBBER.

Business again carried on quietly, with but little alteration in prices. Plantation standard sheet, spot, sold, 1s 9d; November, 1s 9½d to 1s 9d; December, 1s 9½d to 1s 9½d; January-March, 1s 9½d; April-June, 1s 10d per lb.

GENERAL.

JUTE.—The market opened quiet and easier, but rallied soon afterwards on stimulating cables from Calcutta. Spinning demand, however, was confined to pressing needs, and weakness set in. Firsts, September-October, to Continent, sold, £29 5s to £29 15s, and £29 12s 6d; October-November, £28 10s to £29 5s, and £28 15s; November-December, £28 5s to £28 15s and £28 10s. Lightnings, September-October, sold £25; October-November, £24 10s, £25, and £24 15s. Market very quiet for both hessians and twills. 10 oz hessian, spot, 1s 1d, 32s 3d; 8 oz, 27s 6d.

HEMP.—Manila stronger on increased buying orders and reserved sellers. J, October-December, quoted, £46 10s; K, sold, £40 15s to £42; L, £40 15s to £42; L2, £38, paid for November-January;

COMMERCIAL AND BANKING ACCOUNTS SOLICITED

Head Office, 128 Broadway

Six Branches in New York City

M 1, November-January, quoted, £38; M 2, ditto, sold, £34. Of afloat parcels, K sold, £41 per ton. New Zealand and African sisal steady, unaltered.

SHELLAC.—Market firm. T.N., spot, fair quality, 185s; December, sold, 182s 6d; March, 182s to 181s per cwt.

COPRA.—Steady, but general demand rather quiet. F.M.S. Straits, November-December, to Rotterdam, quoted £28; December-January, £28. Dutch East Indies, November-December, £27 13s 9d; Ceylon, £27 9s 6d; South Sea F.M.S. £25 ss; Cebu, £27. South S. plantation, November-December, to Marseilles, £27 7s 6d; F.M.S., £26 12s 6d; smoked, £26 7s 6d. Palm kernels, November-January, Liverpool, quoted £20 7s 6d per ton.

TALLOW.—Messrs Colchester and Woolner write as follows on October 27th:—The tallow market was steady during the week, and prices were fully maintained to-day. Inferior kinds have received more attention than good coloured sorts. At auction to-day 1,139 casks tallow were offered, and 440 were sold. Quotations are:—Australian mutton: Fine, 44s; good to fair, 43s to 42s; dull to dark, 39s 6d to 37s 6d; hard, 43s 6d. Australian beef: Fine, 43s; good to fair, 42s 6d to 40s 6d; dull to dark 38s 6d to 37s; sweet, 45s. Present shipment from Australasia: Good m.x.d., 2s. Present shipment from South America, 42s 6d. The market letter is unchanged. Town tallow, 38s 6d per cwt. Rough fat per 8 lbs, 2d; melted stuff, 28s per cwt. Quotations are:—Town, 38s 6d, net cash,

naked, ex works. Country: Frail casks, 38s; home melted, shipping casks, net, f.o.b., wood coloured, 41s; fair to dull, 39s to 38s. Bone fat: white none; pale none; benzene, 33s; melted stuff, 33s, f.o.b.

MISCELLANEOUS.—Cocoanuts quoted 22s 6d per 100. Coir yarn, Ceylon, £22 to £30; Cochin, £24 10s to £47; Ceylon bristle £18 to £23; cinnamon leaf oil, 5d; citronella, Ceylon, 1s 6d; Java, 2s 4d.

and credits were obtainable down to $3\frac{1}{2}$ per cent. The discount market has been quiet throughout, but mostly firm in tone under the influence of the persistent efflux of gold and of the weakness of the New York exchange. The general minimum for three months' bills has remained at $4\frac{1}{2}$ per cent.

	Nov. 5, 1926.	Oct. 29, 1926.	Oct. 22, 1926.	Oct. 15, 1926.	Previous Rate and Date Changed.
Bank Rate	5	5	5	5	$\frac{1}{4}$ (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	$\frac{1}{2}$ (Dec. 3, '25)
Discount Call	3	3	3	3	$\frac{1}{2}$ (Dec. 3, '25)

Market rate (3 months' bills)	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	..

The Bank return showed a decline of £7,900 in the gold stock and an increase of £468,000 in the Note Circulation. The Reserve was thus £475,900 lower, and the Proportion dropped by 0.3 to 27 per cent. Government securities were reduced by £1,280,000, while Other securities rose by £1,372,400, and as Public deposits were £1,402,200 higher Other deposits fell by £1,781,400. Currency notes were increased by £1,821,800 to £289,437,200, which includes £1,292,000 for notes called in but not yet cancelled. The fiduciary issue is £231,895,200, or £16,007,300 below the maximum for 1926.

NEW YORK MARKETS.

Our New York correspondent cables:—The election results show a swing away from the Republicans, which leaves the Administration with nominal but not working control in the Senate, and with actual control in the House. The issues are not clearly defined, and the new Congress will not be more friendly to Europe. However, the old Congress has provided the necessary positive legislation, and will last until March. The French debt settlement probably could pass the old Senate, but would have less chance in the new. Markets have disregarded the election, and the speculative forces are now puzzled as to whether to be bullish on the easing in money or bearish on the slackening in industry. Meanwhile the Federal Reserve statements reveal a rebound from the previous week's contraction, with the System's discounts and bill purchases up considerably, and the Reserve ratio 0.8 lower at 72.8 per cent. There was a large flow of funds from New York, where most of the expansion occurred, and the ratio declined by 3.4 per cent.

THE STOCK MARKETS.

Monday having been the All Saints' Day holiday the Stock Exchange has had a short week, which has also, on the whole, been quiet. The chief interest has centred in the dealings in the new Belgian Loan and the terms of the chemical fusion, both of which subjects are discussed in "Notes of the Week" on later pages. The gilt-edged market has been quiet, but firmed up a little on the failure of Bank rate fears to materialise. French Government bonds improved with the franc, and Turkish bonds were animated on Paris purchases. Home Railway stocks improved a little on hopes of a coal settlement. Home industrials, on the whole, were irregular, with a heavy tendency. Courtaulds went as low as £5. Elsewhere a feature was a substantial decline in rubber shares, only partially recovered by a late rally led by Rubber Trust shares. The Kaffir market has been without interest. Among tin shares there has been a little activity. The issue of £4 millions 6 per cent. cumulative preference stock by the Central Argentine Railway was over-subscribed, but the underwriters of the Wakefield Corporation issue of £750,000 in 5 per cent. stock had to take up 18 per cent.

THE COMMODITY MARKETS.

With a few exceptions, markets have been quieter this week. Domestic production of coal continues slowly to increase, and has now passed the million-tons-per-week level; but with the winter demand in evidence it has been found necessary to regulate industrial deliveries more closely, and prices still show an upward tendency. Iron

and steel business remains quiet, British makers having little to sell, while their Continental competitors cannot promise delivery before the last week or two of the year. Large purchases of raw cotton are being made at the present low range of prices, and as customers abroad show less disposition to anticipate a further drop, an encouraging inquiry for textiles has been met with, yarn sales having exceeded production. Wool values are less stable in overseas centres—a movement welcomed, for the most part, by British manufacturers as likely to make their position easier after the settlement of the coal dispute. The wheat position shows no marked change over the week. Sugar has been in improved demand, coffee and tea also firmer. Rubber has been stronger after an early fall, owing to disappointment with the "unused coupons" announcement. Among non-ferrous metals tin has improved after a dull opening, while copper and lead have been irregular.

FOREIGN EXCHANGES.

The foreign exchange market has been somewhat more active during the past week, largely owing to the continuation in the recovery of the franc. A fall in the rate of exchange to 150 had been anticipated by the market; there was, therefore, little surprise when the rate moved from 153½ on the 29th to 152½ on Monday. But when on Wednesday it closed at 148½ and reached 144 on Thursday, it was thought that speculative influences were at work, since the French authorities were known to have been taking advantage for some time of the improvement to build up their reserve of foreign currencies. An opening rate, however, of 146 yesterday morning would seem to indicate the setting in of a reaction. It is probable that the downward movement was due in part to increased confidence in France, unaffected even by an increase of 800 millions in advances from the bank to the State and of over 1 milliard in the note issue, in part to the transfer of dollars to Paris and in part to the speculative influence. In any case, some anxiety is felt that the market should have escaped control even for a short period, in view of the possibility of "bear" attacks later. Forward rates show little change from last week at 50 centimes discount for one month and 2½ for three months. Italy has fluctuated between 111 and 113, with, on the whole, a weaker tendency, while Madrid, after falling from 32.07 to 31.90, reacted to 32.00 on the reports of a frustrated plot in France aimed at the Directory. New York has sagged slightly, but has maintained itself above the gold export point. Indeed, the export of gold from this country during the past week has been due to demands from Continental central banks for special purposes rather than to any natural exchange movement. From 4.84 23-32 on the 29th, New York fell to 4.84 21-32 on Saturday, and 4.84 19-32 on Monday. On Tuesday it recovered to 4.84 1½, but weakened on Thursday to 4.84 15-32. Yesterday morning, however, it recovered to 4.84 17-32. Forward rates have narrowed to par for one and three months. Of the other stable currency countries, Amsterdam moved against us over the week-end from 12.12½ to 12.11½, but subsequently reacted to 12.12½, while Switzerland moved in our favour from 25.13 to 25.13½. Brussels, whose new currency has not yet quite found its natural level, fell from 34.85½ to 34.82. Berlin rose from 20.37½ to 20.38½, while Vienna, Prague, and Warsaw all depreciated slightly in terms of sterling. In Scandinavia, Stockholm, after falling from 18.15½ to 18.14½, recovered again to 18.16, and Oslo followed a similar movement from 19.45 to 19.26 and up to 19.33 again. Copenhagen has shown only small variations from 18.23. In the East the rupee has been steady at 1s 5½d, while the yen is slightly stronger at 2s 5½d. The silver market improved early in the week owing to a sudden demand from India. After the departure of the steamer, lower prices ruled, but they in turn called forth a renewed demand from India. Shanghai, after rising from 2s 5d to 2s 5½d, fell again to the lower level, while Singapore has been steady around 2s 3½d. In South America, Rio has improved from 6½d to 6½d. Buenos Aires fell from 45½d to 45½d, but recovered yesterday morning to 45½d, while Monte Video followed a similar movement from 49½d to 49d, and then to 49½d. Valparaiso improved from 39.56 to 39.45 and then fell again to 39.58 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended October 30th:—

(000's omitted.)			
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	8,637	From Revenue	12,043
Interest, &c., on Debt	1,224	Increase in debt	326
Sinking Fund	1,256		
Sundries	730		
Increase in Balances	129		
	12,369		12,369

Total revenue amounted to £12,043,300, against £9,006,000 for the corresponding period. Customs yielded £2,117,000, against £2,036,000, and Excise £1,432,000, against £1,426,000. Property and Income-tax yielded £1,307,000, against £1,682,000, and Super-tax £280,000, against £400,000. Ordinary receipts under miscellaneous yielded £2,202,300, against nothing in the preceding year. Special receipts produced £1,250,000. The week's operations increased the National Debt by £326,000, and caused the following changes:—

(000's omitted.)			
	£		£
Public Department Advances ..	— 400	Treasury Bills	+ 1,716
National Savings Certificates ..	— 100		
Sundries	— 890		
	— 1,390		+ 1,716

The floating debt was increased by £1,315,000 to £781,241,000.

FINANCIAL YEAR, 1926-1927 (April 1 to October 30, 1926).

£		£	
Total Expenditure ..	458,189,920	Raised by Revenue ..	378,861,238
		Decrease in Balances ..	3,740,728
		Amount borrowed ..	75,587,954
Total	458,189,920	Total	458,189,920

ESTIMATES for FINANCIAL YEAR 1926-7.†

£		£	
Expenditure	825,727,000	Revenue	824,750,000
Deficit	£977,000		

† Revised in Exchequer Return dated July 26, 1926.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE THIRD BRITISH EMPIRE.

FERVENT believers in Britain's imperial mission find many grounds for anxious misgiving in the history of the British Empire in recent years. We have abandoned the attempt to "govern" Ireland, we are endeavouring to administer even India in accordance with the wishes of the people, while in Egypt—in spite of Roosevelt's advice—we have "pulled out" almost altogether, and are confining ourselves merely to minding our own business. This is not the result of the unobserved manoeuvrings of some "Little England" Government, for British public opinion has backed these changes as unmistakably as it has shown its unwillingness to approve expensive extensions of our imperial responsibilities in new regions of the world. There is certainly no sign of any desire to absorb the mandated territories into the British Empire in the pre-war sense of the word. On the other hand, the position of the Dominions seems uncertain. Canada is inevitably coming more and more under the influence of the United States in the economic sphere, and to some extent also in cultural affairs, while South Africa and Ireland are claiming a degree of "independence," which revives in the minds of our nervous Imperialists the fear that these demands must end in an attempt to "cut the painter" altogether. Are all these symptoms to be regarded as evidence that the Empire is crumbling, and that the same dissolution which overtook the defeated Romanovs, Hapsburgs, and Hohenzollerns in the late war and in the Peace Settlement is overtaking the British Empire—less suddenly and less catastrophically, but not less surely—in the post-war period?

An answer to this question is attempted in a brilliant little book which Mr Milford is publishing very appropriately while the Imperial Conference is sitting in London, entitled "The Third British Empire," by Mr Alfred Zimmern.* Its thesis, which is implicit in the title, is that the war of 1914-18 has opened a new epoch in the history of the Empire, the change being comparable in magnitude to that which the Empire underwent in consequence of the American War of Independence. According to Mr. Zimmern, the British Empire is not threatened with the fate of the European empires which came to grief in the war, but is preparing, like the Phoenix, to arise from its ashes—a "Third British Empire" arising now by the transmutation from the second, as the second arose from the ashes of the first after 1783.

As Mr Zimmern sees it, the characteristic new feature in the post-war British Empire is twofold. In the first place, "Dominion status," which had been developing empirically and unselfconsciously in certain parts of the Empire between 1783 and 1914, has grown up into something hardly distinguishable—in substance, though not in name—from sovereign independent Statehood. In the second place, this status, in this mature form, has become the recognised goal towards which all communities in the Empire are on the move—though at different rates of progress and along different roads, in accordance with their almost infinitely diverse environments and traditions. But is not this "procession"—as Mr Zimmern felicitously calls it—really a parade which must end in loss of formation and in the withdrawal of every man to his own tent? Not so, Mr Zimmern replies, and for this good reason: The British Empire is marching with the times, and is changing in harmony with a changing world. Certainly "the Third British Empire" could not survive in a world which was still exposed, like the world that went on the rocks in 1914, to the double anarchy of war military and war economic. Probably (as the Chanak incident foreshadowed) it would break up the first time that the United Kingdom was again involved in a private war over European or Near Eastern affairs; or it might survive one or two such crises only to break up over deep divergences of economic interest like that which underlies the question of Imperial Preference. The post-war world, however, is actively engaged in eliminating war by building up the organisation of the League of Nations; while on the economic plane the technique of production and distribution is tending towards an increase in the scale of operations which will mean, sooner or later, that there can be no profitable unit of economic co-operation short of the whole utilisable surface of the earth and the whole of mankind. "The Third British Empire" will survive because it will live and move and have its being within the framework of a world-order from which the chief modern dangers to civilised social life have been banished by general concerted action.

Mr. Zimmern, however, goes further than this. "The Third British Empire," he argues, is not merely moving in accord with the general movement of the post-war world. The British have been the pioneers; and the world is now setting out to do, in a conscious, collective, responsible way, what the British were already doing, haphazard and unconsciously, as "volunteers," in certain spheres of activity in certain regions. There is a kind of "pre-established harmony" between the post-war world and "the Third British Empire" in their common debt to the pioneering work of "the Second British Empire"; and Mr Zimmern, with reasoned optimism, suggests that the British Empire has still some of its most important pioneering work to do. The British Empire, in fact, is in itself a complete sample of the new world order. Geographically, it is represented in every continent and ocean. Racially, it holds white peoples in association with peoples of other colour. Economically it embraces industrial, agricultural and pastoral regions and communities at every stage of every form of economic development—ranging from the manufacturing population of Lancashire to the Caribou-hunting tribes of Labrador. It is

* A course of lectures delivered at Columbia University, New York, by Alfred Zimmern. (Milford) 1926. 6s net.

thus an experimental laboratory for working out all the major problems—political, economic, and cultural—of the contemporary world; and, in the first instance, these problems, many of which are extremely complicated and extremely dangerous, can be worked out more boldly and at the same time more safely in the Empire than in the League, because the League is a young organisation whose roots have not yet had time to strike deep, whereas the Empire has that toughness and vitality which are conferred by sentiment rooted in long tradition.

Mr Zimmern's analysis of the Empire, in its present transitional stage, is acute. There is the Commonwealth, which is an entente; there is the Empire, which in *esse*, though no longer in *posse*, is a colonial empire of the old-fashioned type to which the French or Dutch colonial empires still belong; and there are countries and communities which at this moment are moving up in a "procession" from the Empire towards the Commonwealth. Mr Zimmern calls the Commonwealth an entente because it is maintained by a will to co-operate, and not by constitutional machinery. Indeed, he points out that "the Little Entente" between Czechoslovakia, Yugoslavia, and Roumania is more closely knit by common political interests, and that conferences between its statesmen occur at more frequent intervals than those between the Prime Ministers of Great Britain and the Dominions. From the economic point of view he might have added that there are other independent European States, like Latvia and Estonia, which are more closely knit by common interests in the economic field than the members of the British Commonwealth, and which, so far from tentatively discussing preference, have gone to the length of forming a *zollverein*.

What is there, then, in the Commonwealth relationship which is lacking in the League of Nations? All the self-governing Dominions—as well as India, whose present position, as Mr Zimmern agrees, is transitional and anomalous—are members of the League. Newfoundland and Southern Rhodesia, which, unlike India, are already fully self-governing, might become members of the League for the asking. What is the meaning, or the value, of the Commonwealth to these States and to the world? Perhaps the true answer is that the League is an artificially cultivated and, therefore, in the first stages of its growth, a delicate plant, whereas the British Commonwealth, as has been suggested already, has the toughness and vitality of an older and more spontaneous growth. Within the Commonwealth, therefore, pioneering experimental work can be done of which the League can afterwards reap the advantage.

Mr Zimmern lays his finger on two great problems: the contact of races and the relation between democracy and nationality. He points out that the contact of races is causing tension to-day both within the British Commonwealth, for example, between India and South Africa, and also between members of the League, who are not also linked by the Commonwealth relationship, for example, between Australia and Japan. In every case the tension is dangerous, but within the Commonwealth resort to war is ruled out, whereas there is still a loophole for war between Japan and Australia, and a more dangerous possibility of war between Japan and the United States, who is not even a member of the League. Mr Zimmern suggests that the conditions for a general solution of the race problem are more likely to be worked out successfully in the inter-Commonwealth controversy between India and South Africa than in the controversy between the United States and Japan.

As regards the problem of democracy and nationality, Mr Zimmern claims that the British Commonwealth has already found the true solution in divorcing the two conceptions, instead of identifying them as has been done on the Continent of Europe. Three of the self-governing Dominions are officially bilingual, while, within the United Kingdom, the Scottish have preserved an intense national life of their own on the cultural plane (where nationality properly belongs) without the prop of a national State or even of a national language.

If Mr Zimmern's thesis is substantially correct, as we believe it to be, "the Third British Empire," so far from breaking up, may live longer and go farther than its predecessors.

THE AMERICAN ELECTIONS.

THE elections held last Tuesday in the United States appear to have given the Republican party a clear majority in the House of Representatives, in spite of a number of losses to their opponents; but in the Senate the gains made by the Democratic party have produced a tie between the 48 Republican Senators and the opposition, consisting of 47 Democrats and one Farmer Labour Senator. The situation is, however, worse for the official Republican party than these figures suggest, for their total includes eight insurgent Republicans, as well as some four or five others who cannot be relied on to give consistent support to the Administration. In other words, the insurgents from the West hold the balance of power. This means that a curse of inertia has been placed on political progress in America for two years to come. New policies and accomplishments, either at home or abroad, are quite improbable under such conditions. Particularly in foreign affairs it is impossible to foresee any change from what already is known of American predilections. France can no longer hope for modification of the Berenger-Mellon draft agreement. There will be no deviation from American debt policy. Adherence to the World Court will hardly be ventured. The President and Congress now enter a two years' siege, a tiresome, unfruitful trial of strength, which cannot be decided until the next election. America now stands before the longest of the several periods of tedium and stagnation imposed by her unwieldy electoral system. Of its four years of office the first two years of any new Administration are usually devoted to "feeling the way," the last two to preparing for the next election. Only if an Administration is re-elected for a second and final term has it two years of comparative freedom from election worries in which to push through any substantial programme whatever, and then comes the nearly inevitable reaction of an interim election, and almost complete paralysis for two years. Two out of eight years in office can be constructively used. Coolidge, having come to the Presidency through Harding's death, has had two such years out of six—not brilliant ones at that, with tax reduction as the only popular achievement. If the next elections should put a Democrat or some other Republican than Coolidge into White House the political stoppage cannot end until March 4, 1929—28 months hence—and even then it will take a year or more before anything of importance can be awaited.

But the election is not without other implications. The re-election of Mr Al. Smith as Governor of New York, although it represents an overwhelming Democratic victory, must be greeted by Republicans with jubilation. For it makes Smith's claims on his party's nomination for the Presidency in 1928 almost unanswerable, and there is no Democrat whom the Republicans would prefer in the field against them. Governor Smith is a "wet" and a Roman Catholic. The seat of Democratic strength lies traditionally in the South, which is both "dry" and militantly Protestant. The attempt to nominate Smith three years ago nearly split the Democratic party, and the animus against Tammany, which stands sponsor for the governor, has not diminished. The Republican losses in the election are thus offset by the apparent hopelessness of uniting the Democratic party. If Smith were either "dry" or a Protestant, his chances of election as President would appear bright. He might be personally popular enough to overcome one handicap. But the two together seem insuperable.

The defeat of Senator Butler, of Massachusetts, the only candidate specially endorsed by President Coolidge, points to the gradual decline of the President's personal influence, and this introduces a new element in Republican party politics. The President has never been wholly acceptable to the Republican machine. It was gratified that he proved to be no second Roosevelt, coming accidentally into office and using that accident to incapacitate the machine for a decade. But Coolidge would never have been the machine's choice, and Senator Butler, the President's personal friend and creation as national party

chairman, has made many enemies. The Massachusetts result will widen the breach between the President and the machine. Will he play for an approach to the insurgents? His unfaltering cordiality toward Senator Borah shows that he consciously tried to keep this door open. But he would have difficulty in convincing the public that he was not a narrow Conservative. A more mercurial temperament, an American Lloyd George or a Churchill (they do not exist), would be capable of the spring to the opposition. A Coolidge with such agility is difficult to imagine.

The third result of the election is the least easy to gauge accurately, the drift toward relaxing the enforcement of Prohibition. In the East and in the some Western States the vote for the modification of the Volstead Act would appear quite conclusive. But there has never been any doubt that New York and Illinois were wet. In these States "dry" leaders instructed their followers not to take part in the referendum, so the result is akin to a "Spanish plebiscite." Missouri, despite the brewery traditions of St Louis, went "dry," which is hard to reconcile with the excited predictions that prohibition in America is already doomed. The results, however, are distinct enough to give the liquor issue more substance than it has yet had, and to foreshadow an even greater importance for it in the national conventions two years hence and in the next Presidential election.

JAPAN'S ECONOMIC PROGRESS.

IT is two years or more since the Department of Overseas Trade issued a report on economic, commercial, and financial conditions in Japan. That recently published,* from the pen of Mr R. Boulter, C.M.G., British Commercial Secretary at Tokyo, is therefore of more than usual interest since it covers the two years ended June 30th last, an important period in Japan's economic history.

After the earthquake disaster of September, 1923, it may be recalled, the temporary suspension of the import duties upon certain articles and the demand for and speculation in materials for purposes of reconstruction and replacement caused a tremendous influx of imports during the first part of 1924, the excess over exports amounting to no less than 664 million yen for the first half-year. The second half, or export season, of 1924 produced some improvement, exports being slightly in excess of imports, with the result that the final balance showed a visible surplus of imports of 646 million yen, although exports reached the high figure of 1,807 millions. In spite of this, the exchange fell from 1s 11d to 1s 7½d in the second half of the year. This collapse was due largely to the settlement of exchange which began in September for goods such as raw cotton, wheat, wool, &c., to arrive in the following year. Government support was not forthcoming, and the decline received an impetus from speculative selling of yen by operators in Shanghai. At the end of November the Finance Minister announced that the Government had decided to relieve the situation by making use of their reserves of specie at home and abroad in order to stabilise the yen, and that they were prepared, if necessary, to export specie for this purpose. This declaration had the desired effect, although no specie was shipped until some months later.

The first half of 1925 showed no improvement, the yen remaining at a heavy discount, and constant fluctuations made trading difficult. By the end of June the excess of imports amounted to 521 million yen, and though this figure was some 144 millions smaller than in the first half of the previous year, it was considerably in excess of what had been estimated six months previously. The second half of 1925 witnessed an exceptionally good rice crop, a large production of cocoons, for which high prices were paid, and unusually large exports of raw silk and cotton goods, while other exports showed good results. The final balance for the year showed a visible excess of imports of 267 million yen. Both imports and exports reached higher totals than had ever been recorded before—

2,572 and 2,305 millions respectively—and the total trade showed a gain of 618 millions, of which 498 millions was accounted for by exports. For this favourable trade development the state of the exchange was largely responsible, the export trade being favoured by an exchange between 22 and 16 per cent. below par, while imports suffered a corresponding handicap. Conditions in America had, moreover, been very favourable, since that country was enjoying a wave of prosperity which caused a large demand and high prices for raw silk, the most valuable of Japan's exports.

In these circumstances a feeling of optimism was entertained at the end of last year. Unfortunately, the subsequent course of events has belied the forecasts made, and business remains definitely dull. There is evidence of a reaction from the improvement witnessed between the autumn of 1925 and the early spring of 1926. The factors which aided the tendency in Japan's favour, namely, the proceeds of debenture issues floated abroad, the good harvest of rice and cocoons, the low exchange rate, the active export trade, the reduction of Government deposits and the payments from specie holdings abroad were all of a temporary nature. They have either ceased to exist or have exhausted their effect. Trade has been impeded by the rapid appreciation of the yen and by violent fluctuations in the principal Japanese commodities. Raw silk, for instance, which was quoted at 2,000 yen a bale in January, was down to 1,450 yen in April, though it has since made some recovery. Shares, rice, and cotton yarn have all suffered in a similar way. There are continual reports of minimum price agreements for, or restriction of output of, a number of articles, such as sugar, cement, fertilisers, galvanised iron, and flour. But prices, as a whole, have not fallen sufficiently to keep pace with the rising exchange. Moreover, there has lately been an upward tendency in rates of interest and cost of labour, though prices of commodities continue to decline. Apprehension is entertained lest the next few months should witness increased imports and decreased exports caused by the yen maintaining its present high quotation. Consequently the opinion is being expressed in some quarters that a new measure must be devised to arrest this adverse tendency. The one readiest to hand is the lifting of the gold embargo, and its adoption would be followed by the stabilisation of the exchange, contraction of the currency, and a fall in wages and prices. But it is regarded as improbable that such a course will be adopted, since it would incur the risk of an outflow of specie sufficient to reduce the country's reserves to an undesirable extent. Indeed, the Finance Minister has made it clear in public utterances that the artificial restoration of the yen to parity will not be followed by a lifting of the embargo.

The reserve of specie which the Government maintains abroad is earmarked in the first place for the service of foreign loans, the expenses of missions in foreign countries, and payment for Government purchases abroad. Since September, 1925, periodical shipments of gold have been made to America to replenish this reserve, with a view to reducing the loss on exchange arising from payments made with a currency at a discount and, by increasing the surplus available for disposal to the banks, to assisting in the regulation of foreign exchange. Japan's specie holdings abroad at the end of April last amounted to 231 million yen, as compared with 258 millions at the end of December, 1925, and 615 millions at the end of 1922. Total specie holdings at the end of April were 1,374 millions, as compared with 1,413 millions at the end of 1925 and 1,830 millions at the end of 1922. Efforts have been made to cut down the amount of Government purchases abroad, but a rough estimate of the expenditure out of the specie reserve abroad places the total for the financial year 1925-26 at between 150 and 160 million yen. The expenditure for the current year can scarcely be reduced below 130 million yen, so that the reserve will not last another two years at this rate without further replenishment. The gold sent abroad has been taken from a fund entirely distinct from that maintained as a reserve against the note issue, but the possibility of using the latter becomes evident when it is mentioned that the note issue during May, 1926, fell to a point below the gold reserve, an occurrence which has not been seen for some years.

* H.M. Stationery Office, 2s 6d net.

On the subject of Japan's inroads into British markets in the Far East and India, the report contains some interesting figures, though the subject is not dealt with at any length. The following table shows the growth of exports to some of the principal countries:—

	(Million Yen.)		
	1923.	1924.	1925.
U.S.A.....	605.6	744.9	1,006.3
China.....	272.2	348.4	468.4
British India.....	99.6	135.4	173.4
Dutch Indies.....	40.6	59.3	85.6
Straits Settlements..	20.9	22.7	44.9

In 1925 the largest item among exports was raw silk, with a total of 880.7 million yen, and the second cotton tissues, 432.9 millions. China remains the chief market for the latter, but the value absorbed by India shows a conspicuous increase from 33.6 million yen in 1922 to 70.4 millions in 1925. With reference to this increase in export of cotton goods to India, Mr Boulter writes that the subject has been discussed as much in the Japanese as in the United Kingdom Press, and the charges of unfair competition have been vigorously denied.

"The Japanese industry has been placed in an advantageous position through non-ratification of the Washington Convention regarding hours of labour, favourable yen-rupee exchange, good organisation and management, relatively efficient labour, cheap electric power, and the easy financial position of the large mills, which manufacture chiefly for export."

A perusal of Mr Boulter's report leaves no doubt as to the improvement which has taken place in Japan's financial and economic position in 1924 and 1925. How serious is the setback which occurred in the first half of this year can hardly yet be judged, but there seems to be no reason to anticipate that the adverse tendency will develop any further.

THE CHEMICAL COMBINE.

PRELIMINARY details of the new chemical trust, to which reference was made in our last issue, were made public on Monday. A new company, under the title of Imperial Chemical Industries, Limited, will be formed, and so far as the existing shareholders in the merging companies consent to the scheme their shares in those companies will be taken over by the new company, which will issue in exchange its own fully-paid shares on the following terms:—

Existing Shares.	Shares of New Company.
Brunner, Mond, & Co., Limited	Four 7½% Cum. Pref. £1 Two Ord. £1 One 6% Cum. Pref. £1
Nobel Industries, Limited	Two Ord. £1 Four Def. £1 One 7% Cum. Pref. £1
United Alkali Co., Limited	Two Ord. £1 Three Ord. £1 One Def. 10s
British Dyestuffs Corp., Limited	Forty Ord. £1 Sixteen 7% Cum. Pref. £1 Sixteen Ord. £1 One Def. 10s
	Five 7% Cum. Pref. £1. Three Ord. £1 & Two Def. 10s One 7% Cum. Pref. £1 Three Ord. £1 & Two Def. 10s One 7% Cum. Pref. £1 Three Ord. £1 One Def. 10s Sixteen 7% Cum. Pref. £1 Sixteen Ord. £1 One Def. 10s

It will be observed that the terms of exchange for the ordinary shares of both Brunner, Mond, and Nobel Industries are identical, namely, three ordinary and two deferred shares in the new company for every two shares now held. Yet we have the anomalous position, shown in the table below, of a considerable difference in the present market quotations of Brunner, Mond, and Nobel Industries ordinary shares. The apparently inadequate explanation put forward is that open speculative accounts are still influencing the prices. It will be observed that the Brunner, Mond ordinary shares are quoted ex the interim dividend, which makes the difference in price even more unaccountable. The margin, however, is narrowing:—

	Oct. 15.	Oct. 25.	Oct. 29.	Nov. 2.	Nov. 3.	Nov. 5.
Brunner, Mond, Ord.	36/-	40/9	40/8	37/9	37/-	36/3
Nobels, Ord.	29/9	35/3	36/-	36/9	36/3	35/6
Do Def.	13/6	18/-	19/6	18/4	18/-	17/6
Alkali Ord.	30/-	36/10½	36/-	37/6	35/-	33/9
Dyestuffs Ord.	14/6	17/6	17/-	16/9	16/9	16/6

In the past week prices have mostly declined, and there is much speculation as to what will be the market value of the new shares. Speculative possibilities attach to the new deferred shares, but on the assumption of a 7 per cent. dividend on the new ordinary shares, to which they are entitled before any distribution is made on the deferred, a price of about 23s for the ordinary shares seems likely. This, on the present market valuation of the existing shares, would give a figure of about 3s for the new deferred shares, though a higher quotation is not at all unlikely.

On the assumption that all the shareholders of the merging companies consent to exchange their holdings, the issued capital of the new company on the basis of exchange will be £56,802,996, divided as follows:—

16,219,306 7% Cumulative Preference Shares of £1 each (preferential both as to capital and dividends)	£16,219,306
31,095,555 Ordinary Shares of £1 each	31,095,555
18,976,270 Deferred Shares of 10s each	9,488,135
	56,802,996

The profits of the company to be distributed will be applied:—(1) in paying a cumulative dividend at the rate of 7 per cent. per annum upon the preference shares; (2) in paying a dividend at the rate of 7 per cent. per annum on the ordinary shares; and (3) in distributing the balance between the holders of the ordinary and deferred shares in the ratio of two-thirds to the ordinary shareholders, and one-third to the deferred shareholders. On the basis of the earnings of the four merging companies and their subsidiaries for their respective last completed financial years, it is estimated that, after providing for reserves, the future earnings of the new company should exceed £4 millions, or sufficient to cover the preference dividend three and a half times.

It is claimed that the new company has been capitalised on a conservative basis, and that there are no promotion profits. The four companies will maintain their separate entity and the management will remain as heretofore. The chairman of the new company is Sir Alfred Mond, and the board includes Lord Reading, Lord Ashfield, Sir Harry McGowan, Sir John Brunner, Sir Max Muspratt, and Sir Josiah Stamp.

In explanation of the objects of the proposed fusion, Sir Alfred Mond has stated that strong as the units of the combination undoubtedly are, and capable of operating in the future, as in the past, with profit to their shareholders and with benefit to the country, it was still felt that by union still greater efficiency, both commercially and technically, could be obtained for the development of existing, and the creation of new, chemical industries, with advantages of saving any unnecessary expenditure of capital by duplication and overlapping. "Operating as they are, not merely in this country, but throughout the Empire and the markets of the world, related as they are not merely as producers, but also consumers of each other's products, the advantages of as close and intimate a relationship as it was possible to create was felt by all concerned." Among the obvious advantages and economies which may be achieved apart from the saving in administration which should naturally result from an arrangement such as this, are the economy in research and the elimination of overlapping in this respect, and the provision of a source of supply of materials upon which the various units will be able to draw more easily than hitherto, without being subject to fluctuations in markets and prices. Again, the new concern will be in a much better position to compete with similar groups of an equal size in certain other countries, such as the German I.G. Farbenindustrie, the Allied Chemical Company of New York, Du Ponts, and other great combinations in America. As was pointed out by a correspondent in our last issue, the fine chemical industry is not included in the new combine, though industrial chemicals, fertilisers, explosives, and dyestuffs are all covered.

It may be recalled that some 12 months ago the shareholders of the British Dyestuffs Corporation sanctioned a scheme of reconstruction, under which £600,000 was

paid in cash to the British Government for its surrender of a holding of £1,700,000 preference and preferred ordinary shares, a figure which approximated to the market value of the shares at the time. The paid-up capital was reduced from £9,197,100 to £4,775,600, and the company became entirely free from Government control. No accounts have since been issued, but it seems obvious that the fusion proposals will prove particularly acceptable to the Dyestuffs shareholders. The shares have, in fact, risen substantially since August, when they stood at 12s.

NATIVES AND LAND.

(BY A CAPE TOWN CORRESPONDENT.)

A WEEK or two ago there was held on the banks of the Zambesi a conference of a highly significant kind. It was a conference representative of what may come to be a new African Dominion, for it included representatives of each member of the unbroken line of colonies which now stretches from the borders of the Union to the southern edge of the Eastern Soudan. True, it was labelled unofficial, but Governments were friendly and representatives were influential. Southern and Northern Rhodesia, Nyassaland, Tanganyika, Kenya—all were there.

The questions discussed were, in essence, just the same as those which the early Dutch Government at the Cape had to face 250 years ago. They were the essential and inevitable two—land and labour. It must be so in all new countries, where the land is the chief source of wealth, and where the land is already in occupation by insouciant and uncommercial "natives." The same process which brings the land into the occupation of the European provides him with at least a potential source of labour in the dispossessed natives (if "dispossessed" is the right term to use where original occupation has been economically so ineffective). The problem, then, is to convert this potential supply into an actual supply. So the familiar process of mingled pressure and inducement begins. Effective utilisation of the land is the impelling motive of the European, and he brings his labour-recruiting devices to bear with, as a rule, very little regard for their more distant consequences. Tribal custom breaks up, primitive barbarian economy disappears, and all the familiar effects follow. If, as is often the case, the effects turn out to be harmful to the European, the policy which has generated them may already have gone too far to be reversed. Hence the newer colonies may profit much from a study of the economic history of the Union. For here these effects may be studied over a period of two and a-half centuries, a very long time in African economic history. Now that the Union is adding manufacturing industry to mining and agriculture, and so entering upon a fresh phase of economic development, the occasion is most suitable for such a study. Nowhere south of the Equator has economic development reached such comparative maturity as it has attained here. The lessons of it should not be lost on pioneers passing through the initial stages elsewhere in Africa.

At the Zambesi Conference Lord Delamere, from Kenya, spoke strongly against the West African policy of leaving the land in native occupation, in the hope of raising up a prosperous community of native producers. From the point of view of sheer economic return from the land there can be no question that he is right. But planter-Government is not notoriously long-sighted, and it may be that speedy returns from the land may be very dearly bought in the long run at the expense of more remote economic and social consequences that might have been avoided had they been foreseen.

It is on just this vital matter that the present pickle of the Union offers such a salutary study for the vigorous pioneers elsewhere. Generations of trek and expropriation have brought more and more of the land into European occupation. Native reserves have shrunk and shrunk till they have to support in some cases 70 or 80 to a square mile—a dense population for such a country. They are unable to support it. The population overflows

and settles permanently or intermittently in the towns, drawn by the lure of industrial employment. Town conditions become difficult, the white worker grows alarmed and restive, new social troubles arise, and, in a word, the bill of costs of past dispossession is presented with interest. To-day the Union is faced with the problem of replacing on the land at least a substantial part of the native population, which, in the course of generations, has been steadily pushed off it. There is no necessity to speak of "segregation." The problem is rather one of restoring a disturbed economic balance. For if natives can be placed on the land in considerable numbers and encouraged to become productive, the strain will be taken off the towns, wages, and no doubt efficiency, of town labourers will go up, the white labourer will be better placed to compete with the native, and both town and country natives will constitute a better market for the products of labour. Opinions differ most acutely in the Union on the uses of low-paid native labour in town industries (one of the lines of cleavage of a coming new party system lies there). But, whatever views may be held on this point, opinion is practically unanimous that access to the land for the native must be facilitated in every possible way, and that speedily. The unanimity on that point is at least as great in the Union as the unanimity farther North that the European, for the most part, should hold the land.

But to hold the opinion is one thing: to give effect to it after all these years is quite another thing. One of the four Bills that General Hertzog (as Minister for Native Affairs) has drafted and published is designed to do as much as can be done in existing circumstances.

Some account of the objects and provisions of his draft Land Bill may be of interest as illustrating the difficulty of reversing a process which has gone too far before its consequences have been fully appreciated.

At least one half of the Bantu people in the Union live in reserves, and it has long been recognised that the reserves are far too small for the population they have to carry. It is true that native methods of using the land do not get the best out of it. But by no improvement of methods that seems at all feasible could the present meagre allocation be made adequate. And unless it is made more adequate, poverty must continue, surplus population must move towards the towns, and native workers subsidised by other resources in the reserves will continue to offer themselves for labour at rates low enough to render competition of white labour impossible.

The Native Land Act of 1913 set out to define, on the one hand, areas where no native might hold land, and, on the other hand, areas where none but natives might do so. Under the latter heading certain areas were definitely scheduled. A Commission proceeded in 1916 to demarcate further areas for native occupation, and the work was carried on by a series of local Commissions afterwards.

The present Bill aims at steering a middle course between the two extremes of: (1) Confining natives to existing scheduled areas and areas already in native occupation. (2) Scheduling all the additional areas which have been demarcated by the local Commissions. The main method is to treat all these additional areas as "released" areas, where land may be owned either by natives (of specified tribes) or by Europeans. Powers are given to the Governor-General to release further areas, and this may be necessary in order to fulfil the condition

that in no case, as far as possible, shall there be "islands" of ownership, native holdings completely surrounded by European holdings, or European by native. Preference is given to natives in respect of all Crown land adjoining scheduled reserves, and facilities for exchange are provided so that native holdings may lie together and the native may have some protection against encroachment.

Certain obligations in regard to fencing are imposed upon both classes of owner. To assist the native, a Native Land Purchase and Advances Fund is to be instituted, into which will be paid certain revenues accruing under the proposed legislation, as well as grants made by Parliament for the purpose. Advances may be made from this fund for purchase, for fencing, and for development and improvements generally. Addressing a representative gathering of farmers called expressly to consider the proposals, General Hertzog made it clear that he would support the making of very liberal provision under this head.

The "released" areas constitute about one-twelfth of the Union. Even if land is largely taken up in them by natives, such lands and the reserves will still leave large numbers of natives unprovided for, though we exclude from consideration those working in the towns, or as paid labourers on the farms of Europeans. Since natives may not actually own land outside of the reserves and the released areas, their presence on European-owned land must be regularised somehow. Hence the Bill takes occasion to clarify the law of squatting, now in a somewhat confused state, especially since a decision of the courts has held that a squatter is not a "servant" under the Masters and Servants Act, and therefore not liable to criminal prosecution for breach of a labour contract. According to the Bill, the native on European land must be either a squatter, a labour tenant, or a servant. The squatter must be licensed, and in respect of him a substantial fee must be paid, higher if he is on land not effectively occupied by the owner. He has, under the arrangement, a solid degree of security. Labour tenants are what the name implies. Their number is to be limited strictly to the genuine labour needs on the farm. Licence fees must also be paid in respect of them, and the fees are graded up after a certain point in proportion to the number of such tenants on any one farm. Licence fees are to be paid into the purchases and advances fund.

The period of labour to be rendered by a labour tenant in order to rank as such is fixed at 180 days. Critics should not be too ready to cry "Serfdom" at this. The idea of a labour rent is not unfamiliar in South Africa (the land of the white "bywoner"), and the labour tenant is not bound to the soil. But he is bound by the terms of his contract, and is to be regarded as a servant for the purpose of the Masters and Servants Act as in force in any province. That is, breach of contract may become the occasion for criminal action.

The Bill is by no means revolutionary, and there are critics who will argue that its favourable reception by the conference of farmers mentioned above is sufficient proof that it does not go far enough. But "going into reverse" is a ticklish operation in such a country as this, and General Hertzog, who knows his farmers, probably understands how far he can go, and how much concession he must make to existing practice in order to go so far. If the Bill becomes law in anything like its present form two far-reaching principles will have been laid down—(1) Definite State provision for the extension of areas available for native ownership, (2) the institution of a State fund for the purpose of making advances to native owners.

This is very far from constituting a wholesale measure of segregation. And it may do but little to ease the present strain. Nevertheless, if the step is taken at all it will be a step of far-reaching importance. If it helps to plant firmly in the South African mind the conviction that the prosperity of the native is an essential condition of the well-being of the rest of us, and to extirpate the pestilential notion (offspring of ignorant fear) that poverty-stricken natives are essential to the wealth of the whites, it will have done a great service indeed. For there is no lesson we need to learn more than this: that the native, whatever his colour, his religion, his dress (or lack of it), or the number of his wives, is for social-economic purposes just a producer, and a man like the rest of us.

INTERNATIONAL ELECTRICAL DEVELOPMENT.

THE development of electricity in this country and the technical, administrative, and other problems which arise in connection therewith will certainly be one of the chief industrial issues of the near future. It is, therefore, very pertinent to inquire how we stand in this matter in relation to other countries. Some figures given by Dr W. H. Eccles in his Presidential Address to the Institution of Electrical Engineers, with some supplementary information from other sources, make it possible to set out in tabular form some instructive comparisons. The first of these relates to the output of electricity per head.

The OUTPUT of ELECTRICITY per HEAD of POPULATION (1925).

Country.	Population. (Millions.)	Total Output of Electricity. (Millions of Units.)	Output per Head of Population. (Units.)
Canada	8.8	10,490	1,190
Switzerland	3.9	4,170	1,070
United States ..	105.7	65,801	623
Sweden	6.0	3,200	533
Belgium	7.6	2,250	296
France	39.2	9,700	248
Italy	38.5	7,600	197
Great Britain ..	42.8	8,125	190
Germany	62.5	11,521	185
Holland	7.1	1,896	126
Denmark	3.3	1,231	70

Total 325.4 123,984 380
* Including railway, tramway, and non-statutory undertakings.
† 1924.

The results given in the third column are remarkable: Great Britain with Germany comes last in the list of great industrial nations, and, if allowance is made for the fact that two great power producing areas of Germany, namely, Lorraine and Upper Silesia, have been ceded to other countries, definitely last. The British output is only half of the average for eleven countries, one-sixth of the Canadian, and less than one-third of the American. The high Canadian, Swiss, and Swedish figures are due to the important electro-chemical, electro-metallurgical, and paper industries active in those countries, while private industrial plant, not included in the returns, may form a higher percentage of the national power consumption in Britain than elsewhere. It may be assumed, however, with some degree of accuracy that France, Belgium, Germany, and Britain show the same percentage, and that the statistics of output are directly comparative. As such, they prove that the position of Britain is unsatisfactory.

The reasons for such a low degree of progress may be found in a number of factors, illustrated quite clearly in Tables II-IV. In the first place, as Table II. shows, the number of hours of effective utilisation of generating plant per annum is lower in Britain than in almost any other important industrial country.

The OUTPUT of ELECTRICITY in TEN COUNTRIES (1925).

Country.	Capacity of Generating Plant Installed. (Kilowatts.)	Output of Electricity. (Millions of Units.)	Output per Kilowatt of Generating Plant. (Units.)
Canada	2,590,000	10,490	4.050
United States ..	22,000,000	65,801	3.000
Italy	2,480,000	7,600	3.060
Switzerland	1,380,000	4,190	3.020
France	4,519,236	9,700	2.150
Belgium	1,100,000	2,250	2.000
Germany	5,938,400	11,521	1.950
Holland	508,000	1,896	1.760
Great Britain ..	3,880,000	8,125	1.670
Denmark	170,000	1,231	1.360

Total 44,565,636 119,359 2.660
* Excluding railway, tramway, and non-statutory undertakings.
† 1924.

We can attribute this to the constant state of industrial depression, which has ruled in this country since the end of 1920, and brought demand from industry to a minimum, to the existence of excessive reserve plant, to lack of centralisation of electricity production in large power stations, to the inability also to attract a widely diversified range of industries, or to create new power industries such as electro-chemistry and electro-metallurgy. In Canada the generating plant is operating

at full load at least twelve hours in every twenty-four, but in Britain the corresponding figure is only 4.6 hours. Even allowing for reserve plant, the total for Britain is only seven hours. In view of the fact that industry, with few exceptions, is working with difficulty up to an eight-hour day in this country, this figure would appear to be inevitable. If, however, we remember that a diversified demand, for lighting, commercial display, heating, and domestic purposes, should raise the average duration of supply to at least fourteen hours, the British figure is not satisfactory, and indicates an amount of waste which scientific co-ordination of large power stations would largely eliminate.

The electricity supply industry is not alone in this, and can, in fact, show better figures than the industries consuming power. In the great industrial areas of Britain, investigation has shown that, for every kilowatt of power-consuming machinery attached to the electricity supply network, an annual consumption of only 900-1,000 units can be recorded. This means that out of a theoretically possible 8,760 units per kilowatt, only 10 per cent. to 12 per cent. was actually consumed. This return throws a strange light on efficiency of production in modern industry.

OUTPUT of ELECTRICITY of PRINCIPAL UNDERTAKINGS in SIX COUNTRIES (1925).

Country.	Number of Companies.	Capacity of Generating Plant. (Millions of Units.)	Output of Electricity (Millions of Units.)	Output per Kilowatt of Plant Installed (Units.)
Canada	3 companies	1,289,000	5,828	4,500
Italy	Edison Group	530,000	1,722	3,250
United States ..	14 companies	5,595,092	17,064	3,060
Germany	9 companies	1,764,300	4,593	2,600
Gt. Britain	14 undertakings	1,363,800	2,881	2,110
France	14 Companies	1,640,000	2,987	1,820
Total		12,182,192	35,075	2,880

Even after selection of the most important power supply undertakings in six countries, the British figure, although higher than the national average, does not compare with corresponding figures for Canada, Italy, America, and Germany. The French companies selected show a lower result than France as a whole, owing to the exclusion from the former of large hydro-electric, electro-chemical, and electro-metallurgical undertakings with a high constant demand. Allowing for reserve plant, the British percentage of effective utilisation in efficient undertakings lies now between 30 and 35 per cent., when it should be at least 60-65 per cent.—a serious loss in earning power and a heavy overhead expenditure per unit of output. Generating plant is not being operated at a high standard of activity throughout the year, largely on account of the industrial situation (industry accounting for 70 per cent. of the demand for electricity), and the inability to form large power pools with central reserve stations for equalisation of load. The effect of uneconomic utilisation on the price of electricity in Britain is illustrated in Table IV.:

The PRICE of ELECTRICITY in FIVE COUNTRIES (Pence per Unit Sold) (1925).

Country.	Total Sales of Electricity. (Millions of Units.)	Total Receipts (Millions of National Currency).	Average Revenue per Unit Sold.
United States	47,997	\$1,470	1.53d
Britain	5,550	£44	*1.90d
Switzerland	2,030	83 Frs	.40d
Italy	2,070	426 Lire	.40d
France	1,662	285 Frs	.33d

* Estimated.
NOTE.—The total sales recorded here do not correspond to the total national production as given in Table I., but represent sales by undertakings regarding which information is available.

The average price per unit sold in Britain is 24 per cent. higher than in the United States (a difference due exclusively to uneconomic utilisation and not to engineering deficiencies), almost four times the Swiss and Italian prices, and over four times the French. Depreciation of the franc and the lire has made the French and Italian averages unreal, but the Swiss remains. A combination of all four tables gives the clue to the low state of electrical development in Britain and, through it, to the relatively low standard of manufacturing efficiency obtaining in industry. The lack of demand has reduced the earning capacity of

the generating plant, raised the price of electricity, imposed restrictions through high prices on electrical development, and thus kept the national production of electricity unnaturally low. It is a vicious circle which seems proof against all efforts made to break it. Only a return to normal trading conditions in the country generally can effect a change.

LONDON PROPERTY COMPANIES.

If there was not during the past twelve months such a heavy demand for housing and office accommodation as in previous years, it was still sufficiently good to enable the London property-owning companies to make satisfactory progress. The group of undertakings which we have selected for purposes of analysis all seem to have done remarkably well. The word "remarkably" perhaps hardly applies to the cases of the two smallest concerns—the Metropolitan Association and the Wembley Park Estate. Even these two, however, cannot justly be said to have fared badly. The measure of progress achieved during recent years can be seen from the following table, which shows gross receipts and net profits, after payment of debenture interest, in the past four years:

Name of Company.	Gross Receipts.				Net Profit After Payment of Debenture Interest.			
	1922.	1923.	1924.	1925.	1922.	1923.	1924.	1925.
Artisans', &c.	£345,989	£338,014	£336,164	£337,771	£128,954	£145,870	£146,148	£150,373
City Offices	80,622	80,688	84,942	86,699	15,890	20,382	26,650	29,518
City of London	520,243	574,743	647,689	644,484	450,083	484,792	544,429	550,379
Cons. London	136,219	147,141	153,229	156,894	40,785	50,527	56,244	61,841
Law Land	198,624	202,041	206,132	212,271	43,559	47,895	52,436	58,542
Metropol. Association	39,856	38,294	38,258	38,314	7,706	8,853	8,548	8,387
Met. Indus. Dwellings	51,420	51,614	51,967	55,557	15,452	15,896	20,341	23,290
Pinners Hall	21,198	21,225	24,152	26,658	11,784	11,829	14,194	16,204
Warner Estate	172,569	170,335	170,486	167,750	39,919	43,112	46,650	49,385
Wembley Park Estate	5,478	6,562	8,644	9,390	3,156	4,718	6,522	6,576

In only two instances—the Warner Estate and the City of London—were gross receipts lower, and in neither case was the fall sufficient to cause a decline in net profits. The advance in net profits is, indeed, general with the single exception of the Metropolitan Association, where there was a slight reduction, due, presumably, to variations in rents in accordance with the alterations of the rates and to increased expenditure on repairs and renewals. Our next table shows the total available balance after payment of debenture interest, and how it was utilised:

Name of Company.	Available Balance, After Pay- ment of Deb't're Interest.	Distribution of Available Balance.			
		Prefer- ence Dividend.	Ordinary Dividend	To Reserve, &c.	Carried Forward.
Artisans', &c.	£165,526	£41,172	£81,778	£20,000	£22,576
Dwellings	172,946	42,168	83,756	20,000	27,222
City Offices	26,466	298	17,595	5,000	2,573
City of London	32,091	1,298	21,115	5,000	4,678
Consolidated, (April 12, '25)	665,119	37,439	341,040	150,000	136,680
Consolidated, (March 31, '25)	687,060	37,439	352,000	150,000	147,621
London (March 31, '26)	61,761	..	24,200	24,068	13,493
Law Land	75,334	..	26,400	23.0	19,604

Wembley Park	6,576	..	7,461	Dr 3,500	1,614

(d) Also 4 ordinary shares for every 100 held. (e) Also 4 preference shares, 4½% cumulative for every 100 Ordinary shares.

The increase in the payment of its ordinary dividend by the Law Land is explained by the allotment to the proprietors of four $\frac{1}{2}$ per cent. preference shares for every one hundred ordinary by way of bonus. The Metropolitan Industrial made no appropriation to reserve in 1924. On the present occasion, however, the sum of £34,086 has been set aside to provide for contingencies. This has been added to the balance at the credit of the suspense account, which, together with contingency allocation, is utilised in the formation of a general reserve fund of £40,000. This company has also carried £1,677 to the special repairs fund. In order to be able to pay a dividend on its ordinary shares, the Wembley Park was again obliged to withdraw £2,500 from the realisations suspense account. The latter has thereby been reduced to £11,558, and it is to be hoped that the directors will strain every nerve to put the company on to a dividend-earning basis before this amount is exhausted. Reserve allocations elsewhere were fairly generous. The following table shows the principal liabilities and assets:—

Name	Share Capital and Reserves	Debentures and Loans	Creditors	Properties	Debtors	Cash	Investments
Artisans' Dwellings (1925)	£ 3,351,763	£ ..	£ 35,695	£ 3,291,909	£ 5,259	£ 29,070	£ 139,243

Pinners' Hall (1925)	87,179	..	16,650	48,399	1,222	2,401	60,905

As regards capital changes, the Law Land issued 13,260 preference shares to ordinary proprietors in the form of a bonus, and 35,244 ordinary shares, raising the total issued capital up from £568,246 to £619,907. This is the only alteration to record. The balance-sheet of this company is an exceptionally strong one for the class of undertaking. As must, of course, be expected, the items of properties show some variation. Creditors, generally speaking, figure for more, as also do debtors, and, with a few exceptions, cash. There has not been much change in investments. The Metropolitan Industrial, however, has now eliminated this item from its accounts, the Vale Estate, in which it held a £1,250 share interest, having been wound up. Our concluding table shows the dividends for the past four years, with comparative prices of ordinary shares and stocks and present yields:—

Name	Dividends Last Four Complete Years				Prices of Shares or Stock End of October				Present Yield
	1923	1924	1925	1926	1923	1924	1925	1926	%
Artisans' Dwellings Ord. Stock	5	5	6	6	72½	73½	85½	87½	6 17 3
City Offices (12 shares)	15	18	21	24	8½	11½	15	17	7 0 0
Cons. Lond. Prop. (12 shares)	2½	3½	4½	5½	1½	1½	1½	1½	5 15 0
Law Land Co. (12 shares)	5½	6	6	8	1	1½	1½	1½	6 14 0

* Mean price between highest and lowest.

† Free of income tax.

The yields on the shares of most of the dividend-paying companies are still on the generous side. Probably this is a heritage of the days when dealing in property was considered as being highly speculative and uncertain. The shares of the Law Land Company, for instance, one of the soundest and most progressive of the concerns, offer a return of £6 4s 6d per cent., which, in view of recent bonuses, can be regarded as a high return. Probably, however, this yield is not actually obtainable, as although it is based on the current market price of the shares, dealings in the latter are not very frequent, the shares being firmly held for investment purposes.

CONTROLLING THE OUTPUT OF GOLD.

The actual or imminent return to the gold standard by the commercial nations of the world as an essential step in the restoration of monetary stability makes it pertinent to inquire how gold is likely to fulfil the rôle of a stable standard under post-war conditions, and what steps, if any, can be taken to ensure its comparative stability. The following articles by Professor R. A. Lehfeldt, who in virtue of his position as Professor of Economics in the University of the Witwatersrand, Johannesburg, is particularly well qualified to speak of the production side of the gold question, raises the issue in a manner calculated to challenge attention.

INTRODUCTORY NOTE.—There may be a scramble for gold, raising its value and depressing the general level of prices, or there may be a plethora of gold, leading to inflation of credit, with its consequent rise in prices. The present writer considers the latter risk to be the more serious in the years immediately ahead, and it is with the risk of inflation in mind that these articles have been written. But even if both departures from monetary stability are avoided for the next few years, a longer view of the world's monetary policy must be taken; money should not be exposed to the vagaries of goldmining, and the supply of the standard money-metal should not be dependent on private profit.

I.—DEFECTS OF THE GOLD STANDARD.

THE world has now expressed itself unequivocally in favour of the gold standard, but even before the war that standard was criticised, and the copious discussion that has accompanied the monetary difficulties of the period of recovery has made the world more conscious of the need for a good system of money, so that the question of what the next step should be is already present in the minds of inquirers. A few years ago the monetary systems of the world had been reduced to chaos, and the immediate problem was to get back to something stable enough for ordinary business. Some experts—Mr Keynes especially—regarded the opportunity as a good one for introducing a more scientific system of money, not based upon gold, but whether such an innovation would have been wise or not, the commercial public would have none of it. The existing situation was so deplorable compared with that which had been familiarly known before the war, that the ordinary man's one aim was to struggle back to the firm ground he knew.

The monetary question, then, is already settled to that extent. Not only the United States and Great Britain, but most of the smaller Powers, have restored the gold standard. France and Italy, which have not done so, are not holding back because of any theoretical doubts, but because they are not yet financially strong enough to accomplish what all the business world desires.

Granted, then, that the gold standard will soon prevail through nearly all the world, the question arises whether it is enough to have restored it, or if not, what further steps are needed. Even before the war the defects of the system had become so obvious that plans for reform were actively discussed. At present the tendency is to restore the old legal and customary forms, but they will not necessarily work in quite the same way, so there is all the more need to consider the possibility of improving on them.

A monetary system should aim at stability both of internal price level and of exchange. The effect of adoption of the gold standard throughout the world is to produce permanent stability of exchange; if, then, the alternative of a currency not based on gold is ruled out, only the problem of stable prices remains, but that becomes an international one. It is true that a few writers have argued in favour of continuously rising prices, but the suggestion need hardly detain us. Rising prices are commonly associated with prosperity, but that is because they afford exceptional profits to business men, and so stimulate the controllers of business to enhanced activity. It is a confusion of thought to suppose that this state of affairs can be made permanent; the exceptional profits are due to the rise in prices being unforeseen. If monetary policy were chosen in such a way that everyone knew prices would rise, the other shares in the product of industry would adjust their claims accordingly, and the stimulation

of business would not occur. We may, therefore, accept as the ideal, in common with most writers on economic theory, that the level of prices should remain constant.

The gold standard falls short of this ideal in two distinct ways. There are the rapid changes in price level associated with the cycle of good and bad trade; this cycle, according to English experience of the nineteenth century, had a duration of eight to ten years, but recent American observations appear to show a cyclical change occupying about three years. In either case, rising prices usually mean good trade, and falling prices the reverse, and changes amounting to 5 per cent. or more may occur within a brief period.

The other kind of price change is much slower, and is due to fluctuation of the supply of the money metal relatively to the demand for it. This movement usually continues for a long time in the same direction, so that its effects, though less violent than those of the trade cycle, are more far-reaching.

The trade cycle has attracted a great deal of attention of late years. Its causes are complicated and obscure, and consequently any proposal for avoiding or minimising its injurious effects is exposed to much uncertainty. The most important suggestion is that the central banks should control credit, during the expanding phase, in such a way as to check the rise in prices. Mr Hawtrey and some other writers appear to regard the origin of the cycle as purely monetary, and accordingly are satisfied that a monetary policy could control it; but the bulk of economic opinion holds that other than monetary causes play a large part in producing the cyclic movement. If this is correct, the discount policy of the banks, while important, cannot be relied on to do away entirely with the alternation of good and bad trade.

The use of monetary policy as a remedy is, of course, not new. The authorities, headed by the Bank of England, have long exerted themselves to control trade fluctuation, and not without effect, for the cyclic movement became less violent in the decades preceding the war than it had been in the middle of the nineteenth century. With the changed conditions now prevailing, and the greater influence of Government finance, the duty of the regulating authority is undoubtedly more difficult; it has to learn new lessons from experience, and endeavour steadily to improve its methods of handling the monetary situation. If the suggestion of a national currency of inconvertible paper had been adopted, it is possible that the policy of managing it might have been so perfected as to solve simultaneously the problem of maintaining steady prices, whether for a short or long period. It is not worth while to discuss this, however, since Britain has decided against inconvertible paper. Whilst gold is used control of credit is not enough, because the value of gold must ultimately depend on the cost of mining it; the larger and slower changes in value cannot be prevented through credit policy alone.

Something else is needed, therefore, and two proposals have been made. One of these is the well-known scheme of Professor Irving Fisher, according to which the monetary unit would no longer be defined by a fixed weight of gold, but by a weight adjustable from time to time so as to retain a fixed purchasing power. We do not intend to discuss this scheme here; it has many merits, but it would involve a great strain on the imagination of political and commercial men who are devoted to the gold standard. Our object is to seek for a method of regulation that would more readily meet with acceptance.

The other plan is to control the output of gold with a view to stabilising its value. The output could, of course, be controlled by a sufficiently powerful financial organisation, just as the output of rubber and diamonds has been. The organisation should not be a private syndicate, operating for profits as in the latter case, but a public authority aiming at the best monetary policy in the general interest. Before discussing the possibility of such an organisation, however, it will be well to consider what influence control would have on the value of gold.

Notes of the Week.

Hopes of Coal Peace.—Once again hope has arisen that a settlement of the coal dispute may take place by negotiation, and that the country may be saved from the disastrous effects of a long fight to a finish, which at best could hardly have ended much before Christmas, and would bring with it little hope of a stable future in the industry. The miners' delegate conference met in London on Thursday, and while not committing itself to definite terms, sanctioned a peace move through the mediation of the General Council of the Trade Union Congress. The mediatory committee of the latter body had a long session conjointly with the miners' leaders yesterday morning. Subsequently they visited Downing Street. Their visit was so far satisfactory that the miners' leaders followed them a few hours later. The precise stage to which the move by the miners towards peace has reached is not clear at the moment of going to press. But clearly a new leaf has been turned, and for things to have gone as far as they have the T.U.C. must have obtained from the miners and given to the Government some definite assurances of a satisfactory nature. There is no definite indication as yet that anything has occurred to change the uncompromising attitude of the owners. But if, as it appears, the miners have made a real advance on practical lines, it is the Government's clear duty to live up to the promise made by Mr. Churchill last week, when he said: "The Government are ready to use their good offices to bring together both parties.....We are even ready to legislate if one or other of the parties makes demands which are outrageously unfair." Meanwhile, the drift back to work continues, the increase in the number of miners at the pits being about 28,000 in the past week, the total having now reached over 294,000, as compared with a normal 1,107,128. The drift in the chief export districts continues to be very slow indeed. No statistics are available to show exactly how the return to work has proceeded since the stoppage began, and it is only comparatively recently that trustworthy figures have been issued. For the first three months, from May 1st to the end of July, the drift was a quite insignificant trickle, and on July 30th the *Times* said: "A few thousand men may be producing coal; but more than a million men and boys are refusing to work." In August the trickle turned into a stream in the Notts and Derby fields, and at one or two individual points. But it was not until September, the fifth month of the stoppage, that the drift set in in striking fashion. By September 15th the owners reported 56,000 at work in five districts, and by September 21st 76,000 in eight districts. By September 29th more comprehensive figures were available covering all districts, and giving the total then at work as 137,000, excluding safety men. This figure jumped next day to 149,000, making with safety men a rough total of 200,000. October brought an addition of about 68,000, and by the end of the month the total included 24,700 for Scotland, 27,000 for Yorkshire, and 19,000 for South Wales. Next week, peace or no peace, it appears likely that 300,000 men will be at work, but even if we accept the most favourable estimates of the current rate of output per head we could hardly put the coal production likely next week above 1½ million tons; and although this is sufficient to ease the domestic position considerably, the chief export districts remain largely out of action. We trust, however, that all such estimates will be rendered nugatory by the success of the negotiations to which the door was yesterday reopened, and that we may quickly come to the end of the most futile and costly disturbance in the history of British industry.

Mussolini's Latest Escape.—Signor Mussolini has a charmed life. On Sunday last he once more had a very narrow escape from assassination, the bullet this time being fired by an apparently demented boy. The strong criticisms which from time to time we have passed upon his régime and his policy in no way qualify the congratulations which we offer him upon his repeated escapes and the pluck which he displays. The circumstances under which the last attempt on his life took place made it

certain that popular manifestations of Fascist indignation should be of a pronounced character; for the attempted murder took place on the occasion of huge organised Fascist demonstrations at Bologna to celebrate the anniversary of the march on Rome. The prompt lynching of the miserable assailant, although repulsive to English ideas, was an event that might have taken place under parallel circumstances in any Latin country. The search for accomplices and attempts to unveil a widespread conspiracy appear to have failed altogether; but all opposition newspapers have been indefinitely suspended, and a fatal riot at Genoa and the arrest and release of an English lady, are illustrative of excited activities on a small scale by the boisterous followers of the Duce. Action, too, has been promised in response to the demand for stern measures against the enemies of Fascism. For a moment, too, it looked as though international complications might arise out of the event. Following a Fascist indignation meeting at Ventimiglia, on the French frontier, several Frenchmen were assaulted and the French Consulate was invaded by Fascists, one of whom addressed the crowd from the Consulate balcony. Fortunately, however, this incident, which might have had ugly consequences, was quickly followed by repudiation and apology by responsible Italian Government officials, which seem to have been sufficiently full and prompt to avert the development of any serious degree of Franco-Italian friction. The incident is, however, just sufficient to remind us of the dangers of bodies of armed, undisciplined, and fanatical Fascists, and to ask once more, with a slightly accentuated anxiety, what repercussions the Mussolini régime may yet have in Europe. After Mussolini, what next?

Our Index Number.—Although the general tendency of commodity prices in the past month was in an upward direction, the net movement in our Index Number is a decline of 9 points, thanks to the further fall in textile prices, and particularly in raw cotton. The total is now 4,237, as against 4,246 a month ago and 4,053 six months ago, when the coal stoppage began. The following table gives comparative figures for the five groups and the total:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.)	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.)	Total.	%
Basic (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	879	352	616	464	553	2865	118.6
" Nov., 1918	1289	782	1848	903	1389	6211	282.6

" Oct., "	920	721	880	976	738	4237	192.6

* Corrected figures.

Wheat and flour have risen and potatoes advanced sharply, but these movements were partly offset by declines in meat prices. In subsidiary foods an increase in sugar and coffee was partly counterbalanced by a reduction in tea. In the textile group the bumper yield of American cotton and favourable reports of the Egyptian crop have produced a further fall in raw cotton prices, wool has weakened, and flax and jute are lower, with the result that there is a decline of 62 points in the textile section. Pig-iron is at scarcity prices, and there are now no fixed quotations for manufactured iron and steel, but one or two works have been able, with difficulty, to maintain operations on imported material. Substantial premiums, it is reported, are being freely paid for any early deliveries obtainable. Prices for imported coal are unchanged, and the non-ferrous metals are slightly

lower. In the miscellaneous section changes were few and unimportant. In the table below we give the changes in each commodity's index number as compared with the end of September, the figure 50 representing in each case the average for the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—For.	113½	+ 15	Cotton, A	61	- 12½	Copper	48	- 1½
English	90½	+ 5	Cotton, B	99½	- 17½	Minerals	976½	+ 13½
Flour	100	+ 10	Yarn	82	- 7			
Barley	91	- 3	Cloth	96	- 6			
Potatoes	66	- 3	Wool, Eng.	108	- 5	Baltic timber	85	..
Rice	78	+ 19	Do Aust.	102	- 2½	Amer. timber	77½	..
Beef	123	+ 2	Silk	85	- 5½	Leather	61½	+ 1
Mutton	61½	- 6	Flax	81½	- 5½	Petroleum	108	..
Pork	85½	- 1½	Hemp	66½	+ 3½	Oils	73½	..
	111	- 13½	Jute	99	- 9	Oilseed	69	..
Cereals & meat ..	920	+ 27	Textiles	880½	- 62	Tallow	76½	..

* Corrected figures.

At the end of April, just before the general strike and the coal stoppage, cereals and meat stood at 154, other food at 193, textiles at 162, minerals at 154, and miscellaneous at 139.

Belgian Loan and the Stags.—The principal excitement of the present week has been that aroused by the issue of allotment letters in respect of the Kingdom of Belgium 7 per cent. Stabilisation Loan, of which £7½ millions sterling were offered at 94. The tempting price aroused remark on all sides, writes a Stock Exchange correspondent. When the prospectuses came out queues stretched outside the offices of the three issuing houses, one queue being a measured mile long, half an hour before the bank started to hand out the documents. Forms of application were being sold for a shilling each by office boys, who managed to get hold of a few on their own account. The underwriting commission of 1½ per cent., involving something over a hundred thousand pounds, became characterised as money for nothing, although, of course, it was essential that success should be secured. The subscription lists remained open for about a quarter of an hour. It is understood that the amount was written for some 40 times over, and it would be interesting to know what proportion of the £290 millions was subscribed by the stags. Everybody had to pay the trifling application money of 5 per cent. The issuing houses, the Westminster Bank, Messrs Baring Brothers and Morgan Grenfell and Co., got through the work of allotment from an expedition that must have aroused enormous interest in the Bank of England itself. On Tuesday morning in this week, the day when the Stock Exchange returned to town after its All Saints' holiday, the market opened before ten o'clock in the morning. The first price quoted was 4½ premium. As the New York portion of the loan had already become negotiable in Wall Street on the basis of 4 premium, the bid of 4½ aroused surprise. It tempted the stags to hold back, rather than to sell. More than the

total of the loan must have been negotiated during the first day of dealings, the net result being a rise to 5½ premium, while on Wednesday this was improved upon to the extent of another ½, the premium rising to 6, making the fully-paid stock 100, less 6s for the discount allowed for paying up in full on that day, Wednesday. No such issue could be made without arousing a good deal of criticism and dissatisfaction. The genuine investor complains, justifiably enough, that his desire to obtain a sound bond at a low price was frustrated by the eagerness on the part of the stags to snatch a premium of several points which he, the genuine investor, would have to pay if he desired to increase his stake beyond the extremely modest amount of allotment that he may have secured. The stags had their own private cause for complaint through the throwing out of all applications up to £1,000, though, as the stag generally indulges in operations on a scale of greater magnitude than this, he had little cause for grumbling, particularly in view of the premium that developed. It is obvious that the trifling amount of application money, namely, 5 per cent., had a great deal to do with the enormous volume of subscriptions. If it had been fixed at 25 per cent., this would have cut down the applications in a very substantial manner, and it might also have had the effect of enabling the genuine investor, who was applying with money that he wished to use in the purchase of the stock, to obtain a larger proportion of his subscription. It is known that more than one application was received for the full amount of the loan, namely, £7,250,000, the application money on which amounted to £362,500. A payment of 25 per cent. on application, which would have involved £1,812,500, might have given such applicants pause. It would undoubtedly have curtailed the activities of the many stags. If the latter are to be held in anything like check when there is a big popular loan afoot, with the prospect of a respectable premium directly dealings start in the Stock Exchange, a larger application than 5 per cent. will be needed to give the real investor an opportunity for getting any reasonable proportion of his requirements.

Labour and Industrial Ownership.—A Labour correspondent writes:—Recent events in the political and industrial fields suggest that in the near future British Labour may modify to some extent the Socialist basis hitherto recommended as a solution of the economic problem. Several broad features in the domestic controversy are discernible. State Socialism of the old school is clearly in a bad way; emphasis is everywhere laid on the importance of industry being run, in the public interest, by the people who are strictly familiar with it. In the evidence tendered to the Royal Commission on the Coal Industry, and endorsed by the Miners' Federation, the Labour party urged the desirability of such reorganisation as steered clear of political interference. Some years ago the guild Socialists made considerable running; to-day their appeal is negligible. The Syndicalists have only a handful of supporters. On the other hand, the theory of the public corporation has made a marked advance. The recent Report of the Broadcasting Committee, recommending the establishment of a broadcasting public corporation, responsible to the Postmaster-General, but given great freedom in the development of this public service, has been widely quoted on Labour platforms of the more constructive order as an example of principle which should be applied to other industries, especially where they are monopolistic or quasi-monopolistic in character. Many believe that that must ultimately be the form of ownership for the coal industry; and they also consider that the Railways Act, 1921, and the formation of the four large railway amalgamations paved the way for it in that sphere. In political controversy many of the Labour members regard such a development as the only logical deduction from Mr Keynes' pamphlet on the passing of *laissez-faire*. This tendency is strengthened by some of the candid lessons of the prolonged coal stoppage of the present summer and the boom in American industrial policy. The first has revealed to industrial and political labour that the large unions, after a month or two of conflict, are practically helpless. Very speedily the Miners' Federation came to the end of its resources; other trade unions, especially in the railway world, have considerably mortgaged

their future. Without financial backing there can be no effective contest with a body of employers who achieve substantial agreement among themselves. The second recalls the fact that American trade unions have pursued the policy of steadily increasing their investment in industrial and other stocks, together with the interesting development of labour banks. Efforts to the same end have been made in many of the schemes of industrial co-partnership in Great Britain, but recently it has been shown that individual trade unionists were able to subscribe to only a limited extent, and that purchase on the scale necessary could probably only be undertaken by the unions themselves. Mortgaged as they are to-day, this suggestion is of merely academic interest; but there are many who believe that after the coal stoppage is over and industry begins to recover, the trade unions should analyse this problem in a much more determined and constructive manner. Political and industrial leaders think it should be possible to reconcile such a tendency with the wider movement towards public corporation, which they feel will make a far stronger appeal to the masses of the electorate than a Socialism which has been fastened on to the Labour movement, but whose implications have never been brought home to the rank and file.

France and the Eight Hours Day.—Our Paris correspondent writes:—The economic prejudice caused by the rigid application of the eight hours law is again, under pressure of present circumstances, attracting a good deal of attention. In France the law covers all trades and industries, whether private or public, but the exact method of its application is left to each trade to settle, in accordance with its own special circumstances. The law itself stipulates that "the effective labour of any employee shall not exceed eight hours per day, or 48 hours per week, or an equivalent limitation spread over a period other than that of a week." In many trades advantage was taken of the latter part of the clause to compensate for the loss of working time caused by public holidays, stock-taking periods, &c., by lengthening to an equivalent extent the normal legal hours of labour during the weeks in which these non-working periods fell. Since the advent of the Herriot Government in 1924, however, the trade unions have succeeded in securing the suppression of several of these permissive "make-weight" arrangements, while the practice of according "permanent" or "temporary" extra time has been suppressed by decree. These modifications are proving onerous to both employers and employed now that the country is anxious to increase production to the utmost. An instance of this was seen recently when a manufacturer was distraised upon for the non-payment of fines for exceeding the eight-hour limit. The sale opened amid loud protests from the firm's employees, and not a single bid was offered for the goods distraised on. Eventually the employer caused the distress warrant itself to be offered for auction, and it was knocked down amid cheers for 1,000f, which satisfied the distress. On the other hand, the premises of a Paris cabinet-maker have been sacked by unemployed workmen, owing to alleged infringements of the eight hour law, and several thousand francs' worth of material destroyed.

National Bank of Belgium Charter.—Our Belgian correspondent writes:—In connection with the latest measures for currency stabilisation, the regulations introduced by the previous Minister of Finance, Mr Janssen (see *Economist*, December 12, 1925, page 996), have been amended in certain directions, and the present position of the National Bank can be summarised as follows:—The share capital of the National Bank is to be increased from 50 million to 200 million francs (40 million belgas). The conversion of notes at sight will be made by the National Bank, either in gold, silver (at gold value), or foreign exchange, at the choice of the bank, and under conditions which the bank will determine after approval of the Minister of Finance. If the National Bank does not execute its obligations in connection with the monetary stabilisation, it will have to refund to the Treasury the equivalent in gold of the product from the stabilisation loan (about 90 million dollars) which has been handed

over to the bank in deduction of the State debt to the bank. The notes and deposits will now have as a counterpart the following assets of the bank:—(1) The gold and gold exchange reserve, which must be maintained at not less than 40 per cent. of the liabilities at sight, of which a minimum of 30 per cent. must be in gold. (2) Discounts and loans. (3) Government securities. These may only be acquired by the bank after authorisation by the Minister of Finance, and their total may not exceed the aggregate amount of the bank's capital and reserve fund. This is to prevent the bank from making indirect advances to the State through the purchase of Government stock. (4) Balance of the State debt to the bank (about 400 million belgas). This debt is to be paid off as soon as possible by means of the resources from the fund for amortisation of public debt, and may never be increased beyond the present amount. As to profits, the bank is to credit the State with (1) the income yielded by the foreign securities held by the bank, after deduction of a commission of 0.1 per cent. per half-year upon the average amount of these foreign holdings; (2) the profits derived from the use of the foreign credits which have been obtained in connection with the stabilisation, after deduction of 0.1 per cent. per half-year upon the amount of these operations; (3) the profits made by the bank above a discount rate of $3\frac{1}{2}$ per cent.; (4) 2.25 per cent. upon any reduction in the amount of the foreign securities, derived from the stabilisation loan, which is not compensated by a corresponding increase in the gold reserve or by a corresponding decrease in the liabilities at sight of the bank. The State is to pay to the bank 0.25 per cent. on that part of the circulation corresponding to the advances of the bank to the State. The net profits are to be divided as follows:—(1) Preference dividend of 6 per cent. to shareholders; (2) of the balance 10 per cent. to reserve fund and 6 per cent. to the staff, &c.; (3) of the remainder three-fifths to the State and two-fifths to shareholders or to a special reserve fund. After the expiration of the charter of the bank (December 31, 1952) the three-fifths of the reserve fund will belong to the State. Provisions for administration are as follows:—The bank is to be administered by (1) a "Comité de direction," consisting of the governor and three directors, of which one will act as deputy-governor; (2) a "Conseil de Régence," consisting of the above board of directors and of nine "Régents"; (3) there is, further, a "conseil des censeurs," consisting of ten censors. The governor is appointed for five years by the King; directors, régents, and censors are elected by the general meeting of shareholders. Neither the governor nor any of the directors may be a member of the board of any commercial or industrial undertaking, with the exception of the Bank of Issue of the Colony. A "commissaire du Gouvernement" (Government delegate) inspects the operations of the bank. The Government has the right to control all operations of the bank and to oppose any measure which is contrary to the regulations of the bank, to the law, or to the interests of the State.

Greek Finance.—Our Athens correspondent writes:—By a contract entered into in May, 1925, between the Greek Government and the National Bank of Greece, and modified by a new agreement concluded in April last, the National Bank has undertaken the management and liquidation of the real estate property left in Greece by the Turks exchanged against Greeks from Turkey, in accordance with the agreement of Lausanne for the exchange of populations and properties between Greece and Turkey. This agreement provides for the constitution of an international commission, whose task is to value the properties thus left in each country. The difference resulting from these valuations will be finally paid by one State to the other. Each State undertakes to indemnify its nationals for the property they left in the other when they migrated, from the proceeds of the property abandoned in it. As, however, this valuation will be completed very slowly, and the Greek refugees are in urgent need of assistance, the Greek Government is proceeding to an independent appraisal of the property left in Greece, for the purpose of liquidating it and paying out the proceeds to its nationals, who are entitled to indemnity and who have not received

settlement from the Government. The value of the property these refugees have left in Turkey, and for which they are entitled to indemnity, is being fixed by special committees created *ad hoc* by the Greek Government. Until now the National Bank has received land valued at 4 milliards drachmae. Pending the sale of this property, and in view of the bad financial conditions of the refugees, it has been decided to mobilise part of the value of the property to be liquidated, by the issue of bonds to be distributed to the beneficiaries in lieu of cash. The National Bank is, therefore, issuing a first series of bonds of a nominal value of Drs 2,500,000,000. These bonds bear interest at 8 per cent. per annum, and are guaranteed by the Greek State and secured by a first mortgage on the property. With a view of maintaining, as far as possible, the nominal value of these bonds, special guarantees have been given as regards the regular payment of the coupons due and the redemption of the capital. The latter will be effected in two ways—(1) by receiving the bonds at their face value in payment of rents and in settlement of the value of properties sold, and (2) from the proceeds of properties sold in cash. A special clause of the relative agreement between the Government and the National Bank provides for the raising, at a later date, of a loan in pounds sterling or dollars for the total redemption of the bonds. In pursuance of pressure exercised upon the Government and the political parties by a representative committee of the refugees, it has been decided that the National Bank will advance in cash to the beneficiaries one-fourth of the value of the above bonds, say, 625 million drachmae, retaining an equal amount of bonds at their nominal value. Payment of these advances and distribution of the bonds will begin on November 1st, and should be completed in four months. The Council of the League of Nations will discuss, at its December meeting, the application of Greece for the issue of a supplementary loan for the settlement of the refugees. Meanwhile, the Government has thought it advisable to solve the pending question of the funding of the War Debt of Greece to England. It finds that the present moment is favourable for coming to an agreement as to the terms of funding, which, once effected, should pave the way for the issue on the London market of the refugee loan, and for the carrying out of other financial operations relating to the improvement of the finances of the country and to its economic development. M. Venizelos has agreed to represent Greece in the necessary negotiations with the British Treasury. Though nothing official is known as to the proposals to be made by Greece, it is understood that the terms of funding of the Italian War debt will be taken as a basis. However, on the strength of the agreement of 1918, between the British Treasury and the Greek Government, and in view of the economic and financial difficulties of Greece, a reduction of the nominal amount of the debt will be requested.

The Turkish Budget for 1927.—Our Constantinople correspondent writes:—The estimates for 1927, which have just been published, do not disclose any substantial variations on the figures for the current financial year, which is now drawing to a close. Expenditure for 1927 is estimated at £T188,141,708, as against £T189,407,764 for 1926, and £T166,953,127 for 1925, a considerable economy being thus effected in favour of 1927. A budgetary provision of £T240,000 is made for the new "Council of State," which department is to be restored by the Republican Government, after having been suppressed when the Sultanate was overthrown. Expenditure on the fighting services and on military equipment, although showing a slight decrease upon last year, still accounts for close upon half of the total budgetary appropriation of 188 million liras, the exact proportions being 43.50 per cent. for 1927, as against 47.25 per cent. for 1926. The provision for the service of the public debt at £T10 millions or, say, £1,000,000, remains approximately the same as last year. This sum is totally inadequate to meet Turkey's commitments to her foreign bondholders even on her present substantially reduced capital liability. So far as the other side of the Budget is concerned, it is anticipated that, with the new taxes lately

introduced, and the revenues from the newly created monopolies, the revenue will just be about sufficient to provide the requisite equilibrium.

German Shipping Rationalisation.—The fusion, ratification of which was announced last week, between the Hamburg-American Line and the Deutsch-Austral, Kosmos, Stinnes group, marks an important step in the process of concentrating and "rationalising" German shipping. Here, as in other branches of German industry, the policy of forming "vertical" trusts, connecting the business of shipowning with producing organisations on land, has long been discarded. The objective of the leading concerns has been to achieve the combination into large, completely fused groups of all the enterprises whose interests would benefit by removal of overlapping and wasteful competition, or by the economies in administration realisable under single control. A little less than a year ago, it will be recalled, the North German Lloyd of Bremen absorbed, through exchange of shares, the Hamburg-Bremen African Line, together with the three-score vessels of the Roland Line, and the tonnage operated by the Horn Shipping Company. The effect of this amalgamation was to bring the tonnage directly owned by the N.G.L. to over 600,000 gross tons, and greatly to strengthen the Combine's position as a cargo-carrier, both in the African and South American trades, and also in European waters. The next move was made in January of this year, when the amalgamated Deutsch-Austral and Kosmos Company bought up the Hugo Stinnes Lines, thus uniting nearly 320,000 tons of shipping under one control, and constituting itself a serious potential competitor to "Hapag" and the N.G.L. in the matter of cargo-carrying services. The present fusion restores to "Hapag" its old position as Germany's largest group in respect to tonnage owned—the combined Hamburg-America fleet being now nearly 800,000 gross tons, or 80 per cent. of the tonnage owned by it before the war. In sum, "Hapag" and the N.G.L. now hold the unchallengeable place of "Big Two" in the German shipping world, possessing between them (when account is taken of the Woermann and East African Lines' tonnage which they jointly control) almost 50 per cent. of the whole German mercantile marine. (Outside these two concerns there are now only seven firms whose individual tonnage exceeds 30,000 tons gross, and several of these own exclusively small vessels whose operation does not extend overseas.) Whether further absorptions will follow is a matter of speculation. The N.G.L. has this week announced that it will increase its capital, but there are limits to the extent to which shipping management can be economically concentrated, and since the "Hapag" and N.G.L. Combines are understood to have reached a friendly understanding on lines of mutual co-operation, and are now each in a position of considerable strength *vis à vis* international "conferences," it seems unlikely that either concern would care at present to merge its identity in a single comprehensive trust. The process of absorbing further tonnage into the "Big Two" will probably continue, though this also may await the gathering of the fruits of internal administrative reorganisation foreshadowed in the fusions already effected.

Conditions in Costa Rica.—A correspondent writes: The national finances of Costa Rica have shown little improvement of late years, nor does the current period seem destined to show any sensible amelioration. Notwithstanding these conditions, an unquestionable advance has occurred in the general economic position of the country, particularly in regard to foreign trade. Again this year—so far as it has gone—there has been an excess of expenditure over receipts, thus repeating the experiences of last year, when revenue amounted to 542,450,389 paper pesos and 179,550,281 gold pesos, against an expenditure of 635,252,447 paper and 169,834,126 gold pesos, leaving a deficiency (after reducing the gold balance to paper) of 63,653,593 paper pesos. Unfortunately, this adverse balance came as a supplementary charge to the accumulated deficit upon previous years, the shortage, amounting to 34,155,000 paper pesos, and the "uncollectable debts" due to the Treasury of 49,283,960 paper

THE BRITISH LINEN BANK.

Every Description of Home and Foreign Banking Business transacted

pesos, forming together a deficit of no less than 144,586,754 paper pesos. Yet even this sum does not fully represent the unfavourable position of Costa Rica. With a foreign debt of £26,083,092 and \$25,037,578, the country has to provide for an internal debt of 4,220,000 gold and 263,787,031 paper pesos. These are the figures officially presented up to the end of last year, at which period the gold guarantee of the nation stood at 406,078,572 pesos, and the paper guarantee at 42,358,000 pesos. Costa Rica, notwithstanding its attractive name, is rather less wealthy than some of its immediate neighbours, and the State's heavy national indebtedness forms a severe handicap upon its people, estimated at little over half a million. In regard to the country's foreign trade, conditions, as has been noted, have improved of late years. For 1924, for example, the exports (£3,697,596) showed upon comparison with those of the previous year (£2,640,321) an improvement of over £1,000,000. There was a further improvement in 1925, which has been continued well into the present year. In terms of currency the foreign trade of the 1925 period reached 120,948,158 colones, representing \$58.06 gold *per capita*. Costa Rica to-day ranks fifth among the Latin-American States as regards *per capita* in foreign trade, the others being Argentina, Uruguay, Chile, and Cuba in the order given.

Retail Co-operative Trade.—In the *Economist* of May 29th we gave the estimate of the Co-operative Union as to the position of the retail societies as submitted to the Belfast Co-operative Congress. The statistics have now been completed, and confirm the previous calculation. So far as the final returns are concerned, a correspondent writes:—There are now 1,420 societies of all kinds, and the membership of all types of co-operative organisations is now 4,960,883, with a capital at the end of 1925 of £97,793,229, an increase of £5,867,026. Their total turnover was £295,828,010, an increase of £14,237,109. Of this amount, £183,584,049 was done by the retail societies, the remainder being the trade of the wholesale and the productive societies with these distributive societies. The movement employed 204,366 people in its factories and shops, of which 45.94 per cent. were engaged in production, the respective wages bills being £12,339,847 and £13,987,267. There are now 1,289 retail societies, as compared with 1,452 20 years ago. The tendency is towards amalgamation in many districts, and the average number of members per society is now 3,810, as compared with only 1,483 in 1925. There are ten societies with a membership of over 50,000, these being London, Woolwich, Leeds, Birmingham, Liverpool, Barnsley, Plymouth, Edinburgh, Newcastle-on-Tyne, and Bolton. There are 612 distributive societies with a membership of under 1,000. As compared with 1924 the southern societies had the greatest rate of increase, an advance of 61,027 members carrying the total to 773,354, this comparing with the 1,079,324 in the Manchester district, where the increase was 47,767. The average shareholding of the individual shareholders is now £17.42, an increase of £.36 per member, while the loan capital is now £3.08 per member. Reserve funds have increased by over half a million to £6,027,578, this being equivalent to 5.99 per cent. of the share and loan capital. The stocks in the retail stores were only

increased £10,884 in the twelvemonth to £18,917,920, and the last three years have shown a quicker rate of turning these over. In 1925 they were turned over 9.7 times, in 1924 9.26 times, and in 1923 8.42 times—a very satisfactory tendency from the trading point of view. The debts owing for goods supplied to members rose to £3,159,388, being highest in the South Wales section, where they were £3.06 per member. In Scotland the average indebtedness was £1.12, and it fell to as little as £0.27 per member in the Midland counties. The total trade of the retail societies averaged £37.38 per member, a slight increase on the previous years. It rose to £52.94 per member in Scotland, but in the Southern and the South-Western counties fell to £29.13 and £27.45 respectively. In Lancashire and Yorkshire it was on the level for the whole of the country. The surplus for 1925, after paying £3,617,886 as share interest, was £16,861,894. The gross surplus represented 19.71 per cent. of the share capital and 9.18 per cent. on the retail sales. Thus the distributive movement recovered completely from the slump years, which caught it with heavy stocks and falling markets. But whether the turn-over for 1926 will reach that for 1925 is dependent on the phenomenal progress of the societies in the Metropolitan area producing trade enough to compensate for the heavy decreases that have been noted on the north-east coast and in some of the mining areas. At the moment it would seem that the movement will just about hold its own during an industrial depression which affects the customers of co-operative stores more than any other class of consumer.

The Pitch Export Prohibition.—The recent prohibition of exports of coal-tar pitch—a restriction which is now recognised as unnecessary—supplies another instance, writes a correspondent, of the apparently haphazard methods adopted by the Board of Trade when any suggestion of protection is advanced. Patent fuel makers in South Wales, who require pitch as a binder in the manufacture of briquettes, complained that owing to the shortage of this product consequent upon the coal stoppage, supplies were insufficient for home requirements. Exports, therefore, were to be prohibited in order to safeguard this British industry. The Board of Trade, attracted no doubt by the nature of the application, obligingly complied with the fuel makers' request without, it would appear, reviewing all the evidence. Spirited protests from other quarters speedily disillusioned the Department, and it is doubtful whether many, or indeed any, shipments to overseas customers have been held up. The reason for the failure of the prohibition is not far to seek, and reveals it to be another attempt to use a pre-disposed Department in evading the ordinary laws of supply and demand. The market for pitch is notoriously subject to fluctuation, and a glance at the events leading up to the present position is illuminating. For some three or four years now British production of pitch has been falling in volume—677,000 tons in 1923, 625,000 tons in the following year, 520,000 tons in 1925, and again less this year. A large export trade takes place in this commodity, amounting in 1923 to 414,000 tons, but falling to 315,500 tons in 1924—a decline accompanied by a steady reduction in prices. Last year the large stocks forced producers to reduce prices still further; indeed, sales proved unremunerative at the 40s per ton ruling. Larger exports (nearly 400,000 tons) coupled with the drop in output improved the statistical position towards the end of 1925, and at the beginning of 1926 57s 6d was demanded. At the beginning of the coal strike the price had risen to £4 5s, and has since moved up steadily, until at the present time the quotation holds at £9 to £10 per ton. Foreign consumers have been quite willing to pay these enhanced rates, and this is confirmed by the increased exports during the current year, while forward contracts are still being booked for the supplies available. Hence the proposal that exports should be stopped, and prices forced down by the accumulation of stocks that would ensue; for one point overlooked by the Board of Trade was that small coal, from which briquettes are made, is practically as scarce as pitch, and for the same reason. Though it is hardly to be expected that the

"prohibition" will be lifted until the termination of the coal dispute, there is every reason to believe that it will continue a nominal restriction.

Copper Fluctuations and Export Control.—Some stimulus was recently imparted to the market for standard copper by the initiation of operations by the Export Combine. The price was quickly lifted about £2 per ton, and touched £60 10s for three months delivery. Covering operations played some part in this rise, but it was not long sustained owing to unsettling Wall Street influences and lack of support by dealers here. The market early this week saw the forward price down again to £58 10s. A clear reflex of the export control at work in fine copper is that the value of electrolytic has been fully retained at the same level since the control was enforced. So far as can be gathered liberal European buying of American copper took place immediately after the stabilisation of the price at 14.40c c.i.f. Europe, according to port, but demand has since slackened off distinctly. There has been a good deal of adverse criticism in merchant circles on this side about the working of the new organisation, which is now being found detrimental to the European manufacturing trades. The latter, before the combine came into force, had the advantage of free open competition by producers and dealers, and were generally able to secure copper more cheaply than their American competitors. This has now been entirely reversed, although it may be attributed in some degree to the much higher freights now exacted to European ports. As the American price to domestic users is free from control, and has been reduced lately a little, they are better able to compete in the export markets, especially South America, at the expense of the European manufacturers. It may be mentioned that American copper sheets and other descriptions of manufactured copper have been sold to South America on terms very considerably below those quoted by British manufacturers. Reports from America suggest that Brussels is to be the headquarters of the Copper Exporters Inc. in Europe, and that when its offices are opened with a competent staff it will receive by cable the daily official selling price from New York. According to the official returns issued this week by the London Metal Exchange, the total U.K. warehouse stocks of copper amounted on October 30th to 38,007 tons, made up of 33,982 tons of rough bar standard, and 4,025 tons of refined copper. These figures compare with 39,029 tons, 36,346 tons, and 2,683 tons respectively on September 30th. Therefore, while the total indicates a decrease of 1,022 tons, there was an increase in the holdings of refined copper of 1,342 tons, against which another considerable reduction of 2,364 tons was noted in the stock of rough standard material. Since the beginning of this year there has thus been a shrinkage of roughly 20,000 tons in the 33,982 tons in rough bars, and further reductions are likely over the remainder of the year.

The Anglo-Persian Meeting.—In last week's issue we discussed the prosperous results shown by the Anglo-Persian Oil Company's report, and on later pages of this issue will be found a full report of the chairman's review of the company's position, delivered at the annual meeting on Tuesday. The public interest taken in this concern is something more than the natural interest taken in British industrial ventures of this magnitude. It is enhanced by the fact that the British taxpayer is a shareholder, and to him it is comforting to find that this Government investment, in sharp contrast with some others, has proved decidedly profitable. Sir Chas. Greenway concluded his comprehensive and decidedly satisfactory survey of the position by announcing his retirement from the chairmanship, and well-deserved tributes were paid to his work by Lord Bradbury and Sir Hugh Barnes. In his successor, Sir John Cadman, the company will have another able chairman.

Dalgety and Co.—The well-known Australasian pastoral undertaking of Dalgety and Co., Limited, continued its career of prosperity during the twelve months to June 30th last. As will be seen from the following table, profits were lower than in 1924-25; but, taking all the factors into consideration, the concern can be held to have done very well:—

Year Ended June 30.	Profits.	Expenses and Taxes.	Debt-Interest.	Pref. Div.	Ord. Div.	Rate.	Reserve, &c.	Carried Forward.
1906 ..	£ 371,591	£ 148,171	£ 114,439	£ ..	£ 70,000	% 7	£ 40,000	£ 55,381
1910 ..	542,534	198,362	122,364	25,000	80,000	8	110,000	77,579
1914 ..	570,510	245,434	105,593	25,000	80,000	8	10,000	197,015
1915 ..	582,097	258,048	107,377	25,000	80,000	8	100,000	208,687
1916 ..	643,931	322,210	107,864	25,000	100,000	10	100,000	197,544
1917 ..	861,793	484,448	107,119	25,000	130,000	13	210,000	102,771
1918 ..	875,369	510,304	104,065	25,000	140,000	14	85,000	113,770
1919 ..	857,773	494,475	101,141	25,000	140,000	14	90,000	120,928
1920 ..	957,298	566,470	98,251	25,000	150,000	15	110,000	128,506
1921 ..	689,168	445,176	103,386	25,000	100,000	10	60,000	84,112

A slight reduction in expenditure was secured owing to a smaller liability to income-tax, but against this debenture interest was higher. A reduction to £25,000 was made in the allocation to reserve, but this amount, together with a further £25,000, was appropriated for the payment of a bonus on the salaries of the overseas staff. The balance-sheet shows that the cash holding has risen from £133,227 to £471,982. Investments, however, are lower, the total being £23,893, compared with £286,847. This decline is apparently due to the realisation of £239,200 5 per cent. National War Bonds and a smaller amount of 3½ per cent. conversion loan. In addition the reserve fund stands at £1,000,000, and is invested in sound securities, of which a detailed list is given in the balance-sheet. Advances are also lower, the present figure totalling £4,883,404, against £5,241,627. The directors state that the early part of the season caused grave anxiety in some States, but since then copious rains have fallen, and in Victoria, New South Wales, and South Australia the season is excellent. Wool prices have been steady, on a payable basis, and the incoming clip is likely to be less than last season. The outlook for the wheat crop is regarded as particularly favourable.

Snia Viscosa.—Much interest, writes a textile correspondent, has been shown in the forthcoming meeting of the Snia Viscosa to take place in Turin on November 11th, and in view of the nature of the proposals on the agenda the investors in this concern are naturally somewhat perturbed. It is understood that a proposal will be put forward that the capital of one milliard lire be reduced to L. 750,000,000, and that the amount set free be transferred to reserve. A further proposal is that the capital of the company be increased, and that a debenture issue be made in London. It is said that a sum of £1,400,000 will be asked for, but no terms have been mentioned. Proposals such as these require some explanation, and it is to be hoped that at the meeting full details will be made available as to the position of the company. Meanwhile, the London agents have issued a statement, which shows that the company are selling more yarn now than on any previous occasion, and that the proposed financial readjustment is in a large measure due to the present currency position in Italy. In the absence of complete details, it is impossible to ascertain the exact state of the finances of the company, but as English firms have audited the books and valued the assets, there is little doubt that, subject to the adjustment of the capital now proposed, these are in order. Certain facts relating to the Italian industry as a whole are, however, known, and are worthy of the closest attention of the shareholder or of the investor who may be approached with a view to future investment. The Snia Company state that sales of yarn up to October 20th amounted to 7,449,000 kilos, and that this amount was in excess of last year by about 1½ million kilos. This is all to the good and quite up to expectations. It is further said that over 75 per cent. of

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,512,884

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted on application.

On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.

JAMES STEUART, Chief Manager.

this amount was exported. The crux of the matter, however, really lies in the price obtained for the yarn. The Snia exports constitute a very large proportion of the total Italian exports, probably over 75 per cent., and the average price obtained by the Italian exporter during 1926 has been L. 20 per kilo less than in 1925. It may, therefore, be safely inferred that the prices obtained by Snia have been from 20 to 30 per cent., or possibly more, less than last year, and that profits have been quite insufficient to allow of any approach to last year's dividend rate. Further, the former dividend was paid on a capital of L. 600,000,000, whilst now the full amount of a milliard lire is paid up. In regard to the debentures proposed, it is true that the present position in Italian finance does not allow of the continuance of bank loans, and renders the raising of debentures abroad imperative; but the amount of L. 33,526,280 for interests, allowances, and bank commissions appears to show that these transactions were on a large scale even in the better times of 1925.

Joshua Hoyle.—The depressed conditions prevailing in the Lancashire cotton industry during the past year are reflected in the latest accounts of the well-known textile firm of Joshua Hoyle and Sons, Limited, which cover the 12 months to September 30th last. The principal figures are analysed below and compared with those for previous years:—

Year Ended Sept. 30.	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.
Profit	£ 110,697	£ 193,167	£ 194,118	£ 274,609	£ 173,348
Brought forward	48,486	15,652	18,183	22,355	23,710
Debiture interest	159,183	208,819	212,301	296,964	197,058
Preference dividend	52,531	79,371	79,696	79,879	80,024
Ordinary dividend	52,500	53,375	54,250	54,250	56,000
Renewals & reserves, &c.	18,499	30,500	31,000	62,000	32,000
Carried forward	(2½ %)* 20,000	(5 %) 27,390	(5 %) 25,000	(10 %) 75,000	(5 %) 10,000
	15,653	18,183	22,355	23,710	19,034

*Free of tax.

The directors state that the general strike and the difficulties in the coal trade "have had a serious effect upon the company's trading, and, in addition, there was a heavy fall in cotton values at the date of the company's stocktaking." It has, therefore, been found necessary to reduce the appropriation to renewals and reserves from £75,000 to £10,000, while the ordinary dividend is also halved at 5 per cent., leaving a smaller balance to be carried forward. Stocks figure for £895,429, against £1,003,709, and accounts owing and cash at bank and in hand (which are lumped together under one heading) have declined from £736,663 to £698,482. Against this accounts owing by the company have gone up from £111,722 to £181,788.

Hudson's Bay Land Sales.—The statement of Land sales for the quarter ended October 31st last of the Hudson's Bay Company shows total gross receipts of £85,379, as compared with £88,920 in the corresponding period of 1925. Sales of farm lands, however, payment for which is made by instalment, amounted to 52,604 acres for £129,352, as against 27,576 acres for £72,600 in the same period a year ago. Sales of town lots were £1,260, as against £2,540. For the nine months to date total gross receipts are £335,754, as

against £254,704 for the corresponding period of 1925, sales of farm lands being 191,726 acres for £469,908, as against 98,873 acres for £250,118. These figures seem to reflect greater prosperity in Canada and a growth of confidence.

The President of the Institute of Bankers, Sir John Ferguson, K.B.E., will deliver his inaugural address at the Hall of the Drapers' Company, Throgmorton street, E.C., on Wednesday, November 10th, at 5.30 p.m.

At a meeting of the Royal Society of Arts, John street, Adelphi, W.C. 2, on Wednesday, November 10th, at 8 p.m., an address will be given by the chairman of the council, Sir Thomas H. Holland, K.C.S.I., on "International Interests in Raw Materials."

Oversea Correspondence.

UNITED STATES.—STEADIER MARKETS—MONEY OUTLOOK—INDUSTRIAL CONDITIONS—COTTON POSITION—BELGIUM AND GOLD.

(FROM OUR CORRESPONDENT.)

NEW YORK, October 26.

A STEADIER tone developed in the markets during the past week. Shares rallied a few points on a diminishing turnover, and even cotton withstood well the Government's estimate of a record-breaking crop of 17,454,000 bales. At the moment speculative initiative is at a low ebb, total sales on the Stock Exchange having fallen back to about one million shares a day, the market being the quietest since last July. Traders have been waiting, for one thing, to see what action would be taken at the quarterly meeting of the directors of the United States Steel Corporation this afternoon. An excellent third quarter earning statement has been expected, but it has not been anticipated, except in habitually bullish circles, that any unusual action would be taken with regard to the dividend. Actual events bore out expectations. Only the regular dividends were declared, while the net earnings for the quarter proved to be \$52,626,826, as against \$47,814,105 for the preceding quarter and \$42,400,412 for the third quarter of 1925. The per share earnings amounted to \$4.90, as compared with \$4.19 in the previous quarter and \$3.44 in the third quarter of last year. The nine months' earnings amount to \$13.07 a share, as against \$9.43 for the comparable period in 1925. The latest earnings are the best for any quarter since the war.

Meanwhile the money market has eased off appreciably, with some time money being loaned at slightly less than 5 per cent. This relaxation has come as a surprise, and has been attended by certain noteworthy changes in the banking position. Brokers' loans in this centre, for example, declined another \$72,000,000 in the week ended October 20th. This makes the reduction in two weeks amount to \$154,000,000. The recent liquidation in the share market has wiped out approximately 40 per cent. of the increase in brokers' loans that occurred subsequent to May's low level. At the latest total of \$2,655,000,000, these loans are \$247,000,000 above the lowest of May and \$487,000,000 below the highest of January. Meanwhile the report on the condition of the member banks in the leading cities of the country shows a decrease during the week ended October 20 in the total loans on stocks and bonds amounting to \$68,000,000, this result confirming the indication given by the statistics on brokers' loans in this district. And the Federal Reserve figures themselves show a remarkable reduction in the volume of credit that the member banks have been taking from the system and from the New York bank. Thus during the week ended October 20 the discounts of the system fell \$117,000,000 to \$586,000,000, and at that figure were \$16,000,000 below the corresponding total for a year ago. Total holdings of interest-bearing paper fell \$118,000,000 in the week to \$1,188,000,000, and were some \$40,000,000 smaller than at this time last year.

At the New York bank the contraction was even more marked. Discounts fell \$95,000,000 to \$109,000,000, the latter figure comparing with \$162,000,000 a year ago. Total bills and securities diminished \$118,000,000, and at \$205,000,000 were \$37,000,000 less than at this time last year. With reserves increasing by \$61,000,000, the bank's reserve ratio jumped 6.5 per cent. to 85.4 per cent., this comparing with last year's figure of 81.9 per cent. For the whole system the ratio was 74.1, as against 72.6 last year. Plainly these changes are not such as to suggest higher official discount rates; rather they stir thoughts that a continuation of the latest tendency might lead to a lowering of the official charge.

One factor that helps to explain this reduction in the demand for credit is the decline in commodity prices that has occurred this year. While this decline has been limited chiefly to farm products, it has been fairly extensive among those commodities, and no doubt has lessened the amount of credit that is necessary to carry them. The increased yields have been more than offset by the drop in prices. Another factor that differentiates the banking position of this autumn from that of last undoubtedly arises from the difference in the policies pursued by the Federal Reserve authorities. Last autumn, it will be recalled, discount rates were left down while the share market boomed. Not until November were restrictive measures taken, and then the increases in rates were instituted by certain of the out-of-town Reserve banks. The New York rate was not advanced until after the turn of the year. This autumn the New York bank advanced its rate in August, and by so doing appears to have checked speculative operations for the rise. Instead of a booming share market, we have had a liquidating one. In connection with the diminished demand for credit, it may be noted that bank clearings showed a loss in September as compared with the preceding year, this being the first time such a change has been shown for some time. However, it would appear that the smaller clearings were due to the lower commodity prices and the absence of Stock Exchange speculation rather than to a decline in industrial activity, as railway car-loadings have continued to make a favourable showing in comparison with a year ago.

Just at present there are signs of a recession in industrial activity, but these are nothing unusual at this season of the year. The steel industry, which has been holding operations close to 85 per cent. of capacity in remarkable fashion, is beginning to curtail here and there in response to decreases in consumption in certain consuming industries. The decline so far is slight, but is enough to have established a tendency. Behind this curtailment is a slowing down in operations in the building and automobile industries. The September production of passenger motor-cars in the United States and Canada amounted to 350,000 units, and while this output set a record for the month, it was 43,000 units smaller than the output for August. Further declines undoubtedly will be shown when the October and November figures are published. With oil production continuing to gain, and with crude oil and gasoline prices reduced in a number of localities, the steel trade also notes diminished buying of oil country goods.

Publication of the Government cotton report brought the price of the December delivery down close to the 12 cent. level. A fair rally followed, which suggested that the huge crop forecast had been pretty well discounted. Meanwhile, some consolation is taken from the ginning figures, which show 8,722,000 bales ginned to October 18th, as against 9,518,000 bales to that date last year. There is some talk to the effect that a good deal of cotton will be left unpicked while the Administration is trying to encourage the growers to hold back their cotton by intimating that the intermediate credit banks will be prepared to lend \$200,000,000 on the staple. The Census Bureau statistics indicate that the cotton textile mills were more busy in September than last year, and cheap cotton certainly should stimulate consumption.

Belgium's decision to return to the gold standard has occasioned much favourable comment hereabouts. Our bankers appreciate the progress that has been made since the previous effort at stabilisation broke down, and are gratified that the Belgian authorities have picked a natural level this time. Great confidence is shown in the success

of the plan. Balancing of the Budget and consolidation of the floating debt are held to have prepared the way for the return to gold, while it is thought that large balances are likely to be repatriated now that confidence may be felt in the currency. It is hoped that Belgium's example will prove a stimulus to Italy and France, and that the gold standard soon will prevail throughout the entirety of Western Europe.

FRANCE.—POLITICS—THE FRANC'S RECOVERY—THE TREASURY'S POSITION—ARGENTINE DEBT—BUDGET ECONOMIES.

(FROM OUR CORRESPONDENT.)

PARIS, November 3.

POLITICALLY, the situation has substantially improved during the past week, and it is now fairly certain that the Poincaré Government of National Unity will be able to face the reassembly of the Chambers without much fear that any recrudescence of party warfare will be allowed to interfere with the work of financial restoration that was so satisfactorily begun three months ago. The policy of non-interference that was adopted at the recent Congress of the combined Radical and Socialistic-Radical parties has now been for all practical purposes also adopted by the Socialists. These, at their Congress a few days ago, held what amounted to a funeral service over the defunct Cartel des Gauches, and more or less declared war against their former allies, the Radicals, although reserving the right to renew their alliance with them—or with the Communists, as circumstances may direct—at the pending Senatorial elections, but only so far as second ballots are concerned. It appears to be realised by both discontented Radicals and Socialists that public opinion has ranged itself behind the Poincaré Government to such an extent that anything like organised opposition to the Cabinet, as long as the present plans for financial restoration remain uncompleted, would be both inadvisable and dangerous.

It has now become evident that M. Poincaré, although he has so far studiously refrained from disclosing whether he intends to adopt a policy of stabilisation or one of revalorisation, is proceeding steadily with the systematic application of a definite and pre-ordained plan. His success, down to the present, amounts almost to a triumph, and this has been recognised by a remarkable revival of confidence. As may be expected, the effect of business of the strenuous effort that is being made to right the situation is appreciable, and manufacturers and traders generally are largely marking time until the outlook is clarified. The recent substantial revival of the franc has had a serious repercussion, particularly on manufacturers and others who three months ago, when sterling was quoted at over 200, rushed to buy foreign exchange ahead. Fears were expressed last week that the end-of-the-month settlement would prove difficult in many quarters, but relief was afforded by the fact that business on the Bourse was totally suspended from Friday night until this morning, and this evening's reports show that settling was carried through fairly satisfactorily. The franc firmed up another four points during the four days' suspension of business, and at one period to-day was marked up to within a shade of 150. Carry-over money was abundant for the settlement at 3½ per cent. (for 11 days) in the Parquet, and 10½ per cent. in the coulisse.

The new Caisse d'Amortissement has now begun operations in earnest. Of the 1,300,000,000 of Treasury bonds of which it took charge a few weeks ago 600,000,000 (or nearly 50 per cent.) have already been extinguished by consolidation. The new "Tobacco Loan" resulted in a total subscription of about 3,020,000,000, of which 2,500,000,000 was subscribed in National Defence bonds. By the consolidation of this 2,500 millions the total of National Defence bonds now in existence has been reduced to 45,695,000,000, of which 35,000,000,000 (or over 75 per cent.) consists of 12 months' bonds, while less than 5,000,000,000 (or less than 10 per cent.) are in bonds of one month. The danger that formerly existed in connection with these descriptions, therefore, has been reduced to an almost negligible point. The situation from other aspects, too, has been completely transformed.

BANK OF ATHENS

Head Office: ATHENS.

Paid-up Capital

Drs. 72,000,000

With Offices in all the principal towns in Greece, Egypt, Cyprus, Crete, and Albania, the Bank extends facilities for Export and Import Trade between Great Britain and the Near East generally.

Enquiries invited.

NEW YORK: BANK OF ATHENS TRUST COMPANY, 25, PINE STREET.

BOSTON: ATHENS BANKERS CORPORATION, 15, KNEELAND STREET.

London: 22, Fenchurch St., E.C.3.

At one period in July the Treasury had a margin of only 81,000,000 available, and the position was such that the State was in serious danger of not being able to meet its end-of-the-month payments. The first weekly statement issued by the Bank of France (on July 22nd), after the Poincaré Ministry took office, revealed that the debt owing to the Bank had risen to 38,350,000,000, or within 150,000,000 of the authorised legal limit. The statement dated October 28th showed that this total had been reduced to 35,750,000,000, this reduction of 2,600 millions having been achieved at the rate of 1,000 millions in August, 700 millions in September, and 900 millions in October.

A similarly satisfactory improvement has been effected in regard to the foreign debt payments that have fallen due. Although on July 24th there existed insufficient resources to meet the service of the foreign debt and no reserve, \$10,000,000 have since been paid of interest on the cost of the American war stocks, as well as £7,000,000 to Great Britain, 650,000 florins to Holland, and a further \$6,000,000 due to America on another account, while a large amount of Treasury bonds in the hands of the Bank of England, the liquidation of which was optional, has also been paid off. On Monday the loan recently taken up in Holland was utilised to repay, in advance of their due date in April next, credits granted by the Dutch Government, this step having been taken in order to avoid overburdening the total maturities of the always difficult earlier months of the year. The "Morgan Fund," at the same time, has been reconstituted, thanks to purchases by the Ministry of Finance and by the Bank of France, and this without detrimental effects on the continued improvement of the franc. In addition to the dollars of the Morgan Fund, the Treasury now has available a further mass of over \$50,000,000 of sound money, which it can utilise in case of need. To all this must be added the fact that taxation is again coming in satisfactorily. The revenue, which on July 31st was only 3,640 millions (or 23 per cent.) in excess of the corresponding period of 1925, showed an increase at the end of September of 6,301,000,000, or 33 per cent.

By agreement between the French and Argentine Governments, the repayment of the debt of 18,500,000 gold pesos owing to the latter, which was due for reimbursement on January 1st next, has been postponed indefinitely, "until such time as is convenient to the debtor." The Argentine Government, further, leaves it to the French Government to fix the rate of interest to be paid. Several fixed periods of postponement have been previously offered by the Argentine Government and successively accepted by this country. In view of the debt redemption policy recently begun by the French Government, it is probable that this Argentine debt will be liquidated by a series

of annual instalments, the amount of which will be fixed by M. Poincaré, for approval by Parliament.

In a letter addressed to the Finance Commission of the Chamber, M. Poincaré, in his capacity as Finance Minister, sets forth the reduction of expenditure in the various Government departments resulting from the recent administrative reforms as follows:—

Government Depts. and Public Services.	Budget Estimates of Expenditure. Francs.	Reduced by Francs.
Ministry of Finance.....	24,787,396,819	7,298,880
Judicial services	137,059,133	1,113,600
Prison services	72,518,855	1,493,701
War Office and Army	5,299,619,645	210,825,970
Navy	1,915,432,377	6,726,397
Education	2,056,514,080	2,644,137
Fine Arts	79,490,514	714,546
Public Works Dept.	1,274,892,000	11,209,950
Pensions	612,055,150	18,662,500
Devastated Regions	412,580,000	5,018,530
		265,708,329
Ministry for Interior	438,346,387	—155,824,820

Net results of "Economy Axe," a saving of.... 109,883,509

M. Poincaré also tabulates the following economies effected in connection with the three "Annexed Budgets," which are treated independently of the "General Budget":—

	Francs.	Francs.
National Printing Department.....	40,431,900	39,500
Posts, Telegraphs and Telephones	2,662,429,011	6,304,722
National Savings Bank Department ..	193,032,444	150,000
		6,494,222

But as these reductions of estimated expenditure have been compensated for by other increases in expenditure in these three departments, the total estimated expenditure in these three instances remains as set forth in the first of the two columns. The Minister for the Interior, in an official *communiqué* published a few hours after the above figures were made public, states that the announcement that the administrative reforms effected by him involve increased expenditure this year by his department of 155,824,820f is "completely unfounded." He insists that these reforms involve this year a non-renewable supplementary expenditure of 555,850f, and next year an increase of 689,950f. The effective economy, when his reforms are completely realised, will total 3,957,500f, while the value of the suppressed subprefectures, which will be taken over by the departments, totals over 24,000,000f.

GERMANY.—POLITICS—CREDIT—PRICES—INDUSTRIES—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 2.

THE Reichstag reassembles this week without any extension of the party basis of the Marx Cabinet. The "Great Coalition," which was to be formed by inclusion of the Social-Democrats, has not been formed. The German Nationals keep to their design, which seems impracticable, of enforcing a "citizens' bloc" in opposition to the Socialists. On several questions, mainly social-economic, the Socialists have serious objections to present Cabinet policy; but they will not help the Nationals by opposing the Cabinet on principle, and they promise to treat Government proposals and policies on their merits. The new financial compromise (the *Ausgleich*) between the Republic and the States and Municipalities will come up. The statistical material necessary for a definite regulation of this question is still lacking, but negotiations for the prolongation of the present provincial arrangement are under way. The Government seems resolved to stand fast to the arrangement that not more than 75 per cent. of the income and corporation income taxes yield should go to the local governments, but these demand 90 per cent., as was granted by the third taxation decree. The Cabinet is also opposed to the States' demand that the Republic should continue to guarantee a minimum yield to them of their share in the sales tax. A Bill creating a definitive Federal Economical Council will be submitted. The present Council is provisional in constitution. The number of members in the new Council will be 116. The Council will continue to have only advisory powers, but all

important economic and social-political Bills will be submitted to it before presentation to the Legislature, and its views will be communicated to the Reichsrat and Reichstag. The Reichstag will have power to be represented at meetings of the Council, and to put questions to its members and experts. The Council will be organised in three groups representing employers, employed, and various economic, social, and professional interests. In the employers' group of 39 members will be 12 representatives of agriculture, 10 of industry, four of handwork, five of trade, three of banking and insurance, and five of communications. The employee group also contains 39 members, to be chosen by the trades unions and other labour organisations. The third group contains representatives of the municipalities, social insurance, co-operatives, the Press, and officialdom; also eight members, to be appointed by the Reichsrat, who are specially familiar with local economic conditions, and eight persons who have rendered special services to the national economy. The working-hours' question is likely to cause trouble. The trades unions have issued a demand for unqualified enforcement of the Eight Hours' Day and for prevention of overtime work, declaring that this is one desirable way of reducing unemployment, and that it should be put through by an immediate emergency law. The Employers' Association, the Federation of Industries, and various organisations representing trade and banking have issued a counterblast, declaring that the measure demanded would not result in any considerable number of unemployed being taken on to work, and that ultimately it would increase unemployment.

The money market continues fluid, and the month-end Bourse settlements are causing no trouble. The private discount rates are 4½ per cent. for short terms, 4½ per cent. for long. Business in this credit branch is dull. The liquidation of the Stinnes bank credits, which will result from the transfer of the remaining Stinnes family properties to two American holding companies, will be a factor making for easy money in November. The stamp duties returns show that the circulation of bills of exchange has changed little in the last three months. There has been a heavy decline since the summer of last year. The yield of the capital transaction taxes is increasing rapidly, being 12,980,480 marks in September, against 7,480,740 marks in June. Most of the increase comes from the Bourse transfers tax, which yielded 7,005,960 marks, against 2,718,520 marks. The companies tax yield rose from 3,408,490 marks to 4,045,620 marks. For company foundations in September accounted for 35,680,000 marks nominal; for capital increases 545,090,000 marks, mostly accounted for by the capital increase of the Dyes Trust. The savings banks return for September 30th shows deposits on savings account of 2,712 million marks, against 1,629 million marks at the end of 1925. The banks have arranged for the financing of a further 110 million marks of export credits to Russia under the 300 million mark scheme. The total arranged to date is 230 million marks. Russia is further to be brought within the general export-credit insurance scheme, from which she was excluded, owing to the unwillingness of the private insurance companies to bear any part of such risks. The special terms for Russian business are that the exporter shall bear 50 per cent. of the risk, the Republic and the States 15 per cent. each and the insurance companies 20 per cent.

The official cost-of-living index was 142.2 for October, against 142 in September. The index is now at exactly the same level as in December, 1923, immediately after the currency stabilisation. The lowest point reached was 119.9 in February, 1924, the highest 145 in August, 1925. The official wholesale prices index for September 27th is 132.4, against 130.9 one week earlier.

The number of publicly supported unemployed fell by a further 54,000 in the first half of October. The trade union returns for September show a decline in unemployment in all important branches, in the textiles branch from 16.5 per cent. in September to 14.4 per cent., the partly unemployed in this branch dropping from 36.9 to 28 per cent. In April 20 per cent. of textile employees were unemployed and 52.2 per cent. partly unemployed. The best employment, judged by the figures of fully employed, is in the wool branch, next in the silk. In the

cotton branch only 47.8 per cent. are fully employed. Bankruptcies in October numbered 476, against 451 in September, and monthly average of 901 in 1925. Coal production in September (Saar district omitted) was 12,875,000 metric tons. Total coal and coal fuel production in the first three-quarters of the year, without the Saar, as compared with production in the same area in 1913 was:—

	Coal.	Lignite.	Coke.	Coal Briquets.	Lignite Briquets.
1913	106,571	64,132	22,074	4,174	15,993
1926	104,575	100,826	18,492	3,941	25,109

The daily output on the Ruhr has of late exceeded the pre-war average. The number of miners engaged has reached 402,000, or some 42,000 more than before the British coal strike. Iron and steel export prices are rising, and the bounties or rebates granted to exporter manufacturers by the Steel Syndicate have been correspondingly reduced. Scrap-iron prices have risen considerably, and there is a big demand as a result of increased smelting activity, and of rising freights for overseas ores. The production of rolled goods in September was 954,484 metric tons, as against 912,328 tons in August. The International Steel Cartel has raised the total production figure for the last quarter of 1926 to the highest figure provided for in the agreement, with the result of raising Germany's percentage share as well as her absolute quota. Germany's 43.176 per cent. means production by her in the present quarter at the rate of 13,820,000 tons a year, against 9,980,000 tons by France, 1,850,000 tons by the Saar, 2,650,000 tons by Luxemburg and 3,700,000 tons by Belgium. The home Steel Syndicate has fixed the production ration of its own members for November at 80 per cent. of capacity, as against 70 per cent. in October. Home prices of iron and steel remain unchanged. Dusseldorf authorities express the view that international prices have reached their highest point for the present. German export business is brisk, especially in bars. The Solingen cutlery industry reports an improvement. Since August 7th the number of unemployed has fallen from 7,800 to 5,800. The improvement is due to larger home sales. Orders from Great Britain, America, and British India have declined.

The Sugar Industries Association publishes the following figures: The number of sugar mills operated in the new business year 1926-27 is 253, against 261 last year. The consumption of sugar beet in the new business year is estimated at 10,299,480 metric tons, against 10,248,154 tons in 1925-26. Raw sugar production is estimated at 1,578,585 tons, against 1,605,959 tons in 1925-26, the percentage sugar yield from beet being 15.13 per cent., against 15.48 per cent. A private authority estimates all Europe's sugar production in the new business year at 7,211,000 tons, against 7,603,000 tons in 1925-26.

The Bourse upward movement has continued, and for certain stocks taken violent forms. The speculative favourites, all of which are stocks of important companies, continue to rise, coal-steel, shipping, electrical, chemicals, and banking being on top, but also the less active stocks have risen considerably. Dyes Trust to-day reached a new high record of 354.50, and Mannesmann Tubes, which was around 50 at the beginning of the year, and 126 two months ago, has reached 198. The chief buyers of late have been Rhenish citizens. The commercial banks continue to declare that the extremely high quotations, which are mostly in non-dividend payers, have more than discounted earning possibilities.

HUNGARY.—POLITICAL SITUATION—PUBLIC FINANCE—COMMERCIAL TREATY WITH CZECHOSLOVAKIA—BOURSE.

(FROM OUR CORRESPONDENT.)

BUDAPEST, October 31.

THE National Assembly reassembled on October 18th. Count Bethlen presented his reconstructed Cabinet, including two new members, and briefly outlined his future policy. The Government has a good working majority in

the House, which is now discussing the reform of the Upper Chamber. Legislation concerning social welfare will shortly follow. General elections will be held next year, but nobody knows the exact date when they will take place. There are signs of improvement in Hungary's relation with the neighbouring States. The recent speech of Governor Horthy, expressing the wish to see the old friendship re-established with the Serbs, has been favourably commented on in Yugoslavia, and Mr Nuisic, the Foreign Minister of the Triune kingdom, welcomed it in similar friendly terms. Business men in both countries are realising that they could not but gain by the improved political situation, and it seems that the Central European States are entering on a new phase which will lead to closer economic co-operation.

The Finance Minister's monthly report shows marked improvements in the State finances. The first quarter of the financial year (July-September) is somewhat more favourable than was anticipated; revenues exceeded estimates by 10 million gold crowns, and are higher than in the previous year, despite the reduction in taxes. Mr Bud, the Finance Minister, recently declared that he is fully alive to the difficulties of the economic life of the country, and to alleviate the situation promised a general reform of taxation, but warned the country that the equilibrium of the Budget could not be endangered. He appealed to the banks to allow cheap credits to their customers. Municipal borrowing will be controlled by the Finance Minister and the President of the National Bank. Without their consent no foreign credit is to be contracted. The House of Speyer and Co. (New York) has recently lent \$6 millions to the cities and boroughs. The loan will be used for drainage and electricity schemes. It is an indication of the improvement in credit conditions that the terms on which municipalities are now borrowing are 7 per cent. at 89, as compared with 7½ per cent. at 82 last year.

The negotiations to arrive at a definite tariff treaty with Czechoslovakia are making good progress. Out of 1,300 items, 800 articles have been settled, and the Hungarian delegation is now awaiting the answer of the Czechoslovaks for its proposals for the remaining 500. The temporary agreement which came into force on September 1st terminates at the end of this year, but there is every reason to believe that the long-delayed commercial treaty will shortly come into operation on the most-favoured-nation basis. Hungarian agricultural products and Czechoslovak industry will both greatly benefit by it.

The money market is easy. The policy of the National Bank in reducing its discount rate to 6 per cent. has proved very satisfactory, and was followed by a general decline in the discount market. For fine three-months bills 7½-9 per cent. has been the usual quotation, compared with 11-12 per cent. in the corresponding period last year. Deposits are increasing; they totalled 567 million gold crowns against 377.5 millions last year.

The industrial situation tends to improve slowly, but only the coal and building branches show any marked increase of activity. The following are the summary import and export figures for the first eight months of the year (in million gold crowns):—

	1925.	1926.
Export	394.3	416.8
Import	449.3	499.4

The number of unemployed fell to 21,332 in September, which is the lowest point of the year, and 20 per cent. less than in September, 1925. Bankruptcies in September fell to 103, as against 359 in January, and are now about one-third of the highest point of the year. The cost of living and wholesale index number do not show any important changes in September. The wholesale index remained unaltered at 122, the cost of living at 101, or, excluding rent, at 116. The Bourse has been active, with rising quotations and with only moderate and brief reactions. In the upward movement of recent weeks the chief gainers were the leaders of coal and iron and steel shares. Most of the inactive stocks continue to lag behind.

CANADA.—WESTERN CROP DISASTER—EASTERN CROP CONDITIONS—GENERAL BUSINESS—FEDERAL REVENUES: PRICES—C.N.R. BONDS AGREEMENT—BATTLE OF RIVAL POWER INTERESTS.

(FROM OUR CORRESPONDENT.)

OTTAWA, October 19.

THERE are grave reasons for the apprehension that the weather has dealt the Canadian West one of the worst blows in its history, and that what six weeks ago promised to be a very satisfactory crop will now yield very inadequate returns to the farmers. Since the beginning of September frequent and abnormal rains have hampered harvest operations, and at the time of writing Manitoba is covered with a blanket of snow. Thousands of acres of stooked grain are hopelessly waterlogged, and the evil of sprouting is widespread. Of what has already been threshed the percentage graded "tough" or "ungraded" is unusually high, and as a very large quantity of the Western grain will be unable to stand the export transport charges and will be fit only for feed, the rise in prices which is now proceeding will bring little benefit to the growers. Confirmation of this unfortunate situation comes from many quarters; one large farmer in the Dauphin district of Manitoba reports that on resuming threshing operations in a field of grain, which before the weather broke was yielding No. 1 wheat, the grade was found to have fallen to "No. 4 tough," involving a loss of 40 cents per bushel and eliminating all the profits of the crop. Indeed, so general is the disaster in some areas that officials of the Grain Commission were recently in Ottawa advising the Minister of Agriculture to purchase quantities of seed grain on the ground that in certain districts no seed of reasonable quality would be available for the 1927 crop unless this precaution was taken. The late and unsatisfactory condition of the Western harvest is reflected in the wheat export figures, for whereas in August and September, 1925, Canada exported 31,212,156 bushels of wheat, valued at \$46,797,967, in the same two months of this year her exports were only 20,116,230 bushels, valued at \$30,310,080. But the full damage cannot be estimated for some time, as about 50 per cent. of the crop in Manitoba and Alberta and 20 per cent. in Saskatchewan is still unthreshed.

In Eastern Canada, likewise, bad weather has retarded threshing work and occasioned substantial loss, both in yield and quality of grain. But the average Eastern farmer has more irons in the fire, and will not fare so badly as his Western brother. Potatoes are a decent crop, although there is some danger of rot, and the yield of alfalfa is excellent. Aftergrass and pastures are abundant, and stock generally through the East is in good condition. Below is given the report of the Bureau of Statistics upon the chief grain, root, and fodder crops, expressed in percentages of the decennial averages, 1916-25, and based on their condition at September 30th, last year's figures being given in brackets for comparison:—Autumn wheat, 94 (102); spring wheat, 96 (101); oats, 90 (101); barley, 95 (98); rye, 96 (97); beans, 89 (95); buckwheat, 95 (95); flax, 93 (97); maize, 86 (92); potatoes, 97 (93); turnips, 93 (98); alfalfa, 100 (101); sugar-beets, 98 (99).

As a result of the setback in crop prospects, the purchasing power of the farming community, which constitutes almost half the total population, cannot fail to be smaller than a year ago, and intelligent business men are looking for a curtailment of trade during the winter and are preparing to shorten sail. However, the effect of the crop situation has not yet made itself felt in general business, and the movement of merchandise continues on a satisfactory scale. For the week ending October 2nd carloadings reached a new high record for the year with a total of 77,249 cars, as compared with 75,937 in the previous week and 74,872 in the corresponding week of 1925. The unfavourable weather has affected sales in certain seasonal lines, but wholesalers report a satisfactory flow of orders, and retailers are showing a tendency to buy on a larger scale. Many retailers want quick delivery, and, as both mills and wholesale houses have acquired the habit of carrying light stocks, some difficulty has been experienced in filling orders on time—a condition almost unknown since the war boom. For groceries, hardware, drygoods, and clothing of all kinds

there is an active demand; the textile mills are doing better, and find some difficulty in securing raw material. The autumn buying of iron and steel is quite satisfactory, and the tonnages of finished products bought for delivery in the last quarter of 1926 is substantially the same as the figure for the previous quarter. The pulp and paper industry continues to flourish, but the publication of rather pessimistic reports about business prospects in the United States for the coming winter is causing some anxiety, because a slump south of the border would mean a diminished consumption of newsprint, and would force a reduction in prices, which would go hard with the weaker Canadian mills. Within the next fortnight the price of newsprint for 1927 contracts will be fixed, and manufacturers are hoping that they can maintain it at a level of \$65 per ton. On the other hand, the silver-mining industry has been very hard hit by the decline in the price of silver bullion, and there has been a sharp depression of most of the silver stocks. In general, the stock markets have shown a decidedly reactionary tendency in sympathy with the swift downward movement in New York, and popular stocks like Brazilian Traction have dropped as much as 15 points within the week.

The published figures of the Federal revenues for the first four months of the current fiscal year are quite satisfactory, for, placed at \$145,538,889, they show a gain of almost \$4 millions over the corresponding figure for the previous year. The gain is wholly derived from an increase in the yield of Customs duties, for there has been a substantial decline in the income-tax returns, due to the cuts sanctioned by the last Budget. On July 31st the net debt of the Dominion stood at \$2,348,479,444, as compared with \$2,375,249,395 on July 31, 1925.

The price index number of the Dominion Bureau of Statistics fell 1.4 points in September, being 152.5, as compared with 153.9 in August. Thirty price quotations were higher, 46 lower, and 160 unchanged. Four of the main groups moved downward, the largest decline being in "Vegetables and their products," which fell from 168.6 to 160.9, two moved upward and two were stationary.

There is considerable mystery and uncertainty about the fate of the agreement which was supposed to have been entered into with the holders of an issue of Canadian National income bonds on which no interest has been paid for some years. Apparently Sir Henry Thornton concluded the bargain with the sanction of Sir Henry Drayton, who was acting-Premier during the recent election campaign, and there was no opportunity of getting the agreement ratified by the whole Conservative Cabinet before its authority was destroyed by the election. Mr Mackenzie King has taken the ground that the late Conservative Ministry had an illegitimate status which rendered it incapable of making any valid contracts, and he has cancelled a number of contracts which it entered into. But it is very doubtful if he can sustain this position, for, obviously, if the Meighen Ministry was incompetent to make valid contracts, it was equally incompetent to pass the orders-in-council which set the election machinery in motion, and the new Parliament has no right to exist. If the King Government persists in disregarding the bargain with the C.N.R. bondholders, a nice legal point will arise.

There have lately been interesting developments in a fierce contest for control of immensely valuable water-powers on the Ottawa River, the most important being at the famous Carillon Falls, which has been proceeding between two rival groups of power interests. The chief protagonists in the struggle have been Sir Herbert Holt, the well-known Montreal financier, who is deeply interested in the Shawinigan and the Montreal Light, Heat, and Power Corporations on the one hand, and, on the other, Sir Clifford Sifton, formerly Minister of the Interior in the Laurier Government, with whom certain American power magnates are closely associated. The latter group has got possession of the charter for the Georgian Bay Canal, which was long held by Sir Robert Perks, and as they had many friends in the Liberal party they were within an ace of securing the concessions which they desired when the King Ministry fell. The Conservative Government was favourably disposed to Sir H. Holt and his associates, and granted them a lease of the water-powers at Carillon on generous terms, but it was promptly

cancelled by the Liberals as soon as they returned to office. Now, however, the Holt group have apparently stolen a march upon their rivals. The provincial Governments of Ontario and Quebec have always contended that, although the Ottawa was a navigable river, and therefore for certain purposes under Federal jurisdiction, the fact that it constituted the boundary between the two provinces gave them the rights to its water-power, and, acting on this assumption, the Premiers of Ontario and Quebec have recently signed agreement whereby the water-powers at Carillon will be developed under an annual rental charge by a corporation called the National Hydro Company, and of the 300,000 odd h.p. which will be produced, one-half will be available for distribution by companies like the Shawinigan Company in Quebec and the other half will be allocated to the Hydro-Electric Commission of Ontario. Undoubtedly, the Federal Government has the basis of a claim to some share in these power rights; but it has been presented with a *fait accompli*, and may hesitate to embark on a long legal struggle about the respective jurisdictions of the Federal and provincial authorities.

UNION OF SOUTH AFRICA.—JOHANNESBURG'S 40th BIRTHDAY: ITS PROSPECTS—INDUSTRIAL AND AGRICULTURAL CENSUS—MINERAL OUTPUT.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, October 5.

THE outstanding recent event has been the celebration by the people of Johannesburg of the 40th anniversary of the proclamation of the Rand goldfields. Mr Arthur French, president of the Chamber of Mines, at the meeting held a few days after remarked: "Many people have asked, without receiving any satisfactory reply, 'Why the fortieth?—the fiftieth we could understand.' I incline to think that the true answer, which naturally no one is anxious to give, is an unconfessed uneasiness as to whether, when the fiftieth anniversary arrives, there will be anything like so much left to celebrate. I realise that I shall probably be dubbed as a gloomy pessimist, but in face of the prospect of a declining gold mining industry, is it not time that we should take stock of the position?"

While acknowledging that the Government was moving in the direction of expanding the industry by the sale or leasing of additional mining ground, the sale to the Crown Mines of the Mooifontein area, and the leasing of Geduld East to the Union Corporation, this was not in itself enough to save the position. Mr French was rather critical of Sir William Hoy, General Manager of Railways (now with the Union Delegation to the Imperial Conference), for his simple faith, and wanted something more convincing than "other things," which, Sir William had suggested, would develop as the mines disappeared. He urged that the creation and expansion of Johannesburg had been built upon the foundation of the gold mines, and upon nothing else whatsoever, the only "other things" had been industrial and commercial activities supplying the needs of the gold mines and those directly and indirectly dependent upon them. It would be a great relief to be able to share the optimism of Sir William, but he could not see any solid foundation for it.

Preliminary figures of the tenth Industrial Census of the Union of South Africa dealing with the period 1924-25 have just been issued by the Department. In that year the gross value of output of nearly fifty selected industries (exclusive of mining) totalled £63,847,500, an increase of about £2,000,000. This figure was made up as to £1,267,500 of material used and of £674,500 increase in the value added of the process of manufacture. The respective bulk figures are very similar—namely, £32,262,650 for materials used and £31,585,000 for value added by manufacture. The most important ordinary industry, both absolutely and relatively, is the grain milling industry, the value of the output being £9,337,350, as against £8,189,500 in the previous year. This deals very largely with mealie meal, and the mines alone consume about £410,000 worth a year for feeding their natives. The second largest industry is building and contracting, its gross value being just under £5½ millions, as against somewhat under £5½ millions in the previous year. Building of Central offices and residential property in Johannesburg especially has lately reached the dimensions almost of a boom. There are at least half a

dozen new office blocks being erected in Johannesburg, including a very important one for the African City Properties Trust in Commissioner street, and one for the North British and Merchantile Insurance Company, which has been content to lease premises for a number of years. Bettlheim buildings, one of the oldest office blocks in Johannesburg, is being rebuilt, and the portion to be leased to the Netherlands Bank will in the course of a few months be ready for occupation. There is much discussion as to whether this policy is a wise one, in view of the possible shrinkage in the mining industry in the next few years, but between gold mines on the one hand, in the shares of which due allowance has to be made for amortization of capital, and Government and municipal stocks which only yield 5 per cent., there are few opportunities for investment. Hence the substantial funds being invested in new buildings. In fact, almost the only important industries which are on a joint-stock basis of any considerable importance, and whose shares are freely dealt in, are the Pretoria and Cape Cement Companies. The shares of such important undertakings as the United Tobacco Companies (South) and the South African Breweries are very seldom dealt in locally, as they are British companies, and therefore heavy income-tax has to be deducted from the dividend warrants. The gross value of the output of mine workshops is £4½ millions sterling. The production value of quite a number of industries range about three and three-quarter millions—namely, bakeries, printing and publishing, and sugar mills and refineries. The total value of independent engineering works and foundries is, at £3,100,000, about £1,125,000 less than that of the mine workshops alone, but in the previous year the disparity was even more marked. In the two million range we have tailoring and clothing, tobacco, candles and soap, explosives and matches. Boots and shoes, a very highly protected industry, returned a value of just under £1½ millions. The output of the brewery and malt industry is returned at £1,400,000. Numerous industries return a productive value of about a million—namely, bricks and tiles, cement factories, galvanised iron works and plumbing and sweets.

The principal figures of agricultural products are 10½ million lbs of butter, 5½ million lbs of cheese, 95,000 tons of flour, 160,000 tons of Boer meal, 450,000 tons of maize meal, 16 million lbs of jams and marmalade, of sweets practically 24 millions lbs, and nearly 4½ million lbs of canned and bottled fruit. The production of leather is estimated at 9,537,500 lbs, of skins 150,000 lbs. The production of butter at 3,650,000 lbs constituted a record for the second quarter, while that of cheese at a million and three-quarter lbs was also a record, as was the production of bacon and ham at 2,115,000 lbs.

The mineral output for the Union for the completed eight months of the year is given at £37,834,200, an increase of rather more than a million and three-quarters sterling over that for the corresponding period. Of this increase diamonds account for £975,500 and gold for £771,775. There has been a very marked advance in the production of precious stones from the alluvial fields of the Transvaal. The total above given includes only £18,250 in respect of platinum, but this is clearly inaccurate, as the Onverwacht Company alone announces a net realisation of £35,200. Another proof of inaccuracy is in the August return, which is given at only 119 ounces, whereas, similarly, the production of Onverwacht alone was 530 ounces. No reference is made of figures of output in the abstract, though classed under that general heading, but reference to the details indicates that the figures quoted refer only to actual sales. Surely it would be preferable to include in the summary the total production, and this would be merely consistent with the statement of gold, the figures of which are production figures, which do not necessarily coincide with shipments, although these are regularly made week by week. It appears rather unfortunate that the Mines Department should understate the figures of a new industry which everyone hopes will become an important one, and the matter is certainly deserving of reconsideration. Allowing for some slight increase in the final four months of the year, it seems probable that the total mineral output for the complete period will reach about fifty-eight millions sterling.

HONGKONG.—THE BOYCOTT TO END?—CHAOTIC CONDITIONS—SHARE MARKET RISE.

(FROM OUR CORRESPONDENT.)

HONGKONG, October 5.

THE many startling incidents that have occurred in China during the past month appear to have had sufficient news value to attract the attention of the rest of the world. The consequence may be a more intelligent appreciation of the bankrupt state of Chinese politics and the realisation that a nation lacking stability, security, and integrity is hardly in a position to work out its own salvation. There is a natural reluctance on the part of the Powers to intervene in the internal affairs of such a vast country, but foreign opinion on the spot is becoming more and more convinced that here is a case for the League of Nations, of which China is a vociferous, though defaulting, member. The ever-spreading area of turmoil is beyond the control of any native authority, and unless assistance from outside sources is forthcoming in the very near future, the fate of the Republic will be far worse than that of Russia.

In the meantime, the British Government is pursuing a half-hearted course of its own. It has abandoned the fatuous policy of shutting its eyes to all that goes on in China, and the despatch of a flotilla of destroyers is a welcome sign that something is being done to support the authority of the harassed Consular officials. Moreover, the change in the Legation suggests that a more vigorous line of action is contemplated, although there is considerable doubt as to the wisdom of retaining a Minister in a defunct capital. These considerations apart, there appears to be an inclination to avoid any extreme measures, and if this develops into a return to the old policy of conciliation at all costs, which Chinese opinion interprets as weakness, then there is little prospect of any improvement in the position of Treaty Rights. In Canton the landing of a small party of naval ratings to clear the British wharf had a most wholesome effect, and for some days the river was rid of the pestering strike pickets. A whining request for the withdrawal of the sailors was acceded to, and although for a short time the promise to carry out an efficient patrol was fulfilled, it was not long before matters were very much the same as they were before. The news of an increase in the British Fleet also made an impression, and seems to have led to Mr Eugene Chen's announcement that arrangements would be made to terminate the boycott by the end of September. It is rather curious that this offer has not required a *quid pro quo*, nor is it consistent with the Canton Government's professed inability to interfere with what has been described as a natural manifestation of public indignation. However, if the new policy can be put into effect, there is no wish to remind the Canton authorities of their past errors or to taunt them with their unfulfilled boast that they would bring Hongkong to the dust. The end of September having passed, there has been some anxiety as to the sincerity of Mr Chen's intentions. He now declares that by October 10th the boycott will be definitely ended, not only in Canton, but throughout the Southern provinces. Authoritative opinion here is inclined to accept this assurance. There seems to be no doubt that General Chiang Kai Shek and his followers now realise what a boomerang the boycott has been, and the steady decline in revenue has brought them to their senses. Mr Chen is most anxious for a resumption of relations with Hongkong, as he has in mind development schemes which cannot be financed without help from this quarter.

The Civil War in the neighbourhood of the Yangtze still goes on, but little further progress has been made on either side. Armies continue to be bought and sold, and highly coloured despatches arrive from the front claiming victories to suit the tastes of each correspondent's readers. There are persistent reports that Chang Kai Shek is in retreat, owing possibly to threatening movements by Sun Chuan Fang's troops. Sun, however, is more concerned with keeping his provinces clear of hostilities, and if he succeeds it will mean that one portion of China is saved from the welter of Oriental warfare.

In Hongkong we have experienced our periodical wave of optimism which, as usual, is steadily receding to leave us in the familiar trough of despair. With the promise

of an early termination of the boycott, the share market became extremely buoyant, and prices rose substantially. It was, of course, difficult to obtain shares in such a strong market, and encouragement was derived by holders from the report that several high officials of the Canton Government were buying on a big scale. The reaction has now set in, and although prices have not fallen there is little business being transacted, and quotations are nominal.

The rapid decline in bar silver to 26½d has led to a fall in exchange, and the official T.T. rate has been as low as 1s 11½d. There has been a slight rise since, but the tendency is downward, in view of the absence of support to the silver market. This low level of exchange will be a handicap whenever import business is possible once more, and piece goods dealers especially are very slow in adjusting their ideas to a new parity. It is some consolation that the values of stocks have been sensibly appreciated, and are, in most cases, considerably above replacement cost.

Books and Publications.

A JURIST ON WORLD AFFAIRS.*

ALL students of international affairs will be grateful to Dr Arnold McNair for preparing a fourth edition of the well-known treatise of the late Professor Oppenheim on International Law. The editor has ably discharged a difficult task. At least this may be said of the second volume, which has now been issued, with an intimation in the preface that the fourth edition of the first volume will appear in due course.

The volume now published in a revised form covers the subjects of disputes, war, and neutrality. Extending to 750 pages, it is larger than its predecessor, though the editor has compressed parts of the former text. The new matter introduced therefore covers more than the 72 pages by which this volume has grown. Insertions and revision extend throughout the work, and there is evidence that the editor has examined and considered a great mass of material and authorities with much care. In a book of this kind quite a considerable amount of work may be necessary for the addition of a few lines to a footnote. The materials which have become available during the five years which have elapsed since the third edition was published have been very judiciously incorporated, and the fourth edition should maintain the reputation of the work as one of high authority, and a storehouse of references to other writings on the subjects with which it deals.

As the editor of the third edition had already incorporated new matter without distinguishing it by brackets from the author's original work Dr McNair has necessarily followed the same course. While he may indicate his own view on some points of doubt—as on the question whether the Council of the League of Nations, in requesting an advisory opinion by the Permanent Court of International Justice, need be unanimous—the added matter does not, for the most part, develop points of controversy. Thus, in dealing with the Permanent Court—one of the longest insertions—the editor merely records that the proposal that the Court's jurisdiction should be compulsory was deleted "mainly owing to the opposition of some of the great Powers."

An instance where the editor explicitly points out that he has left an original passage unaltered occurs in the reference to the confiscation of enemy private property by the State. Oppenheim held the old rule, allowing confiscation, to be obsolete. Some authorities support, while others are opposed to this view. The two groups of references are given in a footnote, and the editor goes on to indicate the course of events followed during and after the world war, when the interference by States with private property, though nominally stopping short of confiscation, "inflicted great loss and injury." The wisdom or unwisdom of what, in substance if not in form, was a sweeping innovation, does not appear to be the subject of any expression of opinion. The division between what

* "International Law." By I. Oppenheim. Vol. II. "Disputes, War, and Neutrality." Fourth edition. Edited by Arnold D. McNair, LL.D. (London) Longmans, Green, and Co., Limited. 1926. 425 net.

may suitably be discussed by the jurist, and what by the statesman, is often, of course, indefinite. Perhaps this problem is beyond the jurist's sphere, but light upon it would be none the less welcome.

Steps bearing upon the problem of disarmament taken since the world war are set out. Here again the editor has limited himself to a statement of facts, though there is significance perhaps in his quotation (upon the old saying, *si vis pacem, para bellum*) of the modern comment, "What you prepare for you get." Here, as elsewhere, the book has been brought very closely up to date, and its value for current reference is thus enhanced. A list of the principal insertions is given in the preface, but, as already indicated, the revision of the whole volume, page by page, appears to have been very thorough and complete.

BOOKS RECEIVED.

Monetary Reconstruction. By R. G. Hawtrey. Second Edition. (London) Longmans, Green, and Co., Limited, 39 Paternoster row. 10s 6d net.

The first edition was published in 1922. Since then, as the author remarks, much monetary reconstruction has taken place, and a new chapter on "The Return to Gold" is added in the new edition. This chapter should be read by all who are interested in currency questions.

The Industrial Dilemma. By Philip Kerr. (London) The Daily News, Limited, Bouverie street. 6d.

Inheritance and Inequality. By H. D. Henderson. (London) The Daily News, Limited. 6d.

These are the 14th and 15th brochures in the "New Way" series, which is being issued under the auspices of the Council of the Liberal Summer School. Mr Kerr's essay, which is prefaced by a foreword by Mr Lloyd George, is an impartial survey of what is right and wrong in Labour's demands and Capital's claims. Mr Henderson pleads for a graduated inheritance tax, the proceeds to be ear-marked for debt redemption.

Slavery or "Sacred Trust"? By John H. Harris, with a Preface by Professor Gilbert Murray. (London) Williams and Norgate, Limited, 14 Henrietta street, Covent garden. 5s net.

In a preface Mr Harris states that his object is to assert "that even when the estimated three million slaves are set free and slavery in all its forms has been completely abolished, civilisation must press on until the colonising powers accept and apply to all subject races the principles of the Covenant of the League of Nations, enshrined in the Covenant phrase, 'Sacred Trust.'" In an appendix to the book are given Article 22 of the Covenant of the League and the texts of "A," "B," and "C" Mandates.

League of Nations: Report on the Reform of the Calendar. (London) Constable and Co., Orange street. 3s 3d.

This report of the special committee appointed by the League to investigate this much-discussed international problem is of interest to business men.

Moody's Manual of Railroads. 1926 edition. (London) Moody's Investors Service, Limited, 70 Cornhill, E.C. 3. £5 5s post free.

Deals in its 1,895 pages with the railways of the world and their securities. Balance-sheets and income accounts for each American company are given over a period of years, with tables showing tonnage, mileage, equipment, and other operating figures. Each security is described fully and "rated" by the publishers according to its investment standing. The book is still predominantly American, but an effort has been made to place it upon an international plane by the inclusion of British home railways, South American roads, &c., not treated quite so fully, it is true, as are the American companies. To this extent the volume falls short of the ideal of the British investor, but is, nevertheless, the most complete of its kind, and an indispensable reference book for the railway student. Subscribers are furnished with monthly "supplements," bringing the figures up to date from time to time.

Zeitungs Katalog, 1926. Annonsen-Expedition. (London) Rudolf Mosse, 125-130 Strand, W.C. 2.

A useful guide to the newspaper publications of the world, arranged, firstly, according to countries, and, secondly, according to subject matter. Details are given as to the price, size and the frequency of publication as well as the address of the publishing offices.

Pitman's Business Man's Encyclopædia. Part I. (London) Sir Isaac Pitman and Son, Limited. 1s 3d net.

The first of 30 fortnightly parts. Part II. will be ready on November 13th.

The Bankers' Magazine. November, 1926. (London) Waterlow and Sons, Limited, London Wall. Annual subscription, 30s.

Containing articles on the progress of banking in Great Britain and Ireland during 1925, dealing with the proportion of capital and reserves to deposits.

The Banker. November, 1926. (London) Eyre and Spottiswoode (Publications), Limited. Goldsmith street, E.C. 4.

Contains an article by Mr. Philip Snowden on the "Manifesto of Big Business."

Bulletin Mensuel. Octobre, 1926. Institut International de Statistique. (La Haye) W. P. Van Stockum et Fils. 1.50 florins.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
November 9.	November 11.

Stock Exchange markets have pursued an uneven tenor during the past short week. The House was closed on Monday, November 1st, and reassembled to plunge into a volume of business brought about by the allotment of the Belgian 7 per cent. Loan. Later there were apprehensions of a possible rise in the Bank rate, which, failing to mature this week, are not entertained with regard to next week. The gilt-edged market has been quiet. There is still a fair amount of newly-issued Colonial and Corporation stock that awaits more permanent hands than hold it now.

The main feature in the foreign market has been excitement over the Belgian loan. In addition to the Belgian activity a marked degree of animation sprang up in Turkish Unified, the French being persistent buyers. It was pointed out, however, that, as French Government bonds still receive interest payments and that nothing is being distributed on Turkish Unified, there may be something to be said in favour of the very much more moderately priced French issues, with the consequence that many people effected a straddle, selling the Turkish and buying the French bonds. The movement in the latter was assisted by the further recovery in the value of the franc. Brazilian bonds are easier, and, in a few of the European reconstruction loans, holders have been selling in order to exchange into the Belgian, although, on the other hand, the premium to which the latter has attained is held to throw into more attractive contrast the quotations that rule for European Reconstruction bonds. Peruvians have given way.

Home Railway stocks went a trifle better, on the revived hope that the end of the coal dispute is at hand. Canadians have strengthened; Argentine railways are somewhat dull, overhung by a bull account. In Brazilian railway stocks there is little doing.

The rubber market weakened on the disappointment felt with the arrangements for dealing with rubber companies' "coupons." A sharp recovery occurred in Rubber Trusts on Thursday morning, and this sufficed to give the list a firmer aspect as a whole. The tea market continues flat; nobody has a good word to say for the shares at present. The Anglo-Persian Oil meeting, as satisfactory as everybody expected, was followed by profit-taking sales, which in their turn reacted upon the rest of the oil list, the market turning dull. Court-audits have been down to £5 a share, and the textile market as a whole is reactionary, on account of the heavy falling-off in the profits disclosed by the J. and P. Coats accounts.

The shipping market is a little easier than it was; various insurance shares weakened on sales from Liverpool said to be due to the necessity for money to be found in order to meet losses incurred in cotton speculation. This is, of course, simply guesswork. The iron and steel market was steady, but, on the news of the suicide of Mr Roscoe Brunner, the shares of the Chemical combine gave way. The tendency amongst industrials has been undecided, with a heavy inclination. A number of new issues came to market this week for the first time, and it is extraordinary with what ease new shares and debentures are placed. In the tobacco group, Carreras stood out with further improvement on bonus expectations. Wireless shares are uninteresting. The cable group made a further mild recovery.

The Kaffir market is dull and inert. Not even in Sub Nigels, West Rand Consols, or other recent popular favourites is there any activity worth the name. The fluctuations in the franc led to corresponding movements in diamond shares, and amongst Rhodesians, Chartered are maintained in the hope of an increased dividend being declared next spring.

City of London Electric Lighting Company, Limited.
—In order to comply with Stock Exchange regulations particulars are advertised of the above company. There is an issued share capital of £1,500,000, divided into 800,000 ordinary shares of £1 each, 400,000 6 per cent. first cumulative preference shares of £1 each and 300,000 8 per cent. second cumulative preference shares of £1 each. There is also issued debenture stock totalling £800,000, consisting of £400,000 5 per cent. debenture stock and £400,000 4½ per cent. second debenture stock. There has now been created £600,000 5 per cent. consolidated debenture stock ranking as a floating charge.

N'Changa Copper Mines, Limited.—Share capital £600,000, divided into 600,000 shares of £1 each. This is an issue of 300,000 shares of £1 each at par, the issue being offered only to the shareholders of the Rhodesian Congo Border Concession, Limited, or their nominees. The company has been formed in particular to acquire from the Rhodesian Congo Border Concession, Limited, the rights held by that company under a concession from the British South African Company of prospecting for minerals and marking out mining claims. The area over which rights are to be acquired is described as the N'Changa Dambo main lode area, and consists of a rectangular area three miles in length by $1\frac{1}{2}$ miles in width. Of the present issue, states the prospectus, £210,000 will be available for the purposes of the company. It is stated that the purchase consideration is £65,000 in cash and the allotment of 225,000 fully-paid shares of the company. The expert reports sound a note of cautious optimism, one stating that "the Dambo-N'Changa area has an indicated, if speculative, value which fully warrants the formation of a development company and the expenditure of a large sum of money for the vigorous exploitation of the deposit."

COMPANY MEETINGS, &c.

ANGLO-PERSIAN OIL COMPANY, LIMITED.
RECORD OF CONTINUED PROGRESS AND SUCCESS.
BONUS FOR ORDINARY SHAREHOLDERS.

The seventeenth ordinary general meeting of the Anglo-Persian Oil Company, Limited, was held, on the 2nd inst., at Winchester House, Old Broad street, London, Sir Charles Greenway, Bart. (the chairman), presiding.

The secretary (Mr John Clark) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen,—The report and accounts which we have submitted to you this year are again, I am pleased to say, of a very satisfactory nature, and more than confirm the forecasts I have given you in previous years.

If you will turn to the profit and loss account you will see that the profit for the year is £4,383,232, as against £3,571,966 in the previous year, being an increase of over £800,000, and that after allocating £2,028,100 to reserve funds and extra depreciation, as against £1,193,000 in the previous year, the amount carried to the profit and loss account in the balance-sheet shows an increase of about £330,000. Before arriving at the trading profit of £5,711,039 shown on the credit side of the profit and loss account, we have written off our main and subsidiary concerns a total of nearly £4,000,000 in respect of depreciation and special reserves, making, with the £2,028,100 dealt with in the profit and loss account, a grand total of about £6,000,000, which has been appropriated out of the year's earnings for depreciation and reserves.

The balance at credit of profit and loss account, after making these allocations, was £4,396,699, out of which we have already paid preference dividends and an ordinary interim dividend of 5 per cent., absorbing a total of £1,322,500, and out of the balance we now propose the payment of a final dividend of 12½ per cent. on the ordinary shares, absorbing a further £1,118,750, and leaving a balance of £1,955,449 to carry forward, subject to excess profits duty, if any, for the year ended March 31, 1921.

BONUS.

In addition to the dividend to which I have referred, it is also proposed to give the ordinary shareholders a more tangible interest in the prosperity of the company by capitalising the main portion of our general reserve fund and making a bonus issue of one ordinary share for each two ordinary shares held by ordinary shareholders on the register on November 20th next.

You will see from the balance-sheet that we have now transferred the amount which formerly stood at the credit of share premium account to the general reserve account, to which it properly belongs, bringing the total of the latter to £5,163,128. The proposed issue of bonus ordinary shares will absorb £4,475,000 of this amount, leaving a balance of £688,128 at credit of the general reserve fund, which we propose to build up again from time to time as opportunities occur.

BALANCE-SHEET.

I will now deal with the items calling for attention in the balance-sheet. The first one on the debit side is the 5 per cent. debenture stock, which has been reduced by £125,000, being the amount falling due for redemption during the year. The second is the 6½ per cent. five-year secured notes. These have been reduced by purchase and cancellation to the extent of £144,500, and we have now given notice of our intention to repay a further £1,000,000 of these notes on January 1, 1927. This operation, which is rendered practicable by the great strength of our financial position, will result in a substantial saving in interest. The third is the employees' provident pension and insurance fund. This has been added to the extent of about £380,000, which, although most satisfactory from one point of view, is, on the other hand, undesirable, inasmuch as the large amount now standing at the credit of this fund is at times somewhat embarrassing to us. To overcome this difficulty we are considering the advisability of revising the rules of the fund in such a way as will secure greater benefits to the employees, and at the same time provide for the control and custody of its moneys by trustees.

Coming now to the assets side of the balance-sheet, the first item calling for remark is the one under the heading of "Purchase price of concessions, &c.," which has been reduced by the substantial amount of over £4,500,000. This reduction is largely due to the issue of £4,000,000 debentures of British Tanker Company, Limited, last December, which enabled that company to pay off its indebtedness to our company to the extent of over £3,000,000. A further cause of the reduction is the alteration in the system of operation of our subsidiary refinery company, the National Oil Refineries, Limited. Formerly crude oil was sold to this company,

and stocks of crude and refined products in this country appeared in its balance-sheet, and stood in the Anglo-Persian books as an advance to the company. Now we have adopted the system, which is a more convenient one for us, of consigning the crude to the National Oil Refineries, Limited, and letting that company refine on our account at an agreed charge. This accounts for a transference from the stocks account of the one company to that of the other of over £2,000,000. On the other hand, there has been an increase by a transfer from the next heading, "Refineries, &c.," owing to the formation of some further subsidiary companies. In connection with this item, I would remind you that, although the book value is only £21,880,439, the actual value is enormously in excess of this figure. To take one example only, the value taken for the shares we hold in our principal producing company—the First Exploitation Company—is only 13s per £1 share, although this company paid a dividend of 45 per cent. per annum in 1924-25 and 50 per cent. per annum in the year under review, and will no doubt pay still larger dividends in the future. Many of our other important assets in Persia and elsewhere similarly stand in our books at far less than their real value.

The next item is refineries, tank installations, &c., which, as I have just mentioned, has been diminished by a transfer to the preceding account, while the depreciation written off is in excess of the capital expenditure during the year. The next is stocks of crude oil products, &c., the amount of which is much greater than in the previous year owing to the different method of treating the crude oil shipped to our refinery at Llandarcy, to which I have just referred. The next is debtors and debit balances, in which there is an increase of about £600,000, which is accounted for by the expansion of our business. The next two are British Government securities and cash, the total of which amounts to £5,865,191, as against £1,852,148 in the previous year, or an increase of over £4,000,000 in the liquid resources of the Anglo-Persian Company, apart from substantial sums held by our subsidiary concerns. To-day the position is, I may say, even more satisfactory.

NEED FOR MAINTAINING LARGE LIQUID RESERVES.

In a constantly expanding concern such as ours, one of the essentials of successful working is the possession of ample funds with which to meet any capital outlay which it may be advisable to incur, whether in the direction of extending our present organisations, or in the acquisition of new oilfields or properties. Last year I told you that we did not during the year under review contemplate increasing our production of crude oil materially, because some breathing space was required in order to enable us to secure the best possible results in every direction from the production already available. This work of stabilisation is, however, now sufficiently forward to enable us again to turn our attention to larger production, and to enable us to secure this a very large amount of further capital outlay will be incurred within the next year or two in the provision of additions to our pipelines, refineries, tankers and distributing organisations. This being the case, I am sure you will appreciate the necessity for conserving our liquid reserves as much as possible until we have more nearly approached the maximum production of which we think our fields are capable. What that maximum may be it is impossible to say, but the underground stores of crude which we have already proved in our concessions are so great that we can look forward with confidence to a continuance of the progress which has so far characterised our operations—at any rate, for some years ahead.

CONSERVATIVE POLICY JUSTIFIED.

The report and balance-sheet now before you, together with the explanations I have given you, fully justify, I venture to assert, the conservative policy which we have been following ever since the company first came into existence. The history of the company ever since its formation has been one of continual progress and success. Profits, it is true, had some setback following the period of war and post-war inflation, but this was common to practically all industrial concerns. From that time onwards, however, our profits have shown year by year steady and substantial increases, due partly to increased production and partly to reductions in costs, and I see no reason for not anticipating similar progress in the years to come.

As to the prospects for the current year, all that I can say now is that, subject to there being no radical change in the prices of petroleum products between now and the end of our financial year, there will be a continuance of the augmentation of profits which has been shown in recent years.

MARKET.

As regards the market for petroleum products, it is always difficult to prophesy. At present, judged by past consumption figures, there would seem to be an excessive production of crude oil, but the daily increase in consumption all over the world is so constant—and there are still so many countries in which there is room for large expansion—that it is not at all certain that the present production is in excess of the increased needs

of consumers, in which case there would seem to be little probability of any substantial reduction in prices. In any case, as I have pointed out before, Persian Oil stands in a very favourable position for meeting any competition that may arise.

FIELDS.

The marginal drilling on our main fields in Persia which we have been carrying on for some time past with a view to ascertaining the full extent of the productive area in these fields is proceeding steadily, and numerous wells drilled in during the year not only materially advance the proved area into new ground, but also further demonstrate the remarkable richness of these fields, both quantitatively and qualitatively. To the main line of the productive area in the Maidan-i-Napthun, Maidan-i-Naftek, and Maidan-i-Bibian fields further drilling has now added another large area of proved territory, bringing the total area so far proved up to about 30 square miles. We have hitherto described this productive area as three fields, because each of these maidans, or plains, has borne a separate name from Biblical times, but drilling has now proved beyond doubt that they all form one vast field, in any part of which we can drill with the certainty of finding flowing wells of large capacity. This constitutes a field which it is now beyond doubt is without its like in any part of the world—either for size or productiveness.

The marginal test drilling which we are conducting on this field has also, I may add, recently revealed the existence of an important bifurcation of the main anticline to the north-west. It is too early yet to indulge in prophecy as to the commercial significance of this discovery, but our geologists are optimistic.

The production from our main field during the year under review does not show, for the reasons I have already referred to, any very large increase. The production last year was 4,556,157 tons, against 4,333,933 tons in the previous year, and as against my last year's estimate of 4½ million tons. The current year, like the last, is partly one of stabilisation and partly one of preparation—throughout all the organisations complementary to the fields proper—for larger production in the future, and consequently it is not our intention to draw on our underground store of oil to the extent of more than about 4½ million tons.

A great deal has been done on the main fields during the year to improve yet further the high efficiency of their equipment. The water supply has been immensely improved by a new line northward to the Karun river, and water—once an occasional source of anxiety—is now amply ensured for all purposes. The plant for recovery of gasoline from the fields' "wet" gas will very shortly be in commission, much to the advantage of the company, and steps have been, or are being taken, to extend the use of the "dry" gas for heat and power purposes wherever practicable. Our chemical research department, of which a section is located on the fields, is busily engaged on the elucidation of this problem, as well as of the many others which present themselves in the course of our development work.

NO OIL LOST.

No oil whatever has been lost, and old well-head valves and flowheads have been changed for new ones capable of standing higher pressures than were originally anticipated, also without accident or loss. As we have nothing but flowing wells of high pressure and big volume, all of which are fitted with these well-head valves and flowheads, all that has to be done now to secure the production of crude which we require for our refinery at Abadan, or for export, is to open the necessary number of valves by means of which the production of crude can from day to day or from hour to hour be regulated to our requirements to a nicety, just as readily, and as accurately, as when one turns on the water for one's bath. A highly capable British and Persian drilling staff has been trained on our fields, and our field conditions are now so satisfactory that we can afford to detach drilling crews from our main fields to new test areas without any detriment whatever to the production side of our operations. Testing operations are well advanced in the six new areas referred to at the last general meeting, but no wells have yet reached the presumed oil rock, though gas has been met with in two of them. On the other hand, nothing has come to light to discredit the assumption which led to the selection of the areas for test drilling.

Six wells are now drilling in the Naft Khana area, to which I referred by name for the first time at our last meeting. I had previously recorded the fact that one well—with an initial daily capacity of 1,000 barrels—had been drilled. During the year now under review another well—situated nearly one mile from its predecessor—also came in at an estimated daily rate well in excess of 5,000 barrels. Drilling in this area is particularly difficult, and the greatest care has to be taken owing to the very high gas pressures encountered; hence progress is slow. The wells now drilling in this field extend over a length of 5½ miles, the object being to determine whether the oil deposits in this region are so

extensive as to justify the large expenditure that would be involved in the provision of a pipe-line to the seaboard. In the meantime, however, since a considerable degree of production is already assured, a small refinery is being erected in the transferred territories—near Khaniqin—with the object of supplying the markets of Iraq and Northern Persia with oil won in those territories. This refinery should be ready to operate early in 1927.

With the approval of the Turkish Petroleum Company, in which we have, as you know, a very substantial interest, a geological examination has been concluded by them over 24,000 square miles in Iraq, and an active testing programme by the drill in approved areas will shortly commence.

TEST OPERATIONS IN ALBANIA.

In Albania test operations are now proceeding in three separate zones of our concessions. One particular well recently struck a good show of very heavy asphaltic oil at a relatively shallow depth; but as oil of the quality found could not, unfortunately, be regarded as a commercial proposition, the well is now being deepened in the hope of striking a higher grade oil at a lower level. The geological conditions of the country, so far as they relate to the possible discovery of oil, are by no means easy of interpretation, and success in one zone by no means postulates the existence of favourable and attainable structure in any other—even though it may be adjacent. I mention this since a certain syndicate openly tells its shareholders that the future value of its shares is dependent upon our drilling operations, and many of these shareholders have taken the unusual course of writing to us for confirmation.

In the Argentine the production from our modest concession area has considerably increased, partly as a result of our being forced to embark on an abnormal drilling programme in order to maintain our position against a very determined offsetting policy on the part of our neighbours. The total production from the beginning of 1922 up to the end of 1924-25 was approximately 48,000 tons. In 1925-26 it was 106,600 tons. It will probably amount to 120,000 tons during the current year, and, as this figure could be increased had we a sufficiently remunerative outlet for a larger production, we have recently concluded arrangements for extending the refining and marketing side of our local organisation, in order that we may be able to deal satisfactorily with a larger output.

REFINERIES.

The general refining situation throughout the year has been quite satisfactory, and the programme laid down has been carried out in every respect. Everything necessary has been, or is being, done to ensure that our refineries keep abreast of the most modern practice, and large economies have been, and will continue to be, realised by the strict attention which is being given to this side of our operations.

The throughput at Abadan, our refinery in Persia, was approximately 2,950,000 tons. Working costs continue to show improvement, and we have various schemes in hand and in view, particularly with respect to the elimination of certain of the older benches, which should tend to yet further working economies. Continuing my remarks of last year on the subject of health conditions at this centre, I am pleased to report that the measures taken by the company, costly though they were, have been amply justified. The health of the general community of Europeans, Persians, &c., has never been better.

The aggregate throughput at our principal home refineries was practically the same as last year; they continue to operate in a highly successful manner, and costs show substantial decreases. Progress continues to be recorded by our associated company in Australia—the Commonwealth Oil Refineries, Limited—and the year's throughput showed a gratifying increase over previous years.

No special comment is called for respecting the refineries of our other associated companies, other than that they have operated satisfactorily and generally in accordance with programme. I might, however, mention that our French company has acquired a refinery at Douai, which has been treating Persian crude for several years past, and that the products therefrom now form an important part of our French requirements.

TANKER FLEET.

The vessels of the British Tanker Company were fully employed during the period under review, and they were again immune from any serious accidents. This company, at the end of last year, issued a further £1,000,000 of ordinary shares, bringing the total capital up to £4,000,000, and at the same time issued £4,000,000 of 5½ per cent. debentures at 97 per cent., all of which were readily subscribed. The company made satisfactory profits for the year under review, and after writing off £200,000 for extra depreciation, and the whole of the discount on the debentures and the expenses of the issue—a total of a further £259,535—declared a dividend of 10 per cent. per annum on its ordinary shares, the whole of which are held by the Anglo-Persian Com-

pany. Unfortunately, our fleet of tankers was very short of our requirements, and we had to supplement it by a number of outside charters. To bring it more into line with our needs we have placed orders for a further seven vessels—five of which will be Diesel-engined—which will bring our tanker fleet up to a total of 76 vessels of an aggregate deadweight tonnage of 650,000 tons, all of them built in this country by British labour. We also control through our subsidiary companies, or manage, a number of other tankers, thus considerably adding to our available tonnage. In addition, we own, as you know, a large number of other vessels of various descriptions.

THE SHALE INDUSTRY.

While the business carried on by Scottish Oils, Limited, in the refining of Persian oils is highly satisfactory, I am sorry that I cannot say the same of the portion dealing with shale, the working of which on the basis of the present values of products still continues unremunerative. To make matters worse, a dispute concerning wages necessitated a stoppage of the shale operations in November of last year. After that stoppage it was not found possible to restart the whole of the industry, and since then certain places have had unfortunately to be permanently closed down. The works and mines left idle are being maintained in the hope of an early improvement in conditions, but this is expensive, and cannot be continued indefinitely. The position, which was very unsatisfactory before the coal strike, has since been further aggravated by the high price of fuel. Every effort has been made to carry on this old-established industry, and the unemployment which has resulted from its partial closing down is greatly to be regretted.

DISTRIBUTION.

As regards the distributing side of our business, I am again pleased to be able to report satisfactory progress. Sales of our various products have shown a satisfactory increase during the year under review, and our success in finding further outlets for our production encourages us to continue our policy of expansion.

In certain countries where we are established business has been somewhat impeded by high duties and exchange fluctuations, but with a gradual return to normal conditions we look forward to steady progress in these as in other areas.

In the extension of our markets our most important move since I last addressed you has been in Germany, where we have associated ourselves with two leading German petroleum companies, and we have now begun to make large deliveries of our oils to that country.

Our Empire markets have been extended by the introduction of B.P. spirit and kerosene into East Africa.

The unfortunate dispute in the coalmining industry in Great Britain has led to largely increased demands on us for fuel oil, and by making special efforts we have so far been able materially to increase our deliveries of this product.

We have now commenced to market lubricating oils, and though our operations in this product are still on a small scale, we are confident that before long it will constitute an important section of our business.

I would again remind our many share and debenture holders of the valuable help which they can give the company in both its home and foreign markets by asking for B.P. products and by insisting on being supplied with them. Our B.P. motor spirit still maintains its high reputation as being one of the best qualities, if not the best, on the market—a convincing proof of this being the wonderful headway that it continues to make in the public esteem.

DEPUTY-CHAIRMAN'S VISIT TO PERSIA.

As many of you are aware, Sir John Cadman paid one of his customary inspection visits to Persia this year, and on this occasion he not only, as usual, dealt with a large number of important questions connected with the development of our fields and the working of our refinery at Abadan, but also took the opportunity of paying a visit to Teheran in order to discuss various outstanding matters with the Persian Government, and at the same time of representing the company at the coronation ceremonies of that most remarkable and eminent personage who now controls the destinies of Persia—His Majesty Riza Shah Pahlevi.

He was honoured by a personal interview with His Majesty, at which the latter expressed the utmost friendliness towards the company and great appreciation of the services which had been rendered by it to Persia in the direction of the wealth that it had brought to the country, the large amount of employment it had provided for its people, and in the extensive medical and educational services it is providing, to non-employees as well as to employees, in Khuzistan and elsewhere in Persia. Sir John also had the opportunity during his visit of clearing up several misunderstandings with the Persian Government.

You will be interested to learn that the estimated amount of royalty payable by our companies to the Persian Government in

respect of the last year's profits amounts to £974,823, and that in addition to this large revenue Persia benefited in that year to the extent of about £3,000,000 by the moneys we expended in the country for labour and other services.

EDUCATION.

We have for some years past founded and maintained technical training schools for Persians at our principal centres of operations, and the results have been very gratifying. Several hundred youths have already passed through our training shops to date and have been absorbed in our various technical departments.

With the expansion of our work in Persia we have decided on an extended programme of educational facilities for Persians, in accordance with the curriculum laid down by the Persian Ministry of Education. This will include both primary and secondary education. We have also instituted a scheme by which all our British employees will be compelled to learn Persian during the period of their first agreement.

By providing these educational facilities, both for Persian and British employees, we hope to stimulate the spirit of mutual understanding which is so essential both for Persia and for the company.

I am glad to be able to inform you that Sir John Cargill, our esteemed Burmah Oil colleague, has decided to visit the seat of our principal operations in Persia shortly. I am sure you will join with me in expressing our appreciation of the sacrifice he is making in undertaking this journey in the interests of the company, notwithstanding his many other important engagements.

THE CHAIRMANSHIP.

I will now, with your indulgence, finish on a more personal note. I told you last year that I did not contemplate immediate retirement, but I feel that the moment has now arrived when I can, without prejudice to the interests of the company, withdraw from my more active duties, and I therefore propose to take this step on my return from a visit which I hope to pay to our Persian fields early next year. It is naturally most gratifying to me that I can make this change at a time when the company, to the development of which I have unremittently devoted myself for many years, is in so sound and healthy a condition, and I am confident that under the care of my colleagues, to whose high ability and loyalty I should like to pay a warm tribute, it will continue to expand and flourish.

My successor, Sir John Cadman, happily needs no introduction to you, and I will only ask you to extend to him the unfailing consideration and support which you have been good enough to accord to me, and for which I thank you most sincerely. I need only add that while I shall be laying down the reins as chairman, I shall still take a keen interest in the company's welfare, and that my assistance and advice will always be at my colleagues and the company's disposal.

The report and accounts were unanimously adopted.

Sir John T. Cargill, Bt., said that on the retirement of Sir Charles Greenway from the chair, his colleagues proposed to ask him to accept the title of president of the company, thereby enabling him to enjoy the leisure which he desired, and at the same time keeping him in touch with the affairs of the company.

The Rt. Hon. the Lord Bradbury of Winsford, G.C.B. Mr Chairman, ladies and gentlemen,—As the representative on the board of the Anglo-Persian Oil Company of His Majesty's Government, I think it is not inappropriate, perhaps, that I should add just two words to the tribute which Sir John Cargill has paid to our retiring chairman. I think it must be of the greatest satisfaction, not only to the Government, but also to the taxpayers of this country, that the affairs of this company in which the Government is so largely interested have, from its very inception, been in such able hands.

At the time when the Government originally took an interest in this company I was serving the State in another capacity. I was then Secretary to the Treasury, and it fell to my lot to conduct on behalf of the Government some of the preliminary negotiations with those members of the company who were anxious that the Government should take an interest in its concerns. I very well remember the pleasant associations which I then had with Sir Charles Greenway, and the impression which I formed of his ability in the business world; that impression has ever since been confirmed. After all, the opinions of individuals on these matters are fallible and unimportant. We have the standing success of this great company as the real tribute to the genius of Sir Charles Greenway.

Sir Hugh S. Barnes, K.C.S.I., K.C.V.O., also paid a warm tribute to Sir Charles Greenway for his past services, and the chairman expressed his willingness to accept the presidency of the company.

Resolutions were passed authorising an increase of the capital to £24,000,000, capitalising £4,475,000 of the general reserve, to be distributed as ordinary shares among the holders of the issued ordinary shares, and authorising that issue.

STATE OF BAHIA SOUTH WESTERN RAILWAY COMPANY, LIMITED.

REVENUE EXPANSION—INCREASED TONNAGE.

The seventeenth annual general meeting of the State of Bahia South-Western Railway Company, Limited, was held, on the 2nd instant, at the offices of the company, 8 Arthur street, London, Sir Frank M. Crisp (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The year ended April 30, 1926, proved a good one, gross receipts at £73,302 11s 3d showing an increase of £16,429 0s 6d, whilst net receipts, at £34,651 6s 1d, were £11,235 7s 4d above those for the previous year. The total working expenses amounted to £38,651 5s 2d, or an increase of £5,193 13s 2d over those for 1924-25. This increase was due to the heavier traffic, the ratio of expenses to receipts showing a reduction of 6.1 per cent., the rate last year being 52.73 per cent. of receipts.

Notwithstanding the rise in the value of the milreis, which, under our sliding scale of tariffs, reduced the percentage increase, the currency earnings for the year showed an increase of about 10 per cent. over those for the previous year.

There was an expansion in all sources of revenue, due principally to the large cocoa crop and the general improvement in business conditions in the district consequent thereon. If you will turn to page 4 of the directors' report, where the figures for the cocoa crop for the last nine seasons are given, you will see that the crop for 1925-26 totalled 690,005 bags, of which the company carried 88 per cent., or 611,083 bags. These figures show an increase in the crop of 24,000 bags, and in the number of bags carried by the company of 45,000 bags over the previous best year.

The tonnage of cocoa carried over the railway was 36,686 tons, and of general merchandise 16,638 tons, making a total of 53,324 tons, an increase of about 7,500 tons over last year.

The harbour works at the port of Ilheus were completed early in 1926, and the bulk of the present season's crop is being shipped direct to New York and other overseas ports, thus saving the expense of handling and transhipment at Bahia, to which port the cocoa has hitherto been sent by coasting steamers. Plans are in course of preparation for the construction of a projected extension in a northerly direction to connect the railway to the fertile valley of the Rio de Contas, for which a concession has been obtained.

The cocoa crop for the current year is not expected to be so large as the last one, and weather conditions have been unfavourable

for the collection and drying of cocoa. The upkeep of the company's properties has been fully maintained during the past year. The report and accounts were unanimously adopted.

MONERAKELLE RUBBER ESTATES, LIMITED.

RECORD PROFIT AND DIVIDENDS.

The 21st annual general meeting of the Monerakelle Rubber Estates, Limited, was held, on the 3rd instant, at the company's offices, 12 Fenchurch street, London.

Mr Charles Gordon Bois (chairman of the company) presided, and in moving the adoption of the report and accounts said he was pleased to be able to say that these showed a record profit for the company, in addition to which the board recommended a record dividend of 30 per cent. It was perhaps a source of satisfaction that the all-in cost of production was 9.84d per lb, as compared with 10.35d in the previous year, in spite of the fact that the average rate of exchange for the rupee was appreciably higher than last season. During his (the chairman's) visit to the East last January he took the opportunity of having several interviews with their visiting agent, Mr Scott, and discussing various estate matters with him, with satisfactory results. One remarkable feature was that they were obtaining their maximum standard of production of 100 per cent., although only one-third of their trees were being tapped every third day. Mr Scott expressed a very high opinion of the work being done by their superintendent, Mr H. J. D. Stokes, and the board proposed to recognise this in a practical manner by voting him a bonus of £150. They had opened up a new clearing of 21 acres, and it was proposed to open up a further 30 to 40 acres at a suitable opportunity. Those two clearings would be situated at the bottom of the estate near the factory, but when they had been completed he did not think there would be much land left suitable for opening up, as their remaining areas were very high up on the estate, and he did not think that it would be a practical proposition to open them up. During the season they invited Mr A. C. Matthew, their late visiting agent, to join the board of the company, and he was very pleased to say that the offer had been accepted. Mr Matthew doubtless knew the estates better than any other member of the board, and his advice and experience would be of the greatest value to them.

Sir Stanley Bois seconded the motion, which was unanimously agreed to.

CURRENCY.

According to the Baghdad correspondent of the *Times* the Government of Iraq intends to submit proposals to the Chamber of Deputies for the establishment of a national Iraqi currency and note issue to take the place of the rupee currency now in use. The standard unit of the new currency will be the gold dinar, equivalent in value to half of the pound sterling, and the issue will be made by a Currency Board established by Act of the Iraqi Parliament. It is further stated that in order to prevent any depreciation of the new notes by their over-issue, they will be issued only in exchange for rupees withdrawn from circulation, and the necessary purchases of sterling will be made with the money thus withdrawn.

SILVER.

The market has been sustained by the demand for shipment by this week's steamer for the Bombay November settlement. The stringency was reflected by the discount of 3d for forward delivery, which is larger than has obtained for some time. Indian bazaar orders were mostly not to buy outright, but to sell two months' silver against spot purchases. The slenderness of the support was revealed to-day by a sharp setback caused by China selling for forward delivery, and the impracticability of shipping more prompt silver by this week's steamer, owing to insufficiency of supplies. America has been dealing again both ways—rather more as a buyer than a seller. The tone is still uneasy, but a certain amount of bear covering is likely to arise at falling rates. United Kingdom imports and exports of silver during the week ending the 27th ultimo were:—

	Imports.	Exports.
France	58,590	109,370
U.S.A.	72,596	7,261
Other countries	53,780	
	184,966	116,631

No fresh Indian currency returns have come to hand since our last issue. The stock in Shanghai on the 30th ultimo consisted of about 71,300,000 ounces in sycee, 73,300,000 dollars, and 5,800 silver bars, as compared with about 70,800,000 ounces in sycee, 73,900,000 dollars, and 5,340 silver bars on the 23rd idem. On October 31, 1925, the stock was returned as about 56,600,000 ounces in sycee, 67,500,000 dollars, and 5,560 silver bars; it will be seen, therefore, that the present stock is about 16 per cent. more than that held a year ago, but, as the price of silver has fallen, the sterling value of the stock is about 10 per cent. less than that at the date mentioned. Statistics for the month of October, 1926, are appended:—

	—Bar Silver, per Oz. Std.—	Bar Gold.
	Cash Two Months' Delivery.	per Ounce, Fine.

† Free of tax.

a Including arrears.

buildings, &c. The carry-forward is increased from £12,618 to £17,225. Cash stands at £40,816, out of total assets £278,844.

BUNTAR RUBBER ESTATES.—The company was formed in March, 1925, with an authorised capital of £60,000, and 57,000 shares were issued for the purpose of acquiring a group of estates, now known as the Buntar Estate. On May 25, 1925, the authorised capital was increased to £120,000, and a further 57,000 shares were issued for the purpose of acquiring the property now known as the Nagalelai Estate. Report for year ended June 30, 1926, reveals a trading profit of £9,014. A dividend of 6 per cent. is paid. The carry-forward is £760. The crop harvested from the two estates was 259,453 lbs. Cash is at £7,245. Treasury bills at cost stand at £4,947.

TANDJONG RUBBER.—The net profit for year ended June 30, 1926, amounted to £138,183, against £69,459 in preceding year. The ordinary dividend is 40 per cent., less tax at 4s in the £. This compares with a dividend of 22½ per cent., less tax at 4s 4d in the £ for preceding year. The sum of £20,000 is put to reserve, and £5,000 to taxation reserve. The carry forward is £39,538. Cash stands at £17,129, against £14,644. Investments total £119,414, against £53,074. The investments are shown separately.

MISCELLANEOUS.

A. J. STEVENS AND CO.—The profit for the year ended August 31, 1926, shows a profit of £44,891, against £42,117 in preceding year. The ordinary dividend is unchanged at 12½ per cent. The sum of £10,000 is put to general reserve fund against £15,000 in previous year. The carry-forward is £28,136, against £26,523 brought in. Cash and bills stand at £101,514, against £38,401. Debtors are at £92,033, against £84,298. Stocks are at £245,327, against £211,439. Total reserves amount to £90,005, against £69,449. Creditors are at £74,868, against £130,473.

ANSSELLS BREWERY, LIMITED.—The net profit for year ended September 30, 1926, after making full provision for depreciation and bad and doubtful debts, is £207,496, against £204,684. The ordinary dividend is again 15 per cent., free of income-tax. The sum of £50,000 is put to reserve, making total reserve £330,000. The carry-forward is £144,266. Cash is at £260,837, against £335,578. Investments are at £9,089, against £52,689. Stocks are at £289,708, against £296,152. Debtors amount to £119,374, against £124,516. Creditors are at £694,261, against £737,858.

AUSTRALIAN MERCANTILE LAND AND FINANCE.—The net profit for the year ended June 30, 1926, was £298,168, less transferred to reserve fund, £50,000—£248,168. Out of this sum an interim dividend of 5 per cent., together with a bonus of 2½ per cent., was paid on May 4th last, £90,000, leaving £158,168; and the directors now recommend a final dividend of 5 per cent., together with a bonus of 2½ per cent. (making 15 per cent. for the year,

free of income-tax), £90,000, leaving a balance of undivided profit of £68,168; to which must be added the balance from previous year, £47,141. Balance to be carried forward, subject to provision for income-tax (estimated to cost £68,000), £115,309. The report adds that drought conditions have prevailed for a large portion of the year ended June 30, 1926, over the Central West and Northern areas of Queensland. In September this year these areas were partially relieved by rain, but more is needed. In the remainder of Queensland and in New South Wales and Victoria, seasonal conditions have been, generally speaking, favourable. The wool market has ruled at a steady and satisfactory level, and excellent realisations have been effected.

BURBERRYS, LIMITED.—Profit for year ended March 31, 1926, amounted to £138,644, against £171,690 in preceding year. The sum of £115,735 was brought in from preceding year, which makes £254,379 available. Preference dividend, including all arrears, absorbed £225,000. The sum of £20,000 is transferred to contingencies and general reserve account. The carry-forward is £9,379. Assets total £2,565,366. Goodwill of Burberrys and S. and J. Prestwich stands at £465,533. Preliminary expenses stand at £69,642. Cash is at £28,299, against £30,276. Debtors are at £311,886, against £332,546. Stocks are at £636,651, against £730,569. Overdrafts from bankers are at £228,384, against £306,360. Creditors amount to £298,915, against £322,122. Contingencies and general reserve account stands at £120,000.

CARLTON HOTEL, LIMITED.—The net profit for year ended August 31, 1926, was £63,620, against £62,364. The ordinary dividend and bonus is maintained at 12 per cent. The carry forward is increased from £15,143 to £17,242. The sum of £20,000 has been put to reserve, and £6,521 has been transferred to reserve for amortisation of leases of Carlton Hotel. The company has £75,000 in 4 per cent. National War Bonds, 1927, and £56,726 in its own debentures and in associated and other companies. Cash is at £76,365, against £62,076. Stocks are £83,517, against £81,454.

ERINOID, LIMITED.—The report for year ended August 31, 1926, shows a net profit of £30,335, against £48,748 in preceding year. The ordinary dividend is 10 per cent. for the year, against 12½ per cent. for 1924-25. The sum of £5,000 is put to general reserve, while £5,000 is put to taxation reserve and £500 to staff fund. The carry forward is £6,042. Cash is at £25,116, against £30,804. Stocks are at £99,924, against £94,722. Debtors are at £44,874, against £51,194. Total reserves are £88,150, against £62,807.

HOTEL CECIL, LIMITED.—Profit from trading accounts for year ended August 31, 1926, amounted to £77,473, against £72,528 in preceding year. The ordinary dividend is 4½ per cent., against 6 per cent. The sum of £30,604 is carried forward, against £27,910 brought in. Cash is at £25,958, against £34,353. Stocks are at £39,628, against £42,717. Loan from bankers is at £8,000.

LISBON ELECTRIC TRAMWAYS.—The result of the company's operations for 1925, after deducting interest and amortisation due on the debentures of the "Companhia Carris de Ferro de Lisboa," and the payment of £24,615 interest on and redemption of the debentures of this company, shows a net profit of £166,624. To this sum is added the credit balance of £9,630 of profit and loss brought forward from last year, which gives a balance of £176,254. From this amount the sum of £50,000 has been transferred to the credit of general reserve, leaving an available balance of £126,254, out of which the preference dividend for the year to December 31, 1925, was set aside, together with the further sum of £76,599 on account of the preference dividend arrears, also £5,000 has been transferred to the staff benefit fund, and £10,000 to exchange reserve. This leaves a balance of £9,122 to be carried forward.

LONDON AND COLONIAL INVESTMENT CORPORATION.—The net revenue for year ended September 30, 1926, is £16,771, to which is added £1,775 brought in, making £18,546 available. The sum of £3,000 is put to reserve. The preferred stock dividend is 5 per cent., and the deferred stock dividend 7½ per cent. The carry forward is £2,162. The directors ask for authority to increase the issued capital. Upon the authority being granted the board propose to issue forthwith to existing stockholders (both preferred and deferred) 52,000 shares of £1 each at par, in the proportion of one new share for each complete £5 of stock now held. When fully paid, the new £1 shares will be sub-divided and converted into 10s pref. stock and 10s def stock, which will rank in all respects *pari passu* with the existing issued preferred and deferred stock.

LONDON MARITIME INVESTMENTS.—This company has an issued capital of £1,000,000, in ordinary stock £500,000 and 5 per cent. cumulative preference stock £500,000. It has a reserve fund of £220,000, which is all invested in British Government securities. This is shown fully on the assets side of the balance-sheet under the heading reserve fund investments. Total assets are £1,251,582. Cash is at £23,000. Investments at cost amount to £1,008,982. They are shown under eight headings. Shares in shipping companies amount to £466,895 of the total investments. The net profit for year ended September 30, 1926, is £61,415, against £59,206. The ordinary shareholders again receive a dividend of 8 per cent.

PROVINCE OF BUENOS AYRES WATERWORKS COMPANY, LIMITED.—The directors announce that the rate revisions, referred to by the chairman at the last annual general meeting, have now become effective in the company's most important districts, although the complete programme of revisions is not yet in force. The new rates will be greatly to the company's advantage, but at present it is impossible to estimate the actual result owing to pending appeals, &c. The directors have, therefore, decided to defer consideration of a dividend on the ordinary shares until the final accounts for 1926 are before them. The usual half-yearly preference dividend has been declared.

32s per 400 lbs. English malting 10s to 17s 6d, with choice up to 20s, feed 9s to 9s 6d per 112 lbs. Oats quiet, though reservedly offered. AMERICAN WHEAT MARKETS.

The early part of the week witnessed a steady decline in prices, general trading being quiet, and favourable crop news from Argentina exercising a bearish influence. Subsequently, however, a rally took place, owing to the delay in new crop seeding operations, occasioned by dryness in the Western winter wheat belt, and to improved export inquiry.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Seeding operations have been completed under favourable climatic conditions, and the young wheat plant now above ground presents a healthy appearance. Prices of native wheat remained firm with a hardening tendency, particularly for the commoner grades, offerings being well absorbed. Imported descriptions, however, were obtainable on easier terms, due to a reduction in forward values. In the floating and forward cargo market business continues restricted, and prices tended in a downward direction owing to the better outlook for an early settlement of the coal dispute and an easier freight position, while offers of new crop Plates were on a more liberal scale. World's shipments, though equal to present requirements, should be larger in order to provide some reserve for the near future, when supplies will be curtailed at the closing of navigation on the St Lawrence, in addition to which chartering of new crop wheat from the Southern Hemisphere has been retarded owing to the scarcity of tonnage offers and high rates ruling for freightage. Feeding stuffs are also weaker in sympathy, particularly distant positions. Wheat tends easier. No. 1 Northern Manitoba quoted 65s 6d, No. 2 ditto 63s 9d, No. 3 62s 9d, No. 2 mixed Durum 59s 9d, choice white Karachi 61s 6d ex-ship, all per 496 lbs. English 12s 4d to 12s 8d per 112 lbs. Flour quiet, but spot supplies of imported sparingly offered. London standard grade 52s, town whites 53s, patents 54s to 55s per sack delivered in the home counties, with 6d-1s per sack less for deliveries in the London districts. Of imported Manitoba patents range from 48s to 50s, Minneapolis 48s to 50s 6d, Australian 45s per 280 lbs ex-store. Maize easier. Plate landed 34s, ditto ex-ship 32s 3d, Bessarabian landed 37s 3d per 480 lbs. Barley steady. Californian 40s to 47s, ditto Chevalier 50s, Chilean Chevalier 52s to 62s, ditto brewing 40s to 48s, Australian Chevalier 48s to 50s, ex-store. Smyrna 39s to 55s ex-ship per 448 lbs. No. 3 Canadian Western December 35s ex-ship. Persian ex-ship 30s 6d, landed

Visible supplies of wheat in Canada, 39,028,000 bushels, show an increase of 6,360,000 bushels as compared with the previous figures. Supplies a year ago stood at 30,250,000 bushels.

COAL.

Our Cardiff correspondent writes:—The increased winter demand for coal has led to the introduction on more restrictive regulations in the South Wales coalfield. For the moment permits for the release of fresh wrought coal for industrial consumption are being withheld so far as may be necessary to secure the prior claims of essential services, and prices have been increased. An arrangement has been reached by which merchants are to receive fresh wrought coal at a pithead price of 55s per ton for large coal and 50s for through coal. This represents an advance of about 5s in the pithead price, and in the delivered price to the householder of about 3d per ton. The chartering of tonnage for the shipment of American coal has continued active, and for December deliveries quotations are ruling round 80s, c.i.f. The congestion of tonnage at Hampton Roads and Continental ports continues, and advises report that loading berths are not available within less than a fortnight of time of arrival. The price of pitch has advanced to £10 per ton for patent fuel manufacture, and partly owing to this increase and to the acute scarcity of small coals only a small minority of the works are now in operation. There is a probability of a sharp rise in patent fuel prices next week.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The rather confused conditions which ruled in the market last week still exist, and although there is a good deal of inquiry, the volume of actual business appears to decrease. With a few exceptions, British steelmakers have no material to sell except for delivery at some indefinite date after the strike, and owing to the recent active demand Continental makers of pig-iron and steel can now only offer for delivery towards the end of the year. There is still a great scarcity of pig-iron, British pig-iron being practically unobtainable, and supplies of Continental pig-iron insufficient to meet the demand. The buying of semi-finished materials is less active than it was, owing to the difficulty of obtaining delivery before December, and a similar situation obtains in the finished steel department. In the absence of buying Continental prices have shown a slight weakness.

Our Middlesbrough correspondent's report, dated November 4, 1926, is as follows:—Pig iron: A fair quantity of foreign pig-iron is being brought into this district, becoming more difficult to secure for early delivery. In the meantime, makers here have no difficulty in disposing of the very small production of Cleveland pig-iron. No. 3 G.M.B. is at 120s f.o.t., but it is difficult to secure early delivery. There is still no quotation for ordinary mixed numbers East Coast hematite iron, but small scales of off grades are reported at prices ranging from 87s 6d to 90s. Manufactured iron and steel: Supplies are difficult to secure, as there are only one or two works in a position to produce, and higher prices are having to be paid for moderately prompt delivery. Iron ore: No business is being done, and best rubio is nominal at 21s 6d per ton c.i.f. Tees.

Our Sheffield correspondent writes:—The main problem is still the shortage of material. There are no billets available such as are used for making files, and production in that trade has been severely curtailed. The motor trade is still able to obtain the steel it requires, and makers hope to continue supplies for several further weeks. The mills have raised their prices on hire work by from 25s to £3 per ton. In the majority of cases users are paying the additional charges. The position is serious for firms having an export connection. All export orders are being executed at a considerable loss. Several of the heavy firms are prepared to start an open-hearth furnace, but cannot obtain coal. Members of the crucible steel trade are being called upon to pay an advance of 10s. or more per ton for the Westphalian coke which has enabled them to continue melting in the past. There was a disposition to cease operations rather than accede to the demand, but eventually the makers decided to buy at the new quotation, and have concluded contracts for considerable quantities at the unprecedented figure of 79s 6d per ton. No hematite pig-iron used for making acid steel is now procurable. Continental iron and steel is dearer and deliveries in arrears. The hand-tool branches continue working regularly, and can get raw materials required for the majority of the products. Cutlery and plate makers are quiet for the time of year.

Our Glasgow correspondent writes as follows:—There is no new feature in the iron and steel trade this week. Although a large

number of miners have returned to work in this district, there is practically no coal available for industrial purposes, and what is offered is quoted at quite prohibitive prices so far as iron and steel-making are concerned. Pig-iron is being bought by consumers ex-stock only to cover urgent needs and in very small quantities, the prices realised being very high. Very slender hopes are entertained now of a general resumption at the steel works this side of the New Year, but some of the smaller ironworks and the sheet-makers are operating on a small scale, using mostly Continental "semi" steel. Prices have advanced both for bars and sheets, the latter being now £13 per ton at works for 24-gauge annealed. Galvanised corrugated sheets now command £17 5s. upwards f.o.b. Glasgow, and angles £9 5s per ton.

Our Cardiff correspondent writes:—In the tinplate industry it is feared that the restrictions on the supply of coal for industrial purposes will lead to the closing down of a number of mills and finishing departments. Inquiries are fairly active, but supplies are scarce, and for prompt delivery manufacturers have been able to realise 26s per basis box, and from 24s to 24s 6d for boxes of odd sizes. Stocks have been reduced since last week from 59,990 to 52,391 boxes. Galvanised sheets remain firm at £17 10s per ton, and bars at £6 15s, although imported bars are offering at lower prices.

OTHER METALS.

TIN.—The market commenced the week with a dull tone, and prices declined on heavy liquidations and lower Eastern advices. Later, however, values rapidly improved on buyers becoming more prominent, especially for near positions, while holders adopted reserved measures. The close, however, was weaker. Standard cash changed hands at £296 to £302 to £301 and £298 15s, and three months £294 10s-£295 10s-£291 and £293 15s, finally £291 10s. Sales in the East were reported at £301 7s 6d, £299 15s, £292 and £300.

COPPER displayed slight irregularity and weakness due to realisations, though offerings were fairly well absorbed. Standard cash sold £57 13s 9d to £57 17s 6d-£57 5s, three months £58 10s to £58 15s and £58 1s 3d.

LEAD in good support, and market, after being firmer, failed to maintain top points. Good soft foreign pig, November, sold £29 5s to £29 15s, and £29, December £29 6s 3d to £29 12s 6d to £29 1s 3d, January £29 6s 3d to £29 12s 6d to £29 2s 6d, February £29 5s to £29 10s 3d to £29 5s.

SPELTER irregular, while easier on balance due to realisations. November sold £33 15s-£32 17s 6d, December £33 13s 9d-£33 15s-£32 17s 6d, January £33 12s 6d to £33, February £33 15s to £33, March £33 10s ton.

ANTIMONY dull. English special brands quoted £74 10s to £75; China crude November-December sellers £32, regulus ditto £47 ton.

ALUMINIUM quiet. Home delivery £107, export £112 ton. WOLFRAM quiet, and November-December quoted 14s 3d, antimony ore ditto 5s 6d per unit c.i.f.

QUICKSILVER firm, and spot quoted £17 per bottle.

TIN PLATES firmly held. I.C. coke prompt 26s, and forward nominally 24s per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, November 4, 1926.

Spot sales have again been large, and prices show practically no change. Markets were generally quiet and steady until Wednesday, when a little more hedge-selling, accompanied by straddle reversing, caused a small setback of about 15 points. A great deal of the recent buying has come on the October position, much of it from spinners who think present prices low enough to warrant their securing their cotton requirements for the next year or two.

Spot sales for the week October 29th to November 4th were 43,000 bales. Of these 21,430 were American, 3,300 Brazil, 8,250 Peru, 4,150 Egyptian, 4,700 African, 760 East Indian, and 410 sundries. Imports for the same period were 125,418 bales, of which 111,094 were American, 3,576 Brazil, 8,983 Peru, 1,149 Egyptian, 357 African, 255 East Indian, and four sundries. Quotations to-day are: American middling, 6.88d; Egyptian sakel,

MANCHESTER, November 4, 1926.

Conditions have shown further improvement. Customers abroad are gradually regaining confidence in current prices, and during the past week an extensive inquiry in piece goods has been met with. There is rather less disposition to anticipate lower American cotton prices. There has been good inquiry in piece goods for India, and some fairly large buying has taken place in dhooties for Calcutta. There has also been an improvement in the turnover in jaconets and nainsooks. Most of the offers for grey shirtings have had to be turned down. More business has been mentioned in prints and fancies for Karachi and Madras. There has been rather more activity in staple cloths for Egypt, whilst buyers for South America have not been altogether idle. Only sorting up lines have changed hands for China, but advices from Shanghai have read rather more cheerfully. American spinners continue to maintain their improved position. The mills, of course, should only be working 50 per cent. of production, but it is known that the output is larger. Sales have again exceeded production, probably due to speculative buying. Business in Egyptian yarns is on the small side, buying being of a hand-to-mouth character. The outlook regarding future trade continues better. It would appear that India is leading the way to a larger business.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Raw wool continues to show an easing tendency in the primary markets, especially at the Cape, in which market super twelve months' wool has fallen from 49.50d, clean, delivered Bradford, at the beginning of October to 44d.45d to-day. This decline has been noted with satisfaction by the majority of users, who realise the folly of dear wool under existing economic conditions. For months the home trade has been paralysed by the mining dispute, and the only chance of bringing about a revival after the settlement of this dispute will rest on the possibility of getting reasonably cheap raw material. Moreover, it seems certain that wool must react to some extent to the cheapness of cotton, for the latter staple is always used to cheapen production when the price falls to a low level. With machinery requirements so much below normal, business in this market is being conducted on hand-to-mouth lines, and the general lack of activity naturally creates a favourable position for buyers. Tops are decidedly easier on the week, and warp 64's tops are now obtainable at about 3s 11d, compared with 4s 2d a month ago. Crossbreds are also weaker, but there are considerable differences in quotations due to the position of sellers in regard to commitments. There is no big stock of merino wool in this country, however, and any improvement in the demand for tops would soon bring about a firmer market. New business in yarns is very slow, and prices are being cut very fine; indeed, there can be no margin of profit on many of the prices quoted by spinners who are anxious to keep machinery employed. Demand for piece goods is also disappointing, and the immediate outlook does not encourage the hope of any early improvement.

COLONIAL WOOL.

FROM A CORRESPONDENT.

A three days' series of sales began last Tuesday at Brisbane, the quantity to be catalogued being 45,000 bales. Lower prices were inevitable, and Brisbane simply followed the pace set by Adelaide and Melbourne. Private cables received on Tuesday

stated that good 64-66's wool was selling on the basis of 3s 10d landed and combed Bradford in the top. This price seems to be reassuring, considering the quality of the article, for the bulk of the Queensland new clip this season is 70's, and it may be anticipated that when good 66's wool is selling on that basis most topmakers will call it 70's. Last Thursday week Adelaide provided some very reasonable and desirable topmaking wool, and taking an impartial view of the sales in Australia it would seem as if values, although lower, are quite good. There appears to be no reason whatever why Colonial sellers should not meet the market. Forecasts are being made that wool will be bought on a basis of 3s 6d for average 64's, but the truth is that the price is already not far from that level. Whether Colonial growers are satisfied with present values or not, it is only fair to say that the price named is high enough considering conditions in the textile trade at home.

It is still rather early to talk about the next series of London sales, but the trade is anxious to know what quantity is likely to be available, and still more what interest representatives of the various consuming centres are likely to be able to show. There are still some few thousand second-hand bales awaiting sale. Owners will either have to put this to one side or be prepared to accept a lower scale of values. The date of the opening is November 23, and by then two sales will have been held in New Zealand, whilst prices will have become more settled at Buenos Ayres and Monte Video, all of which should help users to shape a policy for the future. It would now seem as if owners of wool will have to face lower values for all descriptions than were current last season. The deflation of the franc may take the keen edge off French buying, but Germany appears to be in good buying form, and as mills generally in Germany, Czechoslovakia and Russia are busy, big quantities of raw material should be moved there.

HIDE, LEATHER, AND ALLIED TRADES.

With supplies moderate prices of domestic hides remain steady at last prices. At the auctions held in Bermondsey on Thursday last, best ox again sold from 6½d to 9d, and seconds 6d to 8½d. Best cows made 5½d and best calfskins 7d to 12½d, the latter showing fractional advances on last week's prices. Wools made from 6s 2d to 10s 6d, and hogs 2s 4d to 10s 9d each. Business is quiet in overseas hides, both here and on the Continent, and best Argentine fregorifics are now quoted at 8½d to 8¾d. Dry hides are also slightly easier, and dry B.A. Americans can now be bought at 11d c.i.f. Chicago prices are also slightly lower, and best heavy packers are now quoted at 15½ cents, as against 16 cents last week. The demand for sole leather remains good in spite of the difficulties incidental to production. Many tanners have advanced quotations by ½d to 1d per lb, as there is a shortage of light bends and certain other weights. Bends up to 8lbs are wanted by shoe manufacturers, whilst repairers are taking large quantities from 10 to 14 lbs average. The outlook is considered good, and once the coal trouble is settled brisk business is expected. The upper leather market is also very firm; fair-sized sales of willow calf, kip sides, coloured and black kid and patent have been made for the Russian boot, the demand being for the cheaper grades. Reports from the shoe trade centres show that trade is still slowing down owing to the coal strike. Multiple buyers refuse to order in large quantities, although during the past week inquiries have been frequent for Russian boots.

CHEMICALS AND FERTILISERS.

Though business in the chemical market continues to be limited to small orders for prompt delivery, the general undertone remains very steady. With one or two exceptions prices show little change over the month, the principal alterations taking place in the coal-tar products. Carbolic acid crystals are again dearer, with cresylic acid, creosote, benzole, and pitch also scarce and dear. Arsenic

BARCLAYS BANK LIMITED

Executor and Trustee Business transacted. Every class of Banking Business undertaken. Agents and Correspondents throughout the world.

HEAD OFFICE: 54, LOMBARD STREET, LONDON, E.C.3.

And over 1850 Branches in England and Wales

quotations were firmer during the early part of the month, but fell back a little at the close. Wood distillation products are generally steadier, with some price increases. The pharmaceutical and fine chemicals market is very unsettled, with keen competitive conditions. In the fertiliser section some difficulty is experienced for imported products on account of the rise in freight rates. Nitrate of soda is much dearer on this account, and raw phosphate also. Ammonium sulphate is higher according to schedule, but scarce. Potash products, basic slag, and cyanamide are in fair request for immediate delivery.

Comparative representative quotations are as follows:—

	1926.			
	Aug. 5.	Sept. 2.	Oct. 1.	Nov. 4.
Ammonium sulphate	£ 8 0	£ 8 0	£ 8 0	£ 8 0

Sodium hyposulphite	9 2 6	9 0 0	9 0 0	9 0 0

VEGETABLE OILS AND OILSEEDS.

An easier tendency has been evident this week. Linseed oil is in poor demand from consumers and values have receded to about £30 10s per ton naked ex-Hull mill for spot and delivery to the end of the year, while business in London has been done under this figure. Cotton oils are not in such strong demand and prices are lower, crude Egyptian from the new seed offering at £34 and old at £33, while technical refined is lower at £37. Soya, palm kernel and other oils are in slow demand. Linseed is firm, and only sparingly offered in near positions, up to £16 5s being demanded for Plate on spot and October-November shipment, the high figures being largely influenced by the present level of freights. New Plate linseed has an easy tone, and is lower at £14 15s. for January-February shipment, but there is very little disposition to operate at present. Indian linseed is quiet, and Calcutta nominally £17 10s on spot and for early shipment. Cottonseed has been a steady trade, new Egyptian being held for £10 15s. on spot, while £9 17s 6d has been accepted for November loading. Trade in soya beans and ground nuts is principally to the Continent.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—There was an improved demand on actual trade account, and more liberal clearances resulted in all descriptions at full to dearer rates. Of British refined, Messrs and Tate and Lyle's granulated from Empire sugar, ex refinery, raised 3d cwt, at 30s 7d, other remaining at previous figures. English-grown firm to dearer. Cantley, Ely, and Ipswich, 29s 7d, ex factory; and Ely, also Ipswich, 29s 7d, ex store, London. Colwick, Poppleton, Spalding, November-December, 29s 9d to 30s; Felstead, 29s 6d; Kidderminster, 30s 3d; January-March, 3d more. Wisington, November-December, 29s 6d; Peterborough, 29s 9d, for November-December, all ex factory. Imported granulated firmer, with business in Czech and Dutch J 28s 9d to 28s 9d. Forward positions reservedly held and firmer. Czech granulated, ready, 16s 4d; November-December, 16s 1d to 16s 3d, f.o.b., Hamburg. Dutch J, ready, 16s 6d, f.o.b., Rotterdam. Belgian crystals, November-December, 15s 10d, f.o.b., Antwerp. White Java, November-December, to Calcutta, 17s 3d; January-March, 17s 6d; new crop, July-September, 16s 2d; October-December, 16s 4d, c. and f. terms. B.R.B. crystals, November-December, to Bombay-Karachi, sold, 16s 10d, now 17s required by sellers, and January-March, 17s 4d, c. and f. terms. Raw refining kinds steady, quiet. Quite an extensive turnover in white terminal, and market dearer. December, sold, 15s 6d to 15s 8d; March, 15s 11d to 16s 3d; May, 16s 3d to 16s 6d; August, 16s 7d to 16s 10d per cwt.

COFFEE.—The market remains firm for all the finer qualities, and which continue in small supply and wanted. Export varieties move off slowly. East African dearer on the week. Kenya sold, smalls, 122s 6d to 129s 6d; bold, 143s 6d to 153s 6d; peas, 137s to 153s. Arusha, bold, 139s; Kilimanjaro, bold, 144s 6d; Uganda, bold, 116s 6d to 133s; Colombian, good bold, 150s. Future delivery market slow.

COCOA.—Spot goods changed hands quietly at previous rates. Accra, F/F, November-January, sold, 44s 3d, f.o.b.

TEA.—Indian auctions during the week amounted to 59,000 packages. There was decidedly a better tone, competition being actively carried on, and prices in most instances ruled firmer. Pekoe, sold, 1s 0d to 1s 11d; orange, 1s 1d to 2s 8d; broken orange, 1s 2d to 2s 9d; finest to choice, 3s to 3s 8d. Ceylon sales of 17,300 packages also went off with a much better tone. Offerings were readily cleared at full to occasionally higher figures. Pekoe, sold, 1s 1d to 2s 2d; orange, 1s 4d to 2s 7d; broken orange, 1s 4d to 2s 7d. Only a small trade was effected in China descriptions, including Keemun, 1s 4d to 1s 6d; fine, 2s 3d. Ching-Wo, 1s 7d to 1s 8d. Souchongs, 2s 6d to 2s 9d lb. Java auctions of 4,400 packages met with good com-

petition, and best qualities fetched firm rates, but lower kinds marked a decline in most cases of 1d lb. Pekoe, sold, 1s 1d to 1s 4d; broken ditto, 8d to 1s 6d; orange, 1s 3d to 1s 6d; broken orange, 1s to 1s 8d; pekoe souchong, 1s 1d to 1s 2d per lb.

RICE.—Business still restricted, mainly owing to the freight situation. 500 tons Super Siam, January shipment, sold, 17s 6d, c.f. and i., Hamburg, with sellers now asking 17s 9d. Spanish oil, on spot, London, 21s; Two Stars, Rangoon, 16s 7d. Beans continue firm. Madagascar butters, spot, 29s 6d to 30s. Japanese peas, September-October, 29s 9d; October-November, 27s per cwt, c.f. and i., London. Rangoon Bran, old crop, £6; new, £6 2s 6d per ton, ex ship terms.

SPICE.—Pepper reservedly held, and market dearer. Lampong, August-October, sold, 11d; October-December, 10d to 11d; January-March, 10d to 1s. Muntok, August-October, 1s 6d; October-December, sold, 1s 6d. Pimento, spot, 7d per lb, and October-November, steamer, 6s per cwt, c.f. and i., London. Cloves quiet, unchanged. Sago flour, December-February, sellers, 16s 6d. Singapore flake tapioca, November-December, 17s 3d. Dried coconut, spot, halves, 41s 6d per cwt.
