The movement this year so far radically differs from last year's in that it shows no fluctuations worth mentioning. The Government relief plan is correspondingly to be of a permanent character. About 400 million marks are understood to be available out of the extraordinary Budget, but an additional 600 millions are required for relief works, of which 100 million marks are for railway works and 200 millions for house-building. The house-building credit will probably be raised by the issue of three years' Treasury bills, and it is proposed to raise 700 million marks by loan, stage by stage as required, possibly with foreign help.

The Treasury return of Federal finances in the first quarter of the current financial year (April-June) is somewhat more favourable than was anticipated. This return is framed according to the new system of booking expenditure in the month to which it properly belongs in the Budget, and not, as formerly, in the month in which it was paid out:—

ORDINARY BUDGET.		Millions of M.
Revenue—		
From taxes.....		1,455.3
„ administration fees, &c.		68.7
Total		1,524.0
Expenditure—		
General administration		1,043.9
Reparations payments.....		46.1
Subventions to States and municipalities		511.0
Total		1,601.0
Treasury deficit.....		77.0
One-third of surpluses from years 1924 and 1925, as entered in Budget.....		91.8
Surplus		14.8
EXTRAORDINARY BUDGET.		
Revenue		0.6
Expenditure—		
General administration expenditure and war burdens		52.4
Reparations payments.....		64.1
Total.....		116.5
To be covered by loan		115.9
SUPPLEMENTARY REVENUE AND EXPENDITURE FOR FINANCIAL YEAR 1925.		
Revenue		33.7
Expenditure		193.9

In judging the above result it should be noted that in April, the first month of the financial year, the newest tax reductions had not yet taken effect, but against this is the fact that in the quarter year no property tax instalment fell due. The next instalment falls due in August. The deficit of 115,900,000 marks was covered out of the cash reserve, so that the Floating Debt was not increased. This debt on June 30th totalled 69,600,000 marks.

The money market is still easy; the month-end settlements imposed no serious strain, day loans being 4½ to 6½ per cent., month loans 5½ to 6½ per cent. The financing of the harvest will cause no difficulty. Farmers can now get short-term credit at 8 to 8½ per cent. The Reichsbank's inquiry into banking credit conditions has led it to the conclusion that interest rates, of which many complaints were heard, are reasonable, except those of such rural banks and savings banks as are free from Reichsbank influence. This admission is regarded as a retreat by the Reichsbank, which in many earlier utterances implied the contrary. Under the State-backed Russian export-credit scheme, contracts for some 40,000,000 marks have already been given. The Hamburg general export-credit insurance scheme has come into force. The premium is ¾ per cent. of the advance granted by a bank to the exporter, or normally about 1 per cent. of the insured debt. Credits for longer than four months bear supplementary premiums.

The *Frankfurter Zeitung's* wholesale prices index for July 30th was 133.37, against 134.82 one month earlier. The minerals group has risen after a long drop; it is 132.65, against 141.26 on January 1, 1925. The manufactured articles group, which embraces only certain standard goods of determinable qualities, continues to fall, and is 128.69, after having been 143.70 at the end of April, 1925, and 141.07 at the end of 1925. A Statistical Bureau report shows that the index disparity between industrial raw materials and agricultural products (so-called "scissors") has more than disappeared. The averages for whole years have been:—

1924.		1925.		1926 (to July).	
Industrial Materials.	Agricultural Products.	Industrial Materials.	Agricultural Products.	Industrial Materials.	Agricultural Products.
143.4	110.4	136.4	128.0	127.5	117.9

In 1924 industrial raw materials reached a high point of 151.1; in the following July agricultural products reached a low point of 96.4. In June, 1925, the indexes were in one month even, but the disparity was resumed. In June, 1926, the indexes, with 123.7 for industrial materials and 123.6 for agricultural products, were again practically even; and in July, 1926, industrial materials were 124.1, agricultural products 131.0. This question, as in Russia, is taken very seriously by farmers, whereas the industrial classes almost ignore it, although food prices, and therefore wages, are directly involved.

The coal market is very active, and formerly unsaleable

Every Description of Home and Foreign Banking Business transacted

qualities are readily purchased. There are no more reduced shifts on the Ruhr, and some mines are taking on extra men. Large German coke shipments are reported from Rotterdam. The iron and steel market improvement continues. The Steel Syndicate has raised the ratio of production for August to 70 per cent. of full capacity, as against 67½ per cent. in July, and an unchanged 65 per cent. during the preceding year. Steel production in June was 977,309 metric tons, against 899,797 tons in May; 5,294,624 tons in the first half of 1926, against 6,833,680 in the same half of 1925. The corresponding figures for rolled iron and steel goods were 855,929 tons, 790,614 tons, 4,545,134 tons, and 5,633,366 tons. Export of iron and steel in July is believed to have exceeded that of June, which was itself satisfactory. The scrap iron market is active, with rising prices. The Pig-Iron and Steel Syndicates have made no change in their prices or selling conditions for August. The export of heavy rails and of other railway permanent way material is increasing. The home and foreign markets for bars have improved, also for sheets. Wire prices have been put up slightly, as the result of a recent agreement between producers. The Stahlwerkesverband has suspended selling for export for a term of eight or ten days; this measure, it is understood, is in connection with the expected conclusion of the International Steel Syndicate negotiations. Owing to the supposed hopeful condition of these negotiations, and to the new activity in business, the stocks of iron and steel companies have risen in several Central European countries.

The Bourse has been active, with rising quotations, and with only moderate and brief reactions; but there has been no revival of the headlong upward movement of June. The *Frankfurter Zeitung's* index was 102.65 on July 31st, as against a high point for the year of 103.62 on July 3rd (100 on January 2, 1925). To-day the Bourse was firm. Certain stocks, in particular steel and dyes, are at their highest point of the year. To-day chemicals went up rapidly. From the upward movement of last week the chief gainers were steel-coal, electrical, chemical, shipping, and banking. Most of the inactive stocks continue to lag behind. Shipping stocks are gaining owing to more optimistic forecasts, and owing to new capital transactions by the leading companies. The Hamburg-America Company directorate has obtained power to issue bonds to a value of 6 million dollars above 50 per cent. of the share capital, and to transfer 10 million marks of new shares to the Harrimans (a transaction which, the directors state, will not bring any addition to American influence). The North-German Lloyd Company will increase its capital by a sum not exceeding 11 million marks of ordinary shares, and 343,750 marks of preference shares.

BELGIUM.—FORCED CONSOLIDATION OF FLOATING DEBT—UNEMPLOYMENT—ANTWERP HARBOUR ACTIVITY—RAILWAY RECEIPTS—PRICE INDEX—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

GHENT, August 3.

The Belgian Government has taken drastic steps to stop further inflation; six months Treasury bonds outstanding, and five years Treasury bonds falling due on December 1st (together about 6,000 millions francs) will not be paid at maturity, but will be automatically transformed into preference shares of the National Railway Company.

Holders of Treasury bonds who intimate their unwillingness to accept this conversion before August 14th will receive 5 per cent. Treasury bonds without fixed date of maturity, which will be redeemed as soon as the situation of the debt amortisation fund enables repayment. The Minister of Finance is, however, empowered to grant special conditions as regards the repayment of the Treasury bonds in possession of the Savings Bank, credit institutions, and bodies of public utility. The consolidation of the Treasury bonds will only absorb part of the 10,000 million francs preference shares of the National Railway Company; the remainder will be offered to public subscription either for cash at par, or against Belgian Government stock, on conditions which have yet to be fixed. The 1,000 million francs ordinary shares of the National Railway Company will remain in possession of the State, which thereby secures the majority of votes at the meetings of shareholders.

The National Railway Company preference shares will be free of all present and future income-tax; they will have a face value of 500f each and will share between them one-half of the net profits of the company. In addition to this variable dividend (which official estimates put at about 2.70 per cent.), these shares will yield a fixed interest of 6 per cent., payable by the State, which will be increased in proportion to any rise of the exchange rate above 175f for sterling. The repayment at par of the preference shares will be made by the State within 75 years, with the same exchange guarantee as the 6 per cent. interest coupons. After redemption they will be replaced by dividend shares, without nominal value, which will only be entitled to their part in the net profits of the National Railway Company until the end of the 75 years, which mark the expiration of the lease of the State railways to the company.

The forced consolidation of the floating debt will perhaps be criticised abroad; it is certainly open to serious objections from a moral point of view, the more so since the Belgian Government has given on several occasions, and as recently as two months ago, the most emphatic assurances to investors that the Treasury bonds presented an absolute guarantee of repayment at maturity. However, the State would not be keeping faith with its creditors if it repaid them in a further depreciated currency. Between April 1st and July 29th the total of the note circulation and deposits at the National Bank of Belgium has risen from 8,029 to 9,656 million francs. In view of the heavy amounts of Treasury bonds falling due between now and the end of the year, it is to be feared that without a speedy consolidation of the floating debt, the State would have been compelled to resort to inflation at a constantly accelerating pace, so that between two evils the Government has had to choose the least.

The symptoms of artificial prosperity which accompany currency depreciation are reflected by the latest Belgian statistics. The percentage of working days lost through unemployment in June is 1.37, against 2.24 last year. The percentage of totally unemployed in June amounts to 0.9 only, against 1.1 in June last year. Tonnage entered into the Antwerp harbour during the first half of 1926 shows an increase of 313 vessels, or 1,042,304 tons, over the corresponding period of 1925, but part of this increase may be accounted for by loadings of coal vessels on account of the strike in Great Britain. Railway receipts for the first six months of 1926 amount to 914 million francs, an increase of 12 per cent. over the first half of 1925.

The picture is less comforting when we turn to the general level of prices, and to the figures of foreign trade. The index of wholesale prices has jumped from 692 in May to 761 in June (against 552 in June, 1925); the index of retail prices has risen from 579 on June 15th to 637 on July 15th (against 509 on July 15th last year).

The deficit on the balance of foreign trade for the second quarter of this year amounts to 2,048 million francs, an increase of 797 millions as compared with the first quarter:—

QUANTITIES (Metric Tons).			
	January-March.	April-June.	
Imports	8,496,159	8,621,021	
Exports	4,887,387	5,437,511	
Excess of imports....	3,608,772	3,183,510	

VALUES (Thousand Francs).			
Imports	4,776,093	5,984,741	
Exports	3,524,791	3,936,706	
Excess of imports....	1,251,302	2,048,035	

The value of exports has not risen in accordance with the depreciation of the exchange, whereas the prices of imported goods seem to have adjusted themselves quickly to the lower value of the franc.

ROUMANIA.—PARLIAMENT—CROP CONDITION—EXPORT TAXES.

(FROM OUR CORRESPONDENT.)

BUCHAREST, July 29.

In order to comply with the requirement of the Constitution that Parliament must be assembled within 30 days after a general election, the first session of the new legislatures began on June 25th, and closed on July 15th, when King Ferdinand left Bucharest for his annual "cure" at a French resort. The expectations that the opening of Parliament would be used by General Averescu as a suitable occasion for outlining the legislative programme of the new Government were not realised. Presumably the reason for this is that the Cabinet is far from being agreed upon a definite programme, especially in regard to financial and economic matters. The progressive faction headed by Mr C. Garoflid, the Minister of Agriculture, and Mr M. Manoilescu, Under Secretary of State for Finance, is obviously opposed to the financial and economic policies laid down by the former Bratianu régime, and embodied in such Acts as the Mining Law, the so-called Commercialisation Law, the law for Regulating Financial Policy, &c., passed by the late Parliament.

The first detailed estimate on the present season's probable crop outturn, issued a few days ago by the Ministry of Agriculture, makes an excellent showing. The figures are shown below in comparison with the 1925 yields:—

	(Metric Quintals.)	
	Crop Yield in 1925.	Estimated for 1926.
Wheat	28,506,047	35,101,745
Rye	2,031,477	2,989,089
Barley	10,193,278	19,014,842
Oats	7,400,625	12,573,481

These figures are especially interesting because the area planted to grain in 1925-6 is less than in 1924-5 (10,112,743 hectares, against 10,391,056). On the basis of the yields estimated for 1926, it is figured that Roumania will have available for export during the coming twelve months 1,350,000 metric tons of wheat, 115,000 tons of rye, 1,100,000 tons of barley, and about 435,000 tons of oats, plus an amount of not less than 2,000,000 tons of maize. This would mean a grain export surplus of some 5,000,000 tons, or more than double the surplus claimed for 1925, of which, incidentally, only about one-half has so far been exported.

It is a well-recognised characteristic of Roumanian crop estimates that they take an optimistic view of the situation, and, even with the most favourable climatic conditions during harvesting, it is hard to believe that the present season's crop will yield an exportable surplus of 5,000,000 tons. In any event, however, Roumania has neither the financial nor the transport facilities for handling a grain export surplus of this size, and it would be foolish to expect that, under prevailing conditions, an amount even approaching 5,000,000 tons could be shipped out of the country during the nine months of the year when the Danube is open for navigation.

Strenuous efforts have recently been made by the Garoflid-Manoilescu faction to bring about a reduction in the existing schedule of export taxes on grain shipped from Roumania. These taxes at present range from £10 per wagon of 10 metric tons on maize to £18 in the case of wheat, with the revenue therefrom being pledged for the services of the Sterling Consolidated Issue of 1922. Mr Lapedatu, the Minister of Finance, is stated to be strongly opposed to any further general reduction in grain export taxes until some other source of revenue can be found for meeting the requirements of the Consolidated Issue. The present dispute has been partially

settled by the Cabinet to-day approving a reduction in the export tax on wheat from £18 to £13 per wagon, with all other taxes remaining as they are at present. It is believed that the increased export of wheat that will result from the lowering of the tax will probably more than offset the decreased revenue per ton. It will probably be next March or April before the bulk of the maize crop will be dry and ready for export, and there will be ample time before then to consider a reduction of the tax on this grain.

The agitation that was started several weeks ago by the Garoflid-Manoilescu interests, supported by one or two of the leading banks, for a new emission of 2,000 million lei to finance the crop movement has petered out. The Bratianu representatives at the Treasury and the National Bank, supported by the entire Bratianu Press, let it be known in unmistakable terms that there must be no raising of the legal limit on currency circulation (which limit of 21,000 million lei has now been reached), fixed by last year's agreement between the Treasury and the National Bank and ratified by Parliament.

AUSTRALIA.—FEDERAL AND STATE TAXATION—ARBITRATION COURT—GOLD.

(FROM OUR CORRESPONDENT.)

MELBOURNE, June 24.

THE Commonwealth Government has introduced a second scheme for separating Federal and State finance by discontinuing the capitation payments of 25s per head made by it to the States out of taxation collected by it. Under the first scheme this would have been balanced by the abandonment of the greater portion of the Federal income-tax, the States being left to make good the gap in their revenues caused by the discontinuance of the capitation payments by imposing additional taxation on their own taxpayers. This proposal was not accepted by the States. The Commonwealth, under the second scheme, proposes to relinquish 40 per cent. of the Federal income-tax and to abolish the Federal land tax, death duties, and land tax, in exchange for the discontinuance of the capitation payments. The Commonwealth Parliament has power to decide the whole matter without consulting the States, but the latter object to losing the capitation payments and being put to the considerable trouble of rearranging their own taxation systems. The only saving to the taxpaying public would be such as would be possible with a buoyant state of the Commonwealth revenue without altering existing arrangements, and the whole question is that of the simplest form of collecting taxation to provide for a total expenditure not likely to be reduced.

The Commonwealth Government is pushing forward with proposals for extending the powers of the arbitration Court, which deals with rates of wages and conditions of labour. In accordance with the Constitution, the powers of the Court are at present limited to cases where a dispute between employers and employees extends over more than one State, while in cases where only one State is concerned the various State Courts or wages boards have sole power. In order to extend the powers of the Commonwealth Arbitration Court, it is necessary to amend the constitution of the Commonwealth itself, and for this and other objects the Government proposes to hold a referendum. Proposals of a similar character were introduced before the war by a Labour Government, which desired to confer more sweeping powers upon the Commonwealth Arbitration Court, but were rejected on a referendum. The Labour Party has been divided since the present proposals were brought forward in Parliament, opposition being largely directed to the fact that labour matters will be adjudicated upon by judges with life tenure, and, therefore, independent of Parliamentary control, if the proposals in their present form are carried out. Opinion amongst supporters of the Government is also much divided, as the proposals now introduced by an anti-Labour Government follow previous Labour proposals in principle, while in this as well as in finance it is feared that the Commonwealth will go too far in the direction of unification as distinguished from federation.

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

ESTATE DUTY ASSURANCES

Head Office: 10, FLEET STREET, LONDON, E.C.4.
near Temple Bar.

Assets Exceed - - £18,000,000

General Manager: W. A. WORKMAN, F.I.A.

During the last few months gold exports to the value of over 2½ millions have been made from Australia, including 2 millions to America through the Commonwealth Bank and over half-a-million to India. The total of 2½ millions is nearly half-a-million in excess of Australian annual output. Early last year the ordinary banks imported 10½ millions of gold with which to enlarge local stocks, which had remained practically stationary for a number of years previously, when current production was being exported. Part of these imports as well as recent current production has passed into the hands of the Commonwealth Bank, and the exports are partly based upon the official view that the holding of large stocks of gold is "uneconomic." The recent shipments, it is to be noted, have been made at a time when rates of exchange are still in favour of Australia.

JAPAN.—ELECTRIC SUPPLY—FOREIGN TRADE—NEW CAPITAL—MARKETS.

(FROM OUR CORRESPONDENT.)

TOKIO, July 12.

THE outstanding feature in the business world is a keen competition amongst the electricity supply companies for the disposal of surplus energy. Around Tokio, Osaka, Nagoya, and other distributive centres big power companies are engaged in a rate war trespassing on the area of supply of each other to furnish electricity for industrial purposes. In a few months power prices have been cut by nearly 10 yen per kilowatt per annum, leaving only a tiny margin of profit. Though leading power companies' accounts generally made a good showing for the past half-year, their future profits will be affected unless some measures be taken to put an end to the rate war. For this reason, the prices of most of electricity supply shares have lately shown signs of weakness, and are below the best which they attained at one time last year. Meanwhile, it is proposed, for the ultimate interest of the producer as well as the consumer, to end the competition by adopting a scheme of co-ordination amongst the power companies and inter-connection of existing power stations within electricity districts and between districts, which will lead to a more uniform system of supply over wide areas, a less reckless installation of generating plants, and hence lower capital charges and reduced costs of production. Nationalisation or national control of electricity supply also is coming into practical politics. As a matter of fact, a political party has recently made public a plan of national control of generating stations and main transmission lines.

The trade returns for June show that imports at 193,395,000 yen were 8,746,000 yen lower than in the corresponding month of last year, and exports at 156,238,000 yen 25,375,000 yen lower, the excess of imports over exports at 37,157,000 yen being 16,629,000 yen higher. These figures are rather discouraging, particularly in comparison with last year, when the heavy import season came to a close earlier, and there was a small balance of exports in the last ten days of June this year. But the total value figures for the first six months of the year reveal that imports fell by 105.8 million yen, while exports rose by 9.4 millions, bringing the total import excess to 403.7 millions, as against 518.9 millions for the first half of 1925. It is doubtful whether the year's adverse balance on the visible trade figures

will shrink far below two hundred millions, in view of the unsatisfactory record in the second quarter of the year. The only hope rests on the recent encouraging situation in the United States.

The new capital raised during the first half of the year was 704 million yen, as compared with 1,072 millions in the corresponding period of last year. The decrease is accounted for by the Government borrowings, which fell by 373 millions. But, apart from the Government issues, the other capital-raisers were unusually active in the first quarter of the year, owing to the monetary ease. After a sharp recession in April and May, on account of the excessive issue in the previous quarter, borrowing activities revived in June.

The pressure of the half-yearly settlements on the money market was less pronounced than had been expected. The disbursements of the Government loan interest in the middle of June have materially eased the market. The monetary situation has obviously favoured bullish operations in the stock market, and there has been a steady rise in shares all round since the latter part of last month. The general tone of the commodity markets also has been strong. A turning point seems to have been reached in the downward movement in commodity prices developed since October last. The Bank of Japan's wholesale index number for June registered a slight rise, the total being 234.75, as against 234.57 in May.

Books and Publications.

BOOKS RECEIVED.

Economic Development of Modern Europe. By F. A. Ogg and W. R. Sharp. (London) Macmillan and Co., Limited. 16s net.

A revised edition, which carries the story from 1914 to the present time. A useful text-book for economic students in two hemispheres.

History of Banking in Scotland. By A. W. Kerr. (London) A. and C. Black, Limited, 4, 5, and 6 Soho square, W. 1. 12s 6d net.

A fourth and considerably enlarged edition of a work originally appearing in the eighties. The narration has been brought down to 1925, and is a reliable study of banking development in a Scottish environment.

The Strength of England. By G. F. S. Bowles. (London) Methuen and Co., Limited, 36 Essex street, W.C. 8s 6d net.

The author's thesis is, briefly, that the strength of England is essentially maritime, and is "not that of a sea-bully using force alone, but a strength of law, of order, and of regulated preservation throughout." A thoughtful work, moderately presented.

Salesmen in Marketing Strategy. By L. S. Lyon. (London) Macmillan and Co., Limited, St. Martin's street, W.C. 15s net.

The author who, needless to say, is an American, deals very thoroughly with the training and equipment of the complete sales manager and his staff. A work of interest to the manufacturer and trader rather than the economist.

Places in the Sun. By Anthony Eden, M.P. (London) John Murray, Albemarle street, W. 5s net.

Mr. Baldwin contributes a short preface to this series of impressions written during the tour of the British delegation to the Empire Press Conference in Australia.

Der Weg der Reparation. Von Carl Bergmann. (London) Messrs J. Stanislas and Co., 230 Strand. 15s net.

This publication, written by the official representative of the German Government who was present at all the discussions regarding reparations, sets out in a lucid manner the history and events leading up to the Dawes Plan. An interesting account is also given of the structure and the working methods of the international and German organisations which were created in order to facilitate the carrying out of the reparation scheme. Special attention is paid to the political and economic significance of the Dawes Plan to the world in general.

Deutsche Währungs und Kreditpolitik. 1923-1926. Von Dr Dalberg. (Berlin) Reimar Hobbing, 17 Grossbeerenstrasse, S.W. 61. 5 Rm.

An interesting exposition of the currency policy of Germany during the years 1923 to 1926. It includes the last year of the inflationary period, the period of stabilisation, and, finally, the period of deflation—years of outstanding importance in the economic history of Germany. The closing chapter is devoted to a consideration of the future, namely, the probable effects on currency should a European Customs Union be formed.

Das Deutsche Volkseinkommen. Von Dr Erich Rogowski. (Berlin) Emil Ebering, 29 Mittelstrasse. 6.60 Rm.

This publication deals with the incomes of the German people, an interesting comparison being made between incomes in 1913 and in 1924. Reference is also made to the burdens imposed by the reparation agreements, and, incidentally, to Germany's capacity to pay.

Der Arbeitslohn. Von Franz Oppenheimer. (Jena) Gustav Fischer. 3.50 Rm.

A critical appreciation of the different theories of wages in the history of economics.

I Quattro Maggiori Istituti Italiani di Credito. Del Dott. Umberto Bava. (Genova) Soc. An. Valugani and C. An extended survey of the development of the Banca Commerciale, Credito Italiano, Banco di Roma, and Banca Nazionale di Credito.

League of Nations: Audited Accounts for the Seventh Financial Period (1925). 2s 6d net. *Budget for the Ninth Financial Period (1927):—Part I., Secretariat and Special Organisations of the League.* 1s 3d net. *Part II., International Labour Party Organisation.* 1s net. *Part III., Permanent Court of International Justice.* 5d net. COMMERCIAL SERVICE

The Bank has over 330 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade between South and East Africa, the United States of America and the Continent of Europe.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South and East African matters of Trade and Commercial Interest.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. August 10.	ACCOUNT. August 12.
-----------------------	------------------------

THE outstanding feature in the Stock Exchange markets during this short holiday week has been the recovery in the values of French Government, railway, and other inter-bourse issues, a recovery which followed the substantial improvement in the French exchange. Fears of demoralisation, resulting from the slump in the franc, have given place to a more cheerful feeling. This sentiment ran through other markets of the Stock Exchange, playing its part in serving to strengthen prices in various sections, although business, generally speaking, is on the meagre scale common to this season of the year. British Government securities keep firm, and the newly-issued Colonial scrip stocks are moving into more permanent channels. Other new issues are being given a rest. The Perak River Hydro Electric 7 per cent. debenture stock, issued at 96 per cent., and left with underwriters to the extent of 80 per cent., fell to 6 discount.

The foreign market has been cheered by the *volteface* in the French financial outlook. Substantial gains accrued to French railway bonds; the National issues strengthened upon a little speculative buying from people on this side. Peruvian Corporations enjoyed a brisk rally, thanks to the encouraging traffics reported by the company. Applicants for the new Counties of Hungary 7½ per cent. bonds received small allotments, but the loan was heavily staged, and the price, after opening at 1½ premium, fell away from the best. Brazilians are better in most cases. There has been a slight recovery in Italian bonds. Mexicans gave way, owing to the reports of friction connected with religious difficulties in the country.

Home Railway stocks came in for moderate support from the "bear" brigade on the eve of the preliminary carry-over yesterday. The rising of Parliament, without a settlement having been reached on the coal question, went unregarded as a factor in this market. Argentine railway stocks have been good, but the feature amongst foreign rails is a gain of several points in Antofagasta, where a handful of buying orders served to disclose the bareness of floating supply in the market. Nitrate railways are better; nitrate-producing shares show a firmer tendency.

Rubber shares gave way by reason of the exportable allowance for the current quarter being left at 100 per cent. instead of being reduced to the 80 per cent. for which anticipation had looked. Rubber Trusts led a general fall, these shares touching 42s at one time against the last making-up price of 45s. 9d. There was, however, a sharp reaction from the worst, and this applied to the market as a whole. Tea shares are very quiet, and the oil market attracts little attention from any except the professional operators, whose business nowadays consists mainly in what the Stock Exchange calls taking in one another's washing. The tobacco and Courtauld favourites have met with a measure of support, though animation in both sections has subsided very noticeably during the past week or two.

Brewery shares gave way because of sales said to be on behalf of people who require the money for meeting claims in other directions. Morris Motors preference continue weak. The cable group lost a little of its recent rise. Marconis fell back, the shares and debentures both being lowered on realisations from people who fear the result of the auditors' report now in course of preparation. Except for a decline in P. and O. deferred, the shipping market is almost unchanged. Banking shares remain steady, and trust companies' stocks are as hard as ever to obtain, though they remain in constant demand. The iron and steel market receives more inquiries than orders. In the land group there was mild inquiry for Sudan Plantations from Egypt. Recent rises in gas stocks are well held. Brazilian Tractions and Barcelona Tractions have both been features of pronounced strength. In the general run of industrials, catering, hotel, textile, stores and similar shares, the movements are unimportant. Good-class preferences command support, and it is obvious that, in spite of the holiday season, investment is still very much on the look-out for sound and well-secured stocks and shares.

The more cheerful tone felt in connection with French affairs has assisted prices in the Kafir market, though a sharp fall in De Beers preference caused surprise, these being apparently turned out by French investors. Strength in Modders is attributed to the excellent developments which the company reports. Other gold producers' shares are inclined to improve. The Cape has been less aggressive than usual in its speculation in West Rand Consols, Anglo-American, and other such favourites with Johannesburg, but the strength of Sub Nigels is conspicuous and consistent. Chartered shares are better. Tin shares have advanced, Malayan tin descriptions being noticeably popular, and the interest in these spreading to a fairly wide circle of home speculative investors who are watching with active interest the rise in the price of tin, the metal. West African and Cornish shares followed the upward tendency of the Malayan group, though at a more leisurely pace. Mining Corporations and some of the other

Canadian shares received quiet attention from Montreal, though the fluctuations in the prices of these have been comparatively slight. The disturbances in Mexico reacted unfavourably on Mexican mining shares. Russians were relieved from complete monotony by a rise in Lenas.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded	140,882,853			
NATIONAL SAVINGS CERTIFICATES.				
April 1, 1926, to July 31, 1926 ..	Dr 850,000			
Net sales week ended July 31, 1926, Dr 250,000.				
To the Public—				
Kingsdown and Tincroft Mines, £10,000 10% 2nd Mort. Debs., at 90% (rep. at par. Mar. 31, 1927)	10,000	9,000	9,000	..

1921.....	146,859,781	1920.....	367,549,656	

Belgian National Railway Company.—Preference shares are being issued in Brussels on the 9th inst. at par (500 francs), which will carry the right to a fixed dividend of 6 per cent. guaranteed by the State and to half of the net profits of the company after the various statutory provisions have been made. They are repayable at par in 65 years from 1937 by drawings, or the sinking fund may operate by purchase in the market. Holders of shares thus amortised will receive "jouissance" shares, which will continue to participate in the profits of the company. Dividends and capital are free of Belgian income-tax, present and future, and the Government guarantees a maximum exchange of 175 francs to the £. Further particulars can be had from the Banque Belge pour l'Etranger, London, which is also prepared to transmit subscriptions to Brussels.

Seroeway Rubber Estates, Limited.—In order to comply with Stock Exchange regulations, particulars are advertised of the above company. Share capital £70,000, divided into 700,000 shares of 2s each, of which 600,000 have been issued. The company was incorporated on July 10, 1926, to carry on business as a plantation company, and more particularly to acquire the Seroeway Estate, situated in the Tamiang Province, East Coast of Sumatra, Netherland Indies. A local Dutch limited company is being formed for the purpose of holding the title to the property, the whole of the issued share capital of which will be held by this company. The estate comprises about 5,582 acres, and is held on a 75 years' lease, dated 1918, at a rental of about £500 per annum. Of the 5,582 acres, 247 were planted in 1919, 998 in 1924, the remaining 4,346 being unplanted. The estate will be taken over from July 1, 1926, and the purchase price is £50,750, payable in cash (this price including all the expenditure by the vendors).

BARCLAYS BANK LIMITED.

Head Office: 54, LOMBARD ST., LONDON, E.C.3

And over 1,850 Branches in England and Wales.

AUTHORISED CAPITAL ...	£20,000,000
ISSUED & PAID-UP CAPITAL	£15,592,372
RESERVE FUND ...	£9,250,000
DEPOSITS, etc. (30 June, 1926)	£304,247,460

EVERY DESCRIPTION OF BRITISH AND FOREIGN BANKING BUSINESS TRANSACTED.

on the estate as from January 1, 1926, amounting to approximately £11,750, in addition to which the company will bear all costs and expenses in connection with the purchase of the property and the formation of this company and of the Dutch holding company in which the title will be vested. The preliminary expenses are estimated at £1,500 in addition to the costs of and duty on the transfer of the estate, and are payable by the company. A considerable amount of development work will have to be done before the estate is brought into full production.

COMPANY MEETINGS, &c.

GENERAL MINING AND FINANCE CORPORATION, LIMITED.

(INCORPORATED IN THE TRANSVAAL.)

"EXTREMELY GRATIFYING RESULTS."

RESUMPTION OF DIVIDENDS.

The twenty-sixth annual general meeting of shareholders was held in Johannesburg, on Tuesday, June 29, 1926, Mr Arthur French presiding.

The Chairman, in moving the adoption of the report and accounts, said:—It is a source of great pleasure to be able to present such a satisfactory position as is disclosed by the directors' report and accounts now before you, which reflect by far the largest profit made in any one year since 1909.

A special feature of the remarks from the chair at the two previous annual meetings has been the steady progress made by the corporation in improving and consolidating its financial position, and I am pleased to say that a continuance of this progress has culminated in the resumption of the payment of dividends after the lapse of fifteen years, during which no return to shareholders was deemed advisable.

The Chairman, having dealt with various items in the balance-sheet, continued:—The profit for the year, at £240,807, again shows a substantial increase, being £80,850 greater than that earned in the previous twelve months. After adding £22,847 brought forward from 1924, an amount of £263,744 was available, and was dealt with as follows:—

£50,000 was added to general reserve, bringing the total of that account up to £300,000, while provision for Transvaal Provincial and French taxation absorbed £14,729.

DIVIDENDS.

An interim dividend of 5 per cent., amounting to £50,698, was paid to all shareholders registered on October 15, 1925, leaving a balance of £148,317. Out of this balance a final dividend of 10 per cent. to ordinary shareholders, absorbing £101,296, and (in terms of the articles of association) a dividend on the founders' shares of £16,933, were declared on April 8th, and paid out at the beginning of this month, leaving an amount of £30,088 to be dealt with in the accounts for the current year.

I think you will agree that the state of affairs as disclosed by the balance-sheet and profit and loss account is an extremely gratifying one, and that the policy of your board in conserving the increasing resources of the Corporation during the past few years has been more than vindicated, seeing that it was largely by reason of the fact that we had ample funds with which to conduct our business that we were able to earn such satisfactory profits, out of which we have further strengthened our financial position and at the same time distributed such a substantial dividend to shareholders.

Towards the end of last year the corporation guaranteed an issue of 2,000,000 new shares of 10s each of the West Rand Consolidated Mines, Limited, to provide fresh capital for that company. I may say that, had the corporation in recent years not built up a strong financial position, your directors could not have contemplated the guarantee of such a large sum, and our company would consequently not have been able to reap the advantages which have accrued, and are likely to accrue, to it through the provision of sufficient capital to carry on upon an adequate scale the largest and most important property under its control.

SHORTAGE OF NATIVE LABOUR.

The results for the past year from the mines controlled by the corporation, as will be seen from the directors' report, have been satisfactory on the whole, but would no doubt have been better had we not been handicapped to a great extent for some portion of the period by a shortage of native labour. Despite urgent representations to the Union Government, in the course of which the industry guaranteed to employ all the available native labour which could be procured within the Union, no relaxation of the restrictions on the recruiting of natives from Portuguese East Africa was allowed, and this undoubtedly retarded progress in many directions, which would not only have benefited the mining companies themselves, but also have maintained and even enlarged the

field of white employment, with resultant gain to the community at large.

The return to the gold standard of both Great Britain and South Africa has, of course, had a considerable effect on the profits of all gold-producing companies, seeing that since May, 1925, only the normal price has been obtainable for gold, and even for some time before that the small premium ruling was counterbalanced by adverse rates of exchange.

During last year arrangements were made to sell gold locally to the South African Reserve Bank, and considerable shipments also were made to India. As a result of these factors, we are now able to get practically the full price for our gold, instead of being mulcted in railage, shipping, insurance charges, and exchange. This position has, of course, only been rendered possible by the fact that all our gold is refined locally, and that a mint has been established at Pretoria, on which we can call for sovereigns if we wish to do so. The establishment of the refinery and mint has thus been of decided advantage in enabling the mining companies to get the fullest possible return for their product.

The Chairman having dealt at length with the various mines under their control, said:—

LEGISLATION.

During 1925 and since the beginning of this year quite a crop of legislation affecting the mining industry has been placed on the statute book, none of which has been at all helpful, but, on the contrary, has imposed fresh burdens on the industry, either financially or as the result of unnecessary restrictions on our natural expansion.

The Miners' Phthisis Acts Consolidation Act, 1925, has placed an additional incubus on mining companies, and the Mines and Works Amendment Act, commonly known as the Colour Bar Bill, is a menace on account of the wide powers given to the Government in the direction of defining the spheres of labour between white and black.

The Wage Act, now in operation, gives a Wage Board power to investigate and report on wages and conditions of labour, and an amendment to the Transvaal Precious and Base Metals Act has just been put through Parliament at the last moment, giving the Government wider powers to deal with mines which for various reasons are not being worked, with the idea evidently of compelling the owners either to abandon or work such properties.

The case for encouraging and helping the mining industry by the Government has been ably placed before the public recently by the Government mining engineer and others, and various commissions have reported in very favourable terms on the labour conditions on the mines, so that it is surely not too much to hope that, even if the Government will not actively help us, they will at least refrain from further burdensome and restrictive legislation, and leave us to concentrate on the problem of cheapening the cost of production, which is one of the most vital issues facing us at the present time if the life of the Rand is to be extended to a legitimate extent by working the huge deposits of low-grade ore which are known to exist on these fields.

NATIVE LABOUR.

Although, as I have mentioned in an earlier part of my speech, there was a serious shortage of native labour during a considerable part of last year, this state of affairs was remedied by the end of the year through an influx of Cape Colony natives. This influx was entirely due to the failure of the crops in the Native Territories, and although we are at present in the position of having sufficient native labour, a good agricultural season in the areas from which we get our supplies of labour will undoubtedly bring about another shortage. It is to be hoped that, if and when this occurs, the Government will reconsider its refusal to allow the industry to obtain a sufficient number of natives from outside the Union to enable it to maintain normal operations. Any material decrease in production on the mines necessarily involves reduction in the number of persons employed, and to some extent in the consumption of stores, with a corresponding contraction in the spending power of the community.

STRONG POSITION—GOOD PROSPECTS.

Now, gentlemen, I have to-day endeavoured to give you a full and fair account of the affairs and position of the corporation, and I am sure you will acknowledge that they are more than encouraging. To summarise the more important results obtained since I addressed you at our last annual meeting a year ago, our net profit for the past year would more than have admitted of a return of 20 per cent. to shareholders, but we thought it advisable to still further increase our reserve by £50,000, and therefore paid dividends of a lower rate, aggregating 15 per cent. for the period. We have increased our reserve to £300,000, equivalent to practically 30 per cent. on the capital of the corporation. Our financial position is exceptionally strong, and partly by reason of that position we have been able to reorganise the West Rand Consolidated Mines and provide an extra million pounds of capital

funds for that company. The protracted negotiations for the amalgamation of the Cinderella Consolidated with the East Rand Proprietary Mines have now been satisfactorily concluded. We have established business relations with prominent banking and financial corporations in London and New York, through whom we have taken substantial participations in new issues in connection with mining, commercial and financial undertakings in Europe and America. We hope and believe that by so doing we are utilising our surplus funds in a manner which will be distinctly profitable to shareholders. And, finally, I think it only right to repeat that the balance-sheet as at December 31 last has been drawn up on an exceptionally conservative basis in regard to the valuation of our assets. With all these highly satisfactory factors I feel confident that we can look forward to continued and even increased prosperity.

Mr. W. P. C. Hastie seconded the resolution, which was carried unanimously.

BRITISH ENKA ARTIFICIAL SILK COMPANY, LIMITED. PRODUCTION EXPECTED IN OCTOBER.

At the first ordinary general meeting of the British Enka Artificial Silk Company, Limited, held, on the 4th instant, at Winchester House, London, E.C., Sir Henry Strakosch, K.B.E. (the Chairman), said that the meeting had been called chiefly to conform to legal requirements and the company's articles, whereby a general meeting must be held before the end of 1926. It was considered desirable to fix the company's financial year to correspond with the calendar year; hence the presentation of a balance-sheet covering the short period of 3½ months.

The company had acquired, after considerable investigation of other sites offered, the National Aircraft factory site at Aintree, Liverpool, the total area being 68½ acres, including buildings covering 15 acres. The directors believed that the site filled all requirements essential for artificial silk manufacture. The buildings were all on one floor, with ample space for extension, and were adjacent to the railway, now being connected with a siding; the supply of labour was ample, and borings had shown that the quality and quantity of water were adequate.

The necessary structural alterations were now being made, and girls were being trained in the work of sorting in readiness

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Although the position locally shows no change, there is a fair measure of business passing. Fair weights have been sold of raw material in the bale, and still bigger quantities of matchings, mostly on export account. Some think that this really is a continuance of buying on Russian account, covering the orders placed two weeks ago. The enhanced value of the franc has also brought a fair measure of French inquiry into the market. Both German and American bids have also been encountered, and those in a position to offer wool have consequently been able to effect fair sales. All this has given increased strength to raw material values, and there is nothing to be had cheap, wool selling relatively better than tops or yarns. One would like the business better if the sales affected the two latter descriptions, and were being made on home spinners and manufacturers' account. The sales effected relate mostly to fine crossbreds and merinos. Some low offers have been made for coarse prepared tops, but few care to sell tops when they know they cannot buy wool to make them at the prices which they are commanding. There is also some inquiry for home-grown fleece wools, and satisfactory sales have been effected during the week for America in Downs and lustre hogs, as well as some half-bred hogs. The tendency here is against the buyer. Values generally are very firm.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

A somewhat startling message has been received from Tokio, intimating that wool buying for Japan may be in future transferred from Australian centres to Coleman street, the reason being given that "hitherto Japanese buyers have been purchasing a year's stocks, but fluctuating exchange has more than once hit them hard." This reason, in our opinion, is much too paltry. If there is to be any transference of Japanese buying from Australian markets to London, it will be entirely due to financial interests, for merchant-banking firms are almost entirely behind the Japanese mills, and these interests may have had something important to say on the line of operations recently conducted by them. If Japanese users of wool have been foolish enough to put into stock a year's supply, there is no wonder that very serious losses have resulted, and the obvious remedy is to follow the example of British and Continental firms and buy fairly closely with known requirements. A recent private message from a very important Japanese source in Japan in intimate connection with practically all Japanese wool textile mills, sets forth in strong language the present conditions in the majority of Japanese mills. Serious losses have had to be encountered, and but for Government and other financial assistance the majority would have had to call their creditors together. The statement about transferring buying from Australia to London may be an echo of all this, and if London financial institutions can dictate a better policy it will certainly pay Japanese mills to adopt it. At the same time we cannot for a moment entertain the view that such a procedure will materialise. Australian selling centres cannot be ignored by Japanese firms, particularly as at least 80 per cent. of the clip is being sold in Australia, where the selection is more to the needs of Japanese mills, and whence the cost of transport to Japan is less. Where we think there is need for reform is in the method of wool buying. Japan has much to learn at the hands of British and Continental wool buyers in regard to the conduct of her operations.

THE JUTE TRADE.

DUNDEE, August 5.

Business still proceeds along slow lines, and there has been no accumulation of orders over the holiday period. The prospects of a record crop of fibre during the coming season lead spinners to believe that raw jute will be cheaper, and sales of the raw material are limited. In Calcutta, mills and balers are doing little or nothing. Sellers have been forced to reduce their ideas of price, and good First Marks are now obtainable at £31 for August shipment to Dundee, and at £29 for September. There are extremely few offers of Daisee quality, the nominal value of which is stated at £26 for assortment, September-October shipment. The area under Daisee has been increased this season by 30 per cent., which should prove to be a favourable factor to Dundee, where Daisee jute is most largely used.

Prices of yarns are now extremely reasonable in comparison with those of the raw material, but buyers are showing no more inclination to secure their wants. Common 8 lb cops are obtainable at 3s, and 8 lb spools at 3s 1d, at which rates a little business has been done. 14 lb carpet warp rules at from 5d to 5 1/2d according to quality, sacking chains from 5d to 5 1/2d for 8 lb, and 24 lb weft at 4 1/2d to 4 3/4d. Little has been done in Rowe to test the values of £35 for 48 lb and £25 for 200 lb. Cloth business is difficult to effect, though manufacturers are disposed to shade their terms. The quoted rates are 4 1/2d for 103 oz 40 in hessians, and 3 1/2d for 8 oz, with the possibility of less being accepted in the case of a good order. Linoleum hessian manufacturers are badly in need of orders, and have made considerable reductions. Competition is very keen for business in the heavy goods end of the trade, and orders are placed only when concessions are made in prices.

HIDE, LEATHER, AND ALLIED TRADES.

Few hide sales have been held this week owing to the holidays, and Bermondsey has been no exception, as a fortnightly offering was sold last week. Prices all round remain firm, with hides and skins in short supply. Business in foreign hides is still mainly on Continental account, as tanners here are still restricting input in view of the shortage of coal and power. Best Argentine tregorifics are selling at 7 1/2d, but no business is reported in Montevideos, which are scarce. The Chicago market is cabled as steady, with best native steers selling at 15 cents. As practically all the provincial shoe factories have been closed down this week for the holiday, business in sole leather has been small. Tanners, however, report a good demand for repairing bends of 10-12 lbs and 14-16 lbs average. Heavy bends are scarce, and 17 lbs bends and over are difficult to obtain in quantities. Little is passing in upper stock, and inquiries have been confined to large-sized coloured glacé kid, and light willow suitable for the Russian boot. Carriers of kip leathers are very slack, as there is little demand for artizan boots owing to the industrial troubles. The demand for holiday footwear has been below the average, and few filling-up orders are therefore to be expected.

CHEMICALS AND FERTILISERS.

In the chemical market business continues to be restricted, but the undertone is steady, though prices in several lines have moved towards lower levels, notably barium chloride and acetone. Continued firmness is noted in glycerine, with quotations much higher on the month, while acetate of soda also is dearer with supplies scarce. Tartaric and citric acids are well maintained with fair business. Coal-tar products are quoted only at nominal rates, the acute shortage of spot supplies resulting in suspension of trading. The market for fertilisers is quiet pending inquiry on new season's account. Ammonium sulphate is quoted at £11 7s per ton for September, current stocks all being sold. Forward prices are on a rising schedule.

THE BANK OF TAIWAN, LIMITED.

(Registered in Japan, 1899.)

Capital Subscribed : : : Y45,000,000
Capital Paid Up : : : Y39,375,000

Head Office - - - TAIPEH, FORMOSA.

VEGETABLE OILS AND OILSEEDS.

Markets generally are very quiet, and operations have been indifferent to a large extent. Linseed oil has recently been in good demand from consumers, and values are about steady around £35 10s per ton naked ex-Hull mill for delivery from now onward to December. Cotton oil is inactive, and crude Egyptian has eased to £39 10s, with ordinary refined offering at £40 10s without attracting buyers. In the oilseed section there is a distinct lull in linseed, and prices of Plate are easier, £17 having been accepted for seed on passage and August-September shipment to Hull, later positions commanding a small progressive premium. Only urgent requirements are being covered, crushers, both here and on the Continent, having been far from actively interested of late. New Calcutta linseed to London (on passage) has been done at £18 18s 9d, which about represents current value. Egyptian cottonseed has sharply declined to £9 12s 6d for "spot" and seed on passage and £9 15s August. Oilcakes of all descriptions are in poor request.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The market for actual sugar remained without new feature, the general tone being steady, with a fair business passing in British makes. Messrs Tate and Lyle's cubes quoted 33s to 33s 6d; crushed, 30s 9d to 31s 3d; coffee crystals, 33s 6d; nibs, 33s 6d; granulated, 30s 9d to 31s 3d; fine, also coarse grain, 29s 7 1/2d; No. 1, 29s 4 1/2d; No. 2, also London and T.L.S., 29s 1 1/2d; Empire, ex refinery, 28s 3d; granulated, August delivery, 29s; caster, spot, finest, 34s 1 1/2d; "A", 33s 7 1/2d; "B", 31s 6d; mineral water white, 29s 6d; icing ranges from 35s 9d to 36s 3d; pulverised, 32s 6d; yellow crystals, 26s 1 1/2d. Foreign kinds move off quietly in forward positions. Czech, granulated spot, 27s; ready for shipment, 14s 9 1/2d; November-December, 14s 10 1/2d f.o.b., Hamburg. Dutch "J", granulated, spot, 27s; ready for shipment, 14s 10 1/2d; October-December, 14s 11 1/2d, f.o.b., Rotterdam. American, granulated, prompt, 15s 6d, c.i.f., London; and 15s 7 1/2d, c.i.f., outports. Belgian crystals, prompt, 14s 4 1/2d, f.o.b., Antwerp. Polish crystals, prompt, 14s 1 1/2d, f.o.b., Danzig. Cuban basis, 96 per cent., August-September, 11s 7 1/2d, c.i.f., U.K. White terminal steady, but generally quiet. August, sold, 13s 6 1/2d; October, 14s 3 1/2d; December, 14s 6 1/2d; March, 15s; May, 15s 4 1/2d per cwt.

COFFEE.—Spot market quiet, but values fully steady, especially for fine grades, which continue in small supply. Futures slow. September, quoted 91s 9d; December, 89s; March, 87s 9d; May, 86s 10 1/2d; July, 85s 10 1/2d per cwt.

COCOA.—Spot parcels in limited request, but late rates were fully maintained. Accra, for shipment, F.F. grade, July-August, 50s; August-September, 47s; and October-December, sold, 45s 6d per cwt, f.o.b. terms.

TEA.—Private market quiet, at about late rates. The auctions will be resumed on the 9th inst.

RICE.—Market steady. Rangoon, two stars, spot, London sellers, 16s 7 1/2d to 16s 9d; July-August shipment, 16s, c.i.f., U.K.-Continent. No. 1 garden, Siam, July-August, 17s 7 1/2d; Saigon, No. 1, ditto, 15s 3d. Italian cleaned, August shipment, 21s 6d; Spanish, oil dressed, August-September, 20s 4 1/2d cwt, c.i.f. Beans quiet. Rangoon H.P., for shipment, July-August, quoted 12s 3d; Madagascari butter, spot, 26s to 28s, as to quality; ditto, afloat, 24s, c.i.f. Japanese peas, spot, 32s; September-October, 26s 9d per cwt.

SPICE.—Pepper remains quiet. Black Singapore, spot, sellers, 9 1/2d, f.a.q.; May-July, 9 1/2d; August-October, 8 1/2d; Lampong, spot, 9 1/2d, f.a.q.; May-July, 8 1/2d; August-October, 7 1/2d; white Muntok, spot, 1s 4d; L.S., May-July, 1s 2 1/2d; August-October, 1s 1 1/2d. Cloves dull. Zanzibar, spot, 9 1/2d to 9 3/4d; for shipment, August-October, 8 1/2d. Pimento, spot, 6 1/2d per lb; for shipment, August-September, 52s, c.i.f. Tapioca weak. Singapore flake, to Havre, July-August, also August-October, sellers, 15s 9d. Sago flour dull. Sarawak, to U.K., July-August, 15s. Desiccated coconut quiet. Spot halves, sellers, 43s 6d; July-August, 38s 6d. Ginger: Japan, spot, 60s; West Coast African, spot, 37s 6d; forward, 32s 6d per cwt.

FRUIT (Dried).—Currants. Australian in better demand, but other descriptions slow. Amalia, quoted 30s to 31s; Gulf, 32s to 35s; Pyrgos, 30s; Vostizza, 40s to 53s; Patras, 31s to 33s; Australian, 44s to 50s. Sultanas sell more readily. Smyrna, 69s to 71s; Australian, new crop, sold, 66s to 80s; South African, bleached, 70s to 76s; Dates in good request. Siam, quoted 11s 3d to 11s 9d; Khadrowie, 15s to 16s; Hallowie (cases), 22s 6d to 25s. Raisins quiet. South

African, 36s to 42s. Evaporated fruits quiet on spot, but forward quotations steady. Californian apricots, fancy, 140s; Australian, 125s to 135s; South African, new Royals, best, 140s. Plums, Californian, new, 20/30, quoted 105s; 50/60, 52s; 90/100, 37s; Oregon, 30/40, 63s; 35/45, 55s. Pears, Californian, extra choice, 72s 6d; fancy, 82s 6d; Lake County, fancy, 90s. Apple rings, Californian, extra choice, 55s to 60s; prompt shipment, 48s; Canadian, spot, 53s per cwt.

CANNED GOODS.

CANNED FISH.—Sardines are in small supply on the spot, but demand shows no improvement. Portuguese, 1/2s, quoted 4s 3d to 6s per dozen tins. Salmon quietly steady. Red, tall, 1 lb, 60s to 64s; tall pink, 26s to 26s 6d; 1/2 lb, pink, 39s to 41s. Lobsters firm on scarcity. Best 1/2s, quoted 157s 6d to 162s 6d, and 1/2s, 92s 6d to 95s. Japanese crab firm, and arrivals are quickly absorbed. Crayfish in limited supply.

CANNED FRUIT.—General course of trade remains quiet for the time of year, and in some instances low prices are being accepted. Californian Bartlett pears, choice, 24-2 1/2s, quoted 13s 6d to 14s; seconds, 10s 6d to 11s. Californian peaches, choice, 11s 6d to 12s 6d; standard, 10s 6d to 11s 6d; seconds, 9s 6d. Californian apricots, choice, 12s 6d to 13s; standard, 10s to 11s; seconds, 9s 3d per dozen tins. Pines in quiet request on spot, and prices unaltered. Italian tomatoes quiet, both spot and forward, at about late rates.

CANNED MEAT.—Market unaltered, with a steady demand for Danish lunch tongues, at firm rates. Corned beef 6's quoted 38s to 46s, as to quality. Danish lunch tongues range from 122s 6d to 132s 6d; American quoted 135s, with best at 140s to 142s 6d. Ox tongues firm. Cooked boneless hams sell well, and prices of finest Danish compare favourably with other kinds, at 1s 8 1/2d per lb, for cases of six tins.

CONDENSED MILK.—Skimmed: Market is quiet, and prices range from 11s to 12s. Full cream, 20s to 25s. Full-cream evaporated: A good trade is being done, and there are excellent milks offering from 19s 6d to 21s. Belgium is now sending consignments.

HONEY.—New Zealand continues in request, but other descriptions move off slowly. New Zealand quoted 50s to 85s; Australian, 40s to 50s; Jamaica ranges from 37s 6d to 50s; Haiti, 37s 6d to 48s; Cuban, 37s 6d to 48s per cwt.

RUBBER.

Market easier on selling pressure and weak American advices, but a fair business transpired at the lower levels. Plantation standard sheet, spot, also August, sold, 1s 6 1/2d to 1s 7 1/2d; September, 1s 6 1/2d to 1s 7 1/2d; October-December, 1s 7 1/2d to 1s 7 3/4d; January-March, 1s 7 1/2d to 1s 8 1/2d per lb.

GENERAL.

JUTE quiet and easier. Firsts, to Continent, August, sellers, £27 15s; September, sold, £26 10s; October to December, sellers, £26 10s. Lightnings, August, quoted £26; and September, £25 per ton. Hessians and twills inactive, unchanged.

HEMP.—Manila fully steady. J grade, September-November, quoted £43; K, ditto, £33; L, £34 and £30. New Zealand High Point, August-September, £37; fair ditto, £35. African sisal, No. 1 Tanganyika, August-September, £44; and No. 1 Kenya ditto, £43 10s per ton.

SHELLAC featureless. Fair T.N., orange, spot, 125s to 130s; Futures, August, 120s 6d; October, 123s; and December, 119s 6d per cwt.

COPRA slow of sale. F.M.S. Straits, to Rotterdam, August-September, also September-October, sellers, £28 15s; Dutch East Indies, ditto, £28 8s 9d; Ceylon, ditto, £30; South Sea, £27 10s; kiln dried, £27. Palm kernels lower. June-August, to Liverpool, quoted £20 2s 6d per ton.

MISCELLANEOUS.—Cocoanuts quoted 22s per 100. Coir yarn, Ceylon, £21 10s to £37; Cochín, £24 10s to £49; Ceylon bristle, £17 10s to £23; cinnamon leaf oil, 4 1/2d; citronella, Ceylon, 1s 7 1/2d; Java, 2s 5d.

THE MONEY MARKET.

THE past week has been quite an eventful one for the money market. Substantial gold arrivals, some of which were unexpected, failed to influence the supply of floating credits, and with some calling in by the joint-stock banks, there was a decided pressure for accommodation. On Wednesday a fair amount had to be borrowed from the Bank of England, and conditions were thus more comfortable on Thursday and Friday. The discount market

has been distinctly firm, partly owing to monetary conditions and partly to the decline in the sterling exchange and the possibility of a rise in the New York Federal Reserve rate from $3\frac{1}{2}$ to 4 per cent. This happened on Thursday afternoon—sooner than the New York market had anticipated—and resulted in a pronounced hardening in discount rates here, three months' bills, which had been taken up till Thursday at $4\frac{1}{8}$ per cent., being quoted yesterday at $4\frac{1}{8}$ per cent. The movement will no doubt damp the enthusiasm of those who thought that this week's gold arrivals were sufficiently important to revive the possibility of a lower Bank rate here. In consequence of the hardening of discount rates the Government had to pay $4\frac{1}{2}$ per cent. on yesterday's Treasury bill allotments.

	Aug. 13, 1926.	Aug. 6, 1926.	July 30, 1926.	July 23, 1926.	Previous Rate and Date Changed.

Houses Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$ (Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	..

Thursday's Bank return showed an increase of £1,023,600 in the gold stock and a reduction of £1,182,000 in the note circulation, so that the Reserve was £2,205,600 higher. The Proportion, however, was only a little higher at 26.2 per cent., Public Deposits having risen by £2,637,000, and Other Deposits by £3,670,700. Market borrowing at the Bank is reflected in an increase of £3,652,600 in Other securities. Government securities rose by £469,700. Currency notes were reduced by £2,816,000 to £294,176,800, which includes £1,298,300 for notes called in but not yet cancelled. The fiduciary issue is £236,628,500, or £11,274,000 below the maximum for 1926.

The monthly statement of the London clearing banks of average weekly balances for July, which is printed in full on a later page, shows some interesting changes, the most prominent of which are increases of £16½ millions in deposits and of £22½ millions in bills discounted. The following table compares the aggregate figures for the nine English banks:—

	Dec. 1925.	Mar., 1926.	April, 1926.	May, 1926.	June, 1926.	July, 1926.
Capital and reserves	121.0	123.6	124.2	124.2	124.2	124.4
Acceptances	108.2	100.6	95.7	92.4	87.8	85.2
Deposits (incl. undiv. profits, &c.)	1,646.8	1,587.8	1,590.4	1,589.8	1,630.1	1,646.7
Total liabilities	1,876.0	1,812.0	1,810.3	1,806.4	1,842.1	1,856.3
Coin, notes, balance at bank, and cheques in course of collection	256.2	236.2	236.4	239.3	250.9	243.6
Money at call	117.8	109.7	116.3	112.7	121.4	118.7
Investments	286.1	272.2	269.9	268.7	267.9	270.9
Discounts	231.0	187.2	187.6	185.7	210.4	233.0
Loans and advances	846.8	876.3	874.3	877.4	873.2	874.0
Cover for accept., premises, &c.	138.1	130.4	125.8	122.6	118.3	116.1
Total assets	1,876.0	1,812.0	1,810.3	1,806.4	1,842.1	1,856.3

Deposits are now at the same figure as in December last, which is the highest recorded since January, 1925, the total for July, 1925, being £1,633 millions. It will be observed that investments are higher; this is the first upward movement for several months and accounts in part for the increase in deposits. Loans and advances are practically unchanged, but there is a reduction in both cash and money at call. Acceptances are at the lowest figure since August of last year.

NEW YORK MARKETS.

Our New York correspondent cables:—The raising of the New York Federal Reserve Bank rate to 4 per cent. gives all the banks of the system a uniform rate. The action was expected in view of the growing firmness in the money market, but not quite so soon. The weekly statement shows an increase of \$25 millions in the discounts of the local institution, the reserve ratio being 79.5 per cent. The share markets, whose quality has been deteriorating recently, are undergoing a reaction, which has been extended by profit-taking in General Motors after the great rise, and some calling in of loans owing to the

firmer tone of the money market. There is some apprehension now lest seasonal demands for money should begin to conflict with the needs of speculative markets, in which case the latter would suffer. Industrial and trade reports are still good. There is some hope here of Poincaré swinging to debt ratification and the experts' plan. The Clemenceau letter merely served to draw the fire of Borah, and is not seriously regarded in responsible quarters.

THE STOCK MARKETS.

Although business remains quiet in the stock markets as a whole, prices keep firm, and there is some evidence of buying on the part of the public. Investment stocks of all kinds have been a good market, in spite of holiday influences and a stiffening of money rates, but the gilt-edged market yesterday reacted on monetary developments; recently issued Colonial stocks are quiet and somewhat neglected. French bonds have fluctuated, but foreign bonds, as a whole, are firm. Home rails are quiet, but improved yesterday, and Argentine rails are strong. Grand Trunk Pacific debentures gained a few points on the news that negotiations with the Government are to be reopened. Rubber shares have improved slightly on a small rise in the price of the commodity, but industrials generally are quiet. In the Kafir market Sub Nigels have attracted attention on Cape buying, and Malayan tin shares have been active.

THE COMMODITY MARKETS.

The position shows little change as compared with a week ago. Much foreign coal continues to reach this country, Continental prices having been raised slightly during the last few days, though quotations from America, the chief source of supply, are unchanged. Iron and steel stocks are reaching very low dimensions, and trade generally is very quiet, though a few orders for post-strike delivery are being taken. Cotton prices have declined on a better American Bureau report than had been expected, but a fair weight of business has been done at the lower rates. A first list of basic prices for American yarn has been published, but whether the scheme will be effective remains to be seen. The wool market has a firmer tone, as a result of export buying, but conditions in the factories of the West Riding still leave much to be desired. Wheat is cheaper in sympathy with Transatlantic market movements. Sugar is in moderate demand at steady figures, and coffee largely unchanged. Tea is briskly competed for, and slightly dearer; rubber steadied after a dull opening. Among non-ferrous metals, tin has reacted sharply from the levels reached early in the week; copper and lead have also failed to maintain their initial activity.

FOREIGN EXCHANGES.

The foreign exchange market has again been active. In Paris, after the low record of 158½ had been made on the 6th instant, the anticipated reaction set in, which brought the rate back to more natural levels. On Saturday it closed at 161, and on Monday at 166½, the latter jump being due to the realisation that the War Debts Agreements would not be ratified before the close of the Parliamentary session. On Tuesday the rate reached 172½, and on Wednesday 174½. On Thursday the opening quotation was 180, but the publication of the Bank of France statement, which showed a reduction of 550 millions in advances to the State and 987 millions in the note issue, brought it down again to 177. Yesterday morning it opened at 177½. The discount on forward rates has narrowed from 4f to 3f for one month, and from 11f to 9f for three months. As, however, no rate of stabilisation has yet been fixed, and the Debt Agreements cannot now be discussed until the autumn, it is difficult to see how any further movement against the franc, whether external or internal, can be resisted. No foreign credits are available, and the policy of buying foreign currencies against fresh issues of notes is, in fact, inflation—at least, in its effect on prices. Brussels has moved sympathetically, but less violently, so that the margin between the French and Belgian quotation is once more small. It also reached the lowest point of 168½ on August 6th, rising from there to 170 on Saturday,

ESTIMATES for FINANCIAL YEAR 1926-7.†

Expenditure.....	£ 825,727,000	Revenue.....	£ 824,750,000
Deficit	£ 977,000		
† Revised in Exchequer Return dated July 26, 1926.			

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Mitchells and Butlers, Watney, Combe, Reid and Co., and the Anglo-Dutch Plantations of Java. At the meeting of Watney, Combe, Reid and Co., the chairman referred to the book value of properties and goodwill, and mentioned that the latter stood at £3 millions. At the Anglo-Dutch meeting a small increase in capital was authorised.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

M. POINCARÉ'S FINANCE.

THE holding of a National Assembly at Versailles, with all the trappings of a great State ceremonial, for the purpose of making the sinking fund for the reduction of the floating debt a part of the constitutional law of France was a spectacular demonstration of the Government's determination to carry out its plans for the salvation of French finance. The carrying-out of the programme was interrupted by a certain amount of Communist obstruction for which disciplinary measures were found necessary, but in the end M. Poincaré secured his verdict by the overwhelming majority of 601 to 146 votes. The Bill is an addition to the constitutional law of 1875, for it provides on the one hand for autonomy of administration of the sinking fund, and, on the other, guarantees the necessary resources. Thus the obligation to deal faithfully with the debt is given the most impressive sanctions that are available.

We would not underrate the importance of impressing French opinion with the high importance of dealing faithfully with the financial situation, but it is idle to overlook the fact that a sinking fund is a pure delusion unless it is based upon a real surplus of receipts over expenditure in the Budget, and that if the condition of the nation's finances is such that it is necessary to borrow at a high rate of interest, the repayment of debt, some of which may have been borrowed at cheaper rates, merely has the effect of making the Exchequer worse off than before. Indeed, the Chamber might have been somewhat chary of carrying through this solemn constitutional amendment if it had borne in mind the deplorable fate of Pitt's sinking fund during the Napoleonic wars. Under the inspiration of the notorious Dr Price, British politicians thought there was something magical about a sinking fund. The fund was kept going right through the war, and at the end the net result was that the National Debt was considerably heavier than it need have been, simply because of this fantastic plan of paying off debt with one hand while the country was borrowing on less favourable terms with the other. The French Bill provides for the allocation to the sinking fund of the net receipts from the sale of tobacco, the products of the additional taxes on the first transfer of the rights of succession, and of voluntary contributions, while in the event of these proving insufficient the sum required must be made up from the Budget. The plan could only have been made water-tight if it had included a further provision that the current expenditure of the Budget must be covered by taxation and not by borrowing.

It is, therefore, not surprising that this imposing spectacle has failed to prevent a slip backwards in the value of the franc, which, since we wrote last week, has moved from 159 to 177½. In this connection there are two considerations which have militated against the franc retaining the ground it won last week.

174½ on Monday, and 175½ on Tuesday. There was little change on Wednesday, but on Thursday the rate closed at 178, to open yesterday at 178½. On forward rates the discount has narrowed from 7f to 2.50f per month. Italy has also shown some weakness, rising from 144½ to 147½ during the week. New York, after a quiet week-end, at 4.86 9-32, showed a distinctly weak tendency for the rest of the period, which may be attributed to two causes. In the first place, there are signs that the autumn demand for dollars is now really beginning to make itself felt, while, in addition, it was rumoured towards the end of the week that a rise in the New York Bank rate was intended, the rumours being justified on Thursday evening, when the rate was raised from 3½ per cent. to 4 per cent. to meet the seasonal demand for credit. The exchange rate under these influences fell from 4.86½ on Monday to 4.86 7-32 on Tuesday and 4.86 5-32 on Wednesday. On Thursday it touched 4.86 3-32, and opened at 4.85½ yesterday morning, when the New York rate news was received. Forward rates have narrowed from 1½ to 5-32 cent premium for one month. The gold exchanges have also moved against us in sympathy, Amsterdam falling from 12.11½ to 12.11, Switzerland from 25.17½ to 25.14, and Stockholm from 18.17½ to 18.15. Oslo moved during the week-end between 22.19½ and 22.20½. On Wednesday, however, it fell to 22.11½, owing, it is believed, to American speculation, but had moved up again to 22.15 by yesterday morning. Copenhagen fell from 18.34½ to 18.28½. Madrid fell from 32.30 on the 6th to 31.63 on Tuesday, rose to 31.88 on Wednesday, and fell again to 31.85½ yesterday. Berlin improved from 20.42½ to 20.41½, Helsingfors from 193½ to 193, Vienna from 34.41 to 34.38, and Prague from 164½ to 164. Warsaw is steady at 45, and Budapest at 27.85. In the East the rupee has advanced from 1s 5 61-64d to 1s 5 63-64d, while the rupee is steady at 1s 11½d. The silver market has fluctuated under speculative influences, but prices were considerably lower on balance. Hong Kong, however, is 1½d better at 2s 2½d, while Shanghai, after falling from 2s 10½d to 2s 9½d, recovered again to 2s 10½d. In South America, Rio at 7½d has improved 1½d, Monte Video has risen from 49½d to 49½d, and Buenos Aires from 45 15-32d to 45½d. Valparaiso has also appreciated from 39.50 to 39.40 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 7th:—

EXPENDITURE.		RECEIPTS.	
	£		£
Supply Services	9,437	From Revenue	18,781
Interest, &c., on Debt	5,975		
Sinking Fund	290		
Sundries	375		
Decrease in debt	2,681		
Increase in Balances	23		
	18,781		18,781

The revenue for the week amounted to £18,781,000, as compared with £14,666,400 in the corresponding week last year. Customs and Excise were both lower at £1,782,000 and £772,000, against £2,201,000 and £827,000 respectively. Property and income-tax amounted to £5,343,000, against £4,922,000, and super-tax to £440,000, against £600,000. Ordinary receipts brought in £7,053,400, as compared with £8,300, and special receipts were nil, as compared with £12,400.

The week's operations reduced the National Debt by £2,681,300, and caused the following changes:—

EXPENDITURE.		RECEIPTS.	
	£		£
National Savings Certificates ..	250	Treasury Bills	+ 6,029
Public Department Advances ..	7,900		
Sundries	560		
	8,710		+ 6,029

The floating debt was reduced by £1,830,000 to £771,471,000.

FINANCIAL YEAR, 1926-1927 (April 1 to August 7, 1926.)

		Amount borrowed ..	65,595,423
Total	296,924,547	Total	296,924,547

The first is the apparent unwillingness of M. Poincaré's Government to take a definite stand on the question of stabilisation. What the underlying reasons for this hesitation are it is not easy to fathom, but among other influences it is believed that M. Poincaré himself still hankers after ultimate stabilisation at a level of the franc very much higher than its present figure, and one that could only be attained after a long struggle to appreciate its value. It is recalled that in the spring of 1924, when M. Poincaré made his dramatic assault upon those who were speculating in the fall of the franc, its value recovered from over 120 to less than 70, that in reaching this point it came to a level which could not be retained, and that any hopes there might have been at that time of stabilising the franc were rendered abortive by the attempt to push it too high. It would help to clear the air if the Government's views on this question of the ultimate value of the franc were made known, and it became clear that this mistake would not be repeated.

An equally serious reason for hesitation is the fate of the war debt agreements. M. Poincaré came into power following on a demonstration by the Chamber that France would put her own house in order without foreign help. In recent days there was evidence that M. Poincaré had been persuaded that France could not hope to solve her difficulties if she continued to procrastinate about her international obligations, and last week-end it was thought that M. Poincaré would ask the Chamber to ratify the Churchill and Mellon agreements before the recess. The proposal, however, produced vigorous dissension within the Government itself, and roused the temper of the Finance Committee, with the result that the Government refrained from asking for a decision, and accepted the appointment by the Finance Committee of a sub-committee to report on the question, the present indications being that the matter will be brought before Parliament in October. The feeling in France on the matter has been crystallised in a long letter from M. Clemenceau to President Coolidge protesting against the terms of the proposed settlement. This effort of the veteran statesman is unlikely to affect the position in America, and even in France is regarded as having come too late to have any effect on American official opinion. But the force of circumstances is likely to compel the French Government sooner or later—and we hope sooner rather than later—to give effect to the words of M. Poincaré at the National Assembly to the effect that France's external creditors would understand that she wished to satisfy them to the full measure of her capacity. Time will unquestionably bring a radical revision of all obligations left behind by the war, but this will not be hastened by the hesitation of France, which at present only has the effect of undermining French credit in the country whose material resources are the greatest in the world.

THE ITALO-SPANISH TREATY.

THE Treaty between Italy and Spain, which was signed at Madrid last Saturday, August 7th, has been rightly hailed by the Fascist Press as an example of "the good, old-fashioned method of secret diplomacy." That negotiations for a treaty should be conducted privately is nothing out of the way. Indeed, this is recognised on all hands as being almost essential to diplomatic elasticity. If negotiators have to take every step, or half-step, forward and backward in the full light of publicity, they will hesitate to take any step at all, and will therefore be slow to reach common ground. What we do mean nowadays by secret diplomacy is the private conduct of negotiations without the fact that negotiations are in progress being made known, and the omission to publish the text of the resulting agreement when once it has been signed. Under this definition of secret diplomacy the treaty in question undoubtedly falls. The first that we heard of it was the announcement last Monday that it had been concluded, and we still await the text. Meanwhile, we have to be content with what the Fascist Press tells us regarding the contents.

In form the treaty appears to be not only correct, but almost edifying. It is a treaty of amity, conciliation, and arbitration; and it further provides that either party shall maintain friendly neutrality in case of unprovoked attack upon the other party by a third State—for instance, as the *Tribune* puts it, Italy would be obliged to remain neutral if Spain were attacked by France. This hypothetical but very concrete illustration transports us at once into the realm of practical politics.

What are the practical considerations which have led to this treaty being concluded? The Fascist Press informs us that it contains provisions for promoting the common interests of Italy and Spain, both in South America and in the Mediterranean. The first reflection which occurs to us is that these two fields of action are markedly different in character. The common interests of the two parties in South America are not merely legitimate, but eminently peaceful and constructive. The Latin-American countries (unlike the United States) are still in a phase of economic development in which they need and desire European immigration. Italy, and to a less extent Spain, are in a phase in which they need outlets for emigrants. Now that the former field for emigrants in the United States has been virtually closed they must look elsewhere, and where should they turn more naturally than to Latin and Catholic countries which need their emigrants, and where these emigrants will find themselves in an environment which will be far less alien to them than the North American strongholds of the Nordic race and Protestantism? The chief concern of the Italian and Spanish Governments is that their emigrants to Latin-American countries shall be secured fair conditions of work and living, and this is a matter in which joint action can be taken profitably as well as legitimately.

The common interests of Italy and Spain in the Mediterranean suggest more delicate questions. For example, the *Giornale d'Italia* defines the principal aim of the Treaty as a shifting of the Mediterranean equilibrium by a joint effort of the two sister countries. The Italian Press is at some pains to make it clear that no threat is implied to the Mediterranean interests of Great Britain. It is recognised that Great Britain needs a highway through the Mediterranean to the Oriental parts of her Empire; and it is admitted that a better distribution of influence in the Mediterranean, in proportion to the economic needs and historic rights of the countries concerned, is not incompatible with the maintenance of the British line of communications (or, by implication, with the retention by Great Britain of Gibraltar, Malta, and Cyprus). An equilibrium cannot, however, be shifted without disadvantage to somebody, and in the Italian Press comments on the Treaty there is a significant silence regarding the Mediterranean interests of another Latin sister—France. France, unlike Great Britain, does not hold a mere string of naval bases which are territorially and economically insignificant, however great their strategic value as places of call on an imperial highway. She holds the entire Continental mass of North-West Africa between the Spanish and International Zones of Morocco on the North-West and the Italian colony of Libya on the South-East. The French colonies and protectorates in North-West Africa include not only the vastly greater part of that area in terms of territorial extension. They also include the parts which are richest, most populous, and most civilised. Spain and Italy have only been able to pick up the crumbs which have fallen from France's table, and these crumbs have fallen either because the bread was too deficient in nutriment for France to fancy it for herself (as in the case of Libya), or else because some third party objected to France devouring that particular slice (as in the case of Northern Morocco, where Great Britain was unwilling to see France instal herself along a littoral commanding the Straits of Gibraltar).

It must be admitted at once that Spain and Italy have a grievance. Detached observers have watched them with cynical amusement as, in their somewhat naïve eagerness to cut a figure as imperial Powers, they have dug their teeth into the Libyan Desert and the Rif, and have been stung incontinently by a Grand Sanusi and an Abdu'l-Karim. The spectacle of the Powers with the weakest jaws attempting to crack the hardest nuts has been extremely diverting to the stronger Powers who had

prudently tossed the nuts to the ground; but the egotism of the stronger Powers is bringing its Nemesis. To begin with, the military disasters of the Italians in Libya and the Spaniards in Morocco have lowered the military prestige of all the Franks in North Africa; and France, as the leading Frankish Power in the region, has felt the consequences severely. The military fiascos of Spain in her zone of Morocco have recently involved France in a costly and dangerous war, and she has found herself obliged to pour out precious French blood and treasure in reinstating the Spaniards by force—with no security that the Spanish Humpty-Dumpty will not have another great fall the moment that the French prop is removed.

Meanwhile, Spain apparently considers that she has got out of France as much as she can expect to get; and feeling (perhaps not illegitimately) that she is under no moral obligation to this Latin sister, she has resumed her dealings with the other one. The arrangements now embodied in the Pact of Madrid appear to have been mooted originally during the Spanish Royal visit to Italy in 1923, but the opening of negotiations was delayed by the crisis of the war in the Rif, which compelled Spain to co-operate with France if she did not wish to be expelled, bag and baggage, from Morocco at the heels of that Power. Now that Abdu'l-Karim has surrendered and the military operations for the effective occupation of the Spanish zone have entered upon their last phase, Spain has promptly sheered off again from her late co-belligerent in Morocco, and has completed her *rapprochement* towards her other Latin sister, Italy.

In the Mediterranean, Spain and Italy both belong to what Signor Mussolini has picturesquely described as the proletarian class of nations, whereas France represents the propertied and prosperous *bourgeoisie*. If the equilibrium is to be readjusted, where is the process to begin? At Tangier? In Tunisia? The signatories of the new Treaty are keeping their own counsel, but the general nature of their Mediterranean programme—however it is to be carried out in detail—accentuates one of the disturbing features in the international landscape. The new Treaty distinctly increases the possibility that in North-West Africa the three Latin sisters may fall out over the division of the spoils. If they do, the *tertii gaudentes* will be the native peoples.

THE SUPPLY OF CAPITAL IN GERMANY.

(BY OUR BERLIN CORRESPONDENT.)

THE revival of the home capital market is one of the most striking and the least expected of several phenomena connected with the German Republic's rapid recuperation since the war. It means primarily the reaccumulation of national savings. This point may be exaggerated. In part the present abundance of home long-term loan offers is due to the industrial stagnation, as a result of which money, which in more active business conditions would normally be retained liquid for working capital, is being locked up in fixed-interest investments. Some months ago the Reichsbank President, Dr Schacht, even saw danger in this. History, he held, might repeat itself in a new form. During the inflation years a very effective form of "Flight from the Mark" was to invest rapidly depreciating paper currency in non-depreciable expansions of industrial plant and in absorption of industrial undertakings in associated branches. When stabilisation came this was a cause of the working capital famine, which in 1924, when the demand for manufactured goods was still strong, prevented manufacturers utilising their expanded plant to the full, caused the discharge of workmen for whom work was in hand, and brought losses which sometimes obliterated the savings originally made. In warning against undue expansion of the home capital market, Dr Schacht feared that industrial activity would in future be impeded by shortage of working capital.

Against this risk stands the fact of an ever more rapid reaccumulation of capital, so that possibly the present big home investments may not involve any shortage of liquid capital in the future. The reaccumulation is very

remarkable. Less than two years ago Dr Schacht expressed the view that Germany would not within visible time be able to finance her own industry and trade. Savings arising from an excess of home production over home consumption would at best accumulate very slowly, and in the main foreign borrowing would be resorted to. Dr Schacht was not considered a pessimist. The real pessimists proclaimed that any excess of production was inconceivable; on the contrary, the country was using itself up: it had lost its economic self-sufficiency, and it would soon reach breaking point. A former Minister of Industry, Professor Hirsch, was even more optimistic than Dr Schacht. He argued and adduced figures to prove that since about 1921 the country had been producing more than it consumed, including its liabilities abroad, and that reaccumulation of capital at a very fair pace was proceeding. The revival of the home capital market in that year indicates that Dr Hirsch was right.

This revival is only one of the last links in a chain. The links nearest to it are the revivals of insurance business and agricultural long-term credit, and the links at the beginning are banking and savings bank deposits. The movements of banking statistics since the currency stabilisation have been periodically published in the *Economist*. The favourable figures shown need some qualification, because part of the new money in the public's hands originated in realisations of foreign currency loans, and part in realisation of foreign currency hoards and investments dating from the inflation years. The favourable savings banks' statistics, being associated with other classes of the nation, need no qualification. Even to-day the absolute savings bank deposits are very small. At the end of 1913 savings bank deposits totalled nearly 20 milliard marks, and in June, 1926, they totalled (savings accounts only, not current accounts) only 2,362 millions, in July nearly 2,500 millions. But in September, 1925, when statistics for the whole Republic were resumed, the total was only 1,388 millions. In Prussia since January, 1925, the figure has risen from 482 to 1,570 millions. At the date of currency stabilisation deposits had practically no value.

In 1923 insurance policies in mark currency had practically no value at all, their gold value having disappeared. The measures for their partial restoration enacted by the Valorisation Law have not yet had much practical effect, because the restoration depends upon an unknown factor, that is the valorisation of the insurance companies' own paper mark investments. But the value of new life insurance policies taken out in 1925 was 2,700 million marks, which is far above the highest pre-war annual increment. One group of companies boasts that its new policies in 1925 exceeded the figure of 1913 sixfold. In 1914 there were 3,175,000 outstanding policies (not including social insurance). In 1925 applications for 527,912 new policies were made. This comparison has been used, somewhat too liberally for the purposes of insurance

company propaganda, which ignores the fact that new insurances can be explained by other influences than superabundance of cash. It is the disappearance of their old mark investments as a result of the currency depreciation which to-day induces citizens, who have no other resources from which to provide for their families, to insure. The influence first became effective in 1925, when wages, salaries, and commercial earnings rose to gold values comparable with the pre-war level. So regarded, the new flood of insurances reflects impoverishment, not wealth. But the insurance premiums of 1925 represent newly accumulated capital, and tend to prove that insurers earned more than they consumed.

The revival of mortgage investments points in the same direction. Almost all the Mortgage Bank returns for 1925 (which appeared last April) showed large increases in the values of outstanding mortgage bonds, based on the increment of concluded mortgages. This development took place in spite of serious obstacles, such as the low rents of urban housing, the insecurity of title which resulted, and still results, from Valorisation legislation, and the dullness in building new houses, which are almost the only sort of real estate fully secure until the Valorisation confusion is cleared up. Figures for all the mortgage banks are not available; figures for a group of banks show that of 700 million marks outstanding mortgages at the end of 1925 400 million marks were concluded within the year. This year, owing to the decline in interest rates and to the raising of urban rents to the pre-war level, mortgage business has continued to develop satisfactorily. First mortgages on city property may now be had at 8 to 8½ per cent., as against 12 per cent. nominal, in reality (allowing for the discount at which the mortgage bonds given to borrowers instead of cash were saleable) about 15 per cent., which was the rate a year ago. Rural long term credit may now be had at 7 to 7½ per cent., and the supply is abundant, though in great part it comes from public banks. Part of the export credits which are now being given have also the aspect of long term investments, the terms being up to three years. While such export credits originally consisted in re-lending money borrowed from foreign countries, Germany being only an intermediary, to-day, with foreign borrowing declining, the export credit system may be considered as mainly financed out of home capital.

The yield from the Corporation Taxes has this year greatly increased, and the commercial banks' returns show corresponding increases in profits from capital transactions. The figures of home loan and debenture issues point in the same direction. These figures must not be summarily taken to prove the revival of the capital market, because they are occasionally swollen by big issues of a merely technical kind arising from industrial fusions. But, on the whole, the figures show a marked revival. In the pre-war years 1909-14 fixed interest emissions averaged 200 million marks per month, almost wholly from home sources. In all, 1924 home fixed interest emissions totalled 176 millions. In 1925 they totalled 144 millions, and in no month exceeded 49 millions. In five months not a single loan or debenture issue took place at home, while foreign borrowings totalled 1,312 millions. In the first half of 1926 home issues totalled nearly 750 millions. In July 174 million marks loans were raised, mainly in the shape of industrial debentures. In the first seven months of 1926 the Republic and States borrowed at home nearly 300 million marks and the cities nearly 200 millions. Numerous further public loans, Federal, State and municipal, are being negotiated, or have been decided upon.

As against this the tendency to borrow abroad has declined; but here again the figures cannot be summarily taken, because some months' totals include exceptionally large borrowings due to industrial transactions like the Steel Trust foundation. In the first eight months of 1925 foreign borrowing was inactive. In the last four months it averaged nearly 250 million marks a month. In the first five months of this year it averaged only 128 million marks a month. The month of June shows the abnormally big figure of 345 million marks, but this was largely due to the Steel Trust issue. In July, which was a normal month, foreign loans totalled only 80 million marks.

It is certain that Germany is regaining her independence of the international capital market more rapidly than was expected a year or two ago. Confirmation lies in the fact that the home long term interest rate has fallen, despite the absorption of new savings as rapidly as they accumulate. The inevitable industrial recovery, of which there are already signs, will accelerate this process by increasing the national production and by sparing the nation the present large cost of supporting its unemployed. But an industrial revival may cause temporary shortage in the capital market, just as it will almost certainly cause new stringency in the money market.

RURAL CREDIT IN NEW ZEALAND.

(BY OUR CHRISTCHURCH CORRESPONDENT.)

THE annual address of the chairman of the Bank of New Zealand is chiefly interesting for the proposals made concerning new facilities for long-term rural credit. The very sound financial position of the Bank has been commented on in a previous communication to the *Economist*. Attention is necessarily drawn to its operations, not only because of the predominant position which it holds in the Dominion, but also because of the relation in which it stands to the Government. Any alteration in its capitalisation involves an Act of Parliament to enable the Government to take up its quota of new shares, so that the periodic extensions of capital draw a great deal of public attention.

There has been in New Zealand, ever since the sharp decline in prices after the land boom of 1918-20, an agitation for a Rural Bank. In part this agitation arises from an unwillingness to face the losses involved in an acceptance of lower levels of value. In part, however, it arises from a genuine need for improved credit machinery in a part of the capital market hitherto comparatively unorganised. By far the most important part of the rural lands of the Dominion is freehold, and is readily saleable on the simple Land Transfer system. The ease with which a title may be obtained has led to a great extension both of long-term and of short-term credit in recent years. The short-term credit needed for dealings in stock and similar outgoings is provided largely by private firms, generally merchants and dealers, as well as finance and commission agents. Many of these firms have developed from the old land and estate agency companies, and for the most part they are sound conservative financial institutions engaged mainly in what is a form of specialised banking. In the boom period competition set in some measure by less established quasi-co-operative societies owned and controlled by farmers, involved these "semi-banks" in advances which became frozen and involved the banks proper (which had to carry the companies through the crisis) in some embarrassments. But, generally speaking, there is not much instability among these firms, even though their advances necessarily include as a general rule not only short-term credits, but also some part of the longer-term credit for the purchase of land.

The bulk of the mortgage market, however, is much less organised. Neither the banks nor the agency companies, as a general rule, care to lock up their funds in such securities; the mortgagee has, therefore, to find not only first, but second and subsequent mortgages in an unorganised capital market. The legal fraternity provide much of this long-term capital, the leading departments of the Government (such as the Public Trust Office and the Insurance Departments) and private individuals provide more, and there are also specially organised loan and investment companies. The Advances to Settlers Department caters more for the small farmers' lends comparatively small sums on first mortgage at safe margins for long terms, and on a scale of amortisation.

The great bulk of the mortgages are, however, for terms of three or five years, with no provision for reduction of principal. The expense of renewal is considerable, often adding a considerable fraction of 1 per cent. to the annual rate of interest. Considerable interest attaches,

therefore, to the Bank of New Zealand's proposal to create a new department with separate capital and administration in order to advance long-term loans under amortisation arrangements. It is proposed that authority should be obtained from the Government to set up a department to be financed by the new capital issue, and by the raising of debentures. If the Government is prepared to exempt its operations from income-tax, the Bank will undertake to provide advances at not more than 6 per cent (net interest). The maximum dividend payable is to be 7½ per cent.

A further development of the project was indicated by the Prime Minister's suggestion in the House that if the Government gave its consent to the Bank of New Zealand scheme, it would need to do so to similar schemes if undertaken by the other banks.

There can be no reasonable criticism of the utility of this scheme, but its limits are clear. In that part of the field which it covers it will give security, long-term credit, without the cost, anxiety, and inconvenience of frequent renewal, and will at the same time provide for regular reduction of principal. But, obviously, it will do little to provide relief for the marginal borrower or the marginal risk. It may even prove to be a means whereby valuations will be scaled down to more conservative levels. In the long run this may be a very useful service; but in the meantime it remains to be seen whether the project will prove acceptable to those sections of the community who have been active in the agitation for a Rural Bank. The leader of the agitation, Mr W. J. Polson, was sent away by the Government just before the elections as one of a Royal Commission of three to study the problems of rural credit in America and Europe. The Commission is on the eve of returning to the Dominion, and whatever report it may make is obviously forestalled in some measure by the bank's action.

RUBBER-PRODUCING COMPANIES.

At the end of July it was officially announced by the Colonial Office that no change would be made in the percentage of standard production of rubber allowed to be exported from British areas, which accordingly remains at 100 per cent. for the current quarter. A few weeks ago it seemed likely that the May-July average price would fall below the 1s 9d datum level, and the export figure consequently be reduced to 80 per cent. of standard. The average, however, eventually came out at 1s 9.0017d. A further statement issued by the Colonial Office on August 6th removes any doubts which may have existed as to the pivotal price for the current quarter and its effect on the following quarter's export level, it being definitely stated that the provisions regulating exports from Ceylon and Malaya announced on April 26th last will apply in respect of the current quarter "and until it may be decided to modify them." This second announcement had a steadying influence upon the market for the commodity, prices having been appreciably firmer since it was made. At the same time, the continuance of the restriction scheme is responsible for much of the uncertainty regarding the future. Prices of rubber shares are not particularly high. To some extent, of course, this is due to realisation of the fact that the profits secured in respect of the past twelve months were exceptional, and that those for the current year will probably be smaller on account of the fall in the price of rubber, which has since occurred. But, in our opinion, it is almost equally due to the unsettling influence of restriction. As things are at present, with America taking practically three-quarters of the world's supplies, the operations of United States manufacturers are primarily responsible for the level of prices. Thus, with supplies dependent upon prices—as they will be if the present scheme is effective—it seems that manufacturers on the other side of the Atlantic are presented with an excellent counter for market manipulation. It is probable that, were the Stevenson scheme to cease to function, both Mining Lane and the Stock Exchange would be subjected to

THE FIRST NATIONAL BANK OF BOSTON

a temporary period of depression, either for logical or psychological reasons. But restriction cannot last for ever, and sooner or later the effects of its removal will have to be faced. In these circumstances, it certainly seems as though the present time is opportune for the event. Most of the companies are doing very well, and a large number have arranged remunerative forward contracts, which would materially help them to tide over a temporary period of depression, and which will probably not be renewed next year. Thus it seems that the longer the delay the greater will be the evil. While on the subject of restriction we note that the Rt. Hon. Sir Matthew Nathan, G.C.M.G., has been appointed chairman of the Advisory Rubber Committee in succession to the late Lord Stevenson. Lord Stevenson, who died at the age of 53 on June 10th last, will be remembered as chairman of the Standing Committee of the British Empire Exhibition, although his name has figured prominently before the public as chairman of the Committee which drew up the rubber restriction plan. His successor was Governor of Queensland from December, 1920, to October, 1925. Previous to that he had been Governor of the Gold Coast, of Hongkong, and of Natal. He then became Secretary of the General Post Office and Chairman of the Board of Inland Revenue. In 1914 he was Under-Secretary to the Lord Lieutenant of Ireland, and in 1916 was appointed Permanent Secretary to the Ministry of Pensions.

According to Messrs S. Figgis, the shipments of plantation rubber during 1925 were 447,000 tons, which compares with those of previous years as follows:—

Exported from—	1920.	1921.	1922.	1923.	1924.	1925.
Ceylon (and India).....	Tons. 37,200	Tons. 40,100	Tons. 47,000	Tons. 37,000	Tons. 37,300	Tons. 48,000
Malaya, &c. (inc. re-exports).....	187,800	159,900	248,080	252,000	259,750	315,000
Java	31,000	29,600	32,000	33,500	38,580	44,000
Sumatra (East Coast)	22,400	29,900	39,000	47,000	41,000	44,000
India, Burma, &c.	..	..	..	..	11,000	23,000
Total	278,500	259,500	366,000	369,500	387,600	447,000

† December shipments estimated.

This table reflects the operation of the Stevenson scheme, by reason of which no true comparison of the shipment figures is possible. The total shipments from India, Burma, &c., show the biggest increase.

The average London price of first-quality spot crepe in 1925 was 2s 11½d per lb, as compared with 1s 1½d in 1924, 1s 3½d in 1923, 9½d in 1922, and 2s 3d in 1914. From the next table, which gives the crops of 10 representative producers and the prices realised, it will be seen that the producing companies must have benefited substantially from the rise in prices:—

Company.	Production.				Price per Lb.		
	1914.	1923.	1924.	1925.	1914.	1924.	1925.
Anglo-Malay	Lbs. 1,384,382	Lbs. 907,735	Lbs. 952,510	Lbs. 1,243,013	s d 2 11	s d 1 3½	s d 2 11
Chersonese	537,646	428,345	443,707	612,858	2 17	1 2½	2 5½
Cons. Malay	584,050	722,500	632,727	881,718	2 21	1 4½	2 8½
Golden Hope	174,132	279,875	206,405	365,109	2 08	1 2½	2 2
Hindis & Dowlands	1,137,858	1,129,917	965,106	1,335,500	2 2	1 2½	2 7½
Linggi	1,389,420	2,235,315	1,455,507	2,654,120	2 18	1 3½	2 6½
London Asiatic	1,131,430	2,327,718	2,113,997	2,628,971	2 18	1 2½	2 4½
Selangor	614,199	666,526	650,794	667,940	2 24	1 2½	2 9½
Sungei Kapar	658,616	667,149	568,437	752,190	2 24	1 2½	2 9½
United Serdang	1,827,943	2,845,881	3,403,510	3,598,218	2 24	1 4½	2 08½

Here, again, of course, crops were affected by the Stevenson scheme. As regards prices, in only two cases—Anglo-Malay and United Serdang—was the level lower than in 1914. Probably this is accounted for to some extent by the existence of forward contracts at slightly lower prices than those ruling in the open market. In

any event, all the companies secured very considerably higher rates than in 1924, particularly the Sungei Kapar, Selangor, and Consolidated Malay Companies. A comparison of the prices secured, however, is of little use without a record of costs. For this purpose we give below the costs of production per lb of a few companies over a period of years:—

COST OF PRODUCTION per LB.

	1913.	1919.	1920.	1921.	1922.	1923.	1924.	1925.
Anglo-Malay	s d	s d	s d	s d	s d	s d	s d	s d
Cons. Malay	1 0-38	0 9-21	0 11-07	0 10-78	0 6-27	0 7-64	0 8-27	0 7-87
Golden Hope	1 2-18	1 0-81	1 2-11	1 0-71	0 8-23	0 9-86	0 10-42	0 8-88
Linggi	1 0-73	0 11-21	1 0-43	0 9-41	0 7-25	0 7-84	0 9-48	0 9-10
London Asiatic	1 4-76	0 10-12	1 0-14	0 9-33	0 8-47	0 8-63	0 9-58	0 8-88
United Serdang	1 4-56	1 0-86	1 2-22	1 1-97	0 7-87	0 7-72	0 9-25	0 10-70

It will be noted that there was a reduction in cost of production in each instance, with the exception of the United Serdang, whose directors state that "the increase in cost is accounted for by local taxation and commission to staff, both of which are based on the margin of profit earned."

The next table shows net trading results over a number of years:—

NET PROFITS after PROVIDING for all EXPENSES.

	1912.	1913.	1921.	1923.	1924.	1925.
Anglo-Malay	£123,206	£104,583	Dr 4,161	£21,297	£27,957	£87,842
Chersonese (F.M.S.)	20,764	29,081	34,207	22,443	30,882	70,798
Consolidated Malay	58,265	34,712	Dr 15,500	5,765	9,045	61,546
Golden Hope	20,318	12,254	Dr 4,962	5,052	5,237	25,397
Highlands & Lowlands	136,441	79,079	23,187	31,918	28,161	126,417
Linggi	147,814	89,680	17,159	46,350	39,026	249,347
London Asiatic	86,202	61,274	5,761	33,235	38,297	191,659
Selangor	82,300	50,263	36,496	17,819	15,319	70,539
Sungei Kapar	65,867	42,364	2,852	8,642	9,355	49,922
United Serdang	72,596	112,813	Dr 60,607	67,812	98,884	211,067

Even allowing for the fact that recent events may prove to be entirely exceptional, the table given above indicates the speculative element of the industry. The United Serdang, for example, records a remarkable chapter of ups and downs. The aggregate net profits of the ten companies last year amounted to £1,144,600, as against £302,200 in 1924 and £616,100 in 1913, the substantial increase in comparison with the pre-war year being largely due to the savings in costs of production effected during the lean years.

The next table presents a comparative picture of the balance-sheet position of ten rubber-producing companies over the past two years:—

Name and Year.	Share Capital and Reserves.	Creditors.	Properties, &c.	Stocks.	Cash.	Investments.	Debtors.
Anglo-Malay	£376,404	£48,197	£367,037	£23,408	£12,495	£63,637	£1,297
Chersonese Est'ts	£383,764	£52,469	£365,670	£41,277	£17,350	£88,379	£3,482
Consolidated Malay	£281,240	£13,666	£271,621	£17,290	£27,770	£12,731	£3,091
Golden Hope	£281,240	£21,135	£272,991	£30,709	£31,801	£20,425	£4,982
Highlands & Lowlands	£147,545	£4,110	£141,617	£16,847	£4,711	£200	£647
Linggi	£150,089	£9,814	£138,823	£24,281	£20,283	£35,320	£296
London Asiatic	£80,000	£2,676	£72,335	£5,947	£4,900	£8,062	£1,076
Selangor	£80,000	£5,354	£75,921	£11,713	£8,194	£15,589	£1,596
Sungei Kapar	£384,481	£33,497	£346,137	£39,256	£24,343	£69,977	£5,456
United Serdang	£623,586	£10,263	£587,601	£27,784	£9,876	£66,242	£333
Chersonese	£825,651	£14,962	£587,659	£122,002	£104,063	£206,159	£2,906
Consolidated	£602,700	£20,210	£587,686	£41,838	£18,184	£70,425	£3,004
London Asiatic	£603,291	£32,700	£606,123	£102,410	£28,489	£76,982	£29,258
Selangor	£126,739	£5,667	£108,923	£7,135	£9,476	£38,414	£248
Belangor Rubber	£128,574	£6,606	£109,599	£23,366	£37,536	£36,580	£327
Sungei Kapar	£121,964	£2,810	£100,000	£11,965	£13,561	£20,575	£460
United Serdang	£133,662	£6,098	£100,000	£19,392	£46,670	£26,491	£806
Chersonese	£89,258	£53,786	£781,335	£7,631	£29,116	£115,765	£8,455
United Serdang	£854,126	£95,734	£704,431	£8,405	£22,509	£269,813	£16,120

The cash resources of the companies have been increased, and some striking increases appear under the item "Investments." The investments are clearly set out in the balance-sheets, which show that most of their available resources are invested in British Government securities.

Our final table shows dividends over the past three years, comparative prices, and present yields:—

Name and Amount of Share.	Dividends.			Price End of July, 1924.	Price End of July, 1925.	Price End of July, 1926.	Present Yield.
	1923.	1924.	1925.				
Anglo-Malay (£1)	10	10	20	1 1/2	1 1/2	1 1/2	11 0 6
Chersonese (2/)	10	10	20	1 1/2	1 1/2	1 1/2	10 13 6
Highlands & Lowlands (£1)	7 1/2	10	37 1/2	1 1/2	2 1/2	2 1/2	12 17 0
Linggi (£1)	7 1/2	10	40	1 1/2	1 1/2	1 1/2	12 7 0
London Asiatic (2/)	12 1/2	12 1/2	50	1 1/2	1 1/2	1 1/2	13 6 9
Selangor (2/)	10	12	55	1 1/2	1 1/2	1 1/2	13 11 0
Sungei Kapar (2/)	10	12 1/2	25	1 1/2	1 1/2	1 1/2	7 6 9
United Serdang (2/)	10	12 1/2	25	1 1/2	1 1/2	1 1/2	7 6 9

It is natural that dividends should have been substantially increased, and that prices of rubber shares should have moved upward. Yields, however, are still on the high side. This is a good sign, for although most of the companies have been able to arrange good forward contracts, it is practically certain that the average price of rubber for the current year will be lower than that for 1925, and some reduction in profits would appear inevitable.

PASSING OF THE LATIN MONETARY UNION.

(BY A CORRESPONDENT.)

AMONG the somewhat belated casualties of the Great War we must now count that interesting Mid-Victorian attempt at an international currency—the Latin Monetary Union.

Belgium, according to a dispatch from Bern, formally denounced at the beginning of this year the treaties which have bound her since 1865 to France, Switzerland, and Italy in a common attempt to manage their subsidiary coinage. This same dispatch added—with what authority we do not know—that by the end of the year the other signatories, including Greece, who joined in 1868, will have followed Belgium's example. If so, it will be rather a pity, as these five States have carried on for more than sixty years a gallant and interesting attempt at the joint regulation of their coinage. Their difficulties illustrated the problems of the League of Nations long before the League was much more than dreamed of!

In fact, the Latin Monetary Union—as perhaps most people have forgotten—entertained for many years the secret ambition to become itself a "League of Nations"; it hoped to bring Germany, the Scandinavian countries, and Great Britain into the "Latin" Union, and, eventually, all the other nations of the Western World, including India and even Japan. According to the innocent theories of the 1860's, the extreme good sense of all the countries would impel them to join the Latin Monetary Union in a common scientific attempt to establish, if not literally an international currency, at any rate an easily interchangeable one, to the vast benefit and convenience of trade and travellers.

Alas, the other countries, though they attended numerous conferences at Paris, balked at the word "Latin." The German states, with Austria, formed a similar union of their own; the Scandinavian states formed another. In short, the Latin Monetary Union never became quite the Geneva it had hoped to be in world-wide currency matters. Nevertheless, its indirect influence throughout the nineteenth century was remarkable, and deserves recalling.

Its origin was simple enough. In the early '60's, Belgium, France, Switzerland, and Italy discovered that, without knowing it, they had evolved a sort of international currency of their own. In other words, they discovered that their respective nationals were thrifflily disposed to accept, regardless of frontiers, any small silver coins—from the 5-franc pieces down to centimes—which came their way. Belgian banks, French café proprietors, Italian railways and Swiss hotel keepers all accepted cheerfully, at their face value, anything in the way of silver (though drawing the line, curiously enough, at alien gold pieces) tendered them by the travelling public.

This idyllic internationalism was, unfortunately, abused. A lively mercenary trade sprang up in these silver coins as soon as Switzerland, adjusting her domestic currency, disturbed the common equality which all four silver currencies had enjoyed. Early in the '60's Switzerland decided to follow the example of the United States who had, in 1853, reduced slightly the amount of silver in the American silver dollar—just enough to keep the silver dollar slightly inferior to the gold dollar in mutual values. This step was, of course, prompted by the general alarm felt when, with the discovery of gold in California and Australia, gold threatened to become "cheaper" than it had been in relation to silver.

But Switzerland, while following the United States example, nevertheless managed matters differently. Instead of reducing the weight of her small silver coins (and thus instantly betraying the fact that they contained less silver than the

similar coins of her neighbours) she reduced the "finesness" or purity of the silver to "800-thousandths fine" instead of the generally prevailing European ratio of "900-thousandths fine."

The result was that shrewd Swiss bullion dealers, realising that the small coins of the adjoining nations had more silver in them than the analogous coins from the Swiss mint, began thriftily to collect the foreign coins. First, they did it in a small way—making the rounds of the Swiss hotels and banks, and collecting all the French, Belgian, and Italian silver they could find, which they melted and handed over to the Swiss mint for re-coinage. Finding that this was an extremely profitable business, they grew bolder and made periodic raids into the adjoining countries, where they gathered up into satchels all the silver coins which were obtainable. These they carried back to Bern, Geneva, or Zurich, melted up, and, as we have seen, re-coined them through the mint into perfectly good Swiss money.

When news of this merry game was noised abroad the neighbouring countries raised a vigorous protest. A gallant Swiss patriot was cartooned cruelly on the Continent as receiving in his bosom, not the spears of Switzerland's enemies, but the 5-franc pieces of her friends. None of the other countries, however, could think of a really effective scheme for preventing Swiss dealers from obtaining their coins, though France did pass an extremely indignant law forbidding the circulation of Swiss silver. However, the situation obviously called for common action, and at Belgium's suggestion all four countries, including Switzerland, met in Paris in 1865 to discuss the situation. The result was a small congeries of treaties forming the Latin Monetary Union.

These treaties were simple; first, they bound the four countries to employ the same amount of pure silver in their subsidiary coinage—that is to say, silver "835-thousandths fine" instead of the two conflicting ratios previously existing, "900-thousandths fine" for Belgium, France, and Switzerland, and "800-thousandths fine" under the new Swiss law. This blocked the almost too easy game of the bullion dealers. Next, soaring into somewhat higher realms of international relationships, the treaties stipulated that each country should keep the others informed, scrupulously, as to the amount of silver coinage produced per annum. And finally, reaching the very heights of internationalism in which the interests of one are the interests of all, the members bound themselves to limit definitely, at so much *per capita*, the silver currency produced each year. The franc—already common to France, Belgium, and Switzerland—and the equivalent lira of Italy, were given a common par value, one which obtains, of course, to this very day, as the foreign exchange tables daily remind us:—

Country.	Par of Exchange.
Paris	25.22½ French francs = £1 sterling.
Brussels	25.22½ Belgian " = "
Berne	25.22½ Swiss " = "
Milan	25.22½ Italian lire = "
Athens	25.22½ Greek drachmæ = "

But this daily foreign exchange table reveals that a number of other currencies have found it convenient to adopt units with the same par value as the units prevailing in the Latin Monetary Union. Glancing further down the ordinary foreign exchange table, one notes:—

Country.	Par of Exchange.
Helsingfors	25.22½ Finnish marks = £1 sterling.
Madrid	25.22½ Spanish pesetas = "
Warsaw	25.22½ Polish zloties = "
Riga	25.22½ Latvian latas = "
Bucharest	25.22½ Rumanian lei = "
Belgrade	25.22½ Yugoslavian dinars = "
Sofia	25.22½ Bulgarian levas = "

In addition, it may be remarked that the Latin Monetary Union exerted a notable influence upon the currency policies of some of the South American States.

The adventures of this enterprising Union during the nineteenth century attracted widespread attention. On a cold, wet Parisian day the Bank of France—being a thoroughly nationalistic institution, and possessing, moreover, the vague but real powers of a central bank—rose in protest against the attempts of the Union to "fetter" the coinage of France. The "boulevard Press," scenting a first-class battle, took it up, for and against,

and the "Locarno spirit" of 1865 became badly battered. The storm finally blew over without any great modifications of the scheme, and the Union, shaken but hanging gallantly together, carried on. The National Bank of Belgium precipitated a similar controversy, and Italy greatly complicated matters by demanding the right to put out a special silver coinage in honour of the new King ascending the throne. But to permit Italy to issue a new coinage in addition to her ordinary quota would obviously upset altogether the relationship between her silver currency and those of the others unless substantially all the old coinage was recalled, and to this task, finally, the nations set themselves with great amiability and with entire success.

The original treaties provided that the agreements should be for 15 years; if not denounced at the end of that period, they would last for another 15 years.

Accordingly the treaties were automatically renewed in 1880, and again in 1895 and once more in 1910. But now Belgium has formally withdrawn, and it is expected that the others will also release one another. The main reason for the break up is obvious. Belgium, trying to stabilise the franc, wishes entire freedom of action. What is more, she wishes the Belgian franc to cut loose from even a sentimental connection with the French franc. Furthermore, currency is not the simple, quantitative affair that it was in those good old days when the Union was launched; it is more complex, and while the moneys of the world are infinitely more closely related than they were then, each stands on its own budget, so to speak, and the help which countries can give each other is, in these harsh years of post-war reconstruction, more or less illusory.

Notes of the Week.

The Miners' Decision.—It was announced early this week that the miners had rejected the proposed terms of peace embodied in the memorandum of the Industrial Christian Fellowship which the Federation's Executive had accepted, and the delegate conference agreed by a large majority to submit to the districts. No official statement has been made as to the result of the voting in individual areas, but it is understood that the memorandum was favourably received in Northumberland, Durham, Nottingham, Derby, North Stafford, Warwick, and Leicester. On the other hand, South Wales, Lancashire, Cumberland, and the Forest of Dean were definitely hostile, and, with Scotland maintaining a neutral attitude—a local delegate conference recommended a ballot, but no further action appears to have been taken—the issue was ultimately decided by the adverse verdict of the Yorkshire miners. That Yorkshire, of all areas, should assume such a rôle must have come as a bombshell to the Federation leaders, since that county has much less to lose by an economic settlement than have many other areas, and the whole influence of the Yorkshire Federation and of Mr Herbert Smith—whose personality counts for much in the district—was thrown wholeheartedly on the side of the proposed terms. Faulty tactics are largely to blame for the invidious position in which the executive now finds itself. When, after long weeks of reiteration of an impossible formula, the executive had made an important move towards peace by agreeing to a memorandum which at least contemplated some modification of the conditions prevailing before the strike, the delegates were obviously reluctant to commit themselves to full and frank approval. As a result, the miners were asked to vote on terms which involved the abandonment of the ground they had held for so long, and at such heavy costs—without any satisfactory explanation of the reason for the sacrifice—and to take up a new position which had been proved untenable in advance by the Prime Minister's rejection of the Church's terms, on the ground that they contemplated a four month's extension of the subsidy. If this last fact needed any emphasis it was supplied by the Prime Minister's statement, transmitted

to America last week, setting forth, among other matters, the inflexibility of the Government's decision on the subsidy question. Although Mr Baldwin's contention was sound, the publication of his letter came most inopportunely at a moment when the miners were considering their verdict, since it gave rise to an impression, on their side, that the Prime Minister was hostile to them. The further delegate conference which has been called for Monday next will necessarily have to face a delicate problem, as it is generally realised that events cannot stand still, despite the result of the recent voting. The executive will be well advised to urge that the rejection of the particular terms embodied in the Church's memorandum should not be construed as a veto on further negotiations. Its leaders have already recognised that some sacrifice will have to be made, and it is essential that the delegates should speedily put them into a position to give practical effect to this recognition by amending the earlier resolution, which still nominally limits the scope of any negotiations to the maintenance of the *status quo*. Given such authority, the executive would for the first time be able to press the Government to use their influence, which has been repeatedly stated to be at its disposal, to bring about a resumption of relations, possibly along lines of national arbitration. Messrs. Smith and Cook, in recent speeches, have suggested that the memorandum was not regarded as by any means the last word they were prepared to say, and Mr Cook's article in the current issue of the "Miner" strengthens this impression. A forward move on these lines would not be unprecedented in the history of the industry. In 1912, in 1920, and again in 1921, the executive took its courage in both hands and proceeded to obtain a settlement on the best terms available after earlier proposals had been rejected by a ballot of the men.

Jugoslavia and Bulgaria.—The British Government has just done good service to the cause of European peace by making representations both at Belgrade and Sofia regarding the renewed tension over the activities of the Macedonian Revolutionary Organisation—that perennial cause of trouble between the two countries. It is disappointing that this tension should have become noticeable again, for during the last two or three years it had seemed to be steadily relaxing. Both the people of Macedonia and the people of Bulgaria had shown an increasingly strong preference for a quiet life, rather than for an unceasing sacrifice of almost all that makes life worth living in pursuit of a political ambition which has been twice frustrated, and which now has heavier odds against it than ever. Lately, the Yugoslav Government had done its part by improving the standard of administration in Macedonia, and so diminishing the volume of those day-to-day personal grievances which had kept conditions favourable for the work of the Macedonian Revolutionary Diehards. This was one essential element in a constructive policy of reconciliation. The other was to find ways and means for settling on Bulgarian soil, and rendering economically self-supporting, the refugees from Macedonia and from other Bulgarian *terre irredente* who had been squatting miserably in Bulgaria since the Armistice, and who had furnished the Macedonian Revolutionary Organisation with sufficient following to enable them to exert pressure upon the Bulgarian Government. When the Macedonians who had remained at home had obtained good government from Jugoslavia, and when those who had emigrated to Bulgaria had obtained tolerable conditions of life there, there was a good prospect that the ground would be cut away from under the feet of the Macedonian Revolutionaries, and that—with their subversive activities abated—a genuine reconciliation between Jugoslavia and Bulgaria might begin. This second element of constructive policy has recently been supplied by the decision of the League of Nations to promote, on Bulgaria's behalf, a refugee settlement loan, on the general lines of the loan raised for Greece after the expulsion of the great minority from Eastern Thrace and Anatolia. As in all the League schemes of this kind, there was to be strict and effective control in order to ensure that the proceeds of the loan should be used exclusively for the purposes for which they were intended; but, unhappily, the Yugoslav Government was so wrong-headed

as to oppose the loan on the ground that it might be misused for financing military preparations or revolutionary activities. On this *The Times* has aptly commented that "to oppose the Refugee Loan on such grounds seems most illogical. Every Macedonian refugee settled on the land [in Bulgaria] is a recruit the less for the Revolutionary Organisation or for the Communists, who are equally dangerous enemies of a general Balkan understanding." The opposition of Jugoslavia having failed to deter the Council of the League from taking a decision which had every principle of sound statesmanship in its favour, Jugoslavia proceeded to enlist the support of her Allies of the Little Entente for a demand that a Yugoslav delegate should be added to the League Committee of Control, by which the employment of the proceeds of the Bulgarian Loan is to be supervised. Since the representation of an interested—and hostilely interested—party on the Control Committee is both unstatesmanlike and contrary to precedent, it is unlikely that the Yugoslav demand will be accepted. In these circumstances, Jugoslavia has once more taken up the question of the incursions of Macedonian revolutionary bands across the frontier from Bulgaria. No doubt these are still going on, and will continue until the improvement of administration in Macedonia and of conditions of life for refugees in Bulgaria have had time to take effect. But it cannot be emphasised too strongly that these constructive measures are the only possible cure for the Macedonian problem. It is not a problem that can be solved by repression.

Overseas Trade in July.—The Board of Trade returns of overseas trade for July show some improvement in the value figures as compared with June, but the latter had one less working day, which detracts from the improvement, and by comparison with July of last year, which itself was not a very good month, the picture is dismal enough. The comparative figures for July and the first seven months of the year read as follows:—

MONTH OF JULY.				
	1925.	1926.	Increase (+) or Decrease (—) in July, 1926.	
	£	£	£	%
Imports	98,719,220	100,290,593	+ 1,571,373	+ 1.6
British exports	64,826,369	57,263,806	— 7,562,563	— 11.7
Re-exports	11,376,230	9,449,956	— 1,926,274	— 16.9
Total exports	76,202,599	66,713,762	— 9,488,837	— 12.5
Excess of imports over total exports	22,516,621	33,576,831	+ 11,060,210	+ 48.9

SEVEN MONTHS JANUARY TO JULY.				
	1925.	1926.	Increase (+) or Decrease (—) in 1926.	
	£	£	£	%
Imports	776,168,198	702,806,919	— 73,361,279	— 9.5
British exports	457,485,539	395,478,053	— 62,007,486	— 13.6
Re-exports	88,825,317	76,048,939	— 12,776,378	— 14.4
Total exports	546,310,856	471,526,992	— 74,783,864	— 13.7
Excess of imports over total exports	229,857,342	231,279,927	+ 1,422,585	+ 0.6

As compared with June of this year, imports are £2½ millions higher, British exports over £7 millions higher, and re-exports a million lower. As compared with July of last year, the increase in imports is more than accounted for by imports of coal, which amounted to 2,319,700 tons, valued at £4,148,000. This compares with 600,600 tons, valued at £966,300 in June. On the export side more than half the decline is accounted for by coal exports, which fell by £4,457,400, iron and steel (—£1,087,600) and cotton yarns and manufactures (—£2,624,100) being responsible for the balance. Of the decline in re-exports raw cotton accounts for £544,500 and rubber for £460,900, but these reductions being largely a matter of lower prices. Turning to the figures for the seven months, we find that exports of British manufactures account for £40 millions of the total decline of £62 millions, cotton goods figuring for a decrease of over £25 millions. Coal exports are down by over £14 millions as compared with the corresponding periods of 1925, and by £27 millions as compared with the first seven months of 1924, exports to date this year being valued at only £17 millions. On

the import side food, drink, and tobacco show a decline of £21½ millions in the seven months, raw materials a reduction of £26 millions, and manufactures a decrease of £24 millions, the figures last year having been swollen by heavy imports made to forestall the new duties. This partly accounts for the fact that the adverse trade balance for the first seven months of this year shows but a very slight increase. But the monthly average is over £33 millions, which is not a figure that can be viewed with complacency.

Home Crops.—The monthly report of the Ministry of Agriculture and Fisheries states that some winter oats and barley were ready for cutting soon after the middle of July, and in some southern areas a good proportion of these had been reaped before the end of the month, but owing to the showery weather practically none had been carted. Some crops were laid by the heavy thunder rains. On the whole, the crops did well during July, but more sun was needed towards the end of the month for good ripening. Wheat is healthy, with a good length of straw. The ears are generally of good size, and the grain has filled out well. On the appearance of the crops as standing at the end of July the yield per acre over the whole country is forecast at practically 18 cwts per acre, or more than ¾ cwt above the ten years' average, and only very slightly below last year's good yield. Barley looks well on the whole, especially on the lighter lands. The prospective yield per acre is estimated at rather more than 16 cwts, which is 1½ cwts above the decennial mean, and about ¾ cwt more than last year. Yields of wheat and barley are expected to prove above average in all parts of the country except the North-West. Winter oats have ripened well, and are very satisfactory, while spring oats are also good on the whole. The average yield per acre over the whole of England and Wales is forecast at 15½ cwts, or more than 2 cwts above the ten years' average, and nearly 1 cwt heavier than last year. Every division of the country is likely to have over-average crops. Many fields of beans in the east of the country, particularly in Lincoln and the East Riding of Yorkshire, have not fulfilled their early promise. In the division comprising Lincoln, Norfolk, and Yorks East Riding the yield per acre is forecast at only 12½ cwts, or more than 4 cwts under average, but yields are likely to be much better in other parts of the country, and over the whole country are expected to yield about 14½ cwts, or not quite 1 cwt below average. Peas have done well, and the yield is forecast at nearly 14½ cwts per acre, or some ¾ cwt above the ten year mean. As the figures of the approximate area under each of the three cereal crops this year, compiled from the annual agricultural returns collected in June last, are now available, it is possible to forecast, on the basis of the estimated yield per acre given above, the total yield of the crops this year. These forecasts are given in the table below, in which the final figures of 1925 are included for purposes of comparison. It is to be borne in mind, however, that the forecasts of this year's production are based on estimates made at the beginning of this month, and are consequently subject to modification:—

	1925.	1926.	Production, 1925.	Forecast, 1926.
	Acres.	Acres.	Tons.	Tons.
Wheat	1,500,000	1,592,000	1,360,000	1,430,000
Barley	1,318,000	1,150,000	1,010,000	926,000
Oats	1,868,000	1,861,000	1,379,000	1,459,000

In eastern potato districts first earlies yielded well, but in Lancashire and Cheshire crops were light as a result of damage by frosts during May. Over the whole country the average yield per acre is expected to be about equal to the ten year average. The area under this crop is returned at 499,500 acres, or 6,200 acres more than last year. The weather of July was favourable to the growth of root crops, but towards the end of the month mangolds would have done better with more sun. In the North turnip crops look exceptionally well, and over most parts of the country average or over-average yields are expected. Sugar-beet has grown strongly, and good crops are generally anticipated. Very good progress was made with the hay harvest during the first half of July, and over the greater part of the country the bulk of the hay was

secured in good condition before the weather broke. The yields have turned out better than was expected a month ago, and the crops are now estimated at an average of 30½ cwts per acre for seeds hay and 21½ cwts for meadow hay. These preliminary estimates are 1½ cwts and ½ cwt respectively above the ten years' average, and are each nearly ½ cwt heavier than last year.

Shipping Freight Index Number.—During July, for the third month in succession, there was a complete absence of the normal quotations for outward coal chartering from U.K. ports. In the following table, which gives the movement of our Index Number of "tramp" shipping freights, divided into its component groups, the figures for each of the past three months are duplicated. Those in black type record the results obtained by interpolating for each of the coal routes normally included in the Index the last available rates—viz., those current in April. The italic figures show the results reached on the basis of the routes for which quotations have been available—i.e., omitting the usual coal routes. It will be seen that during the month of June the total Index Number registered, according to each of the above methods of calculation, a substantial rise—the net increase being 11 per cent., comparing available routes with available May routes, and approximately 9 per cent. assuming continuance of the April coal-route quotations.

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.

October, ".....	112.60	116.16	147.36	96.45	98.79	124.63	116.00

The month's changes in the Index of each group and sub-group (coal freights excluded) are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade.....	100	0	S. America—outwards	147.36	+ 46.74
Bay—outwards.....	124.19	..	India—outwards	96.45	— 1.25
" homewards.....	101.01	+ 0.56	Far East, &c.	98.79	+ 0.46
Mediterranean—outwards	116.16	+ 11.12	Australia	124.63	+ 32.05

The rise in tramp freights during the month cannot, unfortunately, be said to represent any real improvement in international trade, but is a direct reflection of the abnormal conditions created by the prolonged stoppage in British coal production. Thus the substantial increase in the Index Numbers for the North and South American groups is not indicative of any marked expansion in the volume of grain moving, but was occasioned by the absorption of enormous quantities of tonnage by the requirements of American coal shippers, coupled with the fact that not only was the usual influx of outward-bound colliers from British ports to the Plate interrupted, but (as the Chamber of Shipping's latest return discloses) considerable additions were made to the fleet of laid-up British vessels during the second quarter of the year. Following on a slight revival of inquiry during June, tramp business from the East relapsed last month once more into a state of stagnation, and employment for vessels in European waters was difficult to secure, the ore market being reduced to a minimum. Tentative inquiries from Australia for next season's loading were begun at

considerably higher figures than those nominally current a month ago, but little chartering for this market has yet been definitely concluded. The relation of the Index to the average for 1913 may be seen from the following table, the italic figures for May, June, and July being those obtained without coal freights:—

Month.	(1913 = 100.)	1923.	1924.	1925.	1926.
January	114.05	117.11	114.49	100.57	100.57
February	112.73	123.78	115.96	94.85	94.85
March	115.23	122.09	106.63	89.51	89.51
April	115.45	117.22	104.24	87.97	87.97
May	114.55	114.27	98.23	88.17	88.17
June	106.82	108.62	91.74	92.87	92.87
July	103.39	103.75	94.90	99.71	99.71
August	100.16	104.43	95.87	..	..
September	103.04	110.50	98.19	..	..
October	107.86	115.55	99.49	..	..
November	111.21	112.76	102.23	..	..
December	111.81	111.21	104.67	..	..
Mean for year	106.69	113.44	102.22	..	..

Last month's figures, it will be noted, represent a level of freights approximately on a par with those obtaining in 1913, and considerably higher than the low level of a year ago. Since, in a month's time, the seasonal activity of the autumn is due to commence, it would seem probable that freights will not again reach this year the extreme point of depression recorded during April. It is, however, to be remembered that, as compared with three months ago, bunkering costs have risen by anything up to 60 per cent. Moreover, so dependent is the present artificial level of freights on continuance of the abnormal coal movement from West to East across the Atlantic, that a sudden resumption of work in the British coalfields would probably cause a sharp relapse in whole-cargo freights before the beginning of active shipment of the Northern Hemisphere harvests.

American Cotton Crop.—Our Manchester correspondent writes:—The Department of Agriculture of the United States Government on Monday last sprang a surprise on the cotton trade by its report on the crop for 1926-27. It is remarkable that, although the condition figure, compared with a fortnight earlier, was reduced from 70.7 per cent. to 69.8 per cent., the indicated yield was increased from 15,368,000 bales to 15,621,000 bales. In the circumstances the statistics caused much confusion in the markets of the world, especially in view of the fact that most private firms had forecast that the estimate of the growth would be about 15,000,000 bales. Owing to the figures being very bearish, prices declined from $\frac{1}{4}$ d to $\frac{1}{8}$ d per lb, and since then a very unsettled feeling has prevailed in trading circles. It should be mentioned that the Bureau estimates that should later developments in the season be as favourable to the crop as in the past two years, the output will be 17,501,000 bales, but should developments be as unfavourable as during 1921, 1922, and 1923, the yield will be 14,425,000 bales. For several weeks Lancashire traders have operated with extreme caution owing to the belief prevailing that lower values would be experienced in due course, and this policy of holding aloof has been justified by events. The crop in the States has still to pass through a critical period, and during the next few weeks varied advices are bound to be received. Some authorities in Manchester, however, are of opinion that, given a settlement of the coal dispute and more stability in raw cotton prices, demand in manufactured goods would broaden. Dealers throughout the world have now an opportunity of replenishing stocks at prices which are lower than for four or five years.

Co-operative Profits and Capital.—Although the London Co-operative Society, with its membership of 171,000, is now the largest distributive society in the country, writes a correspondent, that at Leeds continues to be regarded as the most typical example of the British co-operative movement, as understood by E. V. Neale, J. T. W. Mitchell, G. J. Holyoake, and those who laid the founda-

tions of Co-operation. Its membership is 97,344, and the sales for the past twelve months totalled £3,926,534, the resultant profit being £394,534. The report for the first six months has just been issued, and although the sales decreased by £90,759, as compared with the corresponding half of 1925, they were of the substantial amount of £1,936,317, or an average of practically £20 per member. This expenditure of a weekly average of 15s suggests that the members do not obtain all their supplies from the stores. Neither do the directors obtain all their stock from within the movement, for the productions from their own works, from the Co-operative Wholesale Society, and from other co-operative sources, only amounted to £435,043, out of total purchases of £1,431,322. After providing £25,000 for interest on capital, and £28,736 for depreciation, there was a profit of £201,584, from which the members received £184,465, in the form of dividend at 2s in the £ on purchases. The expenses totalled £305,917, in which figured £76,037 for wages, £13,985 in rates and taxes, and £1,104 in directors' fees and expenses. One striking feature in the balance-sheet was an increase of £10,494 in the share capital, which rose to £1,491,063, despite the coal and general strikes, and the lessened income of several thousands of the members. This is a phenomenon which can only be explained by the saving habit of the industrial classes, who feel that although the outlook is gloomy, they must continue to provide for a longer period of dull trade and continued slack employment. And they continue to use the Co-operative Society as a bank. On the capital of £1,491,063 employed, the profit for the last half-year worked out at £155,320 (including the allocations to depreciation and share interest), or 17 per cent. for the six months. This is a result which suggests economy of management, and the value of a market stabilised by the loyalty of 97,000 consumers and their families. Their interest in drawing supplies from the stores is not only whetted by the promise of a dividend which reduces the cost of £1 of purchases to 18s, but by a system of collective life assurance. Every purchasing member of the society and his wife, or her husband, is entitled to certain death benefits proportionately to the purchases made during the previous few years. These vary from small sums up to £50, and in the last six months 1,088 claims, aggregating £8,506, were paid. These subsidiary benefits constitute an important factor in inducing loyalty among the co-operators of Leeds.

The Supply of Petrol.—Little surprise, still less alarm, should have been felt at the address to the Chemistry Section of the British Association in which Professor Thorpe, referring to the extraordinary increase in the number of motor vehicles, prophesied that in the not distant future the world's supply of petrol would be unable to meet the demand. Statements of this kind have been regularly made at scientific gatherings since the war. Happily, whenever a geologist has gone so far as to assert that American oilfields have reached their zenith the production of oil in that great country has received another spurt. It must now be clear to the lay reader that as the reserves of oil are incalculable, it is possible to argue both ways with equal plausibility. As regards the supply of petrol, it was only recently that an expert Committee in the United States argued in the opposite way to Professor Thorpe. This was the Committee of Eleven appointed by the American Petroleum Institute to prepare a report upon the oil resources of the United States for submission to the Government Oil Conservation Board. It might be called a "Committee of all the experts," for it consisted of practical men engaged in the oil business who consulted experts within and without the oil industry—experts on oil shale and coal who answered for the substitutes of crude petroleum, and experts on automobile engines who answered for the mechanical changes which might conserve oil through more efficient utilisation. Its general conclusions were that there was no imminent danger of the exhaustion of

the petroleum reserves of the United States (still less of the world outside), that the supply of oil would be made to go much further by more efficient utilisation (especially in the internal combustion engine), and that by further development of the "cracking" process the supply of petrol would be still further increased. Allowing for a normal increase in population, the Committee estimate that by 1930 automobile engines in America will exceed 30,000,000, and that by 1950 they will reach nearly 45,000,000. To-day's total is over 20,000,000 motor vehicles in America, with possibly 5,000,000 in the rest of the world. The average consumption of petrol per vehicle in America over seven years works out at about 10 barrels (or 420 U.S. gallons). The Committee disapproved of applying this average consumption to the number of motor vehicles ten years hence, for automobile experts have declared that it is possible to design and manufacture automobiles which will run twice as far per gallon of petrol used. As regards supply, the "cracking" process has enabled the recovery of petrol from the crude oil produced in America to be increased from about 25 per cent. to 35.13 per cent. in 1925. This year it has further been increased to 37.19 per cent. The Committee of the American Petroleum Institute were convinced that the "cracking" process could be developed at American refineries until the recovery of petrol amounted to 55 per cent. of all the crude oil produced in the United States. Now, if it is assumed, firstly, that this recovery of petrol will be realised, secondly that the motor engine will be designed to consume half the amount of fuel for the production of the same amount of energy, which are fair assumptions to make, it will be found that by 1950 actually less crude oil will be required to meet the demands of petrol consumers than was actually produced and refined in 1924. And assuming only a small increase in the world's supply of crude oil, there would then be a world over-supply of petrol. These figures, at any rate, show that it is possible to argue with equal justice for an over-supply as Professor Thorpe did for a shortage of petrol. The estimates of the American "Committee of all the experts" will not, of course, be realised to the figure. If a temporary over-supply of petrol develops, prices will fall, and the motor engine will be allowed to consume fuel more wastefully and the "cracking" process will be curtailed: if a temporary shortage of petrol develops, the opposite will happen. But it is, at any rate, significant that the point has nearly been reached in America where by the development of the "cracking" process the refineries in America can take care of the annual increase in motor fuel consumption without requiring any increase in the actual production of crude oil. That fact does not support Professor Thorpe's theory of a world shortage of petrol.

Minimum Prices for Cotton Yarns.—Our Manchester correspondent writes:—In Lancashire trade circles this week there has been considerable interest in the scheme of the Master Cotton Spinners' Federation for establishing minimum prices for American yarns. The scheme is to come into operation from Monday next, and the federation has published the first list of minimum prices. It is pointed out by the Federation that the owners of 93 per cent. of the spindles concerned have given a written undertaking not to sell at less than the figures issued by the federation. The circular gives prices for 10 standard yarns. As an illustration, it may be mentioned that for 36's twist, assuming cotton futures to be 9.50d, the "points on" are given as 1.75d, making the raw material cost 11.25d. The minimum selling price is 17.00d. The range of quotations shows that approximately the minimum figures are about $\frac{1}{4}$ d a lb above current market rates. The circular issued by the federation says:—"You will notice there is no intention in the beginning stages to secure full production costs. The committee believe that the best method of securing success to the scheme is by gradually improving the prevailing prices.

BANK ESTABLISHED IN 1864.

SKANDINAVISKA KREDITAKTIEBOLAGET

GOTHENBURG, STOCKHOLM, MALMO.

Branches in all parts of Sweden.

Paid-up Capital and Reserves - - Kr.182,000,000

Telegraphic Address: "Kreditbolaget."

THE BANK AFFORDS EVERY FACILITY FOR BANKING
BUSINESS WITH SCANDINAVIA.

.....The prices which have been decided upon have been adopted after close examination into the conditions of trade. The object of the scheme is not only to raise prices, but to stabilise them, and if firms concerned will hold fast to these prices an end should shortly be reached to the deplorable conditions which have existed for so long." Although spinning employers are certainly determined to stop selling yarn at a loss, a great deal will depend upon market conditions as to whether the federation's scheme will be a success or otherwise. At the moment overhead charges are abnormally high as a result of short-time working in the mills and the big price which has to be paid for coal.

Farming in Kincardine.—The Scottish Board of Agriculture recently made a detailed investigation of the conditions and results of farming in four typical parishes of Kincardineshire. It was undertaken with the primary object of finding out what use was made of land not accounted for in the agricultural returns. On this point it was discovered that the discrepancy between the area as ascertained by the Ordnance Survey and that included in the agricultural returns was due mainly to inaccurate estimates by farmers of the extent of the "rough grazings" attached to their farms. But the course of the investigation took a wider scope. Every holding of more than 30 acres arable was personally visited, and information, which was readily given, was obtained regarding the general methods of management, the kinds and qualities of stock kept, the prices secured, the yield of grain crops per acre, and the systems adopted in laying down and manuring the different crops, &c. The general conclusions of this survey are interesting and important. The investigators report that the farming was generally of a high standard and the crops obtained above the average. The land was generally clean, dry, and well managed, while the organisation of labour was good. Nevertheless, the balance was frequently on the wrong side, after allowing for interest on capital and for the farmer's services. It is remarked, however, that "the apparent cause of this, viz., low prices for what the farmer had to sell and high working expenses, does not explain why so many farms were able to show a balance on the right side." The conclusion is that, high as the standard of farming is, there is yet room for considerable improvement, and some of the things which might be improved are indicated. Incidentally, this report is unconsciously illuminating on the subject of farming losses. It is often puzzling to account for the fact that many farmers who loudly assert they are losing money continue, notwithstanding, to remain in business year after year. The phenomenon is easily explicable if they expect not only to earn interest on their capital and remuneration for their services, but also a surplus before they consider their farming profitable.

Grand Trunk Pacific.—On Wednesday an announcement of interest to all holders of the 4 per cent. debenture stock of the Grand Trunk Pacific Railway Company was made

by the Stockholders' Committee, which stated that "on Monday they were in communication in London with representatives of the Canadian National Railways to explore means towards negotiations for an amicable arrangement. These negotiations will be entered upon at the earliest possible moment, but, naturally, the committee have no means of knowing at present whether a basis of settlement can be arrived at." It is reported that various important interests in the City have been endeavouring to discover an avenue of approach between the parties concerned, and it is sincerely to be hoped that a satisfactory solution will be found. The amount of stock outstanding is £7,176,800. Since March, 1919, holders have received only one payment, namely, 4 per cent. for the year ended February 29, 1924, which was paid in September, 1924. At the end of May last our Ottawa correspondent suggested that there was good ground for the belief that the King Government would, "if not during the present session, at least during the next," introduce a Bill seeking authority to negotiate a permanent settlement with the holders of Grand Trunk Pacific debenture stock. "If such authority were granted; the Government would offer to buy the debentures from their holders, and would probably suggest fixing the price by arbitration." The stock is now quoted at 51, which is very nearly the highest figure of the year. The lowest recorded in 1926 was 31½, and in 1925 28, the highest in the latter period being 65½.

Canadian Pacific Directorate.—With the usual quarterly dividend declarations on Wednesday the directors of the Canadian Pacific Railway Company announced that they have appointed Mr Reginald McKenna and Mr E. R. Peacock to be directors in succession to the late Sir Augustus Nanton and Sir Thomas Skinner. These appointments will no doubt be welcomed by British shareholders, the practice hitherto having been for only one London director to sit on the board. Mr McKenna now becomes actively connected with one of the world's greatest transport undertakings; Mr Peacock, who is a managing director of Baring Bros. and Co., is already a director of several foreign tramway and kindred undertakings.

Austin Motor Scheme.—The directors of the Austin Motor Company, Limited, have supplied shareholders with the brief details of a new reconstruction scheme under which the original proposal that arrears of preference dividend should be cancelled has been dropped. The directors state that in view of the opinions expressed by those representatives of all classes of the shareholders who were recently called into consultation, the directors have decided that it will not be advisable to ask any class of shareholders to accept a smaller dividend than that to which they are at present entitled, and, further, they have decided to pay off the arrears of both the A and B preference dividends in cash, over as short a term as the profits and cash resources of the company will permit. They have prepared for submission to the shareholders resolutions for the reduction of the company's capital (for which the subsequent sanction of the court will be necessary) by which the preferred ordinary and ordinary shareholders will be asked to agree to a reduction of the face value of their shares to 10s and 5s respectively in order that the deficit may be removed from the balance-sheet, and the payment of dividends resumed. The resolutions will provide that, on the reduction becoming effective, the rate of dividend on the preferred ordinary shares will be increased to 20 per cent., so as to equal the present rate. After the payment of the A and B preference dividend arrears, voting rights will be given to the preferred ordinary shareholders on the basis of one vote for every two preferred ordinary shares at general meetings of the company. The necessary meetings of shareholders and classes of shareholders will shortly be called to pass the resolutions indicated above. It may be recalled that the proposals submitted to the shareholders last March, which

were rejected, provided for a reduction of the preferred ordinary and ordinary shares to 8s and 5s respectively, and for the issue of 5 per cent. income certificates in compensation for cancellation of dividends on the A and B preference shares. The deficiency of £1,350,000 was to be met by writing down the capital by that amount.

The Reaction in Tin.—Nearly £3 a ton was again added to the market value of tin in the earlier part of this week, with quotations actually reaching £299 for standard cash, and £291 10s for forward delivery. This was a result of further buying by consumers on American and European account, but subsequently there was a reaction, which had been regarded as overdue. The break was the outcome of adverse technical conditions, but the position, having regard to the world's consumption overlapping current supplies, is quite sound. The liquidation may develop further, and this, coupled with a certain amount of short selling, tempted in the circumstances, may easily lead to a further drop, since the trade demand has been temporarily checked, and America seems disposed to look on for the moment. Adverse developments in Wall Street have not been without their influence on sentiment, but the fact remains that American consumption is going on at a very high rate, especially for the time of year, the domestic tinplate mills running at roughly 90 per cent. of capacity. Moreover, European trade requirements have been distinctly on the increase of late, while additional mills have been started in South Wales. Stocks in this country are dangerously low, although lately they have been increasing slightly, a fact which explains the decrease in the premium on Straits tin over standard in this market from about £10 to £8 a ton. This week's reaction followed on an almost continuous rise, amounting to as much as £37 a ton for cash and near tin, from the lowest level which had been reached well over two months ago. When resales by speculators come to an end the market is quite likely to become very sensitive, inasmuch as statistical indications are quite favourable, the American deliveries being expected to turn out very heavy, while only moderate shipments are looked for from Malaya and other sources. Consumers on the whole are by no means overprovided, and production continues at a rather disappointing rate.

Transvaal Gold Output.—The gold output of the Transvaal mines during the month of July, 1926, was the highest in the history of the industry, reaching a total of 860,134 ounces of fine gold, as compared with 852,145 ounces in June. The amount produced during the month of July, 1925, was 818,202. The following table shows the monthly output for the past seven years:—

	1920.	1921.	1922.	1923.	1924.	1925.	1926.

The following table shows the number of natives employed at the end of the last few months by members of the Witwatersrand Native Labour Association and Contractors:—

	Dec., 1925.	Jan., 1926.	Feb., 1926.	Mar., 1926.	Apr., 1926.	May, 1926.	June, 1926.	July, 1926.
Gold mines....	166,385	171,985	178,311	181,204	183,828	183,905	183,092	182,262
Coal mines....	16,606	16,433	16,337	16,190	16,212	16,246	16,448	16,648
Diamond mines	3,705	4,652	5,631	5,957	5,834	5,766	6,054	6,099
	186,696	193,070	200,279	203,351	205,874	205,917	205,594	205,009

The number of natives employed in the gold mines shows a slight decrease as compared with the previous month's figures.

Obersea Correspondence.

UNITED STATES.—MARKETS—COMMODITY PRICES—OIL POSITION.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 3.

INTEREST in the financial district has continued to converge on the persistently buoyant share market. Leadership has remained with the same shares, that is, the common stocks of the United States Steel Corporation and the General Motors Corporation. Steel common advanced during the past week on an extremely heavy turnover to a new high record for all time of 153. General Motors common reached its new high peak at 213½, a price that is a full hundred points above the lowest of the year touched on the March break. For the continued strength in Steel common there is no explanation other than the maintenance of strength in the general market, the feeling that steel has been relatively cheap at recent prices, and the excellent character of the news from the steel industry. Nothing new has developed with regard to the much-rumoured but little authenticated "melon" for the Steel Corporation's shareholders. The trade reports indicate, however, that steel buying is holding up, and that operations at the steel mills are being maintained at an unusually high rate for the season of the year, the rate being approximately 80 per cent. of capacity. For the continued strength in General Motors there are explanations in the general recognition of the remarkable character of current earnings, \$17.33 a share having been earned in the first six months of the year, and the spread of the news that the directors intend to distribute a 50 per cent. stock dividend at the August 12th dividend meeting. The present \$7 dividend is expected to be retained on the full amount of stock that will be outstanding after the stock dividend has been put into effect, and there is a strong possibility that an extra cash dividend will be declared as well. Meanwhile, the showings of the new automobile models is going on, and seem to be eliciting a favourable response.

Optimism with regard to business prospects continues, and with this renewed confidence has come the belief, mentioned in these letters before, that money will be moderately firmer this autumn. Meanwhile, short-term money is plentiful and cheap. Although the call rate on the Stock Exchange rose to 5 per cent. over the turn of the month, no change in the fundamental condition of this market has occurred. The flurry was a normal incident to the August 1st settlement, and the rate on the Exchange already has dropped back to 4½ per cent. If precedent is followed the ease in call money will persist through August. One of the noteworthy developments of the past few weeks has been the stability of brokers' loans in the face of a rising share market. Thus in the week of July 28th the total of such accommodation, as reported to the Federal Reserve Bank, declined by \$19,000,000, leaving the total for this item at \$2,602,000,000. These figures coincide almost exactly with those for July 7th. The figure is \$194,000,000 above the low level of May 19th, and \$539,000,000 below the highest reached early in the year.

A further decline in commodity prices, but a small one, during July is reported by Dun's index. The loss amounts to 0.5 of 1 per cent., and leaves this index at 153.1 per cent. of the average during 1913. The losses were restricted to the meat, dairy, and garden products groups. Breadstuffs, clothing, and metals were slightly higher. In connection with the continued declining tendency as revealed by the Dun, as well as the Bradstreet index, it is well to remember that our best-weighted index—that prepared by the Bureau of Labour Statistics at Washington—showed slight advances in both its May and June figures. The significant point is that at present there seems to be no marked tendency towards either rise or fall. There is neither sufficient decline to suggest business recession nor sufficient advance to justify any thought of inflation.

Railroad earnings remain most excellent, and the statisticians now estimate that the net earnings of the Class I.

roads may pass \$100,000,000 for June. This would represent a gain of over \$8,000,000 over the level of a year ago. Some apprehension has been felt during the past two weeks over the condition of the oil market. Stocks of gasoline are large, and production of crude oil is increasing. Despite record-breaking consumption, some have feared lest the equilibrium of the oil market might be upset. Gasoline prices have held firm, however, and it now appears that prices are likely to hold through the season of large consumption. If this proves to be the case, the oil companies will have one of the best years on record. Meanwhile, it has been announced that the syndicate formed to dispose of the shares of the Tidewater-Associated Oil Company has been extended for two months more. All the \$46,000,000 issue of preferred stock, which was offered March 23rd, has been sold, but the common stock, which represents a commitment of some \$90,000,000, remains in the hands of the syndicate.

FRANCE.—TOBACCO MONOPOLY AND DEBT REDEMPTION—GOLD PURCHASES—PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, August 11.

WITH the enactment yesterday of an organic law of the Republic, permanently allocating the revenue from the tobacco monopoly to the extinction of the public debt, the Chambers, sitting together at Versailles as a National Congress, ensured as far as is humanly possible the carrying out of one of the chief of M. Poincaré's plans by writing his scheme for debt redemption into the Constitution itself. This scheme, which coincides very largely with the recommendations of the Committee of Experts in this regard, has been emphatically approved by public opinion and the certainty that was experienced in advance that it would become law has had excellent results in restoring confidence. No better proof of this can be given than the fact that the Government's appeal to taxpayers, in view of the Treasury's need of ready money, to pay as large a proportion of their liabilities in advance, without waiting for the demand notes to be served on them, has had a surprisingly good response. It was reported yesterday that the taxpayers in the Gironde department have made advance payments of 4,500,000f, and those in the Vosges over 3,000,000f (of which 470,000f came from the little town of St. Dié alone). Similar reports have been coming in from the rest of the country day by day. These indications speak loudly as to the new spirit that has animated the nation since M. Poincaré applied himself to his task, and confirms the belief that the country as a whole is sincerely supporting the effort that is being made, notwithstanding the heavy additional burdens it involves.

The manner in which M. Poincaré has utilised the tobacco monopoly as a factor in the plan for financial restoration came rather as a surprise both to the Socialists and to their opponents. It will be recalled that, shortly before M. Poincaré's unexpected defeat at the 1924 general elections, steps had already been taken for the restoration of the match monopoly to private industry, and it was confidently expected that a similar course would be taken with the tobacco and telephone monopolies. This was rendered impossible by the victory of the Cartel des Gauches at the polls. Since then a plan developed by M. Bedouce—who proposed that the factories and other assets of the tobacco monopoly, estimated as having a value of some 17,000 millions, should be handed over for a long term of years to a specially created independent organisation—has received considerable support in practically all quarters. It was proposed that the new company should issue 5 per cent. or 6 per cent. mortgage bonds up to 25,000 or 30,000 millions, which should be obtainable in exchange for National Defence and Treasury and other short-term bonds, thereby ensuring the consolidation by transformation of the bulk of this portion of the debt; another part of the scheme being that the whole of the receipts from sales of tobacco should be paid into the Debt Redemption Fund, which in turn would take care of the interests of the new mortgage bondholders. M. Poincaré has been reproached on the one hand with having gone too far in

his method of dealing with the monopoly, and on the other with not having gone far enough. As a matter of fact, he has left the tobacco monopoly still a State monopoly and merely ensured, beyond all possible modification, that the revenue from it shall be placed out of reach of predatory politicians, and permanently pinned down for debt redemption purposes. His objection to the Bedouce plan was that the proposed issue of mortgage bonds would probably prove insufficient to absorb the enormous amount of short-term descriptions that might be offered in exchange.

The new Debt Redemption Fund, or Caisse d'Amortissement, which has now become an integral part of the Constitution, has started existence with an income from taxation (succession duties, &c.) of 3,500 millions, to which must be added (1) the net profit from the tobacco monopoly, amounting at present to 2,000 millions (with the probability of a large increase in the immediate future); (2) an annuity from the Budget, if the yield from tobacco proves insufficient to meet the interest charges on the 49,000 millions of bonds which it will be the object of the Caisse to extinguish; and (3) various other resources. It will have the right to make new issues of bonds or stocks for the consolidation of that part of the debt with which it is particularly charged; nevertheless, the Government itself, to use M. Poincaré's own words, "retains the right to hasten, by large loans issued by itself, the conversion and extinction of the public debt."

Perhaps the most skilful of M. Poincaré's measures is that which he has restored to the Bank of France the right to buy gold and foreign currency for the purpose of enabling it to secure sufficient sound money to defend the franc. This measure became necessary, for one reason, through the exhaustion of the \$100,000,000 Morgan loan, the balance of which, amounting to \$30,840,836, had to be sacrificed last month, literally to enable the Treasury to keep its doors open. This balance was valued, in the transaction by which the State "sold out" its rights to the remains of the loan, on the basis of 30f 18c to the dollar, and the Bank credited the State, therefore, with 25f to the dollar. The agreement by which this transaction was legalised, however, obliges the Bank temporarily to invest the dollars "under the best conditions," and provision is made for a settlement to be come to between the Bank and the Treasury in the case of an eventual sale of the dollars; the Bank, further, being unable to make such a sale below 30f 18c except by consent of the Minister of Finance.

The law authorising the purchase of gold by the Bank provides that notes issued by the Bank in payment for purchases of gold and foreign currency shall not count as forming part of the ordinary authorised maximum note issue. The question has, of course, been raised as to whether this is not equivalent to a disguised form of inflation. M. Poincaré (who in this instance also has based his action on the recommendations of the Experts' Committee) insists that it is not, and both Chambers have supported this view. It is admitted that every note issued as payment for gold will increase the total note circulation, but it is insisted that as (1) each of these additional notes will be covered by the gold bought, (2) there will be no corresponding increase in the amount borrowed by the State, (3) the Bank's gold reserve will be absolutely respected, the issue of notes under such conditions cannot be described as inflation. M. Poincaré's view is that this measure will enable the Bank to secure "a powerful instrument for regularisation" in the event of foreign speculators "attempting another attack on the franc." The adoption of this proposal and the stipulation it contains that the Finance Minister and the Bank shall, within the next three months, make the necessary agreements for preparing stabilisation of the currency, marks a further step towards a return to sound money.

The question of the ratification of the Washington and London agreements on the debts question remains as it was. The Clemenceau bombshell has found general approval, and the same feeling is entertained in regard to the fact that the Chambers have to-day risen for the usual long summer recess.

The index figure for wholesale prices at the end of July, as issued by the Statistique Générale, indicates a rise of no fewer than 102 points on the month, as compared with

one of 52 points between the end of May and that of June, and of 287 points since the end of August, 1925. The detailed figures are as follows (based on 100 as representing wholesale prices in 1914):—

Nature of Articles.	Number of Categories.	Index Figures at End of		
		May.	June.	July.
General index figure.....	45	702	754	856
Foodstuffs alone—				
General figure.....	20	597	646	703
Vegetable foods.....	8	637	731	788
Animal foods.....	8	525	533	552
Sugar, coffee, cocoa.....	4	673	717	861
Raw materials—				
General figure.....	25	794	848	990
Minerals and metals.....	7	757	837	1,025
Textiles.....	6	933	971	1,162
Various.....	12	734	781	863

It will be noted that minerals and metals have registered a rise of 268 points during the past two months, while textiles have gone up 229 points, the wholesale price in the latter case now being nearly 12 times the pre-war figure. In foodstuffs the rise was chiefly in coffee, sugar and cocoa, and reflects the influence of the recent spectacular fall in the franc. The still more recent improvement in the value of the franc will doubtless be largely counterbalanced by the new indirect taxes, which have come into effect within the last few days. The index figure for retail prices in Paris, based on 13 articles of common necessity, of which petroleum is the only one of foreign origin, is returned as 574 at the end of July, as compared with 544 on June 30th, or a rise of 30 points on the month, and of 153 on that of July, 1925.

SWITZERLAND.—FOREIGN TRADE—TRADE WITH GREAT BRITAIN—RHINE WATERWAY.

(FROM OUR CORRESPONDENT.)

GENEVA, August 6.

The general economic situation did not improve in Switzerland during the second quarter of the present year, and the results of the first half-year are unsatisfactory. While the different services of the Federal Government—Post, Telephone, Telegraph, Railways, Customs—recorded an increase in their receipts, agriculture was badly hit by the cold and rainy weather which prevailed during June and part of July, and foreign trade returns are far from encouraging.

In June, imports reached a value of 200,639,994f (£8,025,339), against 191,427,337f (£7,657,093) in May, and exports totalled 148,696,549f (£5,947,862), compared with 147,299,795f (£5,891,991) in May, a slight improvement when compared with last May and April figures, but a serious drop when compared with June, 1925, when exports reached the unprecedented total of 209,099,042f (£8,363,961). During the first six months of the present year, imports reached a total value of 1,183,944,500f (£47,357,779), as against 1,226,928,711f (£49,077,148) in 1925, and exports totalled 869,815,565f (£34,793,123), compared with 1,069,315,939f (£42,772,677) in 1925, thus leaving a very heavy adverse balance of 314,128,935f (£12,564,656), which it will be very difficult, if not impossible, to make good by means of indirect and invisible exports; the adverse balance, which was about 12 per cent. for the first half of 1925, is reaching this year nearly 26 per cent. Imports declined, partly owing to the reduced needs of industry in raw materials, partly owing to the difficulty of obtaining goods from France, and partly owing to the slackening of imports from Germany pending the conclusion of a new commercial agreement with that country. That agreement was concluded towards the middle of July, and is said to be rather favourable to Swiss exporters. When compared with the corresponding period of last year, nearly all export items show a drop, which is particularly striking as regards silk goods (— 72 million francs), cotton goods (— 47 million francs), watches (— 46 million francs), ready-made clothing (— 20 million francs), chocolate (— 2 million francs), the only important increase being recorded in the condensed milk exports, which were 3 million francs higher

The crisis of the Belgian, French, and Italian currencies partly accounts for the unsatisfactory results of Swiss exports, as well as the Customs barriers set up in all countries of the world, but they are mainly due to the fact that Swiss products are too expensive. The monthly average of exports is 144,969,261f for the past half-year, as against 146,684,250f in 1923, which was the lowest figure registered during the last 10 years. Meanwhile, Swiss currency is maintaining itself slightly above par—25.12f for £1—once more an evidence that the general prosperity of a country cannot be measured by the value of the national currency.

Trade with Great Britain made further progress in June, when imports from her reached a value of 11,126,960f (£445,078), as against 9,167,000f (£366,680) in May, while exports to her totalled 22,481,729f (£899,269), compared with 20,480,000f (£819,200) in May. During the past half-year imports from Great Britain rose to 71,993,686f (£2,879,740), and exports to her totalled 149,142,104f (£5,965,683), Great Britain thus remaining the best customer of Switzerland. British purchases in Switzerland do not suffer great changes from month to month, purchases in watches and silk goods remaining unimportant since last year, as British importers have enough to do to try to sell the huge stocks they collected in 1925 before the re-establishment of the McKenna Duties. The setting up of Customs duties by the British Government was bitterly criticised in certain Swiss industrial quarters; those Swiss who object to these duties forget that formerly all Swiss goods entered Great Britain practically free from duty, while British goods had to pay Customs duties to come into Switzerland; thus free trading England was not even granted the treatment of the most favoured nation in Switzerland.

As for imports from Great Britain, they certainly could be higher; as previously stated, British goods can compete on the Swiss market with any other goods, if not always in price at least in quality; but they are not sufficiently known in Switzerland, and several people connected with the trading circles here are of opinion that British industrials should not overlook the importance of the Swiss market, and should make an effort to advertise their goods in Switzerland, where, for instance, stationery, leather goods, men's ready-made clothing, hosiery, cutlery, and all sorts of requirements for hotels should sell well. Now that the Rhine waterway is opened to Swiss ships, and that Basle is supplied with an up-to-date port equipment, British products can be shipped to Rotterdam or Antwerp, and thence conveyed to Basle on the Rhine barges. This means of transport should not only be cheap, but it would also do away with the grave inconvenience of delays on the French railways, which constitutes the great handicap in Anglo-Swiss commercial exchanges. The transport of goods between England and Switzerland can yet be improved, either through France or by the Rhine, and efforts should be made on both sides to improve it so as to facilitate and quicken trade relations between the two countries.

BULGARIA.—THE REFUGEE LOAN—FOREIGN TRADE—CROP PROSPECTS.

(FROM OUR CORRESPONDENT.)

SOFIA, July 30.

The League of Nations' consent to the £2,250,000 Refugee Loan to Bulgaria has been greeted with a general feeling of grateful relief throughout the country. Everybody in Bulgaria is thoroughly conscious of the urgent need to reach a radical and definite settlement of the refugee question. The proceeds of the loan are to be applied as follows:—Two-thirds to the housing and supplying of the 30,000 refugee families, with the most indispensable agricultural implements, seeds, and live stock. The balance is to be spent on the draining, irrigation, and preparing of wide tracts of land, and on the construction of a network of roads which will connect them with the nearest centres. The loan is to be guaranteed by the revenue of excise duties on salt and alcohol, and by the yield of the matches monopoly. The aggregate revenue from these three sources produced 450,000,000 levass during the last financial year. The various condi-

THE MERCANTILE BANK OF INDIA, LTD.

Capital Authorised £3,000,000

Paid-Up Capital 1,050,000

Reserve Fund and Undivided Profits 1,512,884

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted on application. On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1. JAMES STEUART, Chief Manager.

tions of the transaction are not yet determined. It is reported that the repayment must be effected in 20 annual instalments, and that the loan is to be floated on the London market. The Financial Committee of the League of Nations has recommended a reorganisation of the National Bank of Bulgaria in order to render that institution more independent of the Treasury.

The conclusion of the loan is apparently hampered by certain political as well as financial difficulties. The neighbouring Balkan States seem to be opposed to the granting of the loan to Bulgaria unless their representatives are given an effective control over the actual use to be made of the proceeds; they have fears that irredentist organisations could be subsidised out of the loan, and that the Bulgarian Government would indulge in fresh expenditures on armaments. The League of Nations decision to entrust Mr René Chéron with the control of the funds advanced meets with deep approval in all Bulgarian circles.

Certain symptoms of nervousness observed during the last month in Yugoslavia and Roumania are interpreted by Bulgarian public opinion as consequences of the irritation which the hoped-for success of the loan produced in these countries. The tension in the relations between the other Balkan States and Bulgaria, which has been considerably relaxed during the past six months, has made itself unmistakably felt again since the decision of the League of Nations was announced. It is only to be hoped that this may be a coincidence.

The foreign holders of Bulgarian State bonds are reported to have asked for a reconsideration of their agreements with the Bulgarian Government concerning the payment of the coupons on a basis nearer to the gold parity of their face value. Were the Government to consent to a new increase of the basis, the burden of the public debt's service would reach a dangerously high level, the more so as the repayment of the Refugee Loan will certainly need an annual charge of at least 175 millions levass. Added to the already existing charges, and to the progressively increasing Reparations annuities—10 million gold francs from 1928 and 43 million gold francs from 1934—the future of Bulgaria's public finances leaves little room for light-hearted borrowing, and the eagerness to be observed as to the additional claims in connection with the loan is perfectly legitimate and comprehensible. Besides the difficulty of increasing taxation in a country where wealth is an exception, there is a practical impossibility to go on paying large sums in foreign currency out of a deficient foreign trade balance with no invisible items for compensation. Therefore, the application of the "transfer" system which, by the way, has never been applied to Bulgaria, seems to be a practical necessity. There is no reason to deny to this country the advantages of a principle universally recognised as fair and reasonable, because it had no alternative but to begin paying reparations previous to all other vanquished nations.

The foreign trade figures for the first half of 1925 and 1926 compare as follows:—

(Million Levass.)

	Import.	Export.	Excess of Imports.
June 30, 1926	2,925	2,524	401
June 30, 1925	3,694	2,544	1,150

The big drop in imports is probably due to the drastic restriction of consumption on the part of the peasants, who are returning to their pre-war habits of strict economy. The increase of Customs tariffs on luxuries has also played its part in this direction, although in a far lesser degree.

Trade conditions remain bad. Since the beginning of the year there have been over 80 bankruptcies, an unprecedented figure in this country. The failures are all, almost without exception, among dealers in imported goods, especially textiles, cotton yarns, hardware, and leather products.

Harvesting of wheat and barley is in full swing. The crop appears to be generally fairly good, especially for maize, sugar beet, rice and oil seeds. Tobacco is reported to be good in quality, but the total crop is estimated at not over 22 million kilogrammes, which is under the average of the last four or five years. Cotton-growing experiments have been much discussed this year, and are reported to have given quite satisfactory results in quality as well as yield. The Ministry of Agriculture intends to take measures to foster the extension of cotton growing, and there is official propaganda in favour of the substitution of this culture for tobacco in districts producing tobacco of low quality. According to specialists' statements, the conditions of soil and climate in Southern Bulgaria appear to be favourable to cotton.

UNION OF SOUTH AFRICA.—RAILWAY EARNINGS AND TRAFFIC—GOLD RECORDS—GROWTH OF PUBLIC EXPENDITURE.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, July 21.

THE total earnings of the South African Railways (proper) for the year ended March 31, 1926, were £24,151,407, compared with £21,747,631 for the year to March, 1925, an increase of £2,403,776, equal to 11 per cent. The expenditure was £18,735,325, as compared with £16,858,571, an advance of £1,876,754, also equal to 11 per cent. To arrive at the expenditure as given, the lump sum of £1,500,000 has been added for depreciation. The ratio of expenditure to earnings works out at 75.5 per cent., or exactly the same figure as in 1925, and compares with 74 per cent. in 1924, 77 per cent. in 1923, and as much as 82.7 per cent. in 1922. The balance on railways account is £5,416,083. From this falls to be immediately deducted £4,461,851 interest on a capital of £120,000,000. After allowing for net revenue from subsidiary services, interest on investments and miscellaneous receipts, interest on superannuation and other funds, rent of lines leased, and miscellaneous expenditure, there is a balance on the railway account of £1,083,998. Adding the surpluses of the harbours and steamships departments there is a total balance of £1,531,691, but from this amount have to be deducted (a) contribution in respect of amount of interest-bearing capital £250,000, (b) contribution to reduce the deficiency in pension and superannuation funds, £262,000, (c) contribution to betterment fund, £250,000. These three considerable items have the effect of halving the profit, and the excess of receipts over the expenditure is finally brought out at £769,691. From this has to be deducted £5,185, the accumulated deficit at the beginning of the year, leaving a net surplus of £764,506. The reasons why the extra traffic revenue has not been obtained at merely a slight increase in expenditure lie in the increase in employment of what is called "civilised labour," unskilled white labour uneconomic in contrast with coloured or native labour, and the greatly increased mealie traffic, 1,500,000 tons, as against 610,000 tons, which is conveyed at such rates (especially for export) as to be scarcely remunerative. The *Wall Street Journal* recently quoted a rate of £4 for an American grain haul of 2,000 miles, and a competitive one of £2 on the Canadian Pacific. For half the distance in South Africa the charge for maize under the temporary special rate would be as little as 10s., or proportionately a quarter and one-half the U.S.A. and Canadian charges. Hinterland and mines have to pay for such low rates as these, as well, it is contended, as for the low rates charged between the ports in competition with ships.

Merchandise traffic averaged 950,000 tons a month. The Rand gold mines in the five months to the end of May reduced to a fine powder or slime a rather larger tonnage, namely, 12,053,500. It is a statistical fact that the Crown Mines in May crushed a quarter of the entire merchandise traffic on the railways on the average of last

year, while the five greatest milling mines of the Rand, the Crown, East Rand Proprietary Mines, Government Areas, Randfontein, and Modderfontein will probably crush in July a tonnage equal to the mercantile traffic conveyed on the railway system of 12,000 miles. These figures are given, not to show the comparatively small tonnage for so large a mileage system, but the enormous significance of the Rand gold mines in the Union's economic arena. Revenue from goods traffic figures at £12,646,589 representing 22s per ton. General merchandise traffic works out at 950 tons per mile per annum.

The tonnage of coal is not given, but the freight revenue was £4,045,000, or about £200,000 more than the pits' mouth value of the entire coal production of the Union, practically the whole of which is conveyed by railway. The coal traffic would be about 12,700,000 tons. Taking merchandise and coal traffic together, the tonnage would be rather over 24,000 tons a year, just double the tonnage of basket ore milled on the Rand in the five months to the end of May.

In the gold-mining industry the year has been one of records, the gold yield in March, May, and June eclipsing previous attainments. Government Areas made the splendid profit in June of £220,350. The June gold output of the Transvaal was the first to surpass 850,000 ozs., and while the Rand for the first occasion surpassed a value of £3,500,000 with gold at standard price, this was beaten no less than 17 times in the high premium years 1920, 1921, and 1924. Only twice has the Rand value exceeded £3½ millions. The absolute highest value was £3,823,267 in August, 1921, when gold was taken at £5.575 per fine ounce. The Transvaal value in that month was £3,889,365.

Fiscal matters bulked largely at the annual congress of the South African Association for the Advancement of Science held at Pretoria. Mr J. J. Middleton, the Under-Secretary for Finance, read an instructive paper on "The Growth of Public Expenditure in the Union." Pointing out that the purchasing power of gold was 37 per cent. less than in 1910, the year of Union, he said that, had 1924-25 prices been operative, and allowing for growth of population, the expenditure would have been £23,150,000, whereas it was £29,299,000. In 1911-12 the Central and Provincial Governments were spending £13,109,000, while the current Budgets (1926-27) are for no less than £31,552,000, the high-water mark. Provincial services which cost a modest £2,894,000 in 1911-12, have now passed the ten-million mark, chiefly owing to education, which has become lavish and extravagant, its costs having risen from £1,750,000 to nearly £8,000,000. The gross annual charge on debt was 115 per cent. more than in 1911-12. Since the year of Union £125 millions had been spent on loan account, of which £69 millions were remunerative. The net debt is about £204 millions.

Letters to the Editor.

WEALTH, VIRTUAL WEALTH, AND DEBT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the review of my recent book, "Wealth, Virtual Wealth, and Debt," in your issue of July 31st, you suggest that my pathetic complaint—that the exact amount of Treasury notes issued does not seem to be publicly known—confirms the suspicion that I have not really studied the monetary system which I propose to reform. I trust you will give me the opportunity of saying that when I was in course of writing the book I sought for this information, and where I could get it, from one of the professors of economics here. I was told that even economists had the greatest difficulty in getting the real facts on this subject, that the data issued did not give the full information they appeared to give, and that questions were actually at the time being promoted about it in Parliament. In any case, my complaint was that "it was a great pity that these data are not authoritatively and less ambiguously available to the public," not to the money market specialist or even to the economist.

The difficulty your reviewer found in seeing how "my only novel suggestion"—that the banks should keep £ for £ of their liabilities for customers' deposits in current account—could work, invites the rejoinder that the economists do not seem really to have studied the system either. I may safely

leave it to the reader to decide whether or not it is the only novel suggestion, or, indeed, whether such a simple suggestion could have been made without the novel theory of money from which it arises. But to me, at any rate, it is one of the most curious consequences of, at least, a realistic, if not real, study, that if this had been the fact instead of only a novel suggestion, the system would have worked much as the economists have supposed it to work, instead of as it actually does work. That is to say, if the banks did lend to industry the money upon which they receive interest, but which its owners do not give up, the national industries would indeed be built up and made prosperous thereby, instead of being reduced to their present parlous plight.

Your reviewer further says that it is still more difficult to see how banking and business could work after it (my proposal) had been carried out. I should like to say to this that the position would be then very parallel to how the existing system would work, if ever the banks were neither increasing nor decreasing their "loans," but only issuing new credit as their outstanding advances are repaid. The owners of the money lent would divide with the bank the interest, the owners receiving the net interest after the bank's charge for its services was deducted. But, what is of far greater theoretical and practical importance is that the new currency required to maintain the market at a constant price-level, and to prevent "the fall of prices which makes the business world so unhappy," would be put into circulation when the new goods produced were finished and ready for sale, and not when their production is initiated. This is such an elementary necessity, if inflation and rise of prices is not to be inevitable, that it is safe to say it could have been arrived at by common-sense, without any aid from economic science at all.

If it is urged that it is absolutely essential for industry to be able to obtain credit as an antecedent to any increase of production, I entirely agree, and I would point out that business already pays interest for the use of money presumably as an inducement to the owners to give it up for the purpose. If it is feared that, under my system, the rate of interest would rise, I would point out that the quantity of money in existence being then proportional to the quantity of goods for sale, the manufacture of which is perfectly apprehended, the greater quantity of money would in all probability more than offset the novel condition, that no one could lend it who had not got it.—Yours, &c.,

FREDERICK SODDY.

Oxford, August 9, 1926.

Books and Publications.

BOOKS RECEIVED.

Sarajevo. By R. W. Seton-Watson. (London) Hutchinson and Co., Limited, Paternoster row. 18s net.

A scholarly attempt to put in their proper European perspective the Sarajevo crime and the Austro-Serbian quarrel from which it resulted. The author has carefully examined a good deal of new and hitherto undigested material, and reaches certain fairly definite conclusions having a direct bearing on the question of responsibility for the late war.

Easingden. By J. G. Sinclair. (Oxford) J. G. Sinclair, Lonsdale road. 5s net.

A study of conditions of day-to-day life in a coal-mining village.

La Legislazione Economica della Guerra. By Alberto de Stefani. (London) Oxford University Press.

Another publication of the Carnegie Foundation. The subject is dealt with objectively under various headings—personal, financial, commercial, &c. A valuable addition to economic literature dealing with the war period.

L'Alimentazione e la Politica Annonaria in Italia. By Riccardo Bachi. (London) Oxford University Press.

Professor Bachi's latest work is largely historical, and traces the various aspects of the food problem during the war and at the present time. The main foodstuffs receive individual treatment, and some suggestive conclusions are drawn. A Carnegie Foundation publication.

The Decline in Per Capita Consumption of Flour in the United States. Wheat Studies of the Food Research Institute, Stanford University, California. July, 1926.

The decline is declared to be part of a complex system of changes in consumption of the various important foods due to increased prosperity of the labouring classes, greater diversity of diet, smaller food requirements generally, and the substitution of sugar for the cereals. A thoughtful study, containing numerous informative charts and tables.

Società Italiana per Azioni: Notizie Statistiche. 1925. (Rome) Credito Italiano.

The Italian "Burdett," covering the whole field of limited liability. A highly convenient and informative summary of recent balance-sheet figures is included with other particulars regarding each company.

The Polish Economist: A Monthly Review of Trade, Industry, and Economics in Poland. No. 2. August, 1926. 1s. London offices, 47A Portland place, W. 1.

This journal will be useful to those requiring up-to-date information regarding Polish finance, industry, and trade. The current number contains articles on the coal problem, Budget equilibrium, Russian commercial relations, &c., and various notes on conditions in individual industries.

State of New York: Sixty-seventh Annual Report of the Superintendent of Insurance, for Year ending December 31, 1925. Part I. Joint-stock and Mutual Fire and Marine Insurance Companies, &c. (Albany) J. B. Lyon Company.

An encyclopædic work of reference, containing summary figures, followed by complete particulars of the financial position of every company doing insurance business in the United States.

New South Wales Statistical Register. 1924-25. Part VII.—Commerce: Part VIII.—Social Condition: Part IX.—Hospitals and Charity. (Sydney) A. J. Kent, Government printer.

The Co-operative Review. No. 1. August, 1926. Issued by the Co-operative Union of Great Britain and Ireland. (Manchester) Holyoake House, Hanover street. 6d net.

A review on these lines has been long overdue, and the present publication should speedily outgrow its somewhat modest initial dimensions. Among other interesting articles appears an examination of the value, or otherwise, of "safeguarding" from the co-operative point of view.

Tolley's Income-tax Chart and Manual (1926-27) and Free State Supplement. (London) C. H. Tolley, 4 Great Winchester street, E.C. 2. 3s.

Incorporates the provisions of the new Finance Act and numerous recent decisions of the Courts on such matters as foreign residence and foreign trade, super-tax, taxation of casual profits, &c. A concise, practical manual.

Income-tax Up to Date and Rules and Regulations for the Current Income-tax Year. By H. J. Gully. (London) The Financial News, 111 Queen Victoria street, E.C. 4. 9d net.

A useful handbook, revised to date.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
August 24.	August 26.

Stock Exchange speculation begins to run on what is likely to happen in the markets when the coal crisis is settled. Indications are assumed to point to a growing desire on the part of both sides, owners and men, to bring the present deadlock to a conclusion, and what will follow in the Stock Exchange when work is resumed in the coalfields is now a subject for general discussion. The strength of the gilt-edged markets suggests that people are not expected to withdraw capital from Government stocks in order to supply capital for industrial purposes, and the impression is fairly general at the moment that, though there may be a rise in many stocks and shares as soon as terms of agreement are reached, the outlook for the future is still uncertain and obscure.

The 5 per cent. War Loan is the steadiest in its own particular group, recently issued Colonial stocks being quiet and somewhat neglected. At the same time, the cessation of new issues is of assistance in placing into more permanent hands certain blocks of stock which had been accumulating in the

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business.

Traders interested in the Foreign Markets are invited to correspond with

THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

market during the June-July rush of new loans. Investment stocks throughout the House are a good market, their absorption going on with daily steadiness in spite of the holiday influences at work, and the stiffening of money rates.

French bonds have been fluctuating somewhat excitedly, and form the focus of a good deal of mild speculation on this side of the Channel. Other foreigners are firm on the whole, Argentines being in demand on the satisfactory statement made the other day by the President of the Republic. Mexicans failed to recover the losses sustained by reason of the religious friction in Mexico. The Mid-European bonds present no feature of particular interest.

The Home Railway stocks, which were quoted ex dividend on Thursday in this week, have recovered a noticeable part of the deductions, and yesterday prices advanced on a supposedly better outlook in the coal dispute. Grand Trunk Pacific debentures gained several points on the news that negotiations are to be reopened between the stockholders' committee and the Canadian Government. The announcement that Mr. Reginald McKenna has joined the London board of the Canadian Pacific Railway is construed as a cheerful sign for the prospects of Canadian railway proprietors. The Argentine railway list is very strong; amongst Brazilians, Leopoldinas, both ordinary and preference, have been a good spot. Nitrate rails and nitrate-producing shares reacted on the announcement that the Chilean Government had no present intention of reducing the export duty on nitrate, though other means are to be studied for helping the industry after the end of June next year.

The rubber market is better, upon a slight revival in the price of the produce, and tea shares are disposed to follow the lead set by rubber. There is little doing in oils. Tobacco shares have been sold by people willing to take their profits in view of the industrial outlook, but fresh buyers appeared and the losses were regained. Courtaulds have been firm, although business in them was unusually placid. Trade in shipping shares, banking, insurance, gas, and other illumination securities is confined to bread-and-cheese orders—deceased accounts furnishing stock that is taken by ordinary investment demand. The wireless group remains dull, and cable stocks are resting after their recent rises.

Amongst the newly issued industrials, some of which the underwriters were left with to a substantial extent, the disposition has been for prices to respond to cautious buying on behalf of people tempted by the discounts that prevail. The brewery market went better after having shown a tendency to slip away. A sharp rise in Sidros and a further improvement in Brazilian Tractions had Brussels and Montreal for their chief inspirations.

In the South African market, a number of prices were marked ex dividend on the pay-day in this week, the effect being to give the list a cheap appearance, which attracted a little buying, though not of sufficient volume to exert any marked influence over prices, except in West Springs. The liveliest spot in this section continues to be Sub-Nigels, around which there is an almost daily fight between bull and bear. Were it not for the Cape and for Paris, the Kaffir market would be in a somewhat comatose condition. Paris has been buying Chartered again; and, amongst other Rhodesians, Sherwood Stars attracted attention upon good developments. The most animated part of the mining markets is that for Malayan tin shares, where the rise in the price of tin to within at one time 35s of £300 per ton, served to quicken interest in speculation and speculative investment alike. Prices are better on the week. There is a noticeable inclination on the part of operators to secure what profits they can, as soon as tin gives any indication of going back. Cornish shares are left almost alone, though West Africans contrive to draw sufficient public attention to their claims for prices to be advanced in various shares. Russians have been rather more lively than usual; market prophets profess to foresee a possible rise, next, in copper shares.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—

1921	388,978,203				
1920	367,549,656				

London County Council.—This is an issue of 5 per cent. Local Bonds, at par, for housing. The bonds will be secured upon all the property and revenues of the London County Council and the rates of the Council outside the City of London. A sinking fund is required to be set up for the redemption of the loan. The bonds will be repaid at par at the expiration of five or ten years, as may be applied for. The money is required to repay the 6 per cent. Local Bonds for housing, due for repayment on September 30, 1926, and for housing purposes. A good trustee investment.

Ulu Selangor Rubber Plantations, Limited.—Share capital £65,000, divided into 650,000 shares of 2s each. This is an issue of 400,000 shares of 2s each. The company has been formed in particular to acquire a rubber estate in the district of Ulu Selangor, in the State of Selangor. The estate consists of about 1,313½ acres, of which 305 acres are stated to be planted with rubber 5 years old. The directors have decided not to begin tapping until next year. The purchase price is £25,500, which, after allowing for the value of the reserve land, is said to be equivalent to about £64 per planted acre. This is a moderate capitalisation. It is estimated that the balance of the proceeds of the present issue should be sufficient to cover expenditure on the estates for roads and clearing purposes, to allow for one year's upkeep of the present planted area, and "to enable the directors to proceed immediately with the opening up of 500 acres of the reserve land." It appears from this statement that additional capital will be required when the preliminary work has been completed. Subscribers to the present issue should bear this in mind. The prospectus contains forecasts of future profits, but investors should not place too much reliance upon these, in view of the inherently speculative nature of rubber plantation business.

Batu Lintang Rubber Company, Limited.—In order to comply with Stock Exchange regulations, particulars are advertised of the above company. Share capital £1,250,000, divided into shares of £1 each, of which 981,542 have been issued. The company was incorporated in the Straits Settlements in 1920, particularly to acquire Batu Lintang, Limited—incorporated in the Straits Settlements in 1916—which was placed in voluntary liquidation. The principal asset thus acquired was the Batu Lintang Rubber Estate, in the State of Kedah, comprising some 3,503 acres. Of these, 1,322 acres are planted with rubber, as follows:—1916 and earlier, 574 acres; 1916-17, 144 acres; 1918, 249 acres; 1919, 70 acres; and 1920, 283 acres. It is stated that according to the information given in the company's report and accounts for the year ended June 30, 1925, the restricted crop for that year was 224,698 lbs, giving a return of 529 lbs per acre over an acreage of 425 acres tapped, and that a cable has been received stating that the crop harvested for the financial year ended June 30, 1926, totalled 381,405 lbs. The net profit for the year 1924-25 is given as \$36,817. An interim dividend of 5 per cent., it is stated, has already been declared, and paid on account of the year just ended. The purchase price paid by the company to the vendors, Batu Lintang, Limited, and its liquidator, was 875,000 shares of £1, credited as fully paid, which were allotted to the shareholders of Batu Lintang, Limited, as the nominees of the liquidator. The present company also undertook to discharge the liabilities of Batu Lintang, Limited, and the costs of the liquidation. In addition, the company has received the cash resulting from the issue of 106,542 shares of £1 each at par. The preliminary expenses of the company were \$2,342.84. The capitalisation per planted acre is high, and for this reason alone investors should proceed with caution.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and reports and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

MITCHELLS AND BUTLERS, LIMITED.

SATISFACTORY RESULTS OF DIFFICULT YEAR'S TRADE.

RESULTS OF PROHIBITION IN AMERICA.

MINING DISPUTE AND CHURCH INTERFERENCE.

The thirty-ninth annual general meeting of the shareholders of this company was held at the White Horse Hotel, Birmingham, on the 12th instant, under the presidency of Sir William Waters Butler, Bart.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen,—The trading results as set out in the balance-sheet of this year I hope will appear to the shareholders as highly satisfactory, having regard to the unsettled industrial position which affected our profits, especially during the last two months of the financial year.

The fact that under such conditions our output exceeded that of the previous year plainly indicates that consumers appreciated the superior quality of our products, which are ever increasing in popularity. It is our policy, whenever possible, to add to the value given to the public and thus strengthen, in a permanent manner, the goodwill of the business. As an example of this, although brewing materials were more costly than in the previous year, we expended an additional sum of £54,000 in increasing the strength of our ales, as we are determined that no competitor shall offer better value to consumers.

To illustrate, however, the effect of the excessively high beer duty upon this decision to give better quality, of the additional expenditure of £54,000, to which I have referred, over £40,000 was beer duty, which shows to what an extent this high duty retards the increased use of brewing materials, to the great detriment of agriculture and the consumers of beer.

FALL IN CONSUMPTION OF SPIRITS.

The Budget did not bring about any reduction in the beer and spirit duties, owing to the heavy demands on account of the National expenditure. The consumption of spirits fell fully 50 per cent. between the years 1914 and 1925. The production of beer in England and Wales in barrels of standard strength fell from nearly 30 million barrels to about 19½ millions, representing a decrease of 35 per cent., but the bulk barrels of beer sold in England and Wales show a decrease of nearly 22 per cent., this difference being accounted for in consequence of the beer to-day being brewed at a lower average strength than in 1914. The average strength of the beer now sold is slowly increasing, but with the present high beer duty, this can only continue if output is increased and brewing materials become cheaper.

INCREASED WINE CONSUMPTION.

The consumption of wine per head of the population has increased nearly 50 per cent. over 1914, due to the alcoholic content of wine bearing a rate of duty equal to only about one-half that of beer and stout, and about one-sixth that of spirits. One is at a loss to understand why a foreign product, such as wine, should obtain this huge preference over home-produced beer and spirits, unless it be that strange weakness of ours of encouraging the products of the foreigner at the expense of the home producer.

Notwithstanding the huge decrease in the consumption of beer and spirits, consumers have had to expend not less than £150,000,000 per annum more in consequence of the greatly increased taxation of alcoholic liquors, and the additional costs of rates, taxes, and of production and distribution.

LABOUR UNREST AND BEER PRICES.

Of course, I know the enemies of the trade will at once say this has resulted in added profits to brewer and publican. That is not the point. What I wish to make plain is that no matter whether it be the State, brewer, or publican who benefits by this heavy taxation of alcoholic liquors at the expense of the consumer, it does not require much reasoning to realise that with falling wages—which, unfortunately, many depressed industries are not in a position to check—the workman must be in a state of unrest if his so-called "subsistence wage" leaves out of account the fact that a family of five has to expend £18 per annum more than it did in 1914 on a commodity which he looks upon as a necessity. Further, this largely increased expenditure is sufficient to purchase only about 60 per cent. of the alcoholic beverages he enjoyed in pre-war days. To express it another way: If the average family of five persons consumed to-day the same volume and

strength of alcoholic beverages as in pre-war days, it would necessitate an expenditure of £30 per annum more than then.

I have no desire to connect directly the price of beer with the unfortunate labour unrest now prevailing, but I do contend, as I told Mr Lloyd George years ago, that you must avoid sullenness in a workman. You must foster it, however, if you look upon the supply and cost of his beer as being of no consequence.

PAYMENT OF BEER DUTY LEGISLATION.

The only proposal in the Budget directly affecting the trade was the reduction from three months to two months in the time allowed for payment of the beer duty. The shortening of this credit will, of course, add to the costs of production, and by decreasing the surplus capital of the trader retard his rate of improving licensed properties, which, carried out as our company is doing, requires a large amount of capital at our disposal.

It will be seen from the accounts that in our assets the value of properties has increased by over £270,000, brought about by the improvement of our properties, and the erection and purchase of additional licensed houses. This expenditure, together with the repayment of £40,000 of the loan in connection with the purchase of the Midland Brewery—reducing this loan, which was originally £400,000, to £120,000—has, of course, diminished our cash at bankers and in hand.

During the year we have opened and have had under construction several new licensed properties in the midst of large growing districts, the licences of which were granted in consideration of the removal and closing of redundant licences. Thus we continue our policy of "fewer and better" houses.

One can realise how difficult it is in the midst of industrial unrest to predict the result of the trading operations for the current year. The coal dispute has not injured us as much as one would expect, but if it continues much longer we, like other industries, are bound to feel its ill-effects. Nevertheless, I hope we shall be able next year to submit to you a balance-sheet as satisfactory as the one submitted to-day.

MINING DISPUTE AND CLERICAL INTERFERENCE.

No doubt we all hold views as to how those responsible should deal with the mining position. I, myself, am of the opinion that the less interference there is with the disputants by persons having no economic knowledge of the industry the better. I am, therefore, pleased the Press generally has censured the interference and declarations of a body of clerics in this dispute, whose action appears to savour of that of the so-called Temperance Council of the Christian Churches in connection with licensing matters. In both cases we discover the hand of the Rev. Henry Carter, who is joint secretary of both movements. As the *Sunday Times* states, "Mr Cook has been clever and the leaders of the Churches have been simple. Mr Cook saw that he could gain a moral and tactical advantage by his move; and he used the unsuspecting clerics as his tools." In the same manner the Rev. Henry Carter is endeavouring to further his Prohibition policy under the cover of temperance reform by making use of a body known as the Temperance Council of the Christian Churches. One, therefore, reads with pleasure the remarks of the Bishop of Gloucester in regard to the intervention of the Bishops in connection with the coal dispute, as they are true of all such meddling bodies. He states that their representative character is entirely self-assumed. The words used by the *Sunday Times* in a leading article in analysing this latest intrusion of the clerics into industrial matters apply equally well to the claim put forward by the people who style themselves the Temperance Council of the Christian Churches. It says: "In the first place, what are their credentials? They enter the arena ostensibly as 'representative Churchmen,' but whom do they represent? Not, to be sure, the great bulk of Christian Church-folk in this country, whose opinions they had never consulted, for since their activities became public there have been many direct disclaimers of their methods from Churchmen whose views are of importance. These representative Churchmen, in fact, represent nobody but themselves. That being so, they have no particular claim on the attention of the public as delegates of

religion. Still less, of course, have they any claim to be heard as economic experts."

I find that as general secretary of the Temperance and Social Welfare Department of the Wesleyan Conference, the Rev. Henry Carter said that the liquor trade feared the Wesleyan Methodists more than any other body of people in the country. Apparently he now wants also the mine-owners to fear Methodism. Methodists are generally given the credit for bringing about Prohibition in the States, and I have no desire to deprive them of that doubtful credit. But of this I am certain, that the Prohibition movement in England has planned its campaign on the lines of the Anti-Saloon League of America, namely, to make use of the religious bodies for propaganda purposes.

AMERICA'S PROHIBITION RESULTS.

An inquiry has been taking place before a Sub-Committee of the United States Senate upon Bills to repeal or modify the National Prohibition Act. The evidence which has been given before that Committee, on oath, of the alarming results which have followed the application of the law is startling reading. The official reports of arrests in the three world capitals show that Washington, under Prohibition, and after more than five years of enforcement effort is shown to be five times as drunken as Paris, and nearly seven times as drunken as London. Birmingham, Alabama, with, bear in mind, a population only one-fifth that of Birmingham, England, had 136 murders in 1924 and 112 murders in 1925, and showed the following arrests for drunkenness:—

1920, the first year of Prohibition, 927.
1921, 1,118.
1922, 3,000.
1923, 3,652.
1924, 3,972.
1925, 4,962.

It is, under Prohibition, seven times as drunken as our own City of Birmingham, under licence.

JUDGE DENOUNCES PROHIBITION.

I think this condition as to crime and drunkenness justify the severity with which Judge Talley denounced the Prohibition law in his evidence taken before the Committee of Inquiry to which I have referred. He stated, "he had been for five years a Judge of the Court of General Sessions of New York City, which is regarded as the greatest criminal court in the world and is the oldest court of the United States, being a court of exclusively criminal jurisdiction, trying only felony cases from murder down." In his sworn evidence, he said: "It is my calm and deliberate judgment, based on my experience, that the greatest single menace confronting the United States to-day is the existence of the Prohibition law as it now stands. One of the most imposing promises made by the friends of Prohibition before the eighteenth amendment was that by abolishing drink crime would be decreased to a minimum. That promise has not been fulfilled. Crime has increased in such amazing proportion that it has become the dominant consideration of most of the State and municipal Governments of the nation. A national Commission has been set up to determine the cause and possible remedies to reduce the tremendous wave of crime that is sweeping not only the country, but New York as well. I need not quote statistics to the Committee, to demonstrate that this is the most lawless country on the face of the earth. I go a step further. I assert that Prohibition is one of the largest contributing factors to that disgraceful condition, by reason of the conceded failure or inability of Federal and State authorities to enforce the law; it has created a disrespect for law which, starting with Prohibition, has gone all along the line."

There is no doubt that Prohibition was inflicted upon the United States in consequence of the apathy there, for as more than one American has told me, the people never dreamt that it would come about. Let us be alert to avoid such conditions arising in this country.

Lord Astor, of course, is still doing his utmost to gain support for the proposals contained in what is known as the Bishop of Oxford's Bill. This, if carried, would permit confiscatory measures being taken to end private ownership in a district.

TEMPERANCE LEGISLATION WARNING.

One must confess, however, that during the past 12 months we have not been worried by our opponents in Parliament, and there has been a lull also in the public campaign of the teetotal party. Meanwhile, the trade has been free to devote its energies towards progress, and has been busily engaged in the improvement of the public-house. Nevertheless, you may rest assured the organisers of the trade are not deceived by this quietude, and are not living in a position of false security.

Mr Arthur Sherwell, in the current issue of the Monthly Notes of the Temperance Legislation League, says:—"The public mind has been preoccupied with urgent questions which have held the stage to the exclusion of other questions which have been tem-

porarily obscured, but not robbed of their essential importance. Their re-emergence with enhanced claims to attention is as certain as anything in the world of politics can be." He goes on to say:—"Among these questions will certainly be the drink question. It has been obscured, but not disposed of. Not even the most powerful leader of a powerful political party will be able to avoid it. Already there are unmistakable signs of its re-emergence as a problem of many-sided social importance. Not for many years past have so many minds been at work upon it. And they are not the minds of sectarians or of partisans, but of shrewd observers and students of social life. The British Parliament, which has had a temporary respite from the pressure of the drink problem, will presently find it knocking at the door in an insistent and not negligible way, and the demand, we predict, will have new forces and constructive ideas behind it."

The views of Mr Arthur Sherwell always deserve our notice and careful thought, as, in my opinion, he is the most earnest and well-informed investigator of temperance problems. I think Mr Sherwell's forecast is well founded, and it behoves all of us of the trade—with whom I, of course, include all having any financial interest therein—to be prepared for the storm he predicts is gathering.

To be forewarned is to be forearmed.

With these remarks, ladies and gentlemen, I beg to move the adoption of the report, and will ask Mr Herbert W. Bainbridge to second the resolution.

Mr Herbert W. Bainbridge seconded the resolution, which was carried unanimously.

PRESENTATION TO SIR WILLIAM WATERS BUTLER, BART.

At the conclusion of the ordinary business Mr Arthur Mitchell (deputy-chairman) took the chair, and on behalf of the shareholders presented Sir William Waters Butler with his portrait in oils, by Sir William Orpen, R.A., and Lady Butler with a pearl necklet. Mr Mitchell said the presentations were intended to mark the honour of a baronetcy conferred upon Sir William by his Majesty the King. Alluding to Sir William's work on behalf of the company and to his national work, Mr Mitchell said he was appointed a managing director of Mitchells and Butlers on the amalgamation of the Cape hill and Broad street businesses in 1898, appointed deputy-chairman in 1907, and had been chairman since 1914. He had built up a reputation as one of the greatest authorities in every department of the brewing trade, was a member of several learned societies, and had been a member of the council of Birmingham University from 1907. Sir William was chairman of the Brewers' Society in 1908, president of the Institute of Brewing in 1907, was appointed a member of the Central Control Board in 1916, and was at present a member of the State Management Districts Council. As a member of the Central Control Board his great knowledge both of the brewing and the retail sides of the trade must have been of the utmost practical value to the Government in connection with the State control schemes for Carlisle and other areas. It was undoubtedly the valuable work voluntarily rendered to the nation in this connection which had brought Sir William the honour which his Majesty had been pleased to confer. Beyond all this, Sir William had found time to help forward many movements of a philanthropic nature. The honour had been won by sheer merit, coupled with a fine personal character. Referring to Lady Butler, Mr Mitchell said that by her unselfish devotion and womanly instinct she had been the guiding star throughout her husband's brilliant career.

Mr Herbert W. Bainbridge referred to the occasion as an historic one. For many years, he said, they had had Sir William Waters Butler with them, for 12 years he had been chairman, and in the opinion of the board no fitter opportunity could have arisen to honour him than in connection with the signal distinction conferred upon him. No body of shareholders could have been better served. Sir William had devoted all the active years of his life, and all his talents, to furthering the interests of the company. The late Mr Henry Mitchell and the late Mr William Butler laid a splendid foundation for the business, but their efforts would have been of little purpose if the succeeding generation of Mitchells and Butlers had not carefully built upon it. There was every indication, too, that a third generation would prove equally as keen and energetic in maintaining the high traditions of the concern.

Sir Gilbert Barling, Bart., explained that he was not a shareholder of the company, but had been given permission to be present when the shareholders did honour to Sir William Butler. He could speak with more authority than most with regard to the very generous help Sir William had given to the University of Birmingham. From its inception some 27 years ago he had been one of its staunchest supporters. His last donation was valuable not only in its amount, but because it enabled the University Council to proceed with the building of a new block to be devoted to botany, zoology, and a brewing school. It was benefactions such as that given by Sir William Butler which pro-

vided the means to carry on research in the hope that much more might yet be done to the promotion of human welfare and relief from distress and suffering.

Mr J. Edwin Mitchell expressed the pleasure it gave him to add his testimony to Sir William's sterling worth. They had worked together most amicably at all times, and nothing had disturbed that harmony during the 28 years in which they had been associated. He hoped those who came after would maintain the traditions of the board.

Further congratulations were offered by Lt.-Col. H. S. Staveley-Hill and Mr J. Milliken Smith, after which the chairman handed over the gifts, expressing the hope that they would be handed down to many successive generations, and that Sir William and Lady Butler would live many further years of deserved happiness.

SIR WILLIAM BUTLER'S REPLY.

Sir William Butler, in acknowledging the gifts on behalf of Lady Butler and himself, remarked that whilst their intrinsic value was great, this was incomparable with the value he set upon the kind of spirit which prompted them. Without much sacrifice of time and pleasure on the part of Lady Butler, he would not have been able to undertake the national work which he had performed during and since the war. He rejoiced that a replica of the portrait was to be hung in the board room of the company, alongside those of the late Mr Henry Mitchell and Mr William Butler, his father. This was an honour deeply appreciated, for these two giants in the industry laid down the lines upon which the company had conducted its operations with such marked success. As a director during the past 28 years and chairman for 12 years, he had endeavoured to maintain the company's splendid traditions of upright dealing and of rendering good service to the public. He had done his utmost not only to advance the position of Mitchells and Butlers, but, by taking an active part in the counsels of the trade, from both the political and technical sides, to raise it in the eyes of the general public. He had been most loyally backed up by the members of the Mitchell family ever since his father, in 1898, joined the late Mr Henry Mitchell in the creation of Mitchells and Butlers, Limited. No one could desire to work with better colleagues than Mr J. E. Mitchell and Mr Arthur Mitchell. In conclusion, Sir William said the day had been a memorable one for himself and the members of his family, and recollections of it would be treasured to the end of their lives.

ANGLO-DUTCH PLANTATIONS OF JAVA, LIMITED.

HON. C. H. STRUTT ON POSITION AND PROSPECTS.

The sixteenth ordinary general meeting of the Anglo-Dutch Plantations of Java, Limited, was held, on the 10th instant, at the Cannon street Hotel, London, Colonel Sir Robert Williams, Bt., presiding in the absence, through illness, of the chairman of the company (the Hon. C. H. Strutt).

Mr Percy H. Bradford, representing the secretaries (Messrs Francis Peek and Co., Limited), read the notice convening the meeting and the auditors' report.

In the course of his speech, which was read to the meeting, Mr Strutt said: When comparing our dividend with other companies, it should be remembered that we are only partly dependent on rubber for our revenue, and we have, moreover, a large amount of capital expenditure that has not yet become productive or fully productive. Out of a total of 76,942 acres planted, 29,405 acres are not yet in bearing. This includes 3,207 acres of tea and nearly 10,000 acres of rubber; but perhaps of even greater importance is the fact that during the year under review our tea in bearing only gave an average of 459 lbs per acre. We certainly shall not be satisfied until this figure reaches at least 600 lbs per acre, which we are confident by our improved cultivation methods should be comfortably attainable. This alone should add to our tea output nearly three million pounds from our existing areas in bearing.

The dividend is also not quite so high as anticipated, but if the report be carefully examined it will be seen that this arises from caution. You will notice in our recommendations for the disposal of the revenue for the year that we have put by £50,000 to a special contingencies reserve to meet unforeseen expenses, and we have created a pensions fund of £20,000. Apart from these two reserves, there is also the depreciation reserve account, which now stands at £281,208, and the insurance reserve of £113,735. The auditors have thought it necessary to write off a still larger sum as depreciation on the Utilities Company's assets than has been done hitherto. This has necessitated our finding £27,251 to meet the deficiency caused by the payment of their debenture interest.

The number of our present shares issued, including options recently exercised, is £1,939,743, and adding to this option holders and debenture-holders, who can call for a total of £417,708, our share requirements are £2,357,451. Our present authorised capital is £2,250,000, and, as that requires increasing, you will probably like this to be in round figures to £2,500,000, which will give us a small amount of unissued capital still in hand. A resolution in this respect will be placed before you later in the proceedings.

Our permanent additions during the year to the planted area were 281 acres of rubber, 1,798 acres of tea, and 211 acres of cinchona.

NATIVE PLANTINGS.

Up to the end of 1925 we had 16,177 acres of rubber alone in bearing, out of 28,532 acres planted, but as 1920 was the year of very large planting (we having opened altogether 4,447 acres during that year), the additions to the tapped acreage this year and next year will be on a large scale. After this the annual additions will be comparatively small. Rubber, you will see, has by far given us our best share of profit during the past year, and the future of the industry will be of infinite importance to us. There is no doubt that the restriction scheme of the late Lord Stevenson has been of great temporary assistance to the industry, though I consider a mistake was made in not reducing the restriction faster after the price of 2s 6d was obtained. I think the rise of price to 4s, though welcome enough at the time, will have done too much to encourage those outside the restriction scheme, especially natives, to plant up too great an area. I have always paid more attention to the native plantings than the majority of rubber planters have done, and I am not at all sure that the planting of those who are outside the restriction area will not in five or six years increase the production so largely that the restriction scheme will either have to be withdrawn or be practically of small effect. In short, I think that in five or six years' time it will again be entirely a question of supply and demand. The production will, I believe, be much larger than it is now unless we find that the trees on the older plantations are suffering from old age. This will very likely be the case, but apart from that our chance of a favourable price in the future depends on the consumption increasing at a higher rate than the normal production. I have always been in favour of the restriction scheme, but not that of the selling combine, as I think it far more desirable that the rubber should not be tapped, and thereby the virility of the trees maintained, than to hold up stocks in hand, which I consider is necessarily part of the plan of any combine.

You will probably have noted our increased cost of producing the rubber. When we commence tapping a new area it always costs

us more in labour than on old areas, as generally the trees are picked trees, and not all in close proximity to each other. They do not yield as much, and the new tappers are not so capable as the old; but a more important point still is the bonus we paid to the managers and assistants based on the margin of profit obtained, and which, consequently, tends to increase the cost as selling prices rise. The first six months' yield of rubber for this year amounts to 4,070,088 lbs, and is well within our standard figure allowed under the restriction scheme, and it is expected that the new areas coming into bearing during the next half-year will give still better results.

TEA CROPS.

Our largest product is tea, but though the crop obtained was considerably more than that of rubber, the yield was largely decreased last year by a prolonged drought. These droughts present the weak point of growing tea in Java. They last sometimes for months, even up to five months, and there seems no natural and easy mode of meeting the difficulties they create. The new tea estates which we bought show cheaper capital costs than our old tea lands, but our visiting agents are continually calling for improvements in building, machinery or manuring, which will, we think, before long bring the capital costs up to those of the old estates.

For 1925 the crop of tea obtained was 8,760,251 lbs, against an estimate of 9,350,000 lbs. The estimate for the current year is 10,659,241 lbs, and, provided normal weather is experienced during the next two or three months, this crop should be assured, as for the first six months practically 6,000,000 lbs of tea have been obtained.

There is a slight increase in the cost price—8.45d, compared with 7.8d. This is accounted for partly owing to the smaller crop, but also to the fact that we have been gradually extending our system of manuring, especially on our recently acquired properties.

One-half of this year's tea crop has been sold forward at varying prices, giving an average of a fraction under 1s 3d per pound London.

COFFEE AND OTHER PRODUCTS.

The crop of coffee obtained last year was rather above that of previous years, and the net selling price was also above the average, so the results obtained were better than usual.

The supply of quinine for some little time past has been in excess of the demand, with the result that, although we have been restricting our output, there is still an accumulation of stock, and we are forced to anticipate lower prices and cannot expect to maintain the profits of the last few years. In addition to our agricultural products, we are now making a profit on the purchase of paddy for the Pamanoeken mill and the new mill at Pegaden. Both mills produced last year satisfactory results. This year a third mill has been erected at Pakceran. We have also built a tapioca factory capable of turning out 20,000 piculs of tapioca flour per month.

Our large extensions during the last years were in the direction of the growth of sisal and tapioca, only a small proportion of which was in bearing last year. The sisal suffered slightly from disease, and we have found it somewhat difficult to get the best market for the varieties which we grow. These difficulties we hope shortly to overcome. The sisal factory is now running well, and, though we have suffered, as most companies do in starting a new product, we hope now that we shall improve every year.

DEVELOPMENT OF CONCESSIONS IN SUMATRA.

A new company was formed in October last year to purchase our concessions in Sumatra amounting to 102,114 acres. We received as the purchase price £80,000 in cash and £80,000 in fully-paid shares of the new company. They have made an issue of £250,000 6 per cent. debenture stock convertible into shares on January 1, 1932, or January 1, 1933, and we have undertaken to make good out of the money received as purchase price any deficiency in that company's revenue for the first six years resulting from the payment of debenture interest. We have also subscribed for 170,000 shares in addition to those received as part of the purchase price. We understand that with these funds, which amount to approximately £340,000, the company intends to plant up 6,000 acres with rubber, tea, and coffee, spread over the next three years. For this year it is hoped to plant 875 acres with rubber, 875 acres with coffee, and about 90 acres with tea, but, owing to adverse weather conditions experienced recently, this programme may be somewhat curtailed. According to preliminary estimates, it is considered that the full programme should be completed at a cost of about £60 per acre, including factories and all expenditure up to the bearing stage.

The report and accounts were unanimously adopted, and a final dividend of 12½ per cent., less tax, making 22½ per cent. for the year, was declared.

A resolution was also passed increasing the capital of the company to £2,500,000 by the creation of 250,000 shares of £1 each.

WATNEY, COMBE, REID AND COMPANY, LIMITED.

SUCCESSFUL YEAR—RECORD RESULTS.

The ordinary general meeting of Watney, Combe, Reid and Co., Limited, was held, on the 11th instant, at the Charing Cross Hotel, Strand, London, Sir H. Cosmo O. Bonsor, Bart. (chairman of the company), presiding.

The secretary (Mr W. S. Bradley) having read the notice convening the meeting and the report of the auditor,

The Chairman, in moving the adoption of the report and accounts, said: When we had the pleasure of meeting at this time last year, we had the gratification of anticipating that we should be able to restore our lost capital, and we dwelt upon that anticipation. To-day we submit to you a balance-sheet which, I think, justifies our then action, and we are also going to recommend a dividend which, I hope, will be satisfactory to our stockholders. We have now had seven years of continuing and increasing prosperity, and I feel that one ought possibly to utter a word of caution. You are all aware that these strikes—whether you call them industrial or political—are having a disastrous effect upon the trade of the country. There are more people than ever out of employment, and there are a large number of factories either closed altogether or working on short time. London is always the last to feel a serious depression of trade, but there are unmistakable signs at the present moment that the demand for beer is not so good as it was at this time twelve months ago.

THE BALANCE-SHEET.

To deal with the balance-sheet we are submitting to you, I may say that I have been asked for some definition of the big figure of £12,000,000 odd which appears on it. I have been asked a question as regards the values of the items that make up that large sum. Our properties are all taken at their book value, and it is a fact that all our freeholds and leaseholds are undervalued. At the same time, there is a figure of close upon £3,000,000 for goodwill which is a part of that £12,000,000. I imagine, although I do not know, that if that £3,000,000 were distributed over our leasehold and freehold properties the value would be about equal to the market value at the present date. Consequently, I think we may rest assured that that item of £12,000,000 represents good value for the money. The fact is that our auditors in the past always deprecated our writing anything off goodwill; they asked us to confine depreciation to our freeholds and leaseholds; consequently, our freeholds and leaseholds are now, no doubt, considerably below their value, taken at present market prices.

Last year we told you that the amount we were carrying into reserve was already invested, or about to be invested, in the undertaking. During the year we have spent on capital account something between £400,000 and £500,000. As to how this has been applied, we have bought and also equipped new bottling stores; we have increased our office accommodation, and we have installed additional plant in our breweries. That was capital expenditure to meet what was our increasing trade. We have also spent £121,000 on rebuilding public-houses, £60,000 on alterations and extensions to public-houses, and £110,000 on the conversion of leaseholds into freeholds. That makes practically £300,000 altogether, and that capital is, or will be, remunerative. At June 30th last we had outstanding contracts of £250,000, so that the amount that we are recommending to be carried to reserve for this year is practically all required for capital expenditure on similar lines to our capital outlay of the past year.

REBUILDING OPERATIONS.

As regards our rebuilding operations, the licensing authorities have been very considerate in giving us leave to rebuild, and also for extensions. Our applications for rebuilding public-houses during the year were 28 in number, and out of those 28 applications 24 were granted. We applied in 89 cases for alterations and extensions, and of those 89 applications 82 were granted. That is a very good record, I think. It is a fact that, while the majority of magistrates welcome these improvements and take an interest in these improvements, there are still some magistrates—though I am glad to say their numbers are decreasing—who are so very conservative that they stick to the old tradition, which, in my opinion, is a fallacy, that increased accommodation means increased drinking. Our experience is that the provision of dining, luncheon, and tea rooms not only stops the abuse of alcohol, but also promotes temperance.

I do not think I have anything else to tell you, save that our secretary says that I ought to mention that we made three records during the year—I think I may say four. We have restored our capital, we have sold more beer than in any previous year, and we were, happily, able to maintain our trade. In our bottled beers we have had a very large increase of sales. It may interest you to know that during the year we sold 5,500,000 dozen pints in glass. We may also say that our gross profits constituted a record, being slightly better than last year, which itself was a record. The Chairman concluded by paying a tribute to the loyalty and excellent work of the staff.

The report and accounts were carried unanimously.

BULLION.

The following statistics of imports and exports of gold for week ended August 11, 1926, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.	Exported from Great Britain and Northern Ireland.
From—	To—
British South Africa	Germany
Anglo-Egyptian Sudan	Netherlands
Other countries	Belgium
	France
	Switzerland
	Spain
	Austria
	Italy
	Gibraltar
	British India
	Straits Settlements
	Ceylon
	Other countries
Total declared value of imports	Total declared value of exports

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

ARRIVALS.	WITHDRAWALS.
Aug. 7	Aug. 7
9—Bars bought	9—Spain
S. Africa	10—India
10—Bars bought	11—Spain
11	12—Spain
12	Singapore
13	13
Total	Total
Net arrivals, £92,000.	

Messrs Samuel Montagu and Co. write on August 11th as follows:—

GOLD.

During the week under review the Bank has received on balance £975,000, increasing the net influx since January 1, 1926, to £9,217,000, and decreasing the net efflux since the resumption of an effective gold standard to £2,378,000.

SILVER.

The market has been in the throes of speculation during the week, and prices have fluctuated in accord with a preponderating balance of orders from bulls or bears. On the whole the bears have prevailed. This is not surprising in view of the disheartened condition of the market following the Currency Report. A second bear raid from the Indian bazaars carried prices on Saturday to 28½d for cash and 28¾d for two months delivery. These were the lowest quotations since March, 1916, when 28½d was fixed for cash delivery (no forward quotation was then made). The future of the market lies mainly in the hands of the bears, who, if persistent enough, can maintain prices at the lower level, or even depress them still lower, the possibility of lower production checking the fall being slight, whilst base metals command sufficient value to make the extraction of silver plentiful as a by-product. United Kingdom imports and exports of silver during the week ending the 4th inst. were:—

Imports.	Exports.
U.S.A.	France
British West Africa ..	Bombay
Other countries	Other countries

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

Reports and Notices.

GOVERNMENT STOCKS, &c.

EXTERNAL DEBT OF HONDURAS.—The Council of Foreign Bondholders have received information that the National City Bank of New York, who are the agents designated for the collection of the revenues assigned to the service of the debt, finds itself unable to accept certain amendments introduced at its recent session by the Congress of Honduras into the agreement entered into in December, 1925, between the representatives of the Honduras Government and the bank. The carrying into effect of the settlement with the bondholders will, therefore, have to be postponed pending the reconsideration by Congress (which meets on January 1st next) of the agreement with the bank. Meanwhile, the Council are informed that the Honduras Government has instructed their Consular agents to place the Consular revenues on deposit in the National City Bank to be held in trust for the bondholders pending the ratification of the agreement with the bank as originally signed.

BANKS.

MOSCOW NARODNY BANK, LIMITED.—Turnover for the last half year amounted to £98,919,713, as compared with £152,229,240 for the full year 1925. Total assets on June 30, 1925, amounted to £3,289,021—the present balance-sheet, therefore, shows an increase of 59 per cent. in this respect.

MISCELLANEOUS.

CHILEAN GOVERNMENT AND NITRATE DUTIES.—In consequence of the rumours recently circulating as to the attitude of the Chilean Government in regard to a reduction of the present export duty on Chilean nitrate of soda, the Chilean Nitrate Committee, Friars House, New Broad street, authorises the publication of the following statement contained in a cable received by them from the directorate of the Producers' Association in Valparaiso:—A special commission from the directorate has been received in audience by the President of the Republic, with whom was the Minister of Finance. The commission explained that it is absolutely essential to know the Government's views concerning its policy towards the export duty, in order to allay the prevailing uncertainty in the market. Both the President and the Finance Minister emphatically declared that the present situation of the national finances made it impossible to entertain any reduction of the export duty before June 30, 1927. At the same time they assured the commission that the Government policy towards the nitrate industry is to assist it in every way possible, as Chile cannot afford to have its principal industry crippled, and the promise was given that the Government would from now onwards study means for assisting it during the next nitrate year, that is, after June 30, 1927.

AMERICAN WHEAT MARKETS.

After a period of quiet to steady trading the publication of a bearish American Bureau report induced professional liquidation, accentuated by the absence of any considerable buying on overseas account. Quotations:—

	Jan. 2, 1925.	Aug. 13, 1925.	Jan. 7, 1926.	Aug. 5, 1926.	Aug. 12, 1926.
Winnipeg (No. 1 Manitoba)—Cents per 60 lbs	183	(c) 146½	160	(c) 143	(c) 139½
Chicago (No. 2 Winter)—Cents per 60 lbs	177	(b) 165½	176½	(b) 138½	(b) 135½

(a) July delivery. (b) September delivery. (c) October delivery. Visible supplies of wheat in Canada, at 19,469,000 bushels, show a decrease of 2,469,000 bushels as compared with the previous figures. Supplies a year ago stood at 10,232,000 bushels.

COAL.

Our Cardiff correspondent writes:—The most important event in South Wales this week has been the signing of an agreement between the Coalowners' Association and the Monmouthshire and South Wales Engine-men, Stokers, and Craftsmen's Association fixing conditions of employment for the working of an eight-hour day, the terms embodied being those posted by the owners at the pit-head on the passing of the Government Bill. This is the first important collective agreement concluded since the strike, and embraces more than three-fourths the engine-men, stokers, and craftsmen employed in South Wales. The effect of this independent action by a craft union affiliated not to the Miners' Federation, but to the Trades Union Congress, remains to be seen; but it can have little practical force until the question of hours has also been settled between the owners and the South Wales Miners' Federation. On the Cardiff coal market business has continued to centre mainly in foreign coals, which have arrived in large quantities. There has recently been an advance in the prices of Continental coals, but those imported from the United States, the chief source of supply, remain unchanged. The pressure of the import business has compelled the Great Western Railway Company to take action to relieve the dock sidings of colliery wagons, and a rent of 6d per day per wagon has been imposed. A large number of wagons have accordingly been removed.

Our Sheffield correspondent writes:—Outcrop coal is coming forward in excess of demand, but foreign coal is dearer, and local firms are only using small quantities for special purposes. During July 110,000 tons of German and 47,000 tons of American coal was delivered at the port of Hull. There has not yet been any curtailment of public gas and electric power, and there is plenty of gas coal available.

IRON AND STEEL.

The following is extracted from the weekly report issued by the London Iron and Steel Exchange:—Reports are of poor trade and difficult conditions. Although the majority of the lighter finishing works are able to obtain sufficient coal to carry on with, a scarcity of semi-finished material has developed. British steel makers have been almost entirely dependent upon supplies from abroad, and not only have quotations steadily advanced within the last week or two, but the surplus which the Continental works have available for export seems to have been booked up, with the result that many British works are finding increasing difficulty in continuing production. The uncertainty as to when the British works will be able to resume deliveries has caused a number of orders which had been held up to be sent abroad. Continental works are also experiencing difficulties in trading owing to the fluctuations of the franc exchange, and a number have withdrawn from the market. The actual volume of business which has passed in semi-finished material has been small, and there seems a general shortage of orders from most of the export markets.

Our Middlesbrough correspondents' report, dated August 12th, is as follows:—Pig-iron: There is no change in the position. Business has virtually ceased, as there is so little Cleveland iron for disposal. Makers can command their own price for what remains. No. 3 Cleveland G.M.B. is still quoted 90s per ton f.o.t. works. East Coast hematite has also become very scarce, but the quotation for mixed numbers remains at 81s per ton. Manufactured iron and steel: There is no new feature, and quotations are

unchanged as follows:—Steel ship plates, £7 17s 6d; steel ship angles, £7 10s; iron bars, £11; steel rails, £8. Iron ore: Best Kubio is still nominally 21s 6d per ton c.i.f. Tees, but no business is being done.

Our Sheffield correspondent writes: The position of the steel and allied trades continues unsatisfactory. The home demand has fallen off, but the export trade is fairly brisk, and up to the present time the loss of business through inability to deliver has not been considerable, except in the heavy railway steel department. The Sheffield industries as a whole have lived for the last three months on stocks which had accumulated during a period of six months' quiet trade, and buying of the hand-to-mouth order. These have now been cleared at enhanced prices, and makers will restart their milling plants after the settlement of the dispute with no material in hand. There have been similar clearances of tools and various finished products. The very limited demand for tramway layouts is being met with fair promptitude. Re-rollers have curtailed operations until consumers are prepared to pay better prices. There is a moderate demand for steel castings, for which higher prices are being demanded, except from old customers. The scrap trade is dead so far as heavy steel is concerned, and there is little or no business moving in pig-iron.

Our Glasgow correspondent writes as follows:—Pig-iron stocks are being rapidly reduced, and holders are standing out for higher prices for the available supply. Foundries are still at work, and in some cases are well provided with foreign pig and able to continue operations with imported fuel. In the steel trade the situation shows no change. Inquiries are few, and orders placed for execution after normal supplies of coal are available are being accepted by the heavy steel-makers on the condition that delivery be given in rotation. A fair tonnage has been booked since the stoppage, and when work is started again there will be a busy period until all accumulated orders have been overtaken. Advanced prices are demanded, in anticipation of higher costs after resumption, but in some instances works are willing to book orders at the agreed rates. The bar iron and sheet

THE COTTON TRADE.

LIVERPOOL, August 12, 1926.

The United States Agricultural Bureau report was issued on Monday evening, August 9th, and gave a condition of 69.8, indicating a crop of 15,621,000 bales. It was further estimated that should the conditions be the same as in 1924-25 the crop would be 17,510,000 bales, but should they be unfavourable, as in 1921, 1922, and 1923, a production of 14,425,000 might be expected. The figures came as a surprise, and a decline of about 30 points was immediately registered. Favourable weather continues over most of the belt, and though the earlier reports spoke of poor fruiting and some insect damage, no complaints are now being received. As the "carry over" from last season is estimated at between 5,000,000 and 6,000,000 bales, there should be enough cotton to meet all requirements next season. There has been a better demand on the spot, sales for the week 6th to 12th (inclusive) being 33,000 bales. Of these 17,640 were American, 2,850 Brazil, 5,000 Peru, 2,350 Egyptian, 4,330 African, 600 East Indian, and 230 sundries. Imports for the same period were 40,877 bales, of which 6,690 were American, 7,357 Brazil, 17,886 Peru, 393 Egyptian, 3,130 African, 5,388 East Indian, and 33 sundries. Quotations to-day are Mid-American, 9.36d; Egyptian Sakel, 15.25d; uppers, 11.90d; Brazil fair, 9.36d; Peru G.F. mod-rough, 11.50d; smooth, 11.11d; Tinnivelly, 8.40d; East African G.F., 10.75d; and Mid-West African, 9.06d.

MANCHESTER, August 12, 1926.

Business has been unsettled by the easier tendency in raw material rates, and very few buyers have been prepared to operate with any freedom. Sentiment with regard to future values remains bearish, and there is a disposition to adopt a waiting policy. Cloth inquiry for India has covered a wide range of goods, but not more than a scattered business has been done, most of the sales being in light fabrics and fancies. Transactions for China have been quite isolated. For the Near East and South America only retail lots have changed hands, but a fair demand has been met with for the colonies and the home trade. In the American yarn market the feature of interest has been the publication of the first list of basic prices, which are to come into operation on Monday next, and are about a halfpenny per pound above market rates. Demand has been rather better, some users having indulged in a certain amount of speculative buying. Limited activity has taken place in Egyptian spinnings.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Generally the market is better, as a result of some good sales of raw wool, both in the bale and in matchings. Although the bulk of the buying has been done for export, some fair weights have changed hands on home account, several comb-spinners being compelled to purchase to keep their combs running. The market wears a very cheerful aspect, most firms being satisfied that con-

ditions are better than they expected during the holiday month. The beginning of the improvement is really traceable to the buying on Russian account, and very considerable weights of good merinos have been purchased both in wool and tops. Home spinners also have found themselves in a position to take in more tops, both crossbreds and merinos, after receiving more spinning particulars. A considerable turnover has been effected in British fleece wools. Boston has purchased fair weights of super-Shropshires, good Midland Counties half-breeds, lustre hogs, and also Scotch pulled haslock. Nails, laps, and wastes do not show any change, and these are rather slow but firm in price. The condition of the spinning and manufacturing end of the trade leaves much to be desired, and although there is no falling off in the total machinery running, there is plenty of leeway to make up before it is possible to run combs, spindles, and looms fully. A fair export trade is being done in heavy overcoatings across the Atlantic, but there is nothing like the same weight of business with the Far East or even with South America.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The event of the week is the receipt by Dalgety and Co., Limited, of a cable from their Sydney office giving statistics regarding last season's Australian and New Zealand clips. The cable is as follows:—

	PRODUCTION.		Increase.
	1924-25.	1925-26.	
Bales.	Bales.	Bales.	Bales.
Australia	2,094,880	2,377,866	282,936
New Zealand	591,674	585,910	15,764
Totals	2,686,554	2,963,776	277,222
↑ Decrease.			
	SALES.		Increase.
	1924-25.	1925-26.	
Bales.	Bales.	Bales.	Bales.
Australia	1,587,750	2,655,334	67,584
New Zealand	462,795	491,582	28,787
Totals	2,050,545	3,146,916	96,371

* The sales for 1925-26 include 530,942 bales carried forward from the previous season.

The amount realised for 3,146,916 bales sold last season was £65,980,862, and for 2,050,545 bales sold in 1924-25, £69,083,182. The Australasian average per bale for the 1925-26 season is given as £20 19s 4d, and the average per lb as 16d, against averages of £33 13s 10d per bale and 24.7d per lb for the 1924-25 season. The Australian averages were £21 14s 9d per bale and 16.75d per lb, and the New Zealand averages £16 16s 2d per bale and 11.75d per lb.

In considering the above figures we may ignore entirely the 550,000 bales of old wool which were carried over on July 1, 1925. That wool was grown in the previous wool year, and, therefore, does not affect actual production, which is what chiefly interests the trade. The remarkable thing is that a record production and a big carry-over should have been got rid of during the past wool year without values being greatly affected. It speaks volumes for the consumptive capacity of the trade that over 3,000,000 bales of wool should have been purchased. The whole of last year's clip and a big carry-over of the old having been disposed of, the auctions which open in Sydney on August 30th will see the beginning of the sale of the new clip in good earnest. We are glad to observe that the trade is looking forward to this event with interest, though it would probably have been as well had the auctions begun a little later, and given France time to see where the franc was to be stabilised and England time to settle her coal troubles. Selling brokers in Australia, however, will doubtless adjust their programme to European conditions, and any giving way of values will lead to a very small offering until financial and other conditions become more normal.

HIDE, LEATHER, AND ALLIED TRADES.

The hide market remains steady, with a firm tendency, and best ox hides sold from 5½d to 3½d per lb in Bermondsey on Thursday, seconds making 5½d to 7½d. One or two trifling advances were made on last prices which, though unimportant, showed the market to be firm. Best calfskins made from 6½d to 11½d, lambskins from 2s to 5s 8d, and pelts 4s 3d to 6s 6d each. The imported hide market is firm, buying from the Continent being very consistent. British tanners continue their policy of reduced input in view of industrial conditions. Best Argentine frigorifics are now offered at 7½d and Montevideoes at 8½d. Dry hides are steady, and B.A. Americanos are selling from 10½d to 11d. The Chicago market is cabled as quiet, with best native steers selling at 15 cents. The demand for sole leather remains quiet, although with the resumption of work in the shoe factories inquiries have been more frequent. Manufacturers are still asking for a light bend at, say, from 18d to 20d per lb, but the trade with repairers is sufficient to keep stocks of heavy and medium bends at a higher price well within the compass of tanners, and stocks are low. Sampling in upper leathers is going forward for the autumn trade, business running chiefly on coloured glacé kid and willow calf. Shoe manufacturers are not very busy, makers of artisan boots being very short of orders. Samples of the Russian boot are now before buyers, but so far few orders have been placed.

VEGETABLE OILS AND OILSEEDS.

Markets generally have had an easy tone this week, and prices have declined. Linseed oil has been in poor demand from consumers, and with some profit-taking by speculators values have fallen to about £34 10s per ton, naked, ex Hull mill, for August delivery, with later positions at a slight premium. Cotton oil has also been a dull market, with declining values, crude Egyptian now offering at £37 10s and ordinary refined at £40 per ton. Palm kernel oil is lower at £41, and in common with other soft oils is in small demand on both home and export account. In the oilseed section, Plate linseed sharply declined to £16 10s, which was accepted for seed on spot and on passage to Hull, and £16 15s for September-October. Indian linseed has offered more freely, and fair purchases have been made by crushers of Calcutta at £18 10s to £18 12s 6d, according to date of shipment. Egyptian cottonseed, in the absence of buyers, has declined to £9 7s 6d on passage and £9 10s August loading, but little or no trade is reported. Soya beans, too, meet with no demand from this side, and, while imports have fallen away, large quantities of soya oil in bulk continue to come to hand.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—British refined unaltered, moderate demand. Imported sold quietly at slightly easier prices with regard to Continental granulated. Czecho, also Dutch J, on spot, sold, 27s; white Mauritius, 26s 1½d to 26s 6d. Forward positions more freely offered, and rates against sellers. Czecho granulated, ready and August, 14s 10½d; September, 14s 11½d; November-December, sold, 14s 9½d, f.o.b., Hamburg. Dutch J, ready, sellers, 14s 10½d; November-December, 14s 11½d, f.o.b., Rotterdam. Polish crystals, prompt, 14s 3d, f.o.b., Danzig. Belgian crystals, prompt, sold, 14s 6d, f.o.b., Antwerp. Canadian granulated, August-September, to exporters, 15s 9d, c.f. and i. terms. Cuban, basis 96 per cent., more freely offered, and easier, at 11s 9d, c.f. and i. terms, U.K., August-September shipment. White terminal eased slightly, with moderate dealings. New York market weak, in view of the September liquidation. August delivery, quoted 13s 6d; December, sold, 14s 4½d; January, 14s 7½d; March, 14s 10½d; May, 15s 2½d to 15s 0½d.

COFFEE.—There was a moderate inquiry for spot parcels, and prices for most descriptions ruled steady. Of East India, Mysore sold, 156s to 157s for medium sizes. Vera Paz, bold, 13s to 15s 6d; peas, 12s 6d to 16s. Future delivery market firm but quiet.

COCOA.—Only small transactions in spot parcels on about former terms. Accra F/F, November-January, sold, 44s, f.o.b.

TEA.—Indian auctions amounted to 21,400 packages. Brisk competition prevailed, except for medium descriptions, and while these were mostly in buyers' favour, prices otherwise ruled firm to slightly dearer. Pekoe sold, 1s 4½d to 1s 9½d; orange, 1s 4½d to 1s 6d; broken orange, 1s 4½d to 2s 9½d. Ceylon sales of 29,000 packages soon cleared to brisk and well distributed competition at 4½d to 4d per lb advance. General run of quality marked a decided improvement. Pekoe sold, 1s 3½d to 1s 8d; broken orange, 1s 5½d to 1s 11½d per lb in bond. Only a small business arises in new season's China, but prices are fully steady. Some fine Keemuns sold, 3s 1d to 3s 3d per lb. Java and Sumatra auctions of 11,700 packages experienced a strong demand, and prices disclosed an irregular advance of 4d to 1½d per lb. Pekoe sold, 1s to 1s 4d; broken ditto, 9d to 1s 5½d; orange, 1s 2½d to 1s 7½d; broken orange, 1s 2½d to 1s 9½d; pekoe souchong, 1s 2½d to 1s 3½d per lb in bond.

RICE.—All Eastern grain continues firm, due to sustained absorption in local Burmese markets. European demand, however, is quiet. Two stars, spot, London, 16s 9d; forward, 16s, c.f. and i., London. Italian and Spanish slow, unchanged. Beans and peas remain very quiet. Japanese peas, September-October, 25s 9d cwt, c.f. and i. A large line of Rangoon bran sold by Hamburg interests to Liverpool, September-December shipment, at 10s per ton, ex ship terms.

SPICE.—Pepper still quiet, and prices weak. Black Singapore, spot, quoted 9½d; May-July, 8½d; August-October, 8d; October-December, 8½d. Lampung, spot, 9d; May-July sold, 7½d to 7½d; August-October quoted 6½d; October-December, 7½d. Muntok, spot, 1s 3d;

FISCAL AGENT

First National Bldg.
Boston

50 Pine Street
New York

May-July, 1s 2½d; October-December, 1s 0½d. Pimento, spot, 6½d. Zanzibar cloves, 9½d to 9½d lb. Tapioca steady, quiet. Singapore flake, August-September, to Havre, quoted 16s. Penang seed, ditto, to London, 16s 6d. Sago flour dull, and most positions forward quoted 15s cwt, c.f. and i., U.K.

FRUIT (Dried).—Currants market quiet, but prices firm for most descriptions. Amalia, quoted 30s to 31s; Gulf, 32s to 35s; Pyrgos, 29s to 30s; Vostizza, 40s to 53s; Patras, 31s to 33s; Australian, 38s to 48s. Sultanas quiet. Smyrna, September shipment, 47s; Australian, new crop, 68s; South African, bleached, 70s to 76s; Dates: Home trade slow, but there is a fair inquiry on export account. Siar, quoted 11s 3d to 11s 9d; Khadrowie, 15s to 16s; Hallowie (cases), 22s 6d to 25s. Raisins quiet. Satisfactory reports are to hand regarding new crop Valencias. South African, 36s to 42s. Lexias, new crop, quoted 40s to 45s. Evaporated fruits quiet, both spot and forward. Californian apricots, fancy, 140s; Australian, 125s to 135s; South African, new Royals, best, 140s. Plums, Californian, new, 20/30, quoted 105s; 50/60, 52s; 90/100, 37s; Oregon, 30/40, 63s; 35/45, 55s. Pears, Californian, extra choice, 72s 6d; fancy, 82s 6d; Lake County, fancy, 90s. Apple rings, Californian, extra choice, 55s to 60s; prompt shipment, 48s; Canadian, spot, 53s per cwt.

CANNED GOODS.

CANNED FISH.—Sardines in quiet request, with spot supplies still limited. Portuguese, ½'s, quoted 4s 2d to 6s per dozen tins. Salmon in moderate demand at about late rates, with supplies adequate. Red, tall, 1 lb, 60s to 64s; tall pink, 26s to 26s 6d; ½ lb, pink, 39s to 41s. Lobsters firm on scarcity. Best ½'s, quoted 157s 6d to 162s 6d, and ¼'s, 92s 6d to 95s. Japanese crab firm, and arrivals are quickly absorbed. Crayfish in limited supply.

CANNED FRUIT.—Trade continues quiet, buyers showing little disposition to operate forward. Californian Bartlett pears, 24-2½'s, quoted 13s to 14s; seconds, 10s 6d to 11s. Californian peaches, choice, 11s 6d to 12s 6d; standard, 10s 6d to 11s 6d; seconds, 9s 6d. Californian apricots, choice, 12s 6d to 13s; standard, 10s to 11s; seconds, 9s 3d per dozen tins. Pines in quiet request on spot, but forward prices maintained. Italian tomatoes somewhat neglected.

CANNED MEAT.—Market dull, apart from a steady demand for Danish lunch tongues, at firm rates. Corned beef 6's quoted 38s to 46s, as to quality. Danish lunch tongues range from 122s 6d to 132s 6d; American quoted 135s, with best at 140s to 142s 6d. Ox tongues firm. Cooked boneless hams, Danish, sell readily at 1s 8½d per lb, for cases of six tins.

CONDENSED MILK.—Market quiet. Machine-skimmed ranges from 11s to 12s. Full cream, 20s to 25s. Full-cream evaporated: A good trade is reported at prices ranging from 19s 6d to 21s, according to quality.

HONEY.—New Zealand continues in steady demand, but other descriptions slow. New Zealand quoted 50s to 85s; Australian, 40s to 50s; Jamaica ranges from 37s 6d to 50s; Haiti, 37s 6d to 48s; Cuban, 37s 6d to 48s per cwt.

The discount market has been much firmer, the minimum working rate for three months' bills being $4\frac{1}{16}$ per cent., and in midweek $4\frac{1}{2}$ per cent. and higher was quoted. Yesterday's Treasury bill allotment was made at an average of about $4\frac{1}{16}$ per cent.

	Aug. 20, 1926.	Aug. 13, 1926.	Aug. 6, 1926.	July 30, 1926.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	$\frac{1}{4}$ (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	$\frac{1}{2}$ (Dec. 3, '25)
Discount (Call)	3	3	3	3	$\frac{1}{2}$ (Dec. 3, '25)
Houses' Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$\frac{1}{2}$ (Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	..

Thursday's Bank return showed an increase of £276,400 in the stock of coin and bullion, and a reduction of £768,100 in the circulation, the Reserve being thus £1,044,500 higher, with the proportion at 27.3 per cent. Government securities were reduced by £2,477,700, while Other Securities were £22,600 higher, and as Public Deposits expanded by £5,934,700, Other Deposits were £7,334,300 lower. Currency notes were reduced by £3,217,800 to £290,959,000, which includes £1,297,500 for notes called in, but not yet cancelled. The fiduciary issue is £233,411,600, or £14,490,900 below the maximum for 1926.

NEW YORK MARKETS.

The share market, which has a tired appearance, is reacting, despite the efforts of the pools to convince a sceptical public that a higher Bank rate does not signify the end of the bull swing. Meanwhile indications of a continued high rate of activity in trade reinforce expectations of a further moderate firming up in money rates towards the end of the year. Call money is still easy, partly because brokers have turned to the time money market. The Bureau of Labour index number shows a decline of 1 per cent. in prices in July at 151, the chief declines being in agricultural products. Industrial commodities are fairly steady. The New York Reserve Bank's discounts decreased sharply as a result of the higher discount rate. A large gain in gold reserves, and a moderate decline in deposits, resulted in an advance in the Reserve ratio to 82.4 per cent. The ratio for the system is slightly lower at 75.1.

THE STOCK MARKETS.

Stock Exchange markets have shown an improving tendency, but business continues to be on a small scale. Gilt-edged prices have drooped, owing to the hardening of money rates, and in the foreign market French bonds have fluctuated with the franc. Home rails have again risen on anticipations of an early end to the coal dispute, and Argentine rails have been good on dividend prospects. The rubber share market has been fairly firm, but oils have aroused no public attention. Tobaccos have been more active, and there was a rally in the iron and steel group, but industrials have mostly been quiet. A feature in the Kaffir market was an abrupt fall in Sub-Nigels after the recent rise, which resulted mostly from Cape buying. Rhodesians are slightly better, but attention in the mining markets has largely been devoted to tin shares on the rally in the price of the metal.

THE COMMODITY MARKETS.

The slightly better outlook in the coal situation was reflected in a number of markets during the early part of the week. A number of tentative inquiries have been made for fuel supplies after the dispute, but collieries are as yet indisposed to quote. Activity in the lighter branches of the iron and steel trade is fully maintained at recent levels, though the shortage of home-produced steel is serious. Demand for cotton has been firmer, rates having hardened owing to unfavourable weather reports

from America. Buyers have not taken kindly to the new basic rates adopted by Lancashire spinners, and sales at full prices have been difficult. Trade in wool shows a certain further improvement, reflected in firmer quotations. The advance in raw jute prices, as a result of the interruption of supplies owing to bad weather in India, has not been maintained this week. Wheat prices have slightly declined on quiet trading after a preliminary advance. Sugar is quiet, coffee steady, and tea prices practically unchanged on the week. Rubber is somewhat firmer, forward positions still commanding a slight premium. Among non-ferrous metals tin offerings have been well-absorbed, copper has further improved in value, while lead is quiet but fully steady.

FOREIGN EXCHANGES.

It has been a quiet period in the foreign exchange market, in contrast to the activity of the past few weeks. New York showed a slightly firmer tendency in the first half of the period, but was inclined to sag again during the last two days. From $4.85\frac{1}{8}$ on August 13th, it rose to $4.85\frac{3}{4}$ 31-32 on Saturday, at which level it remained until Wednesday, when it closed at $4.86\frac{1}{32}$. On Thursday it fell again to $4.85\frac{1}{8}$, and opened at that level yesterday morning. In Paris a further marked recovery occurred, but this was followed by a slight reaction. From $179\frac{3}{4}$ on the 13th, the rate fell to $177\frac{1}{2}$ on Saturday. On Monday it rose slightly to $178\frac{1}{2}$, but on Tuesday fell to $176\frac{3}{4}$, and on Wednesday to $169\frac{3}{4}$. This movement is believed to have been due to official intervention, and there was some speculation concerning extensive purchases of francs on the New York market. On Thursday the Bank of France report, showing a reduction in the note issue of nearly 613 millions and of 350 millions in the advances to the State, brought the rate down further to $166\frac{3}{4}$. In the afternoon, however, in the absence of American buying of francs, the rate rose to $172\frac{3}{4}$. Yesterday the opening rate was $172\frac{3}{4}$. The discount on forward rates is slightly wider at $3\frac{1}{2}$ per month. Brussels has followed the same movements. From $183\frac{1}{4}$ on the 13th it fell to $181\frac{3}{4}$ on Saturday, $180\frac{1}{2}$ on Monday and $175\frac{3}{4}$ on Wednesday. On Thursday evening and yesterday morning it was quoted at $178\frac{3}{4}$. On forward rates the discount remains about $2\frac{1}{2}$ per month. Italy has fluctuated only within narrow limits during the week. From $148\frac{1}{4}$ on the 13th, the rate fell to $147\frac{3}{4}$ by Wednesday, but rose again to $148\frac{1}{4}$ on Thursday. Madrid fell from 31.86 to 31.35 over the week-end on the news of the Pact of Madrid, but subsequently reacted to 31.62 on Thursday owing to General Primo de Rivera's speech on the interest of Spain in the future of Tangier. Yesterday the rate was better again at 31.55 . Of the gold exchanges, Amsterdam remained about $12.10\frac{1}{2}$ until Thursday, when it rose to 12.12 . Yesterday it opened at $12.11\frac{1}{4}$. Switzerland also rose from $25.14\frac{1}{2}$ to $25.15\frac{1}{2}$ late in the week, and Stockholm from $18.13\frac{3}{4}$ to $18.15\frac{1}{2}$. Oslo is steady around $22.15\frac{1}{2}$, but Copenhagen rose from 18.27 to 18.29 . Helsingfors, however, fell from 193 to $192\frac{3}{4}$. Berlin is slightly weaker at $20.41\frac{1}{4}$, and Vienna has risen from 34.39 to 34.42 . Prague is steady at 164 and Warsaw at 45 . Budapest has fallen from 27.85 to 27.75 . In the Balkans, Bucharest has improved from 10.60 to 10.45 . In the East the rupee is steady at 15 6-164d, but the yen has advanced again from 15 11-21-32d to 15 11-25-32d, so that it is now within 4 per cent. of parity. The silver market has been quiet, but prices still have a weak tendency. Hongkong has fallen from 25 23d to 25 2d, and Shanghai from 25 93d to 25 93d. In South America Rio is unchanged at 7 19-32d, but Buenos Aires has improved from $45\frac{1}{8}$ d to 45 15-32d, and Monte Video from $49\frac{1}{2}$ d to $49\frac{3}{4}$ d. Valparaiso is steady at 39.40 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 14th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	4,980	From Revenue	12,474
Interest, &c., on Debt	1,586		
Sinking Fund	391		
Decrease in debt	5,364		
Increase in Balances	153		
	12,474		12,474

The Revenue for the week amounted to £12,474,300, as compared with £12,916,000 in the corresponding period last year. Customs were higher at £1,546,000, against £1,484,000, but Excise was lower at £1,280,000, against £1,535,000. Property and Income-tax brought in £4,016,000, as compared with £4,946,000, while Super-tax amounted to £420,000, as compared with £640,000. Ordinary receipts were lower at £507,300, against £584,800, but Special Receipts brought in £1,380,000, against £514,200.

The week's operations reduced the National Debt by £5,364,600, and caused the following changes:—

(000's omitted.)	
National Savings Certificates ..	£ 100
Public Department Advances ..	£ 11,750
	£ 11,850
Treasury Bills	£ 4,867
Sundries	£ 1,618
	£ 6,485

The floating debt was reduced by £6,905,000 to £764,566,000.

FINANCIAL YEAR, 1926-1927 (April 1 to August 14, 1926.)

£		£	
Total Expenditure ..	303,881,300	Raised by Revenue ..	239,692,566
		Decrease in Balances ..	3,957,880

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE SEVENTH ASSEMBLY OF THE LEAGUE.

It is one of the minor misfits in the political calendar that the annual Assemblies of the League of Nations, which take place at Geneva in September, should follow close at the heels of what in England, at any rate, is known, for good reasons, as the "silly season." During the "silly season" newspapers are full of such things as Test Matches and Kitchener myths, and this year the country's mind is divided between holiday-making and one of the gravest possible of domestic concerns in the shape of the coal dispute. All the more, therefore, is this "silly season" of 1926 a "close season" for the British diplomatist—a season in which that stiff-necked bird can venture upon headstrong and contrary flights with less danger than usual of being brought to earth by a well-aimed leading article or Parliamentary question. This is unfortunate, since it is well established that the secretary bird, like other game, flies best when he knows that he is a target for the marksmen—of course, under the fair rules of the game, which the political critic, like the sportsman, violates at his peril. This year, however, it is particularly undesirable that the British Secretary of State at Geneva should be immune from the fire of British public opinion. The business on hand in September is nothing less than the admission of Germany to membership in the League, and the individual on whose action the issue of this vitally important matter will largely depend is Sir Austen Chamberlain, who last spring, in this very matter, deliberately and obstinately set British public opinion at defiance when it had declared itself with a vigour and a unanimity which were almost unprecedented over a question of foreign policy. Sir Austen's conduct then was one of the causes of the tragedy of March 17th, when Germany, after having fulfilled all the conditions required of her, found her admission vetoed

by the vote of Brazil in the League Council. Brazil and Spain would hardly have adopted the intransigent attitude which they did adopt if they had not been confident of the British as well as the French Government's "benevolent condonation" of their action. The consequence was that the promise of Locarno was disappointed at Geneva. The hopes of European conciliation and recovery, which had brightened so wonderfully in the autumn, became overclouded in the spring, and the general situation of Europe—economic as well as political—suffered a severe setback, from which it has still to recover. The task of the Assembly this autumn is to undo the work of last March and to restore and carry forward the good work done at Locarno. A second failure would be incalculably disastrous. Yet we have no assurance that Sir Austen Chamberlain has taken to heart either the pronouncement of public opinion or the consequences of his own almost unconstitutional contumacy in ignoring it. However silly the present season may be, and however much the coal dispute may tend to preoccupy the last serious corner of our mind, it is essential that public opinion should be concentrated once again on the European issue, and that when Sir Austen goes to Geneva it should be impossible for him to profess any doubt as to the mandate which his countrymen have given him.

The great question is whether Germany's admission will be frustrated once more. If we compare the position as it is now with what it was in March, we shall note with relief that certain of the difficulties have been at least diminished. On Lord Cecil's initiative, the Committee which has met to frame proposals for the future composition of the Council has suggested an intermediate class of membership which should satisfy all legitimate aspirations of that new intermediate class of State—halfway between Great Powers and small countries—which has once again become prominent on the map as a result of the war. It is proposed that besides permanent seats for Great Powers and annual seats (without re-eligibility) for small States, there shall be three-year seats, the occupants of which shall be re-eligible continuously. This plan, together with the fruitful idea of group or regional seats to be occupied by different members of the same group in rotation, ought to clear the ground if the issue depended solely on reasonableness and equity. In politics, however, justice and common sense have always to reckon with self-interest and *amour propre*, and without taking these other factors into consideration it is impossible to make any practical forecast.

Let us review the position in concrete terms. What, to begin with, is likely to be the attitude of France? Here, again, we may note with satisfaction that relations between France and Germany have improved. In Germany there has been a remarkable and commendable absence of *schaden freude* over the fall of the franc, and even a tendency towards positive sympathy with the financial misfortunes of a fellow Continental Power—a tendency with which we do not propose to quarrel, though it has cropped up in reactionary quarters, and has a distinctly "anti-Anglo-Saxon" bearing. Again, there have been really serious discussions, with a view to co-operation, between the French and German iron and coal interests, with Belgian and Luxembourgish participation. For the moment the negotiations have been blocked, but, without undue optimism, we may look forward to their early renewal, and may count, in the not distant future, upon the accomplishment of a piece of economic statesmanship which is absolutely essential to the reconstruction of Europe.

France, then, is unlikely this time to act obstructively as far as her own interests are concerned. Last spring, however, M. Briand acted indirectly by encouraging other parties to cause the obstruction which he was unwilling to cause by his own direct and overt action, and it is not so easy to call off the hounds as it is to unleash them. What, then, will be the attitude this time of Brazil, Poland and Spain? Brazil, by her resignation, has put herself out of the picture, and, after the unfortunate stand which she took last spring, this was the least undignified course which she could adopt. We need not take Brazil's resignation to heart or resign ourselves to the belief that it will be permanent. The League of Nations is an institution which Latin American countries cannot afford to boycott,

because it offers them the only possible security against the hegemony of the United States. At the Williamstown Institute of Politics the other day M. Nicholas Polétis rubbed this into a North American audience, and Latin Americans hardly need prompting on the subject.

What, then, of Poland? Last March—be it said to her credit—Poland maintained a "correct attitude" which was in welcome contrast to the attitude of Brazil. Since then any Polish claim to a permanent seat has been weakened by Marshal Pilsudski's *coup d'état*. In the circumstances, Poland is likely to be content with one of the triennially re-eligible places on the Council, in the proposed new category.

But what of Spain? Spain, after a century of torpor and aloofness, has shown, since the war, an increasing desire to play an active part on the international stage—and no one, again, will quarrel with this so long as she does not block the general reconstruction of Europe in order to extort from her neighbours a rank and title which—whatever her claims on grounds of lineage—are not warranted by her present position in the European Commonwealth. Will Spain, this September, persist in her intransigence, or will she forego her unwarrantable aspiration to a permanent seat and content herself with an intermediate position in the same category as Poland, where she properly belongs? Spain's attitude is the uncertain and the dangerous factor in the situation. The collapse of Abdul-Karim and the subjugation for the first time of the entire Spanish zone in Morocco have elated her (albeit these military triumphs have been won by French more than by Spanish arms). The new and rather ominous treaty with Italy has assured her of powerful backing, and the prompt revival of her claim to Tangier shows that she is in an aggressive mood. Will this be her mood at Geneva, and, if it is, how will France react to it? Will she, perchance, seek to placate Spain by renewing her support of Spain's claim to a permanent seat on the League Council, in the hope that this may incline Spain to be more accommodating towards French policy in North Africa? We cannot pretend to prophesy either what Spain will do or how France will react to what she does do; but we can declare with confidence that the action of both the Marquis de Estella and Monsieur Poincaré will be profoundly influenced by the action of Sir Austen Chamberlain; and that, if we want Sir Austen to carry out the British nation's wishes in the matter, then we must remind him vigorously what those wishes are.

COAL: A NEW DEADLOCK.

THE first essential step towards a settlement of the coal dispute was taken on Tuesday, when a delegate conference of the Miners' Federation authorised the executive to open up negotiations with the colliery owners and the Government, with the sole proviso that such negotiations must be of a national character, and not entered into by districts separately. This final breach with the "not a penny, not a minute" policy was made only after protracted discussion, during which the weight of the executive's influence was thrown on the side of the proposed resolution. The adhesion of the delegates from Scotland—an area which maintained effective neutrality during the referendum on the Church's proposals—was apparently the decisive factor, a card vote eventually showing 428,000 in favour of the new policy and 360,000 against, after an earlier proposal to limit the executive's powers to a settlement involving "a seven-hour day, a national agreement, and a national minimum wage" had been dropped.

Contrary to expectation, the executive proceeded to make their first approach to the Mining Association, and not to the Government. The outcome of a round-table conference held on Thursday afternoon went far to endorse the views of those who believe that the two parties, left to themselves, will never reach an acceptable agreement. The *communiqués* subsequently issued by both sides do not by any means give an identical version of what occurred, but apparently the miners attempted to strike the right note at the outset, Mr Herbert Smith stating that they had come "to see how far they could now agree, and not necessarily to emphasise the points

of difference." Unfortunately Mr Smith proceeded to enunciate exactly those points on which agreement was likely to be most difficult. The miners, he declared, were convinced that no lengthening of the working day was called for, and that a national wage agreement was essential. The level at which rates should be fixed under such an agreement was to be decided "after a consideration of possible measures for the reorganisation of the industry," with possibly certain assistance from the Government in the interim. The owners' rejoinder was a blank refusal to consider such a programme, which they declared to be merely a restatement of the thesis which the Miners' Federation had been maintaining for the previous 15 weeks. The Association's spokesmen would seem, in their turn, to have reiterated their former demand for longer hours, district agreements, and, virtually, "no political interference." Neither side can be wholly absolved from a share of responsibility for the ensuing deadlock. The miners' blunt statement was, to say the least, untactful, but an even more serious feature was its ambiguity on the all-important point that the executive were, for the first time, empowered to discuss a possible modification of wage rates. The owners, again, would seem to have lacked the desire to get down to the terms which the miners would ultimately accept, as distinct from their bargaining programme, and their abrupt breaking-off of the discussion has certainly left an impression in the public mind that they are standing out, at the present advanced stage of the dispute, for a dictated peace which would imply complete surrender by the Federation.

Matters clearly cannot be left in this state. The miners' representatives have already notified the Government of the result of their meeting with the Mining Association, and are likely to call on Mr Baldwin to use his good offices, and their appeal is likely to carry the more weight if they can bring themselves to admit in plain terms what they have been broadly hinting in recent speeches—that they are willing to make tangible concessions in the matter of wages. As regards hours, they can make out a strong case, since not only did the Royal Commission pronounce strongly against an eight-hour day, except by mutual agreement, but the owners themselves were reluctantly persuaded by the Prime Minister to accept that verdict at the end of last April. The Federation may further argue that the owners' insistence on district as opposed to national settlements is not merely against the spirit of the Commission's recommendations, but needlessly doctrinaire, since the district offers recently made have all, in fact, provided for a minimum addition to basic rates of 20 per cent. Mr Churchill's speech on the coal question at Swansea this week was, perhaps intentionally, vague on many crucial points, but it left the impression that the Government might still be prepared to stand by a settlement on the broad lines of the Report. On the question of possible financial assistance Mr Churchill was sufficiently explicit. Although no further subsidy can be contemplated, the £3,000,000 set aside in the last Budget—or at least the residuum after financing recent importations of foreign coal—is still available to enable workers in uneconomic pits, the closure of which was foreseen in the Report, to move to other areas and other employment.

THE DIRECTION OF OVERSEAS TRADE.

WITH the July trade returns, some of the features of which were referred to in our last issue, are given the usual figures, showing the countries of origin of imports and of destination of exports and re-exports for the second quarter and for the first half of the year. It may be recalled that in the first six months of the year imports showed a decline of £75 millions in comparison with the first half of 1925, British exports a decline of £54½ millions, and re-exports a decline of nearly £11 millions. From the tables which follow it will be seen that while the decline in imports occurred principally in trade with extra-European countries, more than 66 per cent. of the falling-off in British exports was in trade with the Continent. The first table shows imports from and British exports to the principal countries of Europe for the first half of each of the past three years and for 1914:—

JANUARY TO JUNE. (000's omitted.)									
	Imports from				Exports to				
	1914.	1924.	1925.	1926.	1914.	1924.	1925.	1926.

	148,808	187,838	221,272	206,043	88,940	133,869	130,098	94,794	

The decrease in imports from the Continent, the whole of which occurred in the second quarter of the year, is largely accounted for by France and Switzerland. In the case of the latter the drop of 50 per cent. is probably due to a large extent to the fact that last year's figures, especially in the second quarter, were swollen by goods imported to forestall the new duties which came into force in the second half of the year. The same explanation probably applies in part to the French and Italian figures, which, as may be seen from the table, increased sharply in the first half of 1925. Imports from Germany, on the other hand, increased by nearly £3 millions, and have almost doubled in two years. The decline in exports is general, and most pronounced in the case of Germany, France, Italy and Holland. Russia is an exception with a small increase.

The next table shows the figures for the United States and other foreign countries:—

JANUARY TO JUNE. (000's omitted.)									
	Imports from				Exports to				
	1914.	1924.	1925.	1926.	1914.	1924.	1925.	1926.	
United States	70,447	113,664	129,530	101,343	17,769	26,291	26,663	25,085	
Argentina	18,004	37,303	36,149	35,089	9,645	13,232	14,473	12,821	
Cuba	2,724	7,776	6,693	2,123	890	1,505	1,456	1,152	
Brazil	5,183	3,502	2,653	2,297	4,034	6,156	8,350	6,683	
Mexico	985	2,666	3,522	2,552	389	1,057	1,276	1,436	
Japan	2,047	3,574	4,135	3,986	5,146	14,343	9,910	7,569	
Persia	...	3,919	3,672	3,750	...	815	1,345	959	
China	1,976	5,507	6,892	5,531	8,445	10,822	8,191	9,259	
Peru	1,180	3,374	3,420	2,635	706	1,299	1,316	1,155	
Chile	2,996	6,360	7,760	5,171	2,569	2,477	2,921	3,057	
Uruguay	1,564	3,582	2,867	2,980	1,127	1,573	1,615	1,314	
Colombia	...	893	944	828	...	1,111	1,913	1,874	
Turkey in Asia	1,648	526	687	701	2,877	454	504	427	
Egypt	11,858	18,680	20,051	15,127	4,936	7,298	8,290	6,375	
Other Foreign Countries	11,835	10,028	10,969	10,440	13,744	6,590	7,376	6,329	
	132,447	222,064	239,944	194,553	72,277	94,823	95,019	85,512	

Substantial declines in imports are shown by the figures for South American countries and Egypt, the latter being probably partly accounted for by the fall in the price of Egyptian cotton. Imports from Persia show a slight increase. Exports to the United States fell off only slightly, and, as will be seen from a later table, re-exports to that country were more than maintained. With the substantial drop in imports, therefore, the adverse visible trade balance with the United States has been reduced by £27 millions, namely, from £88 millions to £61 millions. Exports to China have slightly increased, but elsewhere the decline in exports is general.

The third table gives trade with the Dominions:—

JANUARY TO JUNE. (000's omitted.)									
	Imports from				Exports to				
	1914.	1924.	1925.	1926.	1914.	1924.	1925.	1926.	
Australia	21,431	30,852	42,655	37,876	17,711	28,495	29,871	28,637	
New Zealand	16,068	31,802	37,428	30,861	4,689	9,060	11,117	9,648	
India & Ceylon	22,615	40,548	46,375	36,801	36,676	47,144	47,433	44,871	
Canada	9,899	23,617	27,372	29,111	9,580	13,321	13,652	12,701	
South Africa	7,179	9,446	12,410	10,774	10,830	15,436	14,885	16,174	
West Africa	3,394	6,647	7,303	6,684	3,931	4,571	6,374	6,144	
Straits Settlements	7,134	5,330	6,067	11,015	2,612	4,177	4,722	6,559	
Malay States	833	1,011	1,517	3,517	527	755	1,219	1,219	
West Indies	1,373	2,907	3,319	2,483	1,233	1,724	1,876	1,649	
Irish Free State	22,831	19,309	17,584	17,584	21,050	20,906	17,880	17,880	
Other Possessions	5,536	13,719	13,079	15,254	6,979	14,795	16,806	12,427	
	94,629	188,532	216,328	201,960	94,241	159,773	167,442	157,909	

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
67 Milk Street.

BUENOS AYRES:
99 Florida.

HAVANA:
Pedro Gomez Mena Bldg.

Accepts funds from banking correspondents for investment in designated American Securities, Bank Acceptances, U.S. Government Bonds, etc.

Special Representative:
24, OLD BROAD STREET, LONDON.

The substantial decline in imports from Australasia and India was partly offset by increases in those from Canada, Straits Settlements and Malay States, the price of rubber no doubt playing some part in the case of the last two. Imports from Ceylon, it may be mentioned, rose from £7,465,000 to £9,895,000. Total imports from the Dominions, it will be seen, are substantially higher than in the first half of 1924. On the export side there are increases shown by South Africa and Straits Settlements. In trade with the Irish Free State there is a decline in both imports and exports.

The final table gives re-exports to the principal countries:—

JANUARY TO JUNE.					
Re-exports to	1914.	1923.	1924.	1925.	1926.
United States	18,210,000	17,576,000	11,792,000	14,409,000	14,719,000
Germany	11,396,000	10,389,000	17,972,000	16,237,000	9,782,000
France	6,205,000	10,494,000	9,707,000	10,303,000	12,640,000
Belgium	4,140,000	4,983,000	5,688,000	5,130,000	4,304,000
Netherlands	2,615,000	2,631,000	4,065,000	3,322,000	2,427,000
Australia	...	2,004,000	2,715,000	2,323,000	1,085,000
Canada	...	1,453,000	1,237,000	1,817,000	1,266,000

Sweden	452,000	934,000	985,000	838,000	788,000
India and Ceylon	...	568,000	467,000	629,000	746,000
South Africa	...	668,000	727,000	816,000	758,000
Denmark	261,000	895,000	902,000	865,000	410,000
Norway	272,000	432,000	280,000	367,000	240,000
Japan	108,000	153,000	143,000	141,000	139,000
Russia	4,556,000	612,000	2,766,000	6,512,000	4,280,000
China	...	82,000	109,000	80,000	164,000
Irish Free State	...	1,862,000	5,274,000	5,651,000	5,362,000
Other Countries	10,554,000	7,033,000	7,823,000	6,918,000	6,066,000
	59,276,000	63,864,000	74,128,000	77,449,000	66,599,000

A large part of the decline in the total is accounted for by Germany, the figure having now dropped below the pre-war total. Re-exports to Russia have also dropped, but those to France have increased by over £2 millions.

BANTU AND EUROPEAN.

(BY A SOUTH AFRICAN CORRESPONDENT.)

THE Union is not breaking up yet, and the Union Jack has not been hauled down. Mr Tielman Roos is handing out secession-dope of the old brand to the Transvaal backveld and Natal is responding with vague and rather wild threats of secession from the Union. Labour is striving somewhat dolefully to perform the feat of maintaining the Pact while reassuring its members who are shaken and troubled over the flag question. It is not likely that these signs and portents will mean very much in the long run so far as the British Empire is concerned. The consequences of it all are much more likely to upset the politicians than to dismember the Empire. It is a pretty coincidence that Mr Tielman Roos is Minister of Justice in a Hertzog Cabinet, just as General Hertzog himself was Minister of Justice in a Botha Cabinet before he broke away and went off into the veld to organise the Nationalist Party. The parallel between the situation of 1926 and that of 1912 is not infrequently noted, and the Prime Minister himself must be painfully conscious of it at times.

But the Union will not break up nor will it "secede," whatever that may mean. The presence of the Bantu, over five millions of them, will decide that. For the

Power which uses the despised and lowly things of earth to confound the great and high seems to have placed the Kafir here to set strict limits to the lengths that white disunion may go. The mere fact of his presence in such numbers would be enough, like a sort of defining chiaroscuro. But now that he has begun to move, has become more eager for economic and social advancement, more aware of his own disabilities, and more disposed to organise on orthodox trade union lines, white disunion must be more suicidal than ever. The cause of the black man forced the United States to achieve final unity after four years of bloodshed. In this land, where they are nearly four to one, the Bantu, by their mere existence, must render any policy of white disunion futile, just because the alternative is fatal. It is a realisation of this master fact which leads so many, even among Nationalists, to deplore the blind perversity that would divert the white man's energies into barren and profitless controversies over purely academic issues like the flag question. The discomfiture of the Labour Party shows clearly enough that no political party can hope for long life in South Africa which tries to nourish itself on wind of that description. Ultimately each party will be judged by its attitude towards those great permanent social and economic problems which are constituted by the presence of five million blacks among and around less than two million whites striving to organise the life of half a continent on the lines of Western civilisation.

The South African politician usually runs too close to the ground to be able to see the whole landscape. Sometimes he does not see the native at all; sometimes he sees nothing else. But slowly and surely the insistent, relentless movement of the native mass is giving the native that central and permanent place in all considerations of policy that he must inevitably have. The process of popular education to this end has recently been much stimulated by two events of high importance. One is the publication of the Report of the Economic and Wage Commission, the body which after the passing of the Wage Act last year was instructed to report on the wage and employment conditions in which the Wage Board would have to operate. The other event is the publication of General Hertzog's four Bills, embodying in legislative proposals the heads of the native policy which he sketched in a speech at Smithfield some time ago.

The Wage Commission presented Majority and Minority Reports, and the main cleavage was that of difference of view on the economic relations of native to white labour. General Hertzog's Bills deal mainly with political rather than economic arrangements. One provides for (ultimate) full enfranchisement of the mixed ("coloured") people. A second provides for representation of natives in the Union Parliament by seven members who are to be Europeans, who are limited to non-party activities, and are elected by a selected constituency of chiefs and headmen, not by a direct native vote. A third Bill provides for the creation of a Native Council with statutory functions. The fourth is the only one that touches economic issues in a direct way. It is concerned with the terribly urgent matter of regulating the occupation of land by natives. Thus we have now before us:—(1) Reasoned statements of two opposing views of the position of the native in the national economy. (2) A scheme for defining the political status of coloured and native peoples. (3) A scheme for regulating occupancy of land by natives.

The common South African habit of talking of "natives" in a collective way as though they were one homogeneous group, is breaking down in face of the evidence of great economic diversity, together with increasing cultural diversity. There are at least three main groups of natives:—(1) Natives in the reserves, living on land reserved to them, and still retaining a good deal of their tribal life. There must be some two millions or more of these. (2) Natives living on European-owned land as squatters, or as labourers, tenants, or as servants or labourers. These, again, must be nearly equal to those in reserves. Thus, as far back as 1913 over 620,000 Transvaal natives were on European-owned land, and only 350,000 in reserves, while in Natal the corresponding numbers were 420,000 and 566,000. (3) "Urbanised" natives. That is, natives who have definitely become town-dwellers. Their num-

bers are variously estimated, but can hardly be less than 400,000. In towns like Johannesburg, Cape Town, Durban, and Port Elizabeth, there are now thousands of natives who were born in the town, and have never lived anywhere else.

It is enough for our present purpose to note these three main economic groups without raising the further matter of the increasing distinction between natives on cultural grounds. They range from the raw "blanket-Kafir" of the territories to the cultivated American-trained professor, and they are again cut across by a bewildering variety of religious groupings, Christian and non-Christian. These facts are important, of course, as illustrating the increasing difficulty of securing coherent common action among the natives as such.

Returning to the main economic situation, we may note at least two facts that seem to be universally accepted:—(1) That there is no hope of securing sufficient land to plant all the natives in reserves. A few vague dreamers sometimes talk of "segregation" in this sense, but it needs very little knowledge to dissipate that attractive vision. (2) That the urbanised native must be accepted as a permanent phenomenon. As both Majority and Minority Reports of the Economic and Wage Commission agree upon this, it need not be further questioned. There still remains, therefore, the question of natives living under rural conditions, but not in reserves. General Hertzog's fourth Bill is concerned mainly with these.

In view of these diverse conditions, destined to become more and more diverse, there can be no question of a native policy resting on some simple single principle. Policy will have to be many-sided, and the various aspects of the problem will have to be tackled separately, careful as we must be not to lose sight of their relationships. For these relationships are important, and often misunderstood. Thus the "reserve" natives even now are unable to live on the resources of their areas, and have to go out on contract labour to the mines and elsewhere to eke out their means. A rising standard of life adds to the stimulus. The Majority Report sees in the reserves a buttress for the native in bargaining for wages. He has the reserve to fall back upon, it is alleged, and so can resist unfavourable terms. It is doubtful whether this is so. The reserve is much more likely to act as a subsidy, making it possible for such natives to accept a low rate of wages in the towns, and so to depress the condition both of the fully urbanised natives and of the "coloured" labourers in the towns. From what is known of the psychology of the native and of the conditions now actually prevailing in the towns, it seems probable that the reserves operate much more as a form of subsidy than as an access of bargaining strength. Moreover, the presence of so much fleeting, migratory labour hinders the growth of trade union organisation among town natives, and so helps still further to perpetuate the depressed condition.

The danger of all this, not only to the "coloured" worker, but to the poorer type of white labourer in the towns, cannot be ignored, and it gives some weight to the considerations that are put forward in the Minority Report. Moreover, in labour and trade union circles there is a deeply-rooted suspicion that the resort of natives to the towns is encouraged by employers so as to preserve a reservoir of low-paid labour and to keep down wages generally. Hence, in Cape Town especially, there is a bitter outcry from organised labour for the exclusion of the native as far as possible. The trouble is likely to continue so long as a large supply is available of labour which lives on a low standard and is profitable to employ at the low wage it is prepared to take. The operation of the Wage Board may do something to check the trouble, but not much, so long as there is not a relative shortage.

On the other hand, organised white labour does not appear to have grasped as yet that its own prospects of profitable employment in such a country as this are largely dependent on a steady supply of reasonably cheap unskilled labour. If they do realise that, the suspicion just mentioned tends to prevent them from giving it expression.

A small white minority surrounded by a great black majority in a dark continent will be fortunate indeed if

it can altogether escape those alternating manifestations of greed and fear which may bring to ruin the most well-meant policies. The real benefactor would be the man who could find a tonic that would cure the South African of the sudden attacks of "nerves" he is apt to get where natives are concerned.

INTERNATIONAL LAW AT VIENNA.

(BY A LEGAL CORRESPONDENT.)

If, as seems not improbable, "the Vienna Contract Rules, 1926," prove shortly to be the basis of international legislation, the Vienna Conference of the International Law Association, at which a draft of the rules has just been unofficially worked out and agreed, will have done some work of definite practical value to commercial men, especially those engaged in trading with countries other than their own. These proposed rules are intended to be applicable to certain contracts—primarily those for the sale of goods, where the seller and the buyer are of different countries—which do not in terms provide by what national law they are to be governed. The rules would supplement such contracts by laying down which territorial law would, in the particular circumstances, apply to the case.

Very keen interest in this problem was shown at the Conference (which sat from August 5th to 11th) by a large number of commercial lawyers and representatives of business interests. The Conference was made up on most days of three sectional meetings sitting concurrently, and, in the section devoted to "conflict of laws," which dealt with this particular problem, there were some 80 or more members regularly in attendance. They were representative of all the principal European nationalities, and in this and some other matters the Conference had the active support and co-operation of the International Chamber of Commerce. Judge Bagge (Sweden) presided in the section, supported by Dr Mittelstein (Germany) and Dr Leslie Burgin (England). The debates were very thorough and practical, and they resulted, notwithstanding the wide scope and the difficulty of the subject, in complete unanimity as to both substance and form.

Though any summary of the contents of the rules must necessarily give but an imperfect idea of them—details being important in a matter of this kind—it may perhaps be stated that the rules lay down, in the first place, that the law applicable to contracts of sale of movables shall be the law of the seller. The law of the seller is to be determined in accordance with certain sub-rules. Further provision is then made that, in some cases, the law of the buyer shall apply. These are, mainly, cases where the contract is concluded in the buyer's country. Special provisions are included as to stock or other exchanges or fairs, and as to ships registered in a particular country. There are separate rules applicable to contracts for work, and contracts for services, but contracts of carriage are excluded.

The work of the section was confirmed at the general assembly of the Conference, which concluded the proceedings, and it was then decided that steps should be taken to arrange, if possible, for the summoning of a diplomatic conference at which the rules might be embodied formally in an international convention. If, as anticipated, this further official gathering takes place, it may be followed in due course by national legislation in the countries represented to make the rules operative.

In another section of the Conference some proposed rules to determine the date when rate of exchange should be fixed were discussed. There was considerable difference of opinion here, and, although these further rules were adopted as "Vienna Rules, 1926," there were very significant indications that (in their present form, at all events) they may not come into use in actual business. The proposal was merely that they should be available for voluntary incorporation by reference in contracts, and therefore, unless they commend themselves in commercial and maritime circles, they will remain a dead letter.

British representatives appeared to think that considerable revision would be necessary to make them workable, if that could be done at all.

These rate of exchange rules lay down that, if payment cannot be made in the currency mentioned in the contract, the debtor shall pay the equivalent in the country of the place where the payment is made, at the rate of exchange of the day of actual payment. Further, that, if payment is not made when due, the debtor shall pay, as damages, a sum equivalent to the depreciation of the currency of the contract, measured on a gold basis, since the due date.

There would be difficulty, under English legal procedure, arising from the provision for calculating rate of exchange on the day of actual payment. Under the rules the amount could not be ascertained till then, and therefore could not be expressed as a specific sum in a judgment, which, if pronounced in any case, would necessarily be anterior in date. English judgments, which are for specific amounts, therefore could not enforce the rules, or rather, the consequence of the terms of the rules is that they would not be able to be enforced in England, and probably in some other countries also. There were other objections expressed, and, upon the whole, this part of the work of the Conference does not seem likely to be of service in actual business.

Many other subjects were debated, including the international aspects of bankruptcy, of commercial arbitration, of c.i.f. contracts, and so forth. Consideration was given also, to some purpose perhaps, to proposals for making more uniform the laws as to territorial waters. Questions as to the protection of private property from confiscation by States, and as to the international protection of national minorities, were further items in a very extensive and varied programme of subjects. The work of the association, as a body of voluntary workers interested in bringing home to the public the importance of international law in every-day affairs, has always covered a wide field. There can be no doubt that the Conferences, held from time to time in various capital cities, with committee work in the intervals, serve a useful purpose, and, in some respects at least, as the earlier part of this article indicates, some very practical work is being accomplished.

ON CHANGING INVESTMENTS.

(BY A STOCK EXCHANGE CORRESPONDENT.)

EXHORTATION is always at work with words of sage counsel as to the advisability of overhauling investments with a view to seeing which stocks and shares should be realised, which should be replaced by more promising securities, and, in brief, of paying as much care to financial operations as one does to one's wardrobe. Some shares, bought when prospects seemed hopeful, may have arrived at a pitch where the previous promise is worn out, and they should therefore be discarded, while others are out of date as regards possibilities of improvement or appreciation, and were better cast aside in order that they may be replaced by sounder stuff. Advertising outside firms which are not members of any Stock Exchange perform a service, sometimes useful, in drawing attention to securities deemed preferable to some of those which the proprietor already possesses, although advice in this connection is linked with the manifest desire to sell other bonds, stocks and shares paying a higher rate of interest, but not always desirable from the point of view of security. The average man takes out his book of stocks and shares somewhere about the end of December or the beginning of the New Year, and looks through his holdings with the praiseworthy intention of tidying up his lists, with the result that, as every stockbroker knows, the markets are inundated for the first week or so every January with orders to sell oddments and broken amounts of stocks and shares for which their holders have no longer any use. The systematic examination of investments is certainly a counsel of perfection that is carried out by very few people. If a thousand men were to take away with them

on their holidays this month their sheets of holdings in stocks and shares, it would be no difficult matter to make a shrewd wager as to what would be the result in the great majority of cases. The capitalist would decide that his stocks and shares which stand at good prices are too sound for him to sell—unless he should happen to see some other security that appeals to him as being better—and that the remainder of his holdings are too low to make it worth his while to clear them out, having regard to the offchance of their recovering, some day, in value to the price which he originally paid. It is said by the financial cynic that one great element of fear which death holds to the ordinary man of affairs is the opinion which his executors will form of his financial acumen when they come to go through his papers after his decease. Those who have to deal with valuations of stocks and shares for purposes of probate are too familiar with the extraordinary hotchpotch of odds-and-ends that a man can accumulate in his strong-box, for the professional broker or solicitor to feel any astonishment at the variety of rubbish which, in larger or lesser degree, finds its way into the holdings of the ordinary investor. The advertising outsider bases his appeal upon the desirability of securing a higher income, and, to this end, points out the advantages which attach to speculative stocks and shares as compared with the humdrum and prosaic solidity of the War Loan or Great Western debenture. The man, and still more often the woman, with a fixed income derived from the interest on such uninteresting securities, is open to temptation, and provides the readiest source of income for the counsellor of this exchange-of-investment policy. To suggest that people should remain content with what they already hold in the shape of stocks and shares would be as ridiculous as it is for them to think that they will get the same degree of safety from speculative securities, however high-sounding the titles of the latter may be, as they will from the more conventional British Government stocks.

The policy of overhauling investments is one which is eminently sound. For instance, it would pay most people to weed-out of their deed boxes the certificates of the mining and industrial gambles that have long since lost the glamour they once possessed, and, selling the lot, the holder should put the proceeds into the War Loan, or some first-class preference share, however modest the dividend derivable from the exchange might be. Human nature is so constituted, however, that a man will hang on to shares which he knows perfectly well to be hopeless, rather than get rid of them for what they will fetch, and to spend the money in a more useful direction. Going up the scale, he will next find stocks and shares paying him no dividend, and with little hope of their ever doing so, but which carry some faint glimmer of prospect for the future. These also it would be profitable to dispose of in the majority of cases, though here again human nature prefers to take the 1,000 to 1 chance which such gambling counters hold out of turning up trumps in the future.

The present coal crisis is exercising the minds of a good many people in regard to the way in which it is likely to affect the profits of the Industrial companies in which their money is placed; the decline of quotations in a good many industrial shares shows that recent warnings have not been lost upon the public. People begin to realise that the losses inflicted by the general strike, and the coal crisis, will have to be paid for, and that the brunt of the loss will fall upon industrial companies. Again, however, the inborn bullshness of human nature gives rise to the expectation that, after the coal stoppage is over, trade and prosperity will both revive, a condition of mind which has a good deal to be said for it, and which, even in the austere financial sense, may prove to be right in the future, provided the shareholders have the patience to lock up their investments, and to accept, it may be for a time, some diminution of income. The policy of examination of investments deserves greater consideration than it generally receives, but what the investor has to be on his guard against, before all else, is the idea that he can increase his income through the sale of first-rate securities and the repurchase of anything that brings in a higher return. The excellent practice is growing steadily of a man putting a specified proportion of his capital into gilt-edged securities, and, having made himself safe in this

respect, utilising the balance in the purchase and sale of stocks and shares to which there attaches a more speculative flavour, and from which he will gain, if not increment in his capital, at all events an accession of interest in Stock Exchange price movements.

Notes of the Week.

Cloud and Sunshine in the Balkans.—Last week we commented on the threatening attitude towards Bulgaria which Yugoslavia was taking up over the question of *komitaji* raids across the border into Serbian Macedonia—raids which it is notoriously impossible for a disarmed Bulgarian Government to prevent, and which, in any case, cannot be brought to an end by the threat—and still less by the use—of force on the part of the other party. Meanwhile, the Yugoslav threats have been followed up at Sofia by the presentation of a joint Yugoslav-Græco-Roumanian note; and the Yugoslav Press is maintaining the extraordinary thesis that the possibility of an appeal by Bulgaria to the League of Nations is ruled out because Yugoslavia would never agree to it. This shows a fantastic ignorance of the League Covenant, for the case where one party to a dispute is willing, and the other unwilling, to submit a dispute to the League procedure, is the classical case with which the Covenant is designed to deal. Do the Yugoslavs forget what happened half-a-dozen years ago, when the British Government made use of its friendly right, under Article 11, to draw the attention of the Council to a Yugoslav invasion of Albania? If so, memories in Yugoslavia are short, and Yugoslavia herself will be the first country to suffer by this mental deficiency. Meanwhile, it is only fair to note that Yugoslav policy has taken a less aggressive turn in its dealings with Greece. It will be remembered that in 1923, after 10 years of intermittent negotiation, a Græco-Yugoslav Convention was signed, under which Yugoslavia obtained a Yugoslav Free Zone in the Greek port of Salonica. Up to that point the obstruction had been on the Greek side, and, indeed, Greece had only yielded to the fear that the 10-year alliance of 1914 might not be renewed by Yugoslavia when it expired in 1924. In spite of the previous signing of the Free Zone Convention, this Greek fear came to pass; for Yugoslavia had bought up, from a French company, the former Austrian railway from Salonica to Nish, and, having secured her Free Zone, she proceeded to demand from Greece that even the section of this railway which runs through Greek territory, between Salonica and Gergeli, should pass under the Yugoslav Government's control. It was because Greece demurred to this excessive demand that, in 1924, Yugoslavia denounced the 1914 Treaty. It is good news that last Tuesday (August 17, 1926) a new Treaty of friendship and conciliation between Yugoslavia and Greece was signed at Athens, together with four railway conventions in which the Yugoslav claim is compromised on equitable lines. The Greek Government purchases, from the Yugoslav Government-controlled company which had acquired it, the Gergeli-Salonica section of the railway, and this section is to be under Greek control; but Yugoslavia is to participate in this control in matters relating to Yugoslav traffic between the frontier and the Free Zone. Greece is to be congratulated upon this settlement of a dangerous controversy, and also upon the offer of a similar Free Zone which she is reported to be making to Bulgaria. Although, for the sake of solidarity, she has joined Yugoslavia in presenting the triple Note at Sofia, her general policy in South-Eastern Europe is at present one of the conciliatory and constructive factors in the local situation. Roumania, again, is unlikely—judging by her past record—to press to extremes her action against Bulgaria, with whom she has no deep-seated cause of quarrel. Thus we may hope that Yugoslavia will be restrained by her Allies before the League is called upon to intervene. Roumania, meanwhile, on the Friday before last (August 13th), signed a Treaty with France, which appears to follow the lines of the Franco-Czechoslovak Treaty of 1924; and it is possible that this may be followed (as in the case of

Czechoslovakia) by a similar Treaty with Italy. "The Balkans" are rapidly being knit into the framework of Europe.

The Chinese Civil War.—The event which has occurred this week in the Chinese Civil War is usual in one respect and unusual in another. The ordinary feature in it—a feature in which modern Chinese, like mediæval Italian, warfare is advantageously distinguished from modern war in Europe—is that the battle has been bloodless. The extraordinary feature is that this particular one among many bloodless battles appears (though all precedents are against this appearance being a reality) to have produced results which may make some difference to the course of Chinese history. It will be remembered that some time ago the Kuominchun Army of the Baptist—or Bolshevik—General Feng evacuated Peking and retired north-westwards, "in order to develop the agricultural possibilities of the Mongolian desert," as the temporarily allied forces of Wu and Chang converged upon the capital. But while Feng went for a holiday to Moscow, his army still held the Nankow Pass, through which a Chinese-built and Chinese-run railway (in normal times a very efficient concern) makes its way up from the Chihli plain on to the Mongolian plateau. It was obvious that so long as Feng's troops held this pass the hold of Chang and Wu upon Peking would remain precarious; and it was prophesied that, when the inevitable struggle for the pass took place, the allies would get the worst of it and that the Kuominchun would then reoccupy Peking. Instead of this, the allies have won the pass; and while it is improbable that the Kuominchun Army—with Soviet Russia behind it—will be put out of action, it may be presumed that the allies, now that in the north they have secured the key position, will be able to divert their forces southward in order to assist their associate Sun, in the centre, against the Canton Government, which is of the same political complexion as General Feng. *A priori*, Chang, Wu, and Sun have every advantage. They are overwhelmingly superior in numbers, and hold the interior lines; and they ought to be able to overthrow their southern opponents and occupy Canton while, at the distant Nankow Pass, they hold the northern confederates of the Cantonese in check. That this will actually happen, however, it would be foolhardy to prophesy; for in China things are apt to turn out contrary to the probabilities. The Cantonese are the most energetic of the Chinese, and they will not be disposed of easily. If they put up a good fight, they may hope that Wu, Chang, and Sun will fall out with each other (as they have often done before) without giving themselves time to secure a military decision. In that case, the Chinese situation will revert once again to a chaotic inconclusiveness.

Optimism and Markets.—Our present industrial troubles provide a breeding-ground for pessimism, and we are so frequently treated to dismal jeremiads by leading manufacturers that it is refreshing to find an optimist on the war-path. Such is Sir Harold Bowden, chairman and managing director of the Raleigh Cycle Co., Limited, who addresses us in the following terms:—"I have just returned from a land in which optimism is regarded as an indispensable commercial asset to a country overwhelmed by a pall of industrial gloom. One of the fundamental differences between American business methods and our own to-day lies in the fact that, while the American manufacturer acts on the maxim that supply creates demand, here the tendency is first to make sure of the customer. True, it is an easier thing to produce optimistically in a new continent, abounding in unexhausted natural resources and lightly taxed, than to pour out capital in an old country smitten with industrial dementia and wearing a financial millstone round its neck. None the less, even at such a time as this, I would make an appeal to my fellow-industrialists for optimism in their outlook and confidence in their plans for the future. The coal stoppage, which is leaving the raw material of all our industries unworked in the earth, is a nightmare that must pass. There still remain to us our natural resources, our

enterprise, resourcefulness, and technical skill, the best workmen in the world, and, added to all these, a potential demand for British goods that is world-wide. I am not speaking as a mere idealist. In my own company the general strike and the coal stoppage have caused a loss of over £100,000 worth of business, a loss which will unhappily be reflected on more than 3,000 workers who are interested in the profit-sharing scheme which I recently introduced. But, nevertheless, we are looking ahead with confidence, and spending capital on additional plant and new methods of production. This year we have manufactured 120,000 bicycles. For next year we plan to make 175,000. That is what I mean by producing optimistically. Production that is ahead of demand entails progressive methods of salesmanship (which includes advertising), a science in which we are, generally speaking, a decade behind the Americans. Better salesmanship, by creating a new demand—new standards of comfort—stimulates the desire to earn, and, therefore, the will to produce. British industry to-day is encumbered with the dead wood of nineteenth century political dogmas. If the individual worker cared more for his personal possessions, he would, like the American worker, aim at buying his own motor-car and his own house, and have no time for the rhetoric of his political misleaders. Optimism is infectious. Let our employers cultivate it, and thereby break into that vicious circle of economic and psychological depression that is weighing us down." While admitting that an excess of confidence may on occasion be as dangerous as a deficiency of that quality, we commend Sir Harold's buoyancy to the attention of the more timid of our business men.

Employment in July.—Employment in July on the whole showed no improvement, many works remaining partially or completely closed owing to the effect of the continued stoppage in the coal mines. According to the *Ministry of Labour Gazette*, among the 11.9 million workpeople insured under the Unemployment Insurance Acts of Great Britain and Northern Ireland, the percentage unemployed at July 26th was 14.6,* as compared with 14.7* at June 21st and 11.2 a year ago. The total number of registered unemployed at the end of July was approximately 1,664,000.* This compares with 1,699,000* at the end of June and 1,262,000 at July 27, 1925. Among the members of trade unions the percentage unemployed was 13.2* at the end of July, as against 12.9* a month ago, and 11.2 at the end of July, 1925. The following table gives the monthly movements in trade union figures for some years past:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1920.	1921.	1922.	1923.	1924.	1925.	1926.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	2.9	6.9	16.8	13.7	8.9	9.0	10.6
February ..	2.0	1.6	8.5	16.3	13.1	8.1	9.4	10.4
March	1.9	1.1	10.0	16.3	12.3	7.8	9.0	10.1
April	1.7	0.9	17.6*	17.0	11.3	7.5	9.4	10.0
May	1.9	1.1	22.2*	16.4	11.3	7.0	10.1	13.2*
June	1.9	1.2	23.1*	15.7	11.1	7.2	12.3	12.9*

November ..	2.0	3.7	15.9	14.2	10.5	8.6	11.0	..
December ..	2.6	6.0	16.5	14.0	9.7	9.2	11.0	..

* Excluding workpeople in the coal-mining industry who ceased work owing to the dispute.

The industries that remained the most seriously affected by the coal dispute were pig-iron, iron and steel, tinplate, and pottery manufacture, as well as engineering and ship-building. In the building trades and in agriculture employment was good with skilled workers, but in the tailoring trade there was a seasonal decline.

Cost of Living.—There was no change in the cost of living during July. The index number of the Ministry of Labour at the end of July was 70 per cent. above the July, 1914, level. This compares with 70 per cent. at the end of June and 73 per cent. a year ago. The following

table shows the monthly movements of the index figure over a number of years:—

AVERAGE PERCENTAGE INCREASE over JULY, 1914.—All items.
(Food, Rent, Clothing, Fuel, and Light, &c.)

For food alone there was also no change, the index remaining at 61 per cent. This compares with 68 per cent. last year. The only important movements in retail prices during the month were increases in the prices of coal and eggs, and decreases in those of potatoes.

Closer Estimating in Public Expenditure.—The annual review of British public expenditure by the Public Accounts Committee of the House of Commons, which has just been completed for the financial year 1924-25, suggests that after the necessarily wide variations of the war period there is now a definite return to the closer estimating of pre-war times. In the various classes of Supply Services, together with the unclassified estimates and those of the Revenue Departments, for 1922-23 the general average percentage ratio of surrender to the grant was 12.5; in the following year it had dropped to 6.4, while in 1924-25 it was 4.1. Taking the 14 years from 1900-01 to 1913-14 for the purposes of comparison, the average annual percentage of savings on the net estimates of the Civil Services was 2.5, and in the Revenue Departments 1.3, the average for the total supply services being 1.4. That altogether admirable figure has not yet been reattained; but in an expenditure which is more than four times that of the pre-war period, which includes much that is still attributable to war conditions, together with an unclassified group of expiring services, which are very difficult to estimate with accuracy, the percentage of 4.1 represents very definite progress. In the case of the Army the variation between the Appropriation Account and the Estimates for 1924-25 was 2.55 per cent.; three years ago it was as high as 19.85. In the year 1924-25 the Navy was in a particularly good position, with a surrender of only .6 per cent., and the Revenue Departments were sound at .8; on the other hand, the Air Services were still comparatively high at 5.6, owing in part to the uncertainties of an expanding service. The practical meaning of this improvement for the taxpayer is that he has to provide more exactly each year the sum actually required for these Services. The large surpluses of recent times represent, so to speak, taxation that need not have been imposed; but the afflicted get some consolation in the fact that the amounts surrendered go automatically to the reduction of debt.

Conditions in Hongkong.—A Hongkong correspondent writes:—The activity in the piece-goods market, which I reported last month, came to a sudden termination, and, with clearances at a standstill, there was been a state of utter stagnation for the past three weeks. Other markets are in the same plight, and the most plausible explanation is that evasion of the boycott barrier is more difficult than ever. This is put down to the strike pickets having redoubled their energies in view of a possible settlement of the year-old dispute between Hongkong and Canton. At the invitation of the Canton Government, negotiations are to be opened between three Canton delegates on one side and H.B.M. Consul-General, with two Hongkong officials on the other. Confidence in a successful issue to the discussion is at present lacking, for two reasons. In the first place the Canton

Foreign Minister, the principal delegate, has already raised various quibbles as to the powers of the Hongkong representatives, and has in other ways given the impression that his chief object is to obtain recognition of Canton as an independent government. If the conference is to waste its time arguing this point, then the question of resumption of trade will be left in the background. In the second place there are doubts as to the stability of General Chang Kai Shek's régime, in view of the departure of so many native officials and their replacement by non-Cantonese. The feeling is that in the event of the recapture of the city by a Cantonese party, agreements entered into by the deposed leader will be promptly repudiated. A further cause of uneasiness is the persistence of local Chinese merchants that no settlement is possible without a substantial payment from the British side, not that any Chinese consider compensation is due, but because to the Oriental mind, finance is the basis of all understandings. Our Governor has many times pointed out that Hongkong will not pay a cent, and that negotiations will lead nowhere unless this is recognised. The reports of the various Commissioners of Chinese Maritime Customs for 1925 are beginning to appear, and those for four ports in the boycott area show only too clearly the disastrous effects of the artificial restraint of trade. In Swatow the volume of foreign merchandise passing through the Customs fell from 28,800,000 Haikwan taels in 1924 to 21,855,000 Haikwan taels in 1925, a drop of 25 per cent. Wuchow, the entrance port for the inland province of Kwangsi, reports a decrease of over 20 per cent. Kongmoon and Samshui, both on the Canton River Delta, suffered more acutely. The former port returns 6,617,000 taels for 1925, against 15,308,000 taels in 1924. In the case of Samshui, the Commissioner states that the figures for foreign goods imported represent clearances previous to July 9, 1925, as since that date there has been no direct trade whatsoever. No reliable estimate of the damage done to Chinese interests can be made until the figures for the bigger stations such as Canton, Kowloon, Lappa, and Amoy are published, and the full extent cannot be measured by the 1925 returns, as they only cover the first six months of the boycott restrictions. It is, however, obvious that the attempt to destroy British Commerce in China has had repercussions on native trade which will be felt for several years to come. From the point of view of the foreign merchant, the outlook as regards South China is full of anxiety. The Chinese in Hongkong are financially crippled, and will have the utmost difficulty in re-establishing connections with the interior. The dealers there have, in most cases, lost what little capital they ever had, and, even with the tranquillisation of the country, will be unable to trade freely because of the impoverishment of the people and the depreciation of currency. The only comforting reflection is that China has so often emerged from chaos, which would have overwhelmed most races, that she may do so again; but the process of disintegration which has been going on for the past decade has been on so vast a scale that the country is now in a state of anarchy from which it will be difficult to recover without foreign assistance. Intervention is a term that has not been mentioned for the past year, but it may have to be resorted to eventually either by the principal Powers working in unison or through the League of Nations.

Electricity in Agriculture.—In alluding to the benefits which agriculture has derived from science, the Prince of Wales in his address to the British Association did not include the application of electricity to farm practice. In this he was justified by the fact that the utility of electrical power for the cultivation of the land or the growth of crops is at present debateable. Even those who have the most faith in its possibilities admit that the interesting and hopeful experiments which have been made have not yet reached the stage of demonstration, while the average farmer is wholly sceptical. The Engineering Section of the British Association had, however, the advantage of hearing what can be done by one who has done it. Mr Borlase Matthews, who uses an electric-driven plough on his farm in Surrey, claimed that, "with electricity at 1d per unit, electric ploughing is cheaper than with petrol,

paraffin, or fuel oil tractors, and is also to be preferred owing to the greater immunity from breakdown." He also made the somewhat surprising statement that over 200 electric ploughs are now in use on the Continent. Mr Dampier Whetham, who probably knows as much as anyone on the subject, writing in the *Journal of the Ministry of Agriculture*, states that only one electric ploughing set—that of Mr Matthews—is at work in England and one in Scotland. The difficulty of applying electrical power to the actual cultivation of the land is apparent even to the non-expert, but there are other uses of electricity on the farm which appear to be more feasible. Not only for lighting and heating the farmhouse and buildings—and for cowsheds electric light has obvious advantages over any other form of illumination—but for driving the usual farm machinery—chaff-cutter, root pulper, &c.—electricity is very suitable. On a large holding the installation of his own plant may be worth the farmer's while, and, indeed, many farms are so equipped. But the general use of electricity on farms is impracticable except by its distribution, as in the towns, from central stations. The multiplication of large power stations which may be stimulated by the new Act is unlikely to meet the needs of agriculture. Even if a farm has a high tension main running across it, the current is useless to the farmer unless he is prepared to erect a costly transformer to reduce the energy to a suitable voltage. Until this difficulty can be solved the distribution of electric power, however widespread, will be of little use to agriculture.

The British Silk Industry.—A correspondent writes:—The silk industry is suffering severely from the condition of the Continental exchanges. For several years the trade position has become steadily worse, and just recently the curve has dropped sharply. The competition of artificial silk may be one cause of the lessened demand for natural silk material manufactured in Macclesfield and Leek, but to a very large extent artificial silk has created new markets, and has not encroached on the markets for natural silk. The truth is that a large proportion of the silk sold in London West-End shops as Macclesfield is really Continental or Japanese silk that has been finished in Macclesfield. The Japanese finish is quite different from that demanded here, hence goods imported from that country have first to be degummed and afterwards refinished. There are Macclesfield factories that specialise almost solely now on the finishing of imported cloths. In fairness may it be said, due allowances being made for the depreciated exchange of competitive countries, that our manufacturers are partly to blame for the loss of trade. They will not, for instance, give attention to the manufacture of plain cloth. After the Japanese earthquake no silk goods were imported from Japan for some time, and it was suggested to British manufacturers that they might profitably adapt some of their looms to the weaving of plain cloths, but they did not do so, and thus lost a splendid opportunity. In order to keep down production costs, Swiss and French machinery is being installed in the silk factories in preference to British, and especially is this so, perhaps, in the case of looms. Some of the Continental machinery is of a very high order, both as regards design and workmanship, and prominence was given in the Press recently to the arrival in Macclesfield of 23 machines four days after leaving France. The advantage that British machinists hold is in the matter of delivery, and, while Continental firms accept orders, twelve months sometimes elapse before the machinery is completed. Continental machinery is not better than British—there are manufacturers who do not consider it as efficient—but it is very much cheaper. In regard to production methods, those employed in British factories are quite up to date, and, therefore, although the industry has been suffering for some years, and more especially in recent months, the future should see renewed prosperity. All that is wanted is a little more enterprise in catering for the requirements of markets.

Cotton Trade and Minimum Prices.—Our Manchester correspondent writes:—This week further developments have taken place in Lancashire in the efforts of cotton spinners to improve their position. The basic prices

scheme for American yarns of the Master Spinners' Federation has come into operation, and on Monday last all sellers raised their quotations to the official figures published by the federation. There has not been a uniform advance, but, on the whole, the new rates have been about 1d per lb higher than last week. So far buyers to a considerable extent have resisted the upward movement, and spinners have been able to sell only small lots. There is every probability of a determined fight for supremacy. If spinners just at present cannot sell their production it is very undesirable that they should make to stock, and it is urged that increased curtailment of output should be adopted. On Tuesday last there was a mass meeting in Manchester of American spinners to consider the formation of an American Yarn Association, Limited, the object of which would be to secure the laying down of minimum yarn prices below which no member shall sell his yarn, and which shall assure spinners of a profit. The meeting was attended by representatives of over 200 mills, and the decision to proceed with the organisation was adopted unanimously. Nominations will now be received for directors, and arrangements are being made to register the company. The important feature of the scheme is that the association will have powers to penalise members if they transgress the rules. To carry this into effect, it is suggested that each spinning company should take up one £1 share per 100 spindles. It is not intended in the initial stages to call up more than 1s per share. Should a member not carry out the regulations the association will have power to call up the whole of the unpaid capital and make the company forfeit the shares. The organisation has received the support of the owners of 70 per cent. of the spindles concerned. No time will be lost in establishing the association.

Union Cold Storage.—Few concerns in recent years have shown such consistent prosperity as the Union Cold Storage Company, each of whose annual reports shows an improvement over its predecessor. That for the year ended December 31st last, just issued, is no exception. As will be seen from the table below, a substantial gain in net profit has once more to be recorded:—

	1913.	1920.	1921.	1922.	1923.	1924.	1925.
Gross profits	£ 137,094	£ 467,393	£ 558,765	£ 581,589	£ 726,904	£ 848,070	£ 883,564
Deb. interest, &c.	31,727	72,118	74,676	83,423	72,830	61,329	59,088
Net profit	105,367	395,275	483,999	498,166	654,074	786,741	824,476
Brought forward	23,806	71,717	87,497	104,028	109,922	127,841	149,278
Reserve & depreciation	126,173	466,992	571,496	602,194	763,996	914,582	973,754
Prof. dividend	43,185	87,939	108,667	133,472	138,826	138,504	102,572
Ord. dividend	46,109	261,556	328,800	328,800	395,830	526,800	607,030
Carry forward	36,879	87,497	104,028	109,922	127,840	149,278	164,153

During the year £63,450 of debenture stock has been purchased and cancelled, reducing the outstanding balance of the loan capital and mortgages on specific properties to £1,101,217. Redemption of debenture stock and repayment of mortgages have now been effected to the extent of £1,310,756. Unfortunately, the balance-sheet is not as lucid as it might be. We find, for instance, that freehold and leasehold properties, steamships, plant, and machinery, &c., and shareholdings in associated companies are all lumped together. In the absence, therefore, of any explanation in the directors' report, we are unable to trace how the increase in the item from £13,784,427 to £14,414,303 is accounted for. Moreover, so far from the directors showing any desire to present their accounts in clearer form, those under review are actually less illuminating than those for the preceding period. Whereas a year ago "debts due to the company" and "advances to associated companies" were shown separately, now we find that these two items also come under a single head, which, in addition, includes stocks and stores on hand. It is possible that since the ordinary shares are not publicly held the directors consider that there is no need for more detailed accounts. This, at any rate, was the view recently expressed to us by one well-known company chairman, who himself owned all the ordinary capital of his concern. We consider this to be a mistaken policy. Concealment of this sort is always inadvisable, and if a company has nothing to hide it should state its position with the utmost possible frankness. Especially is there need for this in the case of the

Union Cold Storage, in view of the recent unsettling rumours regarding the effects of the Argentine "meat-war," which at one time were sufficiently seriously considered as to depress Stock Exchange quotations for the preference shares. Incidentally, we may observe that the directors make no reference whatever to recent developments in the meat trade.

Rhodesian and General Asbestos.—The results shown for the year ended March 31st more than justify the favourable forecast made at the last annual meeting. At £223,240 the net profit shows an increase of about £100,000, or over 60 per cent. upon the 1924-25 amount. The allocations to depreciation were respectively £10,700 and £12,300. On the present occasion the capital ranking for dividend is £980,000, having been swollen to the extent of £350,500 by the bonus distribution and the fresh issue of shares made since the date of the previous accounts. Nevertheless, the directors are able to declare a final dividend of 10 per cent., making 20 per cent. for the year, the same as before, carrying forward £80,000, as against £28,100 brought in. A reserve fund is started with the allocation of £20,000 surplus on the revaluation of assets in February. By the issue—on terms not stated—of the remaining 20,000 shares the capital has been brought up to a round £1,000,000. Stocks are lower at £73,860. As usual, the report is very laconic in regard to the position of the properties. The directors merely repeat their intimation that "the position at the Shabanie, Gath, and King Mines continues to be satisfactory." Doubtless full particulars will be supplied at the meeting, but as this is not to be held until October 18th the shareholders will have to possess their souls in patience for some time. It is, however, known that, owing to the high grade of the company's product, it is in such demand that the requirements of consumers cannot at present be fully satisfied. On the basis of the dividends of the past two years the yield is not much more than 7 per cent.; but increased profits may be looked for when the additional plant comes into operation.

Mining in Mexico.—At the moment, affairs are distinctly under a cloud. Some—rather unnecessary—anxiety was aroused on the part of British investors by the conflict between Church and State, and this became intensified by the publication of the regulations under the new Mining Law. Because the latter sets out that all commercially valuable minerals and precious stones are the property of the nation, some people jumped to the conclusion that confiscation is intended. The law, however, is not retrospective; and those who hold concessions granted under the old conditions, and have complied with the stipulations, have no ground for alarm. Another adverse factor of an actual character consists in the fall in silver. Still, it should be pointed out that the monthly returns of the Santa Gertrudis, Mexican Corporation, and other companies are based on silver at 60 cents, U.S. The metal has so far not fallen below 61½ cents.

UNITED STATES.—SHARE MARKET REACTION—ACTIVE TRADE—COTTON CROP—THE FRENCH DEBT.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 10.

At the moment of writing the share market, after an exhibition of pronounced buoyancy, is reacting under the pressure of profit-taking. Many new high levels were recorded during the past week. General Motors, the market leader, rose to a new top for all time at 225½, this price comparing with one of 113 made during the March break. Steel common, the other big leader, touched 155½. On to-day's reaction General Motors fell back to 206, while Steel common sold below 150. A contributing factor in the current reaction is a flurry in call money,

which carried the rate on the Stock Exchange up to 5 per cent., and which was attended by moderate calling of street loans. The firmness in money coincided with a report by the Federal Reserve Bank on brokers' loans, which showed that this kind of accommodation rose some \$86,000,000 in the week ended August 4th, reaching \$2,688,000,000. This represents the first considerable increase for about a month, and doubtless reflects greater public interest in the market during the last week or so. Another influence that probably had some effect on quotations is the close approach of the General Motors dividend meeting, which will be held on Thursday, August 12th, and at which a stock dividend of 50 per cent. is expected to be declared. Many traders doubtless have taken profits in the stock on the theory that a reaction may come when the good news is out. As yet it is not known whether the directors will declare extra cash as well as the stock dividend, but it is taken for certain that the 7 per cent. rate will be retained on the new stock to be outstanding.

Although the question of a stock dividend for the shareholders of the United States Steel Corporation continues to be bruited around the brokerage houses, actual information on the subject continues to be conspicuous by its absence. Reports from the steel industry continue favourable, and there is some speculation over the possibility of higher prices for steel products, the advances in three products that the Steel Corporation made some weeks ago having given rise to the surmise that the Corporation may be modifying its price policy, which has stirred criticism among the independent manufacturers for some time. Meanwhile, the report on the unfilled orders of the Corporation, which was made public to-day, reveals an increase of 123,000 tons during July. This is the first increase that this indicator has shown since last December. The gain in orders confirms the trade reports to the effect that consumption of steel has been well maintained, and that inventories have been allowed to run down during the last four months. Unfilled orders on July 31st amounted to 3,602,000 tons. This compares with 3,539,000 tons at the end of July last year.

Further evidence of the continued active condition of trade is furnished by the statistics of railway car loadings. During the week ended July 24th these loadings amounted to 1,085,000 cars, which is a new high record for the year, and represents a movement some 159,000 cars greater than in the corresponding week of last year. Meanwhile, the earnings of the carriers remain excellent. During the first six months of the year the Class I. roads reported net earnings of \$494,000,000, which represents 4.9 per cent. on their property valuations. This figure set a new high record for all time, and compares with \$439,000,000, or 4.5 per cent., in the first six months of 1925. In June the earnings totalled \$107,000,000, a new high record for that month, and one that represents 6.18 per cent. on valuations. With these kinds of earnings furnishing a background, many of the leading railway shares have advanced to new high records.

Publication of the Government Report on the cotton crop as of August 1st resulted in a considerable break in cotton prices, the Report proving somewhat more bearish than the trade had expected. The condition was reported to have declined from 70.7 per cent. on July 16th to 69.8 per cent. on August 1st, but the indicated yield was placed at 15,621,000 bales of 500 lbs gross, this representing a gain of 253,000 bales over the previous estimate. The estimate added that if conditions proved as unfavourable as during 1921, 1922, and 1923 the indicated yield would be only 14,425,000 bales, but that if conditions proved as favourable as during 1924 and 1925 the indicated yield would be 17,510,000 bales. Whether this form of modified estimate is proving to be as helpful as the Southern Congressmen expected may be doubted.

Much interest continues to be taken in the French situation. Our bankers were encouraged by the indications that Poincaré was coming around to ratification of the debt funding agreements. Under these circumstances the Clemenceau letter has naturally proved disturbing, as it is feared that its effect may be to stiffen the resistance that Tardieu has been showing and diminish the chances of ratification. It is felt that President Coolidge cannot but continue to have his dealings with the official repre-

sentatives of the French Government, and that the letter will do little good here and possibly some harm. Incidentally, it is considered rather ironic that Clemenceau should have issued this open letter, as it has been understood that he did not sympathise with President Wilson's attempt to go over the heads of the European Governments at the Peace Conference in his desire to appeal directly to the European peoples, and as the war stores debt of \$400,000,000, which matures in 1928 and on which France now is paying \$20,000,000 a year, was contracted while he was Premier. The Berenger agreement takes care of the war stores debt very nicely, as this debt is funded under the agreement, and the agreement calls for payments starting at \$25,000,000 a year, or only \$5,000,000 more than France already is paying. The Berenger agreement, furthermore, takes care of the \$400,000,000 maturity in 1928.

FRANCE.—STABILISATION PLANS—FRANC REACTION—DEBT AGREEMENTS—REVENUE—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, August 18.

THE Chambers are in recess until the middle of October, leaving Ministers free to develop and apply by decree the remainder of their plans for restoring the financial situation, and the "Cabinet of all the Talents" is taking full advantage of the opportunity. Ministerial and Cabinet Councils have been fixed to take place at very frequent intervals, either in Paris or at Rambouillet, the summer residence of the President of the Republic, and inter-Ministerial conferences are being held daily for the development of plans for reducing the cost of living and to meet the inevitable economic and other crises that are expected to arise from the coming into operation of the various phases of the stabilisation plan that is being carefully matured. Ministers are acting upon the principle of working and acting, instead of talking, and it is understood that the various sections of their proposals are being dovetailed satisfactorily together. It is believed that the first public announcements of their decisions will take the form of the successive decrees whereby they will be brought into operation.

The recent reaction in the exchange rate of the franc is explained as being due (1) to the belief that the extent of the recovery of the franc had been allowed to exceed an advisable level (as in May, 1924), and (2) to deliberate purchases of sterling and dollars for the purpose of creating the *masse de manœuvre* required for future operations to protect the franc. No official statement has been made as to the figure at which it is proposed eventually to stabilise the franc, and this apparently will depend largely upon contingent circumstances that cannot, of course, yet be gauged. The fact that the recently adopted Finance Act stipulates that a large number of fixed duties shall be increased by the application of the coefficient of 6 to their pre-war figures, is regarded as foreshadowing that the Poincaré Government hopes eventually to stabilise the franc at 150.

All further visible steps in regard to the settlement of the British and American debt questions have been expressly postponed for the time being. It is practically certain, however, that the ratification of the Berenger-Mellon and the Churchill-Caillaux-Péret agreements will have to come up for decision when the Chambers resume in October. It is generally recognised, nevertheless, that the foreign debt problem, important as it is, must be regarded as subordinate, for the time being, to the even more pressing one of financial restoration and stabilisation in its purely domestic aspects. Any attempt to force ratification on the Chambers before at least an attempt has been made to secure better terms would almost certainly provoke a split in the only Cabinet that has so far shown any real determination to tackle the combined fiscal, currency, Treasury, and debt problems in a workmanlike manner, and would thus render useless any effort to settle the foreign debt question.

The French opposition to the Berenger-Mellon agreement is focussed largely on the absence of any written undertaking by the United States Government not to

National Bank of Commerce in New York

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world, bringing them into contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
2 and 3, Crosby Square
Bishopsgate, E. C. 3

commercialise the bonds it holds against the French debt. In this connection much capital is being made out of the fact that the American Government, in its agreement with Italy, forced the latter to deposit 62 bonds, corresponding to the 62 annuities of debt which it has agreed to pay, while the agreement gives the creditor Government the right at any moment to demand that these bonds shall be exchanged against definite obligations in lire, which it has the right to throw upon the market when it chooses. The effect of this clause, it is insisted, is that the United States holds control over Italian credit, over the exchange value of the lire, and over the productive power of Italy. Unless both the British and the American agreements are made to include a clause safeguarding this country against what M. Clemenceau insists on terming this "turquification" of France by Anglo-Saxon finance, there is apparently little likelihood of either agreement securing ratification by the present Chambers.

Another objection to the British agreement, as it now stands, is that, although it is supposed to be more favourable to France than the Washington one, it stipulates that during the first five years this country shall pay £42,500,000 to Great Britain, whereas the American agreement calls for only £32,000,000 during the same period, notwithstanding the fact that the total of the American debt stands in regard to the British debt in the ratio of 8 to 5. Another subject of dissatisfaction is that whereas M. Raoul Péret claimed to have secured a promise that the British Government will not claim full payment from this country if the German payments fall to one-half of the agreed sum, Mr Churchill has informed the House of Commons that he has given no such promise. It remains to be seen whether, as the result of informal conferences which are taking place during the recess, a solution may be found in the shape of an undertaking to ratify the present agreements at an early date, provided concessions on the lines indicated can be guaranteed.

The revenue returns for July confirm the belief that the French taxpayer is making a sincere effort to assist personally in placing the nation's finances on a better foot-

ing. The demand notes for direct taxation for the financial year beginning in January are usually postponed until towards September, owing to the traditional delay in passing the Budget. This year, in view of the fact that a substantial amount of taxation additional to that embodied in the Budget had for various reasons become inevitable, there is every probability that the demands will be sent out even later than usual. The new Government therefore appealed to all patriotic citizens to pay as much of their taxation as possible in advance, without waiting for their demand notes, basing the amount tendered on their last year's payments. The response has been most gratifying. Down to the end of July the total payments in advance amounted to about 500,000,000f, of which 170,000,000f was received from Paris and the Seine Department. The record is believed to be held by a Paris borough, in which 25,000,000f were thus paid in advance. A note issued by the Finance Ministry states that taxation payments in advance in the Seine Department had risen by August 14th to over 465,600,000f. Similarly satisfactory results are reported from various other departments.

The total revenue from all sources during July (exclusive of posts, telegraphs, and telephones) was 3,661,106,700f (as compared with 2,420,797,000f in July, 1925). This is an entirely new record, except for the total recovered in December and January last, when slightly higher figures were recorded owing to the extraordinary "speeding up" measures enforced by M. Loucheur. This increase of 1,127,038,600f in available revenue in July was due (1) to the increase in *ad valorem* indirect taxation owing to the recent sharp rises in all commodity prices, (2) the operation of the additional indirect taxation imposed last April, and (3) direct taxation payments in advance. Out of the total revenue during the month of 3,661 millions, 3,583,638,600f were obtained from "normal and permanent" taxation (as against 2,311 millions in June, 1926, and 1,811,120,300f in June, 1925). The effect of the ruthless speeding-up devices put into operation just over six months ago may be gathered from the fact that the yield from direct taxation (which in this case means income-tax, super-tax, and special temporary super-tax alone), which was 1,078 millions in November, 1,571½ millions in December, and 1,546½ millions in January, fell to 74½ millions in May and June, and amounted to 423½ millions in July, solely owing to voluntary payments in advance. Apparently, in view of the drastic collection methods adopted, practically the last farthing of outstanding taxation of this kind has now been recovered. The yield from State monopolies and "indirect taxation" (which in this form of classification includes succession duties, registration and stamp duties and imposts on Bourse transactions, as well as Customs, Excise and taxes on consumption in general) totalled 3,136,928,000f (or 343,700,900f more than Budget estimates, and nearly 898 millions more than in July, 1925).

The most striking item in the return is the enormous increase during the month in the yield from the tax on turnover, which totalled 690,000,000f, or 314,860,000f more than in July, 1925. This monthly total should, of course, be largely increased henceforward, as the tax has now been made to apply to sales for export purposes, and also revised upwards in other respects. The "4,000 to 5,000 millions" which M. Klotz estimated some years ago, when he introduced this form of impost, would be the eventual yield from the tax on turnover, has already been largely exceeded. Its only rival is the duty on registrations, which last month yielded 831,338,000f, or 237 millions more than in July, 1925.

The foreign trade returns for July indicate that exports had a declared value of 5,244,187,000f, and imports of 5,016,083,000f, resulting in a favourable balance of 228,104,000f on the month. This is the first time since July, 1925 (with the exception of May last, when exports exceeded imports by slightly under 70,000,000f), that a month's exchanges have shown a favourable balance. In July, further, while imports fell off by over 28 millions, exports showed a rise of 573 millions as compared with the previous month. The total exchanges during the first seven months of the year have resulted in an adverse balance of 2,463,311,000f, the value of the imports having increased by nearly 55 per cent., as compared with the corresponding period of 1925, while exports showed a rise

in value of about 28 per cent. This rise in imports was due in large part to the sharp rises in prices consequent on the fall in the exchange value of the franc, as is shown by the fact that the tonnage of the imports was greater during the seven months by only 2½ per cent., while that of exports was less than 7 per cent. The detailed comparative figures for the seven months are as follows:—

	First Seven Months of		Difference in 1926.
	1925.	1926.	
Imports—	Francs.	Francs.	Francs.
Foodstuffs	4,633,602,000	6,184,509,000	+ 1,550,907,000
Raw materials	14,595,682,000	23,713,811,000	+ 9,118,129,000
Manufactured goods ..	3,006,502,000	4,532,079,000	+ 1,525,577,000
Totals	22,235,786,000	34,430,399,000	+12,194,613,000
Exports—	Francs.	Francs.	Francs.
Foodstuffs	1,964,757,000	2,658,736,000	+ 693,979,000
Raw materials	6,842,623,000	9,064,067,000	+ 2,221,444,000
Manufactured goods ..	16,284,292,000	20,244,285,000	+ 3,959,993,000
Totals	25,091,672,000	31,967,088,000	+ 6,875,416,000

Care must be exercised in drawing conclusions from the more favourable figures of the returns for July, however, in view of the fact that, although the value of the exports in July showed an increase of 1,733,033,000f, as compared with that for July, 1926, the tonnage increase (124,377 tons) was due solely to an increase of 180,188 tons in the weight of raw materials exported, both foodstuffs and manufactured goods showing an appreciable falling-off in tonnage. Imports, it is true, showed a still larger falling-off in tonnage (285,794 tons), but while foodstuffs dropped by 17,122 tons and raw materials by no less than 276,056 tons, there was an increase of 7,384 tons (as compared with July, 1925) in the quantity of manufactured goods imported.

CANADA.—CROP CONDITIONS—THE ELECTION CAMPAIGN—GENERAL BUSINESS—STOCK AND BOND MARKETS—RAILWAY EARNINGS—IMMIGRATION—THE ALBERTA OILFIELD.

(FROM OUR CORRESPONDENT.)

OTTAWA, July 27.

CROP conditions up till the middle of July were, on the whole, very satisfactory throughout Canada, but the Western wheat crop is admittedly passing through a very critical stage at the present time. It is well headed out with a very short straw, which will mean economy in harvesting operations, but a spell of very hot, dry weather which has prevailed on the prairies for the last week is causing it to ripen rather prematurely, and, according as it continues or is broken by abundant rains, the yield will be affected to the extent of several bushels per acre. Lately grain experts were contending that the first provisional estimate of the Bureau of Statistics for the wheat crop, placed at 348 million bushels, was too low, but if the drought continues it may be near the mark. However, the Alberta Department of Agriculture feels that under present conditions it is premature to make any estimates of the probable yield. On the other hand, if western crop conditions are less roseate, there has been a marked improvement in the eastern provinces; since July began, splendid growing weather has prevailed everywhere, and as there were copious reserves of moisture in the ground to supplement the heat, the late start is being steadily overcome. In southern Ontario an exceedingly good hay crop has already been reaped, and there is a promise of a harvest quite above the average all over central Canada. The Maritime Provinces are less fortunately situated, but even there the conditions give no ground for serious pessimism. As pastures are excellent, the season has been very propitious for the dairy industry, but prices are not too good, owing to a serious falling off in the export demand for butter and cheese, due in part to the diminution of purchasing power in Britain through industrial troubles.

The election campaign is now in full swing; many candidates have already been nominated, and both Premier Meighen and Mr Mackenzie King have delivered their keynote speeches and embarked on oratorical tours which

will take them to the furthest corners of the Dominion. In his speech at Ottawa the Conservative leader made light of the constitutional issue, which, he declared, had been manufactured as a smoke screen to conceal the administrative crimes of the Government. He also reiterated, not with undue emphasis, his belief in a policy of adequate protection, and threw out a sop to the western farmers by giving his cordial benediction to the co-operative wheat-pool movement and promising every assistance and encouragement to this and parallel co-operative enterprise. Mr Mackenzie King, on his part, held that while the Customs scandals were serious, they had been grossly exaggerated for partisan purposes, and maintained that they now must subside into insignificance besides the much graver constitutional scandal which had developed. However, in his opening speech he went out of his way to give Lord Byng a clean bill of health, and with the *Toronto Globe* seizing upon this to express the hope that no more will be heard of "the mischievous, improper, and unpatriotic reflections which have been cast in the direction of the Governor-General," it is difficult to see how the constitutional issue can be made an effective election cry outside Quebec.

Business is bound to suffer a certain amount of disturbance from the election, but conditions continue to be very satisfactory. Railway earnings and car-loading returns indicate that the movement of merchandise continues to be well above the level for the corresponding period of 1925. The miniature building boom which is in progress is providing abundant orders for firms dealing in cement, hardware, and all forms of builders' supplies, and there is a steady demand for machinery and tools of all kinds from the mining camps. The building boom also helps the lumber trade, and the pulp and paper industry, although a little more fearful than it was of European competition in the American market, is maintaining its output, and finds little difficulty about its disposal. The firms manufacturing farm implements are also very busy, and the motor industry, which at the time of the appearance of the Budget could foresee nothing but blue ruin ahead, is actually increasing its output, more than one firm having enlarged its plant in recent months.

The prevalence of the holiday season keeps the stock-markets very dull, and prices generally show a tendency to recede. There is, however, a satisfactory market for good bonds, and the figures show that the total sales for the first half of 1926 amounted to \$326,849,862, as compared with a total of \$242,231,885 for the first half of 1925. Of this total, \$163,143,000, or almost exactly half, were Government bonds, 38 millions were municipal, 114 were corporation, and 12 millions were railway bonds. The Canadian dollar remains slightly above par in New York, while other foreign exchanges have been steady, with the exception of French and Belgian francs, which have met with further marked declines. The earnings of the Canadian National system for the first half of the present calendar year make by far the best showing since the system was consolidated in its present form. The gross earnings are \$120,989,008, as compared with \$105,543,743 in the first half of 1925, and operating expenses were \$106,132,347, as compared with \$101,807,397. Net earnings are \$14,856,660, as compared with \$3,742,345, which is an aggregate increase of over 11 million dollars, or about 297 per cent.

Since the present season opened there has been a very gratifying increase in the immigration figures. During April and May the number of immigrants who entered Canada is placed at 36,113, which is an increase of 11,791 over the figure for the corresponding two months of 1925. During May, British immigrants increased from 6,559 to 7,986, and United States immigration jumped from 1,757 to 2,063, but the greatest increase was in the number of new arrivals from countries of Continental Europe, which increased from 5,022 to 8,571.

Great activity is still visible in the Turner Valley in Southern Alberta, where numerous oil wells are being drilled. At present only a few wells are actually producing oil in commercial quantities, but other wells are showing tremendous flows of wet gas, and there is general confidence that a really valuable oilfield exists in the region. High-placed employees of the Imperial Oil Com-

pany, the Canadian subsidiary of the Standard Oil, have spoken in most optimistic terms of the prospects, and it is counted very significant that the Marland Oil Company, an important American corporation, in which the Morgan firm is said to be heavily interested, has just entered into an arrangement with the Hudson's Bay Company for the development for oil purposes of the sections of land still owned by the company in Alberta. The Federal Government is also evidently impressed with the possibilities of the Turner Valley, for it has just secured the services as an oil expert of Mr Thomas Madgwick, of Birmingham, who will assume his duties at Calgary immediately.

AUSTRIA.—POLITICAL SITUATION—BANKING DIFFICULTY—ECONOMIC LEGISLATION—EXPORT CREDITS—MONEY AND STOCKS.

(FROM OUR CORRESPONDENT.)

VIENNA, August 19.

AUSTRIA is a country of compromises. This was again proved at the end of the summer session of Parliament. Up to the last few days of the session the parties faced each other with the fiercest fighting spirit. Parliamentary work was completely paralysed by the obstruction of the Social Democrats, when suddenly on July 28th peace was restored by compromises to such an extent that all the important Bills, such as the Amendment Bills to the Unemployed Act and Tariff Bill, the School Reform and the Incompatibility Bills, were passed without any difficulty. Thus the Cabinet crisis, which seemed imminent, was avoided, and Dr Ramck's Cabinet will remain in office at least for the next few weeks. It seems, however, that after the return of Dr Seipel from America a reconstruction of the Cabinet, under the auspices of either Dr Seipel or Dr Rintelen, may take place. The Social Democrats do not seem to have any desire to enter the Cabinet, as they prefer to represent a strong Opposition party, which, by obstructing Parliamentary work, can push through all its demands.

At the beginning of July the "Zentralbank der Deutschen Sparkassen" in Vienna, which acts as the clearing institute for all Austrian savings banks, got rather unexpectedly into difficulties. As the declaration of insolvency of this bank would have paralysed all the other savings banks, the Government decided to intervene and take over the guarantee for all deposits at the bank without asking the consent of Parliament. As about £2,000,000 deposits were withdrawn within the first week after the difficulties of the bank became known, the Government had to advance this sum to the bank without having much hope of having more than half of it returned. Although this action of the Government met with fierce protest on the part of the Social-Democrat party—who intend to bring the Cabinet before the Supreme Court—the main object has been accomplished, a panic and further economic complications being avoided. The Government hope to be reimbursed by creating a guarantee fund to which all savings banks must subscribe—this guarantee fund will have to issue bonds under the Government's guarantee to an amount equal to the sums advanced to the Zentralbank. At the same time, in order to avoid a recurrence of such a thing, the Government intend to amend the Savings Banks Act, in the direction of prohibiting savings banks from doing ordinary banking business and strictly limiting the number of concessions for accepting deposits. The latter measure has become necessary, because during the past years all co-operative stores and similar organisations have been granted such concessions. The biggest and oldest of the Austrian co-operative stores, the "Erster Wiener Consumverein," got into difficulties last month, and is unable to pay off its depositors, who all belong to the middle and working classes. The difficulties of the "Zentralbank" and the "Consumverein" had, however, no particular influence on the general economic situation of the country, except that a certain number of small industrial concerns, which were financed by the "Zentralbank," will have to be liquidated.

Among the economic Bills passed by Parliament just before closing, the most important are the Amendment Bills to the Tariff Bills and the Unemployment Act. The

new Tariff Bill represents the result of the official inquiries held last winter, in which the representatives of industries, trade, and agriculture put forward demands for a great number of protective duties. Most of these demands were met, and the increase of duties will apply to all sorts of commodities, such as rye, butter, honey, meat, iron, steel, wire, pipes, machinery of all sorts, firewood, naphtha products, textile goods, chemicals, turnery ware, &c., &c. The increases amount to an average of from 50 to 60 per cent. as compared with the present duties. The object of the new Tariff Bill is chiefly to put the Government in the position of being able to revise all present commercial treaties, and, therefore, only a part of the increases will be put into force at once.

The Amendment Bill to the Unemployment Act aims at lessening the burden of the dole on the industries. In future, industries will not have to pay towards Health Insurance more than A.S. 97 millions, while last year their contribution amounted to A.S. 117 millions. The Federal Government subsidy will also be reduced by 4½ million Austrian schillings, while the share borne by the Provincial Governments and municipal councils will be increased to make up the deficit.

A company with a share capital of A.S. 5,500,000 will be formed in September by Austrian industries and trade in conjunction with the big Vienna banks and some insurance companies, with the object of guaranteeing export credits, with the exception of export trade to Russia. As regards Russian trade, the Municipal Council of Vienna, together with the interested industries, intend forming a special reserve fund of \$500,000 to \$1,000,000, which will be used as guarantee fund for export credits to Russia.

In spite of the firmness of the Berlin Stock Exchange, business on the Vienna market remained dull during the whole month with the sole exception of fixed interest pre-war stocks, in which a real boom set in. In order to stop this quite unfounded speculation, the Treasury announced that it would soon call in all pre-war stocks in order to convert them into the new shilling currency. This statement had a speedy and good effect, and all quotations of pre-war stocks fell by about 50 per cent. Conditions on the money market continued to remain very easy; discount rates for fine bills moved between 6½ per cent. to 6¼ per cent.

NORWAY.—GOVERNMENT AND HANDELSBANK— BUDGET—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

OSLO, August 6.

JUST on the eve of adjourning for the summer, the Storting adopted the findings of a committee, recommending the impeachment of a former Norwegian Prime Minister, Mr Abraham Berge, and his colleagues. The charge brought against them is based on the fact that in May, 1923, the Berge Ministry, without the knowledge of the Storting, deposited Treasury bills to the amount of 25 million kroner with Den norske Handelsbank, which was then experiencing a serious run, and did not disclose this when, about a year afterwards, they obtained authority to grant the bank a credit with the Norges Bank for a further 15 million kroner. The support was given at a time when the country was passing through an exceptionally critical period, and the Ministry considered absolute secrecy an essential condition for the success of action on the part of the Government. Although the bank ultimately succumbed to the pressure of its depositors, there can be little doubt that the Ministry at that time had every right to believe that the support would tide the bank over the difficulties. The impeachment must, therefore, be regarded as a vindication of constitutional principles, and in no way implying suspicion as to the personal integrity of the members of the Ministry, none of them being financially interested in the bank.

Otherwise, recent meetings of the Storting have been devoted to the Budget, more especially to the various reductions proposed by the Government, most of which were ultimately carried. A proposition regarding alterations in the Customs tariff, providing for an increase from 33½ per cent. to 50 per cent. in the temporary super-

charge on certain goods has been passed by the Storting. The "gold supplement" has been reduced from 40 to 30 per cent., the former figure having been in operation since November 4, 1925.

The trade balance, according to official statistics for June, has improved by over 22 million kroner, as compared with May, but imports still exceed exports by about 10.5 million kroner. The following table shows the reduction of the import surplus for the half-year ending June 30th in comparison with last year:—

		(Million Kroner.)		Excess	
		Imports.	Exports.	of Imports.	
January-June, 1926		568.7	432.4		136.3
"	1925	733.3	552.3		181.0

It should be remembered, however, that while the rate of the krone in June, 1925, was about 27.45, the average quotation during June this year was about 22.15.

The impending strike in the paper industry increases the uncertainty already prevailing on account of the conditions in Britain, and although negotiations are now far advanced, it does not seem that there are any hopes of a peaceful solution of the conflict.

The freight market is also rather unstable, but the British coal dispute does not seem to have affected the situation so much as might have been expected. The chief coaling station for Norwegian ships at the present is Hook of Holland.

DENMARK.—PRICES STABLE—PUBLIC FINANCE— TRADE BALANCE—NATIONAL BANK.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, August.

AFTER a protracted decline Danish prices seem to have reached a more stable level. This appears from the wholesale prices as well as from the index of retail prices and cost of living, which was published a few days ago. As far as wholesale prices are concerned, the decline was practically uninterrupted until March, 1926—obviously in connection with the krone rise—and from February to March the official index showed a decline from 165 to 158 (1913 = 100). Since then, however, fluctuations have been insignificant, the figure being 157 for April, 158 for May, 157 for June, and 158 for July. The wholesale price level has thus been practically unchanged for four or five months.

The half-yearly index of the cost of living, according to which the salaries of officials and wages of labour are regulated, was reduced from 219 in July, 1925, to 194 in January, 1926, or by just over 11 per cent. During the following half-year the figure has been further reduced to 184 (or by just over 5 per cent.), and accordingly the decline has this time been somewhat less. If prices in July, 1914, are put at 100, the figures for the different groups were as follows in January and July of 1926:—

	January, 1926.	July, 1926.
Food	177	159
Clothes, boots, washing	230	210
Rent	178	185
Fuel and light	227	215
Taxes, subscriptions, &c.	260	253
Other expenses	181	177
	194	184

The only group to show a rise is rent, and this is principally due to rises in the country districts, where the rent restrictions have been abolished. The index figure computed is the average of the retail prices at the beginning of the last two quarters (i.e., in the present case the beginning of April and the beginning of July), and in periods of continued decline the Danish price index would therefore be somewhat higher than if it had been based exclusively on the prices of the moment. However, this time the difference cannot be very great, as by far the principal part of the decline for the half-year had taken place before April. From April to July the decline has been insignificant, especially for food.

As a consequence of the decline of the price index Danish wages in most trades will be reduced by 5 per cent., following a reduction of 12 per cent. early in the year. Nearly all comments on the price index from trade

sources indicate, however, that this decline is insufficient to ameliorate unemployment, the number of unemployed at present being nearly 50,000.

The State will gain an amount of about 11,000,000 kr to 12,000,000 kr annually by the reduction of salaries. Various further savings on the Budget are contemplated, and the demand for tax relief is increasing under these circumstances. Whether this will be granted by the present Socialistic Government will appear during the sessions of the Rigsdag, which will commence in October. At present the Minister of Finance has not made any definite statement, and he points out that, in his opinion, it is the indirect taxes which should be reduced, if any tax relief is possible at all.

The Danish balance of trade still reflects the slackness of trade. June imports amounted to 134,000,000 kr and exports to 128,000,000 kr, and accordingly there was a slight excess of imports, while the preceding months have shown excess of exports. During the entire half-year January-July the figures for 1925 and 1926 were the following:—

		1925.	1926.
		Krone.	Krone.
Imports	1,120,700,000		802,100,000
Exports	1,051,800,000		783,800,000
	68,900,000		19,300,000

The balance of trade thus shows a considerable improvement, and is actually in favour of Denmark during the present year. That the balance has been particularly favourable lately must be a consequence of the fact that the entire tonnage, which was recently laid up, is now in commission, a development which, however, is principally connected with the coal strike in England.

From the exchange market it will be seen that the krone has now practically reached par, the present sterling quotation being 18.28 kr. The actual parity is 18.16 kr, but under present conditions the gold point is believed to be about 18.28 kr, although the actual figure is not quite certain. In all events, for practical purposes the krone is once more at par, and it is still regarded as certain that from New Year the gold standard will be re-established.

In its balance-sheet for 1925-26 (July 31, 1926) the Nationalbank has taken up its holdings of foreign exchange at par, as far as the gold standard exchanges are concerned, and accordingly all loss on foreign exchange (totalling about 11,000,000 kr), incurred through the exchange policy, has been written off, while the Bank has further written off 6,000,000 kr—on shares and "engagements." The shareholders will receive a dividend of 8 per cent. out of the dividend-equalisation fund, as for the previous two years, this being assented to by the Government in the exchange agreement between the Government and the bank.

POLAND.—COAL EXPORTS—POLISH BANK—MODI- FICATION OF THE BANK ACT—RAILWAYS— FINANCES.

(FROM OUR CORRESPONDENT.)

WARSAW, August 16.

THE factor which dominates the whole present economic situation of Poland is the growing export of coal. In July a new record figure was reached. The export amounted to 1,835,000 tons, as compared with 1,395,000 tons in June. Exports to the United Kingdom have risen by 416,000 tons, to Sweden by 65,000 tons, to Italy by 25,000 tons, to Hungary by 12,000 tons. Among the new markets which were opened, Belgium and Russia appear for the first time in the foreign trade statistics for July. As Danzig and the Polish port of Gdynia cannot cope with the oversea exports, large quantities are being sent by German ports (414,000 tons by Hamburg, 89,000 tons by Stettin, 49,000 tons by Bremen).

The great exports of coal since the beginning of the strike in England have contributed to an improvement of the position of the Polish Bank. While in 1925, and during the first quarter of this year the reserve of foreign currencies was steadily decreasing, a progressive increase took place in the second quarter and in July, which

SECURITY FIRST

ROYAL

INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

amounted to 2 million zlotys in April and May, to 25 millions in June, and to 13 millions in July. During the last month liabilities in foreign currencies (including reports) decreased from 68.9 to 47.2 million zlotys. The greatest part of the foreign debt contracted by the Polish Bank has been repaid, so that shortly the gold deposited abroad as guarantee of the loan will be released. The strengthened reserve enabled the Polish Bank to lower the rate of discount from 12 to 10 per cent. Discounts, however, are maintained on a nearly uniform level. They amounted to 301.5 million zlotys at the end of March, to 301.3 millions at the end of June, and to 304.2 millions at the end of July. The board of the bank has decided to modify the statutes so that an increase of the capital from 100 to 150 million zlotys will be possible. Hitherto the question whether the new shares are to be placed at home or abroad has not been settled. The board has also accepted Professor Kemmerer's plan of making the system of note issue more elastic. The fixed limit of a 30 per cent. reserve in gold and foreign currencies is to be abandoned. The bank will be able to increase its issues beyond this limit under the condition of paying a high tax to the Government. This modification of the statutes is not an innovation, but simply the application of a principle which is a characteristic feature of the modern banking legislation in other countries (Germany, Hungary, Austria, Chile). The proposals of the board will be shortly put before the General Assembly of the bank for decision.

The increased coal exports have not only enabled the Polish Bank to stabilise the zloty with the help of the increased reserve of foreign currencies, but they have also contributed to a financial and economic improvement of the whole state of the country. In the first instance, the State railways have benefited by the coal transports. The situation is even more favourable than during the occupation of the Ruhr; not only is the traffic much greater, but the average length of haul is much larger. The revenues from the transport of goods amounted in 1925 to 510 million zlotys; in 1926 they are estimated at 589 millions. Of the increase of 79 millions 32 are due to the increased tariffs, while the remaining 47 are the result of an intensification of the traffic. The Polish railways have obtained quite unexpectedly a surplus, which is used for the building of new lines, the repair of the rolling stock, &c. Orders for new wagons and locomotives have been placed at home and abroad.

Under the influence of these factors, unemployment is rapidly decreasing. The number of unemployed amounted at the end of July to 264,000, as compared with 359,000 at the end of January. An improvement may be noticed not only in the coal and iron districts, but also in nearly all branches of industry; for instance, in the textile centre of Lodz the number of unemployed has decreased from 89,000 in January to 60,000 in July.

The financial situation is, on the whole, satisfactory. The budgetary deficits fell from 43 million zlotys in January to 7 millions in February, to 2 millions in May, and to 12 millions in June. In March a surplus of 18 millions, and in April of 1 million, was obtained. A comparison of the revenues during the first half-year of 1925 and 1926 is given below:—

		(In Million Zlotys.)	
		1925.	1926.
Direct taxes	168.2		200.1
Capital levy	34.6		22.9
Indirect taxes	47.6		62.1
Stamp duties	57.3		58.7
Customs duties	174.6		82.5
Monopolies	179.9		246.5
Total	662.2		672.8

The total revenues have increased by 10 million zlotys during the first half-year of 1926 as compared with 1925.

In studying these figures it must not be forgotten that during this period the zloty, in comparison with foreign currencies, has lost 50 per cent. of its value. The depreciation at home is smaller, but reaches nearly 30 per cent. The purchasing power of 672 millions this year is much smaller than that of 662 millions a year ago. In consequence it is only by a retrenchment of all expenditure that the Government succeeded in making both ends of the Budget meet.

Books and Publications.

BOOKS RECEIVED.

The Theory of International Prices. By James W. Angell. (London) Oxford University Press, Warwick square. 21s net.

The author, who is an associate professor of economics in Columbia University, reviews the history of the doctrines and investigations dealing with international price relationships in various European countries and in the United States, and seeks to combine the conclusions reached into a general theory of international prices. The work is published under the direction of the Department of Economics, Harvard University.

A History of Economic Progress in the United States. By W. W. Jennings. (London) George G. Harrap and Co., Limited, 39-41, Parker street. 15s net.

A new text-book, which covers the somewhat wide field indicated by its title in workmanlike fashion, and throws a number of illuminating sidelights on historic events.

Annual Summary of Tax Cases, 1925. By Raymond Needham. Vol. III. (London) Gee and Co., Limited, 6 Kirby street. 10s 6d net.

In the present volume Mr Needham takes us up to the end of 1925, and summarises no less than 78 cases litigated in that year.

The Electrical Industry in Germany. (London) British Electrical and Allied Manufacturers' Association (Inc.), 36 Kingsway. 10s 6d net.

This extremely informative survey was reviewed in a leading article of the *Economist* of July 24, 1926, page 148.

Bastiat and the ABC of Free Trade. Translated from the writings of Frederic Bastiat, and edited by Lorenza Garreau. (London) T. Fisher Unwin, 1 Adelphi terrace. 3s 6d net.

Readers will welcome this English text of Bastiat's amusing but pointed parables, which have obtained a permanent place among the classics of Free Trade. The Editor contributes, in a foreword, a sympathetic review of Bastiat's life and work.

Foreign Trade, August, 1926. (Paris) Published by the American Chamber of Commerce in France, 32 Rue Taibout.

The initial number of this new review, devoted to the furtherance of American business with Europe, contains a prefatory message by Mr Herrick, and includes, among other interesting items, articles on "National Boundaries as Factors in Trade and Commerce," by the President of Columbia University, and on "Inter-Allied Debts and Reparations," by Mr W. R. Batsell.

International Labour Review, July, 1926. (London) G. Allen and Unwin, Limited, Ruskin House, 40 Museum street. 2s 6d.

Contains articles on The Sources and Interpretation of Labour Law in France; Over-production and Under-consumption: a Remedy, &c.

The Situation in South Tyrol, 1918-1925. (Innsbruck) Ernst Mumelter, Sailerstrasse, 2-11.

This is the revised text of a memorandum drawn up by the leaders of the German parties in South Tyrol, and handed to the President of the League of Nations Union.

Serfdom in the Konkan. By P. G. Kanekar. Published by the Author at Working Men's Institute, Elphinstone road, Bombay. 8 annas.

Les Codes de la Russie Soviétique. II. Traduits par Jules Patouillet. (Paris) Marcel Giard, 12 Rue Soufflot. 20 francs.

This volume contains the text of the labour, forestal, agrarian, mining and veterinary codes respectively, and is issued under the auspices of the Lyons Institute of Comparative Law.

Joint Stock Companies in British India and in the Indian States of Mysore, Baroda, Gwalior, Hyderabad, Indore, and Travancore. 1923-24. No. 2022. (Calcutta) Government of India Central Publication Branch. 4s 6d.

Manuel Statistique de la République Tchèque. II. (Prague) Librairie Dépositaire Busik and Kohout.

This is the second volume of the "Statistical Abstract" of Czechoslovakia, the figures referring for the most part to the years 1920-22.

The International Significance of the Depreciation of the Zloty in 1925. By Feliks Mynaiski. (Warsaw) The Polish Economist, 2 Elektoralna.

The author contends that the development of Poland's resources is impossible without external financial assistance, particularly American.

English Life, August, 1926. (London) 9, East Harding street. 1s net.

Messrs Bertram Austin and Francis Lloyd, authors of "The Secret of High Wages," contribute a thoughtful article on "Prosperity in our Time—a Director's Responsibility."

The 100 Best Investments. (London) The British, Foreign and Colonial Corporation, B.F.C. House, Gresham street. 1s net.

The August issue includes special articles on "What British Industry Needs" and "The Investment Outlook."

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
August 24. August 26.

THE Stock Exchange has been keyed up this week to a pitch of high excitement, though not over stocks and shares. Members followed, with keener interest than they ever took in Courtaulds, the progress of the Test Match, in which a Stock Exchange man was playing, and this dominated everything else to an extent which caused even the coal dispute to become a matter of secondary importance. Markets, apart from cricket, have been inclined to go better. The House begins to think that the coal crisis is definitely near its end. This led to improvement in a good many industrials, the iron and steel section being noticeably busy. In the gilt-edged stocks prices have drooped owing to the slight stiffening of money rates, added to the disappointment felt at the possibility of a reduction in the Bank rate being postponed for some time to come. The newly-issued Commonwealth scrip has declined to $\frac{1}{2}$ discount.

As the French exchange has moved so have French bonds fluctuated within fairly wide margins. The gambler finds this market ideal for his favourite occupation of getting in and out quickly, and there is a good deal of animation in French

Government bonds on his account. French railway bonds have risen sharply. The Mid-European list is firm, and several of the newer scrips, Counties of Hungary, Westphalia, &c., are strengthening. Brazilians keep hard, but apart from these the South American group is quiet. Peruvian Corporation stocks remain on the up-grade, in consequence of the anticipation that the day is approaching when some scheme will be presented for dealing with the arrears of dividend on the company's preference stock.

Home railway stocks, after their substantial spurt at the end of last week, wavered a trifle, but maintained their advances with a tolerable degree of tenacity. The amount of public business doing in this department is slender. Argentine railway stocks are attracting greater attention by reason of the anticipations of what dividends will be declared next month, and, in this section, Cordoba Centrals stand out more particularly. Leopoldinas have also been popular. Nitrates are sluggish and neglected.

The rubber market showed a moderate amount of strength, though in some of the leading stocks the disposition has been to allow prices to sag for want of a lead on the part of the public. Tea shares are firming up, the impression being that the companies will do at least no worse than they did a year ago, and that the market in the leaf is becoming more settled after its ferment of last year. Oil shares have aroused no fresh attention from the public. The tobacco market is active again, British Americans leading the way in popular favour, owing to the declaration of a dividend on old and new shares alike. Hopes of an early conclusion to the coal crisis led to rallies in a number of iron and steel shares, where the market has been further assisted by announcements of important contracts placed with leading companies. Courtaulds have thrown off part of their recent weakness, and the textile market as a whole is better, the improvement being due simply to the anticipation of work being resumed in the coal industry. This has a similarly favourable effect upon shares in the road and brick-making companies, together with a number of others in trades that depend to a large extent upon coal for their profitable operation. The shipping market, however, is extremely quiet, and movements in banking shares, insurance and trust companies' stocks have been few and far between. Employers' liability have gone ahead. Certain of the Canadian-Latin utility shares are again prominently good, Brazilian Tractions and Sidros especially. Gas and electric lighting shares have moved but little. Cable manufacturing issues continued their advance, though cable stocks and wireless shares are virtually unchanged on the week. Of the new issues, Morris Motors preference are distinctly better; Associated Biscuit preference strengthened to 23s. The land group is hard, with the Egyptian companies' shares rather firmer, and Hudson Bays also in request.

An abrupt fall in Sub-Nigels mystified the Kaffir market and exercised an unsettling influence over other South African shares, which for some time past had relied upon Cape purchases for their principal support. Deduction of the dividends from the prices of gold-producing companies' shares has failed to bring in further support. Rhodesians, on the other hand, make a slightly better showing, with Chartered on the rise. The tin shares in the Malayan group occupy the chief theatre of interest amongst mining shares, and on a rally in the price of tin, the metal public buying of the Malayan varieties became resumed. There is not much doing in Cornish or West African tin descriptions, the public treating these cautiously. A little activity in Russians and a fall in several Mexican mining shares—owing to an apparent misunderstanding—served to bring a little extra business into the mining markets, and there is some talk of a possible revival in copper shares by way of sequel to the activity which has recently characterised those concerned with tin.

The Stock Exchange Committee have confirmed the rule which makes it compulsory for members to mark the words "not negotiable" upon their cheques.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

Fairey Aviation Company, Limited.—Capital £10,100, divided into 10,000 7 per cent. cumulative preference £1 and 100 ordinary £1 shares. In addition there is £150,000 of income stock outstanding. This is an issue of all the preference shares at par. The company has been formed to acquire from the Fairey Aviation Company, Limited, the business of aircraft manufacturers established in 1915, and all the shares in the subsidiary concern called the Hayes Real Estate Company, Limited, which owns a freehold factory at Hayes, Middlesex, the buildings covering, it is stated, 150,000 square feet. It is reported that the company will also acquire a freehold factory and seaplane launching station near Southampton. The prospectus states that the company has no debentures and that the assets are free from any mortgage or charge. The purchase price is satisfied by the allotment of £150,000 of income stock, the satisfaction of the vendor's liabilities, and the payment of the costs of winding up the latter. We are not told exactly what rights are possessed by the income stock, what profits have been made by the vendor company or what figure the assets are valued at. In view of this and the fact that aviation is only yet in its infancy, the shares can only be regarded as speculative.

SPECIAL SUPPLEMENT.

On SEPTEMBER 18th next, there will be published with "The Economist" a Special DANUBIAN SUPPLEMENT.

In addition to several general articles on the Danubian region as a whole, this supplement will contain special articles on AUSTRIA, HUNGARY, ROUMANIA, BULGARIA, CZECHOSLOVAKIA, and JUGOSLAVIA.

TO ADVERTISERS.

This supplement will have a world-wide and influential circulation, and should therefore prove a most valuable medium for Banks and other companies wishing to increase their business in the Danubian regions.

Full particulars can be obtained from the Advertisement Department—
The "ECONOMIST" Office,
3, Arundel Street, Strand, W.C.2.

AMERICAN WHEAT MARKETS.

Unfavourable crop advices and foreign weather news caused a rally in prices at the beginning of the week, but the market subsequently weakened under realisation. The close was steady, export inquiry being good. Frosts have been reported from certain parts of Canada, and wet weather is delaying harvesting. Quotations:—

	Jan. 2, 1925.	Aug. 20, 1925.	Jan. 7, 1926.	Aug. 12, 1926.	Aug. 19, 1926.
Winnipeg (No. 1 Manitoba)—Cents per 60 lbs.	183	(a) 144½	160	(a) 139½	(a) 138½
Chicago (No. 2 Winter)—Cents per 60 lbs.	177	(b) 159½	176½	(b) 135½	(b) 135½

(a) October delivery. (b) September delivery.

Visible supplies of wheat in Canada, at 18,198,000 bushels, show a decrease of 1,286,000 bushels, as compared with the previous figures. Supplies a year ago stood at 7,543,000 bushels.

COAL.

Our Cardiff correspondent writes:—Recent developments in connection with the mining dispute have practically monopolised attention in coal trade circles during the past week. In anticipation of a settlement before next month, a fair number of tentative inquiries have circulated in respect of shipments within reasonable time after work is resumed. Collieries, however, in practically all cases, are indisposed to quote until definite terms of settlement have been agreed. Foreign coals continue to arrive in good supply. Since last week about 50,000 tons have reached the South Wales ports, making the total quantity imported to date approximately 450,000 tons. Local works, however, are inclined to defer placing further orders for forward delivery, pending developments in the coal position. Both Continental and American prices are firmer. Patent fuel has met a small demand at 44s-45s, though prices are barely maintained at this figure, and sales have been reported down to 42s 6d. Banked smalls for patent fuel manufacture are obtainable at 20s to 25s at works, while two cargoes of Scottish duff coal have also been imported for this purpose.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Unsatisfactory conditions continue to prevail in the British iron and steel trades. This year the seasonal quietness is accentuated by the conditions resulting from the coal strike. Manufacturers are obtaining better supplies of coal, both from home and foreign sources; but they are experiencing considerable difficulty in obtaining supplies of Continental steel. Continental manufacturers have recently advanced their prices, but the position is confused, and while a number of the foreign steel makers are quoting high prices and are disinclined to accept orders, others are showing a greater disposition to do business; but in all cases the period required for delivery has been extended into the autumn. The Continental situation has been made more difficult by the movements of the exchanges and by efforts to form international associations to maintain prices. Little attention is paid to the latter in the British market, as it is believed that the steel makers of the various countries are not sufficiently organised on a national basis to reach an international understanding.

Our Middlesbrough correspondent's report, dated August 19, 1926, is as follows:—Pig-iron: Owing to the local holidays, no market was held this week. There is, however, no change in the price of Cleveland No. 3 G.M.B., and those who have any for sale are still willing to accept 90s per ton from local consumers. Some improvement has taken place in regard to the price of East Coast mixed numbers, as stocks are being gradually reduced, and to-day the price is 82s 6d per ton. Manufactured Iron and Steel: Some of the local foundries are still working, and two of our local steel works are putting in two or three furnaces for the manufacture of steel to enable them to execute a few pressing orders for material. Quotations are unaltered. Steel ship plates, £7 17s 6d; steel ship angles, £7 10s; iron bars, £11; steel rails, £8. Iron ore: The nominal quotation of best Rubio is still 21s 6d per ton c.i.f. Tees, with no business being done.

Our Sheffield correspondent writes:—By the aid of foreign and outcrop coal a considerable volume of work is being carried on in

THE COTTON TRADE.

LIVERPOOL, August 19, 1926.

The demand for spot cotton during the week has been good, and prices have advanced about 25 points. Since the issue of the Agricultural Bureau estimate, rather more unfavourable crop accounts have been received, too much rain having fallen in the West, and an increased activity has been shown by the boll weevil. The market is entirely ruled by the weather reports. Spot sales for the week, 13th to 19th (inclusive) were 33,000 bales. Of these, 17,470 were American, 3,000 Brazil, 5,400 Peru, 2,700 Egypt, 2,900 African, 1,100 East Indian, and 430 sundries. Imports for the same period were 45,442 bales. These included 8,382 American, 5,786 Brazilian, 11,929 Peruvian, 12,732 Egyptian, 4,659 African, 342 East Indian, and 1,302 sundries. Quotations to-day are:—Middling American, 9.63d; Brazil Fair, 9.63d; Peru G.F. Mod-Rough, 11.50d; Smooth, 11.28d; Egyptian Sakel, 15.75d; Uppers, 12.10d; West African Mid., 9.33d; East African G.F., 10.95d; and Tinnivelly F.G.F., 8.55d.

MANCHESTER, August 19, 1926.

The tone of the market has been firmer, partly owing to the hardening movement in raw material rates, and partly as a result of spinners of American yarns putting up their quotations in accordance with the Basic Prices Scheme of the Masters' Federation. On the whole, the higher figures have been resisted by buyers, and it has been difficult for producers to sell at top rates. Inquiry in cloth for India has been fairly extensive, and a moderate turnover has taken place, but practicable demand in grey staples remains disappointing. China merchants are discouraged by the position abroad, and low exchange is an unfavourable factor. No business of importance has been done for the minor outlets East and West, buyers being content to purchase odd lots. There are anticipations of increased activity after a settlement of the coal dispute. Spinners of American yarns have been firm at the basic prices, but they have not been able to sell very much. An irregular business has been reported in Egyptian counts.

OTHER METALS.

TIN.—The market for tin exhibited firmer features following higher Eastern and American cable advices. Slight irregularity, however, was noticeable at times due to realisations, though offerings were well absorbed. Dealings in standard cash were recorded at £290 5s to £295, £294, and three months £285 to £289, £288 10s. Sales in the East were reported at £291 2s 6d to £294. COPPER values also improved, while influenced by firmer advices from New York, and dealings were on a liberal scale. Later movements showed slight irregularity and weakness, owing to larger offerings of near dates. Standard cash sold £58 7s 6d-£59 2s 6d and £59, three months £59 2s 6d to £60 and £59 16s 3d. LEAD quiet but fully steady. Good, soft foreign pig, August, sold £32 13s 9d, £32 17s 6d, September £32 10s, October £32 7s 6d, £32 11s 3d, November £32 5s to £32 8s 9d. SPELTER maintained, while firmer for distant positions which attracted chief attention. August sold £34 to £34 7s 6d, September £34 5s to £34 8s 9d, October £34 10s-£34 11s 3d, November £34 7s 6d-£34 13s 9d, December £34 12s 6d-£34 15s per ton. ANTIMONY quiet. English, £74 10s to £75; China, crude spot, £45, shipment £39, regulus afloat £65, shipment £66 ton c.i.f. QUICKSILVER, spot, £15 5s to £15 10s per bottle. ALUMINIUM quiet. Home trade £118, export £120 per ton. TIN PLATES quiet. I.C. Coke prompt 21s 6d to 22s, forward 20s. 3d., per box f.o.b. Swansea.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—More interest has been shown in wool and tops during the last week or two, and although district holidays have resulted in the closing of mills in various parts of the West Riding, it is an undoubted fact that trade in raw material and tops has improved, and this is reflected in firmer quotations. Users, both in this country and on the Continent, cannot ignore the fact that the only source of supply will be in London until the new clip wools are available, and it looks as if competition will be keen at the auctions which open in Coleman street next month. Already some fair weights of the wool withdrawn from last series have been taken privately, and all reports agree that stocks of fine combing wools are by no means plentiful in France and Germany. More interest has been displayed in practically all classes of tops this week, and in many cases topmakers are quoting from 1d to 1d more than a week ago. Some of the larger firms, evidently influenced by the wool position, are inclined to quote well above the market as a protective measure, and spinners who have sold yarn at low prices may yet find themselves in a difficult position if they have not covered in tops. Even crossbreds are moving more freely, and it is clear that the big weights of wool, both merino and crossbred, taken in recent weeks for Russia have greatly strengthened the hands of holders. There is not much change in the yarn section, and developments cannot be expected until the coal dispute has been settled, but quotations for fine yarns are very firm. Crossbreds are still very quiet, and prices remain irregular. Uncertainty regarding delivery is holding up business in piece goods, but prices are firm. The general impression is that business will expand as soon as the industrial outlook becomes clearer.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Very little cable information has been received from overseas during the past week, from which it may be inferred that there has been no important development affecting the wool trade, and that there has been no rainfall worth recording. It has been pointed out more than once that the quantity of wool to be sold in Australia during the current season cannot possibly be as large as last, as there is no surplus to be disposed of. This is better than having a large remnant from any preceding clip, as such is liable to be used in an attempt to frighten the trade into lower wool prices, particularly with manufacturing conditions such as exist to-day in the West Riding of Yorkshire and on the Continent. It is far better for each year's production to be got rid of as it comes on to the market.

The general outlook for the raw material must be regarded as satisfactory. It is expected that, without allowing for the large carry-over from the previous season, the current clip will be slightly smaller, but here again this need not be interpreted as an argument that there will be a scarcity of raw material, and that prices will therefore show any distinct advance. All the probabilities point to supplies being adequate for all needs. Some improvement is taking place in the financial position of France, which means that wool users in that country will still be able to take large weights, though it is obvious that further strenuous efforts will have to be made both on the part of the Government and the public if real financial stability is to be achieved. Some think that France will not operate on a large scale, but it is equally as reasonable to anticipate that big weights of wool will be taken, and certainly every effort will be made to maintain the output of piece goods. Competition will no doubt be keen. Endeavours will be made between firms in this country to get the business offered, and there will be similar keenness in competition

between British and Continental spinners and manufacturers. So far as this country is concerned, there is no prospect of any reduction in overhead charges, and consequently cloth is not likely to be any cheaper.

THE JUTE TRADE.

Bad weather conditions in India for a time prevented the free imports of raw jute into Calcutta. Offers of raw jute to this market again became extremely scarce, and all prices were considerably advanced. This week, however, under improved conditions and the subsidence of the flooding in India, sellers are offering to accept lower prices. Spinners are not to be rushed in their purchases of their requirements for next season, and are only picking up a parcel here and there when the price is reasonable. Religious troubles are stated to be responsible for the lack of offers of native baled jute, and never before has there been so little material offering at this period of the season. At all consuming centres buyers are anticipating a decline in values of the fibre, and are deferring their purchases. First Marks actuals for shipment to Dundee are obtainable at £32 for August, and at £30 for September. The Daisee crop prospects are meantime uncertain on account of damage by caterpillars. This class of jute is in consequence sparingly offered. Sellers are quoting £26 for assortment for September-October shipment.

There is little business being negotiated in yarns. Buyers are endeavouring to further depress prices by taking only small quantities, but spinners are most determined in their efforts to keep up values, and the majority will not yet sell at less than 3s 1d for common 8-lb cops and at 3s 2d for 8-lb spools. Some spins are obtainable at 3s and 3s 1d respectively. All other yarns are only being moderately dealt in at unchanged prices.

The dull monotony of the cloth end of the trade continues. Manufacturers are all complaining of a lack of orders of substantial proportions. The rate ruling for 10½ ozs. 40 ins. hessians is 4½d, and for 8 ozs 3½d is wanted. It requires actual business to test whether less than these prices would be accepted.

HIDE, LEATHER, AND ALLIED TRADES.

The hide market remains firm. Many yards are still working in a reduced input, and this keeps stocks of leather low. At the auctions held in Bermondsey on Thursday last three classes of best ox hides were withdrawn, the two light selections making 6d to 6½d—an advance of ½d on last prices. All seconds advanced ½d, whilst cows sold in best grades from 5½d to 5½d. Best calfskins were steady at 6½d for heavy to 11½d for lights. Lambskins sold from 2s to 8s, and pelts from 4s 6d to 7s each. The English demand for imported hides has been quiet, but the wants of Germany and Russia have kept prices firm at origin, and 7½d to 7½d has been paid for best Argentine ox. Dry hides also share the firmness in the world's hide market. Cables from Chicago report the market as weaker, with best heavy packers, however, still selling at 15 cents.

Trading in sole leather is much better than might have been expected, and manufacturers are now taking moderate quantities of 10-12 lb bends from dry hides. Upper leathers are slow, although sampling is being freely done. Coloured kid and willow are still the best sellers, but there are slight signs of a revival in the demand for black kid. Curriers are badly off for orders, but there is a good demand for sheep leathers for clothing and glove-making purposes. The boot trade is quiet, and short time is being worked in most centres. The Russian boot is being pushed for all it is worth, but so far there is no definite sign that it will be popular amongst women this winter.

VEGETABLE OILS AND OILSEEDS.

Markets generally have been on the easy side this week, and prices all round have had a declining tendency. Linseed oil has met with little demand from consumers, and has lost on the week, current value being around £34 per ton naked ex Hull mill for prompt delivery and all positions, including January-April. Cotton oils have continued weak, and crude Egyptian has receded to £36 15s, and ordinary refined to £38 per ton, without attracting buyers. Soya palm kernel and other vegetable oils are quiet, and quoted lower.

In the oilseed section little has been passing in linseed pending the Argentine crop report, which is expected to show a decreased acreage. Sellers have thus been pressing sales, Plate on spot and afloat offering freely at £16 8s 9d, and August-September at £16 10s, and meeting with very little response. An early transaction in the new Plate crop for January-February shipment is reported at £16 7s 6d to Hull. Cottonseed has continued in poor demand, and black Egyptian is easier, old crop being offered at £9 7s 6d on spot, passage, and August loading. The nominal value of the new Egyptian crop is £10 7s 6d for October loading. Soya beans are inactive, and new crop for November-December shipment is quoted at £11 7s 6d.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—No change in prices of spot parcels. There was a moderate clearance in British refined, but imported met with but quiet attention. Forward positions also quiet, and prices mostly easier. Czecho granulated, ready, sold, 14s 9½d; September quoted 14s 10½d; November-December sold, 14s 7½d, f.o.b., Hamburg, Dutch J, ready, sellers, 14s 10½d; November-December, 14s 9d, f.o.b., Rotterdam. Canadian granulated, August-September, quoted 15s 6d, c.f. and i. terms. Crystallised West India, steady, at 26s to 27s for good to fine, lower kinds being virtually cleared. Cuban basis 96 per cent., August-September, quoted 11s 8½d, c.f. and i., U.K. White terminal quiet and easier. August sold, 13s 5½d to 13s 4½d; September, 13s 5½d; December, 14s 3d; March, 14s 9d; May, 15s per cwt.

COFFEE.—A quiet but steady tone pervaded the spot market. Costa Rica bold sixes sold, 16½s to 19½s; East India, Coorg, 160s; Vera Paz, 150s 6d to 158s 6d; Maragogipe, 200s. Futures quiet.

COCOA.—Only small transactions on the spot at about late rates. Accra easier forward, and F/F, November-January, sold, 45s to 46s, and 45s 6d, f.o.b.

TEA.—Quantity of Indian auctioned during the week amounted to 37,700 packages, and with a generally good demand recent rates were obtained for most descriptions, though common and low medium disclosed slight irregularity. Pekoe sold, 1s 4½d to 1s 10½d; orange, 1s 6½d to 2s 1½d; broken orange, 1s 4½d to 2s 9d. Ceylon sales of 30,500 packages soon cleared to a brisk demand at mostly 1d to 1½d per lb advance. Pekoe sold, 1s 4d to 1s 10d; broken orange, 1s 6½d to 2s 1d per lb, in bond. 8,600 packages Java and Sumatra were offered, and with generally subdued competition prices marked a

weaker tendency for the lower qualities, but fine brought steady rates. Broken pekoe sold, 1s 6½d to 1s 8½d; pekoe souchong, 1s 2d to 1s 2½d; orange pekoe, 1s 4½d to 1s 7d; broken orange, 1s 1d to 1s 10½d per lb, in bond.

RICE.—Market without new feature. European demand is quiet at previous prices, with continued sales in S.O. to Cuba, August-September, 16s 1½d, c.f. and i. Spanish and Italian slow. Beans and peas quietly steady. Business in Japanese peas, September-October, 25s 4½d cwt, c.f. and i. terms.

SPICE.—Pepper in quiet request. Black Singapore, spot, 8d; August-October, 6½d. Lampong, spot, 7½d; May-July, 7½d; August-October 6½d; October-December, 6½d. Muntok, spot, 1s 2d; May-July, 1s 1d; August-October, 11½d; October-December, 11½d. Tellicherry, spot, 10½d. Aleppy, 10d. Zanzibar cloves, spot, 9½d to 9½d; August-October, 8½d. Pimento, spot, 6½d. Tapioca nominally unaltered, also sago flour.

FRUIT (Dried).—Currants market remains dull. Amalia, quoted 30s to 31s; Gulf, 32s to 35s; Pyrgos, 29s to 30s; Vostizza, 40s to 53s; Patras, 31s to 33s; Australian, 38s to 48s. Sultanias quiet. Smyrna, September shipment, 47s; Australian, 66s to 84s; South African, bleached, 70s to 76s. Dates in fair demand both for home trade and export. Siam, quoted 11s 3d to 11s 9d; Khadowie, 15s to 16s; Hallowie (cases), 22s 6d to 25s. Raisins: Capes sold steadily at 37s to 42s; Lexias, new crop, quoted 40s to 45s. Evaporated fruits inactive apart from some inquiry for Australian apricots. Californian apricots, fancy, 137s 6d; Australian, 125s to 135s; South African, new Royals, best, 140s. Plums, Californian, 20/30, quoted 105s; 50/60, 52s; 90/100, 37s; Oregon, 30/40, 63s; 35/45, 55s. Pears, Californian, extra choice, 72s 6d; fancy, 82s 6d; Lake County, fancy, 90s. Apple rings, Californian, extra choice, 50s to 60s; September-October shipment, 48s; Canadian, spot, 50s per cwt.

CANNED GOODS.

CANNED FISH.—There is no improvement in the demand for sardines, though suitable size fish in small supply. Portuguese, ½s, quoted 4s 3d to 6s per dozen tins. Salmon quiet, and tendency easier. Red, tall, 1 lb, 54s to 56s; tall pink, 26s to 27s; ½ lb, pink, 39s to 41s. Lobsters steady. Best ½s, quoted 157s 6d to 162s 6d, and ¼s, 90s to 92s 6d. Japanese crab firm, and arrivals are quickly absorbed. Crayfish in limited supply.

CANNED FRUIT.—Trade continues quiet for the time of year, and prices are correspondingly low, the cheaper grades being in most request. Californian Bartlett pears, 24-2½s, quoted 12s 6d to 13s 6d; seconds, 10s to 10s 6d. Californian peaches, choice, 11s 6d to 12s 6d; standard, 10s 6d to 11s 6d; seconds, 9s 6d. Californian apricots, choice, 12s 6d to 13s; standard, 10s to 11s; seconds, 9s 3d per dozen tins. Pines in quiet request, both on spot and for shipment. Italian tomatoes slow, but prices firm for new pack.

CANNED MEAT.—Market quiet, though trade is fairly brisk for Danish lunch tongues. Corned beef 6's quoted 38s to 46s, as to quality. Danish lunch tongues range from 122s 6d to 132s 6d; American quoted 135s, with best 140s to 142s 6d. Ox tongues firm. Cooked boneless hams, Danish, continue in demand, at 1s 8½d per lb. for cases of six tins.

CONDENSED MILK.—Market quiet, at the recent decline. Machine-skimmed ranges from 10s 6d to 11s 6d. Full cream, 20s to 25s. Full-cream evaporated: A good trade continues for this class, at prices ranging from 19s 6d to 21s, according to quality.

HONEY.—Trade generally quiet, but there is a regular demand for New Zealand. New Zealand quoted 50s to 85s; Australian, 40s to 50s; Jamaica ranges from 37s 6d to 50s; Haiti, 37s 6d to 48s; Cuban, 37s 6d to 48s per cwt.

RUBBER.

In fair support, and market slightly firmer. Plantation standard sheet, spot, sold, 1s 7½d; September, 1s 8d; October, 1s 8½d; October-December, 1s 8½d, 1s 8½d, and 1s 8½d; January-March, 1s 8½d and 1s 8½d per lb.

GENERAL.

SHELLAC market stronger. T.N., spot, quoted 127s 6d to 132s 6d, August, 126s; October, sold, 127s 6d; December, 122s 6d to 123s per cwt.

COPRA market dearer on increased buying orders. F.M.S. Straits, August-September and September-October, Rotterdam, sold,

Amoy, Batavia, Bombay, Calcutta, Canton, Foochow, Hankow, Hongkong, Keelung, Kobe, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

£28 12s 6d, £28 13s 9d; Dutch East Indies, £28 8s 9d; Ceylon, August-September, quoted £29 15s; South Sea, F.M.S., afloat, £27 2s 6d; August-September, £27 5s; Manila, August-September, to Marseilles, £27 5s; smoked South Sea ditto, £26 15s; Palm kernels stronger, August-October, to Liverpool, sold, £26 10s per ton.

JUTE.—Prices opened the week higher due to Calcutta buying orders received by cable, but later a downward movement set in as demand on spinning account remained sluggish, with some irregularity in attendance, and advancing again. Firsts, August, sold, £29 10s to £30, £28 10s, and £30 15s; September, £28 15s to £29, £27 10s, and £29 10s; October £28 5s to £28 15s, £27 5s, £28 15s; November-December, from £28 12s 6d to £27 2s 6d and £28 10s. Lightnings quiet at proportionate figures of 25s per ton under firsts. Hessians and twills are easier, with business limited.

HEMP.—Manila opened firmer, but eased later as buying orders became lessened, though again improving. J, September-November, sold, £44 10s to £44, and £44 10s; K, £34 5s to £34 and £34 10s; L, £34 15s to £34 10s and £35; M, £30 10s. New Zealand nominal. African sisal, No. 1, f.a.q., September-October, £43 10s, sellers.

MISCELLANEOUS.—Cocconuts quoted 22s per 100. Coir yarn, Ceylon, £21 10s to £37; Cochin, £24 10s to £49; Ceylon bristle, £17 10s to £23; cinnamon leaf oil, 4½d; citronella, Ceylon, 1s 7½d; Java, 2s 5d.

Government interest payments to the extent of about £15 millions, the end of the month should be negotiated comfortably. The discount market, though quiet, has been firm in tone, the general quotation for three months' bills being $4\frac{1}{8}$ per cent. Allotments for yesterday's Treasury Bills, which were for a larger amount than usual, were made at an average of over $4\frac{1}{16}$ per cent.

	Aug. 27, 1926.	Aug. 20, 1926.	Aug. 13, 1926.	Aug. 6, 1926.	Previous Rate and Date Changed.

Market rate (3 months' bills) ..	$4\frac{1}{16}$	$4\frac{1}{16}$	$4\frac{1}{16}$	$4\frac{1}{16}$	..

Thursday's Bank return showed an increase of £661,400 in the stock of coin and bullion, and a reduction of £282,300 in the note circulation. The Reserve was thus £943,700 higher, but the proportion fell slightly to 26.7 per cent., Public Deposits having increased by £9,177,400, while Other fell by £2,770,900. Government securities increased by £4,441,300, and Other by £1,095,100. Currency notes outstanding were reduced by £207,500 this week to £290,751,500, which includes £1,296,900 for notes called in, but not yet cancelled. The fiduciary issue is £233,204,600, or £14,797,900 below the maximum.

NEW YORK MARKETS.

Our New York correspondent cables:—The share market is showing more weakness over the increasing firmness of money rates, but the cliques are still supporting their favourites, and rails are good on the July earning statements, which are uniformly above the showing of a year ago. Fresh capital issues are increasing, and industrial companies are seizing the opportunity to refund at lower rates. Short-term Government financing is expected in the middle of next month in order to take up maturing Treasury certificates. The effect of the higher Reserve Bank discount rate, and the growing autumn demands for money, is seen in the lifting of the Stock Exchange call money rate to 5 per cent. The activity in industry is well maintained, and although the increase in petroleum output is unsettling, it is improbable that the summer will see any general reduction in prices. The Reserve statement shows a ratio of 83.6 per cent. for New York, a small decline in discounts and Government securities, and a moderate increase in bill purchases. Discounts for the System show an increase, the higher rate here apparently diminishing the draft of local funds to the interior.

THE STOCK MARKETS.

The Stock Exchange is regarding the coal situation coolly, and business in many markets is rather better than usual at this time of year. Gilt-edged stocks have been dull, and movements in the foreign market have been irregular, but Peruvian Corporation stocks continue strong. Home rails have not maintained last week's rise, but Argentine railway stocks continue in demand on dividend prospects. There is a slight increase in the volume of business in the rubber market, and oil shares have been firmer. The tobacco market remains good, but textiles weakened on the reduction in the profits of the Calico Printers' Association. Elsewhere industrials have been rather quiet. The Kafir market has been affected by Cape operations in a few speculative favourites, and there has been considerable activity in Malayan tin shares.

THE COMMODITY MARKETS.

Though hopes of an early coal settlement have receded, there has been no retrograde movement in the commodity markets this week. Arrivals of foreign coal have been less in evidence, prices still showing a hardening tendency. Iron and steel consumers find it impossible to cover their requirements from domestic supplies, and resort continues to be had to foreign material when available. The cotton market has been taken by surprise by a bearish American crop estimate, and prices have been increased all round. Demand for piece-goods continues disappointing. A more cheerful tone than might be ex-

pected pervades the wool trade, and all classes of material have lately moved against the buyer. Wheat harvesting is proceeding satisfactorily in many countries, and with inquiry on a small scale prices have declined to some extent this week. Sugar is steady at recent levels. Coffee has been bought in fair quantities, but while the finer grades of tea have met with a steady sale, common and low medium teas are weaker. The rubber trade is featureless, prices having fallen from $\frac{3}{4}$ d to $\frac{1}{4}$ d on the week. Among non-ferrous metals tin has been irregular on fluctuating American and Eastern reports, copper is easier, and lead dull.

FOREIGN EXCHANGES.

The feature of the foreign exchange market during the week has been the weakness of sterling and the comparative steadiness of the franc, both French and Belgian—a complete reversal of the position of a few weeks ago. In the latter part of the week, too, it became apparent that the Reichsmark had been unpegged, but the event seems to have escaped general notice, judging by the absence of references in the Press, although the rate had hardened steadily from 20.40 on Monday to 20.35½-20.36½ on Thursday. Another item of interest was the fact that, although the rate for spot lira remained comparatively steady, there was a marked improvement for forward delivery, one month moving to 11 lira discount and three months to 15 lira discount as compared with spot. The dollar rate has moved steadily against London throughout the week. After opening at 4.85½-1½ on the 20th, it passed gradually through the levels of 4.85½-¾ on the 21st, 4.85½-1½ on the 23rd to 4.85 7-32-11-32 on the 26th. Yesterday the spot rate was 4.85½, and forward rates $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$ premium for one, two or three months respectively. There is, however, no need to attribute the present weakness of sterling to any sinister or mysterious influences, as there is every reason to believe that it is due merely to heavy buying of dollars for commercial transactions which are of a seasonal nature. Paris and Brussels have shown considerable steadiness throughout, after a slight reaction to lower levels during the middle of the week. This steadiness is, of course, due in part to the recuperative measures adopted in both countries for the re-establishment of their financial stability, and it may therefore be regarded as the measure of the success so far of the expedients put into force. Paris also has available large supplies of dollars from this season's American tourist traffic, which is by no means over, and sufficient is still coming into the Paris banks to influence a rather dead market. The note issue in Belgium has decreased during the week by 37 million francs, whilst in France it was similarly reduced by 512 millions, and a further drop of 500 millions was shown in the Banque de France weekly statement under Advances to the State. By the latest enactments, however, the Banque de France is empowered to create notes for the purchase of gold, silver, and foreign exchange, and these notes are not to be regarded as an addition to the legal limit. It seems, therefore, that the test of the present deflationary processes in France will only come if and when these foreign currencies, &c., are again disposed of, the crux being, of course, the subsequent fate of the additional notes issued for their purchase. Paris opened at 169½-170½ on 20th, weakened to 172-172½ on 23rd, but recovered to 169½-¾ on 26th, and was yesterday at the same level. Forward rates showed an improving tendency throughout, and stand at 3½f, 6½f, and 8½f discount for one, two, and three months. Brussels remained at about 176½ throughout, with slight weakness at 176½-177 on 24th. Spot is at 176½. Forward rates showed similar tendencies towards improvement, and are 2f, 4f, and 5½f discount for one, two, and three months. The lira shows no change on balance at 148½-1, although it weakened to 150 on 23rd, and improved to 147 on 25th. Forward rates have already been referred to. Berlin, as we have said, went steadily from 20.40 to 20.35½ yesterday, and the Reichsmark exchange is now, we understand, free both spot and forward. The present strength is probably due to the glut of money on the Berlin market, due to the large sums recently lent to Germany, which have converted an adverse into a favourable balance. The peseta at 31.70 is weaker, as

a result of political influences, such as the Spanish attitude with regard to Tangier, and rumours of differences in the higher administration in Spain, and dissatisfaction with the Dictator in high quarters. The other European currencies do not call for remark. The South American exchanges were dull, the milreis being $\frac{1}{2}$ weaker at 45½ on Thursday, and again lower at 45½-½ yesterday. The Argentine exchange is rather firmer at 7½-¾. In the Eastern exchanges the rupee is steady at 1s 6d after weakness at 1s 5 31-32d on 23rd and 24th; Hongkong and Shanghai are firmer at 2s 2½d and 2s 10d. Silver showed a sharp upward reaction about the middle of the week, and prices rose on 24th to 29½d for spot, and 29½d for two months' delivery on 24th, followed by a fall of ½d next day on active selling at the higher levels. Further selling, chiefly on China account, brought prices later to 28½d for spot and 28½d for forward delivery. The sudden rise referred to above is said to have been due to the postponement of the Indian Currency Bill. This postponement was quite a reasonable one, but the temperamental nature of the Indian Bazaars, which are amongst the largest dealers in silver, is a factor which must be taken into account. The yen touched its highest record of 1s 11½d-1½d on 20th, and remained in the neighbourhood of this level until yesterday, when it fell probably under the influence of a natural reaction to 1s 11 19-32d.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 21st:—

EXPENDITURE.	£	RECEIPTS.	£
Supply Services	10,000	From Revenue ..	17,643
Interest, &c., on Debt	685		
Sinking Fund	1,407		
Decrease in debt	4,021		
Increase in Balances	81		
Sundries	1,447		
	17,643		17,643

Revenue yielded £17,642,600, against £16,469,900 in the corresponding week last year. Customs produced £1,876,000, against £2,135,000, and Excise £7,573,000, against £7,221,000. Estate, &c., duties yielded £1,890,000, against £1,080,000. Property and Income tax produced £3,936,000, against £3,792,000.

The week's operations reduced the National Debt by £4,023,000, and caused the following changes:—

	£		£
Sundries	310	Treasury Bills	+ 9,337
Public Department Advances ..	13,050		
	13,360		+ 9,337

The floating debt was reduced by £3,725,000 to £760,841,000.

FINANCIAL YEAR, 1926-1927 (April 1 to August 21, 1926.)

	£		£
Total Expenditure ..	317,419,489	Raised by Revenue ..	257,335,122
		Decrease in Balances ..	3,876,513
		Amount borrowed ..	56,207,854
Total	317,419,489	Total	317,419,489

ESTIMATES for FINANCIAL YEAR 1926-7†

	£		£
Expenditure	825,727,000	Revenue	824,750,000
Deficit	£977,000		

† Revised in Exchequer Return dated July 26, 1926.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—National Bank of Greece, Amalgamated Press, and Union Cold Storage. The chairman of the National Bank of Greece gave an exhaustive survey of conditions in that country.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and an analysis of the Swiss balance of payments in 1913, 1924, and 1925.

THE COAL CRISIS CONTINUES.

THE great coal stoppage of 1921 lasted 13 weeks. The present dispute has already exceeded that span by a month. The present week began with considerable hope that in one of two ways the deadlock would be removed, either by bold negotiation or by so great an acceleration of the drift back to work as to force the miners' leaders into an attempt at wholesale settlement. Neither expectation has been fulfilled. In the realm of negotiation there has indeed been one significant move, the miners' leaders having a long interview on Thursday at Downing Street with Mr Churchill and other members of the Government. The official report of this discussion is not available up to the moment of going to press, but it appears that the proceedings were abortive, in the sense that they produced no definite change in the situation. As regards the drift back to work, this has mainly been confined to the coal fields of the Midlands, and has not developed, as at one time it promised to develop, from a trickle into a stream. In the absence of fresh negotiations, the time-factor may ultimately compel such a development; but it is held back at the moment by the fact that it is only in the better-placed fields that the owners are offering terms likely to bring the men back in any numbers, while organised picketing is obviously effective as a deterrent. In some areas picketing has gone to the lengths of serious intimidation. In the present temper this was unfortunately to be expected. It is, of course, the elementary duty of the Government to protect those who wish to work, and in fulfilment of this duty the Home Office have drafted strong bodies of police into the troubled areas; but there are forms of intimidation against which police protection cannot be wholly effective. In those areas where the owners have been most successful in getting the miners back to the pits the terms are, generally, pre-strike wages and seven and a-half hours, in place of the old seven hours. In South Wales a few men returned temporarily on the basis of eight hours and pre-strike wages; but that movement, which never assumed any substantial proportions, has now completely ceased.

So any resumption of coal production on an important scale, whether through a negotiated peace or through the spread of patchwork district settlements, is little nearer than a week ago. Direct negotiations between the parties have failed; Government attempts to find a way out have failed; the churches and other unofficial mediators have failed. Yet in one way or another the deadlock must be approaching an end. Men of all shades of opinion realise that a negotiated settlement is in the national interest immeasurably more desirable than a drift into district agreements dictated by hard economic stress. The latter form of *dénouement* would carry with it no promise of lasting security or peace. It is worth while, therefore, to examine briefly the positions now occupied by the contending parties and by the Government. The mine-owners, to take their position first, are still trusting to economic circumstances to accelerate the drift back to work, and to bring about a series of district settlements gradually spreading over all the coal fields. Time is obviously on their side. The miners' executive, although freed from the bonds of the delegate conference resolution against change in hours or wages, have not so far screwed up their courage to make effective use of the power to negotiate which was conferred upon them last week. The Government's attitude is made clear by Mr. Churchill, to whom Mr Baldwin, since his departure in search of rest at Aix-les-Bains, has delegated his functions in regard to the dispute. Mr Churchill, in the course of

the last eight days, has made two public speeches, from which the Government's attitude emerges as one of *laissez faire*, coupled with a reiterated refusal of a subsidy, and a general readiness to use its good offices to explore any new avenue for peace, should such avenue be opened up by either party. One of the most notable and unsatisfactory facts about the position is that none of the parties appears any longer even to mention the Royal Commission's Report, except for the purpose of partial quotation in support of *ex parte* argument. The Government explicitly accepted that Report, and, although they departed from it when they passed the Eight Hours Act, have shown some willingness to implement its recommendations. When that Act was passed it was quite clear that its passage would lengthen and embitter the struggle. It has done so. But may not the road to a lasting peace yet be found if the miners' executive, with the time factor in this struggle relentlessly working against them, boldly accept the report, thereby compelling the Government to stand by their acceptance, and putting upon the owners the *onus* of prolonging the deadlock by being the only party to reject the proposal that the lines which it laid down should be taken as the lines on which the future of the coal industry should be worked out. Acceptance would not lead to peace unless it were also agreed that questions of interpretation of the meaning of the Report, where doubt arises, should be submitted to the arbitration of an impartial tribunal. The eleventh hour adoption of the slogan "back to the Report" would doubtless call for courage upon the part of Mr Herbert Smith and Mr Cook. But they might be rewarded by terms better than those into which time and economic pressure would eventually drive them, and they would save from its threatened relegation to oblivion of a valuable constructive piece of work, out of which a prosperous future for one of our greatest industries could be evolved. It is not too late for this line of solution to be attempted. But very soon it may be too late. Meanwhile, as our monthly Review of the State of Trade clearly reveals, the trade and industry of the nation are week by week paying a heavy price for the failure of the coal industry to put its house in order, and to face unpleasant facts which have been abundantly clearly revealed. The results of the stoppage, though very serious, have not been as catastrophic as some were inclined to predict, and, if a lasting settlement could now be achieved, we might yet pass over the threshold of the autumn with good hope of steady economic recovery.

DUMPING IN EUROPE.—THE ANALOGY OF THE SUGAR CONVENTION.

The consideration of the economic problems which are likely to be discussed by the forthcoming Economic Conference of the League of Nations has been somewhat interrupted by the coal dispute in Britain and by the renewed instability of the French and Belgian francs. The preparations for the Conference are, however, steadily proceeding, and the second meeting of the Preparatory Committee is expected to take place after the Assembly of the League is over. Though there may be delay, the issues remain, and we make no excuse for returning to the subject. In the following article a Continental correspondent recalls one of the very few occasions when co-operative action was taken in the nineteenth century on a first-class commercial issue, and compares with that episode some of the features of the present situation.

THE object of the International Economic Conference may be formulated thus: "The policy of economic nationalism and prohibitionism at present prevailing is an obstacle to the economic recovery of the world, and in particular of Europe, and forms a danger to the policy of peace."

The discussion of the problems with which the Conference is to concern itself and the methods for their solution is still in its infancy; and in this connection it is perhaps worth recalling the first example of the international regulation of an important industry. When, in the second half of the nineteenth century the European beet-sugar industry was in course of rapid development and its exports were assuming increasing proportions, France endeavoured, in the first place, to promote sugar exports by refunding to the sugar factories, on the exported sugar, more tax than

they had actually paid on those quantities of sugar. This indirect export bounty was soon imitated in other countries. In Austria, in the years 1875-76, things went so far that the entire sugar tax was eaten up by the bounties for exported sugar, and was even converted into a deficit. The European sugar market was controlled by the bounty sugars, particularly those of France, Germany, and Austria-Hungary. In England in 1875 the Customs duty for sugar was completely abolished. Soon afterwards, among the English sugar refineries and in the English Colonies, whose sugar was no longer able to compete with the bounty-fed European sugar, a powerful demand arose for retaliatory Customs duties against the bounty sugars. In 1879 a Committee was appointed by the English Parliament to inquire into the sugar question. After years of efforts, this Committee succeeded in 1887 in convening a Conference in London of representatives of almost all beet-producing countries. A Convention was concluded, in which the countries concerned bound themselves to abolish the bounties and to retaliate against the importation of bounty-fed sugars. But France withdrew from the convention, and in England itself it met with violent resistance from consumers and the jam industry. The Convention was not ratified.

In the year 1888 the indirect bounty in the shape of the sugar tax refund was abolished in Austria-Hungary, and in its place a direct bounty introduced, the maximum amount of which was fixed at 5 million florins per annum. Germany in 1891, in addition to the indirect export bounty, introduced a direct one, and doubled it in 1896. Austria consequently increased the direct bounty from 5 to 9 million florins. France in 1897 supplemented its high indirect export bounty by a direct bounty of 4.50f per 100 kgs. In addition to this, sugar trusts were formed in the beet-sugar producing countries, and took advantage of the high duties in order to keep the price within the country high, and thus indirectly place the consumers under tribute, in this way creating a big fund for the fight in foreign markets. This indirect form of bounty feeding of sugar exports reached increasing proportions. Sugar prices in the home markets of the export countries were often more than twice as high as the export price. The system of bounties called forth an enormous increase of production, and led to a severe crisis in the sugar market.

Against the extremely heavy dumping which resulted, the United States of America were the first to take action; they, in 1897, taxed bounty-fed sugar with a countervailing duty to the amount of the export bounty of the particular country. By this means the bounties were simply confiscated and reduced to an absurdity. In 1898 the East Indies followed this example. Under these circumstances the bounty countries became willing to negotiate respecting abolition of the bounties. In the year 1898 a Conference met for this purpose in Brussels. Owing to the resistance of France, which was only willing to abolish its bounties in part, and of Russia, the Conference was adjourned. After lengthy negotiations and under the pressure of Britain, the market which is of the utmost importance to sugar exporters, it once again met in Brussels in 1901. Meantime, it had become clear that the high sugar duties of the beet-sugar exporting countries represented a higher export bounty than the direct bounties. England, therefore, declared the reduction of the sugar duties to be a condition essential to an agreement.

The Convention was this time concluded. All the States participating bound themselves entirely to abolish the direct and indirect bounties, and not to fix the sugar duty higher than 6f. Although the duty of 6f still contained a bounty to exporting countries, nevertheless, by the Sugar Convention of Brussels, sugar production was, on the whole, brought back to its natural basis. Before the conclusion of the Convention, the sugar duties in Austria-Hungary amounted to 24 kr, and in Germany to 20 marks. The Convention countries bound themselves to tax bounty-fed sugars with a super-tax equal at least to the amount of the bounty. The Convention became operative, and lasted with various modifications until the outbreak of the war.

The results may be briefly summarised. The Governments which had until then granted bounties, saved the large sums expended for that purpose. Sugar became

much cheaper in the exporting countries. The consumers were released from the tribute which they had paid to the sugar industry. As the abolition of bounty was general, the mutual position of the exporting industries was no more unfavourable than previously, and in actual fact no decline took place in their exports. In the importing countries the prices of sugar were raised to the level produced by the competition between non-bounty beet sugar and cane sugar. Thus the natural fixation of the price of sugar was again restored.

Many points of resemblance with the present situation of many branches of production at once force themselves on the mind. Others will only become clear later. Let us try now to glance at a series of questions bearing upon the economic problems which are to form the subject of the International Economic Conference. In all quarters the dumping by French industry is complained of. The French reply that they are not dumping at all, that their export prices are the same as their home prices, while the recognised definition of "dumping" involves high home prices and low export prices. Foreign countries reply that the French inflation is equivalent to a premium on exports. Dumping by German industry is also again becoming the subject of complaint. The Germans point out that their exports are relatively small, and very much smaller than their imports. Foreigners reply that this is the natural consequence of the large credits which Germany is taking up from foreign countries. England, Germany, and Austria, which have stabilised their currencies, are suffering from an exceedingly large number of unemployed. Why these countries in particular? Will France and other countries, when they stabilise their currencies, fall victims to the same economic crisis? As all these questions show, there is still great uncertainty regarding the lesson which the International Economic Conference is to teach. The problem is much more difficult than that of the International Financial Conference which was held in 1920 in Brussels. The teachings of the Financial Conference were clear and unequivocal: countries must cease to cover their expenditure by the issue of paper money. They must balance their Budgets and stabilise the value of money. These were principles on which the directors of the note-issuing banks, the Finance Ministers and experts were agreed. The problems of economic politics are far more complicated, and there are great groups of interests facing each other. If this time it is more difficult to attain clearness, yet it is so much more important that we should do so.

THE SOUTH AFRICAN TARIFF.

(BY OUR JOHANNESBURG CORRESPONDENT.)

MR J. W. JAGGER, M.L.A., is a very keen supporter of Free Trade, and his advocacy led to some disagreement with General Smuts, the late Prime Minister, who is a keen believer in reasonable protection. General Smuts about three years ago was desirous of doing more railway work in the Cape Town and Pretoria workshops, and of importing less material from Europe. He had, indeed, ambitious ideas that it might be possible to build certain classes of locomotives in South Africa. Mr Jagger was at that time Minister of Railways, and in favour of purchasing the requirements of the railways in the cheapest market, though he probably would not have ignored the local manufacturers if it were possible to buy at a small percentage over the landed cost of the imported article. The disagreement between General Smuts and Mr Jagger was doubtless one of the factors leading up to the resignation of the Prime Minister immediately after the defeat of Mr Robertson, the late Administrator of the Transvaal, at Wakkerstroom. Mr Jagger has just issued an interesting pamphlet, entitled, "The Folly of High Customs Duties in South Africa." He points out that the upward tendency of the South African Customs Tariff is well marked by the general *ad valorem* duty. Between 1903 and 1925 it rose by successive steps from 7½-10 per cent. to 20 per cent. Whole classes of British goods are ad-

mitted at a low rate of duty, being of a kind greatly needed and not produced in South Africa. Yet between 1914 and 1924 the average duty on all British goods imported rose from 7½ per cent. to 9 per cent. The general fall in the level of prices produces the result that, while the absolute increase in Customs duties has been great, the relative increase has been greater. In 1925-26 the Customs revenue was under-estimated, being £8,233,700, or £200,000 above the estimate. For the current year, this revenue is estimated at £7,710,000, but Mr Jagger thinks this is also an under-estimate, as receipts in April and May were £109,000 more than even those for the corresponding period. He works out the under-estimate for the year at over £1,178,000, which would bring up the total receipts to £8,888,000.

One may point out that in relation to the facts of the comparatively small population, and that the whole of the Customs tariff is borne by the white population, a total of nearly £9,000,000 is enormous. By what scales shall we judge it? The actual estimate as modified by Mr Jagger is no less than £2,654,000 in excess of the yield in the year to March, 1925, of income-tax, dividend tax, and super-tax. It represents some 70 per cent. of the gross receipts falling under the control of the Commissioner for Inland Revenue. It compares with £8,272,000 paid in dividends last year by Transvaal gold mining companies. It is £1,902,000 more than the State share of the profits from leased gold mines for the ten years up to 1925, and is two and a-half times the amount received from taxation and State ownership of gold mines in the year 1925.

Mr Jagger recalls Sir Ernest Oppenheimer's estimate given to Parliament, that these duties represented £50 a year to the well-to-do artisan, and £25 a year to the average farmer. Sir Ernest Oppenheimer appeared to have bestowed an enormous amount of labour on these figures. The Minister of Finance declined Sir Ernest Oppenheimer's request for an investigation, declaring that Sir Ernest must be wrong, because his figures amounted to far more than the whole Customs collections. "If they did not, they would certainly be wrong, as it is the essence of protection to raise prices to the consumer by amounts which go not to the Treasury, but to the local industry. However, the incident is of interest as showing how little the authors of oppressive taxation understand the oppression which they inflict." Apart from this it is obvious that in arriving at the effect of high customs tariffs on the community one must not only take the actual Customs Revenue, but the profit which the wholesale and retail merchants make upon this factor in their landed cost, and upon which the profit is estimated. One can only guess at the ratio of profit-loading, but if one takes it at 20 per cent. for the wholesale merchant, and at 25 per cent. for the retailer, a figure of £12,800,000 results. After examining the conditions in different countries, Mr Jagger declares that it is very doubtful whether there is at the present time any country in the world where a tariff board has the confidence of the business community. Believers in the wisdom of boards in adjusting fiscal policy to national requirements are to-day as few as believers in the capacity of Parliament to perform the same feat, and, owing to the publicity given to its proceedings, Parliaments have some advantages which boards have not. He says:—"The question whether high tariffs are wise or foolish resolves itself into the question whether the course into which they tend to divert our economic life is in accordance with its organic nature, or does violence to it. All over the world, but nowhere more than in South Africa, this question is receiving from the increasingly unmistakable logic of events an emphatic answer that the course of high tariffs is the course of folly."

The author examines at some length the effect of these protective duties upon Union manufacturers. The policy of charging less duty on motor chassis than on the complete motor trucks, the bodies being built in the Union, has met with some success. The duty on chicory is now somewhere near 140 per cent., yet in the last two years the importation of ground chicory has increased. Despite duties, the Union imported more butter in 1925 than in 1922; more condensed milk, despite a considerably increased duty, more than three times as much wheat in 1925 as in 1922. Although the duty on clothing has been raised from 7½ per cent. in 1903 to 15 per cent. in 1925,

imports grew by £125,000 in 1925. Between July, 1925, and February, 1926, the wholesale price index of the British Board of Trade fell by 8.7, whereas that of South Africa only fell by 2.7, so that in all matters in which we have to face British competition we have lost no less than 6 per cent. in six months.

The visible balance of trade in favour of the Union was £21,467,000, but this is counterbalanced by the amounts paid for shipping, interest, and services no less than £23,110,000, according to the latest account supplied to the League of Nations. "The blind policy of high tariffs," says Mr Jagger, "is crippling our exports, and is inflicting a mortal blow on our most promising industries by making a present to their competitors of their natural export markets, on which our industries depend to give them such a volume of production as will make cheap production possible. If this is industrialism, it is suicidal industrialism."

Mr J. W. Jagger gives an amusing instance of the futilities of the Board of Trade:—One clause provides "for a duty on rails 'not exceeding 30 lbs per running foot.' This is equivalent to 90 lbs rails. The proposal was slipped in at the last moment, and passed unnoticed. In South Africa practically no rails heavier than 90 lbs are used. Tariff proposals are introduced without explanation. In the present case it would appear that the Government's advisers were under the impression that the weight of rails is estimated by the foot, and what they meant was to tax rails weighing less than 30 lbs per yard, but that they erred because in this, as in many other matters, they neither had knowledge of their own, nor consulted those who had. It is in this way that our tariffs are framed."

Mr Jagger traverses the argument that high customs duties tend to increase employment, pointing out that in Germany, where experts have been spending some years in devising high tariffs there were almost twice as many unemployed as in Great Britain. We have a problem of our own in South Africa. Europeans pay more of the Customs duties than others, high duties naturally load the dice against them in competition for employment. During the past year the employment of Europeans in manufacturing industries has remained almost stationary, while the number of other persons employed has increased four times as fast in the case of coloured persons, seven or eight times as fast in the case of natives, and sixteen times as fast in the case of Asiatics. At Durban there are now well over three thousand Asiatics employed; while on the one hand we are endeavouring to force the Asiatic to leave the country, we are with the other imposing taxes on the Europeans in order to keep industries going manned with Asiatic labour. "High Customs duties, in short, are crippling our exports, injuring our agriculture, mining, and manufacturing industries, keeping up the cost of our transport and other services, doing nothing to increase employment directly, but decreasing it indirectly, keeping back the European, and assisting natives and Asiatics in the struggle for life, and tending to depress both money and real wages."

THE ENGINEERING TRADES IN THE UNITED STATES.

(BY A CONSULTING ENGINEER.)

THE information gathered by the recent *Daily Mail* mission of trade unionists to the United States shows clearly that the causes of the prosperity of the engineering trades in that country are economic and social rather than technical. No doubt a good market at home is an important feature of the favourable economic conditions, and if the welfare of the workers in the engineering industries is gained in part, as has been suggested, at the expense of other sections of the community, that is not a matter with which engineers, in their professional capacity, are concerned. To a great extent the prosperity of the workmen is due to concerted efforts by all engaged in the industry, and, besides the obvious factors such as attention to physical welfare and to means for stimulating the interest and industry of the workers, we may recognise a further element of success in the great size and wealth

of individual concerns, making possible such an efficient production of specialised products that a kind of collective bargaining of the concern as a whole with the purchasing public may be said to exist, and to be of some significance. Professional men form associations the main purpose of which is to maintain fees at a level which they regard as reasonable; trade unions have played the same part for workmen; but the new American system, already effective to some extent if we take a large concern as a unit, seems to hold out much greater, and possibly disquieting, possibilities as the result of "rings," not of capitalists only, but of capitalists with their staffs and all the men on their pay-rolls.

Leaving these high matters, we may usefully consider certain matters of interest to professional engineers and relating to the nature of the plant and machinery used in the United States and to certain features of the supply of skilled labour. The latter is a point of importance, for the report definitely indicates the value of the skilled hand as a manipulator of machinery which multiplies his own output, while it suggests also, to the careful reader, that these men play another and an important part in rendering effective the efforts of the younger and less skilled workers.

The report does not disclose a general efficiency much higher than our own as regards the lay-out of plants, though unstinted praise is given in certain cases; but some of the references to particular machinery are significant. In New York, 100 men produce 1,000 tons of ice daily, "mostly by manipulating switches," and the delegates noted that the operations of filling and freezing were performed by one man, whereas in Britain two are required.

When watching a man making flask moulds by a process which eliminated 50 per cent. of the human element, Mr J. T. Kay, iron-moulder, said: "In England a man doing the same job would work twice as hard, do half as much, and earn half as much," a remark which is worth considering in all its parts. The same delegate made the following comment on a conveyor which transported and emptied moulds. "A similar type of work in England requires that a man must handle the boxes and cast the work himself. Here he simply puts the boxes on a conveyor and gets the maximum output with the minimum physical effort, and at the same time gets higher wages." In his own report, Mr Thomas Murray, patternmaker, wrote: "Nowhere did I see men waiting for the use of indispensable machines as is frequently the case in Britain.....Everywhere in the United States the pattern-shop machinery is from two to six times greater in quantity than in Britain. This machinery includes such useful aids to production as pneumatic drills, pneumatic screw drivers and mechanical routers." He then details the equipment of a shop employing 150 patternmakers, including 24 metal patternmakers, 1 Wadkin universal wood-working machine, 1 Oliver universal woodworking machine, 2 planing machines, 2 surface planing machines, 12 bandsaws, 10 Oliver circular saws, 1 self-feeding circular saw, 1 circular swing saw, 16 turning lathes with saddles, 8 face plate lathes from 20 feet to 2 feet in diameter, 4 large disc sanders with spindles, 6 smaller types of sanders, 6 routing machines, 4 adjustable type tool grinders, 72 steam and electric glue pots, always ready."

At a works where heavy machinery is manufactured "the delegates were particularly struck with the use in a machine job of a steel bed-plate, 200 ft long, costing £12,000. On this a "job" is clamped down and various tools used for its completion are assembled around it, thus enabling drilling, boring, and shaping machines to be used at the same time instead of laboriously moving the work from one machine to another." The general superintendent said that by bringing tools to the job instead of the job to the tools they could do in 100 hours what would otherwise take 144 hours.

At a works manufacturing machine tools, and in a bay of the machine shop, "which is 1,000 ft long and flooded by light from glass-panelled roofs," the delegates "watched a man in charge of a vertical boring machine perform his work at different heights by raising and lowering himself with the platform on which he stood with no more exertion than a single twist of a lever by his right hand. Near him was another skilled workman, who

100 Broadway

New York City

seemed to move almost languidly, controlling a horizontal boring machine with the same ease, adjusting it to any angle by a simple turn of the wrist; this simplified the application of power reducing the time of the boring operation by 30 per cent."

Manufacturers in the United States maintain their unflinching attitude towards ageing plant and machinery. The Carnegie Company is "engaged in scrapping seven mills, which, although containing modern machinery, are not considered up to date, and is building new mills at a cost of £4,000,000." Mr W. Mosses, industrial adviser to the Mission, quotes in his report the remark by an American manufacturer: "I have no permanent machinery."

Mr Alexander Browning, blacksmith, contributed an interesting report, including the following passages:—"At the Buick works at Flint I saw drop-forging being done on a scale I have never before dreamed of. They have 60 drop hammers at work, ranging from the 5,000-lbs Massilon steam hammer to the light old-time board hammer. In addition, they have 14 upsetting machines in operation. The die-sinking work is also under the supervision of the manager of the forge, who has altogether in his department a staff of 900 men with an output that has been as high as 4,000 tons per month. At the International Harvester plant at Chicago the drop-forging is superseding the casting, as at other places. This is best shown by comparing the firm's output of castings and forgings. The figures are: Castings 120 tons and forgings 130 tons per day. At both places I have mentioned every means is adopted to conserve human energy. The material automatically enters the furnace at one end and emerges ready for the hammer at the other. In other branches of smithy and forge work the practice is, more or less, the same as at home. In skill and the quality of work laid down, however, the home employer has a decided advantage over the American manufacturer."

As a general condition of efficiency the provision of power indirectly aiding the worker is regarded as of great importance. Mr W. Wells, vice-president of the Brooklyn Edison Company, said: "It has been computed that the American workman has on the average $3\frac{1}{2}$ horse-power of generated gas and electricity at his elbow." Mr Alexander Drowning, blacksmith, wrote in his report: "Our employers are cruelly handicapped by excessive taxation—especially local—in comparison with their American competitors, while in the matter of cheap and abundant electric power they are simply not in it."

The reference to taxation is not to the present point, but is interesting, and perhaps very significant in regard to the resources of employers in Britain in the matter of reorganisation of industry. Mr J. T. Kay, ironmoulder, referring to an estimate of $3\frac{1}{2}$ horse-power as available at the elbow of every workman, wrote in his report: "I proved the correctness of this statement during our tour."

A number of passages in the report suggest that the American manufacturer is at present enjoying the advantage of being able to procure skilled workmen in sufficient numbers to keep his works going very efficiently, while, at

the same time, he uses his boys and young men for any work in which they show aptitude, without going to the trouble and virtual or relative expense of training them by apprenticeship.

"The visitors saw the plant turning out 230-ton goods engines at the rate of two daily, all 5,000 employees working at top speed. In the pattern shop, which has a Scots foreman, William Yorkston, who has been with the company for 36 years, the delegates found that 80 per cent. of the workers were British, and in the machine shops 30 per cent."

The General Motors Corporation of Detroit employ 99,000 men, of whom 8,500 are of British origin. Mr E. Barth, general superintendent of the Chevrolet works, said: "One phase of our industrial development is the passing of the old apprenticeship system. Boys will not accept low wages to learn a trade when they can make from £1 to £1 2s a day after the age of 18 by doing work which can be quickly picked up. Not more than 2 per cent. of our skilled men served an apprenticeship; 60 per cent. of our boys went to high school."

Mr J. T. Kay wrote in his report: "I was assured by all American employers that there is the greatest difficulty in times of good trade in getting skilled moulders. Whenever I went into a shop I had only to look round for the best job—the most intricate and the one requiring the most skill—and in 75 per cent. of cases the moulder or moulders came from Europe, chiefly from Britain. No apprentice moulders are being trained in the United States. Throughout my tour I never saw one. Some employers are quite frank, and state that they depend for their supply of moulders on Great Britain."

The aspects of the report to which attention is directed in this brief survey are not as important as those relating to the greater matters of social economics and common-sense, but they may be of great interest to engineers generally, and are certainly of some significance with respect to the main purpose of the *Daily Mail* Mission, an undertaking well-conceived, excellently carried out, and likely to have important results.

THE FINANCIAL SITUATION OF CZECHOSLOVAKIA

(BY A CORRESPONDENT.)

FROM the very foundation of the Czechoslovak Republic the financial policy there, besides being faced by the usual difficulties existing in all countries after the war, had to deal with its own special currency problem. The deflation of the currency was carried out in Czechoslovakia to an extent unknown in any other State. The exchange rate of the Czechoslovak crown, which in the autumn of 1921, at the time when an attempt was made to restore the Habsburgs in Hungary, fell to below 6 Swiss centimes, reached its maximum value of more than 19 Swiss centimes a year later, and then permanently maintained itself at 15½ centimes, this representing a proportion to the American dollar of 30 to 1. The deflation

of the currency was achieved through a difficult economic, monetary, and financial crisis. The State finances, which for 1921 resulted in a credit balance, once more showed a deficit, and it was not until 1926 that the Budget showed a credit balance. The currency has ceased to be a problem in the finances of Czechoslovakia, because by the law enacting the establishment of a bank of issue, the activities of which began this spring, provision was made for the Czechoslovak crown to be stabilised at its present level. As a matter of fact, this had already been accomplished after the deflation proceeding in 1922, and this stabilisation has been maintained ever since. The present aims of the financial policy are to carry to their conclusion all the consequences resulting from the stabilisation of the currency in their bearing upon the national and State finances. These consequences at the same time form an essential condition for the permanence of the stabilised currency, since the fixing of the exchange rate against fluctuations upwards is a mere question of currency, technique, and administration, while fluctuations downwards can be guarded against only by the existence of adequate reserves in the Bank of Issue, which in the case of Czechoslovakia, as an export State, represent a considerable amount. Moreover, the prevention of such downward fluctuations presupposes an economic equilibrium exhibited in a credit balance of payment, and also it is conditioned by financial equilibrium, which cannot be attained by burdening output and consumption to such an extent as to menace the country's competitive ability.

As regards national and private finances, the first result of currency stabilisation was to bring about a solvency which had been disturbed by the movements of the currency during and after the war. As far as private finances are concerned, it is necessary to abolish what is left of control, which is to-day restricted only to the measures for the protection of tenants. A Bill for this purpose, and also for providing a State grant to the building movement, was introduced at this spring's Parliamentary session.

The country's competitive ability is adversely affected by the post-war burden of taxation, which was rendered more acute by the deflation policy. What is therefore necessary is to ascertain how much taxation Czechoslovak manufactures are capable of yielding, and then adapting the volume of taxation to a currency. A permanent commission of inquiry attached to the Ministry of Finance is investigating the amount of taxation per unit of manufacture, and several Parliamentary bills are in preparation for the purpose of reconstructing the taxation system. It is vital to reduce the taxation which is proving a burden on undertakings, and this is the purpose of a scheme for the reform of direct taxes, which will be submitted to Parliament in the autumn. The same applies to taxes which are detrimental to manufacture, as, for example, the tax on coal which has just been abolished as far as exported coal is concerned, and reduced as regards coal to be used in iron works. On the other hand, in the interests of Budget equilibrium, it is necessary to increase certain taxes on consumption, the rates of which are below what must be considered reasonable in view of the currency conditions. This process was carried out during last session in the case of the sugar and alcohol taxes.

The financial administration of the country, however, can only fulfil its task towards the national finances if the State Budget is in accordance with the country's economic yielding capacity. In order to achieve this, the Budget must, above all, be constructed in a manner corresponding to its function as basis of the State finances. With this aim in view the Budget for 1927 will be divided into four sections, including administrative expenditure, management of State undertakings, grants to autonomous bodies, and management of the State debt. The reason for this method is that each of these sections requires different principles of finance and administration if they are to be properly worked.

The main items among the State undertakings are the railways and the postal services. Hitherto they took their profits from the State Treasury, and borrowed the amounts which they required as investments. This led to a worsening of their situation, since the amounts which were necessary for these investments in the public interest did not result in any profit from the point of view of an

ordinary business transaction. Now, beginning with the present year, the railways and posts will retain the whole of their net profit, and, in addition, the Treasury will grant the railways 20 per cent. of the transport tax on condition that they contract no loans for investment purposes. This will guarantee an improvement in their future situation. In a similar way, other undertakings will be granted a quota of profits for investments according to their nature. Thus, no further debts will be incurred in this respect, and a large portion of the State finances will cease to cause concern to the financial administration, becoming, on the contrary, a source of increasing revenue.

The Budget of the actual State administration will also have to be stabilised. With this end in view a new salary scheme for civil servants has been introduced, replacing the present bonuses by a fixed salary scale. In the same way the Budget for next year will comprise, in the case of the Ministry of Public Works, all administrative State buildings (schools, law courts, &c.), with a specified time limit for their completion. In this way it is hoped to stabilise the main Budget items.

The grants to autonomous bodies are current items, since they represent the legal share of the State taxation to which these bodies are entitled.

The State debt, both home and foreign, which amounts to about 30 milliard crowns, still remains to be adjusted, and there is also a trifling remnant of the pre-war Austrian debt, and the Italo-French war debt. This amount includes 3 milliards of transitional debt, the consolidation of which forms one of the first tasks of the financial administration. This process of consolidation was very successfully inaugurated this spring by a home consolidation loan, in which one-year Treasury bonds to the value of about a milliard crowns and pre-war railway preference shares to the same amount were disposed of. All the one-year Treasury bonds will disappear from circulation this year. For consolidating the remainder of the transitional debt, the arrears on taxes, &c., from previous years have been reserved. During the present year a vigorous activity has been set on foot for settling all arrears of payments. The revenues derived from this activity, and the separate revenue items exceeding the normal Budget estimate, will, by the forthcoming financial law, be reserved for the consolidation of the transitional debt. This will make it unnecessary to seek for credit abroad. From the point of view of political economy, foreign credit is justified only for currency and export purposes, and for such profit-yielding investments, for the realisation of which we need not only financial help from abroad, but also material assistance in the form of raw materials, machinery, &c. Otherwise, foreign credit leads to an artificial super-import and super-consumption, which is more expensive than home credit, and is a burden upon the balance of payment.

The State Budget for 1927 will show a credit balance, even after payment of all sums for investments. The expenditure of the State administration will amount to 10½ milliard crowns, including interest. This includes nearly 1 milliard of current items arising from the fact that, as has been mentioned, the State will grant autonomous bodies financial assistance from certain State taxes. The whole of the State administration itself will therefore require less than 10 milliard, and the whole of this amount will be covered.

Finally, the process of general consolidation will involve also a codification of financial law, a step which is particularly necessary in our country, not only in view of the post-war conditions, but also because hitherto the divergent Hungarian law has been applicable in Slovakia. The codification of direct and indirect taxation is in progress, a new customs scheme is under consideration by Parliament, and a code of financial penal law is being prepared, together with a scheme of financial management to adjust the form, the application and control of the State Budget.

In conclusion, to sum up the present condition of Czechoslovak finances, it can be said that they are satisfactory. The currency has been stabilised, and the National Bank has at its disposal more than the necessary reserves, which this Spring were strengthened by the conclusion of a revolving credit. The State finances show

a credit balance. This does not exhaust all the tasks to be dealt with by the financial administration, which will continue the process of reconstructing the State Budget in such a way as to get rid of taxation tending to hinder output and enterprise. But this will be possible only step by step, and according as the various post-war obligations, such as grants to disabled soldiers, cease to operate. It will depend also upon the manner in which the rest of the State revenues progress. For the purpose, however, of judging the financial situation, the decisive factor is not merely the position at any given moment, but the tendencies of its development. Even a favourable situation can give reasons for concern if it contains within itself the potentiality of a decline, while, on the other hand, an unsatisfactory state of affairs may be regarded as hopeful if it possesses an element of advance. The reason why the finances of Czechoslovakia are satisfactory is not only because the State finances are in a favourable and balanced condition, but chiefly because they contain those elements which may be safely regarded as leading to improvement. The rapid manner in which the considerable deflation crisis was overcome forms the best proof that the country is rich in economic resources which guarantee the favourable advance of the national finances.

BRANCH SHOP COMPANIES.

ALTHOUGH the prevalence of depression in most branches of trade and industry, with its accompaniment of unemployment, must have resulted in a diminution of the spending power of the community, we find that the big branch shop companies have, during the past twelve months, been able more than to hold their own. An analysis of the accounts of 16 old-established undertakings shows that in only six cases were net profits less than those for the previous twelve months. It is apparent from this that most of the companies must have paid considerable attention to staff efficiency, for in few other spheres of business is sound organisation and management such a vital factor in determining failure or success than in the control of branch shop undertakings.

Our first table shows the amount brought forward from the previous year's accounts, the net profit, after payment of debenture interest, and the distribution of the available balance:—

satisfactory experience of 1924-25, Charles Baker recorded a welcome recovery, and by earning a profit of £14,860 were able to reduce the loss of £56,077 incurred in the previous period to £41,217, the whole of which is carried forward. The actual figures, however, are not so satisfactory as they appear on the surface. The sum of £16,173 was received during the year in settlement of the claim for refund of Excess Profits duty and Corporation Profits tax, and this amount was included in the gross profit of £29,817.

The most unsatisfactory experience of all fell to the lot of Liptons. Once again the company disclosed a drop in profits. The directors, it will be remembered, stated in their report that a most exhaustive inquiry is being energetically instituted into the organisation and management. This suggests that the administration of the concern is faulty, a view which was put forward at the annual meeting. It would, at the same time, be interesting to learn what policy the directors have been pursuing in regard to advertising in recent years. In the meantime, shareholders can only hope that the investigation now proceeding will bear fruit. There is a good deal of satisfaction in knowing that Sir John Ferguson has been appointed deputy-chairman and financial director. His wide experience of financial matters should aid this well-known concern to get back to more prosperous times. Rego Clothiers—a newcomer to our list—has enjoyed its first year as a public company. The results are eminently satisfactory, and while we hope the concern will be able to maintain its profit-earning power, we also trust the directors will take advantage of the opportunity to build up a strong financial position.

The position as it affects shareholders is seen in the following table of dividends for a number of years past:—

	1913	1914	1915	1916	1917	1918	1919	1920	1921	1922	1923	1924	1925

* Free of income-tax. † Paid on a larger capital.

On the whole, shareholders in branch shop companies have little to grumble about as regards dividends for 1925. Two of the undertakings in our list—Lipton and Baker—were unable to make payments to their ordinary proprietors, but elsewhere dividends were at least equal to those for 1924; in many cases they were higher. The rate of dividend paid on the ordinary capital of Boots Pure Drug was reduced from 36 to 33 per cent., but the higher payment was made on a capital of £2,400,000, whereas the present figure is £2,900,000.

The principal balance-sheet items are compared below with those of the previous period:—

The latest balance-sheet of the Maypole Dairy shows £1,996,452 as shares in subsidiary companies, loans, and trading investments, whereas in the previous year this item was included under properties, &c. This explains the greatly reduced figure for properties, and the increased figure under the heading investments.

Changes of share capital were recorded by a number of companies. Austin Reed issued 150,000 cumulative preference shares at 21s each, thereby raising the capital from £298,000 to £448,872. The share premium account now stands at £7,014. Bobby and Co. left their share capital unchanged. The latest accounts, however, contain a new item of £252,959, represented by 2,500 6 per cent. registered notes of £100 each. Against this, however, sundry mortgages and loans have declined from £415,387 to £342,432, and sundry creditors from £132,543 to £104,716. Boots raised their ordinary capital from £2,400,000 to £2,900,000, as noted above. The Home and Colonial issued 350,000 ordinary £1 shares at a premium of 10s per share. This had the effect of raising the capital from £2,049,727 to £2,400,000. Of the premiums received, £50,000 went to the pension fund, and £50,000 to a new benevolent fund, the remainder being allocated to the share premium reserve, which now figures for £74,134. The International Tea Stores share capital now amounts to £1,950,000, compared with £1,700,000, owing to the issue of £250,000 7 per cent. "A" preference shares. At the same time, secured loans were reduced from £194,182 to £41,387. On balance creditors are lower, and while in most cases the holding of cash is higher, sundry debtors figure for more. Most companies show gains under the heading of properties, which shows that a policy of expansion and extension is being proceeded with.

We conclude with a table of share prices and yields:—

The range of yields is not high, but a reasonable return is obtainable on some of the preference shares which are well covered as to dividend.

Notes of the Week.

A Tariff Claim Rejected.—The end of last week saw the publication of the report* of the Committee appointed by the Board of Trade, under the Safeguarding of Industries Act, to consider the application by the Hosiery manufacturers for a tariff on foreign imports. The application is rejected by the Committee, who, however, sweeten the pill by suggesting that if the imports of certain classes of goods, such as cotton hose and half-hose and cotton underwear continue to increase, the applicants should be given the opportunity of putting forward fresh evidence. The applicants demanded a duty of not less than 45 per cent. on all hosiery imports, whether wool or cotton, while the application was opposed by a committee of merchants and importers. The Committee answered a number of the salient questions in favour of the applicants. They found the industry to be of "substantial importance," that a duty would not injure other industries, that the industry was conducted with "reasonable efficiency," and that "unfair competition" in certain classes was being suffered from countries with depreciated exchanges. But on other points the findings were less favourable to the applicants. Only in the case of the cotton descriptions mentioned above were imports found to be "abnormal," or to be placed on the market here at prices impossible to the British producer; nor did the Committee consider that employment is at present "seriously affected." The inquiry is revealed by the report to have possessed many of the same unsatisfactory features as previous inquiries of this kind. The interest of the poor old consumer came in for as little attention as usual; and the evidence of the applicants was as incomplete as usual. They offered, for instance, no direct evidence as to wages in competing countries. Another point worth noticing is that, although the applicants are found to have passed the test for efficiency, the Committee include the following paragraph in their report:—

The opponents laid considerable stress on the advantages to be derived from mass production methods, and the Committee are inclined to consider that if any really serious attempt is to be made by British manufacturers to regain the trade in such articles as cheap cotton stockings and underwear, such an attempt is most likely to be successful if the example set by America is closely followed, and the production of a limited number of staple lines in large quantities by factories controlling the whole of the processes under one management is undertaken. The Committee would also suggest that the whole question of the cost of dyeing and finishing in the hosiery industry, as compared with other countries, might with advantage form the subject of an investigation by the hosiery manufacturers themselves.

From one point of view the hosiery manufacturers may account themselves unlucky to have failed in their application, for the grounds of their claim, though slender indeed, are no more slender than those which have enabled manufacturers in some other industries to obtain tariff protection.

The Coup d'Etat in Greece.—One of the half-dozen dictatorships of Southern Europe has fallen in the same abrupt and violent manner in which almost all these military Governments have gained their seats in the saddle. General Pangalos has been hurled from power, and his overthrowers declare that their purpose is to restore a constitutional régime. The veteran Admiral Conduriotis (the representative of an Albanian family from the island of Hydlira, which distinguished itself in the Greek War of Independence) has consented to resume the Presidency to which he was elected after the overthrow of the monarchy, but from which the dictatorship thrust him aside; and we must hope that under his auspices parliamentary Government may strike root in Greece again. It would be rash, however, to be optimistic—at any rate at this stage. The chain of violence becomes harder to break with each link that is added to it (as Greeks in

* Cmd. 2726. Price, 6d. H.M. Stationery Office.

Æschylus's time well knew). Conduriotis, who is an old man, is likely to remain a figure-head, and, meanwhile, all we know for certain is that General Pangalos has been knocked out by General Condylis. It may be true that it takes one nail to knock out another, but sometimes the result is simply to knock the second nail in in the first nail's place, with nothing to show for the change except fresh splits and splinterings of the wood-work on which this rough-and-ready carpentry is being inflicted. Therefore we shall hesitate to hail the latest revolution in Greece as the overthrow of the Greek dictatorship until we are sure that all the nails are out of the wood. Fortunately for the Greeks, they are a nation which, whether or not the bad Governments which it has got have been the Governments it has deserved, has always managed, somehow or other, to get on in spite of them. Under the execrable Government which they received from the Turks, the Greeks accumulated sufficient wealth and energy to make a successful fight for independence. During the last century, again, they have been execrably governed by one another and by foreign rulers whom they have imported in the vain hope that they might achieve the impossible task of reconciling Greek factions. Nevertheless, the national life of the Greek people, in contrast to the Government of the Greek State, has made remarkable progress. Consider the economic recovery of Greece from the disastrous Anatolian War of 1919-1921, and from the overwhelming influx of destitute refugees. The resilience and resourcefulness of the Greeks in this emergency have been admirable, and though they could hardly have solved the refugee problem as they have done without the benevolent and powerful assistance of the League of Nations, the League would have found the situation beyond repair if the first crisis had not been met by the public spirit of individual Greek citizens. Yet during these very years the political history of Greece has been a nightmare with interludes of comic relief. There is no reason to suppose that, in the immediate future, the contrast between Greek private and public life will become less acute.

Labour's Agricultural Policy.—A correspondent writes:—The Labour Party has produced its agricultural policy, or, to be more precise, a formal statement has been prepared and published which will be submitted first to the Trades Union Congress and afterwards to the annual conference of the party. Assuming it to be then approved, the public have now before them the proposals of each of the three parties. The Liberals were first in the field, in consequence of the initiative and insistence of Mr Lloyd George, and the Conservative policy was authoritatively announced not long after in the famous White Paper issued by the Minister of Agriculture. It may fairly be surmised that the policies of the other parties were carefully considered when the Labour policy was prepared. It is admittedly drafted so as to cover up, so far as possible, the wolf of nationalisation with the fleece of reasonableness and compromise. The State is, of course, to acquire the ownership of all agricultural land, compensating the owners on the basis of Schedule A annual value, which, however, is to be diminished in the case of the "inefficient landlord." As it is previously stated, broadly, that "landlords fail not only in supplying the necessary capital, but also in maintaining and promoting a good standard of husbandry," it would seem that most of them may be adjudged inefficient. The nationalisation of farming—as distinct from the ownership of the land—is dealt with circumspectly. The efficient farmer is assured that he "need fear nothing from the change," and that all present agreements and conditions of tenancy are to continue "until modifications are required to meet new circumstances." At the same time, County Council Agricultural Committees will cultivate land themselves "on a considerable scale," and "the public control of the land," treating agriculture as "a great public service," is the idea enshrined in these ambiguities. The position of landowners and farmers under the scheme is rendered the more obscure by a later statement that the provision of cottages, on the more remote farms, "is the concern of the farmers or landowners themselves." Why land-

owners should build cottages when they have been dispossessed of their ownership or what inducement farmers would have to build cottages is not clear. Public ownership of land and public control of farming having disposed of two of the agricultural classes, it is interesting to see what the Labour Party propose to do for the third class, which should be their special care. After laying down the familiar propositions that workers are entitled to "a living wage," and to "an adequate standard of life" (to which everyone assents in general terms), the establishment of "the Agricultural Wages Board system" is attributed to the Labour Government. The system was in fact established by the Coalition Government, and although it was interrupted by the repeal of the Agriculture Act, it is not historically accurate to claim it as the invention of the Labour Party. Apart from a continuance of the system, accepted by all parties, of the regulation of minimum wages, the Labour policy offers the farm workers nothing which is not already included in the programmes of the other parties, e.g., allotments, small holdings, better cottages, social amenities, &c. The nationalisation of the means of distribution is more explicitly advocated. The importation of wheat and meat is to be placed in the hands of the Government acting through Boards or Commissions appointed for the purpose, milling is "ripe for nationalisation and transformation into a public service," baking and the price of bread are to be controlled or organised, the wholesale distribution of milk is to be nationalised, and it is stated compendiously that "the same principles, so far as circumstances permit, would be applied to other agricultural products." Where the attempt to apply a rigid theory becomes unnecessary, as in regard to such matters as agricultural research and education, the framers of the policy get into a sphere of common agreement, and generally there is much in the ably-written document which would commend itself to all well-wishers of agriculture. One declaration, however, seems cryptic. "The Labour movement," it is said, "believes in economic democracy." It is not very clear what this means, but so far as it is intelligible it would appear to be contrary to Socialist principles. The nationalisation of all the means of production and distribution, which is the avowed ideal of the Labour Party, might surely be described more fairly as economic autocracy.

The Spanish Claim to Tangier.—In a leading article last week we referred incidentally to the fact that the signature of the Italo-Spanish Treaty had been promptly followed by a revival of the Spanish demand for the inclusion of the international zone of Tangier in the adjoining and surrounding zone of Moroccan territory, which is under the protectorate of Spain. Tangier has been the chief port of Morocco (though it seems likely to forfeit that position to Rabat or Casablanca, now that the South has come under the protectorate of France), and is therefore the chief, and, indeed, the only, Moroccan town with a considerable population of Western residents, apart from the French official settlements in the French zone, and the four or five ancient Spanish settlements (known as the *presidios*) on the Mediterranean coast. Hence Tangier has been the one place in Morocco where the régime of the capitulations has been an important factor; and here its importance has been so great that, while the rest of Morocco has been partitioned into a French and a Spanish sphere of influence, in Tangier the capitulations have

blossomed out into a full-blown international régime. After long delays, arising from the standing jealousies of the foreign Governments concerned, and aggravated by the war, the international administration of the Tangier zone was put on a new basis by the inauguration of a "statute" in 1923; but this statute, while impressive on paper, has neither appeased international jealousies, nor improved the lot of the mixed population of the territory. The statute was negotiated and signed by Spain, Great Britain, and France (the latter Power also contributing the assent of her protégé, the Moroccan Sultan), but Spain accepted against the grain a settlement which thwarted the aspirations of France at the price of thwarting Spanish aspirations as well; and Italy was outraged because a claim to participate in the negotiations, which she persistently put forward, was persistently rebuffed. If, however, the signatories of the statute were too few for diplomatic peace and goodwill, the number of Governments to whom the statute gave a finger in the Tangier pie was undoubtedly too large for the comfort and prosperity of the local population. The unfortunate inhabitants of Tangier have found themselves saddled with a régime which is almost as expensive, as unworkable, and as unrepresentative as that with which they had previously been afflicted, and in one important respect they have been decidedly the losers. Until the inauguration of the statute, the administrative separation of the Tangier zone from the rest of Morocco was still juridically incomplete. It has now been sharply defined, and this has already had a serious effect upon the life of a port which depends for its prosperity upon intercourse with its hinterland. There is thus a strong negative argument resting on the unsatisfactoriness of the present arrangement, in favour of the Spanish demand that Tangier should be incorporated in the Spanish zone. Since the Spanish zone completely surrounds Tangier on the landward side, Tangier would probably experience immediate benefit from a removal of the customs barrier which at present intervenes between the two territories. On the positive side, however, uncontrolled Spanish administration would hardly be welcomed—even as an escape from their present ills—by the non-Spanish elements in the population of Tangier, that is by the other European colonies, among which the French colony holds first place, and by the native Moroccans. In these circumstances the best solution might be that Spain, with the consent of Great Britain and France, should ask for the administration of Tangier under a League of Nations mandate. The mandate might be of the "C" class, which would enable the Spanish Government to reintegrate Tangier with its hinterland. At the same time, the non-Spanish inhabitants of Tangier would secure a supervision over the administration on the part of the Permanent Mandates Commission of the League; and the manner in which the Commission handled the Bondelswarts case in South-West Africa shows that, even in a "C" mandate, the supervision of the League may be exercised with great effect.

Congress of Minorities at Geneva.—On the Wednesday, Thursday, and Friday of this week, in anticipation of the seventh session of the League Assembly, there has been held at Geneva, for the second time, a non-official congress of delegates representing minority groups in a number of European States. The number of delegates was about 100, the number of groups about 16, and the total population represented about 30,000,000. These figures are sufficient to show that the Congress, while necessarily organised on private initiative, is an important international affair, and its influence will be greatly increased by the wisdom of the procedure which it has laid down for itself. To begin with, only those groups are represented which have a pronounced national sentiment and an effective organisation. Secondly, the agenda are confined to general questions affecting all minorities as such, to the exclusion of particular grievances. In the third place, all proposals are ruled out of order which involve an alteration of existing international frontiers. The aim of the Congress is to improve the position of all minorities, within the framework of the existing frontiers, by promoting mutual trust and co-operation between the minorities and their respective Governments. Having already met twice, the Congress is likely to become a permanent annual institution, and if it remains true to the

moderate and statesmanlike spirit with which it has started, it may achieve great things. Consider, for example, the effect of delegates from Polish minority groups in five countries, including Germany, and delegates from German minority groups in ten countries, including Poland, meeting regularly at Geneva, and taking friendly counsel together. If a resolution from the Congress, with these German and Polish signatures figuring side by side, at the foot of it, is submitted to the Council or Assembly of the League, or to the Governments of European countries, could either the Polish or the German Government afford to give it less than their most earnest and sympathetic consideration?

British Labour and Subsidy.—While one or two of the Labour leaders, and certainly the officials of the Miners' Federation of Great Britain, are insisting on subsidy as a means of meeting the exceptional difficulties to which a number of industries are exposed, it is understood that this demand is in reality in conflict with certain broad decisions which have been taken by the movement. Within recent times it was necessary to reach a decision on the financial side of the public ownership of mines to be tendered in evidence to the Royal Commission on the Coal Industry; to decide the course of action in somewhat similar circumstances in the Electricity Bill, and finally to determine the policy to be incorporated in the land programme which has now been submitted to the electorate. In coal the decision was that the burden of expropriating the owners, both of royalties and of the mines themselves, should rest on the industry itself, benefiting by the drastic reorganisation which Labour opinion would introduce; in electricity the plea was that the concentration of the large generating stations should become definitely public enterprise, the cost being carried again by the reorganised and more efficient industry; and, finally, while relying so far on the instrument of the taxation of land values in the urban and semi-urban areas, the Labour plan involved payment of compensation to existing owners in land bonds redeemable over a period of years, the annual service of the bonds to come from the aggregate and valid rent charged to tenant cultivators. Whatever view is taken of the economic principle underlying these proposals, it is plain that in three of the largest problems official Labour has definitely ruled out subsidy. That does not prevent one or two leaders from continuing to commit themselves to the economic error that subsidy involves; but it is of definite value that the official movement should not have been misled into recommending it for the purposes of the economic change it has in view. These decisions have had a marked influence in the official Labour attitude towards the indiscriminate call for further subsidy in the coal crisis; the sober truth is that the Miners' Federation have persisted in their demand for something which has been rejected in principle by Labour, and, indeed, is contrary to the evidence which Labour gave to the Royal Commission, which evidence was endorsed as to chapter and verse officially by the Federation!

Iron and Steel Production.—The figures just issued by the National Federation of Iron and Steel Manufacturers show that the coal stoppage has brought the iron and steel industry practically to a standstill. Only eight blast furnaces remained in operation at the end of July, compared with 147 at the beginning of the stoppage, while the production of pig-iron amounted only to 17,900 tons, compared with 539,100 tons in April, and of steel ingots and castings to 32,100 tons, compared with 661,000 tons. With the aid of outcrop and foreign coal, however, rolling mills have been operating at a much higher rate than is suggested by these figures. This is borne out by a consideration of the import and export returns; imports amounted to 270,900 tons, and included 77,000 tons of billets, blooms, and slabs, and 41,400 tons of sheet and tinplate bars; this semi-finished material must have been the basis of much of the finished material exported. Exports of iron and steel in July amounted to 243,900 tons, and included 32,200 tons of pig-iron, 53,600 tons of galvanised sheets, 24,800 tons of tinplates and sheets, and 18,400 tons of black plates and sheets. The coal strike in this country has given a further stimulus to pro-

duction on the Continent, and in June both France and Belgium were producing pig-iron and steel at a higher rate than at any previous period in their history. The following table shows the production of pig-iron and steel in the first six months of 1925 and 1926 respectively for the United Kingdom, United States, and the chief Continental producing countries:—

	(In Thousands of Tons.)			
	Pig-iron.		Steel Ingots and Castings.	
	1st Six Months.		1st Six Months.

Belgium	1,508.1	1,480.1	1,432.1	1,360.2
Luxembourg	1,121.9	1,185.5	996.0	1,063.9
U.S.A.	19,145.8	19,848.4	22,406.1	24,260.6

The chief features of the table, apart from the effect of the coal stoppage in this country, are the depression in Germany and the great activity of France and the United States. France is now producing at about 85 per cent. of full capacity, both in pig-iron and steel, while the United States production in the first half of 1926 was about 80 per cent. of the pig-iron capacity and 86 per cent. of her steel capacity. That production in Belgium in the first half of 1926 is not equal to that in the first six months of 1925 is due to the fact that in the early months of this year Belgian production had not recovered from the effects of the Charleroi coal strike. The following table compares the foreign trade in iron and steel of the chief producing countries in the first half of 1925 and 1926; in spite of the coal strike, exports from Great Britain in the first half of 1926 have slightly exceeded those for 1925, but exports from Germany, France, and Belgium are very much in excess of last year:—

	Imports.		Exports.	
	First Six Months.		First Six Months.	
	1925.	1926.	1925.	1926.
United Kingdom	1,396.1	1,370.5	1,831.7	1,900.8
Germany	640.1	437.2	1,466.6	2,235.7
France	95.5	97.1	1,696.6	2,024.6
Belgium and Luxembourg	257.1	270.0*	1,639.6	1,510.0*
U.S.A.	432.1	580.9	805.2	966.4

* Partly estimated.

Apparently Germany's policy of export bounties to counteract the advantages of the depreciating exchanges in Belgium and France has been largely successful, and Germany has again become the world's greatest exporter of iron and steel.

American Cotton Crop.—On Monday last the Crop Reporting Board of the Department of Agriculture of the United States Government published further statistics on the cotton crop. The figures were not equal to expectations, and had the effect of bringing about a rise in prices of about $\frac{1}{8}$ d a lb. The condition figure was given as 63.5 per cent., against 69.8 per cent. a fortnight earlier, and 62 per cent. at the same time last year. The indicated crop was stated to be 15,248,000 bales, against the previous estimate of 15,621,000 bales. In market circles, writes our Manchester correspondent, it was anticipated that the report would be more favourable than a fortnight earlier, and most private firms put out forecasts of about 15,800,000 bales as the probable yield. Should later developments be as favourable to the crop as in the past two years, the output may be 16,221,000 bales, but should developments during the remainder of the season be as unfavourable as during 1921, 1922, and 1923, the indicated yield is 14,800,000 bales. In a supplementary report, the Bureau states that during the period under review there was too much rain in most parts of the belt, which caused growth of the plants at the expense of fruit, and favoured the multiplication of insects. It is pointed out that boll weevils are rapidly increasing in many sections, and there is a possibility of material

THE MERCANTILE BANK OF INDIA, LTD.

Head Office : 15, Gracechurch St., London, E.C.3.
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,512,884

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES. The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application. Fixed Deposit Rates will be quoted on application. On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to 2l. JAMES STRUART, Chief Manager.

damage owing to the lateness of the crop. If these official advices are correct, the prospects for a big growth are decidedly worse. Lancashire traders are slow to believe unfavourable news relating to the cotton crop, and for some time in the Manchester market sentiment with regard to prices has been bearish. There now seems to be less probability of lower values, although an easier tendency may show itself a little later when farmers begin to sell their cotton.

Agricultural Stabilisation.—A correspondent writes:—The pessimists who proclaim the continuous decadence of English agriculture are not influenced by statistics. If they were the statement of crops and stock as returned in June last, recently issued by the Ministry of Agriculture, might induce them to modify their jeremiads. The general impression which these figures convey is that English agriculture has returned, after the prolonged war period, to a position of relative stability. The yearly reduction of the total agricultural area, due to increasing urbanisation, continues, but, allowing for this, there is no significant change. Arable land, although absolutely less, has relatively increased in a slight degree. Wheat and oats hold their own, and the only important crop which appears to be declining is barley. Sugar beet shows the most striking change, having more than doubled its acreage, and thus justified the exceptional and somewhat expensive measures taken to stimulate its cultivation. The fact that cattle still steadily increase, and have reached a record number, denotes confidence among stock-owners, and represents larger farming capital, while the addition of a million sheep also indicates an appreciable increase of agricultural wealth. A similar statement just published by the Ministry of Agriculture for Northern Ireland shows, on a smaller scale, much the same results, the principal changes being a somewhat marked reduction in the acreage of flax, and a substantial increase of pigs and poultry.

The Franco-German Potash Agreement.—The agreement entered into between the Deutsches Kalisyndikat and the Société Commerciale des Potasses d'Alsace has been extended to 1936, with the proviso that either party may terminate it after seven years on giving a year's notice, otherwise it may be renewed for periods of five years after the first ten years have expired. This means that Germany and France have arranged to divide the world's supply of potash between them, and will do so unless new sources are found in the meantime outside their control. The agreement provides for increasing production and stimulating sale "in order to obtain greater profits from the export trade." In other words, France and Germany will serve themselves cheaply at the expense of foreign purchasers. A Commission is set up to regulate sales. Germany starts with the supply for Eastern Europe, including Austria, Czechoslovakia, Poland, and the Balkans, while France supplies the Western European markets, including England. With regard to other countries, including the United States, Germany will be given 70 per cent. of this market, and France 30 per cent. up to a total sale of 840,000 tons, but after 825,000 is reached France is allotted a supplement of 3,000 tons, and all sales in excess of 840,000 are to be divided equally between the two countries. In case after five years the quantity exported has not reached 840,000 France receives special consideration, and sales beyond the total for tire

end of the sixth year will be divided equally between the two countries. Each country, of course, attends to its own requirements. In 1913 French agriculture only used 33,000 tons of potash, which had increased to 40,000 tons in 1925. Germany uses three times as much. Germany is by far the largest producer of potash. In 1925 German production amounted to 1,225,000 tons, compared with 310,000 for France, so that under the agreement French interests are getting more than their fair share. On the other hand, the Alsace mines, which now have the benefit of the service of German experts, are expected to increase production every year. The increase in recent years has been as follows:—

	Tons.
1920.....	199,175
1921.....	109,724
1922.....	208,993
1923.....	237,000
1924.....	274,000
1925.....	311,000

France consumed 94,363 tons, sold 73,000 tons to America, 21,000 tons each to England and Belgium, and 24,000 tons to Holland. Referring to these statistics, a French semi-official publication says: "These figures give an idea of the importance which will be attained in the future by the Alsatian mines in the world production. The Franco-German agreement on this question constitutes an event of indisputable importance in estimating the value of our mines."

Trade Union Funds.—A statistical return issued this week by the Registrar of Friendly Societies* gives details of the membership, income, expenditure, and funds of registered trade unions with 10,000 or more members in the years 1924 and 1925. At the end of 1925 railwaymen were in the strongest position with a membership of 398,600 and funds of £1,911,500. Next in numbers come the Transport and General Workers with 376,300 members, but the funds amounted to only £486,500. The Amalgamated Engineering Union, with a membership of 234,300, had funds of £1,835,600, expenditure during the year amounting to £1,158,700, including unemployment benefit of £473,900. The expenditure of the Boilermakers amounted to no less than £1,399,600, of which £1,154,000 was for unemployment benefit. These two unions received refunds of National Unemployment insurance benefits of £395,900 and £1,213,300 respectively. The Miners had funds at the end of 1925 of £1,155,400, as against £1,149,400 at the end of the preceding year. The General and Municipal Workers had at the end of last year a membership of 314,000 and funds of £429,400.

The Australian Budget.—Our Melbourne correspondent writes:—The Commonwealth Budget, presented by the Treasurer, Dr. Earle Page, on July 8th, shows that after providing for sinking fund and redemption purposes, £4,030,605 (inclusive of £1,000,000 supplementing the ordinary sinking fund), there was a deficit of £2,822,585 for the 1925-26 financial year ended June 30, 1926. The gross revenue collected by the Commonwealth was £72,285,373, of which £7,951,727 was paid to the States, leaving £64,333,646 available for Commonwealth expenditure, against which the expenditure was £67,156,231, leaving a deficit for the year of £2,822,585. These figures are arrived at by aggregating those in various "parts" of the consolidated revenue account in order to include the total revenue of the railways, Post Office, &c., on the one side, and the expenditure on the opposite side, instead of taking net figures according to the present official form. The estimates for 1926-27 show a gross Commonwealth revenue of £75,131,150, and after deducting £8,428,312 to be paid to the States, there remains a net Commonwealth revenue of £66,702,838, against which Commonwealth expenditure is estimated at £66,553,457, leaving an estimated surplus of £149,381. The estimated revenue

includes £1,500,000 from special Customs duties on petrol, tyres, and chassis for main roads construction. That no reduction has been made in Federal income-tax in view of the actual buoyancy of the revenue has occasioned disappointment, and the special petrol and other duties have led to active opposition from the various interests affected, including motor-car owners. The taxation collected by the Commonwealth during 1925-26 amounted to £54,373,007, and adding that of the six States, £23,295,189, the total for the seven Governments was £77,668,196, against £74,505,727 for 1924-5, and £67,361,729 for 1921-22. The buoyancy of late years is the result partly of generally good seasons and good prices, with which the country has prospered, and partly of the stimulus to imports from external borrowing, the effect of which is to enlarge Customs revenue by several millions per annum. As regards the States, the figures so far available for the past financial year show that several have substantial deficits, the largest of which is £1,274,303 in New South Wales. The season is shaping well in nearly all parts of Australia, the principal exception being in Central Queensland. The area under wheat shows an increase of about 2½ per cent., and a good harvest is hoped for, subject to the spring weather. Butter production also promises well.

The Bank of Italy Return.—The last monthly return issued by the Bank of Italy referred to June 30th, the transfer of the sole rights of issue, which took effect as from July 1, 1926, having been responsible for the delay, owing to the necessity for checking the gold assets and notes which had to be taken over from the Banco di Napoli and the Banco di Sicilia. The Banca d'Italia has 128 branches in Italy, and 8 branches in the Italian colonies, and both the southern banks have a considerable number of branches throughout Italy and the colonies. This is a sufficient explanation for the delay in arriving at the final figures to be embodied in the full returns as prescribed by the Bank statutes. A provisional return, however, has been issued showing the main items for July 31st. These figures cannot be compared with those previously published, but in order to indicate what changes have taken place, we give below, firstly, the aggregate figures for the three note-issuing banks (Banca d'Italia, Banco di Napoli, and Banco di Sicilia), as stated in the Treasury returns for March 31, 1926; secondly, the Banca d'Italia figures, from the last return before the sole issue rights were taken over, namely, that of June 30, 1926, and finally the above-mentioned provisional figures for July 31, 1926:—

(00,000 omitted.)

	March 31, 1926.	June 30, 1926.	July 31, 1926.
	Aggregates for Banca d'Italia, Banco di Napoli, and Banco di Sicilia.	Banca d'Italia before taking over Sole Issue Rights.	Banca d'Italia after taking over Gold Assets and Circulation of Southern Banks.

Other deposits and drafts.....	2,176.9	1,627.7	2,192.5

* The Special Independent Section of the Syndicate for Advances against Industrial Securities was created with Treasury sanction under the auspices of the note-issuing banks, with the object of liquidating the frozen assets arising from the post war bank troubles. The credit in respect of notes outstanding, which were issued on behalf of the section, is secured to a large extent by a special fund set up to meet ultimate losses (standing to-day at nearly 2,600 million lire) and for the balance by the aforesaid assets.

† This figure includes the total notes outstanding on June 30th, issued by Banco di Napoli and Banco di Sicilia, the amount of which was for 3,782.4 million lire. Of these an amount of 620.5 million lire had already been replaced by Banca d'Italia notes and the balance of 3,161.9 million lire will be gradually substituted.

Mining Notes.

Rio Tintos.—The alternations of exchange have produced marked fluctuations in inter-bourse securities recently, one of the prominent movements being in Rio Tintos. It is a fair surmise, writes a correspondent, that these shares have been the medium of large currency transactions, resulting in a more or less artificial market position. The Rio Tinto has the merit of being one of the cheapest of all copper mines to work on account of the nature and situation of the property, so that, even in lean times, its rate of profit compares favourably with those of its largest competitors. But the chairman at the annual meeting last April made it clear that the company's position, owing to agreements with the Pyrites Association, was not, so far as concerned that product, satisfactory, and notice to terminate at the earliest possible date, namely, after 1928, would be formally given in due course. Consequently, it is from the output of copper itself that almost, if not all, profit is derived. Until quite recently the price of the metal this year has been a receding one, and compared with the average of £62 a ton in 1925, it has been below £56, the current quotation being about £58 15s. To offset this there has probably been some reduction in costs, but any benefit in this direction can only have been partial; furthermore, at the meeting above referred to the chairman spoke of the need to replace out-of-date plant which would of necessity involve capital expenditure. The proposed international combine to control sales of copper, in which it is said 90 per cent. of producers are willing to join, may reach fruition, but the declared policy of the Rio Tinto board is to avoid all restrictive alliances, and, therefore, that company is likely to hold aloof. Naturally, however, any rise in prices through such an amalgamation would benefit the Tinto company. In the meanwhile results can hardly have been so good as over the same period last year, and the dividend outlook seems towards a decrease rather than otherwise, as the whole profit for 1925 was absorbed in that year's distribution.

Broken Hill Proprietary.—Last year's results of this important enterprise are scarcely what might have been expected, in view of the recent demand for the shares from Australia. In point of fact, so far from the accounts showing an increased profit, the contrary is the case, the surplus amounting to £303,000, as against £372,300 for the 12 months ended May 31, 1925, albeit last year's development allowance at £293,800 was slightly higher. Results from the Broken Hill properties were of a very gratifying character. The year's output was the best for some considerable time, and, of course, metal prices continued high. Prospecting by diamond drilling failed to reveal any new ore bodies in the company's original mine, but the Potosi will be a small source of supply in the future. Work was interrupted for a couple of weeks owing to the drought. Fortunately the rainfall which has since taken place ensures ample water supplies for over two years. As regards the iron and steel works in New South Wales, upon which the company's future is so largely dependent, numerous drawbacks were encountered, including an increase in the price of coal and reduced working hours. An onerous Workmen's Compensation Act has been imposed, and a further advance in the price of coal has taken place since the date of the accounts; so that altogether the outlook in respect of this branch of industry is not very hopeful, unless the company is successful in its application for an increased degree of protection. An enquiry has been opened by the Tariff Board, but the result is not yet known. A considerable change is shown in some of the balance-sheet items, owing to the sale during the period of the company's holding in the Broken Hill Associated Smelters. The entry "Shares in other companies" has been reduced, while the cash in hand and on deposit has been increased; the liquid assets now amount to £1,243,300, as against £1,040,100 12 months previously. By further redemptions, the debentures have been reduced, the "A" series to £467,000, and the "B" series to £1,105,800. The year's dividends totalled 10 per cent., as against 5 per cent. only for 1924-25, but even on the former basis the yield on the shares amounts to little more than 7 per cent.

The Transvaal Mynpacht Decision.—The fuller details now available of the reserved judgment in the case of the Transvaal Estate and Development Company *versus* the Union Minister of Mines, entail a modification of the original impression. The company was entirely successful in its application, but in the future conditions may be different. It may be recalled that under the existing legislation the Union Government is entitled to proclaim any farm as a public diggings, provided that evidence of mineralisation is forthcoming, but the company has the first right to one-fifth of the area as "mynpacht." The Transvaal Devels. Co.'s farm, "Forest Hill," was proclaimed in September, and the company proceeded to mark out its mynpacht. In December, however, the Minister of Mines withdrew the proclamation on the grounds that the whole of the area was not mineralised. As this set up a precedent, and might, moreover, be attended with very grave inconvenience to the companies interested, a number of other undertakings joined with the Transvaal Devels., and a test action was brought. In this the company, as already intimated, succeeded on all points, and was awarded costs. But, in giving judgment, Mr Justice Stratford laid down the dictum that "the size of the area proclaimed is within the decision of the Governor, who must be satisfied as to its payability." In this he would be guided by the report of the Government mining engineer. Hence it may be inferred that future proclamations will be restricted to areas which are believed to be mineralised. The stipulation as to payability, however, raises, it would seem, a very thorny question.

Oversea Correspondence.

UNITED STATES.—FOUR PER CENT.—STOCK MARKETS.—GENERAL MOTORS DIVIDEND.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 17.

THE increase in the discount rate of the New York Federal Reserve Bank from 3½ per cent. to 4 per cent., which was announced last Thursday afternoon, came rather unexpectedly, but did not occasion a great deal of surprise in Wall Street. Most observers had thought that a higher bank rate might be put into effect some time in September, after the return to this side of the water of Governor Strong. The possibility of an increase had been discussed in brokerage circles for a week or two, but chiefly on Thursday afternoons, and then not to any great extent. However, after the change was announced, everyone seemed to realise that the higher rate was a perfectly natural development. With autumn approaching, the commercial demand for credit has been increasing. The rate on bankers' bills, which is something of an index, has been on a level with the bank rate for some time. The share market has been active, and brokers' loans have been increasing fairly rapidly again. With these conditions prevailing, a firming up in the time money market had reflected the opinion of bankers that the price of credit would be higher toward the end of the year. In addition, the total volume of credit being extended by the Federal Reserve system was materially higher than a year ago. On August 11th, to be specific, the total holdings of interest-bearing paper were, for the system as a whole, \$58,000,000 larger than on the corresponding date last year. Discounts for members were \$11,000,000 higher; open market purchases of bills were \$19,000,000 larger; and holdings of Government securities were \$37,000,000 larger. And it will be recalled that the autumn expansion that came last year carried the volume of credit extended by the Federal Reserve system up to a higher peak than had been reached in any of the three preceding years. In short, the open market for money furnished a primary basis for an increase in rates, while the prospects of active trade, and a big share market, made action desirable unless a repetition of last autumn's speculative market were desired. In any event, good judges are well pleased

with the official action. They are glad that what they call the mistake of last autumn is not to be repeated. They maintain that by leaving the discount rates down until November, and then only moving up the rates of the out-of-town banks (the New York rate being left unchanged until January), an undesirable speculation was fostered, and an unhealthy position was built up. The Federal Reserve authorities apparently now see the desirability of making additional credit resources available at a penalty, and of not using their reserves to retard the advance in the open money market.

Widely differing views are expressed as to the effect which the higher discount rate is likely to have on the share market. The old-fashioned bulls point out the many memorable bull markets that were had before the war, when money was high. They say that the price of money doesn't matter when the public wants to speculate. On the other hand, there are those who maintain that things have changed since the Federal Reserve system has been in smooth operation. They say that previous experience does not count under the new conditions. Since last week's advance in the official rate nothing startling has happened. However, this is not surprising, as it frequently takes a week or so for a change in the bank rate to become effective. When the change was made the reserve bank protected the bill and government securities markets, taking over at the old rate, according to reliable information, the supply of bills in dealers' hands, and buying governments liberally. As a result, the call money market had remained easy, the rate on the Stock Exchange ruling at $4\frac{1}{2}$ per cent. Since the change the dealers have marked up their rates on bills one-quarter, the 30-day paper selling on a $3\frac{1}{2}$ and $3\frac{3}{4}$ basis, while the 90-day bills command $3\frac{1}{2}$ and $3\frac{3}{4}$. Time money goes for $4\frac{1}{2}$ and $4\frac{3}{4}$ for 30-90-day loans, and for $4\frac{1}{2}$ to 5 for the longer maturities. Some bankers expect that later on 5 and $5\frac{1}{2}$ per cent. money rates will be seen in the open market, and that the official rate will be moved up to $4\frac{1}{2}$ per cent.

In the share market the news of the change caused a mild and transient reaction, which was succeeded by a considerable show of strength. The latter was helped by the easy tone in the call money market, and by the efforts of the pool managers and bull operators, who apparently considered that a demonstration was needed to keep market followers from deserting their speculative favourites. Average share prices now are well above the tops reached in the big market of early this year. The quality of the market seems to have been deteriorating during the past few weeks, although it must be admitted that it is the "good" shares that have led—the rails and the standard industrials. Everything considered, the situation lines up very nicely for a test of the effect of a higher bank rate during a period of active and even expanding business. The share market has yet to feel the effects of the change in the rate, but it should have an opportunity to do so soon.

One piece of important industrial news coincided with that regarding the bank rate, and tended to cloud the issue at the moment. That was the declaration by the directors of the General Motors Corporation of the 50 per cent. stock dividend that has been referred to in these letters. The directors made the old 7 per cent. dividend rate apply to the new as well as the old shares, thus increasing the regular annual cash distribution on the old shares to a rate of 10.5 per cent. Other than this, no extra cash dividend was declared, but it is not unlikely that something of this character may materialise at the next quarterly dividend meeting. Following this action, the directors of the du Pont de Nemours Corporation, which owns some 1,300,000 shares of General Motors stock, a holding which corresponds closely with the number of shares of its own stock, increased the dividend rate on the corporation's common stock from a 10 per cent. to a 14 per cent. basis. A special meeting has been called to authorise a two for one split-up of the du Pont shares, but this split-up is not expected of itself to alter the situation with regard to cash distribution. Shortly before the declaration of the General Motors stock dividend the General Motors common shares touched a new high record of 225 $\frac{1}{2}$, this price comparing with a lowest of 113 $\frac{1}{2}$ in the March break. Since the dividend action the stock has sold down to 196 $\frac{1}{2}$ and up to 214.

FRANCE.—FINANCIAL POSITION—EXPORT PRICES AND THE EXCHANGE—PRIVATE ECONOMY TO BE ENFORCED—WHEAT SUPPLIES.

(FROM OUR CORRESPONDENT.)

PARIS, August 25.

THE Government is now making, simultaneously with the development of its plan for the restoration of the franc, strenuous efforts to minimise the serious rise in the cost of living which is the natural corollary of the present currency situation.

The position of the Treasury, judging from last Thursday's Bank statement, has ceased to be alarming. The debt to the Bank was reduced last week by 350,000,000f, increasing the available margin to rather over 1,500,000,000f, while at the same time the total notes in circulation were reduced by 612,629,000f, leaving, before the authorised limit will be reached, nearly 3,000,000,000f of paper money available for issue to meet the requirements of commerce and other needs that may arise. The demand notes for this year's direct taxation have now been levied in most parts of the country—although not yet in Paris—and taxpayers are generally reported to be doing their duty patriotically, both in the way of payments in advance, without waiting for their demand notes, and by liquidating tax obligations more promptly than usual.

The Bank statement last week was all the more satisfactory in view of the fact that payments of \$10,000,000 and \$350,000 fell due to the United States on August 1st, while £1,000,000 had to be paid to the Bank of England last Wednesday. To-day a further payment of \$2,500,000 to the Bank of England matured and was met without difficulty. These obligations may be regarded as being in part responsible for the recent unimportant renewed drop in the franc, but their influence is now regarded as dissipated, and the closing quotation for sterling to-night was again a shade under 170. August being the month of the heaviest payments of the current year on foreign account, and revenue from taxation of all kinds being now once more on the up-grade, no anxiety need be felt for the immediate future. Both the Budgetary problem and the Treasury problem—which are two quite distinct matters, although often confounded—being now apparently solved, while the return of confidence among French people themselves is being confirmed daily, the nation is seriously considering the methods that should be adopted to meet the very serious difficulties that will have to be faced in the near future in connection with the pending stabilisation and revaluation of the franc.

People generally now appear to have at last grasped the fact that commodity prices must be adjusted to correspond with the real value of the currency. It is now being realised that the steady rise in commodity prices is not because the cost of existence is becoming higher, but because the currency by which these prices are expressed has lost its value. As a result, domestic commodity prices are being increased daily, rises of as much as 20 per cent. in certain categories having been recorded during the past week. In other words, French domestic prices are now being lifted to the same level as those prevalent in countries which are on a gold basis. The fallacy of fostering exports at sale prices in francs that were below average world prices as expressed in gold is now realised, and so is the oft-reiterated truth that the apparent prosperity of the past three or four years has really been exactly the contrary, and must, if it continues, inevitably lead to the irreparable disappearance of the rest of the country's acquired wealth. This realisation of the facts of the situation is now supplemented by the recognition that the only means of returning to a normal state of affairs is for every citizen to restrict his expenditure to the proportions of his real income, which is the only practical deflation possible. The practical significance of some of the measures taken by the Government this week is as yet certainly not clearly understood by the population, but there are many indications that the nation has sufficient confidence in its present leaders to accept the several and in some cases onerous restrictions imposed, in the conviction that they will help right the situation.

The first of the three stages of stabilisation predicated by the Experts' report—"a period of pre-stabilisation, with the exchange oscillating about a rate more or less fixed in advance"—has now been definitely entered upon. "The maximum of advances to the State by the Bank" has been "definitely fixed"; the "rigid maximum" of the note circulation has been replaced by a "more flexible system" designed to obtain "until legal stabilisation permits the fixing of a proportion between the reserve (gold and exchange) and the circulation"; notes are being "issued against purchases of gold or currency," which are "not being counted as part of the maximum note circulation"; the reserve is being "strengthened by the acquisition of gold coin at home," by the Bank, "at a rate near the current exchange rate." The readjustment of internal prices which has now also begun is an integral and inevitable part of the stabilising operation. The second period of the movement—"stabilisation in fact"—will begin "at the moment when the Bank, having definitely selected a rate at which to stabilise, decides to purchase and to sell gold at a fixed rate, and to sell foreign exchange with a margin between the selling and buying prices corresponding closely to the export and import gold points." The delicacy of adjusting all these varying factors amply explains why the Government and the Bank have as yet been unable to fix the rate at which to stabilise the franc.

The measures foreshadowed during the present week have the double object of extending to the population as a whole the effort in the direction of economies which the Government has already begun to apply to public expenditure. They include provisions to restrict consumption, particularly of bread, the recent rapid rise in the price of which has had a marked effect on that of other foodstuffs. In order to reduce the quantity of wheat imported from abroad, steps are to be taken to enforce the use of stale bread on as large a scale as possible. The consumption of foodstuffs in restaurants being regarded as excessive, a return is to be made to the system practised during the war of restricting each customer to two courses. Simultaneously, the sale prices of foodstuffs and other necessities are to be rigidly controlled, and all prices are to be plainly stated. Mixed committees of consumers and traders are to be formed in every district to try to reduce prices to the lowest advisable limits. The vicious system of holding foodstuffs off the markets in order to keep up prices is to be rendered dangerous, and the dealers in the public markets are to be compelled to sell to private retail purchasers, after the wholesale trade has been satisfied, at the same prices as to buyers in large quantities. (This measure has already been taken in the Paris Central Markets with excellent results.) Cheap restaurants are also to be reintroduced under public control. The production of foodstuffs is to be organised on a systematic basis, "with a view to the better utilisation of the resources and natural wealth of the home and colonial territories."

A decree was promulgated this morning instituting closer control over the wheat supply, with the double object of preventing the speculation in bread-making materials which has been rampant during the past year or two, and of forcing home-grown wheat on the market, in order to reduce imports of cereals from high change countries. The new law stipulates for rigid declaration by growers of the areas laid under wheat, registration of all the bread-making cereals and flour in the country, and declaration of all quantities sold and conditions of sale. It is provided that permits must be obtained before any consignments of bread-making materials can be moved. The new law applies to Algeria and to the French protectorates and colonies, as well as to France itself. The Minister for Agriculture states that the coming harvest is above the average, and that the yield will be better than that of last year. At the same time he estimates that this country will require during the coming twelve months to purchase 10,000,000 quintals of foreign-grown wheat to meet requirements. One object of the present measures is to utilise for immediate use the grain that is known to be available in France, and thus enable the country to tide over, without appealing to foreign wheat, the period between now and the advent of new domestic supplies.

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

Established 1836.

EDUCATIONAL ASSURANCES

Head Office: 10, FLEET STREET, LONDON, E.C.4.
near Temple Bar.

Assets Exceed - - £18,000,000

General Manager: W. A. WORKMAN, F.I.A.

The retail selling price of bread, which is strictly controlled by the various local prefectorial authorities throughout France, was recently reduced by 30c per kilo. It is announced, however, that the price will very shortly be raised by 5c in consequence of the recent increases in transport charges, the reimposition of an import duty on foreign wheat, and the recent renewed drop in the exchange value of the franc.

GERMANY.—BUSINESS OPTIMISM—FINANCES—CREDIT—INDUSTRY—FOREIGN TRADE—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, August 25.

BUSINESS sentiment during the past fortnight has been increasingly optimistic. The revival in the coal and steel industries has been followed by an improvement in the textiles, paper, and other branches. The continuation of the Bourse boom, and the rapid rises of security quotations in the other chief Central European countries, have strengthened the optimistic sentiment. It is predicted, on grounds which are so far rather thin, that Continental trade is about to undergo a great revival. More favourable reports from Russia concerning the political situation, the crops mobilisation, and the currency, are playing a rôle in influencing sentiment. German crops will be about average, but behind those of 1925. The last official conditions index (for August 1st) shows a slight deterioration during July in all grain crops, except oats, and also in potatoes, while the sugar-beet crop considerably improved. The building market has greatly improved. The Republic has added 20,000 dwellings to the year's construction programme. The Minister of the Interior has refused a demand from the creditor side for a referendum on a Bill revising the Valorisation settlement. The formal ground given for this refusal is that a clause in the Bill increases the valorisation percentage for public loans from 12 $\frac{1}{2}$ (the present rate) to 50 per cent. of the original gold value. This clause, the minister holds, is equivalent to legislation concerning the Budget, and the Bill cannot, therefore, be the subject of a referendum. The Supreme Court has refused to recognise a Danish Court's judgment on "mark equals mark" basis, compelling a mortgagee to accept paper mark repayment of value the fraction of a pfennig. The Danish Court declared that article 242 of the German Civil Code, which requires a debtor to discharge his liability in accordance with good faith, and with business practice, does not apply to the case in point, and that the creditor could gain his case only if the paper-mark offer was, according to German understanding of the matter, contrary to good morals. The Supreme Court declares that the paper mark offer was, in fact, contrary to good morals. This judgment is the first in which the Supreme Court here has condemned any foreign judicial decision in favour of the "mark equals mark" theory. The Supreme Court adds that the fact that Germans themselves for years accepted the erroneous "mark equals mark" rule, does not justify a foreign court in perpetuating the error. This decision seems to have a very clear bearing upon the insurance lawsuit, which recently occupied the English Courts.

The federal finances are improving. They reflect the industrial and trade stagnation less than was expected. Gross receipts from taxation in July totalled 708,004,928 marks. With the exception of two months of 1925, this is the highest figure since the currency stabilisation. In April-July inclusive the first four months of the current financial year, taxes yielded 2,183 million marks out of 6,465 million marks, estimated for the whole financial year. July is the first month of a quarter, in which certain quarterly tax payments fall due; but the receipts in the corresponding months, April, 1926, January, 1926, and October, 1925, were only 584,600, and 674 million marks respectively. As a result of bad employment, receipts from income-tax deducted from wages are unsatisfactory, but receipts from income-tax paid directly have considerably increased, and the Finance Minister expects a further improvement. The sales tax receipts are satisfactory, being considerably more than half those of the same time last year, when the tax rate was double the present. Customs yielded 113 millions in July and 279 millions in April-July, out of an estimated 580 millions for the whole financial year. The July estimated yield was only 53 million marks. In part this increase is due to heavier importing in anticipation of the August increase in grain duties. The Finance Ministry expects that Customs in the whole year will yield 200 million marks more than was estimated. Of the other taxes securing Reparations, the beer tax yield has fallen behind, but those of tobacco and spirits have increased. For the whole year the Ministry predicts a considerable excess of revenue over the estimate if no new set-back in business occurs. Expenditure has remained within the limits estimated. The Finance Minister has not needed to use the powers to borrow given to him last May, and has even managed so far to finance the housing and unemployment relief programmes out of money in hand. He states that he will postpone borrowing at home until money can be cheaply had, and until he can borrow without causing new stringency in the home market.

The money market has undergone no change. Day money last week was lent at 3 to 5½ per cent., this being somewhat lower than earlier in the month. Month rates have slightly increased. In the last few days the impending month-end settlements have hardly affected the market. Although interest rates in the past fortnight have fluctuated within narrow limits, there has been no general decline since June, before which were six months of almost uninterrupted decline. An official of the Finance Ministry predicts that the coming autumn will not see dearer money for business purposes. The financing of the harvest is already arranged for, and if money for Bourse speculation becomes slightly dearer, that will hardly affect industrial and trade credit, because the Reichsbank will not be compelled to raise its discount rate. Interest rates on long-term loans will be governed by the policy pursued in borrowing by the Republic and the States. The June Savings Banks reports show another considerable increase in deposits. The Reichsbank has abandoned its system of rigidly quoting the U.S. dollar at 4.20 marks. For August 24th it fixed a mean exchange of 4.199 marks. Until then all foreign exchanges, with exception of the dollar, had been quoted variably. The fixed official dollar exchange has been a way of expressing the value of the new Reichsmark which, not being convertible into gold, had to be anchored to some full-value gold currency. The resumption of variable dollar quotations, though directly due to the offering of dollars in excess of the Reichsbank's demand, may be regarded as implying that the Reichsmark can stand alone. The great banks have started on the long-expected capitalisation increases. The Disconto Gesellschaft has increased its 100 million mark capital by 35 million marks, offering 20 million marks of the increase to present shareholders at a price of 130. The bank's pre-war capital was 200 million marks. The Dresdner Bank proposes to add 22 million marks to its 78 million marks capital. The ratio of capital to deposits is, in case of all the leading banks, much smaller than before the war, this being a result of the fact that gold capital disappeared during the currency depreciation. The Deutsche Bank is recalling, for issue to its own shareholders, the 40 million mark shares which it parted with to English and American financiers in December, 1924.

The labour market improves slowly. Publicly supported unemployed on August 1st totalled 1,652,000, which is only 400,000 fewer than at the worst point of February. Bankruptcies in the third week of this month fell to the new low point of 108. In all July bankruptcies numbered 694. The improvement in the credit situation is shown by a rapid decline in the number and value of protested bills. In July the value was only 7,300,000 marks, against 38,400,000 marks in December, 1925, the number of protests being 5,900, against 24,500. The Ministry of Industry has retold the Potash Council's proposal to raise prices by 12 per cent. from September 1st. The improvement in textiles embraces all branches, except linen. Cotton weavers, dyers, and printers report greatly increased business, and orders for exports have risen. The woollen cloth branch is very active, also the silk branch, though this complains of low prices as result of French exchange conditions. The clothing industry is also active. The demand for paper of all qualities and for pulp has greatly increased. Foreign orders for paper are coming in satisfactorily. The coal industry improvement continues. Ruhr average daily output lately rose above the figure of 1913, though as a result of mechanisation and better organisation 40,000 fewer miners are employed. Very large exports of coal have been despatched via Rotterdam. Unsold reserves on the Ruhr have fallen to about the output of one week. The recovery in iron and steel is equally marked. The Steel Syndicate companies are producing to their full 70 per cent. ration. Some works are taking on new men. Pig-iron production in July totalled 787,862 metric tons, against 720,081 tons in June; ingot steel production, 1,022,068 tons, against 977,309 tons. In the first seven months of 1926 pig production was 4,929,836 tons, against 6,457,758 tons in the same months of 1925; steel production, 6,316,692 tons, against 7,864,745 tons. The home and foreign demand for semi-finished material, structural forms, bars, wire, and most kinds of sheets is rapidly increasing. Foreign trade in this branch is ever more active. Exports of iron and steel and wares thereof (excluding machinery) in the first half-year were 2,508,382 tons, against 483,142 tons imports. Exports of machinery were 213,756 tons, against 18,110 tons imports. Monthly exports of machinery this year have averaged 35,600 tons, against 30,750 tons in 1925, and 22,500 tons in 1924.

The July foreign trade balance was again passive.

Marks (000's omitted).

Gold and silver	1,907	23,671	
Totals	823,186	5,613,185	

As compared with June, imports (wares only) increased by 150 million marks, whereof 124 million marks represented the increase in foodstuffs, due partly to the impending increase in duties. Exports of finished goods increased by 31 million marks.

The Bourse has been active and firm, with considerable set-backs. Leaders during the past weeks have been electrotechnical papers, this being the result of the plans for a Trust; but the market in general was strong, and the long-neglected "cash" stocks mostly rose. The *Frankfurter Zeitung's* stocks index for August 21st shows 115 (100 in January, 1925), but this index includes only big stocks—the average rise of the whole list is much less. The biggest rises since the boom began eight months ago are in chemicals, electrical, steel-coal, paper, brewery, shipping, railways, and bank stocks. Stocks of machine-construction, leather, and sugar companies still mostly stand at around half their prices of January, 1925.

HOLLAND.—FOREIGN TRADE—BRITISH COAL— MONEY MARKET AND FOREIGN CAPITAL— STOCK EXCHANGE.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, August 14.

NOTWITHSTANDING recent important events abroad, there is but little alteration to record in the general aspect of financial and economic conditions in Holland. The coal strike in Great Britain and the sharp fluctuations in French currency have, of course, reflected themselves in Holland's foreign trade, but not to so marked an extent as to give rise to consternation. At the time of writing the foreign trade returns for July have not yet been published. From the figures respecting June, and also the first half of 1926, it appears, however, that imports have been strongly on the increase. In the first six months of 1926 import values totalled 1,222.2 million francs, against 1,186.7 million francs in the corresponding period of the previous year.

It would, however, be erroneous to presume—as has often been done in this country—that the balance of trade has suffered to a great extent in consequence of French and Belgian competition due to the decline in the currencies of these countries. As a matter of fact, the value of imports from Belgium has shown a retrograde movement, while as regards France there is only an advance of about 6 million francs to record. This does not imply, however, that French and Belgian competition is not making itself keenly felt. The contrary is the case. If we consider the movements of goods to Holland according to the weight, a marked increase of imports is apparent both in the case of France and Belgium:—

IMPORTS FROM BELGIUM.			
	First Half-Year.	Tons.	Mill. Glds.
1923	1,391,417	102.3	
1924	1,787,301	126.2	
1925	1,935,822	134.2	
1926	2,002,256	133.4	
EXPORTS TO BELGIUM.			
	First Half-Year.	Tons.	Mill. Glds.
1923	1,166,342	68.7	
1924	1,205,725	64.6	
1925	1,787,805	77.9	
1926	1,999,502	74.6	
IMPORTS FROM FRANCE.			
	First Half-Year.	Tons.	Mill. Glds.
1923	109,858	33.3	
1924	181,547	53.7	
1925	222,435	54.8	
1926	291,874	60.9	
EXPORTS TO FRANCE.			
	First Half-Year.	Tons.	Mill. Glds.
1923	709,352	64.3	
1924	592,504	56.6	
1925	565,850	41.3	
1926	728,501	39.6	

From the foregoing figures it will be seen that Dutch exports to Belgium and France have shown a satisfactory advance, although the rise since 1925 has not been accompanied by a proportionate increase in the value, which is in many cases probably due to an endeavour on the part of Dutch exporters to retain their outlets by means of price reductions. Taking the general figures, it is evident that as far as imports of goods into Holland are concerned Germany has profited to a marked extent by the decline in imports from Great Britain. The figures appended are a good illustration of this:—

Imports from—	Tons.	Mill. Glds.
Germany	6,637,596	319.8
Great Britain	5,786,568	285.6
Germany	757,570	133.2
Great Britain	1,139,539	191.2

Generally speaking, the course of Holland's foreign trade cannot be regarded with satisfaction. The balance of imports, which had registered a considerable increase in the first quarter of 1926, owing to a great extent to a falling off in our exports to Germany, underwent but little

reduction in the second quarter of 1926, as will be seen from the figures subjoined:—

BALANCE OF IMPORTS IN MILL. GUILDERS.		
1st Quarter, 1925	188.7	
2nd " " 1925	156.0	
3rd " " 1925	96.9	
4th " " 1925	105.7	
1st " " 1926	220.2	
2nd " " 1926	210.7	

Our balance of trade has consequently shown a big import surplus, and were it not for the fact that the balance of payments receives material support from remittances coming forward from foreign markets for the delivery of colonial products, the Netherlands Bank would probably have to take recourse to the export of bullion or to selling foreign bills. In recent months, however—and this notwithstanding the high balance of imports for account of June amounting to 29 million francs—the foreign bills held by the Netherlands Bank have registered a rise, which appears to warrant the conclusion that our balance of payments continues to show a surplus in our favour. Of the more important changes that have marked the course of trade with the principal foreign markets, the strong falling off in Dutch exports to Germany is striking. It was to be expected that the pronounced decline which had set in during the first three months would not be made up in the past quarter. The fall was too great, and improvement in the state of affairs in Germany is too slow for matters to be otherwise. The figures subjoined indicate the course followed by Holland's foreign trade with Germany since the commencement of 1925:—

(In Million Guilders.)			
	Imports from Germany.	Exports to Germany.	
1st Quarter, 1925	150.8	108.3	
2nd " " 1925	134.8	118.6	
3rd " " 1925	148.7	152.6	
4th " " 1925	159.7	89.4	
Total, 1925	594.0	468.9	
1st Quarter, 1926	163.6	69.4	
2nd " " 1926	156.2	88.7	

As the returns show, a more favourable state of affairs prevailed in the second quarter than in the first, although the position continues to be unfavourable when compared with the second quarter of 1925.

Though there is no reason to discuss in detail the changes that have been recorded in the various classes of goods, an exception deserves to be made in respect of one article, viz., coal, since the exceptional course of events in Great Britain in connection with the coal strike calls for closer contemplation. According to the figures appended, Dutch imports of coal have augmented:—

COAL IMPORTS.			
	In Tons.	1926.	In Million Guilders.—
1925.	3,913,259	4,380,625	47.6
1926.			53.3

It is a matter for conjecture whether Great Britain will succeed in regaining her lost outlets after the coal dispute has been settled. As the following figures indicate, Great Britain has so far had to yield a large share of her coal trade to Germany:—

FIRST HALF-YEAR—IMPORTS. (In Tons.)				
From—	1923.	1924.	1925.	1926.
Great Britain ..	2,160,464	1,210,123	648,636	491,348
Germany	563,857	1,998,071	3,162,916	3,748,093

With regard to the state of affairs prevailing in Holland's internal trade and industry, quiet but steady progress has been recorded. Various factors considered, it is evident, however, that there is still room for improvement in trade and industry. The unemployment returns are, in the first place, a clear indication of this. The Dutch Central Bureau of Statistics regularly publishes index figures concerning the number of unemployed workers. According to these returns the index figure for April—the last month for which particulars are available—was 5.4, against 6.6 in March, 8.8 in February, and 15.2 in January. There has consequently been a marked improvement, though this is attributable mainly to the season of the year. The easy tone prevailing in the money market continues to be maintained. The private discount rate has in recent months seldom exceeded 3 per cent., and has usually moved well below this point. When considering the state of the

Dutch money market it should be borne in mind that large amounts of capital have flowed in from abroad to seek shelter from currency depreciation. The amounts involved are very large—although it is not possible accurately to estimate their extent—and are responsible for the easy tone of the Dutch money market assuming a permanent character. There is, of course, a possibility that, in the event of a satisfactory arrangement being made in the monetary position abroad, these amounts of capital will flow back to their source, though this could hardly be expected to endanger the position of the Dutch money market in any way, since the large Dutch banks have, on the other hand, important sums outstanding abroad either in the form of balances at foreign banks or in foreign bills. Notwithstanding the ease of money, trade and industry has only availed itself to a very limited extent of the opportunity to make calls on the market for new money. Most of the issues offered to the public are in the form of conversion loans for provinces or corporations; in addition, there has been some borrowing for foreign account.

In consequence of the low rate of interest investment securities on the Dutch Stock Exchange have continued to be very firm in tone. On the other hand, however, a period of quietude has prevailed in the share market, which is to some extent due to the decline in the price of rubber. The rubber market, which for long had given the lead to the whole exchange, has had to relinquish its position, and consequently the other sections of the exchange have exhibited a somewhat dull tone. The shares of various Netherlands Indian concerns, and also those of steamship companies engaged in the East Indian trade, have proved an exception to the general quietude, and continue to be in good demand.

JUGOSLAVIA.—CROP OUTLOOK—ECONOMIC CRISIS—PUBLIC FINANCE—DEBT SETTLEMENT.

(FROM OUR CORRESPONDENT.)

BELGRADE, August 11.

HEAVY downpours of rain, cloudbursts, hailstorms, and floods have caused severe damage to property and crops in most of the provinces, and especially in Baranya (in the Voivodina plain), where over 80,000 hectares are under water. At one time the weather seemed to take such a catastrophic turn that wild rumours of damages up to two milliard dinars (about 7,500,000 pounds sterling) became current, while subsequent investigation puts loss as nearer 500-600 million dinars (a little over £2,000,000), and crop reports, although not final, suggest a loss in wheat of about 10 per cent.

In spite of the severe loss, however, the storms and floods have done a good thing in arousing the Government to the need of quicker and more drastic action than hitherto. The Economic Council of Ministers is busy working out a plan to relieve the "economic crisis," but the declarations of the various ministers show no definite sign as yet of a cohesive and constructive policy. The general idea seems to be an all round cutting down of expenditure, and this is earnestly urged by the Minister of Finance, in view of the figures just published of the Budget for 1925-26. These give receipts at 11,728 million, and expenditure at 10,913 million, as against an estimate of 12,321 million dinars for both receipts and expenses. The surplus of 815 million dinars seems to be nominal, however, as the sum total of arrears and floating debt is in excess of 800 million dinars. But while last year's balance has just been saved, the likelihood of greatly reduced receipts, in consequence of the damages, makes severe saving imperative. The decrease in receipts is born out by the figures of direct taxation, which, during 1926, yielded in five months only 585, as against 617 million dinars during the same period last year, and as against an estimate of receipts of 770 million dinars.

Hitherto the economy campaign has resulted in the cutting down of all salaries by 10 per cent. for the next three months, a reduction by 10 per cent. of the expenses of each individual ministry, and a number of smaller reforms within the Ministry of Finance. Pending municipal elections, and the realisation that the damages were not so great as at first expected, have unfortunately caused efforts to slacken, and as a Belgrade economic paper so

aply puts it, "sincerely caused the Premier to wish for some more rain and floods." In fact, it seems that although the recent catastrophe will cause the hastening of a number of long proposed reforms, the main burden of economic progress will again be borne by a good harvest.

Harvest reports fortunately are very good. The loss in quantity in wheat is largely made up by better quality and weight, as a result of sufficient humidity. Maize also is excellent, and a repetition of last year's bumper harvest in maize is not unlikely. The amount of prunes for export is estimated at about 5,000 trucks. In general, production has been on the increase ever since the war, the present "economic crisis" being merely a question of profitability as is clearly shown by the trade figures, which give an increase in quantity, but a decrease in value, due to the fall in agricultural prices:—

	1925.		1926.	
	Tons.	Mil. Gold Dinars.	Tons.	Mil. Gold Dinars.
May	448,836	75.7	564,783	67.9
June	358,897	59.1	402,321	55.8
Jan.-June	2,145,337	379.7	2,616,625	359.4

The successful settlement of the war debt with U.S.A. and the preliminary negotiations begun between Great Britain and Yugoslavia for the repayment of the war debt, have had a favourable influence on the financial market, and there are several offers of loans before the Government. A group of Yugoslav emigrants to South America has offered to construct the Belgrade-Adriatic line, asking for the right of exploitation for 75 years, after which period the line with all rolling stock would be handed over without compensation to the Government. The offer has been characterised by the Minister of Communications as "serious." Another American group which is supposed to have 100 million dollars is said to be willing to grant 20 million dollars to the State Mortgage Bank, and also to extend a loan to the Belgrade Municipality.

The dinar continues steady at 275, at which rate it has quoted for the last twelve months. In July much of its steadiness was attributable to the intervention of the National Bank, but since then private banks have been offering more freely in view of the harvest being better than was expected.

HUNGARY.—FINANCIAL POLICY—FOREIGN LOANS—COMMERCIAL TREATIES—BOURSE.

(FROM OUR CORRESPONDENT.)

BUDAPEST, August 15.

LAST week the Finance Minister, Mr Bud, outlined his future policy and gave a general survey of the economic position of the country. He described the great progress made in the last two years, but warned the country of contracting debts for unproductive purposes. Though the rate of interest has been constantly falling and is now around 8 per cent. for foreign loans, the Finance Minister thought that the normal rate ought to be 6 per cent. under satisfactory conditions. He said that the Government proposes to alleviate the present anomalies of the housing position by a big building programme. He could not make any promise as to the valorisation of the war loans, because that would endanger the balance of the Budget, which he would not tolerate.

The latest report of Mr Smith estimated at 65 million gold kronen the amount which Hungary has to pay for her foreign debts. If we consider the new loans which have since been granted, it may be assumed that the trade balance will have "an invisible import" of over 100 million gold kronen for interest. It is rumoured that the Government is going to set up a Control Board similar in character to that existing in Germany in former years, whose duty will be to examine the spending programmes of the local authorities with a view to checking unproductive investments. Lately the House of Rothschild in London has granted to the Hungarian counties a loan of about £2 millions, which will be spent principally on improving and making roads and building hospitals. Other loans for agricultural and industrial purposes are slowly but constantly flowing in to the country. The money market is easy. The financing of the harvest will cause no difficulty. Good firms may obtain credits at 9-10 per cent., and, considering that they paid last year

15 per cent. and more, this is evidence of satisfactory progress. There is not very much hope that the private rate of interest will be much lower in the near future, as the position of the neighbouring States has to be taken into account. In Austria and in Czechoslovakia the rate of interest is practically the same; in Yugoslavia and in Roumania much higher. The currency stabilisation is reflected in increasing savings.

The commercial policy of the country is directed towards arranging the most-favoured treatment with any friendly country; and it has been successful. The difficulties with Austria and Czechoslovakia have been partly removed, as to-day the new treaty with Austria, which is on the basis of the most-favoured clause, begins to operate. It is expected to have a very good effect on the wheat and meat exports, and Austrian textiles and other manufactured products will likewise benefit.

Relations with Czechoslovakia are very similar to Franco-German relations. For five years after the ratification of the Treaty of Trianon Czechoslovakia enjoyed the most-favoured treatment. After the expiration of that imposed treaty the most-favoured-nation clause lapsed, but, nevertheless, 25 per cent. of the foreign trade of Hungary continued to be with Czechoslovakia. It was, therefore, important for both countries to agree upon the most-favoured-nation clause. Unfortunately, Czechoslovakia has recently passed a new Customs tariff in which the wheat and flour duties are excessively high. It is obvious that for internal political reasons the Czechs were induced to protect their agriculture. But the new duties are too high for Hungarian, Roumanian, and Yugoslav flour, and it was feared that it would involve serious trade disturbances among the Succession States. Fortunately, a provisional agreement was made in Prag, which will last until the end of August, by which Hungary enjoys the minimum tariffs, and in return has granted preferential tariffs to Czechoslovakia on about 20 industrial articles. It is of paramount importance that the negotiations, which will continue, should reach a satisfactory conclusion. The natural outlet for Czech industrial products is Hungary, as a part of the former monarchy. Should Czechoslovakia not meet the Hungarian demands that tariffs on wheat and flour should be reduced, it is obvious that Hungary will retaliate upon Czech manufactures. The foreign trade balance showed an import surplus of 60.6 million gold kronen for the first five months of the year. The corresponding figure for last year is 58.5 millions.

Unemployment shows a small seasonal decline. There were 27,000 unemployed in June, 1926, as against 30,900 in March, 1926, and 32,500 at the end of 1925. The cost of living in recent months does not show much movement. The figures are the following:—

	100 in 1913.		
	Cost of Living of a Worker's Family.	Ditto Without Rent.	Wholesale Prices.
December 31, 1924	116	149	160
December 31, 1925	102	119	130
June 30, 1926	101	116	122

The cost of living is lowered by the artificially low rent, which amounts now to 50 per cent. of the pre-war rent, but will be gradually raised.

The Bourse has been active. Certain stocks, such as electricity and coal, are at their highest point of the year.

Books and Publications.

BOOKS RECEIVED.

German Economic Report, January to July, 1926. (Berlin) Bett, Symons and Co., 53 Mauerstrasse, W. 8.

A feature of this interesting summary is the clarity with which the main facts of the financial and trade position are set forth in summarised tables.

Census of the Irish Free State on April 18, 1926. Preliminary Report. (Dublin) Department of Industry and Commerce. Obtainable from Eason and Son, Limited, 40 Lower O'Connell street. 3d.

The Free State may be congratulated on the celerity with which these results are published, the Census having been taken only five months ago. As the previous Irish Census dates from 1911, this early report is welcome.

The Japan Year-Book, 1926. Sold by R. Arita, 6 Howley street, York road, Lambeth, S.E.1. Yen 15,000.

Containing detailed information and statistics on Japanese history, geography, finance, industry, social problems, &c.

Introduction to the American Official Sources for the Economic and Social History of the World War. By W. G. Leland and N. D. Mereness. (London) Oxford University Press, Warwick square, E.C. 4. \$5.25.

A work of the greatest possible value to the historian and economist. Contains a summary account of the records and official publications of the United States Federal Government, which constitute the primary sources for the history of its social and economic activities during the period of American participation.

The French Revolution. By N. H. Webster. (London) Constable and Co., Limited, 10-12 Orange street, W.C. 2. 7s 6d net.

This history has been written round the question, "How far was the Revolution a success from the people's point of view?" An Epilogue points the moral as regards present-day political programmes. The authoress is Conservative to the backbone.

Business Management. An Introduction to Business. By Percival White. (New York) Henry Holt and Co., One Park avenue building. \$4.00.

A serviceable text-book, though the background is entirely American.

Co-operative Ideals and Problems. By Anders Örne. Translated by J. Downie. (Manchester) The Co-operative Union, Limited, Holyoake House, Hanover street.

The author is one of the younger leaders of the Swedish co-operative movement, who held Ministerial office under the late M. Branting. His views on co-operation are thoroughly progressive, and the work forms a valuable addition to the limited volume of literature on the subject.

International Review of Agricultural Economics. New Series, Year IV., No. 2. April-June, 1926. (Rome) International Institute of Agriculture.

An article on "Agricultural Tenancies in England," by Sir Henry Rew, is of special interest. Within the compass of 65 pages the author has condensed a summary of the main developments since the Domesday Book, with, of course, more detailed treatment of present-day conditions.

A Practical Solution to Britain's Industrial Problem. By F. Harty and H. Valder. (London) c/o New Zealand Offices, 415 Strand. 1s.

The solution advocated is that of share-acquisition by the workers, on the lines of the New Zealand Empowering Act.

France and Her Capacity to Pay. By Hon. H. Berenger. (Paris) The Reference Service on International Affairs of the American Library in Paris, 10 Rue de l'Elysée.

Contains the Bérenger Memorandum presented to the War Debt Funding Commission, and the Report of the French Expert Committee—both in English.

Colonial Participation in Imperial Wars—Australasia. By C. D. Allin. (Bulletin of the Departments of History and Political and Economic Science in Queen's University, Kingston, Ontario, Canada. No. 52. August, 1926.)

An objective review which does not go farther than the South African War.

The Round Table. No. 64. September, 1926. (London) Macmillan and Co., Limited, St Martin's street, W.C. 2. 5s.

This number contains the usual thoughtful review of questions uppermost in the mind of Imperial students at the present moment. The British coal dispute is described, and other articles deal, *inter alia*, with the constitutional crisis in Canada, the flag issue in South Africa, and the Locarno Treaties as a factor in Imperial relations.

Kyoto University Economic Review. Vol. I. No. 1. July, 1926. (Tokyo) Maruzen and Co.

This new review, published under the auspices of the Department of Economics of the University, will commend itself to many English readers who, interested in the study of Japanese economic conditions, have hitherto found the material accessible to them of disappointingly small dimensions. The number includes 10 articles, the majority of which deal with aspects of Japanese life.

Incorporated Accountants' Students' Society of London. Lectures—1925. Published by the Society, 50 Gresham street, London, E.C. 3s 6d net.

The papers include "The Duties of an Executor," "Accountancy as an Aid to the Solution of Social Problems," "Profit-sharing Schemes—The Accountancy Aspect," &c.

Journal of the Parliaments of the Empire. Vol. VII. No. 3. July, 1926. (London) Empire Parliamentary Association, Westminster Hall, S.W.1. 10s net.

Containing discussions in the various Parliaments on such subjects as the Locarno Treaty, the composition of the Council of the League of Nations, inter-Allied Debts, &c.

International Crop Report and Agricultural Statistics.
August, 1926. (Rome) International Institute of Agriculture.

OFFICIAL PUBLICATIONS RECEIVED.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C. 2 :—

Employers' Liability Insurance: Effect of the Undertaking given by the Accident Offices Association for the purpose of limiting the charges to employers in respect of employers' liability insurance, relating to the year 1925. Cmd. 2715. 1d net.

British Sugar (Subsidy) Act, 1925: Statements, in the form of balance-sheets, transmitted to the Minister of Agriculture and Fisheries and the Board of Agriculture for Scotland by companies which manufactured, in Great Britain, in 1925-26, sugar or molasses from home-grown beet. Section 1. Factories. No. 133. 3d net.

Forty-fourth Annual Report of the Fishery Board for Scotland, being for the year 1925. Cmd. 2675. 2s net.

Report of the Bristol Advisory Committee for Juvenile Employment, 1925. 9d net.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
September 14. September 16.

THE ebb and flow this week of the coal discussions have affected Stock Exchange markets to a slight extent, but the outlook is regarded coolly, and many members take the view that when definite settlement is reached this may not bring about any prominent advance, although it is generally expected that there will be a little flurry of excitement at the outset. Business in most of the markets is rather better than is generally the case at this time of the year, although in the rubber market brokers and jobbers are looking back a little regretfully to the madness of last August, when everybody was working at top pressure, holidays were abandoned, and the only thing that mattered was to keep pace with the enormous demand of the public to buy rubber shares at continually rising prices.

Conversion 3½ per cent. stock went ex dividend on Thursday, and deduction of the interest of 1½ per cent. gross led to a slight stiffening in the ex dividend quotation. The War Loan declined in the face of dearer money. Victory bonds came into mild request, on the anticipation of reinvestment of money realised by the repayment of bonds drawn for redemption next week.

In the foreign market the strength of Peruvian Corporation stocks continues to be something of a feature, while French Government bonds move in lackadaisical fashion within narrow limits. The Mid-European bonds keep steady; Chinese are inclined to sag owing to renewed uneasiness in regard to the state of the country. Brazilians hold their prices.

The home railway market has failed to maintain the full extent of the rises scored ten days ago, public interest being very inert. Argentine rails are the popular stocks of the moment amongst railways, prices advancing substantially on the dividend expectations due to be solved in three weeks' time. Traffics are being disregarded for the time being.

Nitrate rails and nitrate producing shares are heavy.

The rubber market is a little better, there being a gentle increase in the volume of business, and tea shares are on the rise, a good many parcels of shares having been taken up at the settlement this week. The oil market developed firmer features. Textiles weakened on account of a reduction shown by the Calico Printers' Association in its profits. The dividend has dropped from 10 per cent. to 7½ per cent. This reacted upon Courtaulds and artificial silk descriptions. The tobacco market is good, and continues to attract lively public interest. Amongst iron and steel shares the tendency is erratic, leaning, however, to the better side for choice, the attraction here being that at the end of the coal strike the low-priced iron and steel shares will look to the speculative mind "cheap" purchases. Movements in banking shares are confined to unimportant fractions. The insurance and shipping markets are equally placid. Improvements have occurred in Hudsons Bays, Sudan Plantations, and a few other land issues.

Morris Motors preference, which were 1s 6d discount a fortnight ago, have recovered to their par value of 15s paid. Pressure to buy Brazilian Tractions hoisted the price sharply, while other shares in this group—Sidros, Mexico Tramways, and especially Barcelona Tractions—are better. There is nothing doing in gas or electricity shares. The cable construction group is distinctly hard, daily rises being recorded in the popular shares.

The Kaffir market lies at the mercy of Cape operations in a few speculative favourites, of which Sub Nigels continue to be the principal medium. Here the price fell sharply at one time, to recover, however, upon fresh support from the Cape. The gold list is dull, small declines predominating amongst the changes. De Beers and other diamond shares dropped in consequence of an apprehension lest the proclamation of the new diamond field shall lead to competition with the older-established concerns. Amongst Rhodesians, Sherwood Stars have been in the ascendant. Malayan Tin shares remain a popular and animated market. Prices have been moving up and down according to the mood of the moment as regulated by the price of the metal. There is a good deal of business doing here, the provinces as well as London being active participants in the upward movement. Mawchis gave way on news of floods, &c. West Africans and Cornish shares are out of favour. A little attention has been given to Russians, and there has been inquiry for copper shares.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows :—

Hellenic Electric Railways Company, Limited.

In order to comply with Stock Exchange regulations, particulars are advertised of the above company. There is an issued share capital of £418,000, divided into 418,000 shares of £1 each. The company has also issued £400,000 7 per cent. 20-year bonds, of which £200,000 are "A" bonds and £200,000 are "B" convertible bonds. These bonds are of the respective denominations of £100 and £500 each, there being 1,000 bonds of the former and 200 bonds of the latter denomination in each series. The capital, interest, and amortisation of the bonds are guaranteed by the National Bank of Greece. The bonds are redeemable in 1946 by an accumulative sinking fund, beginning January 1, 1927, and either by drawings or by purchases in the market, while the company may also exercise the right of redemption in the ten years preceding 1946. Up to 1932 the holder of "B" bonds may convert his bonds into the company's £1 bearer shares in the proportion of 91 shares for every £100 nominal value of bonds. Amortisation of the "B" bonds by drawings is not operative while this right attaches. The whole of the bonds, it is stated, have been placed privately. In issuing the above bonds the company has reserved the right to issue (a) so long as the conversion rights attach to the "B" convertible bonds further sterling bonds to a total nominal amount of £100,000, and in addition bonds in replacement of those converted to an equivalent nominal amount, and (b) at any time for the express purpose of further works additional sterling bonds provided that additional £1 shares of the company equal to twice the nominal amount of such issue are simultaneously subscribed for in cash. Any bonds

to be issued in pursuance of this right are to rank *pari passu* with this present issue. The company was incorporated under the laws of Greece on April 14, 1926. The principal objects for which the company is established are the exploitation of the Athens Piræus Railway and other power and transport undertakings. The consideration for the transfer of the whole of the assets and liabilities of the Athens Piræus Railway was 282,040 shares, credited as fully paid, the balance of the shares being issued for cash at par.

COMPANY MEETINGS, &c.

NATIONAL BANK OF GREECE.

STATE OF THE EXCHANGE MARKET.

DEVELOPMENT OF AGRICULTURE.

FINANCIAL AND ECONOMIC SITUATION.

BRITISH FINANCE AND NEW ELECTRIC COMPANIES.

BANK'S SOUND POLICY.

GOVERNORS INTERESTING REVIEW.

The ordinary general meeting of the shareholders of the National Bank of Greece was held on April 24th last at the head office of the bank, Athens.

The Governor (Mr. Alex. M. Diomède), in submitting the report for the year 1925, said: Gentlemen,—The past year did not share the normal financial character of its predecessor. A few disquieting signs in the midst of a period of intensive production indicated the need of following carefully the financial life of the country.

CIRCULATION.

No new issue of banknotes has taken place during the year 1925. Indeed, the circulation for the account of the bank was reduced by the extinction of Drs. 43,500,000, the corresponding sinking fund, according to law, having been paid from the State Budget.

The following is a complete statement of our circulation:—

Maximum Circulation.	On Dec. 31, 1925.	On Dec. 31, 1924.
1. For account of the Greek Government (Law B410' of 1898)	40,000,000	40,951,915
2. For the account of Bank	3,351,405,000	3,394,905,000
3. For the account of the Bank (according to Law IXMB' ..)	1,139,784,175	1,139,784,175
4. For the account of the Greek Government (D. Law of April 23, 1923)	1,016,100,560	716,423,140
Totals	5,547,289,735	5,292,064,230
Funds available for making up maximum circulation)	208,040,705.57	426,140,494
Balance in circulation	5,339,249,029.43	4,865,923,736
Of which—		
1. For the account of the Greek Government (Law B410' of 1898)	40,000,000	40,951,915.42
2. For the account of the Bank ..	3,143,364,294.43	2,968,764,506
3. Authorised by Law IXMB'	1,139,784,175	1,139,784,175
4. For the account of the Greek Government (Decree Law of April 23, 1923)	1,016,100,560	716,423,140
	5,339,249,029.43	4,865,923,736.42

Increase of real circulation in 1925, Drs.473,325,293.01.

It is only the portion of the circulation which comes under the Decree Law of April 23, 1923, that shows some differences as compared with last year. This circulation rose from Drs. 716,423,140 on December 31, 1924, having as cover £2,788,255 at an average rate of Drs. 256.94 per pound sterling, to Drs. 1,016,100,561, having as cover £3,182,525 at the rate of Drs. 319.25 per pound sterling, this being due to the increase at that time of the reserve of foreign exchange. This increase, however, soon disappeared, and the circulation returned to the same levels as in the past.

PURCHASE AND SALE OF EXCHANGE.

During the the year under review, the purchase and sale of exchange fell somewhat short of the movement of the previous year. In 1924 purchases amounted to £34,578,049, whereas in 1925 they totalled £32,869,096, a decrease of £1,708,953. This amount is here shown in detail:—

(a) 15 per cent. on the purchases of other banks (D. Law of April 23, 1923)	14,588,590
As compared with 1924	14,392,683
Or an increase for 1925	195,907
the daily average in 1925 reaching £49,961.	
(b) From the Refugee Loan	3,375,000
(c) From the market direct £14,905,506, of which £11,177,990 were purchased by our various branches.	

The whole state of the exchange market during the year was such that almost no direct purchases were made for the purpose of regulating the market. This, however, is particularly due to the fact that the withdrawal from the market of disposable exchange through the 15 per cent. was effected on a very large scale, particularly during the first five months, reaching the sum of £8,416,406. After such an automatic absorption, there was, of course, no reason to act directly.

But the sale of exchange in 1925 was also smaller, having amounted to £33,924,136, as against £34,255,869 sold in 1924, a decrease of £331,733.

Of the exchange sold, the following disposition was made:—

(a) For the account of the International Financial Commission	2,346,182
(b) For the account of the Public Debt not controlled by the International Financial Commission	412,624
(c) For various expenses and supplies of the Government	3,745,292
(d) For the needs of the market	27,420,038

as against £28,399,369 sold in 1924, or £979,331 less than in 1925.

TREND OF RATES.

Whilst during the first months of 1925 foreign exchange rates were maintained almost at the lowest figures of the previous year, from the months of May-June the trend of rates began to be clearly upward. The lowest rate during the year was in May—i.e., Drs. 256.50 per pound sterling and Drs. 42.89 per dollar, and the highest was that reached in December—i.e., 386 per pound sterling and 79.60 per dollar. The tendency towards higher rates was steadily kept up until the end of the year, and the amounts of exchange offered were absorbed by the market without any reaction. I think that the principal cause of this is to be sought in the fact that during the year there was an intensive demand for the commercial and other requirements of the country, and particularly for the payment of various industrial installations, there being no excessive offer to meet the demand. Indeed, our transactions with foreign countries show an important difference, at least in two principal points, influencing essentially the final result.

The remittances of emigrants, forming a capital element of our assets, were reduced to £2,223,000 in 1925, whilst in 1924 £3,653,724 reached the country through the National Bank alone, and the total of the remittances of emigrants, for which statistics may be had, fell to about £7,000,000 instead of the £9,000,000 imported during 1924. This difference of £2,000,000 of which the country was deprived could not fail to influence the market. Further, the unfavourable trade balance itself has been heavier, because the total importation in 1925 exceeded the exportation by £12,000,000 sterling, and this deficit was an important factor in turning the scales. In my opinion, these two tangible elements, which I mention merely as indications, were sufficiently strong to force up still higher the rates of foreign exchange.

BUSINESS CONDITIONS.

During the past year there was considerable movement of business. Under the impulse of more intensive production, which was particularly marked in 1924, the bank continued lending its support to the market, giving its attention chiefly to agriculture. The total of its loans shows an increase as compared with the past. The increase in productive branches of business at the close of the year amounts to 574 millions. But if one takes into consideration that 113 millions represent additional advances made to agriculturists' refugees, about 100 millions advances to urban refugees, and 190 millions to the real estate credit, it is only the balance that shows the real increase, which does not reach even 200 millions of drachmas, in spite of the reduction of the purchasing power of the drachma.

But beginning with the middle of the year, the tightness of the market, which became noticeable, dictated the retrenchment of business and, in addition to the restriction of new investments, also the prudent withdrawal of previous advances. Nevertheless, the bank has proceeded to this measure with the utmost circumspection, trying as much as possible to leave undisturbed business which was on the eve of completion at a moment when not only individual producers but even the whole national economy might be affected. This retrenchment would have shown itself more considerable in the figures if the management of the bank had not adopted the rule of applying almost no restriction on credits granted for agricultural production. Likewise the loans made to the urban refugees under guarantee of the State have remained untouched. Lastly, the figures shown were also influenced by the credits granted through the current office.

For the protection of its own available funds, and in order to restrain any rush for loans, the bank has necessarily proceeded to successive increase of the rates of interest. Thus the rate of interest on discounts rose from 7½ per cent. to 8½ per cent. on February 14th, and to 10 per cent. after September 9th. Proportionate increases were also applied to the other branches of the bank's business.

DISCOUNTS.

At the end of 1925 the capital invested in discounts amounted to Drs. 680,362,329.35, as compared with Drs. 479,932,337 at the end of 1924, or an increase of Drs. 201,329,992.35, equivalent to 42 per cent.

LOANS AND OPEN ACCOUNTS ON PLEDGE OF SECURITIES AND MERCHANDISE.

The capital employed for this purpose amounted to Drs. 344,589,817.55 at the end of 1925, as compared with Drs. 235,737,708.62 on December 31, 1924. The increase amounts to Drs. 108,852,108.93, or 46.17 per cent.

The bank has dealt in this branch of business with the utmost prudence, without being at all influenced in its estimate by the high prices, to which indiscriminate speculation forces the various securities of the Stock Exchange. Thus the margins demanded were always sufficient to secure an absolute guarantee and, at the same time, to have the actual value of each security clearly indicated.

The capital employed for this purpose on December 31, 1925, of Drs. 416,835,060.61, compared with the capital of Drs. 440,223,510.16 which was employed at the end of the year 1924, shows a small reduction of Drs. 23,388,449.55, equivalent to 5.3 per cent.

REAL ESTATE CREDIT.

The capital employed under this heading was increased during the past year by Drs. 133,633,540.88. At the end of 1924 it amounted to Drs. 407,138,279.20, and at the close of 1925 it rose to Drs. 540,771,820.08. The increase is equivalent to 32.80 per cent. This increase, of which 80 millions come from the head office of the bank and 54 millions from the branches in the provinces, is due to the granting of new loans and credits, though about 52 millions were collected from sinking fund payments. The bank was very chary in granting mortgage loans, because, on the one hand, it was obliged to grant loans with prudence, owing to the necessary concentration of its resources in general, and, on the other hand, because it was necessary to restrain the immense building tendency, which was threatening to precipitate a building crisis.

The rapid development of this branch and the anticipated large needs, which the real estate credit department is called upon to serve, have led the management of the bank to reinforce the special funds appropriated for the requirements of this branch, by issuing the 7 per cent. real-estate lottery loan of 200 millions. The over-subscription of this loan, in spite of the difficult time at which it was issued, induced the bank to continue this course of action by the issue of a second loan. However, besides finding the capital in our own country, to which it is advisable to proceed only with precaution, it was considered that it will add much to the strength of our economy if the bank could find capital abroad as well for the more generous supply of the real estate credit. We have every reason to believe that this will be realised, in which case the bank will acquire with greater ease the means for rendering assistance to the country, which is in absolute need of actual capital.

LOANS MADE TO LEGAL PERSONS.

The capital employed in the business under the heading at the end of the year presents an increase of Drs. 63,184,537.58, as compared with the foregoing year; this capital at the close of the year 1924 amounted to Drs. 217,427,303.09, and in 1925 it amounted to Drs. 280,611,840.67.

DEPOSITS.

The scarcity of capital noticeable since last year and its uninterrupted absorption by the great variety of enterprises in the country could not but have a direct influence on deposits as well, as is shown in the following table:—

	1923.	1924.	1925
Sight deposits	1,362,000,000 ...	1,592,000,000 ...	1,421,000,000
Savings bank deposits	221,000,000 ...	214,000,000 ...	257,000,000
At fixed dates deposits	944,000,000 ...	1,004,000,000 ...	956,000,000
	2,527,000,000 ...	2,810,000,000 ...	2,634,000,000

The above figures show a decrease of Drs. 177,000,000 during 1925, as compared with the year 1924.

It is only savings bank deposits that show an increase of Drs. 42,477,387, which is due to the increase of the limit allowed, from Drs. 5,000 to Drs. 25,000, and of the rate of interest from 4 to 5 per cent.

REPAYMENTS.

It is worthy of mention here that, in consequence of the Conventions, dated June 20 and July 28, 1925, between the Bank and the Greek Government, which were ratified by the Decree-Law of September 20, 1925, the deposits in actual gold, which were converted into deposits to be repaid in drachmas at par, by virtue of the Decree-Law of January 7, 1923, will be repaid by the Bank in exchange on London.

Their repayment will be effected through bonds of a loan of £1,800,000, which will be issued by the National Bank, for a period of 10 years, at 2 per cent., of a nominal value of £20 each, deposits or fractions of deposits under £20 to be repaid by sight drafts on London.

By virtue of the same Conventions the Government undertook the obligation to repay in gold or in exchange on London the gold loans of 40 millions and of five millions, concluded in the years 1915 and 1917 respectively, which were converted into loans of 40 millions and five millions in drachmas, by the Convention of January 30, 1923, between the Bank and the Government, which was ratified by the Decree-Law of March 3, 1923. This repayment will be effected within a term of 50 years and at an annual interest of 1½ per cent.

I consider it unnecessary to emphasise the financial importance of these Conventions. The loss of confidence, which was the inevitable consequence of that measure, which had dealt a severe blow to a variety of private interests, has now been countered, and we have every reason to hope that there will be no further obstacle to our receiving again deposits in foreign exchange and in gold on a larger scale.

AGRARIAN CREDIT.

The tendency toward the extension and development of agricultural production continued unabated during the year 1925, and was crowned by a satisfactory cereal harvest.

It may be safely affirmed that Greece has never known such an intensive land cultivation, the chief factor of which was the refugee population. Large areas of land were devoted for the first time to production, and a considerable activity and improvement was remarked in the methods of cultivation.

Parallel to this progress was the enlarged activity of the Bank's agrarian credit department, which suffered least of all from the pressure of the restrictions imposed by the tightness of the money market.

Thus, the new loans granted during the year 1925 (irrespective of those due at the end of 1924, which amounted to Drs. 462,155,810.855), totalled Drs. 942,459,760, as against Drs. 678,069,568 granted in the year 1924, an increase of Drs. 264,390,192, equivalent to 39 per cent.

In spite of the crisis, which was felt in the tobacco and currant production, and though the necessities of the agriculturist refugees were very pressing, still the results of the receipt may be considered as quite satisfactory.

It is necessary to emphasise here that this branch of the bank's business aims not merely at affording credit, but also at the education of the agricultural population, in order to create steady conditions of agrarian credit.

The regulations of the bank as regards this department became stricter in the course of the year, requiring better order in the accounts and internal organisation of the agricultural co-operative associations, and providing for a control over the allotment of the credits by the latter. These new measures have naturally caused some resentment, but the bank is determined to insist upon their application, being confident that in this manner it serves not only its own security, but at the same time promotes the spirit of association.

GRANTS TO AGRICULTURAL ASSOCIATIONS.

Thus, out of the total new agricultural loans of the year 1925 grants were made to native and refugee agricultural associations

amounting to Drs. 543,909,109, whereas in 1924 the new grants to agricultural associations amounted to Drs. 295,180,613 and in 1923 to Drs. 114,971,172; consequently these grants increased by Drs. 248,728,496, as compared with those of 1924, and by Drs. 428,937,937 as compared with those of 1923. In other words, the grants to agricultural associations in 1925 constitute about 58-100ths of the total, whereas in 1924 they constituted 43½ per cent., which plainly shows the policy of the bank of utilising these associations increasingly as organs of the lending of capital.

As regards the assistance rendered to the agriculturist refugees, we may mention that during the year under review Drs. 218,884,735 were granted, whereof Drs. 100,487,100 were through 412 such associations, whereas in 1924 only Drs. 105,729,834 were granted, of which hardly Drs. 4,000,000 were given through associations. Likewise, the refugee families, whom the bank has assisted by granting credits, reached the number of 75,196 in the year 1925, as against 44,099 during 1924.

Lastly, we note that the capital of Drs. 558,000,000 employed in agrarian credit at the close of 1925 was laid out in the following products:—

	Drachmas.
Tobacco	211,300,000
Currants	52,760,000
Vine-growing products	12,610,000
Olive oil	41,070,000
Animal products	21,900,000
Forest products	2,600,000
Cotton	6,410,000
Cereals and other products	209,350,000
Total	558,000,000

During the year under review an effort was made to secure a law regulating the rate of interest on agrarian credits according to up-to-date conditions, inasmuch as the interest fixed long ago under different presuppositions did not correspond any longer to the new conditions of the money market, and were becoming burdensome for the bank.

As regards the currant production, the year under review was marked by the establishment of the "Autonomous Currant Organisation," which must be commended not only as a system of independent and methodical handling of this valuable product, but also as an evolution in association. The currant growers now hold the destinies of their product in their own hands and are the responsible regulators, while the material administration has been entrusted to the National Bank.

GRANTS TO URBAN REFUGEES.

This branch of business continued during the year with the same intensity, financial assistance having been granted to all the refugee retailers, handicraftsmen, small manufacturers, and scientists. We were organised in groups and larger urban associations; we are of opinion that by such assistance we have contributed very materially to their financial rehabilitation. The capital employed under this heading amounted at the end of the year to Drs. 104,824,126.

From the data in hand it is shown that the results attained in this branch of business were very satisfactory for the bank.

FINANCIAL AND SOCIAL RESULTS.

But it is certain that the financial and social results were even more important, because, thanks to this financial assistance, the various classes of the working refugees have found the indispensable funds for making their labour productive, and also because in consideration of these grants, thousands of petty urban refugees have returned to a productive and normal life, transforming themselves from inert and passive elements of society into small independent economic organisms. Thus, they have escaped the danger of becoming victims to various subversive propagandas, the success of which would be the creation for our country of tragic social and political disturbances, if not a complete upheaval.

Furthermore, according to a special Convention concluded between the Greek Government and this bank, and ratified by Law 3292, we have granted loans under the Government's guarantee to refugees who are Greek citizens, against their real estate which was abandoned in Asia Minor.

This branch of business, differing from the one previously mentioned both in purpose and form, arose from the view that it would be fair and just for Greek citizens, whose property was seized by the Turkish Government since August, 1923, contrary to the clauses of the Treaty of Lausanne, to be assisted financially to a certain extent until the settlement of their case.

The loans granted to 614 beneficiaries up to December 31, 1925, amounted to Drs. 11,751,250. The sum fixed for this purpose by the aforesaid Convention amounts to 50 millions.

REAL ESTATE CONNECTED WITH THE EXCHANGE OF POPULATION

By the Convention of May 5, 1925, as modified by the supplementary Convention of October 3, 1925, between the Government and our bank, we took over the administration of the real estate abandoned in Greece by Mussulmans who had emigrated from the country. By these Conventions the State ceded to us all its rights over the urban and rural real estate (except such as had been ceded to the Refugees Settlement Commission under the terms of the Geneva Protocol) acquired in virtue of the Lausanne Agreement of January 30, 1923, concerning the exchange of populations, and of decision of June 21, 1924, of the Mixed Commission on said exchange.

The object of this cession was defined to be the clearing of this class of property, with a view to giving, out of the proceeds of its sale and out of the income thereof in the meantime, proper indemnities to the exchangeable refugees settled in Greece, against what was due them for the property abandoned by them in Turkey.

This class of refugee, consisting chiefly of an urban population, is quite numerous (estimated at 500,000 souls), and has up to the present undergone the greatest suffering. These people, who abandoned in Turkey properties of many thousands of millions in value, have been unable thus far to recover their normal place in the struggle for existence, owing to the lack of the necessary means, and naturally expect to procure these means from the value of the Mussulman properties, to which they are really entitled under the Lausanne Agreement.

The real estate thus concentrated in the hands of the bank offers a solid basis for the hope that the day is no longer distant when this class of refugee as well will receive proper relief, such as has already fallen to the lot of the agriculturist refugees through the Refugee Loan, as administered by the Settlement Commission.

PROPERTIES RECEIVED TO DATE.

We have received up to date the cession of 50,972 lots of real estate, whereof 39,519 are urban lots. The value of these properties, according to a conservative estimate, amounts to Drs. 2,963,377,588. Of these properties we have already let 24,095 for a total annual rental of Drs. 74,079,813. These figures eloquently justify the hopes we have expressed above; nor are they the final figures, which we shall be able to give you after the cession of such properties is completed.

In order to accelerate the indemnification of the refugees entitled thereto, it has recently been decided to issue bonds secured by the value of the aforesaid real estate. These bonds will be distributed amongst those entitled to indemnities, in lieu of cash advances upon their claims. Amongst other advantages, these bonds will serve in lieu of cash for the purchase of the real estate in question, whose systematic sale will commence shortly. By this means not only a speedy, but also a practical solution has really been found for the difficult problem of finding the resources required for the indemnification of the urban refugees.

FOUNDATION OF NEW COMPANIES.

I also have the pleasure to announce to the shareholders that the Syndicate of Studies and Enterprises, presided over by our bank, and the Power and Traction Finance Company, Limited, of London, has secured from the Greek Government the definitive concession of the privilege of producing and supplying electric current for lighting, industrial motor power, and traction, as well as of reorganising and exploiting the existing electric railways of Athens, Piræus and environs, and of working the Kephissia Railway by electric traction. This enterprise, the technical foundations whereof had already been laid after long and careful preparation, in which our bank took the leading part, is destined to serve, in the most advantageous manner, urgent needs of the two cities and their environs, both as capitals and as serious industrial centres. Now, after the concession of the aforesaid privilege and the complete understanding that has been arrived at between the concession-holders and the old companies, all the latter having become participants in the new enterprise, the concession-holders have founded five new limited liability companies and have made over to these their own rights and obligations under the terms of the concession. With these new companies the corresponding old companies have either been amalgamated or have merely contributed such of their plants as were indispensable for the purchase of the new companies under the concession.

A COMMUNITY OF INTERESTS.

The system which we have followed in the creation of these new companies is a novelty in Greece, though it has long been in application in countries that are financially well advanced. On the principle that enterprises for the production and supply of electric power, as well as of electric transportation, are inseparably bound up together, and therefore that the success of each depends upon the success of all, we set out to create a community of interests amongst these companies, which could be achieved only by the

bond of common capital. Thus we founded a parent company, "The Greek General Company," to which the "Syndicate of Studies and Enterprises" and the "Power and Traction Finance Company, Limited," contributed the entire shareholders' capital that was considered necessary for the enterprises included in the concession.

Of this capital, amounting to £750,000, the "Syndicate of Studies and Enterprises" furnished £400,000, and the "Power and Traction Finance Company, Limited," £350,000. The company thus founded undertook to create and consolidate financially the several companies, which should carry out the execution and exploitation of the works provided for in the concession, with the exception of the Athens-Piræus Railway Company, which, for technical reasons, was founded by the concession-holders directly, without the intermediary of the general company.

The latter, with the co-operation of the old companies, has founded three new companies: The Electric Power Company, the Electric Distribution Company, and the Electric Transport Company, and distributed its aforesaid shareholders' capital amongst these companies in such proportion as each required for the works to be carried out in Greece and for the purchase for cash of such of the installations or possessions of the old companies as were not made over to the new companies against shares.

In this manner the Greek General Company, by participating with its capital in all the enterprises, forms the financial link between them, and by participating in the management of these companies is enabled to guide them to the common good.

BRITISH FINANCIAL ASSISTANCE.

Nevertheless, it was evident that the new share capital, which the founders contributed to the companies thus founded, was not sufficient for their purposes. Wherefore our efforts were directed, from the very start, toward securing a large foreign loan. For this purpose we turned, as usual, to the British money market, which showed itself willing to help these new enterprises. And as the proceeds of this loan were destined, owing to the nature of the enterprises, to be utilised entirely for the purchase abroad of machinery, supplies, &c., it was found possible to combine the interests of these enterprises with the British Government's policy, as embodied in the Trades Facilities Act. Thus we succeeded in signing an agreement with the British Treasury, whereby the latter guarantees to the lenders the repayment of the capital (£2,000,000) and interest of the loan in question. The importance of this guarantee is obvious. Thanks to it, the loan, which will be given by the Prudential Assurance Company, will be issued at the price of 97½ and 97 per cent., with interest at 5 per cent., so that the real interest will not exceed 5½ per cent., whereas under the present conditions of the money market the real interest of a safe loan, guaranteed by a bank and destined for abroad, slightly exceeds 8 per cent. The proceeds of the above loan, which will go to the Greek General Company for distribution amongst the dependent companies, in proportion to their respective needs, will be utilised for the purchase in England of the necessary machinery, supplies, &c.

This enterprise, which has been exhaustively studied from both the technical and financial standpoint, will contribute greatly to the progress of the cities of Athens and Piræus and the development of their industries. And the National Bank may rejoice in the consciousness that without its intervention and initiative these results could not have been attained.

DEFENCE OF THE BANK'S POLICY.

There are, to be sure, some who question the soundness of the bank's policy in this matter. Some even criticise severely what they call the bank's active meddling in enterprises foreign to its own sphere of business. They claim that the National Bank, being the only bank of issue in the country, should confine itself to such banking operations as are related to its privilege of issue, leaving all other branches of banking business to the initiative of other banks.

In theory, of course, there can be no doubt that this view is the more correct. And it would have been a fortunate circumstance if the banking and financial organisation of our country were so far advanced as to allow the application of the above principle of division of business to the question in hand. Yet the National Bank's charter expressly states that the bank's aims include, besides the issue of bank-notes, participation in companies; and there is an unbroken tradition, according to which the National Bank's intervention and participation in the formation of companies, especially of those of a general interest, has always been considered both expedient and beneficial to the country, and has really proved such. Especially in the case of works of public utility, undeniably destined to promote the people's interests, yet requiring a large outlay of capital, the National Bank's initiative and the use of its credit may be considered an indispensable

condition both for the realisation of the projects and for the carrying out of the works to the best advantage.

But even more especially in the case of extensive works, which can be carried out only with the help of foreign capital, the National Bank's active intervention secures not only the participation of Greek capital under terms of equality, but also the better safeguarding of native interests. In such works, moreover, the National Bank does not act for itself alone, but considers it a duty to invite the participation of all other banks, if possible, in order that the financial forces of the country may present a wider and stronger front. Thus, in the case in hand, the honour of the success of the two largest enterprises—that of the electric power and that of the drainage works of Macedonia—is due to the co-operation of the more important Greek banks, which worked for the common aim with real unanimity and a deep realisation of the common purpose.

Until a banking organisation is formed in Greece, capable of studying and founding enterprises, especially of public utility, the National Bank will continue to follow its policy, as outlined above, in the conviction that, by so doing, it best serves the country's interests.

"A PERIOD OF STRESS."

We are passing through a period of stress. The first symptoms of trouble began to be felt last year. The causes must be sought for in the transitional character of our day, which impels native enterprises to excessive expansion and exposes them to speculative exploitation. But another factor, which exerted no small influence, was the needs of the Government, which presented themselves all at once and immobilised a considerable portion of the bank's assets. The country, finding itself in a period of intensive economic activity, was seized with the ambition of overleaping the intermediate stages of evolution and of creating within a brief space what could be established only slowly and in due course of time. We touched upon this question in our last annual report, and pointed out that in the various enterprises, to which Greeks were impelled by a spirit of excessive optimism, it frequently happened that the available resources were not properly weighed, while ephemeral factors were considered as an adequate foundation. The credit element was given undue importance, and the perspective of its use was thought to be a sure way of finding capital. Yet there is nothing more erroneous than this narrow point of view. Repeated observation has shown that unless timely retrenchment is resorted to disastrous consequences may be expected.

It must not be forgotten that the amount of real capital available in the country at any given period is limited, and that the only source of this capital is the people's savings—that is to say, the country's annual surplus, the economy left over from the consumption necessary for the country's subsistence. Any utilisation of internal capital beyond this limit means debit, creates an uncovered obligation, and constitutes a draft upon the future, whose production is uncertain, especially in times of stress, when the process of saving-up becomes slower and very often is diverted to other objects by reason of distrust.

INSUFFICIENT INTERNAL CAPITAL.

Nevertheless, during the year 1925 the above described tendency continued with increased force, and more native capital was called for than was available. A plain enumeration of figures, by no means covering the whole subject, will suffice to give a vivid picture of this situation. Only the companies previously existing increase their capital in drachmas by 585 millions. For the foundation of new companies capital in cash was produced to a total of Drs. 282,000,000. Mortgage loans of an aggregate of about 180 millions were contracted, chiefly for the construction of houses, the immediate cost of which represents an average outlay eight times as great. Over 200 millions was absorbed by the issue of bond loans. I omit the investments in foreign exchange, which were also very considerable. I do not believe that one can reasonably contend that the country's savings from its productive wealth during the above period were such as to cover such an extensive call for capital. Hence we had a rise in the rates of interest, and the failure of prices to maintain the levels to which they had been pushed by groundless optimism and unscrupulous speculation.

The distress thus created was further accentuated by the increasing reduction of the country's reserves of foreign exchange and the consequent restriction of circulation. In other words, the country's foreign exchange reserve was absorbed by various necessities and consumed by the continuously increasing production; yet a certain portion of this exchange left the country owing to motives of distrust. And, lastly, in the call for capital no small influence was exerted by the Government's competition. The Government's many necessities of late years led to constant reinforcements of the State budget by capital drawn from the country alone. And for the last three years the Government has proceeded to no technical increase of the revenue of the public Treasury by a

new issue of banknotes. But all the State expenses, ordinary and extraordinary, could not easily be covered by the ordinary revenues from taxation. And the extraordinary expenses were necessarily heavy, because of extraordinary events and conditions, and because instability of the national currency created constant deficits. All this brought about a considerable increase in the public Treasury's floating debt, which immobilised no little proportion of the Bank's available assets.

FLOATING DEBT.

This situation imposed the necessity of immediate measures both by the Government and by the Bank.

The floating public debt, which weighed upon the Bank and hampered its movements, is composed (1) of various older debts, which had been contracted from time to time as provisioned and had never until recently been collected, amounting in all to Drs. 281,736,161; (2) of the debit balance of the accounts of the Food Ministry, amounting to Drs. 421,510,200; (3) of Treasury bills paid by the Bank, amounting to Drs. 611,954,907.

For the speedy repayment of these sums it was of course impossible to look to the ordinary resources of the Budget. But the then Minister of Finance, Mr Gotsis, took the happy initiative of proposing to create a special source of revenue exclusively for the gradual redemption of the floating debt, by increasing to 20 per cent. the existing 10 per cent. surtax on all taxes and dues. The proceeds of this surtax, which are deposited directly in the National Bank, are used, after covering the service of the forced loan, for the automatic repayment of the various items of the floating debt. Thus, out of these proceeds deposited in the National Bank and amounting up to April 15, 1926, to Drs. 500,885,249, a total of Drs. 281,736,161 was paid off the floating debt during the year 1925, and up to this day, the remainder having been retained for the service of the forced loan and for the settlement of other Government obligations.

Yet it soon became evident that this measure, though very beneficial, was inadequate for a timely liquidation of the situation and for bringing more permanent relief to the strain on the bank's resources.

TREASURY BILLS.

The most dangerous menace to our financial affairs was that arising out of the short-term Treasury bills, guaranteed by the National Bank. From 1918 to 1925 Treasury bills had been issued to a total value of Drs. 1,933,207,000. In these bills, especially during the years of commercial and industrial stagnation, most of the country's annual savings were invested. To this handy and confidence-inspiring investment the unemployed capital, especially of the provinces, had recourse. Even the banks, not finding a better investment in those years for the abundant money in their coffers, purchased especially three-month Treasury bills. Thus many hundred millions of drachmas' worth of Treasury bills represented in reality the cash of the Greek banks.

Beginning, however, with the year 1924, and still more so during 1925, the increasing expansion in all branches of production demanded, incessantly, more capital, and commenced to absorb whatever capital became available, as well as that placed in provisional investments—that is to say, such liquid capital as was invested temporarily either in the form of bank deposits or in Treasury bills, finding now their final destination, were withdrawn and invested in industrial plants, agricultural enterprises, or building operations.

FINANCIAL STRAIN.

The result was that bank deposits came to a standstill, and Treasury bills began to decline. New purchases on renewals of Treasury bills were not sufficient to offset the repayments. Especially, the banks hastened to cash their Treasury bills as they fell due. This forced the National Bank, as guarantor, to pay gradually out of its own available funds Drs. 611,954,907; for the bank did not issue new banknotes, although it possessed the right to do so, nor did the Government refund the sums thus paid, because it lacked the necessary funds.

It was inevitable that the investment of such a large sum in cash in industrial plants, building or remote agricultural operations, added to other forms of immobilisation of funds, should gradually bring about a shortage, which made itself severely felt in the money market. And the drastic restriction of credits by all the banks, which had commenced several months before, only added to the financial strain. The latter, if left to itself and allowed to continue, threatened to deal a severe blow to the country, just beginning to recover from the effects of ten years of war, and that at the moment of the country's greatest economic effort. Moreover (and this was the most ominous point), the Treasury bills henceforth falling due would continue to pour in in great numbers for payment, but there would no longer be any available funds either

at the National Bank or at the Public Treasury for meeting them in cash.

PREVENTIVE MEASURES.

To meet this dangerous situation, which was in no wise due to loss of confidence in the Treasury bills (because I must emphasise the fact that new bills were constantly being purchased in large numbers), but to the rapid expansion of production and the abrupt increase of the country's population by over one and a-half million inhabitants, all seeking employment and working capital,* it was necessary to take preventive measures without delay. And this was the more imperative in that the threatened crisis was not due originally to bare speculation, in which case the crisis might have served to purge an unhealthy situation.

The measures adopted aimed at the complete settlement of the Government floating debt:—

(1) By procuring the necessary funds for the immediate repayment to the bank of the total sum disbursed by it to meet Treasury bills due or discounted—viz., Drs. 666,789,007—and for securing the payment of such bills as would hereafter be falling due.

(2) By the definitive regulation of all short-term Treasury bills and the cessation of further issues of such.

The Forced Loan (1926) by reducing the value of the banknotes in circulation (of over Drs. 25 face value) by one-fourth, this one-fourth being converted into bonds of a 6 per cent. loan, repayable in 20 years by annual drawings, yielded an approximate sum of Drs. 1,173,000,000, which was utilised largely for refunding to the bank what was owing to it by the State for paid or discounted Treasury bills (Drs. 661,789,007) and for another provisional obligation of Drs. 50,000,000. The total sum refunded to the National Bank amounted to Drs. 711,789,007.

By these payments the bank's assets were relieved of a considerable burden, and we were in a better position to come to a measured relief of the market.

LIQUIDATION OF THE FLOATING DEBT.

But this transaction would have had but transient results, and would have had the form of a financial measure of doubtful value, if, at the same time, forethought had not been taken to close once for all the source of the trouble. To this end the following measures were taken:—

The bills falling due for payment during the current year and up to April 1, 1927, amount approximately to Drs. 1,272,029,800 (the remaining Drs. 96,180,000 are five and ten-year bills, which will continue to be valid according to their original terms of issue). One half of this amount has been converted into 8 per cent. bonds, payable in ten annual instalments; the other half are being paid off in cash as they fall due.

Thus after 14 months there will be no short-term Treasury bills in circulation to the debit of the public Treasury.

The ready cash required for these payments is covered by the aforesaid sur-tax of 20 per cent., which is already in force, and is destined for the very purpose of providing sufficient liquid money out of the ordinary Budget revenues for the extinction of the floating debt. Up to April 15, 1926, of the Treasury bills outstanding for payment in cash (value Drs. 636,014,900) amounts to the value of Drs. 113,000,000 were thus paid off out of the yield of the 20 per cent. sur-tax. And as this yield amounts to Drs. 65,000,000 per month, the regular extinction of the remainder within the allotted time is assured.

ADVANTAGES OF METHODS ADOPTED.

The conversion of the other half of the Treasury bills into ten-year 8 per cent. bonds is considered by some as an arbitrary measure, undermining public confidence, and therefore to be avoided at any cost.

I do not share this view, but claim that the method adopted was the best calculated to preserve our credit and to avert financial dangers, present or future. A liquidation of the floating debt was the only procedure that could relieve the public finances of a crushing burden, which indirectly threatened to ruin private finance as well. But this liquidation—it must be emphasised—had to be accomplished within the limits of the existing circulation—that is, the act of liquidation and regulation should not bring about a fresh issue, which would have subverted every advantage aimed at, and would assuredly have given a further shock to the country's financial equilibrium, already badly shaken.

To attain this object, however, by the Budget resources which could be utilised for the purpose, was not immediately possible for the entire amount of the floating debt; nor has the abrupt paying off of so large a debt by new liquid funds, not proceeding

* The Refugee Loan is being used chiefly for the settlement of the agriculturist refugees upon the land, and not for the needs of the urban refugees.

from a foreign loan, ever been considered reasonable or free from the danger of a severe repercussion. On all occasions conversion has been considered the fitter and milder method. The renewal of the debt upon a new basis, by spacing off the dates of expiration without sacrificing the creditors' rights, is financially the sounder solution, especially when time of repayment is short and when a special recurring revenue, administered independently, assures a regular service.

Of course, the new form of this ten-year loan, of a nature entirely different from the previous short-term debt, entailed also a change in the bank's relations thereto. The Treasury bills bore the bank's guarantee and the right of discount under certain conditions; but also the original convention with the Government provided, as a remoter security for the bank's advances, the right of the bank to cover its disbursements by a corresponding issue of banknotes. The Government revoked this right, because it was considered dangerous to have recourse to it. But the logical consequence of this fundamental modification is the release of the bank from its original obligation, which in itself does not fit in to the totally different type of the new loan, and which release is acknowledged by the Government in the Decree Law of January 23, 1926, on the conversion of Treasury bills.

A dispassionate judge of the above measures cannot but admit both their timely character and their slow but sure efficacy.

CAPITAL LIBERATED FOR PRODUCTIVE PURPOSES.

And the wider economic significance of the immediate extinction of Drs. 993,525,168 of the State's floating debt is that this capital, which had been absorbed and immobilised by the State's needs (in other words, had become unavailable for the needs of the country's production), has returned to its proper destination, and its power is once more at the disposal of the public. And, furthermore, that this repayment has been consummated partly through the yield of normal taxation and partly through loan combinations—that is to say, through money lying in the country. There has been no recourse to a fresh issue of paper money, which would only in a technical sense have increased our means of circulation, without affording any real relief to the country's economic embarrassment.

This embarrassment, from which we are suffering and which I refuse to call a crisis, because it has none of the typical features of real crises, will assuredly not affect the country's economic progress

to any great extent. We must not forget that our national economy is now passing through a stage of real transformation with a real hyper-intensity of productive activity; that an entire new population has been thrown upon the country, working and producing, but also consuming; but that careful observation has shown that every perceptible change in a country's economy, even when that change is for the better, inevitably creates confusion in existing conditions and disturbs economic equilibrium. But these phenomena are not vital.

Yet all this will be of no advantage, and the assistance of the bank will prove useless unless we determine to place more faith in our own strength—unless we do not desist from creating causes of mistrust and from disseminating pessimism round about us—a pessimism which spells defamation of our national currency, the flight of capital out of the country, and its investment in foreign securities.

ECONOMIC SITUATION AND PROSPECTS.

In the midst of the general uncertainty which characterises the finances of nearly all countries, the instability of most currencies, the weakness of the prices of the various Government stocks, I think it is no exaggeration to say that our credit stands on a fairly good level, and (what is more important) that this is the opinion of foreign markets. This favourable disposition we must value highly, because to it we owe considerable capital, which has already come from abroad to fertilise our native industry, and from it we hope to obtain further the capital of which the country stands in need. The strong tendency toward a wider economic life, which is an excellent sign of the health and vitality of our race, cannot be met by our own unaided resources, which are utterly inadequate. We have reached that stage of development at which the people's work and enterprising spirit call for the co-operation of foreign capital, which will be used to assist production, not to be consumed in sterile expenditure, and which will thus be of real and permanent aid to our national economy. And we have every reason to believe that in the foreign markets there is both readiness and esteem for our country's material strength, and confidence in its economic future.

THE AMALGAMATED PRESS (1922), LIMITED.

SATISFACTORY RESULTS OF DIFFICULT YEAR.

"ADVERTISING THE LIFE BLOOD OF INDUSTRY."

BURDEN OF TAXATION.

The ordinary general meeting of the Amalgamated Press (1922), Limited, was held, on the 27th instant, at the Memorial Hall, Farringdon street, London, Sir George A. Sutton, Bt. (chairman of the company), presiding.

The secretary (Mr J. R. Sumpter, A.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I assume the report and accounts will, as usual, be taken as read.

We meet to-day under the shadow of the gravest industrial depression this country has experienced for generations, with unemployment returns higher than ever and businesses closing down daily.

The report which we have the pleasure to place before you to-day includes the period of the general strike, during which period the business of the company was at a complete standstill for a fortnight. Owing, however, to efficient organisation and hard work, it was possible to make up for one of the lost weeks. Otherwise the effect on the business would have been more serious.

The report does not, of course, reflect in any way the calamitous coal strike, which has continued ever since the general strike. The damage already inflicted we can partly estimate, but who can foretell the ultimate evil consequences upon our national trade of an industrial upheaval of this nature? Never in the history of this business have we had to face conditions so adverse as those of the last four months. These conditions are known to you all. Take the coal strike alone. It is obvious that with over a million miners out of work in districts where our publications usually have huge sales, the loss in revenue to us must be considerable. The miners are great readers; they buy educational publications on a considerable scale, and I am pleased to testify that we seldom make bad debts among them. So we have a special reason for hoping that they will all soon be back at work again.

Having in mind, then, the adverse conditions mentioned, there is reason for satisfaction with the report we are able to place before you.

The profits, as you will have seen, amount to £542,238 18s 10d. INVESTMENTS.

First a word as to your investments, which I dealt with last year. Owing to the company's large paper requirements, your directors keep in close touch with the paper-making industry. Leading authorities in this industry view with concern the depletion of the world's pulpwood reserves brought about by the present huge demand for newsprint and the large increase in the production of artificial silk. On this account a paper-making undertaking that owns large timber limits from which to draw its pulpwood seemed to your directors to offer a promising field for investment.

We, therefore, subscribed for 10,000 7 per cent. preference shares of \$100 each in the Anglo-Canadian Pulp and Paper Mills, Limited, a new company formed with Lord Rothermere as its president. Ten dollars per share have been paid up and the balance of \$90.00 per share is payable by instalments during 1927. The company has ample funds to provide for these payments. In consideration of subscribing for these preference shares we shall receive a bonus of 4,000 ordinary shares.

The Anglo-Canadian Pulp and Paper Company has acquired vast timber limits on the north shore of the St. Lawrence River. These limits cover an area of approximately 2,237 square miles, and the quantity of pulpwood on them is estimated to be sufficient to produce five million tons of paper, which is equivalent to forty-five years' production of the proposed paper mill.

The preference shares will give a satisfactory yield, and the holding of the ordinary shares will ensure that we participate in the prosperity of the new company.

NEW PUBLICATIONS.

Despite the troubles to which I have referred, there are several noteworthy points in connection with the year's work that illustrate the marvellous vitality of our great organisation.

We have launched many new publications—notably "Music Masterpieces," a superb work issued in conjunction with Mr William Allen, chairman of the well-known firm of music publishers, Messrs Ascherberg, Hopwood, and Crew, Limited. This publication is one of our biggest successes, despite the fact that at a critical stage it had to encounter the setback of the general strike.

We have produced also three high-class literary and pictorial works in "The World's Great Books," "The Children's Colour Book of Lands and Peoples," and "Wonderful London."

The circulations of many of our older publications are in excess of last year's figures. Our old friend "Answers," now in its thirty-ninth year, still maintains its position as the leader of popular periodicals, and registers a very gratifying increase of circulation on the same period last year.

The editor of "Answers," always on the look-out for novel features, has just completed arrangements with Mr Edgar Wallace, author of that strikingly successful play "The Ringer," to tell the story of the play in serial form. "The Ringer" begins in "Answers" early in October, and advertisers may be certain of a largely increased circulation on account of this unique fiction feature.

There has also been very considerable expansion in your magazines and periodicals that sell to women. "Home Chat" has reached a higher figure, in company with "Home Companion" and "Woman's Pictorial." "Woman's Weekly" continues to add to its already vast assembly of readers, and has now the largest circulation of any woman's magazine or periodical published in this country.

Your fashion papers, too, show considerable improvement; all are higher in circulation than last year, particularly "Mab's Fashions," which is now unquestionably the leading fashion journal. And we have added "Mab's Children's Fashions" and "Modern Weekly" to our already long list of publications that cater for the feminine market.

These facts are very satisfactory—particularly to advertisers—as showing the enormous hold our publications have in the

country, and they are especially satisfactory having regard to the buffeting they have had to face the last few months.

LIFE OF THE QUEEN.

Another interesting item is the fact that we have purchased the Life-Story of the Queen. It gives me very great pleasure to announce that we have secured a contribution of world-wide interest—"The Life-Story of Queen Mary," by Kathleen Woodward. The authoress was given special facilities for obtaining the material, which gives this intimate study a peculiar distinction and importance as an authentic record of the remarkable woman who has shared the highest responsibilities of the State through this most sensational era. We claim, with justifiable pride, that we are presenting a unique and historical document. We have decided to publish this work in serial form in "Woman's Pictorial" this autumn. Unquestionably, it will greatly enhance the prestige and popularity of this valuable property.

MR RUDYARD KIPLING'S NEW STORIES.

Again, the editor of the "London" Magazine has secured at great expense Mr Rudyard Kipling's new short stories. This is a literary event of the first importance, and further evidence of our unabated editorial alertness.

ADVERTISING THE LIFE-BLOOD OF INDUSTRY.

I have now to draw your attention to what constitutes, I think, a very noteworthy and gratifying achievement. Once again, despite the adverse conditions to which I have already referred, the revenue from advertisements in your publications has beaten all previous records. This fact speaks for itself. There is no more striking testimony to the very high esteem in which your magazines and periodicals are held by advertisers and their agents. Taken together, the Amalgamated Press publications constitute a selling organisation—a stupendous publicity machine—unrivalled, I believe, in the whole world. Their "hold" upon all classes of the public in all parts of the country is now unshakeable, and the ever-increasing demand for advertisement space is but the natural outcome of the wide and profitable business which they have brought—and will continue to bring—to the great advertisers of this country.

Though every year the advertising horizon expands, we have, I believe, done little more yet than touch the fringe of possibilities; for realisation grows steadily among manufacturers and commercial firms that advertising is the very life-blood of industrial prosperity. In the wide expansion of advertising which must yet come about, it is quite certain that a great group of publications such as yours, penetrating into every hamlet of the kingdom, and deeply rooted in the affections of readers, is destined to play an ever larger part.

NEW DIRECTORS.

During the year we have elected two new directors to the board—Mr A. R. Linforth and Mr S. J. Brown.

Mr A. R. Linforth has been in the service of the firm for some 25 years, and has thoroughly earned his directorship, and if he is anything like as successful in the conduct of the affairs of this company as his brother, my colleague the vice-chairman, the company can congratulate itself on an acquisition to the board.

The other director, though he has not been in the service of the firm for many years, has shown great qualification for the post, and his election is a testimony to the fact that the board is always ready to recognise merit, even aside from length of service.

A SELF-CONTAINED BUSINESS.

It is well to point out again that this company does not derive all its profits from the sale of periodicals and magazines. It is the only periodical business in this country that is self-contained, in that it controls its own timber limits in Canada, its own paper mills, and has also its share interest in the largest printing ink works in this country, in addition to our vast printing and publishing factories. These advantages place us in a fortunate and unique position.

As you know, the Imperial Paper Mills, in which you own the controlling interest, are the second largest mills in the country.

AUTUMN ACTIVITIES.

And now, with regard to our activities for the autumn, I must not be too definite. We had prepared an ambitious programme, but it would be futile to risk the flotation of many new ideas on an impoverished market, since a concern of this kind is naturally wrapped up with the prosperity of the country. The conditions prevailing to-day—with the country strewn with the wreckage of industrial businesses—plus the ever-increasing burden of heavy taxation, which at present shows no sign of diminishing, all result in scarcity of money.

BURDENS OF TAXATION.

If, as I see it is suggested, there is to be still more taxation, the effect upon businesses already staggering under the burden of taxation and continual strikes must obviously be of a serious nature. There is to be considered, in addition, the killing of

initiative and enterprise and the flight of capital to other countries. It would be difficult, therefore, and foolish to make any sort of promise in regard to the future. Shareholders know as much about the situation and the difficulties we have to face as the directors do, but when we get to the end of these disastrous strikes the country should be in for a period of considerable prosperity, and if, as I believe, new ideas and initiative count more than ever to-day, the shareholders can rely upon the board taking every opportunity of developing the business on ambitious, up-to-date, and comprehensive lines.

THE RESOLUTION.

I move: "That the report of the directors produced, together with the annexed statement of the company's accounts at June 30, 1926, be received, approved, and adopted, and that a final dividend for the year of 2s per share, less income-tax at 4s in the £, be now declared upon the ordinary shares."

I will ask Mr A. E. Linforth (vice-chairman) to second the resolution.

Mr Arthur E. Linforth (vice-chairman): Gentlemen, I beg to second that resolution.

The Chairman: Have shareholders any questions to ask?

SHAREHOLDER'S QUESTION.

Mr J. W. Cooper: Mr Chairman, I should just like to ask what was the market value on June 30th of the investments at cost, which appear in the balance-sheet at £1,422,114, and also the approximate amount of dividends on them. After perusing the balance-sheet and hearing your interesting speech, I think it will be the unanimous opinion of the shareholders that the board, as well as the secretary and staff, have well merited their sincere thanks and congratulations on the splendid results as disclosed in the accounts. Although the outlook is somewhat obscure, I have no doubt that while we have such a good board you will be able to withstand whatever buffetings the abnormally adverse conditions may give us and still come up smiling. I have no doubt that the year we have now entered upon will be quite as satisfactory as the one now under review.

CHAIRMAN'S REPLY.

The Chairman: In reply to the question put by Mr Cooper I may say that the investments referred to are very largely in our subsidiary companies, and there is really no market quotation for them. They are companies controlled by the Amalgamated Press, such as "Fashions for All," and the average yield from them is about 7 per cent. I should mention that this item of investments includes £400,000 British Government securities, at cost price, which is under the present market value.

TRIBUTE TO BOARD.

Mr William Haley: Mr Chairman, I have no questions to ask, but one feels tempted almost to put a leading question: How have the board achieved these excellent results, submitted in facts by the balance-sheet and confirmed by your convincing speech? The answer can best be supplied by the shareholders themselves, especially some who may have more intimate contact with the actual working of the business—that such results can only be brought about by the conspicuously able management and matured experience of yourself, Sir George, your good colleague, Mr Arthur Linforth, and all your co-directors. The shareholders should have particularly good cause to be thankful that, despite almost unexampled difficulties in commerce and politics during the past year, our dividends are fully maintained, the profits are actually increased, the reserve fund has received a substantial addition, and the shareholders' interests generally have been consolidated. I feel sure, sir, that many chairmen of commercial corporations envy you your duty to-day in presenting such a report in the light of all the difficulties referred to, and we as shareholders should be lacking in common gratitude if we did not express our appreciation in no formal manner, but very sincerely. The Amalgamated Press, Limited, has a comparatively short but a wonderful record of success, and the best traditions of that period of unbroken success are, we know, being carefully safeguarded by the present directorate. Mr A. R. Linforth and Mr S. James Brown are to be heartily congratulated on their appointment as directors, and we wish them many years of enjoyment of their new dignities. You, sir, have referred to extracts from the report, of which I should like to repeat two: "It is impossible for a large manufacturing business to continue to make progress under such difficult conditions, and it is hoped that the much-needed industrial peace will not be long delayed. In the circumstances, the directors consider that the balance-sheet is a very satisfactory one." I should like to be the mouth-piece of this meeting in assuring you that the shareholders heartily agree with this. We warmly congratulate you on the report, and desire to offer you, Mr Chairman, and your colleagues every evidence of our continued confidence.

Mr Charles Steele: Sir George, I should like to support the remarks which have been made by the last speaker, and I content myself with doing so quite briefly because the facts which surround

us here to-day are, I am sure, sufficiently eloquent. After all, speaking as a very old shareholder in this company and its predecessors, I think I may say that what we have heard from the board to-day is very little more than we expected.

The resolution for the adoption of the report and accounts and the payment of the dividend was unanimously carried.

On the proposition of Mr H. Le Cren Clarke, seconded by Mr Charles Steele, the auditors (Messrs Turquand, Youngs and Co. and Messrs E. Layton, Bennett, Sons, and Co.) were reappointed.

The Chairman: That, gentlemen, concludes the business of the meeting. With regard to the kind remarks of the two shareholders who spoke, I can only hope that the conditions during the coming year will give the board a better chance.

The proceedings then terminated.

UNION COLD STORAGE COMPANY, LIMITED. GOOD RESULTS AND PROSPECTS.

The twenty-ninth ordinary general meeting of the Union Cold Storage Company, Limited, was held, on the 24th instant, at Winchester House, London, Mr Roger P. Sing presiding.

The Chairman, in moving the adoption of the report and accounts, said:—It is gratifying to me to be able to look back and see that for the past 25 years we have not only maintained a 10 per cent. dividend on the ordinary shares, but, with one exception, the earnings of each of those years has been a record for our company as compared with any previous year in our history. The total of the debenture stock redeemed and specific mortgages repaid to date together amount to the considerable total of £1,310,756. This materially strengthens the position of the company. The reserve funds, built up during past years and now exceeding £3,000,000, are also a feature of strength to which I direct your special attention. Goodwill, although it is in fact of very great value, was written off in our balance-sheet some years ago. Of all the multiple shop companies in Great Britain we have by far the greatest number of shops. In fact, we have become the world's largest retailers of meat. A very large proportion of the millions of cattle, sheep, lambs and other live stock which we purchase from the growers in the producing countries across the seas we distribute to well over 1,000,000 families per week over the counters of our own retail shops located in almost every town in the United Kingdom. Our desire is to bring the food products which we handle, and especially meat, within the buying power of the humblest householder. Our shops help materially to this end, as well as being a considerable source of strength to us. We work on a smaller margin of profit from the time the animals are handed over by the farmer until they reach the consumer than it is possible for any other system to live upon. During the year 1925 the business in most of our branches, both at home and abroad, has been consolidated and extended.

Mr J. M. Sing seconded the motion.

In reply to a shareholder, who asked whether any explanation could be given of the fall which had taken place in the company's shares during the past twelve months, the Chairman said it was natural that the trouble in the meat trade should be reflected in the price of all meat companies' shares. He pointed out, however, that the operations of this company in the wholesale meat departments were only a portion of the ramifications of their great business. In the opinion of the directors, the prospects for the continued prosperity of the company had never been better than they were to-day.

The report and accounts were unanimously adopted.

Reports and Notices.

Mr Wilfred Hicks Dankes has been appointed managing director of the Anglo-Dutch Plantations of Java, Limited.

The directors of the Life Association of Scotland have appointed Mr A. Bertram Johnson, of their Glasgow office, to succeed the late Mr A. J. Holt as secretary at their Birmingham branch.

BANKS.

ANGLO-POLISH BANK, LIMITED.—The net profit for 1925 amounted to 366,113 zloty. This is utilised as follows:—To transfer to reserve capital 68,036 zloty. Payment of dividend of 8 per cent., 120,000 zloty. Tantieme to council, management, and staff, 73,326 zloty. To reserve for taxation, 72,000 zloty. Balance forward, 32,751 zloty. The profit and loss account reveals a gross profit of 1,415,663 zloty. Working expenses amounted to 1,049,549 zloty. Total assets amount to 44,267,260 zloty. Cash is at 1,645,004 zloty. Foreign currency in hand is at 668,362 zloty. Balances with correspondents abroad 4,160,265 zloty. Bills discounted, 15,373,047 zloty. With regard to liabilities, paid-up capital is 1,500,000 zloty. Deposits stand at 2,408,618 zloty. Bills rediscounted amount to 10,562,241 zloty. Overdrafts with correspondents abroad 9,572,461 zloty.

COMMERCIAL BANK OF AUSTRALIA, LIMITED.—The net profit for year ended June 30, 1926, amounted to £317,707, against £305,536 in preceding year. The sum of £110,083 is put to reserve fund, and £20,000 to reduction of bank premises. The preference dividend absorbed £84,694, and the ordinary dividend of 15 per cent., the same as for the preceding year, absorbed £119,359. The sum of £66,141 is carried forward. In addition to the amount of £110,083 transferred to reserve fund, the sum of £204,917, being premium received on the new issue of shares, has been credited to that account, thus increasing the reserve fund to £1,000,000.

IMPERIAL BANK OF INDIA.—The report for half-year ended June 30, 1926, shows that the average rate for money for the half-year was 5.65 per cent. The net profits of the bank for the half-year amounted to Rs. 74,27,354. This, with Rs. 10,22,919 brought in, makes a total of Rs. 84,50,273 available. The dividend of 16 per cent. per annum, free of income-tax, absorbed Rs. 45,00,000, while Rs. 10,00,000 is put to reserve fund and Rs. 29,50,273 carried to next account.

QUEENSLAND NATIONAL BANK, LIMITED.—In our issue of August 21, 1926, page 332, the net profit of this bank for the corresponding period of last year was shown as £125,181, whereas it should have been £184,446. We much regret the error.

MISCELLANEOUS.

CALICO PRINTERS' ASSOCIATION, LIMITED.—After providing £511,960 for maintenance, depreciation, repairs, renewals, and upkeep, and £128,000 for debenture interest, the accounts for the year ended June 30, 1926, show a net profit of £216,218, which, with £216,504 brought forward from last year, makes the total to the credit of the profit and loss account £432,722. Out of this sum an interim dividend for the half-year ended December 31, 1925, amounting to £75,402, has already been paid on the preference shares, leaving £357,320, and at their meeting to-day the directors resolved to recommend to the shareholders that a dividend be declared on the preference shares for the half-year ended June 30th last at the rate of 5 per cent. per annum (less income-tax), and on the ordinary shares for the year ended June 30th last a dividend at the rate of 7½ per cent. per annum (less income-tax), against 15 per cent. for preceding year, leaving the sum of £131,112 to be carried forward.

WORKING PROFIT, TRANSVAAL.—The total estimated working profit of the gold mines of the Transvaal for the month of July, 1926, amounted to:—Witwatersrand, £1,140,718; outside districts, £17,675; total, £1,158,393. The estimated working profit in June, 1926, was:—Witwatersrand, £1,141,391; outside districts, £17,939; total, £1,159,330.

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for week ended August 18, 40,885 barrels, including 2,400 barrels from Well No. 121. Shipments, 31,436 barrels.

MEXICAN EAGLE OIL COMPANY, LIMITED.—The production for the week ended August 14, 1926, was 147,000 barrels.

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended August 21, 1926, was as follows:—La Rosa, 26,319 metric tons (previous week ended August 14, 27,115 metric tons). Maracaibo District, 4,060 metric tons (previous week ended August 14, 4,041 metric tons).

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

A spell of fine weather has facilitated harvesting operations, and the grain is being secured in good condition. All dry samples were readily taken by millers, but prices show a downward tendency in sympathy with the general situation. Imported descriptions moved off quietly, available supplies being adequate for present requirements and trend of values in buyers' favour. Dull conditions prevailed in the floating and forward cargo section. The tone was adversely affected by continued Russian offers for prompt shipment, and only a few cargoes were disposed of, chiefly white kinds on Continental account. A sailer of Russian arrived sold at 57s, white Pacific September 51s 4½d and 51s 6d, red winter September 50s 4½d, and several cargoes of Russian, all to the Continent. Maize depressed for near positions owing to the large number of cargoes on passage, but forward quotations fairly steady. Steamers of La Plata afloat sold 30s 1½d to 30s 9d as to size and position, September-October 30s 6d, and November 30s 6d per 480 lbs. c.i.f. terms. Wheat easier. No. 1 Northern Manitoba quoted 60s 6d, No. 2 ditto 58s 9d, No. 2 hard winter 55s 6d, choice white Karachi 52s 6d, Barusso 55s 3d, all ex-ship per 496 lbs. English new sold 11s 1½d per 112 lbs. Flour dull and tendency to 53s per sack delivered in the Home Counties, with 6d to 1s per toba patents range from 46s to 48s 6d, Minneapolis 47s to 49s, easy. Plate landed 33s 3d, ditto ex-ship 31s 3d, Bessarabian ex-ship to arrive 32s 6d per 480 lbs. Barley steady but inactive. Californian 36s to 47s, Chilean Chevalier 50s to 57s, ditto brewing to 48s ex-ship per 448 lbs. No. 3 Canadian Western ex-ship 29s 6d, Russian landed 30s, ditto ex-ship to arrive 28s 6d, Persian ex-ship 28s 6d per 400 lbs. English new 10s to 15s per 112 lbs. Western ex-ship 27s, landed 28s, No. 2 Canadian feed ex-ship 23s 6d, landed 24s 6d, Chilean Tawny ex-ship 22s 9d, American 380 lbs ex-ship 22s 9d, landed 24s 6d, mixed feed ex-ship 19s 6d, landed 20s 9d per 320 lbs. English new 8s 6d to 9s 4d per 112 lbs. Miller offers quiet. Broad bran 6s 6d, middlings 7s 6d, fine ditto

AMERICAN WHEAT MARKETS.

Throughout the week harvesting has made good progress under favourable weather conditions. Export inquiry has been of small dimensions, foreign buyers being disposed to await official intimation of the dimensions of the Canadian crop, with the result that prices have shown a steady decline.

Quotations:—

	Jan. 2, 1925.	Aug. 27, 1925.	Jan. 7, 1926.	Aug. 19, 1926.	Aug. 26, 1926.

(a) October delivery. (b) September delivery.

Visible supplies of wheat in Canada, at 16,051,000 bushels, show a decrease of 2,147,000 bushels, as compared with the previous figures. Supplies a year ago stood at 5,391,000 bushels.

COAL.

Our Cardiff correspondent writes:—The movement back to work at the pits has been followed with keen interest on the coal market. At the two collieries owned by the Powell Duffryn company, over 200 men were signed on, but only a small proportion actually presented themselves for employment, and by the end of the week the whole number had been prevailed upon to remain away. At present only the original safety-men are working. Pit-wood remains a nominal market. One small parcel of French wood, however, has been imported at Swansea, the price realised being over 40s per ton, ex ship. Demand for patent fuel continues quiet, but prices are maintained at 42s 6d to 45s. The bulk of inquiry circulating has been on inland account. The recent advance to 115s per ton in the price of pitch has aroused some apprehension among patent fuel manufacturers, and fears are expressed that

production will be curtailed as a result. Arrivals of foreign coal have been less active. Imports last week totalled only 37,660 tons. Quotations for both American and Continental coals, c.i.f. Bristol Channel ports, have hardened during the past few days, but pending further developments in the mining dispute local importers are indisposed to book up forward supplies, and business has been slow.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The situation in the iron and steel markets continues unsatisfactory. The low production of the British steelworks, owing to the lack of fuel and the difficulty of securing adequate supplies of Continental semi-finished steel, has resulted in buyers devoting unusual attention to the Continental markets. To some extent the position as regards the Western European steel market has grown easier, and the manufacturers appear more willing to quote, although there is very little Continental semi-finished steel available for delivery until late in the year. This, of course, handicaps the production of the British finishing works. The advance in the quotations for Continental finished steel has checked buying in this department. British makers are booking a fair number of orders for delivery some weeks after the strike, and any change for the better in the coal position would probably lead to their obtaining a considerable volume of business.

Our Middlesbrough correspondent's report, dated August 26th, is as follows:—Pig-iron.—The position is unchanged. For what little iron is available, some consumers are willing to pay 90s per ton asked by makers for No. 3 Cleveland G.M.B. Other users are relying on foreign iron, which can be obtained at prices well below the home figure. Supplies of hematite, although not large, are sufficient to meet all needs at present, and the quotation for East Coast Mixed Numbers still remains at 82s 6d per ton. Manufactured Iron and Steel.—One large local works has started three steel furnaces during the current week, but the output is for special requirements. Ordinary consumers of manufactured steel still find it almost impossible to cover their needs. Quotations are nominally unchanged as follows—Steel ship plates, £7 17s 6d; steel ship angles, £7 10s; iron bars, £11; steel rails, £8. Iron Ore.—Best Rubio is still nominally 21s 6d per ton, c.i.f. Tees, but no transactions are taking place.

Our Sheffield correspondent writes:—A feeling of profound depression has developed in the local steel trade. Foreign coal has only helped certain of the lighter branches, but it is proving extremely unsatisfactory, apart from its heavy cost. It is useless, for instance, for the production and heat treatment of the fine special steels, and wherever employed it is troublesome, wasteful, and uncertain in its results. Makers of finished steel goods continue to work in the face of serious odds, and are maintaining a good share of their overseas connections, but this can only be done by the sacrifice of every penny of profit. The home demand for tools continues quiet, owing to the inactivity of many of the engineering shops. The building trade is obtaining ironwork with fair regularity, but a certain amount of construction is being held up for want of tiles, bricks, cement, and sanitary ware, the production of which consumes large quantities of coal. Cutlery and plate-makers are booking orders from the holiday resorts which ordinarily would have been placed earlier in the year. There is little sale for silverware and plated hollowware goods. The cheapest classes of goods sell rather freely.

Our Glasgow correspondent writes:—Delays in procuring delivery of materials from iron and steel works are making the operations of industrial concerns increasingly difficult. The manufacture of heavy steel is still in a state of complete suspension, although a period of considerable activity in the steel trade is

looked forward to at the conclusion of the strike. Foreign and Colonial buyers are seeking their supplies abroad, and it is highly probable that some portion of this business will never be recovered. Orders placed for delivery after resumption of work are for the most part booked at the fixed minimum prices, but 20s to 25s per ton more is being paid for delivery, ex stock. Rollers and sheet makers are able to carry on on imported coal, and steady business is being done. Sheet makers are not anxious to book more orders, their order books being already well filled. Japanese thin sheets have again become a prominent feature, very large tonnages having been placed for delivery when local fuel becomes available.

Our Cardiff correspondent writes:—Business continues quiet, but prices are inclined to harden. Fully 30 per cent. of the tinplate works are operating on imported coal, and in consequence there has been a slight improvement in the number of men employed. Little interest is shown in forward business, and quotations are mainly nominal on a basis of 20s 6d to 21s for stock plates. Prices for prompt business range from 24s to 24s 6d basis I.C. f.o.b. works port. Welsh tinplate bars are unchanged at £6 5s per ton delivered, with galvanised sheets steady at £16 10s to £17.

OTHER METALS.

TIN.—Market irregular, due to fluctuating American and Eastern cables advices. A slow demand, combined with early realisations, imparted a weaker tone during the early part of the week, but later prices rallied on better support, particularly for forward positions, with holders showing more reserve. Standard cash sold £294 15s-£291 5s and £293 5s, three months £288 10s-£286 10s and £289. Sales in the East were reported at £295 17s 6d, £294 10s, £295 5s and £294.

COPPER easier on freer offerings and a poor consumptive demand, with slight irregularity at times. Standard cash sold £59 to £58 7s 6d and £59, three months £59 15s-£59 5s and £59 15s.

LEAD dull and easier, with liberal offerings closing steady. Good soft foreign pig August sold £32 17s 6d to £32 3s 9d, £32 17s. 6d, September £32 13s 9d-£32, £32 12s 6d, October £32 2s 6d to £31 18s 9d, £32 7s 6d, November £32 7s 6d to £31 16s 3d, December £32 5s to £31 15s, £32 6s 3d.

SPELT quieter and slightly lower on balance, closing firm. August changed hands at £34 3s 9d-£33 15s and £34, £34 6s 3d, September £34 6s 3d-£33 18s 9d, £34 10s, October £34 2s 6d, £34 5s, November £34 12s 6d-£34 5s, December £34 10s-£34 6s 3d, £34 11s 3d per ton.

ANTIMONY steady. English specials quoted £74 10s-£75, and foreign £65 per ton ex warehouse.

ALUMINIUM quiet. Home delivery £118 per ton.

WOLFRAM firmer, and forward quoted 14s to 14s 6d per unit, c.i.f.

QUICKSILVER steady. Spot £15 10s per bottle.

TIN PLATES quiet on the basis of 22s to 20s per box, according to delivery.

THE COTTON TRADE.

LIVERPOOL, August 26, 1926.

On Monday last the Washington Bureau issued its fortnightly report. To the general surprise of the cotton world, it indicated a considerable decrease in the probable crop, given favourable conditions, and this in face of fairly good weekly weather reports. On the other hand, the Bureau has left the cotton world guessing, inasmuch as it has raised its estimate of the minimum crop, given adverse conditions, from 14,425,000 bales to 14,800,000 bales. The crop is three weeks late, and consequently offers of actual cotton have not been as free as at this time last year. It would rather appear as if the minimum supply of American cotton would this year exceed requirements, whilst it must not be forgotten that the "carry-over" from last season was very heavy. Operators were short, but the covering of the short interest has caused an advance. Spot sales for the week August 20th to 26th (inclusive) were 33,000 bales. Of these 17,890 were American, 2,000 Brazilian, 7,000 Peruvian, 2,100 Egyptians, 1,050 East Indian, 2,370 African, and 500 sundries. Imports for the same period were 38,791 bales. These included 22,110 American, 4,033 Brazilian, 5,636 Peruvian, 1,479 East Indian, 5,533 African. Quotations to-day are middling American, 10.16d; Brazilian fair, 10.16d; Peru G.F. mod.-rough, 11d; Peru smooth, 11.16d; Egyptian Sakel, 16.20d; uppers, 12.45d; West African middling, 9.86d; East African good fair, 11.50d; and Tinnivelly F.G.F., 8.95d.

MANCHESTER, August 26, 1926.

Prices have hardened, and spinners and manufacturers have been compelled to put up their quotations. Buyers, however, have been slow in following the advance, and the turnover in yarn and cloth has been of small dimensions. For most outlets abroad the demand in piece goods remains disappointing, and local merchants are not in the mood to anticipate future requirements. Most of the bids for India have been too low, and buying has been confined to odd lots, chiefly in light cloths. No development can be recorded in the offtake for China. It has been very difficult to arrange transactions for most of the minor outlets, and home trade buyers have not been at all active. American yarn quotations have been advanced to meet the rise in the raw material, and spinners have been firm, but trade has been restricted. In Egyptian yarns only occasional sales have been reported.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The cheerful tone is well maintained. There seems to be a general impression that the industry is on the eve of better things, based on the belief that the end of the coal dispute will bring a revival in the demand for yarns and piece goods. At present the strength of the raw material market rather than any decided movement in the spinning and manufacturing sections is the mainstay, and it remains to be seen whether users will be forced to follow the upward movement in wool and tops. Consumption is still restricted in this country, but all classes of wool and tops have moved against the buyer during the last fortnight, and the indications are that current values will be maintained. Crossbred tops—for so long neglected owing to the depression in the spinning section—have been taken up quite freely, and recent operations would seem to suggest that most spinners are not carrying large stocks. In view of the very low prices accepted for yarns—more particularly crossbreds—in recent months, it is difficult to see how spinners can make a profit on some of their contracts, and if the recent advance in wool and tops serves to put a stop to selling below replacement costs, it will be a good thing for the whole industry. There is not a great deal of new business in yarns, most of the orders lacking bulk, but prices are much firmer and spinners are in a happier position owing to the receipt of a good volume of particulars against old contracts. The home piece trade is more active, but export business remains dull.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Though they represent only one month's exports, the figures contained in the cable sent from Melbourne by Dalgety and Co., Limited, are very instructive, for they show that the shipments from Australia and New Zealand in July were above the average. The total of 91,000 bales is fairly large, though it must be remembered that during July a year ago sales were suspended, and the carry-over was then on the top side of half-a-million bales. The trade has become accustomed to big export figures as a result of that carry-over, and it will not be long before the exports this season show a marked falling off compared with last. It is curious to find that the figures relative to exports not to the July exports from Australia amounted to 76,000 bales, an increase of 8,000 bales compared with the corresponding period of last year, whilst the exports from New Zealand amounted to 24,000 bales, an increase of 14,000. This makes the total export 91,000 bales, and the total increase 22,000.

These figures show that wool is being got away to the manufacturing centres as quickly as it arrives. The bulk is destined for delivery at the doors of the mills in the various European countries, and it will be very interesting to know what quantity will be available for the forthcoming London sales. So far there is no definite data to work upon, but some are anticipating an available quantity of around 150,000 bales. Judging from the present tone of the market, it would seem as if the trade will be able to purchase fairly freely. What actually transpires, however, will depend a good deal upon whether the miners' dispute is actually settled before the sales open.

The way in which raw material supplies are being sent forward from Australia and New Zealand is in itself very encouraging, but in manufacturing circles in the West Riding there is no little concern about foreign competition. The raw material position at home has certainly had some relief in the large sales recently made to the Continent, particularly as top-makers have found the machinery of the West Riding needs to be fed in order to provide work for operatives, and for the industry to maintain its standing in home and foreign markets.

HIDE, LEATHER, AND ALLIED TRADES.

The hide market is again firming up, and both London and provincial prices have slightly advanced. Best ox hides sold at the Bermondsey auctions on Thursday from 6d to 9d per lb, and seconds from 5½d to 7½d—slight advances of ½d being noted in several classes. Best cows made from 5½d to 5½d, and seconds 5½d. Calfskins were steady, selling from 6½d for heavy best to 11½d best light. Lambskins made from 2s to 8s and pelts from 4s 9d to 7s 3d each. Oversea hides are a shade firmer, as buying is consistent from the Continent. Best Argentine fregorifics are now quoted at 7½d and Montevideos at 8½d. Dry hides are also firmer, B.A. Americanos making 10½d. The Chicago position is cabled as weak, although best packers, quoted at 15 cents, show no alteration on last rates. The sole leather position is firm, with tanners standing fast to their quotations. Heavy bends are scarce, and some difficulty is experienced in finding the requisite quantities for Army boots. Trade is quiet in the heavier classes of kip leathers. Coloured glacé kid is wanted, but there is little black glacé selling except for a cheap grade of women's shoes. Reports from the shoe centres show that offers are for small parcels, retailers awaiting the end of the coal strike before committing themselves.

THE TIMBER TRADE.

FROM OUR OWN CORRESPONDENT.

The timber trade during the past month has relied more than ever on orders from housebuilding sources, which, fortunately, have been of good volume and quite up to expectations. Battens and boards, poles, laths, and slating battens have been in continued request, which says much for the progress of the building industry. As the latter has been adversely affected in some districts by a shortage of materials arising out of the coal strike, one may assume that, with the return of the miners to work, the building trade will show a still further improvement. The timber market, on the whole, must be regarded as in a good position for sellers, imports from European producing countries having been on a much smaller scale this year, while stocks are low compared with the present demand. The shipbuilding industry has just passed through a very bad half-year, and one may expect a little more life in ensuing months. The export trade is also likely to make for increased output during the short period of the year left to us, with an increased call for boxes and cases, which have been in such poor demand during the past four months. In the European timber free-on-board market producers are optimistic as to possibilities from now on until the end of the shipping season. Prices, on the whole, are firm, with a rising tendency for 3 x 9 red deals, and the position in the leading countries of production is much more stable than at this time last year. Canadian spruce imports have declined in quantity, and the market generally for these descriptions is firm. The demand, however, is not as large as it should be. In Liverpool the call for the European softwoods has increased, whilst that for spruce has declined during the past few weeks. Furniture woods have been moving very slowly during the past month, and stocks generally are of good volume throughout the country. Imports, however, with the exception of mahogany, have appreciably declined recently. Colliery timber imports also have shown a decided shrinkage. We hope that this material will soon go into consumption freely and the market resume its customary activity. In the meantime, shippers are meeting with poor offers.

VEGETABLE OILS AND OILSEEDS.

The market for linseed oil is steadier, and more business has resulted from the lower level of values brought about by cheaper seed. At one time this commodity dropped to £33 per ton, naked, ex Hull mill, for prompt and forward delivery, but has since recovered to £33 10s, later positions, including January-April, being at a slight discount and weakly held. Cotton oils have been neglected and have further declined, crude Egyptian offering freely at £35 10s and ordinary refined at £37 15s prompt. Soyabean oil is lower, and palm kernel and other oils barely steady. In the oilseed section, Plate linseed sharply declined to £15 15s for early shipment to Hull on an official estimate of 550,000 acres increase in the area under linseed in Argentina. This induced some buying on crushers' account, and the market has since rallied to £16 for seed on spot and afloat, small premiums being quoted for shipment. New crop for January-February loading is offered at £15 17s 6d. Very little business appears to be passing in Indian linseed. Demand for the remainder of the old crop of Egyptian cottonseed is practically non-existent, and prices have fallen to £9 2s 6d, while new crop offers at £9 10s for late September and October loading.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Spot goods steady at full recent prices, with fair inquiries, especially for British makes. Of imported, Czecho and Dutch J. spot, sold, 26s 10½d to 26s 11½d. Forward positions quietly steady. Dutch J. ready, 14s 0½d, f.o.b., Rotterdam. Czecho, ready, 14s 10½d, f.o.b., Hamburg. There is a fair inquiry for white Java to India. October-December held for 16s 1½d; January-March, 16s 4½d, c. and f. terms. B.R.B. crystals, October-December, done, 15s 10½d, c. and f. terms to Bombay-Karachi. Small parcels of Cuban 90 per cent.,

August-September, selling at 11s 7½d, c.f. and i., U.K. White terminal steady. August, sellers, 13s 6d; September, 13s 5½d; November, 14s 0½d; December, 14s 3½d; March, 14s 9½d; May, 15s 1½d cwt.

COFFEE.—Business in spot parcels was on a fair scale, and a steady tone prevailed. Kenya bold, sold, 130s to 143s 6d. Costa Rican, fine bold blue, 194s. Colombian Maragogipe, 213s 6d to 214s 6d. Futures dull.

COCOA.—Spot goods sold quietly at previous rates. Accra, F/F, November-January, sold, 45s to 44s, f.o.b.

TEA.—Indian auctions of 37,750 packages met with good support regarding the finer liquoring descriptions at steady rates, but common and low medium teas declined ½d to ¾d per lb, and sold rather slowly. Leaf kinds did well on export account. Pekoe, sold, 1s 3½d to 1s 10d; broken orange, 1s 4½d to 3s 4d. Ceylon sales of 28,700 packages experienced a brisk market, and all the finer sorts ruled ¾d per lb dearer, and common about steady. Quality marked further improvement. Pekoe sold, 1s 3½d to 1s 11½d; broken orange, 1s 7d to 2s 3d. Java and Sumatra auctions embraced some 4,990 packages. Common and medium ¾d to ¾d lb down, others steady. Market rather irregular, but leaf grades for export attracted attention. Pekoe, sold, 1s 2½d to 1s 4d; broken, 9½d to 1s 6½d; pekoe souchong, 1s 2½d to 1s 3½d; orange, 1s 5d to 1s 6d; broken orange, 1s 1½d to 1s 9d; flowery broken orange pekoe, 2s 0½d to 2s 0½d per lb in bond.

RICE.—Eastern shippers offer sparingly, and market remains very steady, despite quietness of European demand. Two stars, spot, 16s 6d; forward, 16s 1½d. Italian and Spanish quiet, but steady. Beans and peas dull. Japanese peas, spot, 30s; September-October, 24s 9d cwt.

SPICE.—Pepper in fair request forward, and market firmer. Black Singapore, f.a.q., spot, quoted 7½d; August-October, 7d. Lampung, spot, 7½d; May-July, 7d; August-October, sold, 6½d to 6½d; October-December, 6½d. Muntok, spot, 1s 1½d; August-October, sold, 11½d to 11½d; October-December, 11½d. Zanzibar cloves, spot, 9½d to 9½d. Pimento, spot, 6½d lb; August-September, steamer, to London, 48s cwt. Sago flour, near, 14s 10½d; distant, 15s cwt, c.f. and i., U.K. Tapioca steady, unaltered.

FRUIT (Dried).—Trade remains dull, but prices steady as spot stocks are light, with only small supplies coming forward. Amalia, quoted 30s to 31s; Pyrgos, 29s to 30s; Patras, 31s to 33s; Gulf, 32s to 35s; Vostizza, 40s to 53s; Australian, 39s to 49s. Sultanias: Australian in fair demand, owing to scarcity of Smyrna fruit. Australian, quoted 64s to 80s; South African, bleached, 70s to 76s; unbleached, 65s; Smyrna, good average, cleaned, September shipment, 45s. Dates continue in good request, both for home trade and export at full rates. Siam, quoted 12s 6d to 13s; Khadowie, 16s 6d to 17s; Hallowee (cases), 22s 6d to 25s. Raisins in quiet demand, both spot and forward. Cape, f.a.q., 36s; g.a.q., 42s; Lexias, new crop, 40s to 45s. Evaporated fruits generally quiet. Californian apricots, extra choice, 125s; fancy, 132s 6d; South African, new Royal, first grade, 140s. Plums, Californian, 30/40's, 67s; 40/0's, 56s; 60/70's, 46s; 70/80's, 42s; 80/90's, 40s; Oregon, 30/40's, 60s; 35/45's, 55s. Pears, Californian, extra choice, 72s 6d; fancy, 80s; Lake County, fancy, 85s. Apple rings, Californian, extra choice, 50s to 55s; September-October shipment, 44s 6d; Canadian, spot, 45s cwt.

CANNED GOODS.

CANNED FISH.—Sardines: Market quiet, but the scarcity of snitable size fish is still pronounced. Portuguese, ½s, quoted 4s 3d to 6s per dozen tins. Salmon moves off quietly. Red, tall, 1 lb, 54s to 56s; tall pink, 26s to 27s; ½ lb, pink, 39s to 40s. Lobsters quiet. Best ½s, quoted 157s 6d to 162s 6d, and ½s, 90s. Japanese crab firm, and in demand. Crayfish sells steadily.

CANNED FRUIT.—There is a moderate trade passing at generally late rates. Californian Bartlett pears, 24-2½s, quoted 12s 6d to 13s 6d; seconds, 10s to 10s 6d. Californian peaches, choice, 11s 6d to 12s 6d; standard, 10s 6d to 11s 6d; seconds, 9s 6d. Californian apricots, choice, 12s 6d to 13s; standard, 10s to 11s; seconds, 9s 3d per dozen tins. Pines in moderate request, but prices fairly steady. Italian tomatoes slow, owing to fluctuations in exchange rates.

CANNED MEAT.—Market quiet, but firm. Corned beef 6s quoted 38s to 46s, as to quality. Danish lunch tongues continue in request, and range from 122s 6d to 132s 6d, while offerings of Dutch brands are made at attractive prices. American quoted 135s, with best 140s to 142s 6d. Ox tongues firm. Cooked boneless hams, Danish, continue in demand, at 1s 8½d per lb, for cases of six tins.

CONDENSED MILK.—Market quiet, and skimmed difficult to move. Machine-skimmed ranges from 10s to 11s 6d. Full cream, 20s to 25s. Full-cream evaporated in good demand, and excellent qualities are arriving from Belgium at reasonable prices.

HONEY.—Market remains quiet, but more inquiry is expected during the next month for the winter trade. Meanwhile, New Zealand grades meet with chief support. New Zealand quoted 50s to 85s; Australian, 40s to 50s; Jamaica ranges from 37s 6d to 50s; Haiti, 37s 6d to 48s; Cuban, 37s 6d to 48s per cwt.

RUBBER.

Quiet, but generally steady. Plantation standard sheet, spot, sold, 1s 7½d; September, 1s 7½d; October, 1s 7½d; October-December, 1s 8d; January-March, 1s 8½d lb.

GENERAL.

SHELLAC steady. Fair T.N., spot, 132s 6d to 135s; October, quoted 127s; December, 124s 6d cwt.

COPRA reservedly offered, and a firm tone prevailed. F.M.S. Straits, August-October, to Rotterdam, quoted £28 13s 9d; Dutch East Indies, ditto, £28 8s 9d; Ceylon, August-September, £29 12s 6d; South Sea Islands, £27 5s; ditto, smoked, August-September, to Marseilles, sold, £27. Palm kernels firmer. August-September, to Liverpool, quoted £20 10s ton.

JUTE.—This fibre opened the week easier on some selling pressure, but soon rallied as numerous buying orders came to hand from

Calcutta, mainly in order to cover. Speculative interest counts for more at the moment than such considerations as legitimate supply and demand. A good deal of irregularity ensued later. First, August, sold, £31 and £32; September, £29 10s, £29, and £30 10s; October, £28 10s, £29 15s, £28 15s, and £29 15s; November-December, £28 10s, £29 10s, £28 5s, and £29 10s. Lightnings quoted 20s per ton under firsts. Hessians and twills disclosed a steadier tone.

HEMP.—Manila in better request, but since quieter, and offers sparingly made from the other side. J. afloat, sold, £45; September-November, £45; K. £34 15s to £35; L. £35 10s; M. £31. New Zealand fair, September-November, quoted £34 10s. African sisal quiet. No. 1, f.a.q., August-October, £43. Italian P.C., new crop, for shipment, £56.

TALLOW.—Messrs Colchesters and Woolner write on August 25th as follows:—The tallow market was fairly active during the week, and prices were unchanged to-day, excepting for one class of inferior, which advanced 6d. Home tallow continues plentiful for the time of year. At auction to-day 1,367 casks tallow were offered, and 409 were sold. Quotations are:—Australian mutton: Fine, 45s; good to fair, 44s to 43s; dull to dark, 42s to 40s; hard, 44s. Australian beef: Fine, 45s; good to fair, 44s to 42s; dull to dark, 41s to 39s 6d; sweet, 45s 6d. Present shipment from Australasia: Good mixed, 43s 6d. Present shipment from South America, 43s 6d. The market letter is unchanged. Town tallow, 39s 6d per cwt. Rough

fat, per 8 lbs, 24d; melted stuff, 29s 6d per cwt. Quotations are:—Town, 39s 6d, net cash, naked, ex works. Country: Frail casks 39s 6d; home melted, shipping casks, net, f.o.b., good coloured, 42s 6d; fair to dull, 41s to 39s. Bone fat: white none; pale none; benzene, 34s 6d; melted stuff, 34s f.o.b.

MISCELLANEOUS.—Cocoanuts quoted 22s per 100. Coir yarn, Ceylon, £21 10s to £37; Cochin, £24 10s to £49; Ceylon bristle, £18 to £23; cinnamon leaf oil, 44d; citronella, Ceylon, 1s 7½d; Java, 2s 4d.

METROPOLITAN CATTLE.—August 26.

British Beasts, per stone of 8 lbs to sink the offal. Sheep, per stone.

The Economist,

WEEKLY COMMERCIAL TIMES,

Bankers' Gazette and Railway Monitor:
A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

Vol. CIII.

SATURDAY, SEPTEMBER 4, 1926.

No. 4,332.

ROYAL EXCHANGE ASSURANCE

Incorporated A.D. 1720.

All classes of Insurance transacted and the duties of Executor and Trustee undertaken.

For full particulars apply to:—

Head Office: Royal Exchange, London.

Norway.

Klaveness' Bank, a/s, Oslo.

(Share Capital and Reserve Fund Kr.14,000,000.)

Collections and all other banking transactions on Norway.

London Correspondents: Barclays Bank, Ltd., Hambros Bank, Ltd., Midland Bank, Ltd.

BANCA COMMERCIALE ITALIANA.

Established in 1894. Head Office: MILAN. Capital: 700 million Lire. Reserve Funds 500 millions. Deposits 7,002 millions.

Branches in every centre of commercial and industrial importance in Italy; also in London, New York, and Constantinople.

Affiliated and Auxiliary Institutions in France (Paris and Riviera), Switzerland, Czechoslovakia, Austria, Hungary, Roumania, Egypt, Brazil, Argentina, Chile, Uruguay, Peru, Colombia, etc.

London Office:

30a, Threadneedle Street, E.C.2.

E. CONSOLO, Manager.

balancing of Government receipts and disbursements from day to day. Up to 5 per cent. was paid on Tuesday, but subsequently money has been in good supply at 4 per cent. The discount market, where rates have been maintained in recent weeks by the heavy weekly offerings of new Treasury bills, has also shown an easier tendency in view of the smaller amount to be paid for next week, and the allotment rate for yesterday's bills was lower. The market quotation for fine three-months' bills has dropped away to $4\frac{1}{2}$ per cent., and the Continent continues a keen buyer at lower rates.

	Sept. 3, 1926.	Aug. 27, 1926.	Aug. 20, 1926.	Aug. 13, 1926.	Previous Rate and Date Changed.

Market rate (3 months' bills) ..	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	..

Thursday's Bank return showed an increase of £693,300 in coin and bullion, and an increase of £1,018,000 in circulation. The Reserve was £324,700 lower. The Proportion rose $\frac{1}{10}$ per cent. to $27\frac{1}{10}$ per cent. Public deposits declined by £10,384,300, while Other increased by £6,523,500. Government securities declined by £716,800 and Other by £2,745,800. Currency notes outstanding were increased by £324,700 to £291,076,300, which includes £1,296,500 for notes called in, but not yet cancelled. The fiduciary issue is £233,529,800, or £14,372,700 below the maximum.

NEW YORK MARKETS.

Our New York correspondent cables:—Business sentiment is cheerful as autumn approaches, and share markets are enjoying increasing activity with higher quotations, especially for the railroad group. As regards fixed interest stocks, however, investors are less prominent than speculators, and the latter are becoming increasingly anxious about the hardening of money. Short sellers taking a premature stand have been forced to retreat from time to time, and pools are anxious to mark up their favourites before the tide turns against them. Call money advanced to 5 per cent. before the end of the month, but the rate is now easier, although a further hardening is expected between now and September 15th, which is a tax collection date. Commodity prices are firmer, and *Bradstreet's* index number, after eight months of slow decline, rose four-tenths of 1 per cent. in August, reaching 137.8. This compares with 152.9 at the end of August, 1925. Grain and livestock are slightly lower, but other groups are firmer, strength being shown particularly by textiles, hides and leather, and the miscellaneous group. The Federal Reserve statement shows a reserve ratio of 74.4 for the whole system and 81.9 for New York. A substantial increase in discounts and a moderate decline in the reserve ratio reflects the financial operations of the first of the month.

THE STOCK MARKETS.

The normal post-holiday increase in stock market activity is not yet in evidence, but there is plenty of money available for investment, and sound securities are absorbed easily. The coal dispute has lasted so long that its eventual settlement is thought to have been largely discounted in prices. Apart from Victory Bonds, which benefited from re-investment of money released by recent redemptions, the gilt-edged market is dull in sympathy with hardening money rates. Foreign bonds have been without feature. Home railway stocks move irregularly, business being very small. Argentine rails have eased off on profit-taking. Rubber shares show very slight changes, and tea shares did not maintain the strength of the early part of the week. Oil shares have received

rather more attention, but a substantial drop occurred in British Controlled. Among industrials, textiles are steady, and iron and steel shares hesitating and irregular. Brick-making concerns have been well supported on the publication of good results, and tobacco shares have advanced. Brewery and electric light shares are firm. The Kafir market is dominated by operations from the Cape and Paris. The gamble in Sub-Nigels has subsided. Malayan tin shares continue active.

THE COMMODITY MARKETS.

Pending more definite developments in the coal situation, markets generally have shown no decided trend this week. Considerable quantities of foreign fuel continue to be received, and a more hopeful view of the position is indicated by the decision of the Mines Department to relax certain conditions restricting the disposal of domestic supplies. Cleveland pig-iron prices have again been advanced, most consumers, however, being dependent on imported material. A shortage of steel continues in most parts of the country. American cotton prices show slight change, but Egyptian varieties have advanced smartly on less favourable crop reports. The yarn and cloth markets are quiet, demand from India being disappointing and reports from China pessimistic. The new season's wool sales in Australia have opened in firm fashion, and Bradford prices are well maintained, though the volume of business has fallen off to some extent. The jute trade shows a degree of improvement, increased orders having lately been forthcoming. Wheat markets have been dull throughout the week, with a slow but steady decline in quotations. Dealings in sugar have been quiet and featureless, coffee prices are maintained, and the finer grades of tea in steady demand. The rubber market is without special feature. Tin has again been firm, copper slightly irregular, and lead weaker after a bull movement.

FOREIGN EXCHANGES.

In a rather dull market the principal item of interest during the week was the marked appreciation of the lira. Of importance, too, were the increasing firmness of sterling against the dollar and the steadiness and improving tendency of the franc, both French and Belgian. The lira opened on the 27th at 149, and weakened by the 30th to 150, although at the same time the forward rate showed an improving tendency, as was the case last week. On the 31st there was an improvement in the spot rate to 148½, and matters appeared to have returned to normal. On the first of this month, however, there was a sensational rally, and the lira, after opening at 144½, jumped to 135½, an improvement of nearly 13 lira on the quotation of the previous day. This sharp recovery was due to the deflationary measures adopted by the Government in handing over to the Bank of Italy the balance of the Morgan loan, and the subsequent withdrawal of a considerable proportion of the paper note issue and the cancellation of certain Treasury bills. On September 2nd the movement was carried farther, and spot lira fell to 132, but there is little doubt that it was overdone, as, although yesterday the low level of 130 was reached, there was a reaction to 133½. At the actual moment of writing the rate is hesitant at 132½-133. The dollar exchange opened weakly at $4.85\frac{1}{2}$, as a result of dear money rates in New York, and of a continuance of the demand for dollars here for seasonal purchases. This weakness continued until the 30th. An improvement then set in, and yesterday the rate was as high as 4.85 19-32—forward rates being at a premium of 3-32, 5-32, and 7-32 for one, two and three months respectively. The strength of sterling appears to be due, firstly, to the conclusions of the commercial transactions which occasioned the demand here for large parcels of dollars; secondly, to easier call money rates in New York, and, thirdly, and in a fair degree, to sentiment. In other words, to a belief in the early settlement of the coal dispute. Paris opened at 169, with forward rates three months 10f worse than spot, and improved gradually to 165 on the 31st, three months forward rates improving also to 8½f worse than spot. The

rate was better at $163\frac{1}{2}$ on the 1st, and at $161\frac{1}{2}$ on the 2nd, when 160 was touched for a time. On the appearance of the Banque de France statement, however, the rate yesterday fell to $164\frac{1}{2}$, with forward rates at 3f, 5½f, and 8f discount for one, two, and three months. Brussels moved sympathetically at times with Paris, but within narrower limits, and after opening at $175\frac{1}{2}$, is but little changed at $175\frac{1}{2}$ to-day. Forward rates for one, two, and three months are at 2f, 3½f, and 5½f discount. Berlin, after hardening last week to $20.35\frac{1}{2}$ as a result of a surplus of money on the market, arising, it is understood, from the non-absorption of American loans to industry and commerce, has now fallen off again to 20.39 on these loans being taken up. Forward rates are at 1½, 2, and 2½ discount for one, two, and three months. The remaining European currencies, except the peseta, showed little movement, but the tendency of the gold exchanges was to move, with the dollar, in favour of this country. Madrid weakened from 31.68, the opening rate, to 32.03 on the 30th on unfavourable political rumours, and is still weak at $31.89-94$. The South American exchanges showed only slight fluctuations, the milreis being 7½d weaker at $7\frac{1}{2}$ d in the middle of the week, but unchanged on balance at $7\frac{1}{2}$ d. The peso was firm throughout at $45\frac{1}{2}$ d-½d. In the Far East the yen is very firm at 15 23-32—25-32d. There was a fair amount of activity in the silver market, and prices rose ½d to $29\frac{1}{2}$ d on the 27th. They fell, however, to $28\frac{1}{2}$ d on the 28th, as China and U.S.A. both came on the market as seller, and fell further to $28\frac{1}{2}$ d on the 31st on sales on Indian and Chinese account. On the 2nd the market was quiet at $28\frac{1}{2}$ d for spot and $28\frac{1}{2}$ d for forward delivery. The rupee was weakish at 15 5 31-32d, and stands at that level to-day. Hongkong is rather firmer at 25 2½d-¾d, but Shanghai is on the weak side, as compared with the opening rate at 25 9½d-2s 10½d.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended August 28th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		£	
Supply Services	5,250	From Revenue	9,308
Interest, &c., on Debt	1,880		
Sinking Fund	393		
Decrease in debt	1,079		
Increase in Balances	95		
Sundries	611		
	9,308		9,308

Total revenue amounted to £9,307,600, against £11,579,900 in corresponding week last year. Customs yielded £2,300,000, against £2,125,000 and Excise £724,000, against £927,000. Estate, &c., Duties produced £910,000, against £2,380,000. Property and Income-tax yielded £3,221,000, against £3,468,000, and Super-tax £500,000, against £380,000. The week's operations reduced the National Debt by £1,078,800, and caused the following changes:—

(000's omitted.)		£	
Sundries	— 1,114	Treasury Bills	+ 7,085
Public Department Advances ..	— 6,750		
National Savings Certificates ..	— 300		
	— 8,164		+ 7,085

The floating debt was increased by £320,000 to £761,161,000.

FINANCIAL YEAR, 1926-1927 (April 1 to August 28, 1926.)

£		£	
Total Expenditure ..	325,553,408	Raised by Revenue ..	266,642,687
		Decrease in Balances ..	3,781,646
		Amount borrowed ..	55,129,075
Total	325,553,408	Total	325,553,408

ESTIMATES for FINANCIAL YEAR 1926-7 †

£		£	
Expenditure	825,727,000	Revenue	824,750,000
Deficit	£977,000		
† Revised in Exchequer Return dated July 26, 1926.			

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

PEACE HOPES IN THE COAL DISPUTE.

PARLIAMENT met this week for a two days' emergency session, the express purpose being the renewal of the Emergency Powers, quite properly demanded by the Government in view of the prolongation of the coal dispute. This actual business was, in spite of Labour opposition, disposed of on Monday, and Tuesday was devoted to a general discussion in the House of Commons of the coal situation. The result, in one sense, was disappointing. It had been hoped that the brief return of politicians to Westminster might provide the occasion for some definite new move towards a coal settlement, and this hope was encouraged by a conference—the first of its kind to be held since the strike began—between the miners' executive and the officials of the Parliamentary Labour Party. But no new move emerged from the Labour benches, and the speeches in which Mr Ramsay MacDonald and the miners' members reviewed the position produced no fresh contribution towards solving the impasse.

Nevertheless the brief Parliamentary session has clearly caused an appreciable change in the position. The change is due to the speech in which Mr Churchill outlined the attitude of the Government towards the present phase of the dispute. Mr Churchill's recent speeches on the public platform had, as we said last week, indicated little more than an attitude of *laissez faire*, coupled with a definite refusal of a subsidy. His speech in the House of Commons followed the same line up to a point. The refusal of a subsidy was reiterated strongly, and the Chancellor expatiated upon the futility of Government intervention in the absence of any new proposals from either side. "So far," he said, "all that the men have said to us..... is 'give us a subsidy,' and all the owners say to us is 'leave us alone.' In such an atmosphere there would not be much chance of success for an independent proposal." But, having consolidated this familiar ground, Mr Churchill proceeded to use phrases which tinge the Government attitude with a more hopeful colour. He emphasised the Government's desire to procure a fair and durable negotiated settlement, and made it perfectly clear that if any new proposals, any new sign of "generalship" came from the miners, the Government would "take the risk" of doing their utmost to further an "honest settlement."

More significant still was the passage in which Mr Churchill referred to the question of national and district settlements. From this we quote the more important sentences. "Then there is the question of national and district settlements. I cannot, myself, see the slightest difficulty in reconciling the controversy which has sprung up, and which to my mind is largely a controversy of form, between the two points of view. Notice must be taken of all the local conditions, and there ought to be a national survey of the whole of that process afterwards, and a national settlement within the ambit of which district conditions have been properly considered and district arrangements are properly embodied. I cannot see why that should be irreconcilable." After a brief digression Mr Churchill continued: "If hours and wages were no longer an insuperable obstacle, if the difficulties connected with wages and hours had been reduced to very moderate proportions, then it is quite clear that questions of form as between national or district agreements should never be allowed to stand in the way of a settlement." The general effect of these and other passages in a temperate and well-balanced speech is to convey the impression that the Government is "standing by" eagerly awaiting any chance of hopeful intervention, and armed with considerable resources of imagination and of expedient, which it is ready to use to promote a fair and lasting peace. That is a new element in the situation, and its significance grows when we remember that Mr Churchill is a man whose ambition is not less than his resourcefulness.

It is evident that Mr Churchill's speech influenced the proceedings at the miners' delegate conference held in London on Thursday. The essence of the deadlock has hitherto been that, while the owners will not move an inch because they think that

economic forces are rapidly working for them, the miners' leaders have hitherto considered themselves without authority to move from the position which Mr Herbert Smith has repeatedly laid down, and which provide for possible arbitration on wages after numerous conditions have been fulfilled. The delegate conference on Thursday has, however, vitally changed its tone in giving its executive by a 2 to 1 majority a free hand to discuss any terms for a national settlement, subject only to bringing them back for ratification to the delegate conference. Real conversations with the Government are at last assured, and though this does not necessarily mean peace, the prospect is undoubtedly more hopeful than at any time since May.

In form the owners' objection to national negotiations is still a barrier, but the Government, if it means business, can devise ways for overcoming this objection. Indeed, there are strong grounds of public policy against accepting the owners' views. The nation has already spent £23,000,000 directly to secure peace, and much more indirectly as a result of the dispute. It is vitally interested not merely in getting the men back to work, but in seeing that the peace is a lasting one, and not merely an armistice to permit preparations for new hostilities. The Government owes it to the country to see that the settlement should include provision for the equitable adjustment of wages in the future, and that the difficult problem of wage variations is settled, not merely in accordance with local wishes, but in the national interest. The fact that employers in certain industries are fighting to secure national settlements in face of the opposition of the men is clear indication that this question is for those engaged, not a matter of principle, but of individual interest. In the case of the mines, it is clearly to the interest of individual owners to prevent the migration of the industry. There are also social reasons against too rapid a transference. But the national interest may well require—particularly in abnormal circumstances like the present—more drastic changes than the parties concerned are likely to welcome. The fact that Cumberland mines cannot afford high wages is by no means a conclusive reason why they should be allowed to pay low ones. Mr Churchill appears to have made it clear to the owners on Wednesday that the Government would not be with them in standing out for district negotiations and the crushing of the Miners' Federation.

The Government cannot overlook the fact that events have not conformed to the owners' time-table. The month of August should have seen definite negotiations in important districts. This has not occurred, and though the return to work has been substantial in Notts, the total back at work in the various Midland coalfields is reported at the time of writing to be some 35,000—a bagatelle compared with the 1,150,000 employed before the stoppage. The existence of important minorities of men in most districts anxious to return to work greatly influenced the delegate conference, which at last has shown a will to peace. But the solidarity is still remarkable, and sufficient to prevent the Government weakly acquiescing in the delay, loss, and ill-feeling that would be involved in the owner's plan of piece-meal defeat.

THE LEAGUE, SPAIN, AND TANGIER.

THE League of Nations, in the annual meetings which opened with the Council's meeting on Thursday, has much important business to discuss and transact. But incomparably the most important task to be performed is the retrieving of the disastrous failure of last March. This week, as six months ago, the vital issue at stake is the admission of Germany to the League with a permanent seat on the Council. In March the proceedings became a fiasco, because certain lesser Powers seized the opportunity to press their own claims to a permanent Council seat, thereby producing complete deadlock. Between then and now a Special Commission has been examining the question of the composition of the Council and its work, culminating in protracted meetings at Geneva this week, clears most of the ground which the Council found impassable in March. It recommends an increase in non-

permanent members from six to nine, and has framed regulations for re-election which appear to have satisfied everyone except Spain. Although the Commission is only an advisory body, there is every hope that both Council and Assembly will endorse its report, which clearly favours the appointment of Germany, and Germany alone, to a permanent Council seat. Of the States which claimed permanent seats in March, only Spain persists in her claim, and she has withdrawn from the discussions. That claim never, in our view, rested on solid ground; but in the face of the Special Commission's recommendations for the increase of non-permanent members and for new regulations regarding re-election (which are discussed on a later page), it becomes weaker than ever. Under present circumstances, Spanish persistence in the claim is not merely irresponsible and dangerous to the recovery of Europe, but it is also folly; for if Europe breaks up, the weaker and less efficient of the European states will obviously not be the last to go under. It is disconcerting that the rulers of Spain have added to the number of their demands. In March, their exigencies were confined to the demand for a permanent seat on the Council. This demand was afterwards reinforced by the threat of the Spanish Foreign Minister to withdraw from the League in connection with the question of Tangier—a question with which, hitherto, the League has had nothing whatever to do. Unless, he declared, the Tangier Zone were incorporated in the Spanish Zone of Morocco, Spain would withdraw from the League, and possibly also from her Moroccan Zone. Although the main ostensible reason for Spain's decision, announced yesterday, to "dissociate herself" from League activities is her inability to obtain a permanent Council seat, the Tangier question is clearly a contributory cause of this deplorable policy.

Last week the Spanish Government presented a Memorandum at London, Paris, and Rome, in which it demanded that the incorporation of the Tangier Zone in the Spanish Zone should be brought before a conference of "all the interested States," and that this conference should be opened at Geneva on the Wednesday of the present week, that is on the day before the opening of the League Council's session, at which the admission of Germany is the principal item on the agenda. To this Memorandum Italy returned a friendly reply. France and Great Britain, on the other hand, insisted that, if the Tangier question is raised at all, it shall be raised apart from, and after, the session of the League Council for the admission of Germany. France seems also to have insisted that any reconsideration of the Tangier question shall be confined to the three Powers immediately interested—i.e., to Spain, France, and Great Britain—and shall not be thrown open to the Powers interested in the wider and remoter sense—i.e., to the other signatories of the Algeciras Act, of which the most important, in present circumstances, would be Italy. Dissatisfaction on this score may have been the decisive factor in causing Spain to break with the League.

In a note last week we discussed the Spanish claim to the Tangier zone from the practical point of view; and we concluded that, while the present separation of the port of Tangier from its hinterland in the Spanish zone by a Customs barrier was an arrangement which would probably prove unworkable, we should feel grave misgivings—in the light of Spain's record in administering the Spanish zone—at the thought of handing over to uncontrolled Spanish administration a city which contains not merely a native Moroccan population, but an important Western colony, in which other nations besides the Spaniards are strongly represented. We suggested that a solution might be found by conferring on Spain a mandate for the administration of Tangier in the "C" category, which would make possible the territorial reintegration of the port with its hinterland, while at the same time providing some guarantee for the welfare of the non-Spanish inhabitants of the Tangier zone. On Monday last, Sir Austen Chamberlain stated in the House of Commons that Spain had actually asked for a mandate over Tangier as an alternative to the absolute incorporation of Tangier in the Spanish zone; and in declaring that the British Government could not agree to the last-mentioned alternative, Sir Austen implicitly left a door open for

consideration of the other—though not, of course, until the question of Germany's admission to the League has been settled. On the same day, however, the Spanish Foreign Minister denied that he had ever asked for a mandate, and defined the Spanish demands as a permanent seat on the League Council and the incorporation (*sans phrase*) of Tangier in the Spanish zone. This contradiction has still to be cleared up; but meanwhile, if we are right in thinking that a Spanish mandate for Tangier may offer the most practical settlement of this dangerous controversy, it is worth while looking at this question of a mandate in its juridical bearings.

How have the existing mandates been conferred upon their present holders? They have been conferred by the principal Allied Powers, who during the Great War had conquered the territories covered by these mandates from their former sovereigns; but the mandates did not become juridically valid until these former sovereigns had renounced their rights by signing and ratifying treaties of peace, and until the terms of the mandates had been approved by the Council of the League, to which the supervision over their administration had been entrusted. There seems no reason why—given the willingness of the League Council to assume the responsibility of supervision—a mandate over another territory should not be conferred directly, by the juridical sovereign of that territory, upon some other Power. In such a case, the sovereignty would still remain vested in the original sovereign (there having been no transfer of sovereignty as the result of conquest in war), but the juridical position would be essentially the same as in the case of the mandates conferred as a result of the Great War. There would still be four parties involved: The inhabitants of the mandated territory to be administered, the Government of the mandatory Power on whom the administration of the mandate would be conferred, the juridical sovereign (in this case, the original sovereign and not the sovereign by right of conquest confirmed by treaty) who would confer the mandate, and the League Council who would supervise the administration of the mandate.

In the case under consideration, therefore, a "C" mandate for the administration of the Tangier Zone would be conferred upon the Spanish Government by the juridical sovereign of the territory—that is by the Sultan of Morocco, acting on the initiative and with the approval of the French High Commissioner, representing the Power under whose protectorate the Sultan placed himself by the Franco-Moroccan Treaty of 1912. It may be added that there would be nothing novel in this procedure. It would be similar to the procedure by which the Sultan, having (so to speak) leased the protectorate over the whole of his dominions to France, empowered France to sub-let this protectorate to Spain in respect of part of his dominions. It is in virtue of the discretion thus conferred by the Sultan upon France that Spain holds the title to her present zone in Morocco—under a Franco-Spanish Agreement concluded after the Franco-Moroccan Treaty. If she obtained a mandate for the Tangier Zone, Spain would receive a somewhat better title to it than that under which she holds the protectorate over her present zone, since she would obtain the mandate from the Sultan, who owns the property, and not merely from France, his lessee. On the other hand, her freedom would be restricted in this important and salutary respect, that she would be accountable for the administration of the mandate to the League Council instead of being accountable to nobody—an irresponsible position which she has enjoyed in the zone under her protectorate, and which she has scarcely used to the best advantage.

Thus the suggestion of a Spanish mandate over Tangier seems both practically not inopportune and juridically not impossible, although French agreement does not, on the face of it, appear very likely. But a settlement of this nature has obviously been made more difficult by Spain's abstention from the League's deliberations. The best that we can now hope is that the League, without Spain, will redeem the March fiasco by admitting Germany—which now seems tolerably certain unless Spain reconsiders her withdrawal, and attends the Council Meeting to exercise her veto—and that, thereafter, when the Tangier problem comes up for negotiation, the temper of Spanish diplomacy may have cooled down.

THE ANGLO-INTERNATIONAL BANK.

THE fusion of the British Trade Corporation and the Anglo-Austrian Bank, announced this week, brings to an end the separate existence of two institutions, one of which was created during, and the other profoundly modified by, the war. Both have been important in the politics of post-war international finance, and the present step is of interest not merely from the point of view of the prospects of the new institution, but also because of the general principles raised by the careers of the two organisations. The British Trade Corporation was a company established by charter in 1917 for the purpose of using finance for the more vigorous development of British trade after the war. It was based on the belief that Germany had strengthened her competitive position as compared with ourselves by a much closer liaison between banking and industry and by the granting of long credits. The Government intended to give the corporation substantial support by using it as its agent in financial operations arising out of arrangements made with other Governments, and the charter made careful provision for retaining control in British hands.

The Anglo-Austrian Bank, on the other hand, was launched in a reconstructed form after the war for different reasons. The bank was in grave difficulties and unable to meet its obligations to the Bank of England, acting as agent for the Treasury, in respect of its pre-moratorium bills. Instead of driving the bank into liquidation, the Bank of England took the initiative in reconstructing it in the hope, on the one hand, of retrieving some of the Treasury losses, and, on the other, of creating an island of refuge and stability amid the swirling currents of the monetary chaos in Europe. The Bank of England accepted certificates of indebtedness for a large part of its claims, took preference and preferred ordinary shares in respect of the remainder, and put its nominees on the directorate.

Unfortunately, neither venture entirely fulfilled expectations. The British Trade Corporation launched out on the Continent in circumstances under which it was impossible to do successful business, and even at home it very quickly ran into the period of post-war slump. It has already reduced its capital of £2 millions by one-half, and on the present occasion makes yet a further reduction. The Anglo-Austrian Bank, in spite of the powerful backing of the Bank of England, has proved the impossibility of planting British banking ideas in a foreign and uncongenial soil and carrying them out with personnel trained in an entirely different school. The bank played a most important rôle in the history of Austrian reconstruction, in which country the flood of depreciation was first checked. It did this by creating a bridge between London and Vienna; by interesting British financial circles in Austria at a time when the outlook seemed entirely black; and by giving Austria the assurance that powerful influences meant to help her. But this beneficial result ceased when the Austrian stabilisation plan was carried out, and the connection with the Bank of England began to have positive disadvantages. Only very special circumstances would justify the connection of a great central banking institution like the Bank of England with a particular enterprise which must necessarily be in competition with other financial houses, both at home and abroad; and the situation laid the Bank Court open to the charge—obviously quite unfounded in fact, but readily believed in Austria—that its policy in Central Europe, and that which it recommended to other central banks, was not disinterested. It was generally considered that the transfer of the Austrian branches of the Anglo-Austrian to the Credit-Anstalt, which was arranged in the spring, and of its Italian branches, was a first step towards enabling the Bank of England to disengage itself from its connection with the Anglo-Austrian Bank. The latter has been handicapped at every turn by the difficulties which have beset all Austrian banks—redundant staffs, burdens and regulations in regard to pensions, unwieldy boards of management, onerous turnover and other taxes, and, from the outset, the special difficulty of doing business in a country with a depreciating exchange.

Under the present plan of fusion, a new bank will be established in London under the name of the Anglo-International Bank, Limited. It will have a nominal

capital of £2,000,000 in ordinary shares of £1 each, and a paid-up capital of £1,960,000, of which £1,360,000 represents the consideration to the vendor companies, while £600,000 will consist of entirely fresh capital, the issue of which for cash has already been arranged at a premium of £400,000. This million of new money is presumably being found by the Bank of England.

Of the 1,360,000 shares of the new bank to be issued to the vendor companies, 610,000 will be issued to the shareholders of the Anglo-Austrian Bank, Limited, and by virtue of a provisional agreement between the principal preference shareholders and the holders of the preferred ordinary shares and certificates of indebtedness, the ordinary shareholders of the Anglo-Austrian Bank, Limited, will be enabled to receive one share in the new bank in exchange for every four shares of their present holding. Thus, the ordinary shares of the Anglo-Austrian are written down roughly in accordance with their market value, while the Bank of England has written off a considerable part of its claims. A further 750,000 shares are being reserved for the shareholders of the British Trade Corporation, who are being summoned to an extraordinary general meeting, on September 8, 1926, in order to ratify the arrangement. In this manner the different series of shares of the Anglo-Austrian Bank and the British Trade Corporation will be unified into one single type of ordinary share in the Anglo-International Bank, Limited.

Among others the following have agreed to join the board:—General the Hon. Sir Herbert A. Lawrence, G.C.B.; the Right Hon. Baron Faringdon, C.H.; Mr P. Bark; Mr Julian Day, M.C.; Sir Harry Goschen, K.B.E.; Sir Gordon Nairne, Bart.; and Mr M. S. Spencer-Smith, D.S.O., M.C. The new bank will be established in London, and will operate on the Continent through the medium of first-class local banks in pursuance of the policy of the Anglo-Austrian Bank in disposing of its foreign branches against important holdings in Continental banks.

The objection to the connection of the Bank of England with an institution which will compete with existing accepting houses and with other financial institutions remains valid. But the Bank's action was needed to give a fresh start to two institutions in which both the Government and itself have been concerned. With reduced capital, with a restricted objective, and with the prospect of steady recovery in Central Europe, the new bank should have fair prospects of building up a profitable business, which should before very long enable it to stand entirely on its own feet as a purely private institution. It can hardly, however, be expected to fulfil the high aim with which the British Trade Corporation was launched, namely, the setting of a new tradition in the financing of British industry and trade. That experiment has definitely failed.

FARMING BY DISTRIBUTIVE CO-OPERATIVE SOCIETIES.

(FROM A CORRESPONDENT.)

FARMING by industrial co-operative societies composed of workers in urban areas operating in the interests of consumers has not led to the revival of agricultural prosperity foreshadowed by the late Earl Winchelsea and those who advocated the linking of the landlord, farmer and labourer in a chain of interests. The experience of the last decade has shown that something more is needed for the success of farming by industrial societies than the possession of a market of known dimensions. For a retail co-operative society, with milk, grocery, butchery and greengrocery departments, knows exactly its likely requirements before it acquires a farm. Therefore, in theory, it should be able to start with excellent prospects. But only in a few cases have such hopes been realised. In 1917 the number of co-operative societies carrying on farming operations was 105. They rented or owned 24,476 acres. The amount of capital invested was £633,526, and after paying £23,120 interest they showed a net profit of £32,646. During the four following years 76 more

societies went in for farming, making the total acreage 73,438, and raising the capital involved to £3,229,698. The interest charges were £127,748, and instead of a profit there was an aggregate deficit in 1921 of £362,488. This had to be made good from the other departments of the societies. Had the farms been carried on as separate ventures the shareholders would have been considerable losers; but as the farms were only departments in the general business their losses were set against the profits in other sections.

Such were the results in 1921. Subsequent investigation shows that, although there are now only 157 societies farming, the acreage remains substantially the same, as a few societies have added to their holdings, mainly for the production of milk, while 24 have sold their farms and are keeping to their narrower functions as retail distributors of the daily requirements of their members. The capital now involved is about three millions, and the losses since 1921 have been well over a million. Looking at the individual results, inquiry finds that the losses have been greatest where much of the capital was in the form of cattle, the prices of which fell heavily during 1921-22. There is no doubt that when retail societies purchase farms the general policy has been to recondition the farm buildings on modern lines, with the result that heavy overhead charges have been incurred. Moreover, the co-operative society cannot have the advantage of the family help that proves useful to the small farmer when emergency demands assistance. It works along set lines, and although farm bailiffs are employed, they have not the discretionary and, often, the disciplinary powers that would be exercised by similar people employed by the individual owner of a farm. And in many cases the land acquired has not been suitable or of a remunerative size for the operations intended. Many of the farms have been bought without reference to expert judgment—for in farming matters the retail co-operative societies have been like sheep without a shepherd. And the results suggest that they have gone grievously astray.

At length the co-operative movement has awakened to the necessity of restraining further adventures into agriculture. It has made a special inquiry into the conditions of farming by societies, and with the aid of the principals of the agricultural departments of some of the Universities and the representatives of the Edinburgh, Plymouth and Tamworth societies has made a series of recommendations concerning the financial arrangements which are designed to secure success in the future. Hitherto the accounting periods have corresponded with the quarterly or half-yearly accounts of the societies. It is now proposed that these shall be published annually, and that the farms and stock be valued by qualified valuers, while a uniform method of depreciation is suggested on the basis of 2½ per cent. on the original value of buildings, of 10 per cent. on the original value of machinery, and that a reasonable proportion of any surplus should be applied to reducing the book value of the land. With regard to the interest charged on the nominal value of land, buildings, &c., this is to be at a rate a little higher than the average rate paid by the societies on share and loan capital. This will be equivalent to, roughly, 4½ per cent.

As regards general policy for future development, small societies are advised not to engage singly in farming, and all should, before entering upon farming, decide the real purpose of their operations, which should be, primarily, the supply of the needs of their own trading departments. In view of the proved weakness of committee control, it is urged that managers of farms should be allowed a large measure of freedom in their work, and that better co-ordination should be arrived at between the existing butchery, milk and other trading sections and those responsible for the work of the farms. Unfortunately many of the resolutions which are endorsed by co-operative organisations seem difficult to put into practice—owing to the influence of tradition and custom. But if the retail societies that have grown weary of making losses will shape themselves to the views put forward as the result of a year's serious investigation better returns should be recorded in the future. During the boom that followed the Armistice there was a rush to secure farms, start new works, and venture into fresh

fields of uncertain harvest. Experience has checked that movement, and experience should help in bringing some of the farms to a profitable issue. But they must be recognised as specialised industries to which the regulations of ordinary shopkeeping do not apply. Farming, the oldest of our industries, is not to be run on the lines of the multiple shop—nor are shopkeepers, as distributors, necessarily the most efficient producers. There are limits to the capacity of any class of persons to do the work of others.

TEA PLANTATION COMPANIES IN 1925.

The tea plantation industry, like all other branches of agriculture, is subject to constant change of fortune, being dependent to a large extent upon vagaries of climatic conditions, labour supply, and incidentally upon the caprices of the public. In spite of these ever-recurring difficulties, however, the industry has been able to record a fair measure of progress in recent years, a fact which is the more gratifying, as its development among Western peoples is mainly due to British enterprise.

The progress made in the industry can be seen from the following table of tea imports and re-exports:—

IMPORTS AND EXPORTS OF TEA.						
From—	1913.	1924.	1925.	1913.	1924.	1925.
India	Lbs. 203,459,657	Lbs. 294,511,709	Lbs. 291,027,166	£ 7,839,223	£ 24,269,175	£ 22,222,644
Ceylon	110,936,427	130,462,043	132,438,092	4,179,462	10,636,203	11,098,748
China	15,272,548	24,251,184	10,390,466	613,147	1,535,914	727,625
Dutch Indies	32,052,717	57,286,636	54,117,564	1,072,553	3,741,342	3,275,460
Other countries	2,322,115	3,987,806	3,024,274	78,558	266,378	215,863
	365,043,464	510,498,777	491,057,562	13,782,905	40,448,996	37,538,338
Re-exports	57,555,651	75,878,080	88,585,864	2,808,940	6,947,619	7,854,202

As will be observed, total imports were lower in 1925 than in 1924, although, curiously enough, re-exports were higher. Ceylon is the only producer whose 1925 figures are higher than those for the preceding year. The China figures may reflect the decline in the popularity of this grade of leaf, or alternatively the generally unsettled state of the country.

The following table shows crops for the past three years and financial results for 1920 and the past four years of 13 selected undertakings:—

	Crops.			Net Losses.	Net Profits.	Net Profits.	Net Profits.	Net Profits.
	1923.	1924.	1925.		1920.	1921.	1922.	1923.

Lungia	2,636,351	2,677,511	2,773,003	73,112	59,714	67,933	68,226	60,566
Nedem	5,290,069	5,081,572	4,770,671	21,272	89,767	150,802	138,470	77,002
Yatiantota	551,391	458,970	353,169	30,559	8,191	18,098	20,755	63,653

* Net profit.

Only four of the 13 companies secured larger crops in 1925 than in the previous 12 months. This undoubtedly was responsible, to some extent, for the smaller net profits shown by most of the concerns in the foregoing table. Results were also adversely affected by higher costs. According to the annual analytical chart just issued by the Indian Tea Share Exchange the average price realised for the period under review was 1s 6½d per lb, against 1s 7d; costs were 1s 0½d, compared with 11½d; and the profit per lb was 6½d, in contrast to 7½d. This chart deals with 65 representative Indian companies having an aggregate issued capital of £17 millions, and yielding a crop of nearly 170 million lbs. Several companies were able to earn more last year than in 1924, namely, the Yatiantota, where the rise was from £20,755 to £53,053; the Eastern Produce, where

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
67 Milk Street.

BUENOS AYRES: PEDRO GOMEZ MENA Bldg.
99 Florida.

Foreign exchange orders executed in the New York market for banking correspondents abroad. Commercial banking business of all descriptions transacted.

Special Representative:
24, OLD BROAD STREET, LONDON.

it was from £180,529 to £250,328; and the Ceylon Plantations, from £222,476 to £332,153. The East India and Ceylon, and Dooars also, presented slightly better figures. With the exception of the Dooars, however, all these undertakings also cultivate rubber, and it is probable that the better prices secured for that product helped the profit figures.

Our next table shows the average prices of tea crops in 1924 and 1925, together with the total available balance and how it was utilised:—

		Average Price of Crops per lb.	1924.	1925.	Distribution of Available Balance.			
					Pref. Div.	Ord. Div.	Reserve &c.	Carry Forward
Amal. Estates	Nov. 30, '24	d 19-76	d 19-23	£ 384,853	£ 21,000	£ 167,422	£ 128,499	£ 67,932

The Ceylon Plantations secured the best price for its crop, while the Nedem probably was the least fortunate in this respect. In most cases, it will be seen, allocations to reserve were reduced during 1925. Generally speaking, however, they are still on a fairly substantial scale, especially in the cases of the Ceylon Plantations, which reserved £90,000, Eastern Produce, Jokai, and Consolidated Tea and Lands. On reference to the Indian Tea Share Exchange annual chart, referred to above, we find that the amount distributed in dividends by the 65 companies analysed was £3,680,000, while £760,000 was added to reserves and carry-forward.

The following table shows the principal balance-sheet items during the past two years:—

Name.	Share Capital & Res.	Creditors.	Properties.	Stocks.	Cash.	Investments.	Debtors.

The Chubwa Tea Company's balance-sheet for November 30, 1925, shows cash at £14,219, against £59,484 in preceding balance-sheet, but investments are at £60,139, against nothing in preceding year; these investments are specified in the balance-sheet as £25,139 in 5 per cent. War Loan and £35,000 as amount on deposit at the bank. During the year several capital changes were made. The Lungla converted a further £6,400 of the debentures into ordinary shares, making a total of £72,900 converted to date and leaving £1,600 outstanding. This item should soon be eliminated altogether. The Doors brought its issued capital up from £348,000 to £402,600 by the offer of 54,600 ordinary £1 shares, while the Consolidated Tea and Lands issued 60,000 ordinary £10 shares. The accounts show that properties are practically unchanged, while stocks and investments are also on approximately the 1924 level. In the majority of cases the cash holding is lower. Creditors exhibit no general definite tendency, while not much change has occurred in debtors.

Our final table shows a comparison of dividends and prices and present yields:—

Name.	Prices of 1925.		Dividends.		Price End Aug. 1925.	Price End Aug. 1926.	Present Yield.
	Highest.	Lowest.	1924.	1925.			
Amalgamated (£10).....	48	36½	35	35	38	43½	8 0 9

Cons. Tea and Lands (£10).....	41	27	37½	30	29	33	9 8 3
Doors (£1).....	4½	3½	42½	40	3½	4½	9 8 3
Jhansie (£1).....	4½	3½	45	40	3½	4½	8 17 9
Jokal (£1).....	5	3½	45	37½	3½	4½	8 4 3
Lungla (Sylhet) (£1).....	2½	1½	20	12	1½	1½	7 7 9
Nedeen (£1).....	4½	3	40	20	2½	2½	6 16 3

Yields on even the best tea shares are high, which circumstance can only be ascribed to the speculative nature of the industry's fortunes. The tea share market on the Stock Exchange is, too, sometimes a difficult one to deal in, but with the splitting of shares and greater interest taken in them by an ever-increasing circle of British investors, facilities for buying and selling have improved in the last few years. Competent observers express the opinion that we shall shortly see a revival of activity in this section. The belief is founded on the knowledge that the Indian monsoon has been favourable and that satisfactory prices are being obtained at this season's Indian sales.

THE GRAND TRUNK PACIFIC SETTLEMENT.

THE long controversy between the Canadian National Railways and the holders of Grand Trunk Pacific 4 per cent. debenture stock is likely to be brought to an end by the compromise terms which were made public on Thursday. These terms have been reached through the good offices of an advisory committee, consisting of Mr McKenna, Sir George May, Mr Peacock, and Mr Wilkinson, which has acted as a mediating body between the company and the stockholders' committee. The company's offer will have to be ratified by the Canadian Parliament, and possibly may also require the approval of the Canadian Exchequer Court, while on the other side it must receive the assent of stockholders representing 75 per cent. of the stock (£7,176,801), to which the scheme applies. If these sanctions are obtained, and the scheme goes through, there will be removed a long-standing cause of irritation and bad feeling between the British investing public on the one hand and the Canadian Government on the other, which has tended to tarnish the repute of Canadian securities on this side. The terms of the scheme naturally do not fulfil the expectations of the holders, who are asked to accept a 50 per cent. cut in the current rate of interest in return for a Government guarantee and the certainty of redemption. They are offered in exchange for each £100 of Grand Trunk Pacific 4 per cent. debenture stock £100 of Canadian National Railway Company's debenture stock bearing interest at the rate of £2 per cent. per annum, payable half-yearly and redeemable by means of a cumulative sinking fund of £2 per cent. per annum, to be applied yearly. The payment of the principal, interest, and application of the instalments of the

sinking fund are to be unconditionally guaranteed by the Dominion of Canada. The yearly sinking fund will be applied as follows:—During the first ten years the amount available will be applied in the purchase of stock (by tender only) at not less than £60 per £100 of stock, including the current half-year's interest. If the amount of stock tendered is not sufficient to exhaust the moneys available, the balance will be applied in redeeming stock at par by drawings. After the ten years have elapsed, the sinking fund moneys, as they become available, will be applied in redeeming stock at par by drawings. Thus, the plan converts a perpetual security with an uncertain rate of interest into one with a low rate of interest, but carrying a certainty of capital appreciation. The arrears of interest, amounting to £24 per cent., are to be wiped out.

Whether the stockholders could get more by expensive litigation, they must decide for themselves. The stockholders' committee admit that they might do so; but point to the advantages of a security independent of railway earnings instead of one not only dependent on such earnings, but beset by all the controversies arising out of the guarantee agreement of 1906. Here lies the crux of the question. At present the Grand Trunk Pacific line itself does not earn any portion of the interest, and is unlikely to do so for a very long time to come, and the expectations of the holders, therefore, entirely depend on the guarantee of the Grand Trunk Railway Company, which guarantee, however, only arises in connection with the earnings of each particular year. Those of our readers who have followed the controversy will remember that, on the absorption of these companies by the Canadian National Railways, the Canadian Government guaranteed interest on the 4 per cent. Grand Trunk guaranteed stock, which, it is claimed, was junior to the Pacific debentures. This may have been unreasonable discrimination, or be held to establish a strong moral claim for a similar guarantee to the latter. But the committee appear to have been convinced that it did not constitute a valid legal claim either against the Government or against the holders of the G.T. guaranteed stock. It has also been urged that in the difficult task of assigning earnings to different parts of the combine, charges have been made against Grand Trunk earnings which ought not to have been met until after the Pacific debenture interest had been paid. On this point counsel have advised the Canadian National Railways and the stockholders respectively in opposite senses, and the outcome of litigation on the point is very dubious. The National Railways, on the other hand, reject all claim for arrears of interest; they hold that the 4 per cent. which was paid in 1924 (the only payment since amalgamation) was paid under a misconception of the legal position, and that the full interest would only be paid in years of exceptional prosperity.

The scheme does not strike us as over-generous. As Sir Henry Thornton has said, there may well be important imperial interests involved, and Canada's credit is certainly a matter of first-class importance to the whole Empire. It is true that in the first years the Canadian Railway budget will be charged with the full 4 per cent. owing to the sinking fund provisions, but this will rapidly dwindle, and the whole liability be wiped out in probably considerably less than 40 years. It is, however, appreciably more than half a loaf, and the stockholders are bound to be influenced by the opinion, not only of their own committee, but also of the advisory committee, both of which seem to be satisfied that the offer is the best obtainable.

THE FINANCES OF DANZIG.

(BY A CORRESPONDENT.)

It is expected that the present session of the League of Nations will grant authority for the issue of a new loan for the Free City of Danzig, in accordance with the recommendations made by the Financial Committee of the League at a Conference in London in July last. The following were the recommendations:—

(1) That the Danzig Senate should prepare and present to the Danzig Parliament a supplementary Budget, in which all expenses should be reduced by the end of August, and it would

also be considered at the next meeting of the Finance Committee in September.

(2) Proposals to increase the revenue from Customs. Danzig and Poland should come to the following agreement, beginning from September 1st. Poland should guarantee for a period of two years a minimum of 14 million Danzig gulden and a maximum of 20 million Danzig gulden, and between the minimum and the maximum the share of Danzig in the Customs revenue calculated on the basis of the now existing agreement, i.e., 7.8 per cent. of the whole Customs revenue collected within the Polish-Danzig Customs Union will be given to Danzig; which means that Danzig will be independent of the fluctuations of the Polish zloty. (Both delegations declared themselves prepared to submit the recommendations to their Governments. Further negotiations will be held in Danzig.)

(3) If Nos. 1 and 2 have been carried out the Finance Committee will be prepared at the September meeting to recommend a loan.

The financial affairs of Danzig had been drifting into an unhealthy state for some time. Danzig is a political and economic anomaly, and its fortunes and finances depend on conditions largely beyond its control.

Danzig stabilised its currency, but cannot maintain a financial equilibrium. Consequently, in July last year, the High Commissioner and the Senate of Danzig asked the League of Nations to study the financial situation. M. Janssen, a former Finance Minister of Belgium, ably assisted by Mr Jacobsson, carried out the inquiry, and it was on their report that the Finance Committee based the recommendations quoted above.

One factor which upsets Danzig's budgetary calculations is that, while its own currency, the gulden, is stabilised at 25 to the pound sterling, the Polish zloty is depreciated currency which is always fluctuating. The Financial Committee found that the depreciation of the zloty and Customs difficulties were two chief sources of loss of trade and of revenue. There are close commercial and official associations between Poland and Danzig. When Danzig receives revenue in zloty and has to pay in gulden, it is always in a state of anxiety. Take the revenue from Customs. Danzig is within the Polish Customs Union, and receives at present 7.8 per cent. of the total Customs revenue collected by Poland. In the Budget for 1925-6 Customs receipts were estimated at 19,689,050 gulden, and for 1926-7 at 16,600,000 gulden. A reduction was estimated for owing to the trade war between Poland and Germany and the import restrictions imposed by Poland. The receipts for this year are now estimated at only 8,600,000, and the Customs administration cost Poland 6,600,000, so that the net receipts of about 2,000,000 gulden leaves a heavy deficit.

The Polish policy of restricting imports hits Poland as well as Danzig. The economic theory of the Poles is that the more the exports of a country exceed its imports the richer is that country. Hence, there is little agricultural or industrial development in Poland, and public works are not undertaken except with borrowed money. Danzig is the victim of Poland's economic heresies. Customs receipts decline while exports increase, but exports, which just now consist largely of coal, bring no profit to Danzig. Coal is sold direct by firms in Upper Silesia to foreign purchasers, and the extra labour required to handle the increased export of coal in Danzig Harbour is only 180 men. The following figures show the comparative position of recent exports and imports compared with 1913:—

Monthly Average.	Imports by Sea.	Exports by Sea.	Ships Cleared for Sea Traffic.
	Tons.	Tons.	Tonnage.
1913	96,000	94,000	78,000
Jan., 1925	60,000	145,000	129,000
Dec., "	50,000	321,000	220,000
Jan., 1926	35,000	331,000	222,000
Feb., "	30,000	313,000	184,000
Mar., "	54,000	407,000	263,000
April, "	35,000	405,000	260,000

Exports since April have increased enormously. The June coal tonnage was 14,000,000, compared with 7,000,000 in May. The July figures exceed the June total. The majority of the ships enter the harbour in ballast. They take wealth from the country, but bring nothing in exchange. In spite of this adverse economic factor, Danzig has reduced the discount rate from 10 per cent. in January, 1925, to 6½ per cent. in July, 1926, while the

cost of living has fallen from an average of 140, or 40 points above 1913, in 1925 to an average of 133 in 1926. On the other hand, the unemployed, who averaged 2,000 in 1924, rose to 8,000 in April, 1925, and to 21,000 in February, 1926, and are now 15,000, which is far too heavy a proportion of the total working population of 70,000, although not higher than the present abnormal rate in some German seaports.

Danzig carries special burdens which adds to its financial difficulties. It has too many officials, and they are paid too high salaries. While the Danzig authorities have been reducing the number of officials, the Financial Committee considers that the axe should be further applied. As regards salaries, it is pointed out that the little State of Danzig, where there is no room for advancement, would not get capable officials unless they paid higher salaries than in Germany. Local government is altogether an expensive affair in Danzig. Over one-third of the population depend upon the State for a living. The number includes 15,000 unemployed, who will increase during the winter, 9,1000 officials, former German officials and war invalids, persons in receipt of invalidity pensions, and others who depend on public assistance. Sixty per cent. of the pensions to war invalids is paid by Germany. The percentage of industrial workers is less than before the war. Agricultural, the liberal professional and public services, and all classes of employed have decreased, except those in trade, transport, and hotels. Prior to the war the trade in Danzig was stimulated by shipbuilding and military works for the German Government. There are now few local industries.

The equilibrium of the Budget, to which the Finance Committee of the League gave special attention, is upset owing to the large amount of direct taxes always outstanding, and by the fact that the officials' salaries are paid in advance. For the present financial year the advances in respect of salaries amount to 3,800,000 gulden, and for pensions 1,100,000 gulden. There have also been heavy advances to the Municipality of Danzig and to the gas and electricity undertakings. The result is that the Government is continually borrowing.

The total expenditure of the Free City amounts to considerably more than 100,000,000 gulden. The largest individual items are for pensions, science, art, and education, upon which 14½ millions are spent. The police expenditure amounts to nearly 8,000,000 gulden. It is considered necessary in Danzig to have a strong police force, as the police constitute a reserve to fall back upon in case of emergency, as the Free City has no army. There are other reasons for exceptional administrative expenditure. Among other things, Customs officials are utilised for the supervision of the frontier, and Danzig has an unfavourable frontier line. About two-thirds of the goods handled by the Customs administration is in transit for Poland. Administration is always relatively expensive in a small community which has a certain status to keep up and interests to watch and protect.

The proceeds of credit operations amounted to 6,690,000 gulden at the end of March last, and represents an initial charge prior to whatever deficit may arise in the financial year. It was hoped that the situation would have been somewhat relieved this year by the introduction of a tobacco monopoly, estimated to yield 5,000,000 gulden. The monopoly, however, has not been established. That fact, together with the reduction in the Customs and Excise receipts, showed a total cash deficit at the end of June last of about 7,500,000 gulden, part of

which, about 5,000,000, has been covered by Treasury bills discounted and loans. The short term credits outstanding on July 1st last amounted to nearly 12,000,000 gulden. It is estimated that the total deficit for the whole of the present financial year will amount to nearly 17,000,000 gulden, which includes 8,000,000 gulden for loss of Customs duties, 5,000,000 loss of receipts from tobacco monopoly, and 3,000,000 increase for unemployment. It is highly probable that the deficit may still be greater, particularly if unemployment increases.

The people of Danzig are always being reminded that the Free City is, to a large extent, an economic appanage of Poland. The issue of the new loan required to replace short expensive advances and develop public services requires the consent of the Polish Government.

Notes of the Week.

The Composition of the League Council.—The Committee appointed, after the fiasco of last March, to devise some scheme of composition for the Council which might reconcile conflicting claims and views, met again this week on the eve of the meeting of the Seventh Assembly. Last May, it will be remembered, Lord Cecil obtained support in this Committee for a scheme under which the number of non-permanent members of the Council should be increased from six to nine, three of them should retire every year (the period of tenure being three years), and three out of the nine should be made re-eligible, by a two-thirds vote in the Assembly, for a second three years' period. It was hoped that this possibility of holding a seat for six years (which would not, of course, exclude the possibility of being elected thereafter for a second six years, after a three years' interval), might satisfy the "middle-class" States like Spain, Brazil, and Poland. The scheme would not, it is true, have placed them on an equality with the Great Powers holding permanent seats; but it would still have opened to them the possibility of obtaining a distinction which would differentiate them from the mere rank and file. This scheme has not been as warmly welcomed by the Powers for whom it was designed as its supporters hoped, for Brazil has given notice of withdrawal from the League, and Spain is hesitating whether to follow suit or to announce that she disinterests herself from the League's proceedings. The plan, after much stormy discussion, has been amended in such a way as to make it possible for the Assembly this year, by a two-thirds majority, to confer on three members the quality of re-eligibility, so that Poland—and Spain if she continues to participate—may be at once put into the medium class, though the vote would not, of course, guarantee re-election. The plan of grading Powers has been strongly criticised by Sweden, as representing the smaller Powers, but for the sake of peace, the scheme has been approved by the Committee, with Spain abstaining and Brazil absent. The plan is assured of the Council's approval, and it is unlikely that in view of the important representation of small States in the Council, that the Assembly will upset its handiwork and reject the recommendation of the Council. Germany, at all events, is sufficiently satisfied with the proceedings of the Council to have appointed her delegation, and made her arrangements for proceeding to Geneva. Unless the unexpected happens, Germany should be a member of the League before the end of next week.

The Trade Union Congress.—If there is any excitement at the Trade Union Congress which opens at Bournemouth on Monday, writes a Labour correspondent, it will be very much against the wish, and contrary to all the plans, of the General Council. Their report is a singular document, inasmuch as the little incident of the General Strike is dismissed in a couple of curt sentences, while pages are devoted to an elaborate ruling given apropos of a gasworkers' demarcation dispute. The motive of this effort to stage Hamlet with Hamlet left out is plain enough. The General Council is still trying to stand by the miners. It is not that it has nothing to say for itself. The report prepared for the conference of executives of

June 25th, and postponed at the miners' request, showed that the Council had a very good case; and incidents like Mr Thomas's triumph at the railwaymen's conference at Weymouth suggest that the support of the great mass of the organised workers is behind it. The report of the General Council, in which it is stated that "the strike was terminated for one sufficient reason only—namely, that in view of the attitude of the Miners' Federation its continuance would have rendered its purpose futile," was held up out of loyalty to the Miners' Federation. It was, however, published by an individual member of the Council, Mr John Bromley, whose conversion to a working alliance with Mr Thomas is one of the incidental curiosities of the whole affair. The passage of time since it was written has progressively justified its severest strictures on the leadership of the miners. Consideration for the miners, therefore, is the sole reason for silence. Whether such silence would be, if secured, in the lasting interest of the industrial movement is dubious; still more dubious is the power of any chairman to restrain the speech of the very vocal section of the Trade Union movement which, with far less loyalty and sense of responsibility than the General Council's, is panting to "go for" it. The section which calls itself the "minority movement" is to-day more strongly represented in the personnel of the industrial than of the political side of labour organisation. Other considerations apart, this section believes in "trouble" for its own sake. The fact that Mr. Thomas will not be back from Canada till the Conference is over will take much of the spice out of attacks. Sir W. Joynson-Hicks, by refusing a passport to M. Tomsy, who attended the Conference two years ago, and who, this time, might be expected to distribute diatribes impartially to Right and Left alike, has removed, in advance, another dramatic moment. The Home Secretary has kindly provided the Council with a convenient means of obliterating international T.U. acerbities in unanimous condemnation of himself. Therefore, on all grounds the Conference is likely to interest itself more in the future, both of the movement as a whole and of the Miners' Federation, than in the past.

World's Wheat Position.—The Ministry of Agriculture has issued a preliminary review of the wheat position, which reveals that while the European "bumper" harvests of last year will not be repeated, and increased imports will be required during the coming season, North American crops are, taken as a whole, markedly heavier than a year ago, and the extra supplies should therefore be forthcoming. In England and Wales a good crop is being reaped, the total, on an area nearly 100,000 acres greater than last year, being estimated at approximately 28,600,000 cwt, as compared with 27,200,000 cwt in 1925. Estimates for Italy and Spain show a growth above the average, though less than in 1925, and unofficial calculations for France and Germany indicate the probability of increased imports for these countries. Rumania reports a good crop, amounting altogether to 59,000,000 cwt, or 3,000,000 cwt more than in 1925, and other Danubian countries should also contribute some exports. Sanguine estimates of the Russian crops have not been borne out, and it seems impossible to say at present whether that country will ship more than a negligible amount. The total United States crop may be estimated at 449,000,000 cwt, which is 90,000,000 cwt better than last year. For Canada, the latest official return gives the total as 170,000,000 cwts, considerable deterioration being reported during the past month. This figure is 50,000,000 below last year's very good crop. The latest bulletin of the International Institute of Agriculture summarises the situation to date in the northern hemisphere as follows (in millions of cwt):—

	Average, 1920-24.	1925.	1926.
Europe (15 countries)	328	416	388
Canada and the United States..	630	578	620
Asia (four countries)	205	200	195
North Africa (four countries) ..	46	56	52
Total (25 countries)	1,209	1,250	1,255

Although the data are still provisional and incomplete, they would appear to indicate that the question whether

total supplies will ultimately prove abundant or the reverse depends upon whether the next harvests in the southern hemisphere are largely over or under average. Of them, all that can be said at present is that prospects of the young crop in Australia are very satisfactory, and that in Argentina, while the weather has not been very favourable recently, it has now taken a turn for the better.

The French in Syria.—The dissatisfaction of the French Government with the administration of the French mandate in Syria has again declared itself in a change of personnel. General Billotte is to succeed General Gamelin as commander-in-chief, while Monsieur de Jouvenel, the distinguished publicist and politician, who has held the High Commissionership for the best part of a year, is handing over his office to an experienced civil servant, Monsieur Ponsot. It is a good thing that the policy of appointing a civil High Commissioner, which was tardily inaugurated when Monsieur de Jouvenel was offered the post, has not been abandoned; yet south-eastern Syria seems to have fallen into a chronic condition of guerilla warfare, which finds its parallels in the condition of Macedonia under the Ottoman régime before the first Balkan War, or in that of Southern Ireland during the darkest days before the establishment of the Free State. The French hold the principal towns by sheer military force, and are able to keep open, or rather perpetually to re-open, the principal lines of communication between them; but the open country is in the hands of the Druse and Muslim Nationalist bands, which are not intimidated by French punitive measures, and show no signs of giving in. The truth is that the brunt of the struggle falls neither upon the foreign mandatory Power nor upon its native opponents, but upon the mass of the Syrian people in the disturbed area. The unfortunate villagers are alternately terrorised by the bands into aiding and abetting them, and savagely punished by the French for acts of disloyalty committed under duress. It is the old story of the Macedonian villagers pounded between the hammer of the Turks and the anvil of the Komitajys. In the present case, however, the scandal is far greater, since the party responsible for this deplorable state of affairs is not an anachronistic Oriental Monarchy, but one of the Great Powers of the West acting under a mandate from the League of Nations. In Syria the mandatory of the League has brought not peace but the sword, and has embittered religious strife (one of the inherited handicaps of Syria, which it was the mandatory's business to remove) by arming Christian volunteers to make head against Muslim insurgents who were becoming more than a match for the French regular forces. What can be done? We do not draw attention to these facts out of any malice towards France. The ill-success of the French mandate in Syria adds to the difficulty of administering the British mandates in the adjoining countries of Palestine and Iraq, so that mere self-interest makes Great Britain eager to see the French position retrieved. It is high time, however, for the French Government and the Permanent Mandates Commission of the League to put their heads together and not to shrink even from drastic new departures. Great Britain, on her own initiative, remodelled her whole relation to Iraq after the great revolt of 1920. The results of this change have been happy, and they might well provide a precedent for a new régime in Syria. There is an urgent need for some régime there, which will not only put an end to the present miseries of the Syrian people, but will prevent this country from being, as it is at present, a danger to the whole Middle East.

Our Index Number.—Our Index Number of wholesale commodity prices rose during August by 104 points to 4,149, which is the highest level recorded since the end of January of this year. The figure is still, however, 301 points below that of the end of August, 1925. The percentage advance over the basis of 1901-5 is now 88.6, as compared with 83.9 at the end of July and 102.3 a year

BANK OF ATHENS

Head Office: ATHENS.

Paid-up Capital

Drs. 72,000,000

With Offices in all the principal towns in Greece, Egypt, Cyprus, Crete, and Albania, the Bank extends facilities for Export and Import Trade between Great Britain and the Near East generally.

Enquiries invited.

NEW YORK: BANK OF ATHENS TRUST COMPANY, 25, PINE STREET.

BOSTON: ATHENS BANKERS CORPORATION, 15, KNEELAND STREET.

London: 22, Fenchurch St., E.C.3.

ago. Recent movements in the total in the various groups may be traced in the following table:—

Aug., "	914	685	954	849	737	4149	188.6

It will be seen that in four of the five groups the change during August was of comparatively slight importance. The major part of last month's rise was contributed by the mineral group. Tin and copper were slightly dearer on balance, but the big item is coal. We have in our August calculation included quotations for foreign imported coal, and the consequent advance in coal is responsible for 90 out of the 104 points advance in the total. It will be seen therefore that the rise is mainly due to circumstances which arise directly out of the coal dispute, and will gradually disappear when the mines have been reopened. In the cereals and meat group, wheat, both imported and foreign, and oats are substantially lower, but barley has advanced very sharply, and potatoes are a little dearer. Among subsidiary food the principal point of interest is a hardening in tea quotations. In the Textile group, cotton and wool show little movement, but hemp and jute advanced. Earlier estimates of the American cotton crop have been appreciably revised in view of the lateness of the crop and losses from insect damage. In the miscellaneous group there is little worthy of note. Rubber is a shade easier on the month, and there has been a considerable fall in linseed. The August advance brings wholesale prices up to a level 61.7 per cent. above that

of July, 1914, as compared with 57.7 per cent. at the end of the previous month. How the various groups stand in relation to pre-war price levels may be seen from the following table:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Mar., 1920	261	260	484	269	309	325.6
Dec., "	233	229	209	261	230	230.9
Sept., 1922	151	194	181	150	148	163.3
Dec., 1923	148	231	225	167	136	178.6

Oct., "	153	199	195	161	143	168.7
Nov., "	159	200	191	159	142	168.5
Dec., "	162	193	182	158	141	165.8
Jan., 1926	154	197	181	156	137	163.3
Feb., "	153	199	172	158	138	161.4
Mar., "	152	196	167	156	140	159.4
April, "	154	193	162	154	139	158.0
May, "	153	194	159	155	139	157.1
June, "	154	194	156	158	138	157.3
July, "	157	193	153	164	135	157.7
Aug., "	158	195	155	183	133	161.7

At this date last year the increase over the pre-war level was 73.5 per cent., cereals and meat standing at 164, other food at 204, textiles at 200, minerals at 161, and miscellaneous at 144.

Index of Activity in the Electrical Industry.—Owing to circumstances arising out of the present abnormal conditions in British industry, it was not found possible to obtain the data for our index of orders received in the electrical manufacturing trades in time to permit of its inclusion in our Monthly Supplement. We now remedy this omission. The index, we may explain, is copyright by the Economical and Statistical Department of the British Electrical and Allied Manufacturers' Association. An explanation of the manner in which it has been computed will be found on page 888 of the *Economist* of November 28, 1925:—

INDEX OF ACTIVITY IN THE ELECTRICITY INDUSTRY.
(1920 = 100.)

	1924.			1925.			1926.		
	Home.	Exp't.	Total.	Home.	Exp't.	Total.	Home.	Exp't.	Total.
January	96	95	96	78	102	84	75	110	84
February	100	83	95	77	102	83	74	106	82
March	107	96	104	67	105	76	80	101	85
April	106	105	106	60	95	69	83	100	87

June	105	99	101	58	86	65	82	110	89
July	102	79	96	58	119	73	80	79	80
August	92	79	88	61	119	76	..	..	..
September	89	94	90	61	121	76	..	..	..
October	83	92	85	67	125	81	..	..	..
November	91	96	92	68	124	81	..	..	..
December	80	80	80	76	117	86	..	..	..

The unfortunate effect of the coal dispute on the volume of new orders is reflected in the further decline shown in the "home" figure, but the drop of 31 points in the "export" index somewhat exaggerates the extent of the falling-off in that quarter. The index being based in each case on an average of the twelve months ending with the month in question, the dropping out for the first time of an unusually large order received in July, 1925, has given an unduly depressing air to the figures. As we indicated in our Review of the State of Trade a week ago, the most active branches of the industry at present are those concerned with the manufacture of small motors and domestic apparatus, the demand for industrial motors being stagnant.

The Finance of Broadcasting.—Fresh controversy has been awakened regarding the finance of British broadcasting by the suggestion that the Postmaster-General has to some extent placed a veto on necessary schemes of development. It is also urged that under the new order in broadcasting which will come into force when the present licence to the British Broadcasting Company expires on December 31, 1926, there will be grave danger of an embarrassed Exchequer looking upon the new Broadcasting Corporation or Commission as a revenue-producing asset. In these circumstances it may be well to recall the terms of the report of the Broadcasting

Committee, together with specification of the exact intentions of the Government and the Treasury. The committee recommended that the annual licence fee to listeners should remain at 10s. They contemplated more than two million listeners, which total is now, in fact, achieved. That would give a very broad basis of revenue, on which the first charge under the new corporation or commission would be full provision for research, improvement, and development in the industry, for adequate programmes, and for schemes which commended themselves to the commission from time to time. Only after all these requirements were satisfied was any balance to go to the Treasury. In theory the sound course would be to reduce the fee to the listeners, but the committee unanimously took the view that at 10s per annum it was as low as it should be, at all events in the social and industrial conditions likely to obtain for a considerable time. It is the intention of the Government to apply these recommendations of the committee, so that all doubt as to the financial provision for broadcasting should be removed. But some criticism remains on the question of financial control. In order to get the elasticity which would probably be absent from a strict statutory basis, the Government intend to proceed by charter, which will be discussed by Parliament in the short autumn session. Under that the commission (which will probably consist of five persons) will submit each year the usual estimates to the Postmaster-General, as head of the Department which is responsible in Parliament. They will enjoy, however, the largest measure of freedom. Presumably these estimates will also be seen by the Treasury, and unless there is a subsequent change in policy the accounts will come in the usual course before the Comptroller and Auditor-General and the Public Accounts Committee of the House of Commons. But all that does not imply restriction of the service in the interests of a needy Exchequer. The true reply is that the service is adequately safeguarded by the practically complete freedom which will be accorded to the Commissioners, and by the experience which it is known they will bring to bear on their task. The review of estimates and accounts in question is merely the normal and the essential Parliamentary power in the finance of a very large undertaking which has become for all practical purposes a great public service. In such circumstances it is difficult to account for the extravagant statements which have been put into circulation. If they were designed to secure an extension of the licence to the British Broadcasting Company (the company itself, of course, has made no such request), they were unnecessary, for the Government and all parties in the Commons have agreed that the committee's report is the only possible course, and that the public interest will best be served by the vigorous application of its recommendations for the future of broadcasting.

The Farmers' New Year.—The first of September begins a fresh agricultural season. It is the farmers' new year day. Agriculturists seem to complain of the instability of prices more than of any uniform depression. The following are the remarks of a practical agriculturist:—"The changes from one agricultural year to another are perplexing, and make any settled policy on a mixed farm one of no ordinary difficulty. Maize, the chief competitor with oats and feeding barley, has fallen 11s 6d per quarter on the year, but feeding rice, another competitor, is no cheaper. Beef and mutton are much cheaper, but pork is rather dearer, and there is also a rise in fish, a food competing with meat from the farm. Cheese and butter do not pay to make; the decline is not explained. Lard is much cheaper, and so, too, are potatoes. The farmer seeks in vain for a clue in this labyrinth." It may be remarked in connection with the above that prices for breadstuffs seem far from stable. English wheat at 12s 6d per cwt shows a return to its opening price, but Canadian at 13s against 15s is much cheaper. London household flour, a mixture including both English and Canadian, is at 23s 6d per bag, the price of a year back, so that the public have apparently failed to benefit from the decline in imported corn.

Contangoes and Carrying-Over.—A Stock Exchange correspondent writes:—When, nowadays, a man buys shares for whose purchase money he finds it inconvenient to pay cash he borrows the money and takes up the shares. Sometimes he gets the money from his bank; sometimes from other lenders. The shares are paid for, are transferred into the name of the lender of the money, and the borrower pays a percentage governed by the Bank rate then obtaining. Full stamp duty, 1 per cent. *ad valorem*, has to be met; on a share costing 20s the charge equals 2½d per share. If, on the other hand, a man sells shares that he possesses, he delivers them on the next Stock Exchange pay-day, and takes the money, whether he happens to require its immediate use or not. Such is present-day practice in the great majority of Stock Exchange transactions, purchases or sales. Before the war the buyer would have contangoed his shares if he were unable to pay for them. The seller who did not want money realised by his bargain also carried over. It was a useful means for making good interest without running undue risks, for the security—that is, the shares sold—remained in his own name. If the price went down and he bought them back, there was no stamp and fee to pay, because the shares, if carried over, did not leave his name. Contangoes and carrying-over go on to-day, of course; there is a big speculative position in certain shares. But compared with the extent and ramifications of the business as it existed in pre-war days, the volume of to-day's contango work is relatively very low. The present younger generation of Stock Exchange speculators has been brought up in the system of dealing for cash enforced during the war. Contangoes under such a practice ceased automatically, and when they were permitted, some of the leading firms in the House declined to start the business again. The Consol market ran a big contango account before the war. Many speculators would sell bears of Consols, or buy bulls of the stock, as an insurance against possible losses on transactions which they opened in other markets. Practically the whole of this account has gone, for the Consol market still deals for cash almost exclusively, instead of either for monthly settlements or money, as in the pre-war days. Facilities for carrying over stock and shares had the natural result of leading to establishment of rash, often weak, speculative positions, especially on the bull tack. At the same time, business was encouraged on behalf of the speculator, and the greater the amount of trade that comes into the Stock Exchange the greater is the flexibility and freedom enjoyed by the markets, such freedom being, of course, all to the benefit of the public. The Consol market nowadays does scarcely any carrying-over for outsiders; the American market, in which a huge contango account existed, has shrunk into the merest shadow of its pre-war self. The places of these two areas for the employment of huge sums of capital have been taken by others that call for the use of money on a scale so negligible as to render comparison scarcely worth mention. The old Stock Exchange rule still stands which forbids transactions of speculative business for any but a principal, unless the written consent of the speculator's employer is obtained. The costermonger who owns his own barrow may contango 5,000 Chartered—if he can find a broker to act for him in this operation—but the manager of a bank must not take in 50 Courtaulds without the written assent of his board, if he does not happen to want the money realised by his sale of the shares. It will probably be agreed with unanimity by members of the Stock Exchange that the marked reduction in the volume of contango business has proved of solid service to the credit of the House. In spite of a few painful cases of recent years, failures nowadays are extremely few. The reason for this immunity from financial fears lies in the modesty of the open carry-over account. Contango facilities exist and are of service in assisting freedom of markets, but the abstention on the part of the public from using such facilities as an easy means for unwholesome gambling is an invaluable contribution to the Stock Exchange credit.

Engineering Material from Germany.—One unfortunate effect of the mining dispute, writes a correspondent, has been to make engineering firms send representatives to the Continent to obtain supplies of raw materials. One

well-known constructional engineer is in Germany at present negotiating for the delivery of steel plates. Continental plates are not of as uniformly good quality as those manufactured by British rolling mills, and there is also the disadvantage that faulty material cannot be returned easily, but for work of inferior quality they are fairly satisfactory, and it is thought by some engineers that the opening obtained by the Continental manufacturers will be improved upon. Some classes of shipbuilding material have been bought from Germany for years, and castings have also been obtained from other Continental countries, including Belgium and Sweden. The latter country has always had a high reputation for steel castings. Owing to the increasing difficulty of obtaining iron and steel castings here, orders have been placed with foreign firms recently. It is considered unlikely, however, that serious damage will be done to the British foundry industry, because there is so much risk and inconvenience attached to obtaining castings from abroad. There is the difference of drawing methods, the metric system of measurement being universal on the Continent, and very rarely used here. Belgian, German, and French castings may not be worse than those made in England, but they are not better, and a percentage of them are always defective. These defects may not be discovered until costly machining operations have been performed, and, apart from the question of liability, there is considerable delay in obtaining delivery of another casting. Had the engineering industry been prosperous just now, many orders for castings would have gone to the Continent, and if the dispute lasts much longer this may happen, but up to the present little harm has been done. There is one section of the iron and steel trade that may be more seriously affected by the present need for Continental buying, i.e., the manufacturers of bar iron. For bright steel bars and sections there has never been keen Continental competition, but for the cheaper qualities of black bars the position has been somewhat different. Quantities of Continental bar iron have been bought for certain uses in this country for some years, some being re-exported from here. It is reasonable to assume that some consumers, who have been compelled to buy from abroad during the mining stoppage, will continue to do so.

Iron Ore Production in 1925.—With the publication by the Mines Department of the output and employment at iron ore mines in the fourth quarter of 1925, we are able to produce our usual annual table, giving the production and value of iron ore produced in 1925, and the numbers employed:—

OUTPUT AND EMPLOYMENT AT IRON ORE AND IRONSTONE MINES AND QUARRIES, 1925.

Kind of Ore.	Districts of Production.	Total Output.	Average Percentage of Iron in Clean Raw Material.	Average Net Selling Value at Mine or Quarry.	Total Number Employed at End of Dec., 1925.
West Coast Hematite (non-phosphoric)	Cumberland	Tons. 809,769	52	£ s d 0 19 7	3,184
	Lancashire	142,104	54	1 0 11	563
		951,873	52	0 19 10	3,747
Jurassic Ironstones—					
(a) Lower Lias	N. Lincolnshire (Frodingham).	1,988,268	22	0 2 9	595
(b) Middle Lias	Cleveland (N. Yorkshire).	2,284,186	27	0 6 4	3,609
(c) Middle Lias	S. Lincolnshire, Leicestershire, Northampton, & Oxford.	1,527,400	25	0 2 7	901
(d) Inferior Oolite Ironstone.	S. Lincolnshire, Northampton, and Rutland.	2,948,413	33	0 3 2	1,943
		8,748,267	27	0 3 10	7,048

	S. Staffordshire	13,679	30	0 17 10	69
	Scotland	38,812	30	0 9 11	183
	Other Coalfields	19,805	33	0 18 9	128
		343,021	29	0 13 2	1,379
Other Occurrences of Iron Ore.	Devonshire, Forest of Dean, Somerset, Wiltshire, Carnarvon, Flint, Glamorgan, and Isle of Man.	99,717	..	..	288
		10,142,878	30	0 5 9	12,462

The total output of iron ore was nearly 1,000,000 tons less than in the previous year, and 5,855,000 tons less than in

1913. All districts showed a decline, with the exception of the Cleveland district of Yorkshire and South Staffordshire, where slight increases were reported. The average net selling value declined on the average throughout the country 5d per ton, from 6s 2d to 5s 9d, but the decline was as much as 1s 11d per ton for West Coast hematite, and 7d per ton for Cleveland ironstone. Numbers employed at iron ore and ironstones mines and quarries fell from 14,253 at the end of December, 1924, to 12,462 at the end of December, 1925.

Population and Agriculture in Northern Ireland.—A Belfast correspondent writes:—The recent publication of the results of the census of the Irish Free States enables complete figures for the whole of Ireland to be compiled. The census reveals a decrease in the population of all Ireland from 4,390,219 in 1911 to 4,229,124 in 1926, or 3.7 per cent. A decrease has been shown by every census since 1841, and to-day the population of Ireland is little more than half what it was eighty years ago, in 1846, when it reached its maximum (estimated at 8,287,848). The decrease during the past fifteen years has been confined to the Irish Free State, where the population has fallen from 3,139,668 in 1911 to 2,972,802 in 1926. In Northern Ireland there has been a slight increase from 1,250,531 to 1,256,322. In the decade 1891-1901 the growing industrialisation of the North of Ireland succeeded in arresting the steady decline in population which had been shown by successive censuses from 1841 onwards and there was an increase of 896, followed by a further increase of 13,579 in the next intercensal period, but the rate of increase since 1911 has fallen. Northern Ireland to-day comprises 29.7 per cent. of the population of the whole country, as compared with 20.1 per cent. in 1841. In the North as well as in the South, however, rural depopulation continues, and the inhabitants of rural districts have declined from 663,837 to 618,817. Meanwhile, the urban population has increased from 586,694 to 637,505. Net emigration (including war deaths overseas) from Northern Ireland has averaged 7,188 annually during the past fifteen years, and even from Belfast the yearly average has been 1,869. During the fifteen calendar years 1911-1925 the average annual net emigration from all Ireland amounted to 33,468, of which 18,815 was to countries outside Europe, leaving 14,653 to Europe (in effect to Great Britain). The latter figure is very high, but is swollen through the withdrawal of the British Army in the Irish Free State, war casualties, officers and men who joined the British Army and remained in other countries when demobilised, and the withdrawal from Ireland of many members of the Royal Irish Constabulary when disbanded. The agricultural statistics for Northern Ireland published a short time ago show that, despite the extremely favourable conditions at sowing time, the total ploughed area of the Six Counties is now only 574,500, 8,500 acres less than a year ago. The decline is principally due to a reduction of 7,000 acres in the area under flax, which was sown on only 30,500 acres this year, as against 37,800 in 1925. The crop, however, shows an excellent growth, and the yield is expected to be good. Other crops are also promising well. There has been some improvement in the linen trade recently. Business in yarns and brown linens has been active, while the outlook for bleached and finished linens is also viewed with greater optimism. The report on the sea and inland fisheries of Northern Ireland in 1925 has been issued. The total number of vessels of all kinds engaged in the sea fisheries during the year amounted to 528, and the aggregate crews employed amounted to 1,309 men and 38 boys. The figures show an increase of 27 boats and 29 men over the numbers in 1924. The quantity of sea fish (other than shell fish) landed in 1925 was 100,034 cwts, valued at £71,293, an increase of 44,815 cwts in weight and £26,054 in value compared with the previous year. The increase was due to the remarkable success of the County Down herring fishery, which showed an increase of almost 43,000 cwts in volume and £25,000 in value over the 1924 results.

Conditions in Hongkong.—A Hongkong correspondent writes:—The outstanding event of the past month has been the meeting in Canton of British and Chinese dele-

gates to find a way out of the boycott impasse which has now lasted for more than a year. The conference opened on July 15th, and adjourned *sine die* on July 23rd, without having accomplished its object. Hope of ultimate success has not been abandoned, but, as in the case of the Peking Tariff Conference, it is doubtful whether parleying with a shadow can be expected to yield concrete results. The whole difficulty is to find any authority which can speak in the name of the Chinese people. In the case of the Canton Conference, the Chief Executive, General Chang Kai Shek, has completely ignored the proceedings, which were instituted in his name to restore the economic welfare of his subjects. The General has departed on some military wild-goose chase, and left negotiations to be carried on by three officials, the principal of whom is Mr Eugene Chen, the so-called Foreign Minister. Mr Chen arrived in Canton less than two months ago, a political refugee from Peking. His knowledge of Chinese is scanty, but he has had a Western legal training and he is a practical journalist. He has, apparently, become well versed in Bolshevik propaganda, but he has no vestige of claim to represent the Cantonese. The consequence is that the conference has merely been a vehicle for the reiteration of Bolshevik attacks on Imperialism in general and British influence in particular, while the urgent need for the removal of the artificial restrictions on trade with Canton, both foreign and native, has been relegated to the background. In the meantime, financial stringency in Hongkong is causing much anxiety. The intensification of the boycott since the opening of the conference has still further impeded the trickle of merchandise which has been flowing into the interior. Local Chinese are most despondent, and have lost all interest in fresh business. The month of July is usually a quiet time, but this year there has been scarcely a sign of life in any market. The prospect of a settlement of the boycott caused many dealers to hold up orders and to postpone making consignments to distributing points of the interior. The suspension of negotiations has for the time being paralysed trade, and unless some relief is forthcoming in the near future, the outlook for the end of the year will threaten disaster.

American Oil Situation.—The quick rise in the production of crude oil in the United States—from a daily average of 2,029,976 barrels for the week ending June 19th to one of 2,170,000 for the week ending August 21st—has brought down crude oil prices in certain districts, writes a correspondent. This increase in output is due partly to the development of four new fields, and partly to what is described as a "come-back" in the old Spindletop pool in Texas. The four new fields are the Nigger Creek field, Texas; Seminole County, Oklahoma; Upton-Crane district, Texas; and the Texas Panhandle field. Of these the biggest is the Texas Panhandle field, but here production is being curtailed by the lack of transportation facilities. Recent regulations issued by the Government authorities forbid the completion of wells in this district until storage facilities are available. As no trunk pipe-line has yet been laid to this field, shipments are being made by railway tank car. The present output of the Texas Panhandle field is nearly 90,000 barrels a day. There was some fear that the Nigger Creek field, Texas, which lies close to the Mexia field, would prove to be a prolific producer, but the failure of one of the test wells seems to limit production to a small area. The Seminole field, Oklahoma, is expected to produce a peak of from 60,000 to 75,000 barrels a day of light crude oil by November 1st, which may further depress the price of crude oil, unless in the meantime the old Spindletop field, in which showings of salt water have appeared, declines rapidly. The sudden rise in American production is not the only depressing influence upon world crude oil prices at the present time. Apart from the increasing exports of oil from Venezuela, the exports of crude oil from Colombia are getting into full swing. For July Colombia exported 700,000 barrels. The Andian National Corporation, which recently completed its 350-mile pipe-line to the coast, is now planning the construction of an additional pipe-line which will bring its export capacity up from 30,000 to 50,000 barrels a day. Incidentally, this additional pipe-line will cost \$6½ millions. While crude oil prices have therefore weakened, there is no sugges-

tion of any considerable fall. The production of crude oil in America for the first six months of this year amounted to 359,199,000 barrels, against 370,185,000 barrels in the corresponding period of 1925, a decline of 10,986,000 barrels, while imports were down by 4,400,000 barrels. Consumption, on the other hand, was higher, and the consequent decline in stocks over the six months amounted to 14,568,000 barrels:—

U.S. OIL STOCKS.					
	Dec. 31, 1925.	March 31, 1926.	April 30, 1926.	May 31, 1926.	June 30, 1926.
Crude	418,417,000	420,188,000	410,498,000	409,368,000	404,533,000
Refined	120,313,000	121,324,000	120,138,000	118,673,000	119,629,000
Total	538,730,000	541,512,000	530,636,000	528,041,000	524,162,000

The increase in the consumption of refined oils was most marked in gasoline. There was an increase of nearly 16 per cent. in domestic consumption, or of 19 per cent. in domestic consumption and exports together, as compared with the corresponding period of 1925. Production, on account of the higher recovery of gasoline from the crude oil, increased by 11 per cent. In view of the large stocks of gasoline, amounting to 51 days' supply on June 30th, any general decline in crude oil prices would bring down gasoline, but so much closer is the balance between supply and demand that any pronounced decline in crude oil production would probably maintain the present price level.

Mexican Matters.—From the economic point of view writes a correspondent, the religious disturbances in Mexico seem to have had less effect than anticipated, the latest advices from this long-troubled Latin-American State tending to show that commerce and industry are proceeding, at least outwardly, much as usual. But, to make things easier, the National Treasury has suspended the decree of July 10th providing penalties for failure to meet *pagares*, or notes, in case of instalment-sales of land. The efforts of the Church party to bring about complete boycotts in this and that direction have failed of their purpose, while the Government professes to be in receipt of the usual revenues and to be suffering no particular monetary inconvenience. This year's receipts, estimated at 315,000,000 pesos (£31,500,000), are so far being maintained, and in some directions promise to yield something even better; the expenditures, estimated at 305,000,000 pesos (£30,500,000) thus foreshadowing a balance on the budget of 10,000,000 pesos (£1,000,000), are, however, likely to be exceeded. The mines are producing more generously than for some years past. Precious metals improved 13,545,346 pesos (from 122,160,315 pesos, in 1924, to 135,705,661 pesos in 1925), thus putting additional revenues, in the form of royalties, at the disposition of the Government; while a good harvest is expected, notwithstanding early damage to crops by the floods. On the other hand, oil-production has been declining for some time past, showing for last year a falling-off in value of 1,352,919 (from 293,350,613, in 1924, to 291,997,694 pesos, in 1925).

Brazil Central Railway.—A correspondent writes:—A recent official announcement, received from the Brazilian Ministry of Transport, states that "the electrification of the Central Railway of Brazil will be started this year." This intelligence is chiefly remarkable for the fact that a similar announcement was made, and recorded in the Press as long ago as November, 1919, when two tenders were received—one from a French syndicate, and the other from an Anglo-Italian company, both desirous of penetrating Brazil industrially, proposing to construct the electrified track. The Government, however, being then of opinion that the enterprise should be carried out "nationally," these offers were declined. In October of the following year the Government, through the medium of the Commission of Finance of Federal Congress, expressed its intention of raising the sum of \$11,000,000 (45,000,000 contos of reis) to cover the cost of converting the greater portion of the Central system from steam to electricity. Subsequently (November, 1920) the Senate sanctioned an increase of the sum to be borrowed to

60,000 contos (about \$12,500,000, or, say, £2,900,000). Again, tenders were called for the work by the Inspectoria Federal das Estradas (Ministério da Viação e Obras Públicas), Rio de Janeiro. Our own Commercial Secretary at the British Legation advised constructors on this side to give the matter their serious attention, and that they no doubt did; for several carefully prepared tenders, accompanied by plans, found their way to Rio, and there they still may be for all one knows to the contrary, or for the practical effect that they produced. In the following January it was learned, from an inspired source, that "the work of the electrification of the Central Railway is proceeding," although how this could have been even approximately a fact within so short a period after calling for tenders it is difficult to perceive. Two years later—April, 1922—tenders for the work of electrification had been still unallotted, although further definite offers to carry it out had been received from the General Electric Company (American); the Metropolitan Vickers Electric Company (British); and the Westinghouse Company (American). The proposals were said to contain, however, so many alternative specifications that the Federal Government, upon the advice of its technical department, withheld its consent; and once more nothing came of the matter. But several important American banking firms having sought to interest themselves in the undertaking, it was yet again brought forward for discussion, and there was made in New York (June, 1922) a public issue of \$25,000,000, when the demand for the bonds proved so considerable that the allotment had to be arranged upon a 10 per cent. basis. Eventually the contract for the electrification of the Central Railway's systems was given to the General Electric Company of U.S.A. It was officially stated that this conclusion had been arrived at because in "regard to price and technical advantages, the American offer was deemed to be the best." Nothing was said about the contribution of American dollars. A sequel to this little history was supplied towards the autumn of 1923, when the then President of Brazil—Dr Epitacio Pessoa—was publicly accused of having authorised the funds, that had been subscribed for the electrification of the Central Railway, being devoted to wholly different purposes—namely, the improvement of other existing Federal railways, and not to the specific purposes of electrifying the Central Railway. Since that time there have been several unsuccessful attempts to raise additional sums abroad—it would have been hopeless to expect to secure sufficient financial assistance at home; as recently as May of last year the Minister of Public Works was compelled to plead for a credit of 1,500 contos of reis for "urgent repairs" in connection with the Central system. In view of these facts, the statement now made by the Brazilian Ministry that "the electrification of the railway will be started before the end of the year," is not unlikely to arouse some amusement, perhaps not unmixed with incredulity.

Oversea Correspondence.

UNITED STATES.—SHARE MARKET REACTION—MONETARY OUTLOOK—STEEL AND MOTOR TRADES—COTTON CROP.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 24.

WHILE the reaction in the share market that set in after the increase in the discount rate of the New York Federal Reserve Bank has not developed in a pronounced way, the market has been considerably unsettled. The common shares of the United States Steel Corporation, for example, have sold off about 11 points from the recent top of better than 159; and General Motors common, which made a top at 225½, has sold below 197. Granting that the market in any event was due for a technical reaction, the tone certainly has been considerably different since the bank rate was advanced. The standard dividend-paying railway shares have held up best as a class, but the sceptics point to buying in these issues as "sup-

port" to facilitate distribution in other directions, and aver that the market has lost its "snap." If such proves actually to be the case, the curb to speculative activity must, up to this time at least, be credited to the psychological influence of the change in rate, as there has been very little disturbance in the call money market on the Stock Exchange. The rate for this kind of accommodation has held with remarkable steadiness at $4\frac{1}{2}$ per cent., and there has been little calling of market loans. Just why the call rate on the Exchange should hold at $4\frac{1}{2}$ per cent. with a 4 per cent. bank rate, is something of a puzzle to many observers, as it is the general impression that the member banks feel that they must have a margin of 1 per cent. or a per cent. and a half in order to make rediscounting at the Reserve Bank profitable. Part of the explanation perhaps may be found in the fact that after the discount rate was changed the brokers hastened to take on lines of time money, the rate for which did harden up materially. Another part of the explanation may be found in the seasonal tendency toward ease during the latter half of August. This ease normally disappears with the advent of September, and developments early in that month will be watched with a great deal of interest. Meanwhile most bankers expect a gradual firming up in rates during the autumn, and some think that a $4\frac{1}{2}$ per cent. discount rate will be in effect before the movement is over. As for the share market, while some still maintain that big and strong markets are ahead, a generally more conservative tone is now apparent. Incidentally, the statistics tabulated by the Federal Reserve Bank show that brokers' loans expanded rapidly during August. The increase from July 28th to August 18th amounted to \$140,000,000, and brought the total up to \$2,742,000,000. This is about \$330,000,000 above the low touched on May 19th, but still is some \$400,000,000 below the high touched early in the year. The increase during the week ended August 18th amounted to \$20,000,000. While brokers' loans still are considerably below the year's high, there is a feeling that considerable borrowing on stock exchange collateral was shifted after the March break in the market, many individuals having taken up their shares from brokers' offices, borrowing on them directly from banks.

Whether or not the advance in bank rate and the slowing down in the rate of activity on the Stock Exchange were responsible, the fact remains that something of a change has come over sentiment in the steel trade. Present feeling is in no way tinged with pessimism, but it does take a more conservative view of prospects. Having had production run through the summer at an unusually high rate (and the industry as a whole still is doing about 80 per cent. of capacity) the producers now seem unwilling to take it for granted that consumption will keep up unabated during the rest of the year. They do not care to commit themselves very far ahead in the matter of raw materials. The trade is in such a frame of mind that reports of a sale of 3,000 tons of merchant bars at 1.90 cents a pound Pittsburgh, which would be slightly below the recently advanced price on this product, has brought into question the matter of whether the recent advances in prices of certain products will hold.

Reports from the motor industry, however, are encouraging. Production during July dropped off from that during June, as might be expected, on seasonal grounds and in view of the preparations to bring out new models in August. At 315,000 passenger cars, the July production was 38,000 below that for June, and 33,000 below that for July, 1925. However, the president of the General Motors Corporation has estimated that the August sales of the corporation will reach 130,000 vehicles, which would set a new high record for any month in all time, and which would seem to indicate that new models are catching on with the public.

Further firmness in cotton prices has resulted from the latest Government estimate of the growing crop. As of August 16th, the Department of Agriculture places the condition at 63.5 per cent., and the estimated yield at 15,248,000 bales. This is a reduction of some 300,000 bales as compared with the previous fortnightly report. However, it still is early to tell whether the actual yield will closely approximate the estimates, as about two million bales were added to expectations after this time last year.

FRANCE.—IMPROVED SITUATION—WAR DEBTS— SECRETARY MELLON'S VISIT—A SWISS LOAN— COAL PRODUCTION.

(FROM OUR CORRESPONDENT.)

PARIS, September 1.

CONFIRMATION of the indications of returning confidence on the part of the people of France since the advent of the new Poincaré Government to office is to be seen in the notable renewal of demands for National Defence bonds by investors of all classes. It is announced that it is due to the renewed sales of these bonds and to the response that has been made to the Government's appeal to taxpayers to pay at least a substantial proportion of their direct taxes in advance that the situation of the Treasury since the beginning of August has been rendered free from anxiety for the immediate future. During the four weeks that ended on August 26th the Government has been able to reduce the amount owing to the bank by no less than 1,400,000,000 (from 37,850 millions to 36,450 millions), while the note circulation has been diminished by 2,112,000,000 (from 57,259 millions to 55,147 millions). The available margin which the Government may borrow from the bank before the legal maximum is reached, which a few weeks ago was only 60,000,000, now exceeds 2,000,000,000, while the total amount of notes in circulation is now nearly 3,500 millions below the legal limit. One of the most satisfactory factors in the improved situation is that not only the population in general, but the rural classes in particular, are now again absorbing National Defence bonds for investment purposes. If public credit remains unshaken by a renewal of the political blunders of the past two years, or by any renewed depreciation of the franc—both of which appear substantially unlikely during the immediate future—the outlook should remain satisfactory for some time to come.

It is unofficially announced that prompt advantage was taken by the Government of the recent fluctuations in the exchange rates of sterling and dollars, and that action was successfully taken to ensure the Treasury's needs for sound money for several months ahead; while at the same time the constitution of the *mass de manœuvre*, which is being accumulated for the future defence of the franc, is proceeding satisfactorily. The risk of further inflation is now generally regarded as negligible, but should the need for a large supply of currency arise in the near future it should be comparatively easy to overcome the danger by again raising discount and interest rates, to which the Government and the bank appear resolved to have recourse in case of need. The coming harvest, although it will be insufficient, as usual, to meet requirements, will necessitate much smaller purchases of foreign grain, it is estimated, than last year, while the substantial stocks of raw materials that were accumulated early in the year will enable foreign purchases in the near future to be kept down to a comparatively low figure. Holders of francs abroad will be more likely, it is considered, to increase their holdings, in view of the improved situation, than to dispose of them. It is expected, further, that the measures the Government are now taking to check unduly high prices and bring down the cost of living as much as possible, before the economic difficulties that must accompany the restoration of the franc can develop, will also have a wholesome result. One step in this direction is the announcement by the Government of legal action to compel the declaration of not merely wheat, but of all other stocks of foodstuffs, for the purpose of preventing profiteering by "holding back for a rise." Speaking generally, the whole outlook has undoubtedly vastly improved.

There remains the problem of the British and American debts, and this also is generally believed here to be nearer a more satisfactory settlement, from the French point of view, than was deemed probable a few

weeks ago. The "brief interview" between M. Poincaré and Mr Mellon has excited deep interest here. It is recognised that the last word in regard to a more favourable settlement for this country may perhaps now lie with the American electors, but opinion generally insists that, unless the conditions of the Mellon-Béranger agreement are really substantially revised, there is practically no hope that the Chambers will ratify the settlement provisionally arrived at. It is insisted that if the Germans have so far been able to comply with the obligations of the Dawes Plan, this is solely because practically the whole of the payments have been made in kind. France, on the other hand, would be expected to pay the United States in cash, and would be faced with a similarly un-surmountable difficulty to that which it is generally anticipated will shortly face her former enemy. This thesis, it is believed, is now beginning to secure wider acceptance among the leaders of the United States, and it is believed that Mr Mellon's recent interviews at Evian respectively with Mr Parker Gilbert, the Agent-General for German Reparations, and Herr Schacht, of the Reichsbank, will be found to have had valuable educative effects in this connection.

In this connection the announcement that the French Government has arranged for a loan of 60,000,000 (Swiss) from the Banque du Crédit Suisse, of Zurich, is in some quarters regarded as significant. The loan, which is in obligations of 1,000 (Swiss), at 7 per cent., is repayable within 24 years from April 1st next. It is stated to be contracted on behalf of the French State railways, but this is apparently only technically accurate. As a matter of fact, the operation is the outcome of arrangements under which the Government has already advanced to the State railways a total sum of over 2,000,000,000 for new capital expenditure. This sum figures at present to the credit of the Treasury and to the debit of the State railway department. The Government, by means of this loan, has mobilised a portion of the debt owing by the railway department—probably as much as it could—and has thus secured ready money, which there is ground to believe amounts to something in the neighbourhood of 50,000,000 (Swiss), or about 350,000,000 (paper). The exact yield is difficult to say, as the price of issue has not been made known. It is rumoured that the money will be used to increase the fund of sound money (asserted to be equivalent to £5,000,000), which M. Poincaré resolved to accumulate for the defence of the franc in case of need. The allegation that the conclusion of this loan in Switzerland is to be regarded as a demonstration that France can dispense with American aid may be dismissed as unfounded, if only because its amount—about \$12,000,000—is insignificant in comparison with the \$250,000,000 which the experts suggest as the sum of foreign credits necessary to the success of their plan.

French coal production returns for June, which are now available, disclose a total output of 4,429,981 tons, as compared with 3,876,299 tons in June, 1925. These figures bring the total output for the first half of 1926 up to 24,477,739 tons, as against 23,478,297 tons in the corresponding period of last year. The daily output during June by the 311,508 men employed averaged 170,383 tons, as compared with a daily average of 144,680 tons only in January, 1924, when 286,804 men were employed. This increase of about 17½ per cent. in the daily average output, whereas the working staff has increased by about 9½ per cent. only, has been largely due to the improvement in the equipment of the pits since the war. The bulk of the increased daily output during June was in connection with the pits in the Nord and Pas de Calais coalfield, which were wrecked by the Germans during the war. The daily output of this field alone is now 107,075 tons daily, or 15,778 tons per day more than in 1913. During the same period the daily output of the pits in the Central and Southern coalfields has increased by 1,231 above the pre-war figures. The collieries situated within the old frontiers are now yielding a total of 17,009 tons per day more than in 1913, while an additional 17,227 tons per day are being obtained from the Lorraine field, which was recovered by this country under the Peace Treaty. The output of metallurgical coke by the plants attached to the French collieries totalled 306,718 tons in June, as against 311,416 tons in May.

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up	\$25,000,000
Surplus	\$35,000,000
Undivided Profits	\$6,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world, bringing them into contact with all phases of commerce and industry in the United States.

Bishopsgate, E. C. 3

GERMANY.—INTERNATIONAL POSITION—JULY FINANCES—CURRENCY AND CREDIT—PRICES —INDUSTRY—LABOUR CONFLICTS—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, September 1.

THE beginning of the third Reparations year, on September 1st, has provoked considerable Press comment, some of which is more pessimistic than seems to be warranted. The inspiration for these unfavourable comments comes largely from abroad, in particular from the United States, where the need for the immediate revision of the Plan, or even for its entire abandonment, is discovered by some expert about once a month. While nationalistically minded Germans welcome such ineffective intervention in their behalf, the practical politicians understand that no question of changing the Plan in any material way will ever be considered by Ally countries until the Plan has proved impossible in practice, or at least until it shows some definite serious defect. German pessimists in the Reparations question seize all the more greedily upon these foreign manifestations because in the working of the Plan so far they themselves have not been able to discern the difficulties which were anticipated even by optimists in 1924. While the Plan has not yet been put to its severest technical test—the cash transfers—it has withstood a severe political test. The immediate aim in 1924, which was sympathised with even by persons who altogether disapproved of Reparations, or who thought them impracticable, was to tranquillise Europe, to clear up the Ruhr-occupation mess, and to establish better relations between Germany and her former enemies. This has been achieved in greater measure than was then expected, and even if the Plan should later break down financially, it will probably always be regarded as a work of great political wisdom. This is the view of competent and reasonable Germans, but there is a small class to which success of the Plan, whether financial or political, will be lamented as a failure, while its failure will be welcomed as a success. As Germany's reception into the

League of Nations is in the first instance more a result of the Plan than of the Locarno Pact, progress at Geneva is being closely watched, and on this question the opposing German groups necessarily reason on the lines of their attitude towards the Plan.

The Finance Ministry's return for July, and for the first four months of the financial year, is shown below. This return, which gives ordinary and extraordinary revenue and expenditure separately, and contains only such expenditure as, according to the Budget, belongs to the months in question, replaces the former monthly Treasury reports, which gave indiscriminately all revenues received, and payments out made during the month:—

(In Millions of Reichsmarks.)			
ORDINARY BUDGET.			
	July, 1926.	July, 1925.	April to July.
Revenue—

General Administration.....	54.8	54.8	107.2
Reparations payments.....	20.0	20.0	84.1
Total expenditure.....	74.8	74.8	191.3
To be covered out of loans.....	74.3	74.3	190.2

By the large ordinary Budget surplus in July, the deficit in the first three months of the financial year, which was 77 million marks, has been converted into a surplus of 25 million marks. Federal expenditure has of late remained very stable, with exception of the subventions to the States and municipalities which have increased in proportion to the increase in the gross tax yield. August tax receipts are also expected to exceed the month's estimate.

The abandonment of the fixed dollar exchange rate by the Reichsbank is not altogether convenient to German banks. As long as the rate was maintained at par, 4.20, it was safe for banks to borrow dollars in New York at the month's end, convert them into Reichsmarks, profit from the temporarily higher native interest rate, and be insured against exchange losses when repayment came to be made. Further, when the month-end pressure was over the banks could divert their marks to New York if, as often happened, the short-term rate fell below New York rates, and if, as sometimes happened, short-term money could not be placed here at even the lowest rate. Here, again, there was no exchange risk. This condition has passed. The dollar has since fallen so low that the question of exporting gold appears to have been considered in New York. The Reichsbank has been recalling from New York its own gold, which was deposited in the New York Federal Reserve Bank, as in some European central banks, to guarantee exchange credits. The last Reichsbank return (for August 23rd) shows 1,492,824,000 marks gold reserve, whereof 229,021,000 marks was still with foreign central banks. In the spring and early summer these gold deposits abroad were around 260 million marks. The Bank's discounts have fallen to 1,065 million marks, or with advances to 1,078 million marks, which is the lowest figure attained since February, 1924, immediately after the currency stabilisation.

The official wholesale price index has a rising tendency. The movement in the last six months has been:—

Average for March.....	118.3
" April.....	122.7
" May.....	123.2
" June.....	124.6
" July.....	127.4
August 25th.....	128.2

The cost-of-living index number for July was 142.4, against a low point this year of 138.3 in March. Bankruptcies in the fourth week of August fell to 98, the lowest figure since the inflation period. The Leipzig Autumn Fair has so far proved successful.

The activity in the Ruhr coal industry has further increased. The last week reported shows a daily average output of 387,068 metric tons, against an average of 379,840 tons in 1913. The consignments of coal have also risen very greatly. The coal export branch shows the following rapid development:—

(Metric Tons.)			
January.....	1,005,440	May.....	1,832,172
February.....	1,379,351	June.....	2,517,703
March.....	1,178,541	July.....	3,640,247
April.....	1,156,381		

The average monthly export of the last pre-war year, 2,881,000 tons, has been exceeded. Exports of coke have also greatly increased. The secretary of the coal branch of the Federation of German Industries, who recently made an inspection tour in England, predicts severe Anglo-German competition in coal as soon as England has settled down to a miners' 7½ hours' working day. He holds that when this happens Great Britain will be able to compete, and calculates that she will have a margin of 6s 6d per ton between production cost and selling price, while Germany will have a margin of only 4 marks. This expert does not believe in the possibility of Anglo-German combination in coal. While not opposing a combination, he considers that the lack of a native British coal organisation makes the plan impossible for the present.

The increase in recent years in Labour tranquillity is shown by a newly-issued report of the Ministry of Labour, with the following figures of strikes and lock-outs:—

	No. of Strikes and Lockouts.	No. of Lost Working Days.
Annual average in 1899-1913.....	2,114	8,006,791
1920.....	8,800	54,206,942
1922.....	5,361	29,240,740
1924.....	2,012	36,023,143
1925.....	1,766	16,855,856

The figures for the three first post-war years here given contain political strikes as well as economical. The year 1925 witnessed no political strikes.

The Bourse, which reached a new high point on about August 21st, has since been irregular, and on the whole weakish, but to-day stocks rose considerably, in particular the steel-coal and electrotechnical groups. The latter group may be said to lead the market at present. Siemens and Halske, which began the year at about 65, to-day reached 210. Geneva prospects and the Leipzig Fair reports have had a strengthening influence on the Bourse, but the market is not as active as formerly, and a good deal of speculative money has gone to Vienna, Budapest, and Prague, in all of which cities stocks have of late been strong.

SWEDEN.—HALF-YEAR'S TRADE—STATIONARY BALANCE—INCREASED TURNOVER.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, August.

The general impression of good business activity and prospering conditions during this year is verified by the statistical statements for the first half of 1926:—

FOREIGN TRADE, JANUARY-JUNE.					
(In Millions of Kronor.)					
	1913.	1923.	1924.	1925.	1926.
Import.....	395	600	675	676	698
Export.....	361	456	512	579	599
Excess of import.....	34	144	163	97	99
Total turnover of foreign trade.....	756	1,056	1,187	1,255	1,297
EXCESS OF IMPORT (—) OR OF EXPORT (+).					
	1924.	1925.	1926.		
January.....	— 35	— 24	— 32		
February.....	— 33	— 24	— 20		
March.....	— 22	— 40	— 40		
April.....	— 67	— 44	— 28		
May.....	— 24	+ 7	+ 7		
June.....	+ 18	+ 28	+ 14		
Total.....	— 163	— 97	— 99		

In these figures the first notable point is the important increase in the total value of foreign trade from 1,187 million kronor in 1924, and 1,255 millions in 1925 to 1,297 million kronor in 1926, an increase of 3½ per cent. over 1925, and more than 9 per cent. over 1924. The relation between import and export seems to have arrived at an equilibrium,

as both exports and imports are increasing in the same ratio.

The following table shows how imports are distributed:—

	June, 1926.	June, 1925.	1925.
Foodstuffs.....	19.7	25.6	26.5
Raw materials.....	34.8	31.5	33.5
Manufactured products..	45.5	42.9	40.0
Total.....	100.0	100.0	100.0

The increase in June this year in the import of raw materials (coal) accounts for an important part of the general increase in import.

The distribution of exports is as follows:—

	June, 1926.	June, 1925.	1925.
Foodstuffs.....	6.0	4.1	6.1
Raw materials.....	14.0	17.2	16.7
Manufactured products..	80.0	78.7	77.2
Total.....	100.0	100.0	100.0

The relative decrease of raw materials is caused by a change for the worse in the export situation of iron-ore. The quantity figures for imports during the first six months of 1926 for important commodities are as follows:—Wheat, 68,000 tons, against 141,000 during the same period 1925; coffee, 15,000 tons (15,700 tons in 1925); sugar, 4,760 tons, against 27,260 tons; syrup, 7,370 tons, against 14,000 tons the same period 1926.

The import of petroleum and gasoline was 59,410 tons, against 52,540 tons in the first six months of 1925; of coal, 1,598,600 tons, against 1,372,300 in 1925. The sales of timber at the middle of August amounted to around 610,000 standards, against 725,000 at the same date 1925. Because of the considerable contraction in production this year, the stock is estimated to be 100,000 standards less now than at the same date 1925. The prices have remained firm this year.

It is reported that 92 per cent. of 1926 production of paper pulp is sold, as well as important quantities for delivery 1927. It is also reported that this year's output of news print is nearly outsold. The total export of paper pulp, paper, and paper-board amounts to 773,500 tons the first six months this year, against 724,900 tons 1925, thus a considerable increase. The export of iron-ore is for the first six months 3,164,000 tons, against 3,869,000 tons in 1925. Very good crops are expected.

CANADA.—CROP CONDITIONS—GRAIN MARKETING DIFFICULTIES—GENERAL BUSINESS SITUATION—PROSPERITY OF PULP AND PAPER COMPANIES EFFECTS OF BRITISH COAL STRIKE—THE ELECTION CAMPAIGN—TRADE RETURNS.

(FROM OUR CORRESPONDENT.)

OTTAWA, August 23.

The Western harvest, which was in full swing, has been interrupted by rain, but the moisture and the cold weather which accompanied it have been very beneficial to the late and immature crops, which have been helped to fill, and as a result estimates of the final total yield of the prairie provinces are now being raised. Manitoba has always been assured of a good average crop, and the improvement which has been wrought in conditions in Alberta will bring the yield for that province within measurable distance of last year's figure. It is in Saskatchewan, however, the most important grain-growing province, that the effects of the July drought were in many places too serious for repair, and the total yield will be about 25 per cent. less than last year.

The grain marketing situation was, a week ago, causing decided anxiety, as the elevators in Montreal were almost full to capacity, and between 40 and 50 grain-boats from the upper lakes were waiting to unload; export demand was very feeble, as European buyers found it more profitable to fill their needs from the abundant wheat crop reaped in South-Western American States like Texas and Oklahoma, which export their surplus from Galveston and other ports in the Gulf of Mexico. Yet the congestion prevailed when none of the 1925 crop had appeared in Montreal, and a serious blockade at one time seemed imminent. However, the law of supply and demand has

SECURITY FIRST

ROYAL

INSURANCE COMPANY, LIMITED

6 HEAD OFFICES: LIVERPOOL AND LONDON.

asserted itself; prices of Canadian wheat have had to drop to meet the competition of the surplus of Texas, and there are now indications that Great Britain, France, and Germany are all back in the Canadian grain market and buying heavily. The European orders, which have either been received or are forecasted, will clear out the relics of the 1925 crop and leave room for the crop of 1926, which has already begun to move to the seaboard.

Business has been affected by the usual mid-summer dullness, but the movement and distribution of merchandise still continues to be on a substantially higher level than for the corresponding period of last year. A fortnight ago there was some anxiety in business circles about the bad news concerning the Western crop, and plans were being laid on the basis of a diminished flow of orders from the West; but now the outlook is regarded as more hopeful, and no serious setback is now anticipated. The figure of car loadings for the week ending August 14th is placed at 58,339, which is a gain of 6,460 over the figure for the corresponding week of 1925, and the total from the beginning of the year is given as 1,840,721, a gain of 211,350 over the corresponding total for the previous year. Largely as a result of the industrial troubles in Great Britain the export demand for dairy products had been far below the level of 1925, but in the last two weeks there has been a welcome improvement, and the shipments from Montreal were substantially higher. The lumber merchants have experienced a very dull time, and have had to cut prices to secure orders, but there has lately been a brisker export demand both from the United States and Europe. The chief feature of a lively spell in the stock markets has been a minor boom in the stocks of pulp and paper companies. Despite a large increase in the capacity of Canada's newsprint mills, the ever-growing demands of the American market seem to be able to absorb all the additional output, and apprehensions that over-production might cause a slump in newsprint prices this autumn have vanished. As long as there is no cessation of the present tide of prosperity in the United States, the fortunes of the Canadian pulp and paper companies will be on a profitable basis, and many of them have been able to diminish wastage and secure useful economies by the use of new technical processes, with the result that their earnings, now being published, show a substantial gain over the figures of the previous year. There are also abroad rumours of further consolidations in the industry, and it seems possible that the well-known Laurentide Company may soon join the merger formed last year by the other pulp and paper companies operating in the St Maurice Valley in Quebec. Another factor which is contributing to the prosperity of this industry is the steadily growing demand for the finer qualities of woodpulp as raw material for the manufacture of artificial silk, and some large plants are being devoted to this particular line to the exclusion of everything else.

The holiday season has not yet ended, and retail merchants in the cities report trade as dull owing to the absence of many of their customers at summer resorts, but the storekeepers at the latter places are correspondingly busier. Canada is now the great summer playground of the inhabitants of the Northern United States, and the Department of Trade and Commerce at Washington has recently published a bulletin in which it is estimated that American visitors will this year spend about 190 million dollars in Canada.

Industrial conditions are reasonably satisfactory and the employment figures are very good, there being, indeed, a shortage of the extra hands required to handle the Western harvest. The boot and shoe factories in Quebec had been the scene of a prolonged strike, but it has now been satisfactorily settled, and this particular industry is now reported to be faring well. Canadians are now beginning to lay in their winter sup-

plies of coal, and many of them regret that the British coal strike has practically shut off the supplies of Scotch and Welsh anthracite, which had been freely imported in recent years. This British coal had become very popular, and now the American mineowners are taking advantage of the situation to regain their old control of coal markets of Eastern Canada. The problem of making available the coal supplies of Alberta and Nova Scotia for the fuel needs of the central provinces is still being explored, but the heavy incidence of railway freight rates still forms an insuperable obstacle to the utilisation of these supplies.

With polling day only three weeks distant the general election campaign is beginning to warm up, but hitherto the public has been singularly apathetic to the appeals of the different combatants, and refused to become excited either over the Customs scandals or the constitutional issue. The farmers, who constitute almost half the voters, are absorbed in their harvest, and have developed a certain pardonable cynicism about politics as a means of redressing their woes. Mr King has concluded his Western tour, and will devote the rest of the campaign to the Maritime Provinces and Ontario. Mr Meighen is still in the West, where he is preaching the virtues of a "brick for brick" tariff policy on American farm produce without much success, and he will spend the last fortnight of the campaign in what is regarded as an almost hopeless courtship of Quebec. It is too early yet to make any serious forecast about the result, but competent neutral observers believe that while a number of seats may change their allegiance, there will be no decisive balance of gain for either of the dominant parties, and that the deadlock of the last Parliament may be reproduced in the next.

The foreign trade returns for the first four months of the current fiscal year ending July 31st are very satisfactory, for at a value of \$718,906,711 they show a gain of \$71,175,413 over the figure for the parallel period of 1925. The following are the comparative figures of exports and imports during this period:—

	First Four Months— 1925.	1926.
Domestic exports.....	351,407,904	380,020,931
" imports	292,009,091	333,976,927

In the month of July by itself the grand total of Canadian trade was valued at \$200,204,844, which is a gain of some 15½ million dollars over the figure for July, 1925.

NEW ZEALAND.—THE BUDGET—DEBT REDEMPTION POLICY.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH (N.Z.), July 10.

The first Budget delivered by the Hon. W. Downie Stewart is a concise, clear, and workmanlike document. Its contents are of more than passing interest not only in view of the prevailing economic depression, but also because it is the first definite pronouncement after the election of the Government's financial policy. Its cautious, conservative, and sound finance indicates that the new Minister has a clear grip of the economic circumstances of the Dominion. It is also a reinforcing of the Government's claim that administration rather than legislation is needed just now.

There is some difficulty in comparing the accounts with the figures of previous years, mainly because of the accounting changes introduced into the railway system and the public debt services. But these changes are in the right direction of making each service show clearly its true financial position, so that the temporary obscurity cannot be cavilled at.

Compared with the financial results of the previous year, the revenue and expenditure show increases as under:—

(In Million £'s.)

	1924-5.	1925-6.
Revenue	23.0	24.7
Expenditure.....	21.8	23.6

The bulk of the increased revenue came from customs duties (£814,488), and post and telegraph receipts (£370,853). The import returns were, however, considerably swollen last year, and revenue from this source is likely to be much less in the ensuing financial year. The

Minister has budgeted on receipts approximately as great as those for the year 1924-5, when imports were valued at £49.8 millions. The fall in export values already recorded for the 12 months ending May 31, 1926, is approximately 9½ millions, so that if imports fall correspondingly in the financial year 1926-7, this estimate is likely to be optimistic. The figures of imports and exports are reproduced below:—

Year.	Imports.	Exports.	Excess— Exports.	Imports.
1919-20	32.2	50.8	18.6	..
1920-1	67.5	48.2	..	19.2
1921-2	36.0	43.8	7.8	..
1922-3	37.1	45.5	8.4	..
1923-4	44.4	51.7	7.3	..
1924-5	49.8	54.8	5.0	..
1925-6	53.0	48.7	..	4.3

The increases in expenditure are spread fairly evenly over the departments. The chief increases are:—

Interest	£ 264,537	Losses on railway branch lines	£ 344,830
Sinking Fund	189,658	Naval Defence	157,847
Old Age Pensions.....	95,959	Education	102,448

Of these increases, the losses on railway branch lines are a new item shown for the first time under the system whereby the consolidated fund is charged with losses on certain uneconomical lines. The most important of the other increases are those for the debt services. Two questions are involved in the Government's policy at this point. The first is the attitude towards fresh capital expenditure, involving a continuance of borrowing. During the year just past over £7 millions was spent in capital expenditure as follows:—

Railway Construction, &c.	£ 2,786,190	Public Buildings and Schools	£ 849,041
Telegraphs & Telephones	931,661	Other Public Works....	489,368
Hydro-Electric Supply	945,573		
Main Highways & Roads	949,077		
Irrigation, Swamp-Drainage, &c.	229,569		7,180,479

The Minister's final comment on this point is worth repeating:—"I hold the view that on completion of the large undertakings now in hand in respect of railways and hydro-electric power, a tapering-off policy should be adopted until a further national stocktaking justifies extensions commensurate with our increasing population and trade."

The second important point to be considered is the policy of debt repayment. This is, of course, dependent mainly upon a definite decision to curtail borrowings such as the Minister indicated. Such a decision will probably be forced upon the Government if only by reason of the large amounts of debt falling due for renewal within the next few years. Last year, however, there was a substantial increase of £13,374,539 in the gross and £11,040,831 in the total net debt. Of this net increase 57 per cent. (£6.3 millions) was absorbed by State advances to settlers, workers (for housing), and local authorities. The remainder was used mainly for various public works.

A new classification has been adopted showing the proportions of the debt as follows:—

	Million £.
Ordinary Debt	126.0
War Debt	75.3
State Advances Debt	27.8
Discharged Soldiers Debt	9.8
	238.9

Against this debt are various sinking funds and repayment provisions. Various sinking funds total £2,274,262, but the main provision now is by the Repayment of Public Debt Act, 1925, designed to extinguish the whole of the existing debt in 60 years. In addition, the payment of the £27.3 million advanced during the War to the Dominion by the Imperial Government is arranged under a funding scale by which the debt has now been reduced to £26.3 millions. The Minister of Finance further announced his intention of utilising "windfalls" and surplus revenue for debt repayment, and made a good start this year.

In view of this sound policy, the natural disappointment at the failure to reduce taxation will be considerably lessened. The new Minister is going the right way to reduce taxation by first reducing the causes of it.

ARGENTINA.—PRESIDENT AND PARLIAMENT—PUBLIC FINANCE—TRADE BALANCE—GENERAL BUSINESS—CROP ESTIMATES.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, July 28.

If parliamentary government in this country continues to prove a fiasco, it will not be for the want of plain-speaking by President Alvear, who in his Message at the opening of Congress administered a well-deserved rebuke to a legislature which had distinguished itself by doing absolutely nothing to justify its existence during the past year. The unsatisfactory circumstances in which Dr Alvear found himself called upon to make his annual pronouncement on the situation of the Republic will readily be realised. A Radical President, with a staunch faith in democratic principles, it was his ungrateful task to endeavour to recall those who are supposed to represent the popular will to a sense of their constitutional responsibilities and duties, and to warn them of the dangers which they are courting in abandoning all the business of government to the Executive Power. All this is verging on political ground, and it may be that few of your readers will be inclined to pay any very serious attention to South American politics. Nevertheless, if we are interested in the fortunes of Argentina, we cannot remain wholly indifferent to the part which good or bad government plays in the national affairs here, as elsewhere. To say nothing of the accumulation of urgent measures which appear to be hung up indefinitely for the lack of Parliamentary approval, the grave inconveniences of the "duodecimo" system, under which the State is compelled to meet its indispensable financial requirements from month to month on the basis of previous Budgets, should be fairly obvious.

As regards finance, the Message stated that the revenue during the past year amounted to \$642,368,900 (paper), and the expenditure to \$562,896,200, leaving a surplus of \$79,472,700, which had been utilised on various projects authorised by special laws. External debt bonds had been issued for \$175,952,454, representing the two loans placed in New York for the reduction of the floating debt, while \$29,739,214 had been amortised. The internal debt at the end of 1924 was \$836,227,480 paper, and during 1925 new bonds for \$95,070,000 were issued, and \$21,072,254 amortised. The total circulation of the consolidated public debt was as follows, the corresponding figure for 1924 being given for comparison:—

	Dec. 31, 1924.	Dec. 31, 1925.
	\$ Paper.	\$ Paper.
External debt	687,354,387	833,567,627
Internal debt.....	836,227,480	910,225,225
Total	1,523,581,867	1,743,792,852

With reference to the floating debt, we may take more up-to-date details, since furnished by the Minister of Finance, showing that its position at the end of last month was:—

	\$ Paper.
Short-term internal loans	339,650,000
Difference in exchange	35,000,000
Conversion fund (Banco de la Nación)	15,909,091
Short-term dollar loans	63,597,272
	454,156,363

The steady reduction which continues to be effected will be evident by a comparison with Dr Alvear's total of \$479,259,908, as at April 30th, and \$632,338,190 on June 30, 1925.

The President was naturally obliged to refer to the adverse balance of foreign trade last year, amounting to \$8,917,784 (gold), as compared with a favourable balance of \$182,684,589 in 1924, but he described this as a purely temporary phenomenon which was not to be interpreted as a decline from the prosperous course which is being followed by the country. On the other hand, he spoke of the improved terms of the recent \$20,000,000 funding loan, and its rapid oversubscription, as exemplifying the high reputation which Argentina now enjoys in the financial world.

London: 5, Walbrook, E.C.4 and 4, St. James' Street, S.W.1.

Instead of forwarding to Congress the Budget which had already been drafted in respect of 1927, the executive has recommended the adoption of that for 1926, as already approved by the Budget Committee of the Chamber of Deputies. This covers an expenditure of \$674,983,560, the revenue being estimated at \$675 millions. It is explained that little variation is required in this year's expenditure, but the real object, of course, is to afford even less excuse than ever for time being wasted in fruitless discussion—with what result remains to be seen.

The general position may be described as fairly satisfactory, always allowing for the fact that retail business is not yet out of the convalescent stage. The June bankruptcy returns show a falling-off of \$2,557,392 in the declared liabilities, as compared with May, after discounting the return presented in the latter month by the Banco Comercial del Azul, which it is pleasing to report has now reopened its doors. With the same deduction the total for the first six months of the year stands, in round figures, at \$79,262,000, as against \$58,896,000 in the same period of last year, and \$52,440,000 in 1924. The increase is no more than might have been expected in view of the relatively unfavourable situation this year.

The final estimates of the Ministry of Agriculture give the total wheat yield for the 1925-26 harvest, including the carry-over at the beginning of the year, as 5,571,641 metric tons. After the usual allowances for domestic consumption and seed, and the deduction of 1,831,116 tons exported up to July 10, the exportable balance as from that date is estimated at 1,380,525 tons. The linseed total appears as 1,949,289 tons, the exports to same date 1,111,732, and the available surplus as 647,557 tons. Shipments continue to move forward at a normal rate.

The depressing results of Argentine overseas trade during the quarter ended March 31st are rendered still clearer by a further return by the National Statistical Department, according to which the value of exports fell from \$286,332,356 gold in the corresponding period of 1925 to \$221,524,102, while imports rose from \$219,186,928 to \$227,822,651. Thus the net adverse balance for the three months must be set down at \$73,443,977 gold, but it is to be borne in mind that a marked recovery should be apparent when the figures for the second quarter are available.

Letters to the Editor.

GERMAN COLONIAL POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The best criticism of the efforts now being made in Germany to obtain the return of their colonies (*Economist*, August 7, 1926, p. 240) on the grounds that otherwise they will find difficulty in paying reparations annuities is that their colonies never paid, but were always a source of expense to the Reich. Between 1904 and 1911 the average budgetary deficit for all the colonies together was 81 million gold marks (*Statistisches Jahrbuch f.d. Deutsche Reich*, 1914, p. 454). In 1912, 1913, and 1914 the deficits were respectively 23, 38, and 43 million marks. Despite the heavy export of diamonds from South-West Africa, the German colonies, as a whole, were importers rather than exporters, doubtless owing to the introduction of capital, and the imports were chiefly from countries outside the German economic region. Since reparations payments must appear as the export of goods uncompensated by visible imports, the return of the colonies to the Reich could only have the effect of lessening the amount available for these payments. The impression I received from a visit to East Africa 11 years before the war was that money was being squandered in unnecessary and useless development.—I am, &c.,

TRAVELLER.

BOOKS RECEIVED.

Finland To-Day. By Frank Fox. (London) A. and C. Black, Limited, 4 Soho square, W. 1. 7s 6d net.

A traveller's impression of the country, its resources, its inhabitants, and their activities and conditions. Interesting to the general reader and well illustrated.

La Stabilisation du Franc. Par Fernand Leureux. (Paris) Marcel Giard, 12 Rue Soufflat. 12 francs.

A study of the general principles relating to currency stabilisation, the conclusions from which are applied specially to the present circumstances of France and Belgium.

Meetings. By F. D. Head. (London) Sir Isaac Pitman and Sons, Limited. 5s net.

Primarily intended as a text-book for company secretaries and students preparing for secretarial and accountancy examinations, this work should also be of use to chairmen, directors, and shareholders of limited companies.

Die Wirtschaftskrise in Mittel Europa. Von Arpad Torok. (Wien) Moritz Perles.

An analysis of the causes leading up to the post-war economic crisis in Central Europe, and a suggestion for its solution. The discussion includes inflation, destruction of capital, internal and external purchasing power of money, &c.

The South Africans. By Sarah G. Millin. (London) Constable and Co., Limited, 10-12 Orange street, W.C. 2. 7s 6d net.

Bulletin of the Imperial Institute. Vol. XXIV. No. 2. August, 1926. (London) John Murray, Albemarle street, W. 5s net.

Bulletin of the British Library of Political and Economic Science. August, 1926. (London) London School of Economics, Houghton street, Aldwych. 6d net.

The Mexican Revolution and the United States, 1910-1926. By C. Wilson Hackett. (Boston) World Peace Foundation, 40 Mt. Vernon street. 5 cents.

The London School of Economics and Political Science: Calendar for Thirty-second Session. 1926-27. 3s 6d.

A complete guide to the school's activities. Terms begin on October 4, 1926, January 10th, and April 25, 1927, respectively.

Die internationale agrare Arbeitsteilung Europas. Von Fritz Beckmann. (Jena) Gustav Fischer.

A description of the division of labour as it affected agricultural products in Central Europe in pre- and post-war days. Among other things, the author deals with the influence of the competition for markets for wheat, corn, &c., and the existence in Russia, before the war, of a large mobile labour force.

City of Manchester. Abstract of Accounts, 1925-26. (Manchester) Henry Blacklock and Co., Limited, Albert square.

Mathiesons' Traffic Tables. July-December, 1926. (London) F. C. Mathieson and Sons, 16 Copthall avenue, E.C. 2. 1s. net.

Tea Facts and Figures. No. 5. August, 1926. Price 2s. (London) Fredc. C. Mathieson and Sons, 16 Copthall avenue, E.C. 2.

Gives the following details of tea-planting, &c., companies:—Year formed, shares authorised, and number of shares issued, and amount paid; head offices of companies; number of acres planted; tea output in lbs. for four financial years (estimated for current year); profit (or loss), carry forward, &c., for recent years; dividends paid during, and approximate highest and lowest prices for 1923, 1924, 1925, and 1926 to date; costs F.O.B. and "all in"; selling prices; average price of tea.

The Nineteenth Century and After. September, 1926. (London) Constable and Co., Limited, Orange street, Leicester square, W.C. 2. 3s net.

Contains an article on "Mining Royalties and the Coal Problem," by Sir Reginald Craddock.

International Labour Review. August. (London) George Allen and Unwin. 2s 6d.

Contains an article on the eight-hour day by M. Albert Thomas.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
September 14.

ACCOUNT.
September 16.

THE entry of September revives the anticipation of quickening business in Stock-Exchange markets, as clients return from their holidays and look to the House for opportunities of replenishing depleted bank balances, or for the investment of money whose employment had been left over pending a settlement in the coal industry. That trouble has now been so long present that investment and speculation have come gradually to disregard its influence. Were there to be an early resumption of work in the coal mines, it is doubtful whether Stock Exchange markets would be greatly affected. Many people assume that the conclusion of the trouble is already discounted in prices. There is plenty of money available for investment. Sound securities are absorbed with ease and rapidity.

Victory bonds are better on the reinvestment of some of the money released this week by the redemption of bonds, but otherwise the gilt-edged market is inclined to be dull by reason of a slight hardening of money rates. Foreign bonds are somewhat uninteresting, the movements in French National issues being small. Deduction of the dividends from three of the French railway bond prices brought in no fresh buyers. Brazilians keep very firm, and Roumanian loans of both classes are decidedly better. Chinese bonds are flat on the troubles reported from that country. European reconstruction loans continue to be in quiet request, and Peruvian Corporation issues have strengthened.

Prices of Home Railway stocks move up and down in aimless fashion, the purchase or the sale of a comparatively small quantity of stock proving quite sufficient, so limited is the market, to influence prices all round. The only feature is a recovery in North-Eastern preferred. Prior-charge stocks are unchanged.

Argentine railways went back fairly sharply on sales by people who got in a few weeks ago, and who deemed it discreet to take now the profits which had accrued to them rather than to wait for the dividend announcements, upon the expectations of which the purchases were based. The stock offered found ready homes, and prices recovered. Leopoldinas have been a strong spot. United of Havana continues to be unfavourably affected by the uncertainty which prevails in the sugar industry. In nitrates there is no trade doing.

Rubber, the produce, has eased off a trifle without having any noticeable effect upon prices in the share market, while tea shares, after a show of strength, tended to droop towards the end of the week. There has been a little animation in oils, though the promise of increased public activity in this section has yet to materialise. The textile market is steady. Each setback in Courtaulds is seized upon as an opportunity for the bears to close their positions. Something of a feature this week has been the animation in brick companies' shares, owing to the good results reported by Eastwoods, Burlesdon, and one or two of the other companies. The iron and steel market is a trifle irregular, the public adopting a waiting attitude. Hudson's Bays have been strong. Hotels went a little better. Cable and electric equipment shares are mostly up. Wireless issues remain neglected.

Brazilian Tractions, after their recent remarkable rise, went back a few points, to recover, however, towards the end of the week, while others in this group, Sidros, Barcelona Tractions, and Mexico Tramways, have fluctuated sharply. The banking market is hard, and some mild attention has been attracted to shipping shares, with a few rises as a result. British-American Tobacco developed fresh strength, and Godfrey Phillips spurred. Canadian Tobacco shares advanced on very vague rumours of a possible bonus. Similar rumours, more confidently stated, brought about a jump in Dennis Motors, while Morris Motors 7½ per cent. preference, which fell to ½ discount soon after the allotments appeared, are now a trifle above their par price. The brewery list is firm, and amongst illumination issues, Gas Light and Coke stock has gained a fraction, the electric lighting list being virtually unchanged. There is a good deal of business afoot in a quiet way amongst industrials. Sound preference shares offered in this market find no difficulty in securing investment support.

The Kaffir market remains at the mercy of operations directed from the Cape and from Paris. This week Van Ryn

STARTING NEXT SUNDAY

A REMARKABLE
NEW CITY FEATURE

WILL APPEAR IN THE

SUNDAY PICTORIAL
EVERY WEEK

HOW, WHEN & WHERE TO INVEST

By PARVAL.

¶ This feature will be the work of an eminent financial expert, and will constitute the most authoritative city article in any Sunday newspaper.

Parval's policy is clearly explained in this first article which appears next Sunday. He will, while offering sound advice on first-class speculative investments, discourage hazardous speculation. The comparative advantages of various types of gilt-edged securities will also be dealt with.

Investments suitable for people of moderate means will be indicated as well as those for people possessed of ample capital.

Parval is in the almost unique position of being possessed of first-class sources of information, and at the same time free from financial entanglements.

Consequently, his advice is as disinterested as it is invaluable. It will throughout maintain the same high tone and standard of excellence which distinguishes the already established features of the "Sunday Pictorial."

Deeps, Mozambiques, Tanganyikas (on Brussels business), and a few others stand out as particular favourites. The rest of the active shares have relapsed into something like quietude, the recent gamble in Sub-Nigels having spent its force for the moment, and the Cape no longer paying any particular heed to the previously popular platitudes. De Beers went strongly ahead on Thursday afternoon. There is still a fair amount going on in Malayan tin shares, the better class descriptions being on the up-grade, and West Africans came to the fore towards the end of the week, though Cornish tin shares command little public interest. The copper group keeps good, and, without any fuss, several of the Indian mining shares improved as a result of the week's work. San Francisco Mines of Mexico deserve to be mentioned as popular, on the good developments reported from the property.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded	140,860,269			
NATIONAL SAVINGS CERTIFICATES.				
April 1, 1926, to August 28, 1926 Dr. 1,500,000				
Net sales week ended August 28, 1926, Dr. 300,000.				

To the Public—				
Gondar Tin Mines, 100,000 Ord. Shares, 5s. at par	25,000	25,000	5,000	20,000
Do 100,000 Def. Shrs., 1s. at par	5,000	5,000	5,000	5,000
Total offered to the Public	30,000	30,000	10,000	20,000

Total offered to shareholders only ..	nil	nil	nil	nil
Total offered for subscription to date ..	140,860,269	140,860,269	23,194,268	117,666,001
1926	128,360,577	128,360,577	209,326,100	7,934,477
1925	130,822,951	130,822,951	271,393,173	7,566,222
1924	202,430,317	202,430,317	573,575,650	371,145,333
1923	508,248,328	508,248,328	388,978,203	119,270,125
1922	156,306,480	156,306,480	367,549,656	211,242,176

Gondar Tin Mines, Limited.—Share capital £42,000, divided into 140,000 ordinary shares of 5s each and 140,000 deferred shares of 1s each. This is an issue of 100,000 ordinary shares of 5s each at par and 100,000 deferred shares of 1s each at par. The holders of ordinary shares are entitled to a 10 per cent. non-cumulative preferential dividend and one-third the surplus divisible profits. Each subscriber for ordinary shares has the right of subscribing for one deferred share in respect of every ordinary share. The company has been formed in particular to develop a group of tin mines situated near Ancora, Portugal. The properties consist of eight leases, held in perpetuity from the Portuguese Government, having a total area of 1,000 acres. The purchase price to be paid by the company is £17,500, to be satisfied as to £10,500 (£5,500 in cash and £5,000 in fully-paid ordinary shares) to the original vendor, and as to the balance of £7,000 (20,000 ordinary shares and 40,000 deferred shares, credited as fully paid) to the promoter. It is stated that the proceeds of the present issue, after the payment of the cash portion of the purchase consideration and preliminary expenses, will provide approximately £23,500 for additional plant and working capital. A speculative venture.

Grange Trust, Limited.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. There is an issued share capital of £400,000, divided into 400,000 shares of £1 each. When fully paid-up, the shares will be converted into equal amounts of the preference and ordinary stocks at the rate of £5 of each class of stock for every ten fully-paid shares. The preference stock will be entitled to a cumulative preferential dividend at the rate of 5 per cent. per annum, but will have no further participation in profits or assets. The company was incorporated on July 2, 1926, in particular to carry on the usual business of an investment trust company. The 400,000 shares of £1 each have, it is stated, been placed at par. The amount of the preliminary expenses was £5,902, payable by the company. Prospectusless.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

† Tax free.

different, and prices moved in a downward direction in sympathy with weaker American cables occasioned by more favourable Canadian crop reports. Steamers of white Pacific October sold 50s 6d, Australian arrived 54s, and ditto afloat to Mediterranean at 55s. Maize dull, and La Plata qualities freely offered in near positions at less money, but European kinds firmly held owing to scarcity and dearth of freight. A steamer of La Plata just sailed changed hands at 30s per 480 lbs c.i.f. Wheat dull and easier. No. 1 Northern Manitoba quoted 58s 9d, No. 2 ditto 57s, No. 2 hard winter 53s 3d, choice white Karachi 56s, Barusso 61 lbs 53s 9d all ex-ship per 496 lbs. English new 10s 11d-11s 2d per 112 lbs. Flour lower. London standard grade 48s, town whites 49s, patents 50s-51s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 46s to 48s, Minneapolis 46s 6d-48s 6d, Australian 43s 6d-44s per 280 lbs ex store. Maize slow and values weak. Plate landed 32s 6d, ditto ex-ship 30s 9d, Bessarabian ex-ship to arrive 32s 6d per 480 lbs. Barley inactive. Californian 35s-43s, Chilean Chevalier 50s-57s, ditto brewing 35s 6d-48s, Australian Chevalier 45s-47s ex-store, Smyrna 35s-48s ex-ship per 448 lbs, No. 3 Canadian Western ex-ship 29s 6d, Russian landed 30s 6d, ditto ex-ship to arrive 28s 9d, Persian ex-ship 28s 6d per 400 lbs. English new 9s 6d-10s per 112 lbs. Oats quietly steady, La Plata landed 23s 3d, No. 2 Canadian Western ex-ship 26s 9d, landed 27s 6d, No. 2 Canadian feed ex-ship 23s, landed 24s 6d, Chilean Tawny ex-ship 22s 9d, American 38 lbs ex-ship 22s 9d, landed 24s 3d, mixed feed ex-ship 19s 6d, landed 20s 9d per 320 lbs. English new 8s 4d-9s per 112 lbs. Millers' offals quiet. Broad bran 6s 6d, middlings 7s 6d, fine ditto 9s, bags included ex-mill, feed oatmeal 7s 9d, light oats 6s 9d, ground oats 12s per cwt free on rail. Oatmeal quiet and easier. London-made flaked 17s, rolled oats 16s, medium also fine cut 16s, coarse also medium pinhead 16s ex-mill per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1925-26, 1924-25, 1923-24, 1922-23:—

	1925-1926.	1924-1925.	1923-1924.	1922-1923.
Estimated sales of home-grown wheat—				
1 week to August 28	94,944	249,432	53,769	269,899
52 weeks to August 28	12,947,501	11,835,528	12,821,842	17,454,836
Average price of English wheat per cwt.	12 6	11 7	12 2	9 1

AMERICAN WHEAT MARKETS.

Dullness has pervaded all markets this week, the predominant factors being reported heavy interior movement of the new crops and the absence of demand from overseas consumers. Quotations:—

	Jan. 2, 1925.	Sept. 3, 1925.	Jan. 7, 1926.	Aug. 26, 1926.	Sept. 2, 1926.

Chicago (No. 2 Winter)—Cents per 60 lbs	177	(b) 154½	176½	(b) 134½	(b) 130½

(a) October delivery.

(b) September delivery.

Visible supplies of wheat in Canada, at 12,557,000 bushels, show a decrease of 3,494,000 bushels, as compared with the previous figures. Supplies a year ago stood at 3,937,000 bushels.

COAL.

Our Cardiff correspondent writes:—There has been no material change this week. The importation of foreign coals at Cardiff remains at about 60,000 tons per week, and although the bulk comes from Hampton Roads, cargoes are arriving of Silesian, Westphalian, and even Czechoslovakian coal. The railway companies and the gas and electricity undertakings have covered their requirements up to the end of September, but are temporarily delaying further purchases of foreign coal in the expectation of a settlement of the dispute. The Mines Department has also relaxed the conditions governing the granting of permits for the distribution of the controlled coals, and in its circular to the colliery companies it states that the revised procedure has been decided upon partly in order that as additional men return to work the collieries shall not be hampered in the disposal of their output, and partly to assist the return to normal trading as quickly as possible. There are inquiries on the market for post-strike supplies of South Wales coals, and it is reported that in at least one case a contract has been entered into to deliver within three weeks after the termination of the stoppage.

IRON AND STEEL.

The following has been extracted from the weekly report of the London Iron and Steel Exchange:—Rather more activity has been apparent in the market this week; but the holiday season is not yet over, and there is still a strong inclination on the part of traders to postpone business until the situation regarding the coal strike becomes clearer. The tone of the weekly meeting was apathetic, but it was reported that the British steel makers had booked a fair number of orders of late for delivery when production is resumed after the strike. The belief is gaining ground that the end of the coal strike is in sight, and as a consequence some buyers are placing orders so that they may be executed directly the steel industry gets to work again.

try gets to work again. The question of whether or not prices will advance when this takes place is being actively discussed. Much will depend upon the price of industrial fuel after the miners return to work; but the general impression seems to be that it will be considerably above that ruling before the strike, and that as a consequence the quotations for iron and steel material will also be higher than prior to May 1st.

Our Middlesbrough correspondent's report, dated September 2, 1926, is as follows:—Pig-iron: Prices of Cleveland iron have been advanced 6d per ton, and No. 3 Cleveland G.M.B. is now 90s 6d per ton f.o.t. Makers can command their own price, but most consumers are dependent on cheap foreign iron, imports of which have been fairly substantial lately. Hematite is less scarce, and the price of East Coast mixed numbers remains at 82s 6d per ton. Although fuel is more plentiful, it is far too dear to enable makers to restart more plant. Manufactured Iron and Steel: Small lots of material are being disposed of. A fair amount of activity is taking place at some rolling mills, to meet special requirements. Prices are approximately as follows:—Steel ship plates, £8; steel ship angles, £7 10s; iron bars, £11 15s; steel rails, £8 10s. Iron ore: Business in foreign ore is entirely held up, and best rubio is nominal at 21s 6d per ton c.i.f. Tees.

Our Sheffield correspondent writes:—Some works are now obtaining British coal from Nottinghamshire and Derbyshire, but none is forthcoming from the South Yorkshire pits, which are situated, so to speak, at their doors. Prevailing prices are still above normal. Large quantities of coke from Westphalia have lately been imported and sold to the iron foundries. It is said to be not far inferior to the Durham coke usually employed, but is extremely expensive, costing between 65s and 67s 6d per ton delivered. This importation has enabled a number of closed foundries to restart. The rolling mills and lighter steel branches continue to carry on, though with increasing costs. The scarcity of Sheffield high-grade steel has caused a run upon Swedish steel. Importers have cleared their stocks, and considerable quantities are under orders. A limited amount of crucible steel is being melted, but in the absence of the proper fuel the quality is not always up to the standard. The market for heavy steel scrap is practically at a standstill. Holders having no space to stock, have sold parcels at low prices. A recovery of prices is anticipated when steel melting is resumed.

Our Glasgow correspondent writes:—The majority of sheet works and re-rollers of steel bars are producing to a good average capacity, but output falls short of demand. Bar iron makers have increased their prices for Crown bars, and are experiencing a good demand. Heavy steel works remain closed, and will not be able to resume until local supplies of fuel are obtainable. Work at the shipyards and engineering establishments is greatly hampered through want of material. Foreign steel is coming into this district in fairly large quantities, and is now quoted at firmer prices. A good deal of Continental semi-finished steel is being used by sheet and bar rollers, as this class of steel is now quite unobtainable from British sources. There is a steady run on stocks of pig-iron, and prices have an upward tendency. Consumers are beginning to suffer from scarcity, but are unwilling to commit themselves at present rates for delivery after the strike.

Our Cardiff correspondent writes:—In the iron and steel industry the production of pig-iron and steel bars is on an extremely limited scale, but approximately between 40 per cent. and 50 per cent. of the tinplate mills and finishing departments are operating, and shipments, although much reduced, are continuing. Prices are a shade easier under the influence of an impression that the coal stoppage will end soon, quotations for prompt shipment being about 20s per basis box, and for post strike positions 24s. Galvanised sheets are steady at about £16 10s to £17.

OTHER METALS.

TIN.—The market opened firmer, in face of higher Eastern cables and a better demand, with holders showing more reserve, but later prices gave way on realisations. Standard cash sold £294 10s-£296 15s and £294 10s, and three months £290 5s-£293 2s 6d and £290 10s. Sales in the East were reported at £297 to £299 15s and £298.

COPPER slightly irregular, and barely steady on balance, with liberal dealings recorded. Standard cash changed hands at £59 5s to £59, and three months £60 to £59 15s. LEAD ruled firmer during the first half of the week, and near positions were well supported. Later, however, values gave way on heavy realisations both near and forward positions. Good, soft foreign pig September sold £32 17s 6d to £32 8s 9d, October £32 10s-£32 12s 6d-£32 3s 9d, December £32 8s 9d-£32 10s and £32 1s 3d. SPLITTER market irregular with dealings on a liberal scale. September sold £34 8s 9d-£34 12s 5d-£34 11s 3d, October £34 11s 3d-£34 12s 6d-£34 12s 6d-£34 8s 9d, November £34 11s 3d-£34 12s 6d-£34 6s 3d, December £34 11s 3d-£34 12s 6d and £34 10s per ton. ANTIMONY quiet. English special brands £74 10s-£75, foreign spot £64 10s. China crude afloat sold £40, regulus ditto £62 per ton.

ALUMINIUM quiet. Home delivery £118 per ton. QUICKSILVER spot £15 10s per bottle. WOLFRAM steady, and forward quoted 14s to 14s 3d per unit. TIN PLATES quietly steady on the basis of 23s to 23s 6d per box for prompt and 20s 6d forward delivery f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, September 2, 1926.

There has again been but a meagre demand. Values of American show but little change, weather reports having been not altogether unfavourable. Prices of Egyptian have shown a very smart advance on speculative buying by Alexandria, based upon rather less favourable crop accounts. Spot sales for the week August 27th to 2nd inst. (inclusive) were 29,000 bales. Of these, 14,410 bales were American, 2,100 Brazilian, 6,600 Peruvian, 2,700 Egyptian, 2,600 African, 250 East Indian, and 250 sundries. Imports for the same period were 19,442 bales. These included 6,716 bales American, 3,933 Brazil, 2,265 Peru, 4,895 African, 1,520 East Indian, and 113 sundries. Quotations to-day are: American middling, 10.14d; Egyptian Sakel, 17.65d; uppers, 13.45d; Brazil fair, 10.09d; Peru G.F. mod.-rough, 11.00d; smooth, 11.00d; Tinnivelly F.G.F., 8.95d; East African G.F., 11.55d; and West African middling, 9.79d.

MANCHESTER, September 2, 1926.

The past week has been one of the quietest for a long time. Buyers generally have operated from hand to mouth, the opinion being still held that it will be possible to operate on a cheaper basis in the near future. There is no possibility of any decided improvement in trade until work is resumed in the coal-pits. Most business offering has been for India, and many offers have again had to be turned down. Calcutta continues to be the most disappointing outlet, a decided shrinkage having occurred in the number of offers. Occasional sales have taken place for Bombay, Madras, Karachi, and the up-country districts. Demand for China has been at a low ebb, and recent advices remain very discouraging. Only moderate support has been given by the Near East, but some fair transactions have been put through for the colonies. American yarn quotations have been well maintained, but there is still plenty of room for improvement in medium counts. Spinners of Egyptian descriptions have advanced prices in sympathy with the rise in the raw material rates, but the advance has checked buying.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The new season has opened in Australia with a good general demand for wool, and with prices decidedly firm. In this market all quotations are very firm in sympathy, but the actual volume of business in tops has not been equal to that of the previous week or two. Spinners would like to buy at the prices ruling before the recent advance, but topmakers have very decided views regarding the value of wool, and more especially wool on the spot. Current requirements are not large, but stocks in the hands of users are also rather light, and it is considered that any material expansion in demand which may follow the settlement of the coal strike will cause a further rise in prices. The bugbear of the industry is that selling prices consistently lag behind costs of replacement, and the farther one gets away from the raw wool the more difficult it is to pass on any advance. It is recognised that the present state of the industry in this country does not warrant any further appreciation in wool values, but both in the primary markets and in London this month buyers may be forced to follow the lead of foreign competitors. There is not much change in topmakers' quotations, but all qualities are very firm, with, if anything, a hardening tendency. Spinners have advanced their quotations as a protective measure, but it is difficult to make more money for most descriptions of yarn. The most encouraging feature is that good particulars have been received against old contracts, and there is a marked improvement in employment in the spinning section. The demand for piece-goods on home account is well maintained.

COLONIAL WOOL.

(FROM OUR CORRESPONDENT.)

Values at the wool sales in Sydney, the opening of the Australian selling season, have gone very much in accordance with anticipations. During the past six weeks consumption has been steadily increasing, August having been one of the busiest months in consuming centres this year. The increase in activity was heralded by the commencement of Russian buying, and a very sound situation has been revealed. Purchases on Russian account have included every quality from 46-70's. At the commencement of the movement two or three Bradford firms made large sales, and have since been very busy delivering wool and tops. One effect of the revival has been to demonstrate that stocks of merino wool in Bradford are by no means heavy. A repetition of the placing of orders on the same scale would practically clear out the market, and there is an indication of the smallness of stocks in the buying limits cabled to Sydney. The majority of these limits were at 4s for good average 64's tops, but purchases on that basis have been very small so far. After Monday some buyers advanced their limits to 4s 6d, and "picking up" is now being done by all.

Cable reports of the sales are unanimous in stating that prices for good wools are mostly 5 per cent. above those current at the end of June. Pieces, bellies, and the shorter combing and clothing wools appear to be fully at par. There is just a little diversity as to what tops will cost, some estimating that warp 64's will cost 5 1/2d, and super 60's 4 1/2d. These prices are just about in harmony with those current in Coleman Street last series. Even allowing for the somewhat divergent views held about the cost of wool, Sydney is a very good market, for when the raw material can be purchased to bring in good warp 64's tops at 50-51d, we consider that prices are reasonable.

From the manufacturing point of view there is nothing to justify any inflation of wool values, for a further expansion of consumption at home and abroad is necessary. The sale of large quantities of wool to the Continent has no doubt been the immediate means of sustaining the present firm level of colonial values, but there is something wrong with manufacturing conditions in Bradford and district. All the wool sold for abroad could easily have been worked up by the machinery here if there had been any ultimate demand for it, and if there had been no coal strike it is quite probable that prices for tops would have been higher than they are to-day. Most importers are now of opinion that they can afford to wait developments, and in about another fortnight values will be submitted to another test at the London sales. It is understood that the quantity available will be approximately 170,000 bales, which will mean a series lasting four weeks. This quantity will be quite sufficient for all prospective needs, and if merinos and fine crossbreds advance 5 per cent. and medium and coarse crossbreds 10 per cent., it will be ample.

THE JUTE TRADE.

DUNDEE, September 2.

Prices of raw jute are still moving contrary to expectations, and the feeling is growing that the Government estimate of a record crop of between 11 and 12 million bales has been rather exaggerated. The final forecast will be issued in Calcutta on September 20th next. The district returns will be known a week earlier. Never before has there been such reluctance on the part of Calcutta to offer the raw material at this period of the season, and instead of spinners here purchasing thousands of bales to cover their requirements only a few hundred bales are changing hands where it is absolutely necessary to have the fibre landed here at a certain time. There is great doubt whether values will depreciate to the extent anticipated. Prices during the past month have gained at least £5 per ton, first marks now being offered at £35 for September shipments, and lightnings at £33 10s. There are no offers of

Daisee fibre being made, and the price of assortment is nominal at round about £30 for October-November shipment.

A considerable business has taken place in jute yarns during the past two weeks, as the result of which prices have appreciated 3d per spindle for cops and spools. The respective rates at which business is being negotiated are 3s 3d and 3s 4d, and some sellers are refusing to sell further, having booked large orders. The hessian cloth trade has improved, and orders are now being placed for larger quantities for delivery to the end of the year. Prices have advanced in sympathy with jute and yarns, manufacturers now quoting 4 1/2d for 10 1/2-ounce 40-inch Hessians and 3 1/2d for 8-ounce. Linoleum hessian buyers have been taking off fair quantities, and prices have firmed up. Calcutta goods have appreciated, and speculative sellers have withdrawn from the market for the early positions of shipment. Spot goods have been in demand from United States, and prices are higher at 29s 6d for 10-ounce 40 inch, and at 25s 3d for 8-ounce.

CHEMICALS AND FERTILISERS.

Business in the chemical market has been quieter during the month, holiday conditions having lessened the demand from the consuming industries. Actual trading has been only for small lots, and several products have been reduced in price. The undertone continues firm, however, with stocks short, and prices higher in some lines, including oxalic acid, sodium sulphide, and lithopone. Coal-tar products are now very scarce, with quotations nominal, actual business being at very high levels. Barium chloride and some potash chemicals are easier, while acetone is much cheaper at nominal rates. Fertilisers are in quiet request, with basic slag and ground mineral phosphate attracting some attention for autumn delivery. New season's prices are in force for ammonium sulphate. Nitrate of soda and superphosphate are both cheaper. Comparative representative quotations are as follow:—

	1926.							
	Sept. 2.	Aug. 5.	July 1.	June 1.	Sept. 2.	Aug. 5.	July 1.	June 1.
Ammonium sulphate	11 7 0	13 1 0	13 1 0	13 1 0	11 7 0	13 1 0	13 1 0	13 1 0
Arsenic, white powdered	13 5 0	13 0 0	13 0 0	13 0 0	13 5 0	13 0 0	13 0 0	13 0 0

HIDE, LEATHER, AND ALLIED TRADES.

The firmness in the hide market is maintained, and although tanners still maintain a policy of reduced input, they seem unable to control the values of raw material. At the Bermondsey auctions on Thursday best ox hides sold from 6d to 9d, and best cows at 5 1/2d—showing practically no alteration on last prices. Calfskins in best selections made from 6 1/2d for heavy to 9 1/2d for medium, lights being withdrawn. Lambskins sold from 2s to 9s each, and pelts from 5s to 8s each. Oversea hides are advancing, and good sales are reported to have been made of S.A. frigorifics at 7 1/2d for Argentine ox. Values of dry hides are also advancing, and 1 1/2d is quoted for dry B.A. Americans. The Chicago market is cabled as active, with best heavy packers now quoted at 15 1/2 cents. Trade in sole leather is much better than might have been expected; 10-12 and 12-14 lb bends have moved off well, whilst 7-9 have gone out from tanneries freely. Merchants are selling sole bends in fair-sized quantities, and 12-14 lb selections have made from 20d to 30d. The leather market is firm, and stocks are low. In upper stock, box and willow calf are selling fairly well. Coloured glacé

Issues its own notes in Formosa, conducts general Banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

kid is wanted, and there is a tendency toward the use of black kid for certain purposes. The shoe trade is quiet, the summer demand being almost over.

VEGETABLE OILS AND OILSEEDS.

Markets generally are far from active. Consumers of linseed oil are moderate in their requirements, and current quotations are easier at around £32 10s per ton naked ex Hull mill prompt and to December delivery. Cotton oils have continued neglected and are lower, crude Egyptian offering freely at £35 and ordinary refined at £37 10s ex Hull. Other vegetable oils are in poor demand. In the oilseed section a further decline has been recorded in Plate linseed, which changed hands at £15 10s on passage and £15 11s 3d September-October, with up to £15 15s paid for later shipment. New crop is offering for January-February shipment at £15 15s. A small trade has been done in Calcutta linseed to London at £17 5s for seed on passage. Cottonseed is firmer on a good trade demand, black Egyptian now being worth £9 10s afloat and new crop £10 for September loading. Some demand for Soya beans is making itself felt, the Continent having bought at £12 3s 9d September-October shipment.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The market for refined goods ruled quiet and rather featureless, and previous prices were repeated for British standards. Foreign kinds lack support, and with sellers more in evidence values tended in a downward direction. Czecho granulated, spot, quoted 27s 0 1/2d; September, 15s; November-December, 14s 9 1/2d, f.o.b., Hamburg. J Dutch, spot, 27s 0 1/2d; prompt, 14s 11 1/2d; October-December, 15s 0 1/2d, f.o.b., Rotterdam. German granulated, first half September, 14s 10 1/2d; ditto, cubes, November-December, 16s 10 1/2d, f.o.b., Hamburg. R.T. cubes, prompt, 17s, f.o.b., Antwerp. Belgian crystals, prompt, 14s 7 1/2d, f.o.b., Antwerp. Polish crystals, November-December, 14s 3d, f.o.b., Danzig. Cuban basis 96 per cent., September, 12s, c.i.f., U.K. White terminal easy, while in fair request. September, sold 13s 6d; October, 13s 9 1/2d; December, 14s 3 1/2d; March, 14s 10 1/2d; August, 15s 6d per cwt.

COFFEE.—Business moved quietly, this being partly attributable to the selection on offer being very narrow. Prices, however, are fully maintained. New crop East African is now on offer, but more representative quantities in auction are awaited. Kenya, bold sizes, sold, 135s to 145s 6d; peas, 126s to 145s 6d. Arusha, bold, 130s. Costa Rican, fair to fancy bold, 156s to 195s. Futures quiet. September, sold, 90s.

COCOA.—Only small sales on the spot, at late rates. Accra, F/F, November-January, sold, 44s, f.o.b.

TEA.—Indian auctions during the week amounted to 49,810 packages. All good and fine liquoring parcels were well competed for and command full recent rates, but common declined 1/2d per lb, with but a quiet movement. Pekoe, sold, 1s 3d to 1s 1 1/2d; broken orange, 1s 6d to 2s 6 1/2d; and choice, 3s 5d to 4s 2d. Ceylon auctions of 29,100 packages aroused brisk support for all qualities marking further improvement, and these advanced 1/2d per lb, but common and plain teas ruled 1/2d per lb lower. Pekoe, sold, 1s 3 1/2d to 1s 1 1/2d; broken orange, 1s 4 1/2d to 2s 4d per lb in bond. New season's China meets with but quiet attention. Keemun sold, 1s 10d to 2s 4d, and Foochow Soochongs, 3s 2d to 3s 4d; fine Ching-Wo, 1s 9d. Common old Monongs are wanted in the region of 7d per lb. In auction, 7,029 packages Java and Sumatra offered experienced a better demand, but prices disclosed slight irregularity. Good liquoring grades were in request, and realised full to dearer prices, while leaf kinds sold readily on export account. Pekoe sold, 1s 2 1/2d to 1s 3 1/2d; broken pekoe, 9 1/2d to 1s 6 1/2d; orange pekoe, 1s 4 1/2d to 1s 5 1/2d; broken ditto, 1s 2 1/2d to 1s 1 1/2d; flowery ditto, 2s 1d; and pekoe souchong, 1 1/2d to 2s 1/2d per lb, in bond.

RICE.—Market remained dull, and without new feature. Rangoon, two stars, spot, London, quoted 16s 6d; July-August, 16s, c.i.f., U.K. No. 1, garden Siam, August, 17s 7 1/2d. No. 1 Saigon round grain, August-September, 15s 9d, c.i.f., U.K. Italian idle, with cleaned, afloat, sellers, 21s; Spanish, September-October, 20s to 20s 3d per cwt, c.i.f., U.K. Japanese peas, spot, 30s; September-October, 25s per cwt. Beans slow of sale.

SPICE.—Pepper firmer. Black Singapore, spot, 8d, f.a.q.; August-October, 7 1/2d. Lampong, spot, 8d; August-October, also October-December, sold, 7 1/2d to 7 3/4d; white Muntok, spot, 1s 2 1/2d; L.S., August-October, also October-December, sold, 1s 0 1/2d to 1s 0 3/4d. Cloves dull. Zanzibar, spot, 9 1/2d to 9 3/4d; August-October, 8 1/2d. Pimento, spot, 6 1/2d per lb; September-October, 48s per cwt. Tapioca flake, Singapore firm, to Havre, August-September to October-December value, 16s 6d. Sago flour steady. Sarawak to U.K., August-September, also September-October, sellers, 15s 1 1/2d; October-December, buyers, 15s 1 1/2d per cwt, c.i.f. terms.

FRUIT (Dried).—Currants firm, but quiet. Amalia, quoted 30s to 31s; Pyrgos, 29s to 30s; Patras, 31s to 33s; Gulf, 32s to 35s; Vostizza, 40s to 53s; Australian, 38s to 48s. Sultanias quiet. Australia, quoted 64s to 80s; South African, bleached, 63s to 68s. Smyrna, good average, cleaned, September shipment, 45s. Dates steady. Siar, quoted 13s; Khadowie, 15s to 16s; Hallowee (cases), 22s 6d to 25s. Business was reported during the week in new Hallowee, first tide, 2,000 cases, shipment from Bombay at 34s. Raisins move off slowly. Cape, f.a.q., 36s; g.a.q., 40s; Lexias, new crop, 40s to 45s. Evaporated fruits dull of sale. Californian apricots, extra choice, 125s; fancy, 132s 6d; South African new Royals, first grade, 140s. Plums, Californian, 30/40's, 69s; 40/0's,

56s; 60/70's, 46s; 70/80's, 43s; 80/90's, 38s 6d; Oregon, 30/40's, 60s; 35/45's, 53s 6d. Peas, Californian, extra choice, 67s 6d; fancy, 77s 6d; Lake County, fancy, 85s. Apple rings, Californian, extra choice, 50s to 60s; September-October shipment, 45s 9d; Canadian, spot, 47s cwt.

CANNED GOODS.

CANNED FISH.—Sardines in moderate demand, but there is still a scarcity of good quality. Portuguese, 1/2s, quoted 4s 3d to 6s per dozen tins. Salmon slow. Red, tall, 1 lb, 54s to 56s; tall pink, 25s to 27s; pink 1/2s mostly cleared. Lobsters quiet. Best 1/2s, quoted 157s 6d to 160s, and 1/2s, 90s. Japanese crab clears readily. Crayfish steady.

CANNED FRUITS in better demand, especially for pears, which offer at reasonable prices. Californian Bartlett pears, 24-2 1/2s, quoted 12s 6d to 13s 6d; seconds, 10s to 10s 6d. Californian peaches, choice, 10s 6d to 12s 6d; standard, 10s 6d to 11s 6d; seconds, 9s 6d. Californian apricots, choice, 12s 6d to 13s; standard, 10s to 11s; seconds, 9s 3d per dozen tins. Pines in moderate request, but prices fairly steady. Italian tomatoes quiet, unchanged.

CANNED MEAT.—Moves slowly at late rates. Corned beef 6s quoted 38s to 46s, as to quality. Danish lunch tongues, however, sell steadily, and range from 122s 6d to 132s 6d. American quoted 140s, with best 145s to 147s 6d. Ox tongues firm. Cooked boneless hams, Danish, continue in request, at 1s 8 1/2d per lb, for cases of six tins.

CONDENSED MILK.—Market unaltered, and skimmed dull of sale. Machine-skimmed ranges from 10s to 11s 6d. Full cream, 20s to 25s. Full-cream evaporated, however, continues in demand.

HONEY.—Market generally quiet, apart from a steady demand for New Zealand. New Zealand quoted 50s to 85s; Australian, 40s to 50s; Jamaica ranges from 37s 6d to 50s; Haiti, 37s 6d to 48s; Cuban, 37s 6d to 48s per cwt.

RUBBER.

Market generally quiet, and prices irregular, though fairly steady on balance. Plantation standard sheet, spot, also September, sold, 1s 7 1/2d to 1s 7 3/4d, and 1s 7 3/4d; October, 1s 7 3/4d to 1s 8d; October-December, 1s 8 1/2d to 1s 8d and 1s 8 1/2d; January-March, 1s 8 1/2d to 1s 8 3/4d; April-June, 1s 9d to 1s 9 1/2d per lb.

GENERAL.

SHELLAC dealer.—Fair T.N., orange, spot, 150s to 152s 6d; Futures, October, sold, 146s; December, 143s 6d per cwt.

COPRA quietly steady. F.M.S. Straits to Rotterdam, August-October, quoted £28 16s 3d; Dutch East Indies, ditto, £28 11s 3d; Ceylon, £29 17s 6d; other kinds, however, show no change. Palm kernels quiet. August-October, to Liverpool, sellers, £20 12s 6d per ton.

JUTE.—The market opened the week with a quiet and easier tone, but rallied later on increased buying orders, though somewhat unsettled at times on speculative manipulations. Firsts, August steamer, sold, £32 10s to £34 10s; September, £30 5s to £31 5s, £33,

£32 10s; October, £29 5s to £31 5s, £31, £32 10s, £31 10s; October-November and November-December, £28 10s, £32, and £31 5s. Lightnings, August-September, sold, £29 15s to £31 15s; September-October, £28 15s to £30 10s. Hessians and twills firm, with a moderate demand.

HEMP.—Manila ruled firm on reserved offers with fair inquiries. J grade, August-October, £46 10s; K, £36; L, £36 10s; house mark, ditto, sold, £37 to £38; M, quoted £31 10s. New Zealand quiet but steady. African sisal, No. 1, f.a.q., September-November, quoted £43 per ton.

TALLOW.—Messrs Colchesters and Woolner write on September 1st as follows:—The tallow market was less active during the week, but prices were unchanged to-day. Buyers appear to have filled their requirements for the time being. The stock in London on August 31st, as returned by the wharves, amounted to 20,199 packages, showing an increase during the month of 3,042 packages. At auction to-day 1,384 casks tallow were offered, and 196 were sold. Quotations are:—Australian mutton: Fine, 45s; good to fair, 44s to 43s; dull to dark, 42s to 40s; hard, 44s. Australian beef: Fine, 45s; good to fair, 44s to 42s; dull to dark, 41s to 39s 6d; sweet, 45s 6d.

MISCELLANEOUS.—Cocoanuts quoted 22s per 100. Coir yarn, Ceylon, £21 10s to £37; Cochin, £24 10s to £49; Ceylon bristle, £18 to £23; cinnamon leaf oil, 45d; citronella, Ceylon, 1s 7½d; Java, 2s 4d.

Present shipment from Australasia: Good mixed, 43s 6d. Present shipment from South America, 43s 6d. The market letter is unchanged. Town tallow, 39s 6d per cwt. Rough fat, per 8 lbs, 2½d; melted stuff, 29s 6d per cwt. Quotations are:—Town, 39s 6d, net cash, naked, ex works. Country: Frail casks, 39s 6d; home melted, shipping casks, net, f.o.b., good coloured, 42s 6d; fair to dull, 41s to 39s. Bone fat: white none; pale none; benzine, 34s 6d; melted stuff, 34s f.o.b.

by Continental holders on an important scale. For so large is the Continent's interest in sterling bills and sterling securities now that a reversal of the movement might be disturbing. For five three months' bills $4\frac{1}{2}$ - $\frac{3}{4}$ per cent. has been the usual quotation, but buyers have been less keen in the absence of an immediately profitable resale to Continental interests. November and December Treasury bills, however, have been in rather more demand by some of the banks down to $4\frac{1}{8}$ per cent. There was a fractionally higher average for yesterday's bills, the amount offered having again been raised by £5,000,000 as compared with the amount tendered for three months ago.

	Sep. 10, 1926.	Sep. 3, 1926.	Aug. 27, 1926.	Aug. 20, 1926.	Previous Rate and Date Changed.

Houses (Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	2 (Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	..

Thursday's Bank return showed a decrease of £105,600 in coin and bullion and a decrease of £985,600 in circulation, and Reserve was £880,000 higher. Public Deposits declined by £2,726,800 and Other by £2,419,400. Government Securities were £6,063,700 lower, but Other were £37,000 higher. The proportion rose $1\frac{1}{2}$ per cent. to $29\frac{1}{4}$ per cent. Currency notes outstanding were reduced this week by £426,500 to £290,649,800, which includes £1,296,100 for notes called in but not yet cancelled. The fiduciary issue is £233,103,700, or £14,798,800 below the maximum.

The monthly statement of the London clearing banks of average weekly balances for August, which is printed in full on a later page, shows that deposits declined by £12½ millions. Acceptances also fell by £2½ millions. The following table compares the aggregate figures for the nine English banks:—

	Dec. 1925.	Mar. 1926.	May 1926.	June 1926.	July 1926.	Aug. 1926.
Capital and reserves	121.0	123.6	124.2	124.2	124.4	124.4
Acceptances	108.2	100.6	92.4	87.8	85.2	82.4
Deposits (incl. undiv. profits, &c.)	1,646.8	1,587.8	1,589.8	1,630.1	1,646.7	1,634.1
Total liabilities	1,876.0	1,812.0	1,806.4	1,842.1	1,856.3	1,840.9
Coin, notes, balance at bank, and cheques in course of collection	256.2	236.2	239.3	250.9	243.6	240.0
Money at call	117.8	109.7	112.7	121.4	118.7	117.9
Investments	286.1	272.2	268.7	267.9	270.9	272.9
Discounts	231.0	187.2	185.7	210.4	233.0	226.1
Loans and advances	846.8	876.3	877.4	873.2	874.0	871.7
Cover for accept., premises, &c.	158.1	130.4	122.6	118.3	116.1	113.3
Total assets	1,876.0	1,812.0	1,806.4	1,842.1	1,856.3	1,840.9

Cash is £3½ millions lower, and there is a reduction of about £½ million in money at call. Investments are £1 million higher. Discounts have declined by about £7 millions, and Loans and Advances by just over £2 millions.

NEW YORK MARKETS.

Our New York correspondent cables:—Activity in the financial and commodity markets has slackened this week on account of the interruption caused by the Labour Day holidays. A firmer tone in the money market encouraged profit-taking in the share market, which had shown strength early in the week, but gave way to irregular price movements later. The large over-subscription of the \$350 millions of nine-months notes to replace September 15th maturities testifies to the growing scarcity of short-term investments, caused by the Treasury's policy of steadily reducing outstanding obligations. It is expected that Federal Reserve operations will tend to maintain a steady money market until after the next income-tax payment date. But a further hardening in rates is likely before the end of the month. No immediate change in the Federal Reserve rediscount rate is expected. The Federal Reserve weekly statement shows a substantial increase in circulation, due to holiday requirements and a decline in deposits. Discounts for the whole system are slightly lower, but they show a considerable gain for New York, whose reserve ratio is 79.2 per cent., as compared with 74.3 for the whole

system. Business sentiment remains generally cheerful. Crop prospects are favourable, and record-breaking railroad traffics indicate a greater volume of commerce.

THE STOCK MARKETS.

Growing hopes of a coal settlement and the steady return of holidaymakers have led to some increase in activity in some sections of the Stock Exchange. In the gilt-edged market, however, business is quiet and prices steady, except for a relapse in Victory Bonds following last week's rise. The foreign market has been featureless, apart from the weakness of Chinese bonds, caused by the incident in which a British warship was involved with casualties. Home Rails failed to respond to coal peace hopes. The rubber share section is firm, with the best-class stocks in good demand. The oil share market, though disturbed by the continued slump in British Controlled, showed a fairly steady list. Among general industrials gas and shipping stocks have gained, but the week has been without conspicuous feature. In the mining markets attention has been mainly absorbed by the lively speculative movement in Malayan tin shares, which is discussed at some length on a later page.

THE COMMODITY MARKETS.

The week's developments in the coal situation have induced a rather more cheerful feeling in certain markets, but business as a whole shows no marked change as to volume. Increased chartering of tonnage to load foreign coals has been a feature of the week. Iron and steel remain in very short supply, and makers refuse to commit themselves as regards post-strike engagements pending some indication of the probable level of fuel prices. An extensive spot demand has been experienced for American cotton, but the latest Bureau report is of a bearish character. Spinners of American yarns are adhering to the new basic prices, but orders are difficult to procure. Wool is very firm at the Antipodean auctions, and an advance of from 5 to 10 per cent. is looked for at next week's London sales. The wheat market has been slightly steadier over the week. Sugar is firm on sustained demand from consumers; coffee steady but quiet, and tea well competed for. Rubber remains quiet and featureless. In the non-ferrous metal markets a minor boom in tin is signalled by the attainment of the £300-a-ton level. Copper is fully steady, though dealings are on a less extensive scale than of late, while lead is slightly easier on realisations.

FOREIGN EXCHANGES.

Dullness characterised the Foreign Exchange market throughout the week; little business was done, and no sensational movements occurred. During the earlier part of the week sterling maintained its strength against the dollar, but weakened rather towards the close. The lira showed a weakening tendency as a natural reaction to the recovery of the previous week, which had been carried too far. Paris, after an early improvement, also weakened as a result of small purchases of foreign currencies in a very flat market. Brussels, though moving in sympathy, weakened in a far lesser degree, and remained comparatively steady, as it has for the past two weeks. The dollar rate opened on the 3rd at 4.85 19-32-21-32, and improved to 4.85½-1½ next day. No change occurred on the 6th, although there was fair activity, in spite of Wall Street being closed. Activity was again fairly marked on the 7th, but weakness then set in, and the closing rate of 4.85½ was the lowest of the day. The weaker tendency continued, the rates remaining at 4.85½ on the 8th and 9th, and yesterday further weakness was evident at 4.85½. Forward rates are 5-32, 1, 11-32 premium for one, two, and three months. It is not as yet clear what influences have caused this reaction, but we should be inclined to attribute it to purchases of dollars here at a favourable moment in anticipation of seasonal commercial requirements. Paris started well by recovering from 165 on the 3rd to 163½-164 on the 4th, and managed to maintain this latter level, or near it, at 163½-164½ and 163½-163¾ on the 6th and 7th, but weakness set in on the 8th at 165-165½, and on the 9th there was a sharp rise to 170½-170¾. The spot rate was the same yesterday, but forward rates show the same weakening tendency at 9½

above spot for three months yesterday, as compared with 8½f on the 7th, and 8f on the 3rd. The adverse influences operating during the past week were bad news as to the corn and beet crops, and the necessity to purchase dollars for seasonal grain and other shipments. Brussels, under the influence of Paris, went from 175 to 177½ during the week, after touching 178½, the forward rates being 2f, 3½f, and 5½f above spot for one, two, and three months. The comparative steadiness of Brussels over the past three weeks points to the efficacy of the remedial measures adopted. The lira fell away from the opening rate of 131½ on the 3rd to 136 yesterday after standing at 130½ on the 4th and 130 on the 6th. Forward rates were weaker at 8½ lira above spot for three months. The movement is probably a reaction to an impulse which national enthusiasm had allowed to go too far. Some movement took place amongst the gold exchanges of Europe, in sympathy with the dollar mostly against this country. Amsterdam closed ½ firmer at 12-10½, Berlin also firmer at 20.38-38½, Switzerland firmer at 25.12, and Warsaw unchanged at 44, as compared with the opening levels. The peseta reflected the rumours of serious internal disturbances in Spain, and after opening firm at 31.98 on the 3rd went out to 32.10 on the 6th, and remained at something over 32 on the 7th and 8th. The promptness of the Directorate in handling the situation, however, brought the rate back sharply to 31.92 on the 9th, and the peseta was yesterday stronger on balance for the week at 31.75. No other European currency calls for comment. Of the South American exchanges the milreis is better on balance at 7 15-32d-½, but the peso is fractionally weaker at 45 17-32d-19-32d. In the Far East the rupee has remained unchanged at 15 5 31-32d throughout. The yen is very firm at 15 11½d. The silver market is gloomy and disturbed, and the outlook is described as unpromising. Prices fell to new low levels, the lowest recorded since March, and spot stood at 28 5-18d and forward at 28½d on the 7th. They improved, however, to 28½ spot and 28½d forward on the 9th. Producers in the U.S.A. claim that the prospects are the worst for fifty years past, and anticipate harder times, but it is hoped to create a demand for silver in the arts and as subsidiary coinage to counteract the possible effects of recent Indian currency legislation. The silver exchanges have not, however, so far moved very much in sympathy with silver, Hongkong being practically unchanged at 2s 2d-2s 2½d and Singapore at 2s 3½d-2s 4d, but Shanghai is ½d weaker at 2s 9½d-2s 10d.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 4th:—

EXPENDITURE.	(000's omitted.)	RECEIPTS.	£
Supply Services	7,122	From Revenue	11,102
Interest, &c., on Debt	13,057	Decrease in Balances	395
Sinking Fund	1,431	Increase in debt	10,803
Sundries	690		
	22,300		22,300

Revenue for the week amounted to £11,101,700, against £12,927,900 in the corresponding period last year. Customs produced £1,957,000, against £1,798,000, and Excise £864,000, against £949,000. Property and Income-tax yielded £4,154,000, against £3,785,000, and Super-tax £430,000, against £740,000. Special Receipts yielded £800,000, against £2,900,000 in the corresponding period. The week's operations increased the National Debt by £10,803,700, and caused the following changes:—

	(000's omitted.)	£
National Savings Certificates ..	— 100	
Treasury Bills		+ 1,887
Public Department Advances ..		+ 7,550
Sundries		+ 1,467
	— 100	+ 10,904

The floating debt was increased by £9,460,000 to £770,621,000.

FINANCIAL YEAR, 1926-1927 (April 1 to September 4, 1926.)

	£		£
Total Expenditure ..	347,853,829	Raised by Revenue ..	277,744,363
		Decrease in Balances ..	4,176,636
		Amount borrowed ..	65,932,830
Total	347,853,829	Total	347,853,829

ESTIMATES for FINANCIAL YEAR 1926-7.†

Expenditure	£ 825,727,000	Revenue	£ 824,750,000
Deficit	£ 977,000

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

EUROPE'S NEW CHAPTER.

On Wednesday the Assembly of the League of Nations unanimously admitted Germany to membership and assigned to her a permanent seat on the Council. Yesterday her representatives took their appointed places. Thus the fiasco of March 17th is retrieved, and the most important political event witnessed in Europe since the war has taken place. Its significance may have been partially obscured by its long postponement; but it has not been in fact diminished. The seal is at last set on the work of Locarno, and the treaties signed there ten months ago with the aim of closing the loopholes for war come into force as soon as the purely formal exchange of ratifications has been transacted. Europe is therefore entering this week on a new chapter of her history, and before we survey some of the more important facts that emerge from this week's work at Geneva, let us remember to give honour where honour is due—for instance, to Germany for the initiative which led to the Locarno Conference, to France for the spirit in which this initiative was met, and to Sir Austen Chamberlain for his signal services at Locarno.

Of the many reasons why the accession of Germany to the League is of outstanding importance, the first is that it removes the last shadow of suspicion that the League, under all its fine professions, is really an alliance of the victors in the Great War, with the unavowed but paramount object of consecrating the settlement which they imposed upon the vanquished in the Peace Treaties. This conception of the League was never just, since, from the outset, its membership included not merely the ex-victors but the great majority of the ex-neutrals, and some of the latter rank among the most civilised and most disinterested communities in the world. Moreover, the membership was reinforced at an early stage by the admission of three ex-vanquished countries—Austria, Hungary, and Bulgaria—so that, in fact, it has long included representatives of all the three groups into which the countries of the world were divided during the war period. Nevertheless, the admission of Germany marks the moral, though not the technical, transcending of the war alignments; for the previous admission of three of Germany's ex-allies did not require a very strenuous moral effort on the part of those countries which had the decisive voice in the matter. By contrast, the admission of Germany does profoundly affect the interests and the feelings of her principal European opponents in the late war—particularly of France—and we must keep before our minds the greatness of the moral effort which France has made in consenting, in the first instance, at Locarno, to the admission of Germany to the League with the status of a Great Power. The willingness of France to invite Germany on these terms, and the willingness of Germany to accept the invitation, are unmistakable signs of the return of a constructive goodwill, without which Europe had no prospect of a better future.

Another point of profound importance is that the accession of Germany practically completes the extension of

the League over the whole of Europe, only those parts of Russia and Turkey which are in Europe, remaining outside. The League, of course, has always been a world-wide organisation, and this aspect will doubtless become more prominent—especially in the field of its economic activities—as time goes on. Nevertheless, the Great War had a European origin; its principal battlefields were on European ground, and the League of Nations was founded with the primary object of preventing the repetition of what had been essentially a European catastrophe. From this point of view it is evident that the inclusion of all European countries, and especially those which are Great Powers, is the League's first, though by no means final, objective; and, with the accession of Germany, this first objective has been attained. On this account the accession of Germany has been more urgent, though not more important, than that of the U.S. and the U.S.S.R.—the only two Great Powers that still remain outside the circle.

To turn from the broader aspects of Germany's entry into the League, there are also several results of immediate practical importance which should accrue from this event. Germany will now participate officially and fully in all the League's efforts at the financial and economic restoration of Europe. The reconstruction schemes for Austria and Hungary have been completed, but who can say whether other schemes of the highest importance may not be added before long to the list of present minor activities, such as the Bulgarian plan, which has been sanctioned this week, and Greek resettlement. Again, Germany will now share in the supervision of the mandates—some of them for her own ex-colonies—and of such work as the administration of the Saar Valley. But it is in the economic sphere that her influence is most likely to be felt. Her great need is for external markets. Only by achieving an export surplus can she pay her war obligations, and at the same time, as a result of the war, her export opportunities are curtailed. She has lost, in Alsace Lorraine, important ore resources and a large volume of exportable production. The Russian market, before the war so vital to her, is poverty-stricken; neighbouring nations have raised high tariff walls around her. From all this it may be deduced that Germany will greatly interest herself in all the problems to come before the International Economic Conference, and will use her League membership to influence the commercial policy of Europe towards more healthy fiscal systems.

Last, but most important of all, the adhesion of Germany to the League and the coming into force of the Locarno Treaties clear the most formidable obstacles out of the path that leads to the consideration of disarmament. That is the next great problem, and it is clearly of substantial importance that the League will approach it with its ranks reinforced by the one Great Power which is disarmed. It is not merely the anti-war machinery of the Locarno Treaties, and the presence of Germany at Geneva, which should render the handling of this formidable problem the easier. The will to achieve success should be effectively stimulated in this country and in Italy by the nature of the guarantees which, with the passage of the Locarno Treaties into operation, fall upon their shoulders. France, too, faced with her Herculean financial task, has the most compelling of reasons to take advantage of the more favourable conditions for approaching this problem.

In writing of a week that has brought such welcome progress in European affairs, it is distasteful to close on a jarring note. We must, however, confess that we detect a fly in the Geneva amber. The proceedings of the past ten days have revealed once more the tendency, so pronounced last March, to revert back to old and discredited diplomatic methods. Once again we have seen the representatives of the Powers manœuvring and intriguing, and finally compromising, and presenting the compromise to the Assembly in such form that its free functioning has been crippled, and its decision over the reorganisation of the Council dictated by the coupling together in one resolution of two questions, on one of which there was unanimity, and on the other great diversity of opinion. It is not by such methods that the prestige and usefulness of the League can be enhanced, and we hope that the Assembly will show its resentment and make it clear to dabblers in the old diplomacy that it will not again play the rôle of puppet to the wirepullers.

THE CANADIAN ELECTION AND TARIFF POLICIES.

(BY OUR CORRESPONDENT.)

OTTAWA, August 31.

WITH polling day little more than a fortnight distant, the general election campaign in Canada has now reached its critical stages, but so far it has been a very dull and lifeless affair, the main reason being that the farmers, who constitute almost half the electorate, are busy with their harvest, and decline to take much interest in the warfare of politics. Again, many electors are inclined to agree with the charge of the *Toronto Globe* that the leaders of the two historic parties are preoccupied with the personal duel which has been proceeding between them since 1919, and for the sake of triumph in it are prepared to sacrifice both national and party interests.

When the campaign opened each of the old parties was striving to make the issue, on which it was pinning its faith, dominate the contest. But in connection with the Customs scandals the Conservatives overplayed their hand, and when prominent members of the party made absurd charges reflecting upon the personal character of Liberal Ministers of unquestioned moral integrity, they impaired their chances of securing general credence for the very grave indictment of incompetence and corruption which can be laid; and the unexpected death of Mr Boivin, the late Minister of Customs, who was one of the central figures in the Customs scandals, has prevented full use being made of the ammunition which was available. On the other hand, outside of Quebec the Liberals have largely, as a result of their own pusillanimity, found the constitutional issue a poor electioneering weapon, and are gradually abandoning it. If there was any serious breach of constitutional proprieties, it lay in the refusal of Lord Byng to grant Mr King the dissolution which he sought on June 26th, and for this the Governor-General must bear the sole responsibility. But Lord Byng happens to enjoy great popularity with all classes, and particularly with the war veterans, and the Liberals soon developed apprehensions that any direct attacks upon his conduct would revive the old "loyalty" cry, of which, through memories of the Reciprocity election, they have an ingrained terror, and would also range the powerful ex-soldier vote solidly on the side of the Conservatives. Therefore, although Mr Bourassa on Quebec platforms continues to arraign the Governor-General as "a subaltern of Downing Street," who has reduced Canada to the status of a Crown Colony, and Liberal politicians in the same province are inveighing against the perils of Imperialism, elsewhere the constitutional issue has fallen flat.

As a result the tariff, the railway problem, and other issues which are the staple ingredients of Canadian politics, are now receiving their full share of attention. The Liberals are making the most of the tariff and tax reductions of their recent Budgets, but they have not abandoned their old tricks of adapting their fiscal tunes to suit the particular locality in which they are sung. In the Prairie Provinces the Liberal candidates follow the example of the Progressives, who are no longer a serious factor outside this territory, in denouncing the iniquities of the Protectionist system; but in the industrial districts of Quebec and Ontario they lay stress upon the need for tariff stability, and fiercely repudiate the charge that any further inroads upon the Protectionist fabric are contemplated by their party. In recent speeches in the Maritime Provinces, where a sense of keen disappointment at the economic results of Confederation has generated a growing volume of "secessionist" sentiment, Mr Mackenzie King has been trying to pacify the discontented elements by arguing that the chief blame for the economic stagnation of these regions must lie with the Conservatives, the authors of the defeat of the Reciprocity Treaty of 1911, which would have opened up to them their great natural market in the United States; but he has refrained from giving any pledge that he would, if returned to power, embark upon negotiations for a similar treaty.

Premier Meighen, the Conservative Leader, on the other hand, declares that "I am making no trade treaties with the United States," and alleges that the fatal obstacle to them would be the same impermanence which charac-

terised the Reciprocity pact. He asserts that the Liberals have really abandoned the idea of reciprocity, and points out that when last session he defied any member of the King Ministry to get up and advocate another Reciprocity treaty his challenge was not accepted. Meanwhile, during the present campaign, the Conservative Premier and his lieutenants have been preaching the virtues of a higher tariff and pledging themselves, if returned to power, to increase the scale of duties. Premier Meighen declares that permanence and stability are more important elements for a proper Canadian tariff than its height, and has repudiated the charge that he contemplates the wholesale "brick for brick" tariff policy which would bring the level of Canadian duties to a parity with those of the Fordney-McCumber tariff. But in numerous speeches he has pledged himself to enforce a "brick for brick" policy on farm products. His most definite declaration was made at Orillia, Ontario, where he said: "The tariff revision on farm products will be the very first revision we make. We will make only one revision, and in that revision we will place the tariff on farm products entering Canada on just as high a level as the American tariff." Now this declaration of policy has provoked strong criticism from the Liberal and Progressive parties, who contend that it can bring no real benefit to the Canadian farmer and might, if it provoked the United States to a policy of retaliation, do him a great deal of harm.

It is pointed out that vegetables, fruits, and meats are the chief farm imports from the United States which affect the fortunes of Canadian farmers, and undoubtedly the only demand for increased duties comes from farmers who are raising these articles, but it is now being held that in regard to these particular products the scale of United States duties is substantially lower than the Canadian scale. A study of the comparative rates of the two tariffs on this class of products shows that if Mr. Meighen fulfils his "brick for brick" pledge there will be less instead of more protection for the growers of vegetables and fruit.

On the other hand, a "brick for brick" policy applied to a number of major farm products would force an increase in the Canadian scale of duties, as the following examples will show:—

	U.S. Tariff.	Canadian Tariff.
Wheat, per bushel	.42	.12
Oats, per bushel	.15	.10
Barley, per bushel	.20	.15
Flour, per barrel	1.04	.50
Butter, per lb	.12	.4
Cheese, per lb	.5	.3
Potatoes, per cwt	.50	.35
Eggs, per doz	.8	.3
Hay, per ton	4.00	2.00

Yet the gains from such a change would be very problematical. Taking the figures of the fiscal year 1925, Canada imported from the United States only 152,954 bushels of wheat, and 933,323 bushels of oats—an insignificant quantity in comparison with our own domestic production, and, on the other hand, even with the high duties of the Fordney-McCumber tariff in operation, she sold to the United States 5,418,516 bushels of wheat and 4,488,246 bushels of oats. The same situation prevailed in regard to flour, butter, and condensed milk, as the following figures testify:—

	FISCAL YEAR 1925.	Canadian Imports from U.S.A.	Canadian Exports to U.S.A.
Flour	barrels	76,036	299,385
Butter	lbs	23,853	3,437,690
Condensed milk	cwts	..	89,375

In regard to cheese the balance is on the other side, for Canada imported 909,597 lbs and sold 758,800 lbs; but the fact persists that in 1925 Canada's exports of milk and milk products to the United States were valued at \$8,475,151, as against imports valued at the paltry sum of \$292,626. Only in regard to eggs is the balance of exchange heavily in favour of the United States. In 1925 Canada sold to her neighbour only 119,435 dozen, valued at \$48,187, and bought 2,564,551 dozen, valued at \$917,000, but it should not be forgotten that the greater part of these imports took place in the dead of winter,

when Canada's egg production, owing to climatic conditions, becomes very low, and substantial quantities are brought in from the Southern States. Fortified, therefore, by these figures, the critics of the "brick for brick" policy contend that, even if it availed to procure complete exclusion of all imports of the major farm products, it would make less than \$3,000,000 more available for distribution among all the farmers of the Dominion, and at the same time might imperil the American market for similar farm products, whose value to Canadian farmers is placed at \$20,000,000 per annum at least. The Liberal and Progressive leaders are also warning the Prairie Provinces that if they put the Conservative party in power they will be giving the latter a mandate for a general increase in the scale of duties on manufactured products—clothing, implements, furniture, utensils, &c., which cannot fail to increase materially their costs of living and of production.

It is doubtful, however, even if Mr Meighen were returned with a clear majority, whether he would be in a position to attempt any serious upward revision of the tariff. He seems to have made little headway in winning forgiveness from French Canada, and if it once more votes solidly against him, he can only secure a majority through the support of substantial contingents from the Maritime and the Prairie Provinces. Now, members of these regions, whatever may be their party labels, are for the most part unable to countenance a policy of any higher protection than now exists.

The result of elections is often decided in the last fortnight, and before September 14th fresh developments may bring about a swing of public opinion in one direction or the other, but at present neutral observers can discern no marked change in the state of political sentiment which produced a deadlock last October. The two great central Provinces of Ontario and Quebec, through their respective prejudices against Mr King and Mr Meighen, are evidently determined to cancel one another's influence once more, and in that event the Radical Progressives from the West, who will return at least twenty strong, will again hold the balance of power. There is, however, just one factor that might provide the Conservatives with a clear majority; the country is heartily sick of minority Governments and their timid, tortuous ways, and as the Conservatives have obviously the best chance of securing a clear majority, having only eight seats to gain, many independent electors may decide to contribute their support to a result which would produce a clarification of politics and a reasonably stable Ministry.

BANK CONTROL IN ITALY.

(BY OUR TURIN CORRESPONDENT.)

THE attention of financial circles is centred at present on the problem of control of banks. Political and economic reasons have contributed to give prominence to the problem. Through the creation of corporations of employers and employed, Fascism is endeavouring to give unity to industry and commerce, and to subordinate all economic life to Government direction. Banks, to which are entrusted the savings of the people, could not hope to maintain their independence from the all-pervading spirit of governmental control. It is contended that banks should not do business only for the sake of profits, but should always consider the "national" scope of every business proposition, and prefer to the most profitable the most conducive to approved national ends. This point of view should be especially paramount in all those cases which have a connection with the state of foreign exchanges. In some political circles there is a feeling that the big private banks are not keen in sustaining the public policy of devaluation of the lira, and there is some impression of undue interference of what is called "international finance" to the detriment of the lira. Strictly economic circumstances add emphasis to the general political ones. Several failures of banks—among which the most sensational was the failure of the Agricultural Bank of Parma—gave the impression of gross mismanagement which could and should have been prevented by timely control of competent supervisors. Old objections were repeated against the multiplication of small banks with insufficient capital, which are successfully catering for deposits among

The "six ordinary big banks" are the Banca Commerciale, Credito Italiano, Banco di Roma, Banca

In consequence of the above decisions, the next balance sheet statements of the Bank of Italy for September 30th and October 31st will be watched with the utmost interest, as they will bear traces of the vigorous deflationist policy to-day inaugurated. It would be very desirable that great care should be bestowed on the comparability of the figures before and after unification of the issue privilege. This should be one of the tasks entrusted to the newly appointed vice-director general of the Bank of Italy. The appointment of Signor D'Aroma to the vice-directorship of the Bank of Italy marks the end of many rumours current about the retirement, after 25 years, of the present director general, Signor Stringher. Stringher will remain at the head of the enlarged Bank of Issue, but he is strengthened by the appointment of Signor D'Aroma as vice-director, a very close friend of his, and a young, energetic man. For seven years (October, 1919, to August, 1926) D'Aroma was director general at the Finance Department, and to him is to be chiefly—not to say entirely—attributed the merit of the reorganisation of the direct taxation system. He is by far the strongest man discovered in the public services in the last decade, and his co-operation with Stringher will, it is hoped, be successful in solving the monetary problem—the most momentous of Italy's problems to-day.

SHIPPING COMPANIES' PROFITS.

AN analysis of the profits of a group of representative shipping companies during 1925 discloses a less satisfactory showing than for the preceding twelve months. This is not surprising, in view of the general trade depression. Rather, indeed, may we feel gratified that the figures are no worse. Our index number of "free" shipping freights fell heavily in 1925, and had earnings of the big lines fallen in similar proportion, there would have been a sorry story to tell. But many of the undertakings included in our table reap considerable reward from passenger traffic. Thus to a great extent these are not so seriously affected by adverse

trade conditions. Although the general level of profits was lower in 1925 than in the year previous, four companies were able to record higher earnings. This will be seen from the following table :—

Name and Year Ends.		Amount Brought In.	Net Profit After Payment of Deb. Interest	Distribution of Available Balance.

Fenwick	Dec. 31, 1925	9,304	46,165	8,250	37,500	..	9,711

The best performances were achieved by the Orient, whose net profits advanced from £286,821 to £311,979; the Eagle Oil Transport, from £908,308 to £919,297; Elder Dempster, from £474,302 to £479,514; and Lamport and Holt, from £117,634 to £133,552. All the other companies have lower profits to record. Generally speaking, reserve allocations are not on too generous a scale. Eight of the fourteen companies this year make no appropriation. The Eagle Oil, however, still continues to make substantial provision for contingencies, the directors continuing their policy of strengthening the financial position before making any payment on the ordinary capital. The P. and O. has reduced its allowance from £388,861 to £301,608.

Our next table shows principal liabilities and assets over the past two years : —

THE BANK is represented by Branches or Agents in all the principal cities and towns of the United Kingdom and has correspondents throughout the World

Head Office: 41 LOTHBURY, LONDON, E.C.2

Lampart and Holt last year withdrew the sum of £100,000 from reserve. This time the fund is drawn upon to the extent of £50,000, which has been applied to the writing down of shipping investments. This operation involves a total sum of £200,000. Several companies have followed a similar course. Wm. France Fenwick and Co. have transferred £125,000 from reserve, mainly for the purpose of reducing the book value of the fleet. Elder Dempster have appropriated £625,000. During the year the Cunard Company converted £4,000,000 of its 7 per cent. mortgage debenture stock into similar stock bearing 5 per cent. interest. It also issued in the United States \$7,500,000 two-year gold notes bearing interest at 5 per cent., the proceeds being used in the purchase of new assets, and the reduction of amounts due in respect of steamers delivered to the company. The Eagle Oil purchased and cancelled a further £142,300, and the twelve-year notes, and the amount of these now outstanding is shown at £2,179,350, compared with the original issue of £3,000,000. In accordance with the requirements of the trust deed, £950 of debentures were redeemed by the Orient Steam Navigation. Once again we would like to direct attention to the very unsatisfactory method adopted by the British India, in showing in its accounts the items of stocks, cash, investments, and debtors under one heading. Nor can the P. and O. altogether escape censure in this respect, since cash, investments, and debtors are all lumped together in the balance-sheet.

Our final table shows highest and lowest prices of a number of shipping securities in 1925, together with prices a year ago, also present prices and yields, and dividends on the ordinary shares in past two years:—

	Name.	Prices.		Ordinary Dividends.	End of Aug., 1925.	End of Aug., 1926.	Present Yield.

On the whole, shareholders have little cause to grumble in regard to dividend payments. All the undertakings were able to maintain former rates except the Royal Mail.

where there was a reduction from 6 to 5 per cent.; P. and O. deferred, which received 2 per cent. less at 10 per cent.; Wm. France Fenwick, 5, compared with 8 per cent.; and Lamport and Holt, whose ordinary proprietors went dividendless. On the previous occasion the latter received 4 per cent. During the twelve months share prices fluctuated to some extent, but quotations at the end of August compare favourably with those ruling in August, 1925, if all the circumstances are taken into account. Yields, in most cases, are on the generous side. This is not surprising, as most of the companies will probably be adversely affected by the high cost of bunkering with foreign fuel during the period of the coal dispute.

Sir Frederick Lewis, at the annual general meeting of Furness Withy and Co. in July last, made two interesting references to international shipping conditions. He said: "I would like to quote an actual case of a steamer which we recently transferred to a foreign flag, and which shows as clearly as possible the competitive conditions with which we are contending. On this particular vessel there is a difference of £247 per month, or, say, £3,000 per annum between the operating cost under the foreign flag as compared with the cost of the same service under the British flag." Sir Frederick continued: "I am as firm a believer as ever I have been in the future of British shipping provided the ordinary course of economic laws is not subverted. International trade must continue, and water-borne transport is still the cheapest and best-known method of transport, but we are still too heavily handicapped by the past. If I knew when increased trade would overtake the glut of tonnage with which the seas and harbours are burdened, I don't suppose I should disclose the fact at this meeting, but the fact that I do not intend to make any prophecy must not be interpreted to mean that I am concealing the information." Finally, he mentioned that not the least of our handicaps is the continued competition from foreign Government-owned vessels which are still being operated at less than cost, as is illustrated by the figures just recently published by the United States Shipping Board in support of their application to Congress for a grant to carry them through the current year. It is stated that \$18,000,000 will be required, and out of the published results of 29 services operated by Shipping Board tonnage only one made a small profit of less than £5,000. The stress laid by Sir Frederick on well-known troubles makes the more noteworthy the recent hardening of some leading shipping shares.

SCIENCE AND FARMING.

(BY A CORRESPONDENT.)

It may, and probably will, be felt that the above title has something unusual and not quite seemly about it. Should it not be "Science and Agriculture"? The two Latin words appear to go the better together. It is with a full concurrence in this idea that the title has been chosen, for it is necessary to consider where the English word farming conveys a different conception to the word from that imparted by the Latin word agriculture. To bring together science and agriculture is no more than to apply systematised and verified knowledge to one of the arts peculiarly capable of benefiting therefrom. Those engaged in bringing about such a union can and do take for their motto Dean Swift's famous saying that he is a public benefactor who makes two blades of grass grow where one grew before, that is to say on the old acreage. But those who are engaged in farming receive this same dictum somewhat frigidly, and here we have the difference between farming and agriculture. The farmer asks what has been the cost of doubling the yield per acre, and assuming his previous crop to have paid him 10 per cent. on outlay in cash, skill and labour, he judges the change in the production entirely by its result in increasing or reducing that percentage of profit.

Science has had a good deal to say about agriculture at Oxford, but the element which appeals to farmers has not been much considered. In one important respect

applied and tabulated knowledge has been an unmixed gain. Milk records and trap nesting have enabled farmers to eliminate unprofitable cows and hens where no observation of health or study of breed had been of value. The net gain to farming has been great already, and should be much greater in the future, for it may safely be assumed that "unprofitableness" is a mendelian character. This study, however, has been undertaken on lines of pure addition to knowledge, and the fact that it enriches those who live by breeding cattle and poultry is incidental merely.

The immense success of Rothamsted is intimately connected with what the Prince of Wales stated in his address at Oxford—namely, that it was a private benefaction. A practical man interested in the sale of fertilisers established and conducted it. Costs were studied as well as scientific results, and this side of things has been usefully carried further by the Oxford School of Agricultural Economics. Costings and the systematization of farm accounts promise to do more for farming than not a little agricultural experiment.

The Smithfield Club, which dates from the eighteenth century, was the great pioneer of scientific breeding of live stock for the table, but from the first it has separated itself severely from farming, and the man who breeds beef for the butcher has no guide to profit from the results at Islington. When the King's prize Hereford is bought for forty or fifty guineas the butcher's reward is in glory and advertisement, but even so it is doubtful if any net gain accrues to H.M. Privy Purse. Most of the prize-winning animals sell for prices indicating a heavy loss on fattening. The remarkable merits of this or that proprietary mixed food or ration are not necessarily overstated; what is lacking is a correlation of the cost of giving such food and what the butcher will give for the meat.

A much later establishment is the Botanical Institute at Cambridge, a State-endowed institution. This studies the possibilities of agricultural crops, and has made great efforts to improve our wheat. Here, however, the distinction between agriculture and farming has come sharply to the front. Wheat that is rich in dry gluten is less fecund than wheat which grows more slowly and makes more starch. The Institute pushes the glutinous wheat, and sells the seed corn as a species of propaganda, but the farmer is not an avid purchaser of "Government seed," and has even been known, "in the gun room," to work out little formulæ such as: "Six quarters per acre of slow-growing starchy wheat will fetch 12s per cwt; result 72s. Four quarters per acre of quick-growing glutinous wheat will fetch 14s per cwt; result 56s." There is also the consideration that Canada can grow the glutinous wheat better than can Great Britain, while no overseas country can rival the English starchy wheat for its peculiar gifts of softness and digestibility, mellowness, nuttiness and flavour. Agricultural machinery, to the improvement in which the Prince paid a deserved testimony, has even to submit to the same test of relation of outlay to return; its value is one of relativity. The Darby Digger was a magnificent creation, "a huge earth-shaking" machine. But the initial cost of £400 proved fatal. The various stack dryers have come and gone, but here again cost decides. Sir John Russell, the famous principal of Rothamsted, is a man of humour, rejoicing to be linked with the advertisement as "Rough on Rats," but while he has shown by a careful survey and by many patient experiments that the damage done by rats to stacks amounts to several millions sterling annually, the fact remains that the cost of rat-proof barns and the warehouse charges of the grain as consigned to a town keep thousands even of up-to-date farmers from early threshing and storage.

What the farmer needs to-day is a liaison officer between science and farming. The "living wage" is vital to the working farmer, and that must be the condition precedent to scientific development so far as the actual cultivator is concerned. The scientific development must pay its way.

TIN—A MINOR BOOM.

(BY A CORRESPONDENT.)

ON several occasions during the past few years tin has been "talked" to £300 per ton, and has nearly succeeded in getting there. Twice earlier in 1926 that price was actually approached; in fact, at one time during March the metal changed hands on the Exchange at £300 10s, although the closing price of the day was below the figure. On Tuesday the price closed 35s higher on the day at £300 7s 6d; on Wednesday the cash quotation was still another 25s up at £301 12s 6d; on Friday the price closed at £305 7s 6d.

There can be little doubt that but for the coal position in England the current level would have been reached earlier. For months past the statistical position has been growing stronger. At the end of August the visible supplies amounted to only 12,700 tons—representing about five weeks' consumption. The total compares with 15,600 tons at the end of January and 21,160 tons twelve months previously. The excess of consumption over production in recent years has been obscured by the stocks accumulated during the depression of 1921 and 1922 by the Malayan Government. In March, 1923, these stocks stood at 17,600 tons. In the course of the ensuing two years they disappeared entirely. The continued lack of output to keep pace with consumption has thus of late made a very visible effect upon the supplies, which have now shrunk to a dangerously low level. A number of the Eastern dredging companies are increasing their output capacity, and several recent flotations will reach the production stage between now and the end of the year. In addition, sundry Nigerian enterprises have recently installed additional machinery.

The course of recent events has naturally been followed with interest, and some little excitement, on the Stock Exchanges. Superficially the situation exhibits certain points of resemblance to that which characterised the rubber share market a year ago, but nothing like the same public interest has been aroused as yet. The external features of the tin market are less familiar to the average outside speculator than are those of the rubber market. Many people are unacquainted with the manner in which tin values are reckoned, but what they do know is the extraordinarily mercurial manner in which the price of tin can soar and—slump. Estimates of the lives of tin mines cannot be made with precision, as in the cases of Transvaal gold production. Malayan tin-mining is mostly alluvial, and the hazards of dredging for the metal are numerous. A dredge breaks down, or is put out of action by some unforeseen accident, and, whatever the insurance protecting it, the company's profits are bound to suffer—to suffer considerably if the price of tin happens to stand high. While all goes well, however, the tin producers stand to make remarkable profits.

The share capitals of the good Malayan companies are mostly of modest, or moderate, size. The companies are worked by engineers who are constantly on the alert for the latest inventions to cut down costs and increase capacity. Thus, even in bad times, when the price of tin falls low, a fair proportion of the Malayan tin mines contrive, with their cheap labour, to make some return to shareholders, and when the price is high to report such outputs as promise very pleasant dividends to shareholders.

Cautious observers are standing at the moment on the side of the bulls, in the assumption that, allowing for probable ups-and-downs, tin is likely to remain at a high price for a time. While tin was rising to £300 per ton, the Stock Exchange view maintained that as soon as the round figure became reached holders should sell and make secure of their profits. When tin touched £300 on Tuesday last the price evoked rounds of cheers, and when these had subsided buying of shares set in with greater vigour than before. The fear is not that real holders will sell, but that a rickety bull account will be established menacing the market with the prospect of shares being hastily flung overboard if tin goes back a little, or if any difficulty should materialise in the way of financing bullish operations. On Thursday and Friday last there

was an obvious disposition on the part of the public to accept the good prices that prevailed, but owing to the strength of the tin market the sellers found a fresh set of buyers willing to take shares for "new time"; that is, for the Stock Exchange settlement on September 30th. That is, briefly, how the position stands at present; a position promising as much excitement and interest as even a speculator in mining shares can crave.

JUGOSLAVIA.—A TRANSITION STAGE.

(BY A CORRESPONDENT.)

JUGOSLAVIA is now passing through a series of economic changes and adjustments too comprehensive to be grasped from trade figures or statistical data alone. It is passing on the one hand from a period of relative boom after the reconstruction years to normal circumstances, and on the other from a simpler to a more complex economic life. In State finances this change is reflected in the transition from deflation to stabilisation.

Deflation, synchronising, as it did, with specially favourable circumstances, had, contrary to theory, a very beneficial influence on Yugoslavia. The fall in the prices of imported industrial goods at a time when harvests were plentiful, created, during the years 1923-1925, an unprecedented demand for them among the peasants. The consequence of this was the introduction into agriculture of modern machinery and more advanced methods of cultivation. This in its turn resulted in an increase of nearly one-third both of the yield per hectare, and of the weight of the corn. Nor did industry suffer from deflation as might have been expected. Until then its chief difficulties had been the enormous rate of interest (in 1923 30 per cent. and over) and the lack of markets to absorb its products. Here, again, deflation soon reacted on the interest rate, which gradually fell to about 16 per cent. by July, 1926, while at the same time the prosperity of the chief consumer, the peasant, created a larger demand for industrial goods. Therefore, in spite of a decline in the prices of industrial goods of about 12 per cent. per annum, the fall was more than compensated by cheaper cost of production, cheaper raw material, and greater turnover. Nor should it be forgotten that about one-third of Yugoslav industry relies on foreign capital, and consequently foreign investors had an additional compensation in the rise of the value of the dinar. That industry did not suffer is proved by the fact that in spite of a number of failures of enterprises founded during inflation on capital borrowed at exorbitant rates, no old-established firm was obliged to close.

No less interesting was the effect of deflation on the cost of living and the middle-class consumer. At a time when corn was firm throughout the world, the rise in price was not reflected in dinars, since all increase in gold value abroad and at the bourse was counteracted within the country by the increase in the value of the dinar. So, while corn prices were soaring everywhere in Europe, wheat, for instance, continued to fetch about 400 in Yugoslavia throughout the year 1924. The middle-class consumer with a fixed income in dinars was thus saved from another rise in prices, while the peasant was able to maintain his price.

From the theoretical point of view this bears out the interesting fact that deflation may be beneficial in an agrarian country at a time of heavy export, increasing both the prosperity of the producer and assuring stabilised prices for the consumer. But the success of deflation and the stagnation in trade since 1925 emphasise even more forcibly the fact that Yugoslav prosperity depends more than anything on the state of the international market, and that international economic interdependence is playing an increasingly important part.

In July, 1925, Yugoslav industry was so frightened by the increasing influx of foreign-manufactured articles, which the improvement of the dinar was making cheaper, that it succeeded in causing the Government to introduce a prohibitive import tariff. But the theory that national

industry would prosper with Protection proved an absolute failure. It was in July, 1925, that exports suddenly began to decline in consequence of better harvests in grain-importing countries and the uncertainty of the Russian grain surplus. The harvest having been plentiful and export difficult, internal agricultural prices in Jugoslavia began to decline rapidly, and the peasants, who had sunk a good deal of money in improving their farms and cultivation, found it hard to recover more than costs of production plus a minimum for livelihood. Naturally, they disappeared as buyers from the industrial market, and, paradoxically enough, industry, which had carried on during deflation when only half protected, found itself in difficulties with full Protection and a stabilised currency.

While refraining from prediction, one is forced to conclude that the immediate outlook for industry is not the brightest. The recent floods and storms have damaged the wheat crops so seriously that, while the yield will suffice for internal consumption, it is doubtful whether an export surplus will remain. Consequently, the peasant will not appear as a buyer on the market until after the maize harvest, and even then he will purchase sparingly, for he will need money to repair damage. This will force industry to still lower costs of production, and to introduce more modern management and keener competition—in fact, to undertake a thorough overhauling. This will really mean the speeding up of a process which began about a year ago, when the first pinch was felt, and the Government will certainly be urged to hasten its taxation reform and make charges more tolerable.

Agriculture, also, is passing—or, rather, preparing to pass—through a series of changes. While its chief object hitherto has been the improvement of methods of production and greater yield, it will now have to begin the adoption of other forms of cultivation. Russian competition, although not serious as yet, is beginning to be felt in the Levant, and may be felt soon in the rest of Europe. The possibility, therefore, of passing from corn-growing alone to the cultivation of industrial materials also is occupying the attention of leading agrarians more and more, and is being propagated in the country.

Thus, the passing of the industrial and agrarian boom of recent years has caused the present tendency to move towards reorganisation and modernisation both in industry and agriculture.

Notes of the Week.

The Coal Dispute.—Mr Churchill has this week been actively engaged in the most determined effort to resolve the coal deadlock, which has been made by the Government since the dispute began. As a result of the resolution of the Miners' Conference, last week, the executive wrote to the Chancellor inviting him to convene and attend a conference of the miners and owners, and adding that "we are prepared to enter into negotiations for a new national agreement, with a view to a reduction in labour costs to meet the immediate necessities of the industry." The Government informed the owners that they considered this a sufficient advance to justify them in requesting the Mining Association to resume negotiations. The latter replied that the district associations had withdrawn any authority from the association to enter into national negotiations, and at a conference, on Monday, the Coal Committee of the Cabinet failed to move them from this attitude, in spite of Mr Churchill's argument that the Government passed the Eight Hours' Act in the belief that the owners were still willing to negotiate nationally, and that in the debates the Prime Minister had asserted without challenge from the owners that the latter's proposals would meet the demands of the men for a national settlement. All that resulted from the meeting was that on Tuesday the Central Committee of the association decided to consult the districts as to whether they desired to reconstitute the association as a negotiating body. What the reply of the districts will be is not yet known, though the omens are unfavourable. But in the meantime Mr Churchill has written a further letter to the owners indicating in general terms the Government's ideas as to the connection between district and national negotiations.

The Conference is to lay down general principles of settlement, to be followed by district settlements covering wages, hours, and other conditions, but provided that the points usually covered by national agreements shall be referred for confirmation to the central body. These latter points include:—The ratio of the division of the proceeds of the industry; the intervals between ascertaining; the principles of recoupment; definition of costs other than wages; the minimum percentage to be added to basis rates, and the principle though not the amount of subsistence wage rates in each district. This conception, and, indeed, the wording of the letter follows very closely the report of the Commission, as well as the proposals of the owners on these points in March and April last, and it is difficult to believe that the owners can be so certain of unconditional victory, or so pleased with the prolonged stoppage that they will obstinately refuse to accept the methods of negotiation that they were willing to accept five months ago. This would, indeed, be to surrender the substance for the shadow, for under the plan outlined by Mr Churchill, there is clearly room for substantial variations in minimum wage rates which—even if approved by a national board—mean none the less the abandonment by the men of the claim for a "national minimum." It is also significant that Mr Churchill does not rule out hours from the scope of the discussion, and though Mr Cook does not like the Government's detailed setting out of the possibilities, and would have preferred that nothing should be said beyond the formula of "a reduction in labour costs" until the Conference meets, it is clear that the scope of discussion will be very wide. The various owners' associations will take their decisions during the week-end. They will commit the gravest of tactical blunders if they reject the Government's plan, and by so doing compel the Cabinet to side more definitely with the Federation. The Government has accepted the miners' advance with approval. That decision cannot be dismissed as of no importance.

A Critical Moment in China.—While the various combatants in the Chinese civil war seem no nearer than before towards fighting out their quarrel to a military decision, several of them have contrived, during the past week, to get themselves into serious trouble with foreign Powers. As for the civil war, the recent discomfiture, on the Yangtse, of Wu Pei-fu by the Cantonese (Red) commander Chang Kai-shek has been neutralised—at least, for the moment—by the intervention of Sun Chuan-fang (the master of the five east-central provinces) in Chang Kai-shek's rear. In consequence, Chang has retreated with his main force to Changsha, and is proposing to stand on the defensive against Sun's forces in the province of Kiangsi. It is thought that Chang Kai-shek may find the task of dealing with Sun and Wu simultaneously too much for his strength—especially now that the Canton Government, in whose name he is waging war, has passed under the control of his personal opponents; but, as always in the Chinese civil war, prediction is futile. Meanwhile, the British Government has been having serious trouble both with an adherent of Wu Pei-fu called Yang Sen at Wanhhsien on the Upper Yangtse, and with Wu's enemies, the southern Red Government, at Canton; and it is small comfort to us that the Soviet Government—to whose machinations recent British troubles in China are at least partly due—has fallen into still more serious trouble with Chang Tso-lin in Manchuria. This incident in the north has arisen over the Chinese Eastern Railway, an enterprise created by the Czarism, and inherited by the U.S.S.R., whose rights over the railway were settled by treaty with the Central Chinese Government in 1924. In defiance of the treaty, Chang has just seized the railway's river flotilla and warehouses, and has closed its schools, in which, under the treaty, it has been providing education for the 200,000 Soviet nationals resident in the Manchurian provinces of the Chinese Republic. Almost simultaneously (on August 29th) General Yang Sen (for whom Chang Tso-lin's ally Wu is responsible) attempted to seize by violence a British passenger steamer at Wanhhsien, on the Yangtse, and revenged himself for his failure by successfully seizing two other British merchant vessels, while he immobilised a British gunboat, H.M.S. *Cock-*

chafer, by commanding her from the river bank with riflemen under cover. The British Consul at Chungking attempted to negotiate a settlement under instructions from the British Minister at Peking; but though his proposals to General Yang Sen were most conciliatory, they met with a blank refusal. Thereafter a British naval expedition was sent up the Yangtse from Hankow with orders to release the two British steamers by force. This they failed to do. They succeeded, however, in taking the British officers off one of the steamers, while those of the other jumped overboard, one of them being struck by a bullet in the water and drowned. Three British naval officers (including the officer in command) and four other ranks were killed, and there were six wounded. H.M.S. *Cockchafer* bombarded the town of Wanhhsien, and is believed to have inflicted considerable damage. A day or two before these grave events on the Yangtse, the British authorities at Hongkong had decided to treat the strike pickets at Canton as pirates, and to employ force, if necessary, in order to enable British shipping at Canton to go about its lawful business. Both at Canton and at Swatow British gunboats have taken the offensive, and, so far, the strikers have made no armed resistance. It is possible that the population, and even the Government, of Canton might not be sorry to see the strikers humbled; but, in their present mood, Chinese of all classes, parties, and provinces readily respond to the cry that the foreigner is trampling on Chinese rights, and some violent reaction to these British naval measures may, therefore, be looked for. To make the imbroglio complete, the Canton strike committee seized, on September 2nd, some petroleum stocks at Haiphong belonging to a French company. The moral of all this seems to be that foreigners in China have even worse trouble ahead of them than that which they have already gone through.

The Spanish Dictator Wins.—While the Spanish Government still abstains from participation in the proceedings at Geneva, without yet formally withdrawing from the League, events are happening in Spain itself which provide a striking commentary upon the Spanish claim to a permanent seat on the League Council. Permanent seats are presumably intended for "Great Powers" with stable governments and progressive peoples—for Powers, that is, possessing a combination of qualities which make them natural leaders in the world of international affairs. The struggle between the Spanish Dictator and the Corps of Artillery officers—though it has been terminated vigorously and rapidly, with hardly any shedding of blood—does not suggest that Spain yet possesses this combination of qualities which is required by her international pretensions. For years Spain has suffered from military domination, only tempered by the rivalry between one arm and the other. The officers have established a kind of prescriptive right—which no Spanish Government has so far succeeded in permanently breaking down—to organise themselves in juntas (a species of Soviets) in order to look after their own interests from their own point of view. Since their point of view is inimical to discipline, and especially inimical to promotion by efficiency instead of by mere seniority, the consequences, both for the Army and for the country as a whole, have been deplorable. A flagrant example of military domination in Spain was the *coup d'état* by which General Primo de Rivera brought the present Directory into power; for, unlike the Fascist movement in Italy, this *coup* was a purely military affair, and all the members of the Directory are either military or naval officers. Latterly, the corps of artillery officers seem to have been plotting to mete out to General Primo the measure which he himself has meted out to Spain, but this time they have met their match. The pretorian in the saddle has remained there, while his comrades who have attempted to unhorse him find themselves on the ground. Without much enthusiasm, we may congratulate General Primo and Spain on the outcome; for the worst feature of pretorian government is that the pretorians are apt to come and go in a rapid succession of violent revolutions, and the stabilising of one pretorian régime may be the first step in the evolution of a régime of some better kind. The crisis began last

Sunday, when the whole of Spain was suddenly placed under martial law. At the same moment the King travelled post haste from San Sebastian to Madrid, and signed a series of drastic decrees which gave the Directory a free hand for bringing the artillery officers to heel. Throughout Spain (though not in Spanish Morocco) the artillery officers have now been disarmed, suspended and placed under arrest; and there has been surprisingly little resistance. The only bloodshed (to the extent of three lives lost) that is so far reported occurred at Pamplona. The chief trouble was expected at Segovia, where the artillery officers threatened to show fight, but at the last moment they followed the example of their comrades elsewhere, and, with their submission, the crisis has been officially announced to be at an end. With the passing of this trouble, let us hope that Spain has made a real step forward in the direction of stable government—the first requisite in a would-be "Great Power."

The Trades Union Congress.—A Labour correspondent writes:—The 58th Annual Trades Union Congress, held this week at Bournemouth, has falsified the prophets. There was a general expectation that there would be numerous pyrotechnical displays. The only "scene" at Congress was on Thursday afternoon, when the miners' representatives strongly resented the selection of Mr John Bromley to second a resolution dealing with the coal situation, in view of the statements made by Mr Bromley since the general strike. On the whole the Congress has been a sober assembly. The general strike has been but on the fringe of the discussions of the congress, as the strike was called with the approval of a conference of trade union executives, to which body the General Council propose, after the settlement of the mining dispute, to report on the strike. The cognate question of the powers of the General Council, however, found a place on the agenda in the form of a number of resolutions most of which were designed to enlarge the powers of the council of the congress. The important point regarding these resolutions is that they stood in the name of relatively unimportant organisations, and that not one of them was sponsored by any of the unions which played a prominent part in the recent national stoppage. It is interesting to record that a few years ago the council desired wider powers, but though the General Council of the Congress now enjoys an authority which it did not formerly exercise, the congress declined to grant it the full powers for which it asked. To-day the General Council itself is undesirous of accumulating any further powers, and it resisted the proposal to extend them. The spokesmen of the larger unions, generally speaking, upheld the council's view, and the suggestion on the resolutions was heavily defeated. It should not, however, be assumed that the large-scale strike is now regarded as a discarded instrument. The trades union movement is not an advocate of strike action for its own sake. The strike is conceived as the last shot in the locker. As regards large-scale sympathetic action, the general strike in May has not persuaded the movement that it is a useless weapon. So far as it is possible to ascertain the prevailing feeling on the matter amongst trade union delegates, it is that at the end of the general strike the miners could have obtained better terms than they could have obtained alone or than they are likely to obtain now; and therefore so far from being a failure it was a success, but the fruits of victory were not plucked by the miners. At

the same time the congress was subdued in tone. It may have been due to the somewhat relaxing atmosphere of Bournemouth, but primarily it was an expression of the reaction after a strike and of an appreciation of the heavy burdens which it entailed. There is a widespread feeling that the miners do not recognise the extent of the sacrifices made by their fellow trade unionists, and an openly expressed view that no other union could influence the General Council of the T.U.C. to organise a sympathetic stoppage. There is no disposition in the congress as a whole to talk about the "next time," though there is a desire for the improvement of trade union organisation, and a belief that circumstances might arise in the future which will force large-scale action, as a defensive measure. At the Scarborough Congress last year the "left wing" was prominent in the discussions. Perhaps the most remarkable thing about the Bournemouth Congress is the silence and impotence of the extremists. No doubt this is partly due to the fact that Mr Harry Pollitt, the ablest of the minority leaders, is in prison; partly it is due to the clever chairmanship of Mr Arthur Pugh. But it is also undeniably due to the fact that the General Council is in an immeasurably stronger position than it was a year ago, and that it has drawn the teeth of the extremists by leading the national strike. The Council has shown courage, the most striking example being its decision to issue to the delegates the offensive cable sent to the congress by Tomskey, and its own dignified reply.

The Second Year of the Dawes Scheme.—The Agent-General for Reparations has issued a statement of the receipts and payments for the second annuity year (September 1, 1925, to August 31, 1926) under the Dawes Scheme. Under the experts' plan the total of the second annuity was fixed at 1,220 million gold marks. Of this the whole was received within the annuity year with the exception of 53.1 millions in respect of interest on railway bonds, due to be paid on September 1st, and the balance of the transport tax, due on September 21st—ten days hence. As the Agent-General states, "Germany is thus faithfully performing her obligations, and has made punctually the payments due during the second year of the Plan"—a tribute which felicitously coincides with Germany's entry into the League. The following table shows receipts and payments in various categories for the first and second annuity years:—

RECEIPTS AND PAYMENTS FOR FIRST AND SECOND ANNUITY YEARS
(on Cash Basis, Reduced to Gold Marks Equivalents)
(In Million Gold Marks.)

Receipts.	First Annuity Year.	Second Annuity Year.	Payments.	First Annuity Year.	Second Annuity Year.
Balance of cash at August 31, 1925 ..	107.0		Payments to various Allied countries ..	789.0	1,060.2
Cash withdrawn from proceeds of German External Loan, 1924 ..	800.0		Expenses of Commissions ..	23.1	18.4
Budgetary contribution ..	250.0		Service of German External Loan ..	77.5	97.2
Transport Tax ..	241.9		Discounts, &c. ..	3.9	7.4
Interest on Railway Bonds ..	200.0	550.0	Cash in hand at Aug. 31.	107.0	93.6
Interest on Industrial Debentures ..		125.0			
Exchange Differences & Interest Received ..	0.5	2.9			
	1,000.5	1,276.8		1,000.5	1,276.8

Whereas in the first year receipts consisted entirely of the proceeds of the German external loan and railway bond interest, the second year's entries include 250 millions from the Budget, 241.9 millions from the transport tax, and 125 millions from interest on industrial debentures, while the interest on railway bonds reached 550 millions against 200 millions in the first year. How the payments were made, and how the four principal recipients participated, is shown below:—

(In Million Gold Marks.)

Nature of Payment.	To Britain.	To France.	To Italy.	To Belgium.	Total Four Countries.
On Account of Reparations Recovery Acts—First year ..	155.2	25.1	..	..	..
Second year ..	201.6	41.5	..	..	..
Occupation costs—First year ..	30.2	144.2	..	20.7	195.1
Second year ..	20.6	56.9	..	8.6	86.1
Deliveries in kind—First year ..	4.5	227.3	60.4	72.8	365.0
Second year ..	..	426.1	71.8	101.0	598.9
Cash transfers—First year ..	4.5	39.1	5.3	4.6	53.5
Second year ..	..	..	..	..	..

The decline in occupation costs is a welcome feature, and we may hope for a further decline this year. The yield under the Reparation Recovery Acts to Britain and France has substantially increased, as also have deliveries in kind to France, Italy, and Belgium. Other payments include 38.2 million gold marks to the Serb-Croat-Slovene State, 14.8 millions to the United States. Special importance attaches to the form in which transfers were made. The Agent-General states that "about 65 per cent., or 760 million gold marks, was transferred in the form of deliveries in kind, or in various forms of mark payments within Germany, while about 35 per cent., or 415 millions, was transferred in foreign currencies." This has apparently been achieved without dislocation. In the current year Germany is to anticipate some future payments. Under a new agreement reached with the Agent-General two supplemental budgetary contributions payable in the third and fourth annuity years are to be liquidated in a lump sum. The new arrangement substitutes for a total contingent liability of 500 million gold marks a fixed payment of 300 millions, all of which is to be paid during the third annuity year, which has just begun. The Agent-General describes this agreement as "a further evidence of the spirit of friendly accommodation, and a new earnest of the goodwill and mutual understanding that lie at the basis of the Plan itself."

Shipping Freight Index.—As indicated in the following table, "tramp" shipping freights during August showed a further advance in comparison with July. Quotations for outward coal chartering from the United Kingdom were once more conspicuous by their absence, and the duplicated figures given below have, in accordance with the plan followed since April, been arrived at by two different calculations. The figures in black type indicate the results secured by interpolating for each of the coal routes normally included in the Index the last available rates, i.e., those current in April. The figures in italics show the results obtained on the basis of the available freight quotations, that is to say, without coal. From these figures it will be observed that taking homeward routes alone (the italic figures) the Index figure shows a percentage increase of 5.8 over July, while the Index Number incorporating the April coal routes represents a rise of 5.7 per cent. compared with the similarly calculated figure for the previous month.

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.
Basis (Average, 1898-1913) ..	100	100	100	100	100	100	100

November, ..	111.61	127.83	133.66	119.59	100.88	151.34	124.15
December, ..	114.72	127.83	145.83	96.03	100.88	151.34	122.77

The month's changes in the Index of each Group and Sub-Group (Coal freights excluded) are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade ..	..	..	S. America—outwards ..	145.83	- 1.53
Bay—outwards ..	124.19	..	India—outwards ..	96.03	- 0.42
Mediteranean—outwards ..	105.25	+ 0.24	Far East, &c. ..	100.88	+ 2.09
North America ..	127.83	+ 11.67	Australia ..	151.34	+ 26.71

Chartering for the carriage of coal from the United States to the United Kingdom again monopolised attention during August, the demand being so heavy as to attract vessels from all quarters, and even to bring about the re-commissioning of idle tonnage. Towards the end of the month a lull occurred, importers being more inclined to adopt a waiting policy in view of possible developments in the coal situation, but the falling off in transactions was without effect upon rates, which were fully steady. Other prominent features of the month were a broadening of demand for the loading of North American and Australian (new season) grain, and considerable activity on the part of Black Sea grain shippers. On the other hand, the movement of Argentine grain slowed down in sympathy with a reduced European inquiry; the Indian and other Eastern markets for the most part lacked animation, while the Mediterranean and Bay Ore Ports, though moderately busy on Continental account, suffered through lack of British orders owing to the extremely depressed state of the heavy industries in the United Kingdom. The relation of the Index to the average for 1913 may be seen from the following table, the italic figures for the past four months being those obtained without coal freights:—

Month.	(1913 = 100.)	1923.	1924.	1925.	1926.
January ..	114.05	..	117.11	..	114.49
February ..	112.73	..	123.78	..	115.96
March ..	115.23	..	122.09	..	106.63
April ..	115.45	..	117.22	..	104.24
May ..	114.55	..	114.27	..	98.23
June ..	106.82	..	108.62	..	91.74
July ..	103.39	..	103.75	..	94.90
August ..	100.16	..	104.43	..	95.87
September ..	103.04	..	110.50	..	98.19
October ..	107.86	..	115.55	..	99.49
November ..	111.21	..	112.76	..	102.23
December ..	111.81	..	111.21	..	104.67
Mean for year ..	106.69	..	113.44	..	102.22

The immediate future of "tramp" freights depends materially on the British coal position, but it is probable that any reaction in rates caused by an early resumption at the pits would be offset by the seasonal movement of grain, which should provide good employment for shipping during September.

American Cotton Crop.—Considerable interest was taken, writes our Manchester correspondent, in the fifth report of the American cotton season issued on Wednesday evening by the United States Department of Agriculture. Most traders were expecting a considerable decline both in the condition and in the indicated yield. Much surprise was created when it was known that, given normal conditions during the next 12 months, the crop would total 15,166,000 bales, which compares with the previous report issued a fortnight ago of 15,248,000 bales. The drop in the indicated yield has been quite modest, and as a bigger decline had been expected, American cotton prices in Liverpool and New York dropped immediately the report was issued. The growth in the United States is from two to three weeks late, and a very anxious period has still to be passed through. The United States Government, however, place the minimum crop at 14,040,000 bales, and the maximum indication at 16,379,000 bales. A further report will be issued in a fortnight's time.

International Cotton Statistics.—Our Manchester correspondent writes:—World interest has been taken in the annual cotton statistics just published by the International Spinners' Federation, which show that the world's consumption of American cotton for the year ending July 31st was 13,730,000 bales, against 13,256,000 bales a year ago. Europe consumed less, while Asia and America showed considerable increases on last year's consumption of American cotton. The consumption of all kinds of cotton was 24,681,000 bales, against 23,294,000 bales on July 31, 1925. There has been a considerable increase in the consumption of cotton other than American and Egyptian, and this reflects the greater activity in new cotton-producing countries. Russia has de-

creased her consumption of American cotton in the last half-year from 21,453,9 to 59,374 bales, but this decrease has been more than made up by the consumption of cotton from Russia, Asia, and Persia. England has increased her consumption of outside growths from 277,000 bales last year to 370,000 bales this year. The total world stocks of American cotton on July 31st were 1,969,000 bales, against 1,833,000 bales a year ago. Although the American mill stocks in the world were 136,000 bales larger than on July 31, 1925, practically every country in Europe has slightly less stock than twelve months ago. Europe, again, has less stock of East Indian cotton. The Egyptian cotton mill stocks total to 201,000 bales, against 181,000 bales twelve months ago. The total world's mill stocks of all kinds of cotton on July 31, 1926, were 4,498,000 bales, against 4,267,000 bales a year ago, and 3,569,000 bales on July 31, 1924. All the above statistics have been compiled by Mr Arno S. Pearse, the General Secretary of the International Spinners' Federation.

Bulgarian Debt and a New Loan.—The Bulgarian Minister of Finance has signed, at Geneva, an arrangement regarding the Old External Debt which he will recommend his Government to authorise, and the acceptance of which, according to a statement issued by the Council of Foreign Bondholders, the British, Dutch, and French representatives are prepared to recommend to their respective bondholders' committees or certificate holders. After acceptance it is proposed that a new arrangement shall come into force next April. The main conditions as set out by the Council's statement are as follows:—

(1) The rates of interest payable on the loans of 1902, 1904, and 1907 for 21 years, from April, 1927, to April, 1948, shall be as follows:—

	Per Cent.
April 1927 to 1930 ..	49
" 1930 to 1933 ..	56
" 1933 to 1936 ..	63
" 1936 to 1939 ..	70
" 1939 to 1942 ..	77
" 1942 to 1945 ..	84
" 1945 to 1948 ..	91

(2) After April 1, 1948, the full service of interest on the above-named loans to be resumed. All payments to be in the most appreciated currency specified on the bonds. The rates of payment on the loans of 1892, 1896, and 1909 to be in proportion, but full payments in the case of these loans to be deferred until April, 1951.

(3) The sinking funds to be suspended for six years, from April 1, 1927, but the Bulgarian Government can at any time purchase bonds on the market for amortisation.

(4) From 1933 to 1948 half the full amount of the sinking funds on all the loans, as fixed by new amortisation tables on the basis of the outstanding bonds of each loan, to be applied by the Bulgarian Government to purchases of the bonds on the market, or by drawings at the same percentages as those fixed for the payment of interest at the time when such drawings take place.

(5) From April 1, 1948, the full sinking funds to be resumed and applied in the manner provided by the loan contracts as modified by the new amortisation tables.

(6) The new loan to be issued under the auspices of the League of Nations shall not in any way interfere with or affect the rights and securities enjoyed by the holders of the existing loans, and such holders shall be in all respects entitled to the same treatment as the holders of the new loan in regard to any transfer arrangements that may be established in connection therewith. Should financial conditions in Bulgaria materially improve or deteriorate during the period of this agreement, the Bulgarian Government and the bondholders respectively shall be entitled to negotiate for its revision by mutual agreement.

This agreement is subject to the issue of the above-mentioned new loan. At the same time, this agreement with creditors fulfils one of the conditions for financial assist-

ance that was laid down by the Financial Committee of the League. The new loan, which is to produce £2,250,000, is to be devoted to the settlement of refugees, the construction of houses and land cultivation.

The Indian Rupee.—The postponement of the discussions of the Currency Bill in the Legislative Assembly has given rise to some uncertainty regarding the policy of the Indian Government towards rupee exchange pending the introduction of the Bill. These doubts are now set at rest by the issue of the following communiqué by the Government of India:—"Doubts have been expressed in certain quarters as to the Government's intention in the matter of maintaining exchange at 1s 6d per rupee, in view of the postponement of consideration of the Currency Bill in the Legislature. The Government of India desire to make it clear that, in accordance with the announcement made in the Press communiqué of August 4, 1926, they will continue to take such steps as may be necessary to prevent any undue fluctuation in the exchange value of the rupee, in order to confine the movement of exchange within the approximate upper and lower gold points, as calculated on the basis of a 1s 6d gold rupee—namely, 1s 6½d and 1s 5½d respectively."

Building Societies and Super-Tax.—In view of the great development in the work of building societies, and the present anniversary movement to extend their scope (their total assets are placed at more than £160 million), certain questions have been raised with reference to the customary 5 per cent., free of tax, to depositors, and the extent to which the arrangement may be used for the avoidance of super tax. In the present agreement between the Inland Revenue authorities and the building societies there is a clause which provides that investors, depositors, and lenders are not to be charged to income-tax for the dividends or interest they receive; if charged, and the necessary proof is supplied, they are to be entitled to relief. No repayment of tax is to be made against income derived from investments in, or loans or deposits with, the society, and no certificates of payment of tax in respect of such income are to be issued by the society. The effect of this agreement is that, on the one hand, the Crown is not to be in a position to claim, as against the recipient, that the interest received by him has not been taxed, and, on the other hand, the recipient cannot claim for purposes of repayment that he has paid any tax upon it. But while building society interest paid free of tax under this arrangement is thus not returnable for direct assessment to income-tax, it clearly forms part of the recipient's total income, and is therefore required to be returned as part of that total income both for income-tax purposes (as, for example, in connection with life insurance relief), and for super-tax purposes. In view of these facts, it is believed that this requirement is generally understood and complied with by such super-tax-payers as may have deposits or other investments with building societies.

Nobel Industries.—Judging by the latest results of Nobel Industries, its various activities continue to be highly remunerative. A good rate of progress has been maintained by this important combination, and shareholders have every reason to be satisfied with the figures shown in the accounts for the year ended December 31st last, just issued. These are summarised in the following comparative table:—

	1921.	1922.	1923.	1924.	1925.
Gross profit	£ 809,242	£ 1,157,137	£ 1,178,443	£ 1,003,420	£ 1,091,920
Net profit	604,264	942,901	1,032,489	927,710	1,018,540
Brought forward	757,498	463,349	509,018	650,130	666,597
Available for shareholders	1,361,762	1,406,250	1,541,507	1,577,840	1,685,137
Preference shareholders	269,243	284,986	297,902	300,964	308,630
Ordinary shareholders ..	279,170	413,301	493,474	560,279	638,199
(5 %)	(7 %)	(8 %)	(9 %)	(10 %)	
Balance of note issue written off	..	148,945	..	..	..
Reserves	350,000	50,000	100,000	50,000	450,000
Carried forward	463,349	509,018	650,130	666,597	230,527

It will be seen that, according to our table, the reserve account has been strengthened by £450,000. This is not the full extent of the provision, as the directors state that the special investment reserve account is now no longer needed, and the £550,000 to the credit of the fund has been transferred to general reserve. The deferred shareholders receive 5 per cent. The total of the general reserve fund is now £1,000,000. The directors state that the stoppage in the coal industry has materially affected the home explosives business during the current year. They express the hope, however, that this will be repaired by an improvement in the result of operations in other fields, and a further improvement in the income received from general investments. The balance-sheet shows that £80,379, representing cost of the debenture issue, still remains to be wiped off.

Calico Printers.—The Calico Printers' Association, Limited, experienced a setback during the year ended June 30th last, a circumstance which is not surprising in view of the unsettled condition of the textile industry. A comparative summary of the figures is given below:—

Year Ended June 30.	Gross Profit.	Main-tenance and Depreciation.	Net Profit, Less Debenture Interest.	To Reserve, &c.	Dividends.	Ord. Rate.
1906.....	£ 682,160	£ 200,120	£ 354,040	£ 150,000	£ 201,074	4 %
1907.....	776,752	224,711	424,041	150,000	276,476	6½
1908.....	383,612	212,237	93,375	..	150,805	nil
1909.....	448,880	207,565	163,315	Dr 50,000	150,805	nil
1910.....	723,953	201,615	394,338	200,000	201,073	2½
1911.....	612,630	208,860	403,771	185,000	226,208	3½
1912.....	463,904	205,020	130,884	Dr 80,046	226,208	3½
1913.....	718,851	216,174	374,677	150,000	226,208	3½
1914.....	443,786	210,276	105,510	Dr 50,000	150,805	nil
1915.....	210,818	261,994	Dr 179,176	Dr 200,000	nil	nil
1916.....	1,104,732	312,345	664,387	300,000	351,878	2½
1917.....	1,268,058	562,340	577,719	300,000	251,342	5
1918.....	1,271,559	573,606	569,953	310,000	251,342	5
1919 and 1920	3,040,392	1,567,432	1,216,961	350,000	603,221	10
1921 and 1922	2,418,777	1,659,200	503,542	50,000	552,952	7½
1923.....	1,525,514	597,306	800,208	400,000	402,147	12½
1924.....	1,191,524	522,739	540,786	205,724	351,879	10
1925.....	1,331,554	503,249	700,304	250,000	452,415	15
1926.....	856,178	511,960	344,218	nil	301,610	7½

Net profits, it will be seen, are substantially lower than they were in the previous year. There is some satisfaction to be derived from the fact that the depreciation allowance is a little higher than in 1924-25. Against this, however, it has to be noted that reserves, which last time received £250,000, this time are neglected. The ordinary shareholders, too, are affected, as their dividend is halved at 7½ per cent. During the year capital expenditure absorbed £140,956, or approximately £40,000 more than in the previous period. Land and properties, &c., have gone up from £5,496,326 to £5,637,282, while creditors are up by £110,000, this being accompanied by an increase of £270,000 in the cash holding. Sundry debtors and investments are shown together. This composite item has fallen from £4,444,896 to £3,76,513, but stock-in-trade now stands at £1,965,800, in contrast to £1,792,633. The total of the depreciation account is now £1,003,244; the general reserve accounts for £750,000; the capital reserve for £60,000, and the reserve for equalisation of dividends for £300,000. The balance-sheet shows a fairly strong position, and this will enable the undertaking to tide over the present trying period.

A Plethora of Precious Products.—It would look, writes a correspondent, almost as though the Transvaal is in danger of having an excess of platinum and diamonds. Johannesburg authorities are greatly concerned as to the effect which the pending increase in the production of platinum is likely to exercise upon the price. Inquiry leads to the conclusion that an expansion in the employment of the metal for industrial purposes, owing to a reduction in the price, may be offset by a reduction in the demand for jewellery; as, actually, the chief attraction of the metal for purposes of adornment consists in its dearthness. Six treatment plants—three of them described as pilot—are, or shortly will be, in operation in the Transvaal; and it is calculated that

the output from them will be at the rate of between 40,000-50,000 ozs per annum. Will such an addition to the available supply be absorbed without having a material effect upon the price? Moreover, a distinct expansion is taking place in the output from the South American Gold and Platinum Company in Colombia. It is therefore being very insistently urged that no time should be lost in the creation of an organisation for control of the production and sale of platinum on the lines of the Diamond Syndicate. Then, with regard to diamonds themselves, several rushes have taken place during the past few months. The July output from alluvial workings amounted to £193,000, an increase of 50 per cent. upon the average of the preceding six months; and a further immediate expansion is foreshadowed. For 1925 the output of South Africa from diamond mines was 2,190,900 carats, and from alluvial 239,300 carats. It is obvious that the production from alluvial may become a factor of which the big diamond producers will shortly have to take account. Last year's world's production of diamonds from alluvial and eluvial deposits—chiefly in the Belgian Congo and South-West Africa—amounted to nearly 2½ millions, or somewhat more than the yield from pipe deposits. Moreover, there are indications of growth in the supply from various other centres than South Africa. For example, the Gold Coast Colony exports for 1924-25 were valued at £69,050, as against £34,200 in 1923-24. Two new plants have lately started up, and others are to be added. It would therefore look as though the Diamond Syndicate may find difficulty in maintaining the present prices for the stones unless it can succeed in getting control of the more important new sources of production.

Rand Mine Developments.—The shareholders in two well-known Eastern Rand companies have recently had some excitement, writes a correspondent. On an unofficial forecast of the end-June ore reserve estimate, Sub-Nigels were run up. When the company's own figures came to be published they proved the unofficial forecast to have been a case of unintelligent anticipation. The tonnage is placed at 731,000 tons, an increase of 222,000 tons upon the computation of twelve months previously, the value being 17.5 dwts over a stopping width of 28 inches. The forecast had suggested a total of 950,000 tons, giving 17 dwts over 40 inches. People whose expectations had been over-optimistic rushed to sell their shares; the offerings were quickly absorbed by others taking a different view of the position. One point is that the latest estimate does not fully reflect the character of recent developments, much of the high-grade ore having been insufficiently blocked out for inclusion in the reserves. The other share which has been much in the limelight is Van Ryn Deep. Owing to the reduction in the dividends, the price had lately come down to 2½—comparing with the best of 4½ in 1924. The reduction in the profits having been due to less satisfactory development in the mine as well as to the disappearance of the gold premium, any change for the better in the former respect would be a matter of considerable importance to those interested. On rumours as to the disclosure of better values, the shares for a time met with a strong demand. Information as to the location of the discovery will be awaited with interest. If it should be in the western section of the mine—hitherto found to be of lower grade than the eastern, which has supplied the bulk of the ore so far milled—the prospects of the company will undergo a material amelioration.

New Modderfontein.—Our mining correspondent writes:—Once against this wonderful Far Eastern Rand proposition has succeeded in putting up fresh records in several respects. In the year ended June 30th last the tonnage of ore milled, the development footage, the working revenue and the profit exceeded the results of any preceding period in the company's history. It is noteworthy that, despite the disappearance of the gold premium, the yield per ton (10½ dwts) was above that of any year since 1921-22; the advance in costs arose from special underground expenditure. Of the earnings of 1925-26, nearly £143,000 was absorbed by capital expenditure, the

outlay on shaft-sinking and equipment again being higher than before. A considerable further amount will be required this year. Taxation, at £283,200, absorbed a trifle less than in 1924-25. Appended is a summary of the results for the past three financial years:—

	1923-24.	1924-25.	1925-26.
Ore crushed.....tons	1,384,000	1,479,000	1,532,000
Revenue.....per ton	43/6	43/4	43/10
Costs.....per ton	17/1	17/1	17/10
Profit.....per ton	26/5	26/3	26/
Total working profit ..£	1,825,890	1,938,960	1,992,530
Dividends.....£	1,400,000	1,540,000	1,540,000
Rate.....per cent.	100	110	110
Carried forward	£ 313,810	£ 363,240	£ 423,960
Ore reserves.....tons	9,064,400	9,090,100	9,289,900
Value per ton	8-5	8-5	8-6

An interesting feature in the mining practice consists in a further reduction in the stopping width by nearly 7 inches, due to the full equipment of the stopes with jackhammer machines. This has had the effect of bringing within the pay-limit a large tonnage of low-grade ore which under former conditions was unpayable. Hence, mainly, the expansion in the ore reserve tonnage. On the question of value the consulting engineer remarks: "The effect of the addition of such low-grade tonnage on the average value has also been material." In other words, but for such inclusion the average would have shown a larger increase than it does. On the basis of the dividends of the past two years the shares yield about 11½ per cent. gross, and may be regarded as a sound holding of their kind.

Nourse Mines, Limited.—Our mining correspondent writes:—The results for the year ended June 30th last of this old-established Rand producer are distinctly disappointing. A further increase took place in the tonnage of ore milled, and costs were further cut down by 1s 2d to 21s 10d per ton; but owing to a renewed shrinkage in the grade of the ore milled, and to the entire disappearance of the gold premium, a working loss of £2,730 resulted. Interest and exchange reduced this to £1,600. Capital expenditure on equipment, &c., amounted to £23,700, reducing the carry forward from £80,400 to £55,350. Naturally, no dividends were paid. For the first half of 1924-25 the shareholders received 2½ per cent., and for the whole of 1923-24, 8½ per cent. Last year's underground work rather more than maintained the ore reserves, which now figure at 1,097,600 tons, value 5.9 dwts—the same as before. This quantity, however, is by no means large, having regard to the capacity of the mill; and in practice it has become necessary to draw a large proportion of the ore from other sources. In fact, the percentage taken in 1925-26 from the calculated reserves was only 45. The consulting engineer sums up the position by stating that, "taken as a whole, the results of development show no improvement." Efforts are being made to meet the position by expansion of operations. This involves borrowing money from the parent undertaking, the Rand Mines. The sum agreed upon is a maximum of £40,000 at 7 per cent. interest, principal re-

payable by April 6, 1927. Of this amount, £12,000 had been borrowed at the date of the balance-sheet. Altogether there seems little hope of a resumption of dividends in the near future.

Our Index Number: A Correction.—We regret that inconvenience should have been caused to some of our readers by an error which occurred in our Index Number table on page 387 of last week's issue. The August figure for the second group, "Other Food Products," should have read 695, and not 685, as printed.

THE Industrial Welfare Society's seventh annual lecture conference will be held at Balliol College, Oxford, from September 10th to September 15th. The programme may be obtained from the conference secretaries, 51 Palace street, Westminster, S.W. 1.

Oversea Correspondence.

LEAGUE OF NATIONS.—COUNCIL REORGANISATION AND THE ENTRY OF GERMANY—PAST YEAR'S WORK REVIEWED.

(FROM OUR OWN CORRESPONDENT.)

GENEVA, September 7.

TOWARDS the end of the week, unless some unforeseen and unlikely hitch arises, Germany will be a member of the League of Nations with a permanent seat on the Council. It is no use pretending, however, that the attendant circumstances have satisfied everybody. A good many of the smaller States, including those who take their stand most securely on the interests of the League as a whole, are perfectly frank in their dislike of the Council reorganisation, adopted ostensibly to improve the working of the League, but, in fact, to meet political conditions, and there is a good deal of criticism of what is declared to be an attempt of the Council to dictate to the Assembly how it should conduct its business. One or two statesmen come to an arrangement before reaching Geneva, and a little clique of Powers makes use of the League to serve its own particular ends. The Assembly, they say, wanted Germany admitted with a permanent seat on the Council, and had no interest as a whole in the insistent demands of Poland and Spain or in the diplomatic prestige of France, the friend of Poland.

They see the German Press proclaiming a French triumph, and grumbling about Assembly procedure. They see the French Press saying that too much has been given away to Germany and the other Powers whose special claims have caused so much difficulty. They see that the compromise arrived at has so far failed to satisfy Spain or Brazil, who for the moment are taking no further part in the League, and that Poland is only reluctantly acquiescent. In their eyes, it all boils down, therefore, to ensuring the primary Franco-Polish aim that Poland shall come on the Council with privileges during the same session that German is given her seat. They fail to see why a fundamental reorganisation of the Council should take place to serve these ends, and they do not regard the addition of three non-permanent seats to the Council as necessary, especially as at present two of the existing members of the Council are absent. They resent, also, being asked to vote at the same time—as at present fore-shadowed—on the resolution of the Council for a permanent seat to Germany and three additional non-permanent seats for other States subsequently to be elected during the meeting.

None of these criticisms is without justification, but it is rarely possible to follow purist theories in a workaday world of international relations, and in some respects a good many of the criticisms now made appear a little trivial compared with the issues at stake. If the Council had acted as the custodians of the Covenant and nothing else, regardless of their own particularist desires, they might undoubtedly have done better, but account has to be taken of the fact that neither the Council nor the Assembly does work on these lines; it would be a long way towards the

ideal state if they did. The essential point was to reach an arrangement which Germany and France on the one hand and Poland, Sweden and Spain on the other could accept in order to make the path of Germany's entry secure. This has been sufficiently, if not completely, assured, and the situation with regard to Spain is still not without hope. It has been done without any serious dislocation of the organisation of the League. It may be that at present an additional three non-permanent members with the absence of Spain and Brazil is excessive, but that objection may not apply for long. Turkey will almost certainly come into the League next year. She already has two ambassadors as observers who have gone out of their way to show that Turkey no longer has any quarrel with the League, and M. Benes, who as acting-president of the Council made the opening speech at the Assembly, went out of his way to express the hope that after the happy solution of the Mosul question the League would soon have the opportunity of welcoming Turkey. He gave a definite invitation to Turkey to apply for membership. The return of Argentina to full participation in the League is also only a matter of time, and the return, sooner or later, of Spain is still hoped for. It is quite likely that the Assembly will, in fact, re-elect Spain to one of the re-eligible seats, and the feeling is that, coupled with the almost excessive regard which has been paid to the Spanish Government, Spain will be unable to resist this flattery upon flattery. Even if she does not immediately do so, it will be an advantage to keep a seat for her on the Council, as it will be simpler for her to return, and a vacant seat even for twelve months will make no difference to the work of the Council in present conditions. Ultimately, with Turkey and Argentina in the League, and possibly Brazil and Spain returning, nine non-permanent seats would almost be necessary to give adequate representation to the different regional interests of the world.

So far as the re-eligibility provisions are concerned, constitutionally they mean little, politically they may mean a great deal. The temporary provision by which, for this Assembly alone, not more than three States may be declared to be re-eligible at the beginning of their term of office, satisfies Poland up to a point because she regards it as amounting to something like a political assurance on the part of the Council that she will be re-elected; but constitutionally this is by no means a certain assurance, for re-eligibility is not the same as re-election, and though Poland or any other State may be declared re-eligible at this Assembly, when she comes up again for re-election it will depend entirely on the free vote of the Assembly as to whether or not she serves for another term of office.

It is difficult to find what real substance there is in the other criticism that the Council is endeavouring to impose its will on the Assembly. It was the Assembly's desire that the Council should set up a commission to straighten out the mess of last March. The Council did so, and with great difficulty reached a compromise. It recommends to the Assembly that this compromise should be accepted and put into force, as it has a perfect right to do. The Council also proposes the form in which the Assembly should deal with it, but the Assembly itself is master in its own house, and is perfectly entitled to accept or reject this advice. The Bureau of the Assembly, which consists of the president elected by the Assembly, of six vice-presidents elected by the Assembly, and of the six presidents of the Assembly Commissions, elected by the Assembly, is responsible for the conduct of business; it is free to propose what it wishes, and the Assembly in its turn is then free to accept or reject what the bureau proposes. If, therefore, there are States in the Assembly which object to the compromise, there is nothing in the world to prevent them from doing so. What is absolutely certain is that they are not strong enough to prevent its adoption. If they attempt it, the least that can be expected of them is that, in taking so grave a responsibility, they produce an alternative scheme which will meet the situation. The spirit in which the compromise has been carried out may not be in keeping with the spirit of the League of Nations conceived in its ideal working, but there is nothing in it to suggest that it will have any ill effect on the League, and its value is that it is good enough to provide a solution whereby Germany may enter.

It is the custom that in the opening speech of the Assembly the President should review the work of the past year, and M. Benes, in fulfilling this task with a succinct and comprehensive survey, gave prominence to what has been undertaken by the Economic and Financial Organisation of the League, dealing with the preparatory work now being undertaken for an international economic conference, with the work achieved in the reconstruction of Austria and Hungary, the raising of the Danzig municipal loan, the continuation of the work of the Greek Refugee Settlement Commission, and the preparation of a loan for the settlement of Bulgarian refugees. He also alluded to the variety of other matters under consideration, such as double taxation, unfair competition, the abolition of import and export prohibitions and restrictions, and so forth. As to the future Economic Conference and the Disarmament Conference, he emphasised the necessity for prudent and careful preparation, and with regard to disarmament especially, he said, the failure of an ill-prepared conference would amount to a catastrophe.

The essential step of the immediate future was the admission of Germany to the League and the bringing into force of the Locarno Agreements, which M. Benes described as no more than an application of the Covenant conceived fully in the spirit of the Covenant, carried out under the influence of plans and discussions of the League of Nations itself, and providing for a whole series of pacific procedure, commissions of conciliation, arbitration, Court of Justice, and the Council of the League. In this connection, M. Benes noted the remarkable movement which had begun in the political world as the result of powerful impulse given by the last two Assemblies. The members of the League throughout the world were in process of inaugurating a vast new political system based upon the principle of conciliation and arbitration. It was impossible to over-estimate the importance of this evolution, and if to all that had been done voluntarily in the last few months were added the supreme guarantee offered by appeal to the League, they had the most complete system yet established for the pacific settlement of international disputes.

UNITED STATES.—SHARE MARKET RECOVERY—GOOD RAILROAD EARNINGS—MONETARY FACTORS—IRON AND STEEL.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 1.

AFTER a substantial reaction following the increase in the Federal Reserve Bank's rediscount rate, the share market has been displaying a better tone under the leadership of railway shares. Trading has been on a moderate scale, and there has been no evidence of a strong public desire to indulge in speculative activity. Strength in the rails is readily comprehensible, as current car loading statistics and earning statements are extremely satisfactory. Car-loadings by the Class I. roads have been running in excess of one million cars a week for about three months, and the freight movement that these statistics reflect has been well in excess of the corresponding performances during 1925 and 1924 ever since the beginning of March. Meanwhile the earnings of these roads have been showing healthy gains over the corresponding months of the past three years. It is estimated that the net earnings for July will approximate \$122,000,000, which would correspond to an annual rate of 6.6 per cent. on the Inter-State Commerce Commission's valuation. This showing compares with \$99,000,000 and 5.56 per cent. in July of last year. It makes the second consecutive month in which earnings have exceeded the Inter-State Commerce Commission's "fair return" on valuation. At the same time, the question remains as to the character of the present buying, and as to the ultimate effect of the autumn hardening in money rates. So far the share market has withstood a 5 per cent. call money rate very well, perhaps because the recent reaction partly discounted a higher call money rate. However, a better test of the influence of the money market probably will be had during the next few

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised ... £3,000,000
Paid-Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,512,884

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted on application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEUART, Chief Manager.

weeks. The period of seasonal ease that centres around August is coming to an end, while the Labour Day holiday will make the usual large demands for currency, and the customary increased demand for money in September may be expected.

In its discussion of the money market, the current monthly bulletin of the Federal Reserve Bank points out that there has been a fairly close correspondence between the movement of share prices and the volume of credit extended by the member banks on stocks and bonds. The bulletin expresses the opinion that the correspondence is closer between share prices and these member bank loans than between share prices and the statistics of brokers' loans. Speaking of the recent increase in brokers' loans, which amounted to \$129,000,000 in the four weeks ended August 25th, the bulletin says:—"This increase in brokers' loans appears to be due largely to a change in the method by which security transactions are being financed, reversing the tendency of earlier in the year. From February to May, while stock prices were declining, there was evidence of a shift by which securities were carried more largely by loans made direct to private individuals by banks than by loans made to brokers. This shift was apparent in the statistics in a very rapid decrease in loans to brokers, but a small decrease in total bank loans on securities. From May to July loans to brokers and total bank loans on securities increased simultaneously. But since the latter part of July brokers' loans have increased \$121,000,000, while total bank loans on securities remained practically unchanged. This appears to indicate some shift from direct borrowing from banks to borrowing from brokers." On this basis the bulletin concludes that the total loans of member banks on securities offer a better index of the volume of credit employed in security transactions than do brokers' loans. The question arises as to what the two sets of figures show as to the character of the ownership of the securities, and whether an increase in the proportion of securities carried on brokers' loans indicates that stocks are shifting from strong to weaker hands.

Another interesting and significant subject treated in the Reserve Bank's bulletin is the magnitude of business profits during the last four years. Tabulations covering seven groups of industries show that the quarterly earnings of 89 industrial companies, after receding moderately during 1924, rallied strongly during 1925 and 1926, and reached the highest level of the past four years in the second quarter of 1926. Taking 99 industrial corporations, the profits during the second quarter of 1926 amounted to \$209,000,000, as compared with \$171,000,000 in the second quarter of 1925, and \$272,000,000 in the first six months of 1923. Meanwhile the Class I. railroads earned \$271,000,000 in the second quarter of 1926, as compared with \$234,000,000 in the second quarter of 1925. These figures suggest that earnings of both industrials and railroads will achieve new high records for the year 1926. Plainly the country is enjoying an excellent brand of prosperity, and one that is not tinged with inflationary tendencies.

Current reports show that the steel industry is running along on a remarkably even keel. Production of pig-iron during August averaged 103,103 tons a day, as against 103,978 in July. Production of steel ingots is expected to show a slight increase in August. Producers are reported as feeling confident that a high rate of operation will be maintained during the next two months. Iron and steel prices remain steady.

FRANCE.—ECONOMY PLANS—CONVERSION LOAN IMMINENT—FLOATING DEBT PROBLEM—WAR DAMAGE CLAIMS.

(FROM OUR CORRESPONDENT.)

PARIS, September 8.

THE Poincaré Government is continuing steadily its policy of financial restoration and reform, and every week is now recording either the initiation of further proposals to these ends, or the actual putting into operation of others. The outstanding feature of the past seven days has been the announcement of the approval by Ministers of a sweeping scheme of judicial reform, in view of "the imperative obligation to realise budgetary economies." The Government decisions concern chiefly the suppression of a large proportion of the minor courts and of many of the local prisons, which at present involve the maintenance of a great many more judges and other permanent officials than are regarded as necessary. The 90 départements of France are sub-divided at present into 385 *arrondissements* or electoral districts, 359 of which have their own permanently staffed civil and criminal courts. The decree which is to appear very shortly will suppress 228 of these courts, and will enable the judicial personnel to be reduced by 396 local judges and 271 other permanent officials. Some of these "suppressed" officials will be reabsorbed by extensions that will be necessary in connection with the existing tribunals in the departmental chief towns, but on balance a substantial saving will be effected. Simultaneously 218 local prisons are to be suppressed, involving a net reduction of about 275 permanent civil servants attached to the penal department. Another reform consists in the suppression of 87 departmental *conseils de préfecture*, and their replacement by 23 local administrative councils, each of which will cover much larger areas than the existing councils.

Plans are also being developed for the suppression of many of the sub-prefectures throughout the country, but here the Government is finding it necessary to act with exceptional caution. This reform has been projected for many years, but no Cabinet has ever yet dared to bring it to an issue. The *sous-préfecture* is not only the seat in every district of the direct representative of the central Government, but it is also the centre of the local social hierarchy, and its retention is jealously insisted upon. Deputies representing scores of obscure country towns whose *sous-préfectures* are threatened are already up in arms, and there is also much opposition to the proposed suppression of the local law courts. It remains to be seen whether even M. Poincaré's Cabinet will have the courage to press the proposals to accomplishment, but as to the wisdom of the proposals, from the points of view of economy and efficiency, there can be no two opinions.

The reorganisation and industrialisation of the tobacco monopoly is proceeding satisfactorily, and it is understood that the plan to be followed will be based largely on the report which André Citroën, the well-known motor-car manufacturer, was asked to lay before the Experts' Committee on the subject. It is estimated that it may be found possible to institute the new *régime* during October, but no exact date has yet been fixed for the net receipts of the monopoly to cease to be paid into the Treasury, and to be henceforward diverted into the new Caisse d'Amortissement.

The second large-scale operation in the Government's financial plan is foreshadowed by the announcement that a large national loan is to be issued during October. This loan, I understand, will be solely for the purpose of converting and consolidating a substantial proportion of the floating debt, therefore, it will add nothing to the already huge burden on the national finances. "There will be no advantage in voting additional taxation," M. Poincaré reminded the Senate recently, "unless some solution is found for the problem concerning the National Defence Bonds." If the Treasury is liable to be faced, at any crisis of confidence, with demands for the reimbursement of vast quantities of maturing bonds, the whole elaborate structure that is being raised may be overturned. The Experts Committee, it will be recalled, advised that the existing organisms should devote part of their available resources to buying in short-term Treasury bonds on the market, and eventually of Consolidated Rentes.

M. Poincaré is reported to be acting on this principle. The new loan, it is asserted, will not be issued directly by the Treasury, but by the new Caisse d'Amortissement. It is to be secured by the whole of the resources of the Caisse (the yield from the tobacco monopoly, the new succession duties and the new 7 per cent. tax on first transfers of business undertakings and goodwill). Should these resources prove insufficient, the deficit will be obtained from the Budget, under the law of August 7 last. The primary object of the loan will be to assure the Treasury against any crisis arising in connection with those portions of the short-term debt that will mature during 1927. These are:—

	Frs.
February 1—Crédit National Bonds.....	3,063,000,000
February 16—Six-year Obligations	40,000,000
May—Do do	40,000,000
August—Do do	40,000,000
September 25—6% Treasury Bonds	4,105,000,000
November—Six-year Obligations	40,000,000
	7,308,000,000

In the normal course of events, of course, not more than 50 per cent. of the holders of these would apply for repayment, but it is obviously advisable that as many of them as possible should be converted into consolidated debt, and thus prevented from becoming a recurrent danger in the future. The relation between the pending loan (the announcement of the amount and conditions of which is believed to be imminent) and the problem of stabilisation is obvious. Germany, it may be recalled, in its efforts to stabilise the rentenmark, redeemed the whole of its floating debt. The depreciation of the mark was such that the 191,580,405,000 marks of German Treasury bonds that were discounted by the Reichsbank on November 15, 1923, were paid off with 200 millions of rentenmark on December 22nd following. The French short-term and floating debt on December 31st last totalled slightly over 120,167 millions (paper), of which 93,687 millions was floating debt; therefore, its redemption would require an enormously greater sum in gold francs, so much greater that the adoption of the German plan would be impossible. The problem to be solved is whether M. Poincaré's more gradual plan will prove sufficient, or whether more drastic operations will not prove necessary.

Reports continue to reach Paris of the difficulties experienced by *sinistrés*, owing to the inability of the Government to liquidate the claims for payment of war damages that have been outstanding since the end of the war. These may be best summed up in a typical case that has just come under my own notice. A farmer owning the land he cultivated lost everything he had, owing to the destruction of his property in the Aisne Department during the war. His claim was duly approved some years ago, but down to the present he has not received one centime in satisfaction. Accrued interest is now owing to him to the amount of over 260,000fr. He has just received a proposal from the Government to capitalise this overdue interest, and accept the annual income arising from this capitalisation until such time as the national finances shall be sufficiently restored to permit of his long overdue claim for damages being satisfied and the accrued interest being paid off. This man's case is typical of many thousands.

GERMANY.—POLITICS—FINANCIAL POLICY— CREDIT—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, September 8.

THE reception of Germany into the League of Nations is not likely to have much immediate effect upon political or business sentiment here. The failure last March disappointed the League's German friends and gratified its enemies; and now with the former the effect of a belated reception has been discounted, while the latter present the reception as the result of an unsatisfactory compromise. The home political situation, which has been dull for some time, has had a mild sensation in the shape of an offer by the "heavy industry," which is the weightiest economic factor in German politics, to become a Cabinet party once more. This offer was made at the congress of the Federation of German industries by Dr Paul Silverberg, one of the late Herr Stinnes' associates, who, after

justifying the policy of Industry in opposing the first Socialist Government, declared for co-operation with Labour. As Labour is mostly organised in the Socialist Party, Socialism must again share in the work of government. This was practically an invitation to re-create the "Great Coalition," embracing all Reichstag groups from the People's Party on the Right to the Social-Democrats on the Left, and, incidentally, it was unfriendly to the German-Nationals, with whom the People's Party long stood on ambiguous but on the whole very friendly terms. Such a solution, which would provide the country with a Majority Cabinet—the present Cabinet has only minority support—is urged almost every time a new Cabinet is being formed. While it is an anomaly that a minor section of the industrial workmen, the Catholic Centre part, should have been represented in all recent Cabinets at a time when the greater part, as Socialists, were excluded from power, the Great Coalition has very small chance of being formed. There is a suspicion that the industrialist offer is a back-handed compliment to the Socialists, taking the form of a hint that after these had failed to maintain power and to execute their programmes, they might be taken in on a pledge of good behaviour.

At the same congress the Finance Minister, Dr Reinhold, made an important statement on industrial and financial policy. He told industry that it must cease to regard the Republic as its banker. The present system of using taxes collected from well-managed industrial concerns in order to afford credit to unsuccessful and indolent competitors must cease. The new policy of sharply dividing ordinary from extraordinary expenditure will be continued. The present income-tax, especially as regards the smaller incomes, must be moderated. Referring to the currency in its connection with valorisation, Dr Reinhold stated that "probably in the immediate future an event will happen which will prove how firm our currency stands in the whole world." This statement has aroused much speculation. The "event" is represented variously as the mobilisation of the Dawes bonds, the issue of a Reichsmark international loan, which, if successful, would certainly prove faith in the currency, and the restoration of gold convertibility for Reichsmark notes. It is certain that the Reichsbank has no intention to coin gold, but it is suggested that convertibility of notes to large values necessarily into gold bars, is being considered, and that gold in bars may be exported as a normal way of regulating the exchanges. Against these speculations stands the fact that the Reichsbank's free sale of the exchanges of countries with full-value currencies has proved to be as good as any form of gold convertibility. The Reichsbank president, Dr Schacht, has, however, personally always held the view that foreign exchange as cover for note circulation is a temporary expedient, and he has declared himself in favour of converting the Reichsbank's exchange reserve into gold—a policy which has in fact been pursued, though slowly. At present the Reichsbank's gold reserve is 1,493 millions.

The money market has been tighter. The increased demand lasted longer after the month-end settlements than is usual, and the day rate held at around 7 per cent., but yesterday dropped to 6½ per cent., or for first-class borrowers 6 and 5½ per cent. respectively. To-day abundant money was offered. Bankruptcies in August fell to 476, the lowest figure since the inflation era. The Prussian Trade Ministry's report for August is the most cheerful for some months. It states that many leading industries, in addition to coal and iron, have improved. This applies mainly to textiles, and in less measure to the electrotechnical, motor-car, building, chemicals, wood, clothing, and boot and shoe branches. In the linen branch an improvement has at last set in. The potash industry is regarded with less optimism. The result of the Leipzig autumn fair is described as moderate. The number of exhibitors was relatively small, and French, Belgian, and Czechoslovak goods were offered at below German prices. The iron and steel export market is very firm, with many orders from South America, the Far East, and India. The export prices of bars, wire-rods, plates, and other rolled goods have gone up. No change has been made in home prices, which are considerably above the world market level. There is some talk of the formation of a second great Steel Trust, or "Counter-Trust," to embrace all those leading Western concerns

which did not come into the first steel trust, the Vereinigte Stahlwerke A.G. The outstanding concerns are Krupp's, Haniel's, Hoersch, Kloeckner, Mannesmann, and the Wolff-Netter group. The supposed object of such a formation would be self-defence in case the Vereinigte Stahlwerke A.G. should get control of the syndicates—at present it is a long way off controlling the Ingot Steel Syndicate, which counts most.

The Bourse last week was irregular. The first two days of this week witnessed heavy and universal declines, from which the leading speculative stocks suffered most. To-day, after an uncertain opening, most securities rose. When at their lowest price of this week, some of the high-priced stocks had lost 20 or 30 points as compared with their quotations at the end of the third week in August, and there were drops of as much as 10 points in one day. The market had been heavily overbought, and many speculators were squeezed out. This reaction seems to have differed from those which took place earlier in the present year's bull movement, when the underlying tone was firm, and when profit-taking was the main cause of the decline. This time the Bourse was emphatically weak. The financial Press, therefore, raises the question whether the bull movement, which has now lasted eight months, is not at an end, and whether it did not go too far in carry shares which pay no dividend, and which have uncertain dividend prospects, to prices of 150 or 200; while stocks like Dyes Trust, which were lately quoted at nearly 300, sold on a yield basis of 3½ per cent.

AUSTRIA.—NEW GOVERNMENT LIKELY—PUBLIC FINANCE—SLIGHT TRADE IMPROVEMENT— MONEY AND STOCKS.

(FROM OUR CORRESPONDENT.)

VIENNA, September 1.

A CHANGE in the Government is likely to occur in the near future, and it is probable that the Chancellor, Dr. Ramek, and the Finance Minister, Mr Kollmann, will resign. It is quite uncertain who will become Dr. Ramek's successor, and this will depend on an amicable settlement of the differences between the Vienna and the Styrian groups of the Christian Socialist party. Although the motion by the Social Democrats to bring the Cabinet before the Supreme Court for having used public funds to assist the Zentralbank without Parliamentary consent was rejected by the House, the consequences of this affair cannot yet be foreseen. But it is certain that the present state of affairs, when Parliamentary work is secured only by continuous compromises, cannot go for any length of time, and it can be assumed that both parties will, during the winter, prepare themselves for general election next year. An indication of this is the party programme recently issued by the Social Democrat party, which is drawn up on very radical lines, and shows that the Socialists hope to get the support of the small farmers. Whilst the Social Democrats expect that a new election will bring them great success, the Christian Socialists are of the opinion that their action will not make any great change in the composition of the actual parties.

The fact that the Treasury had to raise the amount of over 62 million A.S. in order to assist the Zentralbank—part of which money was taken out of State funds, and part borrowed—proves more and more to have taxed State finance to the utmost; the Government is, therefore, endeavouring to reimburse itself as soon as possible, and, for this reason, is negotiating with banks and savings banks to induce them to subscribe for short-termed Treasury bonds up to an amount equal to the sums advanced; the amortisation of these bonds would be secured by a special tax to be levied upon savings deposits. It is natural that both banks and savings banks oppose this project, and are only prepared to consent to it if the Treasury grants them certain taxation facilities, regarding which negotiations are still taking place. In the event of the banks taking over these bonds, it will, no doubt, be difficult to place the 75 million A.S. Treasury notes, the issue of which was granted to the Government by the League of Nations Committee last year. The residue of the League of Nations' Loan, still unused, amounts to 106 million A.S., and the Government hope to get part of this released for certain expenditure of public utility

which cannot be placed in the ordinary Budget. At any rate, it is certain that the next Budget will allow of no margin because the State subsidy for the unemployed is increasing, and the State officials have again lodged a claim for emergency help, which is estimated to amount to about 100 million A.S. It is true that up to the present the revenue derived from taxation has been satisfactory, and has exceeded the estimate, but it is to be feared that, owing to the protracted economic crisis, it will considerably decrease next year.

The economic conditions show some, although slight, signs of improvement. At least the fact can be stated that the number of insolvencies is falling; whilst there were still 286 insolvencies declared in April last, there were only 203 in July, and a further decrease is expected for the month of August. It seems as if the necessary, though painful, process of purification in business and trade, which mainly affected the weak firms, is drawing to a close. Unemployment, however, still remains unsatisfactory; the number of unemployed having again increased to 138,610 in the middle of August. In the timber and furniture industries business is still very slack, whilst an improvement is to be noted in electric and cable industries owing to State orders. It is worth noticing that the economic difficulties, under which the country has suffered for some time, have influenced the labour question, inasmuch as trade unions and employees realise that under existing conditions there can be no question of fighting for higher wages.

On August 6th, the bank rate was reduced from 7½ per cent. to 7 per cent. After a long period of dullness a complete change of scene has set in on the Stock Exchange; big Berlin firms and banks have begun to purchase a number of Austrian securities, and also the establishment of more intimate relations between German industries and the Alpine Montane-Gesellschaft has led to purchases on the Vienna market for German account, particularly in shares in the Austrian Danube Navigation Company and various electrical companies. The effect was that not only these shares but practically quotations of all securities have considerably advanced. Austrian buyers follow suit only very slowly, as they are still intimidated by the bad experiences of previous years. For the Vienna banks this advance in prices is very important, as they all have very large investments in securities, which they took up during the slump in order to support the market.

Conditions on the money market continue to remain very easy; this easiness, however, is not sound, but mainly due to the fact that trade and industries have considerably restricted their activities, and large sums of money have become free as the result of the liquidation of so many businesses. Anyhow, these conditions have had the effect of reducing the cost of short-term loans which, not long ago, was 15 per cent. per annum for first-class firms to about 10 per cent. On the foreign exchange market there was but little business and the quotations showed little fluctuations.

POLAND.—FOREIGN TRADE—TRADE RELATIONS WITH BRITAIN—STOCK EXCHANGE—COAL EXPORTS.

(FROM OUR CORRESPONDENT.)

WARSAW, August 29.

THE foreign trade statistics for the first six months of the year show a very marked decrease of imports, as may be seen from the figures below:—

	(Million Zlotys.)	1925.	1926.
A. Agricultural products		281.9	46.7
B. Timber		5.5	1.2
C. Colonial goods		84.7	40.1
D. Mining products		30.8	17.6
E. Other raw materials		188.9	114.5
F. Manufactured goods		455.4	131.6
G. Gold and silver		0.8	0.2
Total		1,048.0	351.9

If we take into account the reduced value of the zloty the decline becomes even greater. Such an abnormal change in the import trade is due to three causes. The intensified agricultural production and a good harvest rendered Poland independent of foreign cereals. The fall of the

zloty acts as a protective barrier, because the home prices are at a relatively low level as compared with foreign exchanges. This natural tendency has been accentuated by protective and partly even prohibitive measures, which render the import of foreign goods very difficult.

The value of exports also declined, but the decrease was much smaller. Below are the export figures for the most important groups:—

	(Million Zlotys.)	1925.	1926.
A. Agricultural products		211.6	253.5
B. Timber		124.4	98.0
C. Colonial goods		2.9	1.2
D. Mining products		138.4	142.3
E. Other raw materials		10.4	9.8
F. Industrial goods		142.4	69.4
G. Gold and silver		..	0.3
Total		630.1	574.5

This decrease is in the first instance the result of reduced industrial exports, which fell from 142.4 to 69.4 millions. The point of gravity of the Polish export trade is being steadily shifted from industrial to agricultural products.

The geographical distribution of Poland's foreign trade has undergone an important change since 1925. The United Kingdom, which in 1925 occupied in the import trade the fourth place (7.2 per cent., the figures being for the first five months of the year) after Germany (33.4 per cent.), the United States (12.9 per cent.), and Austria (9.8 per cent.), now ranks third (10.7 per cent.). In the export trade the United Kingdom occupies the second place (15.9 per cent.) after Germany (23.8 per cent.), while last year it stood fourth (6.6 per cent.), being outdistanced by Germany (51.0 per cent.), Czechoslovakia (8.1 per cent) and Austria (11.8 per cent.).

The stabilisation of the zloty during the last two months has contributed to an upward movement on the Stock Exchange. Funds which were hitherto engaged on the foreign exchange market are seeking new channels of investment. The movements of the stock exchange index numbers during recent months are as follows:—

	60 Commercial Banks.	90 Industrial Undertakings.
End of 1924	100	100
" 1925	69	74
End of January, 1926	57	62
" May, "	51	55
" June, "	62	56
" July, "	76	84

The lowest level was reached in May of this year. In June and July there was an upward tendency, which during this month has been steadily progressing, so that the index is working back to its level of 1924. In comparison with pre-war conditions, the share values are still very low. According to an official index of the Statistical Bureau, the average value of Polish shares amounted to 17.80 per cent. of the pre-war quotations.

Coal exports during the first half of August amounted to 950,000 tons, as compared with 917,000 tons during the first half of July. Coal exports to the United Kingdom and to Russia increased, while the quantities sent to Sweden and Denmark decreased by 50,000 tons.

Letters to the Editor.

THE HOSIERY TARIFF CLAIM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—It is consoling to some extent to read the sympathetic reference, even if somewhat qualified, to the fate of our safeguarding application in the weekly notes in your issue of 28th.

Nothing definite can be said as to future action, if any, in connection with the Report, until the executive of the Council has met. Meantime, I wish to thank you for your very fair comments upon same. You will, however, I am sure, permit me to deal with two points you raise.

The first is that we offered no direct evidence as to wages in competing countries. Just what the Committee expected in this direction it is difficult to say. It will be granted they could hardly anticipate our ability to persuade a German, Japanese, Belgian, or Czech manufacturer to attend the inquiry, and state that he is paying wages which are much below those obtaining in this country. The fact of the matter

is we had secured from reliable sources information which was embodied in our application, and which, from documents circulated by the Committee, we found they had confirmed for themselves, so that the purpose of their statement "no direct evidence was offered" is obscure. It certainly was unnecessary, as the decision on this point in favour of the applicants bears out.

The other point you refer to is that the Committee refer to the considerable stress laid by the opponents on the advantages to be derived from mass production methods, and report their inclination to consider that any really serious attempt to regain the trade in such articles as cheap cotton stockings and underwear is most likely to be successful if the example set by America is closely followed.

I submit, Sir, that this is a case of putting the cart before the horse. Mass production infers an outlet for the resultant output. It would be interesting to have the opinion of the Committee as to where this outlet is to be obtained. If it is within the grasp of the hosiery industry, then undoubtedly the Committee were not justified in coming to the conclusion that the industry is conducted with reasonable economy and efficiency! In any case, mass production is a matter of degree—the man who can make and find an outlet for 25,000 dozen a day should always be in a position to undersell the man who, by circumstances over which he has no control, is restricted to an output of 5,000 a day.

As for standardisation or concentration on a few lines, witnesses who have been adopting these methods gave evidence, and have had the worst unemployment experience of any of our witnesses. This is not to be wondered at, as evidence was forthcoming of the great number of tiny or special orders tendered to British manufacturers which the wholesale houses expect to have executed at the standardised prices. It was admitted by witnesses from the opposition that these small orders were unacceptable to foreign competitors, in fact, could not be executed in time were it otherwise, but the main orders in bulk are placed abroad.

The applicants, of course, were under the impression the regulations were introduced with the idea of changing existing conditions where unfair competition is proved, as in this instance; but the inconclusive recommendation of the Committee seems to warrant the statement that they do not share that view, and that it is not within their province to prescribe for the patient until death has occurred.—Yours faithfully,

M. R. ALLARD, Secretary.

National Joint Industrial Council of the Hosiery Trade, 6 New walk, Leicester, September 3rd, 1926.

OLD DEBTS AND NEW BUSINESS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Imperialism—the desire to dominate the world—is as old as civilisation itself; modern imperialism, after a period of peace, progress, and goodwill among nations, cropped up again when Bismarck smashed Denmark, Austria, and France, formed the German Empire, and consolidated his power by means of the Triple Alliance. In 1914, Germany, confident in her own strength and resources, made war on the civilised world. Are we to draw a veil over the unutterable misery everybody has endured since that awful catastrophe was thrust upon us, merely because politicians and financiers tell us that "we ought to concern ourselves more with new business than with old debts"?

Has the "British nation and public opinion declared itself with a vigour and a unanimity almost unprecedented in favour of the admission of Germany to membership of the League?" Is Sir Austen Chamberlain the sort of man to "set British public opinion at defiance"?

May I ask you a few more questions? Does British public opinion approve of the action of the Bank of England as agent for the German Government in asking for the deposit of all pre-war German Government and municipal bonds on terms which confiscate 97½ per cent. of their capital value, and return a worthless piece of paper representing the remaining 2½ per cent. to the depositors?

Are Spain and Brazil, both countries having kept faith with their creditors for many years past, often in times of acute financial embarrassment, entirely dominated by unworthy political motives in their attitude towards Germany's admission to the League?

I rarely find myself at issue with the views expressed by the *Economist*, which is, and has always been, regarded as expressing the considered opinion of the leading bankers and merchant bankers of the City of London, but I do seriously question the argument that this "new business," i.e., the "reconstruction loans" now being introduced and strongly recommended by London and New York financial houses as safe and profitable investments—founded as they are on the ruin of pre-war security holders—is really approved by British public opinion, which hitherto has been taught to regard honesty as the best policy?

If, in the evening of a long life and with many hard fights for sound financial principles behind me, I am to be classed as

a "reactionary," I must submit to the doctrine of "other times other manners."—Yours faithfully, G. S. PAWLE.

London, August 24th, 1926.

[That the City and the British investing public do not share our correspondent's views is shown by the standing of the European reconstruction loans in the Stock Exchange Official List. The allocation of blame for Germany's currency depreciation is too large a question for discussion in a footnote.—Ed. Econ.]

THE KUOMINCHUN.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to the interesting note on the situation in China in your issue of July 3rd, may I point out that the Kuominchun is the "People's Army" created by Feng Yu-Hsiang, and is not to be confused with the Kuomintang (People's Party), which dates from pre-revolution times and clings to the ideals of its deceased leader, Sun Yat Sen.

The Kuomintang is certainly a force to be reckoned with, for wherever Cantonese are to be found, whether in Shanghai, Peking, or overseas, there is invariably an active and wealthy branch. Unfortunately, within the past two years the headquarters of the party has passed into the hands of extremist leaders whose policy has been shaped by the Soviet agent, Borodin. The consequence is that the efforts of the Hongkong Government to come to a friendly understanding with the Canton Government, which is identical with the Kuomintang, have been frustrated. Relations between Hongkong and Canton are similar to those between London and Moscow, and any well-intentioned advances from Hongkong are at once misrepresented as imperialistic guile. The rank and file of the Kuomintang, whose interests are almost entirely commercial, realise full well the disastrous effects of the rupture between Hongkong and Canton, and undoubtedly desire to see harmony restored. Although courage is lacking and patience appears inexhaustible the ways of the Chinese are mysterious, and it would cause no surprise if the internal discontent at present smouldering burst into activity and drove out the doctrinaire leaders of the party. Then perhaps co-operation between the Kuomintang and the British Government might be possible, and the task of evolving order out of chaos become a joint undertaking.—Yours faithfully, Hongkong, August 10th, 1926. P. S. CASSIDY.

Books and Publications.

THE CITY FROM WITHIN.*

A NEW work by a City Editor is decidedly a literary event. This "plain account" of the British financial system bears all the outward and visible signs of its author's position: a refreshing sense of reality, suggesting observation from within rather than without; a clean-cut style, as if the writer were accustomed to make his points, day by day, with the least possible waste of language; and, one must add, a tendency to seize on the first obvious explanation of any given phenomenon, as if time were precious and the printer's boy never very far from the door. The work is distinguished from most other manuals describing City methods, terminology, and traditions by its strongly personal tone—the writer is constantly taking his readers behind the scenes and persuading them to view City institutions through his eyes. He has a distinct turn for the pithy and arresting phrase: "The City is an expression which is found very useful when we want to put a great many heads under one hat." "All reform comes down to the question of means to carry it out." "No place is a better whispering gallery than the Stock Exchange." He is by no means prepared to believe that all is for the best in the City as it exists to-day, and some of his criticisms, one must admit, come shrewdly home. He believes that recent bank amalgamations have in some cases curtailed the trader's opportunities for obtaining accommodation, and that the multiplication of competitive branches in the outer districts is in danger of being carried to excess. He confesses to a feeling of dissatisfaction whenever the Treasury bill rate is less than 12s 6d below Bank rate. "I feel that when the Government pays a discount rate which works out at an interest rate of 4½ to 4¾ per cent. with a 5 per cent. Bank rate.....the Money Market is, on the whole, doing a little too well out of the taxpayer,

* "Modern Finance and Industry." By A. S. Wade, City Editor of the *Daily News and Star*. (London) Sir Isaac Pitman and Sons, Limited. 5s net.

and out of the finest short-term paper in the world." He frankly states his belief that the preference shares and some of the ordinary shares of the best-known British companies should be rated above foreign bonds. He gives an interesting analysis of the consequences which ensue from the fact that such commodities as tin, rubber, and tea are marketed in the same centre as the capital concerned in their production. The least satisfactory feature of the work is the constant iteration of the thesis that, starting from the Cunliffe Report, Great Britain has gone too swiftly forward with deflation for either her industries or other countries to keep pace. The writer leaves the impression that the Cunliffe Committee were responsible for the collapse of the 1919-20 trade boom, and that all through the subsequent period "less obvious consequences of the policy were disturbing our trade conditions and leading up to industrial crisis." This idea runs like a thread through the whole narrative, and though the author has undoubtedly a right to his opinions, one may question whether the general reader, unacquainted with the minute details of, to say the least, a highly controversial topic, will not carry away a false sense of values from a work designed chiefly for his perusal. Again, is Mr Wade on firm ground in declaring that "a true gold standard would involve our return to a gold currency," or in describing the quantity theory of money as "simple"? Such blemishes apart, however, the present volume is a welcome addition to the list of works designed to give the general reader an intelligent and informed interest in financial matters, and we venture to suggest that the writer might give us, in the future, a second treatise, in which many interesting points, necessarily touched on but lightly in this initial publication, would be reserved for detailed treatment.

BOOKS RECEIVED.

General Strikes and Road Transport. By George Glasgow. Introduction by the Right Hon. D. Lloyd George. (London) Geoffrey Bles, 22 Suffolk street, S.W. 1. 5s net.

A very interesting and detailed description of the transport system for the distribution of essential supplies, initiated shortly after the war, built up afterwards, and seen in full operation during the general strike last May. In his preface Mr Lloyd George says:—"Mr Glasgow, rightly, I think, claims that the experience of Great Britain in May, 1926, has established a new truth in political philosophy, namely, that road transport can be relied on to serve the immediate vital need of a country in a sudden emergency of short duration."

The Cattle Industry and the Tariff. By Lynn R. Edminster. (London) George Allen and Unwin, Limited, Ruskin House, 40 Museum street, W.C. 1. 10s net.

This is the latest volume in the valuable series of studies produced by the American Institute of Economics. The author, who has enjoyed the assistance of the council and staff of the Institute, summarises his conclusions on the American cattle trade as follows:—"First, that the domestic cattle industry in its present state is not dependent upon duties on cattle, and is dependent on a duty on beef, if at all, only in a very small measure; second, that duties on cattle and beef can in the future be made effective in increasing prices and stimulating production only under conditions that are peculiarly difficult, and, finally, that the endeavour to protect this industry will eventually impose a burden on the nation quite out of proportion to the gains that can accrue from such a course." This and other volumes in the Institute's series of economic studies may be recommended to all serious students of fiscal problems.

How to Use a Bank. With a Preface by Hartley Withers. Published by Lloyds Bank, Limited. (London) W. H. Smith and Son. 6d net.

"In money matters," writes Mr Withers, "punctuality and precision are a first duty to oneself and to others, and those who resolve to cultivate them will find a kindly teacher and adviser in this handbook." This testimony is well deserved, for the pamphlet explains in the clearest and most efficient manner the multifarious services performed by the modern bank, and just what the ordinary bank client has to do to make best use of them.

Internationales Jahrbuch für Schiedsgerichtswesen in Zivil- und Handelssachen. Band I. Compiled by Dr A. Nussbaum. (Berlin) Carl Heymann, Mauersstrasse, 44. 20 marks.

A collection of articles on the different systems of civil and commercial arbitration which function in the more important countries of the world. The articles are written by eminent authorities in each country. Part IV. deals with specific cases which have been under consideration.

Report on the Work of the Indian Trade Commissioner During 1924-25 and 1925-26. By H. A. F. Lindsay. (London) Office of the High Commissioner for India.

This report includes an account of India's trade with the Continent and the United Kingdom, the progress made with regard to commercial publicity and intelligence, &c. Useful trade statistics are given in the Appendix.

European Economic and Political Survey. Vol. I., Nos. 23-24. August 15-31, 1926. (Paris) The Reference Service on International Affairs of the American Library in Paris. \$10 a year subscription.

International Administration (Political and Financial). By J. W. Wheeler-Bennett, Junr. (Paris) The Reference Service on International Affairs of the American Library in Paris, 10 Rue de l'Elysée. 25 cents.

The Banker. September, 1926. Vol. II. No. 8. (London) Eyre and Spottiswoode (Publications), Limited, 1 and 2 Goldsmith street, Fleet street, E.C. 4. 1s.

National Bank of Australasia, Limited: Quarterly Summary of Australian Conditions as on June 30, 1926.

This review satisfies a definite need for comprehensive and up-to-date information on Australian trade and finance. We venture to suggest that the bulletin might usefully be supplemented by a cable advance summary of the main points, such as is furnished, for instance, by the South African institutions.

How to Form a Company. By H. W. Jordan. (London) Jordan and Sons, Limited, Chancery lane, W.C. 2. 1s 6d net.

This is the seventeenth edition of a useful and well-known work explaining the documents filed on incorporation, and the principal statutory requirements affecting companies.

OFFICIAL PUBLICATIONS RECEIVED.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C. 2:

National Debt: Return showing for the financial years commencing April 1, 1880, April 1, 1890, and for each financial year thereafter:—(1) The total amount of Dead Weight debt outstanding on April 1st, &c. (2) Other Capital Liabilities. (3) Gross Liabilities of the State. No. 107. 2d net.

Foreign Branch: 168, Fenchurch Street, E.C.3.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

Ticket. September 14. Account. September 16.

The usual week-end prospect of a settlement of the coal dispute seemed on Friday to have more basis than it has done for some time past, and the Stock Exchange again took a hopeful view of the outlook. There is a good deal of business doing in some of the markets. The return of the public from holidays, coinciding as it does with the obvious fact that the two parties to the coal stoppage are getting tired of trade inactivity, serves to stimulate speculation and investment alike, although the latter part of the business is still quiet, and in the British Government stocks there is no more than bread-and-

butter business doing. Prices keep steady on the whole; Victory Bonds have gone back after the rise that they enjoyed upon reinvestment of part of the money that was repaid at the beginning of the month to holders who had their bonds drawn.

The foreign Government market is noticeable chiefly by reason of the flatness of Chinese bonds, prices of which gave way materially in consequence of the serious outbreaks which have occurred. Brazilians are again a little harder, but, except for this, the South American list is unchanged. French descriptions have spent a quiet week.

Home Railway stocks derived no strength from the better prospects of peace in the coal world. Argentine rails have fallen on profit-taking at the end of a long and rather tedious Stock Exchange account of 21 days. Buenos Ayres Great Southern, however, went ahead on dividend hopes. Mexican rails are dull and Mexican utilities have weakened, to recover, however, from the worst on the issue of statements respecting the Mexican Light and Power and the Mexico Tramway companies. Brazilian Tractions provided mild excitement, because of the violent fluctuations in their price. Antofagasta and United of Havana stocks remain depressed.

The rubber market is good, with unremitting pressure to buy the good-class stocks, of which there is a limited supply obtainable. The tea market moves rather erratically, discrimination being shown by purchasers who are directing their attention more particularly to the companies that turn out high-grade tea. In the oil market a further slump in British Controlled common and preferred shares shook the list for a while. All kinds of rumours came into circulation to account for the drop, but none of them have received official confirmation so far. Other shares in the oil list acknowledged no more than a temporary following of British Controlled, some of the prices being a little harder on the week.

The textile list is, for once in a way, uninteresting, though Snias strengthened on an improvement in the Italian exchange. Tobacco shares retain a wide public following, and speculators turned them out on account of the Chinese anarchy, the B.A.T. Company having interests in China. Egyptian land shares have shown buoyancy, and Hudson's Bays held their previous improvement. Gas stocks are better, in consequence of the increase which companies are making in the price charged for their product. Electric lighting shares have not moved. Cable construction issues are hesitating after their long and almost continuous rise. A trifling demand for Marconis served to arouse hopes that the forthcoming auditors' report, expected at the end of this month, may not be as bad as previous fears had apprehended. The shipping market is better, on the hope of resumption of work on the coalfields, and iron and steel shares, as a rule, show very small improvements, optimism in this section being qualified by the passing of the preference dividend by Richard Thomas, the Welsh tinplate manufacturers. Brick shares are better, thanks to a batch of good reports recently issued. Harrods and Harrods (Buenos Ayres) shares have gone ahead. Harrisons and Crosfield deferred stand out with a good rise. The banking market is steady, and no special changes have occurred amongst insurance and trust companies' shares.

Kaffirs played second fiddle to the Malayan tin shares, where lively speculation lashed the market into optimism as the price of tin crossed £300 per ton. Chartered are good at 30s; the shares have been absorbed in thousands per diem by French and option dealers. De Beers keep hard. Cornish tin shares eased off upon rumours of a debenture issue by one of the principal companies, and West Africans attracted a little attention, which led to prices being advanced. San Francisco shares are better upon the good results officially reported, and the quiet demand for Indian mines would be more noticeable were it not for the liveliness amongst tin shares domiciled in the same market.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

Gordon Selfridge Trust, Limited.—Capital £2,000,000, divided into 1,000,000 6 per cent. cumulative preference shares of £1 each and 1,000,000 ordinary shares of £1 each. This is an offer for sale of 1,000,000 6 per cent. preference shares and 100,000 ordinary shares, both at par. Purchasers can take one ordinary share in respect of each ten preference shares, offers to purchase ordinary shares alone not being accepted. This Trust has been formed by Mr H. Gordon Selfridge and Mr H. G. Selfridge, junr., to acquire from them the whole of the ordinary share capital of £750,000 of Selfridge and Co., Limited. The profits of the company, for the years ended January 31, 1924, 1925 and 1926, after charging all trade expenses, directors' remuneration, debenture and other interest, corporation profits tax, and dividends on the preference shares, preferred ordinary shares, and staff participating shares, but before deducting income-tax, depreciation of buildings, and investments and amounts placed to reserve, are certified by the auditors to have been as follows:—1924, £124,616; 1925, £164,158; 1926, £278,705. Dividends on the ordinary share capital are certified to have been 10 per cent. for 1924 and 1925 and 15 per cent. for 1926, all free of tax. It is stated that the purchase price payable to the vendors is £2,000,000, to be satisfied as to £400 in cash and as to the balance by the allotment to the vendors and/or their nominees of 1,000,000 preference shares of £1 each and 999,600 ordinary shares of £1 each, credited as fully paid, the vendors undertaking to pay the preliminary expenses of the registration of the Trust. The vendors have disposed of 1,000,000 preference shares and 100,000 ordinary shares at the total price of £1,022,000, payable in cash. These shares are the subject of the present offer, the purchaser paying the sum of £53,000 to the offerer. A good commercial offer.

Puerto and Balneario Quintero Railway.—In order to comply with Stock Exchange regulations, particulars are advertised of the above company. There is an issued capital of \$7,700,000.00, divided into 42,000 "A" shares of \$100.00 each and 35,000 "B" shares of \$100.00 each. In addition, £187,500 5 per cent. bonds (\$7,500,000 of 6d gold) have been issued, of which £937 10s have been drawn for repayment, and the balance—namely, £186,562 10s—has been purchased by the Anglo-South American Bank, Limited. The purchase price was £76 15s per cent. net in 997 bonds of \$1,500 gold, or £37 10s (at 6d) and 1,989 bonds of \$3,000 gold, or £75 (at 6d). The bonds are guaranteed as to principal, interest, and redemption by the Republic of Chile, and are redeemable by 1963 by means of a cumulative sinking fund of 1 per cent. per annum by half-yearly drawings only at par. Interest is payable in Valparaiso or in London in sterling. The Quintero San Pedro Railway is a short line of about 39 kilometres just north of Valparaiso, and was opened in March of this year. The proceeds of the bonds have been applied to cancel an original debt of £125,000, and the balance in the purchase of equipment and material. Application is being made, it is stated, for permission to deal in these bonds on the London Stock Exchange.

ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

COMPANY MEETINGS, &c.

CRITTALL MANUFACTURING COMPANY, LIMITED.
ATTRACTIVE REORGANISATION SCHEME.

Presiding at the annual general meeting of the Crittall Manufacturing Company, Limited, held on the 6th instant, Mr F. H. Crittall, chairman, in moving the adoption of the report and accounts, stated that the profit earned during the past year amounted to £114,085 15 7d, which he thought might be considered as very satisfactory, showing as it did an increase of £43,922 2s 10d. This, with their share premium account and the amount brought in, enabled them to bring the dividend on the participating preference shares up to the maximum of 10 per cent. for the year, to place £40,000 to reserves, raising these funds to £54,650, to write off preliminary expenses over £6,000, to pay 15 per cent. on the ordinary share capital, and to carry forward £15,355, as against £6,381 brought in.

Having reviewed the operations of the past year, the Chairman continued: In the remarks I have just made I hope I have succeeded in conveying to you a clear picture of our organisation, the basis upon which it has been established and of the undoubted possibilities that await us in the further development of our plans.

I have told you of the capacity of our plants, that our sales continue to show substantial increases, and of the necessity we felt for making ourselves more self-contained by erecting and equipping additional manufacturing units for fittings, &c., which fittings we have hitherto obtained from outside sources.

The question of the effective distribution of our products is one, as I have already indicated, that has occupied the earnest attention of your directors; it is fundamental that our customers should be in a position to obtain windows in or near their immediate locality as and when they require them. Therefore, to meet this situation it is our intention to establish depots or warehouses in selected areas; we recently opened such a depot at Leicester with most gratifying results, and we are confident that the extension of this plan on the lines I have indicated will prove most profitable.

A circular is being issued to the shareholders to-night, which invites your approval to the proposals for the rearrangement of the company's existing capital in a manner which, in the considered judgment of your directors, will prove advantageous to all shareholders and to the future prosperity of the company, and also provides the additional capital required for the necessary further developments.

The matter is one that has received the most careful consideration of your board, they being anxious to formulate a scheme under which the maximum benefits in every respect may accrue to existing shareholders, for it will be appreciated that in other circumstances it might be difficult to obtain this new capital without prejudicing the position of all existing shareholders, owing to the present high rate of interest, including the participating rights paid on the preference shares.

This scheme, we are advised, can, with the aid of the requisite resolutions of the two present classes of shareholders and of the company, be carried out with the minimum of expense, and the necessary separate class meetings and company meetings are being summoned for the purpose of giving effect thereto.

The scheme is shortly as follows:—It is proposed that the present preference shares shall as from June 1, 1926, be replaced by debenture stock, preference shares, and ordinary shares in such proportions that every ten present preference shares (and so in proportion for less numbers than ten) will as from that date be represented by £3 of 6 per cent. redeemable debenture stock, £4 of 7 per cent. cumulative preference shares, and £3 of ordinary shares, and that in addition each holder of existing preference shares will have a transferable right to subscribe for one ordinary share ranking *pari passu* with the existing ordinary shares as from June 1, 1926, at a price of 25s per share for every two of the present preference shares held by him. Fractions of debenture stock and shares will not be issued, but arrangements have been made whereby, if the scheme is approved, such fractions will be realised to advantage.

In order to give effect to the provisions of the scheme, and to make ample provision for the rapidly expanding business of the company, it is necessary to increase the nominal share capital by £600,000. The company will also create £500,000 6 per cent. debenture stock, of which £150,000 will be issued to the existing preference shareholders, leaving £350,000 for future issue. The share capital as rearranged will consist of £500,000 7 per cent. cumulative preference shares and £1,000,000 ordinary shares, and, when the scheme is carried out, the issued capital will be £200,000

preference shares and £600,000 ordinary shares. There will, therefore, be available, in addition to the £350,000 debenture stock, £300,000 7 per cent. cumulative preference shares, and £400,000 ordinary shares for future issue, as required by the normal developments of the business.

On the basis of the proposed capital and payment of the same rate of dividend, viz., 15 per cent. on the ordinary share capital thereof, the effect of the scheme will be that the dividend accruing to the preference shareholders from their converted and new holdings will be increased from 10 per cent. to about 10½ per cent. per annum. Moreover, the directors anticipate great expansion of business, which will be shared by the present preference shareholders through their holdings of ordinary shares. The directors have very carefully considered the scheme in order to satisfy themselves of its essential fairness and benefit to both classes of shareholders, and they unanimously recommend it for acceptance with every confidence.

The report and accounts were unanimously adopted.

BRITISH TRADE CORPORATION.
RESOLUTIONS UNANIMOUSLY APPROVED.

An extraordinary general meeting of the members of the British Trade Corporation, and also separate meetings of the holders of "A" and ordinary shares, were held, on the 8th instant, at the Institute of Chartered Accountants, London, to consider resolutions in connection with the proposed amalgamation with the Anglo-Austrian Bank, Limited, and the formation of a new company.

Lord Faringdon, C.H. (the governor), who presided, said that some of the large shareholders had for a considerable time been of the opinion that a strengthening and broadening of the basis upon which the corporation stood was essential. Experience had proved that it was essential for an undertaking aiming at the class of business which had become the major portion of their activities to have reserves, either hidden or disclosed, to meet contingencies, and one of the attractions of the present scheme was that those reserves were provided. The board also hoped that the scheme would bring much nearer the date when dividends might be available for the ordinary shareholders.

The Anglo-Austrian Bank, Limited, had a nominal capital of £2,000,000, of which £1,406,370 was issued and fully paid. Its surplus assets, after discharging liabilities, were taken at £610,000. The British Trade Corporation had a paid-up capital of £1,000,000, and its surplus assets were taken at £750,000. On the formation of the proposed new company £610,000 of its capital was to be given to the Anglo-Austrian Bank, which should leave a substantial surplus which would become a hidden reserve, and £750,000 was to be given to the British Trade Corporation, which would likewise provide an ample margin. Those transactions would not, however, put the new concern in possession of capital for the contemplated extended business, and friends of the bank had agreed to subscribe for £600,000 of new shares at £1 13s 4d per share, thus providing an additional £1,000,000, of which £600,000 would rank for dividend and £400,000 would go to the credit of a disclosed reserve account. Thus the new company would start with a nominal capital of £2,000,000, divided into 2,000,000 shares of £1 each.

As regarded the £750,000 given to the corporation, it was proposed that £450,000 should be distributed to the holders of the £500,000 "A" shares in the proportion of 18s in new shares for every £1 held. Shareholders who accepted the offer would be paid

dividend upon their "A" shares up to the 30th instant. Those who did not accept would be paid out their £1 per share, plus dividends up to September 30th. It was proposed to distribute the remaining £300,000 of shares among the existing 200,000 shareholders at the rate of three new £1 shares for every two £2 10s shares held.

The scheme was approved at all the meetings.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

ARRIVALS.		WITHDRAWALS.	
Sept. 4	£	Sept. 4	£
Bank	500,000	Sub. African Reserve	10,000
6—South Africa ..sovs.	400,000	6—Bars sold ..sovs.	6,000
7	nil	7	nil
8	nil	8—Spain, &c. ..sovs.	7,000
9	nil	9—Bars sold ..	10,000
10	nil	10—Bars sold ..	7,000
Total	400,000	Total	546,000
Net withdrawals, £146,000.			

Messrs Samuel Montagu and Co. write on September 8th as follows:—

GOLD.

About £286,000 bar gold was available in the open market this week, and of this the Continent secured about £190,000 and the trade £60,000. The balance was taken on account of India. During the week under review £133,000 on balance has been withdrawn from the Bank, decreasing the net influx since January 1, 1926, to £10,573,000, and increasing the net efflux since the resumption of an effective gold standard to £1,022,000.

SILVER.

During the week China has been the chief seller, as America has been reluctant to follow the falling prices. Bear covering and some Indian shipment orders absorbed the fairly plentiful supplies. The consignment from China, unusual in character and a record in size (valued by H.M. Customs at £917,000), to which we referred in our circular of July 21st last, has now arrived in London, and has considerably swollen the floating stock in this market. This fact explains the larger discount on cash silver, and may exert a depressing effect upon the market in the long run, although the silver has already been sold for forward delivery. The movements of the price of late would seem to show that the market, in spite of temporary resilience, has lost the power of remaining at the quotation level of the last few years. With a large body of speculative operations and with the chance of fresh speculative factors intervening one way or the other, a tranquil market can hardly be anticipated. Fluctuations, unexpected and sharp, up or down, are more like to occur. The ability of bears to maintain their position may be tested by attempts to corner deliveries, especially in India. American producers have lost their usual optimism—and rightly so—and they have begun to gauge the real condition of the silver market, and this must be reckoned as a factor. United Kingdom imports and exports of silver during the week ending the 1st inst. were:—

Imports.		Exports.	
	£		£
China	917,205	France	54,850
U.S.A.	66,280	Bombay	42,387

value of bullion, \$37,306.02; recovery per cubic yard, 54.066 cent; total cost per cubic yard, 11.905 cents. Estimated gross return for 31 days to August 31st, \$16,500 from 46,000 cubic yards. (Official note—Restricted output due to the breakage of the spud; expect repairs completed about September 7th.)

NORTH BRONX HILL, LIMITED.—For the month of August the production was as follows:—36,270 tons of crude ore were treated, producing 6,710 tons of lead concentrates, averaging 64 per cent. lead, 30.1 ozs silver per ton, and 8 per cent. zinc; also 6,320 tons zinc concentrates, averaging 47.3 per cent. zinc, 6.1 per cent. lead, and 6.9 ozs silver per ton.

ONVERWACHT PLATINUM.—The following cablegram has been received from Johannesburg: "Reduction plant milled 1,369 tons during month of August." **SAN FRANCISCO MINES OF MEXICO, LIMITED.**—Cable advice of operations for August:—Ore treated, 13,370 tons; residues treated, 9,780 tons; lead concentrates produced 1,837 tons; zinc concentrates produced 4,698 tons. Estimated net smelter return on lead concentrates, \$164,563 (U.S. currency), and on zinc concentrates, \$182,370; total, \$346,933. Operating expenses, \$105,723; estimated operating profit, \$241,210; capital expenditure, \$28,609.

WAIHI GOLD MINING CO.—Bullion return for the period ended August 28th, 16,994 tons of 2,000 lbs have been crushed, and 5,712 fine ounces of gold and 31,106 fine ounces of silver have been produced.

Reports and Notices.

The Coal Distributors' Information Department has removed its offices from 27 Southampton street, W.C. 2, to 8 and 9 Essex street, Strand (telephone, City 3489). The newly-formed Coal Distributors' Parliamentary Committee has its offices at the same address.

After September 13th the address of Messrs James Capel and Co. will be 10 Old Broad street, E.C. 2.

The registered offices of the South Kalgurli Consolidated, Limited, are now situated at No. 1 Broad street place, E.C. 2.

BANKS.

COMMERCIAL BANKING OF SYDNEY.—The profit for the year ended June 30, 1926, amounts to £485,069, against £480,261 for preceding year. The ordinary dividend is again 10 per cent. for the year. The sum of £170,000 is put to reserve fund, making total reserve £3,000,000. The carry-forward is £55,296, against £90,227 brought in. Balance-sheet shows total assets £47,099,230. Bills discounted are at £25,844,832. With regard to liabilities, deposits amount to £38,539,205. The paid-up capital of the bank is £3,500,000.

MISCELLANEOUS.

BRITISH GLUES AND CHEMICALS.—The balance on profit and loss account brought forward from last year's account amounted to £48,770. Preference dividend (less tax) paid September 29, 1925, absorbed £15,312, leaving £33,458. Deduct net loss for year ended May 31, 1926 (£22,919), after due allowance has been made for depreciation (£29,123) and bad and doubtful debts. This leaves £10,539. Deduct income-tax to May 31, 1926, £3,519, leaves carry-forward of £7,019. Balance-sheet shows cash at £1,894, against £20,907. Debtors stand at £150,922, against £124,273. Stocks are at £202,859, against £212,863. Turning to liabilities, there is a bank overdraft of £34,572, which was not on the preceding balance-sheet. Creditors stand at £69,990, against £61,512. Depreciation reserve account now stands at £189,767, against £160,643.

BRITISH-AMERICAN TOBACCO COMPANY, LIMITED.—At a board meeting of the directors of the company, held on Tuesday, the following resolution was duly passed:—"That the offer to the members on the register of ordinary shareholders on the 1st day of July, 1926, and the holders of share warrants to bearer for ordinary shares on the same date, of new shares in the proportion of one share for every five existing ordinary shares on that date, shall remain open until December 31, 1926, and that all acceptances from registered shareholders and applications from holders of share warrants to bearer, received by the company's bankers in London on or before September 28, 1926, will be accepted by the company, and shares allotted to rank for the full dividend payable on September 30th next." In connection with the above it is officially stated that the company are not now prepared to split offers.

CANADIAN COLLIERIES (DUNSMUIR), LIMITED.—Production and sales of coal for the quarter ended June 30, 1926:—Production, 146,020, increase as compared with corresponding period last year, 22,389 tons; commercial tons, 122,352, increase 16,315 tons; sales tons, 118,109, increase 14,448 tons. Aggregate from July 1, 1925, to June 30, 1926: Production, 508,454, increase 18,330. Commercial tons 427,704, increase 12,402; sales tons 410,653, increase 20,734.

CRITALL MANUFACTURING COMPANY.—The directors' report for the year ended May 31, 1926, states that the profits amounted to £114,085 (as compared with £70,162 for the previous year). Deducting interest on loans, governing directors' salary, directors' fees, &c., £11,508, and the half-yearly dividend on the 8 per cent. participating preference shares paid on November 30th last, £12,520, there remains, with the balance brought forward, £6,381, and the amount of the share premium account £25,000, a total of £31,381 available for distribution. This the directors recommend should be allocated as follows:—£20,000 in payment of the second half-yearly fixed dividend on the participating preference shares, the transference to general reserve of £25,000, to depreciation reserve account, £15,000; and £6,081 to writing off from preliminary

expenses; the payment of a dividend of 15 per cent. (as against 10 per cent. last year) on the ordinary share capital, absorbing £30,000; an additional 2 per cent., making 10 per cent. for the year, on the participating preference shares, and the carrying forward of the balance, £15,355.

MID-EUROPEAN CORPORATION.—The report for the financial year ended July 31, 1926, shows a gross revenue of £86,844. The net revenue is £78,845, which, with £3,360 brought forward, makes a total of £82,205 available. The ordinary shareholders receive a dividend of 6 per cent., absorbing £60,000. The sum of £10,000 goes to income-tax reserve account and £12,205 is carried forward.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions over the United Kingdom have been favourable for fieldwork, and farmers made good progress with harvesting and threshing. Supplies of native wheat were on a larger scale, and general run of prices steady, as quality shows improvement. Imported descriptions somewhat irregular, the tendency being rather more in buyers' favour, apart from North American grades, which were less freely offered. A slow demand continued for floating and forward cargoes, but holders were not pressing, owing to adverse Canadian weather reports and advancing rates for freight both from North and South America. Steamers of white Pacific afloat sold 50s, and November 50s 6d. Of feeders, steamers of La Plata maize afloat sold 30s to 30s 3d per 480 lbs, and South Russian barley September at 28s per 400 lbs, c.i.f. terms. Wheat generally steady. No. 1 Northern Manitoba quoted 59s 6d, No. 2 ditto 57s 6d, No. 2 hard winter 53s 3d, choice white Karachi 55s, Barusso 61 lbs 52s 6d, all ex-ship per 496 lbs. English new 10s 11d-11s 1d per 112 lbs. Flour dull. London standard grade 47s, town whites 48s, patents 49-50s per sack delivered in the Home Counties, with 6d-1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 45s-47s, Minneapolis 45s 6d-47s 6d, Australian 43s 6d-44s per 280 lbs ex-store. Maize quiet. Plate landed 32s, ditto ex-ship 30s 6d, Bessarabian ex-ship to arrive 32s 6d per 480 lbs. Barley: Malt neglected, but feeding sorts fully steady. Californian 35s-43s, Chilian Chevalier 50s-57s, ditto brewing 35s 6d-48s, Australian Chevalier 45s-47s ex-store. Smyrna 35s-48s ex-ship per 44s lbs. No. 3 Canadian Western ex-ship 30s, Persian ex-ship 28s 6d, Russian ex-ship 29s per 400 lbs. English new 8s 9d-15s per 112 lbs. Oats inactive. La Plata landed 23s, No. 2 Canadian Western ex-ship 26s 9d, landed 27s 6d, No. 2 Canadian feed ex-ship 23s, landed 24s 6d. Chilian Tawny ex-ship 22s 9d, American 38 lbs ex-ship 22s 9d, landed 24s 3d, mixed feed ex-ship 19s 6d, landed 20s 9d per 320 lbs. English new 8s 4d-9s 2d per 112 lbs. Millers' offals quiet. Broad bran quoted 6s 6d, middlings 7s 3d, fine ditto 9s, bags included, ex-mill, feed oatmeal 7s 9d, light oats 6s 9d, ground oats 12s per cwt, free on rail. Oatmeal in moderate demand. London-made flaked 16s 6d, rolled oats 15s 6d, medium, also fine cut, 15s 6d, coarse, also medium pinhead, 15s 6d ex-mill per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1926-27, 1925-26, 1924-25, 1923-24:—

	1926-1927	1925-1926	1924-1925	1923-1924
Estimated sales of home-grown wheat—1 week to September 4.....	Cwts. 288,467	Cwts. 265,759	Cwts. 90,144	Cwts. 322,002
Average price of English wheat per cwt.....	11 9	11 8	12 3	9 1

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1922 to 1925:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1926.

(a) October delivery. (b) September delivery.
Visible supplies of wheat in Canada, at 10,975,000 bushels, show a decrease of 1,582,000 bushels, as compared with the previous figures. Supplies a year ago stood at 5,528,000 bushels.

COAL.

Our Cardiff correspondent writes:—During the early part of the week business in foreign coals was on a very restricted scale, but later there was a considerable spurt in the chartering of tonnage for the shipment of American coals to the United Kingdom, and freight rates are from 15 6d to 25 per ton higher than a week ago. The cancelling dates of some of the vessels chartered this week extend to nearly the middle of October. The c.i.f. prices of foreign coals have ranged from about 41s for Westphalian unscreened to 45s for best American run-of-mine coals. A significant incident has been a meeting of colliery salesmen on the Cardiff Exchange to consider the question of the course of prices after work has been resumed, at which it was decided to revive the divisional committees which have existed at other periods since the war, in order to ascertain how far co-operative action was possible for the maintenance of prices.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—In spite of the improved outlook in the coal situation business in iron and steel remains quiet. Traders appear inclined to wait until the position as regards the strike becomes clearer, although the market has an active appearance owing to the numerous inquiries in circulation. This is believed to indicate that there is a considerable tonnage of new orders waiting to be placed as soon as industrial conditions become more settled. Most of the steel works already have a fair amount of work on their books for delivery after operations in the steel trade are resumed; but this, of course, will not be until at least a week or two after the strike is over. Buying by the chief export markets is still dull, and the higher prices quoted by Continental makers have undoubtedly checked buying from this direction.

Our Middlesbrough correspondent's report, dated September 9th, is as follows:—Pig-iron: Owing to the very limited quantity of Cleveland iron available, prices have tended to harden still further, and the general quotation for No. 3 G.M.B. is now 92s per ton, f.o.t. Hematite is also becoming increasingly scarce, and for mixed numbers 83s per ton is the average nominal quotation to-day. Until makers know the future price of fuel they are not disposed to commit themselves forward. Manufactured iron and steel: Two or three of the mills restarted to execute a few special orders are again idle, but there is still one mill in operation elsewhere. Some of the local foundries are still working. Quotations are nominal at last week's levels:—Steel ship plates, £8; steel ship angles, £7 10s; iron bars, £11 15s; steel rails, £8 10s. Iron ore: No business is being done, and best Rubio is quite nominal at 21s 6d per ton, c.i.f. Tees.

Our Sheffield correspondent writes:—As regards work in progress, the local position is better, but steel makers find it impossible to cover their heavy additional costs of fuel by raising selling prices. Makers of finished tools, who are paying more for materials as well as for fuel, are obtaining no increase whatever on their products. It is reported that the two Ballerlie blast furnaces in Nottinghamshire are starting next week, and have already booked orders for the delivery of foundry pig-iron next month. In Sheffield four large open-hearth furnaces are working, mainly

on steel for the manufacture of railway tyres, axles, &c. The mills rolling for hire are working at 75 per cent. capacity, the greater part of the orders being diverted from the mills at the heavy steel works. No rails are being rolled, nor will any considerable quantity be wanted by the British railway companies until the early spring, when track relaying begins. Large quantities of Westphalian coke are going to local ironfoundries and crucible steel makers. The cost to the small buyer is about 6s 6d delivered, compared with 4s 5d paid for Durham coke before the strike. More crucible steel is being melted to-day than at any time since May 1st. French basic pig has been offered at from 45s to 50s f.o.b. Antwerp and Belgian No. 3 foundry at 75s Antwerp. Some revival is reported in the demand for cutlery and plated goods, and makers of stainless steel for industrial purposes are busy.

Our Glasgow correspondent writes as follows:—There is no new aspect in the iron and steel position this week. Makers have very full order-books, and consumers who have been holding off are displaying more anxiety to place their requirements in order to secure preferential delivery when works are in a position to resume operations. For stock material available at the steel works from 20s to 30s per ton premium is charged. The feeling is general that the coal stoppage cannot now be prolonged, and some of the works are making active preparations preliminary to an early start. Re-rollers are well employed on limited capacity, and sheetmakers have more work on hand than they can deal with in view of the scarcity and inferior quality of the fuel obtainable. Galvanised corrugated sheets are now £17 10s per ton delivered locally, and delivery is difficult to procure. Pig-iron stocks are nearing exhaustion, and foundries are using large quantities of foreign make.

Our Cardiff correspondent writes:—In the iron and steel industry the general position is very little changed. The increase in the price of tin and in the price of imported steel bars has had a hardening effect on the prices of tinplates, which have been sold at 21s for next month's shipment, but it is stated that at this price manufacturers are suffering a substantial loss. Galvanised sheets are ruling at between £16 10s and £17, and local steel bars at £6 5s.

OTHER METALS.

TIN.—Very firm conditions prevailed in the standard market, and values registered a sharp upward turn in sympathy with higher Eastern advices. The favourable statistical position and active covering of both near and forward dates caused holders to adopt reserved measures, though later slight irregularity occurred, chiefly forward on some profit taking. Standard cash sold from £297 to £306 and £305 5s, and three months £292 10s-£297 5s-£296 10s. Sales in the East were reported at £298 5s to £303 10s.

COPPER.—The general tone was fully steady, and although dealings were on a lighter scale than of late, there was no pressure to sell, in view of lighter stocks and maintenance of prices in America. Dealings were chiefly confined to spot and near dates. Standard cash sold £59 2s 6d-£59 5s and £59, October £59 10s, three months £59 17s 6d-£59 18s 9d and £59 15s. The market for refined descriptions ruled steady but inactive.

LEAD.—Opened firmer but slightly irregular and easier on realisations. A fair business transpired, however, comprising good soft foreign pig, September, at £32 11s 3d-£32 12s 6d and £31 18s 9d, October £32 8s 9d-£32 10s-£31 16s 3d, November £32 7s 6d-£32, December £32 6s 3d to £31 11s 3d per ton.

SPELTER. met with less inquiry, but offerings were only of moderate extent and general tone steady. September sold £34 to £34 5s, November £34 7s 6d, December £34 5s-£34 10s-£34 7s 6d per ton.

ANTIMONY. quiet. English specials quoted £74 10s-£75. China crude August-September £39, regulus spot £64, September-October buyers £62 10s ton.

ALUMINIUM. quiet. Home trade £118 ton.

QUICKSILVER. steady. Spot £15 10s per bottle.

WOLFRAM maintained. Forward quoted 14s to 14s 6d per unit c.i.f.

TIN PLATES quiet. I.C. coke for delivery after the coal strike quoted 20s 3d to 21s 6d per standard box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, September 9, 1926.

The American spot demand has been extensive. The Egyptian figures have shown considerable activity, due to shorts covering on reports of damage to the Sakel crop. The week's settlement difference on Monday last was 150 points. The American Bureau figures issued yesterday indicated a yield of 15,166,000 bales, with a condition of 59.6. If developments during the remainder of the season are as unfavourable to the crop as in 1921, 1922, and 1923, a total production of about 14,104,000 bales may be expected, but if later developments are as favourable as in 1924 and 1925, the total production will be about 16,379,000 bales. Spot sales for the week 3rd to 9th instant (inclusive) were 41,000 bales. Of these 12,510 were American, 4,550 Brazil, 11,100 Peru, 6,100 Egypt, 5,350 African, 550 East Indian, and 840 sundries. Imports for the same period were 42,854 bales, of which 14,813 were American, 2,959 Brazil, 9,423 Peru, 12,004 Egypt, 661 African, 2,994 East Indian. Quotations to-day are: American middling 10.26d, Egyptian Sakel 18.05d, upper 14.05d, Brazil fair 10.16d, Peru G.F. mod.-rough 11.00d, smooth 11.16d, Tinnivelly 9.05d, West African mid. 9.86d, and East African G.F. 11.60d.

MANCHESTER, September 9, 1926.

As far as fresh business is concerned, the week has again been featureless. The majority of buyers have been quite content to hold aloof, and this attitude has been fully justified by the publication of a Bureau report. Spinners and manufacturers continue, however, to present a firm front to customers, spinners of American yarns adhering to the basic selling prices of the Master Spinners' Federation. Manufacturers have not booked any large orders, most offers being from 5 to 10 per cent. below Manchester rates. Demand for India has been fairly persistent, but no sales of weight have been mentioned. There is no improvement in the position regarding China, the present political situation giving rise to further anxiety. Only a moderate sprinkling of orders has been secured for the remaining smaller outlets. Production of cloth is still about 60 per cent. of full capacity. Business in Egyptian yarns has not been important, the stiff advance in prices during the last fortnight checking operations.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The active demand for raw material continues, though neither in wool nor in tops has the turnover this week been so large as a week ago. A very considerable weight of wool and matchings has been sold for export, particularly to Russia, and this has relieved the market, and made up for the reduced consumption in the mills since the beginning of the coal strike. Confidence in the wool position appears to be fairly general, especially as Continental

requirements are thought to be extensive. A big weight of wool is being offered for the September-October series, and good support will have to be forthcoming from the Continent if the bulk is to be lifted and prices maintained; but as London will be the only source of supply for anyone in need of quick delivery, it may well be that wool on the spot in Coleman street will sell at a premium. From the standpoint of traders in the West Riding, however, values are high enough already, and manufacturers are practically unanimous in declaring that it is impossible to pass on the full advance recently recorded in wool and tops. All quotations for tops are very firm, with a hardening tendency, and in sympathy yarns of all descriptions are quoted firm, though new business is by no means plentiful. Both spinners and manufacturers, however, are hoping that demand will expand when the coal deadlock is overcome, and in the meantime they mostly prefer to buy small weights for immediate requirements.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Cable news from Sydney respecting the course of the sales in that centre indicates that the market is still very firm. Private information from actual buyers states that wool is being picked up to bring in merino tops at prices harmonising with what the makers of the best tops in Bradford can sell at to-day. It is not revealing any secret to assert that last week the representative of one of the leading topmaking firms in Bradford picked up over 600 bales in three days to produce average 64's at under 4s, the topmaker admitting that he has been able to sell the lot forward at a profit. Of course, if super. 70's warp wools are required a different price has to be paid, and Japanese and Continental buyers are alone able to pay the high prices mentioned. Bradford buyers will have to get back to their own method of operating in good average merinos, for here there appears to be some prospect of making a profit. The basis of values at the last London sales was nearly as high as Sydney to-day, and any further advance in Coleman street next Tuesday will place values there slightly in front of those ruling in Sydney.

The quantity available for the forthcoming London sales is 108,000 bales. The announcement of such a large quantity has caused a good deal of surprise both in London and Yorkshire, and it is probably correct to say that it has been sensibly augmented by the big weight of second-hand wools which have arrived for inclusion in the catalogues. It is understood that 170,000 bales was the quantity generally expected, but many feel that the heavier arrivals should help to check any undue tendency towards an extravagant rise. Various views are expressed regarding what basis may be established next Tuesday. Selling brokers should be well satisfied with a rise of 5 per cent. in merinos, 7½ per cent. in fine crossbreds, and a good 10 per cent. in medium and coarse crossbreds. These advances are as much as the trade can stand, and nobody wants to see a big spurt at the beginning followed by a slack finish. There should be a consolidation of the best factors in the trade, particularly at the consuming end, rather than any attempt to push raw material values higher. This is said fully recognising that such an eventuality would help importers to get out with their second-hand parcels. For the general and ultimate good of the trade, however, it will be best for values to remain steady around their present level. Wool is quite dear enough to-day to enable orders for yarns and piece-goods to be obtained on any extensive scale, and a development on these lines is most urgently needed.

HIDE, LEATHER, AND ALLIED TRADES.

Domestic hides were steady at the Bermondsey auctions this week, the only alterations being a reduction of ¼d per lb on 90 lbs and a similar advance on 80-89 lbs. All kips and calf-skins sold at last week's prices, while pelts made from 5s 4d to 9s and lambs from 2s 3d to 9s 9d per skin. The market for foreign hides has again showed strength. In frigorifics Argentine ox have sold at 7½d, with cows making 7½d. The Continent has been the principal buyer, but a considerable amount of business has been transacted for the home trade. Latest cable advices from the States show the market as strong, with Chicago packers making 15½ cents. Small parcels for immediate delivery have constituted the main portion of the business done in sole leather this week. September is always considered an "off" month, but this year there seems to be rather more activity. In bends the inquiry for heavier weights suitable for the repairing trade has been better, while cheap light weights have gone out in fair quantities on manufacturing account. Prices all round are firm. The upper leather section also reports a more healthy tone, particularly in regard to the demand for black glacé kid. There is a satisfactory call for willow calf and sides, also for box calf and patent. Shoe manufacturers report conditions as unchanged, and are marking time to see what result the exhibition of Russian boots will have on the probable demand for this class of footwear.

VEGETABLE OILS AND OILSEEDS.

Markets have continued very dull and uninteresting all round. Linseed oil, in sympathy with cheaper seed and in consequence of the poor demand from consumers, has further declined to £32 per ton naked ex Hull mill for prompt delivery, small premiums being asked for the later position. Cotton oils are neglected and lower, crude Egyptian offering freely at £35, and ordinary refined at £37 10s., without attracting trade. Other vegetable oils are also very quiet, and prices somewhat easier. In the oilseed section linseed has been easy on lower Argentine options, and demand from crushers has been on decidedly modest lines. Current value of Plate is about £15 10s on spot and September-October shipment, £15 12s 6d being quoted for October-December. New Argentine linseed is offering at the latter figure for January-February shipment, but little or no actual business appears to be in progress. The balance of the old Egyptian cottonseed is offering at £9 12s 6d to £9 15s, but there is little demand to test the market. The new crop offers at £10 for September, and 2s 6d below that figure for October loading.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Market firm, while assisted by sustained consumptive demands and increased stability in American centres. Further business has taken place in Cuban 96 per cent. on Chinese account at higher prices. British refined advanced 3d per cwt all round, and quantities on offer were well absorbed. Crystallised West India in limited supply, and quoted 26s 9d to 27s 9d as to quality. Imported descriptions reservedly offered. Czecho and Dutch J granulated, spot, 27s 1½d paid. Czecho, September, sellers, 15s to 15s 3½d; November-December, 14s 10½d, f.o.b., Hamburg. Dutch J, September, sold, 14s 11½d, f.o.b., Rotterdam. Belgian crystals, prompt, quoted 14s 8½d, f.o.b., Antwerp. White Mauritius, September-October, 17s 6d, c.f. and i., London. Cuban 96 per cent., September, sellers, 12s 6d, c.f. and i., U.K. White terminal fairly active and firmer. September sold, 13s 8½d to 13s 10½d; October, 13s 11½d to 14s 1½d; November, 14s 1½d to 14s 2½d; December, 14s 4½d to 14s 6½d; March, 14s 11½d; May, 15s 3d; August, 15s 7½d cwt.

COFFEE.—The market on spot is steady, but general trade quiet. Only a narrow selection remains on offer. In auction, Kenya smalls, sold, 110s to 116s 6d; bold sizes, 138s to 144s; peas, 131s. Uganda, bold, 114s to 125s 6d; peas, 129s to 130s 6d. Costa Rica, fine bold colory, 174s. Colombian, fine bold, up to 155s 6d. Future delivery market quiet and featureless.

COCOA.—Only limited transactions on the spot at late rates. Accra, F/F grade, November-January, sold, 42s, 41s 6d, and 42s, f.o.b.

TEA.—Indian auctions this week amounted to 29,880 packages. Brisk competition prevailed for all tippy Assams and good rich liquoring broken Doars, and some high prices were secured. Clean common teas firm to ¼d per lb dearer, and wanted. Consignments from Neilgherry and Travancore were accorded fair support at steady quotations. Pekoe, sold, 1s 3d to 2s 2d; orange, 1s 4½d to 1s 11½d; fine and finest, 2s 2d to 3s 6d; broken orange, 1s 4½d to 2s 9d, and choice parcels at 4s 4d. Ceylon sales of 26,310 packages evidenced a generally quieter demand, export buyers being more reserved. In the case of quality being maintained, steady rates were realised, but otherwise buyers were favoured regarding any change in prices to the extent of ¼d to 1d per lb in the case of common and medium teas. Pekoe sold, 1s 3d to 1s 11½d; orange, 1s 6½d to 2s 3d; broken orange, 1s 5½d to 2s 6d per lb, in bond. New season's selling quietly. Fine Keemun sold, 2s to 2s 2d; Ching-Wo's, 1s 8½d; Panyongs, 1s 1d to 1s 1½d. Common Monings inquired for at 7d per lb. 6,960 packages Java and Sumatra were catalogued in auction, and evidenced a very quiet market. Prices disclosed a good deal of irregularity, and most descriptions were ¼d to 1½d, and in some instances 2d, per lb lower. Pekoe sold, 1s 2½d to 1s 3½d; broken ditto, 10½d to 1s 6½d; pekoe souchong, 1s 1½d to 1s 2½d; orange pekoe, 1s 3½d to 1s 5½d; broken orange, 1s 2½d to 1s 8½d per lb, in bond.

RICE.—Quotations are mostly nominal, demand showing no signs of revival. Bran steady, with a moderate inquiry. Beans unaltered. Japanese peas firm. September-October, sellers, 26s; October-November, 25s 6d cwt, c.f. and i., London.

SPICE.—Pepper firm. Black Singapore, f.a.q., August-September, 8½d; September-October, sellers, 8d. Lampong, August-October and October-December, sold, 7½d; Muntok, spot, done, 1s 3d; and buyers, August-October, 1s 1½d to 1s 1½d; October-December, 1s 1½d ½b. Cloves nominal. Tapioca steady, and Singapore flake, September-November, to Havre, sellers, 16s 9d. Sago flour, November-December, value, 15s 3d. Desiccated cocoanut, spot, halves, 41s 6d; August-September, 39s 3d cwt, c.f. and i. terms.

FRUIT (Dried).—Currants in quiet demand, but late rates were maintained. Amalia, quoted 30s to 31s; Pyrgos, 29s to 30s; Patras, 31s to 33s; Gulf, 32s to 35s; Vostizza, 40s to 53s; Australian, 38s to 48s. Sultanias in fair demand. New crop, Smyrnas, are offering, and while quality is satisfactory, much of the fruit is of small size. Natural colour ruled from 63s to 66s, and bleached, 73s to 74s. Australian sold fairly well at 64s to 78s, as to quality. South African quoted 63s to 65s. Raisins quiet, apart from some business in Capes, f.a.q. selling at 36s; and g.a.q., 40s to 42s. Lexias, new crop, quoted 40s to 45s. Dates firmer forward owing to adverse crop reports. Hallowee, first tide, quoted, 31s 6d; Khadowie, 22s, and siar, 19s 6d. Evaporated fruits firm, and Oregon plums in demand. Apricots held for full rates, and Californian, extra choice, quoted 125s; fancy, 132s 6d; South African new Royals, first grade, 140s. Plums, Californian, 30/40's, 69s; 40/50's, 56s; 60/70's, 46s; 70/80's, 43s; 80/90's, 38s 6d; Oregon, 30/40's, 60s; 35/45's, 53s 6d. Pears, Californian, extra choice, 67s 6d; fancy, 77s 6d; Lake County, fancy,

85s. Apple rings, Californian, extra choice, 50s to 60s; September-October shipment, 45s 9d; Canadian, spot, 47s per cwt.

CANNED GOODS.

CANNED FISH.—Sardines quietly steady, and the assortment on offer is not particularly attractive. Portuguese, ½'s, quoted 4s 3d to 6s per dozen tins. Salmon: Alaska talls tend easier, with limited inquiries, but pink steady. Bockeye firm, owing to the reduced pack this season. Red, tall, 1 lb, quoted 50s to 54s; tall pink, 25s to 27s; Lobsters move off quietly, and best ½'s, quoted 157s 6d to 160s, and ½'s, 90s. Japanese crab and crayfish sell steadily.

CANNED FRUITS.—There is only a moderate trade passing, but prices disclosed slight irregularity. Californian Bartlett pears, 24-2½'s, choice, quoted 12s 6d to 13s 6d; seconds, 10s to 10s 6d. Californian peaches, choice, 11s to 13s; standard, 10s 6d to 11s 6d; seconds, 9s 6d. Californian apricots, choice, 12s 6d to 13s; standard, 10s to 11s; seconds, 9s 3d per dozen tins. Singapore pines quiet. Italian tomatoes move off slowly on about former terms.

CANNED MEAT in slow demand. Corned beef, 6's, quoted 38s to 45s, as to quality. Danish lunch tongues sell steadily at 122s 6d to 135s. American, 140s, with best 145s to 150s. Ox tongues maintained. Cooked boneless hams in good request, and Danish quoted 1s 8½d per lb, for cases of six tins.

CONDENSED MILK remained unaltered, with no improvement in demand for skimmed. Machine-skimmed ranges from 10s to 11s 6d. Full cream, 20s to 25s. Full-cream evaporated in request at late rates.

HONEY quiet, but New Zealand steady at 50s to 85s; Australian, 40s to 50s; Jamaica, 37s 6d to 50s; Haiti, 37s 6d to 48s; Cuban, 37s 6d to 48s per cwt.

RUBBER.

Quiet and featureless. Plantation standard sheet, spot, and September, sold, 1s 7½d; October-December, 1s 8½d; January-March, 1s 8½d, and April-June, buyers, 1s 9d per lb.

GAMBIER.—Market quiet. Block, September-October, 26s 6d per cwt, c.f. and i., London.

GENERAL.

JUTE.—The general tone proved quiet, though at certain periods good absorption took place at the lower rates established under marked pressure to sell. It is interesting to note that American houses now operate in the London market, this feature occurring about a month ago. Firsts, August-September, sold, £32 to £30 15s and £31 15s; September-October, £31 to £29 10s and £30 15s; October-November and November-December, £30 5s, £30 15s, £29 5s, and £29 17s 6d. Hessians and twills quiet and easier. 10 oz, spot, sold, 29s 4½d; 8 oz ditto, 25s 9d, and B twills, spot, 81s 9d.

REMP.—A quiet and easier tone prevailed for Manila. J new grade, September-November, sellers, £45; K, £36; L, £36 10s; ditto 2, £35; M, £33 10s; 2, £31. New Zealand nominal. African sisal, No. 1, f.a.q., September-November, £43.

LEAGUE OF NATIONS

IMPORTANT NEW ECONOMIC AND FINANCIAL PUBLICATION

Memorandum on Currency and Central Banks.

1913-1925

Volume 1. 4/- net. Volume 2. 8/- net.

These two volumes are especially interesting and important because the year 1925 was an eventful period in the currency history of the world, for it witnessed the restoration of the gold standard or its equivalent in the United Kingdom, and as an automatic result of this, in Hungary and Danzig, whose currencies have been stabilised on the pound, in the Netherlands, in Australia and South Africa. It witnessed, moreover, the foundation of a number of new central banks of issue and the accomplishment of important currency reforms both in the New World and in the Old.

These volumes not only explain the new banking and currency reforms in Volume 1, but in Volume 2 is contained currency and banking statistics and summaries of the Balance Sheets of Central Banks in the various countries of Europe, in Asia, Australasia, Africa and America.

payments mentioned. Meanwhile, the discount market has preserved a waiting attitude, with rates maintained by the obscurity of the outlook concerning the course of events this autumn, and in spite of the continued buying of bills on Cointinental account. The rate for fine three months' bills has not been allowed to go below $4\frac{1}{2}$ per cent. In view, however, of the favourable maturity date of the Treasury bills offered on Friday for payment next week, the allotment was made upon terms which were just a fraction more favourable to the Government than for the previous week, the applications at £98 16s 8d only receiving 25 per cent., whereas in the previous week tenders at that price were allotted in full, but no offers at lower prices were accepted.

	Sept. 17, 1926.	Sept. 10, 1926.	Sept. 3, 1926.	Aug. 27, 1926.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	$\frac{1}{4}$ (Dec. 3, '25)
Banks' Deposit Rate	3%	3%	3%	3%	$\frac{1}{2}$ (Dec. 3, '25)
Discount, Call	3%	3%	3%	3%	$\frac{1}{2}$ (Dec. 3, '25)
Houses (Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$\frac{1}{2}$ (Dec. 3, '25)
Market rate (3 months' bills) ..	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	..

The Bank return showed an increase of £457,000 in coin and bullion, and a decline of £848,600 in circulation. Reserve was £1,305,600 higher. Public Deposits rose by £1,237,400, and Other declined by £742,700. Government securities rose by £1,037,300, and Other declined by £1,839,600. The proportion of reserve to liabilities rose by 1 per cent. to $30\frac{1}{2}$ per cent. Currency notes were reduced by £1,077,500 to £289,572,300, which includes £1,295,600 for notes called in but not yet cancelled. The fiduciary issue is £232,026,700, or £15,875,800 below the maximum for 1926.

The Norwegian Bank rate was reduced from $5\frac{1}{2}$ per cent. to 5 per cent. on September 13th. It had stood at $5\frac{1}{2}$ per cent. since April 19, 1926.

NEW YORK MARKETS.

Our New York correspondent cables:—Uncertainties about the credit situation and apprehensions of an increase in the Federal Reserve Bank's rate caused irregularity in the share markets, which for some time showed slackening of buying and a substitution of speculation for investment. The income-tax date, with financial operations totalling a thousand million dollars, passed with little change in money rates, on account of the influence of the Reserve Banks and the plentiful supply of credit which is still available. As business assumes its autumn growth a hardening of money rates, but no real tightness, is anticipated in banking circles. A rise in the discount rate may come later, if speculation increases. The Reserve Bank statements reflect income-tax operations. Deposits rose sharply, and the reserve ratio fell to 74.8 for New York and 71.6 for the whole system. A jump in Treasury certificate holdings represents Government borrowing pending the collection of tax cheques, while discounts fell sharply as member banks used increased Government deposits to pay off indebtedness at the Reserve Banks.

THE STOCK MARKETS.

The only real activity in the Stock Exchange this week has been seen in the mining sections, where, on a further rise in the price of the metal, a very big turnover again took place in tin shares. Elsewhere, in various sections the cloud of the continued coal deadlock and of the crisis in China has had repressive effect. British Government stocks were dull on monetary fears aroused by the unsatisfactory movement in the trade balance revealed in the August returns. In the foreign market there was little business, but Chinese bonds rallied after a fall. Home rails were depressed, but Canadian Railways were firm, and Buenos Ayres Great Southern spurred on the dividend declaration. Rubber shares are mainly unchanged, and oil shares tolerably steady, apart from the slump in British Controlled, which is discussed elsewhere. Industrials generally were rather lifeless, but there was some buying of shipping shares. Bank shares went a little better, and the insurance section was very firm, with Commercial

Union a good feature. New issue results reveal a keen appetite on the part of the investor. The issue of 1,200,000 6 per cent. cumulative preferred shares by Lewis's, Limited, was fully subscribed, while it is announced that heavy oversubscription was accorded to the offer of 1,000,000 6 per cent. preference shares and 100,000 ordinary shares in the Gordon Selfridge Trust, Limited, a similar fate being enjoyed by Manbré Sugar and Malt, Limited, issue of 400,000 7 per cent. cumulative preference shares, 387,692 ordinary shares and 58,334 deferred shares.

THE COMMODITY MARKETS.

Seasonal conditions have made for a larger volume of business this week, but the absence of a coal settlement continues to cast a shadow over trade as a whole. Chartering of tonnage to load foreign coal has been more active, with dates extending into November, and at firmer prices. Large orders continue to be received for post-strike delivery in the iron, steel, and allied trades, but only in the more finished branches can definite dates be given. Raw cotton has declined on better weather advices and the beginning of the new crop movement, while unsettlement in China has been an adverse factor in the cloth markets. The London wool auctions, on the other hand, resulted in a 5-10 per cent. increase of prices, buying orders, however, coming chiefly from France and Germany, rather than the West Riding. Wheat has ruled firm this week on a steady home demand. Sugar is steady at recent prices, coffee in moderate but satisfactory demand, and tea has fully maintained recent levels. Among non-ferrous metals, tin has continued its upward course, but copper is slightly less active. Lead remains firm, with dealings on a fairly liberal scale.

FOREIGN EXCHANGES.

Extreme quietness has prevailed in the Foreign Exchange market during the week with transactions more restricted, and fluctuations restrained within narrower limits than for some time past. New York has remained fairly steady, a rise over the week-end from 4.85 $\frac{1}{2}$ on Friday to 4.85 $\frac{3}{8}$ on Monday being followed by a slight decline to 4.85 $\frac{1}{4}$ by Wednesday. A recovery to 4.85 $\frac{1}{2}$ on Thursday gave place to an opening quotation of 4.85 15-32 yesterday morning. This steadiness is satisfactory, in view of the influence of adverse seasonal factors. It would seem that any appearance of weakness in the rate is at present the signal for buying of sterling in New York. Forward rates show little change at $\frac{1}{4}$ cent. per month below spot. In Paris francs the relapse which set in towards the close of last week continued on Saturday when the rate fell to 167 $\frac{3}{4}$ as compared with 169 $\frac{1}{2}$ on the previous day. On Monday, however, the opposite tendency became apparent, and the rate rose to 169 $\frac{1}{2}$ on that day, and to 169 $\frac{3}{4}$ on Tuesday. A reaction to 169 $\frac{1}{2}$ on Wednesday was followed by a further rise to 171 $\frac{1}{2}$ on Thursday, and to 172 $\frac{1}{2}$ yesterday morning. It remains to be seen how long the authorities will be able to maintain the rate at its present levels against the autumn demand for foreign currencies. Forward rates are slightly narrower at 9 $\frac{1}{2}$ above spot for three months. Brussels followed a similar movement. After falling from 177 $\frac{1}{2}$ on the 10th to 176 $\frac{1}{2}$ on Saturday, it rose to 177 $\frac{1}{2}$ on Monday. A decline to 176 $\frac{1}{2}$ by Wednesday was followed by a further advance to an opening rate of 177 $\frac{1}{2}$ yesterday. The last two movements are probably to be attributed to a premature report that the Government contemplated an early stabilisation, which was contradicted on Thursday evening. Forward rates have narrowed from 2 $\frac{1}{2}$ to 1 $\frac{1}{2}$ per month above spot. Italy was steady at a rate slightly below 135 until Wednesday, when a recovery to 132 $\frac{1}{2}$ took place. This was followed by a reaction to 134 $\frac{1}{2}$ on Thursday, with yesterday's opening quotation at 133 $\frac{1}{2}$. Madrid has risen from 31.70 to 31.97. Of the gold exchanges Amsterdam, after touching 12.10 $\frac{1}{2}$, stands once more at 12.11 $\frac{1}{2}$, but Switzerland has moved against us from 25.13 to 25.11 $\frac{1}{2}$. Berlin has also fallen from 20.38 $\frac{1}{2}$ to 20.38. In Scandinavia, Stockholm fell from 18.16 to 18.15, but Helsingfors is steady at 192 $\frac{3}{4}$. Oslo has moved from 22.15 $\frac{1}{2}$ to 22.15, and Copenhagen from 18.28 $\frac{1}{2}$ to 18.27 $\frac{1}{2}$. In Eastern Europe, Vienna, Prague and Budapest are unchanged, but Warsaw has improved

from 44 to 42 $\frac{1}{2}$. Of the Balkan States, Bucharest has fallen from 975 to 935, but Athens, after falling from 425 to 407, reacted again to 420. Constantinople has depreciated from 905 to 940. In the Far East the rupee has cheapened from 1s 6d to 1s 5 61-64d, but the yen has improved further from 1s 11d 27-32d to 1s 11 63-64d. In the silver market a better tendency early in the week was reversed later, owing to Chinese and American selling. Singapore is steady at 2s 3 $\frac{1}{4}$ d, but Shanghai weakened from 2s 9 $\frac{3}{4}$ d to 2s 9 $\frac{1}{2}$ d. In South America, Rio has improved from 7 15-32d to 7 17-32d, while Buenos Aires is steady at 45 $\frac{1}{2}$ d. Monte Video is 1d cheaper at 49 $\frac{1}{2}$ d. Valparaíso is slightly weaker at 39.30 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 11th:—

(000's omitted.)		
EXPENDITURE.	RECEIPTS.	
Supply Services	From Revenue	£ 9,823
Interest, &c., on Debt		
Sinking Fund		
Sundries		
Increase in Balances		
Decrease in debt		
	9,823	9,823

The Revenue for the week amounted to £9,822,800, as compared with £10,889,100 in the corresponding week last year. Customs and Excise were lower at £2,097,000 and £1,078,000, against £2,444,000 and £1,113,000 respectively. Property and Income-tax brought in £3,176,000 as compared with £3,560,000, while Super-tax amounted to £410,000, as compared with £390,000. Ordinary receipts were lower at £177,400, against £426,700, ad Special receipts at £4,400, against £200,000. The week's operations reduced the National Debt by £2,278,000, and caused the following changes:—

(000's omitted.)			
£		£	
National Savings Certificates..	150	Treasury Bills	+ 172
Public Department Advances ..	1,400		
Sundries	900		
	2,450		+ 172

The floating debt was reduced by £1,220,000 to £769,401,000.

FINANCIAL YEAR, 1926-1927 (April 1 to September 11, 1926.)

£		£	
Total Expenditure ..	355,302,170	Raised by Revenue ..	287,567,171
		Decrease in Balances ..	4,080,169
		Amount borrowed ..	63,654,830
Total	355,302,170	Total	355,302,170

ESTIMATES for FINANCIAL YEAR 1926-7.

£		£	
Expenditure	825,727,000	Revenue	824,750,000
Deficit	£977,000		

† Revised in Exchequer Return dated July 26, 1926.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the meetings of the following companies:—Bank of New Zealand, Nobel Industries, and V.O.C. Holdings Company. The chairman of the Bank of New Zealand gave a review of general conditions in the Dominion, to which reference is made in a Note of the Week. The V.O.C. chairman foreshadowed a fresh issue of capital.

ECONOMIST DANUBIAN SUPPLEMENT.

We publish this week a special Supplement, summarising some of the principal data relating to the economic life of the six Danubian countries of Austria, Czechoslovakia, Hungary, Roumania, Bulgaria, and Yugoslavia. The Supplement outlines the progress of economic reconstruction in a part of Europe which was particularly affected by the war and the Treaty settlement.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

CANADA AND THE EMPIRE.

MR MACKENZIE KING has confounded the prophets who foretold stalemate in the Canadian elections, still more those who thought that the desire of the electorate to solve a deadlock would lead them to vote for the Conservative Party as the one most likely to produce a stable majority, for after an election campaign which was energetically and bitterly fought, and which resulted in heavy polling, the dead point in which the movement of Canadian politics had latterly been suspended has now been surmounted by a decisive Liberal victory. Mr Mackenzie King and his party have secured 119 seats (as against 101 in the last Parliament), while the Conservatives have dropped from 117 to 91. It is true that the Progressive groups, in which the farmers of the Prairie Provinces form the principal element, still hold the balance with an aggregate of 30 seats (as against 24 before), but 11 of these are held by "fusionists," who have been elected with official Liberal support, and are to be regarded as definite supporters of a Liberal Government. This group gives Mr King an assured majority. Even the rest of the Progressive vote may normally be expected to support Mr King, for the Conservative defeat is largely due to the understanding between Mr King and the Progressives, the result of which was to avoid three-cornered contests. In all circles, whether Liberal or Conservative, there is general relief that what threatened to be a period of political impotence and uncertainty has been avoided, and that Canada knows where she stands and can devote herself once more to developing her great inheritance with some assurance of continuity of policy on vital matters such as railways and tariffs. The analysis of results cannot fail, however, to remind us of the greatest internal problem of the Dominion of Canada, namely, the extreme divergence of economic interest between the different divisions of the country—the result of which is that parties tend to represent not so much a dominion-wide division of opinion on political principles, but the interests of the different sections of the country. The figures to hand show the following allocation of seats to parties—the Progressives (shown separately in brackets) being included with the Liberals and the three Labour, two Independent members being omitted:—

	Conservatives.	Liberals and Progressives.
Maritime Provinces	20	9
Quebec	4	60
Ontario	53	29 (4)
Prairie Provinces	1	50 (26)
British Columbia and Yukon ..	13	1

Since the pre-war days of Liberal ascendancy, the Conservatives have captured the Maritime provinces, lost them in 1921, but regained them in 1925. But as a counterweight the Liberals have recently—and particularly in the present election—made headway in Ontario. But the other three sections of the country are single party areas—two Liberal and one Conservative—and vote largely according to their economic interest. Indeed, the clash between the Free Trade prairies and Protectionist Ontario is perhaps the chief source of weakness to the unity of the Dominion. So far as relations with Great Britain and the Empire are concerned, there is no such sharp line of cleavage; but it is fortunate that the Protectionist area is one which is perhaps the most devoted to the imperial connection. If anywhere in the dominions high Protectionist sentiment, and a lukewarm attitude towards the Mother Country became associated we should be faced with a new and critical situation.

Mr King had against him the discredit of the Customs scandal, while the constitutional crisis on which he originally proposed to fight the election fell somewhat flat owing to the personal popularity of Lord Byng, and the conviction that he acted in what he thought were Canada's best interests. We shall, therefore, probably not be far wrong in attributing the result to the strength of the opposition to the protectionist plans of the Conservative Party, the popularity of Mr Robb's Budget—which reduced taxation and promised still further reduction—and the working alliance in the constituencies with the Progressive Party. The outstanding fact of economic

interest is that, for the next few years at all events, Canada is not to move further in a protectionist direction.

The election, however, is of very much more than purely Canadian interest. For the imminence of the Imperial Conference and the developments at Geneva have brought to the fore problems which may be affected by the internal politics of Canada. It is rumoured that Mr King will not attend the Imperial Conference owing to preoccupations in connection with the formation of his Government, which also involve a number of important by-elections. It would be very unfortunate if Mr King is unable to be present, and it might be worth while to postpone the Conference to make this possible, for there are urgent matters to be dealt with, one of them being the attitude of the Dominions towards the Locarno Treaties, which have this week been ratified in Geneva. The Dominions are not yet parties to these treaties; but, as it is pointed out in a very able article in the "Round Table" on "the Imperial Complex," it is very hard for the Dominions to disinterest themselves from British foreign commitments since in the last resource it is almost impossible to contemplate Great Britain being at war without involving the Dominions. International law does not offer any means whereby of persons with a common citizenship some may be at war and some at peace. At the same time, the disinclination of Canada to be bound by the foreign policy of Downing Street is very real, and is shown on the one hand by Mr. King's support of the separate treaty-making rights of the Dominions and on the other by Mr. Meighen's curious and impracticable proposal that in the event of Great Britain being involved in war, Canada should not join in until after a General Election had been held on the subject. As the writer in the "Round Table" points out, "the difficulty of the present-day situation is largely due to the fact that the assumption which has governed the conduct of foreign affairs since the appearance of the Imperial War Cabinet in 1917—namely, that it was possible for the six self-governing nations of the Empire to consult together sufficiently continuously and sufficiently effectively to formulate a common policy for dealing with foreign affairs, and to make themselves jointly responsible for such a common policy—has broken down. The system worked triumphantly at the Washington Conference, on the Pacific and naval disarmament. It began to weaken at Chanak. It was badly strained at Lausanne. It was only maintained by a fiction during the London Conference on Reparations. It disappeared altogether at Locarno. The theory of joint responsibility for a joint diplomacy having thus gradually failed, no clear-cut and easily understandable alternative has been accepted and put in its place. The *malaise* of the last year or so in inter-Imperial relations, the deadlock in devising any intelligible or effective system of inter-Imperial communications, is due not to any real difference about the foreign policy to be pursued, but mainly to the fact that nobody quite knows where they are. It is one of the first tasks of the Imperial Conference to remove the uncertainty, and define a new basis for the conduct of the foreign policy of the Empire, which will conform to the facts and make harmonious and confident relations between its parts once more possible."

But in the meantime the position of the Dominions has been raised upon an even wider stage. At the election of nine non-permanent members of the Council of the League at Geneva this week, the Irish Free State put forward her candidature for the express purpose of indicating the claim of the Dominions to stand for membership of the Council of the League independently of Great Britain; Canada supported her in this view that the permanent British delegate could not be regarded as affording complete representation of the Dominions, or as rendering superfluous their presence on the Council as individual members of the League; and the fact that at the first ballot the Irish Free State secured ten votes, and Canada two, is proof that there is substantial support in the Assembly of the League for this view. Mr King is needed in London next month to help to thrash out some of these difficult questions.

THE HEALTH OF THE NATION.

In the busy day-to-day life of the community, the unobtrusive and beneficent activities of the public health service pass for the most part unnoticed. The Annual Report of the Chief Medical Officer of the Ministry of Health reminds us of the far-reaching services which our public health system is rendering to the nation. This annual stock-taking enables us to appreciate both the progress which has been made in eradicating disease and establishing higher standards of health and the tasks which still remain uncompleted. Unfortunately, it is not possible to produce a profit and loss account in terms of pounds, shillings and pence, for could health and disease be expressed in money, such an account would convince the most parsimonious taxpayer and ratepayer that the public health service has been one of the most productive of investments, and that the material loss due to continued preventable disease and disability is the mildest form of public extravagance.

During the past half century the birth rate per 1,000 of the population in England and Wales has fallen to one half of what it was, and the actual number of births per year by nearly 150,000. The infant death rate, which in the 'seventies averaged 149 per 1,000 births, has fallen to one half, the rate in 1925 being 75 per 1,000. Whilst during the last 50 years the population has increased by 60 per cent., the average annual number of deaths at all ages has fallen from an annual average of 517,831 in the 'seventies to 472,841 last year, and the death rate per 1,000 from 21.4 to 12.2. It is probable that the mortality rate may in future rise somewhat, as a declining birth rate implies an increase in the average age of population. These figures indicate an enormous saving of human life due to a variety of causes, including the rise of the public health services.

In his annual Report on the State of the Public Health for 1925, Sir George Newman, summarises the changes which have taken place since the Public Health Act of 1875:—

There has been a remarkable reduction in, and in some cases a disappearance of, devastating epidemics such as cholera and typhoid fever, which disturbed the whole nation; similarly a fall in fatality has occurred in scarlet fever, diphtheria, whooping cough, tuberculosis, small-pox, and bronchitis, and thus certain types of disease have become milder; a prolongation of the length of days has taken place, and, therefore, increased opportunity; there has been an immense advance in general education, and knowledge is power; infancy and childhood are unquestionably healthier to-day than 50 years ago, and twice the number of children survive to grow up; the treatment of disease is certainly both more expeditious and more effective, and hence gross invalidity is lessened in suffering and shortened in time; insurance has developed by leaps and bounds, and now comprises the sick, the unemployed, the injured, the aged, the widow and orphan, and thus the anxieties which interfere with capacity and labour are greatly reduced; the facilities for saving and thrift have been extended, wages have risen, and purchasing power (though in smaller degree) has extended, and this fact, in conjunction with insurance, has placed the people as a whole in a more favourable position to practise a way of life conducive to health, and become in larger degree masters of their own fate; lastly, there has been improvement in the social and personal habits of the people in regard to health which has, directly or indirectly, enhanced their potential power, e.g., personal cleanliness, living more in the sunlight and fresh air, increased sobriety, and improved nutrition. All these changes cannot do other than enlarge the capacity of the individual enjoying their advantages.

Marked as the progress of the past half century has been, there is still ground for criticism regarding the present state of the public health. One out of every nine deaths is of an infant under one year old, and one out of every six of children under five. Of all the deaths in 1925 two out of every five were of people under 50 years of age. Not one out of every three persons reach three score years and ten. In 1925 the approved societies administering the national health insurance scheme paid out £6,133,000 in sickness benefit and £2,833,000 in disablement benefit to men and £3,120,000 and £1,679,000 respectively to women; in respect of 15,000,000 weeks' sickness amongst men and 10,000,000 weeks' sickness amongst women. Add

to this the volume of sickness amongst young children, children of school age, young uninsured adolescents, and all the uninsured population, and we are faced with a colossal volume of material loss and human suffering, much of which is definitely preventable. Sir George Newman says:—

Alongside the advance which has taken place, there is ample indication of the need for greater, or perhaps more correctly, wider progress. Cancer appears to gain ground; tuberculosis is still all too prevalent; pneumonia and influenza are undefeated; small-pox is preferred to vaccinia; even maternal mortality is permitted to be higher than the average of the previous 10 years. We lost 10,000 children from measles and whooping-cough in 1925 ("childish maladies" in which mortality is preventable); and general invalidity and physical incapacity cost us, among insured persons only, the equivalent of 12 months' work of half a million people. Speaking broadly, therefore, it must be said that whilst we are reaping substantial benefit in many directions, we neglect to take our full profits.

The Chief Medical Officer of the Ministry of Health draws attention to "the supineness or unwillingness of some local sanitary authorities in the discharge of their statutory duties." There is undoubtedly a wide gulf between the most progressive local authorities and the most reactionary, between those who vigorously exercise their wide powers and those who in the mistaken interests of the ratepayers are perfunctory or indifferent in the exercise of their opportunities. It is undeniable that in various parts of the country the community suffers from an inadequate or unsatisfactory water supply, primitive drainage and sewage systems, lack of hospital accommodation, insufficient provision of ante-natal and infant clinics and children's health centres, and feeble supervision of food supplies. We have, indeed, reared an extensive system of national health insurance for the adolescent and adult population, with its medical and cash benefits, on an imperfect system of preventive medicine. It is too obvious to be repeated that a clean and abundant water supply, proper drainage and sanitation, an unpolluted atmosphere, and wholesome food are in the long run cheaper than the most efficient system for treating and curing the victims of unhealthy conditions of life.

But the problem is wider than that of the public health service. As Sir George Newman wisely says, "we must always remember that the science and art of medicine have a social setting, and that an intimate and essential part of the rearing and maintaining of a healthy race of people is dependent upon social conditions." Public health policy should be a part of a wider social policy directed towards greater efficiency and wider opportunities for the people. It is satisfactory to know that, in the closing words of Sir George Newman's report, "Nature and Nurture are marching a little more hand in hand, and there is a fuller understanding of the mutual aid and interdependence which should obtain between improved environment (including housing and industrial conditions), the care and nurture of the body, and the social life of the community."

What, however, is the root difficulty is that there is not a sufficient understanding of the value of expenditure on public health and cognate services. If a proposal to increase the income-tax by sixpence in the £ and beer by a penny a pint for the purpose of some great campaign to root out disease and the conditions creating disease were referred to a plebiscite, it is a matter for conjecture what the result would be. If we may judge by the experience of factory and other industrial legislation in the past, aimed at improving hygienic conditions in industry, which have invariably met with strong opposition in many directions, the result of the plebiscite would not be favourable. Yet less money spent on pleasure and luxuries and more on the public health service would be a highly advantageous redistribution of expenditure from every point of view. Those who will invest 3s in the Report on the State of the Public Health will find in the volume justification for a certain national pride in the inroads made into destructive influences of disease and premature death, a broad survey of the manifold activities of the public health services—preventive and curative, local, national, and international—and some indication of the great evils which still remain to be overcome. No one who looks below the surface of our present difficulties can read this volume without becoming convinced that our national greatness rests largely upon the "health of life" of the people.

THE COAL STOPPAGE AND THE TRADE BALANCE.

THE restriction of overseas trade by the coal stoppage was in May, June, and July so comparatively evenly distributed between imports and exports that the change in the trade balance brought about by the crisis was not very conspicuous. The Board of Trade returns for August tell a different story. Last month's figures reveal an excess of imports on the published merchandise figures £25 millions greater than in August, 1925. The returns, which we discuss in this article, show that at last our external commerce has begun to feel the full force of the coal stoppage, and an examination of them gives reason for fearing that further very substantial additions to the excess of merchandise imports will continue to be made until a settlement has been reached and coal stocks have again been replenished—a task which will occupy a considerable time after work has been resumed. Here is a summary comparison of the value figures for August and the eight months of this year and last:—

MONTH of AUGUST.

	1925.	1926.	Increase (+) or Decrease (—) in August, 1926.	
	£	£	£	%
Imports	91,737,921	101,137,290	+ 9,399,369	+ 10.2
British exports	61,037,999	49,786,744	— 11,251,255	— 18.4
Re-exports	13,499,668	8,570,517	— 4,929,151	— 36.5
Total exports	74,537,667	58,357,261	— 16,180,406	— 21.7
Excess of imports over total exports	17,200,254	42,780,029	+ 25,579,775	+ 148.9

EIGHT MONTHS ENDED AUGUST 31st.

	1925.	1926.	Increase (+) or Decrease (—) in August.	
	£	£	£	%
Imports	867,716,874	803,790,981	— 63,925,893	— 7.4
British exports	518,523,538	445,264,797	— 73,258,741	— 14.1
Re-exports	102,324,985	84,619,456	— 17,705,529	— 17.3
Total exports	620,848,523	529,884,253	— 90,964,270	— 14.6
Excess of imports over total exports	246,868,351	273,906,728	+ 27,038,377	+ 10.9

In the four months before the coal stoppage imports fell by £38.3 millions, and total exports by £31.2 millions, the price factor being mainly responsible, and the net effect was an improvement of £7.1 millions in the balance as compared with the corresponding period of 1925. In the next three months a fall (compared with 1925) of £35 millions in imports and of £43.5 millions in total exports took place, leaving the visible merchandise import balance still only £1½ millions larger at the end of seven months than a year previously. In August, however, a further contraction of £16.1 millions in total exports coincided with an increase of £9.4 millions in imports, and at the close of eight months we find the balance £27 millions more than a year ago, August alone being responsible for £25 millions out of the £27 millions. Coal in itself was a big item. Instead of exporting coal to the value of £3.2 millions and importing practically none, we imported last month coal to the value of £7.5 millions and exported practically none. Also, as compared with August, 1925, iron and steel exports were nearly £2 millions lower, and exports of cotton yarns and manufactures lower by £3.8 millions. At the same time re-exports were nearly £5 millions down. It must be supposed that, as the autumn proceeds, coal requirements, which will become more insistent every week, will, in the absence of a quick resumption of work, have to be met by an increasing import. It is also clear that in the case of some industries which have been drawing on stocks for overseas shipments, a further export decline must be expected. Thus the unsatisfactory movement of the trade balance revealed in August is likely to grow steadily more serious in September, and, unless a speedy settlement is reached, in October also.

The effects of the coal stoppage on the balance of trade are thus seen to threaten a formidable increase in the strain upon the position of sterling exchange, and the accelerated change in the balance comes at the most awkward moment, namely, during the period when heavy

* "The Round Table," September, 1926. (London) Macmillan and Co. 5s.

financing of autumn imports normally influences the international exchanges against London. Nor can we expect any increase in invisible exports to counterbalance this movement of the merchandise balance; on the contrary, shipping earnings have been decreased by the coal stoppage. Obviously, therefore, we are approaching a difficult period, which might be seriously aggravated if foreign borrowing—which has been very slight during the summer—revived strongly. Gold holdings, it is true, are strong, being as large as in the first week of the resumption of the gold standard; but it would be a pleasant surprise if the authorities succeed, even with the co-operation of the directors of American monetary policy, in steering the country through the autumn without using the instrument of a higher bank rate.

Movements of imports and exports in main categories in the first four and in the second four months of this year, as compared with the same periods of 1925, are analysed below:—

IMPORTS.

	January-April.		May-August.	
	1925.	1926.	1925.	1926.
	Mln. £.	Mln. £.	Mln. £.	Mln. £.
Food, drink, and tobacco	191.8	180.6	175.2	166.6
Raw materials & articles mainly unmanufactured	159.6	137.9	115.5	113.9
Articles wholly or mainly manufactured	108.5	103.9	112.5	98.1

BRITISH EXPORTS.

	January-April.		May-August.	
	1925.	1926.	1925.	1926.
	Mln. £.	Mln. £.	Mln. £.	Mln. £.
Food, drink, and tobacco	18.2	16.6	17.4	15.6
Raw materials and articles mainly unmanufactured	31.6	26.2	25.9	9.5
Articles wholly or mainly manufactured	213.9	194.2	200.0	173.2

The cessation of coal exports is reflected in the second line of the second table, while in the first table raw material imports are swollen nearly to last year's May to August figures by the inclusion of nearly £12½ millions for coal. That the May to August drop in manufactured exports is not greater is a matter for relief, for part of the drop that is shown is due to the price factor. That the figure has dropped no further is proof that many lines of export industry are still doing moderately well in comparison with last year. How some leading British exports fared before the coal stoppage and since is shown by the next table, giving quantity statistics:—

BRITISH EXPORTS.

	January to April.		May to August.	
	1925.	1926.	1925.	1926.
Coal	17,462,134	17,481,236	16,100,675	1,492,418
Cotton piece goods	1,576,121,000	1,407,533,100	1,424,110,500	1,290,068,300
Cotton yarn	66,339,500	62,884,000	59,558,600	49,898,400
Woolen tissues	47,466,100	40,861,900	47,423,800	41,827,500
Worsted tissues	18,822,800	15,940,200	14,883,300	15,046,300
Machinery	167,257	167,840	170,546	155,076
Motor cars	6,387	6,030	5,825	4,333
Iron and steel (total)	1,233,673	1,395,730	1,192,090	912,629
Pig-iron	162,436	176,680	130,862	78,692
Ferro alloys	46,905	15,923	26,671	9,069
Railway material	127,818	164,520	140,252	111,194

The Lancashire figures are unsatisfactory, but worsted shows a remarkably good record. The fall in the total iron and steel exports is not so great as might have been expected, but this is due largely to the comparative activity of the finishing trades working on stocks or on imported materials. That is a figure in which we fear to see accelerated decline until a normal coal position has been restored.

In the eight months of this year we have imported £32 millions of bullion and specie, against exports of £19½ millions, the import balance on this account of £12½ millions, comparing with one of about £4 millions in the corresponding period of 1925. Another point brought out by the August trade returns is the effect upon shipping wrought by the coal stoppage. The tonnage of vessels engaged in foreign trade clearing with cargoes from the ports of Great Britain was 3.3 millions in August, against 4.8 millions a year ago. The eight months' figures show

a drop from 41 to 33 millions; and the figure for the past four months was 13.4 million tons, compared with 21 million tons in May to August, 1925. Value figures of imports and exports for August and the eight months in a number of categories will be found in the statistical section of this issue.

THE ECONOMIC OUTLOOK IN ALSACE-LORRAINE.

(BY A CORRESPONDENT.)

THE industrial resources and prospective progress of Alsace-Lorraine have an important bearing on the financial situation in France, as inquiring visitors to this district are continuously reminded. A union has been formed of all the limited liability companies in the industrial area, which includes the recovered provinces, the Saar and Luxembourg, whose interests are closely related; a society for research and economic information has been organised, and the Société Générale Alsacienne de Banque—the largest bank in the area with a capital of a hundred million francs, and with branches in Belgium and Germany—issues a series of publications for the benefit of investors and others interested. Its latest production* is a comprehensive review of the whole situation, which, like other official publications, contains much useful data, all of which must be checked and supplemented from other and independent sources in order to obtain a correct conception of the position.

The re-annexed provinces were a rich prize for France; a highly-developed and efficiently managed estate fell into her lap. Lorraine has given France half her iron ore and 38.89 per cent. of her steel. With the addition of Lorraine coal and lignite and Saar coal—a free gift for 15 years—France has now an annual production of 50 million tons, to which must be added Reparation coal from Germany. The Saar coal was intended to make up the deficiency of production in the devastated areas of Northern France, which, however, according to the Société Générale, produced one million tons more last year than in 1913. As the Saar produces 13 million tons a year, France's compensation last year exceeded by 14 million tons the losses from devastation. With the mineral wealth of Lorraine, its blast furnaces—the most modern in Europe—its extensive metallurgical works, went the potash mines, oil wells, textile factories, and other industries of Alsace; including well-developed agriculture, a highly organised railway system, an up-to-date port at Strasbourg, and various other works and institutions in the prosperous provinces.

The industrial development of Alsace-Lorraine was due to the enterprise of the Germans, who left it one of the richest and most self-contained areas for its size in Europe. While the Alsations chafed under the political and military rule of the Kaiser and yearned to rejoin France, so as to enjoy her free and democratic institutions, they played their part loyally in the development of their country, and now find that economically they are very much worse off. In the interval between the Armistice and the signing of the Treaty of Versailles the provinces were over-run by French prospectors pegging out claims, as it were. An industrial inventory was made preparatory to the transfer. Railways, all other public works and institutions passed automatically to the French State. France also became the owner of the immense mineral and industrial wealth of the province, which were sold on Government account. They were sold to new French companies, a crop of which sprang up in the area, or to existing French companies at about a tithe of their value, and it is doubtful whether that proportion was always paid. It was the impression of French statesmen at the time that Germany had a reservoir from which the maximum of Reparations could be obtained—and it was argued that the less French citizens paid for German property the more the German Government would have to pay—so that in the end the French State would not be any the worse off. By getting property for nothing, like the railways and the Saar mines, and other property at comparatively small

capital outlay, the French owners were placed in a favoured position to show good results, and to compete in the international market. It is important to bear these facts in mind in studying the situation, and also to remember that for five years the door was left open for trading with Germany—a reasonable and necessary provision intended to enable France to find new outlets for the products of the recovered territory.

The population of the three Departments carved out of Alsace-Lorraine—the Upper and Lower Rhine and Moselle—is now 1,781,574, an increase of 71,000 since 1921, including French officials and Polish immigrants. The French authorities sent away all Germans who occupied responsible positions in any capacity, including engineers, experts, and foremen, as well as others and a number who were not 100 per cent. Alsatian. The work of transformation became all the more difficult because of the shortage of capable and experienced Frenchmen to take the jobs of displaced Germans. It is fair to assume that after seven years normal conditions should have been reached.

A few comparisons between production in 1913 and now will show the extent to which progressive development has been maintained under French rule. In regard to iron ore, according to the statistics of the Mines Department and of the Comité des Forges, whose indirect control amounts to a combination—almost a trust—the production in the Metz-Thionville area of Lorraine, which produces nearly half the French ore, reached in 1925 73 per cent. of the output of 1913. The tonnage in the district was 9,023,010 out of a total used in all French blast-furnaces of 22,327,000 tons in 1925. The French production of iron was 93.6 per cent. of 1913, including the blast-furnaces of Lorraine, which represented 38.8 per cent. of the total. Lorraine was responsible for 35 per cent. of the steel. There has been an improvement in the metallurgical industries during the last year, owing to the international agreements arrived at, including the rail combine.

France, who has vastly improved her position in engineering, has become a great coal-producing country. No wonder that we are told that "the coal question now appears to be solved for France"; but the compliment which follows—"this is a result which confers the greatest honour on our coal industry"—requires to be qualified, for if an industry is presented with property for next to nothing and much of it free, the solution of the problem is due to this fortuitous circumstance rather than the enterprise of the owners.

Two other sources of wealth, oil and potash, have increased enormously since France took possession of them. In 1913 the production of potash was 350,000 tons; in 1925 it was 1,926,000 tons. We are not given the figures for the war period, when production must have been stimulated. After the French sent the German chemists and other experts away, the exploitation was not successful. Experts were brought back, and a combine entered into with Germany which gives France and Germany practically a monopoly in the world's market.

Germany, besides home consumption, has two-thirds of the export trade.

Alsace is fortunate in having valuable oil wells. The production of crude petroleum, which was 49,584 tons in 1913, was 63,650 tons in 1925. The returns for the war years are not published by the Société Générale.

The textile industry is one of the largest in Alsace. The number of spindles employed has decreased since 1913. Production has also declined, owing to direct competition with other parts of France and loss of markets in Germany. Artificial silk factories have been established since the war. Progress has been made in public utility works, such as electric power in Strasbourg and an ambitious project adopted for enlarging the Port of Strasbourg. Transport is not so satisfactory. There is less traffic by water. The railways, in spite of their being taken over free of capital, lost heavily up to 1923. Now that they are profitable Alsations complain that they are over-charged so as to contribute to the French railway administration. The milling industry on the Rhine is in a bad way. Germany no longer takes Alsatian flour. Alsace succeeded in keeping out German beer, and the breweries are flourishing. As compared with pre-war days, agriculture shows a diminution. Horses, cattle, sheep, pigs have decreased; land under cultivation is less by an average for all crops of 10 per cent. It is explained that lack of farm labour is responsible. Minor industries, including wine, tobacco, and beer, have held their own. On the whole, however, Alsace-Lorraine is not showing the same productive capacity under France. If, after making allowances for the dislocation caused by the transfer of property, the transformation of industries to work in harmony with industries in the interior of France, the opening up of new markets to take the place of Germany, it can still be said that France has not made the most of the efficiently organised estate which she inherited, her failure must be attributed to several causes. There has been too much politics and finance introduced into the country; centralisation in Paris and bureaucracy have had a crippling effect. A less efficient administration and transport system also share the responsibility; but above all is the view which many Alsations hold—that the French are less capable in industry, in business, and in organisation than were their German predecessors. However rich an estate may be, efficient management is necessary to maintain its prosperity.

THE ELECTRICITY BILL IN COMMITTEE.

(BY A CORRESPONDENT.)

THE changes made in Committee have been sufficiently drastic to warrant consideration of the Electricity Supply Bill as now amended as almost a new measure. Whether those changes make for improvement or not can only be determined by actual experience. There is no doubt, however, that the Bill which, in its original form, was sufficiently complicated, has been rendered more complicated still and may, through sheer difficulty of applica-

tion and interpretation, run the danger of becoming a dead letter. The constitution of the Central Electricity Board has not been fundamentally affected, the only new paragraphs being calculated to remove all possibility of corruption or abuse of privilege to further particular interests. Three new principles have, however, been incorporated in the Bill which, while ostensibly guarding the position of the electricity supply undertakings, may seriously weaken the authority of the Board and reduce the business of supplying electricity to a perpetual wrangle in the law courts. The Bill, as amended, should prove a gold mine for the legal profession, if not for the consumer who expects a supply of electricity at an economic price with a minimum of delay.

The three principles are:—(1) The recognition of arbitration. (2) The transfer of financial outlays, hitherto incurred by supply undertakings to the Board, in the case of standardisation and adaptation of transmission and distribution plant to the new supply schemes. (3) The retention of the Joint Electricity Authority. In addition to this, the relations between the Electricity Commissioners and the Central Electricity Board have changed. The Electricity Commissioners have now to prepare the scheme for national co-ordination of electricity supply, instead of the Board, and the actual execution of the scheme is entrusted to the latter. This means that the originators of the scheme, who, under present conditions, are the most suited of all the experts in Britain to understand in every detail the technical and financial aspects of the supply position, have been deprived of the power to ensure that the scheme, when eventually approved, will be thoroughly sound.

The recognition of the principle of arbitration has struck right at the heart of the original Bill. In certain cases an authorised undertaker may appeal, against the findings of the Central Electricity Board or the Electricity Commissioners or both, to the arbitration of a barrister appointed by the Minister of Transport. This barrister may call in the aid of one or more qualified assessors in the consideration of the appeal, and his decision, with certain modifications, is final. If we now consider the sections of the Bill where arbitration by a barrister is allowed, the full significance of the change may be appreciated. In the first place, the scheme for interconnection, selection of generating stations, supply to and by the Board of electricity and standardisation of frequency may, even after approval and adoption, be held up by any authorised undertaker who is convinced that the scheme will adversely affect him in translation into operation of the obligations imposed on him, and the arbitration machinery comes into play. In the second place, where the Board requires an authorised undertaker to undertake extensions and modifications of its generating station or stations which would entail an undue financial burden on the undertaker, the latter can make use of arbitration. In the third place, in the definition of generating costs, selling prices and expenses fixed by the Board, the authorised undertaker may appeal to arbitration against the findings of the Board and the Electricity Commissioners. In the fourth place, the price to be paid by the Board for a main transmission line and generating station, and, in the fifth place, the determination of expenses incurred through standardisation of frequency are subject to arbitration, if desired by an authorised undertaker. If we add up all those five cases where arbitration machinery may be set up, there is little of any fundamental importance left apart from them in the Bill. The business of co-ordinating electricity supply in this country depends wholly on the power of the Board to preserve and maintain the goodwill of the authorised undertakers, or, failing that, a barrister assisted by one or more assessors will virtually take over their duties.

A further development of the arbitration principle lies in the provision that, in two cases at least, the special order made by the Minister of Transport must lie 30 days before each House of Parliament, and in the event of an Address being presented to His Majesty within that time by either House, no further action shall be taken. In the first case, the right of the Board to acquire itself a generating station owned by an authorised undertaker where the latter is unwilling to carry out the arrangements rendered necessary by the Board; and, in

the second case, the determination of the tariff to be paid for the supply to and by the Board, are at issue. In other words, practically every feature of real importance for the successful realisation of a nationally co-ordinated scheme of electricity supply lies at the mercy of a barrister or of a party sufficiently strong to carry either House of Parliament with it against the provisions, in certain instances, of the Bill.

It is obvious that, in the desire to avoid victimisation, the Government has gone to the opposite extreme and placed the Bill in danger of obstructionist tactics as adopted by an authorised undertaker determined to reduce the Bill to nullity. The opposition to the Bill shows that this probability is by no means an impossibility.

The Central Board, apart from the arbitration provisos, is now saddled definitely with the interest and funding charges on capital required to finance standardisation of frequency and, even in the determination of expenditure incurred on this account, is subject to approval by the Electricity Commissioners with the threat of arbitration in the background. In addition to this, in acquiring a main transmission line, the Board must defray expenditure incurred in altering or replacing switchgear to make use of it, and, at this point again, come under the arbitration proviso.

It is fairly clear that the possibilities of extra capital expenditure of little productive value by the Board are increased by those amendments. The clause also that a selected station must remain a selected station even if the Board may be in a position to close it down and use power from a newer and more efficient station goes against the basic principle of the original Bill. The one point of importance lies in the fact that the Joint Electricity Authority will remain under the Bill wherever determined, and that the definition of electricity districts may be hastened. The salvation of the electricity supply industry depends on the retention and extension of the Joint Electricity Authority rather than on any improvements to be effected by a Central Electricity Board condemned to everlasting disputes before an arbitrator or political interference in the proper execution of its administrative functions. The one industry to benefit by the Bill as amended is the legal industry; no other can possibly find in its provisions any room for optimism.

THE LEAGUE, GERMANY AND THE COUNCIL.

(BY OUR CORRESPONDENT.)

GENEVA, September 14.

THIS morning the instruments of ratification of the Locarno Treaties were deposited with the Secretary-General of the League of Nations—the final step required, after the admission of Germany into the League, to bring these treaties into force. These two acts and the definite Spanish notice of resignation from the League are the most important events which have occurred in Geneva since my last letter. The unanimous election of Germany, both as a member of the League and as a permanent member of the Council, was a great moment, recognised by all as marking a decisive stage in the progress of the League, and everything it represents.

The election itself, however, was completely eclipsed by the memorable session of Friday last, two days after the election, when Dr Stresemann and the German delegation arrived to take their seats in the Assembly. They were given a warm welcome, and Dr Stresemann's acknowledgment, delivered in German, was a model of tact and wisdom, couched in rather warmer terms than might have been reasonably anticipated. He described it as an event of historical importance that Germany and the States allied against her during the war were now brought together within the League for permanent and pacific co-operation, and said that it indicated more clearly than words or programmes could ever do that the League of Nations might indeed be destined to give a new direction to the political developments of mankind. He recognised that the League had already done most valuable

work, and he promised the whole-hearted co-operation of Germany in the tasks which lay ahead. In so far as he made any reference to the divergencies between the League and Germany, he expressed the hope that the settlement of such questions would be rendered easier by German co-operation within the League; and he gave a lofty interpretation of the contribution which national genius might and could make to civilisation as a whole. The ideals of nationality and humanity were able to unite on the intellectual plane, and they could unite in the field of political aspiration, provided there was a will to serve the common process of evolution in this spirit. The speech made a most favourable impression, and enabled M. Briand to characterise it as eloquent and lofty.

M. Briand, who was the only other Assembly delegate to speak, made, according to those able to judge from experience, the utterance of his political career, and without a shadow of doubt the most moving, significant speech ever addressed to the Assembly. It would be difficult for anyone who looks forward to the League becoming the best expression of world conscience to find anything but satisfaction in his glowing enthusiasm for the League, his analysis of how League aims can be achieved, and the friendly hand outstretched to Germany. He promised the German delegation that they would find in him a loyal collaborator; the French and German nations had both reaped an ample harvest of military glory, and henceforward might seek their laurels in other fields. In a notable passage, M. Briand said that if the League had the appearance of a kind of tournament, if, under the stimulus of polemical debates or actuated by an overheated national sense of pride, delegates came to Geneva as champions fighting with a desire to gain the perilous successes of prestige, all would be spoilt. "Prestige," he said, "stimulates the imagination, aggravates selfish interests, urges States on to oppose the statesmen who then lose the guiding rein of reason, the power to find moderate solutions. I promise to endeavour to avoid bringing this spirit here, and I count on the intelligence, the pacific spirit, and the lofty sentiments of the German delegates to do the same. . . . We shall win real greatness for our countries if we induce them to lay aside their pride, if we persuade them to sacrifice certain of their own desires in the service of world peace. This sacrifice will not diminish, it will increase their prestige." The words of collaboration exchanged by Germany and France in a like spirit of sincerity should be marked with a white stone. It was a day of great significance; it was an event which would take a great place in history, and it was for them to ensure that no imprudence would endanger the hopes of the peoples of the world.

M. Briand received a great ovation on returning to his seat, and the President expressed the thanks of the Assembly to M. Stresemann and M. Briand for their speeches. "It is an impressive spectacle," he said, "to see the delegates of Germany and France come to the same platform, animated by the same spirit, in order to express their profound faith and their invincible conviction in the future of the League of Nations." The Assembly was packed, and the proceedings created a very deep impression. The Germans were greatly pleased, and the reception accorded to the speeches both in Germany and France has been admirable. Nothing, in fact, could have been better than the circumstances in which Germany began her long-looked-for association with the League.

The notice of definite resignation subsequently received from Spain had not been anticipated until two or three days before it was actually received. It was couched in strangely contradictory terms, proclaiming a sincere desire for the broad and elevated aims of the League, coupled with a resignation based on the fact that Spain had not been conceded her own particular claim. The importance of the fact was naturally greatly diminished by the entry of Germany, and everyone agreed that Spain was stabbing herself in the back rather than causing any very serious damage to the League. Spain is almost forgotten in Geneva already.

On the other hand, the elation of last Friday has not altogether been maintained during the discussions which have taken place and are still continuing on the method of election of non-permanent members of the Council. Many States frankly do not like various parts of the

scheme, and are not letting it go through without an effort radically to change it. They are certainly being strengthened in their attitude by the definite notice of withdrawal by Spain, as it is now, of course, impossible to re-elect her to the Council in the hope that she might quietly return later on. This means that, with the withdrawal of both Spain and Brazil and with the three new non-permanent seats already voted, there will be five new States to be appointed to the Council. Some reluctance is being shown by suggested nominees for the seats to be held for one year only, and there has been something like a hunting round for States who will accept nomination. Sweden definitely refuses to stand for re-election, which is natural, in view of the part she has played in the discussions during the last few months. Czechoslovakia has definitely announced her intention of withdrawing in favour of the candidature of Roumania as the representative of the Little Entente. That leaves at present only Belgium and Uruguay out of the six non-permanent members hitherto sitting. There is some gossip in favour of electing only seven non-permanent members, thus providing a seat for Poland, instead of nine, but as the nine seats have already been set up it would be a little difficult for the Assembly to leave them empty. Practically, however, it might well be the best thing to do. According to present intentions, the Assembly Committee on methods of election may have finished its work in time for elections to take place on Thursday.

There has been talk of Canada or the Irish Free State putting up for election, and it seems to be the intention of the Irish Free State delegation, if the Canadian delegation, on account of the present political circumstances at home, feels not disposed to stand, definitely to go ahead with its own claim. There is some doubt as to whether she would succeed in gaining a place, but the effort, at any rate, is significant, and will very likely create a renewal of the discussion of the difficult problem of Imperial relations. That is far too big a subject to be entered into here, but it is one which ought to be very thoroughly explored in connection with Locarno and the separate Dominion membership of the League when the Imperial Conference meets in the autumn.

Another question is that of which State or States shall be declared re-eligible if, as must be assumed, the Assembly approves of the re-eligibility provisions of the reorganisation plan. The general feeling is that no other State but Poland should receive this special treatment, and there is opposition to any State receiving it at all. For the ordinary seats for one, two, or three years, mention is made amongst others of Holland, Roumania, Finland, Cuba, Uruguay, Belgium, China, and, as I have said, Canada or the Irish Free State. The Assembly choice will certainly not be an easy one.

Notes of the Week.

Coal-Owners' Decision.—The events of the last few days have not served to render the prospects of a speedy settlement of the coal dispute, now in its twentieth week, any the brighter. Mr Evan Williams, President of the Mining Association, informed Mr Churchill on Monday that, with the exception of one small inland district (Warwickshire), the 24 district associations had replied "clearly and emphatically declining" to empower the association to embark upon national negotiations. Unofficial reports from certain areas would seem to indicate that the attitude of some, at least, of the local owners was less flatly uncompromising, but the adverse nature of the general verdict, at all events, was sufficient to dissipate any lingering hopes Mr Churchill may have cherished of effecting a settlement, or setting the stage for one, before the return of his chief. Mr Baldwin arrived in London on Wednesday night, and after refreshing his memory as to recent developments, proceeded to arrange separate meetings with the officials of the Miners' Federation and with Mr Evan Williams. The Government is evidently by no means satisfied that "there is nothing but the void to talk to," and is anxious to explore more closely than has yet been done by either side the possibility of ultimately incorporating numerous

local agreements in the framework of a national settlement, and in the meantime to get the men back to work at the earliest moment possible. The attitude of the Miners' Federation spokesmen has remained studiously correct through a trying week. The announcement of the owners' decision was followed by the inevitable declaration of inflexibility on the miners' part, but its wording was conspicuously moderate, and by all indications the federation's executive would seem to be sensible of the advantages attaching to their present rôle at the bar of public opinion as plenipotentiaries anxious for a just and equitable settlement, whose efforts are brought to nought by the reactionary intransigence of their opponents. The trickle back to work in inland districts shows no decided growth of volume, the owners' figures showing about 58,600 men at work in Warwick, Notts, and Derby, &c., on Wednesday last, an increase of about 14,000 over the previous six days. The total national output of coal from all sources may now be estimated at about half-a-million tons per week, as compared with four to five and a half millions in normal times.

League Council Seats.—Our League of Nations correspondent, whose article on the proceedings of the Assembly at Geneva appears on an earlier page, wrote before the final voting to elect the non-permanent seats on the Council. This took place on Thursday, and the following States were eventually elected:—For the term of three years, Poland, Roumania, and Chile; for the term of two years, Holland, Colombia, and China; for one year, Belgium, Salvador, and Czechoslovakia. These, with the Great Powers, who hold permanent seats, Britain, France, Italy, Germany, and Japan, compose the Council for the ensuing year. The new Council held its first meeting the same afternoon.

Another Attempt on Signor Mussolini.—On Saturday last another attempt was made to assassinate Signor Mussolini—this time by throwing a bomb at his car. The Italian dictator—who now lives under as great a menace as ever clouded the life of any Russian Czar—took the incident with his customary *sang froid*; but while we heartily congratulate him and Italy upon his escape from a dastardly attempt and admire the Duce's courage, each fresh outrage that gives him occasion to display it, and so to confirm his hold upon the popular imagination, only makes us deplore more earnestly the tyrannical régime which must bear the ultimate responsibility for these repeated outrages. In this case the crime has not only led to about 300 arrests, and to proceedings for the re-introduction of the death penalty into Italian law in respect of persons attempting (whether successfully or not) to assassinate the King, the Queen, the Heir Apparent, or the Prime Minister. The fact that the chief conspirator had arrived in Rome a few days before from Marseilles, and that the plot seems to have been hatched among the Italian *émigrés* in that city, has excited a violent anti-French campaign in the Italian Press. This attack impugns the principle of political asylum (which has always been one of the mainstays of European liberty), and it is wholly unwarrantable, for there seems no evidence that the French police had been culpably negligent. The venom that has been instilled into this Italian Press campaign had been accumulating long before the incident which released it. It represents the pent-up jealousy of Fascist Italy towards France on account of those great French possessions on the further side of the Mediterranean in which Italy desires a share. If such a spirit of rancour and covetousness is allowed to grow unchecked, Fascism will become a standing danger to European peace, as Prussianism was before the war.

The Crisis in China.—The simultaneous crises in the Chinese civil war and in Anglo-Chinese relations still continue, and they are reacting on each other in ways which are wholly impossible to predict in advance, though, as compared with last week, the situation appears slightly more reassuring from the British point of view. In the civil war, Wu Pei-fu's garrison in Wuchang, the city on the south shore of the Yangtse, opposite Hankow, is

still holding out against heavy attacks by the Cantonese forces; but its fall seems inevitable, since the Cantonese have followed up the capture of Hankow by advancing northwards, along the Hankow-Peking Railway, until they have consolidated a position on the passes at the boundary between the provinces of Hupeh and Honan. Nothing more has been heard of Sun's reported stroke against the Cantonese communications at Changsha, or of General Chang Kai-shek's reported counter-invasion of Sun's province of Kiangsi. Meanwhile, the Soviet Press announces that the Baptist-Bolshevik General, Feng, has left Moscow for Inner Mongolia with his staff, and at the same moment there arrives another report (from the same source) to the effect that there has been a serious mutiny among Chang Tso-lin's troops at Kelgan, and that there is disaffection among his followers elsewhere. A New York message states that the Kelgan mutiny has been bloodily and effectively suppressed. It would seem, however, that the U.S.S.R. is taking revenge for Chang's high-handed action in seizing the flotilla, and closing the schools, of the Chinese Eastern Railway, by once more unleashing Feng against him. We may, therefore, expect Feng's army (which still remains intact in Inner Mongolia) to take the offensive, and, in that case, Chang Tso-lin may be immobilised in the north while the Cantonese fight it out on the Yangtse with Chang's "ally-rival," Wu, and with the "neutral," Sun. If the Cantonese win, as seems likely, Chang may find himself in an awkward position between the two "Red" forces of the north and south, which are in sympathy, if not in formal alliance, with one another. Hitherto, Chang Tso-lin has been reputed the most efficient of the War Lords, but he will now have to measure himself against Chang Kai-shek. The fate of China may be decided by a final contest between the frontiersmen of the south and north—the men of Canton led by one Chang, and the men of Manchuria led by another. Meanwhile, the Cantonese are playing for high enough stakes in the civil war to incline them to shake loose from their irrelevant complications with Great Britain; and while the Cantonese Army on the Yangtse has been firing promiscuously on British and United States gunboats, the Canton Government at home seems at last willing (and, we hope, able) to end the anti-British boycott. The latest news is that, on the strength of a promise from the Canton Government to protect British wharves, patrol the river, and prevent breaches of the peace, the British gunboats in Southern Chinese waters have been withdrawn. Meanwhile, British merchant vessels still remain in the hands of Wu Pei-fu's recalcitrant general, Yang Sen, at Wanhhsien in Szechwen—which is almost as far up the Yangtse from Hankow as Hankow is distant from the sea. As the Shanghai correspondent of *The Times* quaintly puts it, "the Wanhhsien incident has proved British impartiality. The only difficulty arises out of the large numbers of killed at Wanhhsien, which may be used as propaganda material." We are asked to believe that, if we only fire as many shots at Wu Pei-fu's forces as at Chang Kai-shek's, and do an equal or greater amount of execution, the Cantonese will relent from their anti-British fanaticism and will even kiss us and be friends. The Admiralty, apparently, are prepared to act on this theory, supposing the negotiations now taking place at Ichang between a representative of Yang Sen and Rear-Admiral Cameron fall through. Two more gunboats have gone up the river from Hankow, and seventy naval ratings "left for Ichang by passenger-train" on Tuesday night, according to the Hankow correspondent of *The Manchester Guardian*. China must be the only country in which 70 armed foreigners can travel by train through one province in order to make war on the inhabitants of another, and this across a war-zone in which two native armies are in conflict. Yet, however bizarre the situation may be, we devoutly hope that a second punitive expedition, with further "large numbers of killed," will not come to pass.

Another Safeguarding Committee.—The following announcement is made by the Board of Trade: The Board of Trade have appointed a Committee consisting of Mr B. A. Cohen, K.C. (chairman), Mrs M. Beer, and Mr M. Jenks to inquire into and report, in accordance with the White Paper (Cmd. 2327) relating to the Safe-

guarding of Industries, upon applications made by the National Leather Goods and Saddlery Manufacturers' Associations for the imposition of a duty upon light leather bags and other receptacles, including bags and receptacles of materials made to resemble leather, and by the British Fittings Manufacturers' Association for the imposition of a duty upon metal frames, locks and clasps for bags and other receptacles. The Secretary to the Committee is Miss A. Kilroy, Board of Trade, Great George street, London, S.W. 1, to whom all communications relating to the work of the Committee should be addressed.

Employment in August.—There was some improvement in employment during August, principally due to the increased supplies of foreign fuel, but most of the chief industries of the country continued to be seriously affected by the coal stoppage. According to the *Ministry of Labour Gazette*, among the 11.9 million workpeople insured under the Unemployment Insurance Acts in Great Britain and Northern Ireland, the percentage unemployed at August 23rd was 14.2* as compared with 14.6* at the end of July, and 12.1 a year ago. The total number of registered unemployed at the end of August was approximately 1,606,000.* This compares with 1,664,000* at the end of July, and 1,418,000 at the end of August, 1925. Among the members of trade unions the percentage unemployed was 13.3* at the end of August, as against 13.2* per cent. a month ago, and 11.4 at the end of August, 1925. The following table gives the monthly movements in trade union figures for some years past:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.								
	1913.	1920.	1921.	1922.	1923.	1924.	1925.	1926.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	2.9	6.9	16.8	13.7	8.9	9.0	10.6

November ..	2.0	3.7	15.9	14.2	10.5	8.6	11.0	..
December ..	2.6	6.0	16.5	14.0	9.7	9.2	11.0	..

* Excluding workpeople in the coal-mining industry who ceased work owing to the dispute.

The industries which showed some slight improvement during the month included cotton, jute, pottery, wool and worsted, iron and steel, tinplate, and railway service. In the building trades employment continued good with skilled workers, but a decline was recorded in the engineering, shipbuilding, printing and tailoring trades.

Cost of Living.—There was an appreciable rise in the cost of living during August. The index number of the Ministry of Labour at the end of August stood at 72 per cent. above the level of July, 1914. This compares with 70 per cent. a month ago, and 74 per cent. at the end of August, 1925. The following table shows the monthly movements of the index figure over a number of years:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items. (Food, Rent, Clothing, Fuel, and Light, &c.)								
1st Day of	1918.	1920.	1921.	1922.	1923.	1924.	1925.	1926.
Jan.	85.90	125	165	92	78	77	80	75

Dec.	120	169	99	80	77	81	77	..

For food alone the index rose to 62 per cent. at the end of August, as against 61 per cent. at the end of July, and 70 per cent. a year ago. The movement of the index

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:
67 Milk Street.

BUENOS AYRES:
99 Florida.

HAVANA:
Pedro Gomez Mena Bldg.

Accepts funds from banking correspondents for investment in designated American Securities, Bank Acceptances, U.S. Government Bonds, etc.

Special Representative:
24, OLD BROAD STREET, LONDON.

was chiefly due to increases in the prices of coal, eggs, and milk, which were partly offset by decreases in the prices of potatoes.

American Copper Statistics.—A correspondent writes: Developments in the American statistical position of copper, as indicated by the usual monthly returns cabled a few days ago, have been quite satisfactory. The most striking feature, perhaps, is that there was only a slight increase in the August production of blister copper to 84,029 short tons, and that the stocks of this copper were reduced by as much as 12,612 tons, making the total 259,493 tons. Evidently the output at the mines has been rather discouraged by the low price. The refinery output for August was increased by 9,920 tons to 128,925 tons, but, at the same time, the deliveries into domestic consumption were excellent, indicating an increase on the month of 7,682 tons, although there was a slight decrease in the exports to 43,173 tons. The stocks at refineries are at much under the normal, showing a small increase on the month at 66,658 short tons. As with lead and zinc, the copper market here has been clearly affected by the coal crisis, but following on the 6,000 tons taken out of home warehouses last month, another important decrease is expected to be shown for this month. It is generally surmised that these stocks will be reduced to about 35,000 tons by the end of this year, which would compare with 56,000 tons a year previous.

Minimum Prices for Cotton Yarns.—It is now six weeks, writes our Manchester correspondent, since the minimum prices scheme of the Master Cotton Spinners' Federation came into operation. In Lancashire there has been great interest in this movement, and the official quotations have been adhered to by spinners to an extent which was scarcely expected. The yarn market as a whole in Manchester during the last few weeks has been distinctly firmer. The Master Spinners' Federation have this week issued a statement on the working of the scheme. The loyalty of the members has given the Committee very great satisfaction, and not a single case has been brought to their notice in which, on investigation, it has been found that a breach has been committed. One satisfactory feature is that deliveries of yarn have been more than actual production, with the result that stocks have been reduced, although spinners have not been able to secure any increase in volume of business. It is officially stated, however, that compared with three months ago yarn stocks have been reduced by about 7 per cent. It is pointed out that the determination of spinners to secure an improvement in margins is proved by this fact, and if volume of trade has not increased this may be attributed in a large measure to the difficulties of the coal situation and the uncertainty of the raw cotton markets. It is estimated that these causes are merely temporary, and that when demand comes forward spinners will be in a still stronger position to secure more adequate margins. On behalf of the Federation, it is stated that unless this position materialises in the near future, the committee, rather than allow any tendency to accumulation of stocks, may find it necessary to recommend a further curtailment of production. The spinning mills in Lancashire engaged on American cotton are working at the moment from 45 to 50 per cent. of the full output. This short-time running

is partly due to the coal situation, and partly to the demand for yarn being restricted as a result of a large number of looms having to stand idle.

Marketing Empire Produce.—The Imperial Economic Committee, writes an agricultural correspondent, was charged by the Government with the duty of devising plans for the better marketing of Empire produce, and a grant of £1,000,000 was made for the purpose. That the Empire includes the Mother Country is a fact which appears to be sometimes overlooked, and in setting up the Committee home producers were ignored. When the National Farmers' Union, not unreasonably, drew attention to the omission assurances were given that it was unintentional and that British producers would be considered in the allocation of the grant. As a guarantee of good faith, Mr. Blundell, chairman of the Chamber of Agriculture, and a well-qualified representative of English farmers, was added to the Committee. The National Farmers' Union was invited by the Committee to give evidence, and a memorandum of the points submitted to them is published in the current issue of the official organ of their Union. This statement was evidently prepared with care and deliberation, and it is important as indicating the attitude of the Union on the subject of marketing, which many people consider to be the crux of the agricultural problem. Agricultural co-operation is definitely discouraged. Not only is it said not to be "a panacea for agricultural ills," but the opinion is explicitly expressed that it would not be good business for farmers "to abandon their enterprise in favour of establishing large-scale co-operative ventures." It is added that there is no definite opening for the provision of special assistance from the Empire marketing grant for existing co-operative marketing enterprise. On the other hand, grants are recommended for enabling the East Malling Fruit Research station to continue and extend its investigations, for the Imperial Fruit Show, for experimental tests of methods of grading and packing, and for cheaper issues of the Ministry of Agriculture series of economic reports. The Union reiterates its objection to the prohibition of the use of preservatives in butter and cream, advocates the establishment of abattoirs in the chief meat-producing and meat-consuming localities, and presses for the removal of the restrictions imposed by the Dominions on the importation of pedigree stock. The most constructive proposal is that a statistical bureau should be established, charged with the duty of making regular surveys of world food supplies and prices, and co-ordinating data relating to production, stocks, and present and potential supplies throughout the Empire. Linked with this is a demand that a single Government department should correlate and publish "producers' and consumers' prices for food-stuffs in this country." It is pointed out that three departments now publish statistics of this nature which, it is urged, "simply cannot be utilised by the man in the street." There is force in these suggestions, although the difficulties are perhaps under-estimated. It was at one time hoped that some effective steps in this direction might be taken by the Food Council, but the expectation aroused by the appointment of that body has weakened.

Federal Oil Conservation Board Report.—The Federal Oil Conservation Board has issued an interim report to President Coolidge, in which it states that the country's estimated reserves in proved oil areas are 4,500,000,000 barrels, or less than six years' supply. It urges the necessity of conservation, and to that end makes a number of recommendations. This report should alarm no one. The Federal Oil Conservation Board is not an expert, but a political body. It consists of the Secretaries of the Interior, Commerce, War, and the Navy. It was appointed over a year ago, while the scare over the oil scandals was alive. It was, in other words, an attempt on the part of the Administration to meet public suspicion of the oil industry. The Board's report merely lives up to its "scare" origin. It may be said at once that the scare of six years' supply does not represent the general body of expert opinion. It may be the opinion of Mr. Doherty, head of the Cities Service Company, who delights in play-

ing a lone hand in the oil industry, or of a few geologists at cross purposes, but the majority expert opinion was plainly expressed in the Report of the Committee specially appointed by the American Petroleum Institute to make a report on this question to the Oil Conservation Board. This Committee was certainly anxious to correct the impression that the oil industry was wasteful and inefficient, but on the question of future supplies, it had every reason to give the unbiased expert view. Its conclusions were:—(1) that there is no imminent danger of the exhaustion of the petroleum reserves of the United States; (2) that oil recoverable by present methods of flowing and pumping from existing wells and proved acreage amounts to 5,300,000,000 barrels (against the Oil Conservation Board's estimate of 4,500,000,000 barrels); (3) that improved methods of deep drilling below oil sands now producing will disclose in many areas deposits not hitherto available which will be tantamount to the discovery of new fields; (4) that the quantity of oil left in the ground under producing and proved areas after flowing and pumping have ceased to produce oil may be estimated at no less than 26,394,157,000 barrels; (5) that oil reserves greater than all these lie in some 1,100,000,000 acres of land which geology indicates as capable of oil bearing. These conclusions make the six years' supply estimate of the Oil Conservation Board, which applies to estimates 2, 3, and 4 of the Committee, appear absurd. The views of the expert Committees may safely be regarded as conservative. Deeper drilling is still in its infancy, and is still unlocking hidden reserves. After flowing and pumping have ceased to produce oil it has already been found possible to get back production by flooding the oil beds with water, or by restoring pressure by the introduction of gas. Moreover, two new processes of oil extraction have recently been developed. The more important, which has been worked out by the United States Geological Survey, consists of flooding the oil beds with a soda ash solution which dislodges the oil from the sand particles just as washing soda dislodges dirt from clothes. The other is a new mining process, which is a great improvement on the mining that is successfully adopted in the oil sands of Pechelbronn, France. This has been taken up by the Standard Oil Co., of New Jersey. These improved methods of oil extraction make it pretty certain that the 26,394,157,000 barrels of oil left underground will be recovered as soon as the price of oil makes recovery worth while. All this is apart from the untouched areas, capable of bearing oil, for which the Committee did not attempt to give any estimate. Exhaustion of oil supplies in the United States in the near future is therefore improbable. What the Oil Conservation Board apparently wants to do is to encourage by any sort of alarm the incursion of American oil operators into foreign fields. Dependence on foreign oil companies is a prospect which has always frightened Mr. Hoover.

Conditions in New Zealand.—Our Christchurch correspondent writes:—"The trade returns for the year ending June 30th give a clear and accurate picture of the effects of falling prices on New Zealand. The calendar year bisects New Zealand's export season, so that figures for the year ending June 30th give much more accurate indications of the true trading position. For the year ended June 30, 1926, exports amounted to £46.3 millions, and imports to £52.5 millions, so that last year's export balance of £6.6 millions has been turned into a deficit of £5.8 millions. The fall in export prices was clearest in the case of wool, which on average is returned at 38 per cent. lower than in 1924-5. The value of butter exported was also considerably less than in the preceding year, mainly because of lowered quantity in a bad season. Declines were shown also in cheese, meat, skins and hides—all the chief exports of the Dominion. This fall in prices has inevitably precipitated a considerable depression, the worst feature of which is a degree of unemployment in the towns greater than has been experienced for some years. The Government statistician is now collecting trade union returns of unemployment, and these show a percentage of 6.6 unemployed among the members of the reporting unions. While the immediate problems of credit stringency and unemployment relief are natur-

ally engrossing the public attention, there are indications also that the Dominion is beginning to realise that the old reliance upon a rising price level is failing it. An unusually clear statement of the present situation is contained in a bulletin recently prepared by the Canterbury College Department of Economics, and issued by the Canterbury Chamber of Commerce. This bulletin attempts a measurement of the material progress of New Zealand, and shows clearly that the per capita productivity is lower now than in 1910. The calculation is worth reproducing:—

Year.	Value of Production. £m.	Value per Head. £	Index of Wholesale Prices.	Volume of Production per Head.
1900 1	31.98	39.4	94	85
1910-11	51.90	49.5	100	100
1920-21	99.97	79.3	208	77
1923-24	105.96	79.3	187	86

In view of these facts there is an increasing body of opinion forming against the political and economic experimentation that was characteristic of New Zealand in easier times. The Arbitration Court has refused to increase the basic wage; there is growing opposition, particularly among strong sections of the dairy industry, to the inauguration of absolute control, and the recently returned Royal Commission on Rural Credit has produced an extremely innocent report. It is true that there are considerable sections of the community which still look to high prices for salvation—the secondary industries are asking for higher protection, the farmers talk not only of meat and dairy produce control, but of wheat pools, wool control, &c., &c., while the cost-of-living basis of wages is firmly fixed in the minds of the labour leaders. But the logic of facts is beginning to force consideration of means for greater and cheaper production, and there are not wanting signs of distrust of such schemes as aim at keeping prices up to levels above the export parity." At the annual meeting of the Bank of New Zealand, which is reported in a later column, the chairman, Sir George Elliot, gave an extended review of economic conditions in the Dominion, in the course of which he said:—"There is, unfortunately, in the Dominion rather a tendency to take a gloomy view of the situation whenever a set-back is experienced, and also a tendency to become extravagant when times are good. Ups and downs are inevitable—it is the average that has to be reckoned with. To gauge truly the conditions of any country, one must take a long period of time into consideration. In the case of our own country, looking back over the years, one cannot but be deeply impressed with the steady march of progress and prosperity. Although for the moment that march has somewhat slackened, there is not the slightest doubt that in the comparatively not distant future it will be renewed and quickened with fresh life and vigour."

British Controlled Oilfields.—The financial sensation of the week has been provided by the issue of a statement by the directors of this concern who, under the chairmanship of Lord Buckmaster, replaced the old board last November. The last report of the late directors stated that "the stage was set for a prosperous future," and the quotation of the shares went as high as 24s. The new directors "lift the curtain," and the shares, which have been crumbling all the year, have gone to the neighbourhood of 4s. The curtain rises on a very sorry scene. For instance, in 1919, the year after its incorporation in Canada, the company purchased by the issue of \$4,375,000 preferred stock and \$15,000,000 common stock certain rights in Ecuador and Costa Rica which turned out to be wholly invalid. In 1921 \$5,000,000 preferred shares were paid for rights in Central and South America, which only in one case proved to have any value at all. The upshot of the matter is that of all the company's huge areas, only one, the Buchivacoa Concession, is stated to be of "proved value," and this is at present one of "indeterminate possibilities," and only one of three sections of this property—the Western—is still retained by the company. This is the field for the management and development of which the present board made a contract

with the Standard Oil Company. The result of the latter's diligent and expert work is so far profoundly disappointing. The final conclusion of Lord Buckmaster and his colleagues is that out of the capital of \$45,000,000 about \$30,000,000 has been lost. "It follows," they say "that if it be desired to put this company on to a sound footing, a drastic reduction of capital is essential." That is obviously so, and at the same time the constitution of the company needs radical change. But even with drastic capital reduction, the prospects of shareholders will still be cloudy; for two of the many serious points disclosed are that annual obligations in several fields are very heavy, and that, if exploitation work is to be pursued in some of the fields possessing dubious possibilities, heavy expenditure is necessary. The whole story makes a deplorable chapter in the history of company finance. The conduct of the old board, whether in purchasing worthless rights at huge cost or in leading shareholders to suppose that prosperity was approaching, appears to be utterly inexcusable. Lord Buckmaster and his colleagues, on the other hand—and this is the only bright spot—are entitled to full credit for their courage in disclosing to the public the whole unpalatable story. But shareholders will deduce from the fact that Lord Buckmaster and four of his co-directors intend to resign that those who are most closely acquainted with the full facts do not rate very highly the chances of bringing the company to prosperity. Presumably they feel that by investigation and publication of the real position they have done all they can do to serve the shareholders.

The Tin Boom.—Under intense activity again this week, writes a correspondent, the buoyancy of the tin market became even of a more spectacular character than in the previous week, when after an almost continuous rise prices indicated a total rise of £11 for cash and near delivery and over £6 a ton for forward delivery. Cash tin then closed at £305 7s 6d, leaving the forward price at a "backwardation" of £8 15s a ton, which by Thursday this week was increased to £12 10s. The market steadily broke into new high records for the year, reaching on that day £317 for actual standard tin, with three months' delivery following up to £305. Such figures had not been seen since the first half of 1920, in which year £423 10s was touched, which was an absolute record. This phenomenal inflation was in a large measure due to exceptionally aggressive speculative enterprise, in fact, reckless manipulation, whereas the present high price has not been brought about through these agencies, but chiefly by the more acute scarcity of supplies, although the fact may be mentioned that a good deal of public interest was aroused in the metal this week, similar to that which has been going on in tin shares. It was fully recognised when the statistics for August came out that the visible supplies had reached a dangerously low level, at about 13,000 tons; and what particularly impressed sentiment was that the American stocks and "afoats" combined were unusually depleted at 6,811 tons, as against 8,905 tons a month previous and 10,864 tons a year before. This naturally meant that at the end of August America had made practically no provision for her October needs, considering that her consumption in the course of this year showed a monthly average of roughly over 6,000 tons. Eliminating the total quantities afloat to Europe and America, tin supplies actually on the spot between the two sides of the Atlantic early this month were very small, and the position threatens to become still more acute. America has become rather nervous as to the filling of her needs over the autumn; it seems almost inevitable that Straits tin will be called for from this side next month, and it is considered rather doubtful whether this would ease the American position to any material extent. There was a considerable amount of American buying in the first half of this week, and the difficulty of securing parcels afloat or near at hand induced American importers and dealers to divert more attention to forward positions, both in Straits tin and the open market, for standard tin. Prices are apt to fluctuate after a violent rise, but the market is clearly faced with a shortage.

Rhodesian Railway Control.—A Stock Exchange correspondent writes:—Under proposals published by the British South Africa Company, the administration as a single transport system of railways serving Northern Rhodesia, Southern Rhodesia, Bechuanaland, the Mozambique Territory, and 112 miles in the Union of South Africa is likely to become an accomplished fact. The benefits of a unified control are to be obtained through the establishment of an authority to be called the Railway Commission, and the year commencing October 1, 1927, will be the first to which the suggested machinery shall apply. In the interim, the companies are asked to limit their dividend distributions for the two years that end with September 30, 1927, in such a manner as will permit of the starting of a reserve fund that forms an integral part of the scheme. The heads of the agreement, published in the memorandum containing the proposals, are drawn in legal language as clear as lawyers' literature usually is, but the principle emerges of a strict apportionment of earnings that shall add to the stability of the security. For this reason the proposals have met with approval from holders of the bonds now quoted, and the effect, while nominally slight, has been to render proprietors more than ever disinclined to part from investments the status of which is likely to be improved by the proposals coming into force. The memorandum, lengthy though it is, deals with a matter of such consequence and intricacy that it leaves unstated many of the minor points that surround the subject. The immediate Stock Exchange market effect was to bring about a decline of about sixpence in Chartered shares. These had been steadily rising for several weeks previously by reason of expectations that the Rhodesian Railway's proposals when announced, might convey an inferential hint of a further capital sum being returned to the holders of Chartered shares. The scheme suggests, neither directly nor indirectly, anything of this kind. Opinions differ as to whether it releases the Chartered Company from obligations in respect of the railways in its territory, but, by encouragement of traffic through a possible revision of rates under unified control, it will assist development of the Chartered Company's area. To this extent it should be a bull point for holders of Chartered shares. The scheme will require time for its benefits to bear material fruit, but it must be recognised as a far-seeing endeavour to place the railway system upon a broad and statesmanlike basis. To which consideration criticism will no doubt yield tribute if opposition should be raised to the present proposals.

Mining Notes.

Modder East.—Our mining correspondent writes: With this enterprise the year ended June 30th has proved a period of transition. During the first four months crushing was continued at the Apex mill of the New Kleinfontein Company; then the company's own reduction plant was brought into operation. Naturally, the change-over involved some expense; but the absorption of gold by the new works was more than counter-balanced by the clean-up at the Apex mill. In respect of the initial four months the working profit aggregated £7,000; during the latter four months it amounted to £42,200. Costs were lower by 5s 10d per ton than the average of the preceding twelve months, while the profit represented 4s 2d in place of 7d per ton. For the whole year the working surplus totalled £36,500, as against £10,950 in 1924-25, and £151,700 in 1923-24, when £44,100 was contributed by the gold premium. Throughout the current session, of course, the company will obtain the benefit of having its own treatment works. Nevertheless, there seems little prospect of an early entry into the dividend list. Last year debenture interest absorbed £30,300. The funds provided by the debenture issue having proved insufficient to cover the capital expenditure, arrangements have been made with the parent undertakings for a loan up to £65,000 at 7 per cent., principal repayable by December 31st next. Including £20,200 advanced to date, the accounts show a net deficit of £48,700. The performance of a substantially increased development of footage expanded the ore reserves

by 214,000 tons to 2,022,000 tons, the value remaining at 6.2 dwts. On the whole, however, the development results proved disappointing, especially in the new ground.

Mount Morgan.—But for the company's income from investments last year's operations would have resulted in a loss of £72,800, whereof £29,600 arose from the fire. Actually the deficit amounted to £3,300. Labour exactions—which have so seriously handicapped the company in recent years—became even more onerous. A slight concession in the basic wage rate made by the Arbitration Court was overruled by Act of Parliament. As a result, during the twelve months ended May 31st last the miners at Mount Morgan averaged 32s per shift. For the past six years the concern has been worked entirely for the benefit of the employees, the last dividend having been 5 per cent. early in 1920. Notwithstanding this, a scheme is on foot for the exploitation of the mine as a big low-grade proposition. The purchase and installation of the necessary machinery would, it is estimated, involve an expenditure of over £1,000,000. Naturally, before any scheme is placed before the shareholders extensive tests are being carried out, and their completion will take well over twelve months. Meantime a renewal of the company's leases has been arranged. It is a question whether the interests of the existing shareholders might not be better served by liquidation. Realisation of the investments alone would provide a sum considerably in excess of the market value of the shares.

Dolcoath.—Shareholders in this old-established Cornish undertaking are much chagrined to learn that still more capital will be required to bring the new property to the production stage. It will be recollected that rather more than three years ago a reconstruction was carried out, the prior charges being incidentally extinguished. Subsequently an advance of £65,000 was obtained under the Trade Facilities Act. The managing director estimates that a further £30,000 will be needed owing to various causes, which he specifies. To be on the safe side, the board propose to create £50,000 debenture stock, and to offer it at par to the shareholders in proportion to their holdings. The stock will bear 8 per cent. interest and carry a bonus of 50 shares per £100. Shareholders unable or unwilling to take up their proportion of the debentures are inclined to haggle at this bonus. Obviously, however, some inducement will be needed, and an addition of 25,000 shares to the company's issued capital of 460,100 shares will not be a very serious matter. Encouraging developments have been reported.

San Francisco.—In June an interim dividend of 1s 6d per 10s share was paid on account of the year ending September 30th. Considerable discussion has lately taken place as to the probable rate of the final distribution. We append some illuminating figures:—

Profit—Eleven months	£ 342,300
One month say	48,500
Total	390,800
Available for dividend taking, 1925 ratio	332,000
Less 1s 6d per share already paid	112,800
	219,200
2s 9d final would take	206,200
Carry forward	13,000

Actually it is thought in market circles that the balance payment will be 3s, making 4s 6d for the year.

Transvaal Gold Output.—The gold output of the Transvaal mines during the month of August, 1926, amounted to 843,854 ounces of fine gold, as compared with 860,134 ounces in July. The amount produced during the month of August, 1925, was 808,218. The following

table shows the monthly output for the past seven years:—

	1920.	1921.	1922.	1923.	1924.	1925.	1926.
January..	Fine Ozs. 670,503	Fine Ozs. 651,593	Fine Ozs. 639,728	Fine Ozs. 704,469	Fine Ozs. 796,768	Fine Ozs. 823,592	Fine Ozs. 796,270
February..	625,330	558,137		704,970	760,617	753,925	753,924

December	632,215	681,847	790,712	778,849	825,273	791,455	..
Total	8,153,625	8,114,516	7,020,110	9,133,060	9,597,634	9,599,702	..

The following table shows the number of natives employed at the end of the last few months by members of the Witwatersrand Native Labour Association and Contractors:—

	Dec., 1925.	Feb., 1926.	Mar., 1926.	Apr., 1926.	May, 1926.	June, 1926.	July, 1926.	Aug., 1926.
Gold mines	166,385	178,311	181,204	183,828	183,905	183,052	182,262	184,032
Coal mines	16,606	16,337	16,190	16,212	16,246	16,448	16,648	16,827
Diamond mines	3,705	5,631	5,957	5,834	5,766	6,054	6,099	5,918
	186,696	200,279	203,351	205,874	205,917	205,594	205,009	206,677

The number of natives employed in the gold mines and coal mines has increased, but there is a decline in the number employed at the diamond mines.

BEGINNING on October 20th, a course of six lectures will be given at the Kingsway Hall, London, on "The Shrinking World: Dangers and Possibilities." The lecturers include the Right Hon. William Graham, M.P., Professor A. J. Toynbee, the Hon. Bertrand Russell, the Right Hon. Sidney Webb, and Mr. Bernard Shaw. Admission will be by ticket, which can be obtained from the secretary of the Fabian Society, 25 Tothill street, Westminster, S.W. 1.

Oversea Correspondence.

UNITED STATES.—FACING THE AUTUMN—MARKETS AND MONEY—COMMODITY PRICE STABILITY.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 7.

WITH the passing of the three-day Labour Day holiday, business men and financiers are beginning to return to their desks after their summer holidays, and Wall Street is taking on its more accustomed aspect. The approach of the autumn season finds the financial community in a cheerful mood, and the markets generally reflect that mood; but it is as yet somewhat early to secure definite ideas as to how business and financial developments will shape up as the end of the year approaches. The share market continues to give a good account of itself, the bull movement in railroads having carried the prices of many of the leading shares up to new high records for the post-war period. Atchison, Topeka, and Santa Fé common has sold at a high of 161, as compared with a low this year of 122; the corresponding figures for New York Central are 147½ and 117; for Southern Railway they are 131½ and 103½. The strength in rails persists at present, and furnishes the backbone for the market. Industrials are irregular; some of the recent favourites have fallen away rather markedly on profit-taking; some others have taken their place in reaching up to new highs for the year. Hopes still are cherished that the oils may come through before the current bull movement has worn itself out, but so far the oils have been held back by a weak bull account, and by the fears for the stability of the oil market that have been engendered by a moderate but steady increase in the rate of crude oil production. Some encouragement has just been furnished the bulls in the oils by the report of the President's Oil Conservation Board, which said that existing visible supplies in this country

will last for only six years, and that the country will be forced to depend on new domestic discoveries and foreign production outside of that. However, this is an old story; or at least a great deal along the same line has been heard since the war. The ability which the oil industry has shown during the past few years in the development of new pools and the creation of improved technology to increase the yield of useful products from the oil actually mined has moderated the fears of shortage. Similarly the discovery that old fields that had been given up as exhausted are able to give new and greater yields from deeper sands has been reassuring. The latest example of this sort of thing is the Spindletop Field in the Gulf region of Texas, which, after dropping down to a few thousand barrels a day from the shallower sands, is now producing over 80,000 barrels a day from the deeper sand. Meanwhile the oil enthusiasts, who were disappointed that the Standard Oil Company of New Jersey did not take steps to retire its preferred stock at the last meeting, are convinced that the company will take such action before autumn is past, and are hoping that the move will help their favourites.

Expectations of moderately higher money seem to be in the process of realisation. Normally, the commercial demand for credit expands rather rapidly after the start of September, and something of this kind is expected this year. The rates on bankers' bills have continued to display a firm tone, and the 90-day paper of this character is now selling on a 3½ and 4 per cent. basis. The rate on these bankers' bills, in short, has again crept up to the Federal Reserve Bank's rediscount rate. In the past, the persistence of this kind of a situation has been followed by an increase in the official rate, and while such a development is not expected just now, the situation does make some bankers think that a further increase in the official charge for money may occur this autumn. In any event, it would seem that the Federal Reserve banks have a good hold on the money market. Statistics of brokers' loans compiled by the New York Stock Exchange confirm the indication given by the Federal Reserve Bank's weekly tabulations. They show that the volume of this kind of accommodation extended to members of the Exchange increased during August by \$144,000,000, bringing the total up to \$2,997,000,000. This figure compares with a low (on the monthly basis) of \$2,767,000,000 on May 28th and a high of \$3,535,000,000 on February 28th.

Announcement by the Treasury of its September 15th financing shows that the Government recognises the somewhat higher money market now prevailing. The offering is nine months' certificates of indebtedness bearing a 3½ per cent. rate, and the amount is \$350,000,000 or thereabouts. It will be recalled that the Treasury sprang something of a surprise by doing no financing in June, its cash position in connection with the large income-tax receipts, being strong enough to obviate the necessity. A year ago, however, the Treasury paid 3½ per cent. on nine months' certificates after having paid 3 per cent. on one-year certificates in the previous June. Last December's financing took the form of one-year paper bearing 3½ per cent. Some students of government finance look for a long-term operation in December.

The Bureau of Labour Statistics index of wholesale commodity prices for July having shown a slight decrease after two small increases, the *Dun* and *Bradstreet* indices both report small increases during the month of August. The former is up 0.3 of one per cent. at 153 per cent. of the 1913 average; the latter gained 0.4 of one per cent. at 137.8 per cent. of pre-war. Weakness in breadstuffs was offset by firmness in other foods and in industrial products. Altogether, the effect that the movement of these various indices during the past several months produces is an impression of stability. There is no tendency whatever toward inflation; on the other hand, there is nothing to suggest a demoralising decline in prices.

Taking everything into consideration, our bankers are inclined to be encouraged over the European fiscal situation. They appear to be impressed with the improvement in the position and management of the Bank of France, and with the chances for a period of relative stability in the franc. They note the rumours of stabilisation in

Belgium, and would not be surprised if the Belgian authorities were to return to gold without waiting for France. They consider that the Belgian authorities have made commendable progress in picking up the threads that were broken at the time that the stabilisation effort broke down, and intimate that a well-considered scheme to return to gold should be able to command the co-operation of international bankers. Meanwhile, a statement of financial reforms given out by the Italian Government, while it has given rise to some rather puzzling comment in Italy with regard to severe deflation, is taken as an earnest of Italian intentions to recover the gold standard.

FRANCE.—NAVAL AND MILITARY ECONOMIES— CONSOLIDATION LOAN—COMMODITY PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, September 15.

THE announcement that the Government intends to carry out sweeping reductions of both military and naval expenditure has apparently been received abroad with even greater satisfaction than previous measures. According to the scheme drawn up by M. Painlevé, the War Minister, and approved by the Cabinet, the number of army officers is further to be reduced by 3,900, thus bringing the legal total of the *cadres* down to 28,000, as against the pre-war total of 35,000. The cavalry arm is to be substantially reduced forthwith by the sale of 7,000 horses, this being a first instalment of a total reduction in the near future of 10,000, to which must be added a further 2,000 horses at present used by the gendarmery department. The Army Remount department is to be totally suppressed, this alone representing an economy of 27,000,000 of a year. Out of 350 barracks in the provinces, about one-half are to be demilitarised and handed over to the local authorities for other purposes (in addition to 199 barracks already demilitarised). A gradual return is to be made to incorporation for army service at the age of 21 (instead of 20 as at present), in preparation for the reduction of the term of compulsory service to twelve months. This step will result, as from 1927, in an appreciable reduction in the strength of the standing army and a saving of about 100,000,000 next year. Decrees legalising these and other measures are to be promulgated before the current week is over. The programme of naval economies includes the suppression of a large number of establishments and simplification of administration that will assure further substantial economies. It has also been decided that in future both the army and the navy shall secure their supplies through a common purchasing agency, which will enable further compression of expenditure to be made.

The axe is also to fall once more in the Department for the Liberated Regions, of which M. Tardieu, Minister for Public Works, is now the responsible head. The total staff of this department, which consisted in 1920 of 65,600 people, was reduced in 1923 to 27,852, and recently to 5,488. A further 488 officials are to be "combed out" forthwith, each being given two months' notice of dismissal, and another 168 are to go soon afterwards. M. Tardieu reports that out of total approved claims for war damages amounting, in round figures, to 88,000,000,000, 67,367,495,000 had been paid down to April 1st last, leaving 20,632,505,000 still to be liquidated.

The first meeting of the Board of Directors of the new Caisse d'Amortissement took place this morning, and thus brought into practical being the novel organisation which has been created to take over from the Treasury the entire responsibility for the floating debt, the reduction of the consolidated debt, and the industrial exploitation of the tobacco monopoly. The most serious feature of the national financial situation, as M. Lebrun, the chairman, pointed out, is the danger that some untoward incident may upset the confidence of holders of the floating debt bonds and again cause demands to be made for the paying off of large masses of these securities. In Paris alone, during the panic period in July last, the Treasury was called on to repay National Defence Bonds at the rate of over 200,000,000 of a day. The object of the Caisse d'Amortissement, of course, is to render a recurrence of such sudden demands impossible, and for

this it has been endowed with the profits from the tobacco monopoly, estimated to amount henceforward (in view of the recent substantial increase in sale prices) to about 2,500 million francs a year, and other sources of revenue estimated to produce a like amount. The crux of the problem to be solved by the directors of the new Caisse is as to whether this estimated annual income of 5,000 millions will suffice to enable them to handle satisfactorily such demands as may be made upon them in respect of a total of 49,000 millions of National Defence Bonds that will have, sooner or later, to be dealt with. Any deficit that may arise will be met, certainly, from the Budget, but such a contribution would be forthcoming only long after the event. The permanent income of the Caisse, also will reach it only day by day and week by week, as the yield from the sales of tobacco and from the taxes specially affected by it are received. It is therefore obvious that the first task of the new Caisse will be to provide itself with an initial endowment in the form of a large sum in cash, to enable it to carry on until its permanent revenue comes in.

At their meeting this evening the directors of the new Caisse decided that the first portion of the vast loan which is to be issued for the consolidation of the National Defence Bonds shall be opened for subscription on October 7th and remain open until October 15th. The decree authorising the issue will appear in to-morrow's *Journal Officiel*. The amount to be offered for subscription will be 3,000,000,000, which will be obtainable only in exchange for National Defence Bonds. The new scrip, which will be secured on the profit of the tobacco monopoly, will be in units of 500, and will be issued at par. The bonds will bear fixed interest at the rate of 6 per cent., and holders will also receive 50c per annum and per bond (with a guaranteed minimum of 5f—equivalent to an extra 1 per cent.—per annum and per bond) in respect of every 100,000,000 of profit per annum earned by the monopoly above the first 2,000,000,000 of a year. The scheme provides for the whole issue to be redeemed at par within 40 years, plus a premium of at least 100f per bond. This premium is calculated, like the variable interest yield, on a basis of 5f per bond as representing the premium in respect of every 100,000,000 of net profits from the monopoly in excess of 2,000,000,000 for the year. The net profit declared by the monopoly in 1925 was 1,643,000,000, but it is anticipated that, by the end of the current year, in consequence of the recent substantial increases in sale prices (from 1f 50c to 2f 50c, in the case of ordinary capital), the net revenue will exceed 3,000,000,000, which will justify the payment of the extra 1 per cent. of interest referred to above. The bonds will be exempt from all the special taxes payable in respect of other securities. National Defence Bonds will be taken in payment at their face value, less that portion of the interest paid in advance that has yet to accrue. As will be seen, the interest yield from the new bonds will be appreciably the same as from Defence Bonds, but these carry no premium. The general conditions of the issue were fixed after a conference between M. Poincaré and the heads of the great banks, which took place last week, and at which M. Moreau, the new Governor of the Bank of France, was present.

It is obvious, however, for many reasons, that the forthcoming consolidation loan can of itself scarcely be considered as of vital importance. The consolidation of 3,000,000,000 of National Defence Bonds cannot in itself have any substantial influence on the general situation, particularly as conversion is optional, and it is evident that other operations on a much more important scale will be inevitable. The possibility of mobilising to this end the railways, forests, or other portions of the national wealth is being suggested, and is by many people regarded as feasible, although it is recognised that such an operation would not be easy. One hopeful sign is that, notwithstanding many foolish unofficial proposals that find their way into print every day urging the penalising of foreigners in France, business men appear to be beginning to realise that it is vital for this country that domestic commodity prices should be raised to the level of those obtaining in sound money countries, and that it is their's and not the foreigners' fault if tourists flock to France because prices are lower than at home.

The recent renewed slight drop in the franc is explained

as having been due to payments maturing for foreign wheat purchases, and a similar movement may be expected next month, when heavy commitments will have to be met for cotton. It is unlikely, however, that any serious consequences will result, as the Treasury is understood now to be amply protected against any speculative raids.

It is now officially announced that the recent French State Railway loan of 60,000,000 (Swiss), issued in Switzerland, was subscribed 10 times over. The loan, which is redeemable in 25 years and yields 7 per cent., was issued at 94 per cent. The French Government have since signed a contract with a group of Dutch banks for a similar 7 per cent. loan of 30,000,000 fl, redeemable in 35 years. The Dutch loan, like the Swiss one, will enable the State railways to reimburse the Treasury for advances made to them, and the money will be used to pay off a loan from Holland which was contracted during the war, and which is due for repayment next year.

For the first time for some years the monthly index figure representing wholesale prices in France (as announced last Saturday, by the *Statistique Générale*, for August) shows a substantial fall. The general figure is returned as 785, compared with 854 at the end of July (a fall of 69 points), 754 in June, 702 in May, 664 in April, 654 in March, and 569 at the end of August, 1925.

GERMANY.—POLITICS—CURRENCY AND CREDIT— INDUSTRY—BOURSE—CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, September 14.

DISCUSSION of political prospects after the Reichstag reassembles in the autumn has been revived by German-National threats to oppose the Government if this Party is not taken into the Cabinet Coalition. To some extent these threats are an answer to the "heavy industry's" overtures to the Social-Democrats reported last week. Although the Socialists have not officially replied to the unofficial request to join the Cabinet, the President of the Trade Union Federation has commented in a favourable sense. Originally, the Marx Cabinet was a provisional construction, accepted in the belief that the Socialists would later come in. At the time they were prevented from doing this by several circumstances, the chief of which was their ill-fated persistence in the plan to expropriate the former ruling houses. The inclusion of the Social-Democrats is probably the only kind of Cabinet expansion which two of the present governmental parties—the Democrats and the Centre—would accept. Although a minority body, the Cabinet could probably pull through next winter without taking in any new allies; but should the German-Nationalists insist, as they threaten, that they are to force Dr Marx's new allies, the effect would probably be to force the Chancellor to come to terms with the Socialists, and take them in instead, so realising the "Great Coalition" ideal. If the prestige of the Social-Democrats in the economical domain is very low, the prestige of the Nationals is weak in the domain of international politics, and not very strong in economic affairs. The Minor Tariff of 1925, or at least the agrarian part, which was put through under German-National pressure, is being severely attacked, and will probably have to be amended. The German-National Prime Minister Schlieben's taxation has had to be altered; and, owing to his policy towards indirect taxation, he is being held responsible for the increased Reparations liability from the pledged sources. Once they shared power with the moderate parties, the Nationals would be in the uncomfortable position of conducting an international policy which they had all along disapproved of and opposed. As the entry into the League of Nations, the Locarno Agreement, and the Reparations settlement are all sealed by formal international agreements, they could not be repudiated, yet the Nationals, admitting this, continue to condemn and deride them. The able men in the party see the difficulties which must here arise, and it is not certain that they really want to share power with parties of radically different principles and antecedents. The prospect, therefore, points rather to opposition by the Nationals than to their entry into the Cabinet.

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up	\$25,000,000
Surplus	\$35,000,000
Undivided Profits	\$6,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world, bringing them into contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE

2 and 3, Crosby Square
Bishopsgate, E. C. 3

The money market is much easier. As interest rates remained relatively high longer than usual, after the month-end settlements it was feared that the period of cheap and superabundant short-term credit was at an end. The mid-September settlement was, therefore, looked forward to with anxiety. Recent days, however, show that the settlement had been well provided for, and day money even became abundant at a lower rate on the eve of the mid-month settlement. To-day day money fell to a minimum of $4\frac{1}{2}$ per cent., and a maximum $5\frac{1}{2}$ per cent. The Reichsbank's return for the first week of September shows the unusually small decline of 123½ million marks in circulation, after a rise in the preceding week of 469 millions, to 3,101½ million marks. Discounts increased slightly by 30 million marks, while advances fell by 92½ million marks to 7½ million marks. The Rentenbank's return for August 31st shows circulation down to 1,498½ million marks. Withdrawals from circulation under the liquidation law have been 581½ million marks. The Reichsbank has been buying more gold abroad, the reserve on September 7th having risen to 1,518,662,000 marks, or 25,844,000 marks more than at the end of August. In accord with the bank's policy, nearly all of the increment has been brought to Berlin. Since March 31st the gold deposits abroad have fallen from 262½ to 200½ million marks, while gold in Berlin has risen from 1,228 to 1,318 million marks. The Reichsbank's note circulation, which at the beginning of 1925 was practically the same as the Rentenbank circulation, is now about twice as high. Present Reichsbank gold cover for note issue is 49 per cent., against the 30 per cent. required by law, but the gradual replacement of Rentenmarks with Reichsmarks will involve increasing demands upon the gold reserve.

The success in New York of the first Prussian foreign loan, at an interest rate and issue price which bring the investor the relatively low yield of 6.95 per cent., has modified the opinion which lately prevailed here that the American market for such issues was about to dry up. The cost to Prussia is 7.4 per cent. The loan is to be

devoted to expansion of the State electrical works and to harbour construction. It is stated unofficially that the much-talked-of Federal foreign loan in reichsmarks is to total 200 million marks. No immediate cause for issuing this loan is known, and considerable scepticism is felt on its much-advertised issue in reichsmarks. Insurance returns show that at home confidence in the reichsmark is growing. This currency is increasingly accepted by both parties, although both are legally entitled to choose any currency which seems better secured. Out of insurance policies totalling 3,300 million marks in 1924, 2,900 million marks were contracted in gold marks and only 75 million marks in reichsmarks (the remainder in a foreign currency, mostly dollars); in 1925, out of a total of 3,000 million marks, 800 million marks were in reichsmarks; and this year about half of all new policies are in reichsmarks. This shows a great growth of confidence by the insuring public, which would be the losing party in case of reichsmark depreciation. Savings deposits in savings banks in all Germany totalled 2,469 million marks, as against 1,629 million marks at the end of 1925. The development of the emission market in the last three months was:—

(Millions of Marks.)				
	Foreign Loans.	Home Loans.	Capital Increases.	
June	260.5	10.5	37.16	
July	110.8	173.98	34.95	
August	39.1	128.5	40.06	

The industrial situation continues to improve slowly. The number of publicly-supported unemployed fell between August 15th and September 1st from 1,603,000 to 1,549,000. Bankruptcies, which in August numbered only 490, are still declining, the number in the first two weeks of September being 148. Railway car loadings show a rapid increase, being in the last recorded week 132,800 cars per day, against 123,500 in July and 101,800 in January. The wholesale index number for September 8th was 127. The home coal demand has considerably increased. Large quantities of fine coal, which in normal conditions are difficult to get rid of, have been sold. A brisk demand for semi-finished steel and rolled goods continues, but the pig-iron market has revived very little. Russia has decided to give a large order to German firms for electrical materials. The total price is stated at 70 million marks. The deal will be financed under the German 300 million marks export-credit scheme.

The provisional crops report, as compared with last year's realised crops and those of 1913, were:—

—In Metric Tons.—			
	1913	1925.	1926.
Winter wheat	3,525,800	2,976,000	2,779,000
Spring "	510,500	241,000	275,000
Winter spelt	437,800	155,000	153,000
Winter rye	9,985,300	7,965,000	7,398,000
Spring "	144,700	98,000	97,000
Winter barley	...	317,000	329,000
Spring "	3,035,500	2,282,000	2,291,000
Oats	8,615,500	5,585,000	6,570,000

The 1913 figures are calculated on the present area.

AUSTRALIA.—OVERSEAS TRADE IN 1925-26—THREE YEARS' EXPORTS COMPARED.

(FROM OUR CORRESPONDENT.)

MELBOURNE, August 4.

THE preliminary statement of Commonwealth trade statistics for the financial year ended June 30, 1926, shows an increase of £4,451,722 in imports of merchandise as compared with the preceding year, but a decrease of £10,149,525 in imports of gold, leaving a net decrease of £5,697,803 in gross imports. Against this is a decrease of £13,785,187 in gross exports as the net result of a decrease of £17,195,780 in merchandise and an increase of £3,410,593 in gold exports. A comparison for the last three financial years is as follows:—

	1923-24.	1924-25.	1925-26.
Imports—			
Merchandise	140,593,551	146,632,092	151,083,814
Gold	24,742	10,511,204	361,679
Total imports ..	140,618,293	157,143,296	151,445,493
Exports—			
Merchandise	116,674,894	161,085,420	143,889,640
Gold	2,812,270	944,739	4,355,332
Total exports ..	119,487,164	162,030,159	148,244,972

Included in imports for 1925-26 are apparel and textiles, £33,256,574, a decrease of £2,900,189, and metals, metal manufactures and machinery, £45,303,928, a decrease of £290,174. The latter class includes the sub-class vehicles (motor-cars, &c.), £15,701,276, a decrease of £912,252.

Australian exports for 1925-26 include wool to the value of about £10,000,000 from the previous season's clip, which was carried over unsold at June 30, 1925, while this year practically none of the 1925-26 clip is carried over. With a smaller wheat harvest at the beginning of 1926, the wheat and flour export season has practically closed much earlier than last year. Taking these items into account, the real reduction in Australian production for 1925-26 has been greater than is indicated by the decrease of £17,195,780 in merchandise exports for the twelve months, and the effect of this will be noticeable in exports subsequent to June 30, 1926. The following is a comparison of the principal exports from Australia for the last three financial seasons:—

	1923-24.	1924-25.	1925-26.
Wool and tops	56,197,158	63,263,145	63,206,248
Wheat and flour	19,297,139	40,799,988	23,877,877
Butter	4,919,664	10,006,081	7,006,872
Frozen beef, mutton, and lamb	2,472,729	5,662,169	5,583,865
Lead	3,323,463	4,154,448	4,524,142
Zinc	1,057,895	1,146,309	1,069,332
Zinc concentrates	1,166,424	1,055,802	1,499,394
Silver	1,080,872	1,123,865	1,171,770
Dried fruits	1,243,272	1,939,829	1,462,673
Hides and skins	6,293,320	8,149,800	8,298,036

Prospects for the 1926-27 season are, however, decidedly favourable at the present moment, subject mainly to the possible effects of spring weather on the wheat crops.

JAPAN.—BUDGET ESTIMATES—TRADE RETURNS—IMPORT EXCESS—BANK REPORTS—COMMODITY PRICES.

(FROM OUR CORRESPONDENT.)

TOKIO, August 11.

THE spending departments have prepared and submitted their estimates of expenditure for 1927-28 to the Treasury, which will soon begin to scrutinise them. Despite the Finance Minister's repeated request for rigid economy, those departmental estimates bring up the total national expenditure to 1,670-80 million yen, including new items of expenditure of 203 millions. Besides this, supplementary estimates to be submitted afterwards will amount to no less than 100 millions. This shows an increase of about 130 to 140 millions upon the current year. Larger outlay on Navy, Army, Education, and Debt Service is primarily responsible for the increase. The fund to be drawn upon to meet these increased expenses is placed at only 70 or 80 million yen out of last year's surplus and the current year's normal growth of revenue, and they must be "axed" accordingly if the Budget is to be balanced. Of the new charges, however, such items as the naval programme for cruiser construction (24 millions for the first year's instalment), increased grants in aid of elementary education (10 millions), better pay for Government's employees, and subsidy to reclamation work in Hokkaido cannot be rejected or substantially reduced mainly for political reasons, for, it will be remembered, the 1926 Budget obtained Parliamentary sanction, with a rider that the Government should budget these expenses for the following fiscal year. It remains to be seen how the Finance Minister will devise the means for raising the necessary fund to meet these charges. At any event, many experts expect that Japan will have another bloated Budget for next fiscal year, in spite of the present Government's avowed policy of financial retrenchment.

The trade returns for July show that imports totalled 184,178,000 yen and exports 161,331,000 yen, the excess of imports over exports amounting to 22,847,000 yen, which brings up the total adverse balance since the opening of the year to 428,254,000 yen. As compared with the corresponding month of last year, there was an import excess of 22,847,000 yen, against an export excess of 41,926,000 yen. Besides this unencouraging record, the recent sharp decline in silver prices in connection with the Indian Currency Committee's recommendation for the

adoption of a gold standard cannot but prove an adverse factor in Japan's export to the Oriental markets. Of the Japanese export industries, the cotton industry will suffer most from the consequent declining purchasing power in silver countries. Mainly owing to the advanced value of the yen, the export of cotton manufactures has been on the decrease since April, as will be seen from the following table:—

EXPORT OF COTTON MANUFACTURES.
(000's omitted)

	1925.	1926.	Increase (+) or Decrease (—) in 1926.
January	36,379	44,976	+ 8,597
February	43,259	49,316	+ 6,057
March	46,204	55,905	+ 9,701
April	47,415	44,212	— 3,203
May	50,471	40,441	— 10,030
June	55,370	37,088	— 18,282
July	46,957	38,396	— 8,561

Under the circumstances it is a matter of concern how far the depreciating silver price, combined with the appreciating yen exchanges, will affect the course of the cotton trade, and pessimism already predominates in some sections of City circles.

With a very few exceptions the leading Japanese joint stock banks have now published their last half-year's results, which show that banking profits are declining. The decreased earnings have been primarily due to monetary ease and lower discount rates ruling during the period. But no changes have been made in the rates of dividend in comparison with the customary rates paid during recent years. The banks owned by big financial families, whose results will be published later, will tell the same story. The accounts of the Bank of Chosen disclose that a steady improvement has been made in its position since its financial and managerial reorganisation a year ago. This Colonial banking institution earned net profits of 768,000 yen for the June half-year, and declared a 5 per cent. dividend for the same period, carrying forward a sum of 53,000 yen.

An upward tendency in commodity prices which developed in June has continued during last month. The Bank of Japan's wholesale index number for July recorded a further rise of 1.41 points, the total being 236.46, as against 234.75 in June and 234.57 in May, which was the lowest since February, 1918. The principal contributors to the rise are the textiles and foodstuffs groups, in which cotton yarn, rice and wheat are prominent.

TURKEY.—FOREIGN CHAMBERS OF COMMERCE—JUDICIAL STATUS OF FOREIGNERS—SHORTAGE OF FOREIGN EXCHANGE.

(FROM OUR CORRESPONDENT.)

CONSTANTINOPLE, September 2.

A CONSIDERABLE amount of space has been devoted in some of the leading home papers to the attitude recently adopted by the Turkish authorities with respect to the status of foreign Chambers of Commerce established in Turkey. None of these institutions have actually been closed, as erroneously announced, although a semi-official *communiqué* in the Turkish Press contained a warning that this step might eventually become necessary if the Chambers did not mend their ways.

The writer has had an opportunity of perusing an official letter on this subject addressed by the Turkish Minister of Commerce to the Chairman of the British Chamber, and delivered yesterday evening. Couched in polite and diplomatic language, this document recognises the utility of the Chamber and undertakes to encourage its activities in developing Anglo-Turkish commercial relations. It, nevertheless, points out that, viewed in the light of recent Turkish legislation, the word "Oda," or Chamber, is reserved for the exclusive use of the Turkish institution of that name. It, therefore, suggests, politely but firmly, that the British Chamber should call itself something else, and offers it the choice, as suitable alternatives, of Trade Union, trade institution, trade club, trade association, or trade affiliation. The troublesome aspect of this suggestion is that the British Chamber is registered in London as a corporation, with a London office. Its name, therefore, can only be altered by the

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

Established 1836.

SPECIAL POLICIES

Contingent, Issue, Sinking Fund, etc.

Head Office: 10, FLEET STREET, LONDON, E.C.4.
near Temple Bar.

Assets Exceed - - £18,000,000

General Manager: W. A. WORKMAN, F.I.A.

somewhat lengthy formalities which are usual in such matters, and with the consent of the Board of Trade. A fact which lends piquancy to the situation is that the British Ambassador is the honorary President of the Chamber, whilst the British Consul-General and the Commercial Secretary of Embassy are *ex officio* members of its Council.

A remarkable test-case, involving French shipping interests in particular, and the status of foreigners in general, has recently been set down for hearing in the Turkish Courts. As the issue turns on the interpretation of certain clauses in the Treaty of Lausanne affecting the judicial standing of foreign subjects resident in Turkey, diplomacy has not been slow to intervene, and the action of the Turks has formed the subject of a vigorous verbal protest addressed by the French Foreign Minister to the Turkish Ambassador in Paris.

Some three weeks ago, about midnight, a collision took place off Cape Sighri, Mitylene, between the 7,000-ton French mail-packet *Lotus*, owned by the Messageries Maritimes, and the *Bos-Kourd*, a 1,000-ton Turkish tramp bound for Smyrna, with a cargo of Heraclea coal. The *Bos-Kourd*, cut almost in two, sank within a few minutes with the loss of nearly a dozen lives. On the arrival of the *Lotus* in the harbour of Constantinople the following day, her second officer, who had been on watch at the time of the accident, was arrested, forcibly removed from his ship by the Turkish police, and placed in goal, where he has remained ever since, notwithstanding the repeated efforts of the French Embassy to procure his release. The captain of the Turkish vessel, who, with the surviving members of his crew, had been picked up by the boats of the *Lotus*, was subjected to the same treatment.

The thesis upheld by the Turkish authorities is that, as criminal proceedings have been instituted against all parties at the instance of the relatives of the dead, who were all Turks, the Courts are bound to keep the accused, including the French officer of the watch, within the orbit of their jurisdiction. The French objection points out that, as the collision occurred outside the limit of Turkish territorial waters, the Turkish claim to exercise its jurisdiction over a French national falls to the ground, and that, moreover, in the particular circumstances, the imprisonment of the officer before any evidence respecting the facts has been heard or sifted constitutes a grave breach of the elementary principles of *jus gentium*.

The Turks appear to be obdurate, and it will be interesting to see, not only how the diplomatic knot is unravelled, but in what way the very evident conflict of principles between the Turkish Penal Code, on which the Turkish claim is based, and the provisions of the Lausanne Treaty with respect to the judicial status of foreigners, will eventually be reconciled, bearing in mind that the present Penal Code is of a later creation than the Treaty. The whole principle at issue constitutes, at all events, a nice technical point for the international lawyer.

Something approaching consternation has to-day been occasioned in financial and trading circles by the action taken by the Commissary of the Turkish Bourse or "Change" with the object of counteracting the recent depreciation of the Turkish lira. At this time of the year, when crops, and more especially the Smyrna sultana and fig harvests have been lifted, and are being shipped to foreign markets, the seasonal offer of foreign exchange should normally cause the Turkish unit of currency to show a marked appreciation. The contrary has this year

been the case. The pound sterling, which, incidentally, forms the basis of all foreign exchange quotations on this market, and which, normally, should just now be the equivalent of approximately 800 to 825 Turkish piastres, has hardened by successive stages until it has passed the 900-piastre limit. To the layman the reason for this dogged persistence of the £ to move in the wrong direction is possibly obscure. A reflective mind would not hesitate, of course, to attribute the unusual phenomenon to the normal play of supply and demand. The official Mandarins do not appear, however, to attach much importance to this economic factor, as they have officially "ordered" the Turkish lira to depreciate no further by compelling local banks to decline all operations with the general public beyond an arbitrarily fixed sterling limit of 910—a Pyrrhic remedy which is already defeating its own object by curtailing offers at a time when a rather badly uncovered market is asking for more and more. A contributive factor to the unexpected weakening of the Turkish currency should undoubtedly be sought in the activities of the Government itself. Whereas certain commodities, such as sugar, alcohol and petroleum, were formerly imported by a host of dealers in relatively small parcels, they are now ordered in bulk by a solitary importer, the "Department of Government Monopolies." The demand for foreign exchange, particularly sterling and dollars, to meet these heavy commitments, coupled possibly with purchases for Government account to cover the cost of military stores, has apparently exceeded the offer created by the export of Turkish produce.

Letters to the Editor.

BANCO CENTRAL DE CHILE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of June 5th, page 1082, in speaking of the Banco Central de Chile, you made one or two slight errors, which I am sure you will be glad to have corrected.

The Banco Central de Chile can issue its banknotes freely, not solely against gold or foreign bills of exchange. It must keep a reserve of 50 per cent. against its note issue and deposits. This reserve must consist of gold, or sight deposits in banks in London and New York. It can fall below a 50 per cent. reserve in times of emergency, but when it does so it is subject to penalties.

The new currency unit is the peso, which is equal to 6d; the cóndor is ten pesos.

Since the organisation of the Banco Central de Chile sight exchange on London has fluctuated between 40.40 and 39.76, the par being 40 pesos to the pound.—Yours, &c.,

WALTER M. VAN DEUSEN.

Banco Central de Chile, Santiago, August 10th, 1926.

BOOKS RECEIVED.

The American Coal Miners' Struggle for Industrial Status. By Arthur E. Sufferin. (London) George Allen and Unwin, Limited, 40 Museum street. 10s net.

Almost every week we acknowledge a new addition to the useful series of studies produced by the American Institute of Economics. This volume is the latest. Its purpose is (1) to account for the evolution in the American coal industry of collective bargaining; (2) to describe the administrative machinery that has been developed for the making and enforcing of agreements, and (3) to analyse the general principles and working rules which have come to govern the relations of operators and miners. The volume is of special topical interest in view of the present controversy over similar matters relating to the British coal industry.

The Evolution of Labour. By W. R. Hayward and G. W. Johnson. (London) Gerald Duckworth and Co., Limited, 3 Henrietta street, Covent Garden. 5s net.

An essay in history with a modern application, this volume describes the continuous struggle of human labour "against the destructive forces of man and nature" from earliest nomadic times to the present days of international industrialism. Their studies lead the authors to conclusions which are optimistic in relation to the present day, and by no means condemnatory of the so-called "capitalist" system. Necessarily sketchy, but decidedly readable.

The British Year-Book of International Law, 1926. (London) Oxford University Press, Warwick square. 16s net.

This volume, invaluable to students of international law, contains a dozen articles on international law topics of the day by known authorities, and also gives the decisions, opinions, and awards of International Tribunals in 1925-26.

League of Nations. Memorandum on Currency and Central Banks, 1913-1925. (London) Constable and Co., Limited, 10-12 Orange street. Vol. I., 4s; Vol. II., 8s.

Mercantilism and the East India Trade. By P. J. Thomas. (London) P. S. King and Son, Limited, Orchard House, Westminster. 8s 6d net.

The title of this book hardly covers the ground dealt with. The author's main object is to trace the beginnings of protectionism in England.

The Orient I Found. By Thomas J. McMahon. (London) Gerald Duckworth and Co., Limited. 15s net.

A book of Eastern impressions by an Australian traveller. Well and profusely illustrated, and outspoken on the problem of the attitude of white races to the Chinese and Japanese.

La Navigation Intérieure en France Pendant la Guerre. Par G. de Kewille. (London) Oxford University Press, Warwick square. 16f.

Rouen Pendant la Guerre. By M. J. Levainville. (London) Oxford University Press. 8f.

Two new French volumes in the Economic and Social History of the World War, produced under the auspices of the Carnegie Foundation for International Peace.

Graphit. Von Dr Eugen Ryschkewitsch. (Leipzig) Verlag on S. Heitzel, Königstrasse, 2. 14.50 marks.

A German technical study dealing with graphite, its production, its uses, and its characteristics.

Moody's Public Utility Manual for 1926. (London) Moody's Investors' Service, Limited. £5 5s.

A manual of some 1,972 pages, forming a complete reference work on American Public Utility Companies and their securities. Complete figures are given from official sources, each security is described in detail, and nearly all are "vested" to show investment status, according to the views of the publishers. This volume embodies data received up to August 15th last.

A Selected Bibliography of Publications, 1920-25, relating to the World Wheat Situation. (Stanford, Cal.) Wheat Studies of the Food Research Institute, Stanford University, California.

An invaluable aid to the study of the subject. Includes sections dealing with various special branches, such as prices, types of wheat, production factors, farm costs, marketing, transport, &c.

Instituto Nazionale delle Assicurazioni. Annuario per il 1926. Città di Castelle, Tipografia della Casa Editrice S. Lapi.

An Italian year-book of insurance.

Annual Statistical Report of the American Iron and Steel Institute for 1925. (New York) American Iron and Steel Institute, 40 Rector street.

Superannuation Schemes and Methods of Making Provision for Dependants of Employees. (London) The Industrial Welfare Society, 51 Palace street, S.W. 1.

The Economic Journal, September, 1926. (London) Macmillan and Co., Limited, St Martin's street. 6s net.

Contains articles on "Inheritance as an Economic Factor," by Sir Josiah Stamp, "The End of Laissez-Faire," by Right Hon. Sidney Webb.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
September 28. September 30.

THE mining markets have assumed the pride of place so far as good business is concerned in the Stock Exchange. The shadow of the coal stoppage hangs over the railway industry and other branches of trade connected more or less directly with the production of coal. But in the mining markets there are activity and strength: Tin shares stand out with conspicuous buoyancy, by reason of a further spurt, for which *Economist* readers have been prepared, in the quotation for the metal.

The War Loan and other British Government stocks barely maintain their prices. Business is quiet. Conditions in the money market are the mainsprings which change gilt-edged stocks, although the home railway prior-charge stocks have drooped to some extent on the dulness that developed in the ordinary stocks.

Chinese bonds, after being extremely weak, took a decided turn for the better on the news being read as affording hopes of peace. French and German Government bonds have been disposed to ease off. Foreign bonds as a whole are not attracting much attention.

Home railway stocks, while above the worst prices of the week, are dull, on account of the uncompromising attitude adopted by the mine-owners. Canadian railways hold their rises. Buenos Ayres Great Southern enjoyed a fresh spurt upon declaration of a bonus of 1 per cent. in addition to the dividend that made 7 per cent. for the past year. Entre Rios rose sharply by reason of dividend hopes. Other Argentine railway stocks are inclined to hang fire. United of Havana was hoisted upon buying said to emanate from Cuba, but cessation of the support led to a reaction. Brazilian railways are firm and Antofagastas seem undecided.

Rubber shares hold their prices at previous levels. In fact, the great majority of prices in the rubber shares have scarcely moved for nearly a month. There is a demand for good-class tea shares. In the oil market, British Controlled further slumped, publication of the company's circular, foreshadowing reorganisation of the capital and resignation of five directors, led to acute flatness. Other oil shares are tolerably steady. Courtaulds and textiles have been inanimate in consequence of the restraint upon business imposed by the coal stoppage, a consideration which applied to various other sections of the industrial market. Egyptian and other land shares are better. Speculation in Brazilian Tractions having subsided, the price of the shares also went back, taking with it Sidros and some of the other shares in this group. The banking market is disposed to be better. Insurance shares are hard, Commercial Unions being a feature of strength.

The buying of shipping descriptions is attributed to hopes of better times ahead when the coal dispute has been settled. The tobacco market remains under the leadership of British Americans, which, after being weak in consequence of the company's interests in China, braced up in sympathy with the rally in Chinese Government bonds. Nitrate shares are dormant.

The Kafir market has developed a good deal of activity, West Rand Consols being the principal speculative counter. These have changed hands in tens of thousands every day. The Cape and Paris joined in a movement that was kept going by British speculators, and West Rand Consols have ousted Sub Nigels as a popular speculative medium. Chartered went back a trifle on publication of the memorandum dealing with the future working of the Rhodesian Railway system. De Beers and other diamond shares presented a better front. The tin share markets have monopolised a good deal of public attention, Malayan shares being especially favoured. There has been a rush to buy tin shares on the rise in the price of the metal. Included in the popular favour, West Africans advanced in company with Malaysians. The Cornish list strengthened a trifle. The daily turnover in tin mining shares has been on a very large scale. Other mining shares have

Lewis's, Limited.—Issued share capital £1,675,000, divided into 500,000 6 per cent. cumulative preference shares, 1,057,500 preferred ordinary shares and 117,500 deferred ordinary shares, all of £1 each. This is an issue of 1,200,000 6 per cent. cumulative preference shares of £1 each at par, of which 600,000 have been applied for and will be allotted in accordance with a contract published in the prospectus. The company provides clothing and personal and household requisites, and was established in 1856, becoming a public company in 1924. The object of the present issue is to provide the balance of the cost of new buildings, now completing, the cost of acquiring Newbury's, Limited, and additional working capital for the development of further properties, and the general expansion of trade. Profits before charging for taxation, but after making provision for all charges, including bank interest, interest on loans and deposits, debenture interest, debenture redemption fund, directors' fees and salaries, amortisation of leaseholds and depreciation of fixtures, are certified to have been as follows:—1922, £406,856; 1923, £314,237; 1924, £327,323; 1925, £388,098; and 1926, £386,939. The net assets of the company on August 1, 1926, are given as £2,374,088, which, it is stated, includes nothing for goodwill. The moderate return offered renders the issue not very attractive.

Manbré Sugar and Malt, Limited.—Issued share capital, £719,160, divided into 100,000 preference shares, 544,160 ordinary shares, and 75,000 deferred shares, all of £1 each. This is an issue of 400,000 7 per cent. cumulative preference shares of £1 each at 24s per share, 387,692 ordinary shares of £1 each at 45s per share, and 58,334 deferred shares of £1 each at £10 per share. The holders of the existing ordinary and deferred shares of the company will be entitled to one new ordinary for every two ordinary, and one new deferred for every two deferred shares now held, while the holders of the preference shares will be entitled to one new preference share for every one now held. The business of the company consists of the manufacture of brewing sugars and the products from maize. The company has entered into a contract to purchase the whole of the issued share capital in Garton, Sons and Co., Limited—in the same line of business—at the price of £2,300,000, and the object of the present issue is to provide the purchase price and for development of both undertakings. The net profits of Garton, Sons and Co., Limited, before charging partners' salaries or directors' fees, income-tax, excess profits duty, and corporation profits duty, but after providing for depreciation, are certified to have been as follows:—1920, £391,329; 1921, £154,843; 1922, £232,042; 1923, £339,621; 1924, £236,929; 1925, £247,149. The profits of the Manbré Co., before charging directors' fees, income-tax, excess profits duty, and corporation profits tax, but after charging managing directors' remuneration, and depreciation, are certified to have been as follows:—1920, £216,667; 1921, £83,232; 1922, £173,292; 1923, £238,754; 1924, £235,971; 1925, £212,982. In addition to the present issue, the vendors have subscribed for

ordinary and deferred shares of the Manbré Co. to the value of £500,000. A reasonably good speculative industrial offering.

Daffo (Northern Nigeria) Tin Mines, Limited.—In order to comply with Stock Exchange regulations, particulars are advertised of the above company. There is an authorised capital of £70,000, divided into 280,000 shares of 5s each, of which 240,007 have been issued. The company was incorporated in July of this year with the object of acquiring mining properties in Nigeria or elsewhere. The company has purchased from the C.B.N. Syndicate, Limited, three prospecting licences in respect of areas of 4,353 square miles, 677 square miles, and 999 square miles respectively of land between the villages of Sha and Bargesh in the Kaleri District of Nigeria, together with three mining leases in the same locality. It is stated that the purchase price is £45,000, payable in cash; the vendors to the C.B.N. Syndicate, Limited, received £24,000, payable in cash. The preliminary expenses are estimated at £1,500.

COMPANY MEETINGS, &c.

BANK OF NEW ZEALAND.

THE QUESTION OF LONG-DATED LOANS.

SEVERE TAXATION.

THE GOLD STANDARD AND IMPROVED EXCHANGE POSITION.

THE CHAIRMAN'S OPTIMISTIC VIEW OF NEW ZEALAND'S FUTURE.

The ordinary general meeting of the proprietors of the Bank of New Zealand was held at the head office on Friday, June 19, 1926.

Sir George Elliot (chairman of directors) presided, and said: The capital issued to shareholders as at April 1, 1925, has been paid in full, and appears in the balance-sheet before you. The capital account now stands:—

	£
Preference capital held by the Government of New Zealand .. 1,875,000	
Ordinary share capital .. 3,750,000	
5,625,000	
The reserve fund with the additions now recommended will amount to .. 2,825,000	
And the disclosed undivided profits to .. 565,378	

These various items—capital, reserve fund, and undivided profits—total .. 9,015,378

In addition there is the 4 per cent. guaranteed stock which matures in July, 1934, amounting to .. £520,988

Of the new shares issued, 1,233 were not taken up by shareholders entitled to them, and they were, therefore, submitted for sale by tender. They realised an average premium of a fraction under £1 17s 6d per share, and the premiums aggregated £2,310 16s, the whole of which, in accordance with the bank's deed of settlement, has been transferred to the reserve fund.

You will, no doubt, have noticed from the report and balance-sheet that, in addition to the £2,310 16s referred to, a sum of £247,689 4s is proposed to be added to the reserve fund. Of this amount £147,689 4s was taken from the ordinary banking profits for the year, and £100,000 from an internal reserve which had been created in previous years to provide for probable losses in transferring surplus funds that had accumulated in London. You will appreciate the necessity of such a reserve when I tell you that in 1924 it cost the bank up to 4 per cent. to transfer large amounts from London, and, had the restrictions on the export of gold been continued, a large proportion of this special reserve might have been required to provide for exchange losses. Fortunately, the restriction on the export of gold from London was removed last year; immediately the whole exchange position altered, and we are able to transfer the £100,000 mentioned to the ordinary reserve fund of the bank.

It may interest you to know that our reserve fund is invested in British Government securities.

PROFIT AND LOSS ACCOUNT.

The profit earned from the ordinary operations of the bank for this year amounted to £912,160 13s 1d, being an increase of £92,875 5s 5d over that for the previous period. This increase is mainly due to the employment of the £1,125,000 of new capital, nearly all of which was paid up early in April, 1925, and to the surplus over the book value of investments which matured during the year.

DIVIDEND.

The dividend, which is payable in Wellington to-morrow, and at the various branches on receipt of advices, will be at the same rate as that of last year; but, next year, without making any definite promise, the directors hope to be in a position to pay a bonus of 1 per cent. on the preference "B" and ordinary shares. This statement is being made now so that all shareholders may have early information of a probability that may eventuate a year hence.

DEPOSITS.

Our deposits at the balance date were £1,042,006 more than at March 31, 1925. Current account credit balances of the public at our New Zealand branches decreased by nearly £1,200,000, accounted for largely by the local issues of Government and local body loans. Fixed deposits and Government balances, however, show satisfactory increases.

ADVANCES AND BILLS DISCOUNTED.

On the other hand, advances and bills discounted amount to £22,662,696, being an increase of £2,048,411 on the previous year's

figures. Owing to the shrinkage in the Dominion's exports and increase in imports, customers have found it necessary to lean on the bank to a greater extent than during the previous year. Indications point to the probability of our still being called upon for extra assistance until next season's produce returns become available. Owing to the strong financial position of the bank, our resources are ample to meet all demands likely to be made upon us.

There appears to be an impression abroad that this bank does not cater for people of small or moderate means. There is no foundation for such an impression, as will be gathered from the fact that in point of numbers 57 per cent. of our advances are for amounts of under £300 each. Indeed, we have many advances of under £50 each, and we are always willing to strain a point for the small borrower as we are for the large borrower.

NOTE CIRCULATION.

The increase of £275,548 was due to cash requirements of customers for the Easter holidays, which commenced on April 2nd.

COIN, CASH BALANCES, AND DEPOSITS WITH BANKERS.

These items show an increase of £235,476 on the previous year's figures.

MONEY AT CALL AND SHORT NOTICE, GOVERNMENT SECURITIES, AND OTHER SECURITIES IN LONDON.

Decrease of £823,000 is due to transfer from London of funds for temporary investment in Australia.

AUSTRALIAN GOVERNMENT SECURITIES.

Increase £957,782. This represents investment, at remunerative rates, of surplus funds in readily realisable stocks. These securities will be sold as and when funds are required for our New Zealand business.

Since 1922 the book value of our landed property and premises has not been written down, as they already stand in our books at considerably under their actual value. Instead, it has been thought preferable to add to the reserve fund any amount which might otherwise have been written off this item.

LONDON OFFICE.

We again express our appreciation of the care and attention bestowed by the London board on our important interests there.

GENERAL MANAGER.

Mr H. Buckleton, our general manager, returned last December from his visit to the Old Country. Mr Corkill, who acted during Mr Buckleton's absence, discharged the duties of the position efficiently.

BOARD OF DIRECTORS.

My colleagues have again done me the honour of appointing me to the chair for the current year.

Sir Harold Beauchamp has been granted leave of absence to enable him to visit England and Canada. During his stay in London he will be associated with the London board.

EXCHANGE AND CURRENCY.

Amongst those whose views are entitled to respect, there is still an acute difference of opinion as to whether or not the reversion to the gold standard was premature. Be that as it may, this at least we do know: that, since the removal of the restriction, exchange difficulties in New Zealand have disappeared, and primary producers have materially benefited.

OVERSEAS TRADE.

The external trading figures for the

than they are buying from us. As I stated at our last annual meeting, it might be possible to make such adjustments in our Customs tariff as would tend to bring our exports and imports to and from various countries more on an equality.

THE BANKING POSITION.

The figures of the quarterly returns of the banks for the period ended March 31st last compare unfavourably with those of similar period of 1925:-

Deposits.—1925	£53,090,843	
1926	£51,314,674	Decrease £1,776,169
Advances.—1925	£43,730,262	
1926	£48,285,142	Increase £4,554,880

The result being a shrinkage in banking resources in the Dominion of £6,331,049

This position is due primarily to the adverse external trade conditions already mentioned, and, in a lesser degree, to the raising of loans locally by the Government and local bodies.

THE NATIONAL FINANCES.

The net surplus revenue—£1,155,679—of the Dominion for the year ended March 31st last, although arising mainly from Customs duties on abnormally heavy importations, is a very satisfactory indication of prudence in the conduct of the country's finances. This prudence is also reflected in the successful flotation, a few weeks ago, of a 5 per cent. loan of £6,000,000 in London at 98½, which was over-subscribed by the public.

TAXATION.

The burden of taxation is still very severe, and there does not appear to be any early prospect of a substantial reduction. Tax-payers will always grumble, but provided prudence and economy are exercised by the Government in its administration, we should all accept the position with as good a grace as possible, never forgetting that we are still paying the price, and must for many years continue to pay the price, of freedom from foreign domination.

We do, however, feel the competition that banks have to face from Government Departments, which pay only trifling taxation, or no taxation at all, in connection with their activities.

It is no argument to say that it would merely be taking money out of one Government pocket and putting it into another for the Post Office Savings Bank to pay taxes in the same proportion as the joint-stock banks. That is not the case; the real effect would be that the Savings Bank would have to pay its depositors almost 3 per cent. less interest than it does at present; or, looking at the matter from another point of view, by reason of the non-payment of income-tax, the Savings Bank can afford to pay ½ per cent. more for its deposits than a joint-stock bank can afford.

Probably nowhere else in the English-speaking world does a Government compete with the banks on such lines as in this country. The function of a Government savings bank is to encourage thrift amongst the poorer classes of the community by providing undoubted security for the investment of their savings. In Great Britain no depositor can pay into the Post Office Savings Bank more than £500 in any one year, on which sum he is allowed interest at the rate of 2½ per cent. per annum; in the United States the limit of a deposit account is \$2,500 and the rate of interest 2 per cent. per annum. In New Zealand the limit is £5,000, and interest at the rate of 4 per cent. is paid on the first £500 and 3½ per cent. is paid on the balance. If the Post Office Savings Bank deposits were in the hands of the banks they would be employed in the development of the pastoral, agricultural, and industrial interests; as it is, they are used by the Government, and are diverted from the channels in which they could most usefully be employed.

LABOUR TROUBLES.

The strike in the Dominion last August of seamen on British ships resulted in serious losses to producers, exporters, and others. Large shipments of meat were held up, some of which had been sold to arrive on certain dates. As a consequence contracts were cancelled, and the meat on arrival in England was dumped on to a glutted market, and had to be sold at a loss. The season, in any case, was not a good one for meat exporters, and this additional loss greatly aggravated the position.

LONG-DATED LOANS.

The question of creating a special department of the bank for the purpose of making loans on the amortisation principle has, during the past few months, had the careful consideration of the directors. In considering the question as to the advisableness, or otherwise, of the bank taking up this class of business there are naturally important points to be considered. Perhaps the most important is that it would be improper for a commercial bank to

lock up any portion of its deposits, or even its ordinary capital, in loans extending over long periods.

As banks have the machinery in existence that would enable them to conduct a lending business of this description more cheaply than any other organisation in the Dominion, we have decided, subject to Parliamentary authority being granted, to set up a department for the purpose of making long-dated loans on an amortisation basis.

Authority will be sought to enable the bank to raise £1,406,250 of new capital to be styled "Long Term Mortgage Capital," and also to raise by debenture issues as and when required three times the amount of this special capital. The debentures would be secured on the "Long Term" loans. The amount of loans outstanding would be limited to the amount of the new paid-up capital and debentures issued, and no deposits nor any of the present capital of the bank would be employed in this new line of business, except by way of a limited advance pending the issue of the new capital and debentures.

The dividend on the new capital will be fixed at 7½ per cent. per annum.

The rate of interest to be charged by the bank on the "Long Term" loans will be 6 per cent., and is not to be varied except under authority of an Order-in-Council.

Charging this rate of interest, it is evident we shall not net a return of 6 per cent. from the operations of the long term loan department, as working expenses, losses, and income-tax have to be provided for; but we shall ask Government, in consideration of our fixing the lending rate on these long term loans at 6 per cent., that the income from this department shall be assessed for taxation on a basis appropriate to the circumstances of the case.

We may reasonably hope to secure for the ordinary business of our bank some collateral advantages from these long term loans; but, whether we do so or not, the profit-earning power of the bank as a whole will be sufficient to pay dividends on the existing capital at present rates, as well as 7½ per cent. on the new capital.

In entering into this new activity, we believe and trust that we are serving the very best interests of the country.

THE OUTLOOK.

Although many of our primary producers have had an unprofitable year, mainly owing to adverse weather conditions, present prices for produce, as a whole, are remunerative to farmers who hold their land at its productive value. It is quite a mistake to suppose that many farmers in New Zealand are in difficulties—the percentage is by no means large. Unfortunately, however, many of those who are in difficulties are returned soldiers who certainly deserve a better fate.

Experience has shown that in some districts land has been brought into use that should have been left in its virgin state, for its actual value is less than the cost of the improvements effected.

The Minister of Lands is dealing with the position in regard to land leased from Government in a manner entirely praiseworthy. A successful farmer himself, his views, which he makes known with refreshing freedom, must carry weight with farmers.

During the past year there has not been much demand for farm land, and not many would-be buyers are able to pay a reasonable proportion of purchase money in cash.

Except in a few districts it looks as if the country were in for a hard winter. To aggravate matters the general strike in Great Britain will doubtless result in a reduction of her purchasing power, which must to some extent affect the prices of the season's produce.

There is, unfortunately, in the Dominion rather a tendency to take a gloomy view of the situation whenever a set-back is experienced, and also a tendency to become extravagant when times are good. Ups and downs are inevitable—it is the average that has to be reckoned with.

To gauge truly the conditions of any country one must take a long period of time into consideration. In the case of our own country, looking back over the years, one cannot but be deeply impressed with the steady march of progress and prosperity. Although for the moment that march has somewhat slackened, there is not the slightest doubt that in the comparatively not distant future it will be renewed and quickened with fresh life and vigour.

Let me close this survey with a reminder, although it may be a repetition of what I have previously said, that as we in New Zealand depend on the Mother Country for so much of our material prosperity, it is our bounden duty, not only as loyal citizens of the Empire, but in absolute self-interest, to assist to our utmost the trade of Great Britain by purchasing British goods; in so doing each individual may help, be it ever so little, to unite and strengthen the commercial bonds of Empire.

MR WATSON'S REMARKS.

Mr Watson said:—

I have pleasure in seconding the motion for the adoption of the report and balance-sheet, and I congratulate you on the

position of the bank, which has been fully dealt with by the chairman.

Your elected representatives on the board of directors, Mr Gibbs and myself, have gone carefully into the question, explained by the chairman, of making a special issue of shares and debentures to enable the bank to undertake the business of long-dated loans, on the amortisation principle, and we are of opinion that such a new departure, carefully conducted, will be in the distinct interest of the shareholders of the bank and of the people of the Dominion generally.

The excellence of the bank's staff of officers in their various spheres warrants confidence as to the continued progression of the institution.

Thirty-two years ago a considerable amount of odium was cast on the directors and staffs of banks owing to the losses made with customers. Knowing how perilous the times were then, I did not join in the adverse criticism levelled against the previous directors of the Bank of New Zealand, as was evidenced by my 21 days' examination before the Parliamentary Committees. After the removal of the head office to Wellington, however, all available measures were taken to avoid a recurrence of past misfortunes. For several years none of the profits were paid to shareholders, which body did not then include the Government, and afterwards only small dividends were paid until, by additions to reserves, disclosed and internal, the bank was in a strong position. Other banks adopted the same principle of amassing reserves, and as all joint stock banks belong to numerous shareholders who work and save, it is surely not to the loss of the public that from their reserves the banks are enabled to augment their dividends. Yet by some critics the success of the banks has been referred to in harsh terms, and I am inclined to think that those who now blame for our prosperity have much in common with those who before-time blamed for adversity. Thank goodness, they are a very minor section of the community. While wages, and prices of most other services, have risen very materially, and the expenses of the banks have increased in accordance therewith, the public do not have to pay much more than before the war for banking service.

The strength of a bank is to the benefit of its depositors in providing undoubted security for their deposits; to borrowers in affording confidence against pressure so long as they fulfil their obligations; and to buyers of exchange in giving safety in the conduct of their business.

To joint stock enterprise must be conceded an important part of the prosperity of this country, and it may not be too much to say that the Bank of New Zealand has been foremost in that particular. Its funds have been employed in the development of land and trade and in assistance to public bodies, and there are many companies and individuals to-day in good positions which they owe to its backing. With increasing strength its functions will undoubtedly expand to the further benefit of the community.

I have been associated with the bank since 1894, when the head office was transferred to Wellington. My present period of office will expire on March 31, 1927, and I am emboldened to seek another renewal of the confidence which you have so long placed in me, and to stand for re-election as a director in December next.

The report and the balance-sheet were unanimously adopted.

A motion increasing the directors' remuneration having been passed, a vote of thanks to the general manager and staff was proposed by the Chairman and duly carried, and after the general manager had replied the proceedings terminated.

NOBEL INDUSTRIES, LIMITED.

EFFECTS OF THE COAL STRIKE.

DEVELOPMENT OF EXPORT BUSINESS.

The seventh annual general meeting of Nobel Industries, Limited, was held, on the 17th inst., at Winchester House, Old Broad Street, London, Sir Harry McCowan, K.B.E. (chairman and managing director) presiding.

The secretary [Mr W. H. Coates, LL.B., B.Sc., (Econ.)], having read the notice convening the meeting and the auditors' report,

The Chairman, in the course of his speech, said: The year 1925 in its opening months was one of considerable promise, but the hopes which were so widely entertained at the commencement of the year of a substantial rate of improvement in the general trade situation were, I am sorry to say, not realised. Two outstanding events characterised the year, namely, the return to the gold standard and the development of a critical position in the coal mining industry. The gradual readjustment in a downward direction of the price level throughout the year, arising from the former, made its effect felt upon export trade, in which, of course, the shipment of coal abroad was adversely affected, necessarily reducing the consumption of explosives in the coal mines of this country, and the prospect of trouble in the coal mining industry cast a shadow of apprehension over the whole country.

SECURITY FIRST

ROYAL INSURANCE COMPANY, LIMITED

6 HEAD OFFICES: LIVERPOOL AND LONDON.

HOME TRADE.

The serious reduction in the output of coal in the United Kingdom which took place in 1925, amounting to some 26 million tons, or nearly 10 per cent. of the 1924 production, materially affected our home trade in explosives and accessories. Notwithstanding the added burden of cost per unit which arises inevitably from a curtailment of output, we felt that we should be justified, in face of the serious position of the coal mining industry, in drawing upon the strength which we derive from our other widespread activities, including our general industrial investments. Accordingly towards the close of last year we made a further reduction in the selling prices of our explosives, and although the price of explosives constitutes only a small item in the costs of the coal mining industry, we believe that our shareholders will unhesitatingly endorse the policy of their board in contributing their share towards the restoration of that industry to economic health.

Satisfactory progress has been maintained by our Birmingham businesses. Our products of sheet and rolled metal and strip, motor bicycles, radiators and carburettors, and lightning fastener have a high and well-deserved reputation for quality and efficiency. Detailed and continuous attention is paid to the maintenance and improvement of technical efficiency, with satisfactory results both to our customers and ourselves.

Our military ammunition continues to give satisfaction. It will interest you to know that at Bisley, in July last, Mr Ashdown, a member of our staff, created a world's record for the Elcho Shield by scoring 44 consecutive bulls out of 45 shots at 900 yards, 1,000 yards, and 1,100 yards with match rifle ammunition made by Kynoch, Limited.

FOREIGN TRADE.

Our general export business showed satisfactory progress during 1925, and our investments in associated businesses established on the Continent yielded us satisfactory returns. We continue to compete for European metal and ammunition business, although the extraordinary keenness of competition, assisted largely by the temporary advantages of unstable currencies, makes the return on such business for the time being almost negligible. We are, however, establishing a reputation for quality of our products in those European countries which we supply from our home factories, and as a result we anticipate greater success in this direction when the stabilisation of European currencies is completed.

The three great Dominion enterprises—Canadian Explosives, Limited, African Explosives and Industries, Limited, and Nobel (Australasia), Limited—in which we are so largely interested, are growing steadily, and are of a profitable character.

In the spring of this year I paid a visit to South Africa, when I had an opportunity of seeing each of the three factories of African Explosives and Industries, Limited, and of realising the high level of efficiency which they have attained. On the explosives side the relations of that company with the mining interests are of the best, and considerable satisfaction is felt with the reductions in prices which we knew would result from the concentration and consolidation of the various interests in that company. With the opening up of new mineral fields in Rhodesia, the demand for explosives will no doubt increase, so that the prospects in this respect are most promising. In the chemical field, including fertilisers, sheep dips, insecticides, &c., the outlook is excellent. Considerable expenditure is being incurred upon research work, and certain portions of the factories in Natal and Cape Province have been organised as experimental stations, to demonstrate the value of the use of fertilisers on the various agricultural products of South Africa. This development has been welcomed by the Government and the farmers generally, and has facilitated appreciation of what can be done on the soil with the aid of the proper fertilisers. The company has recently decided to increase its capital by £300,000 to finance the expansion of the chemical side of its business.

Nobel (Australasia), Limited, commenced business on January 1, 1925, and has had a satisfactory year.

The South American Explosives Company, whose factory is situated in Chili, continues to progress satisfactorily.

I have again to report continued progress on the part of Canadian Explosives, Limited. Mining developments are on a considerable scale, and it looks as if the mineral resources of that great Dominion have hardly yet been touched. In all branches of its business the Canadian company is doing well, and with its excellent organisation I have no fear for the future of that company.

DEVELOPMENT.

It is often said that industry organised upon a large scale tends to suffer from its own size, and to display accordingly a lack of keenness in initiative and development. I can assure you that the management of your company does not suffer from any lethargy of this kind. We have achieved much, but realise that there are still further fields of development in front of us. During the past year we extended our interests in the manufacture of artificial leather by the acquisition of a very substantial holding in the British Leather Cloth Manufacturing Company, which makes the well-known Rexine leather cloth. We have now, therefore, two factories engaged in this activity in Manchester, and we look forward to securing considerable advantages from the consequent fusion of interests.

In the paint, varnish, lacquer, &c., trade, we are developing the production of the well-known Du Pont Viscolac hard enamel for motor-car bodies and other articles, under the name of "Belco." This product is giving great satisfaction to the motor trade, and the demand for it is increasing rapidly, not only in this country, but in other Empire markets.

Some time ago a fusion of interests in the motor accessories trade took place as between Messrs Joseph Lucas, Limited, C. A. Vandervell and Co., and Rotax Motor Accessories, Limited, in the last-named of which we had a substantial shareholding. In the transaction we exchanged our ordinary shares in Rotax Motor Accessories, Limited, for shares in Joseph Lucas, Limited, and we shall therefore share in the advantages which will undoubtedly accrue from this combination of interests.

Before the war Nobel's were associated with important German manufacturers of explosives. This association has now been renewed through our taking a shareholding in the Dynamit-Actien-Gesellschaft and the Köln-Rottweil Company. As a matter of interest, and as it is now more or less public property, I may say that the above companies have entered into a close alliance with the Badische Anilin und Soda-Fabrik—in our opinion an excellent arrangement.

INVESTMENTS.

General Motors Corporation: The progress achieved in 1925 by the General Motors Corporation, in which, as you know, we have a substantial interest, was phenomenal. The total number of cars and trucks sold amounted to 835,902, or 42 per cent. in advance of the figures of the previous year. The total earnings of the company (including its equities in subsidiaries) rose to \$116,000,000, thus putting the corporation in the third place in this respect in the whole of American industry. The earnings available for the common stock in 1925 were nearly \$99,000,000, as compared with \$38,000,000 for the preceding year. The total earnings of the corporation for the first six months of the current year were approximately \$100,000,000, so that this year's earnings will undoubtedly surpass the remarkable figures of 1925. American industry, like our own, is always subject to trade cycles, and we accordingly took a favourable opportunity last autumn to realise a part of our holding and to apply the proceeds to strengthening our balance-sheet value of this investment against any such contingency. On my recent visit to America, advantage was taken of the market to realise a further part of our shares at a handsome profit. We still retain, however, a very substantial holding in the company.

Dunlop Rubber Company: In this company also we have realised a further part of our holding at a satisfactory profit. We are, however, still substantially interested in the fortunes of the company, which, we are glad to observe, is making good progress.

British Celanese, Limited: The unfortunate dissensions in this company had their inevitable effect upon the market value of the shares, and we accordingly took the prudent step of writing our holding down to our estimate of its market value. Since then we have disposed of our preference shares.

Our other industrial investments, taken as a whole, continue to give us a satisfactory return.

THE BALANCE-SHEETS.

The profit of Nobel Industries, Limited, for the year amounts to £1,091,919, which compares with £1,003,420 for 1924. After anxiously weighing the likely duration of the coal stoppage, your board decided to recommend a dividend of 10 per cent. for the year on the ordinary shares and one of 5 per cent. on the deferred shares. The progress which had been made in safeguarding our position against temporary market fluctuations in the values of our industrial investments enabled us to dispense with the special investment reserve account, and to carry the £550,000 which stood to its credit to general reserve. We recommend you further to strengthen this reserve by allocating to it £450,000, thus bringing the total general reserve to £1,000,000.

Your company is a holding company, and one which carries on no trade or business of its own. As a separate legal entity it is only under the obligation to publish its own legal balance-sheet, treating the shares it holds in other undertakings as investments.

I have in recent years given you a statement showing the financial position of the merger regarded as a single business in the consolidated account. This year I am enabled to go a step further and present you with a consolidated balance-sheet of the whole of the merger. This balance-sheet covers the assets and liabilities of Nobel Industries, Limited, and of each of the constituent companies. Following the definition we have adopted, it includes the figures of 40 constituent companies as compared with 30 for the previous year.

In the special circumstances of last year, during which we realised, as I have said, some of our holdings, and had not reinvested the proceeds at December 31st, I will ask you to take the items of investments and cash together. On this basis the 1925 total of approximately £11,079,000 compares with £11,161,000 for the previous year, showing a decrease of only £82,000. I may add that since last December we have adjusted the temporary excess of cash by further investments. All the investments are taken at or under cost. The value placed upon them as a whole is conservative. For those for which market quotations are obtainable the value at the date of the balance-sheet was above that shown. For those shares, mainly in associated companies, where there is no market quotation, we are amply satisfied as regards the value we have adopted.

On the liabilities side I will go at once to the final item of surplus of assets over liabilities and share capital. This consists of the reserves and undistributed profits of the main company and its 40 constituents applicable to the share capital of Nobel Industries, Limited. Deducting the cost of the debenture issue, we are left with a surplus of £2,690,872 on the whole group, which is attributable to that share capital. This figure, of course, includes the general reserve and balance carried forward on profit and loss account of Nobel Industries, Limited. It may be compared with the surplus at December 31, 1924, amounting to £2,495,012, or an increase of £195,860. I am happy to be able to describe the surplus shown at December 31, 1925, as a real margin of asset value after dealing with all contingencies which your board can measure or reasonably foresee.

PENSION SCHEME FOR CLERICAL AND TECHNICAL STAFF.

Shareholders will recollect that last year I informed them that we were considering the establishment of a pension fund, and I am now able to submit to you the outlines of a scheme which has received your board's approval.

We contemplate the establishment of one pension fund for the male and female staff of the parent and constituent companies. As that staff numbers some 1,800 men and women, we have ample strength to organise a fund as a separate entity in the hands of trustees. We propose to establish it upon a contributory basis. Your directors are convinced that the inauguration of this scheme will yield real economic value to your interests, and they accordingly recommend it for your approval. If you pass the resolution which I shall shortly submit to you, no charge will fall upon the trading results of the present year (1926), as it is proposed to start the scheme from January 1, 1927.

PROSPECTS FOR 1926.

The early months of the year were full of promise, notwithstanding the under-current of apprehension of the situation in the coal-mining industry. Had a satisfactory solution of those difficulties been arranged, I should have been able to assure you that the results of our business for the current year would almost certainly have compared favourably with those for the year 1925. Unfortunately, we have had the serious dislocation caused by the general strike, and the slowly paralysing effects of a 20 weeks'

In La Paz and Concepcion the drilling programme has been continued, but although the oil found is of superior quality, the results as regards quantity have been somewhat disappointing, and we shall probably curtail our programme to some extent. The gas pressure has fallen in both fields, and pumping outfits are being installed.

We are also investigating the possibilities of the Sibucara district, where an exploration well was spudded in on February 16th. This well has now reached down to 1,652 feet, and has produced a large volume of gas from two separate levels. Drilling is being continued.

Our pipeline systems, both for oil and water, and our shipping facilities have operated without interruption. In spite of an exceptionally severe dry season the new Rio Palmar water supply system has proved quite adequate, and in addition to our own requirements we have been able to assist the people of the Maracaibo district during the drought, and have received public appreciation of our services therein.

LARGELY INCREASED CONSTRUCTIVE PROGRAMME.

What I have told you as to our largely increased drilling activity and production has its natural corollary in a largely increased constructive programme.

Oil and gas gathering lines and water and fuel distributing systems have been installed to serve the four kilometres of La Rosa-Cabimas coastal drilling, and connecting with the interior La Rosa field and the new Ambrosio field.

The work on our new terminal at Cabimas has progressed satisfactorily, and the steel screw pile wharf has been completed. Direct shipments are now being made to Cabimas from Europe and America, obviating the loss of time and additional expense involved in transshipment at Maracaibo. Extensive housing facilities, machine shop, carpenter's shop, electric power plant, warehouses, and offices are in course of erection. Additional housing facilities have also been built on the La Rosa field itself for the accommodation of the increased staff. The four storage tanks referred to in the directors' report have been completed, and are in use, and three additional tanks of 67,500 barrels capacity each have been constructed.

Plants have been ordered and will soon be erected to treat the large volume of gas produced in the La Rosa field. The residue gas will continue to serve for fuel purposes, and in spite of the heavy increase in our La Rosa-Cabimas Ambrosio operations, the consumption of crude oil for fuel purposes is being steadily diminished.

IMPROVED PRODUCTION METHODS.

Improvements are being made in production methods by the installation of gas separators and individual well production tanks to avoid evaporation and other losses occasioned by flowing the wells into open sumps.

In the Shore Lagunillas Field a separate terminal is under construction. This consists of a material and oil loading wharf, pumping station, steel storage, staff and peon quarters, warehouses, &c. The creation of these facilities is proceeding in such manner as to allow of the handling and shipment of oil produced from our first well immediately upon its completion. The work has been planned with a view to gradual extension of facilities as the development of the field may justify.

As you will remember, the amount of oil contracted for sale to the Caribbean Petroleum Co. under the Sale of Oil Agreement of September, 1924, was raised to 7,000,000 barrels per annum in January of this year. In consequence of the continually increasing production this was again raised in May to a total of 12,000,000 barrels a year. Shipments have been maintained so that at present the buyers have taken delivery somewhat in excess of their contractual obligations.

The price realised for your oil is calculated as before on the same sliding scale based on the Tampico price, and for 1925 was about 2s 8d higher than for the previous year.

FURTHER CAPITAL REQUIRED.

Now all this development and expansion of which I have treated, and which even now is not at its height, cannot go on without great capital expenditure, and as you will have no doubt realised from the balance-sheet the liquid resources of the company are practically exhausted. At the same time the present large programme is giving such results that it would be folly to curtail it for lack of funds. We shall therefore recommend in due course the raising of fresh capital by the issue to the existing shareholders

stoppage of the coal mines. The prolonged stoppage has entailed us closing down, either wholly or in part, several of our explosives factories, and has also affected our activities in other interests. As a result, we cannot expect that the outcome of our actual trading for the current year will be as favourable as last year. On the other hand, we look for a further improvement in the income we shall receive from our general industrial investments, arising partly from that marvellous degree of prosperity in the United States which has been at once the envy and the wonder of the world. In the present uncertainty you will not expect from me any forecast of the outcome of 1926. All I can say is that we shall not lightly abandon the level of dividends paid this year.

The report and accounts were unanimously adopted.

V.O.C. HOLDING COMPANY, LIMITED

IMPROVED POSITION.

DIVIDEND PROSPECTS.

The fifth ordinary annual general meeting of the V.O.C. Holding Co., Limited, was held, on the 14th inst., at Winchester House, Old Broad street, London, Mr Andrew Agnew, C.B.E., presiding.

The Chairman, after explaining that he occupied the chair that day in the absence of the chairman of the company, the Hon. Walter H. Samuel, owing to a recent bereavement, proceeded to read the speech which had been prepared by Mr Samuel, which contained the following statements:—After taking credit for interest received and accrued and transfer fees for the year, amounting in all to £44,600 8s 4d, and charging against this sum the balance of our administration expenses as at December 31, 1924, administration expenses for the year 1925, and the amount written off preliminary expenses account, &c., we are left with a balance to the credit of our revenue account. The result of the year's operations is a net profit of £237,805 8s 1d, subject to taxation, and we propose applying it to the extinction of the loss standing at the debit of the profit and loss account as on December 31, 1924. The result is that we are left with the sum of approximately £2,500 at credit of profit and loss account, which will be carried forward to next year's account. I think that, generally speaking, the results for the year 1925 may be regarded as very satisfactory. We have eliminated from the Holding Company's balance-sheet the assets which are valueless, and we are now in a position to credit all future net earnings to revenue. This being so, we are hopeful of being able to declare our maiden dividend when we see the actual results of the current year's work.

INCREASING PRODUCTION.

At the last general meeting of the company I foreshadowed a production of a million tons for 1926. You will be gratified to hear that we have already exceeded that figure, and at the present rate of production should be well over the million and a half ton mark for this year.

This much-increased production is the direct result of a greater number of drilling rigs at work, and is not attributable to larger wells. We have again concentrated for the most part on the La Rosa field, which has contributed about 90 per cent. of our production. At the end of 1925 we had 12 rotary rigs there, developing a continuous six-string drilling programme, and this has now been increased to 19 rigs working on a ten-string programme, in addition to the equipment for the necessary intermittent cleaning of producing wells. In 1924 we brought in nine producing wells in La Rosa, in 1925 twenty, and in the current year we have already brought in 43 up to September 4th, and hope to do better still. The offset agreement between the Lago Petroleum Company, the Venezuelan Gulf, and ourselves, to which I referred last year, has proved effective in providing for more economic and satisfactory development of drilling on our common boundaries, and its scope has been extended to cover the new developments at Ambrosio and Lagunillas, to which I will now refer. In order to make these developments clearer we have had a sketch map attached to the report, and you will see from it the location of the various fields.

WORK AT LAGUNILLAS.

I referred last year to the well being drilled by the Venezuelan Gulf Company at Lagunillas, which came in in May this year, and to our own development there. Our first well was spudded in on August 19th of this year, and we have completed all the necessary facilities, and have four rotary strings on the spot. We are also drilling two wells at El Mene de Lagunillas, about 14 kilometres from the shore; both wells have oil indications, but in view of the more pressing importance of concentrating on the Shore location, we are now suspending work on them, while leaving them in condition for deepening at a later date. At Ambrosio the Gulf and the Lago have both brought in wells about a kilometre out in the lake, and as you will have read recently in the Press, we have brought in our first well at about 240 tons a day.

of both ordinary and participating preference shares of new ordinary shares at par or thereabouts.

It only remains for me to conclude this review of your company's affairs by saying that in my opinion their condition is most satisfactory, and that to that satisfactory condition the splendid services of our staff have been a very largely contributory factor.

The report was adopted.

* Half-year.

† Tax free.

dividend on the 7 per cent. cumulative preference shares which was last paid on April 1, 1925. The company's trading results show some improvement, but the coal strike is seriously affecting turnover, and Continental competition is still very severe. No decision has yet been given by the authorities on the company's claim for return of income-tax."

WARDLE AND DAVENPORT.—The twenty-seventh annual report to June 30, 1926, shows a net profit of £61,084, against a net profit of £128,309 in preceding year. Including £37,393 brought forward from preceding year there is £98,477 available. The preference dividend absorbed £3,300, and the ordinary dividend £51,750. The sum of £10,000 is written off plant and machinery, and £33,426 carried forward. Cash and investments amount to £375,413, against £382,124. Stocks amount to £63,890, against £81,758. Debtors are at £90,788, against £112,999.

YORKSHIRE AMALGAMATED PRODUCTS, LIMITED.—The following is a comparison of figures for the years 1924-5—1925-6:

	Year Ended March 31, 1925.	Year Ended March 31, 1926.
The gross profits were	43,400	57,415
From which must be deducted the provisions for repairs and renewals and directors' fees and taxation	10,979	12,152
Leaving	32,421	45,263
Deduct—Debit interest paid and accrued	7,332	7,241
.....	25,089	38,022
Add—Balance brought forward from March 31, 1925	1,086	5,970
.....	26,175	43,992
Deduct—Interim dividend paid on the ordinary shares 3 per cent. actu al (less tax)	nil	6,016
.....	26,175	37,976

The directors recommend that this balance be disposed of as follows:—
To place to depreciation reserve fund (making same into £29,168 in 1924; £36,168 in 1925)

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions were favourable to agricultural operations in the United Kingdom, and good progress was made with field work and threshings. All good dry samples of wheat found a ready sale to millers at full to firmer prices. Foreign kinds in moderate request, but general tone firmer in sympathy with the forward position. In the floating and forward wheat cargo market, prices were advanced for all grades, chiefly due to the scarcity of tonnage from North and South America, and the sharp rise in freight rates.

Buyers, however, remained indifferent, so that general conditions were largely nominal. Maize, however, attracted better support, mainly on Continental account, and rates hardened while affected by the freight situation. Steamers of La Plata arrived and afloat sold 29s 6d, ditto ready to load also November-December shipment from 30s to 30s 4½d per 480 lbs c.i.f. terms. Wheat again dearer. No. 1 Northern Manitoba quoted 60s 6d, No. 2 ditto 59s, No. 2 hard winter 56s 6d, No. 2 red winter 55s, all ex-ship, choice white Karachi landed 56s, all per 496 lbs. English new 11s 1d-11s 3d per 112 lbs. Flour firm. London standard grade 47s, town whites 48s, patents 49s-50s per sack delivered in the home counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 45s-47s, Minneapolis 45s-47s, Australian 43s-45s 6d per 280 lbs ex-store. Maize firmer. Plate landed 33s 9d, ditto ex-ship 32s, Bessarabian ex-ship to arrive 32s 9d per 480 lbs. Barley firmly held, especially for feeding sorts. Californian 35s-43s, Chilean Chevalier 50s-57s, ditto brewing 35s 6d-46s, Australian Chevalier 45s-47s ex store, Smyrna 35s-48s ex ship per 448 lbs. No. 3 Canadian Western ex-ship 30s, Persian ex-ship 29s, Russian ex-ship 30s per 400 lbs. English new 8s 9d-15s per 112 lbs. Oats again dearer. La Plata landed old 24s 6d, new 23s 9d, ditto ex-ship 22s 3d, No. 2 Canadian Western landed 29s 6d, No. 2 Canadian feed landed 26s 6d, Chilean Tawny landed 24s, American 38 lbs landed 26s 6d, mixed feed landed 21s per 320 lbs. English new 8s 2d-9s 3d per 112 lbs. Millers' Offals maintained. Broad bran quoted 6s 6d, middlings 7s 6d, fine ditto 9s, bags included ex-mill, feed oatmeal 7s 9d, light oats 6s 9d, ground oats 12s per cwt free on rail. Oatmeal firmer. London made flaked 17s, rolled oats 16s, medium also fine cut 16s, coarse also medium pinhead 16s ex-mill per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1926-27, 1925-26, 1924-25, 1923-24:—

	1926-1927	1925-1926	1924-1925	1923-1924
Estimated sales of home-grown wheat—				
1 week to September 11	Cwts. 389,336	Cwts. 402,421	Cwts. 123,452	Cwts. 391,281
2 weeks to September 11	677,803	668,180	213,596	713,283
Average price of English wheat per cwt.	11 2	11 8	12 1	9 0

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1922 to 1925:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1926.						
Sept. 4	Cwts. 288,467	Cwts. 67,266	Cwts. 58,100	11 9	12 9	8 8
Sept. 11	389,336	124,119	71,527	11 2	12 9	8 6
1922	249,051	58,764	47,430	8 11	10 6	8 9
1923	391,281	232,449	57,376	9 0	11 9	8 9
1924	123,452	333,164	60,962	12 1	17 5	9 3
1925	402,421	199,038	72,238	11 8	14 4	9 8

AMERICAN WHEAT MARKETS.

Firmness has been the order of the day, the ruling factor being the continued rains in Canada, which are hampering crop movements. There is no great export inquiry as yet, and the rise in prices over the week represent predominantly speculative buying:—

	Jan. 2, 1925.	Sept. 17, 1925.	Jan. 7, 1926.	Sept. 9, 1926.	Sept. 16, 1926.
Winnipeg (No. 1 Manitoba)—Cents per 60 lbs	183	(a) 134½	160	(a) 132½	(a) 139½
Chicago (No. 2 Winter)—Cents per 60 lbs	177	(b) 151½	176½	(b) 131½	(b) 136½

(a) October delivery. (b) September delivery.
Visible supplies of wheat in Canada, at 11,457,000 bushels, show an increase of 482,000 bushels as compared with the previous figures. Supplies a year ago stood at 6,640,000 bushels.

COAL.

Our Cardiff correspondent writes:—The only important development in the coal market position this week has been revived activity in the chartering of tonnage for foreign coal. The failure of Mr Churchill to secure a three-party conference, and the complications which his mediation has caused, have deferred the hopes of an early settlement of the dispute, and consumers are now entering into contracts for the supplies of foreign coal extending up to the end of November. Moreover, prices for spot or prompt supplies at Cardiff have hardened appreciably, and American coals are now quoted at 50s per ton c.i.f. At some of the smaller pits in the South Wales coalfield work has been resumed under the terms offered by the owners. The output from these pits, though small, is increasing, and is helping to relieve the shortage.

IRON AND STEEL.

We have extracted the following from the weekly report of the London Iron and Steel Exchange:—Conditions in the iron and steel trades have improved somewhat, and the tone is more optimistic than for some weeks past. There has been also more interest shown in the market by buyers. There is still considerable difficulty experienced in obtaining pig-iron or steel materials for delivery before November. Only small quantities of British pig-iron are being produced, and these are sold at high prices. Continental producers have also advanced their quotations. The demand for semi-finished materials for working up in British mills continues active, but supplies appear limited and insufficient to meet the demand, which is principally for delivery within a few weeks. In the finished steel department there has been some buying by exporters, chiefly for the Eastern markets. The British works which are in the market have generally advanced their prices, while the Continental works' quotations are generally higher, although there is a wide disparity in the prices quoted both by Continental works and by merchant resellers. Several thousand tons of sectional steel material have been bought during the past few days, including a good tonnage of joists for export to the East.

Our Middlesbrough correspondent's report dated September 16th is as follows:—Pig-iron: Both buyers and sellers are unwilling to commit themselves too far ahead, preferring to await the trend of quotations. No. 3 G.M.B. is at present quoted 92s 6d per ton f.o.t., for next month's delivery only. Supplies of hematite are scarcer, but as there is no great demand East Coast mixed numbers can be obtained at the quoted price of 83s per ton, both for home and export. Manufactured iron and steel: Although small lots are being sold, there is a disinclination to book orders until the position is less obscure. The following are the nominal quotations:—Steel ship plates, £8; steel ship angles, £7 10s; iron bars, £11 15s; steel rails, £8 10s. Iron ore: Best Rubio is still nominally 21s 6d per ton c.i.f. Tees, but no business is being done.

Our Sheffield correspondent writes:—The position has become very difficult for the large firms producing open-hearth steel as foreign coal affords no solution of their problem, and only about six of the 70 furnaces have worked since the strike began. Manufacturers in the lighter branches are working at half capacity or more, but owing to the dearth and inefficiency of the fuel available they cannot get selling prices which cover the increased costs. Inability to produce special qualities of steel and castings due to the lack of good-class fuel is hindering the manufacture of engineers' small tools. No rails have been rolled since the strike, but a limited tonnage of tyres and axles is being turned out. Some orders for wire ropes have lately been received from the pits which are now working, and there is a fair demand for such material. The seasonal demand for plate and cutlery has begun, and increased activity is noticeable in all sections, particularly spoons and forks and stainless cutlery. Imports of cutlery are small compared with a year ago. New goods suitable for the Christmas trade are in request.

Our Glasgow correspondent writes:—Unfilled orders are now very considerable, and it only requires a return to normal fuel supplies to provide work for several months. Inquiries for two cruisers and a large repair ship from the British Government are in the hands of local shipbuilders. Several good engineering contracts have recently been placed locally, among the latest being:—12 superheater tank locomotives for Madras and South Mahratta Railway placed with the North British Locomotive Company, and an order placed by the New Zealand Government with Sir William Arrol and Co., Limited, of Glasgow, for the erection of new railway workshops. The contract price of the latter order is said to be in the neighbourhood of £200,000. Some brands of pig-iron are now unobtainable, and for the remaining stocks consumers are asked to pay up to 100s per ton. No fresh production is possible until after the coal dispute is settled. Steel works are quoting for delivery after works resume on the basis of £7 17s 6d per ton for ship plates. Bar iron is in steady demand, and supplies from works command high prices. Re-rollers of steel bars from foreign billets have increased their prices owing to the advance in Continental semi-raw material. Sheets are a steady market, both black and galvanised, with prices a fraction easier as sources of supply across the border widen.

Our Cardiff correspondent writes:—In the iron and steel trade tinplates are showing a firmer tendency, and manufacturers are in some cases guaranteeing shipments for next month. For immediate delivery prices are on the basis of 22s per box, while for shipment up to the end of October quotations are about 1s 6d lower. There has been a slight increase in the output, and stocks now amount to 45,540 boxes. Foreign steel bars are being imported at £5 10s per ton, and manufacturers are now relying principally on these. Galvanised sheets are a steady market at from £16 5s to £16 10s per ton.

OTHER METALS.

TIN.—The market ruled strong, though some irregularity was noticeable at times, due to profit-taking. Holders, however, generally adopted reserved measures in face of higher Eastern cables and purchases on American account, so that a substantial advance in prices was registered. Standard cash sold £308-£311-£307 10s and £317, finally £313, with three months £297-£301-£298, £305 and £303 5s. Sales in the East were reported at £307 2s 6d-£304 5s and £307 10s to £307 10s.

COPPER.—There was rather less activity in the standard market, and despite steady advices from America offerings were on a larger scale and rates the turn easier. Standard cash changed hands at £58 17s 6d-£59 2s 6d and £58 15s, three months £59 12s 6d-£59 17s 6d and £59 10s.

LEAD. generally firmer, with business on a fair scale. Good soft foreign pig, September, sold £31 17s 6d-£32 10s, October £31 15s to £32 7s 6d, November £31 13s 9d-£32 1s 3d, December £31 10s-£31 18s 9d ton.

SPELTER in generally quiet request, but prices for the most part remained steady. September sold £34 5s, October £34 7s 6d, £34 11s 3d, November £34 6s 3d, £34 10s, December £34 10s-£34 6s 3d-£34 8s 9d to £34 11s 3d, January £34 11s 3d per ton.

ANTIMONY quiet. English special brands quoted £74 10s to £75, and foreign £65 per ton ex-warehouse.

ALUMINIUM quiet. Home trade £118 per ton. QUICKSILVER firmer. Spot £16 per bottle.

WOLFRAM maintained. Forward 14s to 14s 6d per unit c.i.f. **TIN PLATES** steady on the basis of 22s 6d per standard box, for guaranteed October delivery.

BANKING FACILITIES.

THE Bank of London & South America, Ltd., provides a convenient and complete banking service to all who trade with Latin-American countries. With branches and agencies at all important points, the Bank undertakes every form of modern Banking transaction.

Monthly Trade Review & Status Reports sent on Application.

THE COTTON TRADE.

LIVERPOOL, September 16, 1926.

The spot demand continues good, that of outsiders being well in evidence. American futures show a fall of about 65 points, mainly due to the movement of the crop being felt and to hedge selling. Weather advices have also been better. Spot sales for the week 10th to 16th inclusive were 43,000 bales, of which 20,940 were American, 2,700 Brazilian, 9,750 Peruvian, 4,080 Egyptian, 3,350 African, 1,450 East Indian, and 730 sundries. Imports for the same period were 26,900 bales. These included the following:—11,717 American, 1,214 Brazilian, 5,226 Peru, 1,738 Egyptian, 4,918 African, 1,425 East Indian, and 663 sundries. Quotations to-day are American Mid., 9.54d.; Egyptian Sakel, 18.55d.; Uppers, 13.65d.; Brazil fair, 9.49d.; Peruvian G.F. mod.-rough, 11.00d.; smooth, 10.49d.; Tinnivelly, 8.40d.; West African mid., 9.19d.; and East African G.F., 10.90d.

MANCHESTER, September 16, 1926.

The market has been under the influence of a downward movement in American cotton prices. An unsettled feeling has prevailed, and buyers of manufactured goods have not been disposed to operate with any freedom. The cloth section has been distinctly quiet. A fair amount of inquiry continues to be met with from India, but actual business has been confined to small lots, chiefly in light fabrics. News from China has been discouraging, and the auctions in Shanghai have been suspended for two weeks. The turnover for the Near East and South America has been limited, but some makers of fancy styles have reported rather more demand for the Continent. American yarn prices have been easier and business restricted. Very little has been done in export yarns.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Once again wool is "top dog," and is dominating the market. The first real impetus was got from the big buying movement on Russian account a few weeks ago. This cleared a considerable weight of wool, and so strengthened the position of holders of stock. Then, when the new selling season opened in Australia, a wonderfully strong demand was revealed on Continental and Japanese account, and at the wool auctions in London this week the recent advances in raw material have been confirmed. In short, it is manifest that, apart from the requirements of this country and America—which are by no means heavy at the moment—there is a real machinery demand for wool in France, Germany and Japan, and these countries are operating extensively. In most cases Yorkshire importers are being outbid in the primary markets, and in London those who are compelled to buy are having to pay prices which the actual state of the home trade does not appear to justify. In other words, quotations for tops and yarns have been advanced in recent weeks, but even now are practically all below replacement costs, yet it is difficult, if not impossible, to induce users to pay more money for either tops or yarns. Users, therefore, are covering immediate needs and leaving the future to take care of itself, in the hope that values may ease somewhat when the first rush of buying by foreign countries has exhausted itself. All quotations are very firm, but the turnover leaves much to be desired.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The fifth series of wool sales commenced in Coleman street last Tuesday, when all sections of the trade were fully represented. A very sober tone was manifest in the bidding, but generally speaking anticipations were realised. The offerings for the day amounted to 11,800 bales, consisting of fairly representative offerings from most of the Australian States, with a liberal weight of crossbreds from New Zealand and Punta Arenas. Nobody showed any desire to push values beyond the levels justified by manufacturing conditions, and but for the lead given by France and Germany, these would have remained as in July. Judging from the prices paid, Continental representatives are able to obtain prices for tops, yarns, and pieces, which are more in harmony with the cost of wool than are topmakers, spinners, and manufacturers in the West Riding. It is also possible that French and German requirements are more pronounced than those of the home trade. In any case, competition on Continental account was most encouraging.

The bulk of the better-class merinos were fully 5 per cent. above the rates current in July, whilst even shabby greasy and scoured pieces, bellies, and locks often appreciated a little more than 5 per cent. Crossbreds showed generally a rise of 5 to 7 1/2 per cent. in fine classes, whilst medium and coarse mostly appreciated 10 per cent. Slipes also improved a good 5 per cent., whilst short and inferior second-class wools often advanced more, there apparently being a greater demand for these to-day for the woollen trade than in July. Puntas also appreciated fully 5 per cent., whilst the few lots of Capes sold showed a general advance of about 5 per cent.

Taking a survey of the auctions since the opening, there is very good reason to be satisfied with the freedom with which wool has sold and the prices paid. Mr Harry Dawson's report, published after the first sale, rightly observes that "There is a uniquely strong resistance against higher prices. The trade cannot continue to encounter new risks and further losses by paying high values for wool without any chance of getting their money back if put into tops and yarns." This statement should be borne in mind by the whole of the Yorkshire industry. So many influences are operating against the development of business at home, and export trade is still so unsatisfactory that the time is most inopportune for forcing raw material values.

THE JUTE TRADE.

Dundee, September 16.

Pending the final forecast, due in Calcutta on the 22nd, business in the jute trade is limited. In the first forecast in July last the acreage under cultivation showed that a record crop could be expected. Since then, however, rumours have been abroad, stating

that considerable damage has been done to the crop by insects and bad weather, and more than usual interest is being displayed in the figures to be issued next week. There has been great reluctance to sell, and prices

THE COMMERCIAL BANKING COMPANY OF SYDNEY, LTD.

(INCORPORATED IN NEW SOUTH WALES.)
SEVENTY-EIGHTH ANNUAL REPORT OF THE DIRECTORS FOR THE YEAR ENDED 30th JUNE 1926.
Presented to the Shareholders at an Ordinary General Meeting held at the Head Banking House, George Street, Sydney, on Tuesday, 27th July, 1926.

The Directors submit to the Shareholders a Statement of Profit and Loss and a Balance Sheet showing the Liabilities and Assets of the Bank on the 30th June 1926, and present the following Report:—
The balance at credit of Profit and Loss Account, after adding the amount brought forward, and deducting Interim Dividend at the rate of 10 per cent. per annum, paid on 22nd January, 1926, rebate on current bills and accrued interest on fixed deposits, reducing premises rate of 10 per cent. per annum, Income and other taxes, providing for bad and doubtful debts, as well as granting to the Staff a bonus on their salaries, and making an addition to the Officers' Provident Fund, amounts to £100,296 12 1
out of which the Directors recommend the following appropriations:—
To Payment of a Dividend for the past Half-year at the rate of 10 per cent. per annum £175,000 0 0
Transfer to Reserve Fund 170,000 0 0
Balance carried forward 55,296 12 1

During the year branches of the Bank have been established at Kurri Kurri, Mandurama, Tullibigeal, Waverley (Bondi Junction), and Weethalle in New South Wales, and Winton in Queensland.
LIABILITIES AND ASSETS (including London Branch Figures by Cable).

THE MONEY MARKET.

In the early part of the week supplies of floating credits were distinctly scarce, and short loans were in strong demand at rates ranging from 4½ to 5 per cent. on Wednesday, when a small amount was borrowed from the Bank of England, revenue collections apparently being partly responsible for the stringency. More comfortable conditions, however, prevailed on Thursday and

Preliminary Notice.

Applications for Shares will be received by the Bank of Ireland, Dublin and Branches, or they may be lodged with their Agents, the Bank of England (Branch Banks Office), London, E.C.2.

LONDON IRISH TRUST, LIMITED

yesterday, and short loans were obtainable at 4 per cent. The discount market, though quiet, has remained firm throughout, three months' bills seldom being taken below 4½ per cent. The weaker tendency of the American exchange and the prospect of further gold withdrawals are no doubt primarily responsible for the firmness of discount rates, though the market also fully realises that it is working on a narrow margin of credits. Yesterday's Treasury bills were allotted at an average of 4 21-32 per cent., which was practically the same as last week.

	Sept. 24, 1926.	Sept. 17, 1926.	Sept. 10, 1926.	Sept. 3, 1926.	Previous Rate and Date Changed.

Thursday's bank return showed an increase of £80,200 in the stock of coin and bullion, and a decline of £479,900 in the note circulation, so that the Reserve was £560,100 higher. The Proportion, however, was unchanged at 30.2 per cent. Public deposits rose by £4,105,700, and Other deposits were £2,530,800 lower, Government securities having increased by £1,260,000, while Other securities declined by £237,400. Currency notes for the week were reduced by £2,184,500 to £287,387,800, which includes £1,295,000 for notes called in but not yet cancelled. The fiduciary issue is £229,842,900, or £18,059,600 below the maximum for 1926.

NEW YORK MARKETS.

After an anticipated hardening in the Stock Exchange the call rate has relaxed to about 5 per cent., which is the general rate for other important forms of money. The present feeling is that, with speculation checked, the Federal Reserve authorities may be satisfied with the existing rate structure. Meanwhile the Federal Reserve statements show a large increase in discounts, which partially offsets the big drop in the holdings of Government securities. These post-tax date changes leave total earning assets considerably lower, and the System's reserve ratio is up 1.5. Industry is still maintaining its high activity, while the decline in the Bureau of Labour price index shows an absence of inflationary tendencies. The Florida disaster has had little market effect, a small part of the loss being insured. In connection with the Government estimate of a cotton crop of over 15,800,000 bales, it may be noted that the practice of adding the minimum and maximum estimates is discounted. The renewed reports of the flotation of German railroad securities is considered premature.

THE STOCK MARKETS.

Although there was some slight decline in the activity of the mining sections, general business in the Stock Exchange showed a tendency to expand this week. On Wednesday a rumour of a coal settlement produced a brighter tone all round, but its proved falsity, coupled with hardening money rates and the rather unexpected appearance of a big New South Wales loan, caused some relapse in gilt-edged issues. The foreign market was quiet, while Home Rails improved temporarily on the coal settlement rumour. The rubber share market was decidedly firmer on the rise in price of the raw material, but the oil market attracts little interest. The general industrial markets provided few points of special interest, but tobacco shares were hard, Courtauld's irregular, and Hudson's Bays again in request. In the Kaffir market attention was confined to a small group of companies, while the tin share market suffered a relapse on the fall in the price of the metal. Underwriters of the Portsmouth Corporation £850,000 5 per cent. loan were left with 18 per cent. of the issue, and of the La Guaira Harbour £100,000 6½ per cent. second mortgage stock with 40 per cent.

THE COMMODITY MARKETS.

The commodity markets have been affected by the quickening tendency of business customary at this time of the year, but trade is far from satisfactory in some cases, owing to the absence of a coal settlement. A scarcity of fuel has been reported from several centres this week, and considerable price increases have occurred, America and Westphalian coals fetching 55s a ton at Cardiff for immediate delivery, while supplies for domestic consumption rule as high as 70s. Fresh orders have been received for iron and steel products, but the heavy side of the industry remains out of the picture as far as actual production is concerned. Cotton prices have fallen on the issue of a new official American crop estimate, but wool continues exceedingly firm on heavy Continental buying. The latest jute estimates are the highest on record, but prices have not yet fully responded to this factor. The wheat markets have been quiet, though prices are steady as a result of firmness overseas. Sugar shows a new advance, on heavy requirements for home consumption, but coffee is quiet, and the lower grades of tea show a slight decline. Rubber is dearer, the absorption of off-grades, in particular, having been on a large scale. Among non-ferrous metals, tin has reacted after its recent prolonged rise, and copper and lead are easier.

FOREIGN EXCHANGES.

After a quiet opening the foreign exchange market was rather more active towards the end of the week, but, beyond a further hardening of the yen, a rather unexpected set-back to the Belgian franc, and a further weakness in the Paris rate, there was nothing of an exceptional nature. Sterling was weak for a time against the dollar, but regained strength towards the close; the peseta reflected the varying rumours of events in Spain, and the lira recovered from the decline which affected it during the past ten days. New York opened on the 17th at 4.85½-½, and maintained that level the following day. On Monday there was weakness at 4.85½-½, and this was accentuated next day, when a rate lower than 4.85½ was touched during the day, this level being, however, regained at the close. The 22nd saw a recovery to 4.85½-½, which is attributed to the supposed improvement in the prospects of a coal settlement here. Next day there was a decline to 4.85½-½, and the rate yesterday was back to a little below that figure at 4.85½. Forward rates are ½, 1½, and 3 premium for one, two, and three months. Paris opened at 172-172½, and was fairly steady about these levels at the end of last week. On Monday, however, weakness set in at 173½-½, after touching 174½. On the 21st further weakness was evident, the opening rate being 174 and the closing 176½. Forward rates were also weaker at 10½ discount for three months, as against 9½ on the 17th. The 22nd saw a recovery to 174½-½, after a weak opening of 177½, forward rates remaining as on the previous day. On the 23rd there was more steadiness, and fluctuations were only between narrow margins, probably as a result of a more favourable Banque de France return showing a reduction in advances to the State of 450 million francs and of 406 million francs in the note issue. Yesterday's rate was 175½, with forward rates at 3½, 6½, and 9½ discount for one, two, and three months. The instability shown by the franc during the week was due largely to purely commercial causes, including a falling off of the supply of dollars from the tourist traffic and a simultaneous demand for sterling from French importers, but it is an open secret that the opposition is strong in France itself to many of M. Poincaré's stabilisation proposals, and the immediate prospect for the franc is therefore regarded by many as difficult. Belgian francs, as stated, showed unexpected weakness, apart from their sympathetic movement with Paris, and went out from the opening level of 177½ on the 17th, to 184½ on the 21st; but, after touching 187 on the 22nd, closed on that day at 184½, and improved on the 23rd to 182. Yesterday's rate was 182½, with forward rates 2½, 4½, and 7½ discount for one, two, and three months. Amster-

dam opened very firm at 12.11, but weakened to 12.11½ on the 23rd, and was 12.11½ yesterday, a premium of 1, 1½, and 2½ florins being asked for one, two, and three months. Switzerland is a shade harder at 25.11, against the opening level of 25.11½, and Italy also is firmer at 131½, against the opening rate of 133½. The peseta fluctuated a good deal in response to political rumours, and after opening at 31.90 on the 17th, went to 32.02 on the 20th; it then recovered to 31.92 the next day and to 31.82 on the 22nd, but settled down at the opening level of 31.90 on the 23rd. Berlin, at 20.37½, is back at its opening level, after weakening to 20.38 on the 22nd, on top of a recovery to 20.36 on the 21st. Yesterday's forward rates were 2 marks and 6 marks discount for one and three months. None of the other Continental currencies call for comment. The South American currencies showed little variation during the week. The milreis is fractionally weaker at 7 15-32d, and the peso unchanged at 45½. In the Far East the Japanese yen showed renewed firmness, and after opening at 1s 11 31-32d on the 17th, went to 2s 0 3-32-5-32d on the 20th, but settled down rather lower at 2s to 2s 0½d yesterday. The silver market was heavy in tone, and inclined to weakness. China was a steady seller throughout, and but for the fact that India came in on Tuesday as a buyer and continued to buy on the 22nd and 23rd, prices would probably have gone still lower. The rupee remained steady at 1s. 5½d throughout, but the Chinese exchanges reflected the decline in silver, Hongkong weakening from 2s 2d on the 17th to 2s 1½d, and Shanghai from 2s 9½d to 2s 8½d. Singapore remained unchanged at 2s 3½d-2s 4d.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended September 18th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		£	
Supply Services	7,400	From Revenue	18,567
Interest, &c., on Debt	783		
Sinking Fund	313		
Sundries	178		
Increase in Balances	131		
Decrease in debt	9,762		
	18,567		18,567

Revenue amounted to £18,566,800, against £13,825,100 during the corresponding week last year. This increase in revenue is presumably due to contributions from France and Italy, which resulted in receipts from sundry loans yielding £4,003,800, against nothing in the corresponding week last year. Customs yielded £1,559,000, against £1,455,000, and Excise £8,323,000, against £7,636,000. Property and income-tax produced £2,251,000, against £2,271,000, and Super Tax £290,000, against £340,000. The week's operations reduced the National Debt by £9,762,000, and caused the following changes:—

(000's omitted.)		£	
Public Department Advances ..	9,850	Treasury Bills	+ 388
Sundries	30		
	10,150		+ 388

The floating debt was reduced by £9,490,000 to £759,911,000.

FINANCIAL YEAR, 1926-1927 (April 1 to September 18, 1926).

£		£	
Total Expenditure ..	363,975,544	Raised by Revenue ..	306,133,987
		Decrease in Balances ..	3,948,727
		Amount borrowed ..	53,892,830
Total	363,975,544	Total	363,975,544

ESTIMATES for FINANCIAL YEAR 1926-7.

£		£	
Expenditure	825,727,000	Revenue	824,750,000
Deficit	£977,000		

† Revised in Exchequer Return dated July 26, 1926.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A fee will be charged (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a review of the results of the 1924 Wage Census in the textile trades of Great Britain.

COAL DEVELOPMENTS.

THERE has been "a certain liveliness" this week in the coal dispute. As we write, however, it all seems to be leading nowhere, except to the certainty that the return to work will be protracted and made with grudging and sullen acquiescence on the owners' terms. The end of October now seems to be an optimistic forecast of the date of final resumption in the exporting districts. While this result may for the moment make the owners "masters in their own house" and "eliminate politics from the industry," it will greatly increase the difficulties arising from uncorrelated wages and conditions in various districts, and will most certainly furnish the miners with powerful inducements to reorganise and fight again. The Government, on their side, will have been ignominiously dismissed by the owners, and, after having spent over £20 millions of public money in order to find a solution in which the interests of the nation would be the first consideration, and having subsequently repealed the Seven Hours Act at the behest of the owners, will in the end not be consulted as to the terms of settlement.

The latest development began with the return of Mr Baldwin, and the despatch last week-end to the miners of a letter in which the Prime Minister informed them that the owners refused a three-party conference, and confessed that it was "not within the power of his Majesty's Government to bring about a conference." He added, however, that a satisfactory settlement should combine district arrangements with national supervision, and that if the miners were ready to restart work on provisional district settlements the Government would legislate to set up a national tribunal; in any district where the provisional settlement involved a departure from the seven-hour day either party could appeal to the tribunal for a review of any matter in such settlement which has hitherto been dealt with in national agreements. The decisions of the tribunal would have the force of law. This plan changed the situation in some important respects. In the first place, it was a definite retreat from the position taken up by Mr Churchill, who had led the miners and the public to believe that he had a plan for carrying into effect his idea of district settlements based upon nationally determined principles. All that is left of this doctrine is the verbal assurance of Mr Evan Williams to the Prime Minister that "the coal owners in all districts are willing to observe the main principles that a national agreement would be designed to secure." This assurance the Prime Minister passed on to the miners; but we may well doubt whether they place much reliance on it, or even on the later announcement that in no district will wage minima be reduced below the 1921 figure, in view of Mr Evan Williams' repeated declaration that he has no longer any authority to speak for the districts. A second point is the limitation of the right of appeal to districts in which working hours are increased. But as the essential question of hours is not one of those on which the tribunal will be empowered to adjudicate, its function would be to see whether fair play in regard to wages had been observed in those cases where the industry took advantage of the legal extension of hours. This provision shows clearly that the Government is nervous about its commitments in connection with an Act which it has so frequently described as permissive only. But this provision does not in any real sense give

effect to those repeated declarations. There is one way, and one way only, by which the Government can carry out this view of the Act in the letter and the spirit, viz., to insist upon a clear option being placed before the men in every district as to the wages they could earn on seven hours or on some longer working day, and to provide for an official ballot in the district to which they refer. This is the only conceivable basis on which the Government's Act could properly be called a permissive one. A third and important point about the proposal itself, however, is that it clearly contemplates the possibility of statutory machinery for the determination of wages in certain cases. In other words, it assumes that the trade board principle may conceivably be applied to the mining industry.

It was inevitable that these proposals, of which the owners at once expressed their disapproval on principle and on the ground that before resuming they must know where they stood, should be rejected by the miners as being an abandonment of the policy the Government had adopted a week before, and as contrary to the views of the Royal Commission. After much heart-searching and discussion, the miners have themselves put forward their own concrete proposals, which are that they are prepared to recommend a return to the 1921 minimum wages as a basis on which there should be an immediate resumption of work, and that the terms of a new national wages agreement shall be referred to an independent tribunal, with instructions to take into account when drawing it up the recommendations of the Royal Commission, which, of course, permit district variations. As these proposals contain no conditions about reorganisation, or even a safeguard of the subsistence minimum rates, they are less favourable to the miners than the Samuel Memorandum or the Government's own proposals put forward in May. The Federation has, perhaps, not said its last word, for it might at this stage be prepared to concede the possibility of longer hours if approved in any district after an official ballot, as an alternative to very low wages. But the miners are hardly likely to throw in their last card since the owners are adamant in insisting upon complete freedom for the districts, and will agree to no settlement which has any semblance of a national character.

In the meantime the business world generally is counting the cost and trying to foresee how this deplorable dispute has affected trade prospects. Assuming that there is a general resumption during October, the loss of production in the whole dispute is likely to work out at from £250 to £300 millions out of a national income which (excluding National Debt interest) was between £3,600 and £3,800 millions in 1925. Such a loss has, no doubt, partly trenching upon savings (which were estimated last year at, say, £450 millions), and for the rest is reducing consuming power, which will show itself in the retail trade of all the most affected districts. These considerations must be taken into account by all who are disposed to think that because we have got on so well during the summer, the coal trade is much less vital to the country than it was thought to be. Such optimists should also disabuse their minds of the idea that this country could somehow readjust its economy on the basis of imported coal. For not only has our importation, as we showed last week, upset our trade balance, but it is only possible in an abnormal condition of the world coal market. The world's coal output is about 25 million tons a week, of which Great Britain produces over five million tons—or 20 per cent. The intake of the world's coal importing countries, plus shipping requirements, is normally about three million tons a week, of which Great Britain supplies $1\frac{1}{2}$ to $1\frac{3}{4}$ million tons. We are to-day rubbing along precariously with an import of a million tons. If imports on this scale—which is obviously quite inadequate for winter needs—were added for any length of time to other country's needs, there would clearly very soon be a world coal famine.

There are, however, grounds for optimism about the trade outlook—as the survey in our monthly supplement shows. World demand undoubtedly seems to be definitely expanding, and even in the "distressed industries" it seems that there should be some expansion this winter if the coal dispute can be cleared out of the way.

ITALY UNDER FASCISM.

In a recent article on "Mussolini and the New Roman Empire" in the *American Review of Reviews*, Mr Frank Symmonds describes Italy as the most dangerous spot in the world from the point of view of the maintenance of peace. Having restored the internal position, and having brought peace and prosperity to Italy, Fascism is out to make a new imperial nation. Expansion is over-due. Why, in justice, should France, with a decreasing population, and England, with a lower rate of increase, possess so many colonies, and Italy, with a population increasing at the rate of half a million a year, so few? Italy is the only European country which is not war-sick. Great Britain, France, Germany, are, for the present generation, at all events, pacifists. In Italy alone is the war psychology dominant. Banners, parades, and inflammatory speeches are the order of the day, and the idea of conquering a place among the great imperial nations is in the ascendant.

This view of present-day Italy (as we have briefly summarised it above), though in many respects a fair enough deduction from externals, is by no means the whole of the story. There are many competent observers who realise the existence of other motives, and see that Fascism considers it necessary every few weeks to seek a new means of giving the nation an impression of activity and energy which public opinion may favourably compare with the ineptitude and feebleness of the old Liberal Governments. The campaigns—we might almost say "stunts"—that have been started and discarded when of no further use are innumerable. The "battle of the lira," the campaigns over wheat prices, over oil, over exports, and the vigorous preaching of the doctrines of liberty of commerce and free initiative, closely followed by proclamations inculcating the omnipotence of the State, have served their turn; and when these internal problems began to bore the public, the Press has been directed to "new phases" of the Fascist revolution.

The suppression of the liberty of the Press, however, has resulted in quite a false impression of unanimity, and while it must always be recognised that playing with fire is a dangerous game, it is probably true to say that only a very small minority takes grandiloquent speeches and sabre-rattling performances very seriously. If the true state of the country were reflected in the Press, it would undoubtedly appear that the population is as war-sick and as pacifist as that of any other part of Europe. Moreover, even the Fascist Press has not been able to keep alive any sustained interest in foreign politics, but since the fall of the lira in June has repeatedly had to return to the questions of domestic interest which are of intimate importance for everybody. On many of these issues the Fascists have very little new to say. In the recent foreign exchange crisis, for instance, their first measure was to prohibit private dealings in exchange, concentrate dealings in a very few banks, refuse foreign currencies unless the request was accompanied by invoices for goods bought, &c.—plans which every Government during and since the war has endeavoured to put into force. And although it is the fashion to decry the efforts of previous Governments as old-fashioned or stupid, Signor Giolitti, in fact, has a much stronger claim than any subsequent Government to be the saviour of Italian finance. For it was he who abolished the bread subsidy at a stroke, and wiped out a budget item of five milliard lire, which, if it had been allowed to grow, would have reduced the Italian currency to the state of that of Germany.

The old régime succumbed because its last leaders were too concerned to win the approbation of the Catholic or Socialist groups, who refused the responsibility of taking office, but vetoed all liberal policies. The Government thus ceased to have any policy of its own, and at the same time failed to gain parliamentary strength. Giolitti in his time had been a dictator who had no hesitation in manipulating the elections to the Lower House, but he was always careful to maintain a respect for liberty and law, and did nothing to impair belief in Parliament and the monarchy.

These traditions, slowly built up over a long period of years, were shattered by the "march on Rome." Italy for centuries has been torn by factions. The chief result of 60 years of a united Italy has been the slow growth of the idea of the State as higher than the factions, and the substitution of peaceful methods for gaining power and office as against civil war. Moreover, as a result of over 60 years of parliamentarianism, Italy developed a Free Press. The most powerful newspapers were not party journals or the instruments of political organisations. They were commercial propositions endeavouring to sell the best journalistic goods—accurate news, non-partisan comments, and useful advertisements—to their customers. Their merits were not appreciated by the class of politicians who are always on the look out for subservient journals, nor were they to the taste of the great financial or trade interests, which found themselves unable to influence their policy. But to the country at large they were a real asset. The new régime has changed all that. To-day the liberty of the Press is gone. Nobody can publish news or comments adverse to Fascism, because the Government can, after two warnings, suppress any obnoxious newspaper. Almost all the old proprietors have been forced to sell their interests to new men, favourable to Fascism, and the few who retain their interests can do so only on condition of keeping silence or making favourable comments.

The political parties have been suppressed equally ruthlessly, with the exception that a certain licence has been allowed to the Socialists and Communists. For this, as far as we can see, there are two motives; firstly, to give to the outside world the impression that there are still political liberties left in Italy; secondly, to give to the public at home the impression that there is one alternative only to Fascism, namely, Bolshevism. There is incidentally much truth in this contention, for the more liberty is suppressed the more certain it becomes that the only alternative to tyranny is a policy of destruction.

It is notorious that under the new régime elections have in no sense been free; but in order to obviate risks the old electoral system has now been wholly abolished, beginning with the smaller municipalities in which the local authorities have been superseded by officials of the Central Government. The policy of suppression has been similarly applied equally to the Civil Service. In the olden days the independence of the Service was secured by a Public Service law, but this was regarded as an intolerable check on the powers of dictatorship. A law was, therefore, duly passed by virtue of which the Government can dismiss, without giving reasons, any public servant who is unfriendly to the present régime. The law expires at the end of the year, but there is no reason to suppose that it will not be renewed. The Magistracy and the Bar are under the same influence. Even the Supreme Court, which under the old régime had declared unconstitutional the method of legislating by decree, has accepted the doctrine that the constitutionality of decrees is a matter for Parliament, not itself, to decide.

It might have been thought that these achievements were enough, and that some liberty would have been left in the realm of business, trade, and enterprise. Even here, however, the new régime has stepped in, and, by the new plan of officially recognised corporations, is spreading the net of Fascism into every activity of life. Only employers and employed who are members of recognised guilds can sue or be sued, though the decisions of the courts and of the arbitration boards apply to members and non-members alike. No one can, however, become a member of the guild without first having been approved by the secretary, an officer nominally elected by the members, but subject to the approval of the Central Government. This officer is the real master of the guild. The inevitable result is that a scramble is in progress to get control of these extremely important organisations, and everyone who wishes to have any say in the fixing of wages and other vital economic matters is making parade of his devotion to Fascism. Employers, however, are becoming nervous that for the sake of popularity these compulsory tribunals will make them pay high wages, and they are beginning to look for compensation in the form of protective duties, large State contracts, and similar privileges.

This control system, however, would not be complete unless it included the professions, and it is, therefore,

being extended to embrace them. The teaching profession is under the menace of dismissal under the Civil Service law; and while it would not be possible to suppress altogether the dissemination of political philosophy except by proscribing all books as well as journals completely, teachers from the elementary schoolmaster up to the university professor are careful to keep silent about present political problems. The theory that silence is golden was never more practised anywhere in the world than it is to-day in Italy. We have seen it stated that at a Philosophers' Congress held at Milan in March last a professor dared to speak, in a very abstract way, in favour of liberty of speech and thought in the universities. At once another professor, who wore the Fascist badge, rose to say that freedom of speech and thought is certainly definitely desirable, but that the words spoken must be the truth; and since anti-national speech and thought is no true thought at all, it therefore must not be tolerated. And on this travesty of the doctrine of free speech the Mayor of Milan, who was also the Rector of the Milan University, dissolved the Congress.

Finally, when all other means fail, Fascism has resorted to outlawry. Italians who, either at home or abroad, speak against the present régime are liable to be deprived of their citizenship. The decision is in the hands not of judges, but of a body of public employees appointed by the Cabinet, who can, without being obliged to hear the accused man, decide that he is no longer an Italian citizen. This "Star Chamber" may temporarily seize his estate, and even confiscate it and reduce him to poverty.

It is deplorable that Fascism has resorted to such methods as we have described, for none of them were needed to achieve the great results which admittedly have been accomplished since the new régime took office. The Budget has been balanced, the railways, post and telegraph are running well and at a profit; great ports like Genoa are efficiently managed; the working-classes are contented and working well; public order has been restored and methods of education improved; efforts are being made to improve the backward regions of South Italy; great advances have been made with public works and roads, and the civic services of cities like Rome and Naples, are being overhauled. But tyranny was not needed to accomplish all this, nor was it necessary to institute a political conception which, it seems likely, will survive Mussolini. If the Prime Minister had been courageous enough to trust the nation he would have won the enthusiastic support of all Italians. Instead he has divided the nation into two parts, the silent section of which must inevitably be asking itself whether life was not as tolerable and the individual more free under the hated Austrian yoke.

THE PROGRESS OF HOUSING.

The most recent figures show that the progress in house-building still continues. In two years the output of houses in England and Wales was doubled, and in the present year the record of last year will be exceeded. The total number of houses completed during the last three full years was as follows:—

Year.	Houses.
1923-4.....	86,210
1924-5.....	136,889
1925-6.....	173,426

When the year 1926-27 commenced (on April 1st) 117,588 houses were under construction. From the end of the war and up to March 31, 1926, close upon 650,000 houses had been built in England and Wales, of which 392,000 were built with State assistance. Of the total of 173,426 houses erected during 1925-6 106,987 received a subsidy, whilst 66,439 were built without State assistance. On April 1st 81,008 State-assisted houses were under construction. Classified according to the schemes under which they were promoted, the number of State-aided houses built up to the end of last year was as follows:—

Addison	173,325
Chamberlain	131,302
Wheatley	19,800
Total	324,427

At the beginning of 1926 the position was as below:—

	Chamberlain (Act of 1923)	Wheatley (Act of 1924)	Total.
Number of houses included in definite arrangements	201,647	76,837	278,484
Number under construction ..	40,008	33,559	73,567
Completed	131,302	19,800	151,102

Of the houses completed under the Chamberlain scheme 93,535, or 71 per cent., had been built by private enterprise; whilst of the Wheatley houses 19,580, or practically all of them, had been built as part of local authorities' schemes. The latest return, showing the position of housing schemes on September 1, 1926, confirms the view that private enterprise is operating under the Chamberlain Act, and that municipal authorities are utilising the Wheatley Act. Though the latter has had a year's less run than the former, more houses have been erected by local authorities under it than under the Chamberlain Act; and there are far more Wheatley houses under construction by localities than Chamberlain houses, as the following table shows:—

LOCAL AUTHORITY SCHEMES (September 1, 1926).

	Act of 1923.	Act of 1924.
Number of houses included in contracts let or in approved direct labour schemes....	56,464	120,768
Under construction	9,945	44,881
Completed	41,627	52,542

On the other hand, only a handful of private enterprise houses are being erected under the Wheatley Act. The general position on September 1st is given in the appended table:—

	Act of 1923.	Act of 1924.	Total.
Number of houses included in definite arrangements	270,392	122,914	393,306
Under construction	53,002	45,547	98,549
Completed	185,030	53,436	238,466

During the first eight months of this year 53,728 Chamberlain houses and 33,636 Wheatley houses—or, in all, 87,364 State-assisted houses—have been built. Some measure of the progress of State-assisted houses may be obtained from the fact that in 1924 52,109 such houses, almost entirely Chamberlain houses, were built. In 1925 79,730 Chamberlain houses and 19,263 Wheatley houses, or 98,993 State-aided houses were built. This year's figure will certainly exceed this. Eight months have yielded 87,364 houses, in addition to which of the 98,549 houses under construction on September 1st 49,252 had reached the stage of being roofed in, whilst about the same number had been begun. It will probably be found that 150,000 State-assisted houses will be completed this year. If only 50,000 houses are built without State assistance, something like 200,000 houses will have been erected this year. This achievement will not have been secured by the extensive application of new methods of building. It is estimated that seven out of every eight houses built under the Acts of 1923 and 1924 are built of brick, by far the greater number of the remainder being of concrete construction.

There is, of course, a considerable bill to foot for this attempt to solve the housing problem. During 1925-26 the Exchequer subsidy amounted to £7,833,861, of which sum £7,280,702 was in respect of the subsidy under the Housing Act of 1919. During the current year provision is made for the payment of subsidy amounting to £8,487,000, an increase of £542,000. Since the end of the war, up to March 31, 1926, the total Exchequer payments of housing subsidies in England and Wales have been as follows:—

Housing, Town Planning, &c., Act, 1919.....	£ 35,460,782
Housing (Additional Powers) Act, 1919	9,493,155
Housing Acts of 1923 and 1924	632,886
Demonstration houses	14,000
Grants towards cottages for tuberculous ex-service men..	16,920
Total	45,617,743

This sum does not represent the total disbursements in aid of new houses out of public funds since the end of the war. To this must be added the contributions made by local authorities under the various assisted housing schemes. Under the Addison scheme the contribution of local authorities amounts in the aggregate to about £850,000 per annum. Varying contributions are made by them in respect of Chamberlain houses, whilst under the Wheatley scheme the maximum contribution required is £4 10s per house per year for 40 years. The aggregate cost of the houses produced under the Acts of 1919 was in the region of £200 million, whilst the Chamberlain and Wheatley houses built up to the beginning of September this year have probably cost about £110 million. So that over £300 million has been expended on houses under the various State-aided schemes.

Although much still remains to be done—and this is particularly the case as regards slum clearances and rural housing—the nation during a difficult period and in face of serious difficulties has made a substantial contribution to the settlement of one of its gravest problems.

THE AUTUMN OUTLOOK IN AMERICA.

(BY OUR NEW YORK CORRESPONDENT.)

WITH Wall Street swinging back into its stride after the holidays, optimism prevails with regard to the business outlook. Views on the share market differ materially, some holding that the prospects of active autumn trade suggest that money will be taken away from the brokers to the detriment of speculative activity in securities. But with regard to business, sentiment is uniformly cheerful. It is pointed out, for one thing, that employment is full and that wages are high; that, in short, public purchasing power is at the highest level attained since the war, and that there is nothing in sight to suggest its impairment. For another thing, it is pointed out that there are no signs of inflation in business. Hand-to-mouth buying still continues to be the rule; inventories are conspicuous by their absence. Commodity prices have tended downward since the end of last year, and at the present time are just about steady. Nor is there any loss of efficiency in business. The railroads are handling a record-breaking traffic without delay, and have on hand a comfortable surplus of good-order cars and locomotives. Meanwhile, although money is hardening, as is usual at this season of the year, there is no prospect of a credit shortage, any more than there are prospects of breeding a new crop of "frozen" credits. The country, in fact, is experiencing a remarkably healthy brand of prosperity, and is doing so with the aid of a first-class central banking system, something that was conspicuously missing before.

Most of these factors have been fairly evident for some time. More recently it has become apparent that the country is to enjoy the benefit this year of good crops. As at September 1st the Department of Agriculture estimates the total wheat crop at 838,000,000 bushels, an outturn which, if realised, will materially exceed last year's crop of 666,000,000 bushels. The average yield for the preceding five years is 802,000,000 bushels. Corn, as at September 1st, is placed at 2,697,000,000 bushels, as compared with 2,905,000,000 last year and a five-year average of 2,849,000,000. The oats crop is estimated at 1,263,000,000 bushels, as against 1,512,000,000 last year and a five-year average of 1,327,000,000. As for cotton, the Department of Agriculture sprang something of a surprise with its September 1st report by estimating a condition of 59.6 and a yield of 15,166,000 bales. The trade had expected the yield to be under 15,000,000 bales. Taken altogether, these estimates indicate that while the year's crops are not likely to be record-breaking, they will average out very well, and should furnish, as far as agriculture can, a basis for a continuance of prosperity. It is true that agricultural prices are in some instances unsatisfactory, and that certain agricultural districts are below par economically and financially. The existence of such a situation cannot, however, be called abnormal, and the indications are that the level of agricultural pur-

chasing power will not be substantially different from what it was last year. Similarly, it probably is true that talk of political unrest among the farmers is exaggerated. Unrest of this kind does exist, but it seems unlikely that with the existing high level of prosperity throughout the country the farmers as a group are likely to rush into the arms of the Radicals. Some swing back of the pendulum from the extreme swing to Coolidge Conservatism of the last big election is only natural; but that the pendulum will swing back all the way to Radicalism in the farming districts is wholly unlikely. The past week has furnished an instance of the way political forces are working in some of the Middle-Western States. In the Wisconsin primary elections the Conservative Republican candidate, Lenroot, was defeated by one of the Radical La Follette men. On the other hand, however, the La Follette candidate for the Governorship was defeated by a more Conservative opponent. Lenroot made a better run than had been anticipated, while the main result of the election is the indication that young La Follette will lose his grip on the Republican organisation, a grip that his father held so long.

Most lines of industry have begun to feel the stimulus of autumn demand. While during the summer some forebodings were heard among steel men that the high rate of operations maintained in what normally are slack months possibly meant that the industry was "borrowing" from the autumn, and that the customary increase in operations toward the end of the year would not take place, indications now point to greater activity. It is true that the unfilled tonnage report of the United States Steel Corporation showed a decrease of 60,187 tons in August, against a slight increase in July, but a decrease in August is not unusual, and shipments during the month were maintained at a high rate. The changed custom of steel consumers of ordering only on a hand-to-mouth basis has, furthermore, given people new ideas as to the significance of unfinished business on steel company books. The fact that the August steel ingot output was 10 per cent. above that of the previous month, and averaged close to that of the preceding seven months, is regarded as more important than the loss in unfilled tonnage.

So far as the remainder of the year is concerned, no considerable increase in ordering may be expected from some of the principal consumers of steel, such as the building industry and the automobile trade; but the railroads and farm implement makers probably will take a larger amount of steel. At any rate, steel men make the point that the use of steel has increased to such an extent that replacement business alone insures a steady and larger demand. Meanwhile prices are being well maintained, and favourable earning statements for the third quarter are anticipated.

Reports from the motor industry also are on the whole favourable. One or two of the smaller companies have omitted dividend payments, and one fairly large producer has cut prices. These events, however, merely call attention to the trend in the trade—namely, that buying is going more and more into a few channels. It would not be surprising if the coming year saw the demise of a number of manufacturers, and also amalgamations, although replacement and export business doubtless will be sufficient to maintain production around the current year's levels. The number of new buyers of motor cars in this country probably is not large, but old owners are constantly changing to better models.

Building is showing some slight contraction. Permits and contracts let in August were below the totals for the same month of last year, but, on the other hand, August of 1925 was a record-breaking month. The loss is coming mainly in construction of a speculative nature, while other classes of construction are holding up well. The building "boom" in this country is, of course, over, but there is no reason to expect any great slump in the industry.

As an offset to the slowing up in some industries, considerable encouragement is being derived from the improvement in cotton textiles. With a plentiful supply of raw material in sight, inventories reduced, and factories better adjusted to changed conditions in the cotton goods trade, cotton consumption is increasing. As autumn orders come in, many New England mills which have

been shut down for several weeks are reopening. The sumption in August, as reported by the Census Bureau, amounted to 500,652 bales of lint, as compared with 460,918 in July and 448,665 in August of last year. Exports during the past month also showed an appreciable increase over the preceding month and a year ago. Textiles have been the sorest spot in the business situation here for several years, and the turning of the corner by this industry will do much toward creating confidence in the future.

THE LEAGUE AND WORLD ECONOMIC PROBLEMS

(BY OUR CORRESPONDENT.)

GENEVA, September 21.

A VARIETY of financial and economic conclusions have been reached in the Council and Assembly of the League of Nations concerning the proposed international economic conference, the Bulgarian refugee loan, the financial situation of Dantzig, and the proposals for a conference on the question of the abolition of import and export prohibitions. With regard to the economic conference, the documentation called for at the first meeting of the Preparatory Committee held last April will be sufficient for the Committee to meet again on November 15th next and to begin the most difficult part of its task. A good deal of discussion has taken place as to the programme and character of the Conference and the general idea of the Assembly is that the utility of the Conference would be lost if a small number of essential questions were not detached and the efforts of the Conference concentrated upon them. It is, however, recognised that it will obviously be necessary to include questions which, while not belonging to the essential problems inserted in the agenda, might at the same time have a certain influence upon them. As to the composition of the Conference, there seem to be two difficulties to be avoided. Some delegations have objections to calling upon experts appointed exclusively for their personal qualifications, as the Conference might run the risk of becoming purely academic. On the other hand, a diplomatic conference is not what is desired, and the members who will be designated by the Governments must not be too closely tied by their official responsibilities. It is anticipated that both these difficulties may be avoided so that the scope of the discussion may be widened and the conclusions of the Conference have practical value and influence upon the economic policy of the Governments. It is suggested that the same procedure for the appointment of delegates might be employed as in the case of the Brussels Financial Conference. As to the date, an effort was made to decide upon some time next spring, but it was wisely decided not to take any definite decision, while at the same time expressing the hope that the Conference would be convened without unnecessary delay as soon as the state of the preparatory work permits and the general conditions appear sufficiently favourable. It is recognised that the meetings of the Preparatory Committee are in themselves an indispensable factor in creating gradually a current of favourable public opinion in the different circles concerned, without which any action organised on an international basis would be difficult. These are the broad lines of the Report adopted by the Assembly to-day. The actual resolution on the subject declares that the general economic situation of the world calls more imperiously than ever for an effort towards international co-operation, and expresses the hope that the Preparatory Committee will actively push forward its work. The Swedish delegate bluntly declared that the real heart of prevailing economic evils was the undue erection of Customs barriers, and the Report should have instructed public opinion on this matter if results were to be obtained; the prestige of the League would be furthered if there were more plain speaking on such points as these.

In close connection with this subject is the decision of the Council to accept the proposal of the League's standing Economic Committee to summon a conference of Government representatives to consider the draft international agreement drawn up by the Committee on the question of the abolition of import and export prohibitions. The Council did not consider that such a conference would overlap with the general economic conference. The latter

would be an advisory conference, whose object would not be to arrive at once at contractual agreements, whereas the conference proposed by the Economic Committee would have the task of carrying out an international agreement. It is left to the Secretary-General, in consultation with the Chairman of the Economic Committee and the Chairman of the Preparatory Committee for the International Economic Conference, to fix an appropriate date.

Another decision of the Council was its approval of the Economic Committee's suggestion that a meeting of jurists should be summoned to assist in drawing up the text of a draft agreement to secure the execution of arbitral awards rendered abroad. In 1923 a protocol was opened for signature for recognising the validity of arbitral agreements in contracts, especially commercial contracts, and has already largely contributed to the spread of commercial arbitration. It does not, however, make provision for the execution of arbitral awards rendered abroad. The fundamental principles of a draft agreement for submission to the jurists have already been outlined by the Economic Committee.

The financial situation of Danzig came before the Council yesterday, when it was noted that the Financial Committee could not recommend the issue of a loan until the Free City had dealt with several points which still remain in suspense, including the situation of Danzig as regards the obligations imposed upon it by the Peace Treaty, the agreement to be concluded with Poland regarding the allocation of Customs duties, and the final arrangements for the establishment of the tobacco monopoly. The Committee's view was that budgetary equilibrium must be re-established, budgetary economies must be effected up to 10 per cent. of the total, and that the Danzig revenue should be increased by the establishment of a tobacco monopoly, with regard to which negotiations with Poland had led to a satisfactory result. If at the next session of the Financial Committee in December the Free City is in a position to show that definite arrangements have been made regarding treaty obligations, the allocation of Customs duties and the final arrangements for the establishment of a tobacco monopoly, the Committee will be prepared to recommend a loan of approximately 30,000,000 gulden, provided the Free City submits a definite and satisfactory scheme of new economies capable of ensuring equilibrium of the Budget.

The conditions of issue and control of the main public loan of £2,250,000 for the settlement of Bulgarian refugees have been approved by the Council. This takes the form of a protocol signed by Bulgaria, by which the application of the loan is under the control of a Commissioner, M. Charron, responsible to the Council. The capital and interest of the loan are to be paid free of all deduction in respect of taxes, dues, or charges for the benefit of the Bulgarian State, and the conditions of the loan are to be submitted for approval to a person appointed to act in the name of the Financial Committee of the League. The securities include revenues from excise duties on salt and alcohol, net receipts of the match monopoly, and all sums received at the end of two years from the appointment of the Commissioner in respect of rent or interest due from persons assisted out of the yield of the settlement loan. The amounts required for the service of the loan are a first charge on these revenues. If at any time the total yield falls below 150 per cent. of the annual sum required to meet the service of the loan, provisions are made for assigning additional revenues. Trustees are to be appointed by the Council to represent the interests of the bondholders, definite provisions are made for the employment of the loan, and the Bulgarian Government is to centralise all its existing services at present dealing with refugees under one authority. The supervisory claims of Bulgaria's three neighbouring States—Greece, Roumania, and Jugoslavia—have been met by the recognition of the right of these States to form a consultative committee which may meet anywhere except in Bulgaria. The three members or any one of them may ask for information from or present observations to either the Council of the League or the Commissioner, and they have the right to appeal to the Council on a subject affecting their interests in the sense of Article 4 of the Covenant, in which case, of course, the State or States

sending the appeal would be present as members of the Council.

Notable results were reported to the Assembly in connection with the Greek Refugee settlement scheme. Of the £10,000,000 League loan, £8,000,000 has been spent, and a considerable part of the rest has been budgeted for. Some 700,000 refugees have been settled or assisted, and 120,000 still need to be dealt with. To complete the installation of those already assisted, and to deal with the remainder the Commission estimates that another £5,000,000 will be required. Greek Macedonia has been completely transformed, and permanent results have been obtained in the strengthening of the economic life of the country as well as in promoting its social stability. Like Austria and Hungary, Greece, with League help and under League auspices, has been able to effect lasting improvements in her national economy. The Assembly resolution expresses the hope that conditions may be such that the money required for the completion of the work may become available in due course.

ELECTRICAL DEVELOPMENT COMPANIES.

To the casual observer obsessed with memories of bad trade it may appear somewhat surprising that companies whose operations are mainly centred upon the manufacture of electrical equipment should have been able, generally speaking, to secure higher net profits in 1925 than in the previous year. Several things have, however, to be remembered; for instance, that many of these concerns are able to secure good overseas contracts; secondly, that a steady tendency has been in progress towards the change over from coal to electrical power among manufacturers who desire to move with the times. At any rate, the showing made by the group of representative undertakings included in this year's analysis is highly satisfactory. In all we have taken the figures of a dozen companies. Of these only four disclosed lower net profits. In some instances the gains were substantial. That prosperous concern, the British Insulated, continued its excellent record and earned nearly twice as much last year as in 1924. Siemens Brothers seem to be getting back once more to a period of stability, there being a substantial increase in profits. The directors prefer to carry forward a larger sum rather than to add more to the reserves. As will be seen from the following table, other companies which did well were Callender's Cable, the General Electric, Johnson and Phillips—whose profits rose from £105,838 to £155,591—and the Brush Electrical. The British Thomson-Houston, the English Electric, the Metropolitan-Vickers, and the Telegraph Construction were not able to do quite so well. The English Electric had a serious setback, profits for 1925 being more than 50 per cent. less than those for 1924. On the whole, the allocations made to reserve were substantial, especially in the case of the British Insulated, Brush Electrical, and the General Electric, and as a rule the amounts carried forward were higher than in the preceding twelve months:—

Name of Company.	Year.	Amount Brought In.	Net Profit After Payment of Dividend Interest.	Preference Dividend.	Ordinary Dividend.	Amount Placed to Reserve, &c.	Carried Forward.

† For 15 months.

With regard to the 1925 figures for Brush Electrical Engineering it should be explained that the £76,190 brought in represents £77,427, less corporation profits tax, 1924, paid in 1925. This amount has been carried to an undivided profits account. We have, therefore, added it to the allocations to reserves in 1925, which explains the blank in the carried forward column at end of 1925, as against £77,427 carried forward at end of 1924. The set-back experienced by the English Electric has already been referred to. Speaking at the annual general meeting, Sir Charles Ellis, the chairman of the company, said that "the profit and loss account was disappointing. The orders secured were less in value than in the previous year owing to a sudden falling off in export orders. But in the latter part of the year the Power and Traction Finance Company obtained a contract in Greece of over £2,000,000, a large part of which represented plant and material to be manufactured by the company. None of these orders came into the books during the past year, and only part of the work would fall into the current year. The unexecuted orders exceeded the whole output of 1925." The directors of the English Electric are to be congratulated upon publishing a consolidated account of all the associated companies.

We now tabulate the principal balance-sheet items, showing how they compare with the preceding balance-sheet:—

Name of Company.	An Analysis of Principal Liabilities and Assets.

(a) Includes Treasury Bills, which are not shown separately in balance-sheet.

With regard to the balance-sheet of British Insulated Cables, Limited, for 1925 we find the item "Cash in banks and in hand, home and abroad" has disappeared. In the 1924 balance-sheet cash amounted to £337,556 and bills receivable £23,266. On the other hand, property and plant has increased in value from £1,068,592 to £1,307,012. But total assets have increased from £4,320,976 to £4,831,006. Debtors are up from £1,275,897 to £1,777,138, and investments from £566,421 to £650,354. Stocks also have increased from £985,007 to £1,030,330.

As regards changes in capital, the British Insulated capitalised £333,333 of the reserve and distributed it in the form of one new ordinary share for every three held. It also reconstituted its loan capital. Whereas the 1924 accounts showed that there were three classes of debenture stock, namely, £82,897 of 4½ per cent. first mortgage stock, £27,147 5 per cent. second mortgage stock, and £711,539 mortgage debenture stock—making a total of

£821,583—the present balance-sheet shows that there is now only one class of loan capital, namely, £714,000 of 5 per cent. mortgage debenture stock. Callenders also made a bonus distribution from reserves, 200,000 ordinary shares being allotted to the proprietors at the rate of one new share for every three held. The ordinary share capital of the General Electric was increased by £30,000 in order to finance the purchase of shares from its Indian subsidiary. The latest accounts of Johnson and Phillips reflect the capital changes made in 1924 and 1925. The ordinary share capital has gone up from £484,921 to £600,000, and there is now £313,470 of 6 per cent. first mortgage debenture stock, against £332,339 of 8 per cent. stock. Siemens Brothers preference capital has been increased from £135,000 to £550,000, in order to provide funds for the extensions now proceeding at Woolwich. The general trend of properties and plant has been upward, substantial gains being shown by some of the companies, notably the Telegraph Construction and the British Insulated. On the whole stocks figure for more, while the cash item, generally speaking, has advanced. The upward movement in creditors has been accompanied by a similar tendency in debtors, while investments stand at a higher level.

Our concluding table shows the highest and lowest prices of ordinary shares for year 1925, dividends for 1924 and 1925, and prices and yields at the end of August, 1925, and end of August, 1926:—

Name and Amount of Share.	Prices, Year 1925.		End of Aug., 1925.			Sept. 23, 1926.		
	Hgst.	Lwst.	Div. 1924.	Price.	Yield.	Div. 1925.	Price.	Yield.
British Insulated (£1).....	3½	2½	%		£ s d	%	£ s d

† Free of income-tax.

The Government scheme for the greater intensification of electrical developments in Great Britain, as well as the wider adoption of this means of power supply throughout the world, has led to the belief that these equipment manufacturing companies will be able to increase their profits in the not far distant future. This has resulted in an advance in the prices of the shares and a corresponding decrease in yields. Some of the returns shown are decidedly low, and the only obvious justification for the yield of 4½ per cent. to 5½ per cent. shown on many of the shares is that the proprietors expect to receive substantial distribution in the future.

THE AUSTRIAN BANKING POSITION.

(BY A VIENNA CORRESPONDENT.)

THE Vienna banks have recently published their first balance-sheets on a gold basis, one for the beginning and one for the end of 1925. This makes it possible to form more accurate judgment than could be obtained from their former rather confusing balance-sheets, where paper kronen of different value were taken.

Of the principal banks of Vienna the Länderbank and the Anglo-Austrian Bank have since the war transferred their centre of operations abroad, and the latter was recently fused with the Kreditanstalt. Moreover, the Länderbank now makes up its accounts in French francs. The chief remaining banks are the Kreditanstalt, the Bodencreditanstalt, the Eskomptegesellschaft, and the Bank-Verein. Then come the Union Bank, the Merkur, and the Verkehrsbank. There is also a number of medium-sized and small banks which are not included in the following survey.

The following table shows the position of the seven principal banks. All figures are millions of Austrian schillings (100 schillings corresponding roughly to £3):—

	Dec. 31, 1913.	Dec. 31, 1924.	Dec. 31, 1925.
Capital and reserves	1,307.9	306.0	306.5
Creditors and depositors	3,826.2	1,555.9	1,772.8
Drafts	408.1	5.0	4.7
Total Liabilities.....	6,359.7	1,875.3	2,130.2
Cash and bills.....	1,265.7	174.2	255.7
Securities and participations	467.8	245.0	249.3
Debtors	3,966.7	1,421.0	1,570.5
Mortgages	595.9	1.8	20.9
Premises	63.8	33.4	33.9
Interest and commission.....	188.2	116.1	107.4
Foreign exchange and securities ..	24.8	32.8	19.8
Salaries	40.5	76.0	66.0
Sundry expenses	35.3	11.1	11.7
Taxes	23.8	31.2	21.2
Net profit	110.8	30.5	27.5

A comparison with pre-war figures shows the effects of war and inflation. Of the former share capital and reserves (including increases during inflation calculated in gold) only a small fraction has been saved. (Eskomptegesellschaft, 30 per cent.; Bankverein, 22 per cent.; Kreditanstalt, 15.7 per cent.; Bodencreditanstalt, 14 per cent.) The real capital, however, is certainly much greater, since all banks are laying great stress upon accumulating hidden reserves, and are only showing a part of their strength. Total assets, as compared with 1913, were:—Eskompte, 59 per cent.; Kredit, 36 per cent.; Bodencredit, 30 per cent.; Bankverein, 25 per cent. It must, however, be noted that after the war the Kreditanstalt and the Bankverein sold their branches in the new States and received shares for them. Gross profits showed a smaller shrinkage, but net profits fell in the case of the Kreditanstalt and Bankverein to 22 per cent. and 23 per cent., in the case of the Bodencredit to 29 per cent., and in that of the Eskompte to 40 per cent. of the figure for 1913. The reason is that expenditure is now absorbing a much higher percentage of gross profits than before the war. Salaries, in particular, have risen considerably owing to larger staffs. Banks like the Eskompte and the Bodencredit, which have no branches and are mainly doing big business, are less affected by increased expenses than those with a large number of branches and a big staff. However, all banks have in recent years decreased the number of employees considerably, e.g., the Kreditanstalt, from 2,370 to 1,740; the Bankverein, from 3,200 to 1,500; the Eskompte, from 679 to 523; the Bodencredit, from 530 to 330. The liquidity of the balance-sheet position is enhanced by the fact that among liabilities there are practically no drafts, which played a conspicuous part before the war, and that rediscounting at the Nationalbank is of no importance, or almost non-existent. All the great banks have once again become the centre of a wide network of international relations. They are associated with powerful foreign houses, and have numerous affiliated banks in the new States of Central and Eastern Europe. It is remarkable that at the Kreditanstalt 65 per cent. of all debts and credits are in foreign currency, which is due to the fact that a very great part of the business is done with customers abroad. This shows how the activity of the Vienna banks is extending far beyond Austria. The balance-sheet figures for 1925 were greater than those for 1924. The Kreditanstalt increased its total assets by 29 per cent., the Bodencredit by 16 per cent., Bankverein by 15 per cent., Eskompte by 7 per cent. Net profits, however, were a little less than a year ago, except Bodencredits, which show an increase of 13 per cent. The dividends declared were:—Bodencredit, 14.4 per cent.; Eskompt, 12 per cent.; Kredit, 10 per cent.; Bankverein, 9 per cent.; Union, 7 per cent.

Since publication of its balance-sheet the Kreditanstalt has taken over the Austrian branches of the Anglo-Austrian Bank and has increased its capital by 15 millions. It is now ahead of all other banks. The Bodencredit, too, has recently acquired control over the Verkehrsbank, and other fusions are, apparently, being contemplated.

A serious incident was the recent insolvency of the Centralbank der deutschen Sparkassen, though this bank is only of minor importance. It was founded with the object of utilising the surplus resources of savings banks. The great savings banks of Vienna, of course, did not require the Centralbank, but the smaller provincial institutions entrusted it with part of their deposits. As a result of inflation savings were annihilated, and only after the stabilisation of the currency could the savings banks begin their usual business again. At first they offered very high interest to depositors, and some provincial banks even continued this practice up to about a year ago. At the same time, the former main field of savings banks—the mortgage business—had been closed by the law restricting house rents to almost pre-war amounts in paper kronen. All this induced the Centralbank to seek investments with high profits, which formerly were absolutely out of the question for such institutions. Thus the bank came under the influence of industrial promoters, who induced it to invest large amounts in industries and mines. Moreover, the Centralbank had a certain political tendency; it was in close touch with the governing parties, and, therefore, was forced to come to the rescue in the case of certain banks and concerns in difficulties where party interests were involved. Ultimately this led to absolute immobilisation of the bank. It was unable to repay deposits owed to savings banks from its own means. The bank would have collapsed, and a terrible run on all savings banks was threatening, if the Government had not intervened by lending and guaranteeing a sum of 62.5 million schillings. This action of the Government has, of course, been sharply criticised, and is, indeed, open to grave objections, though the Government pleads that otherwise an incalculable disaster would have been unavoidable. This is true, yet the necessary intervention could have been carried out in a more circumspect way. Parliament passed a Bill granting a moratorium to the bank till October 31st, and putting it under the strict control of trustees elected from all parties. The trustees are now investigating the matter, and will report to Parliament. The assets include valuable industries, which will probably pass into the hands of the big banks. The Government is anxious to recover the amount paid out to the creditors and depositors of the bank by means of a loan, the interest on which is to be met by the banks. Its plans, however, are not yet fixed finally.

The savings banks themselves, especially the great saving institutions of Vienna, are mostly well conducted. Savings are increasing steadily and rapidly, and this is one of the most hopeful symptoms in Austria.

Notes of the Week.

The League and Franco-German Rapprochement.—Our Geneva correspondent writes:—"The election of nine Member States by the Assembly to the non-permanent seats on the League of Nations Council, the departure of Sir Austen Chamberlain, and the Stresemann-Briand interview at Thoiry, followed by the departure of M. Briand, have been considered as the close of the real events of this Assembly. But the truth is that the Assembly only got down to its normal business—which is its real business—after the excitement of Council reorganisation and elections was over. Dr Stresemann was wise enough to see this, and still remains taking his part in the Council, committees, and Assembly. He and the members of his delegation are participating with the greatest prudence, and have maintained the excellent impression created on the day of their entry. Doubtless they will have a fairly tough battle to fight on their return, possibly for not having made the pace quicker, and probably for what has been described as the victory of France and her friends in the elections to the Council. M. Briand, in fact, on his return to Paris, gave an interview, in which he used almost identical words, but it is fair to remember that he, like Dr. Stresemann, has a difficult home public to consider. It is useless to pretend that there is general satisfaction on the composition of the Council, but most people are glad at any rate to get the matter out of the way for the time being. The present arrangement is not likely to remain permanent,

and, for that reason, perhaps, should not be taken too tragically. The presence of Germany outweighs many things which would otherwise be open to much severer criticism, and Germany's membership of the League, and the presence of her Foreign Minister in Geneva, soon showed their value in the Stresemann-Briand interview at Thoiry, which was made much easier through the normal presence of the two ministers in Geneva for League business." In this momentous interview MM. Briand and Stresemann arrived at a provisional understanding (subject to the approval of their respective Governments), which may be regarded as the political complement to the economic negotiations between the French and German heavy industries. These latter negotiations, which seem at last to have been crowned with success after having been attempted repeatedly, are an indispensable step in the economic reconstruction of Europe, and, as such, they should be welcomed (as the *Economist* has often pointed out) in Great Britain. It follows that we have economic as well as political grounds for likewise welcoming a Franco-German political entente, which will not only do more than anything else could do to ensure the maintenance of European peace, but will clear the ground for carrying the Franco-German economic entente to a conclusion. It is in this, perhaps, that the chief importance of the Briand-Stresemann plan lies, for, though the case for Franco-German industrial co-operation is overwhelming on purely economic grounds, that co-operation could never be wholehearted so long as a political situation existed which kept alive a bitter resentment between the two parties. The bargain hit upon by MM. Briand and Stresemann is that France shall extinguish Germany's political grievance by an early and complete evacuation of the occupied territories, and by a restitution of the Saar territory, without a plebiscite, in advance of the treaty period of 15 years, while Germany shall enable France to rehabilitate the franc by speeding up and increasing the financial performance required of Germany under the Dawes scheme. If this bargain could be carried through, it would enable the French and German industrialists to begin their co-operation on a field cleared of the most formidable political and financial obstacles. There are, of course, many difficulties to be overcome before this fruitful but ambitious plan can be realised. Both the French and the German statesman has to reckon with his "die-hards," and the "die-hards" of the opposite camps may co-operate instinctively, as they so often do, to keep alive the feud which gives all of them their reason for existence. The technical financial difficulties are at least as formidable. Can German "transfers" under the Dawes scheme be increased on the vast scale that is apparently contemplated? The international issues raised are some of the greatest that have arisen since the peace-settlement.

The Tension in China Relaxes.—His Majesty's Government have been rewarded for their good sense in making a further attempt to settle the Wanhien incident by negotiation before resorting to a second time to force. As a result of Rear-Admiral Cameron's conversations with the representative of General Yang Sen it has been agreed that the detained British ships shall be brought down the river and handed over to a third party, by whom they are to be consigned to the British authorities. There will evidently be claims and counter-claims for compensation; but although these will doubtless add to the labours of our harassed consular and diplomatic representatives, they will hardly threaten to cause further bloodshed. There is also better news from the South, for the Canton Government are reported to have come to an arrangement with the Strike Committee for bringing the anti-British boycott to an end. The strike is to be called off, and the pickets compensated out of a fund to be created by raising the import duties to the scale contemplated in the Washington Agreement. This solution has certain unsatisfactory features. To begin with, the Washington Agreement contemplated the raising of the import duties by free negotiation between all the parties to those international treaties on which the present scale rests, and this in return for certain concessions on the Chinese side, such as the abolition of *likin* (internal octroi). The Canton Government is now proposing (after the Tariff Conference at Peking has ended in an *impasse*) to raise the import

duties by a high-handed unilateral act; while, so far from abolishing *likin*, it is proposing to increase the fiscal burdens on foreign trade with China by imposing a special export duty. Nevertheless, we should be ill-advised to haggle over points which, whatever their merits, do not weigh in the balance against the restoration of our trade with Southern China, now that this restoration is at last in sight.

Labour and Wages Policy.—The controversies that have centred round the economies of the mining industry on the one hand, and the attention that has in recent months been directed to the evolution of industrial relations in America on the other, point to the need of a radical overhauling of current ideas about wages. In this matter certain industries, such as the iron and steel trade, in which a combination of payment by results and a sliding scale which affords some automatic means of prosperity sharing have been very successful in maintaining industrial peace, are in striking contrast with some other trades in which very different principles prevail. Ideas on so vital a matter do not change very readily, and only as the result of experience, but it is significant that the problem is one to which the leaders of the Labour movement are directing their thoughts. In this connection a Labour correspondent writes:—"Certain passages in the presidential address of Mr Arthur Pugh, of the Iron and Steel Trades Confederation, at the Trades Union Congress at Bournemouth, convey much more than would appear on the surface. Mr Pugh hinted to British trade unionism that it must reconsider its wages policy. He asked whether it was possible to arrive at basic rates, with strict reference to some index of national production, and having regard to family circumstances, and the cost of living. In this formula he combined elements which have been specially in the minds of most of the trade union leaders in innumerable industrial negotiations within recent times; but the reference to an index of production is important. The public is not generally aware that this has been the subject of anxious consideration by many of the political and industrial Labour leaders, particularly in view of the fact that the movement is committed to the public ownership of large industries. As was indicated in this column recently, Labour has in important spheres taken the line that if industries are to be publicly owned they must be self-supporting; that is, wages must be related to the output of the industry, under which at the same time consumers must be reasonably protected. It is quite frankly feared that if either mines or electricity, or even railways, were publicly owned to-day, large numbers of the workers (almost certainly if a Labour Government were in power) would demand and expect conditions which could only be satisfied, in the absence of the necessary time for reorganisation and greater efficiency in the industry, by higher prices or heavier charges to consumers than are now in force (a development which would seriously endanger progress in public ownership), or by subsidy of some description. Subsidy would be, of course, contrary to the policy which Labour has adopted in the case of the acquisition of land, railways, mines, and electricity. Some of the political and trade union leaders have urged, mainly in private, that especially in the early stages of any transition to public ownership, probably greater sacrifices would be called for by the workers than are now demanded; and that for a time such sacrifices, or alternatively very generous co-operation in the effort of the

industry, would be necessary if the self-supporting or economic basis was to be maintained. Mr Pugh in reality means that trade unionism must give up, with the employers' associations, much of the blind bargaining which at present passes for industrial negotiation. All the facts must be supplied regarding output, the level of prices to consumers, and the disposable surplus. Some of the unions consider that there might be national basis for such a formula; others would like to see a regulated return to capital, labour, and consuming public such as is in effect secured for British railways under the Railways Act, 1921. How far these more important considerations will be studied by the trade unions during the coming year no one knows; the interesting thing is that the abler of the political leaders are urging that the preparation of a definite wages programme of infinitely greater intelligence should be undertaken without delay."

The Italo-Rumanian Pact.—On the Friday of last week (September 17th) a treaty of friendship and arbitration was signed by the Italian and Rumanian Governments. From what is known at present of its scope, this instrument would appear to be framed on the lines originally worked out, on Dr Benesh's initiative, in the "Little Entente" treaties, and afterwards followed, in a somewhat looser form, in the several agreements made by Czechoslovakia and Yugoslavia with France and Italy. The most important feature is that the parties undertake to consult one another in the event of any threat to their common interests, and to accord one another political and diplomatic support in the event of a violent threat to the interests of either from a third party. In type, the recent Italo-Spanish Treaty, on which we commented at the time of its signature, belongs to the same series, but with a significant difference. The ominous thing about the Italo-Spanish Treaty, as we indicated at the time, was that the text contained nothing but harmless and benevolent generalities, with no overt reference to the great and contentious problems of the Western Mediterranean, in which France, as well as Italy and Spain, is concerned. The real relations between Italy and Spain over those questions—which may at any time endanger the peace of the world—were left in the dark. This has not been done, in the present instance, in regard to the equally dangerous problem of Bessarabia—the ex-Russian province which Rumania annexed, with posthumous sanction from the Principal Allied Powers, but which the U.S.S.R. has never ceased to claim as legitimately hers. It will be remembered that the Allied sanction for the Rumanian annexation of Bessarabia was given in a treaty signed at Paris, on October 28, 1920, in part payment to Rumania for evacuating Hungary, whose territory she had unlawfully invaded. Although the Principal Allied Powers signed this treaty, the Russian attitude in regard to Bessarabia made them hesitate to take the final step of ratification; and though the treaty has now, in fact, been ratified by the British and French Governments, two ratifications are not enough to bring it into force. We may, therefore, feel a certain relief in learning that Signor Mussolini—who anticipated Mr MacDonald in attempting to arrive at a friendly settlement with the Soviet Government in 1924, and at that time refrained from ratifying the Bessarabian Treaty rather ostentatiously—has not changed his policy. In a letter of the same date as the Italo-Rumanian Treaty, which he has addressed to the Rumanian Prime Minister, Signor Mussolini has expressly drawn attention to the fact that "no mention is made in the [Italo-Rumanian] Pact of the above-mentioned treaty, the ratification of which on the part of the Italian Government will only take place when this can be done without prejudice to the general interests of Italy."

The Extent of Under-Employment.—The results of the 1924 Inquiry into Earnings and Hours of Labour, which are being published in instalments by the Ministry of Labour, include the first comprehensive statistical survey of the extent of short-time working. Two years have elapsed since the date to which the figures relate, and in many industries there have been appreciable changes in

the position, but the statistics have much significance in that they throw considerable light on the value of the percentages of workers unemployed as a measure of the relative depression in different industries. The methods adopted for the curtailment of production are necessarily dependent on the circumstances under which the various trades are carried on. In some cases, such as the manufacture of pig-iron, it is necessary to close down works entirely as the alternative to full employment. In others, such as the cotton industry, it is possible to provide work for a proportion of the operatives for part of the week. In cases of the first category it is to be expected that the percentage of workers unemployed will be high, and in those of the latter somewhat low, though there may be actually comparatively little difference in the relative depression as measured by the extent to which production is restricted. This feature is illustrated by bringing together, for a few industries, the unemployment percentages and the statistics as to short-time working, which are now available for a week in October, 1924:—

	Percentage Unemployed	Percentage on Short Time	Hours Lost per Week by Those on Short Time
Wool	8.0	18.2	10.6
Railway carriage and wagon building	8.5	7.7	12.9
Chemical	9.0	2.4	8.4
Pottery	10.9	14.8	13.0
Cotton	11.6	17.2	14.0
Bleaching, dyeing, &c.	13.0	39.7	10.0
General engineering	15.2	6.4	8.8
Marine	17.0	2.6	12.8
Pig-iron manufacture	17.3	3.1	20.8
Smelting and rolling of iron and steel	23.4	15.9	13.9
Shipbuilding	30.6	1.1	14.8

On the basis of the above figures it is possible to indicate by a series of index numbers the relative amount of under-employment in the industries specified. Assuming full employment to be represented by 100, the index numbers are as follows:—

Chemical	91	Marine Engineering	82
Railway carriage and wagon	89	Pig-iron manufacture	82
Pottery	88	Bleaching, dyeing, &c.	80
Wool	88	Smelting, &c., of iron and steel	73
Cotton	87	Shipbuilding	69
General Engineering	84		

It will be seen that the relative position of the industries as indicated by the index numbers differs, in some cases appreciably, from that shown by the simple unemployment percentages which have hitherto been the only statistical measure available. The absence of figures in regard to short time has been a serious omission from our industrial statistics, and the illustration given above reveals the necessity for the collection of such figures at frequent intervals.

American Cotton Crop.—Our Manchester correspondent writes:—Late on Thursday evening the Agricultural Bureau of the United States Government created a sensation in Lancashire cotton trade circles when it published a much more favourable report on the cotton crop than was expected. The condition figure was given as 59.5 per cent., against 59.6 per cent. a fortnight earlier, and 53.8 per cent. at the same time last year. The indicated crop was given as 15,810,000 bales, against 15,166,000 bales a fortnight earlier. The important increase in the probable output exceeded all anticipations, as market operators expected an estimate of about 15,300,000 bales. The amount ginned so far this season was given as 2,511,000 bales, as compared with 4,276,000 bales at the same time last year. These smaller ginning figures reflect the lateness of the growth compared with a year ago. The big increase in the crop estimate resulted in an important fall in prices, and the Liverpool market declined nearly $\frac{1}{2}$ d per pound. Unless something extraordinary happens cotton users throughout the world are assured of extensive supplies during the next twelve months, and prices are likely to be on a lower level than for many years back. Buyers of manufactured goods for a long time have held aloof in anticipation of lower values. When prices steady, it is possible that the markets of the world will be prepared to replenish their stocks, and thus provide Lancashire firms with more work.

Cotton Trade Short Time.—Our Manchester correspondent writes:—In Manchester on Tuesday last there was a lengthy meeting of the Short Time Organisation Committee of the Master Cotton Spinners' Federation, and at the close it was stated that consideration had been given to the state of trade and the serious effect which the enhanced price of coal is having on business. After a full discussion it was decided to call a mass meeting of American spinning employers for Tuesday next for the purpose of considering the advisability of further curtailment of production. Since then it has been officially announced that at the meeting next week the committee will recommend the members to work their mills in future one week in three, thus reducing production to 33 per cent. of the full. It may be said that since June 14th last, owing to the coal shortage, the factories have worked about 50 per cent. of full output. It is reported that the Masters' Federation keenly resent the high prices that are now being asked for fuel, and it is likely that employers will be recommended to stop their mills rather than pay the exorbitant rates required in some quarters. If the further curtailment of output is adopted, there is bound to be increased distress amongst the operatives.

Co-operative Trade.—A business that commands a capital of £46,756,470, and supplies goods to retail societies with a membership of 3,854,675, mostly heads of families, should afford some index to the state of trade in industrial areas. Such is presented, writes a correspondent, by the half-yearly report of the Co-operative Wholesale Society, Limited, up to June 26th. The sales were £36,826,524, a decrease of £333,795, or $\frac{1}{2}$ per cent. on the corresponding period of 1925. At the Newcastle branch the decrease amounted to £335,977; but against this it set an increase of £345,259 for the London branch, and one of £52,618 at the Manchester headquarters. The advance in the Metropolitan districts is the most remarkable feature in current co-operative progress, and the sales for that branch have reached £10,404,101 in the six months, as compared with the £9,052,880 turnover of Manchester. The supplies from the society's own works were valued at £12,961,827, a decrease of £600,941. This is largely owing to the position at the society's flour mills, and is the result of lessened prices rather than a smaller output. There has also been a decreased demand from the boot and shoe works, the result of the uncertainty among the buyers of retail societies as to the immediate future in the mining areas. After providing for interest on the capital and depreciation of property, the surplus was £532,548, from which £422,619 is being distributed as dividend to the societies at the rate of 3d in the £ on purchases. While the trading account showed a slight decrease, the deposits and withdrawals for the half-year rose to £314,554,193, an increase of over 8 per cent. Probably the circumstances of the General Strike in May are reflected in this increase, for, through the various co-operative societies, over a million pounds were withdrawn by trade unions in the first few days; and trade unions have had to draw pretty freely since then. The C.W.S. Bank has 20,827 current accounts, half of which are for trade unions, clubs, and friendly societies. The amalgamation of co-operative societies continues to lessen the number of such accounts. Six have just been closed from that cause, and the number of co-operative societies now banking with the institution is 1,005. Foodstuffs are still the principal productions of the C.W.S., and of the supplies of nearly 13 millions the flour mills were responsible for £5,140,412, and the margarine, jam, and biscuit works for over £2,000,000. The production of soap was well over a million pounds, and the opening of the new works near Manchester in July will substantially raise the output for the rest of the year. At the October meetings the directors will recommend the admission to membership of a new society, the Schools Co-operative Society, Limited, which deals exclusively with schools and educational committees—a development of the principle of collective buying and selling in a new direction. Reference will also be made to the question of a pensions scheme for the society's employees. A joint committee of the C.W.S. directors and employees has been preparing a scheme, and this is to have serious discussion during the next few months. At the Southport Congress

last year the provision of pensions for co-operative employees was urged upon societies, and about a hundred distributive societies have adopted schemes. The example of the C.W.S. will give a good lead to the matter throughout the movement.

Hurricane Insurance Losses.—A cable from New York estimates the loss at Miami or in the whole district affected by the hurricane at £20,000,000, and the losses falling on insurance companies and underwriters at £3,000,000. These figures must be guesses, and very rough ones, for it is incredible that anyone can within a day or two have made even an approximate calculation of the damage done in a district that looks like a war-devastated area. It is equally incredible that any reliable opinion can have been formed of what the loss on various insurance policies is, going to work out at. Many different kinds of policies are likely to be affected—policies covering house property against hurricane, policies covering shipping in the harbour, policies covering plantations and orchards, policies covering motor-cars (many of which seem to have been destroyed), and policies covering death and disablement by accident, a form of insurance far more common in America than in England. And if the total of the insurance losses is difficult to guess at, it is still more difficult to say how much of the loss will be borne by American companies and how much in London. The British offices, through their American branches, have accepted hurricane risks as direct business, and some of the offices' managers expect to have fairly heavy claims made on them. Lloyds' underwriters probably have a certain amount of direct business on their books, but they are more concerned with the reinsurance of American companies, which cover their catastrophe risks freely at Lloyds. Excess reinsurance treaties by which the original company rids itself of the catastrophe risk have grown more common in recent years, and this hurricane is just the kind of disaster that these treaties are intended to meet. It must, however, be a long time before the loss under the treaties is ascertained, and very different opinions are expressed by various interested underwriters. Some expect considerable claims, but others are optimistic and do not think that there will be much to pay. The only thing certain is that at this stage nobody knows. One piece of good fortune is that a newly erected bridge in Florida, which was insured in London for a very large sum, has escaped uninjured. Insurance in London of citrus plantations was not renewed this year, and this reduces the scope of possible loss.

Wage Census Results.—Recent issues of the *Ministry of Labour Gazette* have contained the preliminary results of an inquiry into hours and wages during a given week in each of the months of January, April, July, and October, 1924, undertaken last year by the Ministry as a supplementary investigation in connection with the Census of Production. As no previous inquiry had been made since 1906 the greatest possible interest attaches to the figures thus obtained. The industries so far dealt with comprise textiles—which form the subject of a special article in our *Monthly Supplement* this week—pottery, brick, and chemical trades, iron and steel, and engineering. It is hoped to deal fully with the two last-named in future issues of our *Monthly Supplement*, but in the meantime the broad results may be briefly summarised. The following table accordingly sets out certain figures as regards some of the most important branches of the iron and steel, engineering, and other metallurgical trades:—

AVERAGE EARNINGS AND HOURS, 1924.*

Group.	Number of Workers Covered.	Proportion of		Average Weekly Earnings.	Weekly Hours.	
		Males.	Females.		Normal.	Actually Worked.
Pig-iron	28,752	99.8	0.2	s d 63 1	49.9	49.6
Smelting, rolling, &c., of iron and steel	155,730	99.0	1.0	61 5	44.2	44.8
Tinplate	22,507	85.5	14.5	66 5	43.4	45.8
Smelting, rolling & casting of non-ferrous metals	28,954	94.5	5.5	56 7	47.4	48.1
Brass founding & finishing	27,622	80.6	19.4	44 1	47.1	46.2
Sheet metal	45,652	63.8	36.2	43 11	47.1	46.0
Engineering	679,277	92.5	7.5	50 8	47.0	46.6
Shipbuilding	129,277	99.4	0.6	51 9	47.0	46.6

* Based on figures for weeks ended January 19, April 12, July 12, and October 18, 1924. † According to returns received by Ministry of Labour. a Week ended October 18 only. b Four weeks stated above.

The figures are subject to numerous qualifications (the size of the sample, for instance, is not the same throughout, and is markedly less in the case of the figures in the last column than in the rest of the table), and their significance can be realised only by comparison with pre-war results, which are not given by the Ministry of Labour. It is intended, however, to discuss these and other matters in detail in succeeding articles.

Lloyd's Register Report.—The annual report of Lloyd's Register of Shipping opens with a warning as to the serious effect of the coal stoppage on shipbuilding and shipping, but as the report deals with the year which closed on June 30th, the period under review was not itself seriously affected. During the twelve months the committee passed plans for 361 new vessels of 1,089,360 tons gross, and of this projected building no less than 68.3 per cent. is to be built in Great Britain and Ireland. The total is much below that of last year, but the British share is 13.3 per cent. higher. The newly constructed tonnage to which the committee assigned classes during the year amounted to 1,330,507 tons gross, of which 807,627 tons, or over 60 per cent., was built in Great Britain and Ireland; Germany, with 198,172 tons, takes second place, her figure being 140,000 tons larger than a year ago. The figure of 1,330,507 tons for new construction classified compares with 1,315,730 for 1924-25, 885,660 tons for 1923-24, 2,020,185 for 1913-14, and a high-water mark of 4,253,523 for 1919-20. The total world tonnage classed in Lloyd's Register book at June 30th was 29,172,698, of which 13,834,607 was British. The report contains abundant evidence of the progressive change over from coal to oil, although much of the tonnage built for oil can, and does, use coal. Of the tonnage built to Lloyd's class during 1925-26, which was 1,324,789 tons, 418,503 tons were for use of coal only, and 906,286 for oil. This gives a percentage of 31.6 for coal and 68.4 for oil, the percentages for the previous year having been 51.2 for coal and 48.8 for oil. Again, the proviso must be remembered that the oil-burning figure includes a large amount of tonnage adaptable to both types of fuel. But motor ships alone reached nearly half the total, at 602,451 tons. It may be supposed that an event like the long coal stoppage will accentuate the tendency to build vessels fitted with engines capable of running on oil fuel.

The Sugar Position.—There seems to be justification for the recent increase in strength and activity in the sugar market, following the long depression which resulted from the large excess of supplies in the season now ending. Although the Cuban crop was cut down by about 300,000 tons to 4,884,650 tons, the net season's surplus was fully 500,000 tons, which with 2,000,000 and 3,000,000 tons respectively in the two previous seasons, made a total increase in three consecutive years of nearly 6,000,000 tons. The absorbing capacity of the world's markets was certainly severely taxed this year, but the new low record of prices reached since the full weight of the Cuban crop made itself felt has attracted an important demand from the Far East for Cuban sugar, which was sold there on exceptionally low terms, and the large setback in the European takings from Cuba has been to a fair extent made up thereby. The outlook for the commodity has been entirely modified for the better, not only on account of the Cuban surplus being more rapidly absorbed than had been generally expected, but because of reduced crop forecasts for the new season, this applying to various cane-growing countries, such as Java, Australia, Mauritius and Hawaii, and also to European beet sugar. Assuming that Cuba refrains from enforcing another curtailment in her coming crop, it was estimated by an American trade authority that the total world's resources for the season 1926-1927 would show a setback as compared with the previous campaign of about 1,000,000 tons. An early Austrian forecast of the European beet crops circulated recently placed the yield at 7,280,000 tons, as against 7,571,000 tons for the past season, and it is rather significant that the Czechoslovakian crop has been already estimated by Mr F. O. Licht at 230,000 tons less than the last actual yield. European consumption, on the whole, has proved rather disappointing, while the outlet in this

country has been affected by the coal crisis, but all indications now, nevertheless, point to a further steady recovery in sugar prices. Demand is being stimulated by the expectation that the whole of the Cuban surplus may easily be dispersed before the new crop gets under way, inasmuch as it is understood that a definite decision has already been come to by the Cuban Government that grinding will be deferred until January 1st next. When the position was at its worst Cuba was pushing sales of her sugar at 2 cents per lb cost and freight to New York, and selling even at 1½ cents to the Far East; but there has been an active demand lately, and the price has been raised to 2½ cents. Java sugar encountered also an active demand from India and the Far East, and has been generally disposed of at well over European parity. British refiners have repeatedly raised their terms lately, further advances having taken place this week; and, under strong American cable advices, trading in white sugar futures has developed freely, and prices already indicate a recovery of about 1s 9d per cwt for near months from the worst of the depression.

Stock Exchange Advertising.—A Stock Exchange correspondent writes:—Recently the Stock Exchange managers, who exercise control over all the expenditure of the Stock Exchange as an undertaking, voted the Committee an additional sum for the official advertisements of the House, and the result can be seen in the bolder notices that have since appeared in the Press. The Stock Exchange had been previously spending upon advertisements about £800 a year. Many proprietors of Stock Exchange shares complained that this money was wasted because of its inadequacy. The advertisements that the sum permitted were so insignificant as to be valueless for all practical purposes. The extravagance of spending too little was urged again and again, until the Committee recognised the force of the argument, and the managers voted a more liberal sum. The present Stock Exchange advertisement arrests attention, and the House suffers no loss of dignity in the public being plainly told that Stock Exchange business should be transacted through members of the Stock Exchange. Provincial brokers took the lead in this particular matter, and before London moved they were advertising plainly and clearly to the same effect—that business in stocks and shares should be negotiated through members of a Stock Exchange. The necessity for driving this home to the mind of the public may not be obvious to the London stockbroker or jobber, accustomed as he and his immediate circle of friends are to the ways of the bucket shop and the wiles of unscrupulous outsiders. But, singular as it seems, there are still many people in London and its surroundings who make a target easily found by the shaft of the swindler. Such people never read a financial paper, and seldom read a money article, deeming its ordinary City jargon to be outside the scope of their knowledge. If they seek for guidance in regard to making application for new issues, they frequently find a prospectus to be noticed, by their daily paper, in a manner so non-committal as to render the statement of no financial assistance. That any official Stock Exchange advertisement will reach such people is extremely problematical. Their names and addresses lie open, however, in directories, in lists of company shareholders, in the catalogues of popular appeals made by charitable institutions that run various kinds of ballots and the like. The Stock Exchange obviously cannot touch these people with the same ease as can be achieved by, say, underwriters left with large blocks of shares, or by firms which are used for the purpose of peddling out to the public considerable amounts of issues, old as well as new. As for the bucket-shops proper—it might be more appropriate to say improper—they trade with the invaluable assets of public gullibility, the high cost of living, and the reluctance of anyone to admit having been fooled. It may be of service to interpolate here the fact that the most notorious bucket-shops of the day are worth suing for recovery of money by any client with a genuine case of misrepresentation, and a good lawyer. The Stock Exchange advertisement, being of a cautionary character, must perforce be passive. It would confer more public benefit could some way be found whereby the prospective client, not knowing a Stock Exchange broker to apply to, were put

into touch with a member. The Americans are more plagued with bucket-shops than we are, and the New York Stock Exchange has campaigned vigorously against the tribe, though not with complete success. Indeed, it may be doubted whether a civilised society can hope to be ever free from the pests, but the wider use of publicity on the part of the established Stock Exchanges will help towards that protection of the public which is an undoubted obligation upon the shoulders of those who deal honestly in Stock Exchange securities. Withdrawal of the prohibition against Stock Exchange firms' private advertisements to any but the firm's clients might mark a considerable forward step in saving the public money, but this prohibition has been rigorously maintained—up to the present—and the advisability of making a change is a subject that opens up wide fields of discussion.

Prospective Tin Producers.—With the shares of most of the old-established Malayan tin companies standing at high prices there is naturally a disposition to look into the merits of the newer undertakings. Below are summarised some expert calculations relative to a handful of companies due to start dredging in the near or the not very distant future:—

Company.	Estimated Ore Reserves.	Tons per £1,000 Capital.	Estimated Yearly Output.	Tons per £1,000 Capital per Year.
	Tons.		Tons.	
Ampang	9,634	56	700	4.1
Anglo-Burma ..	9,851	65	490	3.2
Eastern Siam ..	8,687	51	572	3.4
Teja Malaya ..	11,750	44	857	2.4
Theindaw	1,750	35	115	2.0

The computations are based upon the prospectus estimates of quantities and value, the tonnage stated representing black tin of 70 per cent.

Swiss-German Commercial Treaty.—Our Geneva correspondent writes:—The Trade Treaty which has recently been concluded with Germany can be viewed with some satisfaction, as it provides for a reduction in Customs duties and puts an end to nearly all import restrictions on the side of Germany, thus affording Switzerland the opportunity of improving her export trade to some extent. Switzerland has obtained certain advantages in regard to her exports of machinery, wood carvings, aluminium, watches and textiles. As regards textiles, Switzerland succeeded in obtaining reductions in Customs duties ranging from 50 to 70 per cent., but this is not likely greatly to improve the situation of her textile industry, which is passing through a serious crisis, aggravated by the very high Customs duties levied on its products in Germany. Some concessions were gained on cotton goods, embroidery, curtains, but none at all on other articles—a fact which is causing some discontent among the industrials of Eastern Switzerland. The greatest success was achieved in connection with the watchmaking industry; the German duties on silver watches have been lowered from 5 marks to 2.75, on ordinary watches from 3 marks to 2, on gold wrist watches from 10 marks to 4, on ladies' gold watches from 20 marks to 14, on men's gold watches from 20 marks to 8. Duties on chocolate have been reduced from 200 marks to 150 marks, on condensed milk from 75 marks to 40 marks, on embroidery from 2,000 marks to 700 marks. Switzerland, on the other hand, agreed to reduce her Customs duties on certain goods on which German duties are lower than the Swiss. Thus duties are lowered on metal working machinery, paper, office equipment, timber, building materials, and copper, and enamelled utensils; duties on toys were reduced from 60 francs to 50, on beer from 12 francs to 9, on cement from 2 francs to 1.50. Moreover, Switzerland pledged herself not to raise her duties as fixed in the general tariff now in operation. The new arrangement is for one year, and is to come into force at the beginning of next year, when it has been ratified by the Parliaments of both countries. It will certainly give an impetus to the Swiss export trade, though certain industries—such as the embroidery and silk industry—will not find them-

selves any better for the change. But the general consequence of the agreement will be to open Switzerland more widely to German trade, which means that Swiss trade and industry will have to meet German competition within their own country, a prospect which is not cheerful. Statistics show that, before the war, Germany's imports into Switzerland represented about ⅓ of the total imports, while in 1925 her share was only 1-5. It is probable that Germany will be able to regain the position she held on the Swiss market before the war, with the probable result that Swiss purchases from other countries such as France, Italy, and Great Britain, will be reduced in proportion of the increase in German imports. Switzerland imported German goods to a rough value of 565.7 million francs in 1910 of 630.8 millions in 1913, and of 471.4 millions in 1925; her exports to Germany totalled 270.1 millions in 1910, 305.6 millions in 1913, and 368.2 millions in 1925. The activity of the German chambers of commerce, commercial agents and commercial travellers in Switzerland clearly shows that Germany is making a big effort to secure a strong position on the Swiss market, and the recent Treaty will undoubtedly help her to achieve that object.

Switzerland's Immigration Problem.—One of the most delicate problems with which Switzerland is faced, writes our Geneva correspondent, is that of foreign immigration. The economic development of Switzerland during the last 50 years, the lack of native labour, low taxes and cheap living every year attract thousands of foreigners who come to the country to earn their living, and who finally settle and sometimes marry in Switzerland. The great majority of these foreigners retain their nationality and form important colonies in the principal towns. They generally do not mix with the Swiss; they have their own corporations, bands, health and old age institutions; they celebrate their national anniversaries exactly as if they were in their own country. This influx of foreigners began after 1870, but it rapidly increased after 1880, when there were 211,035 foreigners out of a total population of 2,831,787; in 1900 there were 383,424 out of a population of 3,315,443; and in 1910, 522,000 out of a population of 3,753,293. The rate of increase was checked by the war, but it soon picked up after 1918, so that in 1920 there were 402,385 foreigners out of a population of 3,880,320, or over 10 per cent. Of these 149,832 were Germans, 134,528 Italians, and 57,196 French. These foreigners are not equally distributed all over Switzerland, while in some agricultural Cantons they only represent a proportion of 2 to 3 per cent; in some frontier Communes of the Cantons Geneva and Ticino they form 20 and even 30 per cent. of the population. Since 1889, Switzerland naturalised nearly 147,000 foreigners, 83,000 of them Germans, 21,000 Italians, and 18,000 French. But this was not considered sufficient, and last year a new regulation was introduced to the effect that a child born in Switzerland is Swiss if his mother is of Swiss birth. This regulation is estimated to bring about an annual increase of 5,000 in the number of Swiss citizens. The possibility of granting Swiss nationality to all children born on the territory is being studied just now by a parliamentary committee. Apart from its political importance, the problem of foreign immigration has certain economic consequences which cannot be overlooked. It is striking to remark that the influx of foreigners was not stopped by the unemployment crisis of 1921-22. At the time when unemployment was at its climax, when 100,000 out of work were on the official registers, 22,300 foreigners came to Switzerland and found some employment. Their number rose to 23,000 in 1922 and to 37,000 in 1923, while, at the same time the number of Swiss emigrants was increasing month after month. From July 1, 1923, to July 1, 1925, 6,000 male foreign workers settled in Switzerland, while 24,000 Swiss asked leave from the military authorities to go and work abroad. These foreigners are employed in certain trades and industries for which native labour can hardly be found. Nearly all the workers in the building and clothing industries are foreigners, mostly Germans and Italians; fruit and foodstuffs retailers, shoemakers, tailors, and navvies are principally foreigners, and a great quantity

of foreign workers are to be found in the textile and wood industry. Emigration statistics show that the number of Swiss emigrants belonging to agriculture, hotel-keeping, artistic and intellectual activities is far greater than that of foreign immigrants applying for work in these professions; on the other hand, the number of Swiss emigrants belonging to the clothing, building, textile, and wood industries is far less than the number of foreign immigrants. This is why some Swiss economists are now urging the authorities to check emigration by training Swiss young men in the trades and industries for which foreign labour is now employed. A better organisation of labour exchanges would help in retaining at home a high proportion of native labour, and, at the same time, check the invasion of foreign workers. If rapid and efficient measures are not adopted the day will come, sooner or later, when the foreign population of Switzerland will equal and even out-number the native population, a fact which may have the most serious political and economic consequences.

British Trade with the Danubian Countries.—In view of the special Supplement which we published last week, the following statistics of British trade with the six Danubian countries may be of some interest to our readers:—

IMPORTS INTO GREAT BRITAIN.
(Thousand £'s Sterling.)

From—	1913.	1923.	1924.	1925.	Half Year.	
					1925.	1926.
Austria-Hungary ..	7,706	..	..	..	..	..
Austria	..	2,093	2,522	2,598	1,563	1,153
Czechoslovakia ..	..	8,300	13,473	10,737	5,971	5,318
Hungary	..	674	544	476	171	188
Roumania	2,037*	2,354	2,209	2,278	991	1,287
Jugoslavia	8*	696	489	369	192	209
Bulgaria	41	42	55	60	33	97
Total	9,792	14,159	19,292	16,518	8,921	8,252

* The pre-war territories of Roumania and Serbia.

Although it must be pointed out that the comparison with 1913 is not strictly accurate, it is nevertheless interesting to see that, expressed in sterling, imports from these countries since 1922 appear to have been considerably in excess of those of pre-war days. This is due, primarily, to the great recovery made by the export trade of Czechoslovakia. When allowance has been made for changes in the general price-level, however, 1924 was the only year in which imports from the Danubian countries reached the 1913 level, this being due mainly to the high price then ruling for sugar. The position of Roumania in our import trade has remained disappointing throughout the post-war period. British exports to this area are summarised in the next table:—

BRITISH EXPORTS.
(Thousand £'s.)

To—	1913.	1923.	1924.	1925.	Half Year.	
					1925.	1926.
Austria-Hungary	4,481	..	..	..	..	..
Austria	..	1,138	2,375	2,212	1,165	864
Czechoslovakia ..	..	994	1,376	1,560	796	691
Hungary	..	154	377	586	287	302
Roumania	1,947*	2,772	2,857	3,071	1,535	1,378
Jugoslavia	38*	914	1,129	1,285	726	436
Bulgaria	472	1,332	1,102	1,332	727	472
Total	6,938	7,304	9,216	10,046	5,236	4,143

* The pre-war territories of Roumania and Serbia.

These totals still remain below the 1913 standard, when allowance is made for changes in the price-level. At the same time, the steady recovery which has been made since 1922—the year of crisis *par excellence* in this part of the world—is most welcome. The set-back this year, however, is only too typical of recent British trade movements. Although the figures themselves are much smaller, the volume of British re-exports to these countries

offers an important indication of their general purchasing power.

RE-EXPORTS.
(Thousand £'s.)

To—	1913.	1923.	1924.	1925.	Half Year.	
					1925.	1926.
Austria-Hungary	1,300	..	..	..	..	..
Austria	..	392	535	531	268	196
Czechoslovakia ..	..	107	156	231	114	80
Hungary	..	12	34	59	26	18
Roumania	71*	71	82	115	39	27
Jugoslavia	1*	18	20	36	13	16
Bulgaria	30	12	10	24	12	5
Total	1,402	612	837	996	472	342

* The pre-war territories of Roumania and Serbia.

The fall in re-exports is even more marked than that in British exports, though, here again, up to the last six months, there has been a steady recovery since 1923.

Argentine Railway Dividends.—The recent strength of Argentine railway stocks was based on anticipations of higher distributions on the ordinary stocks for the year ended June 30th last. Most of the companies have now made known their final dividends, and three of the companies make a higher distribution, as may be seen from the comparative table below:—

Name of Line.	Rate Per Cent. Per Annum Final Dividend.		Whole Year.		Price of Ord. Stocks.		Present Yield.
	1924-25.	1925-26.	1924-25.	1925-26.	End Sep., '25.	Sep. 23, 1926.	
B.A. & Pacific, ord. stk.	8	8	7½	7½	86	90	7 15 6
B.A. Great Southern, ord. stock	8	10	7	8	91	102	7 16 9
B.A. Western, ord. stk.	7	8	6	7	75½	89	7 17 3
Cent. Argentine, ord. stk.	7	7	6	6	76½	77	7 15 9
Entre Rios, ord. stock ..	nil	7	nil	6	38½	68½	8 14 3

It is not surprising that the prices of the ordinary stocks have displayed marked strength, especially those of the companies showing increased dividends. The Entre Rios Railway pays 6 per cent. for the year 1925-26, this being the first dividend since the 1½ per cent. paid for year 1910-11. We hope to deal with the reports of the "big four" Argentine railways in a later issue.

Imperial Airways.—At the meeting of the Imperial Airways, Limited, held in London on Wednesday, Sir Eric Geddes delivered an important speech upon the development of British civil aviation. The meeting did not pass without some criticism from shareholders, which was to be expected in view of the loss of £20,400 last year, following a loss of £15,200 in the first year, and the directors' decision to call up the outstanding liability of 10s per share. The shareholders' disappointment is perfectly natural, but it must be supposed that those who subscribed to this flotation realised that a great deal of pioneer work had to be done before big results could be expected, and also handed over their cash from motives in which patriotism was to some extent involved. Sir Eric's review shows that what he calls the "teething period" is passing, that the Board have adopted a bold forward policy, and that traffic carried is increasing so rapidly that the passenger traffic of the first five months of the present financial year has already exceeded that of the whole of the previous year. The Board believes that the European services will yield a profit this year, and that the profit will in subsequent years be increased by the proposed Cairo-Karachi service. "We now," said Sir Eric, "have a valuable experience based upon the actual operation of a co-ordinated fleet. We now have data and statistics of operation far in advance, I believe, of the data obtaining anywhere else to-day. We have a fleet of aeroplanes conforming to a sound policy which should lead us to success, not only from the point of view of physical transport in safety, but also from the point of view of profits. We have a capable, experienced, and devoted management and staff and the finest pilots in the world. Supreme safety combined with rigid economy is

the keynote of the organisation from top to bottom, and the staff of the company have a firm belief in the ultimate commercial success of an enterprise built on these lines." Sir Eric went on to deal with the "immeasurable potentialities" of air transport, and urged that Government assistance must not be inadequate. The French Government, he pointed out, pay over £400,000 a year in civil aviation subsidies, while the British figure is £137,000. The Cairo to Karachi service, covering 5,500 miles, is to be inaugurated in January. The journey is scheduled to take 3½ days at first, and later on three days.

Burndepth Again.—Floated last year with a most optimistic and encouraging prospectus, Burndepth Wireless, it will be remembered, produced this summer a thoroughly bad profit and loss account, and one of the most deplorable balance-sheets that ever received an auditor's certificate. At the annual meeting there was naturally a good deal of criticism, but the chairman succeeded in getting his way, and the directors managed to escape the open disgrace of an adverse vote from their shareholders. Among the many criticisms at the meeting was one that turned on a mortgage given to the company's bankers, several shareholders wanting to know why a company which was freely supplied with capital in 1925 needed to mortgage its property in 1926. To this criticism the chairman replied rather casually, and led his shareholders to believe that the big mortgage was only a precaution, and that the cash position was not uncomfortable. It now appears that, having arranged this £50,000 mortgage with the bankers, the company is still short of money, and it is proposed to issue, in addition, £50,000 of debentures. They will rank after the bank's mortgage; they carry 7 per cent. interest, and they are redeemable in 1929 at 106. The directors' excuse is bad trade, but no bad trade can excuse results such as these. To raise large sums in preferred and other shares in 1925, fly to the bank for a £50,000 mortgage in the spring of 1926, and come to the public with £50,000 of debentures in the autumn of 1926 is an achievement without parallel, and likely to remain without parallel, in joint-stock finance. Some points about this scandal are not clear, but two things are obvious—(a) that the directors have been singularly unsuccessful, and (b) that the chairman's speeches at the last meeting gave an inadequate picture of the nature and extent of the catastrophe for which he and his colleague are responsible. The shareholders' position seems to be almost, if not quite, hopeless.

Consolidated Main Reef.—Ignoring the gold premium, which in 1924-25 provided £18,100 towards the revenue, this company earned rather more in the twelve months ended June last than previously. A slightly higher recovery of gold was accompanied by a small expansion in costs, the working profit per ton coming out at 3s 6d in place of 3s 9d, the totals being £120,750 and £126,000 respectively. The dividends, however, amounted to only 6½ per cent., as against 8½ per cent. in 1924-25, and 12½ per cent. in respect of 1923-24. The reduction is chiefly accounted for by the increased expenditure on capital account, which last year absorbed £47,300, in place of £27,800 previously. The balance of £190,000 now carried forward is about £8,000 down. On one or two occasions during the past year rumours have been current as to an improvement in developments. Such improvements evidently were of little importance, as the ore reserves at 1,117,200 tons, value 7.6 dwts, show only a trifling expansion, the average remaining as before. Last year the decreased proportion of 43 per cent. of the tonnage milled was taken from the ore reserves. In this connection, the consulting engineer remarks, "It is clear, therefore, that the tonnage in reserve remains inadequate for the present scale of milling operations, and, consequently, the active development programme must be maintained." Work on the Kimberley reef has proved disappointing, and, should it prove to be unpayable on the fourth and fifth levels, which will be opened up in the near future, work will be discontinued. Encouraging results have attended endeavours to prospect the Bird reef, which outcrops on the property. For the current

year capital expenditure to the tune of £60,000 has to be faced. Consequently, with no prospect of any expansion in the earnings, the dividend outlook does not appear hopeful.

A National Free Trade Congress will be held in the Houldsworth Hall, Deansgate, Manchester, on September 29th and 30th. There will be a public demonstration at 7.30 p.m. on September 29th. Further details may be obtained from the North-Western Free Trade Union, 5 Cross street, Manchester.

Obersea Correspondence.

FRANCE.—PUBLIC WORKS REFORM—THE GROWTH IN REVENUE—THE FRANC AND DEBTS—WHEAT CROP AND REQUIREMENTS.

(FROM OUR CORRESPONDENT.)

PARIS, September 22.

THE latest Government department to come under the pruning-knife of administrative reform is the Ministry for Public Works (now headed by M. André Tardieu). This department has been more increased in importance since the war than any other. In addition to railways, canals, and ports, it is now responsible for the restoration of mines, roads, railways, and canals in the devastated regions, "reparation" coal, the Sarre mines, Rhine navigation, hydraulic and electrical power (including the huge scheme for railway electrification which is now in progress of realisation), the solution of the road problem arising from the development of motor traffic, and railway, petroleum, and potash matters in Alsace-Lorraine. The total strength of the department in officials, which in 1920 was 9,274, has already been reduced to 8,243 (as compared with 8,840 in 1914), and is now to be further reduced by 420. The 530 French ports are henceforward to be classified in three categories—namely, national, departmental, and communal ports, of which only the first will continue to be administered by the central Government, the others being handed over to the local authorities, under the charge of State engineers. Extensive reforms are to be introduced into railway administration, including the reorganisation of the Paris suburban lines, which are to be taken out of the hands of the various companies and operated as an independent entity, with a view to getting rid of existing unsatisfactory conditions, and also of the current deficit of some 200,000,000f a year. The note of M. Tardieu's report, which will form the subject of *décret-lois* within the next few days, may be summed up as "increased efficiency at lower cost."

The revenue returns for August show that the total yield from all sources (exclusive of the postal department, which is dealt with in an autonomous Budget) was 3,206,763,500f (as against 1,812,719,700f in August, 1925), of which 3,126,745,000f was from "normal and permanent resources" (as compared with 1,732,782,700f in August last year). These substantial increases are due, of course, to the heavy increases in all kinds of taxation and to the rise in prices of commodities affected by *ad valorem* imposts. The increase is most marked in the yield from the turnover tax, which last month produced 726,118,000f, or practically double the amount yielded in August, 1925. The yield from the turnover tax in August was far and away the largest from any source, the next in order being 391 millions from registrations, while the State monopolies, although 100 millions more than in August last year, figure for only 336½ millions. Income-tax yielded 497,601,000f, as against 372,360,500f in August, 1925. The yield from nearly all categories of taxes was in excess of Budget estimates. State monopolies and indirect taxes during the first eight months of the year yielded 18,634,406,000f, or 4,488,920,000f more than during the corresponding period of 1925 and 1,715,935,600f above Budget estimates. The excess over budgetary expectations from these resources in August alone amounted to 553,932,500f, which seems to indicate that the view of several previous Finance Ministers that

the limit of taxation had been already reached in this country was without serious foundation. Dissection of the various categories of taxation indicates that during the first eight months of the present year they showed the following increased yields respectively, as compared with the corresponding period of 1925:—

	Increase. Francs.
Direct taxes on income	761,254,000
Taxes on private fortunes and stamp duties	1,443,509,000
Luxury taxes	278,062,900
Taxes on various products not indispensable to existence	500,485,000
Taxes on consumption properly so-called	2,013,270,100
State property and various public concerns	37,271,000
Increase in 1926	5,033,852,000

The franc has suffered another setback this week, and closed to-night at 176.50 after touching 177.70 during the day, as compared with 169.50 a week ago, and around 160 at the beginning of the month. Various reasons are given for this comparatively sudden reaction, among them being reports of differences in the Cabinet in regard to the interviews between M. Briand and Herr Stresemann at Thoiry, on the subject of Franco-German rapprochement. Other reasons given are the alarm that has been excited by the reports that Mr Mellon, on his return to Washington, has pronounced against any reopening of the Franco-American debt controversy, and the fear of a recrudescence of party political warfare, when the Chambers meet early next month, in consequence of the dissatisfaction felt in many provincial centres that have been deprived of their sub-prefects, and of law courts, prisons, barracks, and other Government establishments under the operation of the Poincaré economy axe. The only indication that has been vouchsafed as to the Government's present attitude on the British and American debt questions is that so far M. Poincaré has handed over only a part of the dossier concerning the debts to the sub-committee of the Finance Commission of the Chamber, which was appointed to consider the whole question during the recess. It is asserted by M. Dariac, the president of the sub-committee, that no official diplomatic conversation is in progress concerning the debts, and that the sub-committee will begin consideration early next month of the agreements awaiting ratification. Meanwhile, as is known, the French Government last week paid to the British Treasury the sum of £2,000,000, being one-half of the £4,000,000 which, under the as yet unratified Pétet-Churchill agreement of April 22nd, is the total payable during the British financial year 1926-7 in respect of the French debt to Great Britain. In view of all the circumstances, opinion here is puzzled to fix the cause of the franc's recent renewed fall. The problem of the franc, it is generally recognised, has now become a domestic rather than a foreign matter, and no factor on the foreign horizon can now be regarded as directly influencing the success of this country in securing such sound money as it requires. The Morgan fund, it is asserted, has now been practically reconstituted by quiet buying in of sterling and dollars, and this may be one of the causes—if not the chief—of the present somewhat disquieting drop in the franc.

Semi-official statements issued here throw doubts on the recent unofficial reports that the wheat harvest for 1926, which is stated to show a total crop of only 70,000,000 quintals, will necessitate heavy purchases of foreign corn to meet the country's requirements of 90 million quintals. The latter total, it is asserted, includes some 3,000,000 quintals of wheat not required for breadmaking purposes, so that the actual total requirements do not exceed 87 millions. If the 7,000,000 quintals be taken into account, which it is estimated will be economised by the use of 10 per cent. of wheat substitutes in bread (now compulsory under the law), together with a further 1 to 2 millions obtained by the recent increase of 2 per cent. in the percentage of extraction (under the law of July last), and the fact that large imports of foreign wheat have recently reached this country, owing to the improvement in the franc, it is insisted that the real deficit this year will not be more than 2,500,000 quintals, which should prove almost negligible in its effect on the situation. Growers of home supplies of wheat are urged not to allow themselves to be influenced by inaccurate reports, and to offer their crops steadily on the market, month by month.

GERMANY.—POLITICS—FINANCES—REICHSBANK—IRON INDUSTRY—AUGUST FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

BERLIN, September 22.

THE information which has so far been forthcoming concerning the Briand-Stresemann negotiations has made a good impression here. The belated entry into the League of Nations made no such impression: the entry itself was discounted, and the change in the League's constitution was objected to both as being in itself inadvisable from the viewpoint of practical work and as a demonstration that the League is anything but free from rivalries and ambitions. Until this week the enemies of the League were able to object that Germany's entry would merely tie her hands, impose on her material obligations, and deprive her of the potential weapon of co-operation with Russia should such co-operation promise advantage; and such critics got support from recent Soviet-Russian utterances that by entering the League Germany threw away her one chance of regaining authority in international affairs. If an agreement to evacuate the Rhineland and to return the Saar territory before the time foreseen in the Peace Treaty comes into effect, this criticism will become void. Of late little has been heard of grievances resulting from the military occupation, but there is a certain economic pressure, and sentiment on the subject is very strong. The German-Nationals and other opponents of the policy initiated at Locarno have made capital out of this sentiment, adducing the occupation as evidence that in really important questions France and the Allies would never make concessions. An arrangement of the kind reported would greatly weaken German intransigent sentiment, and it would probably strengthen the Marx Cabinet against the attack threatened from the German-National side as soon as the Reichstag meets.

The Finance Ministry's return of the gross yield of taxes for August and for the first five months of the financial year is:—

	(000's omitted.) August.	April. August.	Year's Estimate.
All taxes	651,432 ..	2,814,728 ..	6,465,300
Thereof:			
Direct	461,884 ..	1,911,545 ..	4,506,000
Customs and Excise	189,537 ..	903,018 ..	1,959,300
Thereof:			
Reparations—pledged	186,449 ..	874,680 ..	1,907,000
Yields of the chief taxes were:—			
Income-tax	218,649 ..	935,195 ..	2,100,000
Corporation tax	57,294 ..	177,157 ..	250,000
Sales tax	61,967 ..	362,206 ..	974,000
Property tax	57,436 ..	100,815 ..	400,000
Customs	64,826 ..	343,931 ..	580,000
Tobacco	42,800 ..	233,144 ..	655,000
Sugar	27,895 ..	109,795 ..	265,000
Beer	26,213 ..	115,163 ..	235,000

The yield is very high for a month in which quarterly payments for income and sales taxes did not fall due. In May and June, the last months of this kind, the yield was only 435 million marks. Income-tax deducted from wages, the yield of which directly fluctuates with employment, brought in only about the same sum as in July—93 million marks—but this item had already risen since April from 79½ million marks. The total taxation yield exceeds that of August, 1925, by 130 millions. The taxation yield in the five months April-August was more than five-twelfths of the estimated yield of the whole year. Customs and Excise brought in 46 per cent., and pledged revenues nearly 46 per cent. of the year's estimates.

Money has been again plentiful; day-money, as early in the summer, has been difficult to place. Around September 17th the day-money rate in Berlin was as low as 2½ per cent. Since then there has been a rise in interest rates, but the supply of money remains plentiful. The rates for month-money showed no corresponding decline. A considerable tightening of money is expected before the quarter-end settlements, and this expectation to-day helped to depress security prices. The Reichsbank's return for September 15th showed a decline in discounts of only 15 million marks, to 1,266 million marks, which is considerably higher than the figure (1,108 million marks) of mid-August. The gold reserve shows a new

considerable rise of 22,381,000 marks, to 1,541,043,000 marks, of which 21,050,000 marks was brought to Germany. The reserve of legal-cover exchange fell by 36,754,000 marks, and presumably the Bank has been continuing its policy of paying for gold out of this part of its exchange holding. It is stated that the bank is unwilling to meet the demand made of late from various quarters that it should itemise its returns more minutely—one demand is that the bank's whole holding of foreign exchange should be revealed.

The wholesale prices index number for September 15th was 127.4, which is the same as the average for all July. If only the monthly indexes are counted, and if weekly fluctuations are ignored, wholesale prices have risen every month since March (when they touched a low point of 118.3) except in August, which witnessed a slight drop. Bankruptcies, after declining steadily since the beginning of the year, increased in the third week of this month. The Trades Unions' monthly returns for August show a distinct improvement in employment, but the improvement varies much in different industries, and is nowhere great; a few branches show more unemployment in August than in July. In August in 31 branches 533,690 out of 3,134,373 trade union members were unemployed, against 553,025 out of 3,094,037 in July, and 752,024 out of 3,331,783 in January. The number of workers on short time in August was 450,655, against 491,880 in July, and 740,021 in January. The coal market continues active. On the Ruhr the average daily output in August was 385,076 tons, against 376,813 tons, coke output 59,814 tons, against 56,946 tons. Since the end of July, and as a result almost entirely of the British strike, 19,310 more miners have been taken on, and at present 385,692 are employed. The improvement in the iron and steel industry continues. Output of pig-iron in August reached 850,208 metric tons, against 767,862 tons in July, and 765,901 tons in August, 1925. The delay in concluding the international steel syndicate has caused considerable disappointment. The Pig-iron Syndicate states that it knows nothing about the alleged plan to create an international pig syndicate, which has been discussed everywhere in the Continental Press. The iron ore market is more active, and several closed-down mines in the Siegerland district have been reopened. The leading railway wagon manufacturers are preparing to combine. This branch, like the locomotive branch, has been long depressed, owing to lack of orders from the Railways Corporation, which has more goods rolling stock than it needs; and one of the leading corporations, the Gothaer A.G., has been in financial difficulties. Altogether seven companies, including the Linke-Hofmann, van der Zypen, and Gothaer, are mentioned as members of the combine. The aim of this fusion is "rationalisation" of manufacturing methods, and it probably means the closing of the less efficient workshops. With one exception, all the linoleum manufacturers have decided to combine in a trust.

The August foreign trade balance shows a slight decline in the import supplies:—

	(000's omitted.) August.	July.	Jan.-Aug.
IMPORTS.			
Livestock	12,104	9,013	66,052
Food and drinks	383,610	404,140	2,301,930
Raw & half-manufactured materials	420,553	411,851	2,939,348
Manufactured wares	103,460	103,955	770,006
Wares only	919,727	928,959	6,077,336
Gold and silver	51,544	6,941	199,202
Totals	971,271	935,900	6,276,538
EXPORTS.			
Livestock	477	746	7,162
Food and drinks	26,296	22,875	291,791
Raw & half-manufactured materials	235,350	215,790	1,455,847
Manufactured wares	571,794	581,868	4,668,492
Wares only	833,917	821,279	6,423,292
Gold and silver	2,508	1,907	26,179
Totals	836,425	823,186	6,449,471

Exports of manufactured goods show a decline of 10 million marks. Textiles exports increased by 13 million marks, of which 7 million marks was in wool. Exports

BANK ESTABLISHED IN 1864.

SKANDINAVISKA KREDITAKTIEBOLAGET

GOTHENBURG, STOCKHOLM, MALMO.

Branches in all parts of Sweden.

Paid-up Capital and Reserves - - Kr.182,000,000

Telegraphic Address: "Kreditbolaget."

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

of machinery declined by 7 million marks, and exports of other iron and steelwares and of heavy iron declined by 8 million marks. The trade balance has now been passive for three successive months, after being active for six successive months. The figures for the year so far (in millions of marks), precious metals being omitted, are:—

	Imports.	Exports.	Balance.
January	707.5	794.6	+ 87
February	661.7	782.8	+121
March	645.2	923.1	+278
April	723.0	779.3	+ 56
May	702.7	729.5	+ 27
June	791.9	758.6	- 33
July	942.0	821.3	-126
August	919.7	833.9	- 85.8

The import surpluses are mainly due to increased imports of raw and half-manufactured materials. After the heavy drop in such imports last winter, an increase was expected, and the passivity, being connected with the general trade improvement, cannot be considered an unfavourable symptom. Discussing recent criticism of the official policy in commercial-treaty negotiations, the Minister of Industry, Dr Curtius, declared that this is no time for experiments, and added that he believes that the most-favoured-nation system—which was one object of the criticism—is the system best suited.

BELGIUM.—MONETARY STABILISATION—RAILWAY LOAN—STOCK EXCHANGE—CONGO COLONY PRODUCTION—COAL.

(FROM OUR CORRESPONDENT.)

Ghent, August 22.

RECENT discussions in the Press have shown that public opinion is still hostile to the definite stabilisation of the franc at its present value. The rate of 150f for sterling is put forward as being more in accordance with the present price level. Supporters of this rate point out that stabilisation at 175f, whilst causing a further rise in prices and inflicting an unnecessary additional loss upon holders of Belgian Government stocks, would only postpone, but not prevent, the industrial crisis which is bound to come as soon as the internal purchasing power of the franc has fallen to the level of its external value.

It remains to be seen whether an attempt to increase the value of the franc by 20 per cent. (supposing it was practicable) would not be too risky an undertaking in the present circumstances. Meantime, the Minister of Finance has preferred to keep to the safer side. Instead of repaying the special advances received from the National Bank after the March breakdown of the Janssen stabilisation plan, he has used the available yield from taxation for repayment of debt in other directions. During the last three months 435 million francs of floating debt have been repaid—7 million dollars abroad and 168 million francs in Belgium.

The following subscriptions to the shares of the National Railway Company are known to have been received up to the present: Switzerland, 220 million francs; Holland, 200 million francs; forced consolidation of Treasury bonds, 4,375 million francs; free Belgian subscriptions in specie, 80 million francs—or altogether 4,875 million francs, this being about half of the total amount of 10,000 millions. The small amount of free subscriptions in Belgium is somewhat disappointing in view of the intense publicity campaign which the Govern-

ment launched with the assistance of the entire Press, and of the attractive conditions offered to investors, which included exemption from income-tax, safeguard against exchange fluctuations, fixed interest of 6 per cent., guaranteed by the Belgian State, and prospects of an additional dividend varying with the net profits of the Belgian railways.

Persistent rumours credit the Government with the intention of creating a new monetary unit based upon gold, the "ducat," which would be worth one-tenth of a dollar (about $\frac{1}{2}$ gold franc, or, at the present rate of exchange, about $3\frac{1}{2}$ paper francs. However, up till now the definite measures the Government intend to take in connection with a return to the gold standard remain in the dark, and will probably continue to do so until France has taken some decision in the same matter.

It is generally expected that, as was the case in Germany, a return to the gold standard, which must come sooner or later, will cause a rise in the value of the shares of sound industrial Belgian undertakings. Quotations of variable-dividend securities on the Brussels Stock Exchange at present average in gold value only about 40 per cent. of pre-war quotations. The Bourse has been more active lately. For the moment, shares of companies connected with the Belgian Congo Colony are special favourites. The preference shares of the Union Minière du Haut Katanga, which could be bought for about £10 at the end of 1922, are now quoted, at the present rate of exchange, more than £30, notwithstanding an increase in capital which has taken place between these two dates. The copper production of the Union Minière has risen from 7,404 metric tons in 1913 to 30,464 tons in 1921 and 90,000 tons in 1925. The gold mines of Kilo Moto produced $3\frac{1}{2}$ tons of gold in 1925, against $1\frac{1}{2}$ tons in 1913. Coal, cotton, and other raw materials also show substantial increases.

As was to be expected, the British coal strike has stimulated the coal output, which amounts to 2,118,000 tons in August. Stocks at the collieries had fallen at the end of August to 178,000 tons, this representing only two days' production.

NORWAY.—HIGH TAXATION—ECONOMIC DEPRESSION—TRADE BALANCE—PRICES—CROPS.

(FROM OUR CORRESPONDENT.)

TRONDHJEM, September 13.

At the recent annual meeting of the Norwegian Bankers' Association, the chairman, Mr Kamstrup Hegge, gave an interesting review of the conditions in Norway during the present year. In the course of his address he mentioned the taxes, which now seem to have reached the limit of what can be expected from the already sorely tried taxpayer. Since 1913 the ratio of taxes in proportion to the computed income has risen from 16 to 25 per cent., and there is at the present nothing to indicate an immediate and appreciable reduction. It is quite obvious that the exorbitant taxes are absolutely detrimental, not only to trade and production, but also to the possibilities of a general restoration of our economic system. In its search for fresh sources of income the Government has now proposed a new telephone tariff, which will come into operation on October 1st. At the increased rates stipulated in this new tariff, the use of the telephone will very likely diminish, and a number of private telephone subscribers have already announced their intention to withdraw if the proposition is carried out.

The strike in the paper industry has now been effective since August 14th, and in spite of serious efforts on the part of the Norges Bank to bring about a reconciliation, the dispute still remains unsettled. Notwithstanding the present situation, which is as seriously depressing as ever, there are certain facts that inspire some confidence as to future developments. The krone at last seems to have found its natural basis (at least the level best adapted to the present conditions), and has been quoted at 22-20 since June 25th last, a fact which to a great extent, however, is due to the regulating influence of the Norges Bank. General satisfaction is felt at the decision of the Norges Bank to lower its rate to 5 per cent. to-day. The rate had been $5\frac{1}{2}$ per cent. since April 19th last. This step has long been expected, and may be regarded as

confirming the impression of ease and stability in the money market.

The latest figures available on the trade balance also reflect the general improvement of business activity during the last month or two, and reveal an unusually favourable proportion between imports and exports. There was thus a decline in the surplus of imports from 10.5 million kroner in June to 5.32 million kroner in July. Compared with the figures for July, 1925, the value of imports has decreased by 57 million kroner, while the value of exports has been reduced by 12 million kroner only, representing a decline of approximately 45 and 15 per cent. respectively. The decline in the value of the krone in the same period amounts to about 19 per cent.

The sharp drop in commodity prices, which occurred in March-April last, now seems to have stopped completely, and during the last two months there has been practically no movement, apart from the usual seasonal fluctuations. The wood pulp and paper markets are unchanged, with a minimum of business being done, but it is believed that the bottom has been touched as far as prices are concerned. Heavy downpours of rain in the western and northern parts of the country have seriously hampered the harvesting, while in the other districts a spell of dry weather has enabled the farmers to gather in a very good crop. As a whole the output of cereals is probably not much below the normal yield. The sixth Norwegian Industries Fair was opened on the 5th inst., and will be closed on Sunday the 12th. It has proved a decided success, the number of participating firms being greater and the volume of business larger than at any of the previous fairs.

ROUMANIA.—GRAIN CROPS AND EXPORTS—TRADE BALANCE—MONETARY SITUATION—OIL.

(FROM OUR CORRESPONDENT.)

BUCHAREST, September 8.

The earlier estimates on the grain crops and the size of the exportable surplus are now undergoing their customary late summer modification. It was estimated in July that the present season's crops would provide a surplus of about 5,000,000 metric tons for sale abroad—including 1,300,000 tons of wheat, 1,000,000 tons of barley, fair amounts of rye and oats, and not less than 2,000,000 tons of maize. It is still likely that Roumania's crop this year will be the largest since the war, but it will certainly not provide an export surplus of 5,000,000 tons. The estimate on the wheat surplus has already been scaled down from 1,300,000 to 600,000 tons, and the quality of this grain—as is also the case with rye and barley—has suffered from excessive moisture during the summer. One authority states that the quality of this year's wheat from most sections of the country is about 40 per cent. below normal, and is so inferior that foreign buyers will have none of it. The situation in regard to rye is not so dismal, since it is expected that Belgium, France, and Italy will purchase Roumanian rye this year for mixing with home-grown wheat; and the greater part of the export surplus of barley, it is expected, will find a market in Germany. Maize is still damp, and not yet harvested, and the prospects of moving out any extensive shipments of this grain before next spring (on the re-opening of the Danube) are by no means encouraging.

In brief, therefore, while the 1926 harvest as to quantity is well above the post-war average, the quality is poor, and the marketing abroad of the exportable surplus will be difficult. The continued unsatisfactory condition of the country's transport services, the recent rise in lei exchange to below 1,000 to the £, and inability to find the money necessary for an extensive crop movement are all factors tending to restrict grain exports; and it is not surprising that almost complete stagnation is reported from the ports. The removal of export taxes, for which there is again a strong agitation, would no doubt help grain to move out more freely, but the Exchequer is still dependent upon export taxes for one of its main sources of revenue.

The stimulation afforded to the export of grain, oil and timber by the May drop in exchange to 1,500 lei to the pound, combined with the contraction in imports resulting from the April 1st increase in tariff rates, has turned a foreign trade deficit of 2,500 million lei for the first

quarter of the year into an "active" balance of approximately 1,000 million lei for the seven months ending July 31st. The outlook for the balance of this year, however, is very uncertain. There will have to be a considerable improvement in the grain export situation before the winter closing of the Danube unless another deficit in international payments has to be faced—particularly as there is not the slightest sign yet that foreign capital is flowing to this country in amounts sufficient to off-set a deficit in international payments. Roumania, in fact, on balance, is understood to have shown a loss in the foreign capital account last year. The recent Italian loan of 200,000,000 lire—of which a first instalment of 60,000,000 lire has just been received—is important more for political reasons than it is for financial or economic. As one journal has recently pointed out, what Roumania needs is a loan of 200,000,000 "English livre"—not Italian lire.

The shortage of circulating currency and bank credit becomes more and more acute. The banks have ceased almost entirely to make new loans, and private lenders now seem to have little difficulty in obtaining as high as 4 per cent. per month with good collateral. The recent rise in lei exchange is understood to be due in large part to the banks unloading some of their reserves of foreign currencies in order to get lei for use in financing the crop movement. Much the same situation prevailed exactly a year ago, and also in 1924, with the late summer rise in the value of the lei serving only to hamper the outward movement of grain. There is no confidence here that the recent rise will be maintained for more than a few months. With the use of cheques in everyday business transactions being almost unknown in this country, the chronic shortage of circulating medium has a very serious effect on trade in Roumania. The peasants, for instance, will sell their grain only for currency, which they then hoard. The Bratianu influence in the present Government has so far effectively blocked all attempts to raise the present legal limit of 21,000 million lei on the ground that any new emission by the National Bank would merely be further inflation of the currency, even if the proposed new emission of 2,000 million lei were "covered" by the foreign drafts entering Roumania for account of grain purchases. Railway rates are to be increased by 50 per cent. on September 15th, and Post Office rates are also to be put on a gold basis very soon, which, of course, means a further rise in the internal price level and an aggravation of the currency shortage.

Crude oil production for the first seven months of 1926 reached the "record" figure of 1,806,102 metric tons, against 1,258,520 and 1,016,714 tons respectively for the corresponding periods of 1925 and 1924. Exports of refined products from January 1st to June 30th of the present year amounted to 588,213 tons, or almost double the 1925 figures. While the export is at present active, however, prices are lower than they have been at any time since 1924. Motor spirit for export, which was quoted at 10d per gallon last January, now fetches only about 6d.

POLAND.—PROFESSOR KEMMERER'S MISSION—ECONOMIC IMPROVEMENT—CIRCULATION—BUDGET.

(FROM OUR CORRESPONDENT.)

WARSAW, September 19.

PROFESSOR KEMMERER, who, with a staff of American experts, has been studying for the past three months the economic and financial conditions of Poland, has presented a report to the Polish Government, and returned to the United States. Before leaving the country Professor Kemmerer delivered a speech, in which he drew attention to the improvement which has taken place since the beginning of the year. He based his conclusions on the following facts:—(1) The Budget is now balanced; the period of the last five months, from April to August, has given a surplus. (2) For two months the zloty has been stabilised. The fluctuations are now no greater than those which may be observed in countries where banknotes are exchangeable against gold. (3) The Polish Bank has repaid the credit of 10 million dollars granted by the Federal Reserve Bank of New York. This enabled the Polish Bank to regain control over the gold deposited

abroad. The reserve of Polish notes increased from 34 per cent. in December to 39 per cent. in August. (4) The quotations of Polish bonds and shares have risen. The value of the shares of the Polish Bank has nearly doubled since May. (5) The number of wagons loaded daily on the Polish railways has increased from 10,642 in January to 15,678 in August. Even after deducting coal transports there was an increase from 6,740 wagons in January to 9,454 wagons in August. (6) The number of unemployed has fallen from 359,000 in January to 245,000 in August, a decrease of 32 per cent. In concluding his remarks, Professor Kemmerer laid emphasis on the fact that though an upward movement may be observed in all fields of economic activity, great and difficult problems remain still to be settled.

The Polish circulation, which amounted to 780.9 million zlotys in January, increased to 980.7 millions in July. The increase is due, in the first instance, to an additional issue of notes by the Polish Bank. The circulation of notes issued by the Government, however, has increased simultaneously, though in a smaller proportion, as may be seen from the figures below:—

(Million Zlotys.)

	Total Circulation.	Bank Notes.	Treasury Notes.	Silver Coin.	Other Coin.
End of January	780.9	361.9	268.9	89.3	60.8
" February	791.7	376.9	271.3	88.4	55.1
" March	815.2	389.4	284.5	88.0	53.3
" April	828.7	392.9	295.9	87.4	52.4
" May	855.2	412.9	304.1	86.0	52.2
" June	907.8	448.0	318.7	87.6	53.4
" July	980.8	511.2	321.3	90.9	57.3

The increase in the amount of Treasury notes from 268.9 millions in January to 321.3 millions in July is a very unsatisfactory phenomenon. But in August no further increase has taken place, and it may be hoped that the issue of Treasury notes has reached its final limit. The proportion of the circulation issued by the Government, which amounted to 469 million zlotys in July (Treasury notes and coins), as compared with the total circulation of 980 millions, is abnormal.

The Budget estimates for the last quarter of the year have been presented to the Diet. The expenditure is estimated at 484.8 million zlotys. The Budget of the Ministry of War, which amounted to 139.7 million zlotys during the third quarter, has been increased to 158.6 millions. The Minister of Finance must resist a very strong pressure which is exercised upon him from different quarters in the direction of increased expenditure. In his endeavour to balance the Budget without resorting to the printing press, he is backed by the Premier. It may be hoped that their joint efforts will be successful. Otherwise the Budget equilibrium, which has been attained through great hardships, would be only of short duration.

CANADA.—THE ELECTIONS AND THE IMPERIAL CONFERENCE BUSINESS CONDITIONS—BETTER CROP PROSPECTS—THE STOCK MARKETS—THE MARITIME RIGHTS COMMISSION—PRICES—MINING DEVELOPMENTS.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 7.

THE general election campaign is now in its penultimate stages. Predictions about the result are now unprofitable, but it cannot fail to have an important bearing upon the course of the approaching Imperial Conference, whose opening has, at the request of the Canadian Government, been postponed to October 19th. The declaration of Premier Hertzog, made on the eve of his sailing for London, that he intends to demand at it a written constitution which will regularise South Africa's national and international status, and establish her complete constitutional equality with Great Britain, makes it clear that at the Conference there will emerge issues which have long been kept in the background, but, once raised, must go forward to solution. The Irish Free State is likely to be in cordial sympathy with the aspirations of South Africa, but the Prime Ministers of Australia and New Zealand will be ranged in opposition. Therefore, when the issue comes up for discussion the balancing vote among the over-

seas Dominions will reside with Canada. It is true, indeed, that since during the campaign both Premier Meighen and Mr Mackenzie King have sedulously avoided any discussion of the problem of Imperial relations, neither can claim any definite mandate for a particular line of policy, but it is reasonably certain that while Imperialist sentiment, always strong in the Conservative party, would compel Mr Meighen to make common cause with Australia and New Zealand, the pressure of nationalist opinion would bring Mr King to the support of Premier Hertzog. The result, therefore, may have a very decisive effect upon the immediate future of the internal relations and constitutional arrangements of the British Empire.

The election campaign has produced much less than the usual disturbance of business which accompanies general elections. With the exception of seasonal declines in one or two lines, industry continues to hold up remarkably well, and throughout the country there is a stronger tone of optimism than has prevailed at any corresponding date since 1920. The carloading figure for the week ending August 28th is placed at 60,967 cars, which is a gain of more than 5,000 over the figure for the corresponding week in 1925, and the aggregate total for the year to date, placed at 1,960,780, shows a gain of 221,849 cars. The employment situation at the beginning of August was remarkably good, 5,864 firms showing 854,604 workers on their pay-roll, as compared with 849,565 on July 1st; and the official employment index number was 104.2, as compared with 96.3 on August 1, 1925. The earnings of both the great railway systems continue to be exceptionally good; for the first seven months of the year the C.P.R. net earnings, placed at \$17,877,723, show an increase of 60 per cent., and the C.N.R.'s net earnings, given as \$17,536,998, record the phenomenal gain of 210 per cent., the parallel figure for 1925 being only \$5,667,287.

One factor in the present optimism is the more encouraging news about the Western wheat crop. Harvesting operations, which were more than half completed by the end of August, have, unfortunately, been delayed by prolonged and torrential downpours of rain which took place during the past week, and there will be in many districts a substantial impairment of the quality of the crop. But timely rainfalls and a spell of fine, cool weather which began in the second week of August helped in a wonderful fashion to repair the ravages wrought by the prolonged drought of July, and many fields of grain which were despaired of have filled quite well and will show average yields. The result is that the crop experts of the West now assert that the Bureau of Statistics' estimate of a wheat crop of 327 million bushels is far too low, and some enthusiasts are now predicting that the volume will be found to be in excess of 400 millions, or even as large as the 1925 yield of 411 million bushels. There is, however, considerable anxiety about the fate of the substantial portion of the crop which is still unharvested, and unless good dry weather comes at once it will soon be in the dangerline of disaster from early frosts. There is, moreover, a serious shortage of labour on the Western farms, and to meet the crisis the C.P.R. have released 4,000 of their employees for harvest work, and from the pulpits in all the Western cities clergymen are appealing to their flocks to abandon their ordinary avocations and give a hand at saving the grain harvest. The harvest in Eastern Canada was much later than usual, but it is now practically finished, and, generally speaking, the yields are above the average. The fruit crop and the minor farming industries have also fared well, and on the whole the agricultural community has no reason to be dissatisfied with its condition and prospects. The grain marketing situation still causes some anxiety, as there is still a rather serious congestion at the port of Montreal and the new crop is beginning to pour down to the Lake ports, but fortunately a better flow of buying orders from Europe has made its appearance and helped the outlook.

Both wholesale and retail merchants in the larger centres report the present volume of business as very satisfactory and prospects for the autumn and winter trade as distinctly encouraging. The sales of dry goods and hardware continue to be excellent, while business in groceries and footwear are reported as normal. The steel equipment and construction industries have a fair volume of business in hand and prospects for additional work during the winter months. The equipment com-

panies are busy with very substantial orders for street cars and railway rolling stocks, and both the railway systems have placed large orders for rails with the steel mills. The farm implement companies are maintaining a steady rate of production and find a good export demand for their wares. A higher market for pig-iron is looked for, as well as an advance of one dollar per ton on the price of steel products. Export trade in most lines is satisfactory, but the curtailment of the buying power of Britain through industrial troubles is still keeping the shipments of flour, butter, cheese, cattle, &c., at a lower level than last year.

The stock markets have been very lively, and last week the volume of transactions on the Montreal Exchange was at the highest level in its history, attaining a total of 318,143 shares, compared with a peak of 300,045 in the previous week. The shares of the pulp and paper companies are still in active demand, and the traction and public utility issues are also popular. There is a steady demand for Canadian bonds in the United States, and the local market is absorbing all good issues which are offered.

The Royal Commission which has been examining the problem of Maritime Rights, after journeying as far West as Winnipeg, where it heard evidence upon the possibility of using Halifax and St. John as outlets for Western grain, has now practically completed its sittings, and is in Ottawa preparing its report. It is unlikely that it will be able to offer any serious solutions of the troubles which are retarding the prosperity of the Maritime Provinces, but it should at least uncover the realities of the situation. Meanwhile secessionist sentiment is reported to be growing apace in Nova Scotia, and one candidate is openly fighting on this platform.

The Bureau of Statistics' index number of wholesale prices fell 2.3 points in August, being 153.9, as compared with 156.2 in July. Thirty-five price quotations were higher, 52 were lower, and 149 were unchanged. Declines in the "vegetable products" group, seasonal in character, bear the chief responsibility for the downward trend.

All the mining fields continue to be the scene of great activity, and in the shares of the better-class mining stocks there has been a miniature boom. At present Manitoba, which has lagged behind Northern Ontario in the development of its minerals, is now coming into prominence as the result of fresh developments which are in progress. There has been established in Winnipeg a Manitoba Chamber of Mines, which will fill a long-felt want, and large quantities of local, British, and American capital are becoming available for the exploitation of the province's resources. The well-known London firm of John Taylor and Sons has now actively entered the Manitoba field, and is reported to be interested in a new corporation called "Central Manitoba Mines, Limited," which is the result of the amalgamation of various promising mining enterprises in Manitoba.

INDIA.—CURRENCY REFORMS—PROPOSED RESERVE BANK—EXCHANGE OUTLOOK—TRADE FIGURES.

(FROM OUR CORRESPONDENT.)

CALCUTTA, August 26.

COMMENT on the important recommendations of the Currency Commission would be less useful here than an attempt, however daring or perilous, to forecast their probable fate. The usurping eighteenpenny rupee, it may be calculated, is now firmly seated on the throne. It commands the powerful and unqualified support of Sir Basil Blackett. Nature has intervened to give it further support in the form of another good monsoon, and the political influences of the moment, by decreeing a postponement of legislation, have ensured its maintenance during another busy season, thereby undoubtedly consolidating its hold, both in an economic and sentimental sense, on the country. In the Assembly the upholders of the old ratio feared to risk a vote, and, in view of the expected eclipse of their Swarajist allies in the approaching elections, are very unlikely to be in a stronger position to revive the contest when the new Assembly meets early in 1927. In respect of the staple Calcutta exports, the new ratio is not regarded as a menace, and effective opposition is therefore confined to Bombay, and chiefly

to the cotton millowners, whose special difficulties certainly call for recognition, but may possibly be met, it is suggested here, by tariff adjustments, without recourse to exchange manipulation, with its varied disadvantages, for the benefit primarily of a single important—and, politically, somewhat too influential—industry. In the predominantly agricultural provinces, articulate opinion, commercial and official, appears to favour the maintenance of the existing ratio. There is a natural reluctance to resort to action which would confront the new legislatures, central and provincial, next year with a series of budget deficits, and this practical consideration will, with many legislators, be decisive, particularly if, as seems possible, stabilisation at the present ratio would facilitate the complete elimination of provincial contributions to central revenues. Finally, Sir Basil Blackett's masterly handling of Indian finance has given him immense personal prestige, and if he brings forward legislation giving effect to the acceptable recommendations of the Currency Commission, avoiding piecemeal measures, present prospects favour the assumption that the Bill will command legislative endorsement.

That the Finance Member is anxious to crown his Indian career by establishing the gold standard, and endowing this country with a real Central Bank, is clear from his speech in the Assembly; and, as far as can be foreseen, on these two points there are no insuperable obstacles to the realisation of his ambition. In common with all articulate opinion on this subject in India, he would have liked to add a gold currency to the other innovations impending, but recognises frankly, though regretfully, the temporary impracticability of this project, while reserving the right of the Government of India to revive the scheme when conditions are more favourable than they are to-day. The Anglo-American veto is accepted as decisive at the moment, but certainly has not convinced Indian opinion that a gold currency, however wasteful, represents a stage of evolution which this country can avoid. Meanwhile, the Finance Member is commending the proposed gold bullion standard to a public somewhat suspicious of its real significance and purpose, as a traditional device on to which, if India so desires, a gold currency may eventually be grafted, albeit the bullion standard offers India, even to-day, "a currency standard in no way inferior and in no essential feature different from the currency standard of great Western countries, particularly England and the United States." It is quite recognised that paper currency is more economical and up-to-date, tested by modern practice and theory. Politically, a democratic form of administration would— analogously—be more in conformity with present-day standards than the present bureaucracy! India, however, has been advised, with no lack of authority or reiteration, that it must progress by "stages" on the political side, and, in practice, the same advice holds good in other fields, including the forms of currency most likely to commend themselves, at this stage, to Indian opinion, and to minister to Indian economic requirements.

Until, however, a gold currency, preferably of Indian mintage, is put into circulation, it is fairly generally held here that it would be extremely impolitic to act on the Commission's recommendation that "The paper currency should cease to be convertible by law into silver coin." Interdicts in India habitually and disconcertingly, in most cases, produce results directly the reverse of those intended. One-rupee notes will, as suggested, be revived, but their circulation outside the towns will be limited, and, in any event, no issue will be made until the Reserve Bank takes charge, and the new designs come into operation. A minor point, nevertheless, meriting notice as of historical interest, is the final abandonment of the auctioning of Council bills, and the perpetuation of the more recently-established practice of meeting the English charges (which, by the way, roughly correspond in amount with the British debt payments to America) by means of sterling purchases in India. As an offset to the demonetisation of the sovereign and half-sovereign, it is urged that Postal Cash Certificates, whose sales average about 7 crores per annum, should be payable in gold mohurs—equivalent to 20 rupees (30 shillings at the 1s 6d exchange)—minted at Bombay, where all the necessary equipment and staff are already available. The alternative proposal, put forward by the Commission, of certificates repayable in

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.

Capital Authorised £8,000,000

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted on application. On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1. JAMES STEUART, Chief Manager.

gold bars would afford too much opportunity for fraud in the form of "sweating" and other abuses, and is therefore not likely to be adopted. Gold in bullion form is easily obtainable at present, and this additional method of acquisition would leave the "hoarding habit" (a very misleading term)—which is the direct product of inadequate banking facilities—totally unaffected. Issued only in payment for Cash Certificates, of not less than three years' maturity, gold mohurs, *per contra*, would not obstruct the operation of the proposed bullion standard, but, in effect, would be linked to, and limited by, the spread of investment in Government securities. At present, Cash Certificates find a sale chiefly in the large cities; it is certainly desirable to give them a wider basis of popularity; and it is urged that their exchangeability for a specially minted gold coin would assist realisation of this aim.

The Reserve Bank scheme is gradually winning public understanding and appreciation. Indigenous banks do not wish to see additional powers and funds transferred to an institution competing on their own level of business; on the other hand, it is beginning to be realised that, in its new incarnation the Imperial Bank, while retaining its supremacy in domestic finance, would be able to make a strong bid for exchange bank business which has hitherto been virtually monopolised by institutions with sterling capital and under London control. No rupee bank has yet secured a strong foothold in the financing of foreign trade, and in this respect it is apparent that the release of the Imperial Bank, with its 160 branches, from its present charter would open a new chapter, and, perchance, lead some of the weaker exchange banks to seek a new source of strength by, say, a close alliance with some of the British "Big Five." The general advantages inherent in the establishment of an Independent Central Bank do not need restatement here, and as a clue to official opinion thereon, it is not necessary to look beyond the Finance Member's confession, in introducing the Currency Bill, that "he would himself have some hesitation in advocating the acceptance of an unlimited statutory obligation to maintain exchange within the upper and lower gold points of any fixed ratio, and still more acceptance of a gold bullion standard, unless he were assured that the control of the currency and credit policy and of banking and currency reserves was to be united in one responsible authority other than the Government." Prolonged negotiations must precede the establishment of the Reserve Bank; it is improbable, therefore, that it will begin functioning before 1928.

As already noted, commercial conditions, notably the crop outlook, are strongly favourable to maintenance of the present exchange ratio, so much so that an apprehension found expression in Bombay that rejection of the Currency Bill might dispose the Government of India to follow the advice tendered at an earlier stage by the India Office and permit exchange to find its own upward limit. India's balance of trade in merchandise and treasure in the four months ending July has fallen to 9 crores, compared with nearly 42 crores in the corresponding months in 1925, but jute and cotton, the two most important exports, remain in good supply, and an ample margin exists, notwithstanding a probable contraction in the total value of exports under these headings. Money remains easy, and the Imperial Bank percentage last week at 51.37 established another high record, while the bond redemption in September of Rs. 12 crores affords a further assurance against a higher bank until well forward into the busy season.

Letters to the Editor.

BRITISH REPRESENTATION IN ARGENTINA.

TO THE EDITOR OF THE ECONOMIST.

SIR.—The large and growing British colony resident in Argentina, in conjunction with the great body of commercial men who do business with that South American State, have for long resented the minor advantages attendant upon the maintenance of a Legation compared with the greater benefits attaching to an Embassy. The status and sanctity of ambassadors have always been recognised, and even a purely democratic country like the United States has found ambassadors, as representatives, more powerful and more profitable than ministers. The general principle of H.M. Government in making such appointments is whether any particular country plays a leading part in international affairs rather than a question of its commercial importance; but in the case of Argentina both of these conditions would appear to prevail.

When, in 1487, Fernando V. of Spain sent to England the first permanent ambassador, he was charged with the highly-important mission of encouraging commercial associations between the two countries quite as much as keeping an eye upon the political intrigues between his deeply-suspected "friends," Henry VII. of England and Charles VIII. of France. "Commercial importance" ranked as high then, at least, in the esteem of the Spanish Government as "international affairs." Assuredly the most efficacious as well as the most legitimate form of diplomacy is that whose principal end is to promote good economic and commercial relations between peoples; to aid in establishing communications, augmenting production, creating outlets and new markets; and, finally, to study all the questions on which depend the exploitation of resources and scientific distribution of a country's treasures. That is the secret of sound economic and political policy—that is the way to build up indestructible foundations for the prosperity and happiness of a people.

In former days diplomatists were generally men of considerable social position in their own country, and were appointed to represent it abroad for the purpose of associating upon the most intimate terms with the chief members of the Court to which they were accredited. But this is decreasingly the case to-day, when commerce stands pre-eminent and the requirements of trade as well as those of the majority of the people are daily becoming more and more of paramount importance. It is to the interests of commerce and trade especially that the diplomatist of to-day is called upon to give his direct attention.

That Brazil, happily represented in London by one of her most distinguished sons pre-eminently and fully qualified for the post of ambassador, should have been considered to come within the circle and Argentina doomed to remain outside must seem incomprehensible and displeasing to the great majority of our people. The Brazilian Legation was raised to the rank of Embassy on September 26, 1918, a few months before the Congress of Nations assembled at Paris to dictate the terms of universal peace, a concourse which, since the historical Congress of Vienna, after the downfall of Napoleon, certainly ranked as the most important. It was difficult to understand, then, as it is now—when British economic interests in Argentina are of greater importance than ever they have been—why the premier South American Republic should not have been granted the same dignity as that conferred upon Brazil, notwithstanding the fact that the latter had entered as a belligerent on the side of the Allies, whereas the former had not.

It may be said that since the war the political position of Argentina vis-à-vis Great Britain has become somewhat modified. But this cannot be cited as any sound reason for the non-inclusion of Argentina in the list of ambassadorial representatives in South America. The Argentine Government did not see fit to take up the same position on the side of right and justice as the majority of important nations had done, preferring to stand apart and allow the matter to be fought out as best it could be. While, however, the Government officially stood aloof, the Argentine people encouraged the Allies in every possible way, not only in enthusiastic street manifestations, but also, through the House of Congress, unanimously declaring that the Executive Power should immediately break off all diplomatic relations with Germany. The then President—Dr Victorino de la Plaza—alone remained adamant; happily, there are few examples in modern political history of such an attitude upon the part of a South American Chief Magistrate, particularly when it has come to the insistence on his own personal opinion overriding that of the undoubted majority of the people whose representative he claimed to be.

It seems to have been forgotten by our rulers that Argentina, since the memorable day when Canning recognised the international status of the new Republic in common with other Provinces of the South forcibly divorced from Spain, has always cast in its lot with that of its oldest friend—Great

Britain. Prominent Argentines have neglected no opportunity of declaring publicly their indebtedness to Great Britain as well as to British capital, industry and genius in administration; while each successive Government has selected the most eminent among its citizens as envoys to the Court of St. James's. Rivadavia, Balcanse, Dominguez, and others—to cite but a few—have represented the while-and-blue ensign in the British Isles, to the undoubted advantage of their own country and ours. Even in the dark days of the tyranny of Rosas, the British Minister was *persona grata*, and it was in the house of H.B.M. Consul Mr Gower, in Calle Bolivar, that Rosas hid himself after the fearful field of Caseros before embarking upon an English vessel *en route* to Southampton.

After the fall of Rosas, successive Argentine Governments, following his lead, appointed as diplomatic representatives men who had proved themselves eminently suitable and worthy of the post—men who had maintained at the highest level the commercial—not merely the international—reputation of the premier State of South America. During the terms of office occupied by Mitre, Roca, Quintana, Sarmiento, Avellaneda, the two Saenz-Peñas, Irigoyen, and the present Executive, Dr Marcelo T. de Alvear, the most cordial relations with the British Government existed; while the Argentine Legation in London, apart from its natural diplomatic importance, has attained a high position as the centre of all the financial negotiations of the Argentine Republic.

Last year would have afforded an ideal opportunity for the raising of the British Legation at Buenos Aires to the quality of an Embassy. Not alone did the Heir-Apparent pay a State visit to the Argentine, but the month of February witnessed the centenary of the Treaty of Amity, Commerce and Navigation signed at Buenos Aires February 2, 1825. That this century-old treaty should still remain to-day a living force is the more remarkable by reason of the fact that it nearly came to an end in 1918 at our own request, because we wished to give our colonies complete autonomy to regulate their commerce as they chose, and to free them for that purpose of the obligations laid upon them by similar treaties. Another occasion equally applicable would have been the visit of the diplomatic mission to South America, headed by Sir Maurice de Bunsen, as Special Ambassador, in the month of May of the self-same year. *Occasio agere offertur, facile omittitur*. But another opportunity will present itself at the forthcoming session at Westminster, when we hope to see the proposal meet with more friendly interest and less official stiffness upon the part of the Government.—I am, Sir, yours, &c.,

PERCY F. MARTIN.

DOLLAR DIPLOMACY.

IN a world where there is much talk of ideals and but little practice thereof it is necessary at times to face the facts. An example of bold and refreshing candour in facing facts and in clearing away the nebulous mists of idealism in which American policy is sometimes enveloped in Presidential declarations is given in the book before us.* These two American writers enter the complex realm of American foreign policy, describe with praiseworthy impartiality several episodes which are not altogether consistent with a high-souled ethical standpoint; and generally depict the strange vertiginous movements, if not complete overthrow, of the Monroe doctrine.

At one time the very word Imperialism was supposed to be held in great abhorrence by all good Americans—although it was never easy to take that abhorrence seriously since the days of Jefferson—and Pan-Americanism was the nearest approach permitted in any discussion of foreign policy. But now it is quite impossible to close one's eyes to the very portentous fact that America has developed an imperial policy of a clear and unequivocal type, which not only does not follow the dictates of the original Monroe doctrine, but drags that doctrine, curiously transformed and emasculated, behind it, basing itself mainly on the extension of foreign trade and the protection of American commercial and financial interests in all parts of the American Continent, if not beyond. Its principle is that the flag follows trade, rather than the converse, and the real significance of this distinction is well brought out in the book. The authors give some imposing statistics of American investments abroad since the war, amounting to no less than twenty billion dollars, and add the interesting comment that: "Since economic

* "Dollar Diplomacy: A Study in American Imperialism." By Scott Nearing and Joseph Freeman. Allen and Unwin. 10s 6d net.

activities are reflected sooner or later in politics, it is only a question of time when these foreign investments will produce an equivalent modification in American foreign policy." What exactly is the meaning of this cryptic utterance, and what is its special implication in regard to Canada, where American investment has been particularly heavy of late years? There is no doubt that the type of imperialism adopted by America and its various manifestations will be of extreme practical interest to the world generally during the next decade or so.

It is not easy clearly to define American imperialism, for it seems to have little relation to the old Monroe doctrine. This has long been recognised by American writers. Professor Bushnell Hart, of Harvard, in his book on the Monroe doctrine, said that, from the days of President Polk, this doctrine has been taken to mean that, while European nations might not annex any territory on the American continents, the U.S.A. might annex what it liked. President Wilson, presumably on those high moral grounds on which he always wished to take his stand, extended the doctrine almost beyond recognition, and in future the U.S.A. would not only oppose European territorial acquisition in the Western Hemisphere, but would also oppose concessions to foreign investors. The application of such an interpretation of the Monroe doctrine in the case of oil, as here described, is one of the most interesting parts of the book. The support given by the American Government to the Standard Oil Company in its rivalry with the Cowdray group for the right to develop the oilfields of Colombia and Ecuador, and, in particular, President Wilson's intervention in Mexico in connection with the Tampico oilfields, show unmistakably that American imperialism is a very real thing in world affairs; and that, so far as America is concerned, politics and economic interests are practically the same thing. In this respect transatlantic imperialism appears to differ fundamentally from British imperialism, and it is not perhaps going too far to say that it is more comprehensive, not to say, indeed, more aggressive. Its various manifestations in dealing with the weaker States of the American continent, including Hawaii and the Philippines, and the different forms of intervention, of acquisition, of regulation, and of control are well described; and the whole book may be confidently recommended as a valuable contribution at a time when oil conservation and oil politics are dominant questions of the day.

THE GERMAN NATIONAL INCOME.*

THIS book contains a careful estimate of the German national income before and after the war. Basing his calculations upon the Prussian income-tax statistics, the author reckons that in 1913 the national income lay between 45 and 50½ milliards of marks—probably about half-way between at 48 milliards of marks (£2,400,000,000). This figure differs chiefly in detail from Helfferich's estimate of 43 milliards for 1912, which would correspond to 45 milliards for 1913. Dr Rogowski further estimates that of the income of 1913 some 6 to 7½ milliard marks were saved, and some 39 to 43 milliards consumed.

The author finds that the income of 1913 would have been reduced by 11 per cent. if Germany had had her present frontiers—i.e., to about 42½ milliards. Allowing for price changes, this would correspond with 56½ milliard marks at the level of prices prevailing at the end of 1924.

Dr Rogowski proceeds to estimate the actual income of the year 1924—a task much more difficult to accomplish with a reasonable degree of accuracy than was the case with the income of 1913. Income-tax statistics can only be drawn on in connection with income from employment, which is assessed on returns furnished quarterly; and in part in connection with income from capital. Assessments in respect of profits from trade and industry, &c., were on an entirely artificial basis in 1924, owing to the absence of proper figures for the previous year. In filling up the gaps, the author is necessarily driven to surmise and analogy. He concludes, however, that, on the whole, the German national income in 1924 lay between 42.5 and 45.9 milliards of marks. Allowing for the fact that the

* "Das Deutsche Volkseinkommen." By Dr. Erich Rogowski. (Berlin) Emil Ebering. 1926.

population of the post-war area of Germany increased from about 59,610,000 in 1913 to about 62,000,000 in 1924, Dr Rogowski estimates that the average real income per capital (figures for both years at the level of prices of 1924) fell from 896-995 marks in 1913 to 732-787 marks in 1924. That is to say, there was a decline of between 20 and 30 per cent. The income per head in 1925 would be somewhat higher (perhaps 80 or 85 per cent. of the pre-war real income), but largely, he thinks, owing to the great influx of foreign credits, and to that extent temporary. At first sight it seems surprising that after suffering a great war and a period of the most acute currency inflation, the national real income per head should have been as much in 1924 as 75 per cent. of the pre-war real income. Dr Rogowski points out, however, that a much larger proportion of the population of Germany are of a productive age than was the case before the war. This, of course, tends to increase the real income per head of the aggregate population.

THE WORLD'S CURRENCIES.*

THE League of Nations has just issued a new edition of its "Memorandum on Currency and Central Banks," in which it reviews the more important events which have taken place in the currency conditions of the world during 1925 and the early part of 1926. While this Memorandum is one of a series which began with the meeting of the International Financial Conference in Brussels in 1920, it differs somewhat in substance from its predecessors. The historical and analytical notes concerning the currency systems of different countries, &c., have not been reproduced; on the other hand, the introduction has been made more historical in character, and is now published as a separate volume. The second volume contains statistics of the discount rates, note circulation, gold and foreign assets, reserves, commercial deposits, price indices, &c., and summarised statements of the balance-sheets of all the central banks of the world up to the end of 1925.

Special attention is paid in the first volume to the effect on prices of the return to the gold standard and to the new legislation which has been introduced, not only in those countries which acted together with the United Kingdom in the spring of 1925, but in Finland, Czechoslovakia, Chili, Mexico, Madagascar, Guatemala, and elsewhere. It would appear from the tables given that there are still 19 countries in the world in which definitive currency legislation has not yet been passed, while the gold standard or its equivalent is in force in upwards of 30 countries.

Perhaps the most characteristic feature of 1925 has been the gradual closing of the gap between money market rates in Western and Central Europe and the parallel reduction of the discrepancy which exists in certain countries between the rates for long and short-term loans, and between the rates at which banks borrow and lend money.

BOOKS RECEIVED.

Methods of Amalgamation. By A. E. Cutforth. (London) G. Bell and Sons, Limited, York House, Portugal street. 25s.

A very timely and useful work discussing the advantages and disadvantages of amalgamation, and of various types of merger, while, in addition, the whole question is reviewed from the standpoint of accountancy. The volume breaks new ground in financial literature, and deserves wide attention.

The Scourge of Europe. By Professor L. V. Birck. (London) George Routledge and Sons, Limited, 68-74 Carter lane. 10s 6d net.

The author, who is Professor of Economics at the University of Copenhagen, takes as his sub-title "The public debt described, explained and historically depicted," and takes as his motto a quotation from Napoleon: "National Debt is immoral and destructive; silently undermining the basis of the State, it delivers the present generation to the execration of posterity." The Professor is a supporter of the gold standard, and says:—"If I had not this mortal fear of the lack of judgment of the commercially trained bank leaders, I would resolutely join Keynes in advocating the stabilisation of the price level in preference to that of the rate of exchange; but I prefer an automatic brake to the

* "Memorandum on Currency and Central Banks, 1913-1925." 2 Vols. Geneva, 1926, London agent, Messrs Constable.

presence of mind of a half-witted engine driver." The book is mainly historical and theoretical, and unfortunately is without either an index or a bibliography.

The Free Trade Fall. By Francis Francis. (London) John Murray. 3s 6d net.

This book is in the main a jumble of the customary statements and theories that grace Protectionist propaganda. But it is distinguished by a quite unique collection of more than usually preposterous examples of misstatements of fact and muddled thinking. It also displays a "gift for general invective," rivalling that of the young journalist in the late Lord Morley's favourite story, and Cobden comes in for a good deal of it. The Protectionist who reads the book (which we are not unkind enough to recommend to him or to anyone else) may be excused for exclaiming "save me from my friends." Anyone who may happen to pick up the book we would specially refer to passages on pages 82 and 117-119 on the trade balance as gems of economic topsy-turvydom.

Economy of Human Effort in Relation to Industrial Fatigue. By Lucien A. Legros. (London) Société des Ingénieurs Civils de France, 72 Victoria street.

A reprint of a paper read at the annual meeting of the British section of the Société in London on June 3rd.

South Africa from Within. By Manfred Nathan, K.C. (London) John Murray. 12s net.

The first part of this book is devoted to a historical retrospect from early times up to the establishment of the Union. This covers ground that is more or less familiar, but the most interesting portion of the book is the second, in which Mr Nathan sets out to give a "birdseye view" of life in the Union and its chief problems at the present day. A timely work written in attractive style, and of interest to the general reader.

Principles of Human Geography. By P. Vidal de la Blache. Edited by Emmanuel de Martonne. (London) Constable and Co. 10-12, Orange street. 18s net.

M. de la Blache died in 1918 before completing the present study, but the Editor presented it as closely as possible as he left it, and it was published in 1921 in French. This is the English translation by Mrs Todd Bingham. Following an introduction on the "Meaning and Aim of Human Geography," the book is divided into three parts dealing respectively with (1) distribution of population, (2) elements of civilisation, and (3) transportation and circulation.

Journal of the Royal Statistical Society. July, 1926. (London) Royal Statistical Society, 9 Adelphi terrace. 7s 6d net.

Containing a paper by Mr E. C. Snow on Trade Forecasting and Prices.

Transvaal Chamber of Mines. Thirty-sixth Annual Report. Year 1925. (Johannesburg) Transvaal Chamber of Mines.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
September 28. September 30.

Business in the Stock Exchange shows a tendency to expand in spite of a slight diminution in the activity amongst mining shares, South African and tin alike. A rumour gained currency on Wednesday night to the effect that the coal stoppage could be regarded as finished, and rises took place in most departments. The event proved that report was at least premature, and, on a stiffening of money rates, prices in the gilt-edged market were inclined to ease off. A new issue of £4,000,000 5 per cent. stock 1945-65 in New South Wales at 97 caused surprise in the Consol market, and led to a little dullness amongst Colonial Government stocks, more especially as this is thought to be the precursor of other loans on similar lines. Sales of Government stock by insurance companies likely to be affected by the hurricane in Florida were said to be responsible for weakness in Conversion 3½ per cent., but this surmise met little credence. Insurance shares are heavy,

the recent improvements having raised prices to a level at which a good many shareholders are tempted to consider the propriety of realising.

Portsmouth secured most of its money for the recent loan from the public. The market price is about ¾ premium.

The foreign Government market is quiet, with comparatively narrow movements in French bonds. Resumption of activity in German international loans served to redeem the group from inanition. In Brazilians there is little going on. The recovery in Chinese made further progress. Paris has been a seller of copper shares.

The home railway market benefited by the circulation of the premature coal stoppage rumour already mentioned. Argentine Railway stocks are irregular, Entre Rios standing out with a substantial rise upon the declaration of a dividend making 6 per cent. for the year, against the market anticipation of 5 per cent., Buenos Aires and Pacific also being a firm spot upon announcement of the expected 4 per cent. dividend, making 7 per cent. for the year. Brazilian Railway stocks are steady.

The rubber market is materially better in consequence of an improvement in the price of the raw produce. Tea share movements have been towards better figures. The oil market continues under the influence of the slump in British Controlled, this serving to scare public interest from the market. Trinidad Leaseholds are prominent, with a rise that is attributed to dividend hopes. Courtaulds' shares dropped to 5½ before a reaction came about on the circulation of the coal rumour. Iron, coal, and steel shares have been very quiet, the poor results published by Pearson and Knowles and one or two other companies having little effect upon shares in other undertakings. Banking shares are inclined to be dull, keeping step with the gilt-edged market and the shipping market has scarcely moved. Marconi shares weakened, and some of the telegraph and electrical equipment varieties showed a tendency to droop owing to the statement that the companies were running short of coal. Morris Motors preference have gone back to the neighbourhood of 1s discount. Hudson's Bays advanced and Sudan Plantations were bought by their own particular supporters. Brazilian Tractions, after being a sagging market, shot suddenly into favour, and this had a sympathetically good influence upon Barcelona Tractions and others in this group. Amongst Illumination issues scarcely a movement has occurred. Tobacco shares are hard, British Americans and Carreras being more particularly wanted. Whiteleys went up to 4, and Aerated Breads strengthened; brick-making shares good.

The Kaffir Circus has attracted languid interest. Cape favourites are the chief speculative media, and public attention revolves around a comparatively small circle of companies. Chartered reverted to the vicinity of 29s. South African copper shares are a shade off colour. Diamonds hold most of their recent rises. The tin share market suffered reaction upon a fall of about £10 per ton in the price of the metal. Southern Peraks, exceptionally, are up. Nigerians made a start towards better things, and retained part of the gains. Broken Hills have been in quiet request from Melbourne.

The Stock Exchange Committee have notified their fellow-members that bookmaking, under the new Act, cannot be allowed in the Stock Exchange. This decision is rather expected to be challenged.

NEW ISSUES.

New South Wales.—This is an issue of £4,000,000 5 per cent. inscribed stock at £97 per cent., redeemable 1945-65. The revenues of New South Wales alone are liable in respect of principal and interest. This loan will be applied to public works, rolling stock for railways, construction of railways, water conservation, &c., the proceeds being used to repay existing temporary loans in London. This is a trustee investment, but the prospectus is singularly free from details.

Portsmouth Corporation.—This is an issue of £850,000 5 per cent. stock at par, redeemable 1942-1962. Principal and interest is secured on the corporation's funds and revenues. Provision has to be made for the redemption of the stock by means of a sinking fund. The population is estimated at 250,100, and the total outstanding debt amounts to £2,664,353, of which £961,446 is in respect of reproductive undertakings. The rateable value is £1,299,907, a penny rate producing £5,100. This is an excellent investment.

London Irish Trust, Limited.—Share capital £1,000,000 divided into 100,000 shares of £10 each. This is an issue of 50,000 shares at par. When fully paid, each £10 share will be divided into £6 of 5 per cent. cumulative preference stock and £4 ordinary stock. The company has been formed in particular to carry on the business of an investment trust, "which could be so conducted as to be very profitable to its members, as well as useful to Irish interests when occasion offered." There are names on the board which indicate that the company should have access to considerable funds.

La Guaira Harbour Corporation, Limited.—Issued share capital £400,000, divided into 400,000 shares of £1 each. There is also an issued loan capital of £1,065,829, consisting of £420,000 5 per cent. 1st mortgage debenture stock and £645,829 5 per cent. 2nd mortgage stock, series "A." This is an issue of £100,000 6½ per cent. 2nd mortgage stock, series "B," at the price of £92 10s per cent., which is authorised under a scheme of arrangement sanctioned in the High Court in July last. The stock (Series B) ranks in point of charge for principal *pari passu* with the authorised issue of 2nd mortgage stock (Series A) for £700,000 but in priority to that stock for interest. The existing 2nd mortgage stock is constituted by trust deeds in favour of trustees which create a charge, subject to the £420,000 1st mortgage debenture stock, upon the undertaking and all the revenues and property of the corporation, present or after acquired, other than uncalled capital, such charge being a floating security except as to permanent works. It is redeemable at any time and from time to time at the option of the corporation by drawings on six calendar months' notice at 110 per cent., and interest is payable only out of the balance of the profits of each year, but one-half of such interest is cumulative. The new 2nd mortgage stock (Series B) will be entitled to the same charge and subject to the same conditions. The interest on the 6½ per cent. 2nd mortgage stock (Series B) is similarly payable, but the full 6½ per cent. interest for each year is payable in priority to the interest on 2nd mortgage stock (Series A). The proceeds of the present issue will be applied to improving the harbour. The corporation was founded in 1885, and owns and works the harbour at La Guaira, in Venezuela. The concession runs for 99 years from 1891. Harbour works include a breakwater, warehouses, railway lines and rolling stock. Net revenue, before charging debenture interest and before providing for British income-tax and corporation profits tax, is stated to have been as follows:—1921, £22,421; 1922, £25,273; 1923, £37,567; 1924, £43,005; and 1925, £54,221. Profit, subject to depreciation and London charges, is given as £54,002 for the first eight months of the current year, in contrast with £44,470 for the same period a year ago. Apparently this issue is well covered as regards interest.

Slough Estates, Limited.—In order to comply with Stock Exchange regulations, particulars are advertised of the above company. There is an issued share capital of £420,000, divided into 420,000 ordinary shares of £1 each. The company was incorporated in England in 1920, in particular to acquire from the Government land, buildings, and other property situated near Slough, and known as the Slough Depot. This property, together with surplus mechanical transport and spares, was acquired from the Government by Sir P. L. D. Perry, who acted as vendor to the company, and received as consideration the sum of £25,000 in 1920. The property is being developed as an industrial centre, and the gross rent roll is stated to be £50,000 per annum, apart from the profits on the supply of power, light, water, &c. The value of the freehold land, buildings, equipment, and plant was £501,583 at the date of the last balance-sheet. The profit for the year ended December 31, 1925, is given as £47,295, and a dividend of 10 per cent. was declared. Preliminary expenses amounted to £31,368, all of which has since

been written off. There is due to the Government the sum of £81,438 15s 0d, which is to be secured by a mortgage on the property of the company. This mortgage (free of interest) is repayable by 16 half-yearly instalments, the first of which falls due on December 31, 1926. Prospectusless.

Edison Bell, Limited.—Issued share capital £150,000, divided into 150,000 ordinary shares of £1 each. There are also £40,000 first mortgage debentures and £29,100 second mortgage debentures outstanding. This is an issue of 150,000 7½ per cent. cumulative preference shares of £1 each at par. The company carries on business as manufacturers of gramophones, gramophone records, radio instruments, and electrical appliances. The original business was established in 1896, was acquired by this company in 1909, and was converted into a public company this year. The profits of the company, after making provision for depreciation of leaseholds, plant, &c., but before providing for Government taxation, debenture and other interest charges, insurance premiums, directors' fees, and expenses in connection with the issue of the first mortgage debentures, are certified by the auditors to have been as follows:—1922, £16,922; 1923, £24,169; 1924, £18,666; 1925, £30,305; and 1926, £40,520. Net assets, exclusive of goodwill, are certified to be £167,961. The object of the present issue is to redeem the outstanding debentures and provide additional working capital. A speculative industrial offer.

Taiping Tin Dredging Company, Limited.—In order to comply with the Stock Exchange regulations particulars are advertised of the above company. There is an issued share capital of £1,200,000, divided into 1,200,000 shares of £1 each. The company was incorporated in the Straits Settlements in 1918, particularly to acquire tin-bearing areas, comprising approximately 837 acres, situated at Taiping, Perak, F.M.S. The company also purchased a dredge. The purchase price paid to these two vendors was £425,000 in each case, a total of £850,000, which was satisfied by the issue of 850,000 shares of £1 each, credited as fully paid. In addition, 150,000 shares of £1 each were issued for cash, and the sum of £1 per share was received by the company. In 1919 the balance of the share capital was issued for cash at 25 cents per share premium for the purpose of acquiring a second dredge, while further areas amounting to 96½ acres have been purchased from time to time. The remaining life of the property is estimated at about 13 years. During seven years' working it is stated the profits earned by the company have amounted to \$1,784,140, out of which \$1,050,000 has been paid in dividends, and \$417,000 has been allocated to capital expenditure. The sum available for 1925 is given as \$430,301. Out of this

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

COMPANY MEETINGS, &c.

PENA COPPER MINES, LIMITED.

IMPROVED PRODUCTION—CONFIDENCE IN FUTURE.

The twenty-seventh ordinary general meeting of the Peña Copper Mines, Limited, was held, on the 22nd instant, at Winchester House, Old Broad street, London. Mr Ch. Cahen d'Anvers (the chairman) presided.

Mr E. Johnston (the secretary) read the notice convening the meeting and the report of the auditor.

The Chairman, in moving the adoption of the report and accounts, said: The total output of ore from the mine during the year under review was 120,473 tons, which compares with 111,223 tons extracted in the previous year. This output fully confirms our expectations as explained at our last meeting, and you will be pleased to hear that this higher output has been fully maintained so far in the present year.

The production of fine copper in 1925 amounted to 435 tons, as compared with 364 tons in 1924. This is a considerable improvement. On the last occasion I spoke to you of some experimental work we were then carrying out with the object of increasing the copper production. I am glad to inform you that we have since made very good headway, and that on the occasion of our 1926 general meeting, which we hope to hold early in the coming year, we shall be able to give you a satisfactory account of the 1926 production of copper, and of our future expectations in that direction.

The shipments of ore in 1925 amounted to 104,307 tons. This again bears out the expectations we foreshadowed at our last general meeting.

YEAR'S PROFITS.

The profit in 1925 is £12,964, as compared with £1,352 in 1924. As you will remember, I explained to you at our last meeting that the small profit of 1924 should be viewed as the beginning of a new era, and we have every prospect of justifying in the near future all we have already said to you in this respect.

You will notice that, notwithstanding the capital reduction was agreed to by the shareholders at our last general meeting, the balance-sheet for 1925, now under review, still presents the old figures. This is because the final decision of the Court granting such reduction was not obtained until some time in February of this year. It is, therefore, only in the 1926 balance-sheet that the accounts showing the reduction of capital will appear, and these, as aforementioned, we hope to present to you early in 1927.

LARGE MONEY RESERVE.

The large money reserve, mostly in the shape of Treasury bills, which we have carefully accumulated during the last few years, amounted to some £75,000 on December 31, 1925.

We are glad of the confidence which our shareholders have shown us by not questioning overmuch the reason for this accumulation, as it would not have been in the interests of the company to have referred to it at an earlier general meeting. Now, however, we are in a position to place the facts before you.

You will remember that in 1914 we borrowed 4,000,000 of £25,000 from a Paris group in order to construct our branch railway. The lenders were three foreign establishments, of which two were French and one German. During and after the war we were able gradually to pay off the two French creditors in francs and in sterling respectively. We had hoped eventually to pay the German creditor also in the same way; but the Mixed Arbitral Tribunal has decided within the last few weeks that we must pay the whole in sterling. These payments will absorb practically the whole of our above-mentioned cash reserve. As you will see from the balance-sheet, this still leaves us with considerable liabilities, but the company is now so placed that, should nothing happen to retard its progress, the board would be in a position to announce resumption of dividends when we meet next year.

CONFIDENCE IN THE FUTURE.

You will be pleased to hear that several long-pending matters of considerable importance have been satisfactorily settled, and that the position of the company from every point of view is better now than ever before. Although the future outlook of the pyrites market cannot be considered altogether free from clouds, we are, nevertheless, in a position to face it with the utmost confidence.

Here let me mention that we have completed the most important

parts of our reorganisation scheme, and that before this year is over its last big item, i.e., the electrification of the mine, will be an accomplished fact.

We must express our thanks to the general manager at the mine (Mr E. Mackay Heriot) for his most loyal and efficient co-operation in all matters entrusted to his care, in which he has been ably assisted by his staff.

Mr John Williamson seconded the resolution, which was carried unanimously.

The retiring directors and the auditors having been re-elected the proceedings terminated.

KINTA KELLAS RUBBER ESTATES, LIMITED.

SUCCESSFUL YEAR—RECORD PROFITS.

The sixteenth ordinary general meeting of the Kinta Kellas Rubber Estates, Limited, was held, on the 21st instant, at 2-4, Idol lane, London.

Mr Edward Bedford, C.E. (the chairman), in moving the adoption of the report, said that the crop for the past year was 702,300 lb. They had effected a very satisfactory reduction of .73d per lb in the f.o.b. cost, which amounted to 6.48d, and they had sold the whole of the exportable allowance at a net average price of 2s 6.77d, as compared with 1s 6.2d in the previous year. The increased price, plus the saving in costs, gave a net increase in profit of 1s 1½d per lb. That, plus an addition of 220,000 lb to their crop, accounted for the very satisfactory and record profit for the year of £65,501 after deducting all depreciation and administrative costs and writing off the expenditure upon tin prospecting. The 40 per cent. dividend for the year took £51,562, leaving approximately £14,000 for the additions to reserves and increased carry over. It would thus be seen that the dividend was adequately covered by the year's earnings. Furthermore, the provision which they had made for a rainy day, together with certain transactions in their produce for this and next year assured, so far as human foresight could assure, substantial dividends in the future. The company had a first-class estate, fully equipped in every way, and they were strongly financed both for their rubber production and for tin production.

Dealing with the formation of their subsidiary company, the Kinta Kellas Tin Dredging Company, Limited, he said that they had received proposals from various sources to deal with their timbering area, but had decided to deal with the property themselves. They had subscribed half the capital of the new company, and had an option over the balance, and that company would pay them a royalty of 10 per cent. of the value of the tin raised. The directors believed that the tin company would in a year or two be a large producer. The area already proved was 124 acres, but they had reason to believe that a further area would be available. The property was so situated that the company had every opportunity of negotiating further areas and, indeed, negotiations were now in progress. They believed that the Kinta Kellas Tin Dredging Company would in a year or two be a large producer of tin, while, of course, their company would benefit from the royalty and also from its very substantial shareholding.

The report and accounts were unanimously adopted, and a final dividend of 12½ per cent., less tax, was declared, making, with the interim dividends, 40 per cent. for the year.
