FRUIT (Dried).—Currants in fair demand at steady rates. Pyrgos quoted 32s 6d; Patras, 34s to 36s; Gulf, 36s to 40s; Vostizza, 46s to 55s; Australian, 35s to 42s, as to quality. Sultanas firm with improved inquiries. Smyrna, medium to good, 66s to 72s; fine Cretan, 78s to 85s; Australian, 60s to 78s. Raisins in fair demand at full prices. Valencia, quarter-boxes sold, 44s to 70s, as to quality. Dates steady, with a fair demand. Hallowee, first tide, 31s; Khadowie, 21s 6d; Mar, 19s; cartons, 34s to 40s. Figs steady. Lacouns, 90s to 130s; layers, 60s to 75s; genuine, 32s to 34s. Evaporated fruits in steady support. Apricots: Californian, extra choice, quoted 122s 6d; South African, first grade, 140s. Plums, Californian, 30/40's, 66s; 60/70's, 46s; 80/90's, 38s 6d. Pears, Californian, extra choice, 62s 6d; fancy, 72s 6d; Lake County, fancy, 80s. Apple rings, Californian, spot, 50s to 60s; for shipment, 47s 9d, c.f. per cwt. Almonds sell readily at firm rates.

CANNED GOODS.

CANNED FISH remained quiet, and the general position is unaltered. Portuguese clubs quoted 4s 6d per dozen tins. Salmon quietly steady. Red, tall, 1 lb, quoted 47s; tall pink, 26s to 27s. Lobsters steady, but stocks continue light. Best 1/2s, 160s to 162s 6d; and 1/2s, 90s to 95s. Crayfish, 1/2s, 76s to 77s; 1/2s, 49s to 50s per case. Japanese crab steady. Herrings, 7s per dozen tins.

CANNED FRUIT.—Market quiet, as supplies of new pack are arriving freely, and being distributed against former contracts. Bartlett pears, 24-25's, choice, quoted 12s to 12s 6d. Californian peaches, choice, 11s 6d to 12s 3d; seconds, 8s 9d; Californian apricots, choice, 12s 6d; seconds, 9s 3d per dozen tins. Singapore pines in moderate request on spot, but forward quotations are well maintained. Italian tomatoes firm, but slow of sale.

CANNED MEATS steady. Corned beef, 6's, quoted 38s to 44s, as to quality. Danish lunch tongues, 120s to 130s; American, 142s 6d, with best, 147s 6d.

CONDENSED MILK.—Machine-skimmed firm, but full-cream rather quiet, while a good inquiry continues for the best brands of evaporated milk.

HONEY.—Market generally quiet, while well supplied. New Zealand, however, sells steadily at 50s to 85s; Australian, quoted 40s to 50s; Jamaica, good set light ambers, 46s; and manufacturing kinds, 40s; San Domingo, 34s to 48s; Haiti, 34s to 48s per cwt.

RUBBER.

Market stronger, and business proceeded with fair freedom. Plantation standard sheet, spot, and November, sold, 1s 7d to 1s 8d; December, 1s 8d to 1s 8d; January-March, 1s 8d to 1s 9d; April-June, 1s 9d to 1s 9d lb.

JUTE.

The market opened the week with a quiet and easier tone, but improved later, though some irregularity ensued at times. Spinners absorbed moderate quantities for spot and near at hand parcels. Firsts, September-October, Continent, sold, £29 10s to £30 5s; October-November, £28 10s, £28 7s 6d, £28 15s, and £29 5s; November-December, £28, £27 15s, and £28 17s 6d. Lightnings, October-November, sold, £24 10s, £24 to £24 15s. Hessians and twills steady, but general trade moved quietly.

HEMP.—Manila somewhat irregular but tone firmer, due to spinners operating more freely. J, October-December, sold, £46 10s; K, £42 10s to £42 and £42 15s; L 1, £42 10s to £42 and £42 15s; L 2, £39 10s; M 1, £38 10s to £39; M 2, £34 10s to £35.

New Zealand H.P.F., October-December, quoted £38 10s; and fair, £35 15s. African sisal quiet, and No. 1, f.a.q., October-December, quoted £43.

SHELLAC.—Market firmer. T.N., spot, 190s to 195s; December, sold, 190s to 193s; March, 187s to 193s cwt.

COPRA.—In quiet request. Sirait, F.M.S., November-December, to Rotterdam, sold, £27 5s; December-January, £27 5s to £27 6s 3d. Dutch East Indies, November-December, quoted £27; Ceylon, ditto, £28 15s; South Sea F.M.S. £25 12s 6d. Palm kernels, November-January, quoted £20 1s 3d per ton.

MISCELLANEOUS.—Cocoanuts quoted 22s 6d per 100. Coir yarn, Ceylon, £22 to £39; Cochin, £24 to £47; Ceylon bristle £18 to £23; cinnamon leaf oil, 5d; citronella, Ceylon, 1s 6d; Java, 2s 4d.

TALLOW.—Messrs Colchesters and Woolner write as follows on November 3rd:—The tallow market was quiet during the week, and prices were mostly 6d lower to-day. Buyers are showing little interest, and few transactions have been reported. The stock in London on October 30th, as returned by the wharves, amounted to 21,856 packages, showing an increase during the month of 620 packages. At auction to-day 1,426 casks tallow were offered, and 129 were sold. Quotations are:—Australian mutton: Fine, 43s 6d; good to fair, 42s 6d to 41s; dull to dark, 39s to 37s; hard, 43s. Australian beef: Fine, 42s 6d; good to fair, 42s to 40s; dull to dark,

37s 6d to 36s 6d; sweet, 43s. Present shipment from Australasia: Good mixed, 42s. Present shipment from South America, 42s 6d. The market letter is unchanged. Town tallow, 38s 6d per cwt. Rough fat, per 8 lbs, 2d; melted stuff, 28s per cwt. Quotations are:—Town, 38s 6d, net cash, naked, ex works. Country—Fruit casks, 38s; home melted, shipping casks, net f.o.b., good coloured, 41s; fair to dull, 39s to 38s. Bone fat—White, none; pale, none; benzine, 33s; melted stuff, 33s, f.o.b.

PRELIMINARY PARTICULARS OF IMPERIAL CHEMICAL INDUSTRIES

BRUNNER, MOND & CO., LIMITED.
NOBEL INDUSTRIES, LIMITED.
UNITED ALKALI CO., LIMITED.
BRITISH DYESTUFFS CORPORATION, LIMITED.

The Boards of Directors of Brunner Mond & Co., Limited, Nobel Industries, Limited, The United Alkali Co., Limited, and British Dyestuffs Corporation, Limited, having arrived, as already announced, at a provisional agreement for the fusion of interests of their Companies are now in a position to give this preliminary public intimation of the basis for the proposed fusion, pending the despatch of formal offers to be made to their respective shareholders.

A new Limited Liability Company with the title and Directors stated below will be formed as early as possible. So far as the existing shareholders in the Merging Companies consent to the scheme their shares in those Companies will be taken over by the new Company, which will issue in exchange its own fully paid shares on the terms set out below.

Proposed Name of Company: IMPERIAL CHEMICAL INDUSTRIES, LIMITED.

CAPITAL OF THE COMPANY.

On the assumption that all the shareholders of the Merging Companies consent to exchange their holdings of shares the issued Capital of the new Company on the basis of exchange will be £56,802,996 divided as follows:—

16,219,306 7% Cumulative Preference Shares of £1 each	£	16,219,306
(preferential both as to Capital and Dividends)		
31,095,555 Ordinary Shares of £1 each		31,095,555
18,976,270 Deferred Shares of 10s. each		9,488,135
		£56,802,996

DIRECTORATE.

The first Directors of the New Company will be:—

THE RT. HONOURABLE SIR ALFRED MOND, Bart., M.P. (Chairman).	HENRY MOND, Esq.
SIR HARRY MCGOWAN, K.B.E. (President and Deputy Chairman).	SIR MAX MUSPRATT, Bart.
THE RT. HONOURABLE THE LORD ASHFIELD, P.C.	LT.-COL. G. P. POLLITT, D.S.O.
SIR JOHN BRUNNER, Bart.	P.C. G.C.B., G.C.V.O., G.M.S.I., G.M.I.E.
G. C. CLAYTON, Esq., C.B.E., M.P.	SIR JOSIAH STAMP, G.B.E.
H. J. MITCHELL, Esq.	B. E. TODHUNTER, Esq.

DIVIDENDS.

The profits of the Company to be distributed will be applied in the following order:—

1. In paying a Cumulative dividend at the rate of 7 per cent. per annum upon the Preference Shares.
2. In paying a dividend at the rate of 7 per cent. per annum upon the Ordinary Shares.
3. In distributing the balance between the holders of the Ordinary and Deferred Shares in the ratio of two-thirds to the Ordinary Shareholders and one-third to the Deferred Shareholders.

EARNINGS.

On the basis of the earnings of the four merging Companies and their subsidiaries for their respective last completed financial years, the Chairmen of the four merging Companies are satisfied that, after making due provision for reserves, the future earnings of the new Company should exceed £4,000,000, a sum sufficient to cover payment of the Preference Dividend more than three and a-half times and to leave available adequate funds for further distribution.

Shareholders in the merging Companies will retain all their existing dividend rights up to the 31st December, 1926, after which date the shares of the new Company will rank for dividend.

TERMS OF EXCHANGE:

BRUNNER, MOND & CO., LIMITED.

For each four existing 7½% Cumulative Preference Shares of £1 each	there will be exchanged	Five 7% Cumulative Preference Shares of £1 each in the new Company.
For each two existing £1 Ordinary Shares	do.	Three £1 Ordinary Shares and two Deferred Shares of 10s. each in the new Company.

NOBEL INDUSTRIES, LIMITED.

For each existing 6% Cumulative Preference Share of £1 each	there will be exchanged	One 7% Cumulative Preference Share of £1 each in the new Company.
For each two existing £1 Ordinary Shares	do.	Three £1 Ordinary Shares and two Deferred Shares of 10s. each in the new Company.
For each four existing £1 Deferred Shares	do.	Three £1 Ordinary Shares and two Deferred Shares of 10s. each in the new Company.

UNITED ALKALI CO., LIMITED.

For each existing 7% Cumulative Preference Share of £1 each	there will be exchanged	One 7% Cumulative Preference Share of £1 each in the new Company.
For each two existing £1 Ordinary Shares	do.	Three £1 Ordinary Shares in the new Company.
For each three existing £1 Ordinary Shares	do.	One Deferred Share of 10s. each in the new Company.

BRITISH DYESTUFFS CORPORATION, LIMITED.

For each forty existing £1 Ordinary Shares	there will be exchanged	Sixteen 7% Cumulative Preference Shares of £1 each, Sixteen Ordinary Shares of £1 each and one Deferred Share of 10s. each in the new Company.
--	-------------------------	--

A formal offer containing full particulars of the terms of the proposed fusion will be issued as early as possible to each shareholder in the merging Companies, accompanied by a form of transfer showing the number of shares in the new Company to which he will be entitled under the scheme.

(Signed) BRUNNER, MOND & CO., LIMITED. ALFRED MOND (Chairman).
NOBEL INDUSTRIES, LIMITED. H. MCGOWAN (Chairman).
UNITED ALKALI CO., LIMITED. MAX MUSPRATT (Chairman).
BRITISH DYESTUFFS CORPORATION, LIMITED. ASHFIELD (Chairman).

Paris: Gallignani Library, 224 Rue de Rivoli.
New York: International News Co., 83 and 85 Duane street.

THE MONEY MARKET.

THERE was a fair demand for credits in the early days of the week, and this developed into severe pressure on Wednesday, when from 4½ to 5 per cent. was readily paid for accommodation. Borrowing from the Bank, however, was avoided, and the stringency relaxed on Thursday. The discount market has been very quiet, but 4½ per cent. has remained the general working minimum for

three months' bills, though the Continent was reported a buyer at $4\frac{1}{2}$ per cent., and yesterday there were signs of an easier tendency. The market has been influenced by the better tendency of the American exchange and the "unearmarking" of £500,000 of gold previously set aside on account of the South African Reserve Bank. Yesterday's Treasury bills went at a slightly lower average.

	Nov. 12, 1926.	Nov. 5, 1926.	Oct. 29, 1926.	Oct. 22, 1926.	Previous Rate and Date Changed.
Bank Rate	5	5	5	5	$\frac{1}{2}$ (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	2 (Dec. 3, '25)
Discount, Call	3	3	3	3	2 (Dec. 3, '25)
Houses' Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$ (Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	..

Thursday's Bank return showed a decline of £746,500 in the stock of coin and bullion, but as there was a reduction of £702,900 in the note circulation, the Reserve was only £43,600 lower, the Proportion being slightly higher at 27.2 per cent. Government securities rose by £775,000, but there was a reduction of £2,099,800 in Other Securities. Other deposits fell by £904,800, and Public deposits by £520,400. Currency notes were reduced by £245,100 to £289,192,100, which includes £1,291,300 for notes called in, but not yet cancelled. The fiduciary issue is £231,650,700, or £16,251,800 below the maximum for 1926.

The monthly statement of average weekly balances of the London clearing banks for October, which is printed in detail on a later page, shows an expansion of nearly £26 millions in total deposits and of £5 millions in acceptances. The aggregate figures of the nine English banks are compared below:—

	Dec. 1925.	Mar. 1926.	June 1926.	Aug. 1926.	Sept. 1926.	Oct. 1926.
Capital and reserves	121.0	123.6	124.2	124.4	124.4	124.4
Acceptances	108.2	100.6	87.8	82.4	81.5	86.5
Deposits (incl. undiv. profits, &c.)	1,646.8	1,587.8	1,630.1	1,634.1	1,623.3	1,649.0
Total liabilities	1,876.0	1,812.0	1,842.1	1,840.9	1,829.2	1,859.9
Coin, notes, balance at bank, and cheques in course of collection	256.2	236.2	250.9	240.0	235.0	241.4
Money at call	117.8	109.7	121.4	117.9	113.3	116.2
Investments	286.1	272.2	267.9	271.9	272.6	274.7
Discounts	231.0	187.2	210.4	226.1	218.3	224.7
Loans and advances	846.8	876.3	873.2	871.7	877.4	885.1
Cover for accept., premises, &c.	138.1	130.4	118.3	113.3	112.6	117.8
Total assets	1,876.0	1,812.0	1,842.1	1,840.9	1,829.2	1,859.9

Advances show a further increase of over £7½ millions, while discounts have expanded by £6 millions, investments by £2 millions, the cash item by £6½ millions, and money at call by £3 millions. In October, 1925, deposits increased by £14 millions, this movement being balanced by small increases in all the items on the credit side.

At their meeting on Thursday the directors of the Bank of England agreed to recommend to the proprietors in April next that the Right Hon. Montagu C. Norman be re-elected governor, and that Mr Cecil Lubbock be elected deputy-governor for the ensuing year. The announcement that Mr Norman is to continue in office for another year, making his eighth year of office, will be received with general satisfaction, for although much has been accomplished in the direction of the financial rehabilitation of Europe, there are still many difficult problems to be faced, in the solution of which Mr Norman is particularly well fitted to take part. Mr Lubbock, who six months hence will take the place of Mr Henry A. Trotter as deputy-governor, has already held that position for two years in the past. Mr Trotter, who will relinquish the office, owing to the calls of his business, next April, will then have completed his fourth year as deputy-governor, having served for three consecutive years from 1921 onwards.

NEW YORK MARKETS.

Our New York correspondent cables:—After recovering more than half the October break, the share market is hesitating between the bearish influence of the moderate recession in industry and the bullish influence of cheapening money, which is reflected in a $4\frac{1}{2}$ per cent.

rate for two months' accommodation and a lowering of the bill rate by one-eighth. Meanwhile the Federal Reserve statements show large gains in reserves and a contraction in discounts throughout the system, with the ratio 1.2 higher at 74 per cent. The local ratio is 4.4 higher, and discounts are close to the low level of three weeks ago. The cotton market is displaying a better tone, despite the latest crop estimate.

THE STOCK MARKETS.

Business in most sections of the Stock Exchange has been quiet, the gilt-edged market being particularly inactive. Foreign bonds, however, have been more animated, the premium on the scrip of the new Belgian loan having risen to over 6½. French bonds reacted after an early improvement, and Brazilians were heavy, but some Japanese issues strengthened. The buoyancy of Underground stocks was the feature of the home railway market. Argentine rails are flat, but a rise of several points was marked in Canadian Northern Income bonds. The rubber share market is very quiet, but there has been further activity in oils. Industrials as a whole are featureless. No movements of any consequence were recorded in the mining section, but the price of De Beers fell after the publication of the report, despite the excellent figures. Over-subscription was announced to the new issues by Selfridge Provincial Stores, Bolsover Colliery Company, and Ankole Tinfilds.

THE COMMODITY MARKETS.

Business in the commodity markets has in most cases shown little variation from recent levels, though a slightly better tone has followed the improved outlook in the coal dispute. Importers of foreign fuel are limiting their commitments, though arrivals are expected to be heavy for some weeks to come. Business in iron and steel has similarly been quieter, with appreciable weakness in Continental markets. Cotton prices have been well maintained, despite an increase in the official American crop estimate, buyers having come in on an encouraging scale. A large inquiry for yarn and cloth has been in evidence, but the volume of orders has not come up to expectation. Latest overseas advices suggest that the recent decline in wool values has been checked, but the position of the West Riding textile industry is becoming increasingly difficult owing to high costs and poor demand. The jute trade is quiet, the expected drop in raw material prices having as yet failed to mature. Wheat was firm early in the week, but later declined on quiet demand and in sympathy with overseas cables. Sugar remains steady, with a fair business passing. Coffee and tea are firm. Rubber has recovered most of the ground lost at the beginning of the month, but business continues on quiet lines. Tin has advanced on insistent demand for the near and forward position, lead is active and firmer, while copper opened in quiet fashion, but subsequently improved.

FOREIGN EXCHANGES.

There has been a smaller volume of business in the foreign exchange market during the week, with the possible exception of the French exchange. The most important feature, however, has been the welcome recovery in sterling, which removes temporarily, at any rate, the danger of any export of gold to the United States. This movement is chiefly due to American demand for sterling on the brighter prospects of a settlement of the coal dispute. Thus, from 4.84½ on the 5th, it rose to 4.84½ on Saturday. From then there has been little movement until Thursday afternoon, when the rate rose to 4.84½. Yesterday morning it opened at 4.85. Forward rates have moved from par to $\frac{1}{2}$ c premium for one to three months. Paris, on the other hand, showed some fluctuation. From 146½ on the 5th it recovered to 145½ on Saturday morning, but rose again to 147½ on Monday and 151½ on Tuesday. This was followed by a slight downward movement to 150½ on Thursday, and a further jump to 147½ yesterday morning. Such movements, however, do little more than indicate the general uncertainty of the situation. Forward rates have widened from 50 centimes and 2½ francs to 75 centimes and 3 francs discount for one and three months respectively. Italy has shown

A BRIGHTER PROSPECT.

In times past, as Viscount Grey reminded us in his speech at the Central Hall on Thursday night, the memory of wars was celebrated by keeping the anniversaries of great battles. The names of Waterloo and Trafalgar are sufficient illustration of this fact. But the Great War of 1914-18 is and will always be celebrated not by the keeping of a Jutland Day or a Somme Day, but by the solemnisation of Armistice Day. There is surely something significant of the change in the public attitude to war in the fact that we of to-day perpetuate the memory not of our victories, but of the day that gave the world relief from the most disastrous strife in history, and gave birth to hopes of a more lasting peace and security than the world had previously enjoyed. There is another point, too, which has perhaps equal significance. If the poignancy of feeling with which we keep Armistice Day has lessened with the passing years, the solemnity with which the public observe the occasion has definitely deepened. November 11th, which a year or two back was tending to become a day of rejoicing and festivity, has, by the force of public opinion, been enshrined in the calendar as a day of meditation and retrospect.

Welcome as this change is on the broadest grounds, it possesses a particular value this year; for an exercise in retrospect is especially needed to restore a sense of perspective in times like the present, when we are obsessed with a load of difficulties which the industrial circumstances of the moment have placed upon our shoulders. The Prime Minister, in his annual review of the country's position at the Lord Mayor's banquet on Tuesday, seized upon this occasion for retrospect. Had he spoken three days later he might have changed the very gloomy note that he struck regarding home affairs. For in these three days unpromising negotiations in the coal dispute have developed into what, as we go to press, appears to be a practical certainty of a negotiated settlement. In the week in which we remember the end of the greatest military war in world history, there could be no more appropriate or welcome gift to the nation than the ending of the greatest industrial struggle in British annals. We must leave for another occasion our attempt to assess the national losses involved in a struggle which Mr Baldwin rightly called "a monument of human folly," and which, according to the President of the Board of Trade, has cost the country from £250 millions to £300 millions. Nor can we on the spur of the moment gauge the extent and prospects of the recovery which coal peace will bring to the general trade of the country. But it can at least be said that any agreed settlement is vastly better than a war to the bitter end; and that, although the six months' struggle has ruined a year whose economic record might have been bright, we may now at last look forward to better times. The peaks of prosperity are farther off than a year ago. But arrears of unsatisfied demand will in the coming months give us a lift along the road of recovery, and if we have learned the lessons of this futile struggle and refuse to allow temporary artificial factors to obscure hard truths, there may yet be time to make 1927 the best year Britain has had since the war. We may be thankful, too, that the disturbance caused by the coal trade has not been more ruinous and more general. Of one blessing at least Sir John Ferguson did well to remind us in his inaugural address as President of the Institute of Bankers on Wednesday: "It is great good fortune that we returned to the gold standard in 1925. We shrink from imagining to what figure, but for this, the New York sterling exchange would have fallen owing to this year's strikes and economic losses. As

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 6th:—

EXPENDITURE.		RECEIPTS.	
£	(000's omitted.)	£	(000's omitted.)
Supply Services	7,350	From Revenue	11,961
Interest, &c., on Debt	9,118	Increase in debt	4,805
Sinking Fund	39	Decrease in Balances	374
Sundries	81		
	16,940		16,940

The revenue for the week amounted to £11,961,200, as compared with £11,876,600 in the corresponding week last year. Customs were lower at £2,081,000, against £2,298,000, but Excise was higher at £1,533,000, against £1,477,000. Property and Income-tax brought in £3,333,000, as compared with £3,758,000, while Super-tax amounted to £390,000, against £35,000. Ordinary Receipts produced £72,200, as against £54,700, and Special Receipts amounted to £1,105,000, against £700,000. The week's operations increased the National Debt by £4,604,900, and caused the following changes:—

(000's omitted.)		£	
Public Department Advances ..	300	Treasury Bills	3,431
National Savings Certificates ..	100	Sundries	1,574
	400		5,005

The floating debt was increased by £3,180,000 to £784,421,000.

FINANCIAL YEAR, 1926-1927 (April 1 to November 6, 1926).

£		£	
Total Expenditure ..	475,129,694	Raised by Revenue ..	390,822,390
		Decrease in Balances ..	4,114,486
		Amount borrowed ..	80,192,818
Total	475,129,694	Total	475,129,694

ESTIMATES FOR FINANCIAL YEAR 1926-7 †

£		£	
Expenditure	825,727,000	Revenue	824,750,000
Deficit	£977,000		

† Revised in Exchequer Return dated July 26, 1926.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—London Maritime Investment, Dalgety and Co., Brush Electrical Engineering, and Joshua Hoyle and Sons.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

things are, the exchange for sterling has been as steady as a rock."

The trade recovery which coal peace will release will function in a world more favourable to it in many vital respects than it has been in recent years. Mr Baldwin in his Guildhall speech limited his retrospect to a three-year span. But his comparison of 1923 with 1926 yields results very much in favour of the latter. Three years ago the Ruhr crisis was at its height; Germany was threatened with economic ruin and political disintegration; Austria and Hungary were on the edge of economic catastrophe; Greece was threatened with invasion; unrest was rife throughout the East and the Near East; India was in a critical position; the riot of European currencies was in full force. It was, in Mr Baldwin's words, "one of the darkest moments since the war." Three years have wrought a welcome change in the face of that sombre landscape. The Locarno Pacts and the entry of Germany into the League of Nations have brought a new degree of security to Europe; Austria and Hungary have been pulled back from the edge of the precipice; Germany has established her currency, and the Dawes Scheme has placed the Reparation problem on a regular basis; a fresh batch of inter-Allied war debt settlements have been made; currency stabilisation has been effected over the greater part of Europe; Central Europe and Asia Minor are "rapidly recovering" from the shattering effects of war; India's financial and economic position has made a strong advance, and her political clouds are breaking. The chaos in China is there to remind us that the world is still full of troubles; but when we contrast these two pictures, of 1923 and 1926, we may at least take good heart. Though disappointments, setbacks, and follies blind us to it, the fact of progress is there.

Some of these facts of European recovery were clearly not present to the mind of President Coolidge when at Kansas City on Thursday he, too, indulged in retrospect. His statement that the adherence of the United States to the International Court was unlikely was merely a definite pronouncement of what has been obvious in view of the Senate's adherence to its reservations, and still more so since the election results of last week. Comprehensible, too, are the reasons born of material prosperity which led Mr Coolidge, in effect, to return thanks that Americans are not as other people are. But if some reports of his Kansas speech are accurate, his insistence upon Europe's hates and self-imposed poverty suggests a view that is out of focus, because it is also a little out of date. The emphatic "isolationist" trend of his speech reveals, too, a narrowness of policy which is the logical sequence of this faulty perspective. Europe, as the facts adduced above clearly prove, is making strong progress in an uphill battle. America, as Mr Coolidge observes, is more closely involved than before the war in European affairs. The establishment of peace, security, and prosperity in Europe is an American interest of the first rank. How far and how long can America afford to refuse a further measure of that co-operation which it is in her power so effectively to give? There is a further reason why this question is a vital one to-day. The great war, as Lord Grey says, gravely impaired the prestige of Europe in the East. In the matter of the West *vis-à-vis* the East America's interest, at least as emphatically as Britain's, is clear. She, too, stands to gain by the restoration of the prestige of Europe in the East. But for a change in America's orientation to these problems we must trust to the passage of time and a gradual realisation of European facts.

However, although President Coolidge has slightly damped the new hopes that arise in Britain this week, he has not done more. At last, at long last, a better prospect opens before us. At the Lord Mayor's Banquet of a year ago Mr Baldwin said: "The waters are falling; our spirits are rising." The coal dispute, and the coal dispute alone, stultified his words. If that great obstacle is now removed, we may repeat his phrase with a temperate but reasoned confidence.

THE COAL NEGOTIATIONS.

GREAT progress has been made this week towards a settlement of the coal dispute, and the men have now gone so far towards meeting the conditions demanded by the owners that the Government can hardly fail to secure the owners' agreement to a general settlement. At the end of last week the General Council of the T.U.C. succeeded in reopening negotiations with the Government on the assurance that the Miners' Federation were now prepared to accept the principle of district agreements in accordance with national principles. The negotiations revealed that the miners' idea of these principles was a national minimum percentage on the basis of the seven-hour day, the fixed ratio of 87 to 13 for the division of the proceeds of the industry between wages and profits, the minimum subsistence wages for low-paid men as in April last, an understanding as to the method of ascertaining the proceeds of the industry and as to the districts which were to be separately treated, and, finally, an arrangement by tribunal or otherwise for co-ordinating the district settlements. The owners, who though not authorised to negotiate nationally, did, in fact, enter into discussion with the Government as a sort of post-box between the latter and their district associations, indicated that the general principles to which the owners would agree were:—that wages should be determined by an agreed division of the net proceeds of the industry, the ratio of which should vary in the districts, that there should be a minimum percentage varied by districts, and that there should be a minimum subsistence wage which should also vary by districts.

The conferences ended in the Government ultimately putting forward its own suggestions in a letter to both parties which included:—A national minimum percentage addition to basis rates in accordance with the 1921 agreement for whatever hours might be worked; the ratio of division of proceeds to be elastic and vary between 85 to 15 and 87 to 13; the present method of ascertaining proceeds should be retained; the principle of subsistence minima should be retained but the actual figures subject to negotiation; that the districts should be in accordance with a schedule attached to the statement; and, finally, that in the absence of a national agreement each district should give its guarantee to the Prime Minister. The discussions had, however, also revealed that in the Government's view these national principles must permit a lengthening of the working day. This point the miners' executive did not consider themselves authorised to accept, and it therefore became necessary to summon a delegate conference. The negotiations, however, had also made it clear that, in the event of the executive getting freedom to negotiate on hours, the Government would establish some sort of tribunal to ensure that the district agreements conformed to national principles. They could hardly do less than this, considering the extent to which they are committed to the view that the purpose of the Eight Hours Act is not to introduce a general eight-hour working day in the mines, but to tide over difficult cases. Moreover, the Government is deeply committed for some time to come to deal with the surplus miners whom any re-organisation of the industry will throw out of work. It must formulate an ordered programme for this purpose, and its plans will be hopelessly chaotic unless the district agreements are adequately co-ordinated. The delegate conference, after prolonged discussion, on Thursday night decided to give the executive a free hand to negotiate on the basis of district agreements which would permit an increase of hours. This decision was no doubt influenced by the continued drift back to work, the official statement of numbers engaged having increased during the week from 294,000 to 320,000. This actual increase is paltry, for it would take more than six months to get the mines fully working at this rate of increase. But behind these figures lies the undoubted weariness of the miners with the dispute and their feeling of increasing economic pressure as the winter proceeds. The executive spent most of Thursday night in negotiation with the Government, and at 3.10 a.m. on Friday the following terms were reached, which the miners' executive agreed to submit to the delegates.

(1) The Miners' Federation undertake to do all in their power to promote an immediate resumption of work by means of district negotiations.

(2) As regards the wages on which work is to be immediately resumed, the owners have informed the Government that in every district except Northumberland, Durham, Cumberland, and North Wales they have offered to pay temporarily after the resumption of work a general district percentage on basis rates not less than prevailing on April 30, 1926, and in districts other than the above where there was subsistence wage under Clause 7 of the 1924 Agreement, the same subsistence wage.

(3) The owners have also informed the Government that they are ready to appoint at once a special joint Sub-Committee on transfer price.

(4) Further, the owners have informed the Government that workmen will be reinstated as opportunity offers without prejudice to the men at present at work.

(5) As regards the terms of employment, any district agreement which embodies certain general principles shall be regarded as a standard agreement, that is to say, any agreement that contains provision for all the following matters:—

(a) A district board with an independent chairman.

(b) Periodical determination of the trading results of the industry ascertained jointly by accountants appointed by each side with provision for test audits and reference of any question arising therefrom to the independent chairman of the district board.

(c) Periodical regulation of the district percentage in accordance with paragraph (b) above, the ratio of division of net proceeds being not less favourable to the owners than 87 and 13, and not less favourable to the miners than 85 and 15, and the net proceeds being ascertained in accordance with the third schedule of the national agreement of 1924, but without prejudice to any variation which may be made by the district board or, in default of agreement of the district board, by the independent chairman of that board.

(d) The minimum percentage of basis not less than the equivalent of 20 per cent. on standard; the standard for the purpose of this paragraph being the basis rate in force for the time being (in Scotland the 1888 basis) plus the percentage paid of basis in July, 1914, or the equivalent thereof where part of the 1914 district percentage has been merged in basis rates) plus any percentage that may be agreed to be paid to piece-workers in respect of an underground working day shorter than eight hours.

(e) The payment of subsistence wages to low-paid day-wage men at the rates paid in April last until the pay-day next following January 31, 1927, and thereafter at a rate to be determined by the district board or in default of agreement of the district board by the independent chairman of that board.

(f) The duration of at least three years without prejudice to the variation of the district agreements by agreement between the parties thereof or to any provision that it may contain for the alteration of any of these terms within that period by the district board or, in default of agreement of the district board, by the independent chairman of that board.

(6) The Government, as soon as they are satisfied that paragraph 5 of this memorandum has been complied with, undertake to introduce legislation by which any district agreement other than a standard agreement may, if it is on the basis of a longer underground working day than that prevailing in the district in April last, be made the subject of appeal by either party to the agreement to a national arbitral authority on any of the matters set out in paragraph 5 of this memorandum in respect of which it is less favourable to the party appealing than a standard agreement would be.

No appeal will lie as respects any standard district agreement, or any agreement made on the basis of an underground working day not longer than that prevailing in the district in April last.

7. The national arbitral authority will consist of such members of the Industrial Court (not having any connection with the coal-mining industry) as the Minister of Labour may direct, and will be assisted by two assessors, one appointed by each of the parties to the appeal.

8. When an agreement is made the subject of appeal to the national arbitral authority, the authority may in respect of the matter under appeal make such modifications therein as they think fit within the standard conditions, or may, if they think fit, confirm it without modification. The agreement, therefore, will have effect as approved by the national arbitral authority.

9. The Act giving these powers to the national arbitral authority will have effect for six months only.

10. The Government will forthwith take the necessary steps to put into force the provisions of the Mining Industry Act of 1926 relating to recruitment.

These terms show that the rôle of the arbitral tribunal is to be a very minor one, its scope being greatly circumscribed by the statement that it will not apply to "standard" agreements—i.e., those that include the provisions in Clause 5, which consist of the points summarised in the Government's letter of November 6th, together with the establishment of a district board with an independent chairman, and the proviso that the district agreement shall last for at least three years. As Clause 2 makes it clear that owners in all districts except Northumberland, Durham, Cumberland, and North Wales will pay the minimum of 20 per cent. over the 1914 basis, and as there is no reason to doubt that they will conform to the other provisions, the tribunal will presumably, in effect, only apply to these four areas.

Head Office: 41 LOTHBURY, LONDON, E.C.2

So far as the miners are concerned, the fate of these terms still hangs in the balance. It is unlikely that they will be rejected off-hand, but it is possible the delegate conference may refer them to a ballot—a proceeding which the experience of former ballots suggests is not likely to lead to a settlement. The conference is, however, alive to the danger of delay, and may yet have the courage to seize its last chance of a negotiated peace.

The owners on their side have hastened to state that these peace terms have been issued without their concurrence, and that the statement in Clause 2 is incorrect, because the undertaking about wages only stands if they can be assured of a longer working day. They also maintain their hostility to any revision by a central board. It is, however, inconceivable that they will carry their dissatisfaction to the point of rejecting the Government's plan. They clearly could not persuade the Government to go back on its intention to legislate in accordance with Clause 6. The owners can, of course, put up a form of passive resistance, but they are hardly likely to risk the substance of victory for a shadow; for the terms in effect give nearly all that the owners have striven for. They get a free hand on wages, they have to put up with a central board to co-ordinate the district agreements, the life of which is limited to six months, and they have eliminated the Federation from future negotiations.

The least satisfactory part of the terms is that they leave the hours question entirely undefined in circumstances in which the miners are in a very weak position to negotiate. In many quarters it has been hoped that the settlement would at least limit the hours to seven and a half, which would bring the settlement within the terms of the Washington Hours Convention, a subject on which the British Government has only recently come to a working understanding with France and Germany. If the eight-hour day is introduced it will encourage Continental coal-producers to increase their working day, and before very long bring about again a condition of over-production. For the moment all will go well owing to the shortage of stocks and the urgent need of coal throughout Europe. This fact will also postpone the problem of redundant workers, since only the very bad mines will fail to open on the present condition of the market. But both these issues must ultimately be faced. On the other hand, the statement contains some hopeful elements with regard to permanent peace, among the most important of which is the appointment of a district board with an independent chairman in districts where the standard agreement is reached, while, the Government, for its part, is to use at once its power to regulate recruitment in the mining industry.

Like all agreements which are reached as the result of long-drawn-out and bitter warfare, the terms of peace will be received without enthusiasm by any of those concerned. One thing, however, is quite certain. If these terms are accepted, the nation as a whole will heave a sigh of relief at the passing of the black cloud which has hung for so long over British industry.

IMPORTANT DEVELOPMENTS IN CHINA.

LAST month we published a series of articles on the general features of the situation in China, with particular regard to Anglo-Chinese relations, which raised some very broad issues of policy. On one of the most important of these a correspondent usually resident in China has sent us some interesting comments, which will be found on a later page. This week events have been taking place which seem to portend that the chaos may be cleared up sooner than has been expected, and that Anglo-Chinese relations may now take a decisive turn either for the worse or for the better.

The most important event is the military success of the Southern (Kuomintang or Nationalist) Army against the forces of General Sun Chuan-fang, who has latterly held the five provinces in the hinterland of Shanghai. After the overthrow of Wu-Pei-fu and the capture of Hankow by the Nationalists, there had been a pause in their advance, and it had seemed possible that Sun might break through the flank of their long lines of communication between Canton and the Yangtse. Not only has this possibility now vanished, but Sun himself seems to be going the way of Wu. The Nationalists have already occupied his south-westernmost province of Kiangsi; and though he is making a desperate rally to save Nanking, it is prophesied that Nanking will shortly fall. In that event, the Nationalists will find themselves masters of the Yangtse from Hankow to its mouth, and the international municipality of Shanghai will be enveloped by their forces. This will raise many anxious questions among the Western nations represented in Shanghai, particularly among the British, who have the greatest material interests there and who are at present, unfortunately, the most unpopular of foreign nations in the sight of the Chinese.

Meanwhile, north of the Yangtse, the Baptist-Bolshevik General Feng is reported to be advancing south-eastwards, through Shansi and Shensi, to join hands with his Nationalist allies from the South; and this imminent reinforcement probably ensures the Nationalists against any attack from the Northern war-lords while they are settling accounts with Sun. Indeed, Chang Tso-lin, the master of Manchuria, is the only Northern war-lord now left in being, and his forces are reported to be permeated by disaffection. In any case, his position is precarious, since it rests entirely on material force. While the Nationalists stand for a cause, he stands for nothing but a personal understanding with the Japanese. The moment that Chang Tso-lin's military power shows signs of weakening, Chinese national resentment against his long collaboration with the Japanese for personal ends is likely to break out against him with serious effects. Hence it is not surprising that Chang has so far allowed first Wu and then Sun to be beaten by the Nationalists without coming to their rescue. He is evidently afraid of dissipating his already uncertain strength, and is prudently preparing to stand on the defensive in those Manchurian provinces where his power has been firmly established for some time past. Will he attempt to prevent the Nationalists from entering Peking? It is reported that Dr. Wellington Koo, the Acting Prime Minister of the shadowy Central Government, is urging Chang to fight for Peking, and is threatening to resign—presumably because Chang is showing unwillingness to take the necessary military measures.

Meanwhile it is noteworthy that Dr Koo, though he may, at least momentarily, be at odds with the Nationalists on questions of internal policy or of personal relations between party leaders, is pursuing an identical policy towards foreign countries. Just a week ago he suddenly denounced the Sino-Belgian Treaty of 1865, under which Belgians enjoy extra-territoriality on Chinese soil. This action is as high-handed as the Turkish Government's denunciation of the Capitulations in 1914, after the outbreak of the European War. The Belgian Government shows no sign of acquiescing, and since both parties are members of the League of Nations, Belgium may be expected to seek those means of inquiry and

redress which the League provides. It seems unlikely, however, that she will recover her Treaty rights *de facto*, for, while discussion proceeds at Geneva or the Hague, the Nationalists may have entered Peking, and Dr Koo himself may have entered the Nationalist Government. The denunciation of the Sino-Belgian Treaty is the thin end of the wedge. The other Capitulatory Powers may expect the same treatment to-morrow. In fact, Dr Koo is reported already to have tackled Japan—the most formidable among them—in a note of October 20th, in which he is said to have demanded that the Sino-Japanese Treaty of 1896 shall be revised by negotiation within a maximum period of six months. Japan has a military and economic hold upon Manchuria, in the immediate neighbourhood of Peking, and her local henchman Chang is still in power. If China is now bearding Japan, she will not hesitate to beard France or Great Britain.

The present state of British interests in China was the subject of important questions and discussions in both Houses of Parliament on Wednesday. In reply to Mr Trevelyan, Sir Austen Chamberlain was able to give one piece of good news. Although no definite understanding appears to have been reached between the British and Cantonese Governments, the Hongkong boycott has been officially terminated as from October 10th, and "while a return to normal conditions can only be reached gradually, there has already been some improvement. The train service between Hongkong and Canton has been resumed, steamer services are almost normal, and Chinese dealers are restocking with British piece-goods." This is highly satisfactory as far as it goes. It gives grounds for hope that we may succeed in arresting the calamitous decline in British trade to which Lord Parmoor drew attention in the House of Lords the same evening. We are far, however, from being out of the wood. Sir Austen added that, at Canton, a campaign for the perpetuation of the boycott was still continuing, and a recrudescence of it may, of course, be produced at any moment by a controversy between a victorious Cantonese Government and His Majesty's Government over questions of high policy.

These questions were examined in the House of Lords—without any fundamental disagreement of view—by Lord Parmoor and Lord Balfour. Lord Balfour argued that British policy had long been conciliatory, and he certainly showed a conciliatory spirit in his own references to the crucial question of the Capitulations. "We hold," he said, "quite clearly and distinctly that the Chinese have just reason for great disappointment at the delay which has occurred in carrying out the recommendations of the Treaty of Washington"; and he intimated that the British Government was prepared to discuss a revision of the Capitulations frankly, and to make far-reaching concessions, though he envisaged the maintenance of "special arrangements of an exceptional character" for an interim period.

This is certainly the right way to handle the question of the Capitulations. The Capitulations are an anachronism which, sooner or later, is bound to disappear; and it is far better to go out to meet the Chinese and attempt revision by negotiations than to dig ourselves in and wait for an untenable position to be carried by assault. Lord Balfour very justly pointed out, however, the appalling difficulty of the actual situation. To undo what was done in 1843 and place Anglo-Chinese relations on an entirely new footing would be a vast and complicated task in any case—even if we had a united and representative Chinese Government to deal with. As it is, to whom are we to address ourselves? If we enter into direct negotiations with the Nationalist Government of Canton, we lay ourselves open to the accusation of taking sides in Chinese internal affairs and of taking separate action from the other foreign Powers—contrary to the spirit and even the letter of the Washington Agreements. If, on the other hand, we embark on negotiations—not merely in regard to day-to-day matters, but on far-reaching questions of principle—with the shadowy Central Government at Peking, we may find that this Government has disappeared overnight and that Peking is a no-man's-land in which the Nationalists and Chang Tso-lin are fighting the last round of the Chinese Civil War. We may then be confronted with some *fait accompli*

which may cut away the ground from under the negotiators' feet before the negotiations have begun, and may make a friendly readjustment of Anglo-Chinese relations far more difficult than before.

Much will depend, in the immediate future, upon the new British representative in Peking. The right course for the British Government is to enter promptly into negotiations with the Nationalists if and when the Nationalists become the *de facto* national Government of the country. To negotiate with them while the issue of the Civil War is still in doubt would, as Lord Balfour hinted, be premature. To negotiate a moment later would be to risk missing the opportunity of negotiating at all. Now, more than ever, the Foreign Office needs prompt and discerning counsel from its expert representatives on the spot.

WORLD PRODUCTION AND TRADE.

ON Monday the Preparatory Committee of the League of Nations Economic Conference commences its second session in Geneva. Since the Committee first met at the end of April last some very important events have occurred to alter the world economic situation. Some of them have brought the prospect of effective international co-operation nearer, among which are to be mentioned the stabilisation of the Belgian franc and the checking of monetary depreciation in France and Italy, while efforts to bring about co-operative action between industrialists have resulted in the recent European Steel Pact and the meeting between British and German industrialists in England a month ago. On the other hand, the prolonged coal dispute—which broke out on the last day of the April session, and looks as though it may be settled on the first day of the present meeting—has created quite abnormal conditions in Britain, which have for the moment diverted attention in this country from international affairs. The growing recognition of the need for breaking down trade barriers has, however, been authoritatively expressed in the recent international manifesto by bankers, merchants, and manufacturers, and by the pronouncements of the International Chamber of Commerce.

While these events have on balance considerably improved the prospects of a useful Conference next year, the Secretariat of the League has been busily engaged in gathering the material for a general survey of the world situation which it was instructed to prepare at the April meeting. This was clearly the first task for the Committee to undertake, for until the symptoms have been observed and described it is clearly premature to attempt to diagnose the causes of our present difficulties or to attempt to prescribe remedies for them. Most of this material will be reserved for discussion by the experts at their forthcoming meeting, but in a few cases publication has already been authorised. In one or two cases the documents published are in effect continuations of reports which have been published in previous years under mandates received in the first instance from the Brussels Conference of 1920 and later from the Conference of Genoa. But one of the documents* just issued breaks entirely new ground. This is an attempt to compare the changes that have occurred in world population, world production, and world trade between 1913 and the present time.

Even in the most advanced countries there are no exact figures which represent industrial output, and for its present purpose the Secretariat of the League has, therefore, been compelled to fall back upon statistics of world-production of basic materials and foodstuffs as the only available indices of productivity. Industrial progress largely consists in economising raw material by avoiding waste and producing more finished products, or, in other words, greater economic values from a given quantity of material—for example, greater power and more by-products from a given quantity of crude coal. As great technical changes have been made since 1913, the raw material statistics almost certainly understate the growth of industrial productivity generally. But with this qualification in mind the League figures give a very good starting point for the discussion of the economic situation of the world.

* "League of Nations: Memorandum on Production and Trade." (London) Constable and Co., Orange street. 1s 6d.

The first general result of the inquiry is to show that whereas the world population in 1925 was some 5 per cent. higher than in 1913, the production of materials (including the leading cereals and other foodstuffs, except meat, the chief textiles, fuels [coal and oil], metals, chemicals, oilseeds, rubber and wood pulp), was 117 in 1925, 106½ in 1924, and about the same figure in 1923, as compared with 100 in 1913. In other words, taking the world as a whole, the output of food and materials per head is now larger than before the war. On the other hand, the difficulties of international trade that have been created by general economic dislocation, by monetary disturbances, and by artificial barriers to trade, have prevented a corresponding expansion of commerce, the corresponding indices of the volume of trade of the world as a whole being only 105 in 1925 and 98 in 1924.†

The figures for the world as a whole, however, conceal very great variations in different parts of the world, as will be seen in the following table taken from the report:—

Continental Groups.	Population.	Production of Raw Materials.*		Quantum of Trade.	
	1925.	1924.	1925.	1924.	1925.
(a) Eastern & Central Europe: Including Russia (U.S.S.R.)†	99	82.83	102.103	62	73
Excluding Russia (U.S.S.R.)	103	88	102	71	82
(b) Rest of Europe.....	105	101.102	106.108	98	99
Europe (excluding Russia (U.S.S.R.)†)	104	94	104.5	89	94
Europe, including Russia (U.S.S.R.)†	101	89.90	104.105	84	89
North America.....	119	114.115	126	126	137
Caribbean‡	107	186.188	167.169	132	128
South America.....	122	119	134.135	91	97
Africa.....	107	132	138.139	97	99
Asia, excluding Asiatic Russia	105	116.122	116.124	123	136
Oceania.....	116	117.124	121.124	118	132
World.....	105	106.7	116.8	98	105

* The double figures shown for production result from different methods of calculation, which are explained below. For the purposes of the general conclusions here drawn too much emphasis should not be laid on the precise figure or figures given, but attention should be paid rather to their general order of magnitude; the approximate mean of the range given may be adopted.

† Union of Socialist Soviet Republics, i.e., including Asiatic Russia.

‡ Central America, Mexico, and all islands in the Caribbean Sea.

The report enters a caution in regard to the figures for Asia owing to the absence of cereal statistics for China, and, indeed, until the report has been submitted to the criticism of the experts it would be well to regard all the figures as to some extent provisional. This table, however, clearly brings out several instructive comparisons. The comparative depression in Europe, as contrasted with the rest of the world, is, of course, the most notable feature of the table. The second is the fact that in spite of the tendency to raise tariffs, which is even greater in America and in the British Dominions overseas than in Europe, the international trade of the continents other than Europe shows considerably greater elasticity than European trade. This is due in large part to the development of a new trading region of the world in the Pacific, to which we have several times drawn attention.

The report elaborates the figures of production in some detail, and gives tables which show that "if, with certain vital exceptions, the balance of world production between different commodities has been largely restored, the territorial distribution of production is now very different to what it was." Those continental areas with the most highly developed economic organisation tend to show a more even rate of progress than lands in which new fields of enterprise have recently been opened up, and the table we have quoted, like all tables based upon percentages,

† We may add that an independent official German inquiry into world trade, which has recently been issued, shows a rather lower figure for 1924, the volume of trade in 19 leading commercial countries being represented by the figure 94.7 compared with 82.3 in 1923 and 77.6 in 1922. The German inquiry is not on quite so broad a scale as the League investigation, and slight differences in methods of calculation may account for the lower figure for 1924. But the German figures are interesting as carrying the calculation a little farther back. There is no doubt that the recovery between the years 1922 and 1924 was a very substantial one, and on something like the scale represented by the German index numbers.

is liable to be misunderstood unless it is constantly borne in mind that a very large percentage increase may mean little if it starts from a very low basis. The report, however, draws the conclusion that the table as a whole indicates that "in contrast to Europe, the rest of the world, less affected by war, has achieved a progress perhaps equal to what might have been expected in a normal twelve-year period."

These, and the many other interesting points made in connection with the figures, give rise to some very fundamental questions, the most important of which is clearly whether the changes here indicated are permanent or transitory. From the European standpoint, the most reassuring fact in this connection is that the report shows what rapid headway has been made in Europe in the last two or three years. It will be the chief business of the Committee to endeavour to draw the appropriate conclusions from this illuminating report.

THE AMERICAN COTTON CROP.

WITHIN the last four weeks "sixpenny cotton" has all but become a *fait accompli*, thanks largely to an American crop of record dimensions coming on top of more than average crops in 1924-25 and 1925-26. Three years ago middling American cotton was fetching nearly 1s 8d a pound in Liverpool; two years ago the price was still over a shilling; a year ago over 10d. As recently as September 8, 1926, it was as high as 10.36d, but thereafter a rapid decline was registered on a series of bearish estimates from America. By the third week of October prices had fallen below 7d, and have since fluctuated only a few points below that figure.

This headlong fall of values has, of course, awakened grave disquietude among cotton-growing interests, who claim that they cannot recoup their season's outlay unless prices improve. Various schemes have been considered for holding "surplus" cotton off the market, ranging from the burning of several million bales to the setting up of a corporation with Government assistance and financial backing to exercise regulatory power—or, in other words, to carry surplus stocks as long as may be necessary. According to present indications, however, this duty will largely be left to the banks and financial organisations in each State. Other proposals have included a species of Stevenson Scheme, on the precedent furnished by the British Government in the rubber plantation industry, to ensure a reduction in next year's acreage. Cotton manufacturing interests in America, on the other hand, have welcomed the possibility of increased business, while their Lancashire colleagues, who have long been accustomed to attribute their post-war troubles to persistent under-consumption of manufactured goods as a result of the latter's relative dearth compared with other commodities, have jointly and severally voiced their satisfaction with the prospect of obtaining fresh supplies of raw material at or about the prices of 1913, while commodities in general range about 50 per cent. above the pre-war level.

The crop position during recent years may be appreciated from the following table:—

PRODUCTION AND DISTRIBUTION OF AMERICAN COTTON. (Based on the annual statements of the Liverpool Cotton Association, Limited.)
(Thousand Bales.)

	Total Crop.†	Total Deliveries.	American Consumption.		Exports to—				
			North.	South.	Great Britain.	France.	North Europe.	Other Countries.	Total Exports.
1885-86.....	6,550	6,509	1,825	340	2,620	410	968	345	4,344
1905-06.....	11,320	11,569	2,576	2,413	2,903	778	1,978	920	6,580

† Including linters.

‡ 1926-27 crop 17,918, on basis of last estimates.

The figures suggest a number of important conclusions. The volume of the American crop fell off very considerably in the later years of the war, and made no real recovery until 1924-25. Subsequent totals, however, have been distinctly high. The proportion of the crop consumed in America itself has recently risen to a marked degree. One hundred years ago American spinners accounted for just under 14 per cent. of the total world consumption of American cotton; by the '50's of last century their proportion had risen to over 20 per cent.; by the '70's to over 30 per cent., while in the quinquennium 1906-1910 the 40 per cent. level was exceeded for the first time. During the war a rise to 56½ per cent. took place (1916-20), but this was due in part to abnormal factors, and during the succeeding five years the ratio fell back to 51.7 per cent., and in 1925-26 to 48.6 per cent. Broadly speaking, however, it is true to say that America consumes one bale of cotton at home for every bale she ships abroad. Her interest in the maintenance of cotton prices at reasonable levels is much greater than is commonly realised on this side.

While American raw cotton consumption has thus increased more or less steadily (the war period being excluded), the expansion has been anything but uniformly distributed over the main geographical divisions of her cotton manufacturing trades. A glance at the table will show that while the cotton consumption of the Southern States has grown from small proportions in the eighties, and has doubled even during the last 20 years, the cotton industry in its original *locale* in the New England States has, apart from a temporary spurt during and immediately after the war, been in a state of stagnation for the past 20 years. In 1925-26 the Southern consumption was nearly double that of the North. Another reason is here apparent for the absence of whole-hearted support for schemes aiming at enhancement of cotton prices.

The Southern States of America have, indeed, in recent years taken more than twice as much American cotton as has Lancashire herself. The British consumption figures can scarcely be regarded as gratifying by British readers. In 1885-86 Great Britain took over 2½ million bales out of a crop of rather more than 6½ million bales. In 1905-06 the crop had grown to over 11 million bales, but British consumption remained under the 3 million figure. The years immediately preceding the war suggested that, in periods of large crop yields, Great Britain's takings might be expected to approximate to something between 3½ and 4 million bales. Between 1920 and 1924, however, the average fell below 2 millions, and even in 1924-25 and 1925-26, years of large crops, British takings failed to reach the level attained some 40 years previously. To put the matter another way, in the middle of last century Great Britain consumed over 50 per cent. of the annual American cotton crop. By the beginning of the present century the percentage had fallen below 30, and in 1925-26 it was only 14.8. Lancashire has doubtless tended of later years to specialise more and more on the finer products, and has drawn to an increasing extent on Egyptian-grown supplies. But the major portion of her material is still drawn from America, the trade returns for the last calendar

year, for instance, showing that of total imports of slightly under 19 million cents, 12½ millions were American and only 3 millions Egyptian.

Imports of American cotton by European countries other than Great Britain have lately shown no very great increase as compared with those of the immediate pre-war years, though the ground lost by these countries during the war has subsequently been steadily regained. During the last 20 years the most phenomenal increase has occurred under the heading "Exports to other countries." The large takings of these "other countries" in the first two years of the war may be ascribed to abnormal causes, but on the basis of the most recent figures it would seem that consumption of American cotton outside Europe and the United States has more than doubled since the beginning of the present century. The 1925-26 figures include exports of 1,083,912 bales to Japan, Lancashire's most formidable competitor in Eastern countries, who is also a large consumer of Indian cotton. During the half-year ended July 31 last, Japanese consumption of the raw material from all sources exceeded that of Great Britain for the first time in history.

This survey of the world distribution of American cotton has served to show that the interests to whom dearer cotton is inimical are by no means located exclusively in Lancashire, but are, in fact, distributed over Europe and the East, and, particularly, the United States of America. What are the prospects of a continuance of the present low level of prices, apart from control by outside agencies? The answer obviously depends on the conditions which are likely to obtain in the American cotton belt in the future. In this respect an exceedingly illuminating chart has recently been published by the National City Bank of New York, based on returns of acreage, production, and yield per acre during the last

PRODUCTION OF COTTON, ACREAGE PLANTED AND YIELD PER ACRE IN THE UNITED STATES

half-century. The chart, which is reproduced on this page by the courtesy of the bank, shows quite conclusively that the acreage under cotton has steadily expanded during the last three or four years, but that this expansion has done little more than make up for the check administered to cotton cultivation in the war period. The rapid expansion of production from the low level of 1921 has barely sufficed to bring the total outturn to the level that might have been expected had the trend of the pre-war curve been maintained. The explanation is furnished by the curve showing the yield per acre. Since the war the latter has shown a very significant decline, and in 1921 reached the lowest point during the whole of the period covered by the chart. The Southern farmers do not appear to have used fertilisers during the war period on the same scale as formerly. The recent recovery in the yield has been due in part to a fresh utilisation of such aids to production, and in part to climatic conditions unfavourable to the boll-weevil and other pests, whose depredations were becom-

ing increasingly formidable. The yield per acre remains, nevertheless, appreciably below the pre-war level.

Present indications do not suggest that prices are likely to continue indefinitely at their present level. The rains which have occurred in the cotton belt this week may have adversely affected the grade of the crop outstanding, while the possibility has to be considered that farmers may not go to the trouble of picking low-grade cotton at present prices. As much as 11,259,000 bales had, however, been ginned by the end of October last. With a carry-over of 5 million bales, supplies for the 1926-27 season may reach about 23 millions. Consumption last year accounted for about 15 million bales, and will need to increase by another 3 millions if a larger carry-over at the end of this season is to be avoided. Nevertheless, if increased consumption, stimulated by low prices, should bring about a trade revival next year, a certain hardening of quotations may be expected. In addition, experience shows that a fall in prices below costs of production has in the past been followed by a curtailment of the acreage under cultivation, arising spontaneously, without pressure from outside agencies. Finally, it is to be remembered that for three years in succession unusually favourable weather conditions have obtained in the cotton-growing areas during the critical months, and there is a strong mathematical presumption against a repetition of this phenomenon in yet another year. While, therefore, there would seem to be very slight possibility of prices returning in the near future to the levels of two and three years ago, a rise of moderate dimensions should certainly not be ruled out.

THE BULGARIAN REFUGEE LOAN.

THE scheme for the settlement of Bulgarian refugees, which was approved by the Council of the League of Nations in September last, is the fourth of the reconstruction schemes with which the League has been associated. The problem, which, after long negotiations, is now being dealt with, has been caused by the gradual return since the year 1912, before the Balkan wars, of some 220,000 refugees. The Government has been able to settle some of them, others have settled themselves—in all, about 30,000; but a large number, homeless and starving, with whom the Government cannot deal, constitute a social and political danger. During the summer of this year there has been worked out by the Financial Committee of the League of Nations a scheme for settling them and for obtaining the money required for this purpose, and a document* similar to those which were prepared in connection with the financial reconstruction of Austria and Hungary and the settlement of refugees in Greece has been issued by the Secretariat of the League, containing all the reports of the Financial Committee on the subject, the results of a special inquiry made in Bulgaria on behalf of the League by Mons. René Charron, the decisions of the Council, and the Protocol signed by the Bulgarian Government. This document is prefaced by an introduction by Sir Arthur Salter, the Director of the Economic and Financial Section, in which he summarises the origins of the problems, the nature of the scheme, and the results which it is hoped to obtain.

The full plan of expenditure presented by the Bulgarian Government showed a total of £2,650,000, including £1,625,000 for country settlements and £450,000 for communications. The total was ultimately reduced to £2,250,000 by the Financial Committee, mainly by the omission of the less urgent railway construction and the elimination of an estimate of £150,000 for town settlements. It is proposed to raise an international loan giving a net yield of £2,250,000, including the sum required to repay an advance of £400,000 made by the Bank of England to the Bank of Bulgaria in August, and now in course of expenditure. The total will be increased if it is found desirable to convert a certain pre-war debt of Treasury bonds, of which some 81 million French francs are still outstanding, into bonds under the new loan, so that the amount available for refugee work will be unaffected. The loan will be secured by a first charge

* (London) Constable and Co. 1s 3d.

on (a) the Excise duty on salt; (b) the Excise duty on alcohol; (c) the net receipts of the match monopoly; (d) all sums received after September 1, 1928, in respect of rent or interest due from refugees; (e) other additional revenues to be specially assigned if the above revenues should at any time fall below 150 per cent. of the annual sum required to meet the service of the loan. The competent reparation authority (the Inter-Allied Commission at Sofia) has released the above revenues (a) to (d), and has undertaken to release the further revenues mentioned in (e) if required, and the Bulgarian Government has undertaken to give the necessary first charge. The Government has also undertaken that the assigned revenue shall not be used as a security for any new loan without the consent of the trustees. The latter will be appointed by the Council of the League to represent the interest of the bondholders and the settlement loan. In the last completed year the first three assigned revenues produced a yield of 280,144 and 109 million leva respectively—i.e., a total of 19.7 million gold francs (or rather more than one-third of the total yield of the proposed loan).

Apart from the specific securities of the loan, two precautions have been taken to safeguard the stability of the Bulgarian currency against a depreciation which might diminish the gold value of the assigned revenues. Firstly, new draft statutes for the National Bank, in harmony with the accepted principles of central banking, have been agreed to by the Government. Secondly, after prolonged negotiation, an arrangement has been made with the Reparation Commission, which has taken a decision under which payments of Reparations over the exchange will, if the need arises, be controlled by a Transfer Committee. This committee will be responsible for purchasing foreign exchange for Reparation payments "to the extent to which it considers that the stability of the Bulgarian currency allows."

The control of the execution of the scheme will be in the hands of a Commissioner appointed by, and responsible to, the Council of the League. Mons. René Charron has been appointed to this office till November, 1928.

We have received the following details of Bulgaria's external debt from M. Stoyanoff, Director of the Public Debt Department at Sofia. The position as at September 30th last is set out below:—

A.—CONSOLIDATED DEBTS.

	Original Amount.	Balance.
	Gold Frs.	Gold Frs.
1. 6% Public Loan of 1892.....	124,962,500	7,564,500
2. 5% " " 1902.....	106,000,000	86,750,000
3. 5% " " 1904.....	99,980,000	85,025,000
4. 4½% " " 1907.....	145,000,000	132,282,000
5. 4½% " " 1909.....	100,000,000	87,930,000
Total	575,942,500	399,551,500
	French Frs.	French Frs.
6. 4½% Public Loan of 1909	82,000,000	78,642,332
7. Debt for the Occupation of Eastern Roumelia	10,618,250	3,368,250
8. Reparation Debt according to Art. 121 of the Treaty of Neuilly.....	550,000,000	641,998,678
9. Occupation expenses according to Art. 133 of the Treaty of Neuilly ..	25,000,000	20,445,888
Total of 8 and 9	575,000,000	662,444,566
	French Frs.	French Frs.
10. 6½% Public Loan of 1923 for meeting payments under arbitral awards ..	26,969,500	26,969,500

B. NON-CONSOLIDATED DEBTS.

1. Advance made by Banque de Paris et des Pays-Bas against Treasury Bonds—capital of 74,500,000 Fr. frs., plus unpaid interest up to 1922....	116,220,000	79,540,000
2. Debt to the Company Jonction Salonique-Constantinople, including interest up to Dec. 31, 1923, in Treasury Bonds.....	27,500,000	25,500,000
3. Debt to the Kingdom of S.C.S., payable in Treasury Bonds and coal supplies	14,700,000	4,011,123
4. Debt to the Oriental Tobacco Trading Company and Commercial Company of Salonica, Limited, including interest, according to the agreement of July 16, 1926	£ 111,320 0 0	£ 70,301 0 0

The first public loan was issued in London in 1888, producing 46,777,500fr., at the rate of 6 per cent. and redeemable within 33 years. The proceeds were exclusively applied to the purchase of the railway Roustchouk-Varna, of a length of 223 km., which was the only railway exist-

ing in the country, and belonged to a private company. The loan was wholly redeemed out of the proceeds of the 4½ per cent. conversion loan in 1907.

The following is a record of the subsequent Bulgarian public loans issued abroad up to 1914:—

1. The 6 per cent. mortgage loan of 1889, subscribed by the Banque Impériale Privée des Pays Autrichiens and the Wiener Bank-Verein, of a nominal amount of 30 million francs, redeemable within 33 years. This loan was secured by a first mortgage on the new railways Tsaribrod-Sofia-Vacarel and Yambol-Bourgas, of a total length of 206 km, and was reimbursed in 1907 by means of the above-mentioned conversion loan.

2. The 6 per cent. mortgage loan of 1892, granted by the Banque Impériale Privée des Pays Autrichiens, of Vienna, of a nominal amount of 142,780,000fr., redeemable within 33 years. The proceeds of the loan were applied to the construction of the railways Kiustendil-Sofia and Pleven-Kaspitchan, of a total length of 523 km, as well as of the seaports of Varna and Bourgas. The loan was secured by a first mortgage on the railways referred to, including the railway Roustchouk-Varna, and by a first charge on the revenue from the seaports.

3. The 5 per cent. loan of 1902, the 5 per cent. loan of 1904 and the 4½ per cent. loan of 1907, of a total nominal amount of 351 million francs, the first two redeemable within 50 years and the third within 60 years. The proceeds were applied to the liquidation or consolidation of part of the floating debt, to the construction of new railways, and partially to the conversion of the loans of 1888 and 1889. The repayment of the loans was secured by a first charge on the revenue from the tobacco tax and the stamp tax.

4. The 4½ per cent. loan of 1909, contracted with the Wiener Bank-Verein, of a nominal amount of 100 million francs, redeemable within 50 years. This loan was granted without any special guaranty, as a result of the confidence which Bulgaria had won in the financial world on account of her loyal and punctual meeting all her obligations abroad.

5. The 4½ per cent. loan of 1909, granted by the Russian Government, of an original amount of 82 million francs, redeemable within 75 years. The proceeds were applied partly to pay the debt which Bulgaria owed to Turkey as her vassal, and partly to purchase the railway in South Bulgaria, of a total length of 302 km, which belonged to a private company. Connected with this loan is the debt of Bulgaria to Russia amounting originally to 10,618,250 paper roubles, which represents the expenses paid by Russia for the occupation of Eastern Roumelia.

6. In 1912, the Banque de Paris et des Pays-Bas advanced to the Bulgarian Government a sum of 75 million francs against Treasury bonds. The advance, together with the accumulated interest, totalled 116,220,000fr. in 1922, when an agreement was arrived at under which the whole of the debt will be repaid within eleven years. The liquidation is now proceeding according to the agreed scheme.

7. The Bulgarian pre-war foreign debts close with the advances made by Disconto-Gesellschaft, Berlin, against the loan which was floated in Germany in 1914 but did not materialise. The question of the reimbursement of these advances is now pending.

The administration of Bulgaria's foreign loans was carried on until 1914 regularly and in accordance with the contracts. During the war the reimbursement of the coupons and amortised bonds held by nationals of enemy countries was naturally suspended, but it was regularly carried on in respect of all other holders. In 1919 Bulgaria resumed the payment of the annuities, and the year after provisional agreements were made with the various committees of Bulgarian bondholders for the repayment of the coupons and amortised bonds.

In connection with the foreign loans of Bulgaria, mention may be made of her Reparation obligations. According to Article 121 of the Treaty of Neuilly, the Reparation debt of Bulgaria amounts to 2,250,000,000 gold francs, payable within 37 years, at 5 per cent. interest. The Inter-Allied Commission in Sofia, however, realised the utter impossibility of Bulgaria to pay such a debt with annuities of nearly 140 million gold francs, and in 1923 the Reparation debt was divided into two parts—part A, of 550,000,000 gold francs, at 5 per cent., payable within 60 years, and part B, of 1,700,000,000 gold francs, which will bear no interest until 1953. From the part B are to be deducted Bulgaria's claims under the Treaty of Neuilly, in accordance with Article 122. The payment of the part A will be made according to a sinking scheme. The annuities begin at 5,000,000 gold francs in 1923, and increase to 10,000,000 gold francs during the period of 1927-1932, to 20,000,000 gold francs in 1932-33, to 32,895,336 gold francs in 1933-34, and to 43,395,336 gold francs during 1934/35-1938. As the first annuities do

not cover wholly the interest due, the capital of the Reparation debt will begin to decrease only from 1934.

Besides the Reparation Debt, Bulgaria has to pay for "occupational expenses," within 10 years and at 5 per cent. interest, a sum of 25,000,000 gold francs.

Bulgaria has also to discharge many other financial obligations under special agreements and arbitral awards provided by the Treaty of Neuilly.

LABOUR'S PROGRESS IN MUNICIPAL ELECTIONS.

It is an unfortunate thing that there is no complete annual record of the results of municipal elections, and that information on the subject can only be gleaned from the incomplete material served up by the daily Press under headlines which frequently bear no relation to the facts. It is, however, clear that in recent years great changes have taken place in the representation of political parties on local authorities, and particularly on municipal councils.

After the municipal elections of 1914 the election of Lord Mayors and Mayors in England and Wales resulted in London in the appointment of 21 Municipal Reformers, 3 Progressives, and 4 Independents. Of the 323 Lord Mayors and Mayors in boroughs 168 were Unionists, 122 Liberals, 12 Liberal-Unionists, 1 Liberal-Labour, 5 Labour, whilst in 9 cases the politics were not stated. This broadly, no doubt, represented the strength of the various political parties, except that probably Labour representation was larger than would appear from these figures. During the remainder of the war period, by general consent, local elections were suspended, and the first opportunity of testing the electorate occurred in 1919. When the war ended the composition of the councils was much what it had been in 1914, as the suspension of elections had removed the one means of registering changes of political opinion among the ratepayers.

In 1919 understandings between the Conservative and Liberal parties were common. Though not unknown in some towns where the Labour party was strong, this had not been general before the war. In 1919 in London Lord Downham explained that the Municipal Reformers and Progressives "had agreed to join hands in opposing the motley crew of extreme Socialist Pacifists and those others who had hampered the Government during the last few years." The result of the municipal elections in the London boroughs in 1919 was that the Labour party took over the control of half the metropolitan boroughs, and in the country as a whole Labour representation on municipal authorities substantially increased.

In the provincial elections of 1920 the number of Labour candidates was increased. The results of these elections, according to the *Manchester Guardian*, showed "a Conservative tendency. Labour, far from repeating the striking successes which marked last year's contest, has received a setback in some of the party's strongholds, and the preponderance of Labour candidates has this year only served to emphasise the small general success the campaign has secured." The results, however, showed that in the aggregate the Labour party gained in strength on municipal authorities.

In 1921 Labour candidates again challenged an increasing number of seats on municipal councils, and though a considerable proportion met with defeat, the results in the aggregate in England and Wales registered a net gain for the Labour party of between 70 and 80 seats. For the first time in the history of municipal elections, Labour candidates outnumbered Conservative candidates. Of 622 Labour candidates who went to the poll 204 were successful. The Conservatives nominated 550 candidates, and, including those unopposed, just over 400 were returned.

In 1922, the relative position of the parties was not substantially altered. After the war the Coalition continued in local politics, and the practice of allowing Liberals or Conservatives a straight fight with Labour candidates became general, so that in 1922, whilst there were Labour gains in many parts of the country, there were gains of Coalition—or, as they were called in many

places, "Independent" candidates. On the whole, however, there was a net Labour gain of seats.

In the following year the Conservatives lost more municipal seats than they gained, the Liberals suffered a setback, and the Labour party obtained a net advantage. In 80 of the principal towns and cities in England and Wales the results were as follows (In reading this and subsequent tables it must be remembered that one-third of the councils retire each year, and that, therefore, the annual figures refer to different sets of councillors):—

	Seats Held or Gained.
Conservative	401
Labour	251
Liberal	201
Independent	185

The table below shows the number of candidates who stood in these districts, and the results of the elections:—

	Cons.	Lab.	Lib.	Ind.
Number of candidates	555	623	317	327
Unopposed	143	51	73	77
Elected	258	200	128	108

These statistics are fairly typical of the country as a whole. Roughly speaking, there were two anti-Labour candidates to every Labour candidate, not because there were three-cornered fights, but because in many wards Labour had not yet challenged the older parties.

The municipal elections of 1924 followed immediately on the General Election, and a fear was expressed that the latter would destroy interest in the former, but according to the *Times*, "in many parts of the country very large polls were recorded." In the chief centres there was, to quote the same newspaper, "a large turnover of seats, with the balance rather in favour of the Socialist candidates," though many prominent papers declared the results to be "a rebuff for the Socialists." In 80 of the principal boroughs the position was as follows:—

	Cons.	Lab.	Lib.	Ind.
Number of candidates	524	645	285	222
Unopposed	127	54	69	50
Elected	290	154	125	78

In 1925 the metropolitan triennial elections took place. The results of the election of 1919 had been largely neutralised by the elections three years later, though there still remained six boroughs with Labour majorities. In 1925 the election left eight boroughs with Labour majorities, and one—Greenwich—with Labour councillors forming exactly half the council. Whereas 259 Labour councillors were elected in 1922, 364 were elected (out of a total of 1,366) in 1925. The Labour gains in London swelled the total Labour victories in last year's municipal elections. In 80 of the chief towns and cities Labour was the only party which showed a net gain:—

	Gains.	Losses.
Conservatives	23	40
Liberals	11	33
Independents	21	25
Labour	73	26

The general results in these municipalities were as follows:—

	Cons.	Lab.	Lib.	Ind.
Number of candidates	549	722	278	307
Unopposed	120	68	56	64
Elected	263	245	113	114

Each year since the war the number of Labour candidates at municipal elections has steadily increased, and during the recent elections the number of Labour candidates in the field was greater than ever before, whilst the number elected was greater than on any previous occasion. An analysis of the figures in 80 of the principal towns and cities gives the following results:—

	Cons.	Lab.	Lib.	Ind.
Number of candidates	569	807	291	194
Unopposed	99	51	48	43
Elected	239	350	115	52

As in the case of last year's elections, the only party to show a net improvement in its position was the Labour party. So far as can be ascertained, the position regarding gains and losses is as follows:—

	Gains.	Losses.	Change.
Conservatives.....	22	98	— 76
Liberals	8	61	— 53
Independents.....	18	35	— 17
Labour	160	14	+ 146

These figures were published by the *Times*. The *Daily Herald*, however, gives the total Labour gains as 153 seats.

Lord Jessel, the president of the London Municipal Society and the National Union of Ratepayers' Association, describes the elections as being a fight "between an unorganised mob of Constitutionalists and the disciplined forces of the Labour-Socialists." This, though it may be a compliment to the latter, is an unmerited criticism of the highly efficient election machinery of the orthodox parties. Several important newspapers have attempted to saddle the responsibility for the large number of Labour gains on an apathetic electorate, though such "apathy" as exists is no new feature. Indeed, the percentage of electors who go to the polling-booths increases, and in many towns where the Labour party has done best the poll was a high one. These two explanations provide no answer, though it is doubtless true that Labour supporters poll more strongly than their opponents, and that the non-voters are for the most part Conservative in the sense that they are passive supporters of the *status quo*.

There is little doubt that in some degree the municipal elections have reflected the attitude of the public towards the Government's handling of the coal crisis and its general policy. But this does not explain the unchecked, though variable, advance of Labour representation on the municipal councils each year since the end of the war. It is in part due to the persistent propaganda carried on throughout the length and breadth of the country by the Labour party—a campaign which continues throughout the year, and is merely intensified and more highly organised during elections. The Labour party is now obtaining the place in local politics that it occupies in national politics. There has been a time lag between the advance of Parliamentary Labour and the progress of municipal Labour. For a quarter of a century there has been active propaganda in the arena of national politics. And though Labour representation on local authorities is as old as Parliamentary representation, the same weight has not been thrown into local as into Parliamentary elections until recent years.

What the exact position is in the municipalities cannot be stated. The aldermanic elections are due in many towns, and these may result in further changes. But it is clear that in the provinces Labour representation is stronger than ever before, and that Labour is in control in more municipalities than ever before. On the urban district councils the Labour party is, perhaps, not quite so strong as on the municipal councils. On rural district councils, where old traditions are powerful and rural interests influential, Labour is much weaker. On the county councils, apart from industrialised areas such as Durham, Labour is even weaker still, partly because of the anti-Labour interests in the country districts, and partly because of the difficulty of obtaining candidates who are able to devote the time to county council work, and who are able to afford the inevitable expenditure involved. Taking all our local authorities as a whole,

therefore, Labour is far from controlling local government, though it is yearly gaining strength in the urban areas.

CONTROLLING THE OUTPUT OF GOLD.

II.—CONDITIONS FOR CONSTANT VALUE OF GOLD.

In this series of articles Professor Leffeldt, of Johannesburg, raises the problem of ensuring that gold, which is once more resuming its former standing as the world's standard of value, can itself be stabilised in value. The reader will remember that Prof. Leffeldt, unlike Prof. Cassel and other authorities, takes the view that gold is more likely to become too abundant than too scarce. At the conclusion of this series of articles we propose to put the case for the opposite view of the future value of gold.

The value of gold, i.e., its purchasing power, depends on supply and demand like the value of other things; but there are certain special features which make the economic circumstances of gold differ from the usual case of commodities that are used up almost as soon as they are produced, or even of such durable commodities as houses, which form a closer analogue. The demand for gold is twofold: partly for use in manufacture, when it is practically withdrawn from stock once for all, just as iron or tin is; partly for monetary use, in which it is so durable that one may say it is permanently retained in stock, the current demand being only because the stock needs enlarging. Of the annual output from the mines, part goes in manufacture, and the rest is added to stock, the addition rarely amounting to 3 per cent. in a year. The "supply" of gold that balances the monetary demand is, therefore, not the annual output, but the whole stock existing in a form available for coinage. At the present time that stock somewhat exceeds £2,000 millions, and the annual addition to it—the output of the mines less what is used in industry—is now £30 millions to £40 millions.

The "demand" for monetary use grows on account of the growth in production and trade, but not quite in proportion to that growth, as it would do if gold were the only kind of money. If paper substitutes bore a fixed ratio to gold it would also be the case that the demand for gold grew strictly in proportion to the growth of trade, but that is not the case. The superstructure of paper money and cheques built upon the gold basis tends to become greater; almost every monetary reform is in the direction of economising gold. Thus if a country that has been in the habit of using bank notes for most of its business comes to adopt the cheque system, it will be found that a smaller gold reserve will suffice to conduct the same amount of business.

All through the last century there have been slow changes of this character, so that although the demand for money has increased all the time, that demand has been met to a small extent by improved economy in the currency and banking methods employed. Usually this economy has only played a minor part. Thus it has been estimated that during the half-century or century preceding the war, trade (in the world) increased at a rate of about 3 per cent. per annum on the average. This was met to a small extent by the use of more economical methods, nevertheless it required an increase in the gold stock at a rate not much less—perhaps 2½ per cent. per annum. The novelty of the situation during the war lay in the fact that the economising of gold was suddenly pushed in a way that had never happened before. We had an example of it in England, when the Government persuaded people to adopt notes in place of sovereigns. The same tendency is seen in the resolutions of the Genoa Conference, which aim at greater co-operation between the central banks with a view to working with smaller gold reserves.

Now economy in use is just as appropriate in the case of gold as in that of other materials required to satisfy human

needs, but the suddenness with which it was brought about during the war period was disconcerting. An improved method of using cement, say, would benefit many people, and only upset the limited number who are employed in its production; an improved method of using gold for currency saves the world something in cost, eventually, but it not only upsets the gold mining industry, it upsets the standard of value, and so affects the whole tissue of debts and credits.

In order to maintain constancy in value of gold, it should be supplied in just such quantity as will provide for industrial use, for wear and tear, and for increase in the stock of money, after allowances have been made for the progressive economy in use. For instance, if in a given year the world needs 3 per cent. more money, but 1 per cent. of this is provided by increasing the proportion that notes and cheques bear to gold reserves, then 2 per cent. has to be provided out of the product of the mines. If less than 2 per cent. is provided, the value of gold will rise, if more than 2 per cent. the value will fall. During the 'eighties of the last century the value of gold rose, owing to insufficient production, while in the early years of this century it fell owing to the excessive fruitfulness of the mines.

But if in consequence of some revolutionary situation, such as that which faced the world in 1914, an economy of 10 per cent. were effected in a single year, then it would not be possible to keep up the value of gold, even by stopping the output altogether. It is perhaps straining language to describe what happened during the war as "economising gold," it was rather a deliberate increase of money. As to scale, however, it was quite up to the illustration we have just suggested, and accordingly there was no stopping the fall in value of gold, which, as is well known, dropped to about 40 per cent. of its pre-war level. Then occurred the recovery in 1920-21. At the present time, with the attempts of various nations to restore the gold standard, there is an actual tendency to recession in the ratio of paper money to gold, which is contrary to the usual course of history.

The arguments we have been considering show, then, that, ordinarily, control of the output of gold would permit of keeping its value constant, on the whole. It would not have sufficed to cope with the extraordinary changes of the war, but there is not much likelihood of a similar monetary emergency recurring. On the other hand, it is not a method suitable for dealing with the ups and downs of the trade cycle.

It has been claimed for Irving Fisher's method that it would prevent both the rapid and the slow changes in the purchasing power of gold; this contention is open to some doubt, and anyway we are assuming that the method does not come within practical politics in this generation. Mr Keynes, in advocating a managed paper currency for Britain, independent of the currencies of the rest of the world, though he still supposed gold to play some part in foreign exchange, was not embarrassed by the slower changes in gold value, and considered that the more rapid could be avoided by suitable action on the part of the Bank and the Treasury. If, however, we are restricted to less revolutionary methods, it seems clear that neither gold control nor credit control alone would suffice. The former is slow acting; it can only regulate the stock of gold in existence, in the course of years, while changes in demand arise which may affect the value of that stock in a few months, i.e., which may cause a sensible rise or fall in prices, though the trade influences which bring this about are not cumulative. On the other hand, credit control, while suitable for dealing with the immediate trade situation, could not, so long as money is on a gold basis, affect discoveries which rendered gold much cheaper to produce, nor such absence of new discovery as would in time render it scarce and valuable.

The right method seems to be a combination of the two. The central banks must continue to study their problem of regulating the rate of discount, buying and selling securities and otherwise adapting the supply of credit to the needs of the moment. But in addition, a new organ of control should be created, whose function would be to maintain the gold stock at the level necessary to enable the central banks to carry out their aim of stabilisation, over a long period of time.

Notes of the Week.

Overseas Trade in October.—The October Trade Returns, issued on Thursday, reveal a continuance of the same tendency as was shown by those of the two preceding months. The net result is an import excess of £47½ millions, or £19 millions more than in October, 1925. Imports are slightly higher than a year ago, and total exports down by 21 per cent. A summary comparison of the value figures for October and the ten months of 1925 and 1926 follows:—

MONTH OF OCTOBER.

	1925.	1926.	Increase (+) or Decrease (—) in October, 1926.	
	£	£	£	%
Imports	108,835,624	111,013,703	+ 2,178,079	+ 2.0
British exports	67,081,986	53,176,663	— 13,905,323	— 20.7
Re-exports	13,377,420	10,361,102	— 3,016,318	— 22.6
Total exports	80,459,406	63,537,765	— 16,921,641	— 21.0
Excess of imports over total exports	28,376,218	47,475,938	+ 19,099,720	+ 67.0

TEN MONTHS ENDED OCTOBER 31st.

	1925.	1926.	Increase or Decrease in 1926.	
	£	£	£	%
Imports	1,074,249,049	1,016,350,156	— 57,898,893	— 5.4
British exports	646,340,392	549,121,463	— 97,218,929	— 15.0
Re-exports	126,228,215	103,063,219	— 23,165,016	— 18.4
Total exports	772,568,627	652,184,682	— 120,383,945	— 15.5
Excess of imports over total exports	301,680,422	364,165,474	+ 62,485,052	+ 20.7

Had it not been for the necessity to buy fuel abroad, imports would have been substantially lower in October than a year ago, for we imported nearly £7½ millions' worth of coal last month. In the last four months coal imports totalled £27 millions. Again, imports of iron and steel in October were £1 million above the 1925 figures. Under the head of raw cotton, however, there is a drop of nearly £4½ millions in October, due mainly to lower prices. The last three months have added over £60 millions more to our import excess than the corresponding months of 1925, and we must now expect the visible balance of commerce for the full year 1926 to be not far off £100 millions greater than last year. Certain visible items have probably increased, but, if a margin available for overseas lending exists, it must be exiguous, and it is satisfactory news that, after the Bulgarian loans, big foreign issues are likely to be conspicuous by their absence for the rest of the year. In the following table we show how certain leading British exports have fared as regards quantities in comparison with last year, the figures being divided into two periods—namely, the four pre-strike months and the six months that have since elapsed:—

BRITISH EXPORTS.

	January to April.		May to October.	
	1925.	1926.	1925.	1926.
Coal	17,462,134	17,481,236	24,385,165	1,501,455
Cotton piece goods	1,575,121,000	1,407,533,100	2,150,527,500	1,908,493,300
Cotton yarn	66,339,500	62,884,000	91,337,100	75,503,500
Woolen tissues	47,466,100	40,861,900	65,994,900	60,088,500
Worsted tissues	18,822,800	15,940,200	20,629,300	20,816,200
Machinery	167,257	167,840	258,556	230,554
Motor cars	6,387	6,030	8,992	6,537
Iron and steel (total)	1,235,673	1,395,730	1,834,112	1,266,912
Pig-iron	162,436	176,680	208,330	93,087
Ferro alloys	46,905	15,993	34,411	113,653
Railway material	127,818	164,520	219,715	127,681

This table gives us some measure of the export losses due to the coal dispute. But there are points about it—such as the worsted tissue figures—which show that some branches have managed to surmount all difficulties and maintain a reasonable level of activity. From detailed figures printed on a later page, it will be seen that, whereas the total decline in British exports in the ten months has been £97 millions, about £70 millions is accounted for under the three heads of coal, iron and steel, and cotton yarns and manufactures. The October returns include statistics showing the origin and desti-

nation of imports and exports in the first nine months of the year, and these are discussed in a leading article in this issue.

The Progress of Fascism.—Europe is again disappointed in her hope that Italy may settle down under the Fascist régime and may return, without a counter-revolution, to the normal conditions of European life. The latest attempt to assassinate Signor Mussolini has produced a fresh, and most alarming, explosion of violence, directed not only against the non-Fascist elements in Italy, but against neighbouring countries which have given Italy no provocation. It is disquieting that Signor Federsoni, who stands for moderation, is leaving the Ministry of the Interior; and the new Defence of the State Act, with its elastic definition of offences, its summary procedure by court-martial, and its savage penalties, to which foreigners living in, or passing through, Italy are subject as well as Italian nationals, can hardly fail to produce serious incidents. The persecution of non-Fascists is becoming more systematic and more severe. As illustrations we may cite the reports, published this week in the *Manchester Guardian*, of the eviction of agricultural workers from their homes by carabinieri for the crime of refusing to join the new Fascist trades unions; and the expulsion of doctors, lawyers, and newspaper editors from their native provinces, not for any specific offence, but in vicarious atonement for the recent attempt on the Duce's life by an individual with whom they had no connection whatever. More serious, from the international point of view, are the recent outrages against France—the violation of a French Consulate and the mobbing of inoffensive French railwaymen who were going about their lawful business in an international railway station established by treaty. French public opinion is disgusted and dismayed; and there are rumours that the French Government has lately been strengthening its military position in the Alps—a frontier on which there has been no tension for at least a century. Fascism has once more set its feet on the path of destruction. Unless it draws back it will bring trouble on Europe and ruin on Italy before it destroys itself.

Labour and the National Debt.—A Labour correspondent writes:—It is understood that the Colwyn Committee on the National Debt and the incidence of taxation, appointed by Mr Snowden in 1924, completed its report recently, that it is now in the hands of the Chancellor of the Exchequer, and that it consists of majority and minority statements. The minority includes the Labour members of the Committee. Current belief is that the majority do not take the view that the proportion of direct to indirect taxation is too great in existing conditions; as regards their general programme, it is definitely stated that it recommends nothing novel or unduly drastic. For the Labour movement (the Committee was appointed by a Labour Chancellor of the Exchequer) the minority statement will be important. British Labour fought at least two General Elections in favour of the Capital Levy as a means of more speedily reducing the aggregate burden of national debt. But the proposal never secured the assent of the electorate. With the passage of the years away from the actual period of war-time borrowing, and with the exhaustion of four or five years of industrial depression, culminating in the coal stoppage at literally enormous cost, the large majority of the Labour members of Parliament have privately reached the conclusion that it will be hopeless further to recommend the inclusion of the levy in the party programme. What the minority of the Colwyn Committee have written on the subject is not yet known, but it is believed that they have paid tribute to the levy as the appropriate instrument at the time of its promotion, and have then proceeded to discuss alternatives in the light of changed industrial conditions. If that forecast is correct, they may expect the attack of a minority of the movement and the benediction of a large majority. The latter feel all the more secure in that they do not intend to adopt a purely negative attitude. Most of them still urge that debt must be more drastically reduced. Accordingly they are in favour of recasting the system of death duties (many of them are now definite supporters of the Rignano principle) in such a way as to make it

much more productive. Others would make the sinking fund provision cumulative. With these two devices they would provide a much larger sum annually for debt reduction, since it is suggested that there should be specific allocation of a part of the yield of death duties for such a purpose. In addition to these proposals, it is suggested that a special non-recurring tax should be imposed on large incomes for a limited number of years, the proceeds to be devoted to debt reduction; but this proposal does not affect those dealing with the reconstruction of the system of death duties. At the same time, pleas are advanced for a modification of the exclusive use of the added yield for debt extinction. Many of the Labour members consider that a portion of the extra amount available should be used for immediate and urgent schemes of social reform and a portion for schemes of economic development, such as would provide definite employment rather than either poor law relief or unemployment insurance donation. Were such a programme recommended, it is believed that much of the objection to the disappearance of the Levy would be met. In other words, the proposals would be amended in such a way as to bring them into line with existing economic conditions which no financial principle or proposal can ignore.

British Port Costs.—Severe criticism has once more been levelled at conditions in our ports, the critics this time being the Traders' Co-ordinating Committee on Dock Charges, whose Report on Costs—especially of loading and discharging—was issued last week. The Report is a document at once disquieting and inconclusive. The Committee point to the significant facts that not only do outward freights from this country tend to exceed rates from competitive loading centres on the Continent, but, whereas before the war there was normally a differential of 6d a ton specified in charter parties in favour of British discharging ports, present charters provide for substantially higher freights in cases where a British destination is selected as against discharge in a Continental port. According to the Committee, this situation—involving for this country proportionately dearer imports, handicapped exports, and restricted employment—"arises directly from the heavier cost in money and time at British ports." This is a grave statement, coming from an unusually representative body of port users, and the Committee's conclusion, that there is "a *prima facie* case for a complete investigation into the causes," will be widely endorsed. At the same time, we would suggest, somewhat fuller evidence than that on which the Committee's findings appear to be based is required before conclusions of permanent validity can be reached. The Report instances a number of striking discrepancies between current British and Continental port expenses, but the argument is weakened by the fact that three out of the four foreign ports selected for comparison are situated in countries with rapidly depreciated currencies. The only foreign port with stable currency for which comparative costs are given is Rotterdam. The following table, based on the Committee's figures for four representative cargoes, indicates the contrast between pre-war and current British and Dutch "port disbursements" in connection with identical vessels and cargoes:—

Cargo.	Average of London, Leith, and Belfast.			Rotterdam.		
	Average of London, Leith, and Belfast.			Rotterdam.		
	1913.	1926.	Percent'ge Increase.	1913.	1926.	Percent'ge Increase.
1. Grain	£ 302	£ 551	82	£ 202	£ 317	57
2. Sugar	372	687	85	186	379	104
3. Ore	379	702	85	220	370	68
4. Timber	397	739	86	200	382	91

The average increase in British costs over pre-war level works out at roughly 85 per cent., against 80 per cent. in Rotterdam. This difference is not substantial. What is most striking in these figures (inconclusive as is comparison with a single foreign port) is that Dutch pre-war costs appear to have been enormously cheaper than ours, and that this relative advantage against us still obtains—

average British costs being now 85 per cent. in excess of those of Rotterdam. Explanation of the cause of this great, and continuing, disparity is clearly wanted, together with parallel data for German, Scandinavian, and American ports. (French ports before the war appear to have been more costly than ours.) More evidence is also needed whether "time" or "costs per unit of work" is the dominant factor in high British port "disbursements." There is, however, room to doubt whether labour resources in many ports are employed as effectively as possible, and references made by the Traders' Committee to uneconomic "use of vessels as warehouses," and to "failure to employ facilities to the full limit of capacity because work is slowed down to suit conditions of charter-party," strengthen the impression that the time is ripe for a comprehensive survey of the whole of our port facilities, equipment, and (above all) methods of organisation, in the light of the best foreign practice. The interests of the community are so deeply involved that the Government might well consider the appointment of a Royal Commission.

Port of London Authority.—The financial results of the operations of the Port of London Authority for the year ended March 31st last show a deficit of £6,528, which compares with a surplus of £208,049 in the preceding year. Revenue declined by £126,700, while expenditure increased by £58,500. Fixed charges were also higher by £29,300, owing to the issue in December, 1924, of £3 millions in 4½ per cent. inscribed stock, interest on which absorbed £142,500 last year, against £27,700 in 1924-25. Sinking fund provisions were also slightly higher, but savings were made in interest on temporary loans and in discounts. The following table compares results in the past five years and in 1914:—

	1914.	1922.	1923.	1924.	1925.	1926.
Total revenue	£ 3,434,453	£ 7,929,874	£ 6,319,295	£ 5,542,971	£ 6,429,862	£ 6,303,125
Total expenditure	2,217,822	5,801,217	4,582,425	4,516,076	4,936,340	4,994,889
Balance of rev.....	1,216,631	2,128,657	1,736,870	1,026,895	1,493,522	1,308,236
Fixed charges	932,786	1,575,929	1,400,990	1,284,328	1,285,473	1,314,764
Surplus revenue	283,845	552,728	335,880	742,567	1,208,049	993,472
Brought forward	89,637	896,044	1,448,772	1,573,252	1,315,819	523,868
Written off, &c.	373,482	1,448,772	1,684,652	1,315,819	1,523,868	517,340
Carried forward	281,578	111,400	1,111,400	1,111,400	1,000,000	1,000,000
	91,904	1,448,772	1,573,252	1,315,819	523,868	517,340

The past year's figures, of course, were not affected by the general strike or the coal stoppage, which began at the end of April. Capital expenditure during the year amounted to £107,100, as against £247,200 in the preceding year. The balance of borrowing powers by means of the issue of Port stock remaining unexercised at the end of the financial year was £6,065,800, the amount of Port stock issued and outstanding being £31,590,500, as against an authorised issue of £37,656,200. Total sinking funds at March 31st last amounted to £1,497,700, against £1,288,600 a year previously, these figures including provisional sinking funds for the redemption of certain expenditure in respect of which borrowing powers have not yet been exercised. The reserve fund remains at the statutory maximum of £1,000,000, which it reached in 1921-22, since when the interest on the trustee securities in which it is invested has been credited to net revenue account. Last year the amount of interest was £45,300. The total net register of vessels that arrived and departed with cargoes and in ballast in the calendar year 1925 was 47,064,975 tons, which compares with 45,392,649 tons in 1924 and 40,080,282 tons in 1913. The net register and deck cargo tonnage of shipping that entered and left the Port of London and paid river tonnage dues during the 12 months to March 31st last was 35,852,020 tons, an increase of 1,395,657 tons, or 4.1 per cent., of which 867,879 tons was in the foreign and 527,778 tons in the coastwise trades. From the table below, which gives the values of total imports and exports (including coastwise goods) of the six principal ports of the United

Kingdom, it will be seen that London has still further increased its lead:—

	1923.	1924.	1925.	Inc. in 1924.
London (including Queenborough)....	£ 579,095,902	£ 677,342,399	£ 745,425,872	+ 10.1
Liverpool	532,990,145	582,463,696	579,680,083	— 0.5
Hull	102,034,446	121,186,307	115,083,167	— 5.0
Manchester (including Runcorn)	94,095,116	114,556,561	115,647,548	+ 0.9
Southampton	72,619,877	81,226,133	93,095,224	+ 14.5
Glasgow	80,299,380	84,324,816	87,506,940	+ 2.6

During the year 1925-26 the authority landed or received 2,445,531 tons of import goods for warehousing or for immediate delivery, an increase of 3.9 per cent. as compared with the previous 12 months. The export traffic handled on the dock quays amounted to 691,064 tons, an increase of 31,121 tons. The report states that negotiations with the Unemployment Grants Committee have resulted in the Committee agreeing to pay 50 per cent. of the interest for a period of 15 years on an approved estimated expenditure of £800,000 for a new dry dock at Tilbury, £1,680,000 for a new entrance lock at Tilbury, and £1,030,000 for West India and Millwall Docks improvements, subject to certain conditions as to recruitment of labour.

Shipping Freights Index Number.—The sixth month of the coal stoppage witnessed a remarkable upward movement in whole-cargo freights. Our Index Number, based on the available homeward routes only (the italic figures in the following table) works out at 182.74, a rise of 39.21 per cent. on the previous month. When the April quotations for the missing coal routes are interpolated, the result (as shown by the figures in black type), is a total figure of 162.46, representing an increase of 25.14 per cent. over the corresponding figure for September. It will, however, be appreciated that the abnormal situation created by the prolongation of the coal dispute can no longer be accurately reflected by including coal freight figures assumed to have remained unchanged throughout the past six months; and the Index Numbers, printed in italics, and indicating the average of homeward routes, record most correctly the recent course of the freight market—always with the proviso that it must be borne in mind that the loss of outward revenue has to be set against the recently enhanced earnings for the homeward journey:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.

March, "	128.08	214.63	175.06	141.72	144.36	170.92	182.46
April, "	197.61	214.63	228.64	140.29	144.36	170.92	182.7

The month's changes in the index of each group and sub-group (coal freights excluded) are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade.....	..	..	S. America—outwards ..	228.61	+ 61.56
Bay—outwards ..	..	..	" homewards ..	..	..
" homewards ..	..	..	India—outwards ..	140.29	+ 40.08
Mediterranean—outwards ..	197.61	+ 79.66	" homewards ..	144.36	+ 40.31
" homewards ..	214.63	+ 74.33	Far East, &c. ..	170.92	+ 16.02
North America ..	..	..	Australia ..	..	..

With the continued absorption of enormous quantities of tonnage for shipment of American coal to this country and elsewhere, the general shortage of vessels to meet the normal autumnal requirements of grain shippers—signs of which were already visible in September—became acute during the past month. Both from the Argentine and from Canada and the United States, shipowners were enabled to secure highly profitable rates, while big advances had also to be conceded by grain shippers from the Danube and the Black Sea ports. Quotations for forward loading from Australia also rose sharply, and such business as was afforded "tramp" vessels from Indian and Far-Eastern ports reflected the general advance in values. The relation of the index to the average for 1913 is shown in the following table, the figures for the past six months representing homeward routes only:—

	(1913 = 100.)					
Month.	1923.	1924.	1925.	1926.		
January	114.05	117.11	114.49	100.57		
February	112.73	123.78	115.96	94.85		
March	115.23	122.09	106.63	89.51		
April	115.45	117.22	104.24	87.97		
May	114.55	114.27	98.23	82.69		
June	106.82	108.62	91.74	89.76		
July	103.39	103.75	94.90	99.71		
August	100.16	104.43	95.87	105.53		
September	103.04	110.50	98.19	112.83		
October	107.86	115.55	99.49	157.07		
November	111.21	112.76	102.23	..		
December	111.81	111.21	104.67	..		
Mean for year	106.69	113.44	102.22	..		

Unemployed effective tonnage has now fallen to a low level, and short of an unexpectedly early resumption of normal coal exports from this country, high freights for "tramp" shipping seems likely to rule for some months ahead.

Home Crops.—The monthly report of the Ministry of Agriculture, dated November 1st, states that the dry weather continued during the first week or ten days of October, but subsequently the weather was very variable. Some heavy rains and severe frosts occurred in nearly all districts, whilst in some parts of the Northern Counties and in Wales there were falls of snow. Good progress was generally made with field work, and potato and root crops were lifted under very satisfactory conditions. The rains assisted the ploughing of land which had previously been too hard for this work. Practically all the potato crop has been lifted in most districts, and the tubers have been clamped in clean and dry condition. On the whole the potatoes are small, and crops are light. Disease is reported in nearly all districts, but especially so in the important potato areas in the East of the country. In the Eastern Counties the crop is estimated to be nearly 2 tons per acre below the average of the past ten years, and in the North-Eastern Counties about 1½ tons below average, but in the North and in the South-West of England and in Wales yields practically equal to the average have been obtained. The yield per acre over the whole of England and Wales is estimated at 5.4 tons, or about ½ ton below average. The estimated total production of 2,682,000 tons is 532,000 tons smaller than last year's crops, and 476,000 tons below the average of the ten years 1916-1925. Turnips and swedes are expected to prove a good crop. The roots are of good average size, and are generally of good quality. Less damage to swedes by mildew than was anticipated is now likely in most areas, the rains of the latter half of October improving the position in this respect. Except in the South-Western Counties over-average crops are expected in all divisions, and the yield per acre over the whole country is estimated at 14½ tons, or 2 tons above average. The estimated total production of 11,149,000 tons is 2,000,000 tons above last year's figure, in spite of the decrease in acreage of 40,000 acres. The harvesting of the mangold crop was well advanced all over the country by the end of October, and in several districts was practically completed. The roots are generally large and of good quality,

and yields are above average. Over the whole country the yield per acre is forecast at 20½ tons, or nearly 1½ tons per acre above average. The estimated total production of 6,933,000 tons shows a decrease of 200,000 tons as compared with the 1925 crop, this being accounted for by the decrease of nearly 21,000 acres drilled this year. Good progress has been made in most districts with the lifting of sugar beet; early in the month the ground was often too hard for the roots to be lifted without great difficulty, but since the rains lifting has been much easier. The roots are of good size, and the yield per acre appears to be somewhat heavier than the satisfactory crop of 1925. The sugar content is generally good, and above that of last year. In most districts cultivation and sowing was, on the whole, as far forward as is usual at the end of October. The rains in the latter part of the month were beneficial for ploughing operations and the preparation of seed-beds where the soil had previously been too dry. The land was fairly clean, and good seed-beds were obtained. The sowing of winter corn was well advanced in most districts, but in some of the Eastern Counties this work had been delayed owing to the lifting of sugar-beet.

The Stock Exchange and Public Protection.—The Stock Exchange Committee have done much good work during the past few years, writes a Stock Exchange correspondent, in the direction of making it more difficult for shares in swindling companies to be marketed within the walls of the House. The Committee have no power, of course, over what goes on outside the Stock Exchange. If they had, it is probable that many hundreds of people in this country and in Scotland and Wales would have been saved considerable sums which they spent in the purchase of shares in American oil plots and holdings. Moreover, the legislation of the Stock Exchange is steadily directed towards the raising of the standard of information required before the Committee will grant permission to deal in the shares of any company. Until such permission is given members will not buy or sell. In spite of the reforms which have been introduced with a view to stopping the swindler and the wild-cat promoter, the onlooker may wonder whether even the existing rules are sufficiently rigid to exclude the possibility of shares being introduced to the markets in companies that either have no existence at all or which are mere ramps. Each company has to be sponsored by a member of the Stock Exchange, and this in itself is an invaluable bulwark against the likelihood of swindles coming into the House. The possibility has to be faced, however, of a Stock Exchange member being misled into the taking of too complaisant a view of the company in whose shares he is asked to obtain permission to deal. Having obtained leave, the next step is for share-sellers to introduce their wares to the market wherein it is proposed to deal. Most Stock Exchange firms nowadays are sufficiently well acquainted with technical matters for them to appreciate whether a company is genuine or not. Looking at it from the point of view of the public, however—and it is this which mainly concerns us—no doubt can be entertained as to the fact that there remains a possibility of a swindle or a ramp being introduced to the Stock Exchange, and for dealings in the shares to be permitted. It is at this point that one meets the unsurmountable objection which debars the Stock Exchange Committee from accepting the position of judge, or arbiter, as to the value of any of the shares in which leave to deal is given. The Committee demand compliance with certain formalities. Questions have to be answered, and data provided, which require a good deal of circumvention if they are to be satisfactorily met by the man with a swindle to sell. It may be considered that under no system of questionnaire or scheme in which reliance has to be placed, perforce, upon statements made by interested parties can it be made assured that every loophole permitting the entry of swindling shares into the Stock Exchange shall be stopped. The Committee of the Stock Exchange are not to be expected to engage a mining engineer to see for himself, for instance, whether mining properties exist; a visiting agent to inquire into the condition of a tropical estate, an expert to consider the likelihood of an artificial silk process proving payable. Allowing for all this, however, there are men in the House who maintain that the

Stock Exchange Committee should, and could, do more than they do at the present time in order to place beyond doubt the bona-fides of any company that is brought before them with the intention of obtaining permission of the Stock Exchange Committee for dealings to start in its shares.

Tin Fluctuations.—Manipulation has certainly played a part in the violent fluctuations recorded in tin prices since the middle of October, the two extreme points touched since then being £321 10s and £293 10s, while the forward quotation has fluctuated between £309 10s and £289 10s. Disappointment regarding the coal crisis negotiations and disturbances in Wall street led to successive "bear" attacks being made on the forward market, and forced liquidation on a large scale by dealers and on outside account, but at the lower levels America, as before, neglected no opportunity to make provision for her near requirements, and has drawn from this side considerable quantities of English tin held in stock, apart from the Straits tin afloat picked up through the leading London trading houses. At the close of last week indications that the market was sold out on the speculative side excited considerable attention in the face of an increased demand for near tin, and produced a strong market at the beginning of this week, with prices rapidly rising by as much as £13 a ton in three days. There was some little reaction on Thursday, but the tendency was finally strongly upward. Home stocks are rather badly depleted, and amount to only 1,248 tons, as compared with 1,588 tons at the end of October. While the total deliveries for October showed a further increase against the September returns, it is not improbable that for the current month they will be at least fully maintained, and possibly exceed 10,000 tons, the highest monthly total since last spring. The trade demand lately has been more widespread, consumers who hold but little stock having been more disposed to protect their needs under the influence of the swift recovery. The fact that the market is persistently threatened with a state of scarcity, while there has been as yet no indication of any falling in the actual American outlet, and that there is a possibility of the European demand expanding again given an early settlement of the coal crisis, has tended to encourage new speculative interest. Current production shows no notable increase, in spite of the inflated price, and is only just about sufficient to cope with actual needs. Germany and other Continental countries have been taking rather more tin for some time past, and America is not covered for much more than a month ahead.

Latin-American Trade with the United States.—A correspondent writes:—That the United States is losing something of its former firm grip upon some of the Latin-American countries—especially Mexico and Cuba—with which, from its geographical propinquity, it might have been expected to have maintained closer relations, is proved from the official returns for the fiscal year 1925-26. In 1926 the imports from Mexico were \$168,668,773, compared with \$185,109,260, showing a decrease of \$16,440,487; in the case of Cuba, the trading figures for the year, namely \$227,484,427, when compared with those of the previous year, amounting to \$291,915,139, show the substantial decline of \$64,430,712. In regard to exports from the United States to these two important markets, the falling-off is also well marked. Whereas in 1925 exports to Mexico had amounted to \$146,833,521, the total in 1926 was \$140,080,494, a shrinkage of \$6,753,027; in the case of Cuba the 1925 figure of \$206,662,049 shrank in 1926 to \$182,903,618, or a decline of \$23,758,431. The smaller republics of Santo Domingo, Haiti, Honduras, and Costa Rica, in the Caribbean, and of Ecuador in South America, likewise took fewer American goods, but with these exceptions, the United States shows a moderate advance over the previous 12 months in its trade with the countries of Latin-America. Regarding the total volume of North American commerce with the 20 Latin-American States, it is seen that the exports were about \$32,000,000 higher than in the previous fiscal period, whereas imports showed the small decline of \$7,000,000. The volume of trade passing between the two Americas

has in years past shown a remarkable and—in some instances—a sensational advance, especially during the past decade. To-day the value of this commercial intercourse has reached the impressive total of \$841,228,095, which, compared with the figures for 1925 (\$809,122,825), shows an all-round augmentation of \$32,105,270. It might, perhaps, be difficult to understand the heavy falling-off in the volume of American trade with Cuba, but for the fact that this island of the Caribbean has of late years been passing through an extremely severe economic trial, now rendered more formidable by the recent unexampled amount of material damage caused by hurricanes. While United States trade will probably enjoy the advantage of reconstructing the towns and repairing most of the damage sustained in the interior, the considerable amount of American capital invested in Cuba must feel the results of the calamity more than other countries. America's exports to Cuba are at all times substantially less than her imports; they cover, however, a wide range of commodities, including flour, potatoes, condensed milk, cheese, meats, machinery, mill supplies, automobiles, general hardware, textiles, petroleum products and many other items; for Cuba produces none of these things on its own account. About 75 per cent. of Cuba's total purchases come from the United States, the remainder, originating mostly in Europe, consist of materials which the United States cannot supply so advantageously.

Russian Oil.—A correspondent writes: Geological estimates of petroleum reserves in European Russia, and in Siberia, must necessarily be very indefinite, and cannot be stated with even a remote degree of approximation. The lowest estimate recently has been put at 3,000,000,000 tons, whilst a more optimistic figure is in the neighbourhood of 5,500,000,000 tons. This only refers to well-known regions, such as Baku, Grozny, the Kuban-Black Sea district, the Central Asiatic district, and parts of Eastern Siberia, including Sakhalin and Kamchatka. There are other parts of the vast dominions of Russia, and especially of Siberia, that are thought to be rich in oil, but no very reliable information is at present available. The total output of Russian oil, of which Baku contributes 65 per cent., will probably be about 8,000,000 tons for 1925-6, as compared with 6,961,000 tons in 1924-5, 5,942,000 tons in 1923-4, and 5,084,000 tons in 1922-3. Great efforts have been made of late years to improve the equipment and efficiency of working, and large sums have been spent in the U.S.A. and in Great Britain for new boring machinery, plant, and tools. As a result of this more up-to-date equipment and organisation, it is claimed that the output per worker engaged in the industry has increased from 151.6 tons in 1923-4 to 210 tons in 1925-6. The demand for Russian oil both in the home market and abroad is increasing. The home consumption, which is mostly crude and fuel oils, amounted to 3,618,000 tons of crude, and 4,450,000 tons of fuel oil in 1924-5. The increase in home consumption has been stimulated by—among other things—the much more extended use of tractors for farm work. Exports of oil and oil products from the Soviet Union in 1924-5 amounted to 1,330,000 tons, as against 703,000 tons the preceding year. Great Britain is said to be a large and growing market for Russian oil and products. In an article in the *Soviet Union Monthly* for October some details of the efforts made by the R.O.P. to foster demand for Russian oil in this country are given. Reference is made to the special qualities of Baku and Grozny oils which combine so well together owing to their respective chemical constitution, so that a particularly valuable blend has been put on the market; and sales have increased to such an extent that four new depots have been erected in South Wales during the year ended September 30, 1926. A brief account is given of the chequered history of the Russian oil industry during and after the war. It is also pointed out that the re-entry into the world's markets of the Naphtha Syndicate, with its rich vast oilfields, most of them still untapped, and amounting to about 40 per cent. of the world's total oil resources, is bound to have a considerable and wholesome influence on the market generally. Since it is stated that the mere contemplation of the forma-

tion of R. O. P., Limited, in August, 1924, caused a drop in prices of standard petrol by no less than 3½d per gallon, there can be no question as to considerable influence. Whether it was entirely wholesome for the trade, or even for the consumer, is another question. At all events, some 800,000 tons have been sold in this country at an average of £1 per ton cheaper than oil sold by other companies. The future production of Russian oil has been "planned" as follows:—1926-7, 9.1 million tons; 1927-8, 10 million tons; 1928-9, 10.7 million tons; 1929-30, 11.2 million tons. The allocation of capital expenditure to the oil industry for 1926-7 is approximately 142,720,000 roubles. It is hoped still further to improve the organisation of the industry by better equipment, more scientific methods, and welfare schemes for the workers. It is also intended to spend money on prospecting new districts in the hope of discovering several highly productive fields. Such prospecting work is already being undertaken around Salyany, also in the North Caucasus, beyond the borders of the Groznet—one of the three trusts which now control the industry—and in several districts in the neighbourhood of the Caspian Sea.

Baldwins.—In spite of an increase of £41,800 in trading profits during the year to June 30th last, the directors of Baldwins, Limited, state that "owing to the continued depression in trade they have been unable to pay the dividends on both classes of preference shares." The extent of the improvement which occurred last year will be seen from the following table:—

	1919-20	1920-21	1921-22	1922-23	1923-24	1924-25	1925-26
Trading profit	£ 683,405	£ 410,758	£ 306,132	£ 484,760	£ 493,520	£ 214,078	£ 255,837
Net profit	567,023	325,167	86,993	200,902	193,412	£ 43,966	11,168
Brought forward	285,799	291,325	303,479	309,178	424,140	526,618	230,321
Reserve	852,822	616,492	390,472	510,080	617,552	482,663	241,489
Preference dividend	75,000	25,000	25,000	25,000	25,000	25,000	25,000
Ordinary dividend	45,667	80,476	81,294	85,940	90,935	52,342	..
Carried forward	201,325	303,479	309,178	424,140	526,617	230,321	241,489

For 1924-25, it will be observed, there was a small net loss, and no final dividends were paid on the preference shares at their due date. When the report for 1924-25 was published, however, the directors announced their intention of paying the final dividend on the 5½ per cent. preference shares. The balance-sheet, which is analysed on another page, discloses no changes of importance. Properties and plant are up by about £90,000 at £4,569,064, while investments are higher by a similar amount. Sundry debtors, on the other hand, are now £749,447, compared with £931,126, while sundry creditors have declined from £586,295 to £478,657. The bank overdraft has been increased from £249,275 to £281,630, while reserves are £37,000 higher at £615,100.

Bauchi.—Our mining correspondent writes:—The results which are now being secured by the Northern Nigeria (Bauchi) constitute a fitting reward to the perseverance and foresight which have rendered them possible. Owing to the difficulty experienced in raising the necessary capital and to other causes delays occurred in the completion of the hydro-electric scheme; but it came into operation in July, 1925, and has resulted in a marked expansion in the output at a reduced ratio of cost. The following contrasts the working results of the past two sessions:—

	Concentrates Won. Tons.	Average Price. £ Per Ton.	Mining Costs. £ s d Per Ton.
1924-25	680	177	57 0 8
1925-26	1,280	194	51 12 9

Last year's operating profit amounted to £123,300, as against £51,900 previously. The final dividends now declared make 35 per cent. on the preference and 25 per cent. on the ordinary, and with them will be disbursed an interim of 15 per cent. (the fixed 10 per cent., plus 5 per cent.) on the preference shares and 5 per cent. on the ordinary. The last preceding distribution was 5 per cent. on the preference in respect of 1919-20. There is now written off £17,600 to depreciation, £3,000 develop-

ment and prospecting, and £7,100 loss on sale of shares in the Karre Tin Company—the latter a non-recurring item. The sum of £80,000—the bulk of the credit balance of £99,600 brought forward from 1925—is transferred to reserve, thus bringing the credit balance into an approximate correspondence with the actual cash position. Despite the great expansion in output, the ore reserves show a small increase, now standing at 7,125 tons. This appears to be in itself a conservative estimate, and there are promising indications in regard to portions of the property not included. Provided the price of tin remains at anything like its present level, the dividends of the current year ought to exceed those of 1925-26. If they should total no more than 40 per cent. and 30 per cent. respectively, the yield on the preference shares at current price would be approximately 13 per cent. and on the ordinary 15 per cent.

Transvaal Gold Output.—The gold output of the Transvaal mines during the month of October, 1926, amounted to 853,296 ounces of fine gold, as compared with 839,939 ounces in September. The amount produced during the month of October, 1925, was 812,832 ounces. The following table shows the monthly output for the past seven years:—

	1920.	1921.	1922.	1923.	1924.	1925.	1926.
January ..	670,503	651,593	639,728	764,469	796,768	823,692	795,270
February ..	625,330	558,137	704,370	704,370	760,617	753,325	733,924
March ..	707,036	671,123	761,586	761,586	795,671	825,479	831,340
April ..	686,979	681,382	511,338	743,651	768,923	787,519	803,303
May ..	699,041	687,776	629,786	786,564	809,003	813,949	845,214
June ..	715,957	678,490	675,697	755,309	773,053	780,251	852,145
July ..	736,099	689,555	730,635	754,306	829,437	818,202	860,134
August ..	702,083	711,526	752,490	769,371	809,571	808,218	843,864
September ..	682,173	691,026	747,089	739,504	739,422	797,247	839,939
October ..	662,472	707,825	778,159	793,842	827,583	812,832	853,296
10 months ..	6,887,677	7,728,433	5,464,922	7,573,572	7,980,048	8,020,614	8,286,419
November ..	633,737	704,236	764,476	780,639	802,313	787,633	..
December ..	632,215	661,847	790,712	776,849	825,273	791,455	..
Total	8,153,625	8,114,516	7,020,110	9,133,060	9,597,634	9,599,702	..

The following table shows the number of natives employed at the end of the last few months by members of the Witwatersrand Native Labour Association and Contractors:—

	Dec., 1925.	Apr., 1926.	May, 1926.	June, 1926.	July, 1926.	Aug., 1926.	Sept., 1926.	Oct., 1926.
Gold mines	166,385	183,828	183,905	183,092	182,262	184,032	185,063	181,513
Coal mines	16,606	16,212	16,246	16,448	16,648	16,827	16,762	16,737
Diamond mines	3,705	5,834	5,766	6,064	6,099	5,818	5,500	5,274
Total	186,696	205,874	205,917	205,594	205,009	206,677	207,325	203,524

There is a decline on the month in the number of natives employed at the gold, coal, and diamond mines.

De Beers Diamond.—In their report for the year ended June 30th last the directors of the De Beers Consolidated Mines state that satisfactory sales were effected by the Diamond Syndicate, and that the company realised slightly higher prices for its stones. The result is an expansion of nearly a million sterling in the net profit. Interest and other miscellaneous income showed a contraction, but this was more than counterbalanced by economy in working expenses. Taxation absorbed more than ever. The increased dividend on the deferred shares does not fully reflect the growth in earnings, the sum of £450,000 being set aside as a reserve against preference share dividend; it represents rather more than a half-year's requirements. Stabilisation reserve—invested in other diamond mining concerns and kindred interests—remains at £2,573,840, but reserves have been raised to £3,829,840—chiefly by the appropriation just mentioned. Investments figure at £528,000, as against £305,500; both the debtor and creditor items are larger than before. Appended is a summary of the accounts for the past three years:—

	1924.	1925.	1926.
Diamond sales	£ 3,452,540	£ 3,348,220	£ 4,193,870
Other income	376,320	948,400	722,800
Expenditure, depreciation, &c. ..	2,337,220	2,103,190	1,756,030
Net profit	1,441,640	2,193,430	3,160,630
To taxation	191,280	258,470	409,560
Dividend on deferred shares ..	525,720	1,090,510	1,635,770
Rate per share	10/-	20/-	30/-
Carried forward	407,220	451,670	316,970

At 1,608,000 loads the stock of blue ground and lumps on the floors indicates a reduction of 653,400 loads, compared with the position of twelve months ago. On the basis of the past year's dividend the deferred shares yield about 8½ per cent. This might be regarded as adequate were the prospect of at least the maintenance of the 30s (60 per cent.) rate fairly assured. There is, however, a new factor in the situation—the growth in the Transvaal alluvial output. Last month the yield from this source represented no less than 40 per cent. of the total diamond production of the whole Union of South Africa. To retain their control of 90 per cent. of the world output, the Diamond Syndicate is under the necessity of purchasing the bulk, if not the whole, of such stones. Obviously, if the yield from alluvial should continue for any length of time at its present level—much less if it should further expand—the Diamond Syndicate may experience difficulty in maintaining prices at their present artificial level.

Lord D'Abernon on German Currency.—At a meeting of the Royal Statistical Society in the hall of the Royal Society of Arts, John street, Adelphi, on Tuesday, November 16th, at 5.15 p.m., Rt. Hon. Viscount D'Abernon, recently British Ambassador in Berlin, will deliver his inaugural address as president of the society. His subject will be "German Currency: Its Collapse and Recovery, 1920-1926."

The opening meeting of the fifty-ninth session of the Royal Colonial Institute will be held at the Edward VII. Rooms, Hotel Victoria, on Tuesday, November 16th, at 8.30 p.m., when Sir William Himbury will give an illustrated lecture on "Some Promising Empire Cotton Fields." The Earl of Derby, K.G., will preside.

Obersea Correspondence.

UNITED STATES.—ELECTION RESULTS.—MONETARY OUTLOOK.—BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 3.

ALTHOUGH at the moment of writing the full returns from the State and Congressional elections are not yet in, it is abundantly clear that the Republicans have met with serious reverses. They still retain control of the national House of Representatives, and, after losing seven seats, appear to have nominal control in the Senate. This control is, however, nominal in the full sense of the word, as several of those classified as Republicans are tinged with Radicalism and cannot be counted on in a pinch. Two of the most severe reverses that the Republicans have suffered were in Massachusetts and New York State. Here Senator Wadsworth, an important figure in administration politics, lost his seat, his defeat being in part accountable to the fact that a "dry" Republican ran against him in the election. In Massachusetts, Senator Butler, who was chairman of the Republican National Committee during the last presidential election, and who is a close friend of President Coolidge, was defeated. In eight States the voters registered their opinion on propositions looking to the modification of prohibition. In five States the "wets" won (overwhelmingly in New York); in two they lost; in one the result at the time of writing is still in doubt. Altogether, the results of the election reflect in part a normal swinging back of the pendulum from the last Coolidge landslide, and thus the dissatisfactions that usually spring up against the party in power. In part they reflect the spirit of rebellion against prohibition. As far as business is concerned, the elections probably do not change the situation greatly. What business in this country desires chiefly from the politicians is to be left alone. While the Democrats have gained considerably, they control neither the House nor the Senate, while President Coolidge can be counted on to veto any Radical measures that might be formulated. The new Congress will not come in, furthermore, until next March,

and the old Congress has already finished the necessary positive legislation, such as the tax law.

It need not be assumed that the Democratic successes mean a more lenient policy with regard to the foreign debts. In fact, in so far as the Democrats have disclosed a policy in the matter, it has been to criticise the settlements negotiated by the Debt Funding Commission as being too lenient. If the French were to ratify the Berenger-Mellon agreement promptly there still is a fair chance that the matter might go through the present Senate, though probably only after a hard fight. It seems clear that nothing would be gained and something might be lost by waiting for the new Congress. Meanwhile, it is apparent that even in the present Congress sentiment is less favourable to the World Court.

The share market took the election rather quietly this morning, perhaps because the results were pretty closely in line with expectations. The market had come to a point when about one-third of the loss suffered during the recent break had been recovered. At the moment it still seems undecided as to whether to resume the decline or continue the rally. The latest report on brokers' loans in this district, that for October 27, shows a further reduction in this form of accommodation. A decline of \$53,000,000 brought the total down to \$2,602,000,000, which is \$197,000,000 above the May low and \$540,000,000 below the January high. In three weeks the reduction in brokers' loans has amounted to \$207,000,000.

Meanwhile, the money market has remained rather easier than had been anticipated. In discussing this condition the Monthly Review of Credit and Business Conditions in the Second Federal Reserve district, the bulletin that is published by the local Federal Reserve agent, and which appeared on the first of the month, said:—"The causes of somewhat easier money conditions in the second half of October are to be found in a flow of funds to New York from other districts, not unusual at this time of year, and a considerable excess of Treasury disbursements, including October 15th interest payments, over-withdrawals from depositories and other collections in the second district. There has, moreover, been some decrease in credit demands, due largely to a liquidation in brokers' loans amounting to nearly \$200,000,000. This decrease has been offset in part by an increase in commercial loans of about 140 millions, mostly in the New York district. As a net result of these and other changes, total loans and investments of the reporting member banks throughout the country are about 90 millions under the year's high point of September 29th. In the case of the New York City banks the decrease has been 140 millions, or more than for the country as a whole. Thus there has been a continued extension of credit in principal centres outside New York City. Throughout the country there is no indication of any change of consequence in the basic factors of the credit situation."

Thinking along these lines, some observers believe that the recent ease in money has been a bit unnatural, and that a slightly firmer tone will be displayed soon. Those who hold this view also point out that the holiday demands for currency always are large, and that the discounting at the Reserve banks that they occasion will tend to keep money firm until after the year-end. On the other hand, there is an important body of opinion that holds that money is easing because business is quieting down, and that the peak of the upward movement in money rates has been passed. Additional signs of recession in industry are apparent, but they do not indicate any severe slump as yet. Hereabouts there has been considerable slowing up of late in speculative building, and the automobile industry is curtailing production, as is natural at this season of the year. Pig-iron prices are strong at the moment, because of a flare-up in coke prices, which in turn is due to the advance in coal caused by your strike. Pig-iron production also has held up well. On the other hand, steel mill operations are being curtailed, and the industry as a whole is now below 80 per cent. of capacity, whereas it had been operating at about 85 per cent. for a number of months.

Railroad car loadings, however, still fail to reflect any considerable decrease in the physical volume of trade, although the latest data are those for the week ended

October 16th, and there is usually some lag in these statistics. In the last week for which data are available a new high record for all time was set at 1,210,163 cars. The earnings for the Class I. roads in September are proving excellent, and the increase in the dividend on the Pennsylvania Railroad's common shares from 6 to 7 per cent. is a symptom of the prosperity that the carriers now are enjoying. Crude oil and gasoline prices have weakened in response to large and growing production, the Seminole pool in Oklahoma and the Panhandle region of Texas having proved unexpectedly prolific. Commodity prices as a whole remain pretty stable, Dun's index advancing 0.3 of 1 per cent. during October. This follows slight increases in the two preceding months.

FRANCE.—BUDGET SESSION — STABILISATION — INTER-ALLIED DEBTS — PRICES.

(FROM OUR CORRESPONDENT.)

PARIS, November 10.

THE Chambers reassembled to-day, and formally entered upon a session which it is intended to devote solely to the passage of the Budget for 1927. This task M. Poincaré proposes to complete, if possible, before the end of the year, and by all appearances he will have behind him sufficient support to enable him to overcome any factious opposition that may be offered. Efforts have often been made previously to force the Budget through before the opening of the financial year on January 1st, but it is generally recognised that no Ministry has hitherto been able to start on this task with such excellent prospects as those which M. Poincaré commands. Deputies and senators have returned from their extended visits to their constituencies with a very clear realisation of the fact that any attempt to renew the sterile party conflicts of the past two and a half years will seriously prejudice their chances of success at the coming elections, and that the country as a whole is anxious to give every support to the Premier in his effort to replace the public finances on a sound footing. It may be now regarded as certain that there will be no attempt to discuss before January or February the ratification of the Washington and London agreements on the debt question, and that in the interval strong efforts will be made to secure at least the insertion of the safeguard clauses, without which it is unlikely the Chamber, unless it radically changes its present temper, will vote ratification.

M. Poincaré's strength before both the Chambers and the country at large lies in the fact that he has already wrought what almost amounts to a revolution in the financial situation. He may claim with justification not only to have increased the exchange value of the franc by 100 points (from 246 to 146), but also to have won back the confidence of both the French and the foreign investor. The franc, which was worth little more than a tenth of its pre-war value on July 24th, when M. Poincaré resumed office, had improved by the end of last week by 70 per cent., while the French Funds, during the same period, improved by from 10 per cent. to 34 per cent., as the following examples show:—

	July 21.	Nov. 4.
3% Rentes.....	46	50.75
5% " 1915-16.....	46	60.50
4% " 1918.....	41	51.60
6% " 1920.....	52	70

There has been some sign of alarm lest the improvement of the franc should be carried too far, but the situation appears to be in firm hands, although the present spasmodic day-to-day movements may be expected to continue for some time yet.

M. Poincaré has now broken silence, and definitely announced that he has decided in favour of stabilisation as against revalorisation of the franc. He made it clear, however, that the moment for actual stabilisation has not yet arrived. The restoration of the national financial situation, he informed the Finance Commission of the Chamber a few days ago, comprises two phases—first, re-dressing and rectification, and then stabilisation. The first stage, the Premier insists, has not yet been completed, nor could he yet fix the date when it would have been. Apparently this will depend upon the time the Chamber takes to pass the Budget for 1927 into law.

The measure is based upon this "double idea," an indisputable balance between revenue and expenditure, and the redemption of as large an amount of the public debt as possible. The amount of debt reduction to be effected during 1927 has been fixed at 8,174,000,000, and this M. Poincaré insists shall not be diminished in any circumstances. In reply to questions favouring the abrogation of the law prohibiting exportation of capital, M. Poincaré cited the opinion expressed by the experts in their report to the effect that the law should be continued until some time after stabilisation had been accomplished in fact. The Government proposed to continue the law until the end of 1927, but reserved the right to abrogate it by decree whenever the moment appeared opportune.

The report of M. Darriac, the president of the Sub-Commission of the Chamber on Inter-Allied Debts, which has been sent to the Finance Commission and will be available shortly, states that the Washington agreement concerns both the political and the commercial debt owing by this country to America, while the London agreement concerns the political debt alone. The capital value of the political debt due to America amounts to \$2,933,171,516 and the debt for stocks to \$407,000,000, the total debt, comprising both interest and capital, according to the agreement of April last, being \$4,025,000,000. At the moment of the signature of the London agreement on July 12th last the total bonds held by the British Treasury, representing the French political debt to Great Britain, was £653,127,000, of which £431,504,130 was for capital and £221,622,870 interest. M. Darriac underlines that the British agreement involves the payment of a higher rate of interest than the Washington accord calls for. The report recognises that the London and Washington agreements, if ratified in their present form, would involve payments that would leave France a surplus out of the amount she would receive from Germany under the Dawes Plan of 418,000,000 marks (or \$104,000,000) in 1926-7; 508,000,000 marks (\$126,000,000) in 1927-8; and 369,000,000 marks (\$92,000,000) from 1943 onwards, supposing Germany maintained the payments laid down in the Dawes Plan. M. Darriac points out the danger that exists through the absence of a safeguard clause in the agreements, and urges that the clause permitting the commercialisation of the French bonds held by the American Government shall be eliminated from the Washington agreement.

The index figure for wholesale prices at the end of October, which is announced to-day by the Statistique Générale, shows a fall of 37 points as compared with September and of 87 as compared with July last, which (at 854) marked the highest level yet recorded in this country. At 767 for October, the index figure still leaves a rise of 183 points since the end of October, 1925, when wholesale prices were represented by an index figure of 584 (based on the prices of 45 commodities in 1914). The drop of 37 points is entirely due to the improvement in the purchasing power of the franc, the figure for imported goods (16 categories) having fallen by no fewer than 104 points, while that for home-produced goods actually rose by a point during the month. The index figure for retail prices in Paris (based on those of 13 articles of common necessity) for October is returned as 624, against 590 in September, 463 at the end of 1925, and 408 in January, 1925.

The figures for wholesale and retail prices justify the view that the process of stabilisation is developing. The index figure for French wholesale prices is falling, and that for retail prices is steadily rising, so that the unjustifiable difference that has hitherto existed between them is becoming less. Evidently, there is no reason why wholesale and retail prices should synchronise, as the former are always directly affected by the exchange factor, while domestic prices, on the other hand, are not only less affected by changes in exchange rates but also enjoy the benefit of all those factors still existing that tend to keep the cost of living below that of sound money countries (such as lower rents and transport tariffs). One of the arguments used by the Belgian Finance Minister in support of his decision to stabilise the franc at 175 was that retail prices in Belgium stood at 705 (or, in round figures, seven times the figure of 1914, when the Belgian franc was, for all practical purposes, at

par). It would be dangerous, M. Francqui argued, to stabilise below the index figure of the cost of living, as this would be fatal to industrial undertakings, while workmen would not accept reductions of wages based on the exchange value of the currency. Later on, in view of the fact that the world index figure for cost of living stands now at 160 (gold), and will continue diminishing, it will be necessary to bring down the Belgian figure also, but M. Francqui's intention is that this shall be done by easy stages, to avoid crises. On the basis of the Belgian argument, which appears to be sound, so far as it goes, the French franc, seeing that the index figure for retail prices now stands at 624, should be stabilised at 157. On that basis the present wage standard could be maintained. It would be necessary for the retail index figure to continue to rise, in order to bring French prices nearer to world levels, but this rise would be both slow and moderate, while there is no reason why it should be carried up until it corresponded mathematically with world levels. The cost of living was lower in France before the war than in almost all other countries, with the result that French production costs were lower than elsewhere, and the margin of profit greater.

GERMANY. — POLITICS — FINANCES — CREDIT — INDUSTRY — FOREIGN TRADE — BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 10.

THE German-Nationals this week made what (in view of their threats uttered before the Reichstag reassembled) is probably only the first move in a general policy aimed at embarrassing the Marx Cabinet. On the Socialists demanding a larger increase in unemployment allowances than the Cabinet offered, and pushing the question to a vote, they had the surprising support of the Nationals, who admitted that they are in principle against the higher allowances. The result was a Cabinet defeat. Formally, the Cabinet is not bound by the Reichstag's vote on this question. The Cabinet was merely, according to practice, trying to strengthen its policy by getting the Reichstag's approval. The ordinance embodying the Cabinet's policy, which was also that of the Cabinet parties, was published immediately after the Reichstag's vote. The allowances have been increased 10 per cent., or for non-family persons 15 per cent. The Socialist demand was for the increase by 30 per cent. of allowances to unemployed heads of families and an increase of 20 per cent. in the allowances for family members. The new rates, which are in force only until March 31st next, are for adults: single persons 2.03 marks per day, for others during the first eight weeks 1.78 marks, thereafter 1.96 marks; for wife 0.55 marks, and for each child 0.39 marks. The Social-Democrats announce that they will continue to press for higher allowances. Their temporary alliance with the German-Nationals has not caused a Cabinet crisis, but a repetition would do so if any important legislative project or matter of policy were involved. Everything indicates confusion and obstruction during the next few weeks.

The Supplementary Budget for 1926-27 shows large additions to both ordinary and extraordinary expenditure, and increases the Budget total from 7,600 million to 8,400 million marks:—

	Million Marks.
Ordinary expenditure—	
Recurring.....	105.4
Non-recurring.....	123.8
Total ordinary expenditure.....	229.2
Extraordinary expenditure.....	572.5
	801.7

Most of this extra expenditure is due to the economic crisis, and in particular is for unemployment relief measures, for credits to wine-growers and other interests, and for expenditure in connection with housing and home colonisation. The Labour Ministry requires 200 million marks for housing, 50 million marks for colonisation, and 60 million marks for unemployed relief; and 111 million marks is needed for credit to the Railways Corporation to enable it to accelerate orders to industry, this also as part of the unemployment relief programme.

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:

67 Milk Street.

BUENOS AYRES:

99 Florida.

HAVANA:

Pedro Gomez Mena Bldg.

Accepts funds from banking correspondents for investment in designated American Securities, Bank Acceptances, U.S. Government Bonds, etc.

Special Representative:

24, OLD BROAD STREET, LONDON.

The supplementary ordinary expenditure is to be fully covered without a loan. The excess yield of Customs will, after meeting deficits on certain taxes, leave 90 millions, and the profit on coinage will be 92½ millions more than estimated. These, with 32 million marks more than estimated from the surpluses from 1924-25 and 1925-26, and some additional minor revenue, will cover the 229 millions shown above. The supplementary extraordinary expenditure will be covered by loan. The total to be borrowed, including the 293.8 million marks deficit in the original Budget, will be 866.3 million marks, or with 100 million marks advanced to the Railways Corporation, 966.3 million marks. The Reparations liability in the present (third) Reparations year stands, after the last arrangements with the Reparations Agent-General, as follows:—

	Millions of Marks.
From Budget.....	410.0
Reserve Fund.....	80.3
	490.3
Traffic Tax.....	290.0
Railway Corporation.....	550.0
Industry.....	250.0
	1,580.3

The Finance Ministry's return for September shows ordinary revenue received 588.9 million marks, of which 544.9 million marks was from taxes; and ordinary expenditure 766 million marks, of which 405.1 million marks was for general administration, 41.5 million marks for Reparations payments, and 319.4 million marks for subventions to States and municipalities. The extraordinary expenditure was 63.0 million marks, and revenue nil. The account for the first half of the financial year 1926-27 shows:—

	Millions of Marks.
Ordinary—	
Revenue: From taxation.....	3,359.6
From administration receipts.....	184.5
	3,544.1
Expenditure—	
General administration.....	2,140.5
Reparations payments.....	137.0
Subventions to states and municipalities.....	1,282.3
	3,559.8
Deficit.....	15.7
1/12th of surpluses from 1924 and 1925.....	183.9
	168.2
Surplus.....	168.2
Extraordinary—	
Revenue.....	1.1
Expenditure—	
General administration and war burdens.....	224.9
Reparations payments.....	104.1
	329.0
Deficit.....	327.9

The money market shows no change. Day money is offered in excess of the demand, at rates ranging from 4 to 6 per cent.; month money 5 to 7 per cent. The Reichsbank's return for the last week of October shows the relatively small increase of 142 million marks in discounts, and of only 31½ millions in advances, the latter increase being 100 millions less than in the last week of September. In connection with Dr Schacht's complaint against the independent credit policies pursued by different authorities with accumulated railway, postal, and other funds, the president of the Prussian State Bank

makes the suggestion that these, as well as the available short-term moneys of public and private banks and saving banks, should be voluntarily directed to a new central institution "in order that the greatest advantage for business should be attained." The proposed new central institution should work "in full harmony" with the Reichsbank. This proposal is not likely to be welcomed by the Reichsbank; the crossing of its credit policy, of which it complains, would probably be even more marked than at present, when there are numerous small would-be dominators of the credit market. The Reichsbank's note circulation on October 30th was 3,326 million marks, against 3,251 million marks on September 30th. The circulation of all currencies on September 30th was 5,459.9 million marks, of which 1,369 million marks were Rentenmarks. The total volume of credits by the Reichsbank, private note banks, and Rentenbank on September 30th was 2,215 million marks, against 2,040 million marks on August 31st. The total of foreign loans concluded in the first ten months of this year was 1,363,990,000 marks, against an estimated 1,450,000,000 marks in the same months of 1925. Of the 1926 total 967 millions were borrowed in the United States. The amount borrowed by states was 278 million marks, by municipalities 106 million marks, public undertakings 354 million marks, and private undertakings 625 million marks. The chief difference, as compared with 1925, is the increase of state and the decline of municipal borrowing. Public and private home loans in the ten months totalled 1,198 million marks, in addition to which mortgage bonds for an estimated 1,000 million marks were put on the market.

Coal output is still increasing. In the last two weeks of October the Ruhr's average daily output for the first time exceeded 400,000 tons, against between 302,000 and 329,000 tons in the weeks immediately preceding the British coal strike. The iron and steel branches continue active, but the general view is that the price-rise in the international market has ceased for the present. The movement of "world-market prices," as determined for the purpose of fixing the Steel Syndicate's bounties to exporting manufacturers, has been:—

	Marks per Metric Ton.	
	July.	November.
Ingot	76	95
Blooms	80	100
Billets	83	105
Sheet bars	92	110
Bars	96	118½
Wire rods	112	120
Thick sheets	110	127½

These prices are to some extent fictitious, but they show the relative movement. The bounties have been correspondingly reduced, and for November vary between 11 marks per ton for ingots and 55 marks for tubes. The Railways Corporation, it is reported, has decided to give orders for 800,000 tons of rails and sleepers. The foundation of an international wire rods syndicate is being negotiated. Iron ore production in 1925 totalled 5,923,000 metric tons, against 4,457,000 tons in 1924, 7,308,700 tons in the present area in 1913, and 28,607,900 tons in the then area. The Association of Machinery Manufacturers reports for October an increase in both home and export sales.

The foreign trade report for separate countries for the first half of 1926 shows a considerable decline in the proportion of exports to Europe, as compared with the same half of 1925, and slight increases in the proportions to all other continents. The proportion of imports from both Americas declined. Of imports totalling 4,369 million marks, 2,070 million marks came from Europe, 1,259 million marks from both Americas, and 512 million marks from Asia. Imports from Great Britain were 255 million marks, from the United States 689 million marks, from Argentina 257 million marks, and from the Netherlands 219 million marks. Of exports totalling 4,790 million marks, 3,342 million marks went to Europe, 802 million marks to both Americas, and 478 million marks to Asia. Exports to Great Britain were 537 million marks, to the Netherlands 537 million marks, and to the United States 363 million marks.

The Bourse upward movement continued last week, with violent and erratic rises from which banking and shipping

stocks in particular profited. Speculation in Dyes Trust shares continued, and this stock rose on the 4th to the new record price of 383, which is 120 points above its level of early September, and 280 points above its level at the beginning of the year.

ITALY.—SUPPRESSION OF CONSORTIUM—CONSOLIDATION OF TREASURY BILLS—NEW NATIONAL LOAN—BUSINESS MEN'S MANIFESTO—BOURSE DECLINE.

(FROM OUR CORRESPONDENT.)

TURIN, November 7.

Two events of far-reaching importance have just taken place. The first is the suppression of the "autonomous" section of the Consortium for industrial securities. The Consortium, as I have explained in previous letters, was created, as far as the "ordinary" section is concerned, in 1914 for the purpose of making advances to joint-stock companies and industrial firms. But in 1922 an "autonomous" section was started with the purpose of the salvage first of the Banca Italiana di Sconto, and then of the Banco di Roma. After the advances of the Consortium had reached a maximum of 4,120 millions lire, a decree of January 1, 1924, put an end to new operations. But the liquidation was slower than was deemed in accordance with the new deflationist policy; therefore, by a decision taken at the Cabinet session of November 5th the section has been dissolved. The remaining assets are to be sold gradually by a new institute, wholly separate from the Bank of Italy. The Bank of Issue will be no more encumbered by this legacy of past times, and its note issue will be thenceforth counterbalanced only by normal assets—gold reserves, normal trade discount, and advances to the Treasury, these last to be gradually eliminated.

The second event is the consolidation of the Treasury bills. The brightest feature of the monetary situation has been the gradual decrease of Treasury bills, which, as the Finance Minister, Count Volpi, aptly remarked, were a continuous menace to the circulation, for they could always, when due, be exchanged for cash and force the Treasury to increase the note circulation. To the Treasury bills called "ordinary," which amounted at October 31st to 15,540 millions lire, we must add 1,029 millions 5-years bills, 4,000 millions 7-years bills, and 6,991 millions 9-years bills—total 27,560 millions. It appears from statements made by Count Volpi and the *Corriere della Sera* that, following upon the restriction of credit policy, bearers of Treasury bills claimed, when due, the repayment of an unusual proportion of them. The Cabinet Council in their session of yesterday sanctioned a decree of consolidation. The Italian plan follows the Belgian precedent, but with important points of difference. All ordinary, 5-years, and 7-years Treasury bills are forcibly consolidated—i.e., exchanged for 5 per cent. Consols at different rates of exchange, from 116.50 lire nominal 5 per cent. Consols for every 100 lire ordinary bills, to 115.50, 113, and 112 lire 5 per cent. Consols for every 100 lire 5 and 7-years bills, according to the date when they will become due. Nine-years 5 per cent. bills can be voluntarily exchanged for the new 5 per cent. Consols issue at the rate of 107.50 lire; if they are 4.75 per cent. bills the rate of exchange is 100 against 100. Special rules will be enacted so as to preserve the right of 7 and 9-years bills to premiums.

The new 5 per cent. Consols will be also offered for public subscription at the price of 87.50. A banking syndicate consisting of the Bank of Italy, the State Deposits and Loans Bank, the National Social Insurance Institute, and several other semi-public financial bodies, saving banks, &c., will manage the market for the new security. Those public bodies and others which by law or by their rules are obliged to invest in public State securities will subscribe to the new 5 per cent. Consols. The proceeds of the subscription will be deposited at the Bank of Italy, and, with other special deposits of the above-mentioned bodies, will be utilised in advances to industry with the new security as collateral. The market will,

therefore, not suffer on account of the forced consolidation, as the bearers of Treasury bills will have the right of obtaining advances on deposit of the new 5 per cent. Consols as collateral. If the necessity should arise for removing, in consequence of these advances, the 7-billions lire limit to the commercial circulation, the excess over 7 billions up to 8 billions will not be subject to the extraordinary tax.

In financial circles rumours were current that the consolidation is the first step, as in Belgium, to currency stabilisation; but this conclusion is at least premature. Minister Volpi authoritatively stated that consolidation is a logical sequence to the Pesaro speech of Premier Mussolini, and that it is a further step in the policy of defence and revaluation of the lira.

The manifesto of business men for international freedom of commerce did not have an enthusiastic reception in Italy. Perhaps the only public endorsement of the manifesto's policy was a resolution of the executive committee of the Italian Liberal party; but, given the present low fortunes of the Liberal Opposition, the support is somewhat platonic. In the Press only the *Turin Stampa* published a favourable comment. The rest of the Press was unanimous in publishing very adverse criticism of the manifesto, describing it as an endeavour of rich countries—very well supplied with mines and raw materials and possessing old industries—to capture world trade at the expense of industrially new and poor countries, like Italy, who are labouring under two great handicaps—the increase of population, to which foreign outlets are vetoed by restrictions against immigration, and the lack of iron, coal, oil, cotton, wool, wood-pulp, phosphates, and most other raw materials of industry. How a European Zollverein would prejudice the just claims of Italy for the abolition or mitigation of foreign restrictions against our emigrants no critics explained. As to raw materials, it is probable that the signatories of the manifesto, such as Signori Agnelli, Gualino, Conti, Pirelli, who are perhaps the greatest captains of industry in Italy, would not feel embarrassed at all by the Zollverein's existence in acquiring the best raw materials at the lowest prices in the best markets. There are some presumptions that Italian industrialists are meeting successfully foreign competition, precisely owing to their ability in purchasing raw materials at the best moment. In the *Lavoro d'Italia*, the official daily paper of the Fascist employees' corporations, a Fascist M.P., Signor Lanzillo, published an article in which, while resisting the temptation to inquire into the selfish motives of the British manifesto, recognised that the idea of a European Zollverein was bound to be discussed more and more attentively, owing to the impotence of the present small and divided industrial countries in Europe against the growing competition of the gigantic unified American industrial complex. The probable outcome of the lively discussion, or, more exactly, criticism, of the manifesto will be that the Italian delegation at the next Economic Conference of Geneva will declare their willingness to adhere to an enlarged freedom of trade, and will quote in support of their attitude the numerous treaties of commerce concluded by the present Government, all of them with the most-favoured-nation clause; but will insist in connecting the problem of the lowering of Customs with the discussion of other restrictive measures and mainly of restriction of emigration.

The most sensitive market in October was the securities market. If I reproduced and brought up to date the table I gave in the issue of October 2nd new spectacular collapses in prices would be apparent. For instance, Fiat shares, which closed in August at 534 and had dropped by September 28th to 378, were at one time as low as 290. Afterwards they rallied to 346. Snia Viscosa shares, from an August closing price of 276, fell to 189 on September 28th, and in October reached bottom at 110, from which level it has since substantially recovered. I have only quoted two securities of large companies well known in Great Britain, but the tale of collapse is general. Several failures of Bourse brokers were reported after the end of September, and the settlement was very difficult. In the last ten days of October Stock Exchange seas were less stormy, and hopes are entertained that the public and operators will get tired of throwing out of the windows good securities at prices, on the average, less than half of those ruling at the beginning of 1925.

HOLLAND.—FOREIGN TRADE—INFLUENCE OF THE COAL STRIKE—THE PORT OF ROTTERDAM AND THE NEW WATERWAY—THE 1927 BUDGET.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, November 4.

As was only to be expected the colliery strike in Great Britain has had its effect on the economic state of affairs in Holland. The extent to which foreign trade has been influenced is a case in point. Considered in detail, the figures for foreign trade cannot be reviewed with satisfaction. In the first nine months of the current year there was an import surplus of Fl. 560 millions, as compared with only Fl. 441 millions in the corresponding period of 1925. This was due to imports being Fl. 35 millions higher, whereas exports registered a falling off of Fl. 84 millions. With the exception of Germany, trade movements to the principal countries were not marked by changes of real importance. During the first nine months of 1926 German exports to Holland totalled Fl. 491 millions, against Fl. 434 millions in the same period of 1925. Dutch exports to Germany in the nine months were Fl. 266 millions, as compared with Fl. 379 millions in 1925. From these figures it will be seen that Holland's exports to Germany fell off by Fl. 113 millions—i.e., to a greater extent than the decline recorded in the whole of the Dutch exports (Fl. 84 millions). This is principally to be attributed to the tariffs on German imports, which became operative last year.

This unfavourable state of affairs is partially compensated by increased movements of coal from Holland in consequence of the colliery stoppage. During the first nine months of 1926 5,255,696 tons of coal were exported from this country, as compared with 2,740,836 tons in the corresponding period of 1925. These exports were valued at Fl. 62 millions, against Fl. 32 millions. Were it not for the fact that this class of exports rose by Fl. 30 millions, total export values would not be Fl. 84 millions less than they were last year, but Fl. 114 millions. From these figures it is evident that the whole of the decline in

export values is to be attributed to a decreased movement of goods to Germany.

Holland is deriving further advantage from the dislocated state of the coal trade. The improved conditions prevailing in the freight market—a direct result of the colliery trouble—have served considerably to enhance the receipts of Dutch shipping companies, and more especially of those engaged in the tramp trade. The consequences of the strike have also been reflected in increased activity in the port of Rotterdam, chiefly owing to the number of vessels which came in to coal. The extent of the increase in the traffic will be seen from the following figures for the first ten months of 1926, to which the Hamburg and Antwerp returns have been added:—

	Rotterdam.		Hamburg.		Antwerp.	
	Vessels.	Tonnage.	Vessels.	Tonnage.	Vessels.	Tonnage.
1926	11,906	17,545,746	12,071	14,444,864	9,507	16,006,670
1925	9,270	13,894,416	11,166	14,046,337	8,269	14,142,177
Increase..	2,636	3,651,330	905	398,527	1,238	1,864,493

The greater activity, for which the demand for bunkers has been responsible, is still more strikingly evidenced if we consider the number of steamers entered at the "New Waterway"—i.e., the entrance to the port of Rotterdam. Many vessels replenished their bunkers at the "New Waterway," and consequently did not proceed up to Rotterdam. The returns for the "New Waterway" are:—

	Vessels.	Tonnage.
1926	16,605	23,897,992
1925	11,558	16,981,151
Increase.....	5,047	6,916,841

This year the 10,000th vessel entered Rotterdam on September 21st. This is a record for Rotterdam shipping. Though it is not exceptional for 10,000 vessels to be entered at Rotterdam in a single year, it is phenomenal for this total to be exceeded in the space of nine months. In 1912 10,174 vessels, with a tonnage of 12,360,000, entered the port of Rotterdam, and in 1913 10,572 vessels, measuring 13,447,000 tons. Owing to the war, the 10,000 mark was only reached again in 1924, and almost at the close of the year—viz., on December 27th. In 1925 the 10,000th vessel was registered on November 24th.

Notwithstanding the favourable state of affairs recorded in various quarters, a satisfactory settlement of the coal trouble is looked forward to in Holland with anticipation. A conflict such as is now being waged in England cannot fail to bring unfavourable consequences in its train.

The financial state of affairs in Holland, however, as evidenced by the 1927 Budget, appears to afford every satisfaction, as is stated in detail in the Financial and Economic Review of the Amsterdamsche Bank at Amsterdam. The definite figures for 1923 show a deficit on the ordinary service of Fl. 14.1 millions on a total expenditure of Fl. 611 millions. The year 1924, with total expenditure at Fl. 608 millions, produced a surplus of Fl. 1.2 millions on the ordinary service, which advanced in 1925 to the extent of Fl. 41.5 millions, with expenditure totalling Fl. 591 millions. It should be borne in mind that the 1924 Budget had been estimated to show a deficit of Fl. 28.6 millions, so that the final results were Fl. 29.8 millions better than had been anticipated, and that in 1925 a deficit of Fl. 6.8 millions had originally been estimated. There is no reason to attach too great a value to these very favourable figures, since a good deal of caution is usually exercised by the Ministry of Finance when making the estimates, and consequently it is no exception for the results to turn out better than the estimates. This will probably be the case, too, in regard to 1927.

As regards 1926, the current year, the estimated expenditure, as originally sanctioned by Parliament, was Fl. 625.5 millions for the ordinary service, against Fl. 631.9 millions of revenue. This meant a surplus of Fl. 6.4 millions on the ordinary service. The estimates for some categories of expenditure have since then been increased to the total extent of Fl. 4.3 millions, thereby reducing the surplus, as originally estimated, to Fl. 2.1

millions. It is, however, certain that the surplus will turn out to be much greater. According to the returns of the inland revenue authorities, receipts from taxation during the first nine months of the current year contributed nearly Fl. 21 millions more to the resources of the Treasury than had been originally anticipated.

The annexed table shows the estimated revenue and expenditure for the coming year:—

	(In Guilders.)	
	Ordinary.	Extraordinary.
Receipts	603,901,717.86	7,906,587.25
Expenditure	591,868,646.71	55,098,050.00
Surplus	12,033,071.15	47,191,462.75
Deficit.....		35,158,391.60

According to the above figures, there would be a surplus on the ordinary service of about Fl. 12 millions. This surplus must, however, be at once reduced by Fl. 3.7 millions, being 60 per cent. of the proceeds of the cycle-tax, which amount is to be paid into the road fund to be formed in the near future. The balance will enable the Government to make a move towards lessening taxation, which, considered from an economic standpoint, is most essential. It is intended to provide relief in the form of a reduction of the death dues and of the rates. The Government, on the other hand, proposes to introduce a hotel and restaurant tax, but to drop the Bill pertaining to the tax on luxuries.

The relief provided by the reductions mentioned—and by the action of the Government in not widening the sphere of taxation—can only be described as inadequate. Expenditure is still at an exceedingly high level, as the table subjoined clearly shows:—

	ORDINARY SERVICE (in Million Guilders.)		Surplus (+) or Deficit (—).
	Revenues.	Expenditure.	
1913.....	205.6	197.5	+ 8.1
1918.....	329.1	334.3	— 4.3
1919.....	466.4	444.1	+ 22.3
1920.....	613.7	613.0	+ 0.7
1921.....	608.3	621.2	— 12.9
1922.....	599.0	632.4	— 33.4
1923.....	597.5	611.7	— 14.2
1924.....	609.0	607.8	+ 1.2
1925.....	632.3	590.7	+ 41.6
1926.....	589.4	589.4	..
1927 (estimated)....	603.9	591.9	+ 12.0

If the rise in the index figures since 1913 is taken into consideration, it is apparent that in recent years expenditure has been very high. Notwithstanding all the retrenchment which has been exercised—and will without doubt continue to be exercised—a reduction of expenditure which will be reflected in a proportionate reduction of taxation will not be easily effected, since an ever-increasing percentage of expenditure has been legalised by Act of Parliament, such as the National Debt, Health Insurance, Pensions Fund, payments to municipalities in respect of rates collected by the Government, buildings subsidies, making up the deficit on railways, &c. On the other hand, any expenditure not sheltered by Parliamentary Acts has already been cut down as much as possible—viz., 24 per cent. since 1922.

DENMARK.—POLITICAL UNCERTAINTY—INDUSTRIAL DIFFICULTIES—RISE IN FREIGHTS—TRADE BALANCE—BUDGET—BACK TO GOLD.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, October 27.

APART from the shipping trade, the general economic situation is unchanged. The reduction of wages in August has retarded the increase of unemployment, but at present the number of unemployed is still just over 50,000, against 34,000 at the same time last year. Several industries are faced with great difficulties owing to competition from abroad, and, generally speaking, the situation cannot be said to have improved for this branch of trade, although it has not been further aggravated. The Socialist Government quite recently produced a Bill for emergency measures in support of trade, which, besides loans and guarantees of rather considerable amounts, would, for instance, provide Kr. 23,000,000 in direct subsidies for industry, to be procured through a capital

levy. However, this Bill as a whole has met with an unfavourable reception in industrial circles and in the Rigsdag, where it will in any case be amended, and may cause a political crisis, leading to the resignation of the Government or a general election for the "Folketing." The Industrial Council has pronounced decidedly against the subsidy policy, and has suggested instead temporary emergency duties in support of those industries affected by abnormal imports. At the same time, some items of the Bill have been recommended by industry—for instance, the increase of export credits. The unsettled political situation generally—due to divergencies between the Government party and the Radicals—is unfavourable for trade. To this must be added difficulties due to the coal strike in England, which find expression in rising prices for fuel. The shipowners alone are gaining by the extraordinary state of the world coal market. The increase in freight rates has created extraordinarily profitable conditions, and has caused rather considerable rises in the prices of steamship company shares on the Copenhagen exchange; it is believed that certain companies, which would otherwise not have been able to declare a dividend for 1926, will now be in a position to do so on the strength of their income during the second half of the year.

In its latest freight report—for September—the Statistical Department states:—The greatest increase of all the rates included in the computation has taken place in time chartering. For transatlantic time charters the average for September is from three to four times as high as before the coal strike; for Continental charters the increase is much less, but still in excess of the gross freight rates. The average of all rates included in the computation, except the British coal rate (17 in all), showed a rise from August to September of about 20 per cent.

The Danish balance of trade has now been computed up to the end of August, for which month it showed a small excess of imports, Kr. 4,000,000 only, imports being Kr. 122,000,000 and exports Kr. 118,000,000. For the entire period January-August imports have aggregated Kr. 1,027,000,000 and exports Kr. 1,017,000,000, the excess of imports being thus Kr. 10,000,000 only, against Kr. 53,000,000 at the same time last year, when imports totalled Kr. 1,472,000,000, against exports of Kr. 1,419,000,000. In these circumstances, and in view of the profitable shipping trade, it may be presumed with certainty that the total balance of payments and receipts will show a rather big surplus. The wholesale price index of the Statistical Department was unchanged, 162, during the period August-September, while the index of the *Finanstidende*, which principally covers raw materials and auxiliaries, showed a rise from 141 to 145.

The State accounts for 1925-26, which are now available, show current income amounting to Kr. 382,700,000 and current expenditure of Kr. 381,600,000, the surplus being thus about Kr. 1,000,000. According to the statement of the Minister of Finance at the production of the Budget, it is expected that the current year will show a balance, and the Budget for 1927-28 shows current income to the amount of Kr. 341,500,000 and current expenditure Kr. 340,200,000, making a surplus of Kr. 1,300,000.

Concerning the final solution of the exchange question no news of importance can be reported. The krone has approached still further towards the old gold parity, and it will be convertible into gold from the New Year onwards. The gold coin question is at present the subject of negotiations, which will presumably soon lead to an arrangement. At the end of September the note circulation of the Nationalbank was Kr. 377,400,000, against Kr. 376,400,000 at the end of August, 1926, and Kr. 430,300,000 at the end of September, 1925.

NEW ZEALAND.—UNEMPLOYMENT AND IMMIGRATION—BANK RETURNS—FINANCIAL STRINGENCY—LOW AGRICULTURAL PRICES.

(FROM OUR CORRESPONDENT.)

CHRISTCHURCH (N.Z.), October 11.

THE continuance of unemployment in considerable degree beyond the time when the quickening of the new season usually begins to absorb any surplus of labour is causing a good deal of concern. The Minister of Labour a few

days ago, in reply to a deputation at Wellington, stated the numbers in the four chief cities as Auckland, 596; Wellington, 307; Christchurch, 278; Dunedin, 190. These figures, however, are clearly minimum estimates even for the unemployment in the towns. In addition to the non-registered labouring unemployed, there is still a good deal of slackness in the employment of youths, women, and girls, while the semi-unemployment in the country is also marked.

The aggravation of the problem caused by the tendency to over-importation is passing away, and recent Ministerial statements indicate the intention of slowing up assisted immigration for a time. The Minister of Labour claims that practically all the 7,689 immigrants who entered New Zealand in the last 12 months were successfully absorbed. At the same time, he stated that public works had taken 4,299 of the unemployed, and private employment had been found for 1,932. His colleague, the acting-Prime Minister, who is also Minister for Finance, was obviously concerned at the cost to the Government of this method of relief. He is not prepared to go on with public works merely as a relief measure unless the Government is getting full value for its expenditure. Since much of the public works policy depends upon borrowing, his caution is obviously justified.

The fundamental cause of unemployment is obviously to be found in the difficult economic position of the primary industries. Throughout the farming industries employment has been curtailed a good deal as a result of the economic adjustment that is being made to the lower price levels now ruling. In the meantime, the whole protective system, including the system of fixing wages by reference to the local cost of living, keeps up labour costs. Unemployment committees in the various towns this winter have attempted to increase the employment offering in the country, but the economic position of the farmers, together with the fact that town wages are now relatively higher than farm receipts, have proved an almost insuperable obstacle. There is every indication that the present season will be a good one, and the large area sown in wheat will provide rather more than the usual amount of employment; but prices are low, and as yet show little or no signs of rising. It is significant that unemployment should be worst in Auckland, which depends so heavily upon the dairy industry, whose prices are at the moment well below the level of past years. The return of summer and the customary seasonal expansion of the primary industry will probably take up a good deal of the surplus of labour, but unless the fundamental adjustments take place quickly between town and country it seems certain that unemployment will recur again next winter, especially if immigration continues on a large scale.

Since the above was written the quarterly returns of the Associated Banks have been published. They provide, as usual, an interesting commentary upon the economic and financial position. The concluding comment reproduced below which accompanies the statistical returns is very similar to the views I have expressed above. "The banking figures are not very encouraging, and they show very clearly the cause of so much unemployment. If the present slump is a temporary affair like the one in 1920-21, a year or two should see a recovery; if, on the other hand, values of our primary products move steadily towards the pre-war level, as some think will be the case, then readjustments of a stringent nature will be necessary, involving a lowering of the costs of all kinds of services." The reason for these reflections may be seen in the following table:—

(In million £'s.)					
Quarter.	Deposits.	Advances.	Deposits.	Advances.	Excess
1925—March....	49.9	43.7	6.2	..	..
June	51.5	43.9	7.5	..	..
September..	47.8	45.0	2.8	..	..
December..	46.0	48.6	..	2.5	..
1926—March....	47.3	48.3	..	1.0	..
June	48.3	48.7	..	0.4	..
September..	46.0	48.3	..	2.3	..

The contraction of deposits and expansion of advances disclosed in this table has resulted in the greatest financial stringency since the bad year 1921. The price outlook also is not very encouraging. The London wool sales have just closed with prices about 7½-10 per cent. up; but this advance is on a lower level. Butter, which last year

soared to 230s per cwt and over at the time of the shipping strike, has this year fallen from the level (170s) at which an effort was apparently made to stabilise the price, and is now quoted about 150s with a weak market, owing to accumulated stocks. Meat prices are also low, and with the over-capitalised state of the freezing industry it is obvious that there can be little improvement until some local adjustment has taken place. While it is reasonable to expect an up-swing of prices again in the years immediately ahead, evidence is accumulating that it is not safe for a producing country like New Zealand to continue to rely upon prices approximating those of the boom years after the war.

Letters to the Editor.

GREAT BRITAIN AND CHINA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Extremely important issues have been raised by the author of three recent articles on China in the *Economist*, and it is to be hoped that the questions which arise from those articles will be thoroughly discussed by those competent to do so. In the hope of promoting such a discussion I offer the following observations on his very able presentation of a case against the "Treaty Port habit of mind." May I add that I am in complete accord with the general thesis of these articles?

The author seems to take the ground that our present troubles in China are aggravated if not caused by the "Treaty Port habit of mind," a false conception of affairs among the European and particularly the British merchants and others in those ports. It is suggested that they are clinging to legal and diplomatic defences which have been rendered obsolete by the march of events—that concessions, extraterritoriality, and the rest are no longer of any avail to promote their interests. There is, of course, much beside this in these articles. The moral appears to be drawn that the time has come to trust China, and abandon those limitations on her sovereignty which many Chinese so naturally resent.

This is an attractive doctrine, because it appeals to ideals of equity which are fortunately very powerful to-day in international politics. It is also grateful to a war-weary nation like ours, which would endure much rather than fight to defend any market or the interests of any body of traders. "Fiat justitia ruat cælum." If there were any real political entity in China to trust the argument would be good.

But unless I misread these articles they also seek to prove that the sky will not fall, but, on the contrary, we shall lose no trade if we surrender our privileges. And here, I venture to think, your contributor tries to prove too much. It may be so, but it does not, in my opinion, stand proved by the fact that foreign trade in China as a whole has not shown the setback which we would naturally expect from the disturbed conditions in many parts of the interior. Those who are on the spot seem to think it shows a "hold back" in the sense that it might be expected to advance very rapidly but for the disturbances—but that is a matter of opinion.

In this connection it should be remembered that trade with China is made through the Treaty Ports and Hong Kong, and that though these ports are ultimately dependent on their hinterlands, some of them are also great cities of refuge and markets in themselves.

May I draw your attention to the Department of Overseas Trade's recently published Report on the Commercial, Industrial, and Economic Situation in China for 1926, presented by the Acting Commercial Secretary at Shanghai. On page 11 we read:—

"The surprising fact once more remains to be stated that the revenues derived from the legitimate taxation of foreign trade through the Customs administration in 1926 again exceeded all previous records, though the rate of progress was not so great as in recent years. What certain of the main ports of import and export, such as Shanghai, Hankow, Canton, and Swatow, lost in revenue owing to local disturbances was gained by others, such as Tientsin and the Manchurian ports. The question at once arises how the foreign trade of China can maintain its level in the face of such adverse conditions."

Three reasons are given: First, that the disturbances rarely involve the whole country at once, but affect first one place, then another. Second, that a large proportion of the trade is carried on in and through the Treaty Ports, where there is comparative stability, largely due to the presence of well organised foreign settlements. Although only a comparatively small fraction of the total native population of the country resides in these ports recent expert estimates have put the proportion of foreign goods consumed in them at between 30 and 50 per cent. of the whole. The disturbed condition of the country in

recent years has also led not only to the concentration in these areas of most of the modern industrial organisations which import considerable quantities of raw materials and machinery, but also of the wealthier classes of Chinese." The third reason given is that "it must be supposed that the present demand for foreign goods is in the nature of an irreducible minimum, which local disorders cannot further affect, and in this connection it is of interest to note that the foreign technical advisers at the Customs Conference came to the conclusion that only 20 per cent. of the present foreign imports could properly be classed as luxuries."

I would emphasise another cause, referred to in your article relating to Manchuria, namely, that while most of the rest of the railways in China are being allowed to fall to pieces, the Japanese are in control of a growing system in South Manchuria, and though since 1921 they have been discreet in the manner of their control, the control remains. Trade has fallen off where control has ceased.

Let us remember that as yet, in the political sense of an effective Central Government, there is no "China" to trust. The Central Government is bankrupt and powerless, and trusting it would really mean trusting some local military adventurer with every inducement to squeeze any city in his control to the uttermost farthing.

Surely it is a bold assumption that complex cities like Tientsin and Shanghai, modern financial centres, would suffer no more from such exploitation than the more primitive social organisation of the interior?

To my mind it is self-evident that any reduction of the protection now afforded the inhabitants of the Treaty Ports—including their great Chinese populations—would result at present in the loss of a great part of a market which British industry sadly needs. But if any Chinese party, as distinct from a person, can establish a moderately efficient Central Government, the surrender of those privileges should be promised and performed within a stated time, beginning at once with all persons outside the actual Treaty Ports. I do not think public opinion in those ports would refuse to accept this proposition.

It may occur to someone to inquire how Tsingtau has fared since it was taken over by the Chinese. I have the figures from 1920 to 1924, and I quote them because they seem to go against my contention. The Customs revenue in 1920 was Tls. 1,760,285, and in 1924 it had risen to Tls. 3,221,252. There is some famine surtax in this, but it is not disputed that trade has increased in spite of the fact that the port facilities are falling into disrepair and deteriorating. But it must be remembered that, though there are no concessions in Tsingtau, the foreign traders enjoy the protection of extraterritoriality, and, one may add, the revenue is collected by a Customs service under foreign control. —I am, Sir, yours truly.

London, November 11th, 1926.

W. J. HINTON.

PRE-WAR DEBTS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—May I enlist the help of your valuable paper in supporting the plea of the exporters of our country to obtain assistance from the Government in trying to collect the money owing to them?

Serbian, who owe considerable sums to both Manchester and Bradford, are sheltering themselves behind an iniquitous decree, promulgated by their Government in 1924, that they need not pay their foreign debts excepting in their own depreciated currency. This would have meant at that time accepting approximately £60 for every £1,000 owed. Various attempts were made by the Serbians to settle their debts, but their proposals were so inequitable we were bound to refuse them.

In 1925 I saw a notice in the *Times* to the effect that a Trade Treaty between ourselves and Jugo-Slavia was being drawn up, and wrote to the Foreign Office pointing out that our debts had not yet been paid, and would they use this opportunity to get the decree passed by the Serbian Government repaying them in Dinars annulled. To this the Foreign Office sent me a reply signed by Sir A. Chamberlain, "that they would bear it in mind."

In September, 1926, I noticed another announcement that the Treaty had been concluded and was only awaiting signature. I called at the Foreign Office, but was directed to see the Commercial Relations and Treaties Department of the Board of Trade, who told me, after hearing what I had to say, that this was the first they had heard of it, and they feared it was too late to do anything. My firm then wrote them on October 5th, and they replied "regretting that no progress towards an amicable settlement of these debts has been made, but they are still in communication with the Foreign Office with a view to any favourable opportunity being taken to advance the solution of this long outstanding difficulty." This is the way our Foreign Office and the Board of Trade between them try to get out of their difficulty, and will not acknowledge that they have missed the best opportunity they have had when settling the new Trade Treaty to also get this question settled.

With regard to Poland, there have been a great many cases of goods seized by the Germans during the war whilst in transit from England to Poland. Where these seizures have occurred in Germany consignors have a claim against Germany, their claims have been preferred through the British Reparation Claims Department of the Clearing Office, and have been enforced by the British authorities. I believe that in most such cases compensation has been duly secured from Germany.

However, where goods had been consigned from England to Poland and sold "free English port" or "free old Russian frontier," and the seizures took place after the goods had crossed the frontier, the English Reparations Claims Department has consistently refused to accept any English consignors' claims for compensation for the seizure of such goods on the grounds that the selling conditions of delivery "Franco-Russian frontier" having been completed, in English law, the ownership of the goods no longer vested in the consignor.

The German law on this point is, however, very different, as the German law recognises as the legal owner the person under whose actual control the goods were at the time of seizure. According to the German legal view of the seizures which took place after goods had crossed the Russian frontier, therefore, such goods still being, in the ordinary way, under the control (telegraphically) of the British exporter, the ownership of such goods would still vest in the British exporter.

However, as the British authorities seem to be guided entirely by the English legal standpoint, the result has been that many English exporters have been unable to prefer claims through the Reparations Department in London against Germany for seizure of goods, even though, under German law, the German Government would have been liable to pay compensation to the owner (the British exporter). The latter is told by the British Clearing Office authorities that the Polish customer, being, in their view, the owner of the goods when seized, is the person entitled to make a claim for compensation. Accordingly, many Polish firms have preferred claims against the German Government before the Paris Mixed Arbitral Tribunal for seizures of their goods during the war, and included amongst their claims seizures of "in transit" goods as above mentioned.

Now we hear on good authority that the Paris Tribunal, owing to a fault in the Peace Treaty, was impotent to function in the matter of these Polish claims against Germany.

Some of our Polish customers have very large claims against Germany, of which British exporters' claims through the customers' agency only form a part, and the fact that the Poles cannot obtain compensation from Germany simply means, in many cases, that they cannot pay the English exporter at all.

Thus the English exporter suffers, for his customer cannot pay and he himself is precluded, by reason of the narrow view entertained by the British authorities on the liability of the German Government for the seizures above described, from claiming any compensation whatsoever, and is, in most cases, compelled to write off the whole amount as loss.—Yours truly,

J. E. DARTON.

NATIVES AND LAND.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The article in your issue of November 6th by a Cape Town correspondent on the South African Native Lands Bill does nothing to explain why the friends of the native in South Africa are opposed to the Bill. Two points at least require to be made clear:—1. The so-called "released" areas are not an addition to the potential Native Land Areas. Although the bargain implicit in the 1913 Act, by which Natives were excluded from land-owning over the greater part of the Union in return for the exclusion of Europeans from additional Reserves to be scheduled, has never been implemented, in practice the Governor-General has exercised his power under the Act to sanction native purchases in the areas scheduled by the Beaumont and the Local Commissions. Therefore, "to treat all these additional areas as 'released' areas, where land may be owned either by natives or by Europeans," as the new Bill proposes, is to make no addition, but definitely to refuse to the natives additions to their Reserves, which the Beaumont and Local Commissions regarded as the absolute minimum when the native population was considerably smaller. If the natives' rights in these areas are to be further curtailed by the provisions respecting "islands," it is certain that the net result of the Bill will be that the native's chance of acquiring land has diminished, not increased. The proposed Native Land Purchase Fund, even if it were ever likely to be able to compete with the much larger resources put at the disposal of the white man by the Lands Department, would merely enable a few natives to pay the higher price which the restriction of the areas open to them will put upon native land.

2. The net result of the restrictions upon squatting and labour tenancy will be that the native, since he cannot buy land, must

either clear off the land or bind himself to the white farmer. If he clears off the land he can go either to the reserves, which are already overcrowded, or to the towns, where his rights of residence are now restricted by the Urban Areas Act of 1924, and his opportunities of employment restricted by the Colour Bar Act and the Administration of the Wages Act; he will therefore be compelled to bind himself to service with the farmer. It is true that labour-tenancy is common in South Africa, but, unless I am mistaken, the Bill proposes to double the proportion of his time which the native tenant gives to the farmer—180 days instead of 90—and so make it impossible for him to work for anyone else. The native's fear is that the real object of the Bill is simply to prevent him from working for the mines and urban industries at £4 a month, and compel him to work for the white farmer at 10s to 30s a month. Whether this be called "serfdom" or "labour tenancy" matters very little.—Your faithfully,

STUDENT.

THE METROPOLITAN ASSOCIATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your interesting article upon London Property Companies you draw attention to the Metropolitan Association, and observe that the slight reduction in its revenue is presumably caused by variations in rents in accordance with alteration in rates and to increased expenditure in repairs and renewals. Your conclusions are well founded, and are easily explained by the constitution of the undertaking. The Metropolitan Association for Improving the Dwellings of the Industrious Classes was incorporated by Royal charter in 1845. Its main object was philanthropic, not financial; by its charter dividends were strictly limited to a maximum of 5 per cent., while even its guarantee fund was limited to £15,000. By originally borrowing from the Public Works Loan Commissioners, and afterwards by the creation of 3½ per cent. debenture stock, the activities of this association were carried on to the great benefit of the industrious classes, the company being now in the possession of ten blocks of freehold property and four blocks of leaseholds in the thickly populated parts of industrial London at a total cost of £310,000, while the capital invested in the undertaking amounts to £236,000. Unfortunately for the classes this company was formed to benefit and for those who have for many years carried on this good work, money can no longer be raised at 5 per cent., and even if it could be found, it would be quite impossible to acquire slum property, rebuild, and even get 2 per cent. on the outlay. Consequently, the company is forced to spend its income on improvements for the benefits of its fortunate tenants, who also derive the advantage of any reduction in rates from a corresponding reduction in the rents they pay. The result is expressed in a rent roll of £38,000 only producing a net revenue of £8,000, after applying £25,000 to the upkeep and improvement of the various properties, including up-to-date sanitation, electric lighting, and other advantages which would naturally be charged to capital account. It is a vast pity that investment of this description—i.e., a small safe return where all extra profits are enjoyed by the tenants—is no longer possible. Years ago, in my stockbroking days, I always used to recommend investment in this Metropolitan Association stock to investors who wanted a small but practically certain yearly income added to the satisfaction of doing something towards the benefit of their fellow-creatures. It is strange to see the £100 stock quoted at 73½, but as dealings seldom take place it is probable, as you say, there is none obtainable in the market. Meanwhile, the deplorable housing conditions in the district surrounding the model block of dwellings in Pancras square, where the office of the association is situated, cry out for some financial solution which would enable those who are interested in the welfare of the industrious classes—and who is not?—to provide decent accommodation at the lowest possible rate at which capital can be attracted in these days of high interest and high taxation.—Yours, &c.,

November 9th.

RETIRED.

DEBT AND UNREST.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There is an aspect of our return to gold which has hardly received the attention it deserves, namely, the increase it caused in the burden of the debt and the damage done thereby to the national output, though I confess that it is impossible to estimate how far it has actually intensified the unrest of recent years, on the one hand, or added much to the satisfaction of the rentier on the other. It is, in fact, open to anyone to believe that the distribution of the national output between hand, brain and rentier will adjust itself so as to be pretty much the same year after year, except in a year of widely-spread strikes, that is to say, legal enactments intended to modify distribution will very probably call into play forces which will neutralise the influence of the enactments.

Be that as it may, it was pretty clear before the war that unrest was increasing, with the consequence in prospect that output would ere long be diminished. The war postponed

this; we are now seeing it in operation. That unrest is substantially the secular complaint of the working hand against the non-working creditor or the employer.

I submit that there is a way to check it, though not to stop it—namely, to enact a regular small annual increase in the rate of income-tax—say a penny per year—and place the whole proceeds of income-tax, either with or without super-tax, in the hands of the Debt Commissioners for paying interest on and liquidating the national debt. The Treasury would, of course, remain liable for the debt if there was a deficit at any time, but would be prohibited, so long as the Act was in force, from using the income-tax for any purpose other than that of paying debt. A limit might be prescribed—say, 10s in the pound—which would take 72 years to reach.

The scheme has five features:—

1. Income-tax, unlike local rates on an assessed annual value of a factory, is not an expense which enters into cost of production; it therefore does not to any appreciable extent hinder output.

2. The knowledge that the rentier's tax was being annually increased should of itself allay somewhat the worker's discontent, and could be appealed to by employers and others as a reason for the worker to put his back into his job.

3. Probably distribution would adjust itself independently of the rate of income-tax, as stated above, but the worker would be fooled into thinking that distribution was being modified in his favour, just as he has lately been fooled into behaving as if distribution would be modified in his favour by striking.

4. The slowness of the rate of increase in the tax would prevent capitalists from being upset, and the fact of the increase, coupled with the fact of its being slow, might, I believe, actually stimulate saving.

5. Consequently, a willing worker would replace a discontented one, and Professor Bowley, if he lives long enough and gets a census of production to meet his requirements, should be able to register an increase of output, while the churches might, with a better chance of success than at present, call upon us to be better men, which is the thing that really matters.—I am, Sir, your obedient servant,

ALFRED HOARE.

Books and Publications.

INTERNATIONAL FEDERATION OF TRADE UNIONS

THE Fourth Year-Book of the International Federation of Trade Unions is concerned with facts, and primarily with those relating to the trade union movements affiliated to the Amsterdam International. It does not deal with the rise of the Red International of Labour Unions and the struggle between the Communist trade unionism of Moscow and the Socialist trade unionism of Amsterdam, nor with the trade union movement in countries not affiliated to the I.F.T.U. It is significant that, apart from the United States, Australia, and Russia, there is no important national industrial labour movement which is outside the Amsterdam International, and Russia is the only nation where trade unionism is a force whose movement is affiliated to the Red International of Labour Unions.

The I.F.T.U. is open to national trade union centres which adopt by their rules the policy and objects of the Federation. The organisation is managed by an executive committee and a general council. The former body consists of its president, three vice-presidents, and three secretaries. It is, in fact, a committee of the officers. The general council is a larger body composed of the executive, eleven delegates from the affiliated national centres, and three representatives of the International Trade Secretariats. The Congress of the I.F.T.U. is a gathering consisting of the general council and delegates from each affiliated national centre. The executive committee must meet at least six times a year, and the general council twice a year. The congress normally meets every three years; but extraordinary congresses may be called at any time. Affiliated national centres pay an annual fee of 12 Dutch guilders per 1,000 members.

The affiliated membership of the I.F.T.U. for the last three years for which particulars are available was as follows:—

Year Ending	Membership.
Dec. 31, 1922	18,185,531
1923	15,316,127
1924	13,133,004

This fall is almost entirely accounted for by the shrinkage in affiliated trade union membership in Germany, though the percentage decline was greater in Italy, Greece, and

Czechoslovakia. Of the membership in 1924, 85.2 per cent. were men.

The International Trade Secretariats associated with the Federation are organisations of workers in particular industries or occupations. The chief trades so organised and their membership are given below:—

MEMBERSHIP DECEMBER 31.

	1922.	1923.	1924.
Transport workers	2,154,806	2,091,840	1,921,426
Metal workers	3,204,692	2,585,717	1,864,471
Miners	2,001,196	1,941,199	1,832,337
Textile workers	1,726,440	1,326,030	985,572
Building workers	1,143,550	939,940	885,118

The total membership of the 26 International Trade Secretariats at the end of 1924 was nearly 13 million. The Year-Book gives reports of the various secretariats, covering such widely different groups as hairdressers and diamond workers, hatters and tobacco workers.

Perhaps the most important section of the Year-Book is that relating to the position of trade unionism in the world as a whole, and the "orientation" of the various groups. Between the end of 1921 and the end of 1924 the total trade union membership fell from 46,273,132 to 36,062,711, or by 22 per cent. In actual fact the fall was somewhat greater, as the later figures cover a larger number of countries. If we take the 34 countries for which statistics are available on December 31, 1921, and December 31, 1924, there was a fall of 24 per cent. During 1924, however, the shrinkage was negligible, and it appears that membership has in the aggregate become stabilised, even if it is not now actually increasing.

The I.F.T.U. Year-Book classifies trade unions into five groups—(1) those which are affiliated with or are in general sympathy with the standpoint of the Amsterdam Federation; (2) Communist organisations; (3) denominational organisations, principally Catholic, Christian and Christian-Social unions; (4) syndicalist organisations; (5) various organisations, which include, besides the Fascist bodies (credited with two million members), unions in countries where there is no pronounced "orientation." The changes which have taken place in trade union membership in the various groups are given in the table below:—

Orientation.	Membership.		Increase or Decrease.	
	Dec. 31, 1921.	Dec. 31, 1924.	Absolute.	Percentage.
I.F.T.U.	22,411,826	17,702,431	-4,709,395	-21.0
Communist	7,069,000	7,333,845	+264,845	+3.7
Denominational	3,759,106	2,112,109	-1,646,997	-43.8
Syndicalist	1,254,217	471,435	-782,782	-62.4
Various	11,778,983	8,442,887	-3,336,096	-28.3
Total	46,273,132	36,062,722	-10,210,421	-22.1

It will be seen that during this period of declining membership the only group which actually increased was that of the Communist organisations. According to the Year-Book, "in general, it may be said that the economic slump has been the chief cause of the decline." It is admitted that a further cause of the shrinkage in the first group is "the disruptive work of the Communists." As regards the last group, since 1921 the attitude of many trade union organisations has been more clearly indicated, and it has been possible to place them in their proper classification.

Whilst, generally speaking, a time of "slump" reacts adversely on trade union membership, it has an opposite effect on Communist organisations. A period of economic crisis is used to show the impotence of "reformist" organisations, and Communist propaganda finds a more fertile field in the disillusionment, discontent, and impaired labour standards resulting from trade depression and unemployment. At the end of 1921 Communist organisations existed only in Russia, Bulgaria and Yugoslavia. At the end of 1924 they were to be found also in Chili, Czechoslovakia, Estonia, France, Holland, Japan, Latvia, Lithuania, and Roumania. In many of these countries, however, trade unionism is not an effective force, and even where it has influence, the Communist organisations, except, of course, in Russia, are not important factors. The figures of Communist bodies are swollen by the large

numbers of Russian trade unionists, as may be seen from the attached table:—

	Dec. 31, 1921.		Dec. 31, 1924.	
	Member-ship.	Percentage of Total T.U. Membership.	Member-ship.	Percentage of Total T.U. Membership.
Total membership of trade union movement	46,273,132	..	36,062,711	..
Russian trade unions	6,857,000	14.8	6,604,684	18.3
Other Communist organisations	212,000	0.5	729,161	2.0
Total	7,069,000	15.3	7,333,845	20.3

The relation which each "orientation" bears to the whole trade union membership is seen below:—

"Orientation."	Percentage of total Membership—	
	Dec. 31, 1921.	Dec. 31, 1924.
I.F.T.U.	48.4	49.1
Communist	15.3	20.3
Denominational	8.1	5.9
Syndicalist	2.7	1.3
Various	25.5	23.4

It is clear that the "red" trade unions have made headway; but it is also clear that it is chiefly in countries where the trade union movement is weak. The real strength of trade unionism in a country may be measured, in a rough and ready way, by expressing trade union membership as a percentage of the total population. This percentage is, generally speaking, highest in countries classified under the I.F.T.U. group, and lower in those with Communist sympathies. The highest percentages are found in:—

	%		%
Austria	16.0	Germany	11.5
Great Britain	13.6	Belgium	9.6
Australia	12.7	Denmark	9.4
Czechoslovakia	12.3	New Zealand	8.8

In Russia trade unions form 5 per cent. of the population, and in most countries where the "red" trade union movement has established itself the proportion is even less.

There has been a fierce struggle between the Red International of Labour Unions and the Amsterdam International. Attempts at reconciliation have failed, and there is no reason to believe that co-operation, much less amalgamation, will be realised for some time.

BOOKS RECEIVED.

The Dying Peasant. By J. W. Robertson-Scott. (London) Williams and Norgate, 14 Henrietta street. 10s 6d net.

A review of the position of agriculture in Great Britain. Fundamental conditions are discussed in picturesque and trenchant style. The author concludes:—"The only final solution is for the State to become the ultimate landlord."

The Oil War. By Anton Mohr. With an Introduction by Hartley Withers. (London) Martin Hopkinson and Co., Limited, 14 Henrietta street, Covent garden. 7s 6d net.

An account of the recent history and future prospects of the oil problem and an investigation into the connection between oil and international politics. The author is Lecturer in Political Geography at the University of Oslo.

Caravans of Commerce. By Isaac F. Marcossou. (London) Harper and Bros., Limited, 35 Great Russell street. 7s 6d net.

A description and a eulogy of the work of the foreign service of the United States Department of Commerce. A story interesting to business men, and told in attractive style with a wealth of incident and anecdote.

The Breakdown of Socialism. By Arthur Shadwell. (London) Ernest Benn, Limited, 154 Fleet street. 10s 6d net.

This book is based on a series of articles published under this title in the *Times* during February of this year. They were the result of a tour of inquiry made by Dr Shadwell on the Continent to investigate the progress of Socialism since the war. The impression made upon his mind by his tour is expressed in the title of the book.

Capitalism is Socialism. By J. Taylor Peddie. With a foreword by Gilbert C. Vyle. (London) Longmans, Green and Co., Limited, 39 Paternoster row. 7s 6d net.

We may sufficiently convey to our readers the idea of the book if we quote the words of Mr Peddie himself, circulated with the book:—"This book...is a direct challenge to the recent Bankers' (sic) Manifesto on international trade. I have also endeavoured to prove that there is no such thing as a Law of Supply and Demand nor a Quantity Theory of money. It is the prevailing belief in this law and theory which causes the present economic and social unrest. The money economy in which we live is a vast hoax and swindle; we need a monetary system akin to a barter economy in order that there may be no impediment to the development of production and distribution."

Foreign Trade and World Politics. By Herbert F. Fraser.

(London) Alfred A. Knopf, 38 Bedford place. 14s.

The author is Instructor in Modern European History at the Phillip Andover Academy. His book is a study of the international foundations of prosperity, and is designed to promote international understanding. The main questions dealt with are: What is involved in our (i.e., America's) policy of isolation from European politics? How does isolation affect the European market for American goods? To what extent do we depend on Europe? Mr Fraser is an anti-isolationist. He concludes:—"We and all the world have passed from economic interdependence to economic interdependence; on the political side we must advance from national sovereignty to the more complete ideal of organised international co-operation."

Zum Problem einer Rentenaufwertung in Oesterreich.

Von Dr Paul Stiassny. (Wien) W. Braumüller.

Rm. 2.

An interesting study of the problems connected with the revaluation of the public debt in Austria, including an historical account of the effect of the Treaty of Versailles and subsequent agreements on this problem.

Rubber-Producing Companies. 1926. Compiled by

Mincing Lane Tea and Rubber Share Brokers' Association. (London) Financial Times, 72 Coleman street. 7s 6d net.

The particulars supplied concerning practically every British rubber company embrace directorate, capital, acreage, tenure, when planted, purchase price, crop yields, and net price per lb for last seven years, synopsis of accounts for last seven years, investments, forward sales, estimates, &c., and all recent reorganisations and amalgamations. In the present position of the rubber industry the latest issue of this well-compiled reference book is peculiarly useful to all rubber investors.

European Economic and Political Survey. October 30, 1926. Vol. II. No. 4. (Paris) The Reference Service on International Affairs of the American Library in Paris, 10 Rue de l'Elysée.

OFFICIAL PUBLICATIONS RECEIVED.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C. 2:

Electricity Supply. 1924-1925. Return of Engineering and Financial Statistics relating to Authorised Undertakings in Great Britain for two years ending March 31, 1925 (or May 15, 1925), for Local Authority Undertakings, and December 31, 1924, for Company Undertakings. 15s net.

This return includes approximately 650 pages of statistics and other information covering all local authority undertakers and all company undertakers in Great Britain. Part I. gives particulars of the system of supply and of the generating plant installations, together with annual figures covering population, consumption, maximum load, total connections, load factor, units generated, units sold, &c. Part II. gives corresponding particulars of capital raised and expended, revenue from working, average revenue per unit sold, working expenses, and appropriation of surplus. A very full summary of the main features of the Report, which is included with a number of summary tables at the beginning of the volume, will be found particularly convenient to the general reader.

Report of the Chief Registrar of Friendly Societies for the year 1924. 4s net.

Accounts Relating to Trade and Commerce of Certain Foreign Countries and British Countries Overseas, including Figures Received up to September 15, 1926. 6s net.

The publication of the De Beers report, showing excellent figures, was followed by a fall in the price of the shares, due to a desire to take profits on the part of those who had bought the shares considerably lower down, and who, moreover, are apprehensive in consequence of the fresh diamond discoveries reported from other districts. The Chartered market remained hard, buoyed by dividend hopes, but in the gold share list no movements of any real consequence have occurred, the Cape as well as Paris being disinclined to take a hand in them at present. The tin share market, after an exhibition of dullness, went ahead on a rise in the price of the metal. Russians

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

		1920	

Bolsover Colliery Company, Limited.—Issued share capital £3,487,000, divided into 2,662,000 ordinary shares of £1 each, 175,000 first cumulative 6 per cent. preference shares of £1 each, and 650,000 second cumulative 8 per cent. preference shares of £1 each. There is also outstanding £109,200 5 per cent. first mortgage debenture stock. This is an issue of £400,000 6 per cent. mortgage debentures at par, redeemable 1941-56. A sinking fund, adequate for the redemption of the whole of the present issue in 1956, will begin in three years' time. Subject to the existing 5 per cent. debentures—which will be repaid at maturity, the final year being 1932—the debentures now issued will constitute a first and floating charge (ranking equally with the remainder of the £1,000,000 authorised as and when issued) on the general undertaking and

West Surrey Water Company.— Issued share capital, £165,625, consisting of £25,000 ordinary shares, 10 per cent. maximum, £77,320 7 per cent. maximum, £9,460 preference shares 5 per cent. maximum, £15,000 preference shares 6 per cent. maximum, £7,500 preference shares $5\frac{1}{2}$ per cent. maximum, and premiums £31,345. There is also issued debenture stock totalling £56,400, consisting of £36,400 4 per cent. debenture stock, and £20,000 5 per cent. debenture stock. This is an offer for sale by tender of £26,412 5 per cent. perpetual debenture stock, the minimum price of issue being £95 per £100, and 430 £10 6 per cent. preference shares, the minimum price of issue being £10 10s per shares. The company was incorporated in 1869 for supplying a residential district of about 40 square miles in extent, including Walton-on-Thames, Oatlands, Hersham, Weybridge, Addlestone, Byfleet, Cobham, Chertsey, Littleton, and Shepperton. The population is at present 45,000, and the number of supplies is 8,921. Dividends on the ordinary capital, it is stated, have been as follows:—On the 10 per cent. maximum ordinary shares, 1907-1919 10 per cent.; 1920, $6\frac{1}{2}$ per cent.; 1921 and 1922 (June), $7\frac{1}{2}$ per cent.; and 1922 (December), 1923-1926 (June), 10 per cent.; on the 7 per cent maximum shares, 1907-1919, 7 per cent.; 1920, $5\frac{1}{2}$ per cent.; 1921 and 1922 (June), $5\frac{1}{2}$ per cent.; 1922 (December), 1923-1926 (June), 7 per cent. The net revenue of the company for the 12 months ended June 30 last is given as £12,819, of which interest on the debenture stock, including the present issue, requires £3,777; dividends on the preference capital, including the present issue, require £2,044, leaving available for dividends on the ordinary shares £6,999. Both the debenture stock and the preference shares, it is stated, are full trustee investments, and appear to be covered as regards interest and dividends. Incidentally, there is no reference to Stock Exchange quotation.

Ankole Tinfields, Limited.—Share capital £100,000, divided into 400,000 shares of 5s each. This is an issue of 100,000 shares at par. The company has been formed in particular to take an option to acquire the benefit of two licences granted by the Uganda Government to prospect for minerals on two areas of approximately 90 square miles and 200 square miles respectively in the Ankole district of Uganda. If the option is exercised, the purchase price will be, it is stated, £70,000, payable as to £5,000 in cash and £65,000 in fully-paid shares of the company. A speculation for optimists.

Argus Tin Corporation, Limited.—In order to comply with Stock Exchange regulations, particulars are advertised of the above company. There is an issued share capital of £49,001, divided into 490,010 shares of 2s. each. The company was incorporated in 1924 for the purpose of acquiring mineral lands and rights in any part of the world. The properties acquired from the vendors and others since taken up comprise

COMPANY MEETINGS, &c.

DALGETY AND COMPANY, LIMITED.

DIVIDEND AND BONUS MAINTAINED.

POSITION AND PROSPECTS OF WOOL TRADE.

The forty-second annual meeting of Dalgety and Co., Limited, was held, on the 11th instant, at the offices, 65-68 Leadenhall street, London.

The Secretary (Mr C. D. Mackintosh Gow) read the notice convening the meeting and the report of the auditors.

The Chairman (the Hon. Edmund W. Parker), in moving the adoption of the report and accounts, said that the year under review, although yielding results which did not quite come up to those of the preceding one, must, he thought, be considered of an entirely satisfactory nature. At the last meeting he spoke of the extraordinary slump in wool prices and the consequent dislocation of the company's financial machinery. This year they had been spared all that. Wool had sold well on the whole, and at payable prices to growers, and he hoped that this state of affairs would continue, although he was loth to assume the rôle of prophet; and there were people who considered that there were several adverse factors that might militate against it—such as the present state of trade in Bradford. Exchange rates, too, had shown no wild fluctuations, so that the disabilities under which we laboured before the return to the gold standard had disappeared, to the advantage of Australian trade generally.

CAPITAL REQUIREMENTS.

He mentioned last year that the Board had been considering various methods of increasing the company's resources in the direction of fresh capital, but, beyond putting out an issue of 4½ per cent. irredeemable debenture stock, amounting to £250,000, they had not as yet definitely decided to take further steps. He was convinced, however, that before long they would have to do something in this direction. The company's wheat operations locked up a very large sum, and, in addition to these outgoings, although during the past year conditions had much improved in Western Australia, their clients in that State had had to lean very heavily upon the company in order to restock their properties and carry on with a view to resuming their normal activities. Parts of Queensland, too, had suffered from want of rain, and feed in some districts entirely disappeared, so that squatters had had to resort to hand feeding in order to save their flocks. Despite this, losses had been very heavy, and he had heard the figure put as high as from six millions to eight millions of sheep. Therefore, in this State, too, they must be prepared for contingencies. He was glad to say that partial relief had come to these stricken areas, and he hoped further losses would be averted. In New Zealand the company had not done nearly so well as last year, when the Dominion was responsible for a considerable percentage of their earnings. On this occasion, however, the season had been far from good, and the North Island was the victim of generally unfavourable weather. These conditions naturally affected the earning power the company's branches, especially so as prices of the primary products of the Dominion had declined during the year.

WOOL POSITION.

With regard to wool, steady markets had ruled, certainly with prices on a much lower basis, but at the same time with less violent fluctuations than those which caused so much anxiety last year. In April, 1925, the sales in the Commonwealth had to be suspended owing to lack of demand. They were resumed in July, and after this breathing space, which gave buyers time to reorganise their financial resources, satisfactory clearances of the offerings were made at a slight advance in price for most descriptions. With not more than the usual ups and downs wool had sold remarkably well during the year, and it was a striking tribute to the general stability of the trade to be able to report an almost complete absorption, not only of the 1925-26 clip—amounting to the record production of 2,377,866 bales of Australian wool—but also of the carry-over of over half a million bales of the 1924-25 season. The actual sales in Australia amounted to the huge total of 2,655,334 bales. The value of the wool sold in the Commonwealth amounted to £57,718,015, against £55,545,838 in the 1924-25 season. In New Zealand the clip showed a decrease of 5,764 bales, but with the carry-over the sales amounted to 491,582 bales, valued at £8,262,847, against a total of 462,795 bales, valued at £13,537,344, in 1924-25. Taking Australasia as a whole, in spite of the decline per bale from £33 13s 10d in 1924-25 to £20 19s 4d in 1925-26—or from 24.7d per pound to 16d per pound—there was an increase in value of £2,172,177. Growers, of course, might view with some alarm the drop in value of nearly £13 a bale for their wool, but at the lower level a

stable market was much more likely to rule. The outlook for wool, in his opinion, was hopeful and the position generally sound. The demand for the finest qualities was as keen as ever, because, in spite of the high cost of clothing, the public, generally speaking, demanded the best cloth. It was not expected that the coming clip would show an increase; indeed, it was anticipated that, in spite of the fact that some of the States—notably New South Wales—would have a larger production, the heavy losses in Queensland would more than counterbalance this. Latest estimates put the 1926-27 clip at 2,370,000 bales, including wool from sheepskins. This was some 8,000 bales less than in 1925-26.

WHEAT AND DAIRY PRODUCE.

The Australasian wheat crop for the 1925-26 season yielded 113,500,000 bushels, as compared with 165,000,000 bushels for the previous season. Prices were again high, averaging to the farmer approximately 5s 9d per bushel net, delivered at his nearest railway station. Such a price was encouraging to the industry, and had resulted in considerably more country being put under wheat in the best wheat-growing areas. The prospects for the coming crop were so far excellent, and the hope of a yield of 150 to 155 million bushels was spoken of. Prices had opened at a profitable level to growers, although the likelihood of an abundant supply of wheat throughout the world in the coming year might check the upward course of prices which was just now in evidence.

Turning to the company's interests in dairy produce, the rainfall in Australia having been irregular during the past season, the record production of the previous year was not maintained; but the total exports of dairy produce were normal, and consisted of 40,454 tons of butter and 3,075 tons of cheese. There was a considerable decrease in the value to £6,090,663, as compared with £10,361,840 during the twelve months ended June 30, 1925.

The course of the market for New Zealand and Australian butter this year had been very different from that of the preceding two years, when values rose during the late summer and autumn months, and an exceedingly high price was reached in the month of October. In 1923 1924, in 1924 22s, and in 1925 23s 4s was obtained for finest New Zealand, with Australian only relatively a little less. In October of this year the price was 13s 6s, and to-day finest New Zealand was quoted at 14s 6s to 14s 8s.

The New Zealand Dairy Produce Board had complete control of the shipping and marketing of all New Zealand dairy produce shipped on and after September 1st last, and would, he feared, commence selling under unfavourable conditions, due partly to decreased consumption and heavy stocks in cold store here, and partly to an undoubted general resentment by the wholesale and distributing trade of the announced intention by the board of an attempt to fix minimum selling prices on this market. This company's allocation of dairy produce for realisation under the new scheme was satisfactory, and they would do their best to obtain the most favourable results.

FROZEN MEAT.

With regard to frozen meat, the period under review was one of considerably lower prices than the abnormally high quotations of recent years, and constituted a definite setback, to the disadvantage of the producers in the Commonwealth and Dominion. The coal strike and other industrial troubles, with consequent unemployment, had seriously affected the consumptive demand, and prices steadily declined until they reached a level unprecedented since the cessation of Government control. Prices for frozen mutton and lamb on Smithfield market were about 1½d per pound lower all round since he last addressed the shareholders, and prospects were not favourable to much improvement. Frozen beef showed no important change, but the Continental demand had been seriously curtailed by adverse rates of exchange and protective measures in certain Continental countries. The total value of frozen meat exported from the Commonwealth for the period under review was £4,104,638, and from the Dominion £9,316,736.

Dealing with the accounts, the Chairman said that the net profits showed a decrease of £66,264, but when they considered the decline in the value of most of the commodities in which the company was interested, and the dislocation of trade in Australia caused by the seamen's strike, he did not think they had much to grumble at. As it was, their earnings were above those of an average year, and he felt sure that the shareholders would be gratified that the results justified the declaration of a dividend and bonus on the same scale as last year.

Mr Stephen Fairbairn seconded the resolution, which was carried unanimously.

SECURITY FIRST

ROYAL
INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

LONDON MARITIME INVESTMENT COMPANY, LIMITED.

COMPANY'S SOUND POSITION.

COAL STOPPAGE AND TRADE RECOVERY.

The twenty-ninth annual general meeting of the proprietors of the London Maritime Investment Company, Limited, was held, on the 10th inst., at Winchester House, Old Broad street, London, E.C.

The Right Hon. Lord Kylsant, G.C.M.G. (the chairman) presided.

The secretary (Mr O. A. Hall) having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen,—The report and accounts for the year ended September 30, 1926, were circulated to the stockholders some days ago, and I presume you will take them as read. It is 29 years ago since the company was formed and I became your chairman.

The accounts for the year under review set out the position clearly, and do not call for special comment.

PROFIT AND DIVIDEND.

You will observe that there was a net profit of £61,415 for the year, which, with the balance brought forward from last year, makes an available sum of £66,774.

After payment of the dividend upon the company's preference stock, and adding over £9,000 to the reserve fund, the board recommend the distribution on the ordinary stock of a final dividend which, with the interim dividend already paid, makes a total of 8 per cent., less income-tax, for the year, leaving a balance of £5,582 to be carried forward.

The company has a paid-up capital of £1,000,000, and has no debentures or other indebtedness. The reserve fund now amounts to £220,000, the whole of which, as shown in the balance-sheet, is invested in British Government securities.

VALUATION OF INVESTMENTS.

The fact that a valuation of our investments as at September 30, 1926, showed the capital and reserve fund to be more than intact indicates the sound financial position of the company, due to the conservative policy we have steadily pursued.

The results for the year may be considered satisfactory, having regard to the continuance during the period under review of the depression in the shipping industry, in which this company as an investor is interested.

Latterly there has been a partial improvement in the general level of freights, though this has not benefited the lines engaged in the regular trades to the extent that it has tramp owners.

EFFECTS OF COAL STOPPAGE.

The present disastrous dispute in the coal trade, which has now been going on for over six months, commenced at a time when there was every evidence of a steady all-round improvement in trade and commerce, and the far-reaching effects of the stoppage must inevitably seriously retard general recovery.

On the other hand, if a lasting settlement in the coal industry can be arrived at, and all employers and employed will co-operate wholeheartedly in a big effort to restore progress and prosperity to our country, there is, I am convinced, every probability of such a revival of British trade and industry as alone can provide the wherewithal for the maintenance of a better standard of life for the worker and the means whereby the progress and development of the British Commonwealth of Nations can be achieved.

I now beg to move: "That the report and accounts for the year ended September 30, 1926, as submitted, be received and adopted, and that the dividend as recommended therein be declared and paid."

Mr Arthur A. Baumann seconded the resolution, and it was carried unanimously.

On the motion of the Chairman, seconded by Mr George M. Dodd, Sir F. Vernon Thomson, K.B.E., was re-elected a director. Messrs. Fookes, Hickman and Co. were reappointed auditors, and, on the proposition of Mr M. B. Snell, a hearty vote of thanks was accorded to the chairman.

The proceedings then terminated.

BRUSH ELECTRICAL ENGINEERING COMPANY, LIMITED.

CO-PARTNERSHIP SCHEME APPROVED.

An extraordinary general meeting of the Brush Electrical Engineering Company, Limited, was held, on the 8th instant, at Holborn Restaurant, London, for the purpose of considering and, if thought fit, passing resolutions providing for the adoption of a scheme of co-partnership.

Mr E. Garcke (the chairman of the company), in moving the resolutions, in explaining the scheme, said that after providing for depreciation and all necessary charges, and a dividend at the rate of 10 per cent. for the year on the ordinary shares, the surplus would be distributed to the three classes of employees and to the shareholders in proportion to the total wages, salaries, and dividends paid for the year. The amounts so distributed could, at the option of the recipients, be invested in ordinary shares of the company at par. These shares of £1 each had a present market value of 26s or 27s. Thus the recipients of the distribution of surplus would receive an additional bonus represented by the premium on the shares. There were no restrictions whatever imposed on the shares issued to the employees; they would rank in every respect equally with the shares now issued.

It was decided at the last meeting of shareholders that the scheme should be deemed to come into operation as from January 1, 1926, and that the surplus profits as already defined in respect of the year 1925, amounting to £8,751, should be distributed as a bonus in accordance with the scheme, as if the scheme had been in force for the year 1925. The provisional co-partnership council had decided that this bonus, after deducting the proportion thereof belonging to the shareholders in accordance with the scheme, should be applied in payment of ordinary shares required for distribution to the co-partners who were entitled to a share in this bonus as on December 31, 1926. The third point in the resolution submitted related to the undivided profits, amounting to £76,190. This amount belonged to the shareholders, and was at present contemplated as a reserve for the purpose of maintaining an average dividend of 10 per cent. per annum on the shares. The proportion of the surplus of £8,751 previously mentioned which belonged to the shareholders would, if practicable, be also distributable in shares of the company at par, and this would apply to all future proportions of surpluses accruing to the shareholders.

Under the scheme they were proposing, the directors were asking both the shareholders and the employees of the company to move in the direction of producing better social conditions, which, he said, would be attained when all workers were capitalists and all capitalists were producers, and neither was a consumer only.

The resolutions were unanimously adopted.

JOSHUA HOYLE AND SONS, LIMITED.

EFFECTS OF COAL STRIKE.

The ordinary general meeting of Joshua Hoyle and Sons, Limited, was held, on the 10th instant, at India Mill, Bacup, Lt.-Col. J. Craven Hoyle, T.D., D.L., the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The profits for the year were less by £100,000, and the disposable balance, after deducting the interim dividends paid, the debenture interest, and transfer to renewals and reserves, amounted to £63,033. They proposed paying a final dividend of 6d per share, less tax, on the ordinary shares, making 5 per cent., less tax, for the year, and the usual dividend on the preference shares, carrying forward £19,033, against £23,710 last year.

Twelve months ago he had called the shareholders' attention to the Locarno Treaty, and expressed a wish that the same spirit which had governed the international situation should also govern the industrial situation at home. At that time he felt there was a feeling of unrest. Unfortunately, during the following months the spirit of Locarno was not extended to the industrial life of the country, and he did not think that any individual interested in business would at that time have imagined that all the industries would be called upon to pass through the serious trouble which had been existing in Great Britain for the past six months. At the present moment all eyes were turned towards London, hoping that the efforts that were being put forth would meet with success and form the ground for a permanent and satisfactory settlement.

SCOTTISH UNION & NATIONAL
INSURANCE COMPANY.

ASSETS £13,500,000.

FIRE. LIFE. ACCIDENT. MARINE.

Edinburgh: 35, St. Andrew Square.

London: 5, Walbrook. E.C.4 and 4, St. James' Street. S.W.1.

Having passed through in the period under review, such an abnormal situation, shareholders would appreciate that the important industry of the cotton trade and its allied trades were being most seriously affected. That had been one of the main causes which had brought about the result placed before them that day. Not only had there been great difficulty in obtaining supplies of coal suitable to run the various mills and weaving sheds, but through the qualities obtainable and the extra cost of labour, steam-raising had been a serious item. Had the situation been normal and the cost of production not increased through the heavy charges brought about by the coal dispute, with cotton at its present price he had no hesitation in saying that the situation he hoped for in November, 1924, would have continued during the period under review.

Anxious as periods in former years had been, the last six months had been one of the gravest the company had yet been called upon to face, and, therefore, all would agree that their managing director and his staff had earned their very best thanks.

Mr Walter Pilling seconded the resolution, which was carried unanimously.

	"	11—Canada	250,000
	"	12—Bars	8,000
	"		36,000
Total	522,000	Total	1,426,000
	Net withdrawals, £904,000.		

Messrs Samuel Montagu and Co. write on November 10th as follows:—

GOLD.

About £810,000 bar gold was available in the open market yesterday, and the Continental demand, though not so strong as in previous weeks, accounted for £680,000. Indian requirements were small and with the trade, both home and abroad, absorbed the balance of supplies. During the week under review the net withdrawal from the Bank has been £727,000, reducing the net influx since January 1, 1926, to £6,976,000. The net efflux from the Bank of England since the resumption of an effective gold standard is now £4,619,000. Another European country is about to return to an effective gold standard. In this case it is Denmark, as from January 1st next.

SILVER.

A demand for cash silver—mainly on account of bear contracts falling due (to be prolonged or to be closed)—continues to sustain the market, though, as evidenced by the reduced premium for spot delivery, the stringency is not quite so acute now that the November settlement steamer has sailed. The China exchanges have fluctuated less widely during the week, and this has conducted to steady the silver market. America has been disposed to sell, but supplies from other sources have not been plentiful. Reuter telegraphed from Mexico City on the 7th inst. as follows:—"President Calles has issued a decree reducing for six months the State and Federal taxes on silver production. When the New York price of silver is 45 cents or less per ounce, the production tax of the Federal Government shall be one-half of 1 per cent., and the State tax the same. An increasing scale of taxation is provided as silver prices advance." This would enable some of the producers to carry on in spite of a lower level of prices. (Yesterday's quotation in New York was 53½ cents.) Telegraphic advice from New York to Bombay stated as follows:—"Due to small silver producers curtailing production it is estimated that the decrease in the output has been about 1½ million ounces. It is believed that the larger producing companies have a fair margin of profit even at the present level of prices." As the world production of silver is about 240,000,000 ounces this represents a reduction of only ½ per cent. The silver production of Canada during the first six months of the present year has been returned as 11,108,310 ounces, compared with 9,240,482 ounces in the corresponding period of 1925. United Kingdom imports and exports of silver during the week ending the 3rd inst. were:—

Imports.		Exports.	
Denmark	£ 39,250	Egypt	£ 23,530
France	59,558	British India	252,932
U.S.A.	189,918	Other countries	23,637
Canada	38,740

BURMA CORPORATION, LIMITED (Incorporated in India).—During the month of Oct. 28,497 tons of ore were mined, including 1,528 tons of high grade ore. 21,900 tons of ore were milled in the treatment plant, producing 7,794 tons of lead concentrates. 8,704 tons of lead bearing material, including 1,097 tons of high grade ore, were smelted in the blast furnaces, producing 4,009 tons of lead and 387,142 mts. of refined silver. Refinery products were 4,343 tons refined lead and 387,142 mts. of refined silver. Of silver production 42,080 ozs were recovered from the treatment of copper matte. Experimental zinc plant produced 3,735 tons zinc concentrates, assaying 13½ ozs silver, 68 per cent. lead, and 46½ per cent. zinc. In addition to the above, 1,200 tons copper matte were produced from the treatment of accumulated smelter by-products, and 3,505 tons copper ore. 50 tons of antimonial lead were also produced. Included in the tonnage of refined lead is 284 tons recovered from the smelting of copper ore.

NORTH BROKEN HILL, LIMITED.—For the month of October the production was as follows:—36,100 tons of crude ore were treated, producing 5,900 tons lead concentrates, averaging 64.9 per cent. lead, 29.6 ozs silver per ton, and 7.6 per cent. zinc; 110,637 tons zinc concentrates, averaging 47 per cent. zinc, 6.2 per cent. lead, and 7.5 ozs silver per ton.

SAN FRANCISCO, MINES OF MEXICO, LIMITED.—Production for October:—Ore treated, 15,000 tons; residues treated, 7,500 tons; lead concentrates produced, 2,384 tons; zinc concentrates produced, 3,647 tons. Estimated net smelter return on lead concentrates, \$148,618 (U.S. currency), and on zinc concentrates, \$144,396; total, \$293,014. Operating expenses, \$12,573; estimated operating profit, \$180,441; capital expenditure, \$34,391. Offsets include:—This return includes \$21,750, being excess of realisations of products over valuations in respect of previous month.

Northern Manitoba mid-November loading sold 58s 3d and 56s 9d respectively, ditto afloat 58s 9d and 57s 9d, white Pacific December to North Africa 56s 9d. Maize firmer, due to the sharp rise in Argentine freights. Steamers of La Plata afloat sold 31s 3d to 32s, ditto loading 31s 9d, and December-15th January 31s 9d, all per 480 lbs c.i.f. terms. Wheat easier. No. 1 Northern Manitoba quoted 65s 3d, No. 2 ditto 64s, No. 2 mixed Durum 59s 3d, choice white Karachi November 61s ex ship all per 496 lbs. English 12s 2d-12s 7d per 112 lbs. Flour dull of sale. London standard grade 50s, town whites 51s, patents 52s-53s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 47s-50s, Minneapolis 48s-50s, Australian 45s per 280 lbs ex store. Maize firm. Plate landed 34s 3d, ditto ex ship 32s 6d. Plate Cinquantina 37s landed per 480 lbs. Barley inactive. Californian 40s-47s, ditto Chevalier 50s, Chilian Chevalier 52s-62s, ditto brewing 40s-48s, Australian Chevalier 48s-50s ex store, Smyrna 40s-55s ex ship per 448 lbs, No. 3 Canadian Western December 34s 6d ex ship, Persian ex ship 29s 6d, landed 31s, Russian 33s, Plate 33s, both ex ship per 400 lbs. English malting 10s 6d-17s 6d, with choice up to 20s, feed 9s 6d-10s 3d per 112 lbs. Oats quiet. La Plata landed 28s, ditto ex ship 25s 9d, Chilian tawny 29s 6d per 320 lbs. English 8s 4d-9s 4d per 112 lbs. Millers' offals quieter. Broad bran quoted 8s 6d, middlings 9s 3d, fine ditto 10s 9d, bags included, ex mill, feed oatmeal 9s 9d, light oats 8s 3d, ground oats 13s 3d per cwt free on rail. Oatmeal maintained. London-made flaked 19s, rolled oats 18s, medium also fine cut 18s, coarse also medium pinhead and whole groats 17s ex mill per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1926-27, 1925-26, 1924-25, 1923-24:—

	1926-1927	1925-1926	1924-1925	1923-1924
Estimated sales of home-grown wheat—				
1 week to November 6	396,337	350,299	235,409	372,761
10 weeks to November 6	3,729,356	3,567,466	2,441,449	4,076,589
Average price of English wheat per cwt.....	12 4	10 11	12 9	9 1

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1922 to 1925:—

	QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1926.

1925	350,299	653,438	61,353	10 11	11 8	9 0

AMERICAN WHEAT MARKETS.

Prices advanced early in the week on extensive export demand and unfavourable weather reports, but a recession followed owing to the heavy interior movement of supplies, and to prospects of a large crop in Argentina, and, possibly, a "record" Australian yield. The latter factors may be expected to exercise a growing influence on prices in the next few weeks.

(b) November delivery. (c) December delivery.

Visible supplies of wheat in Canada, 41,335,000 bushels, show an increase of 2,307,000 bushels as compared with the previous figures. Supplies a year ago stood at 30,500,000 bushels.

COAL.

Our Cardiff correspondent writes:—There has been a decided lull this week in the purchase of foreign coals. Supplies arriving have been considerable, and are very likely to continue heavy during the next few weeks, but the bulk will be for railway consumption, orders for cargoes on speculative account diminishing daily. Importers are avoiding further commitments, for it is fully expected that within a few weeks of the reopening of the collieries South Wales will have an increasing supply available for export. The current approximate quotations of American run-of-mine coal for November-January delivery are ruling between 9 and 10 dollars per ton f.o.b., while the c.i.f. price of Westphalian unscreened coals is quoted at between 70s and 75s for November positions. In the South Wales coalfield the output continues to increase, and current prices are 55s for large, 50s for through, and 40s for small coals.

Our Sheffield correspondent writes:—Blast furnace coke is now being made, but the demand for central heating purposes is so insistent that prices have gone up 10s per ton lately, and the fuel fetches 70s and 75s per ton at ovens.

Slack coal commands as much as 50s per ton. Westphalian foundry coke is quoted at 80s 6d delivered, and gas coke 60s per ton. The fuel market is extremely unsettled, and a wide variety of coal prices are heard of.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The quieter conditions noticeable last week have been rather emphasised lately. There is a general tendency on the part of buyers and sellers to await developments in the coal situation before entering into fresh commitments. The brighter news at the week-end regarding the coal strike has raised hopes of an early settlement of the dispute, but it must take several weeks before the British iron and steel industry can get going again. There is no doubt, too, that the period following the strike will be an exceptionally difficult one for traders, as many delicate business adjustments will have to be made regarding deliveries against old contracts and the prices at which new business can be transacted. Weaker conditions were reported to have developed in the Continental market, largely because buyers are refusing to pay the high prices asked by the majority of foreign works for extended delivery. Some of the Continental works are stated to be not too well off for orders, and inclined to press for business.

Our Middlesbrough correspondent's report, dated November 11th, is as follows:—Pig-iron.—There is still an extreme scarcity of Cleveland foundry pig-iron, and the production of the two local blast furnaces now in operation is easily disposed of. Small parcels of No. 3 G.M.B. have been changing hands at 120s per ton, f.o.t. In the meantime, foreign pig-iron is more difficult to secure, and prices are advancing, as much as 100s per ton c.i.f. Middlesbrough having been asked for delivery here next month. The ordinary mixed numbers of East Coast hematite are unobtainable. Only small parcels of off-grades can be purchased, the basis indicated being 92s 6d per ton. Manufactured iron and steel.—Supplies are still difficult to procure, but demand is increasing and heavy premiums are being paid on current minimum prices to secure prompt delivery. Iron Ore.—No business is being done, and no reliable price basis exists.

Our Sheffield correspondent writes:—Manufacturing operations in the steel trade and iron and steel foundries have had to be further curtailed. There is no difficulty in placing orders on the Continent for pig-iron and semi-steel, but no seller will guarantee delivery, and sea transport from Continental ports is disorganised. Demand has dropped sharply in the tool branches, and conditions are extremely quiet in cutlery and electro plate. The official prices of acid and basic billets have been advanced 20s and 10s per ton for delivery after the settlement. For present delivery an extra 30s per ton is charged to cover the high fuel charges, but the production is negligible. The large works producing the commoner and heavier crude steels do not expect to restart until after the end of the year, no matter what happens in the immediate future. Nor is it likely that any pig-iron will be made this year. Coal is being offered for delivery after the settlement at 2s 6d per ton above pre-strike rates.

Our Glasgow correspondent writes:—Conditions in the iron and steel trades have changed very little. Several grades of pig-iron stocks are completely exhausted, and of the remainder only small quantities are being taken up at the high prices quoted. Steel works have very heavy bookings for execution when normal full conditions are restored, and one large plant, which has not operated for about three years owing to dull trade, is making preparations to resume when the strike is over. Inquiries for British and foreign Admiralty work of considerable dimensions are on the market, and makers are tendering for delivery next year, as none of the works are likely to be in a position to start this year. Several good contracts have this week been secured by Clyde shipbuilders in Greenock, Port Glasgow, and at Partick, but work in the yards is greatly hampered by want of steel. The demand for steel sheets, both black and galvanized, is brisk, but makers are as a rule fully booked up for the remainder of the year. Prices are advancing, the minimum quotations for 24 gauge black being £13 per ton, and for galvanized corrugated £17 10s per ton, f.o.b.

Our Cardiff correspondent writes:—The general position in the steel and tinplate markets is practically unchanged. Inquiries for tinplates continue to expand, and buyers on old contracts are pressing for delivery. Prices are very firm, with prompt plates steady at 25s 6d per basis box, and forward plates from 24s to 24s 6d. These higher prices, however, are due chiefly to the heavy increase in the cost of tin, bars and fuel. Steel bars are nominally unchanged at £6 15s per ton, but parcels have been changing hands at £7 10s. Galvanised sheets are a firm market at £17 10s to £17 15s per ton, f.o.b. Deliveries into warehouses last week totalled 71,988 boxes, as against 48,678 boxes the previous week, but as shipments reached 83,174 boxes, the stock was reduced from 52,391 to 41,205 boxes.

OTHER METALS.

TIN.—The market for tin ruled strong, and values advanced sharply in sympathy with higher foreign advices, and a keen demand both for near and forward deliveries, all positions up to February being in request, due to extensive covering orders. Holders adopted reserved measures, despite slight irregularity at times. Standard cash sold £301 to £311 10s, and £310 15s, and three months £292 10s to £291, £299 15s, and £300. Sales in the East were reported at £298 15s to £305 5s, c.i.f.

COPPER opened quiet, but later values improved on buyers showing more disposition to operate. Standard cash changed hands at £57 10s to £57 16s 3d, and £57 12s 6d, and three months £58 2s 6d to £58 1s 3d, and £58 11s 3d.

LEAD active and firmer. Good soft foreign pig, November, sold £29 1s 3d to £29 10s; December, £29 2s 6d to £29 15s, February £29 5s to £29 18s 9d.

SPLINTER steadier on improved inquiries. November sold £32 18s 9d to £32 17s 6d, December £32 18s 9d to £32 17s 6d, and £33 16s 3d, January £32 18s 9d to £33 8s 9d, February £33 5s to £33 17s 6d ton.

ANTIMONY quiet. English specials quoted £74 10s to £75, foreign spot £57 ton.

ALUMINIUM dull. Home delivery £107, export £112 per ton. WOLFRAM firm at 14s 6d per unit c.i.f.

QUICKSILVER firm at £17 5s to £17 10s per bottle.

TIN PLATES.—The market for British make is hampered by uncertainty attaching to delivery, and some merchants with foreign orders to execute are now seeking supplies in the U.S.A., as apart from prices ruling there being more attractive, the question of delivery does not weigh.

THE COTTON TRADE.

LIVERPOOL, November 11, 1926.

Spot sales for the week 5th to 11th (inclusive) were 45,000 bales. Of these 26,770 bales were American, 2,400 Brazilian, 6,900 Peru, 3,150 Egyptian, 5,350 African, 50 East Indian, and 380 sundries. Imports for the same period were 110,872 bales, which included 95,972 American, 160 Brazil, 8,465 Peru, 14,950 Egyptian, 313 African, and 12 sundries. Quotations to-day are:—American middling, 6.00d; Egyptian Sakel, 14.80d; uppers, 10.50d; Brazil, fair, 7.20d; Peru G.F. mod.-rough, 8.00d; smooth, 8.20d; Tinnivelly, 6.40d; East African G.F., 8.60d; West African middling, 6.85d.

MANCHESTER, November 11, 1926.

Trade has been featureless, and considering the amount of inquiry, results have been rather disappointing. Buyers are slow in raising offers, and all spinners and manufacturers are hampered by the scarcity and high price of coal. For India there has been a big inquiry in cloth, and some exceptional sales have again occurred in light fabrics, chiefly for Calcutta. More demand has been met with in grey shirtings, but only limited lots have been sold. Staple makes for China remain dull, but occasional orders have been booked in fancies. Restricted operations have occurred for most of the minor outlets East and West, and some trade buyers have not given very much support. Quotations in American and Egyptian yarns remain irregular, and a moderate business has been put through, but spinners find it hard to improve their position.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The continued lack of activity in consuming centres is having a depressing effect on all sections of the wool textile industry. There is a general feeling that things will improve somewhat when the coal strike is settled, but in the meantime there is hardly enough new business to test values, and in many quarters money is becoming uncomfortably tight. The latest advices seem to suggest that the recent decline in wool values has been checked, and that values will now be fairly steady at about the current level. If machinery could be got going in this country a fairly healthy business might be expected to develop with raw material on the present basis, but as things are even cheap wool would not stimulate demand. Practically all qualities of tops are slightly easier on the week, and if anyone had the pluck to place a big order for future delivery, concessions would almost certainly be obtained. Spinners, however, do not show the least inclination to buy beyond current needs. In the yarn section prices are very irregular, and complaints are general regarding the price-cutting indulged in by some firms who are evidently prepared to sell well below replacement costs in order to keep machinery running. In this connection many firms, with the near approach of the stock-taking period, view the outlook with a good deal of anxiety. The majority of manufacturers are in no better position, and the last six months' trading may prove to have been as unsatisfactory as any in the history of the industry.

COLONIAL WOOL.
(FROM A CORRESPONDENT.)

All overseas cables report a slightly firmer market, and better news is to hand from Sydney, Melbourne, and Perth, where sales have taken place almost daily. It would seem that Germany is taking the lead. Yorkshire, too, convinced that values are now

reasonable, seems disposed to buy freely. While no out and out advance can be reported, the better demand is encouraging. We cannot see any reason why higher wool values should obtain anywhere, but there is a need for an increase in competition, particularly by the home trade. As we said last week, the desire has been very much in evidence to pick up wool in Australia to bring in average 64's tops at 3s 6d to 3s 7d. A great many buying limits are out on that basis in Australia, but no importing topmaker admits having purchased anything of any moment on that basis unless he has been prepared to take pieces and bellies from which to make so-called average 64's tops. However, wool

has undoubtedly been picked up to produce a decent 64's at 1d more, while it has been possible to buy moderately freely on a 3s 9d basis for a better article. It now remains to be seen if there is sufficient buying power in the Colonies to sustain values on this slightly better basis. Everybody is anxious to see the home trade improve, for the real weakness has been located there throughout.

Next Monday will see the opening of a new selling season in New Zealand. A considerable amount of window-dressing has been done during recent weeks, and a little forward selling indulged in at prices below replacement cost to-day. No doubt the reasonableness of South American new clip crossbreds has helped in that direction. It is common knowledge in Bradford that some fair weights of slightly burry coarse crossbred wool (40-44's) have been offered at 15½d, clean, c.i.f. Liverpool, and we cannot see how any home buyer can afford to pay more than ruling values to-day in Buenos Aires and Monte Video. In all probability the two markets will react somewhat upon New Zealand. After all, the home trade, which took by far the biggest weight of last season's New Zealand clip, lost money on their purchases, and the question is whether any firm can afford to repeat for a third time the losing experience of the past two seasons. We should say that during the past six months the home trade has reduced its wool consumption by at least one-third. It would seem that at last wool may be approaching a standard of values which is inspiring confidence.

THE JUTE TRADE.

DUNDEE, November 11.

Business still rules on quiet lines, though the raw material maintains a high level. A slight decline took place in prices last week, especially for the commoner grades, but this week values have more than recovered the loss. A fair business is reported to have been done in Calcutta by mills and balers, but it is still difficult to secure good-class material from the arrivals into Calcutta, which are showing a tendency to fall off, rather than to increase, and are still considerably under last year's figures. Spinners in this market have purchased fair quantities of raw jute. First marks are now ruling at £36 to £37, Lightnings at £29 10s to £30, Daisees 2s 3d at £28 15s to £29 5s, and Tossa 2s 3d at £32 10s to £33, November-December shipment. The trade is bewildered by the attitude of the raw material sellers, who continue to keep up prices when everything points to a lower level.

The yarn branch of the trade has been quiet. Most spinners are quoting 3s 4d for common 8 lb cops and 3s 5d for 8 lb spools, but there are instances of business being done at 3s 3d and 3s 4d respectively. Buyers are holding off in the hope that spinners will accept lower prices, but as present values are not on a paying basis, this contingency does not seem likely at present. Buyers of cloth are showing rather more interest, but actual business concluded is still disappointing. Prices are very steady at 4½d to 4¾d for 10½ oz 40 in and 3½d to 3¾d for 8 oz. South America has purchased 10 por. 46 in tarpaulins to the extent of nearly half a million yards, and inquiries are being received for heavy goods from other centres.

HIDE, LEATHER, AND ALLIED TRADES.

The home hide market remains steady, but a fall is expected soon, as hides will be coming along in bad winter condition. At the auctions held in Bermondsey on Thursday, best ox hides sold from 6½d to 9d and seconds from 6d to 8½d per lb. Cows were very firm and advanced an ½d in both classes, best fetching 6d per lb. Calf skins again advanced, best selling from 7½d to 12½d per lb—an advance of ½d to ¾d on last prices. Cables from Chicago report the market as again active, with best heavy packers selling at 15½ cents. Fregorific hides are rather easier, and business has been done on a basis of 8½d to 8¾d, America being the chief buyer. Dry hides are also less firm, and sales of dry B.A. Americanos have been made at 10½d to 11d. The trade passing in sole leather remains good; manufacturers are eagerly buying light bends up to 8 lbs average, and as stocks are very small, prices are advancing. Repairers are also busy, and are accounting for 12-14 lbs and 14-16 lbs in fair-sized parcels. French bends are again selling well. Rough leather is meeting with a better demand. As regards upper leathers, the chief call is for black-glazed kid, willow calf, and patent. Coloured glacé is hanging fire, as no decision on next season's shades seems to have been arrived at. Prices all round are firm and likely to advance. The boot and shoe trade is badly affected by the coal strike, although Leeds and Bristol manufacturers have received orders from districts where the miners are at work. Russian boots are selling slowly.

VEGETABLE OILS AND OILSEEDS.

Markets continue quiet, with only a small amount of business passing. Demand for linseed oil is spasmodic, and prices fluctuating, current value being around £31 per ton naked "spot," and November-December delivery ex Hull mill. Later positions are at a slight discount. Cotton oil is not in such good request, and is easier on reports of increased cotton crop in America. Crude Egyptian now offering at Hull £33, and technical refined at £36 5s. Soya palm kernel and other oils are quiet, and barely steady.

The feature of the oilseed section has been a certain activity in the new Plate crop, a fair business having been done around £14 17s 6d and £14 16s 3d for January-April shipment. The balance of the old Plate seed is moving off slowly, owing to the dearth of shipping tonnage, high freights, and the poor European demand. Seed on spot is scarce, and held for as much as £16 5s, with "afloat" and October-November at £16. Egyptian cottonseed has taken an easier turn, and a good trade has been done at £9 5s for November, and £9 for forward shipment. The American cotton crop is estimated to give seed equivalent to over 800,000 tons of crude oil, as against 720,000 tons produced last season. Soya beans are quiet, but arrivals in this country are improving. Demand for oilcakes is fair, but disappointing for the time of year.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Market continued very steady, and, in the aggregate there is a fair business with consumers. British refined remained at previous quotations. English grown granulated held for full rates, and available quantities pass steadily into consumption. For November-December delivery prices range from 29s 9d to 30s 3d, according to factory, with Kidderminster, November, 30s 6d; December, 30s 9d; January-March comes at 3d per cwt more money. Ely and Ipswich, ex store, London, 29s 10½d. Imported descriptions fairly steady, and Dutch J granulated, sold, 28s 10½d to 28s 11½d. Czechoslovak, spot, 28s 11½d. Only quiet attention was given to forward parcels, but offers from continental refiners were reservedly made. Czechoslovak granulated, ready, 16s 4½d to 16s 6d; November-December, 16s 3d to 16s 4½d, as to mark, f.o.b., Hamburg. Dutch J, ready, 16s 6d, f.o.b., Rotterdam. Belgian crystals nominal, as offers thence are unworkable on this side. Raw refining kinds firm. Peruvian 96 per cent., November-December, quoted 13s 9d, c.f. and i., U.K. Total Java shipments for last month amount to 167,000 tons, as compared with 209,280 same time last year. White terminal section generally firm, with business on a fairly liberal scale. December, sold, 15s 6d, 15s 8½d, 15s 6d; March, 16s 3½d, 16s 4½d, 16s 3d; May, 16s 6½d to 16s 5½d; July, 16s 9½d; August being freely dealt in at 16s 10½d, 17s, 17s 9d, and 16s 10½d.

COFFEE.—Allhome-trade qualities continue very firm, owing to smallness of supplies available and which mostly consist of consignments from East Africa. Export varieties still slow, as requirements from the near Continent do not extend. In auction, Kenya smalls sold, 12s to 12s 6d; bold, 14s 6d to 15s; Kilimanjaro, bold, 13s 6d to 13s 8s; Ugandi-Congo, very bold, 14s; Colombian, good bold, 15s 6d. Futures after ruling firmer assumed a quiet and easier tone.

COCOA.—Only moderate spot transactions at late rates. Accra, F/F, November-January, sold, 45s to 46s 6d, f.o.b. terms; and Trinidad, 62s, c. and f.

TEA.—Quantity of Indian auctioned during the week totalled 54,480 packages. A good demand was experienced, particularly with regard to good quality broken and tippy teas, and these realised full rates. Common kinds better supported and the turn dearer, though slightly irregular at times. Pekoe, sold, 1s 0½d to 1s 6½d; orange, 1s 3d to 2s 2½d; broken pekoe, 1s 1d to 2s 2d; broken orange, 1s 3d to 2s 4½d; choice, up to 3s 3d. Ceylon sales of 15,570 packages also aroused active and well distributed competition, and prices ruled fully steady in most cases. Pekoe, sold, 1s 1½d to 2s 3d; broken ditto, 1s 1½d to 2s 2½d; orange, 1s 5d to 2s 3d; broken ditto, 1s 4½d to 2s 7d. China qualities move off quietly, but sellers require steady prices. Some Keemun, sold, 1s 5d to 1s 6d; fine, 2s 2d to 2s 4d. Panyongs realised 1s 4d. Souchongs slow, at 2s 4d to 2s 6d. In auction, 4,597 packages of Java and Sumatra were offered, and met an active demand at mostly higher prices, an advance of ½d to ¾d per lb being frequently registered. Pekoe, sold, 1s 1½d to 1s 3½d; broken ditto, 9½d to 1s 8d; pekoe sou-hong, 1s to 1s 2½d; orange pekoe, 1s 3d to 1s 6½d; broken orange, 11½d to 1s 6½d lb, in bond.

Estd.

DE BEERS CONSOLIDATED MINES, LIMITED.

REPORT OF DIRECTORS

For the Twelve Months ended 30th June, 1926,

To be submitted to Shareholders at the Thirty-eighth Ordinary General Meeting to be held on the 26th November, 1926.

TO THE SHAREHOLDERS—

GENTLEMEN,—Your Directors beg to submit their Thirty-eighth Annual Report, Balance-sheet at 30th June, 1926, Profit and Loss Account for the year ended 30th June, 1926, and Appropriation Account, 30th June, 1926. The undistributed balance at 30th June, 1925, was represented by:—

Suspense Profit Account—Diamonds unsold at that date £64,439 2 3
Balance unappropriated 387,229 12 9

During the year the Diamond Account amounted to 4,193,865 15 4

Add to this the following:—
Interest and Dividends on Investments £639,382 9 3
Profits realised on sales of Investments 48,816 6 5
Income from other sources 34,581 5 3

..... 722,800 0 11

..... £5,368,334 11 3

Deduct Expenditure as follows:—

Mining Expenditure £1,218,218 7 0
Farms and Landed Property Expenditure 40,428 7 7
Donations and Relief 18,380 10 11
Allowances to Employees including Provident Fund 90,573 11 5
Directors' Fees 22,729 18 7
Salaries—Head Office and London 31,100 11 3
General Charges—Kimberley and London 66,589 4 0
Interest on Debentures and on Capital of Leased Companies 169,989 15 6
Sinking Fund for repayment of Debentures 97,962 17 10

..... 1,756,033 4 1

Leaving a balance of £3,612,301 7 2

Which has been dealt with as follows:—

Union of South Africa Income Tax £409,557 12 5
Amount transferred to credit of Dividend Reserve Fund 450,000 0 0
Preference Shareholders' Dividend 800,000 0 0
Deferred Shareholders' Dividend 1,635,771 0 0

..... 3,295,328 12 5

Balance undistributed carried to next year..... £316,972 14 9

The Stock of Blue Ground and Lumps on the Floors at 30th June, 1926, was as follows:—

	Loads.
De Beers Mine	48,396
Wesselton Mine	320,558
Bultfontein Mine	391,427
Dutoitspan Mine	847,642
Total	1,608,023

The Company has paid during the year to Preference Shareholders the usual dividend of 20s per share and to Deferred Shareholders 30s per share. During the period under review the diamond market was steady. Satisfactory sales were effected by the Diamond Syndicate, and the Company realised slightly increased prices for its diamonds.

The sales agreements entered into between the four Conference Producers and the Diamond Syndicate for a period of five years, commencing from 1st January, 1926, and which were referred to in last year's report, have since received the formal approval of the Honourable the Minister of Mines and Industries, and this fact was announced by the Chairman at the last Annual General Meeting of Shareholders.

African Explosives and Industries, Limited, in which this Company holds a 50 per cent. interest, continues to make satisfactory profits, and during the year under review declared a dividend of 7½ per cent., which was distributed in fully paid up shares of that Company.

Mr. P. Ross Frames, C.M.G., resigned his seat on the Board of the Company as at 30th June, 1926, and the vacancy thus created has been filled by the appointment to the Directorate on the 21st July, 1926, of Sir Ernest Oppenheimer, Kt., M.L.A.

A report by the General Manager will be submitted at the Meeting. In terms of Clause 84 (c) of the Company's Articles of Association, three Directors retire, namely:—Mr. L. Breitmeyer, Mr. S. B. Joel, Sir Ernest Oppenheimer, but, being eligible, offer themselves for re-election.

A. G. W. COMPTON,
F. HIRSCHHORN,
R. PHILIPSON-STOW,
W. PICKERING, } Directors.

THE MONEY MARKET.

SUPPLIES of floating credits have been plentiful during the past week at 4 per cent., except on Wednesday, when there was a slight tightening, and up to 4½ per cent. was paid for short loans. A feature of the week has been a net influx of nearly a million in gold, of which half a million was accounted for by the release of sovereigns previously earmarked for the South African

Reserve Bank. This, together with the easier tendency in money and the firmness of the gold exchanges, has affected the discount market, which has been easier, with the three months' bills quoted at $4\frac{1}{8}$ per cent. The fact, however, that the amount of Treasury Bills offered yesterday was larger than usual, namely £45 millions, was a steadying influence.

	Nov. 19, 1926.	Nov. 12, 1926.	Nov. 5, 1926.	Oct. 29, 1926.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	$\frac{1}{4}$ (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	2 (Dec. 3, '25)
Discount/Call	3	3	3	3	2 (Dec. 3, '25)
Houses/Notices	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$ (Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	..

Thursday's Bank return showed an increase of £939,100 in the stock of coin and bullion and a reduction of £725,500 in the note circulation, so that the Reserve rose by £1,664,600 and the Proportion increased to 28.6 per cent. Government securities were reduced by £1,802,900, while Other securities rose by £56,500, and as Public deposits rose by £1,844,700, there was a reduction of £1,946,100 in Other deposits. Currency notes outstanding were reduced this week by £1,972,000 to £287,120,100, which includes £1,290,700 for notes called in but not yet cancelled. The Fiduciary issue is £229,579,300, or £18,323,200 below the maximum for 1926.

NEW YORK MARKETS.

Our New York correspondent cables:—Speculative markets are still hesitating. The recent firmness of money has passed, and the Federal Reserve statements show another considerable movement of funds to New York, with discounts again reduced at 90 millions, against 148 millions a year ago. For the System the drop in discounts is offset by open-market purchases, with total bills and securities 38 millions lower than a year ago. The monetary position is plainly comfortable. Meanwhile there are many increased dividend distributions, and the market is eagerly awaiting the new Standard Oil securities. The Bureau of Labour index number for October shows a decline of 0.5 per cent., owing to farm products and clothes. The industrial groups are steady.

THE STOCK MARKETS.

The stock markets have passed an uneasy week, and declines in quotations greatly outnumber the rises. The rapid appreciation of the franc has led to extensive selling orders from Paris, which have spread flatness over many sections. The gilt-edged market, however, has been steady owing to the removal of fears of an early rise in Bank rate, while the feature of the foreign market has been the further rise in the new Belgian loan to nearly 7 premium. Home rails generally have been dull on the coal dispute developments, but Underground stocks are strong. The rubber share market is extremely quiet, and prices have sagged a little, while oils have relapsed after last week's activity. Industrials have on the whole been dull, and the Kaffir market and diamonds have suffered from French sales. The issue of £1½ millions in 5 per cent. debenture stock by the Perak Hydro Electric Power Company, issued under the Trade Facilities Acts, was heavily oversubscribed.

THE COMMODITY MARKETS.

Markets gained a certain momentum early in the week owing to the favourable outlook in the mining dispute, but the results of the district voting subsequently induced more restrained tendencies. The inland price of coal is a shade easier, and in some cases collieries are offering post-strike supplies on a fair scale. Such iron and steel as is available is being sold at approximately unchanged prices, and a number of works have made preparations for a resumption of work as soon as the position is clarified. Cotton has been steadier than of late, and a satisfactory business has transpired, but the turnover of yarn and cloth has scarcely come up to expectations. Wood values are well sustained in overseas centres, and West Riding top-makers report increased business. Wheat was easier

early in the week, on American advices, but subsequently more steady. Sugar has been in steady demand. Coffee and tea are firm, and rubber unchanged. Tin again advanced on bullish advices from America and the East, but the rise was not fully maintained. The market for copper has been easy, and lead prices have moved slightly in favour of buyers.

FOREIGN EXCHANGES.

Although the general foreign exchange market has been quiet, there has been considerable activity in the French exchange. In this section there has been a remarkable recovery during the week. After a slight rise from 146½ on the 12th inst. to 147½ on Saturday, the rate fell to 144½ on Monday, and to 140½ on Wednesday. On Thursday there was another fall to 139½, followed by a further improvement to 137½ yesterday. Various factors have combined to produce this movement. Liquidation of old "bear" positions, on the taking up in some cases of fresh "bull" positions, and the return of capital to France are the visible means by which the new wave of confidence has operated, in spite of the attempts of the Bank of France to prevent so rapid a recovery. There is a growing feeling of uneasiness of French exporters, but as long as there is a general belief that the rate will fall to still lower levels the requirements of legitimate trade can have but little effect on the market. The danger, of course, lies not so much in the fall to these levels as in the reaction which may be expected. Forward rates have narrowed from 50 centimes and 2½ francs to 40 centimes and 1½ discount for one and three months respectively. Italy rose slightly over the week-end from 117½ to 118½, but recovered to 114½ on Wednesday; since then, however, there has been a slight reaction to 115½. Madrid followed a similar course, and after touching 32.01 on Monday, now stands at 31.90 as compared with 31.98 a week ago. New York was firmer in the earlier part of the period in anticipation of a settlement of the coal dispute here. After remaining around 4.85 3-32 over the week-end, it rose to 4.85 5-32 on Tuesday. By Thursday, however, it had fallen again to 4.84 31-32, as expectations were not realised, and opened yesterday morning at 4.84½. Forward rates are slightly wider at 1-32 cent premium for one month and ½ cent premium for three months. In comparison with the other stabilised currencies, sterling has followed a similar course of appreciation, followed at the end of the week by a slight set-back. Thus, Amsterdam rose from 12.12½ to 12.13½ by Wednesday, but yesterday morning was quoted at 12.13½, while Switzerland rose from 25.14½ to 25.15, and subsequently reacted to 25.14½ again. Berlin also rose from 20.41½ to 20.45½, and opened yesterday at 20.43, while Belgium moved from 34.83 to 34.89 and then back to 34.87½. In Scandinavia, Stockholm, on balance, has depreciated from 18.16½ to 18.18, and Copenhagen from 18.18½ to 18.20. Oslo, however, has undergone a sudden appreciation, chiefly owing to speculative purchases of kronen on the belief that an early return to gold was in contemplation. The rate opened on Friday at 18.77, as compared with 19.20 a week ago. In the East, the rupee is 1-32d weaker at 1s 5 27-32d, but the yen is unchanged on balance at 2s 0 9-32d. The silver market has been firmer on Indian purchases, and Shanghai has continued its upward course from 2s 5½d to 2s 6½d, but Singapore is steady at 2s 3½d. In South America, Rio improved over the week-end from 6½d to 6¾d, but on the news of political disturbances reacted during the last two days to 6½d. Buenos Aires is 1½d weaker at 45½d, and while Monte Video fell from 49½d to 49¾d, Valparaiso has depreciated from 39.54 to 39.62 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 13th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	5,072	From Revenue	8,591
Interest, &c., on Debt	765		
Sinking Fund	293		
Decrease in Debt	2,311		
Increase in Balances	150		
	8,591		8,591

The Revenue for the week amounted to £8,591,200, as compared with £8,041,000 in the corresponding week last year. Customs were higher at £2,513,000, against £1,884,000, but Excise was lower at £1,555,000, against £1,696,000. Property and Income-tax brought in £908,000, as compared with £1,041,000, while Super-tax amounted to £380,000, against £420,000. Ordinary receipts were lower at £1,000, against £40,900, and Special receipts at £6,800, against £11,400. The week's operations reduced the National Debt by £2,311,000, and caused the following changes:—

(000's omitted.)	
Public Department Advances ..	£ 2,800
National Savings Certificates ..	50
Sundries	910
	— 3,760
Treasury Bills	+ 1,449
	+ 1,449

The floating debt was reduced by £1,375,000 to £783,046,000.

FINANCIAL YEAR, 1926-1927 (April 1 to November 13, 1926).

£		£	
Total Expenditure ..	481,259,660	Raised by Revenue ..	399,413,540
		Decrease in Balances ..	3,964,302

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—English, Scottish, and Australian Bank, Australian Mercantile Land and Finance, Amalgamated Press (1922), Ansell's Brewery, Kamunting Tin Dredging, and North Anantapur Gold Mines.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE COAL DISPUTE AND AFTER.

THE hopes of a quick negotiated peace in the coal industry, which were current when we went to Press a week ago, have been disappointed. The week has been taken up by the ascertainment of district views on the proposed terms of settlement, and the result, due in no small measure to the Gilbertian methods of ascertainment adopted, is unhelpful, inconclusive, and bewildering. The net result is a majority of 100,000 against the terms. Districts voting in favour were Yorkshire (only by a small majority in spite of the influence of Mr Herbert Smith), Nottinghamshire, Derbyshire, Leicestershire, Warwickshire, North Staffordshire, Cannock Chase, Forest of Dean, Somerset, and Kent. Those who pronounced against the terms were Scotland, South Wales, Lancashire, Durham, North Wales, and Cumberland. The voice of the great export districts was clearly and strongly against the Government's terms, which were fully set out in our last issue.

The result makes confusion worse confounded. The manner in which it was reached was ludicrously unsatisfactory. Miners who have returned to work did not, for the most part, vote; but in districts where they had returned in large numbers they were held by their action to have shown themselves on the side of settlement. For those not at work there was no general ballot. In most areas votes were taken by a show of hands at lodge meetings, often very sparsely attended. A narrow majority at a small lodge meeting was taken to commit the whole membership to acceptance or rejection. Whether the

result represents the voice of the miners of the country as a whole is unknown. It may, or it may not. But that voice has not, under these circumstances, been heard. Had a full ballot been taken in every district the result might have been the same, or it might have been different. But, in any case, the executive and the delegate conference would have had for their guidance a clear expression of the views of the rank and file. As things are, the delegate conference, which met in London yesterday to consider the votes of the district, faced a bewildering position. In the teeth of a paper majority for rejection, could they order an end of resistance? Such a decision might be based on the argument that a two-thirds majority is needed for a continuance of a strike, and that, since one-third of the total of miners are actually at work, no method of voting could have produced such a majority. Or were they to base on the majority for rejection (obtained by unsatisfactory methods) a call to fight on? Obviously, such a call would be disregarded throughout the Midlands, and would almost everywhere be stultified by the accelerated drift back to work, even in those districts which have clearly opposed the terms of settlement. Heroics in face of a relentless disintegration are not an attractive policy. Amid all these bewilderments two facts stood out clearly. No further national terms were at all likely to be forthcoming. These, in all probability were the last national terms—to be taken or left. Secondly, the Miners' Federation itself, severely shaken by the action of the Notts miners, who have taken the negotiation of a separate settlement into their own hands, was threatened with nothing short of extinction. The perplexity of the Miners' Executive in the face of this position, brought about entirely by their own persistently inept leadership, was such that they offered no direct guidance to the delegate conference. The latter, finding no clear way out of an insoluble dilemma, adjourned to give the executive time for further deliberation.

But although the Government have wisely put no time limit on the offer of terms, and, pending the decision of the Conference, have made no announcement, the chances of a negotiated settlement have clearly dwindled. The nation now knows with tolerable certainty that there will be no constructive and clear-cut settlement to place as an asset against the enormous national losses which have been sustained. We are left, therefore, to take what comfort we can from the clear evidence which this week has produced that the inexorable working of economic factors is stimulating the movement back to the mines, and bringing, not peace, but the end of active hostilities within sight. Some time must yet elapse before the export of coal is resumed. But with 370,000 men back at the pits, and the drift gathering intensity day by day, the back of the stoppage has been broken, and the provision of adequate home supplies may not be far off. Although, therefore, events are not shaping so as to give us the expected sequence of peace, optimism and post-strike boom, the outlook is for an approach by quickening stages to a relief from the difficulties of the past six months; and the time is approaching when we should take stock of the national position—looking backward over the wreckage with which the dispute has bestrewn the economic path of 1926, and forward to the prospects of recovery when the output of the mines once more approaches normal. In a subsequent article we make an attempt to assess the cost of the stoppage to the nation, in so far as such an attempt is possible at the moment. Of the prospects of trade recovery when full coal production has been resumed, it is even more difficult to make an assessment. For, whatever the decision of the miners' delegate conference, we cannot gauge the speed with which the resumption of coal output will proceed. It is, however, possible to pick out one or two leading features in the position under which trade recovery will function. For the past few years the volume of world trade has been on the upward grade; but in competing for our share of this rising volume British industry has been hampered by monetary and exchange difficulties. When industry is again freed from fuel troubles it will operate in a world from which these difficulties have been largely removed. At home we have not merely resumed the gold standard, but also accomplished the necessary re-adjustments in the eco-

economic sphere demanded by that resumption; while abroad the instability of Continental currencies, which has been one of our most severe handicaps, has to a large extent yielded to the treatment of sounder financial policy. Another hopeful sign is the increase in the savings of Europe, while the League of Nations' memorandum on production, discussed in these columns last week, reveals definite improvement in the proportions of world production as between leading commodities, and at the same time an increase in the volume of external commerce in relation to world production. All these indications show that the ground swell of economic dislocation caused by the storm of the great war is subsiding, and while the way seems clearer than at any time since the war for an expansion of international trade, the ability of the industry of this country to compete in world markets and gain its share of this growing volume has been improved. Thus, if the sky is not yet clear—clouds are certainly heavy enough in places—there are distinct patches of blue sky. If only the lessons of this disastrous coal dispute will drive home to all those who, whether for the employers or for the employed, rule the fortunes of our industries, the lesson of the futility and costliness of industrial conflict, there is hope that we may in the near future see the feet of the nation firmly set on the road to better conditions that will be established upon a basis far more sure and enduring than that on which temporary periods of prosperity have since the war been founded.

THE COST TO THE NATION.

THE coal stoppage of 1926 has been by far the most costly in British annals. Up to the end of October, 126½ million working days had been lost in the coal-mining industry alone since the beginning of the dispute, and the total loss of effective working time in all trades for the year 1926 is already more than twice the figure for any other period, and about twelve times the average for the last 25 years. It is impossible at this stage to evaluate the total cost to the country, as an important part of the bill of costs has yet to be presented. The heavy iron and steel industries, for example, are scarcely likely to regain their pre-strike activity before the New Year, and in all probability the export side of the overseas trade returns will continue to reflect the conditions of the last few weeks for an even longer period. Further, certain of the most significant effects of the last seven months' events elude statistical analysis altogether. No numerical statement can express the full significance of such features as the lowering of the vitality of the population in particular areas, changes in industrial psychology and in the relations between employers and employed, and, possibly, the far-reaching modifications in the position and policy of British trade unionism to which the strike may ultimately give rise.

The immediate cost of the strike, in pounds, shillings and pence is, however, in itself a sufficiently striking index of the injury inflicted on the community by large-scale industrial disputes under modern conditions. Various estimates have been made ranging from the £166 millions of Dr Bowley to the £3 millions per day suggested by Sir Hugh Bell and others, which would give a total to the present time of from £500 millions to £600 millions. An independent, though necessarily tentative valuation is suggested by numerous general indices of trade activity during the stoppage. The unemployment insurance returns show that the total insured workers employed during the first three months of 1926 had fallen by 14 per cent. at the end of May (account being taken of the million odd miners involved in the dispute), while early in the present month the return to work of large numbers of miners and a slight improvement in unemployment in other trades had reduced the gap to about 11 per cent. These figures, however, afford an insufficient indication of the extent of short-time working. Bank clearings in

ten provincial towns show an average falling off of 13 per cent. since the end of April last, as compared with the first four months of the year, allowance being made for changes in the general price level. Exports of British goods in the third quarter of 1926 were 21 per cent. less in volume than those of the first three months of the year. Our index of the production of electricity in certain of the chief industrial areas of Great Britain (excluding London and Wales) declined on the average by 27 per cent. in the six months May to September last, as compared with the January to April period. This figure undoubtedly gives an exaggerated impression, owing to such factors as the lower consumption of electricity for lighting purposes during the summer months. Altogether, it would seem that about 12 per cent. to 20 per cent. may be assessed as representing the upper and lower limits of the falling off in industrial activity with, say, 15 per cent. as a probable mean figure. On available evidence, we are inclined to put the total national income in the months immediately preceding the strike at the equivalent of £4,000 millions a year. A falling off in production of the dimensions mentioned would in the seven months involve a drop in the national income having as its upper and lower limits about £465 millions and £280 millions respectively, with £350 millions as a most probable figure. One might add an extra £15 millions, approximately, to cover additional losses during the General Strike, and £23 millions representing the Government's pre-stoppage subsidy to the coal industry.

The lion's share of the loss has naturally fallen on the shoulders of the chief protagonists. No exact estimate can be made of the potential production of coal during the last seven months under the régime contemplated by the Samuel Commission, but, assuming an output mid-way between that of the "depressed" period of 1925, and the subsidy-fed early months of 1926, and allowing for the production of those miners who returned to work during the stoppage, the net loss of output "commercially disposable" may be put at about 110-113 million tons, representing, at the low pithead prices obtaining in the January-March quarter of this year, a gross monetary loss of about £90 millions, of which two-thirds to three-fourths—say £60 to £75 millions—would normally have been accounted for by wages.

Of the industries not directly concerned in the dispute, the heavy iron and steel groups were much the worst sufferers owing to their inability to obtain large supplies of cheap and suitable fuel, which are a *sine qua non* of their existence. Against a potential seven months' production (calculated on the same lines as that of coal above) of 3,644,000 tons of pig-iron and 4,457,000 tons of steel ingots and castings, the actual May-November output will probably not exceed 200,000 tons and 460,000 tons respectively. Assuming very moderate disposal prices, with due allowance for savings under the head of fuel costs, the losses of the last seven months may be computed at £10-£12 millions in the case of pig-iron and £25-£28 millions in that of iron and steel.

Industry as a whole has been handicapped by insufficiency of fuel supplies, the inferior quality of much of the imported material, and, particularly in the later months of the stoppage, by its high price. In addition, certain industries, such as the woollen, worsted and shoe trades were increasingly affected as the stoppage progressed by the diminution of purchasing power in the mining districts and elsewhere. Between May and October some 14,000,000 tons of coal were imported into Great Britain at an average c.i.f. price of £2 3s a ton, but during November contracts were being concluded at well over 70s a ton. It may be estimated that in the early days of the present month industrial coal supplies (including those available for gas and electricity works, the railways, and manufacturing generally) were in the neighbourhood of one-and-a-half million tons a week as compared with about three millions in normal times, when the iron and steel industry is an influential consumer.

The extent of the unfavourable reaction of these conditions on individual trades may be inferred from two sets of figures—the unemployment statistics and the trade returns. The following table shows the number of unem-

All trades	1,093,829	1,635,886	

* Excluding coal miners who ceased work on account of the dispute.

In some cases, such as iron and steel, cotton, and railway transport, the number of unemployed workers has more than doubled since the stoppage. The above figures do not give an adequate indication of the large amount of short-time working, but returns made by certain firms to the Ministry of Labour showed that in October last about 21½ per cent. of the workers employed by those firms in the cotton industry were losing 17 hours a week on the average, while in the woollen industry 37½ per cent. were losing nearly 10½ hours and in the worsted trade 40 per cent., were losing nearly 12 hours on the average. In the boot and shoe industry the corresponding figures were 45½ per cent. and 12½ hours respectively, in pottery 29 per cent. and 9 hours. On the railways, where short time was largely non-existent before the general strike, certain workers have since lost up to three days a week—an "economy" which may go some slight way to offset the drop of £26 millions in gross railway receipts during the first ten months of this year. Another series of data is furnished by the overseas trade returns, which reveal a decline of £97 millions in British exports during the first ten months of 1926 as compared with the same period of 1925. Exports of coal, coke, and manufactured fuel are down by £26½ millions; of iron and steel by £8½ millions; machinery, by £3 millions; cotton, yarn, and manufactures, £36½ millions; woollens and worsteds, £7½ millions; other textiles and clothing, £2½ millions; chemicals, £900,000; and leather, boots, and shoes, £500,000. These losses may not be entirely attributable to the coal stoppage in all cases, but it is certain that they do not tell the whole story, and that three or four months must elapse before the full extent of the decline can be even approximately measured.

In the ordinary way, so severe a contraction in our export trade would have entailed a serious drop in shipping earnings, but there is reason to believe that the demand for tonnage to load coal from Hampton Roads and elsewhere for British ports has, in the present instance, gone far to offset these losses. "Tramp" freights have in

many cases risen to over twice their pre-strike levels, and a good deal of idle tonnage has been absorbed. The liner companies have doubtless suffered a good deal, but over the whole industry gains may possibly slightly outbalance losses.

The amount of the bill ultimately to be faced by the taxpayer will be unassessable for some months. Supplementary estimates have already swallowed up the Chancellor's modest surplus in respect of the present financial year, and with income-tax in 1927-28 based, as regards Schedule D, on the results of the single "bad year," 1926-27, the prospect of increased taxation appears uncomfortably substantial. Altogether the country has paid, and is likely to pay, very dearly for the failure of the representatives of a single major industry to adjust their differences round the council table.

EGYPT'S ECONOMIC POSITION.

(BY A CAIRO CORRESPONDENT.)

THE heavy drop in the price of cotton has created something like consternation in Egypt. The whole economy of the country is so wrapped up in the fortunes of this product that any movement in price affects every pocket, though naturally the producers are most directly affected. Ninety-one per cent. of the cultivated land of the country is in the hands of natives, of whom 1,880,000, out of a total of 2,033,000, hold under five acres. The remainder consist very largely of big proprietors, who rarely farm their own property, but let it out, either for cash, or under a metayage agreement, by which the occupier binds himself to put one-half of the land under cotton each summer, which goes to the owner as rent. The rest is at his own disposal, except that he may not plant more cotton; and he usually manages in this fertile land to secure three crops in two years for himself, as well as the one for his landlord. These crops consist mainly of maize, millet, rice, and sugar-cane in summer; of wheat and forage, with onions, beans, lentils, barley, sesame, groundnuts, as subsidiary crops, in winter. The cereals from the small holding rarely come to market, but are consumed by the grower and his family, or sometimes paid as wages to his hired help, even the village barber and dominie often receiving their remuneration in the shape of so much maize annually. For cash he may trust to a small extent to his subsidiary crops, and to the pigeons, poultry, and eggs that his wife takes to market. The metayer then is but little affected by the price of cotton, though his landlord is very much so.

With the small cultivator, however, who works his own plot or hires a parcel from one of the big estates, or not infrequently combines the two methods, the case is far otherwise. He grows the same crops as his fellow the metayer, but he has bound himself to pay a certain rental, which is fixed about this time of year, on the basis of the prevailing price of cotton. In the case of rented land

it is not far from the truth to say that the rent is the value of the cotton that will be picked in the following autumn, estimated at the price current when the contract is drawn. Rents which fall due now, therefore, have been fixed on a basis of about 40 talaris for Sakellarides and 30 for uppers, as against actual prices of 26 to 27 and 17 to 18. The fellah who rents his land will be unable to meet his rent by something like 30 per cent. In such cases the landlord endeavours to recoup himself by seizing the maize, on which his tenant has been reckoning to see him through the winter. There is but one remedy, recourse to the village usurer. Curiously enough, the Egyptian fellah prefers to borrow at high rates of interest rather than draw on the family hoard, which may be hidden away in a hole, known only to himself and perhaps his wife. There is likely to be much scope for the moneylender and the mortgage bank to tide the fellah over a difficult year, till—inshallah—he is again favoured with a sufficiency on his very modest measurement.

The big proprietor who farms any considerable portion of his land or lets it on metayage will this year find his profits from it much curtailed. Not that he is likely to suffer privation like the fellah, for his income, relatively smaller, no doubt, than he has been accustomed to enjoy of late years, is still tolerable, though he may have to forgo his villégiature in Europe next summer. He has, however, no real grounds for complaint.

The Government is likely to be as hard hit as anyone else. One-third of the revenue is represented by the takings of the Customs, arising from the dues on exports (1 per cent. *ad valorem*) and on imports (about 1 per cent. in all). Since the import trade will depend largely on the value of the exports, the takings of the Customs are likely to fall off very considerably. The consequence is not inevitable, since Egypt has accumulated large foreign balances out of the profits of the past ten years, some of which she may employ to finance imports. The purchase of stores out of the cash portion of the reserve fund, presently to be referred to, in order to make good depreciation of Government property, is a case in point. None the less, it is broadly true that imports will be adversely influenced by the fall in the price of our staple. The Treasury is thus likely to be hit by the reduction in Customs dues. But besides this direct loss of revenue all items are likely to be affected. The railways carry less; there is less telegraphing and letter writing; land transactions fall off; judicial fees drop; fewer ships pay port dues; and so on all along the line: and all of these mean less grist to the Treasury mill.

This is particularly the case when a reduction of the outturn of the crop coincides with a fall in prices. Thanks to unusually favourable circumstances last year, the crop was then a bumper one, exceeding 8,000,000 kantars of 90 English pounds, since close on this amount reached the coast, and it is estimated that another 300,000 kantars remain upcountry awaiting the dawn of better prices. But this year there has been a reduction of 7 per cent. in the acreage under cotton, and, worse still, a decline in the yield amounting to between 15 and 20 per cent. on last year's very favourable figure. The Government's latest estimate is for an outturn of 6.8 million kantars, of which 2.86 millions are Sakellarides. The joint result of the fall of price of 25 per cent., and the drop in total outturn will be a diminution of the total value of the crop by some 35 to 40 per cent. on last year's value, itself a good deal lower than the previous year's.

In making this forecast, however, one must not lose sight of the fact that not what is harvested counts, but what is sold, and, as far as foreign trade goes, not arrivals at Alexandria, but exports; for very little of the stock at the port is cotton bought on foreign account, and paid for but not yet exported. Now the huge crop of 1925-6, coming together with a record crop of American and an ever-expanding flow of high-grade cottons from British dominions and elsewhere, has proved to be more than consumers were prepared to absorb. Consequently, for the season ending August 31st, only 7,000,000 kantars of this large crop were exported, against a shade less from the much smaller crop of the previous year. Stocks in Alexandria have risen to 1,100,000 kantars, against 300,000 kantars. The country has, therefore, a reserve exporting power, which only awaits

a revival of trade to become effective in raising the balance of trade. Of this stock, some 400,000 kantars, 350,000 kantars of it Sakellarides, are held by the Government.

Official support for the market was first tried in 1914, when the outbreak of war disorganised commerce and finance and destroyed confidence. On that occasion the decision to purchase cotton from small cultivators (to enable them to pay their taxes, it was cynically asserted at the time) helped to give a useful fillip to the market, and was justified on that account. Several times subsequently, during the fall in prices that followed the world crisis of 1920, the Government ventured on the cotton market, with happy results for the Treasury, but without any effect on prices, that could be attributed in the least to its support. When prices began to sag at this time last year, and producers found that they could no longer rely on receiving the fabulous prices which they had come to look on as their right, an intensive propaganda was initiated by interested parties, calling for Government intervention with the object of holding prices at their then levels. The leaders were the Agricultural Syndicate, a body chiefly composed of landed proprietors, with powerful political influence. There was no attempt to ascertain whether the levels to which prices had fallen, then 38 to 39 talaris for Sakellarides, were or were not unjustifiably low, when compared with the general level of prices. In fact, they were much too high, as the refusal of consumers to take the whole of the crop, even at the much lower prices since prevailing, has conclusively proved. However, the Ziwer Cabinet decided to buy, and also to hold off the market the not unimportant crop grown on the State Domains, and this decision has escaped any attack on the part of their opponents now in opposition in the Chamber. Indeed, it has drawn an apologia from the present Minister of Finance. The decision was to buy up to 500,000 kantars, so long as the price fell below a premium of 75 per cent. on American, for Sakellarides. The sum expended has exceeded £3,000,000, mostly spent on fine grades. Much cotton tendered was rejected, a proceeding which, it is alleged, earned for the rest of the crop a bad reputation, and consequent lower price, than it really merited. The Government has thus become possessed of 400,000 kantars, which it has recently declared will not be placed on the market for some time. As matters have turned out, it is probably face to face with a loss of £600,000, and meanwhile expenses for storage, insurance, and interest continue to mount up. And, so far as appears from the march of prices, the effect has been negligible. The day of full reckoning has yet to come, for the moment the Government starts to throw its stock on the market, the very people who were most insistent on its entry will be the first to exclaim against its attempt to get out. The incident is one more illustration of the fatuity of trying to control the action of supply and demand when only one factor can be commanded, and that but partially.

With all this adverse outlook, however, there is no cause for undue pessimism. Egyptian finances are thriving, and there is reason to look for another surplus, though a much reduced one, on the current Budget. The figures, as finally adopted by the Chamber, are:—

EXPENDITURE.		REVENUE.	
	£		£
Salaries, wages, allowances	13,145,316	Direct taxes	5,800,000
General expenses	11,521,782	Customs	11,900,000
New works	6,623,425	Railways	7,300,000
Other (chiefly public debt and pensions) ..	8,069,477	Registration	2,100,000
		Investments	2,100,000
		Cotton tax	1,500,000
		Various	7,300,000
		Draft on the reserve ..	1,400,000
Total	39,360,000	Total	39,400,000

The steady excess of revenue over estimates during the last ten years has resulted in the accumulation of a great reserve fund, which at date amounts to over £31 millions, less liabilities for the coupons on the Turkish tribute loan of £1.1 millions. New works, which are estimated to cost in the end £12.5 millions, are contemplated, and in some cases begun, and that sum must be looked on as potentially earmarked. Parliament recently decided that Egyptian securities bought for the reserve fund were to be cancelled, and negotiations are in progress with the Commissioners of the Public

Debt as to the best means of doing this. This operation should reduce the debt from £92 millions to £82 millions.

P.S.—Since the above was written the Government has decided to support the market by advancing up to £4 millions, or more if necessary, to cultivators to enable them to hold back their supplies. The advances will be carried out through the banks on the basis of 22.5 talaris per kantar of F.G.F. Sakellarides and 15 talaris per kantar of F.G.F. Ashmouni. Interest (including all charges) will be at 4 per cent., which may be reduced to 3 if there is sufficient demand. Cotton dropped half a talari on the day of publication of this news.

THE DIRECTION OF OVERSEAS TRADE.

THE October returns of overseas trade contain the usual statistics giving the countries of origin of imports and of destination of exports and re-exports. From these we have compiled the following tables, the first of which shows our imports from and exports to the principal European countries for the first nine months of each of the past three years and of 1914:—

BRITISH TRADE WITH EUROPE, JANUARY TO SEPTEMBER
(000's omitted).

	IMPORTS FROM.				EXPORTS TO.

Latvia								
Total	209,833	303,647	320,772	376,801	122,078	198,382	186,987	132,873

Total imports for the first nine months declined by £60 millions, while British exports fell by over £83 millions. British exports to the Continent, it will be seen, accounted for £54 millions of this decline, while imports from Europe are £6 millions higher than in the corresponding period of last year. Imports of coal and, perhaps to a less extent, of iron and steel, are no doubt mainly responsible for this increase. Imports from Germany increased by over £15 millions, from Belgium by nearly £5 millions, and from Holland by over £4 millions. Imports from France, on the other hand, fell by £6 millions, from Italy by £3 millions, and from Switzerland by nearly £6 millions. The decline in exports is general, the most prominent decreases being in the case of France, over £9 millions; Germany, over £15 millions; and Holland, £7 millions. From the next table, however, which gives the quarterly figures of trade with Germany and Russia, it will be seen that British exports to Germany in the past three months were higher than in the second quarter, and were the highest since the last quarter of 1925:—

TRADE WITH GERMANY AND RUSSIA
(000's omitted.)

	Trade with Germany.				Trade with Russia.

July-September ..	22,549	6,536	4,680	11,216	6,375	1,217	2,225	3,442

Trade with Russia has been on a smaller scale than last year, but both imports and total exports show an improving tendency in the last quarter.

In the next table the figures of trade with the United States and other foreign countries are compared:—

OTHER FOREIGN COUNTRIES, JANUARY TO SEPTEMBER
(000's omitted).

	IMPORTS FROM.				EXPORTS TO.			
	1914.	1924.	1925.	1926.	1914.	1924.	1925.	1926.
United States	95,789	160,787	171,692	153,124	27,253	39,188	39,418	36,644
Cuba	3,744	1,055	9,514	3,428	1,281	2,378	2,086	1,648

Argentina	25,895	60,903	52,772	52,421	12,322	20,324	21,950	18,540
Brazil	6,230	4,253	4,331	3,037	5,281	9,487	12,248	9,893
Chile	4,370	9,280	10,405	6,813	3,385	3,882	4,344	4,342
Peru	2,141	6,779	6,212	5,090	921	1,969	1,846	1,729
Uruguay	2,170	4,864	3,998	3,979	1,439	2,379	2,433	1,871
Japan	3,172	5,819	5,602	5,475	7,066	20,533	12,678	10,809
Turkey (Asiatic)	3,581	9,374	10,464	8,878	11,237	16,911	11,308	13,855
China	2,171	937	876	993	3,620	681	815	552
Persia	329	6,045	5,101	5,560	518	1,342	1,906	1,474
Egypt	13,472	23,188	23,017	19,022	5,458	11,132	12,505	8,551
Other countries	7,389	17,892	18,221	17,882	10,473	12,400	14,743	12,722
Total	171,875	325,915	326,601	290,028	91,008	144,357	140,752	124,795

Imports from this group of countries account for a decrease of £36½ millions, towards which those from the United States contribute £18 millions. British exports to the United States are less than £3 millions lower, and with a small decline in re-exports there is a substantial improvement in the visible trade balance with the United States for the nine months, which has fallen from £110½ to £96½ millions. The decline in cotton prices is a contributory factor in this movement, and also in the decline in the value of imports from Egypt. Exports to South America show a general decline, but China has taken £2½ millions more than in the first nine months of 1925.

Trade with the Empire is compared in the next table:—

TRADE WITH THE EMPIRE, JANUARY TO SEPTEMBER
(000's omitted).

	IMPORTS FROM.				EXPORTS TO.			
	1914.	1924.	1925.	1926.	1914.	1924.	1925.	1926.
Irish Free State	£	£	£	£	£	£	£	£
Canada	20,844	43,694	48,859	46,817	13,981	20,690	20,955	19,571
Australia	28,945	41,652	57,886	49,030	26,252	44,789	45,425	45,461
New Zealand	20,255	40,446	45,229	40,322	7,332	14,888	17,155	15,346
India & Ceylon	36,715	61,926	68,642	54,649	52,933	71,172	69,332	67,428
South Africa	8,889	12,411	16,535	13,653	14,684	22,880	22,398	23,922
West Africa	4,811	10,255	10,680	9,953	4,458	7,015	9,767	8,601
Mauritius	376	2,895	339	2,539	982	698	698	519
Straits Settlements ..	10,099	8,473	11,733	15,391	3,691	6,344	7,999	9,163
Malay States	1,893	1,214	2,462	4,827	834	1,321	1,221	1,221
West Indies	1,880	3,941	4,894	3,796	1,765	2,618	2,789	2,546
Other Possessions	6,106	15,479	19,003	18,087	10,477	22,342	22,778	18,021
Total	140,810	279,793	318,105	288,555	137,663	246,580	251,519	238,277

Imports from these countries have declined by £30 millions, Australasia, India, and South Africa being prominent in the downward movement. Conspicuous exceptions are the Straits Settlements and the Malay States, and for the increase in the value of these imports higher average prices of rubber and tin are no doubt the explanation. Exports to Australia have been maintained, but in other directions there is a general decline. Imports from the Empire represent 31.9 per cent. of the total, against 32.9 per cent. in the same period of 1925, while exports to these countries are 48 per cent. of the total against 43.4 per cent.

The final table gives re-exports to the chief countries:—

RE-EXPORTS—NINE MONTHS
(000's omitted).

The bulk of the decline in re-exports to foreign countries is accounted for by Germany, Belgium, Holland, and Russia, while France shows a trifling increase. The principal decline in re-exports to the Dominions is shown by Australia—namely, from £3½ to £1½ millions.

CHINESE PUBLIC FINANCE.

(BY A CORRESPONDENT.)

EVENTS in China have moved rapidly since 1924, and there is a great interest in this country in that complicated and difficult movement. Those who hold Chinese securities have a painful interest, and they will be anxious to know how things stand at present, as well as the prospects for the future.

The time has not yet come when China's future can be prophesied with success, but the present situation is anything but satisfactory. Popularly speaking, the so-called Central Government is bankrupt, and the bailiffs are in possession. That is not strictly accurate in a legal sense, it would be better to say that the Central Government has defaulted on nearly all the issues on which it can default with impunity. When the holders of Chinese securities do get anything, it is due to the existence of two foreign-controlled services—the Maritime Customs and the Salt Gabelle. The Central Government in Peking lives from hand to mouth on the surpluses yielded by these services over and above the revenue already hypothecated; and from time to time it further hypothecates this surplus on which it has to live, discounting any future increase of revenue. It has also the Peking octroi and some minor taxes.

The Customs operate mainly in the Treaty Ports, and within a short radius of them. This revenue is paid into certain specified banks for the account of the security holders, and the surplus is then allocated in accordance with a scheme of priority by the British Inspector-General of Customs.

The Salt Gabelle is collected in many parts of the provinces, and about fifty per cent. of that revenue is now forcibly detained by local military adventurers for provincial purposes. The land tax is likewise retained in the provinces, and, of course, innumerable local imposts are in existence, some of them nothing but legalised robbery.

British investors are mostly concerned with loans secured on the Customs and the Salt Gabelle, or on the revenue of the railways. For the present, as long as taxes can be collected under foreign supervision, for a Chinese Central Government which is not central and does not govern China, they are safe enough. Unfortunately, we are rapidly approaching a position in which that Central Government will be a mere organisation for collecting income, largely for foreign investors, in the Treaty Ports and in Peking, for paying subsidies to any military adventurer who can capture Peking and the surrounding country, and for engaging in various diplomatic arguments and amenities. It must be obvious that any really national movement is sure to sweep away such a Government.

The investors whose security is the earning power of the railways are in a worse plight. They have depended for their safety on European control in certain departments, such as the audit, accounting, and traffic branches. But in most cases this control has been rendered ineffective by military action. The annual report of the Department of Overseas Trade on the Commercial, Industrial, and Economic Situation in China to June, 1926, states that "at the moment of writing most of the railways in China serve no other purpose than to provide transport for large numbers of troops uncontrolled by any central organisation.....the railways have during the past year earned practically nothing, with the result that most of them have defaulted on their loan coupons, thereby swelling the already considerable total of China's imperfectly secured debts." Nor is this a temporary state of war and emergency; things have been getting worse for years. To quote again:—"It is difficult to describe the state of deterioration into which the rolling

stock of the great trunk railways has fallen, and it is little exaggeration to say that, unless the present rate of disorganisation is rapidly arrested, the equipment will disappear altogether, leaving only the tracks and road beds."

It is perfectly true that the Chinese railways, run under good management such as they enjoyed in more peaceful times, could pay off their indebtedness in a very few years. It is also true that the Customs tariff could be considerably increased, and that the present taxes, if properly organised, would make the indebtedness of two and a half thousand million dollars quite a light burden compared with other national debts. But all these things presuppose good government.

We need not go into the confusing and uncertain details of the Chinese National Debt. Those who are interested should read Part III. of Mr Frederic Lee's "Currency, Banking, and Finance in China," published this year by the United States Department of Commerce. Here are the figures he gives in a

SUMMARY OF CHINA'S PUBLIC DEBT.			
Secured Debt—			\$
Foreign		1,350,000,000	
Internal		225,000,000	
Total secured debt		1,585,000,000	
Unsecured Debt—			\$
Foreign		300,000,000	
Internal		236,000,000	
Balance undistinguished		187,000,000	
Total unsecured debt		723,000,000	
Total debt		2,308,000,000	
Arrears of salaries		198,650,000	
Grand total silver		2,506,650,000	

These figures are for 1922, but those given by the Commissions of 1924 and 1925 do not materially differ. They are all estimates, owing to numerous irregularities in issues.

The current financial situation may be briefly described in the words of the same authority:—"The annual expenditures of the Central Government, exclusive of the debt services, amount to over seventeen times the annual revenues. Hence China's Budgets are virtually meaningless, except as an indication of what might be expected in the way of revenue and expenditure if conditions became normal." But these are normal conditions in China, if by normal we mean what usually happens.

The following table shows the highest and lowest prices of Chinese Government securities during 1925 and the first ten months of 1926, together with present prices and yields:—

Description.	Final Year of Redemption.	Amount Outstanding.	Prices of 1925.		Prices of 1926 to End of October.		Price Nov. 18, 1926.	Yield.

It is not necessary to go into details as to default and to estimate the relative values of the different securities. What investors are interested in is the probability of improvement in the future. This depends upon a forecast of a political situation which is still so obscure as to defy analysis by European observers. There can be no doubt that in point of discipline and in the possession of general political ideas, and a propaganda to spread them, the Southern forces under Chiang Kai Shek and the troops of his ally, Feng Yu Hsiang, have the advantage. They are Nationalist, and, in theory at least, Communist. And they have a great hold over the rising generation. Their advisers are Russians, and their attitude towards debts, which are largely old war indemnities, is likely to be un-

sympathetic. Many of the unsecured debts of the Central Government they must be expected to repudiate.

Over against them is set the new dynastic system of Chang Tso Lin, and a confused welter of military leaders with Sun and Wu Pei Fu prominent. It is too soon to foretell the result of the clash between these forces, and impossible to say what would be the line taken by the Southern Party if victorious. One thing, however, is certain—the victors could borrow all the money they will need for the reconstruction of China if they would undertake the present foreign obligations.

But could the Nationalists escape from the effects of their own anti-foreign propaganda on themselves and their followers sufficiently to contract fresh foreign loans with the usual checks and controls? Would they not be more likely to follow the example of Russia, whose problems are in many respects so similar to their own?

AMALGAMATIONS AND VALUATIONS.

AMALGAMATIONS are the order of the day in industry and commerce, and seem likely to be so for some time. In spite of the misfortunes that have fallen upon some of the combinations conceived on a too optimistic scale that were formed during the after-war period, it can hardly be doubted that the tendency is still in favour of consolidations and alliances. The idea is much in the public mind that this movement will extend on an international scale to cover the world's chief industries. Whether these plans ever come to fruition or not, it is clear that national amalgamations are one of the chief developments with which we shall have to deal in the near future. It is clearly of the first importance that this development should be on sound and reasonable lines, and that those who enter into it should do so with the assistance of intelligent guidance as to the why and the how. Whether to indulge in holy matrimony by amalgamation, or to become a member of a harem through a holding company, or to engage in a temporary liaison by a pooling agreement, and what are the right lines on which the freedom of single blessedness is to be surrendered—these are problems that must often be puzzling the wits of our industrial organisers to-day. To help them to an answer, Mr Cutforth has written a useful book* dealing clearly and intelligibly with what may be called the accountancy aspect of the question. The pros and cons of the matter he dismisses briefly, and regards chiefly from the point of view of the amalgamators, refraining from all discussion of the possible results of the process on our industrial future. He just refers, for example, to the criticism frequently levelled against combines that they may kill competition by price-cutting and then exploit the public, says that in the vast majority of cases these criticisms will be found on careful inquiry to have no substance, and adds that he does not pretend to deal with business morality or ethics, and that objections to amalgamations which he proposes to discuss "are practically confined to those on the part of the undertakings in question, and do not include those on the part of the public." This restriction runs through the whole book, and it need not be said that Mr Cutforth has a complete right to impose it on himself. But the result is a work which leaves out the public from a question in which the public is very closely interested and about which the public is going to want to know a great deal more. Looking at his subject from the point of view of the firms and businesses concerned, Mr Cutforth seems frankly to adopt the opinion cherished by so many of them that it is a mistake to tell the public more than can be helped, and that amalgamation arrangements which conduce to secrecy are therefore desirable. In discussing the question whether, for the purposes of a holding company scheme, two amalgamating companies joining forces should form a new company to do the holding, he says:—"Another possible advantage in the formation of a new Holding Company is that of comparative secrecy. The

two operating Companies may be public Companies having a large number of Preference Shareholders, while the Ordinary Shares may, in each case, be held by comparatively few people.....If, in such a case, one of the operating Companies were made the Holding Company, the Preference Shareholders of that Company would receive, yearly, a Balance-Sheet in which the holding in the other Company appeared, and they would probably expect to receive a certain amount of information as to the affairs of that Company. Further, the fact would thus be widely and periodically advertised (which might not be altogether desirable) that the interests of the two businesses were really one, and that such businesses were being operated in unison, instead of in competition with each other. If, however, a new Holding Company were formed to acquire the Ordinary Share Capital of both operating Companies, the owners of the Share Capital of that Company might be comparatively few in number; correspondingly fewer Balance-Sheets would be circulated; and little publicity would attach to the annual meetings of that Company. Further, the Holding Company might bear a name which would be unlike the names of either of the existing Companies.....If the shareholders of the Holding Company, exclusive of the employees of that Company, number less than fifty, the Company could be a Private Limited Company, in which case it would not be under the necessity of filing a Balance-Sheet at Somerset House which would be available for public inspection."

Such is the programme of discreet obscurity which Mr Cutforth describes as a "possible advantage." Again, in detailing the "special advantages" of a pooling agreement, he says that "in the first place there is the possible advantage of secrecy. The companies owning the businesses in question may be openly engaged in competition, and it may be considered inexpedient that the suppliers, customers, and the public generally should know that their interests are really identical." This description of the "advantage" of a device by which suppliers, customers and public can be deceived would be most useful to any Communist orator who was fortunate enough to study Mr Cutforth's pages. If it really represents the sentiment of those who do our joint-stock company business and prepare and audit their accounts, that sentiment cannot too soon be altered.

On the subject of valuation for amalgamation purposes, Mr Cutforth's full and informing exposition will be most useful to his clients. One derives from it, as from other authoritative works on the matter, a disquieting impression of the elasticity of the values that may be put upon most of the assets in a commercial balance-sheet, that is to say, of the inadequacy of a balance-sheet, taken by itself, as a guide to the position of the company which it is supposed to set forth. As he says, "with regard to Assets, the values of these are, in a number of cases, matters not of fact but of opinion." As to land, he says that it is necessary that the same valuer should be employed to value that owned by each party to the merger. "By employing one expert for the whole of this work there is at least the assurance that whether the values put upon the land owned by the various parties are on a somewhat high scale or a somewhat low scale, they are at least consistent." For amalgamation purposes, of course, this is all that is required; but when a business is being joint-stocked for sale to the public, the difference between a "somewhat high" and "somewhat low" scale may be very important to future shareholders. As to plant, machinery and other fixed and loose equipment, "the great probability is that the parties will not be able to agree among themselves as to the values to be arrived at." If this is so—and there can be no question that Mr Cutforth is right—and there is so much room for disagreement that parties engaged in a friendly deal have to call in an expert to decide, how can an ignorant shareholder, or outside critic, knowing nothing of the inner facts of the business, draw any inference from figures set against these items in a balance-sheet? Patents, patterns, book debts, stock-in-trade, work in progress, and, above all, goodwill, all are subject to the same elasticity; in varying degrees they are "matters of opinion." And the question is of very serious importance. If this elasticity in asset values merely made it difficult to attach any definite meaning to a balance-sheet it would be passed as a disability

* "Methods of Amalgamation and the Valuation of Businesses for Amalgamation and Other Purposes." By A. E. Cutforth, C.B.E., F.C.A. G. Bell and Sons. 25s.

under which our joint-stock system has suffered without much practical harm, as compared with the good effects that it has wrought. But when we remember that on the treatment by the directors and managers of companies of these "matters of opinion," and their policy with regard to putting values on them, the declared net profit finally depends, and that the amount of profits earned and the manner of their distribution is a thing about which we have somehow to arrive at certainly if our industry is to work in an atmosphere of peace, it is clear that some definite rules will have to be framed and followed by those who have to form an opinion on the values to be set against these elastic assets. Mr Cutforth, dealing with the purely accounting aspect of his problem, does not concern himself with this wider problem. He shows us the rough-and-ready methods by which balance-sheets express opinions, which are interesting rather than accurate; he does not touch the need for the discovery of means by which they could be made really informing, as public interest requires. On the subject of the balance-sheets of holding companies, he says that they may consist, on the assets side, of one item only, "as, for example, Cost of the whole of the share capital in Company X," and the report may confine itself to stating what, if any, dividend has been received on such shareholding; he adds that it is the general practice to furnish much more information and that in a number of cases the balance-sheets of the subsidiary companies are published with that of the holding company, or a combined balance-sheet is compiled and published; one infers that he considers that this is the right course, but a definite statement to that effect, which would have been valuable from one writing with his authority, is conspicuous by its absence. He has dealt with amalgamations, and valuations in connection therewith, in a manner which will be helpful to the amalgamationists, and also, it may be added, to those who will inquire into the problem in the wider spirit that the subject requires.

DISTILLERY PROFITS.

THE progress of the distilling industry is one which receives careful attention not only from investors, but from those who regard its possible products as munitions of war, and, incidentally, temperance reformers. An analysis of the figures of a group of representative distillery companies for the past year discloses a somewhat mixed record. Some of the undertakings have been able to show better results than for the preceding period, while, in other cases, declines have to be noted. Nor is there much information contained in the various reports to account for this. Be that as it may, it cannot be said that any of the companies, with the exception perhaps of Dublin Distillers and Longmorn-Glenlivet, did really badly. This will be seen from the following table, which shows the net profits over the last two financial years, after payment of debenture interest, together with the amount brought in, and the manner in which available balances were utilised:—

Name and Year Ends.	Amount Brought In.	Net Profit After Payment of Debenture Interest.	Preference Dividend.	Ordinary Dividend.	To Reserve, &c.	Carried Forward.

Walker (John) and Sons—Mar. 31, '26	114,515	654,410	105,000	315,000	221,323	127,602

(b) Ten months.

Probably the best performance was that of John Power and Son. This, however, was not so much due to in-

creased business as to the effecting of economies. The result is, therefore, particularly gratifying, though it is a pity that from the accounts as presented it is not possible to see in exactly what items savings were possible. In striking contrast were the figures of Dublin Distillers. The net loss, it is true, was reduced from £21,880 to £10,862. But the past year's figure included £15,000 transferred from general reserve. Had it not been for this appropriation, therefore, there would have been a loss of £25,862, against £21,880 in the previous twelve months. The directors report that "the great depression in trade which was referred to in our last report continues, but has been accentuated during the past year. There has been a further decline in consumption, with corresponding reaction on the company's trading."

The two largest concerns—Buchanan-Dewar and the Distillers' Company—were both able to show increased profits. The Distillers' Company holds a majority of the ordinary share capital of Buchanan-Dewar and of John Walker and Sons, Limited. The directors of the Distillers report that they "have now had a full year's experience in the working of the enlarged company, and have no reason to modify their views as to the wisdom of bringing the producing and distributing sides of the business into closer contact." In continuation of the policy of expansion the company acquired during the year important interests in the businesses of Herbert Green and Co., Limited, makers of Industrial Spirits at Hull; also in the distilleries and stocks which belonged to the firm of Macdonald, Greenlees and Williams (Distillers), Limited.

A slight and welcome improvement came over the position of Seager, Evans and Co., a small profit being earned during the year. On the previous occasion operations resulted in a loss of £1,246. This, apparently, has been made the signal for an overhauling of the company's affairs. The freehold land at Benfleet, which was producing no income, was sold, resulting in a net profit of £2,322; this amount has been added to the general reserve. In addition, an independent valuation was effected of all plant and machinery at Deptford and Liverpool. The result has been to reduce this asset by a sum of £4,110. At the same time, the opportunity has been taken to write off the following items appearing in the balance-sheet: Goodwill, £5,514, and cost of purchase of Robert Preston and Co., £1,208. The sum of £6,722 required for this purpose has been taken from reserve, leaving the total at £21,490. The Highland Distilleries was obliged to reduce its reserve allocation from £36,700 to £9,471.

The following table shows principal liabilities and assets over the past two years:—

Name.	Share Capital and Reserves.	Debs. and Loans.	Cre- ditors.	Prop- erties, Plant, &c.	Stocks	Cash.	Invest- ments.	Debtors
Booth's Distilleries—1924	£ 535,532	£ 633,502	£ 79,838	£ 199,023	£ 372,305	£ 7,903	£ 148,016	£ 398,680

Walker (John)—Mar. 31, '26	3,329,613	2,000,000	1,882,975	356,888	5,623,210	102,740	266,252	..

The modern system of holding big blocks of shares in other companies, and including them under "investments," considerably obscures the value of a comparative table. The absurdity of this practice can be seen with John Walker's "stocks" returned as £5,623,210, as against "nil" for Buchanan-Dewar. In the balance-sheet of the Distillers' Company, of course, is reflected the increase in capital involved by recent acquisitions and extensions. Properties and plant remain at much the same levels as a year ago, but stocks are somewhat higher. On the other hand, cash, as a rule, accounts for less, though investments, on balance, are higher—especially in the case of the Distillers, where the figure has jumped from £7,385,071 to £15,216,629—for the reasons given above. Generally speaking, sundry creditors have declined, but no pronounced movement either way is shown under the heading of debtors.

Our concluding table shows dividends on ordinary shares during past two years, together with present prices and yields, compared with a year ago:—

Name.	Prices of Shares.			Dividends on Ord. Shares.	
	End of Oct., '25.	Nov. 18, 1926.	Present Yield.	1924-5.	1925-6.
Buchanan-Dewar, 6% cum. pref. (£1) ..	1 7/8	2 1/4	6 3/4	25	25
Distillers' Co., ord. (£1) ..	3 3/4	2 1/2	7 8/3	20	20
Dublin Distilleries, ord. (£5) ..	1	1	nil	nil	nil
Highland Distilleries, ord. (£1) ..	7 3/4	5 1/2	9 0/0	46	50
Longmorn-Glenlivet Distilleries, ord. (10s) ..	1 1/2	1 1/2	5 16/6	10	16
Power (John) & Son 8% cum. pref. (£1) ..	4 1/2	4 1/2	12 15/0	nil	nil
Seager, Evans and Co., ord. (£1 1/2) ..	1	1	nil	nil	nil
Walker (John) & Sons, 7% cum. pref. (£1) ..	1 3/4	1 1/4	6 12/0	25	25

† Free of income-tax. (b) Ten months.

With the exception of John Power 8 per cent. preference, share quotations are below those ruling a year ago. There has consequently been an increase in yields, which are now rather high. Distillers' ordinary now return as much as £7 12s 3d per cent., as against £6 8s per cent. a year ago. The lowest yield is £6 4s per cent. on Buchanan-Dewar 6 per cent. preference, as against £5 13s a year ago.

CONTROLLING THE OUTPUT OF GOLD.

III.—THE STATISTICAL POSITION.

In this series of articles Professor Lehfeldt, of Johannesburg, raises the problem of ensuring that gold, which is once more resuming its former standing as the world's standard of value, can itself be stabilised in value. The reader will remember that Prof. Lehfeldt, unlike Prof. Cassel and other authorities, takes the view that gold is more likely to become too abundant than too scarce. At the conclusion of this series of articles we propose to put the case for the opposite view of the future value of gold.

At the present time the stock of gold in the form of coin or of bullion available for coining is probably about £2,200 millions. By far the greater part of this is held as reserves, by treasuries and banks; gold coins are in active circulation only in a few small countries, though, no doubt, a considerable amount is hoarded by the people of Europe who have suffered so much by the depreciation of paper money. Of the stock, more than 40 per cent. is in the United States; this is more than the proportion that would naturally find itself there in accordance with the extent of her trade. Before the war 20 to 25 per cent. of the world's stock was held in the United States, and though that country has become so much richer relatively to the rest, its needs cannot fairly be estimated at more than 30 per cent. It is impossible to make a close estimate, however, as the figure depends on the currency arrangements adopted there and elsewhere. There is no doubt a large surplus that could readily be exported, but it is of little use to estimate the actual amount; one, two, three, or four hundred millions might be disposed of, according to circumstances.

The stocks held may be divided into two groups, according as the country in which they are held maintains convertibility of its currency or not. If it does, as in Britain or United States, the gold reserve is in active use and the amount of it needed can be estimated

if the currency policy is decided on, but in countries which do not maintain convertibility, such as Spain or Argentina, the gold reserve serves no purpose at all, and the amount of it is arbitrary. All that can be said is that it may be used some day, and the country may think it worth while to keep this expensive luxury on the chance. Fortunately for the rest of the world, such countries are extremely conservative, and there seems no likelihood that any of them will sell their stocks of gold and buy something useful with the money; probably the renewed prestige of the gold standard will suffice, and these countries will keep up their stocks with a view to joining the circle of gold-using countries later; but it is an element of uncertainty in the situation.

As regards output, the maximum that has been reached is about £95 millions. This fell to £70 millions in consequence of the rise in prices, which made many mines unpayable, but it has recovered to £80 millions, of which just about one-half is derived from the Witwatersrand. The most uncertain contributor is Russia, which is rumoured to possess vast deposits, the development of which is hindered by the general economic difficulties of the country. However, even under the Imperial Government the Russian output never exceeded a few millions.

Statements about "unexhaustible" gold resources should always be taken with reserve; the development of a paying gold field is not a simple matter. The most important recent discovery is in Ontario; authentic progress is being made there.

One of the weak points in the statistics is the difficulty of knowing how much gold is used in manufacture. The information collected by the United States Mint fails to include a good many countries, and is exposed to much uncertainty as regards those that do make returns. In the States themselves there appears to be a steady demand for about £8 millions worth of new material for jewellery and other manufacture; this is the largest item except in the case of India, and that country's demands vary extremely according to its degree of prosperity. India's consumption, however, has grown from decade to decade, and will now perhaps average £20 millions a year, so that for the world as a whole it is probable that £40 millions a year must be set aside as needed for industrial uses. This leaves over, at present a possibly equal amount to add to the monetary stock—an addition that would be equal to 2 per cent. per annum; as, however, both production and consumption may vary a good deal, the percentage may easily fall to half as much, or may rise, though perhaps not so greatly.

Taking a long view of the situation a 2 per cent. increase would certainly be enough, if not too much. We cannot expect the increase in trade to be greater than that. True, in the century before the war the increase may have been as high as 3 per cent., but the very rapid increase in population that took place then can hardly be maintained, and has, indeed, already suffered check. It would be unreasonable to expect the world's wealth to increase at a greater rate than 2 per cent.—even that,

if kept up for a century, would mean a sevenfold increase on its present amount.

If, then, there were only commercial changes to consider, the present output, together with such spontaneous improvement in banking practice as is always taking place, would suffice, and probably more than suffice, for growth in the demand for money. The uncertainty is greatly increased by what may, for contrast, be called political influences; i.e., by the influence that the policy of various governments and central banks may exercise. We have been acutely conscious of the dependence of the price level on the will of the Federal Reserve Board, but even less important persons might exercise an upsetting influence. The decision either to re-create a gold reserve, or to dispose of an existing reserve, would affect the market, and might set the fashion for a number of similar decisions. The Reichsbank has acquired a considerable stock since its reconstitution, but Czechoslovakia has conducted its affairs successfully by the exchange method without any gold to speak of. Which example is Italy, say, likely to follow?

Some writers think the nations will insist on returning to the reserve ratios existing before the war. In 1914 the stock of gold was about £1,690 millions, but this included a large amount in circulation; if that had then been replaced by paper money, as it has been since, a suitable increase in reserves being made, probably £1,400 millions would have sufficed. By 1914 this would have needed augmenting on account of growth of production, but because of the war and the subsequent depression, the growth was certainly less than the 20 per cent. which we may regard as normal for a decade. Thus requirements would probably have reached about £1,600 millions in 1924, whilst actually the stocks had risen to £2,200 millions. This calculation indicates that of the rise of 50 to 60 points in the index number of prices, 30 to 40 may be regarded as due to the increase and rearrangement of the gold stock (including the abandonment of gold currency). Complete reversion to pre-war practice in gold reserves would therefore involve a large drop in prices, though not to 1914 level. But the customs of bankers as to reserve ratio are not immutable. It is much more natural to suppose that more economical methods having been shown to be practicable, they should be maintained. Banks in certain countries may want to strengthen their reserves, but the American surplus would be quite equal to supplying such demands. In fact, it often happens that a pious wish to possess larger reserves is expressed, but when it comes to actually paying for the gold, more economical ways are found to be good enough.

To illustrate the uncertainty that arises from the political situation, let us make two extreme suppositions.

First, suppose a serious attempt is made to carry out the Genoa Plan for the replacement of gold reserves by bills and deposits on foreign centres; that Americans become nervous about the value of their huge stock of gold, and try to reduce it; that a French, Italian, Spanish, Argentine or Japanese statesman decides to dispose of some 50 millions worth, and that other countries, seeing the advantage of this, wish to follow suit. Then there might be a very serious fall in the value of gold.

Next suppose that France and Italy accept devaluation of their moneys, and restore the gold standard; that India adopts a fixed gold value for the rupee, with free minting of gold; and that a demand for gold currency springs up among the peoples of Central and Eastern Europe. All these influences would, of course, tend to raise the value of gold.

The mere statement is enough to show how uncertain the immediate future is. Still, we may claim that while the former list of events would cause a violent slump, the latter one would be more moderate and slower in its results, especially as the American surplus is available to meet demands in other countries. On the whole, the chief risk of a disturbance that would be embarrassing and detrimental to trade throughout the world appears to be on the side of depreciation, i.e., of rise in prices*.

* This opinion has not been generally accepted. I expressed it in the preface to "Restoration of the World's Currencies" (1923), despite the fact that at the Genoa Conference (1922), the experts were clearly afraid of a scramble for gold, and I venture to think that what has happened since gives no reason for changing my view.

Notes of the Week.

The Imperial Conference.—The Imperial Conference is expected to conclude its labours early next week, and it is to be hoped that the veil of secrecy behind which those labours have been conducted will be raised as fully and as speedily as possible. The nature of the issues, constitutional, political, and economic, with which the conference had to deal were such as to concentrate upon its proceedings a degree of general public interest greater, perhaps, than that which has been given to any previous conference. But the public appetite for news of what was being done has been left to quite an extraordinary degree unsatisfied. The Press has been full day by day of after-dinner speeches by overseas premiers which have assumed a volume that must have been a burden upon these distinguished visitors. But the report of the actual business proceedings have so far been laconic in the extreme. Some part of those discussions which deal with foreign policy, Imperial Defence and strategy and other "reserved" subjects cannot, of course, be published, but we hope that the Government will be in a position to issue full verbatim accounts of the discussions, as well as the decisions reached, on the wide range of economic and social questions which have been under review. A beginning has this week been made by the issue of four reports by sub-committees which have been adopted by the full conference. These deal respectively with forestry, the immunity of State enterprises from taxation, the taxation of non-resident traders, and the advisability of issuing periodic surveys of Empire trade. The Forestry sub-committee found that the outlook for the world's supplies of soft woods, which constitute about 80 per cent. of the timber used for industrial purposes, was distinctly unsatisfactory, and that although partial replacement of temperate by tropical hardwoods might prevent difficulties on that side from reaching an acute stage, it was imperative for all parts of the Empire to continue to conserve and extend their forest resources. Favourable note was taken of the work of such bodies as the Standing Committee on Empire Forestry, the Imperial Forestry Institute, and the Empire Forestry Association, and reference made to the question of the constitution of the Empire Forestry Bureau to the Forestry Conference to be held in Australia and New Zealand in 1928. As regards immunity of State enterprises from taxation, the General Economic Sub-committee found a measure of agreement within the Empire, sufficient to warrant the opening of negotiations with foreign countries with a view to reciprocal agreement for mutual taxation of Government trading enterprises, without prejudice to national interests in the event of war. As regards taxation of non-resident traders, the sub-committee did not arrive at complete unanimity. As matters stand at present, a manufacturer resident in one part of the Empire who sells his goods through an agent in another part receives different treatment in different Dominions. His burden is eased by arrangements, already existing in some cases, for relief in respect of double taxation, but the cost of that relief falls mainly on the Exchequer of the Mother Country. The proposition that liability to taxation in the country of sale should be confined to "merchandising," as distinct from "producing" profits, has been given effect to in the case of Great Britain, and underlies the laws of some of the Dominions, but the representative of India found himself unable to agree to it, and those of Canada and Australia disclaimed any authority to speak for their Provincial or State Governments. The last of the reports under consideration gave a warm benison to Mr Bruce's suggestion that surveys should be made from time to time, each dealing with inter-Imperial trade in a particular product, or group of products, and, if necessary, co-ordinating information given in the reports of such bodies as the Imperial Institute, the Department of Overseas Trade, and the statistical offices of the various Dominions. The question was, however, found to be intimately bound up with the possibility of holding a full-dress Imperial statistical conference. The Imperial Economic Committee,

whose continued existence on its present *ad hoc* basis was confirmed, was subsequently authorised to undertake the compilation of preliminary reports on these lines. Friday's Conference business included the receipt of reports from committees dealing with research, overseas settlement, workmen's compensation, and nationality.

Tangier.—It seems that the question of Tangier is to be reopened, but within narrower limits than the Spanish Government at first proposed. It will be remembered that Tangier—the principal port of Morocco and the principal seat of foreign residents—constitutes an "international zone" alongside of the French and Spanish zones, into which the rest of Morocco is divided. After long delays a statute for the Tangier zone was worked out in an Anglo-Franco-Spanish Convention of 1923, but this statute pleased neither the inhabitants of the zone, nor Spain, nor Italy. The inhabitants found the new arrangements cumbrous and costly; the Spaniards were disappointed to see their aspirations to incorporate Tangier in their own zone (which surrounds Tangier on the landward side) definitely put out of court; and Italy resented the refusal of the three parties to the Tangier Convention to admit her to the negotiations. Ever since 1923 the Spaniards have been seeking an opportunity to reopen the Tangier question, and Italy has been backing them. In 1925, during the negotiations at Madrid for Franco-Spanish co-operation against Abdul-Karim, the French succeeded in preventing the Spaniards from bringing Tangier into the field of discussion; but the moment after Abdul-Karim had been overthrown by the joint efforts of Spain and France (France bore the burden and heat of the day), Spain concluded a treaty of friendship and arbitration with Italy, and simultaneously raised the Tangier question in formal terms. At first the Spaniards wished to bring up the statute of 1923 for revision, but they appear now to have consented to enter into conversations *à deux* with the French, with a view to increasing the Spanish share in the administration of the Tangier zone within the framework of the 1923 statute. Any changes upon which Spain and France may agree are to be submitted for approval to Great Britain, and also to Italy, before being brought into operation. The Spaniards have a good case in demanding that the Tangier zone shall not be allowed to be used as a base of operations for stirring up trouble in the Spanish zone; and it is reasonable that Spain should have a sufficient voice in the administration of the Tangier zone to enable her to prevent it from becoming a nuisance to her own administration in adjacent territory. The British interest in Tangier is not unimportant, but is entirely negative. It is that a port on the threshold of the Straits of Gibraltar should remain neutral and demilitarised, as it is to-day. It is to be hoped that the forthcoming Franco-Spanish conversations will dispose of the Tangier question, which, so long as it remains unsettled, continually threatens to become a focus of serious international tension.

China and Java.—In regard to China, His Majesty's Government are continuing to pursue that policy of patience and conciliation which, however difficult to maintain, is the only policy which contains a germ of constructive possibilities. Sir Austen Chamberlain's brief statement in the House of Commons last Wednesday was on the same lines as Lord Balfour's statement in the Lords the week before. It could be wished that the British residents in China—especially the local British Press and the local correspondents of London papers—would not persist in placing stumbling-blocks in the Government's path. It is obvious that, for the British in China, the present situation involves a far greater daily strain and exasperation than for their countrymen at home. On the other hand, they have much more to lose if Anglo-Chinese relations do not take a turn for the better, and at present their utterances are mostly calculated to give these relations a serious turn for the worse. For example, on November 12th, the *Times* correspondent at Shanghai telegraphed that "when Western Cabinet Ministers talk of a policy of conciliation in China, it is difficult to believe that they really understand the

true nature of the problem which not only they but China have to face." Editorial endorsement of the correspondent's view followed. This is unfortunate, for it is evident that the party which cannot or will not understand the true nature of the problem is not His Majesty's Government but the British communities in China themselves. The fundamental fact in the problem was frankly admitted by the *Times* in the leading article aforesaid: "No one dreams of forcible intervention in the tangle of Chinese affairs." Anyone in touch with British public opinion at home knows that this is so, and it is a matter of urgency that the fact should be realised by the British in China. There may or may not be circumstances in which the right policy is to use force; but there are no circumstances in which the right policy is to use threats when there is no intention or possibility of following up such words by similar action. We cannot, as the *Times* very properly declared, allow ourselves to incur the contempt of an awakening China; but tall talk without drastic action is the surest means of incurring contempt which the wit of man can devise. We adopted this attitude, with disastrous results, in Turkey from 1919 to 1923. The British in China are inviting us to do the same thing there, with the inevitable sequel of a disaster to another and far more important group of British interests than those which were at stake in Constantinople and Smyrna. We sincerely trust that the Government will hold firmly to their present course. The dangerous possibilities of the situation, if it is not handled with wisdom and restraint, are illustrated by the Communist rising (happily abortive) in Java—an East Indian island, inhabited by a dense population of Muslim Malays, in which settlers from Southern China hold a prominent position. In Java, Communist doctrines seem to have obtained a certain hold upon the imaginations of the people. In China, fortunately, this is not yet the case. The Chinese Nationalist Government at Canton has borrowed technical instructors and organisers from the Soviet Government at Moscow because, for the time being, both parties have certain opponents in common; but this is still no more than a matter of foreign relations; and the exigencies of international affairs often bring together the strangest bedfellows—for example, Czarist Russia and Republican France. The present entente between Canton and Moscow has no very permanent foundations; and it may turn out to be no more than a passing phase if British policy is wisely handled. On the other hand, a British policy of bluster might do more than anything else to play into the Bolsheviks' hands by bringing the relations between Canton and Moscow on to a permanent and intimate footing.

Lord D'Abernon on German Currency.—No pronouncement at the Royal Statistical Society has drawn, or has deserved, so much attention as Lord D'Abernon's presidential address on the collapse and recovery of the German currency. As our Ambassador in Berlin during the period, he followed all events at the centre, and was, no doubt, an important factor in the events he describes. Although the course of the mark's fall and ultimate collapse struck the world as an unprecedented catastrophe, the crisis, as Lord D'Abernon says, was true to standard type, and nothing occurred which could not have been foreseen or have been explained by known law. It was only abnormal in its violence and magnitude. Lord D'Abernon divided his period into two halves—that of decline down to the autumn of 1923 and that of recovery up to the present year. In England we had learnt that the inflation and depreciation of a currency act as a concealed income-tax and levy on capital; a strange blindness hid facts which should have been obvious from the German financial authorities. "The capitalist class, which finally lost its invested savings through inflation, was at no time hostile to the steps which led to this loss." Two prime causes led to the disaster:—(1) Failure to see the danger of an ill-regulated issue of banknotes, and (2) a demand for reparation payments. Seeing that Germany resorted to inflation during the war years, Lord D'Abernon acquits the Allied demand from being the primary cause, and the Reparation Commission constantly advised the German Ministers to reform their taxation, although it never gave them a long enough

breathing space. Many known economic laws were shown at work on a vast scale. Inflation provided industry with "the illusion of fortune" until the crash proved these paper profits to be worthless. As the German Government increased the amount of its paper money the purchasing power of the aggregate currency fell steadily; in 1913 the average currency in circulation was worth £300 million sterling; after August, 1923, until the period of stabilisation, the whole Reichsbank and authorised Government issues could have been bought up for ten millions. Germany only carried on its business with so small an amount of money (in purchasing power) by increasing the velocity of its circulation and by using emergency tokens (Notgeld). At first the Government attacked symptoms, trying to bolster up the external value of the mark by "controlling" dealings in foreign exchange, and even by seizing foreign currencies wherever they could be found. The real remedies were taken when Dr Luther and Dr Schacht invented the rentenmark. The new currency was guaranteed by a mortgage on German landed property and by bonds on German industry. Lord D'Abernon doubts whether the mortgage had a real value; its psychological value was undoubted, since it gave the German public confidence. Even more important was the limitation on the issue of rentenmark notes. In two months the gold value of the authorised currency rose from £10 millions to £113 millions, and the rate of exchange has kept stable ever since. Taxation receipts, too, at once became considerable, in contrast with the time when they did not cover 1 per cent. of the Government's payments. By this time, no doubt, the Allied Powers had begun to help by modifying their impossible demands, but this alone would have had little effect. Dr Schacht's policy of drastic credit restriction made him for a time the most unpopular man in the Reich. Lord D'Abernon praises Dr Luther and Dr Schacht, just as he censures Dr Havenstein and the "wild currency of the Reichsbank" during the earlier period. The ex-Ambassador reckons the *Seisachtheia* involved in the collapse of the mark at £10,000 millions; it is extraordinary that this enormous "shaking-off of burdens" did not destroy the German habit of saving, which is now stronger than ever.

Australian Finance.—At a dinner given by Australian bankers in London on Tuesday, Mr S. M. Bruce, Prime Minister of Australia, gave a forcible reply to recent criticisms of Australian Government finance, which have been heard not only in London but in Australia as well. The rate of increase in the public debt in proportion to population has of late aroused misgivings in many quarters, and these will doubtless be to some extent allayed by Mr Bruce's assurance that future loan policy would be directed "even more determinedly than in the past to ensuring that moneys are borrowed for reproductive work only," and that the Commonwealth Government is doing all in its power to ensure that borrowing shall proceed on a strictly controlled and thoroughly sound basis. In referring to the railways, the finances of which have formed a subject of criticism, Mr Bruce claimed that they had proved to be "tremendously effective agencies for developing their latent national assets and for opening up avenues for private investment and enterprise, thus making great indirect as well as a direct contribution to the national wealth." At the same time he admitted that the railways showed a deficit, and did not deny that an adequate return on much of the capital invested in works is not being earned. Among the large quantity of statistics which Mr Bruce quoted, the interesting fact emerged that, while in 1901 only 14 per cent. of the public debt of Australia was to Australians, and in 1911 29 per cent., the figure in 1925 was 51 per cent. To the thoroughly justifiable demand for the publication of fuller information in loan prospectuses, Mr Bruce's concession appeared to be rather grudging. "This is quite a recent demand," he said, "and I doubt whether any real good is to be derived from the publication of such details" (showing the position of the borrower). The average lender, he went on to say, knows as much as he wants to know about the position of Australia, and if he wants more information, "all he has to do is to look up

the Official Year Book of Australia." Such an attitude as this is no more defensible in the case of a great State than in that of a small municipality, and we hope that Mr Bruce's doubts as to the necessity for the publication of an informative prospectus will have been dispersed before the issue of the next Australian loan. At the annual meeting of the English, Scottish, and Australian Bank, Mr Andrew Williamson, the chairman, endorsed much that was said by the Australian Premier, and said that the discouragement of the supply of the money needed to push on as rapidly as possible the development of the great natural resources of any of our overseas Dominions would be a short-sighted financial policy for this country. "At the same time, all our Dominions should ever bear in mind that extravagance and wasteful expenditure inevitably injure credit. The valuable privilege accorded by the Colonial Stock Act to our Dominions imposes on them a corresponding responsibility in their borrowings, to ensure that their loans shall always continue to be intrinsically worthy of the high position of a British Trustee Stock." On the question of the high rate of taxation, Mr Williamson urged that "greater economy in administration would make possible a very material lessening of the burden, and this cannot be too earnestly impressed upon the Governments of all the States, as well as that of the Commonwealth."

Municipal Banking.—The Treasury has appointed a committee, consisting of Lord Bradbury, Sir Laurence Halsey, Sir Henry Haward, Col. the Hon. Sidney Peel, D.S.O., and Sir William Schooling, to consider whether it is desirable to permit a further extension of the formation of municipal savings banks, and if so within what limits and subject to what conditions, statutory or otherwise. The first corporation to establish a municipal bank in this country, it may be recalled, was Birmingham, which obtained powers under a special Act of 1919. This bank combines the functions of a savings bank and a building society, and has over £5½ millions of deposits and some 170,000 depositors. Manchester City Council has recently appointed a committee to inquire into a proposal for the establishment of a municipal bank for Manchester. Hitherto Manchester has financed itself very successfully by short-term borrowings, and as its requirements are large there are obvious advantages to be gained by the project. At the same time there is an obvious need for a definite ruling as to what requirements should be laid down for the management of municipal banks and as to the conditions under which municipal floating debts, owed to a large number of small depositors, should be incurred.

The Finance of Broadcasting.—Parliament has now given provisional approval to the main outline of the new organisation of British broadcasting, to come into operation on January 1, 1927. Early in the present year the Crawford Committee unanimously recommended that the licence to the British Broadcasting Company, which expires on December 31st next, should not be renewed. Warm tribute was paid to the initial work the company has efficiently undertaken. It was proposed that a new British Broadcasting Corporation should be established, of five persons with knowledge of public affairs; that it should retain as executive officer the present general manager of the company; that under agreement with the Postmaster-General as spokesman on broad issues in Parliament it should have large freedom in the maintenance and development of the service; and that, for these purposes, ample funds should be placed at its disposal. In terms of that report the Postmaster-General has now secured approval of a supplementary estimate of £295,000, part of which will be used for the liquidation of the existing company, including the repayment of £71,000 of subscribed capital to its shareholders at par, and part (£183,000) to meet the outlays of the new Corporation in the period between January 1 and March 31, 1927, the end of the financial year. As regards revenue the scheme provides that the Postmaster-General will continue to collect the licence fees, to be retained at 10s per annum, and of which there are now over two million; that he will deduct from the general yield 12½ per cent. to

cover the cost of collection and administration, the Crawford Committee having recommended that the new organisation should not be in any way a burden on public funds; that from the balance year by year he will allocate to the Corporation 90 per cent. of the yield of the first million licences, 80 per cent. of the second million, 70 per cent. of the third million, and 60 per cent. of the yield of any licences above that figure, the reason for the scale of percentages being that operating costs decline after the first million; that on actual figures this allocation will give the Corporation annually in the immediate future, in round figures, £800,000, rising to £860,000; that that allowance will be substantially more than the present company has enjoyed, and is believed to be sufficient for maintenance, research, development, and all the needs of the service; that the Exchequer will retain sums amounting to two or three hundred thousand pounds annually, according to the Postmaster-General, in recognition of certain services which the State renders in the environment, so to speak, of the Corporation; and that the whole financial arrangement will be subject to review at the end of two years, when the allowance to the Corporation can be increased or diminished as required, and when, presumably, the interests of consumers, either in reduced licence fee or in increased facilities, will be carefully considered. The aim has been to avoid making the arrangement to any extent a revenue-producing machine, in the form of indirect taxation of listeners. Much of the criticism turns upon the apparently ample powers of control which are retained by the Postmaster-General. But it should be observed that they are almost exactly the powers which have been in existence since the British Broadcasting Company was formed, and there is therefore no reason to believe that they will interfere with the development of the service. In an expanding industry, if it may be so described, no one can forecast the finance with accuracy, and all interests have been safeguarded by the complete review at the end of two years, with such Departmental inquiry as will be possible before the expiry of that period. In summary, the scheme may be described as public ownership and control of the service by means of public corporation, standing between the Postmaster-General and the people; it is a large experiment which will be studied with the keenest interest.

American Coal and the British Stoppage.—A correspondent writes:—Figures recently published by the Department of Commerce at Washington demonstrate how beneficial the British coal strike has been to U.S. producers and exporters of coal. For the first eight months of the present calendar year, ending August 31st, the United States exported 16,821,000 tons of coal, as compared with 12,427,000 tons in the parallel period of 1925, a gain of more than four million tons. American coal is now finding its way into the ports of every important country in the world, and the increased export demand has helped the industry to prosperity in what would otherwise have probably been a hard summer. Exports of coal had risen in the first four months of the year from 999,697 tons in January to 1,389,049 tons in April, but the real fillip came in May with the outbreak of the strike, and the figures given below show how rapid has been the expansion of the export trade:—

	Tons of Coal Exported.
May	1,843,787
June	2,525,209
July	3,629,753
August	3,942,869

In August Great Britain took no less than 1,510,761 tons, and almost as large a quantity in July, while the Irish Free State bought 92,420 tons in August and 50,988 in July. Some of the gains in other markets were spectacular; the Argentine, which took 73,086 tons in July, bought 189,080 in August, and the exports to Egypt jumped from 8,119 tons to 41,295. Exports to Italy, placed for August at 146,422 tons, were about the same as in July, and exports to France showed a slight increase from 15,512 tons in July to 18,085 tons in August. Most of the coal exported from the U.S. is mined in Pennsylvania and West Virginia, and finds an outlet at some of the ports on Chesapeake Bay. Baltimore is the most

popular port for coal exporters, and so great is the demand there for shipping to carry coal overseas that the port authorities there have applied to the Government for additional ships. As a result, many tramp steamers which at this time of year usually go to the St. Lawrence ports for grain cargoes are avoiding them this year, and grain exporters in Montreal find it difficult to secure space.

Cost of Living.—There was a marked rise in the cost of living during October. The index number of the Ministry of Labour at November 1st was approximately 79 per cent. above the level of July, 1914. This compares with 74 per cent. a month ago and 76 per cent. a year ago. The following table shows the monthly movements of the index figure over a number of years:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items.
(Food, Rent, Clothing, Fuel, and Light, &c.)

1st Day of	1918.	1920.	1921.	1922.	1923.	1924.	1925.	1926.
Jan.	85.90	125	165	92	78	77	80	75
Feb.	90	130	151	88	77	79	79	73
March ..	90	130	141	86	76	78	79	72
April ..	90.95	132	133	82	74	73	75	68
May ..	95.100	141	128	81	70	71	73	67
June ..	100	150	119	80	69	69	72	68
July ..	100.105	152	119	84	69	70	73	70
Aug.	110	155	122	81	71	71	73	70
Sept.	110	161	120	79	73	72	74	72
Oct.	115.120	164	110	78	75	76	76	74
Nov.	120.125	176	103	80	75	80	76	79
Dec.	120	169	99	80	77	81	77	..

For food alone the index stood at 69 per cent., as against 63 per cent. at October 1st and 72 per cent. a year ago. The rise in the index number during the month was chiefly due to increases in the prices of coal, eggs, and potatoes.

Employment in October.—Employment continued to be bad on the whole throughout October. According to the *Ministry of Labour Gazette*, among the 12 million workpeople insured under the Unemployment Insurance Acts in Great Britain and Northern Ireland, the percentage unemployed at October 25th was 13.6*, which compares with 13.7*† at the end of September, and 11.4 per cent. a year ago. The total number of registered unemployed on November 1st was approximately 1,610,000*. This compares with 1,582,000* a month ago, and 1,295,000 at the end of October, 1925. Among the members of trade unions, the percentage unemployed at the end of October was 13.6*. This shows no change from the figure for the previous month, and compares with 11.3 per cent. a year ago. The following table gives the monthly movements in trade union figures for some years past:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.

	1913.	1920.	1921.	1922.	1923.	1924.	1925.	1926.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	2.9	6.9	16.8	13.7	8.9	9.0	10.6
February ..	2.0	1.6	8.5	16.3	13.1	8.1	9.4	10.4
March	1.9	1.1	10.0	16.3	12.3	7.8	9.0	10.1
April	1.7	0.9	17.6*	17.0	11.3	7.5	9.4	10.0
May	1.9	1.1	22.2*	16.4	11.3	7.0	10.1	13.2*
June	1.9	1.2	23.1*	15.7	11.1	7.2	12.3	12.9*
July	1.9	1.4	16.7	14.6	11.1	7.4	11.2	13.2*
August	2.0	1.6	16.3	14.4	11.4	7.9	11.4	13.3*
September .	2.3	2.2	14.8	14.6	11.3	8.6	11.4	13.6*
October	2.2	5.3*	15.6	14.0	10.9	8.7	11.3	13.6*
November ..	2.0	3.7	15.9	14.2	10.5	8.6	11.0	..
December ..	2.6	6.0	16.5	14.0	9.7	9.2	11.0	..

In many industries employment remained bad, particularly in iron mining, iron and steel manufacture, the tinplate trade, heavy engineering, shipbuilding, and most of the textile trades. There was, however, some improvement in the cotton and pottery industries, but there was a seasonal decline in the building trades.

* Excluding workpeople in the coal-mining industry who ceased work owing to the dispute.

† Revised figure.

Unemployment Statistics—A New Departure.—Since the establishment of unemployment insurance on its present lines, Great Britain has possessed more comprehensive information of the state of national employment than any other country in the world. The business community generally has long realised the usefulness of the returns, particularly of those published monthly, in which are set out the total registered unemployed in a large number of trades, following, broadly, the classification of the 1921 population census. It is now proposed to go a step further, by the issue of various tables showing month by month (or, possibly, even week by week) the course of unemployment in every town or area served by a Labour Exchange. The value of such a series to local traders needs no comment. It will, for instance, enable the adjustment of sales activities to changing conditions of prosperity in local areas, and the making of all necessary allowances for such changes when the effectiveness of advertising or salesmanship is in question. The general demand for information on these lines is held to be insufficient to warrant the printing of new tables in the *Labour Gazette*, but it is intended to circulate a subscription four-page sheet, at a cost to subscribers, as far as can be estimated at the moment, of about £5 per annum for a monthly, or £20 for a weekly, series. The institution of the new arrangements is conditional on the volume of the public's response, and it is to be hoped that the latter will justify the initiative displayed by the Department concerned, and eventually lead to a reduction in the somewhat high charge.

Financing the American Cotton Crop.—In our last week's issue we discussed various questions suggested by the raising of a "record" cotton crop in the United States, and mentioned that certain efforts were being made to raise prices from their present low level by holding "surplus" stocks off the market (see the *Economist*, November 13, 1926, page 808). A correspondent sends us the following account of the measures which have been, or are being, taken to cope with a situation, the outward and visible sign of which is that December cotton futures have lately been sold in New York at 12.32 cents a pound, against an estimated average cost of production of 17½ cents. "Early in October demands for governmental assistance arose from every quarter of the South. President Coolidge responded by appointing a Cotton Commission consisting of Secretaries Mellon, Hoover, and Jardine, and Mr Eugene C. Meyer, the latter an able Jewish banker who was formerly chairman of the War Finance Corporation. The Commission met immediately, and outlined the following relief measures as the most practicable:—

1. An immediate survey to determine to what extent the cotton consuming countries of Europe could be induced to make long-term purchases.
2. The stimulation of the cotton manufacturers of the United States to make long-term purchases as a matter of self-protection as well as for the checking of panic sales.
3. Encouragement of the efforts of the Southern banks to stand behind plans of relief and greater co-operation in these efforts on the part of the Federal farm credit organisation.
4. Restriction of acreage of the 1927 crop.

The task of a rapid survey of the situation in the South was undertaken by Mr Meyer, who is the chairman of the Commission, with the assistance of Mr. A. C. Williams, chairman of the Federal Farm Loan Board. As the result of their survey and a series of consultations with local bankers, there have come into existence a group of cotton finance corporations, for which a combined capitalisation of \$16,000,000 is projected. These corporations are being organised in North Carolina (\$1,000,000), South Carolina (\$1,000,000), Georgia (\$1,000,000), Louisiana (\$1,000,000), Texas (\$5,000,000), Oklahoma (\$2,000,000), Memphis (\$2,750,000), and Western Arkansas (\$1,250,000). The Louisiana corporation will take care of both Louisiana and Southern Mississippi, and the Memphis organisation will look after Northern Mississippi, Tennessee, Eastern Arkansas, Kentucky, and South-eastern Missouri, while the others will restrict their operations to the boundaries of their own States. A capital of 16 million dollars makes possible a loaning fund of 160 millions, and the plan is to lend growers 9 cents per lb on cotton, taking warehouse receipts for storage as security and allowing the loans to run for 18 to 20 months. By

this means it is hoped to be able to withdraw from the market some 4 million bales of the new crop and restore prices to a level which will at least repay the cost of production. Some time must elapse before the success of the measures can be accurately determined, but there are political facets to the situation which will force the Coolidge administration to leave no stone unturned for its relief. During the last session of Congress the politicians from the maize-growing States of the Middle West manoeuvred to secure southern support for the measure known as the McNary-Haugen Bill, by providing a special 'subsidy' for cotton. Their overtures were rejected, but the fear now looms up in the minds of the Republican leaders that, unless the plight of the cotton growers is improved by some means or other, their representatives may make common cause with the members of the western farm bloc and force through a far-reaching and expensive plan of so-called 'farm relief' which would be highly distasteful to the banking and commercial interests of the East."

Cotton Futures Trading.—Our Manchester correspondent writes:—On Monday next there is to be an important meeting of the members of the Liverpool Cotton Association to consider the question of extending trading in the futures market. According to the present rules operations are limited to thirteen months ahead, but it is proposed that this should be altered to twenty-five months. Some of the members have petitioned the directors and asked for this alteration. The proposal has been unanimously approved by the board, and it is quite expected that on Monday the change will be confirmed. According to Liverpool merchants and brokers, they are finding an increasing desire amongst spinners to cover their requirements well ahead at the present level of prices. It remains to be seen whether operators will take advantage of this development to any considerable extent. Traders will certainly be interested to see the prices for distant positions in relation to quotations for current months. Undoubtedly there is a feeling amongst spinners that they should take the opportunity of securing their wants for a long time ahead, as the opinion is held that prices are not likely to go lower, and if the acreage in the United States for next season is curtailed there is every probability of a rise in values before very long.

Iron and Steel Output.—According to the figures issued by the National Federation of Iron and Steel Manufacturers, the five furnaces which were in blast at the end of September continued in operation during October, and produced 13,100 tons of pig-iron, compared with 12,500 tons in September. It will be remembered that on the eve of the coal stoppage there were 147 furnaces in blast, and that the production of pig-iron in April was 539,100 tons. The production of steel in October was 92,900 tons, compared with 95,700 tons in September and 661,000 tons in April. The effect of the British coal stoppage on production on the Continent is reflected in the following table, where the production of pig-iron and steel in the first quarter of this year in Germany, Belgium, and France is compared with production in the third quarter. It will be seen that the production of pig-iron increased by 22 per cent. in Germany, 50 per cent. in Belgium, and 7 per cent. in France; and that the production of steel increased by 29 per cent. in Germany, 73 per cent. in Belgium, and 6 per cent. in France:—

(In Thousands of Tons.)				
Pig-iron—	Germany.	Belgium.	France.	
1926. 1st quarter....	2,005.7	611.7	2,206.7	
3rd "	2,459.1	923.2	2,352.8	
Steel—				
1926. 1st quarter....	2,516.8	535.8	1,985.0	
3rd "	3,254.6	926.4	2,095.4	

Imports of iron and steel into the United Kingdom in October amounted to 398,200 tons, a decrease of 47,500 tons compared with September, but a big increase compared with the average of 236,200 tons imported in the first quarter. Of the total imports, 57,500 tons were pig-iron, 90,900 tons billets, blooms and slabs, 86,400 tons sheet and tinplate bars, and 32,900 tons plates and sheets. Exports of iron and steel amounted to 194,100 tons, an increase of nearly 34,000 tons compared with September,

but, of course, a big decrease compared with an average of 360,900 tons in the first quarter. The chief items exported were 59,600 tons of galvanised sheets, 24,500 tons tinplates and sheets, and 23,500 tons of tubes and pipes (cast and wrought).

The World Court and a World Code.—Before the recent announcement by President Coolidge that there is no prospect of his country's adhering to the International Court of Justice at The Hague, close observers had foreseen that such a declaration was not improbable. In an analysis of the results of the recent United States elections in the *Economist* of November 6th it was suggested that non-adherence to the Court might be one consequence of the paralysis of policy flowing from the almost even balance of parties. In addition it has been known that the conditions attached by the United States Senate last January to its resolution in favour of adherence have not proved acceptable in their entirety to other nations. The President now says that he will not ask the Senate to modify its position, and so there will be a continuance of the anomaly that, though one of the judges is an American, the United States refrains from formal participation. Currency is given, however, to the report that the question is not closed, and further that the President may shortly take an opportunity of explicitly endorsing the movement (which finds much support in the United States) for the codification of international law by proposing the holding of an international conference. Codification is a somewhat vague term, to which the non-legal mind is apt to attach various interpretations. American jurists have dwelt on this. The word may be used as meaning no more than reduction of existing rules to an orderly form, or it may include amendment, or it may be employed more particularly with reference to the smoothing away of inconvenient differences where national laws are divergent. In the last-mentioned sense a good deal of sound, practical work has in recent years been done, and is still in progress. America itself (including Canada) is struggling with the problem of divergency between State and State, and work in this field, on a world basis, has definite interest for business men as well as for those whose views and aspirations are perhaps more idealistic. In the broader sense the League of Nations has, it is material to remember, moved, though tardily. A League committee of jurists, including an American member, has for nearly two years been in existence, its instructions being to advise as to the subjects of international law which could most readily be regulated by international agreement. Vague notions of codification need, perhaps, the corrective of a reminder that real progress is not practicable along the line of preparing, all at once, a theoretically complete and all-comprehending code. The subject is too vast and complex, and, it may be added, too intimately involved with current everyday problems for sweeping treatment. It can be tackled effectively only by degrees, and only by enlisting the co-operation of practical people with special knowledge and experience of each particular subject. Therefore, while a conference would perhaps lift the subject into the prominence it deserves, such a gathering could be no more than a step towards the real solid work needed for the elaboration of useful provisions on various subjects for international adoption.

Chilean Railways.—A correspondent writes: The improvements hoped for in the State railways of Chile, as the result of the recommendations made by the Kemmerer Financial Mission, have as yet manifested themselves in part only, and it is again suggested that it would be better for the country were the Government to make fresh efforts to dispose of some, at least, of its lines—if a purchaser could be found. The importance to Chile of her transport systems can be gauged from the fact that from them one-half of the public debt is derived, while upon their effective management the country's economic progress very largely depends. Ranging over a term of years stupendous sums have been lost upon running the State Railways. Deficits, amounting in all to more than 9,000,000 pesos (say £225,000,000), have been incurred, while the debt, now standing at £13,875,000, demands yearly interest payments of over

£585,000 and an annual contribution to the sinking fund of £487,500. A somewhat better showing has been made during the last 12 months, from which it would appear that the worst days have been passed and a more hopeful future has dawned. While for the financial period in question the revenues of the State lines showed a further loss of 5,650,000 pesos upon the Northern lines, upon the Southern lines there is shown an actual surplus of 13,670,000 pesos, or, say, a net profit of 8,020,000 pesos. These figures, however, would seem to take no account of such important matters as depreciation, renewals, or service of loans. For the first quarter of the present year the gross receipts were 67,000,000 pesos, and the expenditure 53,350,000 pesos, leaving a surplus of 13,650,000 pesos. Efforts are being made towards a better and more simple reorganisation of the State lines; experts from different parts of the world—especially Germany and the United States—have been called in to diagnose and advise, and, if possible, cure, the partial paralysis still being caused by defective administration. It has been found, moreover, that no definite remedy or lasting regeneration is possible so long as politics—as has proved the case in Brazil—are permitted to interfere with the situation, a cause of retardation which makes itself felt in many branches of the management, such as appointments to the staff, discrimination in applying the tariffs, labour conditions, and in other directions. Such drawbacks can alone be dealt with by the Chileans themselves; no foreigner could be expected to attempt a reformation that must come from within.

Iron, Coal, and Steel Debentures.—In the improvements that have occurred during the past week or so in the prices of ordinary and preferred shares in iron, coal, and steel companies, the debenture stocks have sympathised to a mild extent. Not long ago it was difficult to sell stock of this nature. To-day it is none too easy to buy it. In other words, the market in these debentures and debenture stocks is not a particularly free one. In view of the fact that speculative investment is rather eager to take a hand in Stock Exchange securities that are likely to benefit, and permanently, from the conclusion of peace in the coal industry, we may set out a list of some of the principal debentures, of which a moderate amount of stock is obtainable in each case:—

Interest Payable.	Name.	Interest.	Repayable.	Price at which Offered.	Yield not Making for Depreciation.

1 A O	Do do	5½	Oct. 1, 1972, at 103	92	5 19 7

It will be noticed that the yields range from 5½ per cent. on Mond Nickel and William Cory debentures to nearly 9½ per cent. on Armstrong Whitworth Consolidated mortgage debenture stock. In some of the above cases sinking funds are in operation, or are about to come into

working, for redemption of stock at due dates. The interest on Palmer's Shipbuilding is paid free of tax. Armstrong Whitworth passed the last dividend on its ordinary and preference shares. Detailed particulars of the security that covers each stock should, of course, be investigated by prospective investors.

India Rubber, Gutta Percha.—The slight decline in profits shown by the India Rubber, Gutta Percha, and Telegraph Works Co., Limited, during the year ended August 31st last was not sufficient to affect the position of the shareholders. As will be seen from the following comparative table, the ordinary dividend was maintained at 5 per cent. :—

September 30.	1913.	1920.	1921.*	1922.*	1923.*	1924.	1925.	1926.

* To August 31.

The reserve appropriation, it will be observed, was reduced from £60,000 to £35,000. The fund now totals £315,000. The balance-sheet shows no changes worthy of mention. The auditors' certificate, however, once again includes the qualifying clause, "subject to the correctness of the value placed on the assets in France and the 'shares in other companies,' as to which we are unable to certify; these are, however, provided for by reserves." As usual, the directors make no comment either on the results of operations or as to the progress of the company.

Sudan Plantations.—An achievement of no mean merit is recorded by the Sudan Plantations Syndicate, Limited, in its report for the year ended June 30th last. The gross profits are shown to have advanced from £304,931 to £706,408, while net profits have jumped from £172,884 to £522,894. The general reserve, to which no appropriation was made on the last occasion, is strengthened by £28,000 to a total of £50,000. The rate of dividend on the ordinary capital is the same as a year ago, namely, 25 per cent. It is this time, however, payable on a capital of £1,500,000, against only £600,000 in the year preceding. The following table shows the company's progress in the past four years :—

	1922-23.	1923-24.	1924-25.	1925-26.
Gross profit ..	£203,829	£251,090	£304,931	£706,408
Net profit ..	133,182	127,934	172,885	522,894

	(17½ %)	(20 %)	(25 %)	(25 %)
	168,632	176,566	189,451	294,655

The directors report that during the year the area under cotton in the Gezira was extended from 20,000 feddans in the season 1924-25 to 80,000 feddans in 1925-26. As a result, further capital expenditure was incurred, and liquid cash resources for the time being show a corresponding reduction. The Kassala Cotton Company's crop for the past season is reported to have been unsatisfactory in quantity owing to the comparative failure of the Gash Flood, on which the extent of the cultivable area depends. "The present year's flood, however, has been good." It is stated that the operations of the Brazil Plantations Syndicate, in which the Sudan company is interested, suffered

from drought, but it is hoped to have some 3,000 acres under cotton during the coming season. The Syndicate has also increased its interest in Brazil by the acquisition at par of 100,000 shares in the Panama Plantations, Limited. An arrangement has also been made with the Sudan Government for an extension of the area and of the period of the present concession. To obtain these advantages the directors have agreed to various concessions, including a reduction of the syndicate's share of the crop, of which full details are to be given at the meeting on November 24th. The balance-sheet shows that stocks of cotton have increased from £280,255 to £2,148,913, and while the total of investments in other companies is naturally higher, the holding of British Government securities has declined from £613,620 to £396,000.

Spies Petroleum and Russia.—"The directors hope that the time is not far distant when the Russian Soviet Government will find it to their advantage to carry on the business of their great country on lines which are less radically opposed to those in force elsewhere in the civilised world, and they consider that it is only a question of time before some form of agreement will be reached with the Russian Soviet Government by which your company can resume operations in Russia in common with other owners." This is a significant and temperate paragraph in the directors' report of the Spies Petroleum Company, Limited, just issued. In the balance-sheet accompanying the report the accounts for the past 7½ years from February 10, 1919, are included. It makes dismal reading, and, we venture to think, should be carefully perused by the Russian authorities, who may be under the impression that British investors in Russia have short memories. After carrying out the reorganisation scheme sanctioned by the High Court on February 3, 1926, the capital of the company is shown as £1,500,000, in shares of 2s. each. Of these 7,131,802 have been issued, and, in accordance with the terms of the scheme of reorganisation, there are options outstanding on 6,522,180 of the unissued shares. It is particularly stressed in the directors' report that the reorganisation of the company's capital does not prejudice its claim against the Russian Soviet Government amounting to £3,401,667. The net amount of cash provided by the reorganisation scheme was £169,739, after payment of expenses and debts and making allowance for other liabilities. It is the intention of the company to undertake other business, "more particularly" now that the company's resources warrant it, and "partly on account of the delay in arriving at a settlement with the Russian Soviet Government."

Slaters.—In spite of trading difficulties resulting from the unsettled industrial conditions prevailing during the past twelve months, the directors of Slaters, Limited, are able to report an increase in both turnover and net profit in respect of the year ended September 30th last. This made possible the maintenance of the ordinary dividend at 9 per cent. for the year. A comparative summary of results is given below :—

Sept. 30.	Tr'ding Profit.	Interest and Divs.	Exp'ses and Inter'st Ch'rges.	Net Profit.	Prof. Div.	Ord. Div.	Rate.	Balance
1906	£52,021	£4,513	£19,508	£37,203	£5,650	£30,281	12½ %	£1,222
1910	41,068	3,097	21,834	22,443	5,650	19,200	8 %	Dr. 2,817
1914	42,506	2,133	23,822	20,881	5,640	14,180	6 %	Dr. 860

1926	76,997	3,624	51,500	51,201	4,800	18,370	9 %	28,360

* Including £20,673 profit on sale of investments.

† " £22,499 " " "

As on the last occasion, the net profit includes a substantial sum in respect of profit on sales of investments. This amount, however, is utilised to strengthen the com-

pany's position, the whole of it being transferred to the reserve for development and renovations, which is thereby increased to £24,873. A bank overdraft of £3,624 appears in the present accounts, which also show that investments have advanced from £22,747 to £24,116, though whether or not these are taken at cost or market value is not stated. Three of the company's properties, "where financial results were not commensurate with the capital employed," have been closed, and the resulting loss written off. Against this, however, three new establishments have been, or are to be, opened, while "an old-established fish business" has been acquired, and is said to be doing a successful trade. During the year the death occurred of Mrs Thompson-Price, who has been chairman of the company since 1925, and who for nine years previously acted as vice-chairman.

Wall Paper Manufacturers.—After the slight decline in profits recorded during the year 1924-25, the Wall Paper Manufacturers, Limited, is able to show an improvement in respect of the year to August 31st last. The increase in net profits was from £649,438 to £743,399. The ordinary dividend was maintained at 10 per cent. for the year, while the deferred shares again received, in addition to the usual payment of 10 per cent., a bonus of 2½ per cent., making a total of 12½ per cent. for the year. The allocation of £150,000 to the reserve fund (as against £200,000 a year ago) raises the total of the account to £600,000. The sum remaining to be carried forward is £395,010, compared with £306,638 brought in. No startling changes are recorded in the balance-sheet. Sundry creditors have declined from £748,082 to £739,104; on the other hand, there has been a gain in debtors from £606,755 to £665,416. The cash holding amounts to £267,751, compared with £368,681.

Kamunting Tin.—A fresh expansion in profits occurred last year, although the growth was less marked than in 1924-25, as compared with the preceding period. At 1,306 tons the output showed a small decline in contrast with the result for previous twelve months, but the price realised averaged £156 7s 8d per ton, as against £143 12s. Costs ruled substantially higher than before, but the depreciation allowance was cut down by some £5,000 to £17,000. In the end the net profit figured at £122,700, comparing with £106,700 for 1924-25, and £50,500 for 1923-24. The dividends for the three periods totalled 30 per cent., 20 per cent., and 15 per cent., tax free respectively. On the present occasion the somewhat enhanced balance of £39,700 remains to go forward. It may be recalled that the company is one of those which tried a suction cutter instead of the usual bucket dredge. The experiment proved a failure, and the machine, "reconstructed as a thoroughly up-to-date bucket dredge," is expected to resume work early in 1926. Towards last year's output it contributed barely 30 tons. In the books the four dredges now figure together at the highly conservative amount of £77,700. It is intended to instal electrical appliances for driving the dredges, with mechanical appliances for increasing their capacity. Operators inclined to be over-optimistic should note that when the No. 4 dredge comes into operation the No. 1 will be overhauled; thus the full benefit of the extra machine will not be felt at once. Additional ground has been applied for, and a further dredge is to be ordered. On the basis of the first quarterly distribution in respect of 1926-27 the shares yield 7½ per cent., tax free.

MR A. M. SAMUEL, M.P., will deliver a lecture on Insurance against Bad Debts in the Export Trade in the Cordwainers' Hall, 7 Cannon street, E.C., on Tuesday, November 30th, at 5.45 p.m. Mr. W. W. Otter-Barry, President of the Insurance Institute of London, will take the chair.

UNITED STATES.—SHARE MARKET RECOVERY— TRADE CONDITIONS COTTON CROP—BELGIAN LOAN—TAX REMISSIONS?

(FROM OUR CORRESPONDENT.)

NEW YORK, November 9.

WITH the money market showing further signs of ease, and with industrial news still far from bad, the share market has continued its rally until nearly two-thirds of loss sustained in the October break has been recovered. On the recovery, trading has been of moderate proportions, and most of the buying probably has come from shorts and revived bull pools. However, there also has been an upward swing in brokers' loans. Thus during the week ended November 3rd the total for this kind of accommodation here, as tabulated by the Federal Reserve Bank, rose \$38,000,000. This increase followed a drop of \$207,000,000 during the liquidating movement of the three previous weeks. Meanwhile the Stock Exchange monthly tabulation of the loans contracted by its members showed that a decrease of approximately \$108,000,000 occurred during October. The Exchange first announced that the decrease during the month came to only \$28,000,000, but a few days later admitted that an \$80,000,000 error had been made. In any event, the Stock Exchange figures roughly confirm those compiled by the Federal Reserve Bank, and show that the shrinkage during October was considerable. That a rebound in loans should accompany the recovery in the share market is but natural. The next weekly report probably will show that a further increase in loans has occurred. As for the money market, some time money over the end of the year was loaned to-day at 4½ per cent., as against 5½ and 5¼ a few weeks ago. Call money loaned on the Stock Exchange to-day at 4½ per cent., and a supply outside the Exchange was available at 4 per cent. It still is argued in some good quarters that money is cheapening because business is slowing down. However, the statistics compiled by the Federal Reserve Bank indicate that after November 1st, and until near the end of the year, the seasonal movement of money rates at this centre is toward somewhat lower levels. The liquidating movement in the share market has probably accentuated that tendency. Making allowance for all modifying circumstances, it must be admitted that the present easing in the money market is a notable one. Talk of a possible reduction in the official rate, which was stimulated by the sweeping reduction in the volume of credit being extended by the Federal Reserve Bank in the week ended October 20th, has been quieted by the subsequent reinstatement of position with the Reserve Bank by the member banks. Thus whereas discounts fell from \$204,000,000 to \$109,000,000 in the week ended October 20th, they had recovered by November 3rd to \$172,000,000.

As far as the slowing down in business is concerned, it appears to be restricted chiefly to the building industry and the automobile trade. In both of these industries the tendency at this season of the year is toward curtailment. In the case of the building industry it seems that the curtailment is somewhat more than would be expected on purely seasonal grounds. In the case of the auto-

mobile industry there is some argument that the curtailment is more than seasonal, but a clear case has not been made out as yet. The steel industry, in operating at 80 per cent. of capacity instead of 85, reflects the movement in the other two industries.

Car loadings on the railroads fell off slightly in the last week for which data are available—that ended October 23rd; but the total of 1,209,000 cars moved in that week far exceeded any previous performance for any similar week, and was second only to the all-time record of 1,210,000 established in the previous week. Meanwhile retailers are anticipating a very satisfactory holiday trade. In short, the slackening in business does not amount to much thus far, and has not had a depressing effect on sentiment. Stability in commodity prices is indicated by the fact that whereas Dun's index advanced 0.3 of 1 per cent. during October, Bradstreet's index declined by the same amount.

A further increase of 464,000 bales in the cotton crop as estimated by the Department of Agriculture was taken coolly by the cotton market. The forecast of 17,918,000 bales on the basis of the November 1 condition brought out little fresh liquidation, the market even rallying mildly. This action occurred, furthermore, in the face of statistics that showed that ginnings to November 1st amounted to 11,259,000 running bales, this year's figures, by virtue of this showing, exceeding last year's for the first time. The event suggests that an eighteen million bale crop had been discounted in existing prices, and that the stimulation of demand through the agency of low prices is redressing the balance. A much better feeling now prevails in the trade, and confidence in the present level of prices is growing. Stocks of cotton textiles are reported to be lower than at any time during the past five years.

One of the interesting developments of the past week or so has been the revival of interest in the foreign bond market—which has become active and strong. It is not too much to say that this revival of interest dates from the offering of the Belgian stabilisation loan. These bonds were offered to the public at 94, and quickly sold up to 98½ on a tremendous turnover. This development naturally suggested to many that some of the outstanding foreign bonds also were cheap, while the strength in French francs helped the French dollar bonds in particular. The event brings to mind an occurrence of a few years ago, when J. P. Morgan and Co. offered an issue of telephone company bonds at an attractive price after a period of over-pricing and stagnation in the bond market. The success of that particular issue of telephone bonds did much to revive interest in the whole bond market.

Considerable discussion has been evoked by President Coolidge's suggestion, which came as something of a surprise, to make a refund on the taxes collected this year. The suspicion has been growing in well-posted quarters that, despite the rather discouraging attitude taken by the Treasury—an attitude that is not unusual in Treasury officials—the surplus would be large enough to bring up anew the question of tax reduction. The President's move suggests that this suspicion has been well founded. In any event, the President suggested a refund that might amount to, say, 10 or 12 per cent. The amount involved has been estimated at \$250,000,000. There seems some basis for assuming that the President's move came rather unexpectedly to Secretary Mellon. In any event, that official amended the suggestion so as to make the concession to the taxpayers take the form of a credit on the taxes to be paid in 1927 on 1926 incomes. What the Administration is trying to do is to pass on to the taxpayer part of the surplus without having a new tax law and a reduction in tax rates that would set a precedent. The Administration is cautious, and is unwilling to concede that the present prosperity and volume of revenue can be maintained through the next few years. It does not want to reduce taxation and then find that revenues are inadequate. Hence the suggestion of a temporary measure of relief. Whether the President's suggestion will take hold well remains to be seen. In Congress there is, of course, a large volume of opinion that favours tax reduction at any time.

FRANCE.—BUDGET DEBATE—FINANCE PLANS— BANK OF FRANCE—REVENUE—FOREIGN TRADE —COAL.

(FROM OUR CORRESPONDENT.)

PARIS, November 17.

THE Poincaré Government emerged victoriously from its first encounter with the Socialist-cum-Communist Opposition in the Chamber last Friday, and there now seems to be no obstacle in the way of the carrying out of the plan laid down for the sittings until Christmas to be devoted exclusively to the passing of the Budget. There were signs of an organised effort on the part of the Left and the Extreme Left to harry the Government, and notice had been given of no fewer than 60 interpellations. M. Poincaré felt justified, however, thanks to the extraordinary amount of confidence reposed in him by all sections of opinion since he resumed office, in refusing to allow the time of the House to be wasted by purely party squabbling. He asked the Chamber to devote its whole time to the Budget, and the motion, which was made a question of confidence in the Government, was adopted after less than an hour's discussion, by a majority of 154. After this first trial of strength the House settled down in a businesslike manner to the discussion of the various departmental estimates, and there is now every reason to believe that the Government will succeed in completing the programme it has so successfully begun.

Meanwhile, the Premier, in his capacity as Finance Minister, is steadily proceeding with his plans for financial restoration. A further step towards righting the position was taken on Saturday, when a decree was signed authorising the issue of sufficient 7 per cent. ten-year Treasury bills of 500f to replace the amount of 6 per cent. Crédit National bonds, 1922, whose holders have deposited them for payment on February 1st next, the date of their maturity. The new bills are to be issued at 460, as from December 1st. Holders who have deposited their Crédit National bonds for repayment are authorised to exchange them for the new issue, and it has been arranged that the difference between the redemption price of the former and the new descriptions shall be handed to holders when the exchange is made. Authorisation has also been given for the issue of another State railway loan in Switzerland, ostensibly in connection with the Alsace-Lorraine railways. The amount of the loan is 75,000,000f Swiss, in bonds of 1,000f Swiss, bearing interest at the rate of 7 per cent., and redeemable in 24 years as from June 1 last.

Contrary to reports that have been in circulation, the Bank of France has not yet begun to avail itself of the privilege to buy in foreign currency, the reason being that by some oversight, when the Bill authorising such purchases was drafted, no clause was included specifying whether the Bank was empowered to act in this connection for its own account or on behalf of the State. Such transactions would in the ordinary course result either in profit or loss, and it is not clear from the text whether the Bank or the State should in such event benefit or lose, as the case might be. The total purchases of "gold, silver, and foreign currency" hitherto acquired by the Bank were stated in last Friday's Bank statement to be to the value of 1,328,798,133f, but this represents merely what has been offered to the Bank by the public during the past two months, and includes nothing bought under the Bank's recently extended powers.

The revenue returns for October show that the yield from taxation of all kinds during the month marked a new high record, and amounted to 5,094,699,000f, as compared with 4,000,639,900f last January, which was the largest total previously recorded. The revenue for the month from "normal and permanent resources" was 5,016,100,800f, as compared with 3,035,921,200f in the previous month, and 2,885,306,200f in October, 1925. These figures are all the more notable because the revenue for the month does not include the receipts from the tobacco monopoly, the yield from which is now absorbed by the Caisse d'Amortissement, owing to it having been earmarked for debt reduction. But for this change the total revenue would doubtless have been returned as at least 200,000,000f more. A favourable

feature is the fact that, in spite of this diminution owing to recent changes, the yield from the State monopolies and other forms of indirect taxation in October exceeded Budget estimates by 649,312,900f. The total yield from these categories of taxation during the first ten months of the present financial year has already exceeded expectations by 2,686,899,500f. The total Budgetary revenue for the ten months amounted to 31,141,084,700f, of which 14,811,416,000f was drawn from income-tax, registrations, stamp duties, imposts on Bourse operations, and other "taxes on acquired wealth"; 10,030,172,600f from taxes on consumption properly so-called (Customs, salt, colonial foodstuffs, tax on turnover, sugar, petrol, matches, &c.); 1,342,140,000f from sumptuary taxes (luxury, amusement, and motor-car taxes); and 3,751,050,000f from duties on "products not indispensable to existence" (alcohol, tobacco, gunpowder). The yield from taxation during the ten months totalled 31,141,084,000f, as compared with 22,709,140,000f during the corresponding period of 1925, or an increase of 8,431,944,000f (or nearly 40 per cent.).

The foreign trade returns for October disclose exceptionally large increases in the value of both imports and exports, as compared with the previous month, and also with the totals for the corresponding month of 1925. The total value of the exports for the month is returned as 6,103,279,000f (or over 900 millions more than for September), which constitutes a new high record for exports. Imports totalled 5,106,420,000f, which figure has been exceeded only in August, June, February, and December last. That these augmented figures are largely due to artificial causes arising from movements of the franc and the steady rise in French selling prices to the parity of world prices is shown by the fact that the import tonnage in October was a fraction less than in the previous month, and 30 per cent. less than in October, 1925, while exports (which had a total tonnage of 2,689,043 tons) were only 60,048 tons more than in the previous month and 214,726 tons more than in October, 1925. The tonnage of manufactured goods exported showed a drop of 40,369 tons, while that of imports of the same category of goods fell 29,641 tons. The detailed comparative figures, showing the value of the various categories of foreign trade, are as follows:—

	October, 1926.	Inc. or Dec. on	
		Sept., 1926.	Oct., 1925.
Imports—			
Foodstuffs	951,387,000	+ 22,914,000	+ 114,785,000
Raw materials	3,592,161,000	+ 623,403,000	+ 483,484,000
Manufactured goods ..	562,872,000	+ 112,436,000	+ 69,114,000
Totals	5,106,420,000	+ 481,053,000	+ 667,383,000
Exports—			
Foodstuffs	516,329,000	+ 64,594,000	+ 143,018,000
Raw materials	1,941,278,000	+ 724,401,000	+ 776,260,000
Manufactured goods ..	3,645,672,000	+ 117,600,000	+ 783,661,000
Totals	6,103,279,000	+ 906,595,000	+ 1,702,989,000

The total volume of trade for the month showed a surplus of exports, as compared with those for September, of 996,859,000f, as compared with an unfavourable balance of about 39,000,000f in October last year. The total value of the imports for the first ten months of the year is returned as 49,397,518,000f (or 15,409,557,000f more than during the corresponding period of 1925), while exports are returned at 48,810,534,000f (or 12,089,882,000f more), the total exchanges for the ten months resulting in an excess of imports amounting to 586,984,000f (as compared with a balance of exports of 2,732,691,000f at the end of the first ten months of last year).

Coal production returns for September show a total output of 4,392,123 tons for 26 working days, as compared with 4,564,831 tons for an equivalent number of days in August. The average daily output in September was 168,927 tons, with 314,442 workers employed, as compared with an average of 170,048 tons in January last; 160,445 in January, 1925; 144,680 tons in January, 1924; 121,064 tons in January, 1923; and 136,147 tons in 1913. The total output during the first nine months of 1926 was 38,616,059 tons, corresponding to a total output for the year of over 51 million tons, as compared with 48 millions in 1925 and 45 millions in 1924. The collieries

situated within the pre-war frontiers showed last month a daily average output of 152,683 tons, or 16,536 tons more than before the war. The Lorraine coalfield furnished an average additional output of 16,244 tons per day. The output of metallurgical coke by the colliery plants amounted in September to 314,512 tons, or an increase of 57,000 tons on the monthly output in 1913. Demands for increased pay put forward by the miners in the Nord and Pas de Calais coalfields, on the ground of the continued rise in retail prices, have been agreed to by the coalowners, after a joint conference at Douai. The agreement provides for an increase of the temporary additional allowances by 40 per cent., bringing the total increase to 70 per cent., on the basis of the agreements of September, 1925, and January, 1926.

GERMANY.—POLITICS—FINANCES—CREDIT— INDUSTRY—RAILWAYS—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 16.

NEGOTIATIONS for a reconstruction of the Cabinet as a "Great Coalition" by taking in the Social-Democrats are under way. The crisis caused by the unexpected support given by the German-Nationals to Left Opposition proposals, which led to Cabinet defeats, has been overcome temporarily by Cabinet promises of concessions in unemployment policy and by an arrangement that Cabinet and Socialists shall get into touch when important questions are pending. This marks a small advance as compared with the former position under which the Socialists claimed to vote on Cabinet measures on their merits without seeking a preliminary understanding. The Socialists are resolved to do nothing that could help the Nationals either to force their way into the Cabinet or to influence Cabinet policy; but they seem inclined before taking a personal part in the Cabinet to wait and see how last week's agreement works; and they demand a clearer indication whether the Cabinet prefers support from Left or Right. The Centre and the German Democrats are strongly opposed to any coalition with the Nationals, but the attitude of the German People's Party is not so clear; and the "Great Coalition" plan can hardly be realised without a formal compromise agreement as to particular economic and financial measures between this party and the Socialists.

Taxation in October yielded the large sum of 747,034,098 marks, against 544,881,951 marks in September. The increase is wholly under the heading of direct taxes, which yielded 535 million marks against 324 million marks, and is due to quarterly income-tax and sales-tax payments. The total, however, exceeds also that of July (708 million marks), the last preceding month of quarterly payments. Indirect taxes yielded 15 million marks less than in September. Income-tax deducted from wages is increasing slowly. Other income-tax yielded 191 million marks, against 153 million marks in July. The yield of the taxes pledged for Reparations declined, after a big increase in September. Receipts in April-October, constituting the first seven months of the financial year, and the whole year's estimated receipts are:—

	(000's omitted.)	
	April-Oct. Marks.	Year's Estimate. Marks.
All taxes	4,100,645	6,555,300
Direct	2,770,216	4,506,000
Thereof:		
Income-tax	1,379,987	2,100,000
Corporation income.....	265,921	250,000
Property.....	126,460	400,000
Sales	518,926	982,000
Capital transactions.....	72,809	118,000
Traffic.....	187,512	325,000
Indirect	1,330,239	2,049,300
Thereof:		
Reparations—Pledged ..	1,294,521	1,997,000
Others	35,718	52,300

The yields of the Reparations-pledged taxes and the year's estimates were:—

	Marks.	Marks.
Customs	490,778	670,000
Tobacco	374,352	655,000
Sugar	157,698	265,000
Beer	164,178	235,000
Spirits Monopoly	107,513	172,000

The Reichsbank president, Dr Schacht, has made a second sharp attack upon the lack of system in disposing of public funds. He holds that the Reichsbank cannot properly fulfil its functions in regulating the currency as long as other authorities with accumulated funds from taxation, communications, and social-insurance premiums put in practice credit policies of their own. Dr Schacht also considers that the present unorganised system narrows the sphere of credit, and that it compels the different Departments to maintain larger cash reserves than was the case when the Reichsbank handled all these moneys. Of funds totalling 2,500 million marks belonging to the Republic, the Posts, the Railways Corporation, and the Prussian Finance Ministry, only 420 millions are in the Reichsbank.

The private discount rate, which was reduced by $\frac{1}{2}$ per cent. at the beginning of November, has again been reduced by the same amount, to $4\frac{1}{2}$ and $4\frac{3}{4}$ per cent. for long and short terms respectively. The private discount market is very inactive. Day money continues to be offered far in excess of the demand, the rates having fallen to $2\frac{1}{2}$ -4 per cent. at the close of last week. Although no considerable effect upon credit has been produced by the trade revival so far, bankers and other authorities seem to think that the wave of plentiful and cheap money will not last much longer. The lowest interest rates were touched in the second quarter of the year, those of the third being a little higher. The average of the day money, month money, and private discount rate, which in the fourth quarter of 1925 was 8.72 per cent., was 6.53 per cent. in the first quarter of this year, 5.11 per cent. in the second quarter, and 5.22 per cent. in the third. The volume of credits to business by the Reichsbank, the private note banks and the rentenmark fell very rapidly until July, and thereafter rose. On September 30th the total was 2,215 million marks, as against 1,969 million marks on July 31. The circulation of bills of exchange, as shown by bill stamp receipts, fell between July, 1925, when a high point was reached, until August last, since when there has been an increase which in October was very large. These changes, together with the continued upward movement of stocks, the decline in bankruptcies and protested bills, the improving employment, the increasing coal and iron output, and the new tendency of wages to rise, all point to a general trade revival. But no industrial boom and no disappearance of unemployment such as was witnessed in the inflation years is expected.

The coal industry continues active. The cessation of the British strike would not, it is expected, have much effect for some time to come, as the German industry has concluded delivery contracts for a considerable time ahead. The daily output of Ruhr coal in the last two recorded weeks shows a new big rise, the average being 414,500 metric tons, as against 306,000 to 330,000 tons in April. The coke output has also greatly increased. The foreign trade balance in coal in the first nine months of 1926 was: imports, 2,545,000 tons, against 5,920,000 tons in the same months of 1925; exports, 20,412,000 tons, against 10,483,000 tons (Reparations deliveries not included). Coal exports to Holland were 7,526,000 tons, to France 2,839,000 tons, and to Great Britain 1,221,000 tons. The iron and steel activity has not further progressed, and Continental prices have slightly weakened. In the first three-quarters of the year the German trade balance in this branch is very favourable. The negotiation of the international aluminium cartel has caused satisfaction here. The German aluminium industry is a war-time creation, and it was mainly developed with lignite fuel, the water-power which foreign aluminium manufacturers largely used not being then available. The Empire, for military reasons, did most of the financing. The recently opened Inn aluminium works are the first in Germany to use water-power. The Republic to-day has almost a monopoly, and it has power to forbid the opening of new works; but the import prohibition, which exists on paper, is not applied against foreign offers at lower prices than German. Germany's output in 1925 is estimated at 26,200 tons.

A plan is being considered to create an all-German potash trust in the form of a single company to replace

BANK ESTABLISHED IN 1864.

SKANDINAVISKA KREDITAKTIEBOLAGET

GOTHENBURG, STOCKHOLM, MALMO.

Branches in all parts of Sweden.

Telegraphic Address: "Kreditbolaget."

THE BANK AFFORDS EVERY FACILITY FOR BANKING
BUSINESS WITH SCANDINAVIA.

the present State-created syndicate. The aim is, as usual, "nationalisation." The need for trust has been brought out by personal struggles for leadership between the chief potash magnates. After the agreement of 1925 for partition of foreign markets with France, which was renewed with some modifications early this year, a period of prosperity was expected, and vast sums were spent on factories for production of potash preparations. The prosperity was not attained. After sales rose last year to a record high figure, they began to decline, and in the ten months January-October were only 935,590 tons (reckoned in pure potash contents) against 1,108,840 tons in the same months of 1925. Only about one-third of the mines which have participation rights in the syndicate are being worked, and the operating companies have to bear the cost of compensating the owners of the closed-down mines. The largest of the "concerns," the Wintershall, which owns 392-thousandths of the total syndicate quotas, tried to get a majority in the syndicate, but failed. The industry is threatened by competition from "mixed fertilisers" containing relatively small proportions of potash, which both the Dyes and Nitro Trust and the coal interests are about to produce. The Ministry of Industry lately refused to sanction an increase in potash prices, but it is understood to approve of the foundation of a trust, for which amendment of the law would be required.

Railway traffic is very rapidly increasing. The increase in car loadings which normally takes place late in the year has this year been much exceeded. In great part this is due to increasing consignments of coal. As against a loss of 13 per cent. of area and 9 per cent. of railway track, goods traffic has declined since 1913 by 21 per cent. Much the heaviest decline is in goods consigned to abroad, which have dropped 57.3 per cent., whereas home traffic dropped only 17.6 per cent.

After the sharp fall of quotations in the first half of last week stocks recovered moderately, but on the whole week they lost. To-day the Bourse opened weak, but closed firm. The market is less active than in October; and the professional speculators are taking quick profits. Rights to amortisation of federal paper mark loans under the valorisation law are this week quoted on the Bourse. The testing of claims by "old" bondholders, who get preferential treatment under the law, has so far shown that over 40 milliard marks nominal out of a total 70 milliard marks nominal of federal loans are in "old" hands. This is twice as much as was estimated when the valorisation law was passed.

INDIA. — THE WEAKENING RUPEE — STAGNANT EXPORTS—TRADE FIGURES.

(FROM OUR CORRESPONDENT.)

CALCUTTA, October 28.

A PALPABLE weakening in the value of the rupee, following a more than usually successful monsoon, is an autumnal problem that rarely arises. Yet recently, when Calcutta was on holiday, Bombay depressed the market to 1s 5 25-32d for telegraphic transfers. The cynic who studies rupee exchange problems will have it that all years are abnormal, and of this year one can safely predicate that it is normal only in its abnormality. For October, as a rule, marks the beginning of the busy season, when Calcutta, after the publication of the final jute forecast, fixes large ready and forward contracts for the shipment of raw and manufactured jute; and Bombay, after stock

has been taken of the success or otherwise of the monsoon, and after the publication of the more vital American cotton forecasts, arranges to finance shipments of raw cotton, chiefly to Japan. It is these two staples and the fabrics manufactured from them that bulk largest in value among the exports from India. In 1925-1926, for example, of the private exports of Indian merchandise valued at nearly 375 crores, the export of raw cotton accounted for over 95½ crores, while cotton yarns and manufactures were valued at over 9½ crores. This total of over 105 crores compared favourably with the previous year's 103 crores. To this most important item in the exports of India the value of raw jute and jute fabrics exported came a creditable second at over 96½ crores, as against 81 crores in the preceding year. Thus jute and cotton and their fabrics constituted more than 53 per cent. in the total value of Indian exports for 1925-6. This year, for a variety of reasons, there has so far been no heavy seasonal world demand for Indian cotton and jute. The cotton season is six weeks late, and Indian cotton continues to stand above American parity, having failed to react *pari passu* with the setback in American values. In normal years at this period of the cotton season several hundred thousand bales of the Indian staple are generally contracted for forward shipment, whereas recently Bombay has actually been importing American cotton. It is feared that if Indian cotton dealers continue indefinitely to disregard the level of world cotton parities, Japan may intensify a policy of mixing American and Chinese cotton to the detriment of the export of Indian cotton. The reported American movement to sustain raw cotton values may, however, bring Japan into the Indian market for early shipments, as the Japanese mills are said to be short stocked. In the case of jute and jute fabrics the reasons for cautious buying by foreign markets are not far to seek. Wisdom is doubtless justified of her children, and this year a policy of trading delicately has succeeded where last year a tendency to rush in simply saddled buyers with jute at prices which were proved to be the reverse of economic by the time the raw jute was passed into the looms for manufacture. Exports of raw jute for this season to the 22nd inst. totalled only 10,31,256 bales, against 14,09,693 over the corresponding period of last year.

The present values of cotton and jute are approximately 60 per cent. of the values quoted at this time last year.

This unexpected concatenation of circumstances, involving tardy export and lower values, has presented apostles of the 1s 4d rupee with a peculiarly favourable opportunity for attempting to press home the alleged folly of fixation at 1s 6d. Bombay has formed an "Indian Currency League" to this end, which, it is suggested, by propaganda and practical action is endeavouring to expose the impossibility of maintaining the 1s 6d ratio, and the imminent evil effects ensuing on its maintenance of the recommendations of the Currency Commission are embodied in law. Sir Basil Blackett, the Finance Member, recently announced before the Burma Chamber of Commerce that the resources of the Government of India were ample to maintain the exchange at 1s 6d, despite "the recent well-planned 'bear' speculation at Bombay." He regarded the Assembly's decision in August last to postpone the definite vote on stabilisation at 1s 6d as tantamount to a desire to leave things as they were and accept the 1s 6d rate, the further discussion of which he regarded as supererogatory, as it was practically a dead issue.

This pronouncement was followed by a whole-hearted endorsement of the Currency Commission's scheme for the establishment of the Reserve Bank of India. The present Imperial Bank of India was incapable of controlling credit policy and at the same time increasing the spread of education in banking in India. There was ample room for both a Reserve Bank of India and a reconstituted Imperial Bank of India. It seems clear that the suggestion to found a Reserve Bank is the most important of the Commission's recommendations. Although the discussion of this particular point in the political arena will be less controversial than the question of the ratio of rupee fixation, it will nevertheless be contested hotly by vested interests. The pros and cons of the advisability of establishing a Central Reserve Bank of India are too lengthy to be recapitulated here. They have recently been very fully aired in a published corre-

spondence between Sir Basil Blackett and a firm of Bombay brokers. Sir Basil has taken the Reserve Bank scheme under his sheltering ægis, and it is rumoured that early in the spring session of the Indian Legislative Assembly he will introduce a Bill to establish the Reserve Bank more or less in accordance with the suggestions of the Currency Commission. A further Bill must then be introduced to amend the charter of the Imperial Bank of India, which, in compensation for surrendering the rôle of banker to the Government of India, may be permitted to enter freely into ordinary banking business, to have free use within certain limits of Government money, and to receive agency commission. Meantime, opposition against the whole idea is crystallising, and some of the most distinguished former champions of the scheme are said to be wavering.

The trade figures for September are not particularly inspiring. Imports of private merchandise totalled Rs. 1,894 lakhs, and exports, including re-exports, 21 Rs. 2,344 lakhs. Net imports of treasure were Rs. 189 lakhs, and the total visible balance of trade was Rs. 276. The balance of remittance of funds was minus Rs. 4 lakhs. In September, 1925, the excess of exports was Rs. 5.04 crores. This financial year the visible favourable balance for April to September, inclusive, has been Rs. 15.88 crores, against a total of Rs. 53.09 over the corresponding period of last year. These figures constitute some explanation of the rupee's uphill fight in trying to regain the 1s 6d level.

CANADA. — CROP CONDITIONS — MARKETING PROBLEMS — TRADE RETURN — BUSINESS CONDITIONS — RAILWAY EARNINGS.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 2.

THERE has been within the last week a welcome improvement in weather conditions, and the farmers of the prairies have now hopes of salvaging the balance of their grain crops before winter descends in full force. The wheat yield of the three prairie provinces is now expected to reach about 380 million bushels, divided as follows:—Manitoba, 45,000,000; Saskatchewan, 215,000,000; and Alberta, 120,000,000. Owing to the ravages of the weather a much smaller proportion than usual will attain the two highest grades, but the farmers are discerning possibilities of compensation in the recent rise in the price of wheat, which has jumped 12 cents within the last month, and is now around \$1.45 for No. 1 Northern in Winnipeg, and hopes are entertained that the returns of the farming community will not be seriously smaller than in 1925. In the Eastern provinces the grain crop, except in a few very backward districts, has all been safely threshed, and the farmers are now busy with their root crops, which in many places have been badly rotted by the excessive moisture. However, the potato crop is still fairly good, and is bringing excellent prices.

But the problem of markets for the exportable surplus of farm produce is causing considerable anxiety, and the settlement of the British coal strike would be hailed with relief, because the impairment of purchasing power among the industrial workers which has resulted from it has made itself felt decisively in Canada. In the fiscal year ending March 31, 1926, of an aggregate value of farm produce exported estimated at 702 million dollars, Great Britain took no less than 425 million dollars worth, or 60 per cent.; during that period she took three-quarters of Canada's exported wheat, half her cattle, 90 per cent. of her cheese, butter and eggs, two-thirds of her apples, and practically all her bacon. Shipments of cheese and butter to Britain have shown a very serious decline, and prices have been affected. During the past dairy season the price of cheese in Eastern Canada has averaged 4 cents per lb less than in 1925, and stocks are very heavy. Butter stocks also are 50 per cent. heavier than a year ago, and prices are 6 cents per lb lower than in November, 1925. They are also 3 cents per lb under the June price, when they are normally 4 cents higher, and as a consequence the farmers are receiving 20 per cent. less for their cream. The explanation, according to the manager of one of the largest creameries, is that "we have been unable

to sell any worthwhile quantities in Britain for some time now." According to a prominent cattle exporter, the overseas cattle market is also in a precarious position, but prices have not been affected so badly because Britain absorbs a smaller proportion of the cattle exported. British prices for Canadian bacon have dropped from 26 cents per lb. in May to 20 cents at the present time, and only the strong local and American demand has saved the situation for hog-raisers. The marketing of apples has just commenced, but an official of the provincial fruit branch in Ontario has issued a statement advising growers to sell immediately at home rather than take a gamble on the British market. He points out that, with Baldwin apples selling at \$3.50 per barrel at home, they must bring \$5.80 in Britain to make export profitable, because the transport charges are \$2.30 per barrel, and that sales of Canadian apples to date in London have been well below that figure.

This situation finds reflection in the September trade returns, which put the combined value of the exports of animal and vegetable products at \$49,941,769, which is a decline of more than \$10,000,000 from the figure of September, 1925, which was \$59,959,129. From the first half of the present fiscal year ending September 30th imports have been mounting, but there has been a steadily declining tendency in exports, as the subjoined figures show:—

	1925.		1926.
Exports	108,497,911 ..	\$	92,224,610
Imports	78,662,591 ..	\$	85,562,911
Balance	29,835,320 ..		6,661,699
Total trade	187,160,502 ..		177,787,521
—Six Months Ending Sept.—			
	1925.		1926.
Exports	571,315,340 ..		562,866,960
Imports	452,820,156 ..		509,204,076
Balance	118,495,184 ..		53,662,884

The business community always expects a certain dullness in the transition stage which is the prelude to the arrival of real winter conditions, but although the car-loading returns for the week ending October 23rd show a falling-off of 3,184 cars from the previous week's figure, they are 5,463 cars above the total for the corresponding week of 1925, and business is holding up remarkably well. Wholesale and retail trade throughout the country continues to be very satisfactory, and the mail-order houses are doing a big business, particularly in dry goods and hardware. In some manufacturing industries there have been seasonal declines, but the textile, footwear, clothing, and allied plants are all working well up to capacity, and the employment returns show that on the pay-rolls of reporting firms there were, on October 1st, 2,237 more workers than on September 1st. The equipment concerns are getting a steady run of orders for machinery and other material from the mining country, and are expecting further orders from the railway companies in the near future. The iron and steel plants are by no means working at their full capacity, but they have a substantial volume of orders on hand, and the steel ingot production for the nine months ending September 30th was 600,542 tons, as against 581,711 tons for the corresponding period of 1925.

The latest bank returns show an enlargement of 10 per cent. in the bank-note circulation, of 7 per cent. in mercantile loans, and of 6 per cent. in notice deposits, as compared with the figure at the parallel date in 1925. But much more arresting is the amazing improvement in the earnings of the two great railway systems. For the nine months ending September 30th the net earnings of the Canadian National system are placed at no less than \$25,743,334, and the steady betterment in this railway's position can be discerned from the following table:—

FIVE YEARS' COMPARISON.

Nine Months.	Net Earnings.	Operating Ratio.
1922	581,216	99.64
1923	6,929,695	96.15
1924	6,075,820	96.48
1925	12,325,763	92.72
1926	26,743,334	86.41

But equally impressive are the net earnings of the Canadian Pacific Railway, which, placed at \$28,632,621 for

the nine-month period, show a gain of nearly seven million dollars, or 33 per cent. In September the gross earnings of the C.P.R. were a little lower than in August, but the decline was more than made up by a cut in working expenses.

The pulp and paper industry is winding up one of the most prosperous years in its history in very satisfactory fashion, for the announcement that an agreement had been reached by the leading U.S. and Canadian companies to maintain the price of newsprint at \$65 per ton relieves shareholders of any real anxiety about profits for at least a year.

JAPAN.—SOUTH PACIFIC TRADE—MONETARY POLICY—TRADE AND CROPS.

(FROM OUR CORRESPONDENT.)

TOKIO, October 9.

THE South Pacific Trade Conference, held under the auspices of the Foreign Office, was closed on September 23rd after ten days' sittings. In the Conference Government Departments, Chambers of Commerce, exporters' guilds, trading firms, exchange banks, shipping companies, and similar bodies which are interested in trade and enterprises in the South Pacific countries and India, were well represented. The agenda of the Conference included (1) the conclusion of commercial treaties with those countries and adjustment of tariff relations, (2) methods of encouraging investment in enterprises, (3) practical plans for extending markets for Japanese goods, (4) improvement in trade finance, insurance, and transportation, and (5) import of raw materials and co-operative buying. Those items were submitted to each sub-committee, and after full discussion every conceivable measure for the purposes was suggested. Of all suggestions, subsidy to the "promising" enterprises in the South Seas Islands and financial facilities, export credits, and credit insurance evidently received special attention. But such schemes necessarily involve financial legislation, which would be no easy matter to carry through in view of the present state of national finance. One is inclined to think, therefore, that much cannot be expected of the many good, and apparently practicable, suggestions of the Trade Conference.

On Monday the Bank of Japan's official minimum rate was lowered to 6.57 per cent. from 7.3 per cent., at which it had stood since April 15th last year. The announcement came to the City rather as a surprise, for the market anticipated that the open market discount rates would develop an upward rather than a downward tendency as winter approached. Not a few critics condemned the change as unwarrantable on purely financial grounds since the monetary outlook is for a seasonal stringency. Some of them even freely expressed the opinion that the reduction was "political," and designed to discomfit the Government critics, who ascribe the continuance of the business depression to conservative financial policy. But the change to a lower Bank rate was generally welcomed. There was a steady recovery in the stock and securities market, which had been deeply depressed by the discouraging record of the foreign trade.

The change of the Bank rate is also full of significance in the sense that it heralded a modification of the Government's conservative financial policy by the new Finance Minister, Mr Kataoka, who succeeded the late Mr Hayami on September 14th. In connection with the floating of the Tokio Municipal Loan in London the Finance Minister professed that the Government will not hold so tight a rein as hitherto on the municipal as well as industrial borrowing in foreign markets. This was regarded in some quarters as part of the preparations for the removal of the gold embargo, which the new Minister is ambitious to accomplish during his tenure of office.

The trade returns for September are still more depressing than the August figures. While imports at 163,527,000 yen are 1,078,000 yen lower than in the corresponding month of last year, exports at 173,411,000 yen are 59,235,000 yen lower, the favourable balance amounting to only 9,884,000 yen, as against 68,941,000 yen. The appreciating value of the yen, the fall in the price of silver, and the civil disturbances in China have conspired to cause the sharp decline in exports. These figures at

the height of the export season are sufficient enough to cause pessimism in all directions. As a matter of fact, a profound gloom hung over the stock market till the end of last week, which, however, has been greatly relieved by the reduction in Bank rate, as has been said.

The Report of the Department of Agriculture and Forestry estimates the year's rice crop at 59,491,000 koku, which is 210,000 koku smaller than last year's actual yield, but 1,853,000 koku above the five years' average. The estimated yield was smaller than had been anticipated, and the Report caused a rise in rice prices. But the supply of rice for the coming twelve months will maintain equilibrium with import of only something about 4 million piculs of foreign rice.

According to a Report of the same Department, the output of spring cocoons totalled 44,198,000 kamme, a slight increase of 1,270,000 kamme against last year, but its value was estimated at 381,188,000 yen, disclosing a marked decrease of 64,427,000 yen. The Silk Association's statistics place the crop of summer and autumn cocoons at 42,614,000 kamme, or an increase of 343,000 kamme upon the actual output of last year.

Letters to the Editor.

BELGIAN STABILISATION.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Everyone I imagine is pleased at the success of the Belgian loan, except, perhaps, those who did not receive what they applied for. The various arrangements which have been made for stabilising the franc appear to me to be sound and practicable. There is one feature mentioned in the prospectus "in connection with the stabilisation programme," i.e., credits which have been arranged by the central and reserve banks of various countries, which if they are to be used for pegging or artificially maintaining the Belgian exchange appear to me to be unsound and inadvisable. This provision was incorporated in our own Gold Standard Act, and was denounced by the executive committee of the Sound Currency Association, of which I have the honour to be chairman. By pegging or artificially maintaining the exchange you withdraw a legitimate advantage from the exporter. A natural fall in the exchange stimulates exports and promotes trade, and as a result of increased exports and a possible reduction in imports the exchange will correct itself, always provided there is a free market in gold. Should there be an excessive outflow of gold that can be stopped in the usual way by a rise in the rate of discount. In the British case I received an authoritative assurance from the Treasury that the credits had not been so used, and I should be glad to be assured that the same answer will be forthcoming from the Belgian authorities.—I am, Sir, yours, &c.,

D. M. MASON.

PEASANTRY AND THE LAND PROBLEM.

SINCE Goldsmith wrote of a depopulated countryside many have expatiated on the same theme, and Mr Robertson Scott* is the latest in this line of lamentation. Notwithstanding his title, he explains that the term "peasant" has gone out of literary fashion, and that the labourer on the land should be termed a "farm-worker." The change in title is immaterial, but there have been more serious and significant changes. Of all the factors which go to make up what is termed the rural problem none is so baffling as the adjustment of the relationship of the man who tills the soil to the man who employs him. It is comparatively easy to provide, in various ways, the ladder by which he may climb from the status of wage-earner to that of independent cultivator. But the position of the man who does not climb the ladder is not affected, and so long as farms larger than subsistence holdings exist there must be men employed by farmers.

Mr Robertson Scott describes fairly and vividly the conditions in which the farm-workers live. He devotes a special section to Scotland, and, with much illuminating

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted on application.

On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.

JAMES STEUART, Chief Manager.

detail, gives an account of Scottish "farm-servants"—the title which they universally accept—which many English readers will regard as the most interesting and freshest part of the book. He stresses the fact, little known in the South, that the Scottish worker on the land—in spite of the system of yearly or half-yearly engagements—is more mobile than his English compeer, who is engaged by the week. In dealing with English conditions, the author gives, by way of introduction, a description of two villages, one of which he terms "a blot on our time and civilisation." Of the villagers he says, "it is not despair, but hopelessness and ignorance" which afflict them. They are "supine." The farmers are "second-rate in intelligence and skill." In the other village conditions are better; the people are "more self-respectingly housed." Mr Scott insists repeatedly on the primary importance of village housing and the effect of decent cottages on the mentality of the inhabitants. He admits, however, that the older generation are often content with the existing state of things, and that the demand for better housing comes mainly from the younger men and women. Generally they talk "more about better wages than better housing."

The author gives an account of the ups and downs of the agricultural unions and of the struggle for the minimum wage and standardised hours. While he maintains that a number of farmers are paying less than the minimum and escaping detection, he gives, on the other hand, statements supplied to him by farmers who are paying many of their men considerably more than the minimum. Although he is scornful of the futility of the present Wages Board—due to the absence of any effective power or responsibility—he conveys the impression that the system of wages regulation is working satisfactorily.

The book is eminently readable, and contains much shrewd observation. It sets out to be descriptive, and in this respect its object is admirably achieved. Few more vivid pictures of village life and of the labourer's economic and social conditions have been written. The author is freely critical, but it cannot fairly be said that he is constructive. The problem of the farm-worker, and especially of the post-war generation, with their aversion to the land, remains unsolved. Mr Scott appears, somewhat tentatively, to suggest that Land Nationalisation may supply the key, but he wisely leaves the development of the suggestion to others.

THE PROBLEM OF AMERICAN SHIPS.

MANY Americans are dissatisfied with the smallness of the percentage of United States sea trade that is carried in American ships. Some of them look with favour on discriminating duties as a possible means of increasing the employment of the American merchant marine. To these presumably Mr Maxwell's book* is in the first place addressed. It is a searching analysis, from almost every conceivable standpoint, of the consequences of a policy of discriminating duties. The author goes back into the past and studies the results, taking into account the then prevailing conditions. He examines, too, in the light of past experience, the probable effects of the adoption of such a policy in the altered conditions of the present time. At the end of over 200 pages of exhaustive discussion of

* "Discriminating Duties and the American Merchant Marine." By Lloyd W. Maxwell. (New York) The H. W. Wilson Company. (London) Sir Isaac Pitman and Sons, Limited. 1926.

the subject of a discriminatory policy, full of references to State documents and trading records, Mr Maxwell's conclusion is that "Only the folly of a misguided people could urge its endorsement under present world conditions."

In the early trading days towards the close of the eighteenth century, when the United States had originally to formulate a national policy, it had to counteract the effects of discrimination instituted by others, especially by Great Britain. That was an "age of maritime exclusions, trade competition, pirates, and war," and "to balance the inequalities was the only method which could enable native ships to operate in foreign trade." Most countries tried to exclude American ships, which at that time were relatively cheap to operate. The United States, therefore, with the purpose of securing reciprocal treatment, and, as the author repeatedly insists, with that temporary purpose only, discriminated against the ships of other nations in the duties levied. The American merchant marine advanced, and its progress was assisted in part by this policy, though more by the prevalence of war among European competitors, which gave American ships, as neutral carriers, great opportunities. In any case, however, as soon as the treatment claimed by America was accorded, discrimination was discarded. The equality which discrimination may establish is expensive, imposing burdens which ultimately rest on the consumers in the countries at each end of a voyage. It is a political weapon which economically injures, in the long run, those who employ it, as much as those against whom it is used.

At the present time world conditions are quite different from those which existed when the United States imposed discriminating duties. Discriminatory practices, though prevalent in isolated instances, are not now general. Moreover, American ships are, relatively to others, more and not less costly in operation. Therefore, the conditions which make any benefit to American trade possible do not exist. "Were America to adopt a discriminatory policy at the present time, she would be," says Mr Maxwell, "the originator of the practice. On her would rest the responsibility for foisting upon the world a despicable system, inviting retaliation."

Though the Merchant Marine Act, 1920, authorised the President to terminate treaties restricting the right of the United States to impose discriminating duties, three Presidents have, as Mr Maxwell points out, declined to exercise this power. The power remains in existence, however, and there is also another section of the same Act (with which this book does not deal) under which, two or three years ago, it was proposed to discriminate against foreign ships by means of railway rates. Against any future proposals which might be forthcoming for action under this American statute Mr Maxwell's powerful arguments will stand as a safeguard. His book might be studied with advantage, too, in more than one European country.

BOOKS RECEIVED.

British Slavery and Its Abolition, 1823-1838. By William Law Mathieson. (London) Longmans, Green, and Co., Limited, 39 Paternoster row. 16s net.

The author begins by sketching the development of sugar cultivation in the West Indies, and shows how it was affected by French competition and the slave trade. He then depicts the daily life of the slaves, and compares the British type of slavery with others, specially Spanish and American. Two chapters are devoted to the anti-slavery agitation in England, the policy of amelioration which was pressed for ten years on the Colonial legislatures, and the demand for abolition. Though slavery ceased in 1834, a system of forced labour was to continue till 1840; and the last chapter describes the working of this "apprenticeship," and shows how it terminated two years earlier than had been contemplated by Parliament.

The Social Revolution in Austria. By C. A. Macartney. (London) Cambridge University Press, Fetter lane. 8s 6d net.

This book aims at giving an impartial account of what Austrian socialism is, what it has attempted, and what it has accomplished.

Business Annals. By Willard Long Thorp. With an Introduction by Wesley C. Mitchell, and a Foreword by Edwin F. Gay. (New York) National Bureau of Economic Research, Inc., 2474 West 24th street. A scientific study of business cycles.

Cyclical Fluctuations. By Simon S. Kuznets. Preface by Wesley C. Mitchell. (New York) Adelphi Company.

An investigation into cyclical movements in the volume of output, of retail and wholesale sales and in the distribution of incomes.

The Widening Retail Market and Consumers' Buying Habits. By Horace Secrist. (London) A. W. Shaw and Co., Limited, 43 Shoe lane. \$3.00.

A new volume in the North-Western University Business Studies series. An American study in markets and the idiosyncrasies of demand.

A Geographical Study of Coal and Iron in China. By Wilfred Smith, with an Introductory Note by Prof. P. Roxby. (London) Hodder and Stoughton, Warwick square. 5s net.

This book, which contains maps, fills a gap in the literature on the economic geography of China, and discusses the distribution of coal and iron resources in relation to the future industrial development of the country. The author is tutor in the Department of Geography in the University of Liverpool.

An Inquiry into the Causes of the Growth and Decay of Civilisation. By Thomas Lloyd. (London) "The Statist," 51 Cannon street. 15s net.

In this posthumous book the late Mr Thomas Lloyd, formerly editor of the *Statist*, set himself the ambitious task of investigating the forces which give stimulus and also those that brought decay to civilisations. Part I. deals with the origin of man and civilisation; Part II. with State economics; Part III. with disruptive forces. In his 859 pages the author takes us from pre-Palaeolithic times through the empires of Greece and Rome to our modern days of democracy.

Dalgety's Annual Wool Review for Australasia. Compiled by Dalgety and Co., Limited, 65-68 Leadenhall street, London, E.C. 3.

Containing a wealth of facts and figures about wool not only in Australia but in the world as a whole.

La Questione Agraria in Russia. By Jenny Griziotti Kretschmann. (Piacenza) Federazione Italiana dei Consorzi Agrari. 25 lire.

An Italian study of the handling by the Soviet of the agricultural problem in Russia.

La Belgique Restaurée. Publiée sous la Direction de Ernest Mahaim. (Brussels) Maurice Lamertin, Editeur, 58-60 Rue Condensberg.

A study of the population, agriculture, industries, commerce and general economic position of post-war Belgium. A timely and informative publication.

Annuaire Statistique de la Belgique et du Congo Belge. 1923-24. (Brussels), 3, Rue de Louvain. 10f.

Arbitration and Business Ethics. By Clarence F. Birds-eye. Foreword by Charles L. Bernheimer. (London) D. Appleton and Co., 34 Bedford street. 10s 6d net.

A study of the history and philosophy of the various types of arbitration and their relations to business ethics.

The "Beama" Trade Survey. A Quarterly International Study of Trade Conditions prepared by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association (Inc.), 36 Kingsway, W.C. 2. Vol. 1, No. 1. December, 1926. 5s net.

This new quarterly surveys economic conditions in Great Britain and the main industrial countries, with a view to determining the competitive position and forecasting the trend of business activity generally. The electrical industry naturally receives special attention, but is viewed in a perspective which includes other important trades. This latest addition to the growing list of endeavours to use available statistical material as a basis for a scientific appraisal of trade tendencies is attractively presented, and should form a useful guide to those responsible for trade policy in the electrical and other industries.

Scandinavian Banking Laws. Published for the School of Business, Columbia University, by Columbia University Press, New York.

A description of the history, charters, and administration of the national banks of Denmark, Sweden and Norway.

Die Reklame. Von Viktor Mataja. (Munich) Duncker and Humblot. M. 14.50.

An enlarged edition of a former work on advertising, revised in the light of present-day developments. It surveys the different methods of advertising, both past and present, and discusses its economic significance.

Daily Mail Year-Book, 1927. (London) Associated Newspapers, Limited, Carmelite House. 1s net.

A remarkably good shillingworth of general information, and very handy for use in the office.

Journal of the Parliaments of the Empire. No. 4, October, 1926. (London) Empire Parliamentary Association, Westminster Hall, S.W. 1. 10s net.

Includes statements and debates in the Parliaments of the Empire on subjects which are being considered at the present Imperial Conference.

Bulletin of the Imperial Institute. November, 1926. (London) John Murray, Albemarle street, W. 5s net.

Bulletin of the National Bank of Czechoslovakia. (Prague) No. 1. October, 1926.

This initial bulletin of the Czechoslovakian Central Banking Institution gives an account of the establishment of the Bank, a survey of the activities of the Banking Office of the Ministry of Finance, which preceded it, and many valuable statistical tables relating to economic conditions in general.

Annual Report of the Superintendent of Insurance for the Year ended December 31, 1925. (Albany, State of New York) Insurance Department.

This, Part III., deals with casualty, credit, employers' liability, fidelity, surety, workmen's compensation, automobile casualty, real estate and mortgage guaranty.

Statistical Review of the Wool and Wool Textile Trades, 1912-1925. (London) H. Dawson, 74 Coleman street. 10s 6d net.

The Rubber Quarterly. November, 1926. (London) London General Press, 3 Arundel street, Strand, W.C. 2. 1s.

This number of the *Rubber Quarterly* contains articles on Overhauling the Machinery of Restriction and British Motoring Possibilities. Interesting reports on the industry are given from New York, Malaya, Ceylon, Dutch East Indies, and Holland. Many statistics are included.

OFFICIAL PUBLICATIONS RECEIVED.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C. 2:

Wireless Broadcasting: Drafts of (1) Royal Charter for which the Postmaster-General proposes to apply for the incorporation of the British Broadcasting Corporation; and (2) Licence and Agreement, the terms of which have been mutually agreed upon between His Majesty's Postmaster-General and the Governors-designate of the British Broadcasting Corporation. Cmd. 2756. 6d net.

Wireless Broadcasting Service: Copy of Agreement. November 9, 1926. Cmd. 2755. 2d net.

Companies: Thirty-fifth General Annual Report by the Board of Trade. 1s net.

Seventeenth Report of the Commissioners of His Majesty's Customs and Excise for the year ended March 31, 1926. Cmd. 2721. 3s net.

Eighteenth Abstract of Labour Statistics of the United Kingdom. Cmd. 2740. 1926. 4s net.

This volume satisfies the general demand for a publication bringing together the principal labour statistics of the country, and is of special interest as being the first of its kind to appear since 1915. The serial tables deal in most cases with the years 1910-1925. Sections are included relating respectively to employment, insurance, wages and hours of labour, profit-sharing, prices and cost of living, strikes and lock-outs, trade unions, co-operative societies, migration, &c. Invaluable to all concerned with labour questions.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
November 23.

ACCOUNT.
November 25.

Stock Exchange members regard the coal dispute as tottering on its last legs. Monetary conditions are easier to an extent which has removed the fear of an early rise in the Bank rate. The value of the French franc has been greatly improved, to such an extent indeed as to arouse something like semi-panic on the Paris Bourse. In spite of the favourable points in the financial situation, however, markets are uneasy and disturbed. On the week the falls greatly outnumber the rises. The rise in the French rate, instead of having a cheering effect, has led to extensive selling orders from Paris, and these, encountering little British support, have spread flatness over various sections in which the French interest is considerable.

Business is quiet, and yet at the same time big lines of stock occasionally change hands, and new issues that offer reasonable attractions continue to meet with public support. The War Loan is very close to 100, and amongst other gilt-edged securities a steady advance in the prices of recently-issued corporation stocks testifies to the manner in which the investor is absorbing such descriptions as those in which safety is the predominant factor. In Colonials there is not much change.

The foreign market has for one of its features another sharp rise in the price of the Belgium 7 per cent. Stabilisa-

BARCLAYS BANK

LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

The Bank has close working arrangements with Agents and Correspondents in all the principal towns throughout the world, and is in a position to offer complete banking facilities to merchants and others for the transaction of

EVERY DESCRIPTION OF OVERSEAS BUSINESS.

Foreign Exchange transactions arranged.

Chief Foreign Branch	168, Fenchurch Street, London, E.C.3
West End Foreign Branch	1, Pall Mall East, S.W.1.
Liverpool Foreign Branch	45, Castle Street, Liverpool.
Manchester Foreign Branch	94, Portland Street, Manchester.
Bradford Foreign Branch	13, Market Street, Bradford.

tion loan, which, issued at 94, now stands nearly 101. French Government bonds have been better; Brazilians and Chinese gave way. There has been a little inquiry for Japanese Government and corporation bonds. The 4 per cent. dividend declared on Peruvian Corporation preference stock is in accordance with forecast.

Amongst Home Railway stocks the strength of Undergrounds stands out conspicuously, Districts, Metropolitans, and Underground £1 shares being notably good. As regards the steam stocks, however, the prospect of resumption of work in the coalfields failed to stimulate any fresh activity. The Argentine railway market is weak, apparently on sales by those who are timorous regarding the crop outlook. Leopoldinas were hoisted several points upon official permission being given by the Brazilian Government for the raising of the company's rates.

The tone of the rubber share market is dull, and business is languid. Staffs who at this time last year were working until 5 a.m. now leave their offices twelve hours earlier. Tea shares, after their improvements of the last two or three weeks, show something of a halting tendency. The oil market weakened on selling that came mainly from Paris. Dennis Brothers provided a feature of exceptional strength by reason of an extremely satisfactory report. Dunlops, on optimistic rumours, shot above 30s. In the textile market the movements are narrow and lower for choice. Iron, coal, and steel shares showed a robust tendency until the declaration of the South Durham dividend showing a decrease of 5 per cent. laid a check upon the buoyancy, and caused a fairly general reaction.

Amongst electricity supply shares, County of Londons eased off on the postponement of the directors' announcement in regard to distribution of the reserves. In shipping shares the movements are negligible. Some of the Far Eastern banking shares are better. In the insurance group Employers' Liability fell back owing to lack of confirmation of amalgamation rumours. Interest in tobacco shares has subsided to a great extent. Nuera Art Silk have been a strong spot. The Marconi market goes softly on the eve of the issue of the auditors' report. Cable construction shares show a tendency to harden. A few good spots developed amongst breweries, though Distillers, in which there has been very extensive buying, reacted from the top. Several of the drapery and warehouse companies' shares improved, in consequence of optimism in regard to the possibilities of the undertakings being absorbed or amalgamated. Of the chemical combine shares, Dyestuffs and Nobels have been animated without, however, showing much variation on balance. Brazilian Tractions gave way on selling from Brussels and the downward movement in the milreis, and Mexican Utilities are heavy by reason of vague reports of further trouble in the country. Sudan Plantations failed to maintain a rise which they secured upon publication of an excellent report. The general disposition of industrials, like that which ruled in other parts of the Stock Exchange, has been dull.

The Kaffir Circus lay at the mercy of French operations. Paris has been a persistent seller of De Beers and other diamond shares, the selling being supplemented by realisations from this side on the part of people alarmed at the possible competition of the new diamond fields just discovered. Shares in the gold producing companies, outcrop and deep-level alike, have eased off. Chartered stood their ground tolerably well. In the tin market a drop of several shillings in Tinchas, due to a statement from the company showing that the original estimates would not be verified in the time expected, led to depression amongst other shares in the market, although the speculative investor is quietly picking up stock where it is offered cheaply. Canadian and silver mining shares went back to a slight extent. Russians are as dead as the proverbial mutton. There is a mild recrudescence of interest in the subject of reopening the Stock Exchange on Saturday mornings.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

Perak River Hydro-Electric Power Company, Limited.—Issued share capital £827,957, divided into 500,000 8 per cent. cumulative preference shares of £1 each and 327,957 ordinary shares of £1 each. There is also an issued loan capital of £1,350,000 in 7 per cent. participating debenture stock. This is an issue of £1,250,000 5 per cent. debenture stock at £99 10s per cent., guaranteed as to principal and interest by the Government under the provisions of the Trade Facilities Acts; the stock is redeemable over the years 1931 to 1951 by a cumulative sinking fund operated by annual drawings and/or purchase. The stock will be secured by a trust deed constituting the stock a first fixed and specific charge in the concession mentioned below, and the lands, fixed plant, and machinery of the company, and a first floating charge on the remainder of the assets, present and future, including its uncalled capital. The company has been formed primarily to acquire and develop a concession which runs for a period of 80 years, and confers the power to construct and operate hydro-electric works within an area of over 3,000 square miles, and to supply electricity over a wide area in the State of Perak. An expert report is quoted to the effect that "the gross revenue from the sale of power can be conservatively placed at £455,500 per annum, which, after allowing £72,900 per annum for operation charges and maintenance, will leave a net surplus of £382,600 per annum." The investor will, of course, rely upon the guarantee of the British Government.

Valley Woolcombers, Limited.—Share capital £300,000, divided into 200,000 7½ per cent. cumulative preference shares of £1 each and 100,000 ordinary shares of £1 each. This is an issue of the preference shares at par. The company was formed as a private company in the name of the Valley Combing Company, Limited, in September, 1926, to acquire as a going concern the business of woolcombers carried on by William Clifford Gaunt, trading as the Valley Combing Company, Mr W. C. Gaunt subscribing for the whole of the original capital of £100,000 for cash, this being the present ordinary share capital. Profits, before providing for national taxation or depreciation, are certified to have been as follows:—1922, £91,077; 1923, £101,793; 1924, £62,996; 1925, £56,316; and 14 months ended August 31, 1926, £64,171. Land, buildings, machinery, and plant have been valued at £260,536, while assets are given as £285,571. The net proceeds of this issue, it is stated, will be utilised to

repay amounts advanced by Mr W. C. Gaunt. Under Mr W. C. Gaunt the company's affairs should be well handled.

Dawson Brothers (London), Limited.—Issued share capital £220,000, divided into 220,000 ordinary shares of £1 each. The whole of the ordinary capital, it is stated, is held by the Drapery and General Investment Trust, Limited. This is an offer for sale of 160,000 7½ per cent. cumulative participating preference shares of £1 each at par. These shares are entitled to an additional dividend up to 2½ per cent., payable out of one-half of the profits distributed in any year after paying 7½ per cent. on the ordinary shares. The company has acquired the drapery business of Dawson Brothers, established in 1848, and of Staddon's, established in 1870. The object of the present issue is partly to provide the purchase price, the balance being provided by the issue for cash at par of 84,000 ordinary shares of the company. The profits of the two businesses, before providing for taxation, are stated to have been as follows:—1922-23, £44,490; 1923-24, £43,997; 1924-25, £47,801; and 1925-26, £47,071. The net assets of the two businesses are given as £221,237. The advertised prospectus is not without interesting points. Contract No. 5 reads: "Dated July 23, 1926, between Austin Friars Investment Trust Limited and the company whereby the business of Dawson Brothers purchased by Austin Friars Investment Trust Limited under Contract No. 1 above was sold to the company for the price paid by Austin Friars Investment Trust Limited, namely, £193,100." Contract No. 1 is as follows: "Dated December 2, 1925, between Ellen Howerth Ibbott and Austin Friars Investment Trust Limited." Further, it is stated: "The purchase price paid by the company to Austin Friars Investment Trust Limited, the vendors under the above-mentioned Contract No. 6, for the whole of the issued ordinary shares of Staddon's Limited was £232,000, being the price paid by the Austin Friars Investment Trust Limited." Against this we have the issued capital of the company at £380,000. The advertised prospectus is not clear to the ordinary investor.

COMPANY MEETINGS, &c.

ENGLISH, SCOTTISH, AND AUSTRALIAN BANK, LIMITED.

SATISFACTORY YEAR—EXPANSION OF BUSINESS.

DIVIDEND OF 2½ PER CENT., TAX FREE.

AUSTRALIAN FINANCE AND TRADE.

MR ANDREW WILLIAMSON'S INTERESTING REVIEW.

The thirty-fourth ordinary general meeting of the English, Scottish, and Australian Bank, Limited, was held, on the 17th instant, at the head office, 5 Gracechurch street, London, E.C.

Mr Andrew Williamson (chairman of the bank) presided.

The notice convening the meeting and the auditors' report having been read by Mr E. M. Janion (London manager and secretary),

The Chairman said: Ladies and gentlemen,—Since our last annual meeting we have sustained a serious loss through the death of Mr George Slade, after a brief illness, in December of last year. Mr Slade, who for 13 years prior to its amalgamation with this bank, had been a director, and for four years the chairman, of the London Bank of Australia, had, since the amalgamation, been a greatly valued member of this board. From the first his single-minded devotion to the interests of the bank and his sterling and attractive qualities of mind and character won for him the full confidence and warm regard of all his colleagues and of all the members of the staff with whom he came in contact. His early death was a great loss to the bank, and is deeply deplored by us all.

The vacancy thus caused has been filled by the appointment as a director of the Right Hon. Lord Forster of Lepe, after his return from Australia, where, as Governor-General of the Commonwealth, he was so universally esteemed. No more fitting appointment could have been made, and I trust that Lord Forster, whose name is held in high regard from one end of Australia to the other, will long be spared to assist us with his counsel and advice. He deeply regrets, as do we, his inability to be present to-day, owing to absence on the Continent. In terms of our articles of association he retires from office at this time, and, being eligible, he will later on be proposed for re-election.

GENERAL STRIKE AND COAL DISPUTE.

In the year embraced in our accounts two events of outstanding national importance occurred—the general strike, which demonstrated with a clearness which surprised the whole world the determination and the ability of the British people to defend themselves from the dictation of any one class of the community. If it had taught the extremists in our midst the futility of attempting to hold the nation to ransom, it would be worth the cost, and we might for the future dismiss from our minds the bugbear of the menace of a general strike. He, however, would be unduly optimistic who could take such a comforting view, and the safety and future well-being of the whole community require some modification of the law regarding trade unions in order to make the country safe from another better planned, less expected, and therefore less prepared for, general strike, as well as to protect the members of the unions from the domination of their own paid officials.

The other and interrelated event was the coal strike, which has inflicted on the miners themselves incalculable damage. This strike, which it is estimated has already cost the country over £300,000,000, is a tragedy of incompetent or perverse leadership. How British miners could so far lose their self-respect as to accept, let alone beg for, aid in money compulsorily levied from the miners of Russia, who have to work far longer hours for far lower wages than themselves, it is difficult to understand. The strike is damaging with increasing intensity the whole trade of the country, and should it continue through a severe winter must mean acute suffering to millions, and incalculable loss now and for years to come to the whole country. The more reasonable spirit, however, manifested by the last delegate conference towards the latest Government proposals may lead to an early settlement. When a settlement is at last reached, a great responsibility to the nation will rest on both the parties to this dispute to do all possible to secure that ill will and bitterness is brought to an end, and that a fresh start is made in their common interests on lines of good will and mutual co-operation.

NEW COMMONWEALTH BANK CHAIRMAN.

During the past year Mr Garvan, the first chairman of the recently constituted board of directors of the Commonwealth Bank, and prior to that chairman of the Notes Board, has resigned his position as chairman of the bank and his seat on the board. We

regret that he has been constrained to take this course on account of ill-health. While, as you know, differing from his views in regard to seasonal increase of currency to cope with the movement of wool and wheat crops, we appreciated his great ability, energy, and devotion, and we trust that his health will soon be fully restored. The appointment of Sir Robert Gibson as chairman in succession to Mr Garvan has, I think, given universal satisfaction. His ability, wide business experience, high character, and the confidence with which he is regarded in the business world in Australia, convey the satisfying assurance that the important duties of his office will be carried out both ably and wisely, and that the relations between the Commonwealth Bank, as the Central Bank, and the trading banks will proceed along cordial and mutually helpful lines, which is so desirable in the best interests of Australia.

During the year under review, to provide for maturing Commonwealth War Loans, Conversion and Redemption Loans amounting to £67,000,000, to which I referred at our last meeting, have been issued in Australia by the Commonwealth Government, as well as £5,000,000 on behalf of the States, and have been fully subscribed there. The Commonwealth Treasurer is now inviting holders of the 4½ per cent. and 5 per cent. Commonwealth War Loans maturing December 15, 1927, totalling £66,000,000, to convert these into a new 5½ per cent. stock as from December 15, 1926. As you are no doubt aware, the borrowings in Australia of the Commonwealth and of all the States, with the exception of New South Wales, are now being co-ordinated through the medium of the Australian Loan Council. A new loan on behalf of the States, of £6,000,000 at 5½ per cent., repayable in 6, 11, or 16 years, mainly for public works, is at present in course of being raised in Australia. It is also interesting to note that of the whole Australian indebtedness, both Commonwealth and States, which amounts at the present time to about £960,000,000 (after deducting accumulated sinking funds), about £498,000,000, or considerably more than half, has been subscribed locally in Australia.

THE IMPERIAL CONFERENCE.

The Imperial Conference is now being held in London, attended by the Prime Ministers and other delegates from all the overseas Dominions meeting the members of our own Government and the heads of various departments to consider all matters of Imperial moment affecting the interdependence of the various Dominions and Colonies and their relation to the Mother Country. It is difficult to over-estimate the good to the Empire as a whole, and to each individual part, that these Conferences are calculated to effect. Prime Ministers from overseas not only come into close and friendly contact with our own Prime Minister and his colleagues, but with the Prime Ministers of far-off Dominions, from whom they would be otherwise largely isolated. They are thus able to compare notes, and appreciate each other's problems and points of view, thereby creating an atmosphere of friendship and good will, and removing misconceptions and misunderstandings between all parts of our great community of nations.

The principal matters which are occupying the attention of the present Conference are—foreign affairs and Imperial defence; the better distribution of the population of the Empire over its different parts—in other words, the great problem of overseas settlement; the development of trade and transport between all parts of the Empire, that most civilising and uniting and Empire-strengthening bond; and scientifically organised research.

We trust that much good will come from the interchange of information and opinions, and that all that makes for inter-communication and the expansion of trade may be materially facilitated and the links of Empire strengthened.

AUSTRALIAN FINANCE.

On the eve of the assembling of this Imperial Conference, a pamphlet was issued indicting Australian finance, and asking: "Is Australian Finance Sound?" This pamphlet suggested that Australian indebtedness had amounted to excessive dimensions, and challenged in detail the methods of the Commonwealth and the States in the issuing of their loans, asserting that "in the

whole British Empire there is no more voracious borrower than the Australian Commonwealth." I have already stated that more than half of the total Australian indebtedness has been found by Australians themselves, but I would like further to draw attention to the following fact, which the responsible representatives of Australia may, from obvious and worthy reasons, abstain from emphasising. In 1914, on the outbreak of the Great War, Australia gave the flower of her young manhood to help in the struggle, undertaking the whole expense of their equipment, munitions, transport, maintenance, hospital expenses, repatriation, and pension provision, without a suggestion of financial assistance from us, though by so doing she eventually incurred an expenditure of over £600,000,000. Of this £267,000,000 has been paid out of revenue, and there is still outstanding £341,000,000, of which £305,000,000 is Commonwealth debt and £36,000,000 States' debts. Of the original amount of the Commonwealth war debt over £92,000,000 arose from the debt to the Imperial Government for services rendered and goods supplied in connection with the war, the great proportion carrying interest at 5 per cent., and all of which is being repaid by semi-annual instalments equivalent to a further 1 per cent. on the whole.

Contrast this with our foreign Allies' treatment of us in respect of our advances to them. Yet now Australia is being reproached with the figure at which her debt stands, though this war debt accounts for over one-third of the whole Australian debt, and she is described as the most voracious borrower in the British Empire. This attack, and the method of it, which again and again raises doubt as to the security behind the debt, is, in my view, most unworthy. Should this brochure be the uninspired expression of the opinion of the two joint authors, then it is not lacking in audacity. If more statistical information in the prospectuses of Australian loans, or different arrangements as to sinking funds, are desired by the Stock Exchange authorities, as representing British investors, or by any large number of investors, suitable representations can easily be made through the proper channels to the Governments concerned, but this unprecedented dictation from a private source, through public propaganda, with the suggestion of insecurity, seems to me to go beyond legitimate criticism, and ought to be strongly deprecated.

NEED FOR PUBLIC ECONOMY.

Before, however, passing from this subject of Australian indebtedness, I would like to say one word from another point of view—namely, that of the progress and development of Australia itself. As in this country, so in Australia, industrial progress and development are hampered and retarded by the heavy burden of taxation, and it cannot be too urgently impressed on the Commonwealth Government and the Governments of all the States, that they should devote their utmost energies to effecting economy in the public services, and restricting the increase of their indebtedness to expenditure essential to the development of the vast natural resources of their great country. The more that genuine development of the resources of Australia is promoted by money from Great Britain, the more the trade of the Mother Country with Australia will grow, to the great benefit of both. A former Chancellor of the Exchequer has recently observed: "There may be truth in the old saying that 'Trade follows the Flag,' but there is more truth in the fact that trade follows the investor." It would, indeed, be a short-sighted financial policy for this country to discourage the supply of the money needed to push on as rapidly as possible the development of the great natural resources of any of our overseas Dominions. At the same time, all our Dominions should ever bear in mind that extravagance and wasteful expenditure inevitably injure credit. The valuable privilege accorded by the Colonial Stock Act to our Dominions imposes on them a corresponding responsibility in their borrowings to ensure that their loans shall always continue to be intrinsically worthy of the high position of a British trustee stock.

REPORT AND ACCOUNTS.

I will now deal with the report and accounts for the past year. As these have been in your hands for some days, and have no doubt been carefully studied by you, I will ask you, as usual, to take them as read.

You will observe that we have had a satisfactory year. As compared with the previous year our gross income has increased by £10,531 and our net income by £26,328. Our earnings have been sufficient to enable us to recommend the same dividend of 12½ per cent. per annum, tax free, on the increased capital; to carry £100,000 to reserve; to apply £93,750 to the purchase and cancellation of deferred inscribed deposit stock, in accordance with the requirements of our articles of association; to make a grant of £20,000 to the E. S. and A. Bank Officers' Provident Fund; and to add to the accumulated carry-forward the further sum of £47,000, making it £230,000. This outcome of the year's operations is the more satisfactory in view of the sudden and sweeping reduction made in the rates of exchange, a reduction, we think, made too drastically and too suddenly, and which adversely affected us,

with our large exchange business, somewhat severely. That notwithstanding this we have had such a good year is a gratifying proof of the soundness and extent of our general business.

PROSPECTS.

Our business in all departments and in all the States continues to grow in a healthy manner, and the outlook for the current year is encouraging. The exceedingly severe drought over a large portion of the best pastoral areas in Queensland, which we hope may soon be ended by good November-December monsoon rains, while it does not directly affect us, yet, of course, does so indirectly to some extent as regards our Queensland business. All the other States, I am glad to say, are enjoying a good season, and the outlook generally for both wool and wheat is promising. At the same time it is right that we should always bear in mind that as a bank our prosperity is closely bound up with the prosperity of Australia as a whole. Australia has had a long run of prosperous years, and cannot expect to be altogether immune from occasional ebb-tides, and when these come we as a bank will, of course, feel the effects, and we must be prepared for temporary curtailment of profits incidental to temporary reactions and poor seasons; this only emphasises the wisdom of a large accumulated carried-forward balance of undistributed profits.

BURDEN OF TAXATION.

Taxation is a burden which presses very heavily upon us. The taxation which has followed as a necessary consequence of the war we must bear uncomplainingly, as well as the taxation necessary in connection with the development of the trade and industry of the country, but greater economy in administration would make possible a very material lessening of the burden, and this cannot be too earnestly impressed upon the Governments of all the States, as well as that of the Commonwealth. Again, the incidence of the Federal Land Tax is a real hardship to all the banks in Australia, and a modification of that tax is long overdue. This tax, as it stands, requires all the lands on which our banking premises in the various States are situated to be aggregated together, and so brought under the highest rate of a graduated tax. It was never the intention of the framers of the Act so to penalise banks and business concerns. Mr Hughes, who prepared the Act, himself explained to me that the object was to prevent the indefinite tying up of large areas contiguous to the cities to the detriment of the public interest. I would urge that this aggregation should be removed, if not altogether, at any rate so far as it affects business premises. I would press this the more urgently as I feel sure that in the result it would benefit the whole community.

NO FURTHER AMALGAMATIONS UNDER CONSIDERATION.

The satisfactory working and the steady expansion of our business has more than justified the taking over of the business of the London Bank of Australia and of the Commercial Bank of Tasmania, and the increase of our capital. I have observed occasional statements in the Press that we are contemplating further amalgamations and increase of capital, and I think it only right to say that nothing of this kind is at present under consideration. Our attention is concentrated on consolidating and extending the businesses that have already been amalgamated, on maintaining our dividend as at present, and on strengthening our position generally.

BALANCE-SHEET ITEMS.

I will now deal with the accounts. Copies of the report and accounts you have in your hands. I will first take the balance-sheet.

You will observe that our total figures amount to £37,252,627, an increase of £2,703,696.

The capital is unchanged at £3,750,000, of which £2,250,000 is paid up, leaving £1,500,000, or £2 per share uncalled.

The reserve fund, which stood in last balance-sheet at £1,837,331, has been increased by £112,669 allocated at last annual meeting and by £15,000 out of the profits of the past year, as required by our articles, and now stands at £1,965,000. The proposed further addition out of the profits of the past year will be referred to later.

The debenture stocks at £983,547, and the preferred inscribed deposit stocks at £889,419, are unchanged. The deferred inscribed deposit stock at £253,000 is less by £82,000 through the application of the sum set aside out of the profits of the previous year in the purchase of this stock.

Deposits at interest show a substantial increase of £1,473,201, and our current accounts a satisfactory increase of £716,119, and the two together, at £27,918,631, show a gratifying increase of £2,189,320.

Notes in circulation at £1,128 are less by £20. As these notes come in they are cancelled, the issuing of notes in Australia being now the prerogative of the Commonwealth Government.

Bills payable, rebate on bills, and other liabilities at £2,393,680 are higher by £426,587, caused by expansion of business.

CASH AND INVESTMENTS NEARLY £9,000,000.

On the assets side of the balance-sheet cash and bullion, and

cash at bankers, together £7,733,419, are higher than the previous year by £735,383, and show a remarkably strong cash position, being 125 5/8d in the pound of our current accounts.

Our investments (which consist of British and Colonial Government securities taken at or below the market value on June 30, 1926, the date of the balance-sheet) stand at £1,255,738, or a slight increase of £2,978. You will see that our cash and investments together amount to £8,989,158, an increase of £738,362, representing 145 6/8d in the pound of our demand liabilities, a very satisfactory position.

Bills receivable and remittances in transit at £5,954,469, show an increase of no less than £1,078,114, and testify to the larger business transacted. This is especially gratifying in view of the lower prices for wheat and wool which prevailed during the past year.

Advances and other assets (after making provision for bad and doubtful debts and contingencies) at £21,542,690 are higher by £906,993. This is the more satisfactory in view of the volume of our overseas exchange operations and the strong cash position.

Security for note issue at £3,625 is unchanged.

Bank premises and furniture at £762,684 show a reduction of £19,773. Our premises represent a very solid asset, but are necessarily a lock-up, and our continually growing business necessitates a constant addition to our bank buildings; our aim is to keep them written down to a moderate figure, well below their value.

PROFIT AND LOSS ACCOUNT.

Turning now to the profit and loss account, you will follow me better if you will look at the figures on the first page of the report.

The profit for the year, after making full provision for bad and doubtful debts and contingencies, amounts to £1,365,859, against £1,355,328 in the previous year, an increase of £10,531, to which I have already alluded.

Expenses of management in London and Australia including directors' and auditors' fees, &c., at £662,162 are slightly less than last year by £1,224. This is chiefly owing to the costs of equipment of our various offices being less than in the previous year by £22,000, and a reduction in some other items of about £4,000, which was more than offset by an increase in other items amounting to £6,000. On the other hand, salaries and wages were higher by £19,000.

Income and other taxes at £161,388 show a reduction of £14,571, mainly from refunds of previous over-payments.

Expenses of management and income and other taxes together come to £823,551. Deducting this from the profits, we arrive at the net profit for the year of £542,308, which is greater than that of the previous year by £36,328.

Coming now to the appropriation of the net profit of £542,308, an interim dividend of 5 per cent., free of United Kingdom income-tax, was paid in May last on the full amount of the paid-up capital, absorbing £12,500, and there has been transferred to reserve fund £15,000, as already explained, leaving for further appropriation £414,808. Of this we now propose to carry to reserve fund an additional £85,000, making (with the £15,000 already credited to that account) £100,000 for the year, and bringing the reserve fund up to £2,050,000—or still £200,000 below the amount of our paid-up capital.

To the E.S. and A. Bank Officers' Provident Fund, £20,000, of which we are sure you will all approve.

To the payment of a final dividend of 7 1/2 per cent., making 12 1/2 per cent. for the year, free of United Kingdom income-tax, and absorbing £168,750.

To the purchase and cancellation of deferred inscribed deposit stock, as required by our articles £93,750, leaving a balance of £47,308, which, with the balances of previous years, leaves an accumulated balance to be carried forward of £230,722.

I have endeavoured to explain the accounts presented to you, but if there is any further explanation desired I shall be very pleased later to answer any question.

REVIEW OF TRADE AND INDUSTRY.

Following my usual custom, I will now give you a brief review of the Australian trade and industry during the past year, as affecting the primary commodities.

During the past year there has been some contraction in the total amount of both imports and exports. Taking the last four years, the comparative figures are, for the year ended June 30th, in even thousands:—

	Imports.	Exports.
	£	£
1923	131,757,000	117,870,000
1924	140,618,000	119,487,000
1925	157,143,000	162,030,000
1926	151,445,000	148,244,000

In the year ended June 30, 1925, the imports included £10,511,000 of gold. The gold exported in the same year only amounted to

£944,739, while last year the total imports only included £361,674 of gold, while on the other hand the exports included £4,355,000 of gold. In 1925, prior to the restoration of the gold standard, the banks imported rather over £10,000,000 of gold as a precautionary measure in the face of the restriction of currency then prevailing; but with the restoration of the gold standard, and the greater elasticity given to the note issue, this is no longer necessary.

From July 1, 1922, to June 30, 1925, there was a steady rise year by year in imports. Last year, to June 30, 1926, imports were less by £5,700,000, and exports were less by nearly £14,000,000, caused by the shortage of the wheat crop to the extent of nearly £17,000,000, which was to some extent offset by the exceptional export shipments of sugar arising from the production of sugar being largely in excess of Australian requirements.

WOOL.

As I have already observed, this bank devotes a large portion of its funds to financing the overseas commerce of Australia, both export and import, and it also bears its full share in supporting the internal trade and the steadily expanding local industries of the Commonwealth; thus all that affects the trade and industry of Australia is of the greatest interest to us. I am anxious not to weary you with too many statistical figures, and will only deal with some of the primary products.

The backbone of Australian finance is its great wool industry. The exports of the last five years, as shown in the official statistics, are:—

FOR THE YEAR ENDING JUNE 30TH.

	Bales.	Value.
	£	£
1922	2,557,442	47,977,243
1923	2,315,599	57,138,764
1924	1,705,081	56,197,158
1925	1,700,519	63,263,145
1926	2,665,246	63,206,248

These figures represent the wool shipped, and do not include the quantities each year retained in the country and worked up into yarns and cloth by the local mills. Again, they are not an accurate index of the total clip of each respective year, as the amounts held over in one year and shipped in the next vary from time to time. This was markedly the case in 1925, when as much as 500,000 bales were held over, but shipped in 1926, the amount and values in that year being correspondingly increased, the more so as at June 30, 1926, there was practically no balance left of the year to that date to be carried over to the year now current.

COURSE OF WOOL PRICES.

Since our last annual meeting the course of wool prices may be briefly summarised as follows: There was some reaction in the November-December sales, which was further accentuated in January; in March, however, a recovery began, and was carried further in following sales to July, with good clearances. In the September-October sales in London there was a further rise of 5 per cent. to 7 1/2 per cent. in merino and of 10 per cent. in cross-breeds. Since then in the recent sales in Australia there has been some reaction, and this rise has been largely lost, but, judging by the latest cables the market has again steadied and the outlook is still satisfactory. The close of the 1925-26 season saw the clearance of practically the whole of that season's clip of over 2,377,866 bales, as well as of the whole of the 500,000 bales carried over from the previous season. Thus during 1926-27 there is only the current clip to dispose of. Owing to the drought in Queensland, the clip in that State will be considerably less than last year, but it is estimated that this shortage will be largely offset by increases in New South Wales and other States, so that the total clip will probably be somewhat less than last year. Therefore, with the prospect of a good demand from the Continent and Japan, rather better inquiry from America, and an increased demand from Yorkshire on the conclusion of the coal strike, the indications would seem to be favourable to the pastoral industry of Australia and to point to the maintenance of present values for raw wool.

WHEAT.

The exports of wheat and flour for the last five years, in quantity and value, were, in round figures:—

YEAR TO JUNE 30TH.

	Bushels.	Value.
		£
1922	112,000,000	34,164,000
1923	44,700,000	12,991,000
1924	77,000,000	19,297,000
1925	118,400,000	40,800,000
1926	71,200,000	24,100,000

And for these years the average prices per bushel for wheat were respectively 5s 8 1/2d, 5s 4 1/2d, 4s 8d, 6s 8 1/2d, and 6s 3d. When referring to wheat statistics last year, I said that the indications at that time were that the crop of 1925-26 would be less than the "record" one of the previous year, which has proved to be the

case. The total crop for the past year amounted to 113,500,000 bushels.

The estimates so far of the current year's crop vary from 135,000,000 to 160,000,000 bushels. If we take it at 150,000,000 bushels, and deduct 45,000,000 to 50,000,000 bushels for Australian requirements, there is left about 100,000,000 bushels for this year's export. I would point out that the value of wool and wheat together, for the year to June 30, 1926, amounted, notwithstanding the partial failure of the wheat crop, to over £87,000,000.

BUTTER.

The export of butter from Australia for the last five years was:—

	YEAR TO JUNE 30TH.	Value.
	Lbs.	£
1922	127,579,800	7,987,500
1923	79,571,100	6,133,800
1924	65,984,000	4,919,600
1925	145,281,300	10,006,100
1926	97,902,000	7,006,800

and the average values for the respective periods were about 1s 3d, 1s 6 1/2d, 1s 5 1/2d, 1s 4 1/2d, and 1s 5 1/2d per lb.

FROZEN MEAT.

The exports of frozen meat for the last five years were:—

	YEAR TO JUNE 30TH.	Value.
	Mutton and Lamb.	£
	Lbs.	£
1922	91,715,000	2,139,600
1923	167,612,600	4,321,900
1924	39,805,300	1,170,800
1925	50,271,400	1,522,000
1926	82,219,000	2,318,900

	Beef.	Value.
	Lbs.	£
1922	124,167,300	1,867,900
1923	152,950,600	1,794,700
1924	105,163,900	1,301,900
1925	283,620,700	4,140,000
1926	215,089,981	3,264,900

or, taking mutton, lamb and beef together, the combined quantities and values are:—

	Lbs.	Value
		£
1922	215,882,300	4,007,500
1923	320,563,300	6,116,600
1924	144,969,200	2,472,700
1925	333,982,100	5,662,000
1926	297,308,900	5,583,800

During the past year there has been intense competition between American and British interests in the chilled meat industry, which has adversely affected prices of both chilled and brozen beef; the drought which has prevailed in Queensland cannot but be reflected in diminished exports from Australia.

METALS.

The total output of copper for the twelve months to June 30, 1926, was 9,531 tons, against 13,127 tons in the previous year and 45,000 tons in 1913; the price has remained at a comparatively low level, and the outlook in this respect is not encouraging. The road to improved results seems rather to lie in the direction of decreased costs of production than of materially higher selling prices.

The prices of lead, silver and zinc, on the other hand, have been satisfactory, and the mines producing these metals continue to enjoy a prosperous time. Recently, however, silver has had a sharp fall, for which diverse causes have been assigned. The production of lead for the year to June 30, 1926, was 150,819 tons, against 120,735 tons in the previous year.

The Electrolytic Zinc Company of Australia for the twelve months to June 30th last produced 46,583 tons of electrolytic zinc.

The output of gold for the year was 520,000 fine ounces, valued at £2,200,000 sterling, against 625,000 ounces, valued at £2,656,000, in the previous year, and of silver 11,500,000 fine ounces, against 11,200,000 ounces in the previous year.

It is interesting to note that the value of all metals and minerals exported from the Commonwealth, including coal but excluding gold, was for the last four years, in round thousands, as follows:—

	YEAR TO JUNE 30TH.	Value.
		£
1923		8,578,000
1924		9,678,000
1925		9,835,000
1926		10,704,000

STAFF.

In accordance with our practice of arranging visits to this side from time to time of our principal executive officers in Australia, we have during the past year had our general manager in Australia, Mr Wren, with us for some months. Mr Wren arrived

in April, and left again in September. We have had many opportunities of intercourse with him, when the affairs of the bank have been very fully discussed. Of these opportunities I, as chairman, and Mr Paterson as deputy-chairman, as well as our other colleagues, have taken the fullest advantage. It was an unqualified satisfaction to us all to find Mr Wren so well, and as vigorous and alert in both mind and body as hitherto. These visits are invaluable to the officers who come over, to the directors, and to the whole business of the bank. My regret is that Mr Wren could not have postponed his return so as to be with us to-day, but this would have detained him too long. During his absence the responsible duties of acting general manager devolved on Mr Ernest O'Sullivan, our greatly esteemed assistant general manager in Australia, and were discharged with conspicuous ability and to our complete satisfaction.

I cannot draw my remarks to a close without expressing the board's great appreciation of the manner in which the work of the bank during the past year has been carried on by the whole staff. The general manager in Australia, the London manager, and the acting general manager in Australia, and the chief executive officers, loyally and efficiently supported by the entire staff, have rendered admirable service.

I now have pleasure in moving: "That the report and statement of accounts now submitted be and are hereby adopted, and that the amount available for distribution be applied as therein recommended."

Mr John Paterson (deputy-chairman) seconded the resolution, and it was carried unanimously.

RE-ELECTION OF DIRECTORS.

The Chairman next proposed the re-election of the Right Hon. Lord Forster of Lepe, P.C., G.C.M.G., who had been co-opted to the board.

The resolution was seconded by Sir Frederick W. Young and unanimously approved.

The Chairman next moved the re-election to the board of Mr John Paterson, the deputy-chairman, who rendered, he said, most valuable assistance to the bank and the board.

The Hon. Sir John A. Cockburn, K.C.M.G., in seconding, said that his old friend Mr Paterson was a born banker, and his genius in that respect was increased by his lifelong experience.

This resolution was also carried unanimously.

On the motion of the Chairman, seconded by Mr S. M. Ward, the Hon. Sir Arthur Lawley, G.C.S.I., was also re-elected a director.

On the proposition of Mr E. B. Wilkinson, seconded by Mr E. Ambrose, Messrs Turquand, Youngs, and Co. and Messrs Price, Waterhouse, and Co. were reappointed auditors.

The Chairman said that he would like to welcome to the meeting their old friend Mr Charles J. Hegan, a former chairman of the bank. It was a great pleasure to them all to see Mr Hegan looking so well, and the directors hoped that he would long be spared to enjoy the greater ease which he now had, and to be available for them to have a talk with him as opportunity might arise.

VOTE OF THANKS TO THE DIRECTORS.

Mr J. C. Hanna said that he had been entrusted with a resolution according a vote of thanks to the chairman, the deputy-chairman, and the directors for their services during the past year. In proposing it, he wished to say that it frequently happened at meetings that such resolutions were moved as a matter of course when they were not deserved or justified by the results, but in the case of this bank an expression of their unstinted thanks was not only deserved, but was thoroughly justified by the results, which some people might, indeed, call phenomenal. In the balance-sheet which was before them on that occasion there was evidence of solid and steady progress. He was particularly struck with the growth of the figures since the alliance with the London Bank of Australia and the Commercial Bank of Tasmania. The accounts reflected very great credit on the directors and on the staff, and amply justified the resolution which he was about to propose, which was: "That a hearty vote of thanks be accorded to the chairman, deputy-chairman, and directors for their conduct of the affairs of the bank, and that they all be congratulated on the result of the year's working."

Mr J. G. O'Neill, in seconding the vote, said that as an old director of the London Bank of Australia he offered to the chairman and his colleagues his best congratulations on the magnificent balance-sheet which they had placed before the shareholders. They could all feel very pleased that they were connected with such a sound and progressive institution.

The vote was unanimously accorded and the Chairman thanked the meeting for it.

TRIBUTE TO OFFICERS AND STAFF.

Mr Frederick Tomkinson said that he would like to associate himself with the remarks of the chairman on the loss sustained by the death of Mr Slade. The resolution which he had to propose did not require any speech. It was: "That the thanks of the share-

holders be heartily accorded to Mr Wren, the general manager in Australia, Mr Janion, the manager in London, Mr O'Sullivan, the assistant general manager in Australia, Mr Shipston, the assistant manager in London, and the executive officers and the staff at home and in Australia for the valuable services they have rendered to the bank during the past year."

Mr C. J. Hegan, who was greeted with cheers, said that he was extremely gratified at being asked to second the resolution, and he thought he might claim that there was no one on that side of the table who was better qualified to do so than he was, having been for some thirty years in daily touch with the then existing staff of the bank in London, and having an accurate knowledge of what went on on the other side of the water. There had been a great many changes since then, but he was happy to say that he was still on intimate terms with the general manager in Australia, Mr Wren, and with the manager in London, Mr Janion, and he knew them to be men who had no axes to grind. They devoted themselves to the best interests of the bank. They also studied the interests and well-being of the large body of men committed to their charge, with the result that they had built up a loyal, hardworking, and contented staff.

The vote was unanimously accorded.

MR. JANION'S ACKNOWLEDGMENT.

Mr E. M. Janion (London manager and secretary) said that, on behalf of the staff in Australia and in London, both seniors and juniors, he wished to thank the proposer and seconder for the kind remarks which they had made, and also the chairman for his references to them in his speech. He would like to say on behalf of the staff that they were all delighted to see Mr Hegan, and he hoped that that gentleman would be with them for many years to come.

He would like to say that the whole of the staff were very loyal and contented, and that he knew no institution in which the feeling of *esprit de corps* was so largely developed. All the officers were devoted to the bank, and used their efforts to help forward its progress. It would give him great pleasure to convey the thanks of the shareholders to his colleagues on the other side.

Mr F. J. Moule proposed a cordial vote of thanks to the chairman for his admirable address, which was most instructive and helpful. This was seconded by Mr A. I. D. Stewart, and accorded by acclamation.

A brief acknowledgment by the Chairman brought the proceedings to a close.

NORTH ANANTAPUR GOLD MINES, LIMITED. ENCOURAGING OUTLOOK IN GOOTY AREA.

The nineteenth ordinary general meeting of the North Anantapur Gold Mines, Limited, was held, on the 18th instant, at 6 Queen street place, London, Mr V. Herbert Smith presiding.

The Chairman, in moving the adoption of the report and accounts, said that the mining lease over the North Anantapur property expired on February 16th last, and all work on that area had ceased. The Gooty area was now the centre of the company's mining activity, development having been vigorously continued and a 10-head mill and small cyanide leaching plant erected. The cost of this installation had been kept at a very low figure, as it was possible to utilise to a great extent machinery formerly in use at the old mine. Subsequently to the close of the company's financial year, reduction operations had been commenced and two returns had been made—namely, 500 tons, which yielded 149 ounces fine gold, and 520 tons, which yielded 203 ounces. The development carried out to date showed that the reef formation was practically continuous, and where the quartz was encountered it was usually rich in gold. Lenticular bodies of quartz, varying in width from one inch to over 7 feet, pinched and made again so rapidly that the ground could not be properly tested by driving levels at 100-foot intervals. Owing to this and to the fact that in places the reef was only exposed on one side, it was difficult to calculate the tonnage of payable ore available for stoping. The superintendent estimated, however, that 7,000 tons could be recovered, and it was probable that further quantities of payable ore would be encountered in the stoping which would shortly be commenced. The outlook at Gooty afforded encouragement, and fully justified the continuance of the exploratory work and the treatment of the ore.

The company's various holdings were clearly set forth in the balance-sheet, but he wished to draw special attention to Anglo-Canadian Explorers, Limited, who possessed over 1,500,000 shares of £1 each in Central Manitoba Mines, Limited. The North Anantapur Company held 20,000 shares in Anglo-Canadian Explorers, Limited, and the directors were of opinion that these shares would become a valuable asset.

He understood that some of their shareholders had once more been circularised with reference to the position and policy of the company. The board had again overwhelming evidence that the policy they were pursuing was in full accordance with the wishes of the great majority of the shareholders, and, while that position existed, they had no intention of altering their present course.

The report and accounts were unanimously adopted.

AUSTRALIAN, MERCANTILE, LAND AND FINANCE COMPANY, LIMITED.

SUCCESSFUL YEAR—DIVIDEND AND BONUS MAINTAINED.

The sixty-second annual ordinary general meeting of the Australian, Mercantile, Land and Finance Company, Limited, was held, on the 18th instant, at the head office, 20-22 Coleman street, London, Mr Robert Henryson Caird (chairman and managing director) presiding.

The notice convening the meeting and the auditors' report having been read by the secretary (Mr J. L. Simpson),

The Chairman, in moving the adoption of the report and accounts, said: This is the fifth consecutive occasion on which I can begin my annual speech with a note of congratulation, and the third year in succession that we are able to recommend a bonus of 5 per cent. in addition to our ordinary dividend of 10 per cent., both free of income-tax. It is particularly gratifying to me, as it was not without trepidation that I advised the great increase in the paid-up capital from £520,000 to £1,200,000, for though I felt confident that the policy was sound, I could not feel equally confident that we could so speedily get the new capital into full use, and, frankly, I did not expect that we should so soon be able, not only to pay the full dividend and bonus on the increased capital, but also to go on adding largely to our reserves.

RESULTS OF BOARD'S SOUND POLICY.

When I addressed you last year, I felt it my duty to sound a note of warning, for I knew that our profits had been swollen by the extraordinarily good prices we had secured for our wool clip, and I hardly thought that the expansion of our general business would compensate; however, there it is. Though our properties gave us £76,770 7s 3d, less profit, and though we had to reserve a large sum out of this year's general profit to provide for possible losses consequent on the severe drought in Queensland, you will see that our net profit is only £30,598 1s 5d less than last year, and we are able to pay the same dividend and bonus, place £50,000 to reserve, and carry forward as large a balance as we did last year. When I seek to account for this very satisfactory result, I can only think of one contributive and exceptional cause, and that is that we carried forward from 1924-25 season a considerable quantity of wool, which certainly added to the profit of our wool-selling departments in the season 1925-26, but the main contributory causes are the conservative policy we have pursued with our own properties over a long series of years, and the energy, tact, and devotion of our splendid staff of officers.

WOOL CLIP AND PRICES.

Our own clip of wool for 1925-26 amounted to 9,396 bales, and realised £243,736 2s 1d, compared with 7,645 bales, which realised £299,909 3s 4d the previous year. After the great fall in the value of wool which took place in the early months of 1925, which I referred to last year, a fairly satisfactory level of prices was established, and has been maintained without any very great fluctuation up or down, and I see no reason why these prices should not continue.

The estimate of numbers of sheep in New South Wales up to last January showed a remarkable increase of 9,560,587 over the previous year, but I am inclined to think that part of that increase was due to greater care in the collection and compilation of the returns, and may not be fully reflected in increased product of wool, and the very severe drought in Central and Northern Queensland will certainly result in a reduction of wool from that State, so that probably the amount of wool available from Australia will not greatly exceed the previous year; on the other hand, the suicidal strike of the coal miners in this country will affect consumption and must increase the cost of manufacture.

SEASON IN AUSTRALIA.

Of the season in Australia it is difficult to speak in general terms. While we have experienced a very good season in North-West New South Wales, where some of our large properties are situated, other parts of that State were dry up to last March; dry weather also prevailed in Victoria, but in Central and Northern Queensland there has been a long and severe drought, causing heavy losses and great expenditure for feeding valuable flocks in the hope of saving them. Some relief came in September, when thunderstorms were fairly general, but much more rain is needed, and the monsoonal rains are anxiously looked for. We were fortunate to get three inches at Maneroo—one of our large stations—which will carry us on for some months. In the southern part of Queensland, where we have another large property, a very good season is being experienced.

The Chairman then read latest reports from Australia and Argentina.

Mr Frederick A. White seconded the resolution, which was unanimously adopted.

AMALGAMATED PRESS (1922), LIMITED.

CONTRACT WITH GRAPHIC PUBLICATIONS, LIMITED.

TERMS OF THE AGREEMENT.

OVERWHELMING SUPPORT OF SHAREHOLDERS.

An extraordinary general meeting of the Amalgamated Press (1922), Limited, was held, on the 17th instant, at the Memorial Hall, Farringdon street, London, for the purpose of considering and, if thought fit, passing the following resolution:—"That the agreement dated November 5, 1926, made between the Amalgamated Press (1922), Limited, of the one part, and the Graphic Publications, Limited, of the other part, be and is hereby approved."

Sir George A. Sutton, Bart. (chairman of the company), presided.

The secretary (Mr J. R. Sumpter) having read the notice convening the meeting,

The Chairman, who was received with cheers, said:—Ladies and gentlemen,—It gives my colleagues and myself the greatest possible satisfaction to find that the resolution we have put before you for your consideration to-day has received such overwhelming support from the shareholders. The total number of ordinary shares in the company is 2,717,716, and we have received proxies from 4,068 ordinary shareholders, representing 2,087,516 shares, in favour of the resolution, also proxies in respect to 274,845 preference shares, making a total of 2,362,361 shares. It is right that I should also tell you we have received proxies for 95 shares against the resolution. With regard to the merits of the transaction my colleagues and I, after most careful consideration, thought it was our duty to enter into a provisional contract with the Graphic Publications, Limited, the performance of which contract is guaranteed jointly and severally by Sir William Berry and Mr J. Gomer Berry.

TERMS OF SALE.

The terms of sale, as stated in our circular, are such as to provide the ordinary shareholders upon a liquidation of the company—which must result from the transaction when it has been approved by you—with a payment of £3 5s for each £1 share, payable as to £2 5s in cash and £1 in 5½ per cent. first debenture stock of the company proposed to be formed by the purchasers. My colleagues and I consider the price one the acceptance of which should be recommended to you. And I would take this opportunity of pointing out to you that when the present company was formed, in 1922, you received four £1 shares for each £1 share you held in the old company, at the same time having divided amongst you approximately £1 in cash or securities, so that the proposal to-day is equal to the receipt by you of £14 a share for each of your original shares in the Amalgamated Press, Limited. This is a result upon which I think you may feel disposed to congratulate yourselves.

POSITION OF PREFERENCE SHAREHOLDERS.

The position of the preference shareholders had to be considered by us in making the deal. It would obviously have been unfair for us to concur in a contract which would have left the preference shareholders, on liquidation, with only £1 per share, to which they were solely entitled, upon the happening of that event. We therefore stipulated, as a condition of entering into the contract, that, quite apart from the purchase money under that contract, the purchasers should enter into an agreement with the trustees for the preference shareholders to secure them a return of 24s on each preference share.

Some questions have been asked by shareholders as to what is to become of the cash and Government securities referred to in the circular. Those, of course, form part of the fund which on liquidation will go towards providing the £3 5s per share to the ordinary shareholders.

I must also point out to you that under the terms of sale there will be no loss of income to the ordinary shareholders. You have been accustomed to receive an interim dividend of 1s per share, that is at the rate of 10 per cent. per annum, for the period from June 30th to December 31st, and it has therefore been arranged that 5 per cent. interest from the 30th of June until completion will be payable upon the whole £3 5s share that you will be entitled to receive. So that, in fact, you will by way of income receive substantially more than the amount of dividend ordinarily paid upon the shares for the period in question.

THE NEW COMPANY.

I have no doubt that it is in the minds of many of you whether it will be possible for you to continue your association with the

old business in the future. I am in a position to say that a new company will be formed, the board of which will include your present directors, with some others appointed by the purchasers, and that the company will be issuing to the public a 7 per cent. preference share. Full opportunity will be given to you to subscribe for these shares.

The directors, in recommending the proposal, are satisfied that they will be associated in the future management of the business with people who have established a high position in the publishing world, and that the great traditions of the business, of which we are all proud, will not suffer at the hands of those who will secure the controlling interest in the new company.

LORD NORTHCLIFFE'S REVERED MEMORY.

I feel I should like to add this. To me it seems only fitting that I should pay a tribute to the ever-revered memory and wonderful genius of the founder of the firm—the late Lord Northcliffe, who, with his brother, Lord Rothermere, built up what is the largest publishing business of its kind in the whole world. To them the credit of this is due, and I feel that I must say so to-day.

The late Lord Northcliffe did me a great honour when he invited me to succeed him as chairman of this business, and my colleague, Mr A. E. Linforth, as vice-chairman, and it has been my pleasure and privilege to meet you on twelve occasions in this capacity.

I would conclude my remarks by moving the resolution on the paper, and I call upon Mr A. E. Linforth to second it. Afterwards Mr William Graham, the solicitor of the company, will explain the agreements, and deal with any points which you care to bring up or questions you desire to ask.

I now beg to move: "That the agreement dated November 5, 1926, made between the Amalgamated Press (1922), Limited, of the one part and the Graphic Publications, Limited, of the other part be and is hereby approved."

Mr Arthur E. Linforth (vice-chairman) seconded the resolution. The solicitor, Mr William Graham (of Messrs Nicholson, Graham, and Jones), explained the agreement and read the operative clauses.

REPLIES TO QUESTIONS.

Captain Vickerman asked if the chairman could give the meeting the approximate date when the £2 5s per share in cash would be paid.

The solicitor replied that the completion of the sale was fixed by the terms of the agreement for February 28th next. He thought the programme which would probably be adopted by the directors was that as soon as the new company had been formed and had proceeded to allotment, Amalgamated Press (1922), Limited, would be put into liquidation, and the board would thus be in a position at the earliest possible moment when the money had been received from the purchasers, to pay out to the ordinary and preference shareholders that to which they were entitled. He should say that the payment ought to be possible within a very early date after February 28th.

Sir Henry Arnholz said he had the privilege of being, along with Sir George Sutton, the holder of the largest amount of ordinary shares of the company, as executors of the late Lord Northcliffe. As such they had the very highest opinion of the value of those shares. The estate of Lord Northcliffe, as the shareholders would have learnt from the Press, was being administered by the Court, and before the executors were authorised to approve of the scheme they had to get the approval of the Chancery Judge. When he (the speaker) told them that the Chancery Judge had approved of the scheme he thought that this would add further confidence in their acceptance of the proposal. The number of shares held by the estate was very large. As they had heard from the speech of Sir George Sutton, Lord Northcliffe was the founder of the business, and they, as executors, had perhaps a little sentimental feeling about losing control of the concern, but it was undoubtedly the opinion of all who had examined the scheme that it was for the benefit of the shareholders, and they could not allow sentiment to go too far. He had great pleasure in supporting the scheme.

Mr Ruck inquired in what manner the preference shareholders would be paid the extra 4s per share.

The Chairman said that the preference shareholders would receive the whole of their 24s per share in cash.

DEBENTURE SECURITY.

Mr T. A. Carver asked if he was to understand that the company's holding of shares in the Imperial Paper Mills formed part of the guarantee of the proposed debentures.

The Chairman: Yes.

The solicitor remarked that 512,000 out of the total of 600,000 of Paper Mill shareholders would be transferred into the names of the trustees for the debenture-holders, and they could not be parted with without their receiving a proper *quid pro quo*.

Mr Carver expressed the opinion that, in view of the value of the Paper Mill shares, the ordinary shareholders ought to receive £3 10s for each of their shares. It was his opinion, and also the opinion of certain disinterested people in the paper trade, that the shareholders were being treated rather shabbily.

The resolution was carried by an overwhelming majority, amid cheers.

Capt. Vickerman moved a vote of thanks to the chairman and directors for their magnificent work in the past, and also for the magnificent return which they had obtained for the shareholders by the proposed sale. He felt that the dissentients were really too greedy, and that they ought to be contented with the offer.

The vote was unanimously accorded, and after a brief acknowledgment by the Chairman the proceedings terminated.

KAMUNTING TIN DREDGING, LIMITED.

GOOD RESULTS—SHARE SPLITTING APPROVED.

The thirteenth annual general meeting of Kamunting Tin Dredging, Limited, was held, on the 18th instant, at the registered offices of the company, 7 Martin's Lane, Cannon Street, London, Mr John I. Philips (chairman of the company) presiding.

Mr J. Hope Bowden, on behalf of the secretaries (Messrs Bright and Galbraith, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: From a profit-making point of view we have had the most successful year in the history of the company, as, after writing off a further £17,915 as depreciation—which brings the value of our four dredges to £77,673, or less than £19,500 each—we have made a net profit of £122,739, and, after providing £24,000 for income-tax reserve, you have received four quarterly dividends of 1s 6d each, tax free, equal to 37½ per cent. when the tax is taken into consideration.

The average market price of tin, which steadily increased from the commencement of our financial year until March last, suffered a rather sharp set-back in May and June, but since that time it has steadily improved, until last month it reached an average of £300 per ton. It would therefore appear that we can look forward to the market price being maintained, and also I think an even more profitable time than we have enjoyed in the past year.

You will no doubt learn from reviews on the general position that, while landings of tin in October, 1924, were 4,590 tons, this year they are only 1,848 tons, and while the visible supply for the year 1924 was nearly 18,000 tons, this year it is only some 14,000 tons. While the price of the commodity is, as you know, very high, you are also, no doubt, fully aware that, in the case of a commodity like tin, where the ruling price yields a handsome profit to producers, yet for want of new fields production seems to be far short of requirements, for the simple reason that, as you know, tin forms such a very small portion of the value of any finished article, and therefore the price might be well above today's level without any restriction on trade.

Since the reconversion of No. 4 was decided upon a scheme for the electrification of our dredges has been very carefully considered, with the result that a contract was let for the electrification of No. 4 dredge. This has somewhat delayed her date of readiness, but it is confidently anticipated that she will again be in commission early in 1927.

You will also be aware that your directors have decided to call for tenders for a No. 5 dredge, and it is intended to instal this—which will also be electrically driven—on our north-western area, on which we have not yet had a dredge.

I might also mention that, as soon as convenient after No. 4 is again working, No. 1 dredge will be stopped for general repair and overhaul. Although she is now 12 years old, we understand she is in good condition, and, when overhauled and brought up to date, will be capable of still many more years' hard work.

Now with regard to our property, you will have noticed from the report and plans that, in addition to purchasing the Kamunting police station and grounds—which is to be used as offices and a site for our new workshop—applications have also been made for 396 acres of State land, which, if granted, will give us an undredged area of 2,267 acres, assuring us of many more years' work.

Gentlemen, in my opinion, everything augurs very well indeed for the future.

Sir Ernest W. Birch, K.C.M.G., seconded the motion, which was carried unanimously.

At an extraordinary general meeting which followed, it was unanimously resolved that each of the £1 shares of the company be sub-divided into four shares of 5s each.

ANSELL'S BREWERY, LIMITED, BIRMINGHAM.

SATISFACTORY YEAR DESPITE INDUSTRIAL TROUBLES.

The twenty-sixth ordinary general meeting, being the twenty-fifth annual meeting of the shareholders of Ansell's Brewery, Limited, was held at the Queen's Hotel, Birmingham, on Thursday, November 11th. Mr James A. Fairhurst (chairman) presided.

The Chairman said that before they proceeded with the business he desired to apologise for the absence of two directors—Messrs Edward Ansell and A. E. Wiley—who were unable to be present on account of illness.

The secretary read the notice convening the meeting and the auditors their certificate.

INCREASED PROFIT.

The Chairman said that with regard to the transactions during the year it was a great pleasure to him to be able to present a balance-sheet which showed an increased profit on the previous year. It was not a very large increase, but he thought in the circumstances it was very satisfactory. The period under review included the general strike and five months of the coal strike, and, as everybody was well aware, all trades in the districts in which the company operated had been and were being adversely affected. To his mind, when the public had not so much money to spend they were more apt to discriminate upon how they spent what they had. The company's increased profit was due to the fact that the article they produced was a very popular one. That they were a progressive company they would agree. During the year they had purchased additional properties and converted leaseholds into freeholds by spending £135,000.

Altogether a total sum of £230,000 had been expended on these purchases, together with brewery extensions, rebuilding public-houses, and additional plant. That, he thought, might be considered fairly satisfactory.

THE ASSETS.

Turning to the assets side, he said he had already referred to the first three items. The stocks were slightly less and the investments were £43,000 less. The reserve account would be brought up to £330,000. Taking everything into consideration, he thought the balance-sheet was a very satisfactory one. Providing they had no great labour strikes and that they were not interfered with by legislation, he looked to the future of the company as an optimist.

He moved: "That the report and accounts be received and adopted, and that the following dividends be paid, viz.: at the rate of 5 per cent. per annum (less income-tax) on the preference shares, and at the rate of 12½ per cent. per annum, making 12½ per cent. for the year, together with a bonus of 2½ per cent. on the ordinary shares (both free of income-tax) for the half-year ended September 30, 1926."

Mr T. Ansell seconded, and said he could endorse all the chairman had stated. There was just one thing that could be added—there was not one penny down for goodwill.

The resolution was carried unanimously.

CHAIRMAN RE-ELECTED A DIRECTOR.

Alderman William J. Seal (Sutton Coldfield) proposed the re-election of Mr Fairhurst as a director.

Mr A. E. Ansell seconded and the resolution was carried.

Mr Fairhurst thanked the shareholders for his unanimous re-election as a director. He was deeply interested in the affairs of the company, and he would endeavour to serve the interests of the shareholders to the best of his ability.

Mr H. P. Ruston proposed, and Mr F. W. Greenway seconded, the re-election of Messrs Fisher, Randle and Fisher as auditors. The resolution was carried.

DIRECTORS AND STAFF THANKED.

Mr S. J. Davies proposed that the best thanks of the meeting be accorded to the chairman for presiding, and to the directors and staff for their services during the year.

Mr Alfred Aston seconded the resolution, which was carried.

The Chairman: I thank you very much indeed, and on behalf of my co-directors and staff I thank you also. We have a board which co-operates most excellently together, and we are backed up by an excellent and hard-working staff. They have the interests of the business at heart, and they are indeed entitled to the thanks of the shareholders. That concludes the business, and I thank you for your attendance.

Messrs Samuel Montagu and Co. write on November 17th as follows:—

GOLD.

About £947,000 bar gold became available in the open market yesterday. The Indian bazaars bought about £50,000 and about £80,000 was taken for the trade, the balance being absorbed by the Bank of England. The net receipt by the Bank during the week under review has been £961,000, increasing the net influx since January 1, 1926, to £7,937,000, and decreasing the net efflux since the resumption of an effective gold standard to £3,658,000.

SILVER.

The market has been in a very sensitive condition during the week owing to vacillations of the China exchange and speculative business in India connected with options. The reduction in the London stocks following the departure of the settlement steamer, and the nervousness of some bear operators, created an upward tendency. Yesterday orders from China and India launched upon a market scantily supplied drove prices 3d up for cash and 1½d for two months' delivery to 26d and 25½d respectively. Prices have been falling more or less continuously since October 7th, when 26d was fixed for cash and October 13th 25½d for two months' delivery. Yesterday's movement, though large for one day, was exceeded last month, when on the 18th the cash price fell 1½d. The basis for the recent improvement seems entirely speculative. No fresh factors have appeared that will increase actual consumption or remove the incubus of probable demonetisation. The amount of the silver rupees held in the Indian currency note reserves, with an average weekly increase since June 7th last of about 80 lacs a week, has risen 20 per cent. since that date and shows no sign of abatement. Such an influx, if continued, will render the disposal of surplus silver coin under the new currency scheme a serious problem. During the same period the visible stock in Shanghai has increased to an almost similar degree, namely, about 16 per cent. These figures relating to the greatest silver-using countries in the world—who have had to take, failing other buyers, nearly two-thirds of the world's output—indicate that, unless India can increase proportionately its offtake (recently there has been a slight falling off), the sterling value of silver may be difficult to maintain in the not too far distant future. As the price of silver in India and the China exchanges failed fully to respond to yesterday's sharp rise, a reaction ensued to-day of 1½d for cash and of 1½d for two months' delivery. The near future of the market is uncertain, owing to the reasons above detailed. United Kingdom imports and exports of silver during the week ending the 10th inst. were:—

Imports.	Exports.
France	British India
U.S.A.	Other countries
Other countries	

INDIAN CURRENCY RETURNS.

BROKEN HILL PROPRIETARY BLOCK NO. 14 COMPANY, LIMITED.—During the fortnight ended September 25th, 2,038 tons of this company's ore were treated at the mill of the Broken Hill Proprietary Company and produced 410 tons of lead concentrates and 231 tons of zinc concentrates.

MOUNT LYELL MINING AND RAILWAY COMPANY, LIMITED.—During the four-weekly period ended November 10th the mill treated 8,810 tons of ore, producing 3,155 tons of concentrates.

Reports and Notices.

Mr T. L. Kesteven (of Messrs Lawrence Graham and Co.) has been elected a director of Legal and General Assurance Society, Limited, as from January 1, 1927.

Courtaulds, Limited, have removed to 16 St Martin's-le-Grand, London, E.C. 1. New telephone, City 3561 (twelve lines).

At a meeting of the board of the Anglo-Argentine Tramways Company, Limited, held to-day, Mr Henri Speciaal, of Brussels, was elected a director of the company to fill the vacancy on the board caused by the retirement of Mr Henry Francis Gunning.

GOVERNMENT STOCKS, &c.

COMMITTEE OF BRITISH HOLDERS OF FRENCH WAR BONDS.—The Right Hon. Edward Shortt, K.C., has consented to act as chairman of the Provisional Committee of British Holders of French War Bonds issued in London and Dublin. The committee is arranging to hold a public meeting of bondholders in London within the next few weeks. Notice of the meeting, together with a memorandum prepared by the provisional committee and copy of the resolution to be submitted at the meeting, will be posted to all bondholders who forward their names and addresses and particulars of the bonds they hold to The Secretary, Committee of British Holders of French War Bonds, 15-17 King Street, St James, S.W. 1.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1 to September 30, 1926, compared with those for the same period of 1925:—

Gross receipts, Sept., 1926	Do do do 1925	Estimated receipts for nine months (Law of Control) ..	Actual receipts for 1926 (nine months) ..	Actual receipts for 1925 (nine months) ..
Monopolies, Tobacco, Stamps, and Stamped Paper.	Drachmas. 17,892,476.05	Drachmas. 10,958,020.60	21,675,000.00	8,025,000.00
Piræus Customs.	Drachmas. 50,663,708.30	Drachmas. 48,341,020.20	165,846,742.75	407,301,155.50
			91,285,831.75	383,243,410.90

* Exclusive of increases in duties and selling prices not subject to the system of plus-values.

Note.—Of the surplus over the estimated receipts from the monopolies, tobacco, stamps and stamped paper, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1881 to 1893.

LIBERIAN LOAN OF 1912.—The Council of Foreign Bondholders have received advices from the National City Bank of New York, the fiscal agents for the above loan, that they are in possession of the necessary funds for the encashment of the January 1, 1927, coupons on the bonds outstanding. There is also a small balance available for sinking fund, which may be increased by further

remittances. The fiscal agents will be glad to receive tenders, which must be in their hands at their offices, 55 Wall street, New York, not later than December 10, 1926. Accepted bonds will be for delivery on or before January 1, 1927, for payment on that date, and must bear the coupons due July 1, 1927.

PORT OF PARA.—The report for 1925 shows that no change has been made in the port works since the board's last report. The capital recognised by the Government remains fixed at the same figure of 60,651.102 milreis gold, or £6,823,249, on which sum the company's contracts guarantee its annual gross receipts of 10 per cent., viz., £682,324. Statistics show an improvement in the traffic of the port for the past three years. This improvement is due, on the one hand, to a revival of the rubber trade, and, on the other hand, to the development of Para. Notwithstanding, however, the increase in the gross receipts and the rise in the Brazilian exchange, which from 3½d in the beginning of August, 1925, has risen to and remained above 7d until October, 1926, the company's net earnings, when converted into sterling, still remain small as compared with its fixed charges. Total tonnage of vessels entering the port in 1925 was 977,864 tons, against 911,692 tons in 1924. For the first six months of 1926 total tonnage was 474,656 tons.

RAILWAYS.

BRAZIL RAILWAY.—The report and accounts for 1925 shows that for the first half of that year the value of the milreis remained almost stationary in the neighbourhood of 6d, rising to over 7d during the last three months of the year. This improvement was maintained in 1926; during the first nine months exchange oscillated between 7d and 7½d. As stated in the directors' report for 1924, this amelioration must, above all, be attributed to the policy of strict economy and withdrawal of paper money pursued by the Brazilian Government. The balance brought forward from revenue account is £321,364. Income from collaterals is \$808,411. Conversion into cash of assets representing income \$57,981. Sundry interest, &c., \$166,559, making total gross income \$1,354,315. The net income is \$777,374.

BANKS.

BANQUE BELGE POUR L'ETRANGER (SOCIETE ANONYME).—The following is a comparative table of balance-sheets (sterling equivalents taken at 25 francs to the £) :—

	1924.	Year Ended June 30, 1925.	1926.
Net profit of the business year.....	489,552 ..	431,192 ..	723,968
Dividend (free of coupons tax).....	8 % ..	8 % ..	10 %
Capital subscribed.....	4,000,000 ..	4,000,000 ..	4,000,000
paid up.....	3,000,000 ..	3,000,000 ..	3,000,000
Reserves.....	960,000 ..	1,120,000 ..	1,280,000
Sundry creditors.....	24,431,237 ..	30,876,079 ..	54,636,912

Note issue in China.....	86,525 ..	149,967 ..	125,703
Cash.....	4,559,397 ..	5,286,619 ..	8,421,904</

ing £23,845 repaid during year in respect of overpaid taxation, amounts to £67,572. After providing for depreciation, bonuses, &c., balance available amounts to £59,738. Dividend on first and second preference shares to October 31, 1926, less tax, absorbed £8,640, leaving a balance available, subject to income-tax, directors' fees, &c., of £51,098. Directors recommend placing to reserve fund £5,000 and paying a dividend of 2s 6d per share on ordinary shares, less tax, leaving to be carried forward, subject to income-tax and directors' fees, £36,098. Buildings and plant have been well maintained during period covered by accounts, and directors report that they consider results very satisfactory, considering extraordinary difficulties with which they have had to deal during past six months in consequence of general strike and coal strike.

KERN RIVER OILFIELDS OF CALIFORNIA.—The combined result for the year ended May 31, 1926, is as follows:—Gross profit, Kern and St Helens Companies, including interest, profit on sale of securities, transfer fees, difference in exchange, less administration expenses, £172,479, against £153,851 in preceding year; brought forward from last accounts, £88,845; making £261,325, against £290,674 in preceding year; deduct depreciation and amounts written off in respect of the year to May 31, 1926, £80,000, against £50,000, leaving £181,325. The directors propose to appropriate this balance as follows:—Dividend on ordinary shares of 10 per cent., absorbing £120,000. This compares with 12½ per cent. in preceding year. Carry forward, Kern and St Helens Companies, subject to U.S.A. and British taxation and directors' remuneration, £61,325. Notwithstanding the increased output obtained from our various fields, the directors recommend the reduction of the dividend as above in consequence of the lower price obtainable for the heavy oil of the old Kern River Field and the necessity of providing additional depreciation upon the St Helens Company's properties.

STOCKHOLDERS INVESTMENT TRUST, LIMITED.—The report and statements of account for period commencing with the incorporation of the company on June 9, 1925, and ending on October 31, 1926, has just been issued. The 50,000 shares of £10 each subscribed, when fully paid up, were converted and divided into £300,000 5 per cent. cumulative preference stock and £200,000 ordinary stock. There is a credit balance of £24,175. Preference dividend absorbed £12,000. Ordinary dividend of 5 per cent., less tax, absorbed £8,000. The sum of £3,000 is put to reserve. The carry forward is £1,175. Changes in investments have resulted in a surplus on realisation of £13,097, of which £11,097 has been applied in writing off the whole of the preliminary expenses, and the remaining £2,000 has been put to reserve, making total reserve £5,000. The company gives a complete list of its investments, which number 160.

YARROW AND CO., LIMITED.—The report for the year ended June 30, 1926, after deduction of debenture interest and depreciation, is £11,720, to which is added £2,750 brought in, making £14,470 available. The ordinary dividend is 7½ per cent., absorbing £11,250, leaving £3,220 to carry forward. During the year the shipyard and engine works have been fairly occupied, but the business has been adversely affected by the depressed condition of the industry generally, accentuated by the deplorable dispute in the coal industry. Investments at cost stand in balance-sheet at £78,799. Their market value on October 18, 1926, was £87,004. Cash is at £5,864.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions have remained unsettled with further rains, which caused floods in low-lying parts of the country. The temperature, however, has been mild and favourable to the growth of cereal crops. Native wheat continues in fair request, but prices marked a declining tendency, owing to the general situation. Imported descriptions moved off slowly, and values took a sharp downward turn in sympathy with reduced forward offers. Dull and easier conditions prevailed in the floating and forward cargo section, owing to the limited demand from millers in this country, combined with increasing Canadian stocks and freer offers from that quarter, especially distant positions, while Argentine shippers have also reduced their quotations. Steamers of white Pacific December shipment sold 50s 3d per 480 lbs. Feeders also met with poor support, and trend of prices in buyers' favour. Steamer of Plate maize on passage sold at 32s 3d to Spain per 480 lbs c.i.f. Wheat irregular and easier. No. 1 Northern Manitoba quoted 62s 9d, No. 2 ditto 61s 3d, No. 4 57s 6d, No. 2 tough Manitoba 59s 6d, No. 2 mixed Durum 58s 3d, choice white Karachi November 60s 6d ex-ship, all per 490 lbs. English 11s 10d-12s 3d per 112 lbs. Flour generally quiet, though steady at the recent decline, with strong grades of imported somewhat reservedly offered. London standard grade 48s 6d, town whites 49s 6d, patents 50s 6d-51s 6d per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 40s-48s 6d, Minneapolis 47s-49s, Kansas patents 45s-46s, Australian 45s per 280 lbs ex-store. Maize quiet and easier, but closed steady. Plate landed 34s, ditto ex-ship 32s 3d, Plate Cinquantina 37s 6d landed per 480 lbs. Barley dull and weak. Californian 40s-47s, Chilean Chevalier 52s-62s, ditto brewing 38s-48s, Australian Chevalier 48s-50s ex-store. Smyrna 40s-55s ex-ship per 448 lbs. No. 3 Canadian Western 34s 6d ex-ship,

Persian ex-ship 29s 3d, landed 31s, Russian 33s, Plate 33s, both ex-ship per 400 lbs. English malting 9s 9d-18s 9d as to sample, feed 9s 6d-9s 9d per 112 lbs. Oats quiet. La Plata landed 27s 6d, ditto ex-ship 24s 9d, Chilean Tawny 27s 6d-31s landed per 320 lbs. English 8s 3d-9s per 112 lbs. Millers' offals dull and occasionally easier. Broad bran quoted 8s, middlings 9s-9s 3d, fine ditto 10s 6d, bags included, ex-mill, feed oatmeal 9s 9d, light oats 8s 3d, ground oats 13s 3d per cwt, free on rail. Oatmeal quiet. London-made flaked 18s, rolled oats 17s, medium also fine cut 18s, coarse also medium pinhead and whole groats 16s ex-mill per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1926-27, 1925-26, 1924-25, 1923-24:—

	1926-1927.	1925-1926	1924-1925	1923-1924.

AMERICAN WHEAT MARKETS.

The weakness recorded in the American wheat markets continued until the middle of the week, liberal interior movements of supplies being maintained and favourable crop advices from Argentine exercising a bearish influence. An improvement subsequently took place on reports of rain in Argentine, the possibility of easier freight rates, and increased export inquiry.

	Jan. 2, 1925.	Nov. 19, 1925.	Jan. 7, 1926.	Nov. 11, 1926.	Nov. 18, 1926.
Winnipeg (No. 1 Manitoba)—Cents per 60 lbs.....	183	(b) 141½	160	(b) 143½	(b) 136½
Chicago (No. 2 Winter)—Cents per 60 lbs.....	177	(c) 15 ½	176½	(c) 140½	(c) 135½

(b) November delivery. (c) December delivery.

Visible supplies of wheat in Canada, at 46,108,000 bushels, show an increase of 4,773,000 bushels as compared with the previous figures. Supplies a year ago stood at 36,666,000 bushels.

COAL.

Our Cardiff correspondent writes:—Confidence in a settlement of the dispute has been severely shaken by the decisive majority of the miners' delegate conference at Cardiff against acceptance of the Government terms. In view of the steady increase in the output of South Wales—now estimated at 60,000 tons per week—it was hoped that the regulations prohibiting exports would be relaxed. The Customs authorities have received instructions to release coastwise shipments and to relax the regulations concerning bunkers for foreign-going vessels, but it would seem that the embargo on cargo exports of coal to foreign countries will be maintained till the policy of the South Wales Miners' Federation in regard to resumption under an eight-hour day has been clearly defined. Meanwhile, inland prices are a shade easier. There are many orders in the market from foreign customers; three contracts alone cover a quantity of nearly half-a-million tons; and in spite of the week's events collieries are offering post-strike supplies on the basis of 35s for best Admiralty large and 25s for best small steams f.o.b. In one or two cases merchants have chartered tonnage for December positions. Pitwood imports are being resumed on the basis of between 38s and 40s, ex ship Cardiff.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Buyers and sellers are still awaiting the outcome of the coal negotiations, and in the meantime trading has been on exceptionally quiet lines. Only five blast furnaces in the whole of the country have been able to keep in operation, the quantity thus available for the open market being of small dimensions. Continental iron also has been obtainable only in small parcels, and producers abroad have recently advanced their prices 3s to 4s per ton. On the other hand, the slackening in the demand from British users of steel owing to the improved prospects of peace in the coalfields has been reflected in the fall in the prices quoted by the Continental makers of semi-finished and finished materials. Inquiry for finished materials has been light, but those few British works which have been able to continue producing have found no difficulty in disposing of their output.

Our Middlesbrough correspondent's letter, dated November 18, 1926, is as follows:—Pig-iron: Owing to the present situation, it is difficult to give any report on the local market, but in view of the number of miners returning to work, it is known that some works have preparations well in hand with a view to starting up. The prices for prompt deliveries are unchanged, No. 3 Cleveland G.M.B. being 120s per ton f.o.t. Ordinary mixed numbers East Coast hematite are not quoted, but it is understood that small parcels of "off" grades are obtainable at a price indicated as about 92s 6d per ton. Manufactured iron and steel: No new business is being done, and an early advance is expected on the current official minimum prices. Iron ore: In the event of furnaces being restarted some of the works will probably require small deliveries, but at present there is no new business and no quotation.

Our Sheffield correspondent writes:—The progress towards a settlement of the dispute has not made any noticeable difference to the general industrial situation here. Few, if any, of the largest steel works will be able to resume before the New Year. The smaller establishments have kept running at a percentage of their capacity, and it will be easy for them to increase their activities. There is a fair amount of confidence abroad with regard to the future, but it is tempered by some nervousness, due to the certainty of increased production costs. There are also remains of old contracts to work off at pre-strike prices. Durham makers are now quoting foundry coke at 37s 6d at ovens for contracts of not less than six months' duration. A further large quantity of Westphalian coke has gone into consumption at inflated prices, some users having paid up to 85s or more, delivered. Importers are not placing any new contracts for this fuel. In the local finished and lighter steel branches overseas trade is being maintained at a fair level, but home orders have been declining for some weeks past. It is expected that the repair of the many thousands of railway wagons which have been standing idle in sidings for more than six months will bring much welcome work for the Sheffield steel trade.

Our Glasgow correspondent writes:—The steady drift back to work of the miners in Scotland, combined with the belief that an early resumption of full coal supplies is inevitable, has brightened the outlook in iron and steel circles, and the feeling is general that, apart from the necessary making up of lost ground, a solid improvement in trade is in sight. Moreover, important contracts have recently been placed both for shipbuilding and engineering. Within the past few days considerable tonnage has been ordered from shipbuilders on the Clyde, Forth, and Tay, and it is also announced that the Port and Haven Commissioners of Great Yarmouth, in conjunction with the local Corporation, have placed an order with Sir Wm. Arrol and Co., Limited, of Glasgow, for a new bridge across the Yare, the estimated value of which is £200,000. Steel supplies from the Continent are somewhat better, but offers for fresh business are now at a higher rate. Pig-iron production is not likely to be resumed this year, as supplies of coke have first to be procured. Stocks are diminishing, and quotations are nominal. Inquiries for galvanised corrugated sheets are numerous, but deliveries in most cases cannot be given until early in 1927, as makers are practically fully booked for the next two months at least. Prices are very firm, and quotations have been made, for shipment up to March, as high as £17 15s per ton for 24 gauge, f.o.b. The demand for black sheets for home trade is brisk, but, owing to the high cost of fuel, makers have had to advance prices to a level which makes consumers hesitate to buy except for immediate pressing requirements.

Our Cardiff correspondent writes:—The general position is unchanged. In the tinplate market inquiries have been fairly active and prices are firm up to 25s 3d per basis box f.o.b. Bars are unaltered at £6 15s and galvanised sheets steady at £17 10s to £17 15s. There was a decrease last week in the receipts from works, but the stocks at the end of the week were slightly higher.

OTHER METALS.

TIN.—The tin market gained strength following firmer advices from America and the East, which resulted in a sharp advance in prices for early delivery, while assisted by liberal buying orders. Later, however, some irregularity was noticeable, particularly regarding forward positions which were more readily offered, so that the advance was lost. Standard cash sold at £311 to £310 15s and £314 5s and £309 10s, three months £300 5s to £303 10s and £298. Sales in the East were reported at £307 10s to £310 and £307.

COPPER.—General conditions in the standard market remained quiet, and with sellers more in evidence a weaker tone resulted. Standard cash sold £57 16s 3d to £57 2s 6d; three months £58 15s to £58.

LEAD.—A moderate demand was steadily supplied, with prices tending in buyers' favour. Good soft foreign pig November sold £29 10s to £29 11s 3d and £28 17s 6d, December £29 16s 3d to £29 17s 6d and £29 15s 3d, January £30 to £29 10s and £29 5s, February £30 to £29 6s 3d, March £30.

SPELTER opened with a firm tone, but demand since quieter, and values exhibited irregularity and weakness. November sold £33 17s 6d to £33 2s 6d, January £33 16s 3d to £33 2s 6d, February £34 to £33 11s 3d and £33 3s 9d, March £33 16s 3d to £33 3s 9d ton.

ANTIMONY quiet. English special brands quoted £74 10s to £75. China crude November-December £32, regulus ditto £51 per ton. **ALUMINIUM** dull. Home delivery quoted £107, export £112 ton. **WOLFRAM** firm. November-December shipment sellers 15s 3d, and antimony ore 5s 9d per unit. **TIN PLATES** steady. I.C. Coke 25s 3d to 24s 3d as to position per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, November 18, 1926.

Prices show little variation from those of a week ago. This steadiness in prices has brought a little more trade to Manchester and also a little more investment buying. All interest as regards size of the crop is now at an end, and attention will henceforth be paid to the ginning figures and the quality. There is a large amount of cotton still to be sold, but with the financial facilities which the Southern States now have available selling is not likely to be aggressive and the farmer can hold his cotton for a considerable time for a better price. A meeting of the Liverpool Cotton Association will take place on Monday to decide whether trading in future should be extended to twenty-four months instead of twelve months as at present. Spot sales for the week 12th to 18th (inclusive) were 40,000 bales, of which 19,430 bales were American, 3,300 Brazilian, 7,000 Peru, 2,300 Egypt, 7,350 African, 100 East Indian, and 520 sundries. Imports for the same period were 119,213 bales, including 92,835 American, 14,431 Brazil, 13 Peru, 9,104 Egypt, 2,486 African, and 254 sundries. Quotations to-day are:—Middling American, 6.99d; Brazil Fair, 7.34d; Peru G.F. Mod-Rough, 8.50d; smooth, 8.34d; Egypt Sakel, 15.00d; Uppers, 10.50d; Tinnivelly, 6.55d; West African Middling, 6.99d; and G.F. East African, 8.75d.

MANCHESTER, November 18, 1926.

The experience of sellers during the past week has been rather disappointing. Despite a substantial inquiry, business done has been of limited dimensions. Some buyers seem to believe that yarn and cloth may be cheaper when spinners and manufacturers are able to buy coal at lower prices. There has been a considerable demand for piece goods for India, but the response to prices wired out has been rather poor, and operations have been confined to moderate lots in bleaching styles and grey shirtings. There is no hope of increased support from China just at present. Printing and finishing qualities have attracted some attention for the Near East, South America, the Continent and the Colonies, but transactions of importance have been scarce. Demand in home American yarns has tapered off, and there are indications of spinners having lost ground. Exceptional sales have taken place in Egyptian counts for thread manufacturing.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—On every occasion in the mining industry when signs of a settlement of the long-drawn-out mining dispute have appeared, the wool textile industry has responded by taking a more active interest in supplies and prices. A spurt of this sort was noticeable last week-end, and after a long period of stagnation a considerable turnover was done in tops, which apparently suggests that business is waiting in the background, and that if coal supplies could be obtained at reasonable prices trade would expand in all directions. Users have also been aroused by the marked recovery in wool values in the primary markets. The demand for wool in Australia has been more general, and prices in both Melbourne and in Sydney have advanced about 1d per lb clean. If the new level is maintained spinners and manufacturers will have seriously to consider if they can afford indefinitely to delay their purchases of tops and yarns, for if account be taken of the world's requirements in raw material—especially the needs of Continental firms—the question may well be asked if wool is likely to fall much below the current level. Germany is an active buyer, and in recent weeks has taken the place of France as the leading operator in Australia and in South Africa. In the home trade, of course, development depends upon a settlement of the mining dispute, but the market to-day is certainly much firmer than a week ago, and it is more difficult to obtain concessions on quoted prices. There is not much change in the yarn trade, but a rather more hopeful feeling prevails in the manufacturing section.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The event of the week is the opening of a new selling season at Wellington. From cables received, the initial sale seems to have been satisfactory and the general impression prevails that the wool is sound. No user finds fault with the price of the raw material, but with the absence of demand for the fully manufactured article. There is nothing wrong to-day with either merino or crossbred values. The missing link all through has been the absence of vigorous consumption and on the end of the coal stoppage it is hoped a real effort will be made to sell yarns and piece-goods. We expect the New Zealand clip to be very similar in size and character to that of last year, though it will be a little lighter and better grown. That Wellington should have opened so creditably is a surprise to many, but it can be taken for granted that the trade has faith in the future of wool, and is prepared to do its best to support all markets in New Zealand. Of course, when a few more sales have taken place it will be seen where prices actually stand, and the prices ruling in Coleman street next week may also influence New Zealand beneficially. We cannot see any sound reason for higher prices, in view of the amount of idle machinery in the West Riding.

Next Tuesday will see the opening of the final series of Colonial sales for the year, and around 137,000 bales are available. The quantity is just a little larger than was expected, but it is not formidable, and if the home and Continental trades are at all in a buying mood the bulk of the offerings can be lifted. It is difficult, however, to say exactly what will take place. A fortnight ago an all-round decline of 10 per cent. seemed likely, compared with the best prices ruling at the last series, but there have since been considerable sales in Bradford, and many firms are now in want as 3s 8d has been taken for good average 64's tops, and 1d more for warp 64's. To-day it is not possible to buy at the former price, and the majority of firms are waiting 3s 11d for a better article, with the very best makers asking 4s. od. We fully

expect the London sales to be on this basis. As far as we can judge it would seem as if merinos will show an all-round decline of about 5 per cent. Crossbreds should fall likewise. Apart from last week-end, when all spinners were putting down orders for the new year, the vacation has been exceptionally quiet, with a marked decline in top values. However, the reaction is welcome. We see no reason why current values should not continue, since wool is at a most useable price. Considerable support will probably be forthcoming from the Continent, and with good competition between France, Germany and the home trade a satisfactory series should result.

HIDE, LEATHER, AND ALLIED TRADES.

The hide market remains very steady in spite of the wet and dirty condition of hides at this season. Best ox hides in Bermuda on Thursday sold from 6½d to 9d per lb, and seconds from 6d to 8½d per lb. Best calfskins made from 7½d to 12½d per lb, wool skins from 6s 2d to 11s, and hogs from 2s 6d to 10s 9d each. Imported hides remain steady, best Argentine fregorifics now selling at 8½d on Russian, German, and American account. Latest cables from Chicago report the hide position as steady, with best heavy packers now selling at 15 cents. The tone of the leather market is strong; stocks in tanneries are in small compass, and the big demand for light bends up to 8 lbs has resulted in an advance of price by 1d to 1½d per lb in many cases. Repairers are still active buyers of medium weights of wet-salted bends, whilst the demand for shoulders and bellies is sufficient to keep the market clear of stock. The demand for upper stock is fitful; a fairly active demand has set in for black glacé kid for the Russian boot, whilst a fair trade has also been done on coloured willow and glacé for the same purpose. The boot and shoe trade remains moderately well employed. Orders have come along rather better for men's stout boots, owing to the partial resumption of work in the coal districts. Russian boots have also sold better of late, large orders having been received by Leicester firms during the past week.

VEGETABLE OILS AND OLSEEDS.

Markets generally are steady, but the volume of business comparatively small. Linseed oil has been in somewhat better demand by consumers, and is at £31 10s per ton naked ex Hull mill prompt and delivery to the end of the year, with later positions at a discount. Business in London is reported at £30 12s 6d to £30 17s 6d spot, and November-December cotton oils are quiet and easier, crude Egyptian offering at £32 10s and ordinary refined at £36. Palm kernel oil is a shade lower, but other quotations are maintained. In the oilseed section the position is largely dominated by the high freights and the paucity of available tonnage. Supplies of linseed on spot and afloat are small, Plate being held for £16 10s, with November-December loading 12s 6d less. New Plate has been done at £15 January-February. Trade in Indian linseed is dull, and Calcutta to London nominally £17 7s 6d for shipment. Cotton seed is in fair demand and business reported in black Egyptian to Hull at £9 January and February, a small premium being required for earlier shipment. Manchurian soya beans on passage to this country have been done at £11 5s. About 275,000 tons of the old Plate crop of linseed still remains unshipped, and in view of the reduced demand, proportion may have to be carried forward to next year.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Increased stability was apparent in this market, with sustained inquiries on grocery and also manufacturing account. Of British refined, Tate and Lyle's goods advanced 3d per cwt. Cubes, now, 35s to 35s 6d; granulated, fine and coarse, 31s 7½d; No. 1, 31s 4½d; No. 2, also London and T.L.S., 31s 1½d; ditto, November, 31s; January-March, 31s 6d; yellow crystals, spot, 28s 1½d. English grown mostly 3d per cwt higher, with early deliveries now ranging from 29s 9d to 30s; and Kidderminster, 30s 3d, ex factory terms. Imported granulated dearer, with business in Czecho and

Deposits are received for fixed periods on terms which may be ascertained on application.

Dutch J at 29s 4½d. Shipment parcels also dearer, with few offers from refiners; in fact, in the case of Czecho granulated, bids were received thence for the November-December positions at 16s 7½d, f.o.b. Hamburg, in order to cancel out contracts previously entered into, but sellers stood out for a higher figure. Dutch J, ready, quoted 16s 10½d, f.o.b., Rotterdam. Polish crystals largely nominal in the absence of definite offers, as apparently more remunerative prices are obtainable in local markets than ruling in the U.K. White Mauritius, November-December, quoted 19s 6d; Peruvian, 96 per cent, ditto, 13s 10½d, c.f. and i., U.K. Indian markets very firm, and buying orders thence circulate with freedom. B.R.B. crystals, January-March, sold, 18s 4½d; white Java, January-March, 18s 4½d; ditto, July-September, 16s 9d; October-December, 16s 10½d, all c. and f. terms, India. Active movements again took place in the white terminal section, and prices were firmer though attended by irregularity at times. December, sold, 16s to 16s 1½d; January, 16s 4½d to 16s 5½d; March, 16s 9½d, 16s 11½d, 16s 10½d; May, 17s 2½d to 17s 1½d; August, 17s 6½d, 17s 5½d, 17s 6d; October, 17s 3d; December, 17s to 17s 10½d cwt. Market closed the week with an excited tone, due to reports of Cuban crop being restricted to 4½ million of tons. Of British refined, Tate and Lyle's goods raised 1s 6d cwt all round. English grown is dearer, and imported granulated 9d. Terminal unusually brisk. December sold up to 16s 11½d; March, 17s 9½d; May, 18s 0½d; August, 18s 3½d; December, 17s 3½d.

COFFEE.—The spot market remains very firm for all qualities suitable to the home-trade, as supplies of same are on a limited scale. East African descriptions are from 3s to 5s dearer on the week. Kenya bold, sold, 14s to 16s; peas, 14s 6d to 16s 6d. Jamaica mountain-grown, bold, sold, 20s to 21s 6d. Colombian-Maragogipe, sold, 20s 6d. Futures dull.

COCOA.—Spot parcels quiet, but sellers required steady rates. Accra, F/F, November-January, sold, 47s 9d to 48s 6d, and 46s 9d, f.o.b. terms.

TEA.—During the week Indian auctions amounted to 55,897 packages. There was a decided improvement in general competition as buyers showed a good deal more confidence, particularly in the case of good liquoring tippy teas, and these marked an advance of ½d to 1½d per lb. Common and palin medium also sold well at ½d to 1d per lb more money. Only a small quantity Southern Included, and these sold at higher figures in sympathy with Northern. Pekoe, sold, 1s 1½d to 1s 10d; orange, 1s 2½d to 2s 3d; broken orange, 1s 3d to 2s 4d; fine to choice, 2s 7½d to 3s 1½d. Ceylon sales embraced some 18,700 packages, and these were also well-competed for at mostly ½d to 1d per lb advance. Pekoe, sold, 1s 2½d to 2s 2d; orange, 1s 6d to 2s 4d; broken, 1s 5d to 2s 7d. China teas in quiet support, but held for full prices. Fine Keemun, sold, 2s 3d to 2s 4d; medium, 1s 7d to 1s 10d; common, 1s 4d. Panyongs, sold, 1s 3d to 1s 4d. Sou-

chongs, 3s. Common monings found buyers at 7d per lb. Only 2,750 packages Java and Sumatra were brought to auction, and this reduced quantity met with rather quiet attention, but prices on balance disclosed no material alteration. Pekoe, sold, 1s 1½d to 1s 4½d; broken ditto, 1½d to 1s 7d; pekoe souchong, 1s 1½d; orange pekoe, 1s 4½d to 1s 6½d; broken orange, 1s 1½d to 1s 7½d lb, in bond.

RICE.—There is nothing fresh to note in this market. Apart from inquiries arising on Japanese account for Burma grain, trade otherwise is very slow. Two stars Rangoon, January-February, London, quoted 14s 6d; February-March, 14s 9d. S.O. to Japan, 12s 1½d, f.o.b. terms. Spanish and Italian steady, quiet. Beans steady, quiet. Madagascar butters, spot, quoted 29s to 30s, according to sample. Rangoon haricot, H.P., November-December, sold, 11s. Japanese peas firm. Spot quoted 30s; afloat, 30s 9d; November-December, sold, 32s 6d; December-January, 33s 6d to 33s 9d; January-February, 33s 6d to 33s 9d; February-March, 33s 6d per cwt, c.f. and i. London.

SPICE.—A good demand for pepper, chiefly in forward positions and market firm. Black Singapore, spot, 11½d; Lampung, spot, 11½d; October-December, sold, 11½d; January-March, 1s 0½d to 1s 1½d; Muntok, spot, 1s 8d; October-December, sold, 1s 8d to 1s 7½d; January-March, 1s 8½d; Pimento, spot, 8½d per lb; November-December, 70s per cwt. Cloves steady, and the better qualities of Zanzibar in more request for grocery purposes owing to the failure of the Madagascar crop. Spot lots 9½d to 10½d, as to quality per lb. Tapioca quiet, unaltered. Sago flour, December-February value, 16s, c.f. and i. U.K. Desiccated coconut, spot, halves, 42s 3d per cwt.

FRUIT (Dried).—Currants firmer, especially for the finer grades. Pyrgos quoted 34s; Patras, 35s 6d to 36s 6d; Gulf, 36s 6d to 39s; Vostizza, 46s to 55s; Australian, 35s to 42s, as to quality. Sultanias fully steady, with sustained inquiries. Smyrna, medium to good, 66s to 72s; fine Cretan, 72s to 85s; Australian, 60s to 78s. Raisins in steady demand at firm prices. Valencia, quarter-boxes sold, 45s to 65s; halves, 44s; seedless, 50s. Dates steady. Halloween, first tide, 31s; Khadowie, 21s 6d; Siar, 19s; cartons, 34s to 40s. Figs firmer. Lacoums, 100s to 140s; layers, 63s to 80s; genuine, 32s to 34s. Evaporated fruits firm, while in moderate support. Apricots: Californian, extra choice, quoted 122s 6d; South African, first grade, 140s. Plums, Californian, 30/40's, 66s; 60/70's, 46s; 80/90's, 38s 6d. Pears, Californian, extra choice, 62s 6d; fancy, 72s 6d; Lake County, fancy, 80s. Apple rings, Californian, spot, 50s to 60s; prompt shipment, 47s 9d, c.f. per cwt. Almonds tend firmer in face of a good demand, and small stocks on hand.

CANNED GOODS.

CANNED FISH.—Sardines in limited request. Portuguese clubs quoted 4s 6d per dozen tins. Salmon quietly steady. Red, tall, 1 lb, quoted 47s; tall pink, 26s to 27s. Lobsters steady on light supplies, but demand without improvement. Best ½'s, 160s to 162s 6d; and ¾'s, 9s to 95s. Crayfish, ¾'s, 76s to 77s; ½'s, 49s to 50s per case. Japanese crab steady. Herrings, 7s per dozen tins.

CANNED FRUIT.—Supplies continue on a liberal scale, but buyers confine their purchases to immediate requirements. Californian Bartlett pears, 24-2½'s, choice, quoted 12s to 12s 6d. Californian peaches, choice, 11s 6d to 12s 3d; seconds, 8s 9d; Californian apricots, choice, 12s 6d; seconds, 9s 3d per dozen tins. Singapore pines in fair request, and prices tend firmer owing to high forward offers. Italian tomatoes firm, and reservedly offered.

CANNED MEATS in limited request, and prices tend easier. Corned beef, 6's, quoted 38s to 44s, as to quality. Danish lunch tongues, 120s to 127s 6d; American, 142s 6d to 147s 6d.

CONDENSED MILK.—Machine-skimmed firmer and packers restrict-

ing supplies, but full-cream dull. Evaporated milk, however, sells readily.

HONEY firm, and fine grades in short supply. New Zealand quoted 54s to 85s, as to quality; Jamaica, good palish, 52s 6d; and manufacturing kinds, 35s to 40s; Cuban, 35s to 48s; Australian, 40s to 50s; Californian white set, 57s 6d; pale liquid, 56s per cwt.

RUBBER.

Nothing new occurred to disturb the serenity of this market. Plantation standard sheet, spot, and November, sold, 1s 8½d; December, 1s 8½d to 1s 8½d; January-March, 1s 8½d to 1s 8½d; April-June, 1s 9d per lb.

GENERAL.

JUTE.—Prices at opening of the week were forced up owing to an improved demand mainly on covering account and firm cables from Calcutta, but later a weaker tone set in while somewhat unsettled. Firsts, September-October, sold, £31 to £31 7s 6d, and £31; October-November, £31 to £30; November-December and December-January, £30 7s 6d to £30 15s and £29 5s; January-February, £30 10s to £29 10s; February-March, £30 15s. Lightnings, October-November, sold, £26; November-December, £25 15s to £25 5s; Hearts, November-December, £22 15s. Hessians and twills generally firm, with a moderate demand for near positions. B twills, spot, sold, 88s; January-March, 82s 6d.

HEMP.—Manila met a fair reception and with some reserved, still marked on the part of shippers, a firm market prevailed. J, November-January quoted £48; K and L 1 ditto, sold, £45 to £46; L 2, £42 to £42 5s; M 1, £41 10s to £42; M 2, £36 to £37. New Zealand firm, and fair clearances resulted in fair quality, November-January, at £36 to £36 5s. African sisal steady. No. 1, f.a.q., November-January, £43. Italian hemp steady. Indian continue very dull.

SHELLAC.—Market steady. T.N., spot, 225s; December, 220s to 215s; March, sold, 222s 6d to 215s per cwt.

COPRA.—Remained quiet and featureless. F.M.S. Straits, December-January, to Rotterdam, quoted £27 8s 9d; Dutch East Indies, £27 2s 6d; Ceylon, November-December, £28 10s; South Sea sun-dried, £25 10s; Cebu, £26 5s. South Sea to Marseilles, plantation, £26 12s 6d; sun-dried, £26 2s 6d; kiln-dried, £25 7s 6d. Palm kernels, November-January, quoted, £19 17s 6d per ton.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, £22 to £39; Cochín, £24 10s to £47; Ceylon bristle £18 to £23; cinnamon leaf oil, 5d; citronella, Ceylon, 1s 6½d; Java, 2s 3d.

Paris: Galignani Library, 224 Rue de Rivoli.
New York: International News Co., 83 and 85 Duane street.

THE MONEY MARKET.

LOMBARD STREET opened the week under fairly comfortable conditions, but the ease was short lived, for on Tuesday there was some extensive calling-in by the banks for balance-sheet purposes, and there was a keen demand for loans which became still heavier on Wednesday, when a moderate amount was borrowed from the Bank of England. The stringency, which, it is suggested, was partly due to large Revenue payments, has since relaxed a little.

CITY OF BLOEMFONTEIN

1% INSCRIBED STOCK 1954.

CITY OF PRETORIA

4% INSCRIBED STOCK 1939.

CITY OF PRETORIA

4½% INSCRIBED STOCK 1910/60.

RAND WATER BOARD

4% INSCRIBED STOCK 1935.

Notice is hereby given that in order to prepare the dividends due on the 1st January next, the BALANCES of the several accounts in the above mentioned Stocks will be STRUCK on the night of the 1st December and that on and after the 2nd December the Stocks will be transferable ex-dividend.

Forms of request for the purpose of forwarding Dividend Warrants by post to Banks or other Agents may be obtained on application to the Bank.—For Barclays Bank (Dominion, Colonial and Overseas), National Bank of South Africa Branch, Manager, Circus place, London Wall, E.C.2. 15th November, 1926.

IMPERIAL JAPANESE GOVERNMENT.

4% STERLING LOAN OF 1910.

Notice is hereby given that the COUPONS due 1st December, 1926, will be PAID on and after that date (Saturdays excepted), between the hours of 11 and 3 at The Yokohama Specie Bank, Limited, where lists may be obtained.

Coupons must be left three clear days for examination prior to their payment.—For The Yokohama Specie Bank, Limited, K. YANO, Manager, 9 Bishopsgate, London, E.C.2. 16th November, 1926.

The discount market has again been very quiet, and rates were unaffected by the monetary tension, being quoted throughout at $4\frac{1}{2}$ per cent., with business mostly done at $4\frac{1}{4}$ per cent. Renewed stringency in the money market is anticipated at the beginning of next week in connection with the usual month-end requirements, but on Wednesday over £50 millions will be disbursed in War Loan interest.

	Nov. 26, 1926.	Nov. 19, 1926.	Nov. 12, 1926.	Nov. 5, 1926.	Previous Rate and Date Changed.

Thursday's Bank return showed a reduction of £25,000 in the gold stock, but as the note circulation declined by £104,000, the Reserve was £79,000 higher at £34,719,600. Government securities were reduced by £1,080,000, but Other securities expanded by £4,948,400. Public and Other deposits increased by £3,325,600 and £608,600 respectively. Currency notes were reduced by £2,384,400 to £284,735,700, which includes £1,290,300 for the notes called in but not yet cancelled. The fiduciary issue is £27,195,400, or £20,707,100 below the maximum for 1926.

NEW YORK MARKETS.

Our New York correspondent cables:—Security markets are again firm, the money market having relaxed after the turn of the half-month. Meanwhile the Government estimate of a cotton crop of 18,400,000 bales has been received by the market with equanimity, and sugar is strong on the Machado intimations as to a restricted Cuban production next year. Reports as to industrial conditions remain rather good, steel production being maintained at a better level than expected, while there are some anticipations of increased automobile output. Altogether the nature of the industrial news and the cheapness of money are creating a more optimistic feeling.

THE STOCK MARKETS.

The main factor in Stock Exchange markets has again been the Paris operations in inter-Bourse securities rather than the coal situation, developments in which appear to have been without any effect on prices. The settlement which finished on Thursday was a quiet one. Gilt-edged stocks remain steady, while various recently issued colonial and Corporation stocks have been in quiet demand. Belgian sevens maintain their high premium, and French Government bonds have been bought. Home rails have given way on dividend fears, but Argentine rails are quiet. Rubber and tea shares have been lifeless, and there has been little doing in oils. Drapery shares have been prominent on amalgamation reports, and Dunlops in demand on dividend hopes and other rumours. Kaffirs have been under the influence of Paris. The Newfoundland loan of £1,027,300, the Ealing Corporation stock issue for £950,000, and an issue of £200,000 by the United British Steamship Company were over-subscribed. Larger subscribers to the Newfoundland loan received about 40 per cent. of their applications.

THE COMMODITY MARKETS.

The week's developments in the coal situation, coupled with the approach of the Christmas season, have improved the immediate outlook in most markets. Coal supplies are quantitatively more satisfactory, and pit-head prices have dropped about 5s a ton. Iron and steel makers are preparing to resume production, but for various reasons, including high fuel prices, a general resumption before the New Year is unlikely. Raw cotton quotations are quietly steady, despite a fresh increase in the official estimate of the American crop, but buyers of yarn and cloth are disposed to act with caution. London wool auctions have been interrupted by exceptional climatic conditions, but values remain fairly steady, with a moderate turnover in tops and yarns. Trade in jute is restricted by the continued absence of the substantial price decline expected as a result of greatly increased crop estimates. The wheat market is generally unchanged. Sugar rose sharply early in the week, but has subsequently been less active. The

better qualities of tea and coffee have been in demand at enhanced prices, but lower grades have not found ready sale. Among non-ferrous metals tin shows a further advance, but copper and lead are easier.

FOREIGN EXCHANGES.

Conditions in the foreign exchange market were similar to those prevailing last week. While business in general was quiet, the French exchange was erratic with a considerable volume of transactions for the first half of the week. From $134\frac{3}{4}$ on the 19th the rate fell to $129\frac{1}{4}$ on Saturday, after touching 128 at one time. On Monday there was a reaction to $136\frac{1}{8}$, and on Tuesday the closing rate after some fluctuations was $138\frac{1}{8}$, on Wednesday it rose to $141\frac{1}{4}$, but subsequently fell to $138\frac{3}{4}$. A reaction to $133\frac{1}{4}$ occurred on Thursday, and yesterday's opening rate was $131\frac{1}{2}$. Speculation is chiefly responsible for these movements, but ultimately it is the uncertainty regarding M. Poincaré's financial policy which makes speculation possible. His refusal once more in recent speeches to decide definitely between valorisation and revaluation has encouraged the supporters of both policies, but can scarcely make the final decision easier. At present it would seem that an approach to the level of 130, on the one hand, and of 140, on the other, calls out influences which tend to cause a reaction. At the same time, a sudden movement in either direction would not be unexpected. Forward rates have widened again slightly to 50 centimes and $2\frac{1}{2}$ f discount for one and three months respectively. New York has shown a slightly firmer tendency, rising from $4.84\ 25\text{-}32$ on the 19th to $4.84\frac{1}{4}$ on Saturday. After standing on Monday and Tuesday at $4.84\ 29\text{-}32$ it hardened to $4.84\frac{1}{8}$ on Wednesday. Thursday's rate of $4.84\ 31\text{-}32$ was unchanged yesterday morning. Forward rates have narrowed from 1-32 cent premium per month to par and 1-32 cent premium for one and three months. The "gold" exchanges have, on the whole, been firm. Thus, Amsterdam has risen on balance from 12.13 to 12.13 $\frac{1}{2}$, Brussels from 34.87-34.87 $\frac{1}{2}$, and Vienna from 34.40 to 34.41, while Geneva is unchanged at 25.15. Berlin, on the other hand, after rising from 20.42 $\frac{1}{2}$ to 20.43 $\frac{1}{2}$, fell again to 20.42 $\frac{1}{2}$. Stockholm has depreciated from 18.17 $\frac{3}{4}$ to 18.18, Copenhagen from 18.20 $\frac{1}{2}$ to 18.21 $\frac{1}{2}$, and Oslo, as a reaction from last week's improvement, from 18.93 to 19.00. In Southern Europe, Italy, after fluctuating between 114 $\frac{1}{2}$ and 116, is slightly lower on balance at 115, while Madrid has fallen from 32.03 to 31.98. In the East the rupee is steady around 1s 5 $\frac{1}{2}$ d, and Japan about 2s 0 $\frac{1}{2}$ d. Silver, after being steady early in the week, fell slightly on increased inquiry from China. Shanghai has fallen from 2s 6d to 2s 5 $\frac{1}{2}$ d, and Singapore from 2s 3 $\frac{1}{2}$ d to 2s 3 $\frac{3}{4}$ d. In South America, Rio fell from 6 $\frac{1}{2}$ d to 5 $\frac{1}{2}$ d on Monday owing to political uncertainty, but subsequently recovered to 6 1-32d. Buenos Aires is steady around 45 $\frac{1}{2}$ d, and Monte Video around 49 $\frac{1}{2}$ d. Valparaiso has recovered from 39.62 to 39.51 pesos.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 20th:—

(000's omitted.)			
EXPENDITURE.		RECEIPTS.	
Supply Services	9,524	From Revenue	14,598
Interest, &c., on Debt	4,859	Increase in Debt	1,664
Sinking Fund	390		
Increase in Balances	105		
Sundries	1,384		
	16,262		16,262

The Revenue for the week amounted to £14,598,000, as compared with £15,207,600 in the corresponding week last year. Customs amounted to £1,677,000, against £1,704,000, and Excise to £8,300,000, against £7,893,000. Property and Income-tax brought in £1,014,000, as compared with £1,296,000, while Super Tax was £340,000, against £330,000. Ordinary receipts were lower at £196,000, against £414,600, and Special receipts amounted to £100,900 against nil last year. The week's operations increased the National Debt by £1,664,000, and caused the following changes:—

(000's omitted.)		
Treasury Bills	£ 2,506	Public Department Advances.. + 4,550
National Savings Certificates	50	
Sundries	330	
	2,886	+ 4,550

The floating debt was increased by £2,030,000 to £785,076,000.

FINANCIAL YEAR, 1926-1927 (April 1 to November 20, 1926).

Total Expenditure ..	£ 497,416,423	Raised by Revenue ..	£ 414,011,509
		Decrease in Balances ..	3,859,096
		Amount borrowed ..	79,545,818
Total	497,416,423	Total	497,416,423

ESTIMATES FOR FINANCIAL YEAR 1926-7.†

Expenditure	£ 825,727,000	Revenue	£ 824,750,000
		Deficit	£977,000

† Revised in Exchequer Return dated July 26, 1926.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Royal Bank of Scotland, Western Telegraph, Wallpaper Manufacturers, Spies Petroleum, Baldwins, and Kern River Oilfields of California.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a review of the results of the 1924 Wage Census in a number of trades in Great Britain.

THE IMPERIAL CONFERENCE AND AFTER.

THE session of the Imperial Conference leaves an imposing record of work done. Its principal proceedings, reports and resolutions are summarised on another page. The outstanding State paper is the masterly report of the Committee on Inter-Imperial relations—a historic document which will probably take rank among the most important achievements of constructive political thought since the constitution of the League of Nations. The legal bearings of this document are manifold and intricate, and we leave this highly technical field to be explored by an expert in a later issue. The ultimate importance of this session of the Imperial Conference cannot be measured simply in terms of policy thought out and constitutional relations clarified. Great as these concrete achievements are, it is not on this account that we feel—as undoubtedly we do feel, both in the Dominions and in Great Britain—that this session has been specially significant and specially fruitful. The truest measure of its fruitfulness is the dramatic contrast between the pronouncements made by General Hertzog at the opening of the session and at its close. General Hertzog came to London with the determination to take his experiences here as the test of South Africa's status in the world. At the outset he told us frankly that he and his party in South Africa were still unconvinced that the Imperial relationship secured to them the perfect national freedom which those who believed in the Empire, both in Great Britain and in the Dominions, had claimed for the Empire as its characteristic product. At the close he has told us with equal frankness, and with a courage that does him honour, that his doubts have been allayed. We rather believe that Mr Cosgrave, who started from much the same position as General Hertzog, has arrived at the same point to-day. If we are right in our belief, we may sum up the special achievement of this session as follows:—The question of status has been settled, once for all, in the minds of all parties concerned. Henceforth, those memories, susceptibilities, and forebodings which have sometimes impeded the smooth working of co-operation in the past will no longer stand in the way, and the British Entente—for that is what the British Empire has become as far as Great Britain and the Dominions are concerned—will be

able to pursue its common objects, on their own merits, with greater freedom than in the past.

We realise how remarkable this achievement is when we recall how delicate this question of status—now happily disposed of—has been. It has not been altogether easy for Great Britain to allow her sovereignty over the Dominions to evolve into a hegemony and this hegemony into an equal partnership. At many moments we might have been tempted to give way to a very human feeling that he who pays the piper should call the tune—the inverse of the American "No taxation without representation." We may legitimately congratulate ourselves that, ever since our great lesson in the eighteenth century, we have at each decisive moment steadily taken the more generous and more statesmanlike view. Yet, this said, we must hasten to add that the effort of psychological adaptation to the new conditions of equal partnership has been considerably more difficult for the Dominions than for ourselves. In any voluntary transference of powers it is emphatically more blessed to give than to receive. The stronger who gives freely of his strength can always solace himself for any twinges of regret over lost dominion with the consciousness that he has the *beau rôle*. On the other hand, the recipient is apt to feel that the gift itself is a symbol of inferiority, and that liberty bestowed, and not inherited or won, is liberty held on a precarious tenure. Such feelings are almost inevitable at the start if the relationship which is being freely modified was originally established by conquest—as was, of course, the case with the French Canadians, the Dutch South Africans, and the Catholic Irish. When we think how recently the relations between the two last-mentioned peoples and the people of Great Britain were expressed in terms of brute force, the rapidity and extent of the psychological evolution on the Dominion side is amazing.

This evolution on both sides fulfils our long-cherished ideal that the Empire should depend on a state of mind and not on any set of formal institutions; and this ideal is obviously right, because it responds to human nature.

Among the peoples of the world to-day there is an insatiable and irresistible desire for the enjoyment of independent nationhood on a footing of moral equality between all nations, be they great or small. This desire was the subterranean force which produced the Great War; and, having come to the surface in that earth-shaking catastrophe, it then created the League of Nations. The achievement of the British Empire—an achievement which now seems secure—is that it has found a means of satisfying this universal desire, which does not involve its own dissolution. Contrast the genesis of the present entente between Great Britain, Canada, South Africa, Australia, New Zealand, and the Irish Free State with that of the entente between Czechoslovakia, Jugoslavia, and Rumania. The former has grown out of the old British Empire without any convulsion, whereas the Little Entente has only been able to come into existence through the catastrophic action of a world war, which broke the former Hapsburg Monarchy into fragments and then recombined some of these fragments with other fragments of territory and population into the units of the new entente—but all this at the cost of an almost incalculable loss of life, wealth, and happiness. Nor, again, is the Little Entente complete, for in consolidating certain nations it has mutilated others; and in wiping out the old ulcerated frontiers between Austria-Hungary and her Balkan neighbours it has opened new wounds between post-war Hungary and the hostile entente that rings her round.

Up to this point, then, the British Empire has succeeded where the Hapsburg Monarchy has failed, but, lest we be tempted to let ourselves subside into a perilous complacency, let us remember that, if the post-war "Little Entente" is incomplete, the post-war British Entente is incomplete likewise. The new relation between Great Britain and the self-governing dominions may be perfect after its kind, but, so far, this relation exists for only a part of the territory and the population of the British Empire, and, moreover, for that part in which the establishment of such a relation was comparatively easy. The bond of feeling between the present equal partners in the Empire is cemented by community of civilisation and community of race, and, compared with this common social

inheritance, the differences between French and British, Canadians or Dutch and British South Africans or Protestant and Catholic Irish are insignificant. Can we extend our new status of equal partnership, which we have now solemnly proclaimed as the moral constitution of the British Empire, to the still unenfranchised majority of the Imperial territories and populations? Shall we succeed in the enterprise of bringing India into equal partnership—a task which makes our achievements in Ireland and South Africa look like child's play? Is the new spirit of the British Empire potent enough to overcome the barriers between races, cultures, and religions—barriers so much more formidable than the trifling national differences between the various peoples of the Western world? If the British Empire can create an equal partnership between white men and black men and brown men, between Christian and Muslim and Hindu, it will then have ensured its own immutability and fulfilled its mission in the world. The "third British Empire" now exists. It must next evolve into "the Fourth British Empire" if it is to endure.

A RESERVE BANK OF INDIA.

THE announcement by the Secretary of State for India in the House of Lords that, in agreement with the Government of India, he is prepared to accept as a whole the recommendations of the Royal Commission on Indian Currency and Finance (subject to such further consideration of detail as may prove necessary) marks an important step in the progress of India's currency and credit organisation. The declaration, read in conjunction with the pronouncement made concurrently with the issue of the Commission's Report in August last, involves acceptance in principle by the authorities of the Commission's recommendations for:—

- (a) The establishment of the gold bullion standard in India.
- (b) The fixation of the gold value of the rupee at a ratio equivalent to rs 6d per rupee.
- (c) The transfer of the control of the currency from the Government to a Central Bank of Issue; and, pending such transfer,
- (d) The undertaking of a statutory obligation by the currency authority to maintain the gold value of the rupee between the gold points of the accepted gold parity by an engagement to buy gold, and sell gold or gold exchange, without limit.

Legislation to give effect to these recommendations is to be introduced in the Indian Legislature during the forthcoming Delhi session. When they have become law, India will possess a system of currency and credit which closely conforms to the accepted principles of modern monetary organisation. There is no reason to doubt that the system will be as enduring, and that it will exercise as beneficent an influence on India's economic progress as similar organisations have exercised on the progress of other countries. It betokens adolescence in monetary affairs, and is in harmony with the trend of evolution of India's political organisation.

By far the most characteristic and promising part of the plan is undoubtedly that which deals with the transfer of the control of currency to a central bank. That bank is to take over from the Government the assets of the gold standard and paper currency reserves, it is to be endowed with the sole right of note issue for a term of 25 years under stringent conditions regarding the reserves to be held by it as security for its note issue, and it is to be laid under an obligation to maintain monetary stability by an undertaking to buy and sell gold bullion without limit (in quantities of not less than 400 ounces) at prices fixed by statute. This transfer of control constitutes the most radical departure from the old system. It recognises the truth that, in a modern economic organisation, monetary stability can only be attained with efficiency and economy if the control of both currency and credit is placed in the charge of a single authority.

Though the public discussions of the Commission's recommendations have revealed a remarkable balance

of opinion in favour of the establishment of a Central bank, there are a few who seem to disapprove of it on the ground that joint-stock banking in India has not yet reached a sufficiently important stage of development to justify it. They appear to be of the view that, until the banking habit is much more widely diffused, and the number and size of banks operating in the country are far greater than at present, the existing system is adequate. We have, on the other hand, the testimony of some of the high officials of the Government of India, who either were in the immediate past, or are at present, in charge of the management of the currency. Their evidence before the Commission leaves us in no doubt that, even on the present restricted scale of joint-stock banking, the absence of real and unified control over credit makes the task of maintaining monetary stability both difficult and uncertain. It is obvious that, with every extension of the banking organisation, this difficulty and uncertainty must increase. But there is another aspect of the question. The development of joint-stock banking cannot progress at a greater rate than that at which confidence spreads amongst the people in the soundness and security of the banking institutions to whom they entrust their money, and that security depends upon the possibility of these institutions being able, in times of stress, to turn into cash the maximum amount of their assets. Stringency breeds distrust, and in these circumstances every bank in the country will cling to its cash resources, and a crisis becomes almost inevitable. The wider the banking development under such a system of decentralised banking reserves, the greater will be the probability of crises occurring, the more disastrous their effect, and obviously, the greater the shock of confidence in banking generally.

It is only under a system in which the banking reserves of a country are centralised in a true central bank, endowed with the right of note issue, that a general breakdown of credit can be avoided, for only a central bank is adequately equipped in times of stress to extend credit liberally to all who produce securities that represent credits granted to solvent people in respect of true commercial transactions. A joint stock bank which limits its activities to this, its legitimate, sphere of business is unlikely to find itself in difficulty, however acute the stringency may be. It is clear, then, that the development of joint stock banking can only proceed safely under the shelter of a true central bank. Without it a deliberate policy of expansion of the joint stock banking system must be fraught with considerable danger, especially in a country whose population is inexperienced in banking, and therefore more likely to be seized by panic. To make joint stock banking safe, to spread confidence amongst the people, and thus to foster the growth of banking, the establishment of a central banking system must precede, and cannot follow, that growth.

The problem as to whom the functions of a central bank are to be entrusted in India—whether to the Imperial Bank or to an entirely new institution—is an intricate and delicate one. The Currency Commission's advice is definitely to entrust them to a new institution—to be styled the "Reserve Bank of India"—and to afford to the Imperial Bank every facility to continue its good work of expanding its joint stock banking organisation throughout the country, as it has so successfully done since it was called into being. We are in no doubt that the judgment of the Commission is right. The one and only goal—the be-all and end-all of a note-issuing central bank—is the maintenance of monetary stability. Every one of its transactions must be weighed from that point of view, and must be directed to that end. It must not be influenced by any other consideration. Its primary duty is to the nation, and not to its shareholders. To fulfil this trust, the Reserve Bank must be able to control the credit situation without fetters or bias, and that can only be the case if it is itself not involved in it. As the custodian of the ultimate banking reserves of the country, it must command the most complete confidence in all circumstances; it must never be placed in a position in which any doubt can arise as to its financial stability; it must, therefore, never be exposed to the same kinds of risks as those to which commercial banks generally are exposed; and, above all, common prudence requires that reserve balances which are entrusted to it, and which are held to meet

sudden and unforeseen emergencies, should not be invested in the same type of security as the assets which those reserves are destined to protect. A central bank, being the custodian of the ultimate banking reserve of the country, must therefore obviously avoid investing its funds in anything but the soundest and most liquid security, viz., short-term advances, against goods of a self-liquidating character. Nor should a reserve bank seek to expand its activities at a time when the country's trade is brisk, and the joint stock banks are busy financing it. That is the time for the reserve bank to strengthen its position, so as to be prepared for the inevitable set-back. It is then that its turn comes actively and helpfully to intervene. Enough has been said to show how vitally the functions of a central bank differ from those of joint stock banks, and how unwise—nay, dangerous—it would be to attempt to combine such different functions in a single institution. The only sure foundation upon which India's credit organisation can be built up is the establishment of a new and independent central bank, the charter of which is drawn up on recognised lines, and which limits the character of the business it is authorised to do so as to make it abstain in normal times from transacting the every-day commercial banking business of the country.

The Imperial Bank of India during its relatively short career has helped more than any other bank to spread indigenous banking in India. Though it is performing one or two functions of a central banking character, its make-up, its traditions, and its general business are essentially those of a joint stock bank, and no bank in India is better equipped to continue this work than the Imperial Bank of India. If it were entrusted with the central banking functions of the country, that would involve the drastic limitation of its activities to purely central banking objects, and if it is so limited in its sphere of activities, then it must obviously cease to be the medium through which the joint stock banking organisation can be extended. The elaborate organisation which it has set up for the purpose, and the unique experience it has gained in pursuing its policy of extending branch banking, would be difficult, if not impossible, to replace. The Imperial Bank shareholders would be giving up an asset of great potential value, and the country would suffer a serious loss by the set-back that would be caused to the development of indigenous banking.

STABILISING THE FRENCH FRANC.—WHAT RATE SHOULD BE ADOPTED?

(BY A CORRESPONDENT.)

It is sometimes assumed that, having pursued a successful financial policy during the past three months, M. Poincaré hopes ultimately to restore the pre-war value of the French franc. It is extremely unlikely that M. Poincaré really has any such intention. He cannot fail to have been warned by his economic advisers and by his friends in industrial and banking circles of the economic disaster complete revalorisation would cause if attempted. It is, however, probable that M. Poincaré has not yet definitely made up his mind with regard to the rate at which he would like to see the French franc stabilised, and it is believed that he would personally favour a rate near that to which it has recently recovered. Indeed, it has frequently been hinted in the Press that he has in view a rate of 125 to the £. A policy aiming at a rise of the franc up to that point meets with a great deal of support among the general public, politicians in the Chamber and the Senate, and in certain business circles. There is, however, an opposite "school" composed of a few theoreticians, some bankers and certain industrialists, who sound the warning that such a marked recovery might end in a breakdown fraught with the gravest danger, and accordingly look with considerable alarm at the recent movement. This view is undoubtedly held fairly widely abroad, where it is sometimes thought that the policy pursued by M. Poincaré is more influenced by considerations of prestige than of economic advantage. It would, however, be unfair to judge the Poincaré policy without very careful analysis of the situation, and of the economic arguments that may be advanced in favour of a policy aiming at a moderate rise of the franc.

It may perhaps be best, first of all, to devote some attention to the arguments of those who are opposed to any substantial recovery and wish for stabilisation of the franc at the rate between 155 and 165 to the £. They maintain that an improvement in the franc would lead to a crisis so severe that it would endanger the economic stability of France. It is no doubt true that a state of trade depression would be a consequence of recovery, but the depression would probably be less acute than the difficulties experienced in other countries, such as England, Sweden, and Czechoslovakia, which have practised a policy of deflation for the following reasons:—(1) The rate of depreciation from which recovery was being achieved has only been ruling for a relatively short period in France, while in the other three countries mentioned recovery was effected from a rate that had been quoted for a considerable time, and had, therefore, produced a certain degree of economic equilibrium. In provincial France the price level has not yet risen in proportion to the fall in the rate of exchange. There is in this respect a marked difference between France, self-sufficient to a high degree, and Belgium, largely dependent upon foreign trade for the necessities of life. (2) When England and Sweden deflated in 1921-1922 prices were falling almost all over the world, and exporters were finding the greatest difficulty in disposing of their goods. If France were to deflate to-day the French exporter would at all events be able to find buyers on a world market which is fairly strong; it is even probable that in the event of currency appreciation in France bringing about a cessation of the so-called "valuta-dumping" of French goods, world-market quotations would become firmer.

On the other hand, it may be maintained in favour of an appreciation of the franc that it would be advantageous to allow the crisis to take place as soon as possible instead of postponing it. The experiences of Austria, Germany, and Poland are illuminating in this connection. In those countries the rate of stabilisation was so chosen that there was no immediate deflation; on the contrary, the first year of the stabilisation period was characterised by an increase in the note circulation, a slight rise in prices, and only relatively low figures of unemployment. The increase in the note circulation provided the means for a careful policy of credit rationing at moderate rates of interest. It was thought at one time that by such a helpful policy acute business disturbances might be avoided. But later events proved that the serious depression had only been postponed. In Austria the brunt of the crisis was felt as a result of the shock produced by the unfortunate franc speculations in the spring of 1924. It is interesting, however, to note that Mr Layton and Professor Rist, the two experts who investigated Austrian economic conditions at the request of the League, did not connect the unemployment which accompanied the crisis with this speculation or with the particular currency policy adopted, but declared that the high numbers of unemployed were "due to the fact that, since stabilisation, there has been a steady elimination of superfluous workers and to the introduction of more economical methods of working—a movement which is the counterpart in private business of the régime of economy introduced by the reconstruction scheme in the sphere of public finance." There are many in Austria who think it would have been preferable to adopt a stiffer currency policy with a higher rate of stabilisation, and thereby to arrive at a more immediate disappearance of wasteful inflationary methods. The purification of economic life is bound to come about—of what use can it be to give another lease of life to unsound firms which will have to be eliminated in any case? While they continue to exist they only cause further loss of capital. The psychological effect of getting rid of a number of speculators who have been profiting by inflation should also count for something.

It has been argued that an improvement in the franc would endanger the equilibrium of the budget, as it would increase the burden of the public debt. This argument would no doubt be of great importance if a return to, say, 75f to the £ were attempted, but it is of little account when the difference is only between 155-165 francs to the £, on the one hand, and 125-135 francs on the other, as the service of the domestic French debt would in either case be less than £150 million. Moreover, some import-

ance attaches to the economic position of those who have subscribed to State loans. This is perhaps of particular economic importance as it is certainly of political importance in France.

A further argument advanced is that a recovery of the franc would lead to a decrease in exports, and thus upset the balance of payments. It is, however, curious to note that in all the countries which have deflated recently—e.g., Denmark—there has actually been a decrease in imports greater than in exports, so that the balance of trade has been improved. This may perhaps be explained by the fact that when deflation is occurring the importer becomes alarmed by the falling prices on the home market and reduces his purchases from abroad, while the exporter, who understands that he is tied to the quotations on the world market, will be more ready to adjust his prices to the rate of exchange in order to dispose of his goods. It is, however, possible that this readjustment would be more easily achieved in a small country like Denmark than in a large one like France, and that, therefore, a more considerable reduction in the value of exports might take place. There might also be a decrease in spending by foreign tourists. In order to meet these changes in the balance of payments, it would be advisable to arrange for some foreign assistance in the case of a recovery of the franc up to 125 to 135 francs to £1.

It would thus seem as if some, at least, of the arguments against a rise of the franc might prove to be of less importance than is generally believed, provided that the rise were kept within moderate limits. There are some other arguments in favour of such a rise which may be of importance. A rise in the franc would create a certain fall in prices, and would thus reduce profits; but reduced profits lead to relatively low rates of interest, which would be very helpful in the management of the floating debt. Stabilisation of the franc at the rate of 155-165 to the £ would, on the contrary, lead to a further rise in prices, a high level of profits, and consequently to high rates of interest. Moreover, the amount of notes in circulation would have to be increased. If the Bank of France tried to regulate that increase, the holders of Treasury bills or of *bons de la défense nationale* would be able to upset the regulative policy simply by asking for cash payments.

Some students of the French situation admit that a recovery of the franc is possible, but insist that recovery ought to be effected *slowly* if it is to be permanent. There are, however, strong reasons for believing that such a view is fundamentally wrong. In the event of an immediate and sudden improvement, the significance of the monetary change would be brought home to the people at large, and the necessary readjustments would probably be made without any serious resistance owing to the favourable psychological atmosphere. If, on the other hand, the recovery is slow, it does not stand out so clearly in the public mind; what is in reality only the consequence of a monetary change would run the risk of being transformed into a question of principle in a fight between employers and employed. The French authorities would, therefore, be wise to make up their minds as quickly as possible regarding the rate of stabilisation to be adopted, and then endeavour to attain that rate without further delay. M. Poincaré is undoubtedly aware that nothing less than complete monetary reform, definitely linking the franc with gold, can provide the necessary safeguard against untoward movements in the future. Given the French temperament and the political system of incessant ministerial changes, it would not be possible to retain the confidence of the country without a settlement of outstanding questions which affect the attitude of foreign markets. The present French Government, and M. Poincaré in particular, can claim that they have succeeded in re-establishing the financial position more fully and more easily than anyone on the Expert Committee had imagined possible. But obviously the monetary policy of France cannot be based on the certainty of having M. Poincaré for ever in the Ministry of Finance in Paris. Would it not be possible for M. Poincaré to persuade his countrymen that stabilisation at the best rate speedily obtainable would constitute the best possible guarantee of future stability?

Might not a rate of, say, 140 francs to the £1 prove politically acceptable as a compromise, while probably

obviating an increase in the note circulation and eliminating that period of fictitious semi-prosperity through which Austria, Germany, and Poland passed during the first year of stabilisation?

THE WORK OF THE IMPERIAL CONFERENCE.

THE Imperial Conference, which opened on October 19th, finished its labours on Tuesday, November 23rd, and on the following day an official summary of its proceedings was issued. On the first day opening statements were made by the Prime Ministers of Britain and the Dominions and a message of greeting sent to the King. Thereafter the full Conference only discussed big questions such as foreign policy and defence; while the main business was conducted by a number of sub-committees, whose simultaneous sessions permitted far more work to be performed than could possibly have been done in full conference. Below we epitomise the account of the proceedings under various heads.

INTER-IMPERIAL RELATIONS.

Of all the sub-committees, that on inter-Imperial relations, under the chairmanship of Lord Balfour, was the most important, and the Dominion Premiers personally attended it. Its report has been published in full. It attacks first of all the question of Dominion status, and, having said "nothing would be gained by attempting to lay down a Constitution for the British Empire," delivers the following definition of the mutual relation of Britain and the Dominions:—"They are autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations." Later it is laid down that "every self-governing member of the Empire is now the master of its destiny. In fact, *if not always in form*, it is subject to no compulsion whatever." As to India, the sub-Committee content themselves with saying that its peculiar position is already defined by the Government of India Act, 1919.

Referring back to the words in italics above, the Committee find that "existing administrative, legislative, and judicial forms are admittedly not wholly in accord" with the definition of status given above. In the first place, a slight alteration was found necessary in the King's title, owing to the establishment of the Irish Free State. The title is henceforth to read: "George V., by the Grace of God, of Great Britain, Ireland, and the British Dominions beyond the Seas King, Defender of the Faith, Emperor of India."

Next the position of Governors-General is dealt with. Here again a clear definition is given:—"In our opinion it is an essential consequence of the equality of status existing among the members of the British Commonwealth of Nations that the Governor-General of a Dominion is the representative of the Crown, holding in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by His Majesty the King in Great Britain, and that he is not the representative or agent of His Majesty's Government in Great Britain, or of any department of that Government." In pursuance of this, it was decided that in future "the official channel of communication should be between Government and Government direct," and not, as heretofore, through the Governor-General. Details for carrying this out are to be settled as soon as possible.

The operation of Dominion legislation was next considered. The recommendation here is for the appointment of a Committee to enquire into and report on changes desirable to be made in the existing system, but two points are clearly laid down:—(1) "It is recognised that it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs. Consequently, it would not be in accordance with constitutional practice for advice to be tendered to His Majesty by His Majesty's Government in Great Britain in any matter appertaining to

the affairs of a Dominion against the views of the Government of that Dominion." (2) "The appropriate procedure with regard to projected legislation in one of the self-governing parts of the Empire which may affect the interests of other self-governing parts is previous consultation between His Majesty's Ministers in the several parts concerned." It is further recommended that a sub-Conference be invited to advise on changes necessary in merchant shipping legislation.

With regard to the question of Appeals to the Privy Council, the salient passage in the Sub-committee's report is as follows:—"From these discussions it became clear that it was no part of the policy of His Majesty's Government in Great Britain that questions affecting judicial appeals should be determined otherwise than in accordance with the wishes of the part of the Empire primarily affected. It was, however, generally recognised that, where changes in the existing system were proposed which, while primarily affecting one part, raised issues in which other parts were also concerned, such changes ought only to be carried out after consultation and discussion. So far as the work of the Committee was concerned, this general understanding expressed all that was required."

RELATIONS WITH FOREIGN COUNTRIES.

The resolutions of the 1923 Conference regarding treaties are supplemented. Those resolutions made it incumbent upon any Government contemplating a treaty which might affect other parts of the Empire to notify the Government or Governments concerned. It is now laid down that, where such notification produces no adverse reply, the Government may proceed with the treaty. But no Government can commit another to definite obligations. Treaties with foreign Powers should be made in the name of the King, or, where the treaty applies to only one part of the Empire, in the name of the King on behalf of that part. The plenipotentiaries for the various British units, it is recommended, should have full powers issued in each case by the King. A specimen form of Treaty is drafted and printed.

It was found that no difficulty arises over representation at the international conferences under the auspices of the League of Nations. Having made certain suggestions regarding other conferences, the sub-committee turned to the question of the general conduct of foreign policy. "It was frankly recognised" that "the major share of responsibility rests now, and must for some time continue to rest," on the British Government. Nevertheless the growing interest of the Dominions in foreign relations is recognised, and the appointment of Canadian and Irish Ministers at Washington noted. It was felt "that the governing consideration underlying all discussions of this problem must be that neither Great Britain nor the Dominions could be committed to the acceptance of active obligations, except with the definite consent of their own Government."

As regards the machinery for communication and consultation, a resolution was passed which opens as follows:—"The Governments represented at the Imperial Conference are impressed with the desirability of developing a system of personal contact, both in London and the Dominion capitals, to supplement the present system of inter-communication and the reciprocal supply of information on affairs requiring joint consideration." The resolution makes it clear that new arrangements to be evolved should be additional to existing machinery. Questions of compulsory arbitration, and the permanent court were discussed, and a resolution was passed congratulating the British Government on its share in bringing about the Locarno Treaties.

Sir Austen Chamberlain gave the Conference a full review of foreign relations, and "the discussion made it clear that the Governments of the British Empire remain firmly attached to a policy of peace, and to support of the League of Nations as the great instrument of peace."

Following a review by Mr Amery of the Colonies, Protectorates and Mandated Territories, the work of the Mandates Commission was discussed.

Nationality questions were discussed by a sub-Com-

mittee under the chairmanship of the Home Secretary; the changes recommended are slight.

DEFENCE.

Mr Baldwin reviewed the work of the Committee of Imperial Defence, and the Conference also heard the political and expert heads of the Army, Navy, and Air Forces. Among the conclusions reached were the recognition of the international naval reductions following the Washington Treaty, and a regret that further progress had not been made with the international limitation of armaments; the establishment of the naval base at Singapore was approved. Emphasis was laid on the progress made in building up air forces, and the necessity for continuing the work. It was proposed that representatives of Dominions should be invited to attend the Committee of Imperial Defence when questions of defence affecting overseas dominions are under consideration.

ECONOMIC QUESTIONS.

The Conference passed a resolution emphasising the necessity "of improving the speed of ocean communications between various parts of the Empire." Arrangements were also made regarding the management of the Pacific cable undertaking, and co-operation between various parts of the Empire for facilitating the development of air communications. The subject of overseas settlement was examined by a special sub-committee, in the adoption of whose report the Conference recommended the permanent adoption of the policy "of a redistribution of the white population of the Empire in the best interests of the whole British Commonwealth."

The continued existence of the Imperial Economic Committee, whose work was commended, was sanctioned, and it was instructed to prepare periodical surveys of inter-Imperial trade in particular classes of commodities. The question of Industrial Research was handled by a special committee, and arrangements recommended for the active prosecution of research in all fields of applied science, and for the dissemination throughout the Empire of results achieved. The promotion of industrial standardisation was also recommended. The attention of the various Governments was drawn to the desirability of devising means to secure that "a larger and increasing proportion of the films exhibited throughout the Empire should be of Empire production." Certain other reports on minor questions have already been referred to in the *Economist*.

The Conference concluded with resolutions of mutual satisfaction expressed by both home and overseas representatives.

MAIL STEAMSHIP SPEEDS.

WE are accustomed to associate the great material progress of the world in the last quarter of a century with improvements in transport and communications. It is, therefore, something of a shock to be reminded by current discussions of steamship speeds that in recent years the speeding up of transport has been almost entirely achieved by new methods—wireless, the motor car, and the aeroplane—whereas the world's older established methods—the railway and the steamship—made their great developments before 1900. It is true that the turbine, the use of oil fuel, and the Diesel engine are improvements of the greatest importance, and that railway engineering technique has been progressing all the time. But the fact remains that the records for long-distance runs on British railways were made in the middle of the nineties of last century, while there has been hardly any speeding up of transport on any of the world's ocean highways, except the North Atlantic route. No doubt a larger proportion of traffic is to-day carried at speeds which represented the best practice twenty years ago; but the lack of further progress suggests that, in the absence of some great development, rail and sea transport have reached their maximum economic speed. The question whether this is so or not is immensely important for the distant countries of the world, and it is therefore not surprising that great interest has been aroused in tentative plans which have recently been put forward for starting a new accelerated service of mail steamers between this country and Australia. Published details of the scheme—which was sponsored by Sir James Connolly, formerly Agent-General in London for Western Australia—lacked pre-

cision, but the project was believed to contemplate the construction of a fleet of seven 24,000-ton vessels, with an average sea speed of 22 knots, and with accommodation each for 2,000 passengers. This fleet, whose initial cost was estimated at about £10 millions (a high capitalisation per ton), was seemingly designed to maintain a fortnightly service between Southampton and Brisbane, embarking outward mails at an Italian port, and touching *en route* at Bombay and Colombo. The promoters of the scheme, with whom engineering experts of the eminence of Sir Charles Parsons and Sir John Biles were understood to be associated, were reported to be confident that the service would be commercially successful without Government subsidy, provided the new line obtained mail contracts of the same order as those now operative, and was given some sort of semi-monopoly in the "assisted" emigrant traffic.

In this connection, it will be recalled, the Imperial Shipping Committee was requested, over three years ago, to examine the question of speeds on the Australian route. The Committee concluded, firstly, that, with the steamers then running and under construction, the maximum acceleration, practicable on the sea voyage, would be 48 hours between Suez and Fremantle, and that this would entail keeping an average sea speed of 16 knots. Apart from sea speed, they also pointed out that nearly two days could be saved by embarking mails at Taranto, while the P. and O. liners might save some 48 hours by transshipping the Indian mail at Aden, and omitting the Bombay call.

The Committee's second conclusion was that to attain even an average sea speed of 18 knots—thus saving four days on the passage—would involve heavy subsidies. They also pointed out that the vessels already in service were adequate to cope with all the (markedly seasonal) traffic offering; that travel would be restricted by higher fares—comparisons between the Australian route and the North Atlantic "ferry" with its millions of "well-to-do" patrons being quite misleading; and that the possibility of an air service for mails and hurried passengers being inaugurated before an expensive new fleet of fast subsidised steamers could be "written off," must not be overlooked.

These, briefly, were the findings of the Shipping Committee's 1923 Report, bluntly described by its critics to-day as "a plea for continuing things as they are." Certainly no great change has since been made. An air service—in the possibility of which as an economic alternative to shipping on an eight thousand mile route it is difficult as yet to feel confident—is not appreciably nearer accomplishment. Both the Orient and P. and O. lines have built larger and more luxurious and, in the Orient Line's case, considerably faster vessels. Yet, when all is said, the Orient service has apparently gained only 24 hours between Naples and Fremantle (instead of the two days' saving recommended as practicable by the Shipping Committee), while the P. and O. Line, which should automatically have saved two days by omitting, as it now does, the Bombay call, has actually given travellers the benefit of only 24 hours. In fact, as was admitted by the Postmaster-General in Parliament on November 9, mail times to Australia are substantially the same to-day as in 1900, the gain since 1923 having only restored approximately the pre-war speed.

The position is not one for self-complacency, and it is easy to sympathise with the evident feeling in the Dominion that "the best is not being done for them." But in reply to such complaints, it is important to realise that the Empire is not in a unique position as regards the speed of sea communication, and that the problem embraces all ocean mail routes with the single exception of the peculiarly situated New York-Europe service, in which an average sea speed of 23 knots or more is maintained on a 3,000 mile run. But this is only achieved at a minimum cost of 4½d a mile for the saloon passenger, and with the aid, of course, of many "luxury fares" from wealthy tourists. Elsewhere, the present fastest services compare roughly as follows:—Between Marseilles and Bombay (about 4,550 miles) the P. and O. mail steamers achieve an "over-all speed"—i.e., including calls in port—of well under 14 knots per hour, with a minimum first-class fare of about 3½d a mile. This timing, which is

maintained by an average sea speed probably not exceeding 15 knots, is identical with that kept before the war, when the corresponding fare was less than 2½d a mile. On the Southampton-Rio Janeiro run (some 5,150 miles) the Royal Mail "A" liners appear to average somewhat over 15 knots at sea, and do the trip at the "over-all" rate of 14½ knots against 13½ knots in 1913, thus reducing the passage time from 16 to 15 days. Current minimum first saloon fares work out at about 3½d per mile, against a little less than 2d before the war. A similar percentage increase in fares has been made by the Union-Castle mail steamers to the Cape, a present minimum of about 2.6d per mile, first class, comparing with roughly 1½d in 1913. The pre-war and present scheduled times for this run of 6,000 miles (involving, however, only one call) show no alteration, average sea-speed being apparently about 15½ knots. We now come to the Australian route, on which the distances are—Marseilles to Fremantle, 8,120 miles; Naples to Fremantle, 7,725 miles. The current first-class minimum fares are approximately 3d per mile by P. and O., and a little over 2½d per mile by Orient vessel, against corresponding pre-war charges of under 2d per mile in each case. The "over-all" speed is slow, but bunkers have to be twice refilled, and the Suez Canal negotiated—the latter factor applying also to the relatively slow Bombay service. At sea, average speed kept by the P. and O. may be estimated at a trifle under 15 knots, while the Orient steamers achieve 16 knots. (In the case of the P. and O. and Orient services, both to India and Australia, it should perhaps be added that the rates per mile by sea, all the way from London, are appreciably lower than those given above. The P. and O. rates are roughly 2.7d per mile, London-Bombay, and 2½d London-Fremantle; the Orient rate, London-Fremantle, is under 2d, against 1½d before the war.)

Surveying these representative routes, it seems that post-war increases in fares nowhere exceed disproportionately the general rise in prices (though the general cost of running steamers is 90-100 per cent. above pre-war, according to the last annual report of the Chamber of Shipping). The average sea-speeds, however, still lie within the limits of 15 to 16 knots—a not very impressive achievement when it is remembered that 9½ to 10 knots were commonly attained in the '60's of last century. Great as has been the advancement made by the shipping companies in the provision of larger and more luxurious passenger ships, one is compelled to ask why speed has not shown more improvement.

The shipowner's answer—given the correctness of one assumption—is convincing. He replies that experience has shown that none of these routes can live on mails and passengers alone. Unless fares are to be prohibitively high, or heavy losses are to be made good from State funds, a substantial quantity of cargo must be carried. Further, fuel costs must be kept within a certain limit per mile. This being so, he argues, how is the difficulty to be overcome that though a fast enough ship can certainly be constructed, its design, engine-room, and fuel consumption—based on the best established engineering results—will be such that cargo space will tend to dwindle to vanishing point as speed increases, and running costs to soar in inverse proportion? This question of cost is the crux of the whole matter. The Dominion routes cannot offer sufficient regular traffic at high rates to cover the cost of very fast ships unless there is some further revolution in marine engineering practice. The Imperial Shipping Committee, which admittedly does not profess to be a body equipped with special technical knowledge, was evidently satisfied during its 1923 inquiry that the following formula then represented with approximate correctness the relative size, capital cost, and revenue necessary for commercial success, of four typical ships designed to keep certain specified speeds.

The Cost of Speed.					
Ship.	Average Sea-speed, Knots.	Minimum Economic Size, Gross Tons.	Ratio of Initial Costs.	Ratio of Revenue Required.	
A.	16	15,500	100	100	
B.	18	18,500	125	130	
C.	20	21,500	160	180	
D.	25	30,700	250	290	
* To cover running costs with 12½ per cent. for depreciation and profit.					

These figures illustrate strikingly the cost of high speed at sea, and the Committee added further that cargo capacity would fall from 3,500 tons in the case of Ship A to zero in the case of D. Until the validity of this formula is disproved, any substantial saving of time on overseas mail routes must await new and improved methods of propulsion, unless resort be had to subsidy—a course with little to recommend it. Interest, however, now attaches to the fact that the formula's validity is very definitely challenged by Sir John Biles, who has committed himself to the statement that through "methods of propulsion now available" 40 per cent. in speed can be gained on a given weight of machinery and fuel, and that consequently the time at sea between Suez and Fremantle, for example, can be reduced by seven days—a feat, one may remark, requiring vessels of a fair weather speed of at least 26 knots if punctuality is to be maintained. On these assertions, from the technical standpoint, the layman can express no opinion. The Imperial Conference has, however, this week put on record its belief that further acceleration is possible, and it is therefore important that the claims and counter-claims should be thoroughly sifted. Such an inquiry would not, however, do justice to the shipowners of this country if it assumed that in the past they have been backward in giving to their clients the benefit of technical improvements, or if it did not recognise the great part they have played in developing the distant countries of the world as well as the large losses which many of them have incurred in recent years in the endeavour to maintain regular services in times of very bad trade. If the Governments consider the speeding-up of mail services of urgent importance, they could begin by saving over 40 hours by the simple device of reverting to the system of sending the Eastern and Australian mails to Taranto.

ARGENTINE LAND COMPANIES.

ARGENTINA has for many years been a favourite field for the investment of British capital. Particularly is this the case in regard to the railways. On the agricultural side, too, much has been done by the British investor in developing the resources of the Republic. Many of the companies engaged in this branch of activity have emerged with considerable credit, and have yielded satisfactory dividends to the investor. So far as the past twelve months are concerned, however, conditions have not been so favourable as in the years immediately preceding, and the majority of Argentine land companies secured lower net profits.

From the accounts of eight of the most important undertakings which we have selected as representative of these activities, we make the following comparative statement of gross and net revenue:—

Year Ended.	1923-24.		1924-25.		1925-26.	
	Trading Rev. 'ue.	Net Profits.	Trading Rev. 'ue.	Net Profits.	Trading Rev. 'ue.	Net Profits.
Argentine Land and Investment	June 30 150,066	100,300	June 30 166,296	114,967	June 30 144,721	108,490
Argentine Southern Land	June 30 161,515	69,559	June 30 157,985	56,234	June 30 160,879	54,589
Cordoba Land	Dec. 31 ..	..	Dec. 31 140,080	175,118	Dec. 31 75,651	41,367
Forestal Land, Timber, and Railways	Dec. 31 652,932	418,869	Dec. 31 701,632	387,326	Dec. 31 853,870	390,333
Leach's Argentine Estates	Mar. 31 257,136	117,267	Mar. 31 244,766	118,083	Mar. 31 274,711	118,785
Port Madryn	June 30 8,530	6,394	June 30 7,219	5,433	June 30 6,009	4,021
Rio Negro	June 30 109,383	57,856	June 30 84,327	40,419	June 30 53,622	14,102
Tecka	June 30 91,634	43,337	June 30 79,358	30,510	June 30 71,101	25,733

15 months.

It will be seen that in the majority of cases both trading revenue and net profits declined. The exception was the Forestal Land, which was able to record an increase in net profits from £387,326 to £390,333. This, it is true, does not seem a very remarkable performance on the figures alone, but, on the other hand, it has to be remembered that it was achieved during an unfavourable season.

Both the Rio Negro and Leach's were particularly adversely affected by the difficult conditions prevailing during the year. The directors of the latter company apparently did all in their power to maintain the concern on a profitable basis, for they state in their report that "the profit on trading for the year is only £15,565, in spite of the fact that the cost of production was 40 cents

per 10 kilos lower than the previous year, a reduction of 14 per cent." The loss of £74,110 has been charged to reserve. The Tecka Company also suffered from unfavourable climatic conditions.

Our next table shows the principal assets and liabilities during the past two years:—

Name and Year Ends.	An Analysis of Principal Assets and Liabilities.							
	Share Capital & Reserves.	Debs. and Loans.	Creditors.	Land & Buildings, etc.	Stocks, Prods., etc.	Cash.	Investments.	Debits.

June 30, 1925 ..	285,118	..	6,191	203,579	16,537	1,87	108,801	2,664

During the year the Argentine Land and Investment made an issue of new ordinary shares of £1 each, which were offered for subscription at 25s per share to the shareholders in the proportion of one new share for every five held. A total of 119,861 shares was accepted and resulted in the raising of the capital to £747,262, the premium of £29,965 being added to the reserve.

Twelve months ago it was stated in a number of the reports that it was considered advisable to charge taxation against each year's receipts rather than to work on a three years' average basis of assessment. The result of this policy is apparent in the present accounts, no appropriations to taxation suspense funds being made in respect of the past financial year.

The Board of Forestal Land has decided to reduce the Argentine currency assets and liabilities to their correct currency value. The reserve for fluctuation in exchanges and for taxation, amounting to £225,000, has accordingly been eliminated. This, however, is more than counterbalanced by the application of the sum of £230,000 to the writing down of holdings in and advances to associated undertakings. The Tecka Company made no allocation to Taxation Suspense Account, which on the previous occasion received £6,000. The general reserve appropriation, however, was maintained at £5,000. The Rio Negro placed nothing to reserve. A year ago £12,000 was set aside for this purpose. The Argentine Southern, too, does not repeat its taxation suspense allocation of £5,000, but it has raised the transfer to livestock contingencies from £8,000 to £19,294. The position has also been strengthened by the transference of a further sum of £25,000 from the reserve to livestock capital account.

In their last few reports the directors of the Port Madryn have drawn attention to the question of a return of capital to the shareholders. In the present document it is stated that the matter has been further postponed owing to the State Railways Administration continuing to lease the Central Railway of Chubut, "and until the future of this line is definitely settled, consideration of this matter will, of necessity, remain in abeyance."

Our final table shows dividends for the past five years, together with comparative prices and present yields:—

Name and Amount of Share.	Dividends.					Prices.		Present Yield.
	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.	End of 1925.	Nov 25, 1926.	
Argentine Land & Inv't, £1	20	10	10	10	10	17	13	6 8 d
Argentine Southern Land, £1	5	5	8	8	6	14	13	5 15 0

Do 6% Ptz. Cum. Pref., £1	Nil	Nil	12	9	Nil	14	14	Nil
Port Madryn, 10s	5	10	5	5	5	10	10	4 9 0
Rio Negro Ord., £1	5	8	10	10	10	15	15	9 3 0
Tecka Ord., £1	5	8	10	10	10	15	15	7 15 0

† Paid on old capital.

So far as dividends are concerned, the foregoing table shows that shareholders have not had to suffer reductions on account of less satisfactory results except in the cases of the Argentine Southern and Leach's, while the Cordova Land actually made a payment of $3\frac{1}{2}$ per cent., against nothing a year earlier. In regard to Leach's, the dividend on the 6 per cent. preference capital is now in arrear.

On the whole, share quotations have held up fairly well. This is a result, probably, of the knowledge that conditions in the Argentine are improving, and that the outlook for the various crops is, on the whole, better than was the case last season.

PERUVIAN CORPORATION.

THE results disclosed in the report of the Peruvian Corporation for the year ended June 30th last compare very favourably with those of the preceding year, when serious floods caused whole or partial interruption of traffic for some three months on the company's various railway lines, which produce more than half its income. In the year 1924-25 the revenue contributed by the Central Railway—the principal line—declined by over £176,000. In the past year revenue from this source has increased by over £178,000, namely from £70,100 to £248,500, and substantial increases are shown by the net revenue received from the other lines. Total gross receipts from the working of the railways and steamers amounted to 21,240,700 Peruvian soles, against 16,490,100 soles in 1924-25, working expenses were 13,759,300 soles against 13,114,800 soles, and net receipts 7,481,400 soles against 3,375,300 soles. The net receipts in sterling were £592,300 at 10d to the sol, as against £302,400 at 21½d in the preceding year. The amount accruing to the corporation out of the net income of the railway companies and from the navigation of Lake Titicaca was £516,300, as against £262,200 in 1924-25, and £470,300 in 1923-24, so that in spite of the adverse movement in the exchange, which is at the lowest point in the corporation's history, the railway revenue was better than that of two years ago, hitherto the highest recorded. The Government annuity of £80,000, which is secured primarily on the sugar tax, is again paid in full, though owing to the floods of 1925 the guano shipped suffered in quality, shipments amounting to £76,900, as against £110,200 in the preceding year. Miscellaneous receipts, including a debit balance of £8,400 on exchange account, amounted to £39,400, against £38,800, and total income was thus £712,500, against £491,200 in 1924-25, against which administration expenses of £27,400, or £6,000 less, are charged, giving a net income of £685,100, against £457,900. From the comparative table which follows it will be seen that the past year's results are better than those of 1923-24, hitherto the best for many years:—

	Year to June 30.				
	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.
Railway net revenue ..	£ 387,293	£ 363,751	£ 470,269	£ 262,165	£ 516,288

Carried forward	84,941	106,483	116,701	123,862	126,657

In December, 1924, the debenture holders agreed that the rate of interest be permanently fixed at 6 per cent., and that the date of redemption be extended from 1926 to 1945. In the 1924-25 accounts only 5 per cent. was chargeable for interest and sinking fund together with £27,000 for additional interest accrued to June 30, 1925. For the past year debenture interest requires £246,100, and sinking fund £131,900, while income-tax takes £5,800. The cumulative preference stock receives its full dividend of 4 per cent., leaving the arrears at 109½ per cent., and after making this payment there is a small addition to the reserve. The main items of the balance-sheet are summarised below:—

June 30.	Debentures.	Creditors and Bills.	Sinking Fund, Reserve, Insurance and Net Revenue.	Concessions, &c.	Railways.	Investments, Bills, and Cash.
1913	£ 5,176,000	£ 71,769	£ 1,253,291	£ 12,772,305	£ 9,700,667	£ 258,741
1914	5,111,750	130,829	1,370,807	12,772,305	9,741,496	322,001
1919	4,739,700	120,001	1,770,044	12,772,305	9,506,566	566,685
1920	4,650,550	137,436	1,899,811	12,772,305	9,506,566	383,273
1921	4,556,300	306,257	1,929,906	12,772,305	9,509,988	289,157
1922	4,456,650	302,463	2,022,666	12,772,305	9,509,988	295,213
1923	4,351,300	232,289	2,325,579	14,389,704	7,477,035	498,699
1924	4,293,950	270,237	2,535,404	14,389,704	7,477,035	744,242
1925	4,122,250	248,929	2,587,540	14,353,704	7,477,075	711,116
1926	3,997,800	212,818	2,712,980	14,344,704	7,477,075	793,882

Under the debenture scheme mentioned above the corporation was empowered to accelerate redemption of the debentures at 105 per cent., and the redemption of the whole of the debentures will be thereby completed by annual drawings by 1945. Up to date £1,402,200 has been redeemed. There is a sinking fund of £1,416,000, and a reserve account of £700,000, the latter being unchanged in comparison with last year. Investments in British and Indian Government securities have expanded by £50,000, and bills receivable are £112,000 higher, but cash has been reduced by nearly £90,000 to £248,000. The paragraph in the report which will be of the greatest interest to stockholders is that relating to the arrears of preference dividend. The directors "assume that it is the wish of the stockholders that the arrears of preference dividends should be dealt with, and on this assumption the board have the matter under serious consideration." The annual meeting, to be held on December 20th, will thus be invested with more than the usual interest. The ordinary stock, which has equal voting rights with the preference, has never received any dividend. The preference stock has been active during the past year on the corporation's improved prospects, and has risen this week to 52½, which compares with a low point of 36½. At yesterday's price the yield is 7½ per cent. The ordinary stock has also improved substantially during the year, from 41½ to 8½. The latest quotation is 7½.

CONTROLLING THE OUTPUT OF GOLD.

In this series of articles Professor Lejfeldt, of Johannesburg, raises the problem of ensuring that gold, which is once more assuming its former standing as the world's standard of value, can itself be stabilised in value. The reader will remember that Prof. Lejfeldt, unlike Prof. Cassel and other authorities, takes the view that gold is more likely to become too abundant than too scarce. At the conclusion of this series of articles we propose to put the case for the opposite view of the future value of gold.

IV.—INTERNATIONAL CONTROL: CONSTITUTION AND FINANCE.

If it were a question of controlling the output of gold in the interest of private parties the procedure would be familiar. The undertaking would be a large one, but not beyond the resources of present-day finance. A trust or holding company could be formed which would by negotiation or by purchase of shares in the market, come to direct all, or nearly all, the larger mines; probably little attention would be paid to the small, scattered producers, who would be incapable of influencing to an appreciable extent the policy of the trust, whatever that might be. The trust would then, no doubt, try to secure rights over land known to carry deposits of gold not yet ripe for

development. The market valuation of the Witwatersrand mines is about £70 millions to £80 millions, and that field produces half of the world's output. Thus the total capital needed to control the industry would be smaller than that of the United States Steel Corporation or the London Midland and Scottish Railway Company.

There is, of course, no question of such a private organisation. Probably it would not pay, but if it did there is no reason to suppose that its interests would coincide with the interest of the world in acquiring stability of money, and the nations would certainly not allow their money to be at the mercy of a private group of financiers. The organisation would be governmental.

The distribution of gold mines is very local, and consequently, if the only aim were to secure control of output, two Powers—the British Empire and the United States of America—could do that without the help of the rest of the world, though their position would be strengthened if they obtained the co-operation of Russia and Mexico, the next two largest producers.

This would not be the right approach to the problem, however, for it would set up the interests of gold producers against those of consumers, and it is for the sake of the latter—i.e., of everybody—that the scheme is proposed. It should be international from the start, and secure the attention of all the important States, whether they have gold mines or not. Now that there is a League of Nations the initiative may be looked for there, though, of course, the co-operation of America would be essential, and that of Russia very desirable. We may, therefore, suppose the League to call a conference, and the outcome of the conference to be the establishment of a permanent commission of control.

Constitution.—The Commission would represent, primarily, the interest of the commercial nations in securing sound money; there would not, in general, be any conflict of interest between large and small powers in this respect, so that the smaller States would not need to insist on special representation, which would make the Commission an unworlly large body; its composition might well be similar to that of the Council of the League, i.e., the leading States would have permanent seats, while the others elected certain representatives. There are two or three States, however, which, as large gold producers, have a special interest in the proceedings of the Commission. They should be represented, as a matter of fairness, and also because it would be essential to obtain their willing co-operation.

Finance.—The Commission would be a trading corporation, requiring capital to the extent of one to two hundred millions sterling. Its principal aim would not be the making of profits, and it might quite possibly incur losses, and these would have to be met by the constituent States. The maximum possible loss would be the whole interest on the capital, which should therefore be raised in the form of bonds guaranteed by the States; the maximum might be put at about £10 millions, but, of course, there would not be the slightest reason to expect that such a heavy loss would occur. Probably the most practical way would be for each State to guarantee the interest on an agreed portion of the total capital, which portion would be raised from among its own citizens. Thus if Great Britain accepted responsibility for one-tenth of the capital, and we take what is probably the maximum figure, it would be necessary to raise £20 millions by a loan on the London market, carrying a British Government guarantee of interest. It is not to be expected that the actual loss to the British Government, if there were any loss at all, would be more than a small part of the interest, and would be a trifling price to pay for the advantage of long continued stable money. The yield on gold mining is, in general, so much higher than the rate on Government loans, that if the management of the Commission was sound it should be able to put aside reserves that would secure it from loss.

Probably the States would agree that voting power on the Commission should be in proportion to the capital subscribed. The only serious conflict to be feared that would not be reasonably guarded by this arrangement, would be one in which the gold producers were ranged

against the rest of the world. It would not be practical to give them votes on the Commission numerous enough to hold their own, but it should be an understanding that the Commission should, as far as possible, proceed by agreement, rather than by the will of the majority; and it might be well to give the producing States the right to appeal against alleged injustice to the International Court of Justice.

V.—METHODS OF CONTROL.

Procedure.—The Commission, however, could only carry out its aim of obtaining monopolistic control of production if it had the friendly co-operation of the producing states. As compared with a private financial syndicate, it would be at some disadvantage in starting, because it could not act with the same degree of secrecy. However, it could do a good deal through purchase in the open market without putting up the price against itself too much, and also by negotiation with gold mining companies, for there are a good many mines that would welcome the opportunity for sale. Various methods would be employed, to suit circumstances, but as the Commission would certainly need to be supported by powers of compulsory purchase of land, which could only be granted by the legislatures of the states concerned, it should be part of the original agreement that the states should give all necessary support in carrying out the scheme.

Like private trusts, the Commission would be faced with potential as well as with actual competition, and it would be part of its policy to acquire undeveloped gold-bearing land. In this it might need the support of legislative powers, in order that when a discovery was made the Commission should have the right, on giving reasonable compensation to the discoverer, to acquire the mining rights in the ground. This would not be a formidable business, for in any case gold discoveries are rare, and they are made in out of the way places, where transport is so difficult that the value of the land is not great. It is only in most unusual cases that owners of undeveloped gold-bearing land are in a position to hold out for a high price.

Land near existing mines is worth more; perhaps the most important instance of this is the area which forms a prolongation of the workings of the Witwatersrand. Much of this happens to belong to the South African Government, a fact which should facilitate transfer to the Commission on fair terms. It must be remembered that gold mining is in a depressed condition at present, which would make it much easier for the Commission to start its operation without loss; indeed, the South African Government has tried in vain to lease some of the Far-East Rand areas for years past. The Commission need not be in a hurry; if it spent ten years in acquiring control the situation would probably not have changed seriously in the meantime, though it would be well to act more quickly if possible.

Attitude Towards Gold Producers.—The practical effect would depend on whether the Commission considered the time suitable for active development, or whether it decided on a restrictive policy. It is only in the latter case that any difficulty would be involved; it may be dealt with under the threefold heading of the shareholders, the employees, and the community in general.

Arrangements affecting the shareholders would come into the initial period; it is hardly necessary to say more about them, as it has been dealt with above. Any shareholders who refused reasonable terms of purchase would, naturally, have to stand the risk.

A liberal policy of compensation towards employees should be adopted. Miners are a somewhat restless community, the turning over of labour being large; so that if it were proposed to reduce output even to a large extent this could be accomplished chiefly by not taking on new men, and letting the old ones drop out; actual compensation, even on a liberal scale, would not impose a serious financial burden. The staff, of course, is in a more permanent position, but there is at present rather a shortage of mining engineers, and gold mining is only a small part of mining. The Commission could well afford to behave according to the traditions of the best class of employer, especially as it would have work to offer in many parts of the world.

More difficulty might arise in the relations of the Commission to communities in general than to those persons directly dependent on gold mining. Diminution of output affects local trade, reduces the traffic on railways, cuts away an export which may be of importance to the country's trade balance; it would be resisted for all these reasons. It would hardly be possible to offer actual compensation for such losses, but they should be borne in mind in regulating policy. The Commission would, of course, follow in general the sound commercial principle of producing gold from those mines which show the largest profit; but if it came to closing down a mine that was not exhausted of ore, other considerations must be attended to. Thus restriction might be quite practicable in certain countries that were prosperous, and where other industries were developing rapidly; it should be withheld in the case of a community specially dependent on gold mining, or, if possible, some set-off allowed, such as the purchase on favourable terms of undeveloped ground. It is in such matters that the Commission would most need tactful management.

Its operations, however, would be rendered much easier by the fact that it would only need to develop its policy slowly. Gold mines usually have only a short life; the community expects them to die out after two or three decades, so that even when a restrictive policy was called for it could often be accomplished by mere absence of new development.

If the Commission considered that the supply of gold was likely to become inadequate, it could do much to correct the situation. Output of gold is not limited by the extent of mineral known to exist, but by the possibility of working that mineral at a profit. The industry can at any time be expanded by putting more capital into it, only the return on that capital may not be sufficient to attract it in competition with other enterprises. The Commission should acquire reserves, as a result of prudent working of existing mines, which we may assume to have been bought at a reasonable price; it would then be in a position, if necessary, to subsidise production from new mines. At the same time, it might devote resources to exploration and the opening up of new fields.

For instance, on the Witwatersrand hundreds of millions of tons of ore are known to exist, and a small reduction in the cost of working would bring much ore that is now unpayable within the line of payability. A producer who was prepared to lose for the sake of increasing output would sometimes be rewarded with unexpected finds, and would probably lose but little on the whole. Actual exhaustion of the mine-field is so distant as not to be worth discussing. It is true that eventually some limit to the stock of available gold must be met, but some time the world's need for money will reach a limit too, and the present generation is not called on to deal with these eventualities.

Notes of the Week.

Coal Settlement Progress.—Shortly after we went to press last week the miners' delegate conference decided that all districts should open negotiations for settlements, but that all district terms should be submitted to a further national conference for approval. To guide the districts in their negotiations the following six points were laid down:—(1) The method of ascertaining the district's percentage on basic rates to be as provided by the National Agreement of 1924. (2) The ratio of division of net proceeds to be 87 to 13. (3) A minimum percentage to be provided of not less than 20 per cent. upon the standard wages prevailing on April 30, 1926. (4) The payment of April, 1926, subsistence wages to low-paid day wage men. (5) All agreements to be terminable by one month's notice from either side. (6) Districts to endeavour to effect the complete reinstatement of all men and boys employed at April 30, 1926, on the lines provided by Clause 13 of the National Wages Agreement of 1921. Progress has been somewhat slow, but when the delegate

conference reassembled yesterday they received the definite news of a settlement in Scotland on the basis of eight hours and a nominal minimum of 9s 4d a day for the next six months. In Northumberland, too, an agreement has been reached, which the Miners' Association are recommending to the rank and file, who will ballot upon them. There the terms include a 7½ hours' shift and a net proceeds division of 87 to 13. In South Wales a ballot is to be held with a view to empowering the local leaders to negotiate a settlement. Discussions are proceeding in Derbyshire, Yorkshire and Durham, and will take place in North Wales next week. In Lancashire and Cheshire the miners' leaders refused to recommend the owners' terms, and referred them to the national conference. Meanwhile, the return to the pits has been accelerated. In the past week the number of miners at work has increased by over 62,000, and is now over 428,000. With a general return in Scotland now apparently assured, the total should rise above 500,000 early next week, irrespective of the speed with which other districts come to terms. Production next week should therefore approach the level of 2½ million tons, and with imported coal continuing to arrive, the Government have decided that the position in regard to domestic supplies is good enough to justify them in removing, as from the end of this week, the household rationing system.

A New Phase in China.—A new phase—which might possibly be the decisive phase—in the Chinese civil war is apparently about to open. There has been a conference of the Northern Militarists at Tientsin, which Chang Tso-lin and Sun Chuan-fang attended in person, while Wu Pei-fu was represented by deputies. At this conference joint military action against the Nationalists was decided upon, but in rather a half-hearted way. If the Militarists had agreed to pool all their forces and to send the well-trained and well-equipped Fengtien (Manchurian) Army of Chang Tso-lin to cover Nanking and Shanghai before the Nationalists had time to secure the line of the Lower Yangtse, it is conceivable that a successful counter-offensive against the Nationalists might have been launched, and that they might even have been driven out of Central China and back into their original boundaries. Other considerations, however, have prevented the taking of a decision which was imperative on military grounds. Chang Tso-lin's treasury is empty, and his troops, though well trained and equipped, are by no means to be depended upon, since they serve their master for food and pay and not for a cause, and are therefore susceptible to Nationalist propaganda. The doubtful loyalty of Chang's troops, however, seems to have counted for less than the unconcealed jealousy of his confederates. However much they may desire to recover their lost provinces from the Nationalists, Wu Pei-fu and Sun Chuan-fang would rather forego the attempt if it involved the military occupation of the territories that still remain to them by the forces of friend Chang. Accordingly, it has been settled that Chang's troops shall remain in reserve, and that his vassal, the war-lord of Shantung, shall lead an expeditionary force down the Tientsin-Pukow Railway to its southern terminus, which is on the north bank of the Yangtse, opposite Nanking. It seems, however, that the Shantung troops are not to cross the river. The most effective unit in this force is said to be a mercenary legion of Russian "Whites" with an armoured train, and since the Nationalist forces are partly organised by Russian "Reds," the Russian civil war may flare up again in a week or two on Chinese soil. It is more likely, however, that the Shantung expeditionary force will stand idle at Pukow while Sun and Wu are wiped off the map, and that the final round of the civil war will then be fought between the Nationalists and Chang in the neighbourhood of Peking. Meanwhile the Nationalists have won over the workmen in the arsenal at Canton, and are reported to be stirring up an anti-foreign labour movement at Hankow—even among the employees of the Maritime Customs Service. The whole situation bears a remarkable resemblance to that in Turkey during the last phase before the victory of the Turkish Nationalists over the Greeks in 1922, and Shanghai may well feel nervous when it remembers the fate of its prototype Smyrna.

A World Economic Conference.—The Preparatory Committee for the League of Nations Economic Conference has just concluded its second session at Geneva. A definite agenda has been drawn up, and the recommendation made that the Conference should meet next May. All League members will, as a matter of course, be invited to attend, and, in addition, the United States and Russia. American acceptance may be presumed, since she is represented on the Preparatory Committee, but Russia will not send any representatives to Geneva so long as her diplomatic dispute in Switzerland is unsettled. The Conference will devote its chief attention to the economic problems of Europe. The first part of the agenda relates to general aspects of the situation—the most important being the problems of international finance. Part two deals with more specific issues under the three heads of commerce, industry, and agriculture. The first of these heads is by far the most important, and under it the problem of tariff barriers will be broached. There can be little doubt that the Conference will show full realisation of the folly of multiplying and increasing restrictions on the interchange of commodities between nations. Perhaps the most important new factor in the tariff situation is the awakening of German opinion to the need of removing tariff barriers in order to secure a larger market for her industrial production. Under the second head one of the chief topics is likely to be the question of private international industrial agreements—a matter which has become of practical importance by the formation of the International Steel Pact. The field to be explored by the Conference will be a vast one. The precise scope and nature of the discussions will, however, become gradually clearer as the large number of documents prepared for and considered by the Preparatory Committee are published and discussed. They include some very important and useful reports, whose appearance will be awaited with great interest.

Great Britain and the Mandates Commission.—Sir Austen Chamberlain has not always a felicitous touch in his handling of international affairs, and it is distinctly unfortunate that the first "example of common action" in that sphere between the self-governing members of the British Commonwealth, since this last meeting of the Imperial Conference, should take the form of an attack upon one of the most distinguished and effective organs of the League of Nations. The British note of November 8th disclaims any unfriendly or depreciatory intention; but, in complaining in this formal way of the new questionnaire which the Permanent Mandates Commission has drafted, the British Government, whatever its intentions, has, in fact, dealt a heavy blow to the prestige of the Commission, and therewith to the prestige of the League. This is thoroughly bad policy on our part, for the League is more necessary to the British Commonwealth than to anybody. It supplies a constitutional framework within which the Commonwealth can exist—as its genius bids it exist—without any constitution of its own. Knock away the scaffolding of the League, or even shake it, and you weaken or destroy the framework without which the British Commonwealth cannot exist in its present form. The case for the Permanent Mandates Commission in this matter of the questionnaire has been admirably presented by Major J. W. Hills in a letter published in *The Times* of last Wednesday, November 24th. Major Hills draws attention to the fact that, out of the 118 numbered questions in the new questionnaire, the whole number has been answered in substance by Australia in previous annual reports on her mandated territories, while 117 questions have been answered by Great Britain and 115 by New Zealand. So far, at any rate, as these three British Commonwealth mandates are concerned, the questionnaire was not a demand for additional information, but simply a guide for the presentation, in a standardised form, of information that was already being furnished by the mandates on their own initiative. Major Hills further points out that Great Britain, certainly, has nothing to conceal—since we may justly claim that the mandatory system is simply an application, under an international sanction, of the British system of colonial administration. He pertinently adds that if it is the Dominions, and not the Mother Country, who wish for some modification in the ques-

tions asked, it is surely for them, and not for us, to make the claim. The Dominions are members of the League and mandatories in their own right, and there is no sphere in which their full nationhood is more clearly established. The most serious feature, however, about this attack on the Permanent Mandates Commission is that it has been made over an administrative technicality, and that it deliberately ignores the great moral and political issues which are really at stake. If the administration of all mandates by all mandatories had been as exemplary as the record of New Zealand, for example, or of Great Britain, and if the Commission had gone out of its way to show want of tact and statesmanship, Sir Austen Chamberlain's note might have been justified. As a matter of fact, everybody knows that the Commission has had at least two grave cases to deal with—the South African mandate for South-West Africa and the French mandate for Syria and the Lebanon—and that it has handled them both with an admirable blend of firmness and discretion. In the light of their records, neither South Africa nor France could possibly have delivered this attack on the Commission in their own names. South Africa and France lie low and reap the benefit. In effect, Sir Austen has lent Great Britain's good reputation as a stalking-horse to Powers which have reasons of their own for bearing resentment against the Commission—but reasons which are wholly creditable to the Commission and not so creditable to those Powers themselves. The Commission certainly deserves the support both of its principals, the Council, and of the enlightened public opinion of the world.

Merchandise Marks.—The House of Commons has this week given a third reading to a Merchandise Marks (Imported Goods) Bill, of which the principal features are the following:—(1) Imported goods bearing the name or trade mark of a British manufacturer are not to be sold unless accompanied by indication of origin; (2) anyone who sells or advertises imported goods not marked with the name of the country of origin is liable to serious penalties; (3) decisions and inquiries regarding the administration of the Act are to be in the hands of committees not responsible to the House of Commons. This legislation is an attempt to do two things:—To prevent fraud and misrepresentation, and to translate into action purely Protectionist and nationalist sentiment regarding the purchase of foreign goods. In the first respect it is laudable, but the prevention of fraud might surely have been aided by a less complicated measure. The real aim is the second one mentioned, and its pursuit, as always when an attempt is made to interfere with the natural course of trade, is difficult and dangerous. The Gilbertian absurdities into which it will lead us in certain directions are clear enough. How can you stamp a tomato? What is to be done with a bottle of beer when the bottle is imported and beer home-brewed? How do you treat a finished product which contains materials of various origins? The theme is entertaining enough, and Sir John Simon made great play with it in the House of Commons. But laughter and tears are akin, and the Bill, we fear, will produce more cause for the latter than the former. The major objections to it can be briefly stated. The present moment, when Britain ought to be leading the fight for the reduction of trade barriers, is uniquely unpropitious for any attempt, such as that made by this Bill, to restrict the free interchange of commodities between nations, or to prejudice foreign goods. Secondly, it can hardly fail, in spite of a mitigating clause inserted by the President of the Board of Trade, to place obstacles in the way of our very important *entrepot* trade. Thirdly, it lays upon importers, manufacturers, and retailers a fresh burden of worrying detail, at a time when they especially need to be free to concentrate on bigger issues. Fourthly, it carries a step further the system of administration by committees not responsible to the House of Commons—a pernicious and, unfortunately, a spreading system. Fifthly, apart from the aim of preventing fraud, its whole idea proceeds from false economics. Sixthly, and finally, it will cost money, put grit into the wheels of commerce, and will, to a large extent, prove unworkable. All this seems a very big price to pay for the Government's desire to placate that large section of their followers who think all foreign imports bad, who have not learnt that if you want

to export you must import, and whose failure to perceive Britain's vital dependence upon international trade is expressed in their favourite slogan, "Buy British goods and keep the foreigner out."

The Cotton Trade and Mr Keynes.—Our Manchester correspondent writes:—In Lancashire trade circles there was considerable interest on Monday last in the meeting between Mr J. M. Keynes and the Committee of the Federation of Master Cotton Spinners' Associations. This conference was a result of a recent article by Mr Keynes, in which he criticised strongly the policy of organised short time in the mills spinning American cotton. The proceedings took the form of a statement from Mr F. Mills, the chairman of the Short Time Committee, and this was followed by a reply from Mr Keynes. He put forward as his remedies for the depression the formation of a cartel to include all the mills spinning American cotton. He said that in a cartel individual businesses would maintain their separate identity. They would be allotted quotas by the cartel managers, and these quotas would be transferable; thus the mills that are in a weak position, either for finance or any other reason, would be able to transfer their quotas to the stronger businesses. He said he had never heard of any method of curtailing the scale of industry except variations of these three—the process of bankruptcy, the formation of a cartel, and the formation of amalgamations. With regard to the establishment of a cartel, he said there would have to be an element of what amounts to compulsion, and in his opinion this would mainly come from the banks. In conclusion he explained that the more he heard about Lancashire the more he was convinced that the financial situation was at least as big a factor as short time. On Monday afternoon there was a further conference between Mr Keynes and members of the Short Time Committee, and it is understood that this took the form of cross-table talk. It is no secret that Mr Keynes late in the day confessed that he had learned a great deal about the cotton trade, and it is possible that had he at that time had the information which he now holds, his original article would have been of a different kind. It may be said that the leaders of the Lancashire cotton industry are determined to give careful consideration to the proposals put forward, but it is doubtful whether some of the suggestions are practicable.

American Cotton Crop.—The Department of Commerce of the United States Government continues to spring surprises upon the trade by its reports on the cotton crop for this season. On Monday last the estimate of the growth was increased to 18,399,000 bales, which compares with 17,918,000 bales a fortnight earlier. The forecast was better than expected, states our Manchester correspondent, and much interest was taken in the ginning return, which was 12,954,000 bales, against 11,259,000 bales a fortnight earlier. These figures were scarcely equal to anticipations. The statistics as a whole, although bearish, have had practically no effect upon values. It is rather remarkable that, although the estimate of the crop since October 1st has been increased from 16,627,000 bales to 18,399,000 bales, prices during that period have fallen less than ½d per lb, and there is now every indication of rates being stabilised between 6½d and 7d per lb in Liverpool. The absence of a further fall in values may be partly due to the scheme in America for financing the big supplies, and undoubtedly during the last few weeks there has been comparatively little pressure to sell from farmers. The most important factor in the situation is the question of acreage for next season, but traders will have to wait at least three or four months before any news on this point can be available.

Liverpool Cotton Trading.—Contrary to expectations the members of the Liverpool Cotton Association this week have defeated the proposal that trading in cotton futures be extended from 13 months to 25 months. The matter was thoroughly discussed at the meeting last Monday, and the resolution failed to secure the necessary three-fourths majority. It is understood that one of the

chief reasons for the defeat of the proposed alteration is that brokers, owing to the uncertain financial outlook, are afraid to arrange contracts which will not be completed for nearly two years ahead.

Stock Exchange Saturdays.—Discussion has arisen in a surprisingly acute form during the past week over the question of the advisability of reopening the Stock Exchange on Saturdays. The matter has been canvassed here from time to time, and it has formed the subject for conflicting opinions since the Stock Exchange returned to pre-war conditions in the way of contangoes, fortnightly settlements, &c. So much bitterness is imported into the various points at issue, writes a Stock Exchange correspondent, that it may be well, at the risk of wearying by reiteration, to present some of the principal factors on both sides. The original purpose which induced the Stock Exchange Committee to close the House on Saturdays a couple of years after the war started has long since ceased to exist. The supporters of the demand for reopening place their policy upon the reasonable and fair ground of public convenience and national policy. It is contended, and with justice, that the Stock Exchange, quasi-national institution as it is, should set an example to the rest of the community in the way of being willing to work on all the business days. From the purely business point of view of the Stock Exchange itself, no particular purpose can be served by people coming to town on Saturdays if there is nothing profitable for them to do. The Stock Exchange Committee, approached this week on the point, replied that it is for the House itself to decide whether there is a sufficiently widespread desire amongst members to warrant them, the Committee, in taking action with a view to restoring pre-war arrangements. They said that if the members as a whole cared to present a memorial asking for reopening, this would be given every consideration. Those who support the idea of reopening on Saturdays are to a large extent drawn from the class which, were the Stock Exchange to be reopened, would not itself come to town, and with whose usual liberty the reopening would in no way interfere. The appeal comes largely, that is to say, from older men who are able to take business quietly, and who can delegate to junior partners, authorised clerks and office staffs the management of affairs for half-a-day. The purely personal inclination of the House is opposed to reopening, as, of course, it is bound to be. After about a decade of Saturday holidays, nobody wants to work on Saturday unless he is thoroughly convinced that by so doing he is either rendering some national service or doing himself good. On the latter head, Stock Exchange opinion in the majority of cases has no hesitation in saying that business is not likely to be sufficiently active to justify any alteration being made, but, in regard to the national policy, there is an uneasy feeling, equally general amongst members, that the House should set an example to the nation by being on the spot for the transaction of what business may be offered it. Play is made with the assertion that banks, outside houses, and bucket-shops derive advantage through getting orders from clients on Saturdays, and acting upon the same to the detriment of the actual markets. It is also claimed that business with foreign exchanges is lost through the markets being closed in London at the end of the week. The loss, if there is any, sustained by business being diverted to other exchanges through the London Stock Exchange being closed on Saturdays is a matter of estimate, and a doubtful quantity. The people who are in favour of reopening have on their side the anxiety to do business whenever possible, and not to allow so much as a chance of securing an order to slip. Mechanical difficulties in the way of delivery of stock are obvious to the practical man, though these cannot be understood, of course, by outsiders, who are more concerned with the national example side of the issue. We do not pretend to have set out every aspect of the case in this short presentment of the pros and cons that prevail, but it is very necessary to gain a clear idea of the position if an independent public judgment is to be reached which can influence the four thousand members of the London Stock Exchange in coming to a right decision upon what is very much more than a personal matter.

Conditions in Northern Ireland.—The autumn session of the Northern Ireland Parliament is now practically ended, writes our Belfast correspondent, and it is expected that Parliament will be prorogued on Tuesday, November 30th. The session has been devoted to the discussion of purely local affairs, and a great deal of legislation has been passed. The principal Bills discussed included the Motor Vehicles (Traffic and Regulation) Bill, and the Marketing of Eggs (Amendment) Bill, to both of which previous reference has been made. A Housing Bill providing for the extension of the Northern Ireland Housing Acts, under which subsidies are granted to private builders or local authorities for the erection of dwelling-houses of a certain type, has also been passed. Up to March 31, 1926, the number of houses completed in respect of which subsidies were payable under these Acts, and the amounts paid, were as follows:—

	Amount Paid.	Houses Built.
Private builders	£ 131,160	 2,043
Local authorities	£ 22,920	 336

The Exchequer and Financial Provisions Bill also passed its third reading. The Bill proposes to authorise the Ministry of Finance to raise by Ulster Loan Stock a sum of £2,250,000, in addition to the £2,000,000 obtained by an issue of stock in 1925. The provision is required to enable long-period loans to be made to local authorities and others, and this sum of £2,250,000 represents approximately the probable advances to be made during the next two and a quarter years up to March 31, 1929. A slightly more optimistic attitude continues to prevail in the linen industry; the supply of flax in Northern Ireland will, however, probably be lower than in 1925, owing to the decreased acreage grown, but the yield and quality are turning out well. Prices are averaging a little over 8s per stone, 3s or 4s below those ruling a year ago. According to the annual report of the Flax Supply Association, which has just been issued, home-grown flax appears to have constituted just under 25 per cent. of the total supply in 1925, which, however, was very appreciably less than the total supply in 1924, the quantities available in that year amounting to 36,505 tons, as against 21,480 tons in 1925. The supply of flax per spindle fell from 6.33 stones in 1924 to 3.71 stones in 1925. There has also been increased hopefulness in the shipbuilding industry following upon the announcement of an important building programme. In agriculture the harvest has been a fairly good one. The poor crop of potatoes in Great Britain this year is expected to increase the normal demand for Ulster potatoes in the Lancashire and South Wales areas.

Conditions in Switzerland.—A Geneva correspondent writes:—The Swiss foreign trade returns for October were more satisfactory than was anticipated. The value of imports reached £8,331,604, compared with £7,275,636 in September, and that of exports was £6,738,691, as against £6,139,380 during the previous month. Imports of raw materials and of fuel were somewhat higher, and there was an increase in the exports of the four chief industries, reaching £113,000 for watches, £8,000 for silk goods, £14,000 for cotton goods, and £41,000 for machines. During October imports from Great Britain totalled £503,533, as against £387,376 in September, and exports to Great Britain £1,045,000, compared with £1,010,434 in September. Though the British coal strike does not greatly affect the Swiss coal market, it has, nevertheless, caused some inconvenience to the gas works as well as to the paper and metal industry. It was recently found that certain gas works had only coal supplies for a few days, and the Swiss Government at once arranged with the Federal Railways for the importation of the necessary coal from Upper Silesia. Special coal trains, running at the rate of 18 a week, are now bringing in Silesian coal and distributing it to the gas works and to the factories which have orders from the Government or which are considered as industries of public utility. The position of private industrialists is rather difficult at present, as the coal merchants—on whom they depend for getting their fuel—have taken advantage of the situation and have increased their prices to a great extent. It is expected that if British

coal exports are not resumed in the very near future, the Government will be compelled to take over the control of the importation, distribution and sale of fuel so as to stop profiteering. The quarterly survey of Swiss industrial undertakings shows that, out of a total of 1,691 factories examined, and employing 189,000 hands, 63 per cent., as against 62 per cent. during the previous quarter—that is 1,065 factories occupying 125,000 workers, as against 1,048 factories employing 116,000—report their situation to be good or satisfactory, while it is described as unsatisfactory or bad in the remaining 37 per cent. Several industries have been able to reabsorb the greater part of the workers they had discharged, and a few are short of labour. Meanwhile the number of unemployed has risen from 12,803 at the end of September, to 14,253 at the end of October, but this increase is mainly due to the seasonal stoppage in agriculture and in the building trade. The general economic situation of the country is still depressed, and the improvement recorded in October principally results from the annual increase in the orders made in anticipation of the Christmas and New Year's festivities. But there is a fact that should not be overlooked, and that will greatly influence the activity of industry as well as of retail trade, that is the rise in the value of the French and Italian currencies, which is benefiting Swiss producers and retail traders. The direct consequence of this rise is that it is no more profitable to buy certain goods in France and Italy as they are now cheaper in Switzerland, and if this rise continues it will cause many millions of francs, previously expended abroad, to be spent in the country itself, an appreciable advantage for national industry and commerce.

The Position in Hongkong.—Writing on November 1st a Hongkong correspondent says:—It is now three weeks since the boycott was officially terminated, but the situation is far from satisfactory, nor is there any confidence in the immediate future. The first week of the new dispensation promised well, and as a consequence of the general resumption of shipping services passenger traffic was almost as heavy as in pre-boycott times. Canton dealers flocked down to Hongkong in order to renew business connections and merchants here had every hope of disposing of much of their accumulated stocks at advantageous prices. The rumours of trouble caused by the disbanded pickets were not regarded very seriously, and there was a general disposition to restrain criticism until the Canton Government had had time to put its new policy into effect. The fact that cargo was moving very slowly caused little surprise until it became evident that the British steamers were under a ban. Only cargo carried by Chinese-owned steamers (which incidentally fly the British flag) could be discharged in Canton, and during the past few days hundreds of pickets have forcibly prevented Chinese passengers from embarking on the British steamers for Hongkong. The "movement for the severance of economic relations with the British and Imperialist nations," which was at first looked upon as a face-saving demonstration by the Strike Committee, now appears to be the boycott in a new guise. Canton retailers are forbidden to handle British goods, and their shops are invaded by gangs of pickets who affix labels to all articles which have a British appearance, even the inscription "Made in Japan" being regarded as an indication of British origin. To help the local housewife in discriminating when making her purchases an exhibition has been opened with a display of British goods alongside their non-Imperialist substitutes. In other directions a widespread effort is being made to prevent the restoration of trade which the removal of the embargo has made possible, and naturally the Chinese are far too cowed to prosecute business which will embroil them with the powerful Strike Committee. Whether the Canton Government will ultimately gain the upper hand remains to be seen, but at present the absence of any regular military force, due to the demands from the Yangtze front, leaves the Government without means to enforce their decrees, with the result that Canton is now in the hands of a labour tyranny. The cost of living is extremely high, owing to the past year's restrictions of foreign imports, and the working and servant classes are in a state of open mutiny against their employers. It is assumed that the Government is

sincere in its desire to reopen relations with Hongkong, but it must be confessed that the speeches of leading officials hardly support this view. A report from Peking states that the associates of the late Soviet Ambassador, Karakhan, excuse the Canton Government's change of front on the ground that it became necessary through the reinforcement of the British Fleet in China, and was intended as a blind to delude the British Government. It is, of course, hopeless to attempt to fathom Bolshevik ideas, but propaganda is still rampant in Canton, where Borodin retains his post of adviser. The latest effort at poisoning Chinese minds against the British is the circulation, under official auspices, of Mr Chu's version of the Wanhien incident as presented at Geneva. With all these unpleasant signs of antagonism to the British, trade here is by no means stagnant. The resumption of shipping with ports other than Canton has enabled dealers to despatch a good many consignments to the interior, and the past month has seen a welcome expansion in trade. Piece goods clearances have been extremely good, and there have been many sales from stock as well as resales of bankrupt cargo at full prices. A fair amount of enquiry has come out, but although Manchester and Bradford quotations are appreciably lower, the fall in exchange has raised the local currency equivalent by some 15-20 per cent. It has, therefore, been impossible to bring business to book owing to the wide difference between current prices and dealers' ideas, and it looks as if it will be some weeks before the market firms up sufficiently to bridge the gap. The same remarks apply to enquiries for metals and sundries, and very little business has been put through so far. In all branches of import trade the fluctuations in exchange have proved a hindrance, for while the tendency of silver is obviously downward, the Chinese are inclined to look for a return to a higher level. There is, in consequence, no prospect of an adjustment of prices on the part of dealers so long as exchange remains unsteady, in contrast to the attitude of our local retailers who have taken the opportunity of increasing their prices by some 15 per cent. all round.

The Pig Lead Position.—Ever since the beginning of the coal stoppage the market for foreign pig lead has remained more or less under a cloud, while the outlet in this country has suffered more than has that of other non-ferrous metals. In addition to this, lead has been in the last month or two distinctly affected by reduced calls on Continental account, and some falling off in the American demand under an increased domestic supply. The American price was, therefore, the more quickly influenced by the weakness on this side. Deterioration in the American position received additional confirmation from cable advices giving the crude lead production for October in the United States and Mexico combined at 74,238 short tons, while the refinery production amounted to 71,532 short tons. The latter compares with 68,143 tons for September, thus indicating an increase of 3,389 tons. Owing to this, and a decrease in the total American deliveries, the stocks held by producers increased last month by 6,549 short tons, making the total 21,107 tons. When industrial conditions begin to be restored to the normal, there is small doubt that the present excess of lead will quickly disappear. It is assumed that there is room for a revival in the Continental demand, while better developments have been reported lately in the German electrical industry. Our imports for October amounted to 23,320 tons, making the aggregate for the ten months 222,470 tons, as against 225,419 tons for the same period last year. Home needs within the last few months were estimated at the rate of roughly 22,000 tons to 24,000 tons a month, which is about 5,000 tons to 6,000 tons less than at the height of the great activity which was experienced in this commodity in the late months of last year. The average price for prompt lead for last month was about £30 16s 5d, comparing with an average for the whole of 1925 of £35 17s 3d. From the lowest point touched this year (in May) of £27 7s 6d, there was a recovery late in July to £33 7s 6d, so that as compared with the latter the present value indicates a depreciation of fully £4 a ton. Producers, however, are still making a good profit, with lead selling at around £29; and looking ahead, the outlook as regards the world's consumption is promising.

Copper Control Tribulations.—In our issue of November 6 some reference was made to difficulties which had arisen in certain European trades in connection with the working of the new copper selling organisation, the Copper Exporters, Inc. It is now about a month since this concern, created under Washington sanction, started working under an agreement with European copper interests, but already rather serious difficulties have been encountered. European manufacturers have found themselves undercut in export markets by American works owing to the relatively cheaper terms at which refined copper can be secured on the other side in a "free open market" against the "pegged" price to European ports. These difficulties, together with the fact that American copper producers outside the combine have made their presence felt in the European market by selling at below the "combine" terms, were made the subject of a lively discussion at the meeting held in Brussels last week by the European members of the combine. It is understood that the British Metal Corporation, who have the marketing of a considerable copper output under their control, and who had provisionally joined the selling organisation more or less with a free hand, have since the Brussels meeting completely withdrawn therefrom. It appears that the European members have intimated that they would not remain a party to the combine under the "Copper Exporters, Inc." unless a change was made in the selling methods adopted. Their withdrawal from the combine is said to be subject to notice being given to that effect before June 1st next. Needless to say that these developments have had a certain prejudicial effect on the course of the market this week.

The Phosphate Position.—A correspondent writes:—The outlook for the phosphate rock mining industry, which provides the largest bulk of raw material for use in the world fertiliser industry, continues to be very promising. The increasing needs of agriculture have resulted in a large increase in consumption of superphosphate, and the production of phosphate rock has, therefore, expanded to keep pace with the requirements of manufacturers. The record pre-war figure of 7,000,000 tons was not touched again until 1923, but since that year phenomenal advances have been made in the output of rock. In 1924 8,100,000 tons were mined, and in the following year, despite adverse circumstances in certain producing areas, the figure rose to 8,600,000 tons; while estimates based on data so far available foreshadow a further increase during the current year. Of the producing countries the United States maintains its premier place with about 3,450,000 tons in 1925, representing an increase on the previous year of more than 500,000 tons. This is the more striking since it coincided with the Florida land boom, which resulted in a scarcity of labour at the phosphate mines, thus adding to production costs and raising prices. In the second most important mining area, Tunisia, the policy of keeping output far in excess of sales resulted in costly accumulation of stocks at the end of 1924, and production in 1925 was therefore curtailed somewhat, actual figures being 2,862,000 tons and 2,691,000 tons respectively. In Algeria production also declined last year, from 843,000 to 716,000 tons, but here the unfavourable situation was ascribable principally to the decline of the franc, and also to the competition experienced from the Moroccan product. And it is in this latter district that the most remarkable developments are taking place. Purely a post-war enterprise, the exceptionally favourable disposition of the phosphate deposits, together with the consistently high quality of the material, has won for Morocco the position of third place in the list of producers. From 33,000 tons in 1921, the output has risen steadily, until last year it amounted to almost 700,000 tons, and, based on current production, should reach 1,000,000 tons this year. A great deal of capital has been utilised in the opening-up of this area, but the last annual report of the State Bureau that is responsible for the administration points out that the accumulated interest has now been paid, and large sums are being allocated to development work. This success has permitted of a further reduction in prices to an extent that has not only seriously affected the sales of the other North African producers, but has restricted the European market for

American exporters. At the same time, consumption in this market has increased sufficiently to absorb the greater supplies available, though not to reduce the stocks of over 1,000,000 tons in Tunisia. From 4,500,000 tons in 1924, European demand for phosphate rock advanced to more than 5,000,000 tons, an increase in which nearly all importing countries shared, with Germany showing most promise. Statistics for the first six months of 1926 reveal the certainty of continued progress in this and other important markets; and when it is remembered that Germany, which in 1925 accounted for 400,000 tons, consumed approximately 1,000,000 tons before the war, the outlook as that country improves its economic position is brighter. Some compensation for the inevitable disappearance of the European market is accorded the American producers in the 20 per cent. advance in home consumption. It is feared, however, that this "boom" is too large, and the statistical position in superphosphate helps to justify the fear that a set-back may be experienced within the next year or two. Other producing areas do not greatly influence the world position, but in Nauru and Ocean Islands, from which about 460,000 tons of phosphate are obtained, bad weather has this year caused a diminution in output. In Britain and Ireland the depression in the domestic superphosphate industry is reflected in the decreased consumption of phosphate rock, imports declining from 410,814 tons in 1924 (of which 68,095 tons to the Irish Free State) to 375,593 tons (42,414 tons). The current year has witnessed keener competition from abroad in the manufactured product, accompanied by still lower imports of the raw material.

Roumanian Oil Progress.—A correspondent writes:—Three important events mark the history of the Roumanian oil industry this year. First there has been a record production following upon the exploitation of some of the State oil lands. The total output of the Roumanian fields in the first nine months just exceeded what was the record output for the twelve months of 1925—2,300,000 tons, while the export of refined oil products up to September 30th, amounting to 1,041,780 tons (consisting of 295,450 tons of petrol, 355,266 tons of lamp oil, 26,935 tons of lubricating oil, and 364,129 tons of fuel oil) exceeded the total exports for the whole of 1925 by some 200,000 tons. The only trouble about this record output is that oil prices and the Roumanian leu having fallen, it is worth less in gold values than the output of 1925. Moreover, transportation has been inadequate, and the companies have been unable to export all that they had available. To remedy this a new pipeline is to be built to Constanza to carry petrol (benzine), which is now transported in railway tank cars. The existing pipeline is confined to the handling of lamp oil or white spirit. The second event of importance is the settlement of the claims for compensation of the British oil companies, whose properties were destroyed by the Allies as a defensive measure in the war. The British Government, it may be recalled, agreed to reduce the total of the Roumanian war debt by the amount of the British oil companies' claims provided the Roumanian Government settled direct with the companies concerned. After long negotiations a settlement was recently arrived at. The Roumanian Government has recognised the amounts of compensation assessed by the mixed Commission, and agreed to settle those amounts by annuities (free from all Roumanian taxes) spread over 40 years beginning at 2 per cent. for the first five years, rising to 3½ per cent. during the next five years, and to 4 per cent. during the subsequent 30 years, the first half-yearly payment being made on December 1st next, the last on December 1, 1965. This agreement applies only to British companies. In the case of the Phoenix Oil group, for example, about half of which consists of French companies, payments will be based on only half the total amount of compensation pending a settlement of the Franco-Roumanian war debt. It has been questioned whether the British companies were wise in accepting this settlement at the moment when the Astra Romana, the Roumanian subsidiary of the Royal Dutch-Shell group, is bringing a petition of right against the British Government in respect of the war damages it suffered. The Roumanian

THE FIRST NATIONAL BANK OF BOSTON

Government, at any rate, has made for itself an excellent settlement, and done something to restore its credit abroad. The third event was the conclusion of an agreement with the semi-official Italian oil company, under which in return for a loan the Roumanian Government makes over its royalty oil to be refunded by this company in Roumania. It is probable that another Italo-Roumanian company will now be formed to develop some of the State oil lands.

Venezuelan Oil Concessions.—At the end of the year it is expected that a new issue of ordinary shares will be made by the V.O.C. Holding Company on bonus terms, writes a correspondent. The remarkable increase in the production of its subsidiary, Venezuelan Oil Concessions, Limited, calls for further capital expenditure in the field. The following table gives the production for the last four years:—

	Metric Tons.
1923	60,000
1924	390,000
1925	690,000
1926 (estimated).....	1,750,000

About 90 per cent. of the production has been drawn from La Rosa field, which is on the east side of Lake Maracaibo. The results obtained in La Paz and Concepcion fields on the west side of the lake have proved somewhat disappointing. The chairman stated at the general meeting this year that, although the oil in these two fields was of superior quality, the gas pressure had fallen off and pumping was being installed. In La Rosa field, where competition with Lago and other American companies has been severe, big wells continue to be brought in. New production has been found at Ambrosia slightly to the north, and Lagunillas to the south of La Rosa. The company's first well in the Lagunillas field was brought in on November 6th with a production of about 600 tons through a ¾-inch pipe. The present total production of Venezuelan Oil Concessions is at the rate of nearly 8,000 tons a day, or 2,920,000 tons a year. Hence the need of new capital. The £977,000 advanced to the operating company by the V.O.C. Holding Company last year has already gone in capital expenditure and development. For example, £430,000 was paid to the Venezuelan Government for the extension of concession rights and £520,000 was spent on plant, machinery, buildings, and pipeline. Apart from this loan, the last balance-sheet showed V.O.C. Holding with a surplus of current assets over current liabilities of £281,683, made up almost entirely of cash and Treasury bills. But this amount will not go far in oilfield development on the Venezuelan scale. The issued capital of V.O.C. Holding is £3,596,912 in £999,228 preference shares, and the balance in ordinary shares of £1 (valued in the market at £3½). A further issue of ordinary shares, at a small premium, to bring the capital up to £5,000,000, is not improbable. As regards dividends, the company, having written off valueless assets is in a position to credit all future net earnings to revenue. It will be recalled that the chairman at the last general meeting of the company stated:—"We are hopeful of being able to declare our maiden dividend when we see the actual result of the current year's working."

Royal Bank of Scotland.—At the annual meeting of the Royal Bank of Scotland, held in Edinburgh on Wednesday, the Duke of Buccleuch, the chairman, was hopeful as to the trade outlook. The effects of the general strike and the coal stoppage, he pointed out, must show themselves in many balance-sheets during the next year, with far-reaching results upon the national exchequer and upon the burden of local rates in industrial districts. "Even yet it is possible to look for a revival of trade, as there are not absent indications of improvement in shipping and shipbuilding, which, if realised, would necessarily have their effect upon the iron and steel and other industries. Contracts have, no doubt, been permanently lost to the country, but there are still many orders being held over. These, however, can only be undertaken if there is to be a sufficient and steady output of coal at a practicable price. Subject to that condition, British coal must, in respect of its superior quality, come to its own again in the foreign markets. As a further factor which makes for optimism, there is the greatly improved condition of Europe, both politically and financially, which encourages the hope of further expansion in our Continental connections." His Grace mentioned that in six months' time the bank would celebrate its bi-centenary, having been incorporated by Royal Charter on May 31, 1727, and stated that the story of the bank, which is being written, will be found to form a not inconsiderable contribution to the history of Scotland itself during the period dealt with.

British Overseas Bank.—The accounts of the British Overseas Bank, Limited, for the year ended October 31st last, show a profit of £150,200, which represents an increase of £24,200 over that of the preceding year. Though the directors do not give in the report any indication as to the reason for this substantial improvement, it is undoubtedly a reflection of the betterment in economic and financial conditions on the Continent, in which the activities of the Bank are mainly centred. The dividend, 6 per cent., on the "A" shares—which are held by the public—is again paid, while that on the "B" shares, which are held by other banks, is increased from 3 to 6 per cent. Reserve is again credited with £25,000, and premises are written down by £5,000, leaving the balance carried forward practically unchanged at £60,600. Deposits show an increase of £1,157,000 at £3,296,000, but acceptances have declined from £3,913,500 to £2,448,000. On the credit side, the principal changes are increases of £468,000 in money at call, of £600,000 in bills discounted, of £50,000 in Government securities, and of £95,000 in advances. At their present quotation of £5½ the £5 "A" shares give a return of about £5 2s per cent.

Consolidated Gold Fields.—The full accounts for the year ended June 30th have somewhat modified the impression produced by the absence of any increase in the dividend. The statement of the operating company shows a profit of £438,700, as against £388,900 in 1924-25, and as the amount now required for depreciation on investments is only £13,300, in place of £35,900, the surplus comes out £72,400 up at £425,400. Thus the company is able to disburse a total of 8 per cent. as against 7 per cent., still leaving the enhanced balance of £40,800 to go forward after provision has been made for taxes, &c.—naturally heavier than before. The inability of the Consolidated Gold Fields to pay more than 12½ per cent. arises from the circumstance that the increased receipts were swallowed up by the payment of £24,200 arrears of relief on preferential dividends in respect of Colonial taxation, this arising from the decision in a test case brought by the Gold Fields American Development Company. The information given in regard to the position of the company's Rand subsidiaries adds little to what is already known; indeed, as regards the Sub Nigel it is scarcely up to date. As to the American interests, the chief points consist in the expansion of operations by and the financial reorganisation of the American Trona Corporation; the greatly improved position of the South American Gold and Platinum, upon whose shares the payment of a dividend in the near future is foreshadowed;

and the virtual duplication of its earnings by the Yuba dredging enterprise. On the distributions of the past two years Gold Fields shares yield about 8½ per cent., and may be regarded as a fair speculative holding.

Pahang Consolidated.—Having regard to the advance in the price of tin, and of the entry into the dividend list of the company's rubber subsidiary (the Kuala Reman), the expectation had been entertained that the Pahang would for 1925-26 improve upon the distributions of the two preceding years. This expectation was justified by results, the final dividend of 22½ per cent. on the ordinary making a total of 30 per cent., as against 20 per cent. for both 1923-24 and 1924-25; the preference, of course, again receive the maximum of 15 per cent. Moreover, the accounts show an even larger expansion in the profits than might have been inferred from the increase in the distribution, the net earnings figuring at £260,700, as against £150,600. No less than £100,000 is, however, now appropriated for special purposes; £20,000 for depreciation on plant (the same as before), £20,000 (as against £10,000) to mine development reserve, £10,000 to taxation, and £50,000 to a special reserve for rubber planting. Thus, in effect, the directors are putting back into rubber cultivation somewhat more than has so far been received therefrom (£42,000). This procedure is meeting with criticism on the part of some of the older shareholders, who argue that if funds were needed they should have been obtained by the issue of the reserve shares at, say, 10s. The point is obviously one upon which room exists for a difference of opinion. In deciding to extend the company's rubber interests the directors have doubtless been actuated by the development results of the recent past. In this connection they remark, "The position of the mines generally appears to be more satisfactory than was the case a year ago, but in view of the character of the country continuous systematic development and prospecting are still of the utmost necessity." Hence the increased appropriation already mentioned. On the basis of the 1925-26 dividends the ordinary shares yield something over 10 per cent.

Russian Mining Corporation.—The shareholders in this undertaking have had a bolt from the blue in the shape of a proposal for reconstruction with an assessment of 7s per share. It is no matter for surprise that some vigorous protests have appeared. The balance-sheet just issued shows interests in Russia, £176,300; other investments, £36,700; cash, £2,050; creditors, £2,300. During the five years ended September 30th expenses exceeded receipts by £9,200, increasing the debit balance to £29,400. The shares held in the Altai Mines have been exchanged for 231,800 in the Lena Goldfields, representing nearly share for share of the company's capital. According to the explanation given by the new directors of the company, funds are required to take advantage of the "opportunities for profitable work" now offering in Russia. It is probable that those now behind the undertaking will achieve with it the degree of success already recorded in the case of the Lena. At the same time, some of the smaller proprietors may find it inconvenient or impracticable to provide the money necessary to preserve their interest, which they have regarded as practically equivalent to holding Lena shares themselves.

Wankie Colliery.—Progress continues to be the order of the day with this Rhodesian enterprise. For the year ended August 31st last the coal sales totalled 507,950 tons, as against 402,600 during 1924-25, and the coke sales 170,600 tons, in place of 153,200. Thus the net profit came out at £181,500, as against £164,250 the preceding year and £138,500 for the ten months ended August, 1924. Meanwhile the issued capital has been increased; thus the final dividend is 7½ per cent. in place of 10 per cent., making the total for the year 17½ per cent., as against 20 per cent. Powers are asked for the increase of the capital by £100,000 to £1,000,000; this, presumably, foreshadows a further issue. The position in regard to supplies of fuel is extremely strong. The coal reserves

proved by actual development are estimated at over 9,000,000 tons—an increase on the year of 904,950 tons, notwithstanding the larger output; the total represents between nine and ten years' supply. Then the coal reserves in the area remaining under a radius of two miles from the Bell Station are computed at 50,516,000 tons—to a great extent proved by the present workings. In view of the contracts which have been entered into with the Union Minière group and with the Bwana M'Kubwa Copper Company, a further expansion in the output is in prospect; within eighteen months from the present time the sales should reach 1,000,000 tons per annum. The outlook would, therefore, appear to warrant the ruling quotation of 26s for the 10s shares—albeit on last year's distributions the yield is no more than 6½ per cent.

At the second ordinary meeting of the present session of the Institute of Actuaries, on Monday, November 29th, at 5 p.m., at the hall of the institute, Staple Inn, a paper on "The Mortality of Europeans in British West and British East Africa" will be read by Mr. H. E. Raynes, F.I.A.

Oversea Correspondence.

UNITED STATES.—MARKETS.—BUSINESS CONDITIONS.—STANDARD OIL FINANCE.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 16.

ALTHOUGH a number of minor, and in several instances contradictory movements have occurred in the markets during the past week, there has been little fresh indication, either in the markets or industry, of a major trend. The share market, after recovering nearly two-thirds of the October break, has marked time, two days of mild reaction being followed by an irregular recovery. This market now has a distinctly professional aspect. The turnover is moderate, and the principal movements seem to be due to the operations of cliques. A good investment demand probably underlies the market, but at this stage the public shows little inclination to buy confidently or aggressively. The money market, which displayed such marked ease early in the month, has been slightly firmer. The call rate on the Stock Exchange, which had been as low as 4½ per cent., advanced to 5 per cent. The 4½ per cent. time money that was in evidence last week has, for the moment at least, disappeared. This firming is not surprising at the middle of the month, and may prove transitory. Part of the firming may be due to the large reduction that occurred last week in the borrowings of the member banks at the Federal Reserve Bank. These changes suggest that money flowed into New York in such volume that the member banks paid off rapidly at the Reserve bank. Possibly they paid off a little too much in relation to this week's demands. This would explain in part the firming up of the call rate and would forecast a recovery in the volume of rediscounts. In any event, brokers' loans dropped in the week ended November 10th, possibly reflecting the reaction in the share market. The reduction of \$37,000,000 wiped out a corresponding advance in the previous week.

A gain of about 90,000 tons during October in the unfilled orders of the United States Steel Corporation proved somewhat smaller than Wall Street had expected. Nevertheless it seems that the steel industry is holding up better than had been anticipated. The gain in unfilled orders might have been greater had not production held so high during October. The report on that month's steel ingot production showed a gain of about 2 per cent. over the rate of production during August and September, although recent reports of declining operations at the steel mills had prepared most observers for a decrease. October ingot production, in fact, set a new high record for all time. However, the trade journals still insist that operating schedules are being reduced this month, and that an average operation of 75 per cent. of capacity instead of the 85 per cent. of the late summer and early autumn is in prospect. As for other trade indications, car

loadings still are holding at record-breaking levels, and railroad earnings continue to be excellent. Sales by chain stores also continue to make new records, the October showing of ten leading chains being 9.5 per cent. ahead of October last year, while the gain for the first ten months of the year amounts to 12.9 per cent. October sales by the two leading mail order houses, which do a large business in the agricultural districts, showed a falling off from October's sales last year, but this decline is attributed by the executives to the fact that October, 1925, was a month of severe weather that prompted heavy buying of winter clothing, while October this year was mild. In the cities a big holiday trade is anticipated.

With current reports indicating that the aggregate volume of business profits is large, it is not surprising to find that there have been numerous instances in which old dividends have been increased or extra dividend declared. The General Motors corporation, whose profits in the first nine months of this year are 85 per cent. greater than in the corresponding period of last year, declared \$4 a share extra. This follows, it will be recalled, the declaration of a 50 per cent. stock dividend a few months ago. Several of the Standard Oil companies have declared extra distributions, and the New Jersey company has just announced a comprehensive plan for retiring its preferred stock. The latter is not outstanding to the extent of \$200,000,000 par value, having been floated soon after the war, when the New Jersey company for the first time found itself unable to finance its expansion out of earnings. As the stock is callable at 115, some \$230,000,000 will be returned to the preferred stockholders on the redemption date, which is March 15, 1927. Meanwhile the company has decided to go ahead with the financing necessary to permit the redemption. An issue of 5 per cent. 20-year debentures of \$120,000,000 par value has been sold to J. P. Morgan and Co., and probably will be offered shortly. Although the offering price of these debentures has not been announced, a strong demand for them has resulted in transactions on a "when-issued" basis at around 102. To secure the

rest of the money that will be needed, the company will offer new common shares to existing common shareholders at par (\$25), in the ratio of one new share for each six held. This means the issue of some 3,450,000 new shares. As the funds thus obtained will still fall short of the \$230,000,000 needed, about \$25,000,000 will be taken from the company's cash account. Meanwhile the directors voted, in addition to the regular quarterly dividend of 25 cents a share, an extra of 12½ cents. It is assumed that this extra will become a "regular" extra and that the stock has, in effect, been placed on a \$1.50 annual basis, one dollar being regular and 50 cents being extra. Altogether, this large financial operation will have the effect of leaving the amount of capital in the business slightly smaller than before, of increasing the number of dollars paid to the common shareholders, and of substituting a \$120,000,000 issue of 5 per cent. debentures for a \$200,000,000 issue of preferred stock. However, as the preferred stock has to be called at 115, and as \$1.50 a year will be paid on the new stock that is being sold for \$25, the saving in charges to the holders of the existing 20,000,000 shares of common stock is not very great. Possibly certain interests in the company did not like to see so large a share of dividends going to preferred shareholders. On the other hand, the company now will have bonds outstanding, and bonds are something that never were popular in Standard Oil circles. The refinancing does, of course, allow common shareholders to invest new money in the business on a 6 per cent. basis, and this opportunity, together with the extra dividend, probably will be appreciated. In the last analysis the decision to call the preferred probably arose from a desire to do something for the common shareholders.

FRANCE.—POLITICS—DEBT PROBLEMS—THE STABILISATION DILEMMA—BANK OF FRANCE AND GOLD.

(FROM OUR CORRESPONDENT.)

PARIS, November 24.

A LARGE proportion of the members of the Upper House and many of the Deputies are now absent in the constituencies, in connection with the pending renewal of one-third of the Senate, and the Chamber is unusually tranquil. The senatorial elections are on this occasion provoking an exceptional amount of interest, owing to the uncertainty that prevails as to what developments will occur in regard to the grouping of the various political parties in connection with the contests. There is ample evidence that a substantial portion, although still a minority, of the Radical and Radical-Socialist party is anxious to fight in alliance with the Socialists again, in order to bring about on a minor scale a repetition of the triumph which the Cartel des Gauches secured over M. Poincaré at the General Elections in 1924. Strenuous efforts, however, are being made to preserve, both in the constituencies and in Parliament, the unity of the Government of National Union which is now in power; but it cannot be said at the moment that this is incontestably assured. M. Poincaré has once more emphasised the necessity for a political party truce now that the whole future of the nation is at stake, not only as regards its material things, "but, as a consequence, as regards its moral power, its intellectual expansion, and even the independence of its political action." The Premier also again insisted that financial restoration cannot be accomplished "in a few days or a few weeks, but will be a task of long duration, during the accomplishment of which all other considerations must be set aside."

Meanwhile, the Chamber is steadily discussing the expenditure sides of the departmental Budgets in turn, the revenue side being left till later, and comparative calm reigns over Parliament. M. Poincaré is thus left at liberty to devote himself almost uninterruptedly to the great work of financial restoration. The flat refusal of M. Béranger to return to his post as Ambassador to Washington, which was announced yesterday, strengthens the belief, which is growing in strength daily, that ratification of the American and British debt agreements in their present form may be regarded as impossible. Obviously, with the matter of the agreements in its

present state, M. Béranger could not expect to return to Washington with any authority. Definite indications as to the Government's intentions in this matter may be given by M. Briand's choice of the ex-Ambassador's successor, which cannot long be delayed. At present it seems likely that a professional diplomatist will be nominated to the post, which would be in effect a neutral decision and would leave the door open to further negotiations. On the other hand, the nomination of M. Tardieu (whose name is being mentioned for the post in several directions), or some other leading politician, would suggest that the Government has decided to force ratification through, and endeavour to settle at the same time not only the debt problem, but also the cognate questions of the monetary difficulty and the securing of foreign credits. It is difficult to foresee how any settlement on the lines of the present agreements is possible, however, with the continued presence in the Cabinet of M. Louis Marin and others who are known to be immovably opposed to ratification. Even if approval of the agreements were forced through the Chamber on a vote of confidence, it is practically certain, I was assured by a prominent banker member of the Upper House, that the Senate would refuse to ratify them.

The solution of the stabilisation or revalorisation dilemma seems as far off as ever. The recent remarkable improvement in the franc and its corresponding fall immediately afterwards has caused considerable alarm, but is generally regarded as merely incidental and as affording no reliable data of its real tendency. In professional as well as official circles there is a good deal of alarm as to what the immediate outcome of the present situation may be, unless the exceptionally delicate situation is handled by all parties with extreme care. M. Romier, the able editor of the *Figaro*, holds that the present value of the franc lies at between 120 and 130, and other authorities predict that by the spring it will have reached 100, the point where it stood in the autumn of 1925. There has been a great deal of wild talk in the Press as to the possibility of the franc recovering to the neighbourhood of par, but the danger that would attend any further substantial recovery in present circumstances is too obvious to need comment, as all authorities agree. It is this feature of the problem which makes M. Poincaré's task so difficult. Fortunately, it is recognised in responsible quarters that, however desirable it may be that the franc should recover its full value, it is still more desirable that this shall not occur until the country's huge mass of internal debt has been satisfactorily dealt with. M. François-Marsal urged recently, from his place in Parliament, that a day should be fixed for arresting the improvement in the recovery of the franc, and that its value should be stabilised at the point midway between the index figure for internal prices and that representing world prices. M. de Chappedelaine, the rapporteur to the Budget Commission of the Chamber, on the other hand, points out in his report that unless stabilisation is fixed at a comparatively high figure, the whole equilibrium of the Budget will be upset, as it would immediately involve a substantial falling off in revenue from all indirect taxation, and particularly from the tax on turnover, which is now the largest individual source of revenue.

The uncertainty which has prevailed for some weeks as to whether the Bank of France has been paying for its purchases of gold and silver coin with bank notes that have been excluded from the weekly return of notes in circulation has now been removed. In a communiqué which it issued last Thursday, and which was published simultaneously with the usual weekly statement, the Bank says:—

Certain persons persist in believing that the notes actually in circulation are the subject of accountancy; the one made public in the item "Notes in Circulation" in the weekly statement, and the other concealed and dissimulated in the item "Sundries" in the same statement.

All the notes in circulation, without exception, whether they have been issued in connection with commercial operations, against advances to the State or in payment for purchases of gold, silver, and currency instruments authorised by the law of August 7, 1926, figure without distinction under the item "Notes in Circulation."

The law of August 7, 1926, merely stipulated that the legal limit of the note circulation, as it had been fixed by previous laws (at 58,500,000,000 f) would be automatically raised by an amount equivalent to the purchases of gold, silver, and currency instruments

made in conformity with the said law. The Bank has so far had no need to utilise this supplementary margin.

Last Thursday's Bank statement set forth that the bank purchases of gold, silver, and "devises" (foreign exchange) amounted to date to 1,402,509,192f, or an increase of 73,711,559f on the week. The continued satisfactory recovery of taxation was confirmed by the item showing that during the week the Treasury had reduced the debt to the bank by a further 200,000,000f, while the note circulation had been reduced by a further 862,715,065f. The report in circulation recently to the effect that the bank itself has not yet begun to buy foreign exchange, it is now evident, was exaggerated, to say the least, but in any case the total of these purchases cannot have been large, as they are included in the same item as gold and silver currency purchases. The omission from the law which now empowers the bank to buy foreign exchange of any provision setting forth whether any profit or loss that may eventually accrue from such purchases shall be borne by the bank or the State is stated now to have been corrected by a special agreement between the two parties to the matter, the terms of which have not yet been made public.

The exact amount of foreign exchange that has been secured by the Treasury with a view to ensuring the payment of all foreign debt maturities for the immediate future, and accumulating a *masse de manœuvre* as a weapon for defending the franc, is being kept carefully secret, but it is believed in banking circles to be very substantial. One report places the amount still at the disposal of the Treasury, after allowing for the reconstitution of the Morgan Fund of \$100,000,000 and providing for foreign debt maturities, at as high a figure as \$300,000,000, or between 8,000 and 9,000 million francs. The dollars and sterling that have been secured during the past weeks are understood to be held in New York and London to the credit of the French Government, which has been credited with their value in francs in Paris.

GERMANY.—POLITICS—CURRENCY—POSTS AND RAILWAYS—EMPLOYMENT—INDUSTRY—FOREIGN TRADE—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, November 24.

No further progress has been made towards Cabinet reconstruction. In the Reichstag debate of November 23rd on foreign policy, the German-National spokesman was relatively moderate, and expressed scepticism as to international understanding in view of the existing obstacles rather than disapproval of the Cabinet's policy. Dr Stresemann gave good reasons why nothing definite has yet come out of the Thoiry negotiations, and implied that the question of the military control seems to him the most important matter at present. As now exercised, the control is little more than a sentimental grievance, but it is a weapon in the hands of Right extremists. The Cabinet holds that the competence of the League of Nations under Article 213 of the Versailles Treaty does not extend further than investigation, which, as it can only be undertaken after a special vote of the League Council, could not take the form of continuous control to replace the present system. Dr Stresemann declared that the clearing up of any doubt on this point cannot be made the condition precedent of the withdrawal of the Inter-Ally Control Commission.

The improvement in the exchanges in France is regarded in industry here with a good deal of satisfaction. Although the foundation of the International Steel Trust to some extent removed the chief cause of complaint against "exchange dumping," French competition is severely felt, and the last monthly calculations showed French iron and steel prices to be still considerably lower than German. Doubt is expressed whether the new high franc exchange level will be maintained. It is taken for granted that no badly depreciated currency can cease depreciating in the long run if its formal stabilisation is neglected. The French note circulation is considerably higher than in the spring, when the franc exchange was at about present level, and the gold price-index is very much higher. The paper mark also had big temporary recoveries, and more than once for a short time German gold prices were very

high. The prevailing view is that the franc exchange rise will delay stabilisation. The credit situation here is unchanged. Day money since the middle of the month has been obtainable at as low as 2½ per cent., month rates being relatively higher. A Reichsbank discount rate reduction is talked of. The present 6 per cent. for discounts and 7 per cent. for advances have been in force since July. A new factor which may make money dearer is the pending foundation of companies for financing retail business on credit, the aim being to increase the volume of sales activity by applying the American instalment payment method. The Prussian Cabinet has issued new rules regulating municipal borrowing abroad. All such loans, including short-term, need official sanction; and sanction will be given only when the money is needed for "directly productive purposes," and, further, when the particular municipal undertaking in which the proceeds are to be invested will itself yield the necessary interest and amortisation money.

The *Reichspost* reports for the operation year 1925-26 profits totalling 252,200,000 marks, or, if 66,900,000 marks carried over from the preceding year is deducted, 185,400,000 marks. Gross receipts, including the sum carried forward, were 1,782.7 million marks, as against 1,654 million marks in the preceding year. Receipts of the different branches were (in millions of marks):—

	1924-25.	1925-26.
Posts and Post-Cheques	880.8	945.0
Telegraphs	97.8	87.0
Telephones	648.3	614.9

The balance-sheet shows a growth in the value of buildings, plant, and equipment from 1,385 million marks on February 1, 1924, to 1,801 million marks on March 31, 1926. The department has large sums in hand, the chief being about 500 million marks post-cheque account deposits, and while part of these funds are permanently invested, an active credit policy is pursued with the rest. On March 31, 1926, the department had lent out to States and State banks nearly 290 million marks. Railway receipts show a steady increase, being (millions of marks) 372½ June, 410½ July, 413 August, 419½ September. The financial results, after providing for reparations bonds, reserve, and preference dividends, were:—June, 5 million marks deficit; July, 9.6 million marks surplus; August, 33.3 million marks surplus; September, 26.8 million marks surplus. Traffic continued to increase in October. The Director-General of Railways states that the British coal strike has resulted in an increase of about 100 million marks in German railway receipts in 1926, and that the strike will continue to affect the railway revenue favourably during the first half of next year.

The trades unions' reports for October show 14.5 per cent. of unemployed members against 15.6 per cent. in September, and 17.9 per cent. in July. The greatest improvement since July is shown in the textiles, clothing, and tobacco branches. The proportion of members working on short time in October was 9.8 per cent., against 15.9 per cent. in July. The number of unemployed out of 3,099,997 members of the Socialist trades unions in October was 449,744. Publicly supported unemployed on November 1st numbered 1,309,000, against 1,339,000 on October 15th. In Berlin there are signs of declining employment, which is probably due to seasonal influences. The Unemployment Insurance Bill, which will do away with the allowance system, has got through the Reichsrat, with certain changes. Premiums and unemployment pay are ordered in seven wage classes; and payments are limited to 70 per cent. of the wage in the lower, and 60 per cent. of the wage in the higher classes. The normal longest period for which unemployment pay may be drawn is 26 weeks, but when the labour market is depressed this term may be extended to 39 weeks. A new feature is a special "crisis provision," eight-ninths of the cost of which will be borne by the Republic, and the remainder by the municipalities. Premiums are payable by employers and employees, but the Republic may grant loans in times of emergency. The law is to come into force on April 1, 1927.

The steel trade is slightly less active. Pig-iron output in October was 935,279 metric tons, against 740,741 tons in October, 1925; in the first eleven months of 1926, 7,595,430 tons, against 8,699,335 tons in the same months

of 1925. The chief of the Kloeckner A.G. has made an optimistic statement concerning iron and coal prospects of 1927. A Central-German Steel Trust has been created by fusion of the steelworks formerly belonging to the Linke-Hofmann-Lauchhammer A.G. with steel works in Brandenburg belonging to the new Western Steel Trust (Vereinigte Stahlwerke). Most of the capital will be held by the Linke-Hofmann Co. and the Western Steel Trust. This is a new instance of dissolution of a vertical trust and creation of a horizontal trust instead. The proposed High-Grade Steel Trust is also assured; here the Western Steel Trust will be the predominant partner. The Vulkan and A.G. Weser shipbuilding companies are to fuse, and a trust corporation of all the North Sea yards is talked of. The Hamburg-America Co. has published an optimistic half-yearly report; dividends are to be resumed. Earlier plans for a shipbuilding trust were opposed by the more efficient yards, which objected to bear the burdens of the less efficient. The last week reported shows a new record in coal output on the Ruhr, the average daily production reaching 420,910 tons. The motor-car industry reports an improvement. Production cost is being rapidly reduced. The census of July, 1926, shows 544,894 motor-driven vehicles, against 425,790 one year before. The number of motor-cycles (small machines omitted) rose from 161,665 to 236,387; of private motor-cars from 174,665 to 206,456.

The textiles industry continues to improve. The turnover in the clothing industries in October exceeded that of September by 64 per cent. Sugar production in the business year ending August, 1926, was 1,603,247 metric tons, against 1,564,640 tons in the preceding year. The building report for 1925 shows that 165,053 buildings were erected, or 53.7 per cent. more than in 1924. The number of new dwellings provided was 73.4 per cent. more than in 1925. The net increase of 171,855 in the number of dwellings in the whole republic was, however, far from satisfying the demand, though in most districts there is a shortage only in small dwellings. In Prussia large apartments have been freed from the rationing and rent-control system, also shops and business offices if they are not connected with apartments.

The foreign trade balance in October was passive, for the fourth time this year. Without the import surplus in precious metals, which was exceptionally large, the deficit was 110 million marks.

Totals.....	882,398	839,882	8,171,604

The October trade report is remarkable because, as compared with September, it shows increases in all of the four groups of wares on both sides. About half of the increase in imports of raw and half-manufactured materials consisted of textile materials; finished textiles imports also increased considerably. Coal again accounts for part of the increase in exports of raw and half-manufactured materials. About half of the increase in manufactured exports consists of rolling-mill products and iron and steel wares, but exports of machinery declined by 4 million marks, and of finished textiles by 4½ million marks. Exports of miscellaneous chemicals, leather goods, dyes, paper, and paper wares increased. Imports (omitting precious metals) were the largest since October, 1925, exports the largest since March, 1926. The

industrial recovery is plainly reflected in the rapid growth of imports since May, and exports in the last four months have always exceeded 800 million marks, a total reached only once in the first six months of the year.

The Bourse has been weakish and dull. Two of the "D" banks again warn the public that quotations, judged by dividend yields, are very high. The chief present support for the Bourse is cheap money. Foreigners, and a good many Germans, are reported to have transferred their profits to the Paris and Brussels Bourses. The Berlin Bourse Committee has rejected a proposal to abolish fortnightly settlements and return to the pre-war system of only one settlement, at the end of the month. The return to month-end settlements would force the speculating public to increase their stakes. The present organisation of the futures market has not yet been tested in a long bear movement.

BELGIUM.—GOVERNMENT FINANCE—DEBT VALORISATION—TAXATION RECEIPTS—TRADE BALANCE—COAL—BOURSE.

(FROM OUR CORRESPONDENT.)

GHENT, November 22.

MINISTER FRANCOU, who was the chief author of the stabilisation measures, has retired from office owing to ill-health. In his parting letter to the Prime Minister, he gives a survey of the work accomplished under his direction. When assuming office, on May 22nd, he found a State debt of 6½ milliards francs to the National Bank, an internal floating debt of the same amount falling due before December 31st, and an external floating debt of 50 million dollars, equal to the gold reserve of the National Bank. Confidence was at a low ebb, and 6 per cent. Government stock had fallen as low as 55 per cent. At present, the State debt to the bank has been reduced to 2 milliards francs, the bulk of the internal floating debt has been consolidated, and there remain only about 2½ milliards francs falling due between now and 1932, for the payment of which the Fund for Amortisation of Public Debt will have sufficient resources, seeing it has a special annual endowment of 1½ milliards francs during four years, not including the normal allocations for debt redemption and the extraordinary receipts from sale of State property or from private donations. The external floating debt has been reduced to 25 million dollars, for the payment of which, at maturity, the necessary foreign exchange is already available. Between May 22nd and November 19th, 6 per cent. Government stock has risen from 55 to 73.

Without detracting from the admiration due to the energetic and businesslike way in which Minister Francoqui has handled the difficult situation left by the breakdown of the stabilisation measures of Minister Janssen, it must nevertheless be pointed out, in due justice to the latter, that it was only after his failure that public opinion in Belgium became sufficiently ripe for the drastic steps, thanks to which the present success has been achieved, viz.: (1) the fixing of the franc at a value nearly 70 per cent. lower than that of the first stabilisation; (2) the forced consolidation of floating debt; (3) the increase of taxation by 1,500 million francs; (4) the increase of the external debt and the conclusion of the foreign stabilisation loan at a rate of interest which, in other circumstances, would have been considered by public opinion as unnecessarily heavy. The State debt which, in 1914, totalled about 6,000 million francs, mostly internal, now amounts to about 60,000 million francs, of which nearly half is external debt. The service of the public debt, which amounted in 1913 to about 200 million francs, will now require more than 3,000 millions. The burden of the debt would be further increased if a revalorisation of internal debts to a percentage of their former gold value should take place. In certain directions a revalorisation of pre-war debts by 100 per cent. and of after-Armistice debts by 50 per cent. is advocated; others propose to give a compensation to the holders of rentes by enabling them to exchange same for preference shares of the National Railway Company on special terms. It is probable that,

if compensation is given, it will be very slight. Up till now, holders of rentes, as a whole, appear quite resigned to the stabilisation at the present rate, and to the loss they have sustained through the depreciation of the franc; it is, however, to be feared that, unless this question is rapidly solved, political parties may seize upon it for electoral purposes and press upon Parliament proposals which might make the position of the Treasury more difficult.

Receipts from taxation continue to exceed estimates:—

(In Million Francs.)

	Financial Year. 1925.	Financial Year. 1926.
Budgetary estimates.....	3,455 ..	3,285
Receipts up till September 30, 1926	4,052 ..	3,640
Excess of receipts over estimates	597 ..	355

The balance of trade for the first nine months stands as follows (in million francs):—

	Jan.-Sept. 1925.	Jan.-Sept. 1926.
Imports.....	12,863 ..	16,484
Exports	10,623 ..	12,820
Excess of imports over exports	2,240 ..	3,664

The continuation of the British coal strike has caused a serious shortage in Belgian coal supplies. Normally, Belgian production is about two million tons monthly, and consumption 2½ million tons. Belgium chiefly exports dry coals and imports bituminous coals (gas and coking). Not only are the latter classes practically unobtainable at present, but the exports, which have been going on until last month (and which are almost entirely stopped now), have rendered all classes of coals very scarce. For the first time, lignite from Czechoslovakia has been imported into Belgium. The Belgian Government has requisitioned 5 per cent. of the production of the collieries, which, through the medium of the municipalities, will be put at the disposal of householders who are unable to obtain the necessary supplies in the free market.

An agreement has been reached lately between mine-owners and miners as to wages: these will no longer fluctuate exclusively in accordance with the index of retail prices; in the new sliding scale which has been adopted the index of retail prices will only count for 75 per cent. and coal prices for 25 per cent.

Although it is generally admitted that many shares of sound Industrial Belgian undertakings have not yet risen in accordance with the depreciation of the franc, the Bourse is hesitant. This is ascribed partly to a reflection of the slump on the Paris Bourse, and partly to a fear that internal prices will rise further, and that a tightening of money may be expected before long. The increase in the latest weekly statement of the National Bank, of private deposits by more than 200 million francs, reflects the desire of private banks to maintain sufficient liquid funds. The National Bank no longer includes in the amount of notes outstanding the five-and-twenty franc notes, amounting to 800 million francs. These are taken over by the State, and will be transformed into currency notes, to be replaced later on by silver coin. The liabilities at sight and short notice of the National Bank are at present covered as to more than 50 per cent. by gold and gold exchange.

CZECHOSLOVAKIA.—POLITICAL CO-OPERATION— BUDGET—COAL—COMMERCIAL TREATIES— TRADE.

(FROM OUR CORRESPONDENT.)

PRAGUE, November 10.

THE political situation has taken on quite a different aspect during the last few weeks. That which all thinking people have seen to be essential for the future development of the State, viz., the co-operation of all nationalities in the work of government, now seems within sight of realisation. The Germans have already accepted two seats in M. Svehla's Cabinet, and the Slovak Clerical Party is at the moment busy choosing two of its own number to fill two other ministries. Such a step is of great importance, and should help to solve the many problems with which

this State is still confronted. The Slovaks, through their leader, M. Hlinka, still declare that they will be satisfied with nothing but full autonomy, as laid down in the Pittsburgh Agreement, but it is the firm conviction of the best students of Slovakia that, given a little greater economic prosperity and more education in that region, the problem will settle itself.

The first duty of Parliament after reassembling in October was the consideration of the Budget, which was presented by the Minister of Finance, Dr Englis. In a speech which aimed at stating quite frankly the real position of the State finances, Dr Englis declared the great defect to be that "the existing financial system did not correspond with the economic structure of the State," first, because of the excessive demands made by way of taxation both by the State and the local financial authorities, and, secondly, because the present method and imposition of taxation do not recognise sufficiently that Czechoslovakia is primarily an exporting country which must compete in foreign markets. This is the first Budget in which the whole expenditure upon capital investment is included, and though new expenditure to the extent of 800 million Kc—450 million Kc for increases of pay to the underpaid State employees, 37 million Kc for pensions, and 109 million Kc towards the consolidation of the pre-war debt—has been incurred, still there is a small surplus of 20 million Kc. Revenue was estimated on the basis of the actual yield of the past two years, and the following expenditure items seem to indicate the right kind of development:—

(In Millions of Kc.)

	1926.	1927.	Difference.
Ministry of National Defence..	1,935 ..	1,370 ..	—565
Education	782 ..	766 ..	+ 16

(The latter should also be increased by 325 million Kc. entered under another section.)

Dr Englis, during his whole period of office, has aimed at the removal of the floating debt. Last year 1,000 million Kc were wiped off, so that it now stands at 4,600 million Kc. In addition, he has made the first attempt at the establishment of a sinking fund by allocating a portion of the State income from taxes to the consolidation of the State debt, and is setting aside 600 million crowns every year for annuities.

The Budget figures were as follows:—

	(Kc. 000's omitted)	
Revenue.....	Expenditure.....	Surplus.
9,723,914	9,703,505	20,409

While the sugar beet output for the season 1925-26 is easily a record (both for pre-war and post-war years), all is not well with this industry. High taxes and the extent to which some of the refineries are indebted to the leading banks prevent healthy development.

That the English coal strike may not turn out to be such a great boon to the Continent as was at first expected is now beginning to be generally realised, and nowhere more than in Central Europe. A shortage of coal on the home market is just beginning to make itself felt, which may soon necessitate a partial—if not complete—prohibition of exports. A shortage of wagons has prevented the Czechoslovak coal trade from benefiting to the extent which it might have from England's misfortune. Bohumin (Oderburg), on the Czech-Polish frontier, and the chief outlet for the Moravska-Ostrava coalfield, is so congested with accumulations of coal transport that the position has called for immediate attention. The most important effect of the strike upon Czechoslovakia has been that coal can now go South, especially to Italy, where formerly it was impossible to compete with England. According to reports issued by the Ministry of Works, the output of coal in the third quarter of the year shows an increase of 17 per cent., and exports are higher by 80 per cent., totalling 1,646,860 tons. Of this latter amount, England imported 234,899 tons of pit (i.e., black) coal.

Negotiations preparatory to Czechoslovakia's entry into the new European Steel Trust have hitherto been unsuccessful owing to disagreement, not upon the quota of 1,500,000 tons which was to be this State's share, but as to the distribution of this quota among the various home concerns, and endeavours are being made at the present to win the support of the one company which still stands out.

Commercial relations, on the basis of most-favoured-

nation treatment, have been established with Japan, Hungary, and Turkey, and a satisfactory arrangement with Canada has been arrived at which will be signed during the next few days. The commercial negotiations with Germany are likely to be protracted in view of the conflicting interests on both sides. But some better understanding is much desired by this State, 23 per cent. of whose exports go to Germany, and 18 per cent. of whose imports come from that country. Austria's sudden denunciation of the supplementary agreements to her commercial treaty (of 1921) with Czechoslovakia has come as a great surprise, especially as it was thought that this matter would have been satisfactorily arranged in the meetings planned for January next. Such an arbitrary step is regarded here as a hindrance to the stabilisation of commercial relations in Central Europe.

Trade is still very slow in many of the principal industries, but the general feeling seems to be that the economic crisis has passed its worst stage. The number of unemployed is now 76,000, i.e., 2.1 per cent. of the whole body of workers. Orders to the value of 81 million Kc (over £500,000) have just been placed here by the Soviet Trade Mission in Prague. These are principally for engineering plant.

The trade balance for September was as follows:—

	(000's omitted.)		Surplus
	Imports.	Exports.	of Exports.
In tons.....	735,038	1,256,319	521,281
In Kc.	1,367,087	1,482,890	115,803

The figures show a favourable tendency.

ROUMANIA.—OPENING OF PARLIAMENT—LOAN NEGOTIATIONS—CURRENCY STABILISATION—CROPS AND TRANSPORT—OIL EXPORTS—BOURSE.

(FROM OUR CORRESPONDENT.)

BUCHAREST, November 20.

THE Royal Message read at the opening of Parliament on the 14th gave the first authoritative outline of the legislative programme of a Government which took office eight months ago. The Message itself provides sufficient explanation for General Averescu's reluctance to come to grips with the Chamber. In so far as it deals with the pacific and successful policy of the Government in foreign affairs—and it does so at considerable length—the Press has no unfavourable criticism to offer. The programme of internal legislation which it foreshadows, however, has been badly received, the main comment being that Roumania's major problems—i.e., currency stabilisation, foreign loans, drastic revision of the basis and methods of taxation, railway reconstruction, &c.—are to be left untouched. The inference now is that the Averescu Government intends merely to "mark time" for a few months until the former Bratianu régime is ready to return to power with a new economic policy designed to encourage foreign capital to enter Roumania under conditions less onerous than those imposed in the past. In other words, the shelving is implied of the "through ourselves alone" policy which has inspired most of the Bratianu post-war economic legislation.

In the meantime, however, the Averescu Government is apparently not without hope of securing foreign loans, and there have been persistent reports in the Press during the past week or two that London bankers have offered to float a £30,000,000 loan for the National Bank, £10,000,000 to be set aside to assure the success of an operation for establishing lei exchange, and £20,000,000 for re-equipping and extending the country's transport services. To guarantee the services of the issue, it is stated, the bankers suggest that the Government should earmark its minimum 2 per cent. royalty on all oil produced in Roumania, and, in addition, permit the bankers to exercise some control over the revenues of the State railways during the life of the loan. While welcoming the reported offers, the Bratianu newspapers were prompt in reminding the Government that no loan conditions threatening Roumania's complete financial and economic independence would be acceptable. There the matter rests for the present.

Opinions are very much divided on the question of currency stabilisation. The business community would, of course, welcome any feasible scheme for restoring some degree of stability to the lei. With the actual gold holdings of the National Bank only about 2 per cent. of the outstanding currency circulation, however, any stabilisation plan would have to be almost wholly dependent on foreign credits. Moreover, Roumania by legislation enacted a year or so ago is already committed to a so-called 15-year revalorisation programme, and the Bratianus have certainly given no indication yet that they would accept an immediate devalorisation of the lei in place of their revalorisation plan. During the life of the present Government, therefore, any attempt permanently to stabilise exchange is very unlikely.

The harvesting of the crops has been completed under very favourable conditions, so much so that the Ministry of Agriculture has raised the estimated yield of maize from 51,000,000 to 57,000,000 metric quintals. The final estimate of wheat is 30,000,000 quintals, rye 2,800,000, oats 11,600,000, and barley 16,800,000. On the basis of the latest estimate, this year's maize crop is nearly 50 per cent. greater than in 1925, and, figuring internal requirements at around 30,000,000 quintals, the balance available for export should be more than 25,000,000—or 2,500,000 metric tons. Assuming that there would be no export of other grains, a recognised authority claims that—with transport facilities in their present condition—it would take Roumania two years to move out 2,500,000 tons of maize. This claim may be somewhat exaggerated because of the abnormal conditions which at present prevail in the grain export trade, first because of the extremely low prices now being offered, and secondly because the scarcity of ocean tonnage and high freight rates resulting from the British coal strike have brought the outward movement of grain and timber from Roumania—at least from the lower Danube ports—almost to a standstill. The high hopes that had been entertained of an intensive grain export movement this autumn have now vanished completely.

The export of oil products, however, has not been affected by the British strike, and the outward movement from Constanza has been extremely active during recent months. During the first nine months of the present year Roumania exported slightly over 1,000,000 tons of oil products, which is almost double the comparative figure for 1925. More than 150,000 tons per month are now being shipped out. In view of the impending winter traffic disorganisation, however, and the inability of the transport services to keep up with the increasing refinery outputs, crude production is now being shut in and new drilling curtailed. In consequence, the daily crude output, which a few weeks ago reached a new high "record" of 12,000 tons, is now back to 10,000. Even a daily output of 10,000 tons, however, which means about 5,000 for export, is more than the railways and the Constanza pipelines will be able to handle during the winter months.

With more borrowers than lenders at 3 per cent. per month, there is obviously no money available in Roumania for Bourse speculation. In consequence, the security markets are flat, with very little business passing. For four years now the Bourse—with intermittent rallies, of course,—has had to withstand a steady flow of liquidation, and values on a gold basis have shrunk to a very low level. They can hardly go lower, but, on the other hand, a pronounced upward swing seems out of the question until the prevailing money crisis has been weathered.

NORWAY.—THE RISE OF THE KRONE—INCREASED UNEMPLOYMENT—EFFECT OF BRITISH COAL DISPUTE—SEPTEMBER TRADE.

(FROM OUR CORRESPONDENT.)

TRONDHJEM, November 17.

THE relation of the Norwegian krone to foreign currencies is still one of the most prominent economic questions of the day, and recent events have brought still more immediate importance to this problem. Since October 13th, when the Norges Bank decided to discontinue its purchase of foreign currencies, the rate of exchange for

sterling has fallen off from 22.20 to 19.75, where it remained unchanged from October 22nd till November 16th, although in the open market transactions took place at rates ranging from 19.30 to 19.50. It was obvious that a new rise of the krone was anticipated, and yesterday a considerable amount of sterling was offered at 19.15, while the official rate was only reduced to 19.45. To-day, again, sellers of sterling dominated the market, and with the Norges Bank's quotation at 19.10, the market closed with sellers somewhat below 18.80.

As will be seen from the above, the rise in the value of the krone equals about 15 per cent. in five weeks, and although a downward movement in prices has been perceptible for some time, it is quite clear that the disproportion between the internal and the external value of the krone is still very considerable. The difficulties which this sudden appreciation of the krone presents to private business life are so manifold that to enumerate them would lead too far, but they are already notoriously manifested by reduced hours and employment in factories and workshops all over the country. But by far the most serious thing in connection with the krone rise is the fact that public debt is not being reduced in a corresponding proportion. Both State and municipalities will be faced with unprecedented difficulties when trying to balance future budgets, and radical measures will have to be taken to cut down expenditure all along the line.

However, much has already been achieved in this direction, and it must be admitted that—everything taken into consideration—a return to gold parity, which seems to be the natural course, would be less embarrassing now than it would have been at an earlier juncture. The real crisis undoubtedly fell in the spring of 1923, when the many bank calamities threatened the country with economic ruin, and the general impression is that the country has stood the strain of the rapid appreciation of the currency and the consequent deflation process better than might have been anticipated.

To counterbalance the extraordinary conditions caused by the rise in the value of the krone, and as a result of a pronounced easement on the money market, the Norges Bank, on the 27th ult., further reduced the discount rate to 4½ per cent., the preceding reduction having taken place only six weeks earlier. This is the lowest bank rate on record since 1916, and our discount rate is now lower than that of the Bank of England. Most of the private banks simultaneously reduced their deposit rates from 2 to 1 per cent. for call money, and from 3½ to 4 per cent. to 3 respectively, 3½ per cent. for deposits on three and six months' notice. In spite of these low rates, bank deposits do not seem to decrease, judging by the latest weekly returns of the big Oslo banks, which reveal an expansion of deposits of nearly 10 million kroner.

The latest unemployment figures show an alarming increase, especially considering the fact that the real winter season, when unemployment usually is at its highest, has not yet set in. As in October about 40,000 men were out of work, as compared with only 27,000 in October, 1925, this unfavourable position must be seen in connection with the exchange situation and the British colliery strike. The coal deadlock has been the source of difficulties not only to industry, but also to the railway and steamship service, and its solution will therefore be greeted with satisfaction all over the country.

The foreign trade returns for September show an excess of imports of about 42 million kroner, which is considerably above that of any previous month during the current year. This unfavourable proportion is chiefly accounted for by the paper strike, which reduced the value of exported woodpulp and paper by nearly 20 million compared with September, 1925. Compared with the first nine months of 1925, however, the surplus of imports during the same period in 1926 is reduced from 289 million to 208 million kroner. The stock market has been unusually active during the last week or two, and the present favourable position on the freight market has brought about an appreciable rise in most of the shipping shares.

ARGENTINA.—GENERAL CONDITIONS—TRADE BALANCE—FREIGHTS—THE BRITISH COAL DISPUTE—CROP ESTIMATES—GOVERNMENT FINANCING.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, October 29.

THERE is little change to report in the situation to-day, except that having passed through another month, the importers have time on their side in the matter of eliminating the surplus stocks with which the market had been flooded, and the noticeable decrease in imports during the past few months is all to the good. Business in general still remains on the restricted side, both because of the slow process of getting rid of this glut and the lower values offering for the main products of the country, and for some time yet the business world will evidently be obliged to adopt a cautious policy. In the circumstances it is pleasing to report that the declared liabilities in the September bankruptcy cases were the lowest for the year, amounting to \$11,267,550, as against \$15,398,567 in August, and \$11,974,601 in September last year. This, however, still leaves the fact that the total for the nine months, \$122,419,600, compares badly with the corresponding figure last year, which was \$89,877,615, and altogether it looks as if 1926 will end with something of an inglorious reputation in this respect. Banking business is naturally suffering, the tendency being for deposits to increase, while discounting continues sluggish. From 7½ to 8½ per cent. is being charged for advances on current account, and from 6½ to 7½ per cent. for discounts. The exchange market has remained very dull throughout the month, sight rates on London and New York holding fairly steady to-day at about 45½d and \$107.80 respectively. The tone on the Bolsa is quite satisfactory, the outstanding feature being a lively speculative movement in the shares of a local oil concern (Astras), which imparted some degree of activity to a section of the market which in the ordinary way suffers from the preference for public securities.

The following official statistics covering the first nine months of the year show the position in regard to exports:—

	VALUE (gold pesos).			
	January-September.		Difference.	
	1925.	1926.		%
Pastoral	289,170,563	255,367,845	—33,802,718	13.2
Agricultural....	376,993,793	337,030,659	—39,963,134	10.6
Forestral	15,505,321	14,689,314	—816,007	5.3
Other produce ..	10,659,652	10,534,249	—125,403	1.2
Totals ..	692,329,329	617,622,067	—74,707,262	10.7

	VOLUME (tons).			
	January-September.		Difference.	
	1925.	1926.		%
Pastoral	1,117,056	1,103,782	—13,274	1.2
Agricultural....	6,830,799	7,532,997	+702,198	10.2
Forestral	279,315	230,842	—48,473	17.4
Other produce....	353,252	320,155	—33,097	9.4
Totals	8,580,422	9,187,776	+607,354	7.0

The corresponding returns for the first quarter showed decreases in both volume and value (13.2 and 22.6 per cent. respectively), while by the end of June the tonnage had increased by 13.6 per cent., and the reduction in value had dropped to 10.3 per cent. A decline in meat and wheat shipments, the values of which are down \$19,366,142 and \$66,091,537, is more than offset by larger shipments of linseed, maize, barley, oats, rye, wool, and various other commodities but unfortunately this only ameliorates the adverse comparison with last year, due to the general price depreciation. One effect of the turn for the worse in market conditions has been to deprive the national exchequer of a useful amount of revenue, since the values of many of the exports have dropped below the basic figure fixed for taxation purposes. Thus, out of the total value given for the nine months under review, \$214,118,000, or 34.6 per cent., represented produce which left this country free of duty, whereas the proportion in the same period of last year was not more than 22.5 per cent. This has contributed to a reduction in the total revenue from \$479,137,167 in January to September, 1925, to \$451,833,081, the falling-off being largely due to lower receipts from both export and import taxes. It may be added that no information has yet been published

as regards imports later than the figures for the first quarter, so that the effect of the comparatively poor export position on the balance of trade can only be guessed at.

Everyone in this country is praying for an early settlement of the coal strike, the long duration of which has aggravated an already unsatisfactory state of affairs. At a time when low freights are eminently desirable to clear off our relatively low-priced production, tonnage is exceedingly scarce and expensive. Notwithstanding daily rumours that the dispute is on the verge of a settlement, the freight market continues strong and active, and prices are soaring. Typical rates are 42s 6d from up-river or Bahia Blanca to the United Kingdom or Continent, and a couple of days ago 52s 6d was agreed upon, San Lorenzo to U.K. or Continent, for a boat of 7,000 tons, November 25th cancelling, with option of December 5th at 50s. Both coal and tonnage are badly wanted, and even in the event of an immediate end of the strike it will take some time to ease the position. According to the calculations of the Ministry of Agriculture, the exports of wheat and flour from January 1st to the end of September, amounting to 2,091,470 tons, should have left an exportable surplus from the last harvest of 1,120,171 tons, while in the case of linseed the export is given as 1,381,576, and the surplus as 377,713 tons. As regards future prospects, the same Ministry has issued its second estimate of the area sown with wheat, linseed, oats, barley, rye, and birdseed showing a total of 12,425,400 hectares. This represents an increase of 150,400 hectares over last month's preliminary calculation and one of 253,040 hectares, or 2.1 per cent., as compared with last year, while the advance on the figure for the season 1912-13 is as much as 22.1 per cent. The final estimate still remains to be issued, but this is not expected to show any material variation on the total as given.

Two important financial operations have recently been arranged in New York on behalf of the Argentine Government by Messrs J. P. Morgan and Co. and the National City Bank. The first related to the private sale of \$20,000,000 six months Treasury bills, and the second to the public issue of \$16,900,000 34 years 6 per cent. bonds at a price of 98½, this being quickly over-subscribed. The bulk of the last-mentioned loan is to meet certain liabilities of the State railways, but it is understood that a small proportion will be sent here. Evidently there is nothing wrong with Argentine credit at the present time, notwithstanding the fact that the commercial position just now is none too brilliant, and, indeed, the good work of President Alver to place the finances on a thoroughly sound basis is meeting with its reward.

Letters to the Editor.

THE BRITISH TYRE INDUSTRY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—After some trouble I have got together statistics which would not appear to confirm the criticism of British tyre salesmanship made by Mr F. Webster in a paper recently read by him before the Manchester section of the Institution of the Rubber Industry.

"It is quite true," said he, dealing with export business, "that American figures are much higher than ours, and, moreover, it is likewise correct that progress on the part of our rivals is much faster."

Is it? Here are the motor cover exports of Britain and America for the five complete years from 1921 to date, with the percentage of increase and decrease for each year:—

	U.S.A.	Increase.	United Kingdom.	Increase.
		%		%
1921	840,000	..	163,000	..
1922	1,326,000	.. + 57½	271,000	.. + 66½
1923	1,363,000	.. + 2½	397,000	.. + 46½
1924	1,389,000	.. + 2	550,000	.. + 38½
1925	1,770,000	.. + 27½	872,000	.. + 58½
Total percentage of U.S.A. Total percentage of United Kingdom increase over four years, 111%. increase over four years, 435%.				

Far from the progress of our rivals being "much faster" than ours, it will be noted that in no year have American sales increased by a higher percentage than British sales. If, then, Mr Webster had thought fit to say that the rate of

American progress was much slower than ours the statement could not have been challenged.

He might have added that the total export figures for this country are vitally affected by the fact that one big British manufacturer secures business overseas by establishing factories abroad to get it on the spot.

He might have pointed out that, despite this circumstance, a handful of British factories are actually exporting to-day more than half the total number of covers sold by one hundred and sixty American manufacturers.

He does not mention these facts for one simple reason—the British salesman is always the pessimist, his American cousin the universal optimist.—Yours faithfully,
London, November 24th, 1926. "STATISTICIAN."

DEBT AND UNREST.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of the 13th inst. your correspondent Alfred Hoare writes:—

"(1) Income-tax, unlike local rates on an assessed annual value of a factory, is not an expense which enters into cost of production; it therefore does not to any appreciable extent hinder output."

This appears to be a general opinion, and I shall be glad if you will allow me to try and briefly correct this false idea.

Local rates assessed on the tenant occupier certainly enter into cost of production, but tend to leave a smaller margin for rent—i.e., they tend to reduce rents. The methods of collecting that part of local rates which are not for services rendered so far as business is concerned is wrong in that it is not related to ability to pay. But the advantage of local rates over income-tax is that it is more direct, and only applies to buildings with land and has not the many ramifications of income-tax. That municipalities should collect yearly more than the landlord in a great many cases is certainly ridiculous. But, as Henry Ford says, taxation breeds poverty, and a large slice of local rates is for the education and relief of the poor.

Mr Alfred Hoare is deluded, in common with most others, in thinking that income-tax is a direct tax and does not enter into the cost of production.

Income-tax (Sch. A) increases all rents and, commencing with the rent of the coal miner, farm worker, &c., proceeds through every stage of production, transport and manufacture, multiplied by gross profit and augmented by the further Schedule A tax at each stage.

Income-tax (Sch. B) increases the rate of interest on mortgages, &c.

Income-tax (Sch. C) increases the general rate of interest. Income-tax (Sch. D) increases the cost of the articles produced in business concerns, and if it is a raw or semi-manufactured material the increase is multiplied by gross profit to the next handler.

Income-tax (Sch. E) increases the cost of Government, corporation and public company administration, and so increases national and local taxation. The increase caused by the tax in public company administration is multiplied by the net profit in the cost of raw or semi-manufactured articles or in the transport or distribution of the same.

Each of the income-tax schedules increases the cost at various stages of production, and except where the income-tax payer is dealing with the consumer the increase is compounded at gross profit ratios.

Although these increases due to income-tax at various stages of production may be relatively small as percentages, their aggregate value is a large proportion of the £330 millions collected under the Income Tax Acts. The compound accumulation of these increases at 33½ or 25 per cent. gross profit ratios, together with additions at each of several or many stages of production, must be enormous, and is reflected in the high cost of living and production, but has probably a more disastrous effect in the wasting of assets and the destruction of capital.

Income-tax in its present form and magnitude is the most indirect tax it is possible to conceive. Truly, it is collected at the source, and tends to dry up every river of commerce.—Yours truly,
J. J. E. SLOAN.

Holmsfield House, Liverpool, November 18th, 1926.

Books and Publications.

THE OIL WAR.*

THIS is a readable account of the political implications of the commercial fight for oil territory, with a brief introduction by Mr. Hartley Withers. It is written by the Lecturer of Political Geography at the University of Oslo, and is conspicuously free from bias. The author makes

* "The Oil War." By Anton Rohr. Martin Hopkinson and Co. 7s 6d net.

full use of the recent literature that has appeared on this complex subject, but, as is common with students of politics who are not in actual touch with the oil industry, he makes a number of mistakes. For example, no one with any knowledge of the oil business would regard British Controlled Oilfields as an important instrument of British oil policy—"carrying on open warfare against Standard Oil in the same manner as this is done by Royal Dutch and the D'Arcy Exploration Company"—or as having acquired "in recent years a surprising number of the most valuable oilfields around the Caribbean Sea." Such statements show that the author is dependent for his story upon what he has read in books and articles (mostly unreliable), and not upon any real experience of the oil situation. We doubt whether even his main theme that "in all parts of the world the oil war is being waged with the same ruthless intensity"—is tenable at the present day. Iraq, which is probably the world's biggest potential oilfield, has been parcelled out among the contending nations or combines. There is no outstanding territory left that invites an international scramble. The opposing oil groups are still as keenly competitive as ever in acquiring new concessions, but they are finding themselves more often united in a common defensive against the "attacks" of foreign Governments, as, for example, in Russia, Mexico, and Roumania. The author's wholehearted sympathy with the Mexican Government will be found a little strong for the ordinary taste. He really should not suppose that every political intrigue of an oil company is inspired by the Government of that company's native country. The British Government's holding of Anglo-Persian oil shares is no doubt largely responsible for this illusion. That holding, the child of Mr Winston Churchill's genius, has turned out to be a great financial success, but that is as far as it goes. Governments are not taking the same interest in oil questions as they did after the war, when the spoils of victory were being divided. Probably none of them now believes in the idea of a world oil shortage.

BOOKS RECEIVED.

Banker and Customer. By S. Evelyn Thomas. (St. Albans) Donnington Press, 40-42, St. Peter's street. (London) Sir Isaac Pitman and Sons, Limited, Parker street, Kingsway. 12s 6d net.

This volume aims at giving students and practical bank men an up-to-date exposition of the principles and practice of banking as conducted in this country.

What Price Progress? By Hugh Farrell. (London) G. P. Putnam's Sons, 24 Bedford street.

The question which this book poses and answers is: "Is America keeping step with the rest of the world in the application of science to industry?" A fairly comprehensive review is given of the present state of the industrial arts in America.

Land Planning in the United States for the City, State, and Nation. By Harlean James. Preface by Richard T. Ely, introduction by Albert Shaw. (London) Macmillan and Co., Limited, St Martin's street. 21s net.

An American study of land-planning, both urban and agricultural. The following sentences may be taken as the keynote of Miss James' theme:—"In the future we must plan ahead and make the best possible use of land, both rural and urban, if we are to maintain or improve the comfortable standards of living which we have set up." "We need less independent action and more team work."

Imperial Defence. By Stephen King-Hall. (London) Ernest Benn, 154 Fleet street. 9s net.

The British taxpayer is paying £116 millions for Imperial defence. The aim of this book is to explain to him why he pays it and what he gets for it.

The Imperative Need for Public Economy. By Francis W. Hirst. (London) League to Enforce Public Economy, 20 Essex street. 3d.

A memorandum on the recent growth of national expenditure and taxation, containing a criticism of Mr Churchill's Budgets and an appendix on the French scheme of economy.

The British Public and the General Strike. By Kingsley Martin. (London) Hogarth Press, 52 Tavistock square. 3s 6d.

An examination of the issues involved in the general strike, the expressions of public opinion, the conduct of the public, and the relation of the strike to the constitutional position.

Economic History of England. By M. Briggs. (London) University Tutorial Press, Limited, High street, New Oxford street. 8s 6d net.

This book is an attempt to give within a "reasonable" space—in fact, it is over 540 pages—an elementary account of the economic development of England down to the present day.

The Libelle of Englyshe Polycye. A Poem on the Use of Sea Power, 1436. Edited by Sir George Warner. (London) Oxford University Press, 11 Warwick square. 10s 6d net.

This poem was written in 1436. Its main purpose was to show that the future greatness of England depended upon the development of trade and the right use of sea-power. This is the first critical edition of the poem. The editor, Sir George Warner, was formerly Keeper of Manuscripts and Egerton Librarian at the British Museum.

Statistical Abstract of the United States, 1925. (Washington) Government Printing Office.

Represents a digest of the data collected by all the statistical agencies of the U.S. Government, as well as of those of some private agencies and one or two States. It is, in fact, a condensed but comprehensive summary of statistical data, covering all the business and activities of the American nation.

Questions and Problems in Accounting. By Russell A. Stevenson and R. Emmett Taylor. (London) Macmillan and Co. 8s 6d net.

This book consists of questions and problems in the principles of accounting, and refers mainly to American practice.

The Motion Picture in Its Economic and Social Aspects. (Philadelphia) Annals of the American Academy of Political and Social Science, November, 1926.

Will be read with interest by English readers, in view of the recent deliberations of the Imperial Conference on the same subject. Various writers contribute papers on the technical, literary, educative, and commercial value of the motion picture.

International Crop Report and Agricultural Statistics. November, 1926. (Rome) International Institute of Agriculture.

The "Express" Metric Quotation Reckoner. By J. Gall Inglis. (London) Gall and Inglis, 31 Henrietta street.

A useful little book enabling a conversion to be made at a glance from British weights and measures to a metric basis. *Lloyd's Calendar, 1926.* (London) Lloyd's, Royal Exchange. 3s 6d.

As indispensable as ever as a reference book on all matters concerned with the shipping world.

The Round Table, December, 1926. (London) Macmillan and Co., St. Martin's street. 5s net.

Includes articles on "Anglo-American Relations" and "India: Political and Constitutional."

Bulletin of the British Library of Political and Economic Science. November, 1926. London School of Economics, Houghton street, Aldwych, W.C. 2. 6d.

Includes a useful bibliography on the subject of International Cartels.

OFFICIAL PUBLICATIONS RECEIVED.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C. 2:

Department of Overseas Trade: Reports on the Financial and Commercial Situation of Austria. September, 1926. 1s 6d net.

Return relating to all Authorised Gas Undertakings in Great Britain for the year 1925. Part I. Particulars relating to the manufacture and supply of gas. Board of Trade. 1926. 5s net.

The return deals with all authorised gas undertakings, a total of 781. The quantity of gas made and sold is shown both in cubic feet and therms, the latter in some cases being estimated. The quantity of gas made in 1925 showed an increase of 3.1 per cent. as compared with that of 1924, but the amount of coke, breeze, and tar showed a slight falling off.

Treaty of Mutual Guarantee, between the United Kingdom, Belgium, France, Germany, and Italy; Locarno, October 16, 1925. Cmd. 2764, 1926. 3d.

Contains the text of the famous "Locarno Pact." *League of Nations: Forty-First and Forty-Second Sessions of the Council; Report by the British Representative.* Cmd. 2761, 1926. 4d.

The Mineral Industry of the British Empire and Foreign Countries: Statistical Summary, 1923-1925. Imperial Institute. 8s.

A useful compendium of the world's production, imports and exports, of 49 different minerals, including gold, silver, platinum, coal, iron and steel, quicksilver and diamonds, prepared by the Mineral Resources Section. A bibliography of current statistical publications in many countries is appended.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
December 7. December 9.

THE damp squib conclusion to the coal dispute has had little influence over prices in the Stock Exchange markets, where the main factor continues to be the effect produced by Paris operations in speculative inter-bourse issues. The fortnightly account, which finished on Thursday in this week, has proved a quiet one, with business running on humdrum lines, although plenty of excitement is afforded by wild movements in a few outstanding features.

The investment market is steady, with the War Loan at 100, though dulness has occurred in Conversion 3½ per cents. Stock exchange talk runs on the probability of income-tax being increased in the next Budget, as a corollary to the losses sustained in consequence of the coal dispute. Various recently-issued Colonial and Corporation stocks have been in quiet demand.

Chinese bonds are better, on speculative purchases that have for their foundation vague reports of conditions in the country having become less disturbed. Mexicans, however, remain weak. Brazilians moved erratically. In the European group Belgian Sevens stand at the highest price hitherto recorded, namely, 7½ premium above the issue price of 94. French Government bonds are being picked up by people, who, recognising the 7 per cent. yield now offered, regard them as a healthy speculation rather than as a gamble.

Nothing seems to assist Home Railway prices for long. The disposition of the market is again heavy, by reason of the approach of dividend-time and the fears that this arouses in regard to the outlook for the second half of 1926 distributions. Brazilian Tractions recovered sharply, upon a statement by the board of the company to the effect that they would offer opposition to the proposal for including Brazilian Traction in a wider group. The Argentine railway market is quiet. Paraguay Central "D" debenture gave way upon the issue of a report which is considered disappointing. United of Havana recovered several points, thanks to the better outlook which opens for sugar, this having also a favourable influence over prices of shares in sugar-producing companies.

The rubber market is almost asleep. Tea shares give little signs of vitality. The oil market has subsided into quiescence. In the shipping, banking, and insurance groups there is nothing much doing. On the other hand, shares in the drapery and stores companies have been greatly stirred, and, in various cases, the prices have been run up on rumours to the effect that amalgamations are in contemplation, agreements that would, if carried out, give the shares substantially higher values than have been ruling of late. The air is thick with hopes and expectations. It is difficult to buy shares in a number of the well-known drapery and similar concerns. Dunlops have been another feature of strength, the advance accompanied by all kinds of rumours, amongst which may be mentioned the talk of distribution of American assets, the writing-up of the share capital and the prospect of a handsome dividend. Every rumour must be treated with great reserve.

Amongst textiles Courtaulds have been moving within unusually narrow limits, but buying of other artificial silk shares resulted in a good turnover of business and a general improvement in prices. The iron and steel market is inclined to improve. There has been a mild rise in a few of the popular brewery shares. The wireless division is uninteresting, and cable stocks, with the shares in the construction and equipment companies, hold their prices. London electricity supply issues are very quiet. Sudan Plantations, after a drop to 4½, recovered to 5½. Swedish match were a good spot. Tobacco shares are halting, though Carreras remain in demand.

The Kaffir Circus, with a few leading Rhodesians, moves at the nod of Paris. Diamonds are somewhat tender, owing to the discoveries of diamonds upon new areas. The tin share market is in a sensitive state, although the strength of the metal fortifies the bulls. Canadian and Russian mining shares dwindle from lack of public interest.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

Government of Newfoundland.—This is an issue of £1,027,300 5 per cent. bonds to bearer of £100 each at £99 per cent., redeemable at par in 1951. The bonds are a direct obligation of Newfoundland. The total debt, including the present issue, is given as £14,798,393; the population is 262,979. There is also a temporary loan from the British Government of £400,000, while loans to municipalities total £394,348. The amount standing to the credit of the sinking fund account is stated to be £309,867. Revenue for the year ended June 30, 1925, was £2,162,223, expenditure being £2,090,921. The proceeds of this issue are required to cover expenditure in connection with docks, railways, light-houses, development of natural resources, and other essential public services. A well-secured bearer bond.

Ealing Corporation.—This is an issue of £750,000 5 per cent. stock at £99 per cent., redeemable 1946-50. Principal and interest is secured upon all the properties, rates and revenues of the corporation, and a sinking fund for the redemption of the loan is required to be established. The rateable value is £752,510, a penny rate producing £3,000. The outstanding debt is £1,206,510, and the population is estimated at 91,000. The proceeds of the present issue will be applied for electricity works, street improvements, housing, sewerage, and other purposes, and paying off existing loans. This is a good trustee investment.

The London Power Company, Limited.—Issued share capital £50,000, divided into 50,000 shares of £1 each, carrying a fixed dividend at the rate of 6 per cent. per annum. This is an issue of £4,000,000 5 per cent. redeemable debenture stock at 95 per cent., there being £3,000,000 of stock already issued. The stock is constituted a charge on the undertaking and on the revenues of the company by the London Electricity Act, and beginning with the year 1927 an amount not less than 1 per cent. of the amount outstanding will be applied out of the statutory sinking fund in redemp-

tion of the debenture stock. The company was formed in January, 1920, as a private company under the name of the London Electricity Joint Committee (1920), Limited, to secure the co-operation of the London electricity supply companies in the promotion of a scheme for the better development of the supply of electricity in London and Middlesex and neighbouring districts. The company became a public company and changed its name on the passing of the London Electricity (No. 2) Act, 1925, by which it agreed to purchase the freehold of the Willesden and Amberley road generating stations and certain transmission lines of the Metropolitan Electric Supply Company, Limited, and to take on lease the generating stations and main transmission lines of the other constituent companies (the constituent companies consisting of ten London electricity supply companies), on terms under which such stations and lines will be acquired by the company in or before 1971. It is now operating these generating stations, and is supplying the constituent companies with the energy required for the purposes of their business. Each of the ten constituent companies has agreed with the company that if in any year the receipts of the company on revenue account are insufficient to meet the charges upon it, including debenture stock interest and sinking fund, each company will provide a part of the deficiency equal to it during the year bears to the total amount paid for electricity supplied by the company. The aggregate of units sold by each of the ten constituent companies during each of the last three years has been as follows:—1923, 190,657,426; 1924, 215,952,957; and 1925, 263,113,970. The final arrangements in connection with the taking over by the company of the various properties have been practically completed, and the proceeds of the present issue are required to complete these arrangements, to pay for the extension of the generating stations and lines, and other purposes. An excellent public utility issue.

South Staffordshire Waterworks Company.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. There is an issued stock capital, including premiums (net) of £1,784,325, together with an issued or exercised loan capital of £814,510, consisting of £276,969 (nominal) 4 per cent. permanent debenture stock, £21,801 premiums obtained on the foregoing, £500,000 (nominal) 5 per cent. irredeemable debenture stock, and £15,740 capitalised rent charges. The £500,000 5 per cent. irredeemable debenture stock ranks *pari passu* both as to capital and interest with the existing 4 per cent. permanent debenture stock. The company, it is stated, has sold the £500,000 5 per cent. irredeemable debenture stock at 94½ per cent. The company was incorporated in 1853, and supplies water for all purposes in an area of about 300 square miles, supplying the boroughs of Burton-on-Trent, Dudley, Smethwick, Sutton Coldfield, Walsall, Wednesbury, and West Bromwich. Prospectusless.

Cedar Investment Trust, Limited.—Issued share capital £480,000, divided into 30,000 7 per cent. cumulative preference shares of £1 each and £450,000 ordinary shares of £1 each. This is an offer of 120,000 7 per cent. cumulative preference shares of £1 each at par. The company was incorporated in 1918 as a private company, and carries on business as an investment trust company. In November, 1926, it was converted into a public company. Profits, after charging income and corporation profits taxes, and exclusive of surplus on realisation of investments, are certified to have been as follows:—1923, £13,366; 1924, £16,389; 1925, £19,699; and 1926, £24,804. Net assets, as shown by the books, are also certified to have been £538,221. In November, 1926, a sum of £150,000 standing to the credit of the company's capital increment or surplus account and reserve account respectively was capitalised and distributed in a like amount of fully-paid ordinary shares as a bonus to the ordinary shareholders. The trust appears to have been progressively successful.

Charterhouse Investment Trust, Limited.—Issued capital £300,000, divided into 300,000 ordinary shares of £1 each. This is an issue of 700,000 ordinary shares of £1 each at 21s per share. The company was formed in November, 1925, as an investment trust and finance company. The net profit for the year ended November 11, 1926, is given as £52,593; a dividend of 7 per cent., less income-tax, has been declared. "The additional capital now issued," states the prospectus, "can be profitably employed in business already in hand." It would have been of interest to learn something about the item shown in the balance-sheet, "stocks and shares in course of delivery," amounting to £171,981 8s 4d.

Simons and Co., Limited.—Authorised share capital £400,000, divided into 150,000 7½ per cent. cumulative preference shares of £1 each and 250,000 ordinary shares of £1 each. This is an issue of the preference shares at par and 200,000 ordinary shares at 23s per share. The company has been formed to acquire the businesses of several fruit brokers and importers, including half the subscribed capital of one undertaking. Assets are given as £225,000. Profits of the businesses to be acquired, after charging all expenses other than management and interest on bond, but before

providing for income-tax and corporation profits tax, are certified to have been as follows:—1924, £78,152; 1925, £76,013; and 1926, £42,746. One-half the profits of the undertaking of which half the share capital will be held and other trade investments are certified thus:—1924, £6,215; 1925, £16,475; and 1926, £14,812. The purchase price is £380,000, payable in cash. An informative prospectus.

United British Steamship Company, Limited.—Issued share capital £400,000, divided into 400,000 shares of £1 each. This is an issue of 200,000 shares of £1 each at par. The company was incorporated in 1921, and the seven steamers owned by the company are each between 8,000 and 10,000 tons deadweight, their average age being about five years. They stand in the books, it is stated, at a cost of £5 17s 6d per ton deadweight. A further steamer of 8,000 tons is building at a cost of £68,410, and delivery is expected in the early part of next year. There is a valuation of the fleet as a going concern at £386,500, and the cost of these steamers to the company, less the amounts set aside for depreciation, is given as £348,738. An interim dividend at the rate of 7 per cent. per annum, it is stated, has been paid for the first half of 1926. The purpose of this issue is the development of the company's business, and to enable advantage to be taken of suitable opportunities to acquire first-class modern tonnage at favourable prices. The company is under good management, but the trend of its future has yet to be determined.

Low Temperature Carbonisation, Limited.—Authorised share capital £1,275,000, divided into 12,750,000 ordinary shares of 2s each, of which 6,734,129 shares are unissued. There has also been created £300,000 8 per cent. cumulative income debenture stock. This is an issue of £150,000 8 per cent. prior lien debenture stock at par, and carries the option to subscribe at par for five 2s ordinary shares of the company in respect of each £1 stock allotted, the period of the option to be for two years from the date of allotment. The stock is to be constituted by a trust deed conferring a specific first charge upon the freehold property and patent rights, and a first floating charge on all the other undertakings and property of the company, both present and future, including its uncalled capital. The stock is redeemable by the company at par in 1931 or any earlier date at £110 per cent. The prospectus states:—"The issue, the whole of which has been underwritten, will realise in cash £142,500, which, after providing for the expenses of carrying through the scheme of arrangement, is, in the opinion of the board, more than sufficient to complete the works, now in course of erection, for the treatment of 60,000 tons of coal per annum." It would have been interesting to have a few figures in the prospectus showing the value of assets. As it is, it is difficult for investors to know the degree of security behind these debentures.

Para Plantations, Limited.—Capital £300,000, divided into 2,000,000 preferred ordinary shares of 2s each and 2,000,000 deferred shares of 1s each. This is an issue of the ordinary shares at par. Profits will first be applied to the payment of 10 per cent. on the deferred ordinary shares, and after the same sum has been distributed to the holders of the deferred shares the balance will be equally divided. The company has been formed in particular to acquire the whole of the issued share capital of the Companhia Paraense de Plantacoes de Borracha, which is incorporated under the laws of the State of Para, Republic of Brazil, having an issued capital equal to £220,000. The properties owned by the company are situated in Para, and comprise an area of approximately 650 square miles. The production of rubber from the Tapajos estates for 1924 and 1925 is given as 628,761 and 1,727,532 lbs respectively. The company will apply for a concession to build and operate a factory to wash crepe and standardise the rubber. The purchase consideration is stated to be £183,675, payable as to £83,675 in cash and the balance in deferred shares of 1s each. An interesting flotation, the future of which will be watched with interest.

The Creole Syndicate.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. The outstanding capital consists of 1,506,045 shares common stock (no par value) non-assessable. The company was incorporated in 1920 under the laws of the State of Delaware, U.S.A. It has acquired various concessions in Venezuela, from which the total oil production during the first nineteen months of operation was 3,677,450.66 barrels, the total oil accruing to the syndicate during this period being 1,031,358.63 barrels. The company also hold a controlling interest in a number of other undertakings. The surplus for the period ended June, 1926, is given as £178,007.96. The company, it is stated, has sold to responsible interests 125,000 shares of the unissued stock at \$12 per share for delivery on or before May 30, 1927, and has granted an option on 240,000 additional shares at the same price to be exercised on or before the same date. Prospectusless.

Western Nigerian Tin Mines, Limited.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. There is an authorised share capital of £60,000, divided into 240,000 shares of 5s each, of which 200,007 are issued. The company was incor-

porated in October, 1926, with the object of acquiring and working mining properties in Nigeria and elsewhere. The company has purchased various mining leases, rights, and exclusive prospecting licences in Northern Nigeria. The purchase consideration for these properties and the payment of the preliminary expenses of the company is stated to be £30,000 in cash. The vendor has agreed to procure subscriptions at par for 200,000 shares in consideration of the call of a further 39,993 shares at par for a period of two years from October, 1926, a commission of 3d per share being payable by the company in respect of all shares so called. Prospectusless.

Bynoe Harbour Tin Syndicate, Limited.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. There is an issued share capital of £10,000, divided into 40,000 shares of 5s each. The company was incorporated in October, 1926, for the purpose, among other things, of prospecting rights covering tin-dredging areas approximating five square miles in area in Bynoe Harbour and 500 acres in Darwin Harbour in the Northern Territory, Queensland, Tasmania. The option which will be acquired extends until July, 1927, and if the option is exercised the purchase consideration payable is one-fourth of the nominal capital of any company formed to take over such rights, this consideration being payable wholly in fully-paid shares of the company. The purchase consideration payable to the present vendor is, it is stated, £5,000 in cash. The preliminary expenses, in addition to brokerage and cost of stamp duty upon the transfer of the option, are estimated at £750. Prospectusless.

Southern Electric Tramways Company, Buenos Aires.—In order to comply with Stock Exchange regulations particulars are advertised of the above company. There is an issued share capital consisting of 39,659 shares of \$M/100 each. There are also £130,000 6½ per cent. first mortgage debentures. The debentures will be redeemable by means of a sinking fund, the final redemption date being 1946, and are secured by a trust deed providing for the creation of a first specific mortgage on the concessions, land, buildings, plant, &c., and a floating charge on the other assets. The company was formed in 1908, and is incorporated in the Argentine Republic. It operates, under concessions in perpetuity, a system of electric tramways from Retiro F.C.C.A., the centre of the city of Buenos Aires, to Temperley. Profits, before providing for service of debentures and interest on loans, are stated to have been as follows, taking the gold \$ at 46d.—1922, £18,667; 1923, £21,155; 1924, £19,016; 1925, £18,321; and 1926, £21,144. The proceeds of the debenture issue will be applied to the redemption of debentures now outstanding (given as about £15,880), to repayment of loans and advances, and to the general purposes of the company. Prospectusless.

COMPANY MEETINGS, &c.

ROYAL BANK OF SCOTLAND.

EMINENTLY SATISFACTORY POSITION.

BICENTENARY NEXT YEAR.

PROSPECTS OF TRADE REVIVAL.

The annual court of the Royal Bank of Scotland was held, on the 24th instant, at Edinburgh.

His Grace the Duke of Buccleuch, K.T. (the governor), presided. In moving the adoption of the report, his Grace said:—

I presume it will be your pleasure that the annual report and balance-sheet with the auditors' report, which have now been in your hands for some days, shall be taken as read. I think you will agree that the position of the bank as shown by the balance-sheet is an eminently satisfactory one.

DEPOSITS, ETC.

Dealing first with the bank's liabilities, our deposits have been maintained at a high level—the amount at the date of the balance being nearly 40½ millions.

There is a reduction in the amount of the notes in circulation, which is not surprising in view of the long stoppage of work in the coalfields. At the time of the balance our acceptances were unusually low in amount, but these fluctuate considerably according to the state of foreign trade and the requirements of our customers and other connections.

STRONG LIQUID POSITION.

Turning to the assets side of the statement, it will be found that our liquid funds exhibit the usual high ratio, and besides our cash and short money this position is further reinforced by our holding of British Treasury bills, amounting to £1,770,000.

INVESTMENTS.

There is some reduction in our holding of British Government securities, owing to the increased demands upon the bank from our customers. As you will observe from the entry in the balance-sheet, our holding of these securities is of a varied character, containing a proportion—a very substantial one, I may say—of short-dated bonds, which form an ideal banking investment.

ADVANCES.

The increase in the advances to customers on cash credit and current accounts is a natural one having regard to the times through which we have been passing.

TRADE PROSPECTS.

Last year from this chair I ventured to express the view that there were not wanting signs of improvement in trade. Such hopes were rudely shattered by the general strike, which, however, was quickly and successfully overcome, and looked as if it might in its results prove a blessing in disguise. Unfortunately, peace was not to be reached with the defeat of that violent measure, and we have had to face the prolonged and bitter coal dispute, with all its consequent loss and unsettlement. Even that struggle has, however, had to give way to the logic of economic facts. The effects of these serious experiences must show themselves in many balance-sheets during the next year, with far-reaching results upon the national Exchequer and upon the burden of local rates in industrial districts. Even yet it is possible to look for a revival of trade, as there are not absent indications of improvement in shipping and shipbuilding, which, if realised, would necessarily have their effect upon the iron and steel and other industries. Contracts have, no doubt, been permanently lost to the country, but there are still many orders being held over. These, however, can only be undertaken if there is to be a sufficient and steady output of coal at a practicable price. Subject to that condition, British coal must, in respect of its superior quality, come to its own again in the foreign markets. As a further factor which makes for optimism, there is the greatly improved condition of Europe, both politically and financially, which encourages the hope of further expansion in our Continental connections.

THE NEED FOR INDUSTRIAL PEACE.

We can only express the hope that the severe lessons of these trying months have not been lost, and that in the long run we may be able to look forward to some measure of industrial peace, extending over a period of years, accompanied by a definite increase in the ratio of production, which would go a long way towards enabling this country to attain again to her rightful position in the trade of the world. This is no mere capitalist expression of view. The duty of securing it as a reality is

equally incumbent upon employer and employed, and in an island country such as ours, which depends to a vital extent upon its export trade for its supply of food, some working agreement between Capital and Labour is absolutely essential if the standard of life amongst our people is to be maintained.

BANK BUILDINGS.

Returning to our balance-sheet, it is satisfactory to find that, owing to liberal appropriations from time to time, the increase under bank buildings and property over last year's figures is comparatively small having regard to the building schemes which the bank have had in hand. The most important recent addition to the bank's buildings—the new office at the west end of Princes street, Edinburgh—was completed in the early summer and has been in occupation since that time. The new edifice has been generally admired from the architectural point of view, and it forms an important addition to Edinburgh's public buildings, whilst as a branch bank office it is equipped so as to meet every requirement of our numerous and important clientele.

PROFITS.

Our net profits, after providing for all bad and doubtful debts and making allowances for contingencies, amounted, as shown in the balance-sheet, to £476,545, being just a trifle over last year's figures. It is gratifying in such a year as we have experienced to make such a showing.

APPROPRIATIONS.

After making the usual dispositions for bank buildings and heritable property and pension reserve fund, the directors have recommended a dividend for the half-year at 16 per cent., making with the dividend paid for the previous half-year 16 per cent. for the whole year, less income-tax. This is an increase of ½ per cent. on the previous year, when 15½ per cent. was paid.

REST NOW EXCEEDS CAPITAL.

As you will see from the report, after making these appropriations there is a balance of £106,545 carried to rest account, bringing the total of the rest up to £2,571,249. For the first time in the history of the bank the rest exceeds the paid-up capital, as recently increased to £2,500,000, and the two together have now reached the impressive total of £5,071,249.

DRUMMONDS' BANK.

Since our acquisition of Drummonds' Bank it has been customary to say a word regarding that important branch of our organisation, and it is only necessary to add to-day that the business at that office, which has brought a large and influential connection to the Bank in the West-end of London, continues to be entirely satisfactory.

FOREIGN BUSINESS.

Our foreign department continues to grow in importance and to yield satisfactory results.

BI-CENTENARY.

The Bank was incorporated by Royal Charter on May 31, 1727, so that in six months' time we shall reach our bi-centenary. The story of the Bank is being written by an accomplished hand, and it will be found that it forms a not inconsiderable contribution to the history of Scotland itself during the period dealt with.

LOSSES ON THE DIRECTORATE.

Suitable reference is made in the report to the losses sustained during the year by the death of Sir George M. Paul, LL.D., an extraordinary director, and of Mr James A. Fleming, an ordinary director. Sir George Paul had been law agent of the bank for a considerable period of years, and always took a very keen interest in its affairs. Mr Fleming had a very old connection with the institution, his father having been cashier, and he himself in his youth had for some little time been in the service of the Bank. We shall miss him not only as a valued colleague and adviser, but as a warm personal friend.

THANKS TO STAFF.

The thanks of the directors and of the proprietors are due to all the members of our staff for their loyal and devoted service during the past year.

The directors feel sure that the proprietors will join them in

heartily congratulating Sir Alexander Wright on the well-deserved honour recently conferred on him by His Majesty the King, which they feel is a fitting recognition alike of his public work and of the eminent position which he holds in the banking world.

They would further take this opportunity of recording their high appreciation of the valuable services which Sir Alexander has rendered to the Bank during the past year, and they also desire to extend their thanks to the other officials at head office, London, Glasgow, and elsewhere.

APPROVAL OF ACCOUNTS—DIVIDEND.

With those remarks I beg to propose that the report now submitted containing a statement of the accounts and balance-sheet of the Bank be approved, and that out of the profits of the year a dividend of 16 per cent. per annum for the half-year, under deduction of tax, be now declared in conformity therewith.

The report was approved, and the governor, deputy-governor, extraordinary directors, and the retiring ordinary directors were re-elected, and auditors were appointed for the ensuing year.

THE SPIES PETROLEUM COMPANY, LIMITED.

WIDER INVESTMENT POWERS.

The twenty-seventh ordinary general meeting of the Spies Petroleum Company, Limited, was held, on the 26th instant, at River Plate House, Finsbury circus, London.

The Chairman (Mr G. Grinnell-Milne) said that the balance-sheet now presented showed the effects of the scheme of reorganisation of capital passed by the shareholders at the meeting of January 18th and February 3rd of this year, which was sanctioned by the High Court of Justice on February 3rd. Under the terms of that scheme the nominal capital of £1,500,000 was subdivided into 15,000,000 shares of 2s each. The conversion of the issued shares of 10s each into 2,328,750 shares of 2s each, and the further issue of 4,657,500 shares of 2s each and 1s 3d per share, with shares issued in payment of commission under the scheme, gave a total issued capital of 7,131,802 shares. The reorganisation reserve account represented the total figure by which as a result of the scheme the company's issued capital had been reduced.

As pointed out in the report, the Russian assets of the company were not affected by the scheme of reorganisation of the capital of the company, which was an internal matter, and did not in any way affect the company's claim against the Russian Soviet Government. Their claim, amounting to £3,401,666, was made up on the basis of data obtained on the oilfields in 1919, when an audit of the company's books and inventory in Russia was specially undertaken by a chartered accountant sent out from London. The figures were arrived at as the result of most careful investigations, accompanied by a drastic writing off of all assets in the company's books, which, upon the taking of inventories, were not bound to exist in reality. The company had been extremely fortunate in being able to support its claim, not upon book entries alone, but upon assets which were identified in detail and proved to exist at that time. In concluding his remarks on the accounts, he wished to emphasise the fact that the directors were now presenting the shareholders with clean accounts showing all dead expenditure written off, much of which was directly and entirely due to the nationalisation of the company's business. This enabled them to start their new career in the possession of substantial cash resources.

COMPANY'S RUSSIAN CLAIM.

With regard to the company's claim against the Russian Soviet Government, though the board had at present nothing to report of an encouraging nature, after seven years of constant watching, resulting in disappointment, they felt, in common with others who had closely studied the position, that the Soviet Government had recently begun to show a disposition to consider foreign claims in a less uncompromising manner than before. They were of opinion that events must have borne in upon that Government the fact that, in order to enjoy the credit facilities in this country of which it had felt and proclaimed a need, it would have to come to a settlement satisfactory to its creditors. The position of companies like the Spies Petroleum, who had important properties in land and buildings in Russia, which they were not allowed to take back or make use of, was somewhat different from that of creditors whose claims were founded upon loans repudiated or defaulted on, and upon miscellaneous indebtedness. While bondholders and creditors who held miscellaneous claims would require settlement by funding operations to repay principal and interest, company's in the position of the Spies Petroleum offered an easy method of settlement by the return of the properties which had been sequestered.

SECURITY FIRST ROYAL INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

ADVANTAGES OF RESTORING COMPANY'S PROPERTY.

By the restoration of the property in Russia which had been financed and worked by foreign owners, the Russian Government would be conceivably released from large claims without making any cash payment, or a relatively small amount, and the very fact of their making such settlements should put them in an entirely different position when seeking that financial assistance abroad of which they now appreciated the necessity. Not only would the Russian Government establish a more satisfactory position in the minds of capitalists of our own and other nationalities, but by enabling this company and other property owners to restart their properties and expand their energies in developing them they would be assisting in rebuilding the industries of Russia, and encouraging the flow of capital into that country to the benefit of Russia and her creditors. He was not endeavouring to persuade the shareholders that such a solution was rapidly approaching, but it was one to which they must continue to look forward.

In the meantime, the company had a substantial sum of roughly £160,000 in cash, and were desirous of being put into a position to use this sum, or a part of it, for carrying on good business when such was offered to them.

The report and accounts were unanimously adopted, and the following resolution was carried by a very large majority: "That when investing or making use of capital moneys for initiating or carrying on fresh business, the board be authorised and requested, having regard to the powers of the company, to entertain a wider field for employment of its funds than was contemplated at the time of the reorganisation of 1926."

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.

PROBLEM OF LOW PRICES.

The seventeenth ordinary general meeting of this company was held, on the 24th instant, at Kingsway Hall, Kingsway, London. Mr William Ivey (chairman of the company) presiding.

The secretary (Mr Reginald H. Young, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: When they met a year ago they had suffered from a very heavy decline in the price of oils, ranging from 10 per cent. to 35 per cent. In spite of the hope that they had seen the bottom in the fall in prices, it had proved otherwise, as they had gone lower to the extent of a further 15 per cent. Those low prices had held good during the whole of the financial year under review, especially in the case of the heavy oils. While the heavy oils had gone so low, and although they had not received satisfactory prices for light oils, still they had thought it wise to continue active development in order to obtain more of the lighter oils, and with that end in view they had continued development, with the result that they had not only succeeded in holding their own, but had increased their total production by 196,981 barrels. They had also increased their gross profit by £18,628. That active drilling campaign had entailed very heavy expense, but they had been able to meet that. They had continued their old conservative policy of writing off large sums for depreciation, and this, together with the increased expenditure, had caused the reduced dividend. The directors had followed that course entirely in the interests of the shareholders. If prices had only remained at a fair and reasonable level, they would have made a very large profit by reason of the increased production, and would have been able to pay a higher dividend than the 10 per cent. recommended. As it was, prices had remained low, and, of course, they could not do anything to affect world prices. The chairman then referred in detail to the various fields in which the company is interested—California, Mexico, Trinidad, and Rumania. Speaking with regard to the position generally, he said that the past year had not been a good one. The low prices ruling had caused the big companies to shut down 855 producing wells to prevent a continuance of over-production. There was no doubt they had encountered a gloomy patch, and, of course, they could not control world prices. Although the position had been gloomy, the outlook was not hopeless.

The report was unanimously adopted.

THE WALL PAPER MANUFACTURERS, LIMITED.

DIVIDENDS MAINTAINED DESPITE DIFFICULTIES.

DIRECTORS' CONFIDENCE IN THE FUTURE.

The ordinary general meeting of the shareholders of the Wall Paper Manufacturers, Limited, was held, on the 25th instant, in the Venetian Room at the Holborn Restaurant, High Holborn, London, Mr Edgar Smith (the chairman) presiding.

The secretary (Mr John T. Chasney) having read the notice convening the meeting and the auditors' report,

The Chairman said: Ladies and gentlemen,—As you have all received copies of the directors' report and the balance-sheet, may I assume that it is your pleasure that we take them as read?

The profit for the year ending August 31, 1926, as shown in the profit and loss account, is £649,438. This includes the profits from the manufacture of wallpaper and also the profits from our other businesses, together with dividends and interest on our investments. It is £84,939 less than last year. The previous year's profits were £734,377, to which was added £9,023, being the final payment which we received on our German claim, or a total of £743,399. The amount brought forward from last year's account is £306,638, against £267,040 brought forward the previous year. The amount now available for appropriation is £801,170, against £852,798 last year.

Your directors recommend that the same dividends be paid as last year; that a sum of £150,000 be added to the reserve fund, and that £305,010 be carried forward.

BALANCE-SHEET ITEMS.

In the balance-sheet on the liabilities side you will notice that the issued capital and debenture stock are the same as last year. The creditors are £739,104, against £748,081. The reserve fund is £600,000, against £400,000 last year. On the other side of the balance-sheet are shown the following assets: land, buildings, plant, machinery and goodwill, £3,613,829, an increase of £35,510. Then come the company's investments, including shares in subsidiary companies, £2,072,951, which figure shows an increase of £156,480. These investments are chiefly in Government securities, but some of them are only of a temporary character, as they are earmarked for taxation payments in suspense.

The stock-in-trade, £809,625, is slightly less than last year. The debtors are £665,415, against £606,754 last year, and the bills receivable are slightly less than last year. Proper reserves are made, as usual, against doubtful debts. The cash at bankers and in hand is £267,751, which is £100,929 less than last year.

EFFECTS OF STRIKE.

The profits are considerably less than last year. Naturally, when the coal strike commenced the costs of manufacture at once began to increase, also the purchasing power of the public became less. A year ago I ventured to prophesy that we should soon see a great revival of trade in this country, and, as far as our own company was concerned, we were well ahead of previous years until the coal strike commenced. At that time it became clear to the directors that the strike would reduce our profits, and probably if there had been no strike the question of an interim dividend on the deferred shares would have come before the board for consideration; but this national calamity precluded it.

The coal strike had very little effect on the production side of our business in the past year: we have always been able to turn out the goods, as we were well stocked with coal last May; but the consumption of wallpaper has been very materially affected, and may be affected for some time to come. The strike commenced at the height of the spring-cleaning season. The result was that innumerable jobs were cancelled entirely, people leaving over their decorating for another year, with a marked falling off in the demand for wallpaper. Our export trade also suffered somewhat by foreign manufacturers making the most of our difficulties by exaggerating the importance of the general strike, and booking orders on the plea that we should not be able to deliver the goods.

DIRECTOR'S VISIT TO AMERICA.

Last autumn one of our directors visited South Africa and North America, stimulating our agents and personally seeing all our customers. In the United States he spent a considerable portion of his time in an investigation of their methods of manufacture and machinery, to make sure that no new inventions were escaping our notice.

Our export manager has been round the world, paying special attention to our customers and agents in Australia, New Zealand, Canada, and South Africa. We have recently established central branches in Canada, Egypt, and South America for the distribution of a section of our products.

As you are aware, we have several men on the board who have had great experience in financial affairs, and we must give them some credit for the fact that our export trade to countries where the exchanges vary so quickly has been conducted profitably.

RELATIONS WITH LABOUR.

Throughout the year, and in spite of the troublesome period since last May, our own cordial relations with labour have been fully maintained, and I cannot praise too highly the loyal services rendered in every department. Personally, I attribute the harmony which in our industry exists between employers and employed to the efficient working of the Wallpaper Makers' Industrial Council, which meets regularly to exchange views, endeavouring to promote the welfare of all who are engaged in the industry.

Our company has decided to hold an Arts and Crafts Exhibition in March next, which will give our workers an opportunity of showing their skill and expressing their individuality. Prizes will be given for the best work done in leisure time at home, such as designs, paintings, sketches, photographs, wood-carving, carpentry, embroidery, needlework, or any kind of work done by anyone employed by the company, from the youngest apprentice to the directors and managers. It is an effort to encourage the cultivation of taste and skill in the workers, and also the promotion of the team spirit, as well as affording an opportunity to discover talent and ability. The exhibition will be held in the Manchester offices of the company at King's House next March.

NEW MANCHESTER OFFICES.

Three years ago I told you that we had purchased a fine freehold property in Manchester, which we intended to convert into offices. This work is now completed, and at "King's House" we have provided for our own use a suitable range of offices, the rest of the building being let off to excellent tenants. The income from this undertaking has fully justified our anticipations and has proved a sound investment. No doubt we shall find this central property even to increase in value.

CONFIDENCE IN THE FUTURE.

In conclusion, I may say that we have no misgivings as to the continuance of the company's prosperity, although it is temporarily clouded by the long-drawn-out labour dispute, which must have impoverished to some extent the consumers in this country. We are not pessimists, yet it would be foolish to ignore the effect of this gigantic wasting of the national means. However, your directors unanimously believe that by maintaining a steady policy of conservative finance, our company may look with confidence to the future.

I now formally move the adoption of the report and the accounts for the year ending August 31, 1926, and will ask Mr Sugden to second this resolution.

Mr A. V. Sugden seconded the resolution, which was carried. The retiring directors were re-elected, and the auditors having been reappointed, a hearty vote of thanks to the chairman concluded the proceedings.

General Manager & Secretary—Hugh Lewis.

BALDWIN'S, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The twenty-fourth annual meeting of Baldwin's, Limited, was held, in Birmingham, on the 19th instant, Colonel Sir Charles Wright (chairman of directors) presiding.

The Chairman, in moving the adoption of the report and accounts, said the amount brought into credit from manufacturing, trading and other interest and other accounts was £255,837, an increase of £41,759, despite the continued depression in the iron and coal industries. Sundry creditors on trading account showed a decrease of £75,283.

The directors regretted that the preference share dividends were in arrear, and that the ordinary shareholders had been so long without any return. The subsidiaries again showed trading losses, largely due to the operations of the colliery undertakings.

Speaking of the industrial situation, Colonel Wright said the year had brought no improvement in the iron, steel, and coal industries. The general strike, followed by the coal stoppage, brought the trades practically to a standstill, and it would take a long time, very heavy repairs, and much money before they could be brought back to normal conditions. Everything possible had been done during the coal stoppage to keep the tinsplate and steel works going, and they managed to work at about 50 per cent. of their capacity in these departments.

With regard to the subsidiary companies, the works of the Port Talbot Steel Company had been practically at a standstill, with the exception of the light plate mill and light bar mill, which had worked intermittently. The heavy bar mill and heavy plate mill had been closed down since September of last year, owing to keen competition in foreign heavy plates and sectional material, and unless some legislation was introduced to counteract the dumping of heavy steel goods, there seemed small prospects for the future of the heavy steel trades.

He was glad to report that a working arrangement had been come to with the Mannesman Company, of Germany—the largest and most efficient of all weldless tube makers—and he felt sure that, by an exchange of technical information and the adoption of many of the German company's improved methods, they could look with much greater confidence to the future of this undertaking.

COAL TRADE.

Turning to the collieries, the Chairman said the period through which they had just passed would undoubtedly go down to history as the most crucial in the long record of coal mining in this country. It was to be hoped that the settlement would prove real and lasting, and would ensure cheap coal supplies. It was estimated that the stoppage would cost the country between £200,000,000 and £300,000,000, while the iron and steel industries alone would be involved in a loss of approximately £30,000,000. This chiefly represented wages. The tragedy of the long-drawn-out stoppage seemed to him that the men had been encouraged to fight for the non-existent; they had been fighting not so much the coalowners as hard, economic facts, a position which the miners' leaders had consistently refused to face.

The great problem of the near future was the recovery of our coal export market, in which foreign competitors were now so firmly entrenched. A feature from which some encouragement might be drawn was that reports seemed to be fairly general that the superiority of British coal for every industrial and domestic purpose had been clearly demonstrated; but it all came back to

ESTABLISHED OVER ONE HUNDRED YEARS.

SCOTTISH UNION & NATIONAL INSURANCE COMPANY.

ASSETS £13,500,000.

the cost of production. Foreign buyers liked our coal well enough, and we should get the market back if the prices were right.

It would be remembered that at a recent meeting a shareholder asked if the directors had considered the advisability of writing down the capital of the company so as to bring into line the question of capital values in comparison with earning capacity, more especially with regard to the subsidiary companies. At the request of the directors the following gentlemen had consented to act as an advisory committee in the matter:—Mr Beaumont Pease (chairman of Lloyds Bank); Mr Nigel Campbell, of Messrs Helbert, Wagg and Co.; Mr A. H. Wynn, of the Mercantile Investment and General Trust; and Mr William Mackinnon, of Messrs Alfred Tongue and Co.

THE FUTURE.

With regard to the future, it was difficult to make any forecast, but he was of opinion that, given a fair and economic agreement in the coalfields, and with the now stabilised currencies in Germany and Belgium and the stabilisation in France, which could not be long delayed, and, maybe, the less acute competition from the Continent, owing to the recent developments, which had brought about a much closer regulation of outputs in France, Luxemburg, Belgium and Germany, there might be a somewhat better outlook for the steel trade in the near future. There was one thing certain—that Baldwin's, which if operating fully could turn out a million tons of steel ingots and 1½ million tons of coal yearly, with works among the best equipped in the country, would be able to take full advantage of any revival in trade.

The motion was seconded by Sir John Cecil Davies and agreed to.

WESTERN TELEGRAPH COMPANY, LIMITED.

SUCCESSFUL YEAR'S RESULTS.

The ninety-third ordinary general meeting of the Western Telegraph Company, Limited, was held, on the 25th instant, at Electra House, Moorgate, London.

Sir John Denison-Plender, C.B.E., K.C.M.G. (chairman of the company), presided, and in moving the adoption of the report said that throughout the year their cable service between South America and the rest of the world which they offered to the public had been well maintained, no interruption of cables having caused delay in the flow of traffic, and the results of the year's working must, he thought, be considered more than satisfactory, considering the widespread trade depression and social upheaval.

The revenue for the past year showed an increase of over £68,726, but the working expenses were higher by £35,101. With, however, a decrease of taxation in England of £21,989, the net increase under this heading was brought down to £13,112. This placed them in the satisfactory position of again being able to add £250,000 to the general reserve fund, to pay the quarterly dividend of 2½ per cent., free of tax, and to carry forward nearly £330,000, as against £300,500 brought in.

There was a great movement taking place in telegraphy as a whole, which no one could have failed to notice, as it had been liberally dealt with in the Press. While radio telegraphy in its most recent application was offering the public an additional means of communication, still the vast web of cables which covered the world was continually increasing. Within the last twelve months over 16,000 miles of deep-sea cable had been constructed and laid, or were about to be laid, by various British and foreign cable companies. An innovation would be made shortly by the introduction of a specially-cheap-rate telegram at Christmas time and the New Year. This type of telegram was inaugurated last year by the companies serving the Eastern hemisphere, and this year it had been possible for their own companies to offer the same facilities to those who cared to avail themselves of the opportunity of exchanging greetings by cable to their friends in South America. The report was adopted.

" 26	nil	" 26—Bars sold	19,000
Total.....	nil	Total.....	31,000

Net withdrawals, £31,000.

Messrs Samuel Montagu and Co. write on November 24th as follows:—

GOLD.

An interesting event this week was the purchase of bar gold for New York, for the first time since November last year. Of the £300,000 available yesterday in the open market about £177,000 was secured for this purpose. The remainder was divided between the trade, India and Egypt. The net withdrawal from the Bank during the week under review has been £17,000, reducing the net influx since January 1, 1926, to £7,926,000, and increasing the net efflux since the resumption of an effective gold standard to £3,660,000. Indian trade figures for October have been cabled as under (in lacs of rupees):—Imports of merchandise on private account, 19,97; exports, including re-exports of merchandise on private account, 23,93; net imports of gold, 1,11; net imports of silver, 1,89; net imports of currency

notes, 1; total visible balance of trade in favour of India, 98; net balance on remittance of funds in favour of India, 43.

SILVER.

Notwithstanding a rather poor undertone, prices were fairly well maintained during the earlier part of the week. Bear covering and some moderate purchases for Indian and elsewhere sufficed to meet restrained selling from China and America. To-day offerings from China became more free, and owing to demand from the above quarters having been largely satiated during the last few days, little support was forthcoming. Prices therefore relapsed, and the quotation for two months' delivery, which at the present moment is the more sure indication of the value of silver, again dipped below 25d. Doubtless easier rates will attract bear covering, and some resistance will be felt should the price reach a lower level.

In view of the recent anxiety in the U.S.A. regarding the report of the Indian Currency Commission, it is interesting to learn from the General Bulletin of the American Mining Congress that Mr Winston, Under-Secretary of the United States Treasury, has stated that the plan of the Commission for stable currency in India embodies "the least possible disturbance to the value of silver."

INDIAN CURRENCY RETURNS.

Reports and Notices.

It is announced that "The Banker's Almanac and Year Book," 1926-27, will be published on December 1st.

Mr Edward Vincent Reid has been appointed a director of the Union Assurance Society, Limited.

RAILWAYS.

PARAGUAY CENTRAL RAILWAY.—Gross receipts for year ended June 30, 1926, amounted to £259,372, against £250,174, an increase of 3.7 per cent. Working expenses amounted to £136,107, against £110,996, an increase of 22.6 per cent. Net receipts at £123,265 compared with £139,178, a reduction of 11.4 per cent. The "D" income debenture stockholders again receive 6 1/2 per cent. The balance of £16,100 is carried to general reserve account.

SOUTHERN SAN PAULO RAILWAY.—The directors announce that they have received advice from their general manager that the Government of the State of Sao Paulo have given their approval to the sale of the company's undertaking to the Itarare-Fartura Railway Company. Meetings of the first debenture-holders, income debenture stockholders and shareholders are being convened for November 29th for the purpose of submitting to them for their approval the *ad referendum* contract for the sale of the company's undertaking. A circular containing the board's recom-

mendations with regard to the disposal of the proceeds of the sale is being issued to the debenture-holders and shareholders.

RUBBER, &c.

CASTLEFIELD (KLANG) RUBBER ESTATE.—The net profit for year ended June 30, 1926, amounted to £77,689, against £40,048 for preceding year. The ordinary dividend is 60 per cent. for the year, against 35 per cent. for preceding year. The sum of £10,000 has been put to general reserve. The carry forward is £9,109. Cash has increased from £34,393 to £40,403. The crop harvested amounted to 1,044,164 lbs, against 668,095 lbs for preceding year.

MALAYA GENERAL COMPANY, LIMITED.—The yield of rubber for the year ended August 31, 1926, was 1,676,040 lbs. The average cost was 7.8d per lb f.o.b. Singapore, as compared with 7.44d in 1925. The "all-in" cost for the year was 8.49d per lb. The average selling price was 2s 0.9d per lb, all the rubber being sold in Singapore, with the exception of off-grades, which were disposed of in the London market. After allowing £2,313 for depreciation and £2,519 for directors' fees, general expenses, &c., there remains a net profit for the year of £117,306, the balance at credit of profit and loss account being thereby increased to £145,259. From this an interim dividend of 20 per cent., absorbing £38,981 has been paid, leaving an available balance of £106,278, which the directors propose to deal with as follows:—£25,000 to reserve, increasing this account to £75,000; £58,471 in payment on December 6th of a final dividend of 30 per cent. (less income tax), making a total for the year of 50 per cent.; £22,807 to carry forward to the current year's accounts. Total assets are £388,883. Cash is at £61,448. Investments stand at £73,921, of which £70,421 are in Government securities.

TEBRAU RUBBER ESTATES, LIMITED.—The report for the year ended June 30, 1926, shows a net profit of £61,645, against £20,251 in preceding year. The ordinary dividend is 45 per cent. for the year, against 17 1/2 per cent. The sum of £5,000 is transferred to general reserve and £4,798 carried forward. Cash is at £27,805, against £19,415. Investment in Government stocks, &c., at cost stand at £36,504, against £46,630.

MISCELLANEOUS.

BRAZILIAN TRACTION, LIGHT, AND POWER CO., LIMITED.—The directors state that their attention has been called to a proposal made to the holders of ordinary shares of the Brazilian Traction, Light and Power Company, Limited, by Mr Alfred Loewenstein on behalf of a new Canadian company—the Hydro Electric Securities Corporation—offering in exchange for their shares, shares in the new Canadian company, it being stated that such company will have a controlling or important interest in other hydro-electric enterprises not in any way connected with Brazil. It is the opinion of the board that any such fusion or alliance of the Brazilian Traction Company with other companies not connected with Brazil would not only be no benefit to the Brazilian Traction Company, but, on the contrary, it would have most harmful results for the Brazilian Traction Company's undertaking and consequently for its shareholders. The board regret that they are compelled to make this announcement, and wish to state that Mr Alfred Loewenstein has already been informed of their views, and that, if the proposal were proceeded with, they would oppose it publicly.

CHARING CROSS ELECTRICITY SUPPLY.—The directors of the Charing Cross Electricity Supply Company, Limited, have decided to recommend that £460,800 of the reserves of the general undertaking be capitalised and distributed as fully-paid shares to the holders on December 6, 1926, of the existing ordinary shares in the proportion of four new shares for every five shares then held. The resolutions necessary to give effect to this recommendation will be submitted to the shareholders at an extraordinary general meeting to be held on Monday, December 6, at 12 noon. The transfer books of the ordinary shares will be closed from December 4th to 8th, inclusive.

HARBODS (BUENOS AIRES), LIMITED.—The gross profit for year ended August 31, 1926, is £475,427, against £457,844. Income from investments and balance of interest account amounted to £21,488, against £15,641. Transfer fees produced £736, against £903. Gross dividends receivable from South American Stores amounted to £176,765, the same as for preceding year. The dividend is the same as last year—i.e., 8 per cent. on the preference shares. The balance-sheet is fully analysed in another column.

MERSEY DOCKS AND HARBOUR BOARD.—The accounts for the year ended July 1st last show a deficiency of £39,800, but £160,000 is transferred from the insurance fund, which enables the usual contribution of £100,000 to the sinking fund to be made. A balance of £14,200 is transferred to unappropriated receipts account. The principal decreases in receipts were £43,200 in dock traffic and £41,100 in rates and dues. At the annual meeting the chairman, Mr Thomas Rome, stated that the fall in dock traffic is to a great extent accounted for by a decrease in receipts at the Mersey Cattle Wharf owing to a reduction in rates made in March, 1925. Coaling appliances also have dealt with much less tonnage. The decrease in the rates and dues is entirely caused by the general falling-off in trade consequent on the labour unrest.

WESTERN TELEGRAPH CO., LIMITED.—The revenue for year ended June 30, 1926, amounted to £1,541,000, and the working expenses to £839,881. After providing £32,747 for debenture stock interest and £77,845 for income-tax, there remains a balance of £500,626; to this is added the sum of £300,440 brought forward from June 30, 1925, making a total of £801,066. The directors have transferred £250,000 to the general reserve fund. Four dividends of 2 1/2 per cent. each have been paid, amounting to £311,805, making a distribution of 10 per cent., free of income-tax, for the year ended June 30, 1926, thus leaving a balance of £320,171 to be carried forward to the next account.

AMERICAN WHEAT MARKETS.

The markets this week have been characterised by small fluctuations, the dominant factors in the situation being an unstable export demand, less favourable crop advices from Argentina and Australia, and unfavourable weather reports from different parts of the country.

	Jan. 2, 1925.	Nov. 26, 1926.	Jan. 7, 1926.	Nov. 18, 1926.	Nov. 25, 1926.

(b) November delivery. (c) December delivery. † Previous day's quotation. Visible supplies of wheat in Canada, at 47,892,000 bushels, show an increase of 1,784,000 bushels as compared with the previous figures. Supplies a year ago stood at 42,083,000 bushels.

COAL.

Our Cardiff correspondent writes:—The reopening of negotiations between colliery owners and workmen's representatives has strengthened the belief in an early resumption in South Wales. The miners' leaders had no power to negotiate a settlement, but on Thursday they communicated to a delegate conference the owners' proposals for a new agreement, and the workmen are being balloted immediately on the question of giving the executive council power to reopen negotiations and arrange a settlement. The crux is the hours question. The owners, while insisting on an eight-hour day, have conditionally agreed to inaugurate a Saturday seven-hour day as from this week, and this concession has created a favourable impression. Meanwhile the number of men at work is increasing, and the output for the present week is estimated at about 100,000 tons, or slightly more than 10 per cent. of the pre-stoppage production. The removal of the inland restrictions on the distribution of coal has brought relief to the industrial position, particularly in view of the refusal of the Government to withdraw the embargo on exports to foreign countries, but, as the natural markets of the steam and dry coals are overseas, great pressure is being brought to bear on the Mines Department to make such concessions as are likely to avert the evil of the stoppage of collieries at which work has been resumed. Inland maximum prices have been reduced by 5s per ton, but actual prices show a greater decrease compared with those ruling a week ago.

Our Sheffield correspondent writes:—Movements of South Yorkshire coal are being hampered by something like a breakdown of railway transport. Owing to the shortage of waggons and delays in movements of traffic, coal is accumulating at a good many of the collieries, and these difficulties are likely to be intensified when industrial conditions approach the normal, as many thousands of waggons which have been idle and exposed to the weather for seven months need repairing. Comparatively little coke is being made. It pays better to sell coal at the moment than to coke it. Users are completing contracts for Westphalian foundry coke, but the placing of contracts abroad has ceased.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The belief that work will soon be fully resumed in the coalfields has had little effect so far upon the iron and steel trades. It is not now expected that activity will develop until after Christmas; but by that time there are indications that a considerable demand will make itself felt, as there is no doubt that a considerable tonnage of orders has been held back, owing to the coal strike. Directly steel manufacturers can obtain coal they will get busy on the orders they have in hand, which are understood to be sufficient to provide several weeks of work for most of the steel plants. The problem of post-strike costs has yet

to be solved, and until manufacturers and dealers are in a position to judge the future course of prices a large volume of new business cannot be expected. The tone of the Continental market has somewhat weakened.

Our Middlesbrough correspondent's report, dated November 25th, is as follows:—Pig-iron: In view of the favourable coal outlook several local plants are being prepared in readiness for a start as soon as sufficient supplies are assured. Meanwhile foundry iron continues as scarce as ever, and consumers are paying 120s per ton f.o.t. for No. 3 Cleveland G.M.B. prompt delivery. Mixed numbers East Coast hematite cannot be obtained for early supply. Manufactured iron and steel: Steelmakers are making preparations for restarting, and in one case it is understood that furnaces are being "warmed up." Steelmakers have good orders on their books, and are anxious to overtake arrears. Iron ore: Most of the works have stocks to meet early requirements, and will not, therefore go into the market for supplies until the position develops further.

Our Sheffield correspondent writes:—Firms interested in iron and steel have not yet determined on their new policy. Producers of raw materials are unwilling to quote forward until it is ascertained what they will have to pay for fuel. Local steel makers cannot get coal that is being mined almost at their doors under 55s per ton, which is a prohibitive price. There will be little manufacturing revival until fuel prices approximate those which prevailed before the dispute, and such a condition is not yet in sight. Deliveries of Continental pig-iron, billets, manufactured iron and steel plates are heavily in arrears, and the lack of regular supplies of such materials are responsible for the irregular working of mills. Three open-hearth furnaces have been restarted this week. The remainder will not be put into operation until the New Year. Conditions are likely to be depressed until the end of the present year.

Our Glasgow correspondent writes:—The change in the coal outlook this week has given rise to some hope of a possibility of restarting blast furnaces and steel works before the end of the year. There is certainly sufficient coal being produced in Scotland to warrant supplies for these plants at an early date, and there remains only the question of price, which is at present prohibitive so far as iron and steel smelting is concerned. Consumers still hesitate to book for forward delivery, but there is very little likelihood of prices becoming easier for a considerable period. Among recent

COMMERCIAL SERVICE

The Bank has over 330 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade between South and East Africa, the United States of America and the Continent of Europe.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South and East African matters of Trade and Commercial Interest.

contracts reported for the Clyde are two cargo vessels of 9,000 tons dead weight, which are to be built by Messrs Napier and Miller, Limited, the machinery being supplied by Messrs David Rowan and Co., Limited. Their value is estimated at about £105,000. Prices all round are very firm, steel plates being now £8 2s 6d basis, delivered Clyde area. Black sheets, 24 gauge, are £13 per ton, and galvanized sheets £17 15s per ton, f.o.b., Glasgow.

Our Cardiff correspondent writes:—In the steel and tinplate markets delay in the settlement of the coal dispute is impeding business, and in both the export and inland sections operations this week have been on a restricted scale. Prompt prices of tinplates are steady at from 25s to 25s 6d per basis box, and at from 24s to 24s 6d for end of the year positions; local steel bars are unchanged at £6 15s, compared with £6 3s 9d for foreign bars, and galvanized sheets are steady at from £17 5s to £17 10s. The receipts from works last week were only 25,749 boxes, compared with 71,988 boxes a fortnight ago, while shipments were 33,921 boxes compared with 83,174 in the week ended November 9th. Stocks have been declining, and now stand at 35,235 boxes, the lowest figure reached since the early part of August.

CUMBERLAND IRON.

(FROM OUR WORKINGTON CORRESPONDENT.)

In the Cumberland and North Lancashire hematite pig-iron market makers are sold ahead for three months, and are now booking orders for delivery during the second quarter of next year. No large volume of business is being dealt with, but directly production is resumed it is believed that buying will be on a heavier scale. It will, of course, be January before the industry is in its stride again, but by the middle or end of that month 15 or 16 furnaces may be in blast between Workington and Carnforth, as compared with the 13 blowing in April last. There are substantial shipments on old contracts to make to the United States and to the Continent, in addition to deliveries to the Midlands, South Wales, and Scotland. No change has occurred in prices, which, however, exhibit a tendency to stiffen. Bessemer mixed numbers are quoted at £4 19s per ton delivered at Glasgow; £5 3s per ton delivered at Sheffield; £5 7s 6d to £5 17s 6d per ton delivered at Birmingham. Manganese alloys are not in active request. Ferro is a quiet trade at £15 10s per ton. Orders for railway material represent not less than three months' full employment for the rolling mills at Workington. Rails are £8 10s per ton; sleepers, £10 10s per ton; fish-plates, £12 10s per ton.

OTHER METALS.

TIN.—The market opened the week with a strong tone. Higher advices from America and the Straits, together with scarcity of spot supplies and active covering of near dates, resulted in a sharp upward movement in values. Later, however, a reaction occurred, and part of the advance was lost under some pressure to sell and a falling off in demand. Standard cash sold at £311 10s to £316 10s and £315 10s, three months £300 to £303 10s. Sales in the East were reported at £306 17s 6d to £311 and £310 10s.

COPPER slightly irregular, but prices easier on balance, owing to lower American advices, though at the lower basis there was more disposition to trade. Standard cash sold £57 2s 6d to £56 15s, three months £58 to £57 11s 3d.

LEAD slightly irregular, but dealings were on a fair scale. Good soft foreign pig November sold £29 7s 6d, December £29 3s 9d to £29 10s and £29 6s 3d, January £29 6s 3d to £29 10s, February £29 6s 3d to £29 15s £29 11s 3d, March £29 8s 9d to £29 16s 3d and £29 12s 6d.

SPELTER was moderately supported, and after a firm interval closed quieter. November, also December, sold £33 7s 6d to £33 11s 3d, January £33 6s 3d to £33 10s, February £33 6s 3d to £33 13s 9d £33 11s 3d, March £33 11s 3d £33 13s 9d to £33 10s, April £33 8s 9d ton.

ANTIMONY quiet. English special brands £74 10s to £75. China crude November-December quoted £32, regulus November-December sold £53 ton c.i.f.

ALUMINIUM dull. Home delivery quoted £107, export £112 ton. WOLFRAM firm. November-December 15s 9d to 16s c.i.f. ANTIMONY ore ditto 5s 9d per unit.

TIN PLATES easier. I.C. coke prompt 24s 9d to 25s 3d, forward 22s to 23s per box f.o.b. Swansea.

QUICKSILVER firmer. Spot £17 15s per bottle.

THE COTTON TRADE.

LIVERPOOL, November 25, 1926.

The United States Agricultural Bureau Report was issued on Monday last, and gave an estimated production of 18,399,000 bales, with 12,954,000 bales ginned. Despite the high production figures, the market during the week has been dull and featureless. Spot sales for the week 19th to 25th inclusive were 38,000 bales, of which 25,340 were American, 1,450 Brazil, 6,100 Peru, 1,150 Egypt, 3,080 African, 750 East Indian, and 130 sundries. Imports for the same period were 91,331 bales, including 67,413 American, 588 Brazil, 4,734 Peru, 17,281 Egyptian, 621 African, and 604 sundries. Quotations to-day are middling American 6.66d, G.F. Brazil 7.26d, G.F. mod. rough Peru 8.75d, smooth 8.26d, Egyptian sakel 14.65d, uppers 10.00, Tinnivelly 6.45d, East African G.F. 8.70d, and middling West African 6.91d.

MANCHESTER, November 25, 1926.

A quiet feeling has prevailed throughout the week, buyers having shown increased disposition to act with caution. There is, in fact, increased expectation of lower values, although the raw cotton markets are not responding to official reports of larger supplies. Cloth inquiry has been of fair dimensions, but numerous bids cannot be entertained. Scattered sales have occurred for India, but the turnover has been smaller than earlier in the month. Only odd lots have been put through for China. Bleached shirtings have attracted a little more attention for Java and the Straits Settlements, and fine goods have been in steady request for the Continent. Makers of fancies continue to meet with moderate sales, but manufacturers are in urgent need of contracts in standard qualities. American yarns for home use have moved off slowly. Prices are becoming more irregular, and there is increased pressure to sell. Some very fair lines have been booked in Egyptian counts, and rates remain steadier.

A MAGIC TRANSATLANTIC WORD for ILLUSTRATED BOOKLET

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The course of trade at the opening sale in Coleman street this week revealed no new feature. Unfortunately, Wednesday's and Thursday's sales were abandoned on account of fog. Judging from overseas cables, the recent ease in raw material values has been checked, and many users in this country are beginning to doubt whether wool will fall much below the current level. Reasonably cheap raw material would doubtless help to bring out business, but wool cannot fall much below to-day's rates without jeopardising the position of growers, and the best interests of all sections would probably be served if the raw material could be maintained without much fluctuation one way or the other. Increased machinery activity is urgently needed in the West Riding, and it is hoped that when coal becomes available at a reasonable price wholesale fabric buyers will be induced to operate with more freedom. In the meantime, there is only a moderate turnover in tops and yarns, and quotations are steady at about last week's rates. Some big weights of tops and yarns changed hands a week or two ago at prices which would not be accepted to-day, but apparently most spinners have satisfied their requirements for the present, and are not disposed to add to their commitments. The unfortunate thing is that selling prices still remain well below the cost of replacement, but machinery, though a good servant, is a hard master, and mill-owners, faced with idle plant and heavy standing charges or with orders which show no margin of profit, are in an unenviable situation.

COLONIAL WOOL.
(FROM A CORRESPONDENT.)

The final series of London sales commenced last Tuesday, with a large crowd of buyers present. Prices went very much as we forecast last week. Good combing merinos declined 5 per cent., while shabbier wools lost ground to the extent of 7½ per cent., sometimes a little more, largely on account of the absence of active French competition. Crossbreds generally declined 5 per cent., fine halfbreds maintaining their ground as well as any of this class of raw material. Stocks of 56's tops in Bradford are very small, and values for these, as well as 58's, have kept wonderfully steady during the recent depression. Even a reasonable consumption of fine crossbreds will readily absorb all the wools available. We regard the opening as very sound and satisfactory. Nobody is disposed to force the pace or to exceed limits. Germany led the van, with the home trade a good second. French competition was very limited. A sudden outburst of French competition may occur at times when a few urgent requirements are to be covered, but, generally speaking, the chief support of the series will come from Yorkshire and Germany.

We entirely agree with Mr Harry Dawson that the whole trade is anxious to avoid risks at the moment. There is an entire absence of speculation. Home and Continental "emergency requirements" will be the chief factor in supporting values in Coleman street, but there certainly is nothing as yet to stimulate any very large buying on future account. In Mr Dawson's words: "The strong and universal desire that seems to be uppermost in all centres to-day is that we may have a minimum of fluctuations during the coming season. Any strong upward movement would most certainly check the improved demand, while a steady market would certainly help a return to confidence, with fuller machinery employment and better conditions all round." There is no doubt that the home trade has in the last fortnight been a keen buyer at Australian selling centres entirely because values were reasonable. This point we have stressed week after week. To-day Coleman Street is fully 5 per cent. above Australian prices. The risk that is inseparable from buying overseas makes such a margin necessary, but providing prices remain where they are we think steady operations in all overseas selling centres will continue.

THE JUTE TRADE.

DUNDEE, November 25.

Uncertain movements in prices of raw jute tend to restrict business in all sections. Whenever signs of lower prices are apparent buyers withdraw. The latter still believe that prices should be lower on account of the record crop, but, apart from the smaller imports into Calcutta compared with last season, the question of securing good quality is most acute. Many reliable shippers are unwilling to sell owing to the difficulty in obtaining the material necessary to keep up their standard. The Daisee and Tossa fibres are reported to be very bad. The Calcutta mills are turning their attention to pucca bales, and purchasing these instead of the usual kutcha bales, and loose jute. Reports as to the conditions prevailing up-country in India are very conflicting. Some observers believe that the jute is being held up by the natives, others that the crop is not so large as the official forecasts would imply. Good first marks are held for high prices, from £36 to £37 being asked, while lightnings are from £29 10s to £31, Daisee assortment at £28 to £28 10s, and Tossa assortment £33 to £33 5s, all November-December shipment.

There is little business in yarns, but spinners' quotations are very firm. For common 8-lb cops 3s 4d is the general market value and for 8-lb spools 3s 5d. Spinners are determined not to cut these rates so long as the raw material remains at its present high price. Business in cloth is extremely slow. Buyers continue to take small quantities for immediate requirements. Prices are steady at 4½d to 4½d for 10½-ounce 40-inch hessians and from 3½d to 3½d for 8-ounce. Linoleum hessians are quiet, as are heavy

goods. Calcutta hessians have been dull and depressed, but at the moment are showing signs of recovery. America has purchased fair quantities in Calcutta for shipment up to December 15th.

HIDE, LEATHER, AND ALLIED TRADES.

There are no signs of any weakening in the home hide market, and provincial prices have showed advances of ½d to ¾d per lb. At the auctions held in Bermondsey on Thursday last prices were steady, best ox selling from 6½d to 9d, and seconds from 6d to 8½d per lb. Best cows sold at 6½d and best calves from 7½d to 12½d. Imported hides are firmer in face of a demand from the United States, Russia, and Germany, and best Argentine fregorifics are now selling at 8½d, home tanners also being interested at this price. Dry hides are a shade firmer and B.A. Americanos are quoted at 11½d. The Chicago position is cabled as firm, with best heavy packers selling freely at 15 cents. Business with merchants has showed a slight decline this week in sole leather, but good deliveries have gone out from the tanneries of cheap dry hide bends and medium wet salted to the repairing trade. In dressed leather the chief demand is for cheap black and coloured glacé kid for the Russian boot, willow also coming in for a share of this business. Patent is a good seller. Curriers of kip leathers are receiving orders for kip butts suitable for miners' boots. The boot and shoe trades are fairly well employed. Large orders have been received by Leicester manufacturers for Russian boots. Makers of artisan boots are also busier.

THE TIMBER TRADE.

(FROM A CORRESPONDENT.)

The trade in North European building woods has turned a little in favour of consumers during the past four weeks. Imports during October showed a large increase compared with the corresponding month of 1925, which will be welcome to consuming industries. London's November receipts have also been on a large scale. Increasing freight rates, however, will not tend to encourage the import of any large volume of North European building timbers into the country next month, for many purchases will be held in stock abroad until next season. The increased cost of new goods on account of these high freight charges (which are in some cases as much as 40s a standard) has increased the value of spot goods, but selling competition is keen, and holders of high freight stocks will find a difficulty in selling remuneratively. This phase is probably temporary, and spot values will doubtless firm up gradually during the close season of navigation. Building trade consumption has tapered off a little this month, the decline being largely seasonal, though higher costs may be partly responsible. The first open-water business in North of Europe productions has commenced much earlier than usual, large purchases of Finnish wood having been made by Great Britain and other European consuming countries. This shows a confidence of greater industrial activity in Great Britain and Europe next year. Rates are about the same as the present season's opening quotations, and freights are expected to be 10s to 15s above those f.o.w. 1926.

Imports of Canadian spruce have fallen off this year. Consumption of this wood has been satisfactory in the Mersey district. Stocks are light, and further shipments would find a responsive market. Stocks in London are sufficient in view of the present level of consumption. In shipbuilding timbers—teak, pitchpine, Douglas fir, &c.—the market is firm, with stocks, on the whole, moderate. Mahogany logs in first hands are very light, and the market is firm. American hardwoods are in good stock, with only small additional supplies expected next month. Forward business can be transacted only on high c.i.f. levels.

VEGETABLE OILS AND OILSEEDS.

Rather a better tone is present, but actual business still leaves much to be desired. Linseed oil attracts little attention from consumers, and values are about unchanged at £31 per ton naked ex-Hull mill for "spot" and delivery to April. Cotton oils have declined sharply, but this appears to have brought in buyers and caused prices to rally, crude Egyptian now quoting £31 and technical refined £34 10s. Palm kernel oil is easier at £40, but other oils are nominally unchanged.

In the oilseed section values of Plate linseed have been largely influenced by reports of the weather and the growing crop. After business has been done in new crop for January-February loading at £14 17s 6d, the market improved to the extent of 5s. A fair business is reported in old seed on passage or for early shipment, £15 15s being paid for November-December and £15 5s for December-January. New Calcutta linseed to London has been done at £16 10s, April-May shipment. Cottonseed is easier and in moderate demand down to £8 17s 6d, having been accepted for black Egyptian for shipment. Private estimates of the yield of the new Argentine linseed vary very widely, some putting the figure as low as 1,500,000 tons, while others reckon on 1,900,000 tons, or only slightly less than the past season's yield.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—After marked activity and rising prices in all directions, there was a pause in demand, but actual sugars kept firm in value. Of British refined, Tate and Lyle's cubes quoted 37s 3d to 37s 9d; granulated, fine and coarse, 33s 10½d; No. 1, 33s 7½d; No. 2, also London and T.L.S., 33s 4½d; month forward 33s 3d; January-March, 33s 6d; yellow crystals, spot, 30s 4½d. English-grown granulated in moderate support at 31s 9d to 32s 3d, according to factory. Czechoslovakian factory crop estimate amounts to 1,020,000 tons, against 1,200,000 of Licht, and an outturn 1st season of 1,500,000 tons. Imported granulated steady, quiet. Czechoslovak also Dutch J, 31s 6d. White Mauritius, 29s 6d. All parcels for shipment paraffin offered and firm. Czechoslovak granulated, ready, 18s 4½d; December, 18s 6d; f.o.b., Hamburg. Dutch J, ready, 18s 9d, f.o.b., Rotterdam. Polish crystals, December, 17s 10½d, f.o.b., Danzig. Belgian crystals, ready, sold, 18s 4½d, f.o.b., Antwerp. Peruvian, 96 per cent, December, quoted 15s 9d, c.f. and i., U.K. White Mauritius, December-January, 21s 3d, c.f. and i., London. White Java, January-March, to Calcutta, sold, 19s 10½d; July-September, quoted 17s 6d; October-December, 17s 7½d, c.f. terms. White terminal slightly unsettled and easier, with fair transactions. December, sold, 17s 9d, 17s 8½d, and 17s 8½d; March, 18s 3d, 18s 1½d, and 18s 3d; May, 18s 4½d, 18s 3d, and 18s 3½d; August, 18s 4½d; September, 18s 3½d; December, 17s 2½d to 17s 0½d cwt.

COFFEE.—The market continues very poorly supplied with qualities suitable to the home trade, and as a result these sell readily, while prices are again slightly higher. In auction, Arusha smalls, sold, 110s to 118s; pile sizes, 124s to 144s 6d; bold, 142s to 153s. Kilimanjaro, pile sizes, 128s 6d to 136s 6d; bold, 145s to 155s 6d; and peas, 138s to 154s 6d. Futures dull.

COCOA.—Spot market steady but rather quiet for most descriptions. Accra, unsettled in forward positions. F/F, November-January, sold, 50s, 47s 6d, 48s 6d, and 48s, f.o.b.

TEA.—Quantity of Indian in auction during the week amounted to 56,770 packages, including a fair proportion of Southern. All the finer and tippy qualities experienced a ready sale, at full recent rates with regard to Northern, but plain and grades poor in the cup sold but moderately at mostly ½d to ¾d per lb under previous quotations. Southern invoices came in for good patronage, in which fine parcels from Neilgherry in particular participated. Full prices were secured. Pekoe, sold, 1s 1½d to 1s 10d; broken ditto, 1s 1½d to 2s 2½d; orange, 1s 3d to 2s 4d; broken ditto, 1s 3½d to 2s 4d; fine to choice, 2s 8d to 3s 6d. Ceylon auctions of 21,650 packages aroused keen competition, the commoner lots ruling steady, while good to fine realised full to dearer prices. Pekoe, sold, 1s 2d to 2s 2d; broken, 1s 2d to 2s 3½d; orange, 1s 5d to 2s 4d; broken ditto, 1s 5½d to 2s 6½d. Business in China teas continues to move quietly. Some good to fine Keemun sold, 1s 10d to 2s 6d; Ningchows, 1d to 1½d per lb. Java and Sumatra auctions of 5,800 packages ruled steady for fine qualities, but common declined ½d to ¾d per lb. Pekoe, sold, 1s 1½d to 1s 4½d; broken ditto, 8½d to 1s 9½d; pekoe souchong, 1s 1d to 1s 3½d; orange, 1s 3½d to 1s 6½d; broken orange, 1½d to 1s 8½d per lb, in bond.

RICE.—Market still very quiet, and quotations nominally unaltered. Two stars, January-February, 14s 6d; February-March, 14s 7½d. Spanish, spot, 21s; shipment, 20s. Beans quietly steady. Peas quieter. Japanese old crop, spot, 29s 6d; new, 31s 9d; afloat, 30s 9d; December-January, 33s per cwt.

SPICE.—A quiet tone pervaded the pepper market. Lampung, October-December, 10½d; January-March, sold, 11½d to 11½d; Muntok, October-December, quoted 1s 6½d; January-March, 1s ¾d. Zanzibar cloves, October-December, 8½d; January-March, 8½d. Pimento, spot, 8½d per lb. Tapioca easier. Singapore flake, December-January, to Havre, sold, 16s 4½d. Sago flour, December-February, to the U.K., sold, 15s 7½d per cwt.

FRUIT (Dried).—Currants firmer, with a fair demand. Pyrgos quoted 3s; Patras, 36s to 38s; Gulf, 39s to 44s; Vostizza, 46s to 55s; Australian, 35s to 42s, as to quality. Sultanias maintained. Smyrna, medium to good, 66s to 72s; fine Cretan, 72s to 85s; Australian, 60s to 78s. Raisins in good demand at full rates. Valencia, quarter-boxes sold, 50s to 70s; halves, 45s. Dates steady, quiet. Hallowee, on quay, first tide, 30s; Khadowie, 20s 6d; Siar, 18s; cartons, 34s, landed terms, London. Figs firm. Lacouns, 105s to 140s; layers, 68s to 80s; genuine, 32s to 34s. Evaporated fruits generally quiet, but tone firm for plums. Californian apricots, extra choice, 125s; South African, first grade, 132s 6d. Plums, Californian, 30/40's, quoted 66s; 60/70's, 46s; 80/90's, 38s 6d. Pears, Californian, extra choice, 62s 6d; fancy, 72s 6d; Lake County, fancy, 80s. Apple rings, Californian, spot, 50s to 60s; prompt shipment, 47s 9d, c.i.f. per cwt. Almonds very firm, and in demand, with stocks light.

CANNED GOODS.

CANNED FISH.—Trade generally quiet, but late rates were maintained. Sardines—Portuguese clubs quoted 4s 6d per dozen tins. Salmon—red, tall, 1 lb, quoted 27s; tall pink, 26s to 27s. Lobsters

—best ½'s, 160s to 162s 6d; ¾'s, 90s to 95s. Crayfish—½'s, 76s to 77s; ¾'s, 49s to 50s per case. Japanese crab steady. Herrings 7s per dozen tins.

CANNED FRUIT.—There is not much activity so far, but an improvement in demand is anticipated shortly. Californian Bartlett pears, 24-2½'s, quoted, choice, 12s to 12s 6d. Californian peaches, choice, 11s 6d to 12s 3d; seconds, 8s 9d; Californian apricots, choice, 12s 6d; seconds, 9s 3d per dozen tins. Singapore pines in fair request, and prices firmer owing to the strong forward position. Italian tomatoes firmly held, with extreme rates ruling for parcels to arrive.

CANNED MEATS in moderate request at steady rates. Corned beef, 6's, quoted 38s to 44s, as to quality. Danish lunch tongues, 120s to 127s 6d; American, 142s 6d to 147s 6d.

CONDENSED MILK.—Machine-skimmed firm, while more reservedly offered, but full-cream moved off slowly. Evaporated milk sells steadily.

HONEY steady, with moderate sales. New Zealand quoted 54s to 85s, as to quality; Jamaica, good palish, 52s 6d; manufacturing kinds, 35s to 40s; Cuban, 35s to 50s; Australian, 40s to 50s; Californian white set, 57s 6d; pale liquid, 56s per cwt.

GENERAL.

HEMP.—Only small transactions this week, but prices steady, as shippers offer with some reserve. Japanese consumption of manila continues to extend, and while showing an increase of 60,000 bales to date, as against corresponding period last season, the total quantity now approximates to that taken by Great Britain. J, November-January quoted £48; K and L 1 sold, £45 10s; L 2 quoted £42 10s; M 1, £42 10s; M 2, £36 to £37 p.i.d. New Zealand, fair, November-January, quoted £36 10s. African sisal No. 1, f.a.q., November-January, £43.

SHELLAC.—Market quiet. T.N., spot, 210s to 215s; December, 207s 6d to 200s; March, 215s to 220s 6d per cwt.

COPRA.—Quiet, and prices tend against sellers. Straits, F.M.S., December-January, to Rotterdam, sold, £26 15s; Dutch East Indies, ditto, sold, £26 12s 6d; Ceylon, December-January, sold, £28; South Sea Islands, sun-dried, quoted £25; ditto, to Marseilles, quiet, unaltered. Palm kernels slow, and near steamer, Hamburg, sold, £19 2s 6d to £19; November-January, to Liverpool, quoted, £19 12s 6d per ton.

RUBBER.

With reserved sellers and fair buying disposition at opening the market ruled firmer, but eased soon after. Plantation standard sheet, spot, and November, sold, 1s 7½d to 1s 7d; December, 1s 7½d to 1s 7½d; January-March, 1s 7½d to 1s 7½d; April-June, 1s 8½d to 1s 8½d per lb.

TALLOW.—Messrs Colchesters and Woolner write on November 24th as follows:—The tallow market was quiet during the week, and prices are barely maintained to-day. Several of the lots unsold at the last auctions have since found buyers, but there remains available about half the quantity catalogued. There were no auctions to-day. Quotations are:—Australian mutton: Fine, 43s; good to fair, 42s to 40s; dull to dark, 39s to 36s 6d; hard, 42s. Australian beef: Fine, 41s 6d; good to fair, 40s to 39s; dull to dark, 37s 6d to 36s 6d; sweet, 43s. Present shipment from Australasia: Good mixed, 40s 6d. Present shipment from South America, 40s 6d. The market letter is unchanged. Town tallow, 37s 6d per cwt. Rough fat, per 8 lbs, 1½d; melted stuff, 27s per cwt. Quotations are:—Town, 37s 6d, net cash, naked, ex works. Country—Frail casks, 37s; home melted, shipping casks, net f.o.b., good coloured, 40s; fair to dull, 38s to 37s. Bone fat: white, none; pale, none; benzine, 32s; melted stuff, 31s 6d, f.o.b.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, £22 to £38; Cochin, £22 10s to £45; Ceylon bristle, £18 to £23 10s; cinnamon leaf oil, 5d; citronella, Ceylon, 1s 6d; Java, 2s 2d.

PRELIMINARY NOTICE.

THE CHARTERHOUSE INVESTMENT TRUST, LIMITED.

(Incorporated under the Companies Acts, 1908 to 1917.)

CAPITAL - - - £1,000,000

DIVIDED INTO

1,000,000 Ordinary Shares of £1 each, of which 300,000 have been issued, and are fully paid up.

The Articles of Association provide that no Debentures or Debenture Stock, except for securing overdrafts, advances or loans from the Company's Bankers for the time being, may be created without the consent of the Company in General Meeting, and there shall be carried to reserve each year a sum at least equal to 10 per cent. of the net profits until such Reserve Fund amounts to 50 per cent. of the Ordinary Capital for the time being issued, to be maintained at that figure.

The Prospectus will be advertised on Sunday and Monday next

OF AN

ISSUE OF 700,000 SHARES OF £1 EACH AT 21s. PER SHARE.

The above Shares will rank for Dividend as from 12th November, 1926, and are thus equal in all respects to the existing issued Shares.

The Directors and their friends have applied on the terms of the Prospectus for 300,000 Shares, which will be allotted in full.

The Prospectus will show:—

The Charterhouse Investment Trust, Limited, was formed in November, 1925, as an Investment Trust and Finance Company, and has been instrumental in placing successfully several important public issues.

The additional capital now issued can be profitably employed in business already in hand.

The first year's results show a net profit of £52,593 2s. 2d., representing approximately 30 per cent. on the Capital of the Company for the time being paid up as from the due dates of calls on the original Shares. Out of this profit there has been declared a dividend of 7 per cent. less income tax, equal to 12 per cent. on the capital for the time being paid up; £7,534 has been placed to Reserve, £5,905 carried forward to next year, and £10,000 written off preliminary expenses. This satisfactory result has been achieved during a year which included more than six months of the disastrous coal strike.

Prospectuses and Forms of Application can be obtained on Saturday from

LLOYDS BANK LIMITED, 39, Threadneedle Street, E.C.2;

JOHN PRUST & CO., Stockbrokers, 37, Throgmorton Street, E.C.2, and Stock Exchange;

THE BRITISH OVERSEAS BANK, LTD.

ESTABLISHED 1919.

Report by the Board of Directors to the Seventh Annual General Meeting of Shareholders to be held in the Bank Premises, 33, Gracechurch-street (Lombard-court), London, E.C.3, on Tuesday, the Seventh day of December, 1926, at 12 noon.

The Directors submit to the Shareholders the Balance-sheet of the Bank as at 31st October, 1926, and Profit and Loss Account, together with copy of the Auditors' Certificate.

The Profit, after allowing rebate of interest and providing for all bad and doubtful debts, Income Tax and other Taxation for the year ended 31st October, 1926, amounts to £150,220 13 4

Balance available from last account 60,345 11 3

Making a total of £210,566 4 7

Interim dividend on "A" Ordinary Shares at the rate of Six per cent. per annum for the Half-year ended 30th April, 1926, and Income Tax thereon 30,000 0 0

Leaving a Balance of £180,566 4 7

which has been appropriated as follows:—

In payment of a Dividend on the "A" Ordinary Shares at the rate of Six per cent. per annum (less Income Tax) for the Half-year ended 31st October, 1926, which together with Income Tax thereon amounts to £30,000 0 0

In payment of a Dividend on the "B" Ordinary Shares at the rate of Six per cent. per annum (less Income Tax) for the Year ended 31st October, 1926, which together with Income Tax thereon amounts to £60,000 0 0

To Reduction of Premises Account 5,000 0 0

To Reserve Fund 25,000 0 0

Leaving a Net Balance to be carried forward to next year of 60,566 4 7

£180,566 4 7

Since the close of the year under review the Directors have appointed Mr. Dudley Ward, C.B.E., a Manager of the Bank, to a seat on the Board.

The Directors retiring by rotation are The Right Hon. Viscount Churchill, G.C.V.O., and The Hon. Bernard Rollo, who, being eligible, offer themselves for re-election. In accordance with Article 91, Mr. Dudley Ward's appointment requires confirmation by the Shareholders.

The Auditors, Messrs. A. W. Tait, C.B.E., and A. S. Macharg, also retire, and, being eligible, offer themselves for re-appointment.

By Order of the Board,
A. E. THORNE, Secretary.

BALANCE-SHEET as at 31st October, 1926.

AUDITORS' REPORT.

We have examined the above Balance Sheet and compared it with the Books of the Bank. We have satisfied ourselves as to the correctness of the Cash Balances and the Bills of Exchange and have verified the Securities. We have obtained all the information and explanations which we have required, and are of the opinion that the Balance Sheet is properly drawn up, so as to exhibit a true and correct view of the state of the Bank's affairs, according to the best of our information and the explanations given to us and as shown by the Books of the Bank.

London, E.C., 23rd November, 1926.

THE MONEY MARKET.

THE customary end-of-the-month pressure in Lombard street was accentuated by some calling in of funds by the joint stock banks on Tuesday for balance-sheet purposes, and up to 5 per cent. was readily paid for short loans, but the market managed to avoid going to the Bank. On Wednesday over £50 millions in interest on War Loan was distributed, and the market was able to

wipe off its debt to the Bank of England, but the effect of the interest payment was not fully felt until Thursday, when short loans were freely offered down to $3\frac{1}{2}$ per cent. The discount market eased in anticipation of more comfortable conditions in the money market, and the general working rate for three months' bills has been $4\frac{1}{2}$ per cent.

	Dec. 3, 1926.	Nov. 26, 1926.	Nov. 19, 1926.	Nov. 12, 1926.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	4 (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	2 (Dec. 3, '25)
Discount/Call	3	3	3	3	2 (Dec. 3, '25)
Houses' Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	2 (Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	..

Thursday's Bank return showed a decrease of £98,500 in the stock of coin and bullion, and an increase of £1,688,900 in the note circulation. The reserve thus declined by £1,787,400, the Proportion dropping by nearly 2 per cent. to 25.9 per cent. The War Loan interest payments are reflected in an increase of £8,930,000 in Government securities, a decrease of £14,616,700 in Public Deposits, and an increase of £17,000,900 in Other Deposits. Market repayments are indicated by a reduction of £4,698,300 in Other securities. Currency notes were increased by £1,047,700 to £285,783,400, which includes £1,289,700 for notes called in, but not yet cancelled. The fiduciary issue is £228,243,700, or £19,658,800 below the maximum for 1926.

NEW YORK MARKETS.

Our New York correspondent cables:—The security markets are displaying some buoyancy, and average share values are at new high levels. The public is showing signs of interest, but the volume of business is still moderate. Cheap money is one factor and the steadiness of industry another, sentiment being more optimistic. Call money rates have relaxed with the passing of the end of the month. Demands in connection with the latter complicate the week's Federal Reserve statements, which show increased demands upon the System, with the Reserve ratio 1.1 per cent. lower. There has been some flow of money to New York, besides which the local Reserve Bank has bought bills and Government securities. Dun's Index is practically unchanged for November, with group movements irregular.

THE STOCK MARKETS.

The course of markets in the Stock Exchange this week has been disturbed by several adverse factors, the most prominent of which is the state of affairs in China. Fluctuations in the franc, the fall in the price of rubber, and the unsatisfactory conclusion of the coal stoppage have also been depressing influences, and in most sections prices have been weak. The distribution of over £50 millions in War Loan interest produced no investment buying in the gilt-edged market, where, however, prices are tolerably steady. Chinese bonds have fallen heavily, while inter-Bourse stocks, such as Peruvian Corporations, Rio Tintos, and Turkish Unified, have been very sensitive and are lower on balance. Home Rails have again drooped, but the Argentine Railway market has been fairly good. Rubber share prices have slumped on the further fall in the price of the commodity. In the industrial market Bleachers relapsed on the reduction in the interim dividend, and Dunlops reacted after last week's advance. Mines, with a few exceptions, have been depressed. The issues by the Charterhouse Investment Trust and the Associated Dyers and Cleaners were over-subscribed.

THE COMMODITY MARKETS.

The resumption of operations in all the coalfields of Great Britain has improved the immediate outlook in almost every trade, though some little time must elapse

before normal conditions are restored. Pit-head prices have fallen, on the average, by about 10s a ton, and official permission has been forthcoming for a partial restart in the export trade. The heavy iron and steel industries are hampered by high fuel prices, and a shortage of available material. No immediate drop in quotations is looked for. The cotton market is featureless, and as yarn and cloth buyers continue to act with caution, no increase falls to be recorded in the volume of business done. Heavy weights of wool are moving at firm prices in all centres, but the absence of a brisk demand for piece goods has prevented the more hopeful feelings of makers from being translated into action as yet. The wheat markets have been easy in tendency, with a slight accession of business in the latter part of the week. Sugar is steady, coffee and tea quiet. Rubber prices have fallen below 1s 6d on selling pressure. Among non-ferrous metals, tin was in strong demand early in the week, but lost ground later, while copper and lead showed similar irregularities after a firm opening.

FOREIGN EXCHANGES.

The features of the foreign exchange market have been the wide fluctuations in the franc, the movement of the Berlin exchange against this country, and, to a lesser degree, the appreciation of the Canadian dollar. Paris opened on the 27th at 135 $\frac{3}{4}$, but there was an improvement at the close to 134 $\frac{1}{2}$. On Monday there was an improvement at the close of over 4f on the previous day's closing, the rate being 130 $\frac{1}{2}$, after being under 130 during the day. On Tuesday there was a firm opening at 130, followed by a reaction to 132 $\frac{1}{2}$, the three months' forward rate being at 2 $\frac{1}{2}$ f discount, as compared with spot. On Wednesday the effect of the larger turnover consequent on the monthly settlement showed itself in the opening rate of 134, but 130 $\frac{1}{2}$ was recorded at the close. The three-months' forward rate was 2 $\frac{3}{4}$ discount. On Thursday there was great activity and wide movements between 126 and 129 $\frac{1}{2}$, the closing rate being 126 $\frac{3}{4}$, another variation by 4f on the closing rate of the day before. Yesterday, midday, saw the rate at 127 $\frac{3}{4}$, after opening at 126, and there were signs of further weakness, which would carry the rates still higher. Forward francs for one and three months' delivery were quoted at 85c and 2.70c discount. It is understood that although the Banque de France returns were slightly less favourable, showing increases of 1,000 million francs and 69 million francs in advances to the State and in the Note issue, taxation has of late been coming in most satisfactorily. It is, however, obvious that such steep rises as those recorded during the week must be unhealthy at the present level of the franc; and also that this sudden appreciation must rapidly stifle industry and soon check the inflow of taxation. It is also fair to say that too much appears to hang on the shoulders of one man to inspire much confidence in the future in the face of the factors we have mentioned. The New York rate remained on balance unchanged at 4.84 $\frac{1}{16}$, after improving to 4.85 1-32-16 on Monday. Forward rates yesterday were at 1-32c discount for both one and three months. Montreal improved from 4.84 $\frac{1}{4}$ to 4.84 $\frac{1}{2}$ on a transfer of gold from New York. Berlin improved from 20.43 to 20.39 on considerable buying of marks in connection, it is believed, with ordinary commercial transactions. The lira showed a fair amount of fluctuation from time to time, and stood yesterday at 113 $\frac{1}{2}$, with one and three months at $\frac{3}{4}$ and 2 $\frac{1}{2}$ lira discount, as against the opening level of 114 $\frac{3}{4}$ - $\frac{1}{2}$. The peseta appreciated well from 31.99-32.02 to 31.85, chiefly, it is supposed on better political conditions. Oslo showed considerable weakness on Monday at 19.22 after opening at 18.98, but recovered slowly though steadily to 19.08 yesterday. Stockholm was rather better at 18.16 yesterday against the opening level of 18.17, as was Copenhagen at 18.20, as compared with 18.21. Geneva moved against this country and closed at 25.13, against an opening of 25.15, as did Brussels at 34.85, as compared with 34.88. The other European exchanges call for no remark. In the East the rupee opened weaker at 1s 5 25-32d, and

closed at this level in a dull market after touching 1s 5 $\frac{3}{4}$ d. The yen opened at 2s 0 $\frac{1}{2}$ d and closed a fraction weaker at 2s 0 $\frac{1}{4}$ d. Of the South American exchanges, Buenos Aires closed weaker by 1-32d at 45 23-32, and Rio was also weaker by 1-32d at 6 1-32d. The silver market was very quiet and dull throughout, and prices fell sharply towards the close as a result of Indian and China selling. The general outlook is hesitant and uncertain. The silver exchanges reacted in sympathy, Shanghai falling to 2s 4 $\frac{1}{2}$ d after opening at 2s 5 $\frac{3}{4}$ d, and Hongkong to 1s 10 $\frac{3}{4}$ d, as against 1s. 11d. Singapore remained unchanged at 2s 3 $\frac{1}{2}$ d.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended November 27th:—

(000's omitted.)			
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	7,585	From Revenue	9,147
Interest, &c., on Debt	1,253	Increase in Debt	1,556
Sinking Fund	810		
Increase in Balances	117		
Sundries	939		
	10,703		10,703

Revenue amounted to £9,147,700, as against £8,971,200 during the corresponding week last year. Customs yielded £2,518,000, against £2,338,000, and Excise £1,689,000, against £1,485,000. Estate, &c., duties produced £1,700,000, against £680,000. Property and income-tax yielded £588,000, against £1,258,000, and Super-tax £380,000, against £360,000. The week's operations increased the National debt by £1,556,000, and caused the following changes:—

(000's omitted.)			
	£		£
Public Department Advances ..	2,000	Treasury Bills	+ 4,036
National Savings Certificates ..	200		
Sundries	280		
	2,480		+ 4,036

The floating debt was increased by £2,020,000 to £787,096,000.

FINANCIAL YEAR, 1926-1927 (April 1 to November 27, 1926).

£		£	
Total Expenditure ..	508,003,354	Raised by Revenue ..	423,159,220
		Decrease in Balances ..	3,742,316
		Amount borrowed ..	81,101,818
Total	508,003,354	Total	508,003,354

ESTIMATES FOR FINANCIAL YEAR 1926-7.†

£		£	
Expenditure	825,727,000	Revenue	824,750,000
Deficit	£977,000		

† Revised in Exchequer Return dated July 26, 1926.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Royal Bank of Australia, Consolidated Goldfields of South Africa, Castlefield (Klang) Rubber Estate, John I. Thornycroft, Pahang Consolidated, and Malaya General Company. At the meeting of the Royal Bank of Australia it was decided to hold meetings annually instead of half-yearly.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

REFLECTIONS ON THE COAL DISPUTE.

This week may be considered for practical purposes to have seen the end of the most serious dispute in the annals of British industry. All the miners of the country are not yet at work; all workable pits have not yet reopened; agreements have not been signed in all districts; here and there minor points remain to be adjusted. But the men in all districts have been instructed by their organisations to return to work; more than 50 per cent. of the total have actually resumed; and by the end of next week we may expect to see most of the mines of the country working at fairly full pressure to overtake arrears of demand and to rebuild the depleted stocks,

first at home and then in those countries abroad where the cessation of British production has caused a fuel famine. The chief event of the past week, during which the rush back to work has been heavy in all districts, has been the conclusion of an agreement in South Wales on the basis of an eight-hour day, with seven hours for Saturday. In Durham and in Cumberland ballots resulted in a narrow rejection of owners' offers, but a two-thirds adverse majority being lacking, a return to work was ordered. So, piecemeal, on a variety of terms, none of them anything like as favourable to the miners as those that wise leaders could have secured for them six months ago (or even before the strike), our greatest key industry is resuming production. In Scotland, South Wales, and Lancashire the terms include an eight hours' day; in Northumberland, Durham, Yorkshire, Notts, and Derbyshire a 7 $\frac{1}{2}$ hours' day. In Scotland, Yorkshire, and Lancashire the agreements are for three years; in Notts and Derbyshire for five years; in Northumberland for two years; in Durham for only one.

Thus hostilities are at last at an end. But can we say that there is peace in any real sense? Our readers are aware that we do not regard as ideal, or even as satisfactory, either the general line of the terms that have been arranged or the manner in which the end of the struggle has come about. It is, however, no good crying over spilt milk. The point of real importance is that there is now a breathing space, during which the industry will work under artificially favourable circumstances; and we may yet look to the future with confidence, if this respite is employed by the best brains on both sides of the industry in assimilating the lessons of this disastrous dispute, and in determining to face at long last the hard facts which the Samuel Commission enunciated so clearly, but with a voice that, unfortunately, fell on the deaf ears of narrow and inept leaders on both sides. If, on the other hand, the industry is merely going back to hide its head in the sand of a temporary and unnatural boom, whose passing will leave things worse than ever, then the coal cloud still hangs heavily over our industrial future, and we have gained no asset to place against the appalling losses which the industry has for seven months heaped upon the nation. There is, we hope, ground for believing that this ostrich-like procedure will not be adopted. On the side of the miners we may surely expect results from the revelation of the grotesque failure of leadership from which they have suffered. It is almost inconceivable that any important body of workers, with the object-lesson of the last seven months before their eyes, should again entrust their fortunes to the hands of men so utterly devoid of statesmanship, of courage, of broad outlook, of grasp of facts, of negotiating power, or even of the elements of common business capacity, as Mr A. J. Cook and Mr Herbert Smith have conclusively proved themselves to be. Now the conduct of affairs has passed from these feeble hands into the control of bodies of men in the various districts, among whom undoubtedly are persons of far greater capacity. From this transfer may we not hope to see the gradual emergence of constructive policy and enlightened leadership? Whether on the owners' side we may also hope for a greatly needed change in outlook and policy, such as will enable them to grasp the opportunity offered by the period immediately ahead, time alone will show. Optimism on this point is somewhat damped when we find that to the Report of the Committee on the Marketing of Coal, which we discuss on a later page, a minority report is appended, two of the three signatories of which are coalowners, who, in effect, say that no improvement is needed and nothing requires to be done. Sincerely do we trust that the coming months will show this *dolce far niente* attitude to be unrepresentative of the mineowners as a whole.

Some of the most obvious considerations arising out of the coal dispute and its settlement have, however, a vital bearing not merely on the coal trade, but on the whole industry of the country. We may take the end of the coal dispute as marking a critical point in the economic history of Britain. Hitherto it has been possible to attribute the ups and downs that we have experienced since the war to temporary and passing causes.

At one time, when our European competitors were in a crippled condition, we had a very nearly free run in distant overseas markets. At others monetary depreciation put us at a serious disadvantage. From now onward we are facing more normal circumstances. The chief currencies have been stabilised, and though something still remains to be done in this respect in France and Italy, both these countries now seem to have the determination as well as the power to prevent any serious further fall. There are signs that at last the world's volume of trade is steadily expanding. Are we going to retain a large share of this growing trade, or is the world going to pass us by and leave us to our wrangling and our inefficiency?

There are two hopeful signs. The first is that the General Strike and the more deadly long-drawn-out stoppage in the mines have disillusioned the masses of the workers of the country with the methods of Moscow, and will probably have the effect of destroying the influence of extremists in the trade-union organisation whose purpose should be to aim at the technical and economic advancement of industry, instead of at industrial sabotage for political ends. On the other hand, large numbers of employers have realised in the last two years that they have much to learn both from America and from Germany in regard to industrial technique, industrial organisation, the relations between themselves and their workpeople and their customers, and, generally, in the art of taking a long view of industrial policy. In short, these last years have been a period of mass education. Are we going to profit by the lesson?

On the trade-union side much depends on whether the leaders will show the necessary courage to explain to the masses of the people that efficiency and high productivity alone can create high consuming power, and that, therefore, the use by the worker of the most up-to-date plant and technique, progressive reorganisation in the workshops and modern commercial methods can alone produce high wages, and that to push wages up without these is only to strangle British trade. It would be false to assume that misguided trade union leadership is alone responsible for the present condition of British industry. In one of the worst-hit of our export industries—the cotton trade—relations between employers and workpeople are very good. Payment on a piece-work basis is the rule, and, broadly speaking, the trade unions have not hampered modernisation of the mills. The iron and steel industry, again, is one in which relations have been exceptionally good for many years. Payment by results has been general, and the attitude of labour cannot in any sense be held responsible for any defects there may be in that industry's technical equipment. Even in the engineering industry, in which there has been so much difficulty in removing traditional restrictive practices, the system of payment by results has made very considerable headway since pre-war days. Nearly half the workers are to-day on piece-work, compared with less than a quarter before the war, and, if the skilled grades alone be considered, the percentage is very much higher. On the other hand, one of the more prosperous industries, namely, the building trade, is one in which the time payment system is almost universal, and habits of *ca' canny* seem the most deeply ingrained. No thinking trade unionist, however, would deny that there is an absence of an active spirit of co-operation over a large field of British industry. So long as it is lacking there is no hope of getting a real lift to wages and the standard of living in this country.

Responsibility for improvement, however, lies even more definitely at the door of the employers. Nothing could be more disastrous than any attempt to use the situation created by the defeat of the miners to depress wages further or crush trade-union organisation. The most important objective of employers should be to increase the productivity of their workpeople in order that they may pay them more. But they cannot hope to get support in such a policy unless they can satisfy their men that they are getting a fair share of what should be a mutual benefit. In our view the omens are in favour of expanding trade in the immediate future for the reasons we have mentioned, and in any case there are arrears of work which will create at least a temporary activity

for several months to come. But unless the underlying conditions of domestic organisation are rectified now, this boom may prove as short-lived as the notorious post-war boom. It is hardly too much to say that British industry is at the cross-roads. The time has come to choose which road we will take.

MILITARY BUDGETS AND DISARMAMENT.

(BY A CORRESPONDENT.)

THE Preparatory Commission for the Disarmament Conference, which was appointed by the Council of the League of Nations in December, 1925, has not yet dealt with the questions referred to it in full session; these have been considered by sub-Commissions or by means of expert Committees, of which the most important was the Joint Commission, composed of members chosen among the personnel of the regular League Committees, such as the Financial Committee and of the International Labour Organisation. The Joint Commission having concluded its work, it has made a report dealing with certain economic aspects of a Disarmament Convention and with the possibility of utilising military and naval budgets for the limitation of armaments. It is worthy of note that this Report has been unanimously adopted by the Commission, which included English, French, German, Italian, Czechoslovak, and other members.

The Commission has had to study the possible economic consequences of a system of supervision of disarmament in accordance with a future Convention. As, however, the terms of such a Convention cannot be precisely forecast, the study has necessarily been somewhat hypothetical. The Commission considered, amongst other cases, the eventuality of certain terms being agreed upon which might affect private industry. With regard to the question of prohibiting certain forms of warfare, particularly chemical warfare, the Commission has had the advice of some specially qualified experts in the chemical industry, and states, in agreement with them, that the success of such prohibition would be better assured were there a previous agreement between the chemical industries concerned—a statement which might also be taken account of by the coming Economic Conference of the League.

In general the Commission lays stress upon the necessity of preventing any undesirable interference with the secrets of private industry and trade. With regard to the normal application of the Convention, it relies in the main upon the collection and study of statistical documentation. In the possible event of disputes arising between States as to the application of the Convention, the Commission recommends the adoption of a procedure somewhat similar to, but not quite as stringent as, that laid down in Articles 411 to 420 of the Treaty of Versailles for the peaceful settlement of disputes arising out of the International Labour Convention. The Commission refrains from proposing inquiries on the spot, leaving the question of such inquiries to the Preparatory Commission itself, in view of their pre-eminently political character.

Before the war the Inter-Parliamentary Union had already put forward a proposal for a Disarmament Convention, founded solely on a general reduction of the military budgets of the contracting States, and similar suggestions have been made since the war in League Assemblies. The Joint Commission considers that limitation of armaments by means of limiting expenditure only would be inadequate as the basis of a Convention. Such a Convention would not only be extremely difficult to negotiate and to control, but the freedom each State would possess to employ in the way it considered most effective the sums allowed by the Convention might obviously be used to develop forms of armaments particularly harmful to another given country.

If, however, the contracting parties agreed upon specific maximum figures for effectives and material (ships of war, big guns, aircraft, &c.), it would, in the opinion of the Commission, be useful to supplement that method of limitation by limiting also certain main categories as well as the total of budget expenditure on armaments. The amounts to be allowed to each State would naturally

correspond to the number of men and the quantity of material which had been agreed upon; if, however, smaller items of material were not made the subject of specific numerical maxima, those items might be conveniently combined in budget figures. The Commission emphasises the desirability of including in the Convention maximum figures for defence expenditure, in order to supplement and serve as a subsidiary check on the numerical limitation of effectives and material.

In the latter respect the Commission makes certain proposals which may be said to represent a solution by compromise of the controversial question whether supervision of a Disarmament Convention would be necessary or not. The French delegates have insisted upon maintaining that control would be necessary, but it should be understood that the French word "*contrôle*" has a much weaker significance than the English word "*control*," and certainly does not involve the right to interfere in the management of the "*controlled*" establishments. The Commission has accordingly avoided the use of the word "*control*" and adopted instead that of "*keeping a watch upon*" the due observance of the terms of the Convention. The Commission then links supervision with the study of statements of defence expenditure, *i.e.*, with facts and documents which are published. Although it must be admitted that only in exceptional cases would the figures of defence expenditure represent a measure of comparison of the armaments of various countries, changes in total defence expenditure and in certain classes of such expenditure from one year to another might be taken as an index of the changes in the armaments in each country, provided no modification was made in the military and naval system, (conscription, voluntary army) during the period.

In order to facilitate the utilisation of the budget figures the Commission proposes that uniform statements of defence expenditure on a standard model should be prepared. It would be impossible for the various States to adopt a standard system of budget accounting, as the differences in accountancy are generally connected with differences of a constitutional character, tradition, &c. Each State would be free to continue its national system of accountancy for its own purposes, but would undertake to provide the necessary information for the model statement of defence expenditure. The extra work involved would probably be quite moderate, as the data needed would, in almost every country, be easily extracted from the regular budgetary documents submitted to Parliament or unpublished material available in the Treasury. Similar compilations are, of course, constantly being made by Government departments.

The Joint Commission proposes that, before the model statement is drawn up in its final form, the collaboration of certain experts eminently qualified to deal with defence budgets should be secured. Sub-Commission "B" of the Preparatory Commission, which met in Geneva on November 29 and 30, decided to appoint a special committee for the preparation of the form of model statement and certain kindred questions.

It would be wrong to exaggerate the importance of the unanimous conclusions arrived at by the Joint Commission, but they may, nevertheless, be said to represent tentative solutions of certain preliminary problems concerning the technical aspects of disarmament.

TEXT OF THE INTERNATIONAL STEEL PACT.

M. DE CHARNACE, of the Comité des Forges de France, has issued the full text (summarised briefly in the *Economist*, October 2nd) of the agreement signed at Brussels on September 30th, by representatives of the various steel-producing countries of France, Germany, Belgium, Luxembourg, and the Saar. Its importance to British iron and steel interests, as well as its significance for the future of European industry, justifies its reproduction in full. The complete text is as follows:—

ARTICLE I.: Each country shall pay \$1 every month into a common fund for each ton of crude steel actually produced. By crude steel is understood all steel produced in the countries by the Thomas, Bessemer, Siemens, Martin crucible and electric processes, or by any other process. This sum will be placed to the

credit account of the country making the payment. The first payment shall be made two months after the coming into operation of the agreement by means of three-months drafts; for subsequent months it will be paid on the 25th of the following month by means of three months drafts.

If the Government of one of the countries adhering to the agreement opposes the transfer of all or of part of the sums to be paid in application of the present article, the effective payment may be replaced by the guarantee of a bank approved by the managing committee or by cash payments to a special account in a bank located in the corresponding country and approved by the managing committee.

ARTICLE II.: The administration of the common fund is to be in the hands of a managing committee of four titular members designated respectively by each of the participating countries: Germany, Belgium, France and Luxembourg. Each of these four participating countries will also appoint two substitute members to replace the permanent member in case of absence or of any accident to the latter. The presidency of the directing committee will fall in turn to the representative of each participating country, for the duration of one year. Generally speaking, and apart from the specific provisions of the following articles, the managing committee shall take all necessary measures to ensure the execution of the conditions of the present agreement, and to render effective the control provided for. It also has entire administrative authority, and the direction and custody of the moneys paid into the common fund or held by the committee. All votes in the directing committee shall be in accordance with the national quota assigned.*

ARTICLE III.: The managing committee shall fix the quota for each country every quarter, according to Article IV., not later than half a month before the commencement of each quarter, by the application of each country's fixed coefficient to the total tonnage representing the probable needs of the market.

ARTICLE IV.: The coefficients for the different countries may only be modified by an unanimous agreement.

The total tonnage for each quarter, and consequently the quotas for each country, shall be decided by a majority of three-quarters of the votes, each country having a number of votes in proportion to its participation, it being understood, however, that unanimity, minus one country, constitutes a sufficient majority, even if the dissenting country represents more than one-quarter of the votes.

The Saar shall not vote separately, its votes being divided between France and Germany in the proportion of one-third and two-thirds respectively.

ARTICLE V.: Each month the actual crude steel production of each country shall be ascertained, with regard to the assigned quota.

ARTICLE VI.: If the quarterly production of a country exceeds the quota which has been fixed for it, that country shall pay for every ton in excess of the quota a contribution of \$4 to the common fund, in addition to the payment provided in Article I.

ARTICLE VII.: If the production of a country falls below the quota assigned to it, that country shall receive from the common fund an indemnity of \$2 per ton of deficit.

Indemnity, however, in respect of deficits in tonnage shall not be paid on more than 10 per cent. of the quota fixed for that quarter. If a deficit of 10 per cent. or more continues during several consecutive quarters, the tonnage giving rise to the indemnity shall be reduced by 2 per cent. each quarter, thus reducing the indemnity to 8 per cent. in the second quarter, 6 per cent. in the third, and so on.

In the case of *force majeure*, a general meeting of the different groups shall decide, by a majority vote, the amount of the indemnity.

ARTICLE VIII.: Accounts shall be drawn up every quarter; penalties and indemnities mentioned in Article VI. and VII. shall be put into force immediately after the closing of the account. At the close of every half-year the common fund shall be liquidated. After deduction of general expenses the sum remaining in the fund shall be divided amongst the countries (a) in proportion to the actual production in the period, up to the amount of the payments under Article I., and (b) in proportion to the participation figures for the quarter in so far as there may exist a fund from the payment of fines. The first liquidation shall be effected on April 1, 1927.

ARTICLE IX.: The present agreement shall end on April 1, 1931, provided that up to May 1, 1929, a country shall have the right to give notice that it intends to withdraw from the agreement on October 31, 1929, and, in such case, the other countries shall be free of all commitments on that same date.

ARTICLE X.: The present agreement has been concluded on the assumption that, during its entire duration, the tariffs applicable to steel products imported into Germany shall not be increased. If Germany should increase such tariffs, the present accord may be denounced at any time by each of the contracting parties on three months' notice, it being understood that each of the parties shall receive from its Government entire liberty of action with regard to the tariffs.

The present agreement may also be denounced at any time, after April 1, 1927, to take effect three months afterwards, if the Government of one of the adhering countries of the convention should raise an objection to it, basing its attitude on the unfavourable treatment which, in the absence of a commercial treaty, one of the other countries might apply to its products.

If Germany or France should denounce the present agreement for one of the reasons above mentioned, they shall also be entitled

* The quotas as finally established differ slightly from those reported in the Press at the time the agreement was signed. The official quotas are now given as follows: Germany, 43.50 per cent.; France, 31.19 per cent.; Belgium, 11.56 per cent.; Luxembourg, 8.55 per cent.; and the Saar, 5.20 per cent.

to denounce it with regard to the other contracting parties who shall have, also, the right to denounce it among themselves.

ARTICLE XI.: The assignment or exchange of quotas is allowed only in the case of a company or a group owning or operating plants in another country. The fact of possession would be admitted on the ownership of at least 40 per cent. of the capital of such a plant. Previous notice of such transfer or exchange of quota must be given to the managing committee. The transfer can take effect only at the beginning of the next period of account, and should be in force at least throughout that period.

ARTICLE XII.: If, on the date of April 1, 1927, the total consumption has not increased to such an extent that the Luxemburg group shall have obtained a tonnage quota equal to an annual minimum production of 2,300,000 tons, and on April 1, 1929, a tonnage quota equal to a minimum annual production of 2,480,000 tons, this group shall have the right to withdraw from the present convention on a notice of three months. The other countries shall thereafter also be free to withdraw.

ARTICLE XIII.: Any dispute arising between the parties with regard to the interpretation and execution of the present agreement shall be settled compulsorily by arbitration.

ARTICLE XIV.: Adherence to this agreement remains open to the steel producers of other countries. Entry may take place through a general meeting (a) by a majority vote if the proposed participation is fixed on the basis of production for the first quarter of 1926, or (b) by unanimity if entry is proposed on the basis of other principles.

If the signatory countries find that their combined share of the total European production in a given half-year is lower by 5 per cent. than their share was during the first quarter of 1926, then any one of the group may denounce the agreement within three months after the half-years referred to, whereupon three months later the dissolution becomes effective.

The agreement may also be cancelled by any one of the participating countries, on due notice of three months, whenever the total production fixed for a half-year is less than 13,139,000 tons. In this case the cancellation notice should be given within a period of one month.

The text reveals several new points which do not appear to have been noticed hitherto in this country. It provides, for example, for overcoming difficulties that might be placed in the way of transfer of funds; it provides for the splitting of the Saar vote; it indicates that the total demand will be assessed quarterly instead of annually, as was previously suggested. On the other hand, it is silent in regard to any division of markets, and does not provide for the exclusive enjoyment of the home markets of the various countries. Whether such an agreement is to become the topic of subsequent negotiations, or whether in view of the limited number of countries concerned it is not considered possible to regulate this matter, the statement does not reveal. The document should, however, be read in conjunction with the agreement with the German steel-consuming industry which we printed in the *Economist* of October 23rd.

THE STATUS OF THE DOMINIONS.

(BY A LEGAL CORRESPONDENT.)

ON November 20th there was published a remarkable document, the Report of a Committee on Inter-Imperial Relations appointed by the Imperial Conference which has just closed. This report was adopted by the Conference on November 19th. On the one hand, we hear it hailed as "epoch-making" and "the Magna Charta of the Empire"; on the other, we are assured by the *Times* that "it is essentially a register of conditions as they exist already, rather than a programme for the future." Perhaps the key to the meaning of the document is that it was intended to produce both these reactions. In it we see the hand of the politician as well as the hand of the lawyer. Some of its expressions have little meaning for the lawyer, but will be a very present help in trouble for the Dominion statesman who must placate some of his more nationalistic supporters. What "blessed words" are "equal status"!

Premising, therefore, that the document is a report and not a statute or a constitution, that we must not expect to be able to attach legal weight to each phrase, and further that time alone can show its true meaning and consequences, let us examine some of its provisions. In the first place we find a definition of the status of "the group of self-governing communities composed of Great Britain and the Dominions....."

They are autonomous communities within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations. (Italics not ours.)

This appears to be the governing principle, and we shall examine its application in two fields—domestic and foreign. (The case of India is peculiar, and receives separate treatment in the Report.)

(A) *Relations between the various parts of the British Empire.* The first consequence is a comparatively unimportant change in the Royal Title, which will, when the necessary legislation has been passed, read as follows: "George V. by the Grace of God, of Great Britain, Ireland, and the British Dominions beyond the Seas King, Defender of the Faith, Emperor of India." The only change lies in the omission of the words "the United Kingdom of" before "Great Britain and Ireland"—an omission which results from the creation of the Irish Free State. Some feeling is being manifested in Northern Ireland, but Ireland remains Ireland whether divided under two administrations or united under one, and the new title hardly seems open to objection on the ground that it omits specific mention of Northern Ireland. It will be noticed that in the new title, as in the one which it will replace, "Dominions" is used in the old sense of "possessions," and includes the Crown colonies; if this is not so, they do not come into the picture at all.

Secondly, the Report registers a change in the position of the Governor-General of each Dominion. In future he will occupy "in all essential respects the same position in relation to the administration of public affairs in the Dominion as is held by his Majesty the King in Great Britain," and it is put on record "that he is not the representative or agent of his Majesty's Government in Great Britain or of any Department of that Government." Accordingly, he will no longer be the channel of communication between the London Cabinet and the Dominion Cabinets; but in future "the recognised official channel of communication" will be "between Government and Government direct." The Governor-General will be supplied with copies of all documents of importance, and will be kept fully informed, just as his Majesty is kept in touch by the London Cabinet.

Thirdly, with regard to the operation of Dominion legislation, a Committee will be appointed to examine and report upon the many technical questions arising in connection with the extra-territorial effect of Dominion legislation and with the Royal Assent to, or disallowance of, Dominion legislation. But it is placed on record that "it is the right of the Government of each Dominion to advise the Crown in all matters relating to its own affairs"; and, as is indeed the present practice, that "legislation by the Parliament at Westminster applying to a Dominion would only be passed with the consent of the Dominion concerned." Fourthly, we find with reference to appeals to the Judicial Committee of the Privy Council a statement of a negative character, which seems to suggest that if any Dominion wishes to abolish the right of appeal it is at liberty to do so.

(B) *Relations with Foreign Countries.*—Firstly, in relation to the negotiation, signature, and ratification of treaties, the step forward on the path of independence which was registered by Canada in 1923 in connection with her Halibut Fisheries Treaty with America (for which reference may be made to our article of May 5, 1923) is affirmed, and developed even further. In future, in the case of treaties affecting the whole Empire the contracting party will not be stated to be "the British Empire," nor will his Majesty be stated to contract on behalf of "the British Empire," but he will contract (i.) "for Great Britain and Northern Ireland and all parts of the British Empire which are not separate members of the League of Nations"; (ii.) "for the Dominion of Canada"; (iii.) "for the Commonwealth of Australia"; (iv.) "for the Union of South Africa"; (v.) "for the Irish Free State"; (vi.) "for India." If the treaty applies to only one or more parts of the Empire, then his Majesty will contract only for those parts. The "full powers" issued by the King to plenipotentiaries authorising the negotiation and signature of treaties will be granted only "on the advice of the Government concerned."

Secondly, as regards representation at International Conferences, it is determined that where the conference is of a technical character, the separate representation of each Dominion is desirable; where it is of a political character the special circumstances of each case must be considered. Alternative kinds of machinery are suggested and discussed. Thirdly, as regards the general conduct of foreign policy, it is recognised that "in this sphere, as in the sphere of defence, the major share of responsibility rests now, and must for a time continue to rest, with His Majesty's Government in Great Britain." The Conference was "impressed with the desirability of developing a system of personal contact both in London and in the Dominion capitals," for the purpose of the sharing of this responsibility by means of consultation in common, but no details of the new machinery are given. It goes without saying already that the Dominions cannot be "committed to active obligations except with the definite assent of their own Governments." The Conference passed a resolution congratulating the London Cabinet upon the success of their Locarno policy, but we are not told how far the Dominions will adopt the obligations of the Locarno Pact. Fourthly, *exequaturs* granted to foreign consuls located in a Dominion will only be granted after reference to the Government of that Dominion, and will be countersigned by one of its ministers. The practice whereby the Irish Free State has, and henceforward Canada will have, a separate Minister Plenipotentiary at Washington is "taken note of," but not with any degree of enthusiasm.

To sum up, it is impossible at present to estimate the implications and consequences of this document. We incline to the view that they are less far-reaching than is being commonly supposed. Complete independence as to internal and inter-imperial affairs seems to us to present little difficulty, and to exist already in all but name. Complete independence as to foreign affairs is a very different matter; if it merely means that no Dominion is morally bound by a policy or a treaty to which it has not assented, well and good; but if it means that each Dominion is at liberty to develop its own foreign policy, that way leads to the break-up of the Empire, and we do not believe that this liberty is claimed or is intended.

THE WHITE STAR LINE DEAL.

THE announcement was made last Saturday that the Royal Mail Steam Packet Company had concluded arrangements to purchase, as from January 1, 1927, the whole of the share capital of the Oceanic S.N. Company, Limited (the White Star Line), which has been held since 1902 (although the Line never ceased to be run under the Red Ensign) by the International Mercantile Marine Company of New Jersey. While the re-acquisition of the Line by British interests was not unexpected, the identity of the present purchasers has occasioned some surprise. Last spring, it will be recalled, negotiations for the transfer of the White Star Line were understood to have been nearly completed between the American combine and a British syndicate headed by Messrs Furness, Withy, and Co. At the last moment the deal fell through, for reasons still undisclosed, Sir Frederick Lewis's comment on the matter at the annual meeting of the Furness, Withy Line in July being simply that "it had been found impossible to arrive at a mutually satisfactory consummation of the transaction." The present purchase price has not yet been officially stated, but is believed to be in the order of \$35,000,000, payable, according to New York reports, as to \$10 millions next February, \$6,250,000 in February, 1928, a similar sum in February, 1929, and the balance of \$12,500,000 within 10 years. On this assumption the R.M.S.P. Company acquires for somewhat under £7,000,000 the Oceanic Company's paid-up capital of £5,000,000, included in which are no less than £4,250,000 of capitalised reserves, scrip bonuses of 400 per cent. and 33½ per cent. respectively having been issued in 1916 and 1920. Net profits, before payment of interest on the 4½ per cent. (1923-43) debentures—of which

£1,100,000 were outstanding on December 31st last—have averaged £485,500 over the past four years, as compared with an average of £519,700 in the four years 1909-13, when the capital was £750,000. On this basis the purchase price might seem on the high side, but it must be borne in mind that the past four years of depression do not give an adequate indication of earning capacity. Moreover, apart from the considerable value attachable to the White Star Line's "goodwill," the worth of the assets to be transferred is very great, given current prices for construction of high-class passenger tonnage. The White Star fleet, including the three "super-liners," the "Majestic," "Olympic," and "Homeric," consists of approximately 526,000 tons gross, with an average age of slightly over 15 years. Of this tonnage about 160,000 tons is owned jointly with the Shaw, Savill, and Albion Company, over 40 per cent. of whose share capital is held by the Oceanic Company, who also possess a controlling interest in the capital of George Thompson and Co., Limited (the Aberdeen Line). Assuming that these holdings pass, with the other White Star assets, into the hands of the Royal Mail group, the purchase price appears to represent a reasonable valuation.

Hitherto the R.M.S.P. combine, with its chief subsidiaries—Elder Dempster and Co., the Union-Castle Line, Lamport and Holt, the Pacific Steam Navigation Company, and the Nelson Line—has been mainly occupied with the African and South American trades. Its present acquisition—extending its total affiliated tonnage to over 2½ million tons—will not only bring into its sphere of operations the Australian and New Zealand routes, through the joint White Star-Shaw, Savill vessels, but will make it one of the dominant factors in the North Atlantic business, in which the combine has already participated since 1920, when a Royal Mail "cabin-class" service between Southampton and New York was successfully inaugurated. Future developments in the North Atlantic will be watched with interest. The I.M.M. Company still retains ownership of the Leyland Line and the Atlantic Transport Line, and rumours that their sale to Sir John Ellerman, who holds a controlling interest in the Shaw, Savill and Albion Company, is under negotiation, have been denied. It is, however, understood that the I.M.M. Company desires to qualify as a purely American concern in order to purchase the North Atlantic liners now owned by the United States Shipping Board, in which case the sale of their remaining British-run tonnage may yet be effected; and, in any case, the position of the Atlantic Transport and Leyland Lines, hitherto controlled by the Oceanic Company's British directorate, would appear to be somewhat anomalous in view of the forthcoming transfer of ownership of the Oceanic Company. In Belfast, which has long shipbuilding associations with the White Star Line, the hope is entertained that the present deal will lead to early replacement of the older units of the Oceanic Company's fleet, as well as to construction next year of the new "super-liner," for which plans were already projected before the company changed hands.

THE ORIGINS OF THE GREAT WAR.

FRESH light on the outbreak of the Great War continues to accumulate. The publication this week of the first volume to appear in the series of British Documents on the Origins of the War (1898-1914), of which Mr Gooch and Mr Temperley are the distinguished editors, has anticipated by a few days the publication of the last seven volumes in the German Series, "Die Grosse Politik der Europäischen Kabinette" (1871-1914). These two issues of documents happen also to cover the same ground; for while the last seven volumes of the German Series run from 1912 to 1914, the British editors have published the eleventh volume of their series earliest, though it is the last volume in order of events.

This volume—entitled "The Outbreak of War: Foreign Office Documents, June 28-August 4, 1914"—has been collected and arranged, with introduction and notes by Mr J. W. Headlam-Morley, the Historical

Adviser to the Foreign Office, and in this case the editors "have limited their responsibility to examining the papers printed by him and to comparing them with the original documents and files." They certify that, in their belief, "no important or essential document in the Foreign Office Archives has been omitted, and that publication of the official State papers has been in no way restricted."

Mr Headlam-Morley modestly presents his volume as a "new edition" of the White Paper which was laid on the table of the House of Commons on August 6, 1914. As a matter of fact, he has given us something still more interesting than that justly celebrated publication. "The only thing to do," in preparing a new edition, "was to publish the whole correspondence, including every telegram and despatch, however unimportant and incorrect, in any way relating to the origins of the War. This is the course which has been pursued, and the reader has before him, in this edition, everything, within the specified dates, contained in the Foreign Office records which appeared to have a bearing on the origin and outbreak of the War. He is in possession of all the documentary material which the Secretary of State and his advisers had before them at the time."

This differentiates the present volume from the other forthcoming volumes in the same series, and also from the German Series. Naturally, exhaustive publication is only feasible for a very short period of supreme interest and importance. For the period preceding the murder of the Archduke selection was the only practicable course. Nevertheless, a volume of select documents is not the same thing—however high we may rate the judgment and the single-mindedness of the editors—as a volume like the present. The value of the present volume has been enhanced by the fact that, since it was in type, "Lord Carnock (formerly Sir Arthur Nicolson) has, with high public spirit, deposited in the Foreign Office the correspondence which he, as Permanent Under-Secretary of State, conducted with Ambassadors and Ministers abroad. Many of these documents, which are of great historical importance, are now included." It is also noteworthy that "the documents especially concerning each Allied and Neutral country have been communicated to the Governments for their agreement," and that "in every case this has been given without reservation," with the result that, "except in one or two personal references to living people of no political importance, no omissions of any kind have been necessary." It is added that "modifications of the text would under no circumstances have been considered."

Thus the new volume is something which the White Paper of August 6, 1914, was not, and could not have been; but in his comparison between the two publications Mr Headlam Morley shows that the White Paper was not only an extraordinarily prompt, but an extraordinarily full publication—considering the date and circumstances. "Never," he maintains, "had there been a disclosure of negotiations so immediate, so full, and so frank"; and his own volume proves this contention.

For anyone acquainted with Mr Headlam-Morley and his work it is superfluous, and almost impertinent, to mention that the present volume is admirably produced. The introduction, for example, is as interesting a document in itself as those which it covers. Mr Headlam-Morley happily combines all the rather varied and exacting qualifications required. He is a historical scholar, with a long administrative experience, who published the first serious work in English on the subject covered by the present volume, and who has since then had the widest opportunities for observing how Foreign Offices work and how international affairs are carried on. It is because the book has been produced by someone who has worked in the office whence the documents come that the arrangement of the material is so masterly and the occasional brief editorial notes are so lucid.

The lay reader who peruses these printed pages, with the terse minutes, followed by initials printed in small type under the text of each telegram or despatch, will gain a much clearer idea than he could before of the way in which official business is done. At any rate, to somebody who has worked in a Government department himself, these printed pages vividly recall the "jackets" enshrining the record of actions in all their stages of

growth, from conception, through consideration, to decision.

Two personalities stand out: Sir Edward Grey's and Sir Eyre Crowe's. The contrast between their temperaments comes out in a striking manner, and the dramatically minded reader may be tempted—perhaps unconsciously—to make an antithesis between them. According to his individual temperament or opinions, he may be inclined to make a hero of the Permanent Under-Secretary as the man of resolution who was equal to the occasion, or of the Secretary of State as the man who strove for peace and never let slip the smallest opportunity of working to save it. A truer conclusion, perhaps, would be that the two temperaments were complementary, no less than the two official positions, and that the country was fortunate in being served by both these men in their respective posts and with their respective characters.

The ultimate train of thought, however, which a perusal of these deeply-moving documents sets on foot, is not a comparison of characters or an apportionment of responsibilities between this or that individual concerned. Although a great crisis brings out differences in temperament and ability which are less conspicuous in ordinary times, and although the present volume presents some vivid instances of this—for example, in the famous conversation between Sir E. Goschen and the German Chancellor on August 4th (No. 671)—the most overwhelming impression is the antithesis between the personalities and the machine. The individuals whose thoughts and deeds appear in this book are the people upon whom collectively the responsibility for the outbreak of war is supposed to rest. Among controversialists who argue on these lines it is common ground that, whichever the particular criminals were, this list contains their names. The impression made by the documents upon the writer of this article is that "War Guilt" cannot really be established. Almost all the individuals immediately concerned, for all their differences of personality, rose to a surprisingly high level of intelligence and good-will; but they were all flies on the wheel, and a strong man like Sir Eyre Crowe was no more master of the situation than a weak man like Dr Bethmann-Hollweg.

Some writer of Utopias—is it Samuel Butler or Mr Wells?—has imagined a society in which the machines have become the masters of their makers. The fancy was conceived as a fairy-tale to indicate a dangerous tendency in the Western World, but it is already a serious fact. The machines of steel of which that writer was thinking are only the material expressions of a mechanical relation between human beings; and the consummate skill with which we have built up intricate mechanical relations between ourselves on a vast scale is the characteristic quality of our Western society, which has raised us up and may also cast us down. This volume of documents records the hopeless struggle of men against machines which have enslaved them—the alliance machine and the mobilisation machine in this case. The League of Nations is wrestling to bring these two particular lethal machines under control, but others still have us in their grip—the strike machine, the lock-out machine, the newspaper machine, the electoral machine, and a host of monsters too numerous to mention. Can we human beings hold our own against these formidable inventions of ours?

CONTROLLING THE OUTPUT OF GOLD.

*In this series of articles Professor Lejfeldt, of Johannesburg, raises the problem of ensuring that gold, which is once more resuming its former standing as the world's standard of value, can itself be stabilised in value. The reader will remember that Prof. Lejfeldt, unlike Prof. Cassel and other authorities, takes the view that gold is more likely to become too abundant than too scarce. At the conclusion of this series of articles we propose to put the case for the opposite view of the future value of gold.**

VI.—INTERESTS OF THE LEADING NATIONS.

WE have dealt at some length with the effects on gold-producing regions, because it is there that difficulties may most readily arise. But the motive of the whole scheme

* These articles will be issued as a pamphlet, with an introduction by Dr Schacht, President of the Reichsbank, by the London General Press, 3 Arundel street, London, W.C.2. Price 1s.

is to secure stable money for the world; the right point of view is that the world should be ready to pay what is necessary to obtain this great benefit, and should see that if particular persons and communities are exposed to loss in consequence of it they are duly compensated.

There has, indeed, been a satisfactory degree of steadiness during that period, as well as of consistency between the records for different countries. In the United States the Bureau of Labour index has shown 145 and 161 as the limits of its fluctuation, and the averages for successive years have been 149, 154, 150, 159. English prices, as shown by the Board of Trade index, reduced to gold by means of the New York Exchange, have varied between 140 and 168, the highest figure being due to the transitory influence of the preparation for returning to the gold standard. Since that restoration was made the average in U.S.A. has been 158 and in Britain 157 (May to November, 1925). It is noteworthy that so close an agreement should be found; it means that the relation of dollar and sterling prices is practically the same as before the war—the ratio of exchange of goods between the two countries has, after all, suffered no permanent alteration. This tends towards confidence in the soundness of index numbers.

It may be maintained, however, that as the period 1922-5 has been one of depression, prices should not be tied down permanently to the level of that time. Certainly the level chosen must be such that it can be maintained by the resources available to the monetary authorities without undue strain. The Genoa Conference recommended that the Bank of England should call a conference of central banks, one of the aims of which was to preserve stability in the value of gold. This conference has not met officially, but there is reason to believe that the leading banks have held meetings privately with a view to co-operation. As neither they nor the Governments have made any pronouncement, we can only discuss what influences are likely to weigh with the countries that are most concerned.

Taking first the United States, the most obvious circumstance is the extensive interest in gold possessed there. First the actual holding of metal amounts to eight or nine hundred million pounds; next, the British debt, of over nine hundred millions, has been funded on a gold basis, and those owed by the other European States have been dealt with similarly, and then there are commercial foreign loans held by citizens of the country; all these make up a vast total of property which would fall in value with any depreciation of gold. The only influence to be set on the other side is the possibility of a popular inflationary movement. Whether the Federal Reserve Board's policy has been the real cause of the maintenance of steady prices in America is disputed; there is no doubt that the board has used whatever power it possesses with that aim. But the board is not popular, and it has been threatened with attack in Congress by those who would like to see the gold stock made the basis of a movement of monetary expansion.

Unless, however, such a movement acquires strength, one may suppose the official policy of the States to be the maintenance of the present level of prices, represented by an index number round about 150 (1913 being taken as 100).

The British Treasury is credited with a different policy. Nothing definite has been said in public, but its actions seem to point that way consistently, and Mr Churchill, in his Budget speech, made references to the economic situation as it would be with a price index of 175. The adoption of a high figure is, of course, with a view to reducing the burden of the National debt. The attitude of the Treasury may be seen in its discouragement of the use of sovereigns in England, and the introduction of Ricardo's plan for limiting convertibility for export bars, in place of coin; it is probable that the official opposition to the use of gold currency in India is traceable to the same source, although it seems politically undesirable to antagonise a movement so popular and natural to India.

THE FIRST NATIONAL BANK OF BOSTON

BOSTON, MASS., U.S.A.:

67 Milk Street.

BUENOS AYRES:
99 Florida.

HAVANA:

Pedro Gomez Mena Bldg.

One of the largest and strongest Banks in America. Capital and Surplus: \$40,000,000.

Special Representative:
24, OLD BROAD STREET, LONDON.

The motive of the Treasury is intelligible enough. Crudely put, it is that, with a debt of £7,700 millions, a rise of 1 per cent. merely in the value of gold would increase the burden by the equivalent of £77 millions (equal to the whole value of the mines on the Witwatersrand!). Looked at more closely, however, this argument loses some of its cogency. It is strictly true as regards the external debt; a fall in the value of gold would reduce the real burden of the payments to America, not only to the Government, but to the nation. But it should not be forgotten that Britain is still a creditor country, and on the largest scale. The interest received does not come to the Government, but it would be very shortsighted of the Treasury to ignore it for that reason. It would surely be unwise to depreciate three milliards of foreign investments in order to reduce the burden of interest on one milliard of foreign debt. Even if to meet the needs of the Treasury it were necessary to put a special tax on income from foreign investments, that would be better than deliberately reducing the value of the unit in which they are reckoned.

Presumably, then, if the policy of the Treasury is such as has been suggested, it is on the ground of the effect on the internal debt that it has been adopted. The unit of measurements makes in this case no difference to the amount of the national income, but only to its distribution. It is a question of how much the earners of the nation are prepared to pay to those who have acquired claims through providing goods and services in the past. This is far too complex a problem to be discussed as a digression from the treatment of another problem; we will put forward only one consideration. Currency inflation is the equivalent of a capital levy; for example, if the level of prices were raised from 150 to 175, that would take away one-seventh of all capital. But it would be a levy carried out in flagrant disregard of the accepted principles of taxation, as it would fall equally on the rich and poor; the man who had saved a few hundreds pounds out of scanty earnings would be taxed by just the same percentage as the millionaire.

On the whole it is far from clear that the interests of Britain are on the side of depreciating gold. It is much to be desired that the question should be discussed, and an authoritative pronouncement made; imperial policy cannot well be disregarded, for even if the financial interest of the home country is held to demand depreciation, that should be weighed against the importance of harmonious relations with those parts of the Empire which support gold, i.e., the producing countries, especially South Africa; and India, if it is true that the adoption of gold currency there is a popular demand.

The scheme proposed would have more importance in the moderately distant than in the immediate future. It is put forward as a necessary completion of the gold standard; and though it would take some years to get into working order, that is rather a reason for its adoption than for delay, since to adopt it would be a declaration on the part of the powers that they intended to maintain a constant standard of value, and not suffer the monetary evils of the past to recur. It is true that for some time to come banking policy would have to be the chief support of such an intention; control of gold output would come gradually to take its place in the scheme, and it would probably be found in the course of working it out that the differences between the leading countries were not beyond the range of compromise.

Notes of the Week.

The Crisis in China.—At the moment of going to press the situation at Hankow appears, happily, to be somewhat eased. A British destroyer is anchored off the "bund" of the British concession, marines have been landed, and processions of Nationalist demonstrators have been turned away from the boundaries of the concession without any untoward incident occurring. At the best, the British community will be able to remain *in situ*. At the worst, it will almost certainly be possible to evacuate them on board ship with safety. This is an improvement, yet the situation still remains ominous. The general strike at Hankow is due to begin on the day on which the present issue of the *Economist* will appear, and no one can quite tell what may follow. The trouble is that on both sides there are elements which are spoiling for a fight; and if these elements get out of control—even on one side only, and that momentarily—the fat may be in the fire. On the Chinese side, the Southern Nationalist Government apparently does not desire to push things to extremes. Indeed, elementary statesmanship would counsel it to settle scores with the Northern Militarists before it throws down the gauntlet to the foreign Powers. On the other hand, the Extremist Wing of the Nationalist Party may regard the foreigners as the principal enemy, and under their incitement the masses, at Hankow or elsewhere, may run amok. Part of the driving force behind the Nationalist Party is derived from the widely diffused sentiment in favour of depriving the foreigners of their privileges, and there is evidently a feeling in China that, since these privileges were originally extorted by violence, there is no moral reason why they should not be abolished by the same method. ("Under-dog" always has a long memory.) Then there are the Bolsheviks. Their influence on the situation in Southern and Central China should not be exaggerated; for, after all, the number of Russian advisers and experts in the service of the Nationalists is exceedingly small, and the two parties are co-operating for different ends. The Chinese want Russian assistance towards securing their national independence. The Russians want the Chinese to drive another nail into the coffin of "the Capitalist Powers." Either party in this transaction wants to get more than it gives, and probably the Chinese will have the best of the bargain. Nevertheless, the immediate objectives of the two partners do coincide in so far as they both want to deprive the foreigners in China of their privileges. On the British side we have to fear the irresponsible talk (which in the present situation is as dangerous as action) of the "die-hards" in the Treaty Ports. Some organs of the British Press in China seem to be incorrigible. They must know that a second "opium war" is impossible, yet they persist in writing as militantly as though they had the whole military and naval strength of the British Empire behind them to back their futile policy of the mailed fist. Fortunately, they have not. In the House of Commons on Wednesday Sir Austen Chamberlain, on the eve of his departure for Geneva, declared that "His Majesty's Government will take all the steps which they think required and which they can employ, but they are most loath to interfere in the domestic affairs of China, apart from the necessity of fulfilling their prime duty of defending the lives of British subjects." This is the right policy in an extraordinarily difficult situation. The British Minister at Peking, and the British Consular and Naval Authorities in other parts of China, may be trusted to carry out the Government's policy in the spirit and the letter with cool-headed discretion.

The Marketing of Coal.—The majority report of the Departmental Committee on Co-operative Selling in the Coalmining Industry (Cmd. 2770, Stationery Office, 1s net) adopts an attitude very closely in accordance with the Samuel Committee. It is signed by eight out of eleven members, viz., Sir F. Lewis, Sir T. Catto, Mr Vernon Hartshorn, Sir Hugo Hirst, Sir A. Mond, Sir W. H. Peat

Mr Varley, and Mr Warriner. After carefully considering and analysing the various arguments for and against the development of organised marketing in the coalmining industry, the Committee come definitely to the opinion that, in principle, such a development would be beneficial to the industry. They confess that a serious impediment lies in the present lack of consolidation in the industry, and that the full benefits of organised marketing cannot be realised unless the industry can be consolidated by amalgamations into a much smaller number of units. In some areas, particularly the chief exporting areas, the balance of opinion of the trade itself is decidedly against the principle, in other areas it is favourable while in a third group it is evenly balanced. The present scope, therefore, for voluntary organisation of coal marketing is clearly limited. The Committee, therefore, does not shirk the logical corollary, namely, the introducing of some measure of compulsion. The Report speaks with approval of local selling pools, on the general lines of those already in operation in the South Yorkshire coalfield, which serve a valuable purpose both in themselves and in preparing for a closer physical co-operation between the collieries concerned. District organisations have, however, a more effective scope for influencing the market, though not to the extent of securing any substantial degree of monopoly. The Committee, therefore, consider them desirable, and think that they might also be helpful in organising pools of wagons among their members, and in co-ordinating improvements in the preparation of coal for the market. On the side of economies in production a district marketing organisation cannot directly intervene, but indirectly it might be helpful in stimulating amalgamations and in the concentration of production on the more efficient mines. The chief difficulty in the way of district organisation will lie in getting a sufficient measure of loyal and active support. The Committee, therefore, recommend legislation so that a minority of, say, 25 per cent. or less, calculated on a tonnage basis, can be compelled to come into a scheme for a district marketing organisation, backed by a 75 per cent. majority, and proved to the satisfaction of a tribunal to be a scheme for the more efficient marketing of coal. In this connection the Labour members, Mr Vernon Hartshorn and Mr F. B. Varley, dissent from their colleagues' conclusion that they "are not prepared to contemplate anything in the nature of general compulsion." They would give the voluntary principle a full trial first, and then, if still necessary, apply compulsion to the whole trade. On the question of the co-ordination of district organisations the Report recognises the possibility of a conflict of interest between the industry and the consumer. It can only be justified to the community by the industry effecting and sharing with the consumer economies not only in marketing, but in all phases of production and transport. They believe that ultimately there must be a central committee co-ordinating the district organisations in the exporting areas, which at a favourable opportunity would be in a position to negotiate an international agreement—a result which the Committee regard as the "ultimate solution." The minority report of Mr Bell, Sir David Llewellyn, and Mr McCosh, opposes such plans root and branch. "The main objective of co-operative selling arrangements would be to compel the consumer to pay higher prices" is their theme; and while rightly insisting that the present-day need is a high rate of production at a low cost, they discount the importance of price stabilisation, the extent of possible economies in marketing, and the reactions on production itself. The industry under free competition made very great progress before the war. It will do so again if only costs are kept down and no attempt made to "restrict" output or exploit "sheltered" markets. But the dissentients do not say what is to happen if the world's demand, even at cut prices, proves to be sluggish, how they would deal with selling organisations abroad which can discriminate in prices, or overcome the handicap of the high costs in uneconomic pits. The representatives of the coalowners have had a difficult task in setting their minds to a problem such as this in the midst of a coal dispute. But it is very unfortunate that they should have once again done no more than put on record that things are all right as they are, and that all will be well if only they are let alone.

Imperial Defence.—There was issued yesterday a report of the review of the work of the Imperial Defence Committee, given by Mr Baldwin to the Imperial Conference, and of the speeches made by the Dominion Premiers. The first impression conveyed by Mr Baldwin's statement is that the Committee is an effective body working hard and continuously to apply the lessons of the last war to the problem of preparing the framework of Empire defence against any possible future disturber of the world's peace, and keeping up to date with the march of scientific discovery and technical development. There are, for instance, 30 sub-committees, including a new one consisting of the three chiefs of staff of the Navy, Army, and Air Force, and a man-power committee, while schemes have been perfected for insurance of cargoes and insurance against aircraft damage in case of war. From the speeches of the Dominion Premiers it is clear that the Dominions have made use of a co-operation in plan and idea in their own home defence arrangements. Principal public attention will, however, be devoted to the discussion on the Singapore Docks project, which was dropped by the Labour Government, but revived and persisted in by the present Government. Mr Baldwin said that in spite of the contributions of £2 millions from the Federated Malay States and of £250,000 from Hongkong, "a heavy burden of expenditure in this matter still confronts us, which, in existing financial conditions, we cannot contemplate without anxiety." He therefore appealed to the Dominions for "co-operation," meaning, presumably, financial contributions. The response was not very encouraging. Mr Mackenzie King, for Canada, seems not to have referred to the question. Mr Bruce, of course, was bound to deal with it, since if any part of the Empire is interested in the Singapore project it is Australia. Mr Bruce said that "Australia believes that the Singapore base is absolutely essential." But in the very same sentence he made it clear that Australia could not promise to pay any share of the cost. He explained that when the Singapore plan was dropped in 1924 Australia embarked on a five-years' naval construction programme, and could not afford, therefore, to contribute to the cost of the revised plan. Mr Coates, of New Zealand, gave a reply rather more favourable to the British taxpayer; for he foreshadowed an increase in the contribution already promised by New Zealand for Singapore, and also threw out the suggestion that all the Dominions should share the cost of building ships for the common defence of the Empire. The Maharajah of Burdwan explained that India's defence costs were already so high that she could not contribute to Singapore. Some day, possibly, an equitable system for dividing the cost of Empire defence among all self-governing parts of the Empire will be evolved. But that day is apparently not yet; and it is becoming abundantly clear that the British taxpayer will have to foot the major part of a very formidable bill for Singapore.

The By-Elections.—During the last fortnight there have been three by-elections which have resulted in the return of two Conservatives and of Commander Kenworthy, who has transferred his allegiance to the Labour Party. The figures for the three constituencies are as follow:—

	Howdenshire (Yorks.)	Hull (Central).	Chelmsford (Essex).	Total.
Conservative	10,653	11,466	13,395	35,514
Liberal	6,668	2,885	8,435	17,988
Labour	2,318	16,145	6,140	24,603

	Previous Election. (1922.)			
Conservative	10,748	12,904	15,875	(Totals
Liberal	7,021	15,234	10,244	not
Labour	..	..	2,904	comparable.)

The joint results give an exaggerated idea of the headway made by the Labour Party owing to the fact that Commander Kenworthy's personality counted for a very great deal in Hull, and that his transfer to the Labour Party carried, perhaps temporarily, a very large number of Liberal votes. The other two divisions show in the case of Howdenshire that in a Yorkshire county constituency

the Labour Party has not at its first attempt secured a very strong foothold, but in Chelmsford the Labour candidate has gained at the expense of both of the other parties. These two results show some Labour headway in divisions which are not the most favourable territory of the Labour Party. On the other hand, the Conservative poll is down in each case. The decline is not, however, more than one would expect from the waning popularity which every Government experiences during a long period of office. The Liberals, on the other hand, have fought under singularly unfavourable conditions, for the division in the ranks of the party has to a large extent paralysed the machine and damped enthusiasm. In the circumstances, and considering the added handicap of Commander Kenworthy's action in Hull, the Liberal figures have been maintained surprisingly well. Political currents may well be setting in the direction of giving the Liberal Party a considerable opportunity in the near future. It cannot hope to take advantage of it until it brings its civil war to an end. Mr Lloyd George no doubt realises as clearly as anyone that an independent fund may well become an old man of the sea upon his shoulders, and seems willing to put it at the disposal of the party as long as it is not to be used against him or administered by those who have declared themselves unable to co-operate with him. Those who desire the welfare of the Liberal Party should see to it that personalities, if they must persist in the party, should be "localised" and not allowed to prevent the effective organisation of the party in the country. This means that the machine must be placed in the hands of the neutrals—a solution which Mr Lloyd George at all events seems willing to accept.

Mexico and the United States.—What is happening in Mexico is apparently very much what is happening in Turkey and China. The "under-dogs" are getting on their hind-legs all over the world, and twisting the tails of the Great Powers. In China, just now, Great Britain is being subjected to that exasperating and undignified operation, while our American friends look on with an air of slightly sanctimonious complacency which is not the least of the mortifications which we have to endure. In Mexico, it is the Eagle's feathers which are being pulled out, while the lion has been making a motion to lie down with the lamb. The fact is that it is comparatively easy for Great Powers to accommodate themselves to the new situation in countries where their interests are secondary, but exceedingly difficult in countries where they happen to be the protagonists. The trouble between Mexico and the United States arises out of the provisions of the Mexican Constitution of 1917, which is only now being enforced because Mexico is only now enjoying a breathing space of stable government between the revolutions which have been convulsing her since 1910. One chapter of this constitution thus belatedly enforced has already produced a battle royal between the Mexican Government and the Roman Catholic Church; but the Constitution is no less zealous for the national rights of the Mexican people in the economic sphere, and there is a chapter which declares the mineral resources of the country to be national property. Hence the battle between the Mexican Government and the State Department at Washington. The actual crisis has arisen over a Mexican law providing that, in virtue of this chapter in the 1917 Constitution, holdings of mineral rights which were in the hands of foreigners before the passage of the Constitution shall be converted into concessions running for fifty years. Foreign firms have been given until December 31, 1926, to declare their willingness to convert their interests on these terms. British oil firms in Mexico are apparently complying for the most part, and it seems that some American firms desire to do the same. Others, however, are holding out, and the question now is: How far can these firms count on the State Department to back them? And how far can the State Department count on American public opinion? The omens indicate that the State Department will give way. They have to reckon with

the pacific principles of Mr Borah, the chairman of the Senate Committee on Foreign Relations. The mild line taken by the British has weakened the American front. Military intervention in Mexico is as uninviting as it is in Turkey or China (where wars are easy to begin but difficult to finish). And, then, in the background, there is the imponderable but effective public opinion of the other Latin-American peoples. Respectable "bourgeois" countries like the Argentine, Chile, or Peru may privately disapprove of Mexican goings-on, but they avowedly sympathise with Mexico's cause in this controversy, for every Latin-American people wishes to be master in its own house of its own material property; and everyone of them fears the economic advance of the United States. The United States already dominates the little disresponsible Latin-American countries of the Caribbean. Mexico, too, is disresponsible, but she is large, and she is covered with porcupine bristles. In other words, she is a welcome bulwark for the Latin States of South America; and accordingly the South Americans regard the Government of President Calles with much the same feelings as the independent Oriental peoples regard the Government of President Mustafa Kemal.

Our Index Number.—A decline in the general level of commodity prices is recorded in our Index Number, which at 4185 shows a decrease of 52 points as compared with the end of October. There were almost as many increases as decreases among the individual commodities, but while changes were mostly small, there were a few substantial declines. The following table shows the changes in each of the five groups and in the total:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	%
Basic (avg. 1901-5) ..	500	300	500	400	500	2200	100.0
End July, 1914	579	382	616	464	553	2568	116.6
Nov., 1918	1289	782	1848	903	1389	6212	282.6
Mar., 1920	1508	914	2974	1246	1709	8352	378.6
Dec., "	1344	805	1284	1216	1275	5924	269.8
Dec., 1921	921	636	1106	762	931	4357	198.0
Dec., 1924	992	789	1452	815	806	4855	220.7
June, 1925	885	704	1234	736	791	4351	197.8
Dec., "	936	679	1120	733	782	4251	193.2
Jan., 1926	892	694	1117	726	758	4189	190.4
Apr., "	894	678	1000	714	766	4053	184.2
May, "	885	681	978	718	765	4029	183.1
June, "	893	682	963	735	760	4035	183.4
July, "	910	678	945	763	748	4045	183.9
Aug., "	914	695	954	849	744	4156	188.9
Sept., "	893	708	942	963	739	4246	193.0
Oct., "	920	721	880	976	738	4237	192.6
Nov., "	895	728	867	959	735	4185	190.2

It will be seen that nearly half the decline in the total is accounted for by primary foodstuffs, and for this foreign wheat, flour and rice are mainly responsible. In the subsidiary foodstuffs group a further advance in sugar was partially offset by a decline in butter. Among textiles, raw cotton was practically unchanged, despite the further increase in the official estimate of American crop. Cotton yarn and cloth fell during the month, and there was also a sharp decline in silk, but wool prices were unchanged. In the minerals section the most prominent movement was a drop in household coal. Prices in the iron and steel markets are largely nominal, and substantial premiums are willingly paid for prompt delivery. The nominal quotation for pig-iron is unchanged, steel rails are lower, while iron bars are higher. In the non-ferrous group a decline in lead was offset by an advance in tin. Movements in the miscellaneous section were very small. The change in each commodity's index as compared with the end of October are set out below, the figure 50 representing in each case the average for the basic period 1901-5:—

	Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.		Index Number.	Inc. or Dec.
Wheat—Flour	1014	-12	Cotton, A	623	+13	Copper	47	-1
English	95	+4	Cotton, E	395	-5	Minerals	955	+17
Flour	77	-10	Yarn	77	-3	Baltic timber	93	..
Barley	88	+2	Cloth	92	-3	Amer. timber	77	..
Oats	68	+3	Wool, Eng.	108	-8	Leather	61	..
Potatoes	81	+3	Do Aust.	102	-2	Petroleum	108	..
Beef	111	-11	Silk	77	-2	Oils	75	+2
Mutton	64	+3	Flax	79	+1	Oilseed	75	+2
Pork	84	-1	Hemp	68	+1	Tallow	67	..
	111	..	Jute	192	+2	Crystals	85	..
Cereals & meat	895	-24	Textiles	867	-13	Rubber	19	-1
Tea	152	..	Pig-iron	129	-6	Miscellaneous	735	-3
Coffee	146	+1	Steel rails	71	-6			
Sugar, cane	118	+5	Iron bars	96	+6			
Sugar, beet	116	+5	Coal, steam	227	-15			
Butter	79	-5	House coal	147	-9			
Tobacco	116	..	Lead	118	-7			
Other foods	728	+6	Tin	123	-7			

As a result of these movements the increase over the pre-war level drops from 65.2 to 63.2 per cent., as may be seen from the table below, which also gives the position of each of the groups in relation to July, 1914:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100.0
Dec., 1918	226	222	293	186	241	237.5
Mar., 1920	261	260	484	269	309	325.6
Dec., "	233	229	209	261	230	230.9
Sept., 1922	151	194	181	150	148	163.3
Dec., 1923	148	231	225	167	136	178.6
Sept., 1925	161	199	203	162	143	172.6
Dec., "	162	193	182	158	141	165.8
Mar., 1926	152	196	167	156	140	159.4
June, "	154	194	156	158	138	157.3
July, "	157	193	153	164	135	157.7
Aug., "	158	197	155	183	134	162.0
Sept., "	154	201	153	207	134	165.5
Oct., "	159	205	143	210	134	165.2
Nov., "	155	207	141	206	133	163.2

At this time last year cereals and meat stood at 159, other food at 200, textiles at 191, minerals at 159, miscellaneous commodities at 142, and the total at 168.5.

The Retail Price of Meat.—The Food Council has been looking into the price of meat, and has issued a report, which deals at some length with the weekly price lists issued by the Central Markets Committee of the Corporation of London. The avowed object of the issue by the wholesale market of a list of retail prices is the standardisation of meat prices for London at a fair level. The Food Council, however, thinks that these "official" prices are too high. The gross profit allowed for beef, for example, in the 39 price lists issued between January 14th and October 30th was as follows:—

No. of Occasions on which the Gross Profit Allowed in the Lists was:—	English Beef.	Scotch Beef.	Argentine Beef.
Less than 20% on cost	2	1	..
Between 20% and 30% on cost ..	2	1	..
Between 30% and 40% ..	15	25	6
Between 40% and 50% ..	14	12	7
Between 50% and 60% ..	7	..	20
Between 60% and 70% ..	1	..	5
Over 70% on cost	..	..	1

Similar figures could be given for English mutton. The profits allowed on lamb and pork, New Zealand mutton, &c., have been much smaller, but these kinds of meat are consumed in comparatively small quantities. Argentine beef, on the other hand, on which the percentage of gross profit has been greatest, is to a large extent relied on by the poorer class of customer. These rates of profit compare with the 20 per cent. average gross profit (or 16 per cent. on turnover) which the butchers claimed as reasonable before the Royal Commission on Food Prices. The Food Council consider that these latter rates of profit could have been maintained in September even if prices had been reduced by 1½d-2½d a lb on Scotch beef, 1½d to 2d a lb on Argentine beef, 2d to 2½d on English beef, and 2½d-3½d a lb on English mutton. The evidence as to the method of compiling the list adopted by the clerk and superintendent of Smithfield Market and his advisory committee of retailers is conflicting, but one fact emerges. The Smithfield retail price list does not represent either prices actually charged or prices which should be charged on any consistent theory of margins,

whether percentage or cash, but prices which in each particular week the individual butchers who framed the list would like to obtain. Thus, the witnesses claimed 17½ per cent. on turnover for expenses for the week ended January 16th, when the average gross profit on turnover was 27½ per cent.; but the evidence submitted to the Royal Commission suggests a figure for expenses varying from 8 per cent. to 13 per cent. on turnover only. The conclusions reached by the Council, which seem justified by the evidence, are as follows:—(1) The margins of profit allowed in the Smithfield retail price lists are actually excessive. (2) The list is unrepresentative and not drawn up on any consistent plan. (3) The Council does not favour the issue by a market authority of a list of estimated retail prices for meat, owing to the wide variations in conditions and trading methods. (4) The retail price list should, therefore, be discontinued. (5) The weekly list issued by the Liverpool Markets Committee is in a different position, as the market contains a large number of retail stalls. As, however, the list represents top quality prices only, it is open to misinterpretation; and it receives very little publicity. The Council therefore suggest that it should be published only when prices outside the market appear higher than the market prices. (6) In any case, the consumer will receive far more assistance in purchasing meat if retail butchers exhibit lists showing the retail prices of, at least, the more important cuts, and if such lists are placed in conspicuous positions so that they can be clearly seen from outside. It will be observed that the latter recommendation need not involve legislation, and that the remedy for the present state of affairs is now in the hands of the consumer.

The Rise in Sugar.—Indications of considerably reduced sugar resources for the current season, to which reference was made in our issue of September 25th last (p. 502), have become more definite, and prices within a short space of time have risen sharply. Raw Cuban sugar, which was selling at one period this year, when the market was at its worst, at around 2 cents per lb cost and freight to New York, was late last week lifted to 3¼ cents under an increased pressure of demand, especially on the part of American refiners, in order to complete their needs over the end of the year. Crop forecasts to date indicate a deficit of roughly one million tons in the total world's crops as compared with the previous campaign. Messrs. Willett and Gray's last estimates were 23,363,000 tons, as against 24,300,000 tons and 23,623,000 tons respectively for the two previous seasons. It will be seen, therefore, that this season's resources have fallen by about 260,000 tons behind the 1924-25 production. The outstanding feature in regard to consumption has been the remarkable expansion of American trade needs, which for the current year have been estimated by an American trade authority at about 5,620,000 tons, as against 5,510,000 tons for 1925. This means another increase of over 100,000 tons. Out of the total given, over 3 million tons would represent the meltings, less exports at Atlantic ports. Sentiment was recently influenced by advices that a presidential decree is about to be issued in Cuba to restrict the crop to a maximum of 4½ million tons, so that the yield would thus experience a contraction of 384,000 tons and 625,000 tons respectively against the two previous crops. The German forecast of the European beet crops has been again lately revised down to 7,217,000 tons, this comparing with actual yields of 7,418,000 tons and 7,064,000 tons respectively for the two preceding seasons. Mr Licht's estimate of the German crop has been reduced to 1,675,000 tons, as against 1,800,000 tons last season; and in regard to Czechoslovakia his estimate so far has been maintained at 1,200,000 tons, as against 1,500,000 tons in 1925, but the Czechoslovakian factories' estimates have been circulated latterly at but little over one million tons. It is not expected that much new Cuban sugar will become available for export until towards the end of January, although it is understood that the cutting of the cane will be started on January 1st. Severe damage was done to factories in Cuba by the hurricane, and costly repairs are involved thereby. In the meantime the old Cuban surplus is rapidly decreasing under increased pressure of needs by refiners, while large quantities continue to be shipped to the Far

BANK OF ATHENS

Head Office: ATHENS.

Paid-up Capital

Drs. 72,000,000

With Offices in all the principal towns in Greece, Egypt, Cyprus, Crete, and Albania, the Bank extends facilities for Export and Import Trade between Great Britain and the Near East generally.

Enquiries invited.

London: 22, Fenchurch St., E.C.3.

East, chiefly China, and it is probable that the surplus will entirely disappear by the time the new crop begins to reach the seaboard.

The Belgian Budget.—A correspondent writes:—The feature of the Belgian Budget for 1927 is that all ordinary expenditure has been cut down to the lowest possible figure, in order to make every sacrifice for the consolidation and redemption of the public debt. The final balance, in round figures, is as follows:—

Estimated total revenue	Fr. 9,577,000,000
Estimated total expenditure	9,415,000,000
Estimated surplus	162,000,000

These figures scarcely represent the situation accurately, however, so far as the ordinary Budget expenditure is concerned, as they do not disclose the fact that this statement includes no less a sum than 1,500,000,000 of revenue which is designed to be absorbed by the *caisse d'amortissement* for the extinction of a substantial portion of the floating debt. The total estimated expenditure for the year is made up as follows:—

Ordinary expenditure	Fr. 3,086,000,000
Extraordinary expenditure and reparations ..	772,000,000
Marine, posts, telegraphs	802,000,000
Service of the consolidated debt	3,255,000,000
Caisse d'amortissement for the floating debt ..	1,500,000,000
	9,415,000,000

From this it will be seen that 4,755,000,000 of the year's revenue, or slightly over 50 per cent. of the total, will be absorbed by interest charges and debt redemption. The State railways, having passed into the hands of an independent national organisation, no longer figure in the Budget. Ordinary expenditure by the various Government departments (apart from expenditure directly connected with the debt) is estimated at 2,287,000,000, which includes 200 millions for the Department of Justice and 689,000,000 for national defence and gendarmerie. Army expenditure is equivalent to rather over 7 per cent. of the total of the general Budget. In spite of a cutting down of departmental expenditure at the last moment by 100,000,000, this portion of the estimated expenditure still shows an increase of 330,000,000, as compared with last year, this being due to the fact that estimates for 1927 are based on an index figure of 7.5 and on sterling at 175. The total estimated expenditure of 9,415,000,000 is covered by estimated receipts from taxation and German reparation payments, with the exception of 440,000,000, representing the amount of long-term bonds given to *sinistrés* in payment of war damages. The

Extraordinary Budget of 772,000,000 includes estimated expenditure of 190,000,000 on public works and 580,000,000 to complete the payment of damages for war losses. It is estimated that the balance outstanding for war losses will be liquidated during the course of 1928, with the exception of the paying off in cash of the 440,000,000 of long-term bonds which have recently been handed to *sinistrés* in part payment of their claims. The amount to be received by Belgium from German reparation payments in 1927 is estimated at 79,100,000 gold marks, or 672,000,000, this figure being based on an annuity of 1,500,000,000 gold marks (including the special contribution of £300 millions). The improvement which has been effected in the situation of the Belgian debt during the past twelve months will be realised when it is stated that on September 30, 1925, 71 per cent. of the total was in the form of consolidated debt, and 29 per cent. consisted of floating debt. On October 31st this year the proportion of consolidated debt had risen to 89 per cent., while the floating debt had been reduced to 11 per cent. of the whole. Thanks to efforts made during the past few months, the total debt has been reduced by 895,000,000. The heavy taxation imposed on the country will undoubtedly prove onerous, from the economic point of view, but will ensure, if all goes well, a speedy liquidation of the balance of the floating debt. It is regarded as unlikely that it will be possible to remove the recently imposed "special taxes" before the expiration of four years, but by that time it is expected the floating debt problem will have been completely solved, and the extinction of the consolidated debt may be spread over a greatly extended period.

Economic Conditions in Sweden.—A Stockholm correspondent writes:—The hitherto published figures of the general index of production give very favourable impressions of Swedish economic life this year. While the average index figure of production for the first three quarters was 104 in 1924 and 108 in 1925, it has increased to 110 for the same period in 1926. The industries which especially account for this increase are the paper and paper-pulp industries. Also the iron-ore and steel trades show slightly improved figures. On the other hand, the production index for the timber trade is considerably less than in 1924 and 1925 (the average for the three first quarters was in 1924, 100; in 1925, 105; and in 1926, 92). The improvement in the iron and steel industries is presumably caused by the English coal strike, and it is too early to anticipate any real change for the better as regards this old famous Swedish industry, which has for some years been in a very bad position. Though the production in the timber trade has been considerably less this year, the prices obtained have been firm. Thus 1926 has hitherto been the best year since the war. The satisfactory business conditions were anticipated by the Stock Exchange, where heavy advances took place during the first half of this year. Since August the stock market has been very dull, and no marked tendency has been noticeable. The money market has been easy, though the export of capital this year in comparison with preceding years seems to have been remarkably large. The capital exported during the first three quarters is estimated at about 65 million kronor, or twice as much as in the same period last year. The issues of bonds have amounted to about 120 million kronor from January 1st to September 30th this year, while the corresponding figure for 1925 was 80 million kronor. The consolidated balance-sheet of all Swedish commercial banks for last month also records an increased volume of deposits and higher figures for discounts and loans. The tendency for the rate of interest on bonds has been downward most of the year, but the last few weeks have witnessed a firmer tone. The harvest results are over the average.

Australian Crops and Finance.—Our Melbourne correspondent, writing on October 28th, says:—The short period of dryness in September was succeeded by wet and broken weather in the wheat-growing areas, relieving the slight apprehension that was beginning to be felt. The prospect is now for an Australian yield of over

150,000,000 bushels, making the harvest one of the best on record, with an exportable surplus of about 3,000,000 tons for shipment in the form of wheat and flour in the new year. Exports for the 1925-26 shipping season (reckoning from December) have now reached about 1,820,000 tons, against 3,150,000 tons for the whole of the 1924-25 shipping season. A fair amount of chartering has already been effected for early new season's loading, but the advance in the freight market consequent upon the English coal strike makes the outlook for obtaining sufficient tonnage for the opening months of the season somewhat uncertain. With a large quantity of wheat in prospect, with active wool sales proceeding in accordance with the programme drawn up some time ago, and with a good spring production of butter, the Australian export season as a whole will again run into large figures. Imports, however, continue on a full scale, taking into account both natural purchasing power and the influence of fresh borrowings abroad, and one result continues to be a heavy Customs revenue. While the Commonwealth Government is in a favourable position owing largely to the heavy Customs revenue, some of the States find it necessary to increase taxation. The Western Australian Budget for 1926-27 shows an estimated surplus of £10,960, after allowing for a reduction in income-tax, which is rendered possible by the special grant from the Commonwealth Government. Tasmania is also able to make a slight reduction in taxation. But in Victoria the Budget shows an estimated surplus of £5,574, after crediting additional betting taxation £343,000, besides increases in railway freights and fares to produce £420,000. The proposed betting tax has, however, been defeated in the Victorian Parliament, where the position of the Ministry is precarious. In Queensland the Budget shows an estimated deficit of £173,766, for which additional revenue is to be raised, including increased stamp duties.

Palestine and British East African Guarantees.

—British co-operation in the finance of Palestine and British East Africa advanced a further stage this week in the House of Commons, but there is still considerable doubt with reference to the future of these development schemes. The Government propose to guarantee, as to principal and interest, aggregate loans raised in the open market of £4½ million for Palestine and £10 million for British East Africa. The arrangements provide that the Treasury must be satisfied regarding the application of the proceeds of the loan, with sinking fund arrangements over a period of 40 years, and with safeguards for the taxpayers behind certain prior charges which now exist, particularly in the case of East Africa. The Palestine provision may be regarded as the fulfilment of a definite obligation, arising from war conditions; part of the proceeds which Britain guarantees will be used to repay debt due to this country, and the remainder will go to railway and harbour development. In East Africa the loan follows the report of the East African Commission. They thought, however, that Britain should contribute at least the interest free for a period of years at the start; eventually the Treasury ruled that the territories in question must bear the interest charges right away. In Kenya and elsewhere this has led to controversy, stimulated by certain increases in current taxation, by the growth of capital obligation, and by a disposition to regard the burdens as too great for the easy balancing of the local budgets. No doubt, with some regret, the Colonial Office has accepted the Treasury view. The £10 millions will now be launched at once. A committee, over which Sir George Schuster presided, showed that many of the schemes for railways and harbours require far more survey and preliminary review than they have so far obtained. Out of the £10 million they are able to regard only something less than £1½ million as ripe for immediate treatment. The Treasury have accordingly indicated that while the present financial resolution, and the coming Bill, will cover £10 millions, they will, in fact, only guarantee such amounts as are approved by a committee, probably substantially on the lines of the advisory committee which has acted under the Trades Facilities Acts—in all likelihood composed of men familiar with the

needs and economic prospects of these areas. The Government have apparently rejected the idea of a central board, with general and comprehensive powers in review. Each scheme will be considered on its financial and other merits; and in such conditions it is thought that the risk of loss to British taxpayers will be comparatively small. But it is known that the Colonial Office would have liked a larger measure of freedom from Treasury control, and certain schools of thought in the territories have used similar argument. On the other hand, if the British people are to guarantee any scheme as to principal and interest, it becomes the first duty of the Treasury to lay all the facts before them, and to analyse the position of the enterprises from time to time.

P. and O. Results.—It may be recalled that twelve months ago the directors of the Peninsular and Oriental Steam Navigation Company reduced the dividend on the deferred stock from 12 to 10 per cent., being "compelled" to do so by the poor state of trade generally, the unrest in China, and the loss caused by the labour troubles in Australia. For the year ended September 30th last, the dividend is maintained at 10 per cent., in spite of the persistence in an exaggerated form of at least two of the adverse factors mentioned. This, the directors say, is due to "the conservative policy hitherto adopted, and not to the profits made." The stockholder is vouchsafed no further information than this, for the accounts merely give the "net result" after providing an unstated amount for depreciation. This shows a decrease in comparison with last year, but whether it exaggerates or minimises the change in earnings during the past year we cannot tell. For what it is worth, we give the following comparison of the published figures:—

YEAR ENDED SEPTEMBER 30TH.

	1914-15.	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.
"Net result" Brought forward.	£ 494,160	£ 696,661	£ 1,013,241	£ 1,346,938	£ 1,273,533	£ 1,196,518
	68,703	100,305	101,799	101,873	101,034	142,143
Deb. interest..	562,863	796,966	1,115,040	1,448,811	1,374,567	1,338,661

	(15 %)	(12 %)	(12 %)	(12 %)	(10 %)	(10 %)
Carried forward.	78,182	101,799	101,873	101,034	142,143	133,157

The allocation to reserve for redemption of debenture stock is reduced by £27,000, and the balance carried forward by £9,000. The balance-sheet is in the "improved" form introduced a few years ago, assets being given in five items instead of in only one, but of a total of less than £30 millions, two items account for over £27½ millions. The first is the fleet, valued at £18 millions. The second is a composite entry covering three very important items which ought to be shown separately—namely, investments (less loans), cash, and debtors. These figure together at £9,684,700, or £2,898,500 less than last year. We must once again ask whether the necessity for these obscurities still exists. Some four years ago Lord Inchcape told the shareholders at the annual meeting that the company held £7½ millions in British Government securities. No information has since been given beyond a statement that the sinking fund for the debenture stock of £7 millions, which now stands at £968,400, is invested in Government securities. On the debit side there is a substantial decline in bills payable and sundry balances—namely, from £9,772,400 to £6,686,300. The tonnage of the fleet shows a reduction of 27,894 tons at 576,916 tons, and the report mentions that two vessels were sold at prices considerably in excess of their book values, the difference being passed to credit of the depreciation account for the rest of the fleet. A year ago Lord Inchcape said that the ships stood in the books at less than their original cost, against which there was over £5½ millions in various funds as a provision for the uncertain future. The balance-sheet, no doubt, is a strong one, but there is no means whatever of testing its strength in its present form. Rumours were current at the beginning of the week in the marine insurance market

to the effect that the company and its subsidiaries had decided to cover its ships in the market instead of carrying its risks itself. We refer to the matter below.

The P. and O. Insurance.—Great interest has been aroused this week by the news that the P. and O. Company, departing from their old policy, have done a big insurance for "time" in the open market, but the scheme appears to be smaller than was originally supposed. The first rumours of the insurance suggested that the whole of the P. and O. fleet and the B.I. fleet were being covered, and that consequently all the insurance reserve, which stands at £3,328,223, would be freed for other purposes. This, we understand, is not correct. The main P. and O. fleet is not being covered, but a certain number of subsidiaries are. The scheme takes the form of a re-insurance of the P. and O.'s fund, so that the fund will be running the whole risk on the best steamers, and re-insuring at least a portion of its liability on others, but as the top value of the boats being re-insured is £1,000,000, the transaction is a big one. The re-insurance was arranged quietly with four companies, the Royal Exchange, the Atlas, which has Lord Inchcape as director, the Commercial Union, and the Marine, which has a long connection with the P. and O. interests. Two Lloyds' syndicates are also interested. At present these four companies are naturally concerned with re-insuring their lines, so that the boats will come to the help of the market by the way of two re-insurances—(1) the re-insurance of the P. and O.'s fund, and (2) the re-insurance of the four selected companies who took the first re-insurance. It has been said that this new development has caused great satisfaction in the market, but actually, we understand, the market would have greatly preferred it if the fleets had been placed in a more direct manner than that actually adopted.

J. and P. Coats.—No reason is given by the directors of J. and P. Coats, Limited, in the annual report covering the year to June 30th last for the substantial decline shown in net profits. The past year's figure is the lowest recorded since 1921. Shareholders, however, do not have to suffer on that account, thanks to the large amount brought forward from the previous accounts—namely, £1,143,000, as against £256,400 twelve months earlier. After meeting the payment to the preference proprietors, the ordinary shareholders again receive a dividend of 15 per cent., together with a bonus of 2½ per cent., making a total return of 17½ per cent. for the year. This leaves £256,370 to be carried forward, compared with £1,143,030 brought in. The following table shows how the latest results compared with those of earlier years:—

Year ended June 30.	Net Profit After Depreciation, &c.	Interest.	Dividends and Bonus.	Pension, Insurance Fund, &c.	To Reserve, &c.
	£	£	£	£	£
1906	2,974,088	36,642	1,972,821	294,629	450,000
1910	3,171,464	19,278	2,448,908	25,000	675,000
1911	3,102,952	19,096	2,453,808	42,500	525,000
1912	2,794,072	..	2,449,183	26,440	500,000
1913	2,903,239	..	2,449,183	..	500,000
1914	2,634,388	..	2,225,803	..	..
1915	2,598,966	..	2,208,347	..	30,000
1916	3,387,395	..	2,210,016	..	100,000
1917	3,360,950	..	2,294,131	..	2,000,000
1918	3,171,796	..	2,289,732	100,000	..
1919	3,995,149	..	2,850,638	400,000	750,000
1920	4,164,894	..	3,161,214	150,000	450,000
1921	2,072,449	..	2,911,263	..	Dr 250,000
1922	3,270,913	..	2,911,250	..	250,000
1923	2,889,959	..	2,911,250	..	..
1924	3,107,213	..	2,911,250	..	200,000
1925	3,655,700	..	2,911,250	..	..
1926	2,024,590	..	2,911,250	..	..

The fact that the ordinary bonus has been maintained indicates that the board considers the past year's figures to have been affected by temporary factors. No doubt shareholders will be eager to learn to what extent this assumption is correct from the chairman's remarks at the meeting to be held on December 9th. According to the balance-sheet, book debts, agents' balances, &c., have declined from £2,765,525 to £2,353,404, while sundry creditors have advanced from £2,302,282 to £2,598,154.

Stocks at £4,178,099 are about £225,000 lower on the year, but the cash holding has been increased from £1,600,736 to £2,134,271. Investments, on the other hand, amount to £676,101, against £802,646, and advances to subsidiary companies stand at £5,684,274, compared with £6,302,549. At the annual meeting the shareholders are to be asked to sanction the alteration of the date at which the accounts are made up "for various reasons in connection with the administration." If the necessary permission is forthcoming, the balance will, in future, be struck at December 31st of each year, and a report will be issued in respect of the half-year ending December 31st next.

Aerated Bread Company.—A decline in profits is recorded in the accounts of the Aerated Bread Company for the year ended October 2nd last. Gross profits were lower by £30,000, and net profits by £20,000. These results cannot be regarded as very unsatisfactory in view of the industrial situation, the coal stoppage covering the last five months of the financial year. The directors mention that the results of the trading at the Wembley Exhibition of 1925 have been brought into the past year's accounts, and show a small profit, though less than had been anticipated. The following table compares results for a number of years past:—

September.	Gross Profit.	Expenses.	Net Profit.	Depreciation, &c.	Div.	Rate.	Carried Forward.
1907-8.....	£ 276,252	£ 220,366	£ 55,886	£ 5,000	£ 50,409	27½	£ 17,376
1910-11.....	283,695	236,203	46,492	5,000	40,883	22½	14,176
1913-14.....	315,476	240,350	75,126	28,000	49,846	27½	28,543
1914-15.....	286,919	253,146	36,003	8,000	29,948	17½	26,598
1915-16.....	299,434	282,354	17,080	11,704	7,959	5	23,955
1916-17.....	289,199	303,882	Dr 14,683	8,000	..	..	1,271
1917-18.....	419,112	322,566	96,546	59,000	28,135	15	10,682
1918-19.....	587,456	435,506	151,950	62,000	80,500	30	20,132
1919-20.....	685,831	520,274	165,557	57,882	113,050	25	14,757
1920-21.....	728,376	582,381	155,995	40,000	102,637	15	14,150
1921-22.....	637,811	488,936	148,875	48,184	87,975	12½	14,639
1922-23.....	629,104	497,954	131,150	37,621	79,784	8½	19,499
1923-24.....	681,578	526,639	154,939	35,252	100,943	10	30,276
1924-25.....	692,860	535,443	157,417	28,000	102,606	10	46,736
1925-26.....	662,557	525,113	137,444	22,000	104,200	10	57,981

Special allocations in the past year consist of £20,000 to reserve for income-tax and £2,000 to staff pensions fund. A year ago £11,000 was provided for income-tax, £15,000 for property depreciation, and £2,000 for staff funds. The 6½ per cent. preference dividend absorbs £26,000, and after the repetition of the 10 per cent. ordinary dividend the balance forward is increased by £11,250. The report states that the profits of the company's subsidiary businesses have been maintained, "and, with improved industrial conditions, these companies give promise of still better results." The balance-sheet shows an addition of £131,900 to the property item, and reductions of £15,500 in investments, £25,900 in cash, £44,900 in debtors, and £10,200 in stocks. The yield on the ordinary shares at their present quotation of 28s is 7½ per cent.

Tate and Lyle.—Once again the well-known sugar-refining undertaking of Tate and Lyle has to record lower profits, and on this occasion the ordinary shareholders are made to suffer by having their dividend cut from 13½ per cent. to 6 per cent. for the year. The accounts cover operations for the year ended September 30th last, and the latest figures are compared, in the following table, with those of the two preceding years:—

	1923-24.	1924-25.	1925-26.
Gross profit.....	£ 647,256	£ 573,111	£ 489,323
Net profit	616,784	543,128	459,505
Brought forward	38,650	69,934	52,733
	655,434	1,186,173	1,001,561
To reserve, &c.	100,000	50,000	190,000
Preference dividend ..	71,500	71,500	71,500
Ordinary dividend ..	420,000	438,840	198,720
Rate per cent.	(13.226)	(13½)	(6)
Carried forward	69,934	52,733	52,018

The increase in the amount reserved is accounted for by the fact that the allocation to the general reserve fund has been raised from £50,000 to £100,000, while, in addition, the sum of £90,000 has been transferred to a dividends reserve. There are thus now four separate reserve accounts—a depreciation reserve of £300,000, a

general reserve of £750,000, an investment reserve of £141,673, and a dividend reserve of £90,000, making a total of £1,281,673, against a paid-up capital of £4,912,000 and a balance-sheet total of £9,397,721. The investment reserve has declined from £204,863 to £141,673, but the balance-sheet gives no clue as to the reason for the reduction. Investments at market value are shown to have fallen from £2,103,878 to £2,040,688, but investments in associated companies, on the other hand, have gone up from £112,632 to £148,519. Stocks are lower by about £35,000 and cash by £9,000, while the item of bank loans now figures for £2,240,000, compared with £2,055,000. It will be remembered that the company recently announced its intention of temporarily closing its Plaistow refinery, and that the factory would remain closed so long as the present unfavourable conditions created by competition from the subsidised beet sugar industry continued. Those investors who saw the statement in the Press will probably have anxiously awaited the report in order to obtain further information. If so they are doomed to disappointment, for the directors make no reference whatever to this important development. Shareholders will, therefore, probably have to wait until the annual meeting, to be held on December 9th before they can obtain fuller particulars.

Peter Walker.—The operations of the well-known brewery undertaking of Peter Walker (Warrington) and Robert Cain and Sons during the year ended September 30th last were not productive of such satisfactory results as were achieved in the previous period. The balance of profit, after providing for Government taxation, amounts to £570,411, compared with £608,541, while the net figure, arrived at after the deduction of debenture interest and sinking fund, totals £420,411, in contrast to £458,541. The amount brought forward from last year is, however, slightly larger, and the net disposable balance is thus £466,122, against £493,010. This decline was not sufficiently important to warrant a reduction in the payment to the ordinary shareholders, which amounts to 9 per cent. for the year. The staff benefit fund once again receives £3,000, but the allocation to reserve is reduced from £80,000 to £50,000. The total of the fund is now £200,000. Stocks, as shown in the balance-sheet, have declined in value from £22,336 to £17,530. Elsewhere changes are of no importance. The report is accompanied by a print of the consolidated balance-sheet and profit and loss account of the subsidiary companies, which shows total assets of over £12 millions, a paid-up capital of £6½ millions, and debentures outstanding of £3½ millions.

North Broken Hill.—At one time during the year ended June 30th last, operations were hindered by lack of water; the average prices received for the metals produced—although this point is not mentioned in the report—also showed a falling off, while dividends, &c., brought in less than before. Thus the revenue figures at £1,776,300, in place of £1,936,200, and the net profit at £715,300, as against £889,000 for 1924-25. The dividends, however, show an increase. Last year's distributions totalled 19s per share, or £665,000, as compared with 15s representing £560,000. It should be mentioned that while the depreciation allowance was the same on both occasions—£50,000—taxes and special amortisations absorbed more in 1925-26 than in the preceding period. At £1,112,800, the surplus cash assets indicate a trifling decrease. The chief alteration in the company's holdings in associated undertakings consists in an increase of 70,000 shares (to 300,000) in the Broken Hill Associated Smelters. In the British-Australian Lead Manufacturers £26,000 debentures have been subscribed; the company has also taken a small participation in a concern formed for metallurgical investigations generally. The general manager states that the ore reserves "may be safely estimated at 4,000,000 tons." This time the quantities are segregated, 3,200,000 tons being credited to the North and 800,000 tons to the British section. During the current year exploratory work will be commenced on a new level, the 1,700 ft. With an ample supply of water available, and various subsidiary additions made to the

treatment plant, the output for 1926-27 should display some expansion. On the other hand, the quotations for lead, zinc, and silver have experienced an appreciable decline; hence it would not be prudent to count upon more than the recent dividend rate of 4s per share per quarter. On this basis the shares yield a shade over 11 per cent.

Gold Mines Investment.—A noteworthy advance is shown in the profits of the year to October 31st, these figuring at £46,900 in place of £21,500 previously. The difference arises in the main from the realisations of investments effected in preparation for the amalgamation scheme referred to later. No change is, however, made in the rate of dividend, the 1s now declared making a total of 1s 6d, as before. A year ago the question was raised as to whether the continuance of the undertaking as a separate entity was warranted. The directors propose to meet the position by sale of the concern to the Gold Coast Amalgamated Mines on the basis of the exchange of two shares for one. The holdings of the two companies are very similar; their break-up value is calculated to be in the one case 13s 6d and in the other 27s per share. Thus the amalgamation terms appear to be fairly equitable, if no regard be paid to the dividend on G.M.I. shares—which is, of course, included in the present price.

Cam and Motor.—In several respects the report to June 30th sets up a record. The tonnage crushed was higher than ever before, and the ore reserves have expanded to an unprecedented figure. At £528,600 the working profit compares with £437,500 and £453,300 for the two preceding periods, when the gold premium brought in £27,000 and £44,500 respectively. Last year's revenue was swollen to the extent of £66,000 by the treatment of antimony ore, which naturally increased the working costs; irrespective of this charge, the ratio was 20s 3d, as against 22s 8d for 1924-25. Income-tax absorbed £42,800 as against £20,300 for this item and corporation profits duty previously. After the payment of dividends totalling 27½ per cent., as against 25 per cent., the enhanced balance of £12,800 remains to go forward. Last year's dividend rate does not constitute a record, a similar total having been paid for 1923-24. At 1,029,900 tons, value 53.6s per ton, the ore reserves show an increase of 93,100 tons in quantity and of 3.5s in value. The broad features of last year's developments consist in some decrease in depth in the width of the ore body in the "Motor" mine—without, however, diminution in the total gold contents—and a slight increase in width, with a considerable expansion in value, in the "Petrol" mine. On the basis of last year's dividends, Cam and Motor shares yield 10½ per cent. There would appear to be the prospect of a somewhat larger distribution for 1926-27.

Bwana M'Kubwa Copper.—The experience of this undertaking emphasises the large amount of money and patience required in the opening up of a base metal proposition. From its original total of £400,000 in 5s shares the capital was in March, 1923, increased to £900,000, and in January, 1924, further raised to its present figure of £1,500,000. Last year an issue of £300,000 7 per cent. notes was made (it is repayable at the end of 1928). Now a fresh expansion of the capital by £500,000 is proposed; of the new shares, 400,000 are to be offered to the proprietors at 7s under guarantee. It is explained that the additional capital is required for the purposes of the company, including the development of the N'Kana mine and its extensions. The property owned, of course, consists of the mine from which the company takes its name, the one just mentioned, prospecting rights over the N'Kana concession of 1,800 square miles, and various other holdings. Owing to delays in connection with the plant, treatment at the Bwana M'Kubwa mine did not actually start until September. For the first month the output was 195 tons, for October 205 tons, for November and December 466 and 637 tons respectively are expected. It has been computed that with the first unit of plant in full operation over 10,000 tons of refined

copper should be produced per annum for a gross profit of £200,000. This would represent 12½ per cent. upon the capital, including the new issue; but after allowing for depreciation, the service of the notes, &c., probably not more than 10 per cent. would be available for distribution. Later on the capacity of the plant is projected to be increased to 25,000 tons per annum, but this would obviously entail considerable additional capital. Altogether it would look as though those interested may have to wait some time for an adequate return.

Naraguta.—From the dividend standpoint, the year ended March 31st last marks an advance in the history of the Naraguta (Nigeria) Tin Mines, the balance distribution of 5 per cent. now recommended making a total of 12½ per cent., as against 10 per cent. for each of the two preceding periods. With it will be paid 5 per cent. interim in respect of 1926-27. Actually, however, the dividends of recent years have borne little relation to the profits. In 1923-24 £21,330 was earned and £26,250 disbursed. For 1924-25 (after writing off £5,500 from investments in addition to the depreciation allowance) the profit amounted to only £8,000, but 10 per cent. was again paid. Last year's working surplus of £15,230 was supplemented by the transfer back to profit and loss of £10,000 some time previously placed to reserve; thus, after provision of the larger dividend already mentioned, the enhanced balance of £11,060 remains to go forward. This transfer was made in view of the strengthening of the company's finances owing to the flotation of the Korot Areas; definite allocation of the £44,700 received from this source has yet to be made. Although the Korot Areas contributed for only seven months, last year's output of 416 tons fell but little short of the total for the preceding period. The price average for the tin concentrates was £167 11s, as against £152 17s. Of the properties referred to in the manager's report, one—the Karama—has since the date of the accounts been transferred to a subsidiary company. Prospecting on certain other concessions has been attended with discouraging results, and they are to be abandoned. The reserves on the Naraguta areas are estimated to represent 7,100 tons of 7½ per cent. tin concentrates. Even with a substantial expansion in the output, this deposit would last for many years. Looking at the position all round, the current price of about 34s seems high for the £1 shares; but Naragutas are one of the few tin shares in which French speculators take an interest.

Witbank Colliery.—Results for the year ended August 31st were seriously affected by the fire which broke out in July. The output, which during the first ten months of the year had been more than maintained, totalled 774,500 tons, a shrinkage of 46,000 tons as compared with the 1924-25 aggregate. The net revenue of £65,800 showed only a moderate shrinkage; the necessity of cutting the dividend from 15 per cent. to 5 per cent. arose mainly from the expenditure of £24,100 upon extinction of the fire, although the balance of £113,100 carried forward exceeds by £20,000 that brought in. The surplus in question—which is represented by cash and cash assets—takes no account of the sums due under insurance policies. Presumably the conservative policy followed by the directors may be regarded as a provision against contingencies; if all goes well, the distributions for the

current year should make some compensation for the penury of the past period. Developments continue satisfactory, and boreholes recently sunk in the intact southern portion of the company's area "have disclosed coal of high quality and good width." The installation on the company's property of the new power station for the Electricity Supply Commission should prove advantageous to the Witbank Colliery, both directly and indirectly.

Wall Paper Manufacturers—A Correction.—We regret that owing to a transposition of figures the profits of the Wall Paper Manufacturers, Limited, for the year to August 31st last were wrongly stated in our issue of November 20th. The correct figure is £649,438, which compares with £743,399 for the preceding 12 months, there being thus a decline of £94,000, and not an increase as given in our Note.

An exhibition of footwear will be held at Prague, together with the Prague Samples Fair from March 20 to 27, 1927, and will be representative of the shoe industries in Czechoslovakia.

SIR WALTER EGERTON (late Governor of Nigeria) will preside at the meeting of the Royal Colonial Institute, to be held at the Edward VII. Rooms, Hotel Victoria, on Tuesday, December 7th, at 8.30 p.m., when the Hon. W. G. Ormsby-Gore, M.P., will give an address on "British West Africa."

Obersea Correspondence.

LEAGUE OF NATIONS.—COUNCIL MEETING AGENDA — GERMAN ARMAMENTS — MANDATES — DISARMAMENT.

(FROM OUR CORRESPONDENT.)

GENEVA, December 1.

THERE is a good deal of gossip as to what may happen in and around the meeting of the League of Nations Council which opens next Monday. Several important questions will be considered in one form or another. Whether those relating to armaments control of Germany will definitely arise in the Council itself is doubtful. The Germans are not likely to raise it whilst negotiations are in progress, and the chances are that when the subject does definitely come before the Council, it will be in the form of an arrangement previously agreed to between the parties. That is as it should be, the alternative being the raising of the question by the German Government in the form of a protest.

In view of the unjustifiable tendency of some of the arguments made use of recently, it may perhaps be well to point out where the League stands in the matter. Any reasonable view of Article 214 of the Treaty of Versailles and the analogous articles in the other treaties leaves no doubt that the right of League investigation provided for is not intended to be in the form of permanent control after inter-Allied control has been removed. It is a right to investigate if and when any State asks for it, and if the Council by majority approves. The scheme elaborated in September, 1924, for such investigation and the plan to ensure the carrying out of any such investigation will probably not stand in their present shape, and the German Government's representations regarding various features contained in them will have to be taken account of, not only from the point of view of the practical possibility of their being put into force, but also from the point of view of the League's credit as an impartial organ.

In a general way it is difficult to imagine that, against the will of the Government of a great State, a system could be put into practice by which Commissions might enter a country with all-inclusive rights to visit any and every kind of establishment, whether public or private, to demand all documents, &c., &c. It will become progressively less possible, and there has been a good deal of solemn nonsense written in this regard. If the position

ever became serious enough for the attempt to be made, it would be serious indeed.

The only actual item on the Council agenda which bears on the problem is the re-election of the Presidents of the Commissions of Investigation for the various ex-enemy countries, and M. Stresemann will undoubtedly be in a rather delicate position. It will be difficult for him to assent to the re-election of the French General Desticker as the President of the Commission of Investigation for Germany, and difficult also to protest without raising a discussion on the whole scheme.

The famous questionnaire of the Mandates Commission and the report of the Commission on its recent session will be considered by the Council. The controversy over the questionnaire is not of so much importance in itself; it is the tendencies which the controversy may imply, and it is not easy to assume that so much fuss has been made solely over a document *per se*. The Note of the British Government, sent with the approval of those Dominions who also exercise mandates, is extremely clever and moderate in form—and in this respect an improvement upon Sir Austen Chamberlain's effort at the last Council meeting—but a little subtle. It makes much use of certain portions of the 1920 Report of M. Hymans to the Council as governing the general system, but makes no allowance for the fact that this Report was made before the drafting of the mandate's terms, which are the real governing factors. However, so far as the consideration of the actual questionnaire itself is concerned, there is nothing much to bother about, and though much might be said about the arguments of the British Note, it is good enough as it stands for the proper functioning of the Mandates Commission. The Commission has made it quite clear that it does not intend to be limited in carrying out its task, and that if it cannot get reports presented on the basis of the questionnaire, it will secure the information from the accredited representatives who appear before it. If the objections go so far that the information they require in this way is refused, the Commission will undoubtedly say so in their public reports, and in the long run, so long as they retain their present spirit of independence, they will have the whip-hand. What they maintain so strongly is that while the Council has the obvious right to accept or reject any advice which the Commission may give, the Commission, nevertheless, has complete liberty to offer any advice which appears appropriate. At the same time, excellent though the work of the Commission has been, the manner of some of its members does occasionally give an irritating sense of their being a little above themselves. It may quite well be that the objections to the questionnaire are prompted as much by this reflection as by others.

The various Council committees, preparatory committees, sub-committees, joint committees, &c., continue to plod away on numberless details concerned with the limitation and reduction of armaments. It is a confusing spectacle for those who are interested only in a general way, but, at the same time, while this detailed work might naturally cause impatience if there were a world thirsting for disarmament, and may cause some cynicism in the ranks of those who have little use for it, it is achieving a valuable purpose in clearing red herrings from the path and in producing some positive elements which might contribute to progress. It is perfectly true, as the British Government holds, that it is no use having a conference for the limitation and reduction of armaments until there is some hope of doing something, and it is just as well, meanwhile, that every possibility should be explored. Some of the ideas trickling through the mass of inquiry will no doubt be useful when the time comes, and one of these is an ingenious proposal which has attracted a good deal of attention this week, for using defence expenditure as one of the means of supervision. It is a secondary, but important, consideration.*

The main responsibility for the preparations for the Conference on armaments is in the hands of the Preparatory Committee, which will probably meet again during the first six months of next year, and the prospects are against a Conference before 1928. Meanwhile the Council Committee, which meets this week, is having some interesting material put before it bearing on the

* See article on page 948 of this issue.—Ed., Econ.]

speeding up of Council meetings, movements of officials, the quickest possible transmission of communications, &c., in emergencies. These considerations arose out of the Greco-Bulgarian incident, but they also relate to views expressed on the security and armaments problem.

Amongst other questions on the agenda of the Council are the consideration of the report of the Committee, which suggested that the International Economic Conference should take place in May, and several financial matters connected with the employment of the remainder of the reconstruction loans in Austria and Hungary, with the Bulgarian refugee settlement plans, and with the financial situation of Danzig. The Council will be called upon to approve the Secretary-General's appointment of M. Dufour-Feronce as German Under Secretary-General in the Secretariat.

UNITED STATES.—MARKET TENDENCIES—INDUSTRIAL CONDITIONS — STABLE COMMODITY PRICES—COTTON CROP.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 23.

WITH money again easy, and with bonds firm, the share market has resisted the reactionary tendencies that made themselves apparent after something more than half of the October break had been recovered. There is still no widespread desire to indulge in speculative operations, but there also is a marked absence of selling pressure. Under these circumstances pools and cliques in a number of individual shares have been able to resume operations, and in some instances with distinct success. While the present showing is not conclusive, it may be that once again easy money and a great supply of investment funds are proving stronger influences than some slackening in industry. The flurry in the money market over the 15th of the month, which carried the call rate on the Stock Exchange to 5 per cent., has passed, and that particular form of accommodation now goes at 4½ per cent., which is within one-quarter of the low rate of this autumn. Time money again is available at 4½ per cent. Meanwhile the Federal Reserve statements for November 17th showed that another notable reduction had occurred in the demands that the member banks in this district are making on the local Federal Reserve institution. Discounts fell another \$26,000,000 to slightly more than \$90,000,000, this figure being the lowest of the season, and nearly \$58,000,000 lower than the figure for November 18th last year. Along with the reduction in discounts came a gain of \$29,000,000 in reserves which was accounted for by an influx of gold, a large part of which apparently came from the interior. Even with circulation up by \$13,000,000, the reserve ratio increased 0.4 of 1 per cent. to 84.9, this figure comparing with 82.8 a year ago. As the report for the system as a whole showed comparatively minor changes, it follows that the movement of funds has been toward this centre, and that the demand for funds here is moderate. While prophecy is as dangerous as ever, some good judges believe that the money market will remain about as it is until the Christmas demand for currency stimulates discounting, the latter tendency usually being attended by a harder tone in rates. After the end of the year the usual early-January surplus of funds in this market is anticipated.

Meanwhile industry continues to make a better showing than expected. After all the talk of a slowing down in the steel business, production has continued to hold in the neighbourhood of 80 per cent. of capacity. The prophets still say that operations will decrease to about 75 per cent. of capacity, but the fact remains that business is holding up extraordinarily well. A little weakness has been noticeable in steel prices recently, and the turn to your coal strike has taken some of the stiffness out of the pig-iron market. There seems to be a real basis for believing that building operations have passed their crest. On the other hand, the consumption of steel in the automobile and motor truck plants is quite likely to increase in January, and there is even some talk of an increase in operations at the motor plants during December. The General Motors Corporation's sales fell off somewhat during the last two weeks of September and the first two weeks of October. Since then, however, they have grown

well, and it is believed that earnings in the last quarter will compare favourably with the last quarter of last year, which was an extremely good one. Somewhat similar reports are heard with regard to the agricultural implement industry; and the mills that make steel pipes, while they have caught up with the demand for oil country goods, seem to have plenty of business for the next few months. Railway car loading statistics continue to confirm the indication of a high rate of industrial activity, the performance for the week ended November 6th exceeding all records for that particular week of the year. Altogether there is not any very substantial ground for pessimism with regard to the business outlook.

A slight decline (0.5 of 1 per cent.) was shown by the Bureau of Labour Statistics commodity price index for October. The loss was due principally to slight recessions in the farm products and cloths and clothing groups, the latter being accounted for by the weakness in cotton prices. Industrial groups generally were steady. After making the decline the index remained at 150 per cent. of the average level for 1913. This index has moved within a range of three points during the last eight months. The lowest was recorded in August at 149 per cent. of pre-war. The high figure of 152 per cent. was touched in March, May, and June. All of which indicates that prices have been relatively stable since last spring, even if the present level is 5 per cent. below that of a year ago.

Price-cutting has spread in the oil industry recently, but the cuts have been moderate and not universal. They have come, furthermore, after the season of heaviest consumption. During the last several years the oil industry has been unfortunate in having the prices of its products break in the summer just when the season of early consumption is getting under way. This year the situation has been strong enough to preserve the price-level until after the big business has been done, and this fact should have an important bearing on the industry's profits this year. As an offset for the weakness in oil, sugar prices have been quite strong on President Machado's declaration that he would limit production in Cuba to 4,500,000 tons for the coming crop. Meanwhile, cotton has displayed marked firmness, despite the further raising of the Government crop estimates. That of November 14th placed the yield at the unprecedented total of 18,399,000 bales. After the publication of this estimate the cotton market remained firm, and closed the day's trading at precisely the same level as on the day before. Since then it has continued to show firmness. There is now some talk to the effect that so large a crop cannot be picked. In any event, the action of prices indicates that the big crop has been discounted, and that the period in which low cost will stimulate consumption of cotton cloth may have arrived.

FRANCE.—POLITICS — THE FRANC — BUDGET — PAYMENTS IN KIND.

(FROM OUR CORRESPONDENT.)

PARIS, December 1.

M. POINCARÉ is driving the various chapters of the Budget Bill through the Chamber with characteristic skill, and there is now every likelihood that the revenue and expenditure for the coming year will be approved by both Houses before December 31st. The sixty or more interpellations, many of them dangerous from the political point of view, of which notice had been given when Parliament reassembled, were got rid of, it will be remembered, under a promise that members should be given every opportunity to "blow off steam" (provided they obeyed the new rule limiting their speeches) during the discussion of the various departmental budgets. By similarly skilful handling the Premier and Finance Minister has succeeded in avoiding another dangerous rock in the form of the opposition that still exists to the *décrets lois*, by which so much useful work has been recently accomplished. All these decrees, it will be remembered, are subject to subsequent ratification by Parliament. A good many Socialists and other members of the Opposition were anxious to have the decrees submitted to Parliamentary approval simultaneously with the Budget proposals,

several of which are closely associated with this new method of legislating. M. Poincaré, by sheer force of personal authority, has convinced his critics that it would be a waste of time to discuss the merits of the decrees now, as most of them have been in operation for some time, and that any questions concerning them can quite well be left until later, so that the vital work of financial reform shall not be delayed.

The question whether M. Poincaré will eventually opt for stabilisation or revalorisation remains unanswered. The specialists are obviously diametrically at variance as to which of the two methods is already undergoing application or whether either of them really is. M. Poincaré, in a statement some weeks ago before the Finance Commission of the Chamber, was understood to say that he intended to adopt the principle of stabilisation, and immediately speculation became general as to the figure that would be chosen. Since then the Premier has announced that he intends to proceed "as far as possible with the revalorisation of the franc," and once more the specialists have given evidence of their disagreement. Some are insisting that revalorisation has been definitely decided upon, while others claim that all evidence tends to the contrary. Yet others are publicly discussing, without making things clearer, the technical difference between the two. The facts appear to be that a process of revalorisation is undoubtedly proceeding, more or less automatically, but that it is as yet impossible to foresee whether this will be made use of by M. Poincaré merely as a prelude to stabilisation or will be carefully moulded, in accordance with all the factors concerned, with a view to ensuring that eventually, within a period more or less long (but, in any case, probably extending over several years), the franc will be gradually restored to par, and that in this way France will work out—as many people insist she is perfectly able to do—her own financial salvation.

M. Loucheur insists that in theory there is nothing to prevent complete revalorisation of the franc, if the State pays off, in eight or ten years, the debt of 35,000 or 36,000 millions which it owes to the Bank. Every year, in that case, the value of the franc would increase, and eventually the currency would be brought back to its pre-war value. Such a policy, however, M. Loucheur insists, would lead to a reduction in the volume of business, instability, and the risk of unemployment, and would result in an annual Budget of from 22,000 to 23,000 millions, over four-fifths of which would be required for the service of the public debt. On balance, M. Loucheur expresses himself as strongly in favour of stabilisation.

The situation as it stands is paradoxical in the extreme, and in no respect more so than in regard to the floating debt. Some 3,000 million francs of bonds have been consolidated, but simultaneously, thanks to the return of confidence, a very substantial amount of new bonds have been issued, while the Treasury has accumulated a large amount in deposits withdrawable at a moment's notice. On balance, it is more than probable that the total of the floating debt has not been appreciably diminished. A similar situation prevails as to the inter-allied debts. On two occasions at least the Government has appeared to wish for a speedy solution, and twice the solution has been adjourned. Nevertheless, there is reason to believe that M. Poincaré is amply prepared with a series of plans adaptable to all eventualities and that he will apply them as circumstances direct.

The Budget for 1927 provides for a total expenditure for Army purposes, exclusive of pensions, amounting to 5,850,000,000, equivalent to 1,125,000,000 (gold), as compared with 1,470,000,000 (gold) in 1913 (including the then negligible cost of military pensions), 5,421,000,000 (paper) in 1920 and 4,847,000,000 in 1926. The increase of 1,003,000,000 for 1927 is due to the increased cost of foodstuffs, equipment, and other commodities (which represents 535,736,165, or more than half the increased expenditure), and to the necessity for providing for a large increase in the civilian personnel of the Army and in the number of professional non-commissioned officers, in consequence of the pending reduction of the term of compulsory Army service. Experience has shown that when the 18 months' period, instituted in 1923, is reduced to 12 months, it will be

impossible to form, during their short period of compulsory service, sufficient non-commissioned officers to maintain the first line of the national defence at an adequate level of efficiency to meet normal requirements. Over 91,000,000 of the increase is accounted for by the decision to grant extra allowances, totalling 64,343,000, to the troops forming the army of occupation in the Rhineland, to meet part of the high cost of living in that region, and of 26,800,000 as indemnity for loss on exchange. Comparison shows (according to the *Temps*) that French expenditure on the army works out at 5.57ths of the total Budget expenditure (this including the maintenance of the troops on the Rhine and elsewhere abroad), while Germany is spending 5.56ths of her total Budget expenditure on an army with only half the number of effectives. The present volume of expenditure on the French army will, of course, be substantially reduced after 1927, when the new system of twelvemonths-service will have come into operation.

The problem of German reparations in kind has again been called attention to by M. Le Trocquer, who was Minister for Public Works in M. Poincaré's previous Cabinet, and who took the opportunity during the discussion of the Budget of his former department, a day or two ago, to urge that his proposals of 1922 should again be considered. M. Le Trocquer, it may be recalled, drew up an elaborate plan for port, railway, canal, and other developments, which he proposed should be rendered possible by an extension of German payments in kind. These payments were to take the form of supplies of German materials and machinery, and German labour was to be brought into France, housed in special camps, and employed on the works in question. Germany, however, which at that time had arranged to devote some 2,035 million gold marks to the improvement of her own inland navigation system, received the proposals with ill-will, while the Socialist Party also raised objections. The incident of the occupation of the Ruhr definitely resulted in the scheme being indefinitely postponed, in spite of the fact that the French claims for payment in this form had been reduced from 17,000 to 5,000 millions. M. Le Trocquer insists that it will be impossible for France to receive in cash the whole of the amount due to her under the Dawes Plan, even if she could secure the payment of the capital value of her share of the German railway bonds allotted to her and the present proportion of payments in kind, including coal (since Germany cannot furnish the 20,000,000 tons of coal necessary to complete, beyond what France can produce herself, to meet her annual requirements in combustible). M. Le Trocquer's remarks were based on the fact that in 1928 Germany's payments under the Dawes plan will reach their height; therefore steps should be now taken to secure larger payments in kind for application to public works.

GERMANY.—LABOUR LAW—BANKS—FINANCE—TARIFF—TRADE CONDITIONS—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, December 1.

THE Socialists are pressing for an emergency law regulating working hours, to be passed pending proceedings with the new definitive Labour Protection Bill, which was approved by the Cabinet last week. The first aim of this law, which accepts eight hours in principle, but makes important qualifications in detail, is to make possible the ratification of the Washington agreement; but the Bill, which is very detailed, also amends and brings into one scheme numerous enactments for protection of labour passed during two generations. The Bill covers all classes of employment with a few exceptions, chief of which are agriculture, fisheries, navigation, and domestic service. The eight hours working day is established as a general rule; but a number of paragraphs establish exceptions and lay down special rules for home work, work under several employers, and work in continuously operated factories and workshops in which a 56 hours week is permitted. In general, overtime is limited to 60 hours a year, but may be increased to 300 hours with official permission. Overtime is to be paid at a 25 per cent. higher rate than normal time. For certain classes such as waiters, chauffeurs, and watchmen the

working day is 10 hours. The age up to which the special enactments for protection of youthful workers apply is raised from 16 to 18. In times of emergency the law may be suspended.

The money market has not, in general, changed. The day money rates rose in connection with the month-end settlements to 6½-8 per cent., which is a bigger rise than usual. The private discount rates remained unchanged at 4½-4¾ per cent. They were twice raised towards the close of October. Offers of short-term credit continue to exceed the demand. The Reichsbank President indicated that a way is being devised for diverting part of the superfluous short-term money supply into long-term loans; it is assumed that the part referred to is the cash balances of public departments which are lent on short terms to the banks, but are never recalled. Dr Schacht expressed the view that the 2,500 million marks which is held by these departments far exceed their real need, and that if all these monies were concentrated in one institution, the Reichsbank, 1,000 millions would suffice to keep the departments liquid. The commercial banks' bi-monthly balance-sheets for October 31st show a further increase of business. The assets of the six chief Berlin banks increased in the two months from 6,038 to 6,595 million marks, bills rising from 1,338 to 1,413 millions, advances on securities and prolongations from 473 to 628 millions, and current account debtors from 2,538 to 2,771 millions. Capitals, as a result of increases by the Disconto and Dresdner Banks, increased from 452 to 509 millions; reserves from 180 to 208 millions; deposits from 2,578 to 2,728 millions; and total liabilities to creditors from 5,011 to 5,517 millions. The liabilities of 85 credit banks, three mortgage banks, and 20 State and provincial banks (including the Prussian State Bank) increased in the two months from 9,793 to 10,430 millions. The proportion of liquid assets to liabilities is calculated at 57.6 per cent., which is the highest since the end of 1924, the lowest, 51.9 per cent., having been at the end of October, 1925.

The chief totals of the Budget for 1927-28, which is prepared but not yet published, are stated as:—

ORDINARY.		Marks.
Revenue		7,965,020,000
Expenditure—		
Permanent items	7,519,830,000	
Non-recurring	445,190,000	
		7,965,020,000
EXTRAORDINARY.		Marks.
Revenue		8,140,000
Expenditure		509,540,000

leaving a deficit to be covered by loan, all on extraordinary account, of 501,400,000 marks. Of the 7,519 millions permanent ordinary expenditure, 2,645 million marks are subventions to States and municipalities, 175½ million marks internal war burdens, 831 reparations payments, and 3,868 million marks administration and other permanent expenditure. Of the extraordinary expenditure, 19 millions are for internal war burdens and 67½ millions for Reparations payments. The Prussian Budget for 1927-28 balances at 3,473½ million marks. Of taxation revenue, 1,589 millions are subventions from federal taxes, and 975 from State taxes. Prussian revenue received in the first seven months of the financial year 1926-27 was 1,524.7 million marks, expenditure 1,661.7 million marks. The Federal Finance Ministry is reported to be preparing a new scheme for settlement of claims by "old" bondholders under the Valorisation Law. "Old" bondholders are those who acquired their present loan holdings before July, 1920. They hold loans of a total nominal value of about 40 milliard marks out of 70 milliard mark loans altogether outstanding. Under the pre-liar law they are to receive 125 new (gold) marks for every 1,000 old held. This is payable when drawn for amortisation between 1926 and 1956, and only then is the interest (simple) at 4½ per cent. payable. The new plan is to give immediately 125 marks of a new federal loan per 1,000 nominal of old loan, to bear 4½ per cent. interest from date of exchange. This would mean creating at once a new federal debt of 5 milliard marks, which would be amortised in 30 years. Reports that also "new" bondholders are to have their (very much less valuable) rights converted into new loan are denied.

BANK ESTABLISHED IN 1864.

SKANDINAVISKA KREDITAKTIEBOLAGET

GOTHENBURG, STOCKHOLM, MALMO.

Branches in all parts of Sweden.

Paid-up Capital and Reserves - - Kr.182,000,000

Telegraphic Address: "Kreditbolaget."

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

The Federal Economic Council has expressed itself against the demand of the sugar industry for doubling of the import duty. The present duty is 10 marks per double-centner. The ostensible aim of this demand is to make it possible to increase sugar-beet prices to a level profitable for growers. The Council recommends that measures should be taken to maintain a reasonable average beet price, and suggests an increase in the sugar duty not exceeding 5 marks per d.c., and a reduction of the sugar Excise tax (in order to compensate consumers) by the same amount. The increased duty should be fixed until October, 1930. The Government has its own plan to reduce the sugar Excise tax and to make good the revenue loss by fixing higher spirits prices, so that the spirits monopoly yield will increase. For this the consent of the Commissioner for Controlled Revenues is necessary.

The number of publicly supported unemployed on November 15th was 1,314,000, against 1,308,000 on the 1st. This increase may be due to seasonal causes, but it is noted that in Berlin unemployment has increased in trades which are not affected by the season. Bankruptcies in November numbered 453, against 476 in October. The quarterly report of the official Institute for Enquiry into Trade Conditions expresses the view that Germany is at the beginning of a period of economic activity. The British coal strike, says the report, was one factor in this, but in the main it is due to internal economic forces, and will continue. From the steady drop in prices of German manufactured goods independently of the movement of raw materials prices, the Institute concludes that, despite rising wages, production cost is falling. The coal activity continues, and a shortage is threatened. The Federal Coal Commissioner has decided for the present not to prohibit export, but he has ordered the mines to make a special delivery of 400,000 tons to the internal market. Output in the whole Republic in October was 13,516,977 tons, against 12,313,445 tons in the same area in October, 1913; output in January-October inclusive, 118,091,998 tons, against 118,885,238 tons. The prospects of a coal struggle with Great Britain are not relished here. The trade Press declares that if, what is not expected, an agreement concerning markets is come to, the British share could not be based on the volume of output or sales under the State subvention system. Steel production in October was 1,174,234 tons, against 916,609 tons in October, 1925, and a monthly average of 1,577,924 tons in 1913. The Stahlwerksverband has reduced prices as follows (in marks per ton):—Ingots from 104 to 100, blooms 111½ to 105, billets 119 to 112½, sheet bars 124 to 117½. Krupps, supported by Essen municipality, have applied for a credit of 20,000,000 marks at 3 or 4 per cent. from the Republic, to enable them so to adapt the Essen cast steel works that production can be conducted at a profit, otherwise some 20,000 men may be discharged. Other western metal concerns are opposed to the application, complaining that they must pay around 7 per cent. for credit. The theory that public funds are loanable to private undertakings merely because employment is thereby improved is strongly objected to in non-business quarters. The Western Steel Trust (Vereinigte Stahlwerke) is about to create another big dependent company, with 40 to 50 million marks capital, around its interests in the Siegerland district. According to Prague and Vienna reports the entry of at least some of the smaller

central European countries into the International Steel Cartel is practically assured. The Czechoslovak companies have agreed upon their respective quotas, the proposed total Czechoslovak share being 1½ million tons. The Poles and Hungarians are unwilling to join the Cartel on the basis of their output in the first quarter of 1926 (the basis originally adopted for the chief partners), declaring that output then was much below capacity. Austria appears to take the same line as Czechoslovakia; the Alpine Montan A.G., the only Austrian producer that counts, is already under the control of the German Western Steel Trust. The shipbuilding industry is more active, mainly as the result of orders for a few very large vessels.

Bourse prices have again fallen, for the third successive week. Since the first week of November, when the year's highest prices were reached, the leading speculative stocks, then quoting between 160 and 180, have fallen 15 to 30 points; but they are still higher than at the beginning of the last phase of the boom, which was in early September. A particularly sharp drop on one day last week caused the banks to intervene.

POLAND.—POLITICS—POLISH BANK — UNEMPLOYMENT—PRICES.

(FROM OUR CORRESPONDENT.)

WARSAW, November 24.

POLAND is at present in a state of political reorganisation. Parties which formerly had a deciding voice in Parliament are losing influence, and new organisations are trying to enter into the field of active politics. One of the most important of recent political events is the meeting of the Cracow Conservative Party in Warsaw and in Lodz. This party before the war played a very important rôle in Austria. During the last elections it lost all its seats in Parliament. It was certainly a very abnormal phenomenon by which Polish parliamentary life was deprived of the steady influence of a Conservative party. Marshal Pilsudski, in entering into negotiations with the great landowners of Eastern Poland, made a first step in the direction of the formation of a Conservative party outside the former Austrian Poland. The meetings in Warsaw and Lodz were intended to bring the leaders of the Cracow party into touch with representatives of Congress Poland. It is difficult to foretell what will be the results of these discussions, or how far they will lead to the formation of a strong Conservative party. Marshal Pilsudski's move to the right has decided the Socialist Party to pass to the opposition. This party, which in May actively supported Marshal Pilsudski's *coup d'état*, was deceived in its hopes that the overthrow of Wito's Government would bring the representatives of the "workmen and peasants" into power. Instead of this, Marshal Pilsudski's Cabinet pursued a policy which is characterised by the Socialists as "capitalistic."

The economic situation continues to improve. The most important event is the steadily growing reserve of foreign currencies in the Bank Polski, as may be seen from the figures below:—

(Million Zlotys.)

	Gold.	Foreign Currencies.	Per Cent. of Reserve.
June 30	134.6	18.5	33.72
September 30	135.4	109.1	39.38
October 31	135.4	113.5	39.72
November 10	135.5	123.5	43.90

During this period the liabilities in foreign currencies decreased from 48.7 million zlotys in June to 11.8 millions in November, so that the increase of the "net" reserve was even more rapid than shown in the table given above. The net reserve (the foreign currencies possessed by the bank after deduction of liabilities) amounted (millions zlotys) to:—

End of January	2.8	End of June	9.6
" " March	12.3	" " October	90.9
" " May	7.8	November 10	97.5

During the first five months of the year the liabilities in foreign currencies were greater than the assets. Now the surplus of assets amounts to 97.5 million zlotys.

The number of unemployed, which at the beginning of the year reached nearly 360,000, had decreased to 217,000 in September. Of those employed in the textile industry

in January, 44.7 were working one to three days. To-day this proportion has fallen to 3.8 per cent., while the percentage of those working six days has increased during the same period from 25.4 per cent. to 79.4 per cent.

The trend of foreign trade during the last two months has been less favourable than in June and July, as shown below (millions gold francs):—

	Imports.	Exports.	Excess of Exports.
January	47.3	109.2	61.9
June	63.5	102.8	39.3
July	65.8	121.0	55.2
August	92.1	128.6	36.5
September	85.4	114.7	29.3

The September decline in exports is partly the result of the increased price level. We give below the figures illustrating the price movements during the recent months (1914 = 100):—

	Wholesale Prices.	Cost of Living.
April	166.6	227.6
May	181.2	246.6
June	174.6	243.9
July	166.6	232.8
August	173.2	237.4
September	177.2	246.4
October	177.2	249.3

Since July the index of wholesale prices has increased from 166.6 to 177.2, and of the cost of living from 232.8 to 249.3. During this period the dollar exchange has declined from 10 to 9, so that the depreciation in the internal value of the zloty is greater than the depreciation in its exchange value. This naturally facilitates imports and exercises a depressing influence on exports. In consequence, the future trend of the Polish trade balance must cause some misgivings. Fortunately, the great reserve of foreign currencies held by the Bank Polski makes an unfavourable trade balance less dangerous for the stability of the zloty than at the beginning of the year.

CANADA.—ARRIVAL OF WINTER—CROP FIGURES AND CONDITIONS—RISE IN FREIGHT RATES—PRICES—GENERAL BUSINESS—INDUSTRIAL CONDITIONS—THE MEETING OF PARLIAMENT.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 15.

WINTER has now definitely set in throughout Canada, but the snowfall so far has been light and the frost moderate. A certain amount of grain is still standing unthreshed in the more backward prairie districts, but by strenuous efforts the farmers have been able to save most of the imperilled crop. The movement of grain to the seaboard has been greatly accelerated in the past few weeks, and between August 1st and November 11th the Canadian Pacific Railway had delivered to the head of the Great Lakes 14 million more bushels than during the same period of 1925, but the effects of the wet weather are revealed by the fact that only 57 per cent. of the total deliveries were in the class of contract grades. However, there is now little complaint about the volume of the wheat yield, which the latest report of the Dominion Bureau of Statistics places at 405,814,000 bushels, as compared with 411,375,700 in 1925; of this total all save some 20 million bushels is spring wheat grown on the prairies. The yield of oats is very disappointing, being only 364,777,000 bushels, as compared with 513,384,000, and there has been a decline in most of the other field crops according to the survey of the Bureau, whose figures are given below in bushels, with the final estimates for 1925 appended in brackets:—Barley, 105,086,000 (112,668,300); rye, 12,016,400 (13,687,900); peas, 2,426,400 (3,410,000); beans, 1,108,500 (1,500,000); buckwheat, 9,871,000 (10,448,800); mixed grains, 32,448,000 (34,301,000); flaxseed, 6,715,400 (9,297,000); corn for husking, 6,744,000 (10,564,300). Of the prairie provinces, Saskatchewan and Alberta have fared better than they expected, but Manitoba, where a bumper yield was promised in August, has had to be content with a relatively poor crop.

The marketing situation, however, is still unsatisfac-

tory, and in view of the fact that lack of export demand has resulted in the presence of more grain in the terminal elevators at the head of the Lakes and Montreal than at any corresponding date for some years past, it is a matter of surprise that prices have kept up so well. But at the end of last week they broke sharply as the result of an announcement by the North Atlantic Steamship Conference that an increase in freight rates to the United Kingdom on what are known as "conference commodities" would be enforced after December 1st, and would range from 15 per cent. upwards. It is true that rates on wheat, flour, and cattle are not "fixed" by the conference, but with complete machinery for co-operative consultation available, it is not difficult for the steamship companies to maintain a common rate on the major farm products.

Indeed, their success in raising the rates on wheat within the last few months has alarmed the grain trade. Last May the rate on wheat from Montreal to Liverpool was 7.5 cents per bushel, but November quotations range from 12.7 to 13.5 cents; the winter rate from St John to Liverpool, which was 9.7 cents for December, 1925, will begin at 19.5 cents, or more than double last year's figure. Further advances on the wheat rate are now feared, and as they are bound to depress prices in Winnipeg, a renewal of the agitation against steamship monopoly may be expected when Parliament meets. The policies may be expected when Parliament meets. The authorities at Ottawa attribute the blame for the rise in freight rates to the British coal strike. They point out that many of the tramp steamers, which at this time of year usually come to Canadian ports for grain cargoes, have found more profitable employment in carrying coal from the United States to Britain. As a result there has been a scarcity of grain space, and, with the salutary competition of the tramp steamers reduced to a negligible factor, every foot of space on the passenger and freight liners belonging to the North Atlantic Conference has been in demand, and they have been able to command their own terms. For this and other reasons the final settlement of the British coal strike will be hailed with great relief in Canada, whose economic fortunes have been seriously affected by it.

Prices show a slightly downward tendency, and the wholesale index number of the Dominion Bureau of Statistics stands at 151.1 for October, as compared with 152.3 for September and 156 for October, 1925. The average cost of a weekly budget of 29 staple foods as given by the Bureau is placed for October at \$10.93, as compared with \$10.94 for September, \$10.89 for October, 1925, \$16.92 for June, 1920, the peak, and \$7.99 for October, 1914.

The general condition of business continues to be satisfactory, and although this winter the purchasing power of the rural communities may be rather smaller than last year, there is no fear of any serious recession in business. The latest car-loading figures available, for the week ending November 6th placed at 83,812 cars, show a decline of 269 cars as compared with the previous week, but in previous weeks they had been running at record levels; indeed, during the four weeks ending October 23rd, when a total of 322,683 cars were loaded, a new peak figure for any single month was established, the previous best having been 306,194 cars in November, 1925. Wholesale houses report that the flow of orders is better than at the corresponding date in 1925, and retail trade is on a satisfactory level. The mildness of the weather has rather retarded the demand for winter clothing and footwear, but drygoods firms find a gratifying degree of activity, and the boot and shoe industry is more prosperous than it has been for many months. The tanneries are also very busy, and can scarcely meet the demands upon them, since American buyers have been in the market with large orders. Most of the basic natural industries are in a flourishing condition. The demand for pulp and newspaper is still strong, and practically all the mills are operating close to capacity. There has come a welcome relief to the industrial situation in Nova Scotia, due largely to the British coal strike. The local coal mines are busier than they have been for years, and the steel plants have a good volume of work on hand. The silver-mining companies still have their outlook depressed by the fall in the price of raw silver, but the output of other minerals is steadily increasing, and successful results are attending

the exploration and development work which is going on in all the mineralised areas. The fishermen on the Pacific coast have enjoyed a profitable season, and their brethren on the Atlantic coast have secured a very large catch, although prices continue to be deplorably low.

Making allowance for seasonal tendencies, industrial operations are highly satisfactory. In September the output of steel was 29 per cent., and of iron 9 per cent., greater than in August, and while the market for these products has been displaying a stronger tone, the leading mills have orders which will assure good employment for several months ahead. The farm implement plants, now commencing their operations for the marketing season of 1927, are all planning a heavy production schedule, and the motor firms are all well provided with orders, foreign as well as domestic sales being alike good. Recently the volume of new construction contracts has shown the usual seasonal drop, but the October figures are still more than double those given for September, and nearly 50 per cent. above the total reported for October, 1925. In residential areas in the cities there are definite signs of overbuilding, but many large projects of industrial and commercial construction are under way, and the outlook for the winter and next spring is quite propitious. At this period of the year the employment problem usually begins to cause anxiety to the authorities, but the latest Government report shows that many more workers were employed in October, 1926, than in October, 1925, and while the large cities will probably during the dead of winter have a number of workless people on their hands, the problem is not likely to be serious.

The Federal Parliament has been provisionally summoned to meet on December 9th, and it will spend a fortnight, before arranging for a long adjournment until the end of January, in passing the balance of supply for the current fiscal year and terminating the necessity of carrying on the financial business of the country by the device of Governor-Generals' warrants. All the members of the King Cabinet have been re-elected without opposition, and it is not expected that the Conservatives will refuse to facilitate the speedy passage of the estimates still unvoted.

Immigration returns for the first three-quarters of the present calendar year, ending September 30th, which have just been published, are not altogether satisfactory in view of the special efforts which have been made to increase the inflow of immigrants, but they represent a gratifying improvement of 66 per cent. on the very poor figures for the corresponding period of 1925. During these nine months 112,835 immigrants entered Canada, as compared with 67,878 in the parallel months of 1925. But one disturbing feature is the declining proportion of British immigrants, who only numbered 41,419, while arrivals from the U.S. numbered 16,776, and from other foreign countries 54,640.

UNION OF SOUTH AFRICA.—DEMANDS OF LABOUR—HOW THE GOLD PRODUCTION IS ABSORBED—EXCESSIVE CUSTOMS RECEIPTS.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, November 3.

THE demands of the unions which have been referred to arbitration by members of the Wages Board, conciliation procedure having failed, would, if granted, create a serious position, expert opinion being to the effect that this would bring the wage cost of mining and treatment back almost to that prevailing before the strike of 1922. Not only would the better-class mines have to face greatly enhanced costs, but several low-grade mines would be compelled to close down. In this connection the results of certain large mines in the September quarter show that it is only the community, and principally the working man, that is interested, as there is nothing left for shareholders. Four low-grade mines in that period spent £650,000 to make £30,000 nominal profit, or less than 5 per cent. on "turnover," as the commercialist would express it. Nourse and Kleinfontein actually spent £4,000 a day to make rather less than that sum in a whole quarter, the respective figures being £190,000 and £2,100, and £146,250 and £1,245. Nourse mine secured a humble threepence a ton, which is better than in the June quarter, when the total profit was

so small as to be incapable of being worked out on the unit basis. Kleinfontein earned less than 2d per ton.

Taking the month of September by itself, no less than ten out of the Rand's 35 mines, which crushed nearly half a million tons (or 20 per cent. of the whole), made the paltry profit of 1s 6d per ton or less (one a loss, two a profit of one penny a ton, and two of sixpence a ton), and totalling £17,300. But they spent no less than £515,000, a huge sum circulating among the community, and a large proportion in white wages. Profit actually represented 3½ per cent. on turnover, a wretched return. One would have thought that the labour people would have realised the wisdom of leaving well alone.

According to the report of the Government mining engineer, the balance of recovery of the gold mines of the Rand, after allowing for working costs, representing gross profits, was £12,060,750 in 1925, a drop of £3,510,000 mainly owing to the disappearance of the gold premium. The Chamber of Mines stated the figure at £12,419,779. Rate of profit was 8s 5d per ton, the lowest since the start of the gold premium in 1919. In 1914 the rate was one shilling a ton higher. In the four years prior to that the figure was 10s a ton. An important factor in the reduction of net profit has been the growth in the item Government's share of profits. In pre-war times the amount was only £175,000, by 1920 the payment had increased to £944,000, falling to £760,000 in the strike year. In 1923 the Government's receipts were over a million, while in the last two years they have averaged practically a million and a-half. Interest and repayment of debentures last year figured at £565,000 (in 1923 it was as high as £927,500), and interest and repayment of loans £170,750. Dividends paid by Rand Mines (repeated here for sake of completeness of record) were £8,164,200, a decrease of £1,393,500.

In 1925 the value of gold produced on the Rand was £39,596,400, of which £26,525,200, constituting 67 per cent. was spent on salaries, wages and stores, in almost equal moieties. The maximum expenditure under these two headings was £30,690,800 in 1920. This was the year of maximum premium, when gold averaged 114s per oz, an extra gross revenue of 8½ millions. Out of a then value of £44,407,544 (a record in value, though not in ounces) the salaries and wages bill came to £16,876,140, or £3,061,500 more than the 2 stores account. These two items represented 69 per cent., but in 1918 they had reached a maximum of 76½ per cent. Last year 4,505,000 tons more than in 1920 were crushed, though stores cost £600,000 less, and salaries and wages, owing to the reorganisation following the strike, £3,566,000. It is interesting and important to notice that in 1913 and 1914, labour and stores accounted for 64½ per cent. The highest ratio was 76.6 per cent. in 1918, when working costs had reached 21s 7d per ton, but before the gold premium had become operative. When one bears in mind the greater depth of the mines, the present ratio may be considered satisfactory; it is only brought about by the high efficiency at the modernly-equipped mines of the Far East Rand. The best dividend year was 1924, when £9,557,660 was paid.

The 81st annual meeting of the South African Mutual Life Assurance Society, familiarly known as the "Old Mutual," was recently held at Cape Town. The society has now accumulated £15,000,000 in funds, which compares with £59,000 in its tenth year. For the second year in succession the funds had increased by over a million sterling, and it is just 39 years ago since the society passed its first million mark. The largest proportion of the funds is invested in Government stock, almost 5½ millions being with the Union Government. The interest earned had increased by a few pence to £5 12s 4d gross, and £5 6s 1d after deducting income-tax. A large amount invested in the 6 per cent. Union loan has, under the last conversion, been placed on a 5 per cent. basis, a reduction which will be shown in the next year's accounts. Expense ratio was slightly higher, and surrenders slightly less. Claims for the year amounted to £446,250, bringing the total paid up to £11 millions.

Official figures show that out of a total of £104 millions of assurance in force with all companies operating in South Africa, the South African Mutual holds no

less than £42 millions. The chairman devoted a considerable portion of his speech to the question whether South Africa was under-insured, and came to the conclusion that it was, the average insurance being for one year's income only.

In the *Economist* of August 28th I (our Johannesburg correspondent) referred to Mr Jagger's estimate of excess Customs dues for the year at £1,178,000. Prof. H. E. Fremantle estimates the discrepancy between estimate and collections at an even larger amount, £1,342,000 for the year. This enormous miscalculation is inexcusable, and means thoroughly bad finance. It implies the imposition of heavy taxation which is not required, and increasing the burdens, especially of the poor, but also on industry in general when there is no call for it.

Letters to the Editor.

THE FRENCH FRANC.

TO THE EDITOR OF THE ECONOMIST.

SIR,—M. Poincaré is in this quandary. The Rentiers will quarrel with him if he stabilises the currency now at, say, 150, and the industrialists if he puts off stabilisation and allows the exchange value to go on appreciating. It appears to me that what would meet the case would be to stabilise at 150 for five years, at 125 for the next five years, at 100 the next five years, and so on down to 25.22, the old sterling parity—five years being each period of readjustment. To meet the very true objection of the colossal amount of the debt, I would solve that by making it irredeemable, and give fresh bonds calculated at the dollar price of the franc current on the day each issue has been made.—Yours, &c.,

PERCY H. JOSEPH.

Westgate-on-Sea, November 23rd, 1926.

Books and Publications.

BOOKS RECEIVED.

British Documents on the Origins of the War. Vol. IX. *The Outbreak of War. Foreign Office Documents, June 28-August 4, 1914.* Collected and arranged by J. W. Headlam-Morley. (London) H.M. Stationery Office, Adastral House, Kingsway. 10s 6d net.

A very important collection of official documents, to which we devote an article in this issue.

An Economic History of Modern Britain: The Early Railway Age, 1820-1850. By J. H. Chapman. (London) Cambridge University Press, Fetter lane. 25s net.

This is the first of three volumes in which Dr Chapman intends to bring his economic history of modern Britain down to 1914, with an epilogue on 1914-24. The story starts when the short-period effects of the Napoleonic wars were ending, and contains a full analysis of economic Britain as it was in the decade 1820-30. The author is one of the leading authorities on modern economic history in the University of Cambridge, and his work should be read by serious students of economics.

Richard Cobden and Foreign Policy. By William Harbutt Dawson. (London) George Allen and Unwin, Limited, 40 Museum street. 12s 6d net.

The author, in twelve chapters, discusses Cobden's attitude to such questions as war and peace, arbitration, foreign policy, diplomacy and the Foreign Office, the Colonies and Imperialism, and Anglo-American relations; and in the two concluding chapters he brings Cobden's teaching to bear upon the international and Imperial problems which face British statesmen to-day.

Le Retour à l'Étalon-or. By Georges Lacont. (Paris) Payot, 106 Boulevard Saint-Germain. 20f.

A review of British monetary policy leading up to the resumption of the gold standard, written by a French economist, who is in the service of the Bank of France.

Hungarian Commerce and Industry in the Year 1925. (Budapest) Chamber of Commerce and Industry.

A full and authoritative report on the economic activities of Hungary in 1925, printed in English.

Greek Refugee Settlement. (Geneva) League of Nations. 2s 6d.

A full story, translated into English, of the settlement of Greek refugees produced by the Refugee Settlement Commission. The volume is well illustrated, and contains a map of the settlement of rural and urban refugees and also an ethnographic map of Macedonia.

The Science and Method of Politics. By G. E. G. Catlin. (London) 68-74 Carter lane. 12s 6d net.

The author, who is Assistant Professor of Political Science in Cornell University, U.S.A., discusses the relation of politics to history, ethics and other social sciences, and inquires whether the social sciences must continue to lag behind the natural sciences.

Practical Social Science. By John A. Lapp. (London) Macmillan and Co., Limited, St. Martin's street. 7s net.

The aim of this book is to fill the need for the study of social science in American high schools. It is divided into four parts: (1) Citizen and society, including population, migration, and occupational problems; (2) production and general welfare, including chapters on world commerce, transport, and natural resources; (3) social welfare, including education, health, &c.; (4) community work.

The Mathematics of Business. By William V. Lovitt and Henry F. Holtzclaw. (London) D. Appleton and Co., 34 Bedford street. 12s 6d net.

The joint authors are respectively Professor of Mathematics in Colorado College and Professor of Commerce in Kansas University. The book is designed to cover the ground of elementary mathematics with which a business man needs to be acquainted. It illustrates problems of accountancy, investment, banking and insurance, and shows the simplest methods of working them out.

Commercial Air Transport. By Lieut.-Colonel Ivo Edwards and F. Tymms. (London) Sir Isaac Pitman and Sons, Limited, Parker street, Kingsway. 7s 6d net.

The latest volume in Pitman's Transport Library. Air Vice-Marshall Sir Sefton Branker contributes a foreword. The aim is to educate public opinion to the huge possibilities of aviation and its importance to the Empire.

The Bankers' Almanac and Year Book, 1926-27. (London) Thomas Skinner and Co., 330 Gresham House, Old Broad street. 42s net.

This is the 82nd edition of this well-known book of reference. Its pages have been increased by 200 to the formidable number of 3,212, but into this compass is compressed a quantity of information that must be unique. In the present edition a further large number of institutions has been added in the section on international banks, while the geographical index, which gives the name of every city and town in the world where there is a bank, and the name of the bank situated therein, has been subdivided in order to facilitate reference. In addition to the banking directory the volume contains a large amount of historical and statistical information. This book is quite indispensable to the banker, and will earn its place on the "reference" shelves of most business houses.

Manual of Electrical Undertakings and Directory of Officials, 1925-26. Compiled by Emile Garcke. Edited by Frederick C. Garrett. (London) Electrical Press, Limited, 13, 14, and 16 Fisher street, Southampton row. 35s net.

A valuable and recognised standard book of reference covering every branch of the electrical industry in Great Britain and the Dominions. The present issue contains full particulars of 3,430 undertakings, while the directory section gives the names and addresses of 20,000 officials of electrical concerns. It also deals exhaustively with the electrical progress of the year and devotes many pages to the Government's Electricity Bill.

International Register of Telegraphic and Trade Addresses, 1926-1927. (London) Marconi International Code Company, Limited, Marconi House, Strand. (New York) Telegraphic Cable and Radio Registrations, Inc., 280 Broadway.

A large and most useful reference book to all who are engaged in international commerce. It contains a representative list of the registered cable addresses of the principal firms of the world, and a comprehensive summary of the chief codes used by leading business houses in all countries. It is divided into four main sections: (1) Alphabetical, (2) travel, (3) classified trades, (4) cable signatures.

The China Year-Book, 1926-27. Edited by H. G. W. Woodhead. (London) Simpkin, Marshall, Hamilton, Kent, and Co., Limited, 4 Stationers' Hall court. G.P.O. Box 77. 42s net.

An indispensable reference book for all who are concerned to keep pace with events in every walk of Chinese life. The latest issue contains many new features and is more than usually important in view of current Chinese occurrences.

The Life Tables, 1926, of the Association of General Life Assurance Companies. By A. Abel. (Berlin) E. S. Mittler and Son, Kochstrasse 68-71.

The 40th volume of the Life Tables of the Association of German life assurance companies.

The 100 Best Investments. November, 1926. (London) British, Foreign, and Colonial Corporation, Limited, B.F.C. House, Gresham street, E.C. 2. 1s net.

In this issue the special articles are on "The Future from Opposite Angles" and "The Outlook for the British Investor."

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised ... £3,000,000
Paid-Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,512,884

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted on application.
On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.
JAMES STEUART, Chief Manager.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
December 7.	December 9.

Stock Exchange markets have been disturbed by a number of adverse factors, of which the revolution in China is the most prominent. It is probable that prices would have been, in any case, dull and depressed, because they generally are when the end of the year comes in sight. But China, the fluctuations in the franc, the fall in raw rubber, and the somewhat unsatisfactory conclusion of the coal strike have been prime elements in spreading weakness, amounting to acute flatness in some cases, over the markets of the House. Business is quiet; sellers predominate in most departments.

The War Loan is the merest shade under 100. Distribution of the half-year's interest on Wednesday had no effect in bringing investment buying into the market, though prices of British Corporation stocks are well maintained, and the public continue to be ready takers of gilt-edged stock offered reasonably. Several new Corporation stocks are on the point of issue.

Chinese bonds have fallen very heavily in price; the quotations sent out by the Stock Exchange, and reprinted in the newspapers, are in various instances almost nominal. On some days it has been as hard to buy as on others it was difficult to sell. Wide prices have prevailed throughout the week. French Government bonds are a little easier. The railway issues keep steady. Chileans have gone back, with the exception of the 1886 issue, where sinking-fund purchases effected last Wednesday caused the price to strengthen. Inter-bourse stocks, such as Peruvian Corporations, Rio Tintos, Turkish Unified, and De Beers have been in a highly sensitive and easily-moved state of fluctuation, with prices lower on balance.

There is no improvement in the home railway outlook. The petering-out of the coal strike brought in no fresh support, and prices are mostly down. The Argentine Railway market has been good, but could not maintain its strength in the face of conditions prevailing elsewhere. Paraguay Centrals have been further depressed in consequence of the disappointment felt with the report. Other foreign railway stocks are quiet, though Mexican rails show a faint recovery.

Rubber shares have dropped because of a further fall in the price of the commodity. The tea market is heavy. Nothing has occurred to make oil shares better. Carreras rose with a bound, upon announcement of the company's huge profit for

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London. W.C. 2.

COMPANY MEETINGS, &c.

ROYAL BANK OF AUSTRALIA, LIMITED.

SATISFACTORY HALF-YEAR'S RESULTS.

STRONG CASH POSITION.

PASTORAL AND TRADE POSITION AND PROSPECTS.

The twenty-seventh annual general meeting of the shareholders of the Royal Bank of Australia, Limited, was held in the board room of the Chamber of Commerce building, William street, Melbourne, on October 25.

Mr R. J. Atcock, chairman of directors, presided, and in moving the adoption of the balance-sheet and statement of accounts (which had already been published) said:—

I am pleased to present to you again a balance-sheet showing a satisfactory half-year. You will have seen the figures, and I do not think there are many items which call for particular remark, except that profits, you will observe, are rather better than last half-year, which is principally due to our surplus funds being more profitably employed, advances to customers having increased to a moderate extent during the period. Notwithstanding this latter movement our cash position remains very strong, the percentage of liquid assets to liabilities being 42 per cent.

WOOL CLIP.

Good returns are again, fortunately, assured for the Australian wool clip. Owing to the extremely dry spell in Queensland the clip will not be as large as last season, but the falling off is estimated to be only slightly over 5 per cent., say 125,000 bales. With the exception of the wool grown in parts of Queensland, the year's clip will compare most favourably with recent ones as to the weight cut per head of sheep, and, according to reports received, it is well grown, sound, but a little broader in quality. It carries more condition than last year, but with considerably less burr and seed. Favourable shearing conditions in August and September have resulted in the wool arriving at the seaboard much earlier this year, and consequently there was ample wool available for the opening sales. With a good general demand ruling growers have been willing sellers, and to date approximately 580,000 bales have been sold for a most satisfactory return, an average of a little over £23 a bale, approximating a total of £13,300,000. Under the allocations made by the National Council of Wool-selling Brokers, in consultation with the Australian Woolgrowers' Council, 1,050,000 bales will be catalogued in the Australian selling centres for the half-year ending December 31, 1926.

MARKET CONDITIONS.

Prices are practically equal to those ruling last season, and must be considered satisfactory. Fine merinos are in best request. France, Germany, and Japan are giving the strongest support to the market, but America has taken most of the top lines, and competition from this country is expected to improve as more suitable wools become available. The bidding on account of local mills has been brisk, and evidently their stocks of raw wools are not heavy.

The Yorkshire section of the trade commenced the season with fair orders, but has been gradually dropping out of the market, and is at present getting only a small proportion of the offerings. A decided and early improvement in the trade in the manufacturing centre of the United Kingdom would be most welcome, as the Yorkshire section is our principal buyer, and without its active competition it will be difficult to maintain present prices when the heavy quantity of wool especially suitable to its requirements is offered.

PASTORAL REQUIREMENTS.

In all the States, with the exception of Queensland, to which I will refer later, the seasonal conditions of the pastoral industry are good, although in some of them there are limited areas in need of useful rains before the hot weather sets in. The New South Wales lambing was almost a "record," and generally in Victoria it was satisfactory. Stock are in good condition, and the prospects for the summer are most encouraging. The failure of the wet season in Queensland last summer, together with insufficient autumn rains, brought about a disastrous drought in that State. Heavy losses of cattle and sheep have been sustained, and in many cases very heavy expense has been incurred in sending sheep long distances to agistment country, also in feeding with hay and other fodders what stock were left on the runs. On some stations this expense is said to be up to, if not in excess of, the value of the sheep that have been saved. Happily, useful rains fell last month—unusual in September in Queensland—affording relief

which, it is hoped, may last until towards the end of the year, when the wet season may be expected. It is fortunate that a prolific lambing has been experienced in New South Wales, which should make available a large number of surplus sheep to assist in restocking the Northern State. While this is in progress there must necessarily be a shortage of pastoral income for taxation, which the Government on the last Budget statement can ill afford to lose.

DAIRYING INDUSTRY.

With reference to the dairying industry the butter exports for the season 1925-26 up to June 30th were approximately one-third less than the previous season. European summer production during May, June, July, and August of this year has been on a much larger scale; in fact, all butter production throughout the world has increased considerably over pre-war quantities, excepting in Siberia. The prospects for high prices for Australia during the ensuing season are not very encouraging, especially for quantities to arrive up to the end of the year, due to the fact that on October 1st over 1,000,000 boxes of butter were stored in London. The bulk of this quantity was held by New Zealand factories for higher prices during the summer months in England, but which did not materialise. Victoria is shaping for a heavy export season up to the end of the year, but New South Wales and Queensland, particularly the latter, require further heavy rains to augment supplies.

It is pleasing to report that the Eastern trade is steadily gaining ground, and is a very important factor in the export of tinned butter, especially from Victoria. As regards cheese, this commodity is at much lower values than last year, being in sympathy with butter. In all States, excepting Queensland, the bulk is used for home consumption.

As regards wheat, seasonal prospects are excellent, and as sowings have been on an increased scale it seems likely that the total yield for the Commonwealth will run to exceptionally high figures. A pleasing feature in the position is the increase in production in West Australia, which bids fair within a short space of time to rival, if not surpass, some of the old settled States.

GENERAL TRADE POSITION.

So far as the general trade position is concerned, imports have been heavy, but stocks should be good, owing to the buoyancy created by the favourable season in sight, and on the whole the trade barometer seems set fair for another year. Beyond that, who can tell? But one is bound to reflect on the fact that as a community we seem to be more or less relying on a continuance of the present national income, and, at the risk of being thought ultra-conservative, I must again voice my strong plea for more economy to be exercised in public and private affairs. In a country so largely dependent on weather conditions as this is, we ought to build up a margin in prosperous times to cover the eventualities (such as Queensland now has to contend with, for instance) as a result of, say, drought or a fall in the prices of commodities.

When considering the general position, I cannot but refer to the British coal strike. Directly and indirectly it is having, and will continue to have, a serious effect upon the community. It is within my province to call your attention to what it means to trade. The difficulty of getting orders filled expeditiously in England, with the risk of being forced to buy in other countries, is acting adversely to Imperial interests, while indirectly the employment of tonnage for the carriage of coal to England to keep going such factories as continue to work is acting directly upon the freight market, and will probably result in higher freights being demanded to carry our wheat to the United Kingdom.

"THE 44 HOURS WEEK."

A matter which is exercising the minds of most business people at the present time is that of the 44 hours week. While not wishing to discuss the merits or demerits of the case, the fact cannot be overlooked that in New South Wales, Queensland, and Western Australia, where the working week has been recently reduced to 44 hours in connection with the railways, tramways, and a number of secondary industries other than those which come under Federal awards, the cost of production, and consequently

the cost of living, will be correspondingly added to. The increased cost to the New South Wales Government in making the concession to the railway and tramway employees alone will, it is stated, be well over £500,000 a year for the time being. Reference is merely made to this matter, as it has a most important bearing on finance, both State and private.

NEW LONDON PREMISES.

Adverting to our more immediate concerns, I am pleased to report that after a good deal of investigation and consideration of various alternatives, we have now practically secured new London premises. For some time past we have felt the need of a move from 18 Bishopsgate, where the office space is too small for our growing business. The situation of the new office is in Old Broad street, at the corner of Union court, very convenient and central, and it provides ample accommodation not only for the existing staff but for expansion as well. We think that when the lease is signed we can feel quite settled as regards London premises for many years to come. Our general manager (Mr Laing), who is in the Old Country at present, and who conducted the negotiations, is very pleased with the site, and Mr Briscoe, our London director, also approves. Since we last met the bank has opened a new branch in the Chamber of Commerce building in William street, which you have no doubt observed as you came in to this meeting. We had in mind, of course, extension of business, but apart from that we wished to convenience our old customers in the vicinity. I am pleased to say that from both points of view the branch bids fair to be a great success.

FUTURE ANNUAL MEETINGS.

As regards the special business of which you have notice—the resolution referred to is for the purpose of altering our articles of association in order to permit of the general meeting of shareholders being held annually instead of half-yearly as at present. This is in accordance with the practice now followed by all the other banks. If, therefore, you approve of the resolution it will mean that there will be no general meeting of shareholders until October next year, but, all going well and as usual, an interim dividend will be declared in April next.

Mr Edward Campbell seconded the motion, which was agreed to. A vote of thanks to the chairman, directors, and staff was passed on the motion of Mr A. C. Macbean, seconded by Mr J. Gras-y-Fort.

The resolution providing for the holding of the annual general meeting not later than November 10 each year, with consequential amendments to the articles of association, was adopted, and will be submitted for the approval of the extraordinary general meeting which will be held on November 9th.

PAHANG CONSOLIDATED.

EXCELLENT RESULTS—STRONG FINANCIAL POSITION.

The twentieth ordinary general meeting of the Pahang Consolidated Company, Limited, was held, on the 30th ultimo, at Winchester House, Old Broad street, London.

Mr H. Frisby, who presided, said that the balance-sheet presented was the best the company had ever known. They had made an extra £60,000 out of tin owing partly to the rise in price and partly to an increase of 70 tons in production. In addition they had received their first dividend from the Kuala Reman Rubber Estates. They proposed to write £20,000 off the plant and machinery, to reserve £20,000 for mine development, £10,000 for taxation reserve, and £50,000 for a special reserve for rubber planting. The final dividend they proposed to pay was at the rate of 22½ per cent., making 30 per cent. for the year, and the preference shareholders would receive their full 15 per cent.

With regard to the Willinks mine, in his opinion that mine had "gone out," and for future development they must look to the area east of the main fault. That would necessitate the opening up of a perfectly new mine, which would mean very heavy capital expenditure. It was for that reason that the directors thought it necessary to keep the company in a strong financial position. There was no doubt that if they did do further development work they would meet more water, and their present pumping plant was working practically to its capacity, so that fresh plant would have to be installed. In the Myah mine the position was more satisfactory. Further ore had been opened up, which would assist their reserve and enable them to carry on for some time. On the 400 feet level they had opened up a lode 4 feet wide of 3 per cent. tin.

The most pleasing part of their report was that referring to the Kuala Reman Rubber Estates, of whose capital the Pahang Consolidated owned seven-eighths. The rubber was reported as being excellent, and the output had averaged about 400 lbs to the acre.

The first dividend received from that company worked out at about 30 per cent., free of tax, on their original outlay of £140,000. They had decided to plant another rubber estate, which they hoped would turn out equally good. They would probably form a new company to take over that estate, and shares would be offered to the shareholders on very favourable terms.

The report and accounts were unanimously adopted.

CASTLEFIELD (KLANG) RUBBER ESTATE, LIMITED.

EXCELLENT RESULTS—DIVIDEND 60 PER CENT.

INTEREST ACQUIRED IN TIN SYNDICATE.

The annual general meeting of the shareholders of the Castlefield (Klang) Rubber Estate, Limited, was held, on the 1st instant, at the registered offices, 7 Martin's lane, Cannon street, London, Mr W. Arthur Addinsell (chairman of the company) presiding.

Mr C. H. Smallwood, on behalf of the secretaries (Messrs. Bright and Galbraith, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—I move: "That the directors' report and statement of accounts for the year ended June 30, 1926, as submitted to this meeting, be and they are hereby received and adopted, and that a final dividend of 35 per cent., making a total dividend of 60 per cent. for the year, be declared and paid."

The net profit for the year, after making allowance for depreciation on buildings and machinery, was £77,689. This gratifying result was due mainly to the excellent market price obtained for the company's produce, which worked out at an average net figure of approximately 2s 1½d per pound for all grades, as against 1s 10d per pound for the previous year.

During the period under review the average export allowance was 87 per cent. of the standard production figure allowed to this estate under the restriction scheme, and the crop harvested totalled 1,044,164 lbs, which compared with 668,095 lbs for the previous year. We have not yet received notification of our new allowance.

Owing to the scarcity of Tamil labour which prevailed throughout Malaya during the latter part of last year, it was necessary to engage Chinese labour on contract, which resulted in a slight increase in the tapping cost. This increase, however, was not material, because the expenditure was spread over a considerably larger crop. A high standard of tapping was maintained during the year, and the yield per tree was satisfactory.

GOOD CONDITION OF ESTATE.

The property is in an excellent state of cultivation. The young areas are showing excellent growth and should add material to future crops.

A full programme of work was carried out last year, which included thinning out, drainage and the construction and repairing of roads and bridges, in addition to which a substantial amount was spent on buildings and machinery.

The directors have recently acquired a further 158 acres of land adjoining the property, which is eminently suitable for the cultivation of rubber. Of this land, 75 acres have already been felled, and arrangements have been made to clear and plant the remaining area as soon as possible. The total area of the property is now 3,472 acres, of which 3,079 acres are planted.

An examination of the accounts reveals a sound financial position, which it is proposed to strengthen by transferring a further £10,000 to reserve, raising it to £50,000, against our capital of £100,000. This reserve provides our working capital.

INTEREST IN TIN SYNDICATE.

A few weeks ago shareholders were circularised regarding a syndicate which was formed to prospect for tin upon the Castlefield, Killinghall and Hongkong estates. Although the prospecting operations (on the area selected) on Castlefield were not successful, we hold a 15 per cent. interest in the syndicate, and will therefore receive this proportion of any profits made by the syndicate on the sale of its interests to the new company which will be formed to work the tin-bearing land on Hongkong.

Gentlemen, I have given you a brief outline of the general position of the property, but again I must refer to the excellent work which has been carried out by our manager, Mr D. S. Gardner, and his assistants. Our thanks are due to them, also to Messrs Cumberbatch and Co., the local agents in Kuala Lumpur.

Before I sit down I feel constrained to say just one word to remind you that this is the twentieth annual meeting. We are therefore in our twenty-first year, and I think it is a matter for congratulation that we have with us not only Mr de Winton—who, as you will remember, was the first chairman of the company—but also our friend and colleague Mr Harold Rendle, who had the audacity to select Castlefield, open it up and pass it on to us! I think as shareholders we must all be grateful to these gentlemen, who have stood by us from the very first. As you know, Mr Rendle took the place of his father on the board.

Mr Cecil de Winton seconded the motion, which was unanimously adopted.

The retiring director and the auditors were re-elected, and the proceedings concluded with a vote of thanks to the chairman and directors and to the agents, manager and staff in the East.

CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA, LIMITED.

SUCCESSFUL YEAR'S RESULTS.

SUB NIGEL—REMARKABLE DEVELOPMENTS.

The ordinary general meeting of the Consolidated Gold Fields of South Africa, Limited, was held, on the 2nd instant, at the Cannon street Hotel, London, E.C. Lord Harris (chairman of the company) presided.

Mr H. G. Sidgreaves (joint secretary) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the new Consolidated Gold Fields, Limited—the operating company—had paid a final dividend of 6 per cent., making, with the interim dividend of 2 per cent. paid in March last, 8 per cent., free of income-tax, for the year. This places the Consolidated Gold Fields of South Africa in a position to recommend a dividend of 12½ per cent., less income-tax. He would like briefly to refer to a measure of disappointment with which, he understood, the announcement of the present dividend had been received in some quarters. Doubtless they had had what was called a good year, in that some of their principal holdings had appreciated considerably in value, mainly due to their prospectively increased dividend-paying capacity. He would tell them, however, that they proposed holding their Sub Nigel and Robinson Deep shares as revenue producers for the time being, and they could not credit themselves with a profit on investments until they realised that. They could not have their prosperity both ways.

SUB NIGEL MINE.

The outstanding feature in connection with their mining investments during the past year had been the almost sensational appreciation in the value of the Sub Nigel Mine, or, as Mr Christopherson put it in moderate language, "the remarkable improvement in the development values disclosed and the encouraging increase obtained in the percentage of payable footage."

The cable recently received clearly pointed to a continuance of favourable progress. It read as follows: "Sub Nigel continues to open up high values, and provided sufficiency of native labour 16,000 tons should be milled in December. Expect profits to increase monthly from now on, and anticipate the full benefits from increased plant from March onwards." The company held 240,000 shares in that company, and he was sanguine enough to believe that the revenue from their holdings would be very substantial. Furthermore, they had every reason to be satisfied with the progress made by Robinson Deep, in which they continued to hold a large interest which, as he had said, also they placed in the category of their stable investments, certainly as regarded the "B" shares.

ROBINSON DEEP—ENCOURAGING REPORT.

The latest cable information read as follows:—"Developments on Robinson Deep continue to open up good values at depth, anticipate material increase in profits after installation of sorting plant and new hoist, former hope to complete by end of June and latter by end of 1927. It is estimated that the cost of this will be £51,000, but the additional profit to be made therefrom is expected to recoup this expenditure within 12 months. There will be no interruption in milling operations whilst the necessary alterations are being carried out. Meantime anticipate dividends on 'B' shares will be maintained for current and next half-year, thereafter hope for an increase." The Simmer and Jack Mines had suffered more than other mines from shortage of native labour, which had delayed the de-watering and re-equipment of the area upon which the future prosperity of the company depended. The development of results so far was encouraging, but the best results could not be expected until all mining was concentrated in the new area, which, it was not anticipated, would be possible until some time next year. The latest cable information stated that the Simmer and Jack Mine ground was opening up satisfactorily, and that the outlook for the future was encouraging.

AMERICAN AFFAIRS.

He would draw special attention to Count Bru's report on their American affairs, and particularly to the hopeful prospects of the American Potash and Chemical Corporation, which under that name was in effect a reorganisation of the American Trona Corporation. They looked forward with confidence to a dividend distribution next year.

The latest cable information they had had informed them that the total output of the remodelled plant would, at or about the end of that year, be between two and two and a-half times that of the old plant, with overall costs per ton considerably lower than heretofore, and that in spite of the fact that the market price of borax had fallen owing to severe competition, due to the American Potash and Chemical Company's increased output, the market price for both potash and borax was still considerably higher than the figure taken as a remunerative basis when it was decided to increase the plant to its present capacity.

The South American Gold and Platinum Company also had reached a stage at which regular dividends should be forthcoming at an early date—this year they hoped, but possibly not until early next year; at any rate, during their current financial year.

In dealing with the various other interests of the company, he said that in regard to their remaining interests in the Devonshire House site, everything in that connection was proceeding satisfactorily and according to anticipations. The Piccadilly building had been completed, and all the ground floor accommodation had been let on long lease, save the National Provincial Bank premises, the lease of which had been sold. Leases for a large number of the flats had been sold, and further sales were proceeding. Negotiations also had been entered into for the sale of the remaining part of the site, namely, the portion lying between Messrs. Thomas Cook and Sons' building and Stratton-street, and arrangements were now completed for the sale of the freehold of the building adjoining Lansdowne House, so that the whole venture should make a good showing during 1927.

Lord Brabourne seconded, and the resolution was carried unanimously, the chairman, directors, and staff receiving the congratulations of the shareholders on the excellent report.

JOHN I. THORNYCROFT AND COMPANY, LIMITED.

IMPROVED RESULTS.

The annual meeting of John I. Thornycroft and Co., Limited, was held, on the 30th ultimo, at Winchester House, London, Sir John E. Thornycroft (the managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said that last year he stated that the general opinion seemed to be in favour of a revival in trade provided the threatened trouble in connection with the coal industry was avoided, in which case there was every prospect of the position continuing

to improve. They had had to go through a general strike and a coal strike, and they had suffered heavy losses in the shipyard. There would have been losses in any case, but the difficulty in getting supplies and general disturbance had greatly aggravated the position. Fortunately, the commercial vehicle business was little affected, and therefore they were able to show an improvement on last year's figures.

The profit for the year, after deduction of all charges and depreciation, amounted to £57,297, approximately £20,000 better than the previous year. It was proposed to pay a final dividend of 3 per cent. on the cumulative preference shares (making 6 per cent. for the year), 7½ per cent. of the preferred ordinary shares, and 3 per cent. on the ordinary shares. They also proposed to transfer £2,000 to the benevolent fund. With regard to the shipbuilding and marine engineering side of the business, the experimental destroyer which they had designed and built for the Admiralty was nearing completion. From the trials which had been made the directors were convinced that she would give most satisfactory results. The new marine motor works at Reading were now well equipped, and the production of marine motors was going on satisfactorily. The sales of the commercial vehicle business had increased. An interesting and very important development for colonial work had been the production of what was known as the "rigid 6-wheeler." This vehicle was designed to meet the very exacting requirements of the War Office, and, quite apart from military use, there was no doubt that there would be a great demand for it for commercial work; they had already a considerable number working in different countries abroad. They had paid great attention to developing the colonial and overseas markets, and spent a great deal on establishing efficient service organisations. The orders on their books for home deliveries were quite satisfactory at the present time, and with their overseas connections there seemed little doubt that they could secure plenty of business.

The report and accounts were unanimously adopted.

MALAYA GENERAL COMPANY, LIMITED.

SUCCESSFUL RESULTS OF THE YEAR.

The 18th ordinary general meeting of the Malaya General Company, Limited, was held at Winchester House, Old Broad street, London, on the 3rd instant, Mr. George M. Weekley (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—"When we last met we were able to congratulate ourselves on a record crop of 1,061,237 lbs of rubber and a dividend of 25 per cent. To-day, with a crop of 1,676,040 lbs—about 60 per cent. increase—and with a selling price of 2s 0.9d per lb, we are in a position to transfer £25,000 to reserve, to give you a final dividend of 30 per cent.—making 50 per cent. for the year—and to carry forward the very substantial sum of £22,807.

Our estate cost of production was slightly above the manager's estimate, this being mainly due to the fact that we were unable to deliver any of our rubber in latex form, as we had expected to do during the greater part of the year, but it is hoped that everything will be ready to start these latex deliveries at the beginning of 1927.

We now have 4,980 acres under mature rubber, and when the 100 acres which were recently felled are planted up, we shall have got well over the 5,000 acre mark.

The estate is being maintained in good order, and the visiting agent, in his last report, states that "the trees are looking very well indeed, and the condition of the estate is thoroughly satisfactory."

I would now like to call your attention to the very strong financial position of the company, as shown in the balance-sheet. The year's profit has enabled us to increase our reserve account to £75,000, nearly all invested in Government securities, whilst we had in cash and on deposit over £60,000, or more than sufficient to pay the final 30 per cent. dividend.

Our property, I may remind you, stands in the books at the very moderate cost of about £45 per planted acre, without taking anything into account for nearly 2,000 acres of reserve land.

You will also notice that our investments and deposits have yielded over £5,000 in interest during the year, this being more than sufficient to pay all London expenses, directors' fees, and depreciation.

Reverting to purely estate matters, the manager reports very favourably on our staff in the East, and we feel that we have a very contented and happy family out there. The manager and staff have put in some most excellent work, and I have pleasure in paying tribute to their efficiency and loyalty.

The resolution was carried unanimously.

BANK.

ROYAL BANK OF AUSTRALIA, LIMITED.—The seventy-seventh report for the half-year ended September 30, duly audited and certified, shows the net profits amount to £53,832, which it is proposed to deal with as follows, viz.:—To pay a dividend at the rate of 10 per cent. per annum, £37,000; transfer to the reserve fund £15,000 (making it £665,000); and to add to the amount carried forward from last half-year £1,332 (making it £29,367). In future meetings of the bank will be held yearly in October instead of half-yearly.

RUBBER, &c.

DJASINGA RUBBER AND PRODUCE.—The crop harvested during the year ended June 30, 1926, was 1,000,561 lbs, against 955,325 lbs in preceding year. The net profit is £42,233, against £34,626. The sum of £5,000 is put to reserve as last year. The ordinary dividend is 8 per cent., against 7 per cent. The carry forward is increased from £13,235 to £15,178. Cash stands at £36,413, against £24,135. Investment in 5 per cent. War Loan remains the same at £10,105.

SINGAPORE PARA RUBBER ESTATES.—The profit for year ended June 30, 1926, amounted to £31,090. The ordinary dividend is 15 per cent. The sum of £1,000 is put to Income-tax reserve account, and £5,251 carried forward. The average price obtained for Rubber actually realised was 2s 4.85d per lb, against 8s 0.4d per lb for preceding year. The f.o.b. cost amounted to 9.25d per lb, against 9.5d per lb for preceding year. Cash stands at £19,407. Investments are at £12,984, all of which, with the exception of £400, are in British Government securities.

MISCELLANEOUS.

BRITISH INDIA STEAM NAVIGATION.—The report for the year which ended on September 30, 1926, shows a balance available for distribution, after providing for depreciation, of £139,073, which it is recommended should be distributed as follows:—Dividend of 5 per cent. on preference stock, of which 2½ per cent. was paid in May last, £35,000; dividend of 8 per cent. (free of income-tax) on shares, of which 4 per cent. (interim dividend) was paid in May last, £76,576; leaving a balance to be carried forward of £27,497. The mail services of the company have been performed with regularity. The old steamer "Japan" has been sold. There has been added to the fleet during the year the new steamer "Sirdhana" (7,745 tons), and since closing the accounts the new steamers "Rohna" (8,602 tons) and "Rajula" (8,478 tons), which have been built for the company's Negapatam/Straits mail and passenger services, have been delivered. The directors have contracted for a new cargo-passenger steamer of 2,400 tons for the company's Moulmein/Penang service. The directors are pleased to report that no serious accident occurred to any of the company's vessels during the year.

CHINESE ENGINEERING AND MINING.—The report for year ended June 30, 1926, shows that the sales of coal by the Kailash Mining Administration for the year amounted to 2,898,107 tons compared with 2,861,708 tons for the preceding year. The amount brought to the credit of the company's profit and loss account including interest in China, less certain small expenses, is £230,732. Interest and other items bring up the total credit to £256,513. After deducting administration and other expenses in Europe £19,838, and exchange £1,066, there remains a net profit of £235,607. Adding the amount brought forward from the last account, £239,420, there is a total credit of £475,028. Income-tax amounts to £93,919, and the available balance of the year is therefore £381,109. An interim dividend of 5 per cent. (£70,000), free of income-tax, was paid on May 26, 1926. The board propose that a further dividend of 5 per cent. be declared, free of income-tax (making a total of 10 per cent., free of income-tax, for the year) the same as for preceding year, payable on December 7, 1926. This will leave a balance to be carried forward of £241,108.

NEW ZEALAND LOAN AND MERCANTILE AGENCY.—Total receipts for year ended June 30, 1926, amounted to £616,014, against £595,632 in preceding year. General administrative expenses amounted to £350,881, against £332,964. British and Australasian taxes amounted to £51,492, against £42,778. The sum of £10,000 has again been written off premises account. The net profit after payment of debenture interest is £135,641, against £141,890. The ordinary dividend is again 7 per cent. The carry-forward is increased from £39,646 to £45,286.

STRAND HOTEL, LIMITED.—The report for year ended September 30, 1926, shows a net profit of £100,856, against £99,989. Preference dividends absorbed £37,000. The preferred ordinary dividend is 11 per cent., absorbing £25,300, and the deferred dividend is 506 per cent. as before, absorbing £25,300. The sum of £23,641 is carried forward, against £10,392 brought in. Balance sheet reveals total assets £1,427,597. Cash is at £98,919, against £93,086. Investments are at £203,636, against £183,716. Reserve stands at £100,000.

THE CORN TRADE.

Mark Lane, Friday Evening.

Following a period of heavy rains, climatic conditions became dry and colder. Threshings of native grain were also hampered consequently supplies at country markets were somewhat irregular and generally lower prices had to be accepted. Imported descriptions also moved off quietly, and values tended in a downward

direction in sympathy with forward weakness. In the floating and forward cargo section buyers continue to hold off, and prices responded to lower American and Argentine markets, while influenced by cheaper rates for freightage occasioned by numerous cancellations of vessels originally fixed for coal now competing for grain freight to Europe. Feeding stuffs were also neglected, and tendency of prices in buyers' favour on pressure to sell. Steamers of La Plata afloat sold 31s 1½d to Continent, and ditto at 31s 3d on passage to Spain. Wheat irregular and easier. No. 1 Northern Manitoba 60s 6d, No. 2 ditto 59s, No. 3, 58s, No. 4 55s, No. 2 tough Manitoba 58s, No. 2 mixed Durum 57s, choice white Karachi 59s 6d, ex ship, all per 496 lbs. English 11s 8d, 12s 2d per 112 lbs. Flour quiet. London standard grade 47s, town whites 48s, patents 49s-50s per sack, delivered in the home counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported Manitoba patents range from 44s-47s 6d, Minneapolis 45s-47s, Kansas patents 44s-45s, Australian 44s 6d-45s, per 280 lbs, ex store. Maize easier, Plate landed 33s 6d, ditto ex ship, 31s 6d, Plate Cinquantina 37s landed, per 480 lbs. Barley dull. Californian 40s-47s, Chilian Chevalier 52s-62s, ditto brewing 38s-48s, Australian Chevalier 47s-50s, ex store, per 448 lbs. No. 3 Canadian Western 34s 3d, ex ship, Persian, ex ship, 29s, landed 30s, Russian 32s 6d, Plate 31s 6d, both ex ship. Plate landed 33s 9d per 400 lbs. English malting 9s 6d-18s 9d, as to sample, feed 8s 9d-9s 8d per 112 lbs. Oats easier. La Plata, landed, 23s 6d, ditto, ex ship, 22s 3d per 320 lbs. English 8s-8s 6d, per 112 lbs. Millers' offals weak. Broad bran quoted 7s 8d, middlings 8s 3d, fine ditto 9s 6d, bags included, ex mill, feed oatmeal 9s 9d, light oats 8s 3d, ground oats 13s 3d per cwt, free on rail. Oatmeal quiet. London made flaked 18s, rolled oats 17s, medium, also fine cut, 18s, coarse, also medium pinhead and whole groats, 16s, ex mill, per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1926-27, 1925-26, 1924-25, 1923-24 :—

1925	464,498	539,629	75,786	11 5	13 3	9 1

AMERICAN WHEAT MARKETS.

Markets were easy in the earlier days of the week, on reports of favourable conditions in Argentina and Australia, and large offerings of Russian wheat. A recovery was subsequently recorded on a broadening of general demand, stimulated by fears that navigation on the Great Lakes and the St. Lawrence would close earlier than had been expected.

(b) November delivery. (c) December delivery. † Previous day's quotation.

Visible supplies of wheat in Canada, at 44,535,000 bushels, show a decrease of 3,357,000 bushels as compared with the previous figures. Supplies a year ago stood at 35,926,000 bushels.

COAL.

Our Cardiff correspondent writes:—The stoppage in the South Wales coalfield ended on Wednesday, and on Thursday morning the hewing of coal was recommenced at most of the pits. The terms of settlement include an eight-hour day for five days of the week and a seven-hour shift on Saturday. Until the end of May next the underground and surface workmen are guaranteed their pre-stoppage wages of 42.22 per cent. on the 1915 standard rates, but that the payment of the 14.2 per cent. conceded to the hewers when the hours were reduced from eight to seven in 1919 is to be discontinued. The distribution of the net proceeds of the industry is to be in the ratio of 85 per cent. to wages and 15 per cent. to profits, and the minimum wage 28 per cent. on the 1915 standard rates. The period of the agreement is for the three years ending December, 1929, but under a new provision it will be open to either side to apply for a revision either of the minimum wage or of the subsistence wage at the end of the first or second year. The immediate effect of the settlement was to lower the maximum price of house coal from 50s to 40s per ton at the pit head. The regulations prohibiting the export of coal have been relaxed. Shipments of bunkers in the foreign trade is now free. Quotations for export purposes are very unsettled, and it is feared that some weeks must elapse before they reach a stable basis.

The offices of Argentine Land and Investment Company, Limited, have been removed to No. 17 St. Swithin's lane, London, E.C.4. The telephone number is now City 7839, and the telegraphic address "Argenterie. Cannon."

Mr Walter Home, C.I.E., has resigned his seat on the board of the Barsi Light Railway Company, Limited, and Sir Ernest A. S. Bell, C.I.E., has been elected a director in his place.

We are informed that Mr Francis R. Phillips, M.C., has joined the board of Messrs Bernhard, Scholle, and Co., Limited.

The Right Hon. Lord Buckmaster, owing to protracted illness, consequent upon his recent operation, has resigned his position as president and

We are informed that Mr Charles Pakeman, of Salisbury House, London, E.C. 2, has been elected a director of the Neuchatel Asphalt Co., Limited.

Baring Brothers and Co., Limited, notify that the transfer books

of the Commercial Cable Company Sterling 4 per cent. 500-year debenture stock will be closed from 22nd to 31st inst., both days inclusive, for preparation of the warrants for the interest due January 1st, 1927.

RAILWAYS.

MEXICAN RAILWAY COMPANY, LIMITED.—The report for the half-year to June 30th last shows that the balance transferred to net revenue account is \$1,135,627, as compared with \$720,372 in the first half of 1925. At the standard rate of 24d to the peso, this is equivalent to £113,562. After deducting interest, difference in exchange and Mexican income-tax, the surplus for the half-year is £5,515, which reduces the debit to net revenue from £752,872 to £747,356. Gross receipts for the half-year were \$7,133,300, a decrease of \$146,700 as compared with the corresponding half of 1925, while expenses amounted to \$5,997,700, a decrease of \$91,900. The report states that the hurricane at Vera Cruz caused no interruption to the train service, and that no additional expenditure has been incurred.

IRON AND STEEL.

We extract the following from the weekly report issued by the London Iron and Steel Exchange. The activity which developed when it became certain that the coal strike was upon the point of being settled has continued. In addition to contracts which the British works have had in hand for a considerable period of the strike, they have taken a considerable tonnage of orders during the past week, principally from constructional engineers. Up to the present practically none of the steel works has been able to make a restart, as sufficient supplies of fuel are not yet available. Interest in the market generally centres upon the time of delivery required by the British steel works and also upon the prices they will ask when delivery is possible. Those works which have refrained from booking orders during the strike are now in a position to quote for near delivery, but prices are still entirely a matter of arrangement, since the manufacturers are unable yet to estimate their costs when supplies of fuel are obtainable.

Our Middlesbrough correspondent's report, dated December 2, 1926, is as follows:—Pig-iron: It is expected that immediately supplies of coke are available several of the local blast furnaces will be started, but their production will chiefly be required for steel-works' production. It is not expected that there will be very much, if any, foundry pig-iron for sale in the open market (in addition to the production of the two blast furnaces which have been kept in blast all during the strike) before the end of the year. Quotations for prompt delivery are therefore unchanged, 120s per ton being asked for No. 3 Cleveland G.M.B. It is reported that contracts have been fixed for six months on a basis of 82s 6d for No. 3 Cleveland G.M.B. Mixed numbers East Coast hematite are not expected to be available until early in the new year. There are indications that makers are prepared to negotiate forward contracts at round about 90s per ton. Manufactured iron and steel: Makers are reported to have good order-books, and one local steel-works has commenced operations. Others will follow immediately supplies of fuel are sufficient. Iron ore: There is no new business, and with the present stocks it is not likely that there will be an early resumption of buying.

Our Sheffield correspondent writes:—Preparations are in hand for restarting idle plant, and the increased availability of British coal has enabled firms to proceed with orders for special qualities of tool steel. Fabrication of steel is being hampered, however, by the absence of raw material, and producers of commercial steels cannot afford to work with fuel at its present high prices. Coal quotations are dropping daily, the latest being 40s for coal and 30s for scrap. There will be little movement in trade, however, until these figures decline by nearly one-half. Two blast furnaces have started at Staveley, Derbyshire, on coal owned by the proprietors of the concern. Several open-hearth furnaces have been started in Sheffield, but the remainder will not be lighted until January. There is practically no English pig-iron to be bought, and it is difficult to obtain foreign pig or steel billets owing to the disorganisation of North Sea transport. Several large parcels of superior Swedish pig, unloaded at "cut" prices, have been imported to this district. Very little English coke is coming forward. The foundries continue to use Westphalian coke bought at high prices. The small tonnage of blast-furnace coke being made is much too dear for smelting pig-iron. Not much forward buying of fuel, iron, or steel is taking place, as neither sellers nor buyers are able to estimate costs for some weeks ahead. Business in the finished steel branches is irregular mainly on account of inability to obtain steel suitable for making tools. There is a brisk demand for colliery equipment: wire ropes and tools.

Our Glasgow correspondent writes:—With the return of peace in the coalfields inquiries are more numerous, and manufacturers are being pressed for something more definite in the matter of delivery. Preparations for a restart are well forward at a number of the works, and it only remains for the price of coal to reach an economic level for works to commence operations. Quotations for pig-iron are in the meantime merely nominal, and it is not anticipated that any alteration in the present prices of steel is likely to take place for some months after a resumption. Some steelmakers have entered into negotiations with their men with the object of curtailing their usual New Year holidays should a start be made before then. Wrought iron works are preparing for early resumption of full production, and a fair amount of business is on hand. Re-rollers are finding difficulty in keeping up to their commitments on account of delays in delivery of Continental billets, &c. With one or two exceptions all the sheetmakers are working full time, and in this branch very busy times are assured for the first half of next year. Several large shipbuilding contracts are reported for Clyde yards, and also a large steel structural order for New Zealand, which has been placed with a Glasgow firm.

Our Cardiff correspondent writes:—In the iron and steel industry the termination of the dispute has led to a considerable improvement in the outlook, and it is expected that within the next week or two more than 70 per cent. of the tinplate mills will be working. A gradual resumption of work at the steel-bar mills is also looked for. Current prices have ruled between 25s 3d and 25s 6d per box for prompt tinplates, and between 23s 9d and 24s 6d for forward delivery. Tinplate bars are unaltered at £6 15s, although in some cases makers are asking £7; while galvanised sheets are steady at £17 10s per ton.

OTHER METALS.

TIN.—The market opened with a strong tone, values responding to higher foreign advices, coupled with a good demand. Subsequent realisations, however, imparted irregularity and weakness, and most of the advance was lost. Standard cash changed hands at £318-£321-£313 15s, three months £304 10s-£297-£299 15s. Sales in the East were reported at £310 15s-£311 5s and £308 15s ton.

COPPER.—Liberal offerings were fairly well absorbed, but movements were somewhat irregular, due to fluctuating advices from America. At one time selling orders were on a heavy scale, but later the tone improved as buyers became more prominent. Dealings in standard cash were recorded at £56 17s 6d-£56 10s-£56 12s 6d, three months £57 12s 6d-£57 6s 3d-£57 8s 9d per ton. LEAD opened firmly, but eased later on selling pressure. Sales were of moderate extent, comprising good, soft foreign pig, December at £29 3s 9d-£28 15s, January £29 7s 6d to £29 1s 3d, February £29 12s 6d-£29 5s, March £29 12s 6d-£29 3s 9d, April £29 7s 6d per ton.

SPELTER irregular and tendency easier. Sales included: December at £33 5s-£33 2s 6d, January £33 15s-£33 2s 6d, February £33 15s-£33 2s 6d, March £33 15s-£33 1s 3d ton.

ANTIMONY quiet. English special brands £74 10s-£75, China crude November-December quoted £33, regulus ditto sold £55 ton c.i.f.

ALUMINIUM steady. Home delivery £107, export £112 ton. WOLFAM firmer, and November-December quoted 17s per unit. The market for TINPLATES remains quiet, as consumers still adopt reserved measures in face of prices manifesting a downward tendency, and it is this gradual shrinkage in values which causes certain distrust on the part of buyers. I.C. coke: December, 22s 6d to 22s 9d, January 22s per box f.o.b. Swansea.

QUICKSILVER firmer. Spot quoted £17 10s to £17 15s bottle.

THE COTTON TRADE.

LIVERPOOL, December 2, 1926.

The market is dull and featureless, and trade remains stagnant. Spot sales for the week November 26th to December 2nd inclusive were 33,000 bales, of which 16,810 were American, 1,620 Brazil, 8,000 Peru, 1,050 Egyptian, 4,730 African, 580 East Indian, and 210 sundries. Imports for the same period were 137,544 bales, including 117,809 American, 1,856 Brazil, 4,350 Peru, 10,968 Egyptian, 2,402 African, and 159 sundries. Quotations to-day are: American middling, 6.59d; Egyptian F.G.F. Sakel, 14.10d; F.G.F. uppers, 9.50d; Brazil fair, 6.94d; Peruvian G.F. mod-rough, 8.75d; smooth, 7.94d; Tinnivelly G.F., 6.20d; West African middling, 6.59; and East African G.F., 8.45d.

MANCHESTER, December 2, 1926.

There has been no particular improvement in the amount of business passing in the market. Some sellers have reported an increased inquiry, and now and again there are indications of offers coming nearer to the quotations of producers, but buyers are cautious, partly owing to the easier tendency of values. Makers of grey shirtings suitable for India have met with a little more encouragement, and some fair lines have been booked for Calcutta. Light fabrics have again attracted attention for India generally, but individual transactions have not been important. In view of the news from China the trade outlook tends to become worse. Printing and finishing styles have not been altogether idle for several minor outlets, and fine goods continue to be sold for the Continent, the Colonies, and the United States. American yarns have moved off slowly, and prices have favoured buyers when tested. Some moderate orders have been booked in Egyptian counts. Further operations have occurred in extra hards for the Near East.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—A better tone, without any material expansion in business, sums up the market position to-day. All sections are inclined to take a more hopeful view, but something is needed to turn this feeling into action. Judged purely by the world demand for wool, the position might be considered to be sound, for the raw material is moving in big weights and at very firm prices in all the world's markets. When we analyse the demand, however, we find that it is the keenness of foreign competition that is largely responsible for the strength of the wool position. That is not to say that Yorkshire buyers are not operating; they are buying steadily in most centres, but exercising a wise restraint—the days are past when importers with lavish credits bought on a grand scale in the belief that users would be forced to follow the market. The policy to-day is to buy and sell, snatching a profit, however meagre, as and when opportunity offers. Most traders have no heart for speculative plunging, even if the banks would permit it. This is all to the good, and if all sections of the industry continue to move with caution, the return to more normal conditions will be hastened. At present demand for both tops and yarns is comparatively small, but quotations are firm. The lack of a really brisk demand for piece goods is the fly in the ointment. Some improvement is expected now that coal is available in increasing quantities, but the ravages of the last seven months will not be made good in a moment. Industrial peace at home and more settled conditions—political and financial—abroad are essential if progress is to be made in any direction.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The week in Coleman street has been excellent. Each day's sitting has been characterised by keen bidding, and prices are, if anything, against the buyer. Competition has remained good, and France has done distinctly more buying this week, which has helped values. What we like best of all is the active competition on the part of the home trade, while Germany continues to buy freely. Last Tuesday 35½d was paid for a good line of New England greasy combing wools, several lots realising from 34d to 36d. Leading lines of new clip wools from New South Wales and Queensland have been making up to 26½d, while waster wools have sold around 22-24d. These are very good figures, showing a tendency which is slightly in sellers' favour. We have stressed

the point for weeks that nothing would do more towards bringing out more business and an increased consumption than steady and firm wool values. Very good figures have been forthcoming for station-scoured Queensland wools, up to 46½d being paid for the very best. These certainly show no lower prices compared with the best of last series. We have been particularly pleased to see more done on French account. Prices for crossbreds are very firm and steady. There is not a particularly big quantity of greasy fleece wools being catalogued, but they are easily making full opening prices. There is no improvement in slipes and scoureds.

News from overseas is good. Prices in South Africa are just a little irregular. They may be dearer for two days and a trifle cheaper the next. However, prices ruling at all the selling centres are still in advance of Australia, except for the very best and choicest parcels. Cables from both Geelong and Sydney clearly indicate higher figures for superfine lines, and Sydney so far holds the record this season, 39d having been paid for one lot of grease combing. One cannot but come to the conclusion that, taking the demand for wool at all selling centres, confidence is felt in the future of prices. All sections seem to be buying, although France this last month has been quieter than usual. Now that the coal strike is over, a bigger consumption may be hoped for.

HIDE, LEATHER, AND ALLIED TRADES.

The home hide market remains very firm, with practically no change in prices for the better grades. At the Bermondsey auctions held on Thursday, best ox made from 6½d to 9d, and seconds from 6d to 8½d per lb. Best cows sold from 6½d to 6¾d, and seconds at 5½d, both sorts showing slight advances. Calfskins were slightly weaker, and best selection sold from 7½d to 12d. There is more confidence shown in the imported hide market following on the virtual settlement of the coal strike. The better grades of dry hides maintain full values, but dry B.A. Americanos have sold on a basis of 11½d to the Continent. The Chicago position is cabled as firmer, with best heavy packers still making 15 cents. The sole leather position continues strong, with supplies in very moderate compass. In many cases advances have been obtained in light bends of ¼d to ½d per lb. Repairers are taking large quantities of 12/16 lb bends. Offal is as scarce as ever, and America has been a big buyer of late. The demand for black and coloured kid is brisk. Certain grades of German have also been advanced, box calf by 1d per foot, and patent by ¾d per foot. There is an improvement in the demand for curried kip leathers. Good orders are being received for stout boots suitable for the manufacturing districts.

CHEMICALS AND FERTILISERS.

More interest is being shown in the chemical market, with very fair inquiries for immediate and forward deliveries. Several alterations in prices have taken effect, and the market has an upward tendency. In the coal-tar products market, quotations are somewhat easier in view of the slow demand and expectations of larger supplies shortly, but carbolic acid crystals and naphthalene are firm; pyridine is very weak. Of the industrial chemicals, caustic potash, sodium and potassium chlorate, sodium sulphide, formaldehyde and the prussiates are all dearer. Wood distillation products continue quiet, but there is more inquiry for acetone. Fine chemicals are unsettled with business moderate in face of strong competitive conditions. The fertiliser products market is steadier, ammonium sulphate being scarce and dearer. Nitrate of soda is higher in price though quiet. Potash salts, cyanamide, basic slag and ground rock phosphate attract considerable attention on spot.

VEGETABLE OILS AND OILSEEDS.

Markets continue quiet, and there is little disposition to do business in the present circumstances. Linseed oil is in poor demand from consumers, and values, which are largely influenced by the price of seed, are about unchanged on the week, the Hull mill price being around £31 per ton naked for "spot" and delivery forward to April. Cotton oils, after a period of active buying and firmer prices, have receded again, current value of crude Egyptian being £31 and technical refined £34 10s prompt. Palm kernel oil is in poor request and has dropped to £38 10s, export trade having dwindled to almost nothing. Castor oil, owing to dearer seed, has sharply advanced to £49 for first pressing, which is £6 higher than a month ago.

In the oilseed section Plate linseed has been in fair demand for shipment but quiet in the near positions, which are still at a substantial premium, £16 10s being quoted for seed on spot and afloat. Some business has been done in new crop Plate around £15 for shipment early in the new year, while Calcutta to London December loading is reported at £17 12s 6d. Cottonseed is easier on spot on account of large arrivals, and for Egyptian black December-March loading £8 12s 6d has been accepted by shippers. Soya beans are quiet, current value of Manchurian afloat being around £11 5s.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Market fully steady, and a moderate business resulted in spot parcels at previous quotations for all descriptions. Any subdued tone noticeable was attributable to December tenders now circulating, and which occupied operators' attention. English-grown granulated, 31s 9d to 32s 3d, ex factory, according to brand. Czecho, also Dutch J, spot, sold, 31s 3d. Forward positions reservedly offered and firm, and Czecho granulated, ready, also December, quoted 18s 3d to 18s 4½d, f.o.b., Hamburg. Dutch J, ready, 18s 7½d, f.o.b., Rotterdam. Polish crystals, December, 17s 9d, f.o.b., Danzig. White Mauritius, spot, 30s to 30s 6d, as to sample; ditto, December-January, 21s, c.f. and i., London. Peruvian and Brazilian, 96 per cent., December-January, 15s 9d; Brazilian, 80 per cent., 13s 6d, c.f. and i., U.K. White Java, July-September, to India, 18s 6d, c. and f. terms. Mr. F. O. Licht now estimates European crops at 6,983,000 tons, against 7,342,000 previously, and an outturn last season of 7,471,000 tons, or in other words, a decrease of 488,000 tons, and which mostly occurs in the Czecho-Slovakian crop. The Decree governing Cuban restriction to 4½ million tons is expected to be issued shortly. White terminal section steady, quiet. December, sold, 17s 7½d, 17s 8½d, and 17s 6d; January, 17s 11½d to 18s; March, 18s 3½d to 18s 2½d; May, 18s 6d to 18s 4½d; August, 18s 6d, 18s 6½d, and 18s 5½d; November, 17s 5½d; December, 17s 1½d to 17s 0½d.

COFFEE.—A quieter tone pervaded this market, but really fine qualities ruled steady. Others, however, were slow of sale, and prices easier. Costa Rica, new crop, common to fair bold, sold, 15s 4 to 16s; Colombian, bold, 14s 6d; peas, 14s 6d to 14s 5s; Arusha, low mid, 11s 6d. Futures continued dull.

COCOA.—Spot market quietly steady. Accra, F/F, November-January and December-February, sold, 48s to 49s and 52s, f.o.b.

TEA.—Indian auctions during the week amounted to 55,900 packages. A generally quieter tone prevailed, and medium and common teas declined ¼d to ½d per lb, but really fine sorts ruled steady. Pekoe, sold, 1s 0½d to 1s 5½d; broken ditto, 1s 0½d to 2s 2d; orange, 1s 2d to 2s 3d; broken orange, 1s 3½d to 2s 3d; pekoe souchong, 1s 0½d to 1s 4½d. Ceylon sales of 21,700 packages met a steady market for all the finer liquoring kinds, but medium and common declined from ½d to 1d per lb. Pekoe, sold, 1s 1d to 2s 3d; orange, 1s 5½d to 2s 5½d; broken orange, 1s 5d to 2s 7½d. Only retail transactions occurred in China teas. Some Keemun sold, 1s 8d to 2s 3d; Ching-Wo, 1s 6d to 1s 7½d. In auction, 4,638 packages Java and Sumatra were offered, and met an irregular market. Really fine liquoring teas sold well at firm rates, but medium and lower sorts declined ¼d to 1½d per lb. Pekoe, sold, 1s 2d to 1s 3½d; broken ditto, 1s 0½d to 1s 9d; pekoe souchong, 1½d to 1s 1d; orange pekoe, 1s 3½d to 1s 7½d; broken orange, 1d to 1s 1½d per lb, in bond. There is only a retail business doing in China descriptions.

RICE.—Shippers ask steady prices, but demand on European account keeps very quiet. Two stars, January-February and February-March, 14s 4½d. Spanish, oiled, on spot, 21s; shipment, 20s 6d. Beans quiet, unaltered. Peas dull. Japanese old crop, spot, London, 29s; new, 31s; afloat, 30s 6d; December-January, 31s 3d cwt.

SPICE.—Pepper market quiet, and forward positions weaker. Lampung, October-December, sold, 10½d to 10½d and 10½d; January-March, 11½d; Muntok, October-December, 1s 6½d; January-March, 1s 7½d. Zanzibar cloves, spot, 9½d to 10d; October-December, steamer, 8½d; January-March, 8½d. Pimento, spot, 8½d lb. Tapioca dull. Singapore, December-January, to Havre, quoted 16s; Penang, seed ditto, to London, 18s. Sago flour, December-February, to U.K., sellers, 15s 4½d cwt. Ginger steady, quiet.

FRUIT (Dried).—Currants firm, with a good general demand. Pyrgos quoted 35s; Patras, 36s to 38s; Gulf, 39s to 44s; Vostizza, 46s to 55s; Australian, 35s to 42s, as to quality. Sultanias sell steadily. Smyrna, medium to good, 66s to 72s; medium to fine Cretan, 67s to 85s; Australian, sold, 66s. Raisins in good demand at firm rates. Valencia, quarter-boxes, sold, 50s to 75s. Dates in steady request. Hallowee, new crop, 30s 6d; Khadrowie, 21s; Mar, 17s 6d; cartons, 34s to 36s, landed terms, London. Figs firm. Lacoums, 110s to 140s; layers, 68s to 80s; genuine, 32s to 34s. Evaporated fruits moved off quietly. Californian apricots, extra choice, 12s; South African, first grade, 13s 6d. Plums, Californian, 30/40s, quoted 64s; 60/70s, 46s; 80/90s, 38s 6d. Pears, Californian, extra choice, 62s 6d; fancy, 72s 6d; Lake County, fancy, 80s. Apple rings, Californian, spot, 50s to 60s; prompt shipment, 47s 9d, c.i.f. per cwt. Almonds firm on light supplies.

CANNED GOODS.

CANNED FISH.—Trade remains quiet, though supplies of most kinds are in moderate compass. Sardines—Portuguese clubs quoted 45 6d per dozen tins. Salmon—red, tall, 1 lb, quoted 45s to 47s; tall pink, 26s to 27s; halves, 38s to 39s; Siberian halves, 34s to 35s. Lobsters—best ½s, 160s; ½s, 90s to 92s 6d. Crayfish—½s, 76s to 77s; ¼s, 49s to 50s per case. Japanese crab steady. Herrings 7s per dozen tins.

CANNED FRUIT.—Business is proceeding on quiet lines, and deliveries continue to be made against forward contracts, but the outlook is rather better owing to the improved industrial situation. Californian Bartlett pears, 24-2½s, quoted, choice, 12s to 12s 6d. Californian peaches, choice, 11s 9d to 12s 3d; seconds, 8s 9d; Californian apricots, choice, 12s 6d; seconds, 9s 3d per dozen tins. Singapore pines in quiet request on the spot, but the forward position remains strong. Italian tomatoes firm, but in small request.

CANNED MEATS in quiet demand, and tongues tend easier. Corned beef, 6s, quoted 38s to 44s, as to quality. Danish lunch tongues, 19s 6d to 127s 6d; American, 140s 6d to 147s 6d.

CONDENSED MILK.—Machine-skimmed tends firmer and shippers more reserved. Full-cream unaltered. Evaporated milk is selling well.

HONEY in fair demand, and white kinds firm on scanty offerings. New Zealand quoted 54s to 85s, as to quality; Jamaica, yellow set, 40s to 42s 6d; white, 50s to 52s 6d; Haitian, palish yellow set, 37s 6d to 40s; San Domingo, fair palish, 45s; Californian, fine new bright golden liquid, 55s per cwt.

RUBBER.

With quite a lack of trade interest and some pressure to sell, a dull and weaker market resulted. Plantation standard sheet, spot, and December, sold, 1s 6½d to 1s 5½d and 1s 5½d; January, 1s 6½d to 1s 6d and 1s 6½d; February, 1s 6½d to 1s 6d and 1s 6½d; April-June, 1s 7½d to 1s 6½d per lb. Market firmer but very irregular throughout the greater part of Friday, while influenced by concerted buying proposed by American interests. Plantation standard sheet, spot and December, sold, 1s 6½d to 1s 6½d, 1s 6d, and 1s 6½d; January, 1s 6½d to 1s 7½d, 1s 6½d, and 1s 6½d; January-March, 1s 7d to 1s 7½d, 1s 6½d, and 1s 6½d; April-June, 1s 7½d to 1s 8d, 1s 7½d, and 1s 7½d per lb.

GENERAL.

JUTE.—The market presented generally quiet features, and prices at times disclosed slight irregularity. A quiet business was conducted with continental spinners, including Firsts, on spot, Hamburg, at £31. Firsts, October-November, sold, £30 10s to £30 5s; November-December, £30 to £29 12s 6d; December-January, £30 to £29 12s 6d; January-February, £30 to £29 12s 6d; February-March, £30 10s to £30 2s 6d. Lightnings, November-December, £25 15s to £25 5s; Hearts, November-December, £22. Hessians and twills quiet, steady.

HEMP.—Manila very quiet, apart from some interest shown in the October-December position. Shippers, however, retrained from pressing, and quotations were kept at a steady level. J. October-December, quoted £47 10s; K and L 1, £46; L 2, £43; M 1, £42 10s; M 2, £37. New Zealand, fair, November-January, £36. Italian, P.C., November-January, £50, and S.B., £53. African sisal No. 1, f.a.q., November-January, £43. Indian hemp quiet.

THE BANK OF TAIWAN, LIMITED.

(Registered in Japan, 1899.)

Capital Subscribed : : : ¥45,000,000
Capital Paid Up : : : ¥39,375,000

Head Office - - - - - TAIPEH, FORMOSA.
London Office - 25 OLD BROAD STREET, E.C.2

BRANCHES:
Amoy, Batavia, Bombay, Calcutta, Canton, Foochow,
Hankow, Hongkong, Keelung, Kobe, New York, Osaka,
Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tientsin,
Tokyo, Yokohama, &c., and Correspondents in every
principal town in the World.

The Bank is incorporated by a Charter and is under special supervision of the Imperial Japanese Government, issues its own notes in Formosa, conducts general banking, and acts as Agents for other Banking Institutions. Deposits are received for fixed periods on terms which may be ascertained on application.

SHELLAC.—Market generally quiet. T.N., spot, 205s; December, 200s; March, sold, 205s, 215s, and 205s per cwt.

COPRA.—Prices moved upward lately on an improved demand, mainly on covering account. Crushers continue to show reserve. F.M.S., Straits, November-December, sold, £26 12s, to Rotterdam, December-January, £26 12s 6d to £26 13s 9d; Dutch E.I., December-January, quoted £26 10s; Ceylon, sellers, £28; South Sea, sun-dried, £24 15s; ditto, to Marseilles, £25 5s; smoked, £24 15s; Cebu, to Rotterdam, £25 7s 6d. Palm kernels, November-January, quoted £19 12s 6d per ton.

TALLOW.—Messrs Colchesters and Woolner write on December 1st as follows:—The tallow market was quiet during the week, and prices are barely maintained to-day. There were no auctions to-day, but there will be auctions next week. The stock in London on November 30th, as returned by the wharves, amounted to 21,335 packages, showing a decrease during the month of 521 packages. Quotations are:—Australian mutton: Fine, 43s; good to fair, 42s to 40s; dull to dark, 39s to 36s 6d; hard, 42s. Australian beef: Fine, 41s 6d; good to fair, 40s to 38s 6d; dull to dark, 37s 6d to 36s 6d; sweet, 43s. Present shipment from Australasia: Good mixed, 40s. Present shipment from South America, 40s. The market letter is unchanged. Town tallow, 37s 6d per cwt. Rough fat, per 8 lbs, 1½d; melted stuff, 27s per cwt. Quotations are:—Town, 37s 6d, net cash, naked, ex works. Country—Frail casks, 37s; home melted, shipping casks, net f.o.b., good coloured, 40s; fair to

dull, 38s to 37s. Bone fat: white, none; pale, none; benzine, 32s; melted stuff, 31s 6d, f.o.b.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, £22 to £38; Cochin, £26 10s to £45; Ceylon bristle, £18 to £23; cinnamon leaf oil, 5d; citronella, Ceylon, 1s 6d; Java, 2s 2d.

DRAPERY TRUST LTD.

CURL BROTHERS, LTD., Norwich. (Established 1883.)
 DAWSON BROTHERS (London), LTD., City Road, London. (Established 1848.)
 FRANK DRURY & CO., LTD., Manchester. (Established 1912.)
 KENNARDS (1926) LTD., North End, Croydon. (Established 1853.)
 MARGARET MARKS, LTD., Knightsbridge, London, S.W.1. (Established 1923.)
 MARSHALLS, LTD., Successors to Marshall & Snelgrove's Yorkshire businesses (established 1843), Leeds, Scarborough, Harrogate, York, Sheffield and Bradford.
 PETTIGREW & STEPHENS, LTD., Sauchiehall Street, Glasgow. (Established 1888.)
 PLUMMER RODDIS, LTD., Brighton, Hastings, Folkestone, Eastbourne, Bournemouth, Boscombe and Southampton. (Established 1887.)
 SELINCOURT & SONS, LTD., Cannon Street, London, E.C.4. (Established 1856.)
 STADDON'S LTD., Barking Road, London. (Established 1870.)
 STAGG & RUSSELL, LTD. (Incorporating Stagg & Mantle, Ltd., and H. C. Russell, Ltd.) (Established 1814 and 1862.)
 WARWICK HOUSE, LTD. (Successors to Holliday, Son & Co., Established 1886), Birmingham.

Announce that
 negotiations have been completed for the acquisition of
 controlling interests in the following further businesses:—

BOBBY & CO., LTD., Margate, Bournemouth, Cliftonville, Eastbourne,
 Exeter, Folkestone, Leamington Spa, Southport, Torquay, High Wycombe;
 BON MARCHÉ, Gloucester; HANDLEYS, LTD., Southsea;
 FOOTMAN PRETTY & CO., Ipswich; JONES & CO., LTD., Bristol;
 WELLSTEEDS, LTD., Reading

practically completing the programme outlined at the time of the formation of
 the Trust last December.

The interests acquired have been purchased on the basis of the earnings of the past
 three years, during which period trade has been depressed. The trading figures for the
 first nine months of the current year show that, notwithstanding the Strikes, turnover has
 been maintained.

In selecting the above from the many businesses which have been considered, the
 Trust has had in view not only the past and present earnings, but also the prospects of
 increasing earnings by grouping certain businesses which, owing to the similarity in the class
 of trade, or geographical situation, can be more advantageously and economically conducted
 under unified control.

This grouping of businesses into units of manageable size not only makes it possible
 to obtain the services of men of high position in the trade which would not be possible in
 smaller businesses, but also maintains that desirable attention to detail and to customers
 which is the essence of successful retail trading.

As instances of the many advantages to be gained by grouping, the merger of H. C.
 Russell Ltd., and the adjoining business of Stagg & Mantle Ltd., as Stagg and Russell Ltd.,
 and the amalgamation of interests in Dawson Bros. (London) Ltd., and Staddon's Ltd.
 (two businesses carrying on a very similar class of trade), are proving very satisfactory.
 The holdings of the Trust in Plummer Roddis Ltd., and those being acquired in Bobby & Co.
 Ltd., will give an interest in an almost complete chain of Stores in the South of England.

In Scotland, a number of important Drapery businesses (including Pettigrew & Stephens,
 Ltd.) are also about to be grouped. The Trust will hold a substantial interest in the new
 Scottish Company.

It has been the policy of the Board to retain the existing management, and to afford
 to those interested in the management an opportunity of acquiring a substantial share interest
 in the groups in which they are interested and in the Drapery Trust. The pooling of technical
 knowledge of men who have had a life-long experience in the Drapery and Textile Trade has
 proved invaluable. The Managing Directors of the various groups will, as far as possible,
 also be Directors of the Trust, the Board of which consists essentially of practical men.
 This wider association of businesses provides increased scope for the advancement of individual
 members of the staff. Schemes for Staff Provident Funds are being organised on a basis
 which would not be practical in single businesses of moderate size.

A Wholesale Department has been started for the purpose of developing a system of
 Centralised Buying from which it is anticipated that important economies will be effected
 and a considerable income will in course of time be derived.

THE MONEY MARKET.

SUPPLIES of credits in Lombard street have been plentiful
 during the past week, and short loans have been obtain-
 able for the most part at 3½ per cent., with occasional
 business at 3 per cent. Substantial arrivals of gold, of
 which the Bank secured a fair amount, and the further
 improvement in the Bank return, which shows the gold
 stock more than £8 millions and the Reserve nearly £12
 millions higher than at this time last year, were re-

sponsible for an easier tone in the discount rates. The market has been very quiet, with the rate for three months' bills quoted mostly at $4\frac{1}{8}$ per cent., though the Continent has been a buyer at $4\frac{1}{2}$ per cent.

	Dec. 10, 1926.	Dec. 3, 1926.	Nov. 26, 1926.	Nov. 19, 1926.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	$\frac{1}{4}$ (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	2 (Dec. 3, '25)
Discount, Call	3	3	3	3	2 (Dec. 3, '25)
Houses' Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$ (Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	..

Thursday's Bank return showed an increase of £357,600 in the stock of coin and bullion, and a decline of £59,400 in the note circulation. The Reserve, therefore, rose by £417,000, the proportion being 1.8 higher at 27.7 per cent. Government securities were reduced by £6,105,000 and Other securities by £947,800. Public and Other deposits declined by £385,900 and £6,242,100 respectively. Currency notes were increased by £3,630,900 to £289,414,300, which includes £1,289,300 for notes called in but not yet cancelled. The fiduciary issue is £231,874,900, or £16,027,600 below the maximum for 1926.

The Bank of Poland reduced its discount rate from 10 to $9\frac{1}{2}$ per cent. on Thursday.

The statement of the London Clearing Banks of average weekly balances for November, which is given in detail on a later page, shows only slight changes in comparison with October, as may be seen from the aggregate figures of the nine English banks in the following comparative table:—

	Dec., 1926.	Mar., 1926.	June, 1926.	Sept., 1926.	Oct., 1926.	Nov., 1926.
Capital and reserves	121.0	123.6	124.2	124.4	124.4	124.4
Acceptances	108.2	100.6	87.8	81.5	86.5	94.9
Deposits (incl. undiv. profits, &c.)	1,646.8	1,587.8	1,630.1	1,623.3	1,649.0	1,647.8
Total Liabilities	1,876.0	1,812.0	1,842.1	1,829.2	1,859.9	1,867.1
Coin, notes, balance at bank, and cheques in course of collection	258.2	236.3	250.9	235.0	241.4	240.5
Money at call	117.8	109.7	121.4	115.3	116.2	117.6
Investments	286.1	272.2	267.9	272.6	274.7	276.3
Discounts	231.0	187.2	210.4	218.3	224.7	219.7
Loans and advances	846.8	876.3	873.2	877.4	885.1	886.6
Cover for accept., premises, &c.	138.1	130.4	118.3	112.6	117.8	126.4
Total assets	1,876.0	1,812.0	1,842.1	1,829.2	1,859.9	1,867.1

Acceptances, as usual at this time of the year, show an expansion, but deposits have slightly declined. Increases in investments, advances, and money at call have been offset by reductions in discounts and cash.

NEW YORK MARKETS.

Our New York correspondent cables:—Markets have been little affected by the reopening of Congress, as the President's messages were on orthodox lines as anticipated, and the session is expected to produce nothing decisive. The firmness of security markets continues, and many company reports showing excellent results and increased dividends are appearing. The money market continues steady, easy conditions being expected after the end of the year. The Federal Reserve statements show little change for the whole system, but a movement of funds from New York, where there is greater dependence on the Reserve Bank. Much interest is taken in the French position, and it is hoped that France will not miss another opportunity of stabilising on a gold basis.

THE STOCK MARKETS.

China and the franc have exerted less influence on the stock markets this week, but business remains quiet, and for this the approach of Christmas and the end of the year is presumably responsible. The gilt-edged market shows a steadiness somewhat unusual at this season of the year, while Chinese bonds have been a little less sensitive. European Reconstruction loans are in favour, and Belgian Sevens have strengthened to $7\frac{3}{4}$ premium. Home Railways have improved a little on the better showing of the traffic returns, and in the foreign section United of Havanas are better on the brighter outlook for sugar. Rubber shares show a slight recovery, but tea and oil

shares are very quiet. Courtaulds have reacted to $4\frac{1}{2}$ on dividend fears, and Dunlops have been sold, but P. and O. deferred hardened on the chairman's speech. The Kaffir market is still under the influence of Paris, while tin shares have been a little more active. The issue of Newcastle 5 per cent. stock at $99\frac{1}{2}$ was over-subscribed.

THE COMMODITY MARKETS.

The most important development of the week has been the rapid decline of coal prices from the artificially high levels established during the stoppage. Though the process has still some way to go, a revival of demand is now expected, and the New Year will probably see industry under way again. British pig-iron remains scarce, but Cleveland makers are quoting for delivery in the first two months of 1927 at prices about 15s a ton higher than those prevailing before the strike. Steelmakers are awaiting more regular fuel supplies before resuming production. The cotton market is quiet and featureless. Expectation of a heavy reduction in the American acreage and yield next year is becoming general. Wool continues to move freely, and at firm values, in all the world's markets, but there is no accession of activity on the home manufacturing side. Jute is steady. An unexpected revival in demand has enabled Dundee manufacturers to clear stocks at enhanced prices. Wheat has been steady, with a fair demand, but ample supplies available at all times. Sugar is firm, on sustained inquiry, coffee and tea generally steady, and rubber slightly dearer. The tin market has taken a quiet turn, but lead and copper continue in fair demand.

FOREIGN EXCHANGES.

The foreign exchange market has been dull, with little business passing during the week; but the franc again registered some sensational fluctuations, and varied at times by as much as two, three, and even four francs in a day. The only other features were the weakness of the milreis and a sudden jump by the Swiss franc against this country towards the close. Most of the other exchanges were fairly steady. Paris closed on Saturday at 122 $\frac{1}{2}$, forward rates being 3f discount for three months. On Monday 120 was touched before finishing at 123 $\frac{3}{4}$, and forward rates remained unchanged. Tuesday saw a reaction to 126 $\frac{1}{2}$ at the close, after an opening at 122 $\frac{1}{2}$, and 126 $\frac{1}{2}$ was touched during the day, under the unfavourable influence of an inconclusive Budget Debate. On Wednesday the opening was steady at 126, but a fall to 127 followed, to be succeeded by a sudden reaction to 121 and a closing rate of 122—i.e., a gain of 4f in the day. Three months forward rates fell off, however, to 3 $\frac{1}{2}$ discount. On Thursday things were quieter, and the rate opened firmer at 121 $\frac{1}{2}$, but fell away again to 123 $\frac{1}{2}$ at the close. Yesterday was also dull, the rate at mid-day being 123, with three months forward again at 3f discount. The economic effects of the sudden appreciation of the franc are daily more evident in increasing unemployment, decreasing business by industrialists and wholesalers and retailers alike, and by the departure of foreign visitors; and M. Poincaré is faced with the realisation that considerable sections of the population are anxious for inflation, and opposed to his policy. It is difficult to trace the origin of the heavy support which is required to keep the franc at its present levels, but whatever its origin, there is no doubt that it is there. In the absence of other evidence, we must suppose that it can be attributed in some considerable measure to the maintenance of big speculative positions by foreign operators, and in lesser degree to the repatriation of French sterling and dollar balances abroad. Neither of these factors, however, can redress the inherent unsoundness of the position, and the former, indeed, must aggravate it in the end. New York kept fairly steady about 4.84 $\frac{1}{2}$ — $\frac{1}{8}$, and 4.85 was touched once or twice. Yesterday at noon the rate was 4.84 $\frac{1}{2}$, with one and three months' forward at $\frac{1}{4}$ cent discount. The belga was steady throughout at about 34.86 $\frac{1}{2}$, but a shade stronger at 34.86 yesterday. Amsterdam moved against us from 12.13 $\frac{1}{2}$ — $\frac{1}{4}$ on Monday to 12.12 $\frac{1}{2}$ — $\frac{1}{4}$ on Thursday, but reacted to 12.13 yesterday. Geneva yesterday moved sharply against us to 25.08 after being about 25.12 $\frac{1}{2}$ —25.13 $\frac{1}{2}$ all the week. The lira was rather weaker at one time at 113 $\frac{1}{2}$ on Tuesday, but closed

unchanged on balance yesterday at 111 $\frac{1}{2}$. The peseta moved very little and varied between 31.87 and 31.91. Berlin closed weaker at 20.39 $\frac{1}{2}$, as did Oslo at 19.11 after an opening rate of 18.98. Stockholm was rather better at 18.15. Bucharest reflected the political uncertainty, being weaker at 980-990, against an opening of 925-935. The other European currencies call for no remark. In the South American exchanges, rumours of an intention to stabilise the milreis at 6d were unfavourably received here, and there was a decline during the week from 5 $\frac{1}{2}$ d at opening to 5 $\frac{1}{4}$ d sellers yesterday. Buenos Aires was fractionally firmer at 45 $\frac{1}{2}$ —46. In the Far East the rupee was steady at 15 $\frac{3}{4}$ —18d throughout, and the yen also firm at 2s 0 9-32 $\frac{1}{2}$ d. The silver market saw several changes in the price of the metal, but after a quiet and dullish week the market closed quietly steadier. The silver exchanges were unchanged throughout.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 4th:—

(000's omitted.)			
EXPENDITURE.	£	RECEIPTS.	£
Supply Services	8,850	From Revenue	11,245
Interest, &c., on Debt	46,530	Increase in Debt	44,433
Sinking Fund	408	Decrease in Balances	322
Sundries	212		
	56,000		56,000

Revenue amounted to £11,245,400, against £13,543,600 during the corresponding week last year. Customs yielded £2,117,000, against £2,060,000, and Excise £1,431,000, against £1,846,000. Estate, &c., duties produced £1,120,000, against £1,010,000. Property and Income-tax yielded £1,817,000, against £368,800, and Super-tax £310,000, against £490,000. Special receipts produced £690,000, against £1,232,300. The week's operations increased the National Debt by £44,433,500, and caused the following changes:—

(000's omitted.)			
	£		£
National Savings Certificates — 150		Treasury Bills	+ 1,862
		Public Department Advances ..	+ 30,400
		Bank of England Advances ..	+ 11,500
		Sundries	+ 821
	— 150		+ 44,583

The floating debt was increased by £43,815,000 to £830,911,000.

FINANCIAL YEAR, 1926-1927 (April 1 to December 4, 1926).

£		£	
Total Expenditure ..	564,003,689	Raised by Revenue ..	434,404,588
		Decrease in Balances ..	4,063,821
		Amount borrowed ..	125,535,280
Total	564,003,689	Total	564,003,689

ESTIMATES for FINANCIAL YEAR 1926-7.†

£		£	
Expenditure	825,727,000	Revenue	824,750,000
Deficit	£977,000		

† Revised in Exchequer Return dated July 26, 1926.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British Overseas Bank, Mexican Railway, Scindia Steam Navigation, P. and O. Steam Navigation, British and Chinese Corporation, Sudan Plantations Syndicate, Chinese Engineering and Mining, J. and P. Coats, Djasinga Rubber and Produce, Harrods (Buenos Aires), Tate and Lyle, Aerated Bread, Peter Walker (Warrington) and Robert Cain, Nelson Brothers, Strand Hotel, New Modderfontein Gold Mining, and Bwana M'Kubwa Copper Mining. At the meeting of the British and Chinese Corporation the chairman gave an interesting survey of the position of the Chinese railways. The chairman of the Scindia Steam Navigation Company dwelt at some length upon the subject of the Indian coastal trade and Indian shipping generally. The chairman of the British Overseas Bank, in the course of an interesting speech, said that the policy of co-operating with native banks and not opening branches abroad had been continued. Lord Inchcape's speech at the P. and O. meeting is discussed on a later page.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

ASSESSING THE BLAME.

BELLIGERENTS who have just ceased fire are hardly the most suitable people to pass judgment on the dispute in which they have been engaged or on the conduct of the war. It was therefore hardly to be expected that Wednesday's debate in the House of Commons on the coal dispute would produce an impartial judgment on that deplorable affair. The speakers knew that their remarks could in no way affect the settlement, and were therefore able to give their active attention to the pleasant task of scoring off the other side—a not very difficult task considering the blunders that all parties have made during the last eight months. The result was a considerably more enlivening entertainment than was afforded by any of the debates which took place while the country was in the grip of the fight. Such discussions do not make it easier for the country to settle down, and, having let off steam, we hope that Parliament will let these personal issues rest until the dust of battle has cleared away. We do not mean to suggest that this great crisis should be buried in oblivion. On the contrary, the future prosperity of Britain depends upon our learning the lessons which it has to teach and guiding our future industrial policy in the light of them.

Of the debate itself there is not very much that need be said. All sections were in possession of an abundance of ammunition, freely presented to them, and it was used on all hands effectively, and on the whole fairly and without undue passion. Mr MacDonald, in moving the Vote of Censure of the Government for their handling of the dispute, centred his case around the Government's abandonment of the Samuel Report, their alleged partiality towards the owners, their Eight Hours Act, and their general waverings and lack of consistent policy. Having spent millions of the taxpayers' money to get a settlement, Mr MacDonald argued, the Government became mere spectators of the struggle: "Mr Evan William's offensiveness defied them, Mr Cook's incompetence baffled them, powerful interests threatened them," and eventually the Government "allowed the nation to lose at least £500,000,000 in order to give the owners time to get a victory." That, in brief, was Mr MacDonald's case, and being as vulnerable as they are, the Government had little cause to complain of the material of this party attack or the manner of its presentation. The Government's case was in the hands of the Prime Minister and Mr Churchill. The former confined himself almost entirely to the easy task of condemning the impossible leadership of the miners, whom he deservedly and unmercifully trounced. But this in itself was not a very telling reply to Mr MacDonald, who had himself in terms admitted the incompetence of Mr Cook. Mr Churchill was more effective, for, so far from confining himself to making debating points, he carried the war into the Labour camp and lectured its leaders upon their responsibility for the recent trend of trade unionism. "The Labour Party," said Mr Churchill, "had been built up by bringing politics into industry, and industry into politics."

To discriminate between the justice and the injustice in this accusation levelled by Mr Churchill at the Labour party is a long and delicate task. But in leading the House of Commons away from the particular tragedy of the coal dispute to the broader questions of trade unionism, Mr Churchill imparted a much-needed imaginative note into what was, on the whole, a sterile exhibition of mutual recrimination. The imputation and distribution of blame is a barren exercise unless it leads to the appreciation of the broader lessons of recent industrial history, and to a comprehension of what is needed to avert such disasters as that through which we have just passed. The events of the last 20 years have conspired to give the trade unions an enormous economic power. There would, in any case, be grave danger that this power might be misused. We have in mind not merely the possibility that a particular trade or section of a trade may be in a position to demand ransom from the consuming public, but the danger which every trade unionist knows to be a real one—that a particular section may pursue a selfish policy at the expense of other classes.

of wage-earners. It would have been, in any case, a very difficult task for the leaders of the Labour movement to ensure that this great and growing power of the trade unions was used with an eye to the advantage of the community and with proper regard to the relative position of different industries, trades, and crafts. But when a small but active section of men, who held revolutionary political ideas and did not believe in trying to make the existing economic system work well, acquired influence in the trade union movement, the prospect of a far-sighted and sane trade union policy became very remote. On the contrary, we had the spectacle of experienced trade union leaders being driven into the general strike, which they did not believe in (and the political Labour party driven to acquiesce), and the coal industry prostrated by a dispute which could have been settled times out of number if the leadership of the miners had been in other hands than those of Messrs Cook and Smith, of whom, as Mr Baldwin rightly said, one could not think, and the other of whom could not act.

Of the many methods which might encourage a more healthy atmosphere in industry the one of the most importance is to introduce into wage discussions a neutral element which would look at problems from the point of the general interest. The plan is, of course, embodied in the whole trade board system, and it exists in many special arrangements in the organised trades. But clearly it could be extended with enormous advantage. The Government believes in this idea; its most notable application has been the appointment of one commission after another to give an impartial verdict on the situation in the coal industry. Perhaps the most serious feature of the present situation is that in no single case has the verdict of these impartial commissions been adopted by the Government of the day. The recent Coal Commission is the most striking case. The Government went to the length of spending a sum equal to the pre-war service of the National Debt in order to get an impartial decision. If something like arbitration had in fact been applied to the coal industry, an immense prestige would have been given to arbitration as a method to be applied right throughout industry. As wielded by the present Government, at all events, we fear the plan is now discredited. Of the shortcomings of the leaders of the two parties in the coal industry the nation has a knowledge which is as clear as it is painful. The real nature of the Government's failure is not, perhaps, so generally understood. It is, as we have endeavoured to show, that, having spent millions on a subsidy in order to obtain an independent review of the position by a Royal Commission, they threw away a unique and dearly-bought opportunity to establish the idea of arbitration in a signal fashion. Instead, their courage failing them, they retreated to a position of detachment, which is not tenable at this stage of national industrial development, or which, as Mr MacDonald put it, represents a policy and a doctrine which "was dead before Queen Victoria herself died." So far as the Government is concerned, that is the lesson of the coal dispute, and it will, we hope, be as much taken to heart as the lessons, more clearly seen but hardly more important, of the conduct of the leaders of the coal industry.

A WORLD ECONOMIC CONFERENCE.

THE Council of the League of Nations has this week adopted the report of the Second Session of the Preparatory Committee which has been considering plans for an Economic Conference. This means that the Conference will be convened at Geneva on May 4, 1927. Following the precedent of the Brussels Financial Conference, it will consist not of Government spokesmen empowered to draw up conventions, but of persons who, though selected by the Government, will be chosen for their personal qualifications. In order that various interests should be represented, each country will be entitled to send up to five delegates, and it is the hope of the Preparatory Committee that this will bring into the Conference a fairly representative body of employers, representatives of labour, financiers, agriculturists,

economists, and persons acquainted with the practice of international commercial negotiations. The intention is thus to organise a general consultation without the restrictions that would be involved if everything that was said was considered binding on the respective Governments. The personnel of the Conference, however, should be such as to give authority to any conclusions on which general agreement is reached.

The main task of the Preparatory Committee has been, on the one hand, to compile an agenda for the Conference, and, on the other, to arrange for the preparation of documents which will serve as the basis for discussion on the items included in it. The agenda drawn up by the Committee which has now been adopted by the Council is as follows:—

AGENDA OF THE CONFERENCE.

First Part.

The World Economic Position.

Principal features and problems as seen from the point of view of different countries.
Analysis of economic causes of the present disturbed equilibrium in commerce and industry.
Economic tendencies capable of affecting the peace of the world.

Second Part.

I. Commerce.

1. Liberty of trading:
 - (a) Import and export prohibitions and restrictions.
 - (b) Limitation, regulation, or monopolisation of trade.
 - (c) Economic and fiscal treatment of nationals and companies of one country admitted to settle in the territory of another.
2. Customs tariffs and commercial treaties.
Obstacles to international trade arising from:
 - (a) Form, level and instability of import and export tariffs.
 - (b) Customs nomenclature and classification.
3. Indirect methods of protecting national commerce and shipping.
 - (a) Subsidies, direct or indirect.
 - (b) Dumping, and anti-dumping legislation.
 - (c) Discrimination arising from the conditions of transport.
 - (d) Fiscal measures discriminating against foreign imported goods.
4. Repercussion upon international commerce of reduced purchasing power.

II. Industry.

1. Situation of principal industries (productive capacity, output, consumption and employment).
2. Nature of present difficulties in industry; their industrial, commercial and monetary causes.
3. Possibilities of action:
 - (a) Organisation of production, including, in particular, international industrial agreements, considered from the point of view of production, of the consumer and of labour; their legal position; their connection with Customs problems.
 - (b) Importance of collection and prompt exchange of statistical information with regard to industrial production.

III. Agriculture.

1. The present position of agriculture compared with pre-war conditions, in respect of production, consumption, stocks, prices and free circulation of agricultural products.
2. Causes of present difficulties.
3. Possibilities of international action:
 - (a) Development of, and international collaboration between, producers' and consumers' organisations, including the different systems of co-operative organisation.
 - (b) Continuous exchange of all relevant information concerning agricultural conditions, scientific and technical research, agricultural credit, &c.
 - (c) Development of the purchasing power of agricultural producers.

Some features of this agenda are commented upon in the covering report of the chairman. It is pointed out that while the general conference must clearly be allowed to have a general discussion on the principal features of the world situation, it must also endeavour to concentrate on special questions on which results may be hoped for. It is contemplated that in Part I. the analysis of causes of the lack of economic equilibrium will cover such questions as the relative impoverishment of Europe as compared with the rest of the world, and the effect of such impoverishment on industry, commerce, and agriculture; the instability of the exchange value or internal purchasing power of currencies; and the inadequacy or high cost of capital resulting from insufficient saving. Financial questions are not the main purpose of the Conference, but they clearly could not be left out of a discussion of the general causes which have produced the relative depression in Europe. Again, the analysis of

causes of the present situation of many stable industries must include such problems as "the abnormal increase of equipment in certain industries, the increase of cost prices resulting from the insufficiency and the irregularity of demand, and the difficulties of adaptation to post-war conditions." The report calls the attention of the Council to two questions which figure prominently in the agenda. The report of the International Chamber of Commerce and other recent declarations, among which might be mentioned the recent manifesto of bankers, industrialists, and others in Europe and America, has compelled attention to the question of tariff barriers. Secondly, in a much more limited sphere, recent discussions have shown the great public interest in proposals for international agreements between private industrialists. The first of these issues clearly covers a wider field, and is of more permanent importance than private industrial agreements. But it has to be recognised that in current European thought the two problems are closely linked together. In the next five months both of them will doubtless be briskly discussed; but, whatever the outcome, the Economic Conference will prove to be a landmark in European history, since it will bring into the arena of formal and public international discussion the whole question of tariffs and the possibility of facilitating international intercourse.

The list of documents in preparation for the Conference shows that no aspect of the question is being shirked, and that there will even be issued a memorandum on the level of tariffs which should put the debate on the basis of ascertaining fact, and not of mere vague charges and counter-charges.

The Council has decided to invite delegates not only from members of the League, but from the United States, Russia, Turkey, Mexico, Ecuador, and Egypt. M. Theunis, former Prime Minister of Belgium, who has presided over the Preparatory Committee, is to be the president of the Conference.

THE STOCK MARKET POSITION: THE COAL DISPUTE AND AFTER.

THE present position of the stock markets presents features of peculiar interest, both to those who deal in retrospect and to the great majority whose main preoccupation it is to try to read in the position of the moment some indication of future trends. The latter exercise cannot be fruitfully attempted until the broader aspects of the course of markets generally during this troublous year are clearly apprehended. Possibly the most helpful way of approaching a retrospect is to throw back one's mind to last April. Suppose that in April a Stock Exchange expert had known with certainty that the country was on the eve of a general strike of short duration, and a coal stoppage drawn out to the length of nearly seven months. What would have been his prognostications regarding the course of the security markets? He might have argued, perhaps, that the general setback to trade and production would release funds normally employed in those directions and divert them into investment channels, and that, therefore, high-class fixed interest stocks would rise, while all home industrials would necessarily sag, as the public saw week by week the growing total of economic loss. Or he might have followed a rather different line of thought. So dire an event, he might have argued, will shake confidence, impair British credit, upset the trade balance, lead to a higher Bank rate, and drive fixed-interest stocks as well as industrial securities down the path of depreciation.

In any case, as the mind moved from the general to the particular, our imaginary expert would surely have predicted certain definite movements. Home railways, coal, iron and steel and engineering shares, and other securities of the type to be the most closely and directly affected by a coal stoppage he would have marked down for a substantial fall; and for a lesser fall a wide range of industrial shares. On the other hand, he might very reasonably have assumed that certain sections of the markets would benefit through the fuel shortage; in particular, he

might logically have foreseen a rise in oil shares. Looking elsewhere for markets that might attract favourable attention owing to their comparative immunity from coal-strike effects, he might have tentatively fixed upon such sections as rubber and mining.

Now let us take a rapid glance at what actually happened, and contrast events with this imaginary prophecy. In general terms it may be said that fixed-interest stocks came through the strike period practically unchanged. The index number for fixed-interest securities compiled by the *Bankers' Magazine* was 110 in mid-April; in mid-October, after very slight intervening variations, it was 110.2; and in mid-November 109.3. Only at the very end of the period was there a falling away. Five per cent. War Loan, which at April 30th was 99½, was 100 at November 30th; 3½ per cent. Conversion Loan on the two dates was 75½ and 74½ respectively. Far more striking, however, is the story told by the movements of other classes of securities. The index number compiled by the same authority for variable dividend securities actually rose from 128.7 in mid-April to 135.9 in mid-November. Remembering our imaginary prophet of woe, let us see what happened during the great strike to some of those sections with regard to which he might reasonably be apprehensive:—

	April 19.	Nov. 18.	Rise During Strike Period.
	£	£	%
13 British Railway ord. stocks	179,537,000 ..	184,576,000 ..	+ 2.8
14 iron, coal, and steel shares	40,322,000 ..	48,851,000 ..	+ 21.1
5 shipping shares.....	22,114,000 ..	25,018,000 ..	+ 13.1
38 commercial and industrial shares	457,625,000 ..	472,420,000 ..	+ 3.2

Just those types of shares, which from their intimate connection with coal, might have been expected to suffer a fairly severe slump, have, instead, risen substantially, and this remains remarkable even though allowance is made for the fact that by April prices had felt the effect of the approach of the trouble. What is the explanation? In the case of shipping shares, the appreciation may be attributed to the spectacular rise in freights during the autumn. But to find shares of heavy industrial concerns higher at the end than at the beginning of the dispute, and even the ordinary stocks of the British railways, as high as in April is surprising. A partial explanation may be found in the growing belief during the last few months that the eventual settlement would create remunerative conditions. But it is difficult to avoid the conclusion that the markets have liberally discounted the trade recovery for which the way should now be clear.

If the movements in the markets during the coal dispute are, on the face of them, curious, there is equally an element of surprise in the way in which they have behaved since the strike was known to be at or near its end. The sense of general relief at the close of the most costly industrial dispute in our history has found little or no reflection in the Stock Exchange. Indeed, in the past week or two prices in many sections, which were firm enough during the strike, have begun to crumble. Members of the Stock Exchange are inclined to attribute this turn of events to a variety of causes. First and foremost, there was no sudden or satisfactory end to the coal dispute. It just petered out, and left the public mind more concerned with its cost than its end. Instead of reawakening investment appetite or speculative spirit, the close of the dispute seems to have set both brokers and the public discussing whether the coming trade recovery will balance past losses and whether there is any hope of avoiding an increase in the income-tax in the next Budget. Fears of the latter event are already expressing themselves in purchases of "tax-free" securities. In addition to this the end of the dispute came chronologically too late to suit the Stock Exchange, for the last weeks before Christmas are seldom times of active buying or strong markets; and superimposed upon all this came two fortuitous adverse influences, namely, bouts of heavy selling from Paris, and real—perhaps exaggerated—apprehensions about the unhappy position in China.

So markets in general remain what the initiated call "sticky," or "muddy" in the extreme; and it would seem that a change of tone will not come until some new and definitely favourable factor emerges. It may be that

this will be provided by New Year optimism of the traditional order, aided and abetted this year by the gradual appearance before the public eye of impressive signs of post-strike industrial activity. But there are several questions which investors in the present position must ask themselves, and several primary points which they must bear in mind. As regards gilt-edged stocks, holders have been very fortunate in that this very difficult period has been weathered without a rise in Bank rate—a feat that could not possibly have been achieved, had we not returned to the gold standard in 1925. But, on the other hand, fixed-interest securities have not benefited as much as might have been expected by some as a result of the general slowing up of trade caused by the coal dispute. The reason is patent to anyone who examines banking statistics. In a period when the coal dispute severely checked trade and production, the loans and advances of the banks rose substantially. Indeed, between April and November the loans and advances of the clearing banks increased from £874 millions to £886 millions. In a word, the banks have had to carry some industries on their backs over this difficult period. This fact clearly has a bearing on the future course of the gilt-edged market, and on the monetary position which to so large an extent dictates that course. As trade revives two processes will set in. Demands by trade and industry for the normal financing of production and distribution will increase; and the temporary frozen credits of the banks will gradually thaw. But the former process is likely to be somewhat speedier than the latter. In that case—leaving aside the question whether we have as yet defeated the threat of the adverse movement in the trade balance—monetary conditions may become harder, and the movement may be pronounced enough to hold fixed-interest stocks at or below present levels in the early weeks of 1927.

The markets for variable dividend securities, if only because of their infinite variety, present a far more complex problem. What will determine, for instance, whether good rubber shares will continue their new incipient recovery after a decline which has no obvious or logical reason, or whether leading oil shares will enjoy the revival which to many seems overdue? There are so many imponderable factors to be weighed up, and the psychology both of the House and of the investing public has seldom been harder to diagnose. Will gloomy fears of higher taxation become an obsession? Will the percolation of news of trade revival light the spark of speculation and fire the public imagination? These questions time alone will answer. But on the whole the voice of caution—not of pessimism, but of caution—would seem to be required. From the facts and figures quoted at the beginning of this article, the investor must deduce that the way in which he has come through great industrial troubles is miraculous. Some leading and favourite industrial securities have indeed fallen, and may be due to rise again. But, as a whole, home industrial shares have been maintained at a level which presupposes quite as high a degree of trade recovery as is immediately probable. Lest we be accused of over-pessimism we hasten to add that any stock market movement which may develop will find practically every section in a healthy intrinsic position. Open accounts are, generally speaking, small. But the complex nature of the forces at work suggests caution as the best policy, and indicates that the bargain-hunter will require more than usual powers of discrimination and perspicacity if he is to avoid trouble in the months which lie ahead.

THE SITUATION IN MEXICO.

(BY A CORRESPONDENT.)

THE situation in Mexico is wrapt up in a certain amount of mystery, but by all accounts the elements of serious trouble are present. There recently appeared in the American Press apparently authentic accounts of a widespread revolutionary movement in the northern provinces, designed to restore de la Huerta to power, but they have failed of confirmation, and although the enemies of the Calles Government, both inside and outside Mexico, are undoubtedly engaged in continuous plots for its over-

throw, it still seems to have command of the internal situation.

But a crisis is obviously looming up in the dispute between the Calles administration and Washington over the application of Mexico's new law to foreign oil and mining interests, of which the greater proportion are in American hands. On January 1, 1927, foreign owners of oil concessions must agree not to seek diplomatic representation of their home Governments in connection with their holdings, or, if they reject this condition, must under the new laws forfeit them to the Mexican Government. The American interests affected have naturally enlisted the aid of the Coolidge administration, which has made strong representations to Mexico on the subject, and on November 23rd the State Department at Washington threw some light upon the controversy by publishing, without comment, its correspondence with the Mexican Government upon this particular issue and other correlated questions.

The correspondence, as published, consists of four notes, and in the first, dated July 31, 1926, Secretary Kellogg enumerates four basic principles, which it says had "all been endorsed by the Mexican Government," and says the remaining difficulties lie "in specific application of these general conceptions." The four principles are:—

First—Lawfully vested rights of property of every description are to be respected and preserved in conformity with the recognised principles of international law and of equity.

Second—The general understanding reached by the commissions of the two countries in 1923, and approved by both Governments at the time of resumption of diplomatic relations between them, stands unmodified, and its binding force is recognised.

Third—The principle of international law that it is both the right and the duty of a Government to protect its citizens against any invasion of their rights of person or property by a foreign Government, and that this right may not be contracted away by the individual is conceded.

Fourth—The principle that vested rights may not be impaired by legislation retroactive in character or confiscatory in effect is not disputed.

Mr Kellogg supported these principles in a long, argumentative note, in which he asserted that American-owned subsoil rights, legally acquired in Mexico prior to 1917, may not be reduced by subsequent legislation, nor could owners be required to waive their rights to protection of their Governments under pain of forfeiture, in order to substitute for such vested rights limited concessions to operate oil wells or mines for a period of years. Mr Kellogg then referred to the 1923 Joint Commission and its proceedings, in which the paramount issue was recognition, and added:—

"Without the assurances received in the course of that negotiation, recognition could not, and would not, have been extended, and my Government confidently relies upon the fulfilment of the assurances then given."

In his reply of October 7th, Mr Aaron Saenz, the Mexican Foreign Minister, challenged this interpretation, and, citing the text of telegrams which passed in August, 1923, between the Mexican Foreign Office and Mr C. E. Hughes, then Secretary of State at Washington, contended that the Obregon Government had taken special pains not to admit a conditional recognition subject to the outcome of the conferences.

This same note questioned the scope of diplomatic intervention to protect the rights of nationals in a foreign country, and argued that it should be limited, where such nationals waived the right to such protection, to cases where there might be a subsequent denial of justice or other "infringement of international duty." The note then went on to discuss the new system of ownership in Mexico, and to explain that the purpose of the Mexican Government was to apply the principle of nationalisation to petroleum deposits. It argued that there cannot be two laws, one concerning rights acquired before 1917, and another concerning rights subsequently acquired, and that, with regard to the rights acquired before 1917, there could not be two ways of enforcing the laws—one for Mexican nationals and another for aliens; nor could the constitution be indefinitely suspended. Difficulties, said the Note, were inevitable in the adjustment of the

old rights to the new rules, and two divergent tendencies were in conflict—"that of the created interests, which would prefer and demand that the same system of law be continued, and that of the general interests of the nation, which require that the old rights adjust themselves to the new principles."

On October 30th Secretary Kellogg, in a brief rejoinder, restated the American position that recognition had been conditional upon the understandings about property rights, and intimated that his Government expected the Mexican Government to respect them in their entirety, and refrain from any action under the new laws which would operate, "either directly or indirectly, to deprive American citizens of the full ownership, use, and enjoyment of their said properties and property rights." He also added a very significant warning about the "extremely critical situation affecting the relations between the two countries which would inevitably flow from Mexican insistence upon the new doctrines." The Mexican reply, dated November 17th, was even more brief, and after demanding the citation of concrete cases in which recognised principles of international law had been violated, insisted that there could be no justified motive for misunderstanding between the two Governments about the issues involved.

There for the moment the situation rests, but January 1st, the day when the new laws come into operation, is drawing nigh, and there is little expectation in Washington that the Calles Government will recede from its position. Ambassador Sheffield, however, who has been in Washington for several months, is now on his way back to the Mexican capital, and it is presumed that he is in possession of instructions to reopen negotiations and apply further pressure upon the Mexican Ministry. The situation is further complicated by the political disturbances in Nicaragua, a country where a great deal of American capital is invested; rival political factions are engaged in a sort of civil war, and it is charged that Mexican Government has abetted gun-running enterprises calculated to assist the anti-American party. As a result there is good deal of propaganda afloat in the American Press about the "Bolshevist menace" in Central America, and the theory prevails that it is being disseminated to prepare the public for a much stiffer attitude towards Mexico and a possible fulfilment of the veiled threat contained in Secretary Kellogg's Notes to break off diplomatic relations.

But such a step would meet with serious opposition in the United States. For one thing the American Federation of Labour has pronounced against any interference with the domestic affairs of Mexico, and for another Senator Borah, the chairman of the Foreign Relations Committee, a politician whose favour is greatly courted by President Coolidge, has expressed, after reading the correspondence, the opinion that there was no threat of any ultimatum in it, and that there would not be any break with Mexico. Senator Borah, to his credit, has always been an outspoken antagonist of the advocates of "dollar diplomacy," and he is now in a strong strategic position to resist their schemes for driving the Coolidge Government to a policy of intervention.

IRON AND STEEL LOSSES.

THERE have been published this week the annual reports of three iron and steel companies, each of which relates to the year ended on September 30th last, and thus covers five months of the coal stoppage. The results disclosed, as might be expected, are unsatisfactory in the extreme, profits having fallen far short of the amount required to meet debenture interest. In two cases, indeed, the profit and loss accounts show a debit balance of substantial dimensions before prior charges have been met. The three companies in question are Dorman, Long, and Co., Limited, the Cargo Fleet Iron Company, Limited, and the South Durham Steel and Iron Company, Limited. In the table below we set out the results of these three companies for a number of years past, and have added those of Bolckow, Vaughan, and Co., Limited, whose report appeared about a month ago, and relates to the year ended June 30th last. This table gives some indication of the effects of the coal stoppage upon the main industries of the North-East coast:—

The figures of Bolckow, Vaughan and Co., Limited, to which some reference has been made in a previous issue, cover only two months of the coal stoppage. The accounts

show debit items of £77,299 for "expenses incurred through coal stoppage," and of £41,697 for "standing charges on idle plant." The latter arise from causes other than the coal stoppage. The chairman, in his speech at the annual meeting, said that "they are charges upon properties which were idle through trade depression, and are distinct from the charges created by the coal stoppage. They arise almost entirely at collieries and ironstone mines which were lying idle." But the figure of £77,000, which represents the direct cost of the coal stoppage to the company for a period of two months, is very heavy, for the company kept two blast furnaces going and derived "a considerable revenue from the sale of the iron they have produced." Some further figures given by the chairman show that the company's employees lost in wages from May 1st to the end of October a sum of £642,100. The accounts, however, indicate that the company's fortunes were on the mend, the profit for 1925-26, before charging depreciation and the expenditure mentioned above, being £82,900, as against a loss of £37,900 in the preceding year.

The figures of Dorman, Long and Co., Limited, have on the face of them, no redeeming feature. But apart from hopes of trade revival, which the company shares with the rest of the trade, there are possibilities in connection with the Sydney bridge contract and the Kent coalfields developments, which may help the company to emerge from its present difficulties. The company has undertaken heavy commitments in these directions, but little light on the subject is thrown by the report and accounts. For the five months of the coal stoppage the collieries and iron and steel works have been idle. "Work has been continued to a limited extent in our constructional departments, and sheet and wire works." An increase of £500,000 in the 5½ per cent. debenture stock means an expansion of nearly £24,000 in interest, and after payment of preference dividend for nine months only and charging £33,300 for debenture sinking fund, there is a debit balance, after bringing forward a credit balance of £122,000 from the previous year, of £312,300, which is charged against the reserve for general purposes, reducing it to £306,900. Including other small funds there are total reserves of £472,800. The issued capital is £8,018,000, of which £6 millions is in ordinary shares. These have received no dividend since 1920-21, while the £1,500,000 8 per cent. preferred ordinary shares have now received no distribution for two years. The dividend on the 6 per cent. preference shares, amounting to £518,000, is cumulative. The balance-sheet shows an increase of £168,700 in the bank overdraft, which now amounts to £1,160,800. To set against this there is an entry on the other side of £1,147,600 for net expenditure on Sydney and other bridges. In this connection the report says that satisfactory progress continues to be made on the company's bridge contracts, but owing to the terms of payment a further expenditure of £475,000 in excess of revenue from this source has been necessary. Debenture capital stands at £4,421,700, while creditors have declined from £1,132,300 to £611,600, and debtors from £825,500 to £372,600. Cash stands at less than £7,000. The report states that to provide for expenditure in Kent, debentures for £2 millions have been issued by Pearson and Dorman Long, Limited. These are guaranteed under the Trade Facilities Act, and will supply all the funds required to complete the programme of development in Kent. This has necessitated a reorganisation of Pearson and Dorman Long's capital, under which Dorman Long receive £1,525,000 share capital.

The Cargo Fleet Iron Company's accounts show a drop of over £70,000 in profits to the small amount of £2,300, but thanks to the large balance brought forward, namely £215,800, the debenture interest can be met without a withdrawal from reserves. Similarly, the South Durham Steel and Iron Company, which brought forward £206,200, is able, by reducing this by £66,600, to pay its debenture interest and 6 per cent. preference dividend, and to distribute 5 per cent. on its ordinary capital; the latter, it may be noted, has not been increased since before the war. The company has reduced its holding of Government securities by £207,000.

Our next table gives similar figures for Baldwins, Limited, and the United Steel Companies, Limited, whose financial years ended on June 30th:—

BALDWIN, LIMITED.							
	Profit.	Deben- ture Interest, &c.	Prefer- ence Dividend.	Ordinary Dividend.	Rate.	To Reserves, &c.	Increase or Decrease in Carry Forward.
1913-14	178,441	22,500	13,750	55,000	10	66,357	+ 20,834

1924-25	201,835	160,125	nil	nil	nil	120,881	+ 79,171
1925-26	20,618	163,221	nil	nil	nil	160,400	+ 303,003

* Workington Iron and Steel Company only. (a) Free of tax.

Baldwins were able to show a considerable improvement in profits in comparison with 1924-25, but then the carry-forward was drawn upon to the extent of £289,400, and six months' preference dividend was paid. For the past year nothing is distributed on the preference capital, leaving £129,500 in arrears, but the balance forward is strengthened a little to £241,500. Investments in and loans to subsidiaries stand in the balance-sheet at £4,130,200. In the previous year a sum of £550,000 was applied in reduction of this item to write off the trading losses of the subsidiaries. In the past year, according to the chairman, the subsidiaries again show trading losses, largely owing to the operations of the colliery undertakings; no appropriation to cover these losses, however, is made this time, but a special committee has been appointed to deal with the matter.

The United Steel Companies, whose profits have declined by 90 per cent., has reduced its undivided profits by £303,000, but still has £520,900 in hand. A year ago £81,700 was written off for depreciation, but consideration of depreciation for 1925-26 "has been adjourned until the works are again in operation, and industry is in a normal condition." The report adds that all the works and plant of the branches and subsidiary companies have been efficiently maintained out of revenue. The dividend on the preference shares is cumulative.

In conclusion, we show how share prices have moved during the past year, giving the highest and lowest quotations of 1925 for comparison:—

	1925.		1926.		Highest	Lowest	April 30.	Nov. 30.	Dec. 10.
	Highest	Lowest	Highest	Lowest					
Bolckow, Vaughan, Ord. (£1)	10/	4/3	8/9	5/	6/3	8/9	8/		
Dorman, Long, Ord. (£1)	13/9	7/6	11/3	8/	10/	11/3	10/3		
Do 8% Non-Cum. Prt. Ord. (£1)	22/	12/	16/	12/6	15/	14/3	13/9		
Do 6% Cum. Prt. (£1)	19/3	14/3	18/	15/	17/6	14/3	16/3		
Cargo Fleet Iron, Ord. (£1)	15/	10/	13/9	9/6	10/6	1/	13/		
South Durham, Ord. (£1)	55/6	38/9	55/6	41/3	45/	50/	50/		
Do 6% Cum. Prt. (£1)	21/3	18/9	20/9	18/9	19/3	8/9	20/		
Baldwins, Ord. (£1)	15/6	7/6	10/6	7/6	8/	8/9	8/9		
Do 5% Cum. Prt. (£1)	18/	12/6	15/	12/6	13/	14/3	14/6		
Do 5% Cum. Prt. (£1)	18/9	11/3	13/	10/6	12/6	13/	13/3		
United Steel, Ord. (£1)	8/9	3/9	8/	4/3	5/	6/3	5/6		
Do 6% Cum. Prt. (£1)	15/6	7/6	12/5	7/6	8/	12/	11/3		

It will be seen that, with the exception of the shares of Dorman, Long, and Co., Limited, prices on November 30th, that is, after seven months of the coal stoppage, and when the end was obviously at hand, were not only above those of April 30th, but very much higher than the lowest recorded in 1925. Dorman, Long shares have naturally receded since the publication of the report, but the comparative firmness of other quotations suggests that there is some optimism as to the future of the iron and steel industry, which has endured several years of severe depression, especially on the North-East coast.

SOUND FINANCE AND FISCAL FALLACY.

THE messages which President Coolidge has delivered to Congress this week may well dismay the commentator, for they make a call upon the whole range of his vocabulary. In his references to imports and tariffs we find him vying with the most fallacious of protectionist pundits; in a passage dealing with foreign debt payments we recognise with quiet satisfaction a new touch of realisa-

tion of the sacrifices which America's European debtors are shouldering in order to meet their obligations; and, finally, in his Budget message, we find Mr Coolidge, not merely appearing as the apostle of sound finance, but also coming forward with a reduction in America's naval programme, which, even if no immediate results follow, is a most courageous and timely gesture to a Europe which is groping its way through the network of interest, susceptibility, prejudice, and fear which guard the knot of the disarmament problem from the knife of the reformer. Mr Coolidge proposes to reduce the personnel of the American navy by 3,000, and asks Congress to postpone the construction of three out of the eight light cruisers which were to have been started before July; and he bases the request on the ground that the United States is negotiating "to broaden our existing treaties with the Great Powers which deal with the elimination of competition in naval armaments." His statement also omits provision for airship construction already sanctioned by Congress. This deliberate slowing down in armament expenditure gains in significance when the general Budget situation is studied. It is certainly not dictated by financial pressure. Indeed, the position of the United States public finances, as disclosed, is one to make the British taxpayer rub his eyes and lick his lips with envy. The total of the Budget for that great country, with a population 2½ times as large as that of Britain, is closely similar to that of the British Budget, at £802 millions. Although in the Revenue Act of 1926 £77 millions of taxation were remitted, President Coolidge is still able to forecast a surplus of £76 millions for this year and a further surplus of £40 millions for next year. It is not the pinch of the shoe that suggests economy in defence expenditure. In his treatment of these surpluses Mr Coolidge reveals sound policy. They are not, he says, too big for a nation with a national debt of £3,900 millions, and he urges that if Congress makes any fresh tax remissions they should not be of a permanent kind, but should merely be applied to the first two payments due in 1927. Like his armament gesture, this cautious line of financial correctitude is the more meritorious in view of the atmosphere of conspicuous prosperity in which it is adopted.

It is with regret that we turn from Mr Coolidge the sound financier to Mr Coolidge the expounder of fiscal policy. Readers of Bastiat's brilliant writings on free trade might well be excused for thinking that he had exhausted the subject of protectionist fallacies. But in his address to Congress Mr Coolidge produced one which is worthy to rank with the choicest of Bastiat's collection. In the course of his speech he expounded the situation of America's import trade in the following terms:—

It is estimated that Customs receipts for the present fiscal year will exceed \$615,000,000, the largest ever secured from that source. The value of our imports for the last fiscal year was \$4,466,000,000, an increase of more than 71 per cent. since the present tariff law went into effect. Of these imports about 65 per cent., or roughly \$2,900,000,000, came in free of duty, which means that the United States affords a duty-free market to other countries almost equal in value to the total imports of Germany and greatly exceeding the total imports of France. We have admitted a greater volume of free imports than any other country except Great Britain. We are therefore levying duties on about 1,550,000,000 of imports. Nearly half of this, or 700,000,000, are subject to duties for the protection of agriculture, and have their origin in countries other than Europe. They substantially increased the prices received by our farmers for their produce. About 300,000,000 more is represented by luxuries such as costly rugs, furs, precious stones, &c. This leaves only about 550,000,000 of our imports under the schedule of duties which is in general under consideration when there is discussion of lowering the tariff.

Having reached this satisfactory conclusion, the President proceeded to pass an illuminating comment. "Those," he said, "who are starting the agitation for a reduction of tariff duties, partly at least for the benefit of those to whom money has been lent abroad, ought to know that there does not seem to be a very large field within the area of our imports in which probable reductions would be advantageous to foreign goods." This exposition leaves us marvelling at the moderation of the framers of the American tariff. Surely the logical thing to do would be to double, treble, or quintuple the duties on the commodities included in this 550 million dollars, and reduce the figure to nothing at all. Mr Coolidge could then proudly declare that "there is no field at all within the area of our imports in which reductions would be advantageous to

foreign goods." Those to whom money had been lent abroad would quickly realise that they had been completely mistaken in supposing that America could possibly provide a market for their goods, for the trade statistics would disprove such a preposterous idea beyond the possibility of dispute. The President would, moreover, be able to point to the fact that not a mere 65 per cent., but 75 per cent., of America's imports came in duty free. And when the process had been pushed to its ultimate conclusion, and the same process applied to agricultural products, the duties on which, though not yet sufficiently high to keep them out altogether, have nevertheless "substantially increased the prices received by our farmers for their produce," American statesmen would be able to claim that all America's imports come in duty free, and that therefore the American tariff is the lowest in the world.

But the protection afforded by a tariff is to be measured by what it keeps out—not by what it lets in. There is a real danger that fallacies like that of Mr Coolidge may creep into the discussions which are certain to take place during the next year or two on the topic of tariffs. On a first approach to the subject there is a tendency to look at the total imports of a country and the revenue which it raises from import duties, and to regard the ratio of the second to the first as an indication of the severity or leniency of its tariff policy. The fact is, of course, that the more highly protectionist the tariff is the smaller are the duties collected under it. There is a growing tendency to import only goods on the free list and the ratio of customs revenue to total imports falls to a low level. On the other hand, import duties which are counterbalanced by internal Excise duties, and are therefore without any protectionist effect at all, may be an important item of the fiscal system of the country and produce a large revenue. Thus a high ratio of Customs receipts to imports may be the consequence of a free trade policy, and a low ratio the result of high protection, though this is not always the case. The only way to measure the level of the tariff is to take a representative series of goods and to ascertain what duty they would pay (measured as a percentage of their value) if they succeeded in surmounting the tariff wall. If the discussion of European tariffs is to be usefully carried on, the Economic Conference must have before it an idea of the level of the tariffs of different countries measured on some such basis as this. But it is really a little disheartening, at a moment when there are signs of a trend towards saner economic policy, to find the President of a great and enlightened nation regaling his legislators with such an elementary fallacy.

COAL SETTLEMENT.—TERMS OF THE DISTRICT AGREEMENTS.

We summarise below the most important features of the agreements made between employers and employed, under which operations have been resumed in most districts of Great Britain. Our list includes all the most important areas of the country, viz., Northumberland, Durham, Yorkshire, Nottinghamshire, Derbyshire (and Cannock Chase), Lancashire and Cheshire, South Wales, and Scotland:—

NORTHUMBERLAND.

1. A district board to be set up, representing the Northumberland Coal Owners' Association and the Northumberland Colliery workers, with an independent chairman.
2. Wages to be determined in relation to ascertained proceeds.
3. The percentage addition to basis rates to be not less than 80, subject to recoupment of deficiencies.
4. A subsistence allowance to be paid to make up the wages of low-paid adult day-wage workers to 6s 9d per shift.
5. In making ascertained allowances, allowances in the shape of free houses, or rent allowances, and free coals to be treated as wages paid, and not as other costs. Sums required to make up the subsistence allowance to be similarly treated.
6. Wages to be at the rate of 80 per cent. above basis rates until February 28, 1927. March wages to be determined by the ascertainment of proceeds for January, 1927; April wages by proceeds for February, &c.
7. The above arrangements to be conditional upon the acceptance of the following terms:—

1. A 7½ hours' shift, plus one winding time, for coal hewers, and an eight hours' shift, plus one winding time, for all other classes of underground workers, with unrestricted coal drawing hours. The county basis wage of hewers, for Joint Committee purposes, at the steam coal collieries, to be raised to 5s. 6d.; that of hewers at the

soft coal collieries to be in the same proportion.* The county basis wage for fillers to be raised to 5s. 10d.

8. The hours of persons employed on the surface to be 49 per week, exclusive of mealtimes.

9. The percentage additions to piece-workers (whether merged in prices or not) granted for the reduction of hours no longer apply.

10. Surplus proceeds to be divided in the ratio 87-13.

11 and 12. Pits to be cavelled and hewers, fillers, and conveyer men to be cavelled separately if the management desires.

13-16. The full hours of the shift to be worked by the first shift on the last day of the quarter, and by both shifts on the first day of the quarter, and a single shift of normal length on pay and half Saturdays. The management to have power to arrange the different shifts to suit circumstances at each colliery (this clause does not apply to the establishment of a three-shift system). The Sunday repairing shift to be on the Sunday night instead of Sunday morning. The customary short shift on Sunday night to continue.

17. The agreement to continue for two years, subject to one month's notice by either party after the expiration of that period, the District Board having power to revise the minimum percentage addition to basis rates after one year on application from either party.

DURHAM.

1 and 2. As in Northumberland, *mutatis mutandis*. 3. The percentage addition to basis rates to be not less than 89, subject to recoupment of deficiencies.

4. A subsistence allowance to be paid to make up the wages of low-paid adult day-wage workers to 6s 8½d per shift, but no extra payment to be made to persons receiving more than that sum.

5. As in Northumberland.

6. As in Northumberland, substituting 89 for 80.

7. The agreement to operate for one year, subject to one month's notice by either party thereafter.

The foregoing arrangements to be conditional upon the acceptance of the following terms:—

8. For hewers 7½ hours per shift, plus one winding. For all other classes of underground workers eight hours per shift, plus one winding. Variations of county standards of piece-workers to be fixed by the parties.† Hours of deputies 7½ per shift, plus one winding, it being understood that if required they are to stay longer, and be paid an equivalent wage for overtime.

9. Hours to be 49 per week, exclusive of mealtimes, for persons employed on the surface.

10. The 12½ per cent. granted to piece-workers other than hewers on the reduction of hours (whether merged in the basis rates or not), no longer to apply.

11. Proceeds to be divided in the ratio 87-13.

12. Hewers and fillers to do stone and shift work at and about the face, and to work together and pool their earnings if required.

13. Where machine mining is applied, persons employed, whether machine men, drillers, fillers, pullers-up of conveyors, or canchmen, to work in conjunction when required, and do any necessary work though it be outside their ordinary work.

14. All seams to be cavelled separately where the management require.

15. The practice of sitting at the kist to be abolished. The men to go into their working places as soon as authorised by the deputy, and to remain for the full hours of the shift.

16. The present arrangement with respect to the minimum wage of piece-workers to be terminated, and the matter further considered.

17. Machinery to be set up without delay for the adjustment of piece-work rates and the determination of other matters of dispute continually arising at the pits.

YORKSHIRE.

1. and 2. A Wages Board for South Yorkshire and West Yorkshire to be constituted, with equal representation for owners and workers, and an independent chairman.

3. and 4. All questions of basis rates of wages, hours of employment, and conditions of working to be decided in each of the two areas separately. Wages to be expressed in the form of a percentage of the basis rates, and be periodically adjusted in accordance with results.

5. The percentage to be determined by results during a previous period, as ascertained by returns made by the owners, and checked by joint test audit by independent accountants appointed by the respective parties to the agreement, the percentage in no case to be less than the minimum under Clause 7.

6. Subject to Clause 7 hereof, 85 per cent. of the difference between the net proceeds of sale of coal and costs of production other than wages to be taken. From this amount to be deducted the amount paid as subsistence allowance, and the deficiency (if any) referred to in Clause 7. The balance to be expressed as a percentage of the wages paid at basis rates during the period of ascertainment. Wages paid at basis rates to include the percentage addition to piece-workers consequent upon the reduction of underground hours below eight per shift.

7. If in any period the percentage be less than 32 per cent. upon 1911 basis rates, 32 per cent. shall be paid as a minimum. Provided that in the first twelve months the minimum is to be 36 per cent., but the amount of the deficiency between the actual ascertained percentage and the minimum percentage to be deducted in the next

(*The hewers' county basis wage for Joint Committee purposes at the soft coal collieries to be 5s. 4d.)

†On November 27th the owners stated they were prepared to fix the county standard basis wage for hewers and fillers at 4s 8d.

subsequent ascertainment.‡ If no balance be available for meeting a deficiency, the latter to be made good subsequently.

8. If wage rates so determined do not provide a subsistence wage to low-paid adult day-wage workers, such addition to be made as the Board may deem necessary. The subsistence allowance of 6d. per shift (up to a maximum of 8s. 9d.) to remain in operation.

9. In ascertaining the proceeds and costs other than wages, the accountants to follow the principles to set out in a schedule to be agreed upon.

10. The period of ascertainment to be one month. The percentage payable during March, 1927, to be based on results in January, 1927, &c.

11. The agreement to operate for three years from January 1, 1927; and thereafter be terminable by one month's notice on either side.

NOTTINGHAMSHIRE.*

1. A District Wages Board to be constituted, with equal representation of the coal owners and workmen, and an independent chairman.

2 and 3. Wages to be expressed as a percentage of basis rates. The percentage to be determined by results during a previous period, as ascertained by returns made by the owners, and checked by independent firms of accountants appointed by each side.

4. Subject to Clause 8 hereof, the ratio 85-15 to be taken.

5 and 6. Wages not to fall below basis rates, plus 38 per cent. Any adult able-bodied day wage workman whose rate per shift, after adding district percentage, is less than 8s 9d, to receive a subsistence wage to bring him up to that figure, with a maximum addition of 6d per shift. This to apply only to ordinary working time. No such workman to be paid a gross rate, including the subsistence wage, of less than 7s 11d per shift, not including overtime.

7. Hours of work per shift for manipulators above and below ground to be half an hour longer than on April 30, 1926. The percentage payable to piece workers to be 7 per cent. in place of 14.17 per cent.

8. If the amount of the ascertained proceeds in any period is less than the sum of (1) costs other than wages, (2) wages at the minimum and allowances as in Clause 5, and (3) an amount equal to 15-85ths of such costs, the deficiency shall be carried forward and subsequently dealt with as follows:—

Any excess in subsequent quarters shall be applied to make good any deficiency brought forward. Otherwise the deficiency or such portion as remains shall be again carried forward to a subsequent period. No deficiency is to be carried forward for recoupment beyond April 30th in any year. The first ascertainment period to be May, June and July, 1927.

9. The district to comprise Nottinghamshire, and be varied only by the decision of the Board.

10. In ascertaining proceeds, &c., the accountants are to follow the principles set out in a schedule to the main agreement.

11. The rates payable until the end of August, 1927, to be 90 per cent. above basis rates for December, 1926; 80 per cent. for January and February, 1927; 70 per cent. for March, April and May, 1927; and 60 per cent. for June, July and August, 1927. Wages for September, 1927, to be based on ascertained results for May, June, and July, 1927, October wages on results for June, July and August, &c., unless the periods are varied by the Board.

12. The agreement to operate until December 31, 1931, and thereafter be terminable on six months' notice by either side.

CANNOCK CHASE.

Clauses 1 to 4. Identical with Nottinghamshire agreement.

5 and 6. Wages not to fall below basis rates, plus 42 per cent. Any adult able-bodied day wage workman whose rate per shift after adding district percentage is less than 8s 9d to receive a subsistence wage sufficient to bring him up to 8s 9d per shift, with a maximum addition of 6d per shift. This wage not to apply to overtime.

7. Hours of work to be those in force before the Seven Hours Act, except on Saturdays when hours will be from 7 to 12.30, without mealtime.

8 and 9. These clauses follow the lines of the Nottinghamshire agreement, with the important exception that in the draft agreement no date is mentioned as regards the first ascertainment, and, as regards recoupment of deficiencies, an "agreed proportion" of any subsequent credit balance, as determined by the Board, is to be applied for the purpose. No clause is included which limits the carrying forward of deficiencies beyond a certain date in each year.

10. The district to comprise the Cannock Chase and Pelsall Coal-fields, and be varied only by the decision of the Board.

11. Identical with Clause 10 of the Nottinghamshire agreement.

12. The rates payable to be 62½ per cent. above basis rates during December, 1926, March, 1927, and 52½ per cent. above basis rates during April-June, 1927.

Subsequently, wages to be based on ascertained results during agreed periods.

13. The agreement to operate until December 31, 1931, and thereafter be terminable on six months' notice by either side.

LANCASHIRE AND CHESHIRE.

1. All workpeople who were in employment at the collieries immediately before the stoppage to be re-engaged as soon as possible and signed on as work becomes available for them.

‡The wording of this proviso has subsequently been altered to make its meaning clearer.

*A precisely similar agreement was made for Derbyshire, excluding South Derby.

2. HOURS OF WORK.—Hours underground and for surface workers engaged in manipulation of coal to be one hour per shift more than before the stoppage, with the exception of the morning shift on Saturdays, the latter to be six hours. Meal-times to be 20 minutes on Saturday, and half-an-hour on other days.

3. TERMS OF PAYMENT.—Up to June 30, 1927, wages, in the grades hitherto regulated by percentages, to be at the rates paid in April, 1926—namely, 46.66 per cent. upon the 1911 basis rates. During this period such subsistence allowances and extra percentage to the lowest-paid day-wage workers to be continued as in April, 1926.

4. The 13.1 per cent. hitherto paid to piece-workers in respect of the reduction of hours from eight to seven to be withdrawn.

5. For July, 1927 (a) the percentage addition to 1911 basis rates to be according to the ascertained results for March, April, and May, 1927. (b) Costs of production other than wages to be deducted from the proceeds, and of the balance 87 per cent. to go to wages. (c) The minimum percentage below which wages cannot fall to be 32 per cent. on the 1911 basis rates. The subsistence allowances awarded under the 1921 agreement to be paid. (d) After June, 1927, the wages of workmen 21 years of age or over in no case to be less than 7s per shift, or those of adult female workers less than 4s 9d per shift.

6. In each subsequent month a similar ascertainment to be made. For example, the percentage for August, 1927, to be fixed on the ascertained results of April, May, and June, &c.

7. The owners to be entitled to recoupment if they are called upon to make up any part of the minimum of 32 per cent. on the 1911 basis.

8. The agreement to operate for three years to December 31, 1929, and thereafter to be determinable by one month's notice on either side.

SOUTH WALES.

The following main principles were to be embodied in an agreement:—The agreement to terminate on December 31, 1929, with power on either side to ask for a review of the minimum and subsistence wage on December 31, 1927, and December 31, 1928. The 42.22 per cent. and the present subsistence wage to be continued to May 31, 1927. Wages for June, July, and August, 1927, to be based on the ascertainment of proceeds and costs for February, March, and April, 1927. The periods of ascertainment to be quarterly, viz., February, March, and April; May, June, and July, &c. The minimum to be 28 per cent. The ratios to be 85 and 15, with no allowance for amortisation. Hours of work to be eight per shift, and seven on the morning shift on Saturdays. Recoupment to be provided for in accordance with the 1924 agreement. A sub-committee to be appointed to consider transfer prices. Provision to be made for dealing with double shift on coal and the introduction of machinery.

The representatives of owners and workmen agreed that every endeavour should be made to expedite the reopening of workings so that, as far as practicable, employment should be given to workmen employed in April last.

SCOTLAND.

The following terms were accepted and are to be embodied in a formal agreement:—

i. A conciliation board to be established, with an independent chairman.

ii. Hours below ground to be increased by one hour per shift. Surface workers to work a normal week of 49 hours.

iii. During the period of agreement the district minimum percentage is not to fall below 110 per cent. above the 1888 basis—i.e., the minimum percentage in operation from July, 1921, to June, 1924.

iv. After the temporary period provided for in clause x., wages to be paid on the basis of ascertained results for Scotland for such periods as the parties may agree.

v. Basis of wages to be on a division of product in ratio of 87-13.

vi. The principle of a reasonable and effective allowance in the ascertainment, however, in respect of the introduction of new capital and the principle of effective recoupment to be admitted.

In dealing with the allowance in respect of the introduction of new capital, the board to take into consideration the effect upon the ascertainment of the lowering of the wages cost as the result of the introduction of such capital. An early meeting of the conciliation board to deal with these matters, and also the question of allowance for amortisation. In the event of disagreement decision to be made by the independent chairman.

vii. Subject to the payment of subsistence wages during the temporary period (see clause x.), minimum subsistence wages to be as under the 1921 agreement, subject to revision after one year by the parties, or, failing agreement, by the independent chairman.

viii. As regards the determination of transfer prices, the owners to consider sympathetically reasonable and practicable proposals made by the workmen's side.

ix. The agreement to be for three years, subject to two months' notice of termination.

x. During a period to be called "the temporary period," the owners to pay 133.33 per cent. of the 1888 basis (i.e., the percentage before the stoppage), subject to a readjustment of tonnage and other piece-workers' rates corresponding to the addition when hours of work were reduced. Subsistence wages in operation before the stoppage to be paid during "the temporary period," which will run until April 30, 1927.

xi. As from May 1, 1927, wages to be determined by an ascertainment for the month of March, 1927; wages of June to be determined by the results of months of March and April, and thereafter by two-monthly ascertainments.

xii. The owners to reserve for consideration such questions as

classes of workmen to whom the agreement applies, overtime and week-end payments, &c.

xiii. These proposals to be without prejudice and subject to possible modification.

The general features of these agreements were commented on in a leading article a week ago. In all cases the principle of division of proceeds between owners and workers is retained, but whereas the ratio remains at 87-13 in Northumberland, Durham, Lancashire and Cheshire, and Scotland, it is amended to 85-15 in Yorkshire, Nottinghamshire, Derbyshire, Cannock Chase, and South Wales. Provision is made in most cases for the payment of specific rates for a limited time after the resumption of operations, and the ascertainment of future rates on the basis of results in named periods (which are not identical in all cases). Minimum wages are provided for, and the principle of recoupment admitted. The South Wales, Lancashire and Cheshire, and Scottish agreements provide for an eight-hour day; those of Northumberland, Durham, Yorkshire, Nottinghamshire, and Cannock Chase for a seven-and-a-half-hour day. The duration of the agreements varies with different areas, the longest being those of Nottinghamshire, Derbyshire, and Cannock Chase, which run for five years, and the shortest that of Durham, which runs for one. In Scotland, Yorkshire, and South Wales the agreements are for three years and in Northumberland for two. All agreements, except those in Lancashire and South Wales, provide for the setting-up of District Boards, with independent chairmen.

Notes of the Week.

A Detente in China.—This week the situation in China has been distinctly easier. At Hankow the general strike, which had been announced for last Saturday, has been postponed, and the new British Minister, Mr Miles Lampson, after getting into touch with the British community in Shanghai and conferring with his Japanese colleague, is now on his way up the Yangtse. Meanwhile, the transference of the seat of the Kuomintang Government from Canton to Wuchang, on the Yangtse opposite Hankow, has begun, and an early meeting is expected between Mr Lampson and Mr Eugene Chen, the Kuomintang Minister for Foreign Affairs. There is talk of an impending recognition of the Kuomintang Government by Great Britain, and possibly by Japan, but it would be unwise to count upon a settlement being in sight, even on these lines, since the Kuomintang are naturally elated by their sensational successes in the civil war, and this elation may translate itself into the form of greater exigency in their dealings with foreign Powers. The rallying to their side of the great treaty port of Foochow brings the whole of Fukien province under their authority, and it is probable that Chekiang will follow—so utter is the collapse of Wu Pei-fu. In these circumstances it is conceivable that the Kuomintang may refuse to accept recognition unless they are recognised, not merely as the *de facto* Government in the constantly growing territory that is under their effective control, but as the sole lawful Government of the Chinese Republic. Already they have sent a representative to Geneva to watch the proceedings on the Council of the League of Mr Chu, who holds his seat in the name of a central Government at Peking which has long been impotent and is now actually extinct; and they have written to the Secretary-General of the League to inform him that they alone can claim to speak in the name of the Chinese people. In the same letter they assert that all existing "unequal" treaties between the defunct Peking Government and foreign Powers are null and void. This was precisely the line which the Angora Government took in regard to the international commitments of the Sublime Porte after the Turkish Nationalist victories in 1922. It is not easy to see how Great Britain (or, *a fortiori*, Japan, with her local entanglements with Chang Tso-lin, the War Lord of Manchuria) could accord to the Kuomintang Government that exclusive recognition which it apparently desires, for this would be tantamount to indirect intervention in the Chinese civil war—though on the side which has hitherto regarded us as hostile. It is for the Chinese themselves to remove this difficulty from our

path by coming to some agreement among themselves instead of fighting the civil war out to a finish, and there are rumours that some compromise may now be reached. Certainly there is a lull in the military operations, and while the Northern war lords are showing remarkably little stomach for the fight, the Kuomintang forces, on their side, do not appear to be pushing north of Hankow, and the movements of their ally, the Baptist-Bolshevik General Feng, in the north-west, are wrapt in obscurity. As for the treaties, all parties are agreed that modifications must be made, and it is obvious that the British, as well as the Japanese, Government is prepared to make far-reaching concessions. This being so, the Kuomintang would put themselves in the wrong—not only juridically, but in equity—if they insisted upon a unilateral denunciation of what are, after all, bilateral agreements. The fact that originally these agreements may have been forced upon the Chinese Government by pressure ought to make far-sighted Chinese all the more careful to obtain their removal by the more binding procedure of free negotiation. We have great hopes that, formidable though the difficulties may be, a personal meeting between Mr Lampson and Mr Chen will do much to clear them up.

The Italo-Albanian Treaty in Yugoslavia.—The treaty which has just been signed at Tirana, in Albania, by the Italian and Albanian Governments has had repercussions which Signor Mussolini can hardly have foreseen, but which are unpleasant for everybody, because they militate against the peace of Europe. Ostensibly, the treaty is simply one of those rather colourless treaties of amity which Dr Benes brought into fashion, and which are harmless enough, if not particularly beneficial, when they are concluded between two States which have no obvious common object inimical to the interests of a third State. When, however, this latter bond exists, such treaties do a distinct disservice to the cause of peace, because they give rise to the conjecture that there are secret clauses of a less innocuous character than the published text, or, at any rate, that there is some tacit understanding which does not appear on the surface. This was the effect of the Russo-Turkish Treaty signed at the end of last year just after Turkey had declined to accept the award of the League of Nations on the Mosul Question. The same effect was produced by the treaty of amity between Italy and Spain a few months ago, which was promptly followed by the Spanish attempt to reopen the question of Tangier. The Italo-Spanish Treaty was inevitably regarded as a menacing gesture towards France, and now the Italo-Albanian Treaty is being interpreted in much the same way in regard to Yugoslavia. In Belgrade it is reported that the news of the treaty aroused the same kind of emotion as the news of the annexation of Bosnia-Herzegovina by Austria-Hungary in 1908—an ominous reminiscence. Admittedly, it is the Treaty of Tirana that has led the Yugoslav Foreign Minister, Monsieur Ninichich, to resign, and his resignation has now been followed by the fall of the Coalition Government, presided over by Mr Uzunovich, of which Mr Ninichich was a member. For the fall of the Government there were other contributory causes. The coalition itself—between the late Mr Pashich's Radical Serbs and Mr Radich's Peasant Croats—was an uneasy fellowship, for Mr Radich must be even more awkward to deal with as a colleague than as an opponent. Possibly, Mr Uzunovich has taken advantage of a favourable opportunity for retiring from an untenable position. Yet, when all is said, it is unfortunately evident that the neighbourly relations created between Yugoslavia and Italy by the settlement of the Fiume Question in 1924 are relapsing into the untoward atmosphere of suspicion and tension which prevailed before then. Tension between the two countries over Albania is more serious than tension over Fiume, because it touches the susceptibilities of the Serbs, who are the dominant partners in the Triune Kingdom, whereas Fiume was an affair of the Croats, in which the Serbs were only interested indirectly. Moreover, it is significant that the Fascist Press is venting its displeasure at Mr Ninichich's gesture upon France, and is taking the line that the alienation of Yugoslavia from Italy is not due to the Tirana Treaty at all, but to French machinations. Here

we have (though happily in miniature, and in a Europe weary of war) something like the situation which led to war in 1914. Italy feels herself a young and lusty nation malevolently "encircled" by France and Yugoslavia, as Germany formerly felt herself "encircled" by France and Russia. France and Yugoslavia, on the other hand, feel Italy (and this with greater reason) to be an increasingly dangerous neighbour. Here is the old European order with a vengeance. It remains to be seen whether the new order of the League of Nations will prevail and preserve European peace.

London Traffic and Bridges.—Not merely Londoners or Englishmen, but visitors from every part of the globe, must have had it impressed upon their minds that, with increasing population and the growth in the volume of road transport, London's traffic problem has for years been becoming constantly more urgent and more intricate. In a report* published this week a real step forward has been taken towards dealing with the question. Lord Lee of Fareham and his colleagues on the Royal Commission on Cross-River Traffic are entitled to congratulation on several counts. They were only appointed at the end of July, and have therefore performed their work with a celerity not always associated with such bodies. They are unanimous in their recommendations. They have also succeeded in producing a comprehensive scheme, and at the same time in satisfying strong public sentiment in at least two directions. Waterloo Bridge, they recommend, should not be demolished, but widened and strengthened; and the scheme for a St. Paul's Bridge, which was held by many to menace the safety of the Cathedral, is rejected by them. Waterloo Bridge instead of being scrapped, is to be made capable of taking four streams of traffic; similar rebuilding and widening is recommended for the Chelsea, Albert, Wandsworth, Putney, and Hammersmith bridges. In addition five new bridges are proposed:—(1) "Ludgate Bridge." The proposal is for a combined road and footway, 70 to 75 feet wide, from Southwark street to Holborn Viaduct. (2) A new Charing Cross Bridge. A double-decked steel bridge, providing space for six railway tracks on the lower level with a 60 foot roadway above, and two footways of 15 feet each. This, it is proposed, should be built immediately just to the east of the present Hungerford Railway bridge. This will involve the removal of Charing Cross station to a site bounded on the east by Buckingham street, and the railway will take off near the Cavell statue, and cross over the Strand. (3) The proposed new Hampton Court Bridge, and the connection with the Portsmouth road is approved. (4) and (5) Two new bridges are recommended to improve the western exits from London, one near Baset Wharf, and the other by Chiswick Ferry. Naturally these schemes involve many road changes and improvements of bridge approaches. In addition the Commission adopt various proposals regarding Rotherhithe and Blackwall tunnels, and the Ministry of Transport scheme for a Dartford-Purfleet tunnel. The magnitude of these recommendations and the fact that they are "integral and interdependent parts of a general and comprehensive scheme" leads up naturally to the proposal that a "Central Authority" should be set up to deal with the whole problem of bridges, and should be sanctioned by Parliament and provided with necessary resources. If a comprehensive scheme is to be carried out this is essential. Effective co-operation between eight score of local authorities is obviously impossible. The Commission's programme involves a gross expenditure of £27,500,000, the chief individual items in the bill being Charing Cross Bridge, £7½ millions; new Ludgate Bridge, £3 millions; new "western exits" scheme and bridges, £2 millions; Dartford-Purfleet tunnel scheme, nearly £3 millions; Victoria Dock road scheme, £3 millions. Compared with these large figures, the estimate for the improvement of Waterloo Bridge looks small at £860,000. The cost will, of course, be spread over a number of years, and with regard to its finance the Commission reach the following conclusion:—"In summing up the financial aspect of our programme of

* "Report of the Royal Commission on Cross-River Traffic in London." (Cmd 2772.) H.M. Stationery Office. 4s net.

new works, we think it desirable to emphasise that the maximum annual charge for the service of a 60-year loan should not exceed £1,400,000, of which, say, 75 per cent. (£1,050,000) would fall upon the Road Fund and the balance upon the local authorities concerned within the London traffic area. Thus the burden falling on this area would be about £350,000 per annum, which is exactly the present yield of a penny rate." The Commission has produced a thorough, comprehensive and workmanlike scheme.

Coal Prices and Supplies.—With a general return of miners to the pits—it is estimated that there are some 800,000 at work this week—a new problem has developed, namely, the handling of supplies. The first official figures of output since the stoppage began give a total of 2,324,000 tons for the week ended November 27th, the number of wage earners employed being 455,000. Prices of household coal have been reduced this week by 14s to 19s per ton in London, which brings them down to within about 14s above the level ruling at this time last year. Consumers, however, are not purchasing in large quantities, with the result that there is serious congestion in the railway depôts and sidings and a shortage of wagons at the pits. According to the Great Western Railway, London household coal, of which 90 per cent. is coming from the Midlands, is being cleared from the collieries and delivered at a much greater rate than it can be absorbed in the Home Counties. "The position to-day is that the Great Western Railway Company has standing on London wharves and in the immediate vicinity ready for delivery a quantity of coal equal to six days' supply for the depôts served." The coalowners' wagons are being used as warehouses." On Tuesday it was announced in the House of Commons that, except in the case of anthracite and coke, permits for export would no longer be required. This removal of restrictions for which the export districts have been pressing for some time, will greatly facilitate the resumption of work there. The benefit to the railways of the miners' return to work has already shown itself in the traffic receipts, the returns for last week showing a substantial improvement. For the four main lines goods train receipts for the week show a decline in comparison with the corresponding week of 1925 of only £156,000, as compared with a decrease of £298,000 in the preceding week. The Southern Railway recorded an increase of £10,000 in goods receipts for the first time since the coal stoppage began, while the corresponding figure for the London and North-Eastern for last week showed a decline of £55,000, as against one of £144,000 in the preceding week. It is anticipated that by the end of the year 900,000 miners will be at work, and the traffics of the railways should benefit correspondingly if the present congestion can be overcome. But for the 48 weeks of the year which have elapsed gross receipts show the formidable decline of £27½ millions, a figure which the remaining weeks of the year cannot be expected substantially to reduce.

The Reform of Indian Currency.—We have received a report of a speech made by Sir Basil Blackett on November 23rd, dealing with the problems raised in the Indian Currency Commission's Report. It will be remembered that Sir Basil Blackett originally put before the Commission a plan for a gold currency system instead of a gold bullion system for India, while he also assumed in his evidence that the management of the currency would be transferred to the Bank of India. The Commission's recommendations differed from those of the Finance Department, but Sir Basil Blackett recognised the force of the reasons which weighed with the Commission and accepted their conclusions. His defence of the present proposals and his carrying of them into legislative effect will be the more effective for his having first explored other possibilities. Sir Basil Blackett agrees that his scheme for a gold currency, which in any case was to have been spread over a period of ten years, involved risks to India which it would be unsafe for her to face, seeing that the conditions which he laid down as prerequisite to its adoption have not proved capable of realisation. Sir Basil still thinks that India may ultimately pass through a stage

THE FIRST NATIONAL BANK OF BOSTON

in which she will have a gold currency, and he points out that the plan proposed by the Commission is one on which it will be quite simple to superimpose a gold currency when the country has grown accustomed to the limitation on the free issue of silver rupees which the present plan imposes. But for the present the scheme for a gold currency is not practicable. As regards the much more keenly debated question as to whether the Imperial Bank can take over the functions of a central bank, Sir Basil observes that the Commission were "driven away from the idea of making a central bank for India out of the Imperial Bank and into the proposal for an entirely new reserve bank by the inexorable logic of facts." The only alternative to leaving the control divided between the Government of India, the Secretary of State and the Imperial Bank was, in effect, an entirely new institution. To have left the control where it is would probably have made them unwilling to recommend a gold standard at all. The suggestion has been made that, in order to secure the proud position of the central bank of India the Imperial Bank would have been willing to be shorn of all its commercial activities, and in his minute of dissent Sir Purshotamdas Thakurdas suggested that this question should be submitted to a vote of the shareholders. But, as Sir Basil points out, the matter is one of wider interest than that of the shareholders. The Imperial Bank has played a great rôle in developing commercial banking in India. It is much easier to create a new central reserve bank than to recreate the Imperial Bank of India. There are those who still think that it could perform both rôles, but all experience shows that this is impossible. If it is to pioneer in branch banking it cannot be subjected to the severe restrictions that are inevitable in the case of a central bank, nor can it be left with unrestricted powers to swamp all other banks with its note issue monopoly, freedom to deal in exchange, and the use of the whole of the balances of the Government. Clearly the recommendation that other banks should be compelled to keep a proportion of their reserves free of interest with a central institution could not be imposed if the central bank was competing with them. We are satisfied that Indian opinion, when it comes to enacting the necessary legislation for carrying out its currency reform, will recognise that an entirely independent central bank is an essential feature in the proposal to give India a gold bullion standard.

Brazilian Stabilisation.—The new Brazilian President, Mr Washington Luiz, was faced with a thorny problem on taking office, in the state of the country's currency and its effects on the national industries. During the first half of this year the fallers had been forced up to within a fraction of 8d of the Federal Administration's deflationary policy, combined with a very large influx of foreign capital. The total amount borrowed abroad was estimated at about £30 millions sterling, the chief items being £10 millions raised through the San Paulo Coffee Institute loan and 60 million dollars lent to the Federal Government by American subscribers for the consolidation of the floating debt. The national industries, which had been fostered by high tariffs and a depreciating milreis, and were already feeling the effect of the resumption of industrial activity by the countries which had been engaged in the war, were hit very hard by this 60 per cent. advance in the exchange value of the currency, which had been below 5d at the time of its worst de-

pression. At the meeting of the Sudan Plantations Syndicate, held on Wednesday, Mr Eckstein, in dealing with the company's investments in Brazil, said that in San Paulo (the chief industrial State) there had been 297 failures during 1925, and 265, with liabilities of nearly £4 millions, in the first six months of this year. The new President has a high reputation in Brazil, earned by his successful administration of the affairs of its leading province, and there is every reason to suppose that his decision to stabilise the milreis—henceforward to be called the cruzeiro—at 6d, and to maintain a gold exchange standard on that basis, has been founded on carefully considered grounds. Obviously, the weight of the external debt will be heavier at 6d than it would have been at 8d; but since 8d has shown itself to involve too great a strain in other directions, it is wise statesmanship to recognise the fact, and adopt a level that is more businesslike, if less dignified. It may also be hoped that, having given this relief to the country's industry, Mr Washington Luiz will modify the policy of forcing it into artificial channels by high protection, and will, by permitting cheap imports, foster the development of the Republic's enormous natural resources. If this were done, we should very soon see the fulfilment of Mr Eckstein's statement that "the power of recuperation in a rich country like Brazil is so great that once the pendulum swings the other way trade will re-establish itself in astonishingly quick time." It may also be hoped that the Brazilian Government will give due consideration to the claims of railway and other public utility companies, working with foreign capital, to be allowed to make charges which will enable them to yield a fair profit, at the newly established rate of remittance.

American Cotton Crop.—This week the Department of Agriculture of the United States Government has published what is known as its preliminary final estimate of this season's cotton crop. The indicated yield has been given as 18,618,000 bales, exclusive of linters. The abandoned acreage is estimated at 2.9 per cent. of the total under cultivation last June, which has been revised from 48,989,000 acres to 47,653,000 acres. The average yield per acre is returned at 187.0 lbs, against 162.3 lbs per acre last year. At this period of the season there is always considerable interest in the ginning returns, and it is announced that up to the end of November the total was 14,645,000 bales, the amount during the past fortnight being 1,691,000 bales. On these figures being published, writes our Manchester correspondent, the New York and Liverpool markets were rather disappointed, as bigger totals were expected. There was a slight rise in prices, but the advance was soon lost as the higher rates brought out increased hedge selling. With a carry-over last season of 5,000,000 bales, and a crop of nearly 19,000,000 bales, supplies during the next twelve months amount to about 24,000,000 bales. An increased consumption is probable, but the requirements of users are likely to be rather less than 15,000,000 bales, so there should be a carry-over at the end of next July of between 9 and 9½ million bales. With such abundant supplies it is naturally difficult for operators to engineer a rise in prices, and it seems likely that rates will not change very much until news is received as to the intentions of farmers with regard to planting for next season in the Spring of 1927. The authorities in the States are pressing growers to cut down the acreage under cultivation by 25 per cent., but there is much uncertainty as to whether the restriction will be loyally carried out. It should be realised, however, that present prices are below the cost of production, and it is not reasonable to expect that such a condition of affairs will be allowed to remain for any length of time.

Shipping Freight Index Number.—With the rapidly increasing production of coal, and the termination of the mining stoppage clearly in sight, whole-cargo shipping freights last month displayed a tendency to "mark time." Our Index Number for November (based on the available homeward routes only) records an increase of 7.62 per cent., as compared with a rise of nearly 40 per cent. in October—the November figure being 196.67, against a corresponding figure of 96.20 when the coal dispute was

in its first month. If the April quotations are interpolated for the missing coal routes, the November figure works out at 171.77, a rise of 5.73 per cent. on the figure for October similarly calculated—vide the black type lines in the following table:—

Date.	European Waters.	North America.	South America.	India.	Far East and Pacific.	Australia.	Total.

The month's changes in the index of each group and sub-group (coal freights excluded) are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index No.	Inc. or Dec. Points.		Index No.	Inc. or Dec. Points.
Home trade.....	..	..	S. America—outwards	227.08	- 1.56
Bay—outwards.....	..	..	" homewards.....	..	..
" homewards.....	..	..	India—outwards.....	172.86	+ 32.57
Mediterranean—outwards	212.30	+14.69	" homewards.....	161.81	+17.46
" homewards.....	224.39	+ 9.76	Far East, &c.....	181.60	+10.68
North America.....	..	..	Australia.....	..	..

The upward movement in rates indicated above reflects the undiminished dislocation of normal supplies of tonnage, through concentration of shipping in the North Atlantic rather than any expansion in general demand. Indeed, the existing level of "spot" rates for grain cargoes showed signs of having a restrictive influence on the volume of business. In the case of South America, which was a fairly active market throughout the month, the fall in the index figure is due to the fact that shippers succeeded in establishing, for 1927 loading, a heavy discount on the rates which had to be conceded in order to secure vessels for prompt shipment.

The relation of the index to the average for 1913 is shown in the following table, the figures for the past six months representing homeward routes only:—

Month.	(1913 = 100.)	1923.	1924.	1925.	1926.
January.....	114.05	..	117.11	..	100.57
February.....	112.73	..	123.78	..	94.85

With the period of active business in moving Southern Hemisphere crops approaching, the immediate outlook for "tramp" shipping (provided bunker costs revert to something like pre-stoppage level) is certainly promising, and fair profits should be secured during the next three or four months. There is, however, no material ground for supposing that, when tonnage has been redistributed over markets now suffering from temporary shortage, the supply of vessels catering for bulk cargoes will not again prove to be as much in excess of demand as was the case in 1925.

The P. and O. Meeting.—At the annual meeting of the Peninsular and Oriental Steam Navigation Co. on Wednesday, Lord Inchcape amplified to a slight extent the

information obtainable from the annual report as to the financial position of the company. Of greatest interest to stockholders, perhaps, was the statement that, "although liner shipping is doing uncommonly badly at the present time it appears from a conservative statement which our accountants recently prepared, and which was submitted to the board, that the P. and O. Company, if broken up to-morrow, the ships it owns sold at very low prices, and its investments disposed of at current market rates, would be able to discharge its entire obligations and its preference stock and be in a position to give the deferred stockholders a good deal more than to-day's market value of their holdings." With reference to investments, he stated that they are worth to-day, with their assets, a good deal more than their book value, and mentioned that the company has cash deposits from allied concerns of £5,311,000. "These we treat as liabilities in our accounts, although they are really our own property." Outstanding bills for new ships have been reduced by £150,000 to £3,756,200 since the closing of the accounts. "The shipbuilders and the discount market have been very good, and have not pressed us in these hard times, but our determination is, as far as feasible, to be indebted to no one." Lord Inchcape did not throw much light on the question of insurance. The company, he said, could reinsure its outstanding risks to-day for a sum very much less than the amount at the credit of the insurance fund, namely, £3,328,200. "We have the question of this fund under consideration with a view to treating it as a reserve, and a year hence I may have more to say on the subject." The coal strike is estimated to have cost the company a good deal over £200,000 in coal alone, although nine of the mail steamers are oil burners. But while the liners have suffered, and are still suffering, from the coal strike, the tramp steamers, of which the company owns 40, have benefited for a few weeks by carrying coal to this country, which will partly make up for their heavy losses in recent years. Under the profit-sharing scheme, which was inaugurated on January 1st last, the amount invested up to September 30th was £300,000, and interest will be paid on it at the end of the year at the rate of 7½ per cent. per annum. Lord Inchcape was distinctly sceptical of the prospects of the proposals for speeding up the steamship services to India and Australia by forming a company with a capital of £11 millions to operate seven ships at a speed of 22 knots. "When I look at the capital of the P. and O. Company," he said, "which in ordinary and preferred stock is something under £7,000,000, the company owning, as it does, over 400 steamers, and remember the difficulty it has to earn £500,000 a year to pay its dividends, even when helped by its investments, I am at a loss to understand how anyone can believe that seven ships, costing £11,000,000, will, after covering running expenses, upkeep and depreciation, provide a surplus of £550,000 a year to give a dividend of 5 per cent. per annum to those who put up the money. You may depend upon it that, if the P. and O. and Orient Companies, with their lifelong experience of the trade, had seen their way to cover their expenses and leave a decent margin, they would have gone into a 22-knot service long ago."

Australian Commonwealth Loan.—Our Melbourne correspondent, writing on November 4th, says:—The Commonwealth Government is now offering a 5½ per cent. "Cash and Conversion Loan," maturing in 1933, 1938, or 1943, at the option of the subscriber (to be exercised when making application). The cash portion is for £6,000,000, the Treasurer reserving the right to accept a larger total, and the proceeds will be allotted between five States (excepting New South Wales) and the Commonwealth Capital Commission for public works. The conversion portion is an early attempt to deal with two War Loans at 4½ per cent. and 5 per cent. respectively maturing on December 15, 1927, for £67,860,840 together, and whatever success is obtained with the present issue, which will close on December 20th, will simplify the task of completing the conversion before December, 1927.

Customs and Excise.—The annual report of the Commissioners of His Majesty's Customs and Excise for the year ended March 31st last* elaborates the statistics already published in the finance accounts. One of the most interesting tables is that relating to the home consumption of Empire and foreign goods, from which we have compiled the following comparisons of Empire goods to the total retained for home consumption in each of the past three financial years:—

	1923-24.	1924-25.	1925-26.
Spirits.....	59.3	66.7	60.8
Wine.....	5.2	4.8	6.3
Tea.....	88.2	84.1	87.1
Raw cocoa.....	92.6	90.8	91.9
Coffee.....	47.9	44.2	49.9
Sugar.....	25.4	10.1	22.6
Dried fruits.....	10.7	18.7	19.6
Tobacco.....	7.3	8.5	10.9

The quantity of home made spirits retained for consumption was under 12.1 million proof gallons, against 12.3 million proof gallons in the preceding year. The corresponding quantities of imported spirits were 2.1 million proof gallons, against 2.2 million respectively. The consumption of home-made beer in 1925-26 was 20,731,527 barrels, against 20,668,162 barrels in 1924-25, the net receipts from the duty being £76,320,000, against £75,825,800. The total quantity of imported beer retained for consumption in 1925-26 was a little over 1½ million standard barrels, practically the whole of which came from the Irish Free State. The budget estimate for 1925-26 assumed a consumption of tea of 395 million lbs, yielding a revenue of £5,650,000. Consumption rose, however, to over 406 million lbs, resulting in a surplus of £130,000 on the estimate. The bulk of the foreign tea came from Java and Sumatra, and only about 2½ per cent. from China. Consumption of cocoa also increased much more than expected, and the actual receipts were £735,000, or £55,000 more than the estimate. As a result of falling prices, sugar consumption at 1,676,000 tons exceeded the estimate by 90,000 tons, the total revenue showing a surplus over the estimate of £421,000. An increase in the preferential rebate was responsible for the increase shown in the table above in the consumption of Empire sugar. Receipts from the "McKenna" duties fell short of the estimate by £19,000, forestalments being much heavier than expected. For the nine months during which they were in force they amounted to £1,081,200, as against £2,590,500 in the full year 1923-24. During the year the seizures of smuggled goods amounted to 7,897, the bulk being seizures of tobacco and spirits. The number of persons convicted of smuggling was 3,412, and the total amount of the penalties recovered £12,200.

Reparations Payments.—The statement of the Agent-General for Reparation Payments of receipts and payments under the Dawes Scheme for November shows receipts of 94.8 million gold marks and payments of 89.6 millions. Total receipts for the first three months of the third annuity year amount to 274.4 million marks and payments to 261.3 millions. In the table below we show receipts and payments for the full second annuity year and for the first three months of the third year:—

RECEIPTS and PAYMENTS
(on Cash Basis, Reduced to Gold Marks Equivalents)
(In Million Gold Marks.)

Receipts.	Second Annuity Year.	Third Annuity Year, Sept. to Nov. (Incl.)	Payments.	Second Annuity Year.	Third Annuity Year, Sept. to Nov. (Incl.)
Balance of cash at August 31, 1925	107.0	63.5	Payments to various Allied countries	1,060.2	235.3
Budgetary contribution	250.0	75.6	Expenses of Commissions	18.4	3.3
Transport Tax	241.9	..	Service of German External Loan	97.2	20.6
Interest on Railway Bonds	550.0	135.0	Discounts, &c.	7.4	2.0
Interest on Industrial Debentures	125.0	..	Cash in hand at Aug. 31.	93.6	106.7
Exchange Differences & Interest Received	2.9	0.3			
	1,276.8	274.4		1,276.8	367.9

The first year's receipts amounted to 1,000 millions, consisting of 800 millions from the proceeds of the German external loan and 200 millions for interest on railway bonds. In the past three months France has received 107.4 million marks, of which the bulk was in deliveries in kind, the British Empire 53.6 millions, of which 48 millions was under the Reparation Recovery Act, Italy 19.2 millions, Belgium 13.2 millions, and the United States 27.7 millions, of which 20.1 millions represented deliveries under agreement and the balance cash transfers in foreign currencies.

The Percentage Grant System.—In a recent Parliamentary discussion Mr Neville Chamberlain revived interest in the problem of the relation of Exchequer grants to the local authorities when he suggested that the Government were trying to work out a permanent method of dealing with the subject on the basis of block or fixed grants, but designed to have regard to the circumstances of the area. In some quarters this was interpreted as a promise for the necessitous areas. A day later Mr Chamberlain explained that he had merely the general system of percentage grants in mind. As regards the necessitous areas, whose difficulties have been largely increased by the industrial conditions of the past summer, it may now be assumed that the Government will not pursue the effort to find a formula by means of which they might be given special Parliamentary assistance. The subject was recently surveyed by a Departmental Committee, with narrow terms of reference which permitted only the review of specific schemes or proposals. These were submitted by representative officials in different parts of the country; one by one they were analysed by the Committee and rejected as impracticable, or open to serious objection; and the Government have taken refuge in that report and in the difficulty of making any concession of this character without upsetting arrangements which apply generally to the whole scheme of percentage grants. The latter, and larger, controversy is still in a somewhat remarkable position. In public health, education and other services these grants by the State are usually on the basis of 50 per cent. of the approved expenditure of the local authority. The Geddes Committee attacked the system on the ground that it was costly. In keeping with its recommendation, a Committee under Lord Meston was appointed to consider the whole problem. It took voluminous evidence four years ago, but for three years has not met, and the Government recently announced that they were unable to get the chairman of the committee to take any step. The evidence tendered is believed to be mainly in favour of the retention of the percentage grant system, subject to certain administrative improvements. Meanwhile the Government have decided to continue the system for the present financial year, which is to be one of inquiry; next financial year they suggest that they may institute a method of block or fixed grants. It is understood that the scheme in mind proposes to review recent expenditure, and in the

light of all the facts guarantee the local authorities in the aggregate a certain sum for a period of, say, three years ahead; within that aggregate allocate the grants substantially on the percentage basis; and ask the local authorities to co-operate in efforts at economy in return for freedom from certain of the centralised administrative control to which they are now exposed as percentage grants operate. The local authorities have so far refused to look on the proposal with favour; but apart from the speech of Mr Chamberlain the real fight will not come until the Government announce the precise details. Meanwhile the forces of the authorities are being mustered in resistance, and much of the business world which regards high local rates as a greater burden on industry than national taxation apparently intends to lend its support.

London Electric Supply Shares.—The position of the shares in the London electricity supply undertakings becomes very interesting, in view of the fact that before the end of this year all the companies will have to publish their intentions in regard to capitalisation of the reserves, and distribution of these in the shape of bonus shares. Half-a-dozen of the companies have already done this—the Brompton, Charing Cross, Chelsea, Kensington and Knightsbridge, St. James's and Westminster companies. There remain to come announcements from the City of London, the County of London, London Electric, Metropolitan and South London. The statements issued by the various companies have not been uniformly satisfactory to shareholders, although it is probable that the first two announcements, being exceptionally good, led to exaggerated hopefulness in the way of expectations concerning the others. The County of London is a little different from the other companies, owing to the larger area over which its ramifications extend. The Charing Cross Company is also an exception, inasmuch as its dividend up to 1936, instead of 1931 as the other companies will have to do, after which dates, respectively, the full dividend becomes 7 per cent. all round. Under the London Electricity Supply Acts, 1925, the standard dividends were set out as 10 per cent. on old shares up to 1931 and 7 per cent. on the new up to the same year; after 1931, on all ordinary capital, as already mentioned, it will be 7 per cent. It is assumed in the market that the companies will endeavour to adopt a standard rate on old and new shares alike. With a view to showing how the new arrangement will work in the future, a well-known firm in the Stock Exchange have prepared a table giving the reserve distributions to date, and showing what the yields will probably be during the next five years and what they will be thereafter. The figures make interesting reading to the many investors who have put money into the industry, and the details may be reproduced as follows:—

ORDINARY SHARES OFFERING.

Company.	Old Shares.	New Shares to be Capitalised.	Amount of Div. Paid in 1925.	Amount Re-quired to pay "Standard Dividend" until 1931.	Price.	Yield on Stand'd Div.	Bonus.
			£	£		%	
Brompton & Kens..	292,300	60,000	29,217	(9) 133,430	30/6	7 7/8	£1 for £5 held
Charing Cross Elec.	576,000	169,000	86,400	(8 1/2) 184,576	47/	6 1/2	£1 for £5 held
Chelsea Electric	247,180	148,308	29,662	(8 1/2) 135,100	25/6	7 3/8	£3 for £5 held
City of Lond. Elec.	800,000	..	98,000	..	51/6	..	..
County of Lond. Elec.	1,330,000	..	158,353	..	65/6	..	..
Kens. & Knight Elec.	105,000	189,000	15,750	(8 1/2) 123,730	24/6	6 1/2	£9 for £5 held
London Electric	499,500	..	49,350	..	36/6	..	..
Metropolitan Elec.	1,000,000	..	110,000	..	41/	..	..
St. James' and Pall Mall	200,000	440,000	35,000	(7 1/2) 50,800	24/6	6 1/2	£11 for £5 held
South London	260,000	..	39,000	..	22	..	..
Westminster Elec.	755,620	503,746	113,343	(8 1/2) 110,824	26/	6 1/2	£2 for £5 held

a After 1936 yield will be 5 1/2%.

The companies have the right, under certain conditions, to pay the same dividend as in 1922, except on bonus shares, until 1931; but it is generally expected that they will elect to go on the scale which provides 10 per cent. on the old capital and 7 per cent. on capitalised free reserves. In some quarters it is contended that the strictly correct method of estimating yields on the shares at the present prices is to take 7 per cent. as the dividend; but this would be misleading, inasmuch as it would show a lower return for the next five years than pro-

prietors are likely to receive. There is, of course, the possibility that the companies might not be able to pay the 10 per cent. on existing old capital, though this is so unlikely as to make its contingency hardly worth considering. Broadly speaking, a 10 per cent. dividend all round should have the effect of bringing the prices on to more or less the same standard of market valuation, and several already are quoted in the neighbourhood of 24s. This price, on the 10 per cent. dividend basis, affords a return of £8 6s 8d per cent. on the money for five years, after which the yield will drop, on the 7 per cent. rate, to £5 16s. 8d. per cent. It has been assumed that the clearing up of the uncertainties which have surrounded the London electricity supply questions for the last 20 years at least would be followed by a broadening of investment interest. Considering the uncertainty, however, that will prevail in connection with yields during the next five years, it may be doubted whether, from the market point of view, there will be any immediate expansion of investment interest in the shares of the London electricity supply companies.

Orient Line.—The accounts of the Orient Steam Navigation Company, Limited, for the year ended June 30th last, show a further increase in profits, though the fact that the figure is shown after charging an unstated amount for depreciation, and includes a transfer from contingency account entirely vitiates comparison. The published figures are compared with those of previous years in the following table:—

June 30.	1913-14	1921-22	1922-23	1923-24	1924-25	1925-26
Profit	£27,454	£282,578	£280,093	£296,607	£320,806	£371,329*

* Includes "a transfer from Contingency Account."

The appropriations are the same as in the previous year, the 12 1/2 per cent. dividend on the deferred shares being paid free of income-tax. The bulk of the assets are shown in the balance-sheet in one item of £4,669,800, which includes the fleet and investments. This is £77,000 higher. Outstanding debentures for £177,300 have been redeemed, and creditors, which include contingency accounts, have been reduced by £97,400. The general reserve stands at £1,300,000, and the repair and renewal account at £500,000. An analysis of the balance-sheet will be found in a later column.

Amalgamated Anthracite.—After a promising start the Amalgamated Anthracite Collieries, Limited, fell upon lean times, and three years after making a maiden payment to the shareholders of 11 1/2 per cent. it was decided to discontinue dividends. The latest accounts, covering the year ended September 30th last, show a further falling-off in profits. The extent of the movement will be seen from the following table:—

	Year Ended September 30th		
	1924.*	1925.	1926.
Gross profit	369,116	200,923	190,404
Net profit	255,988	151,831	127,633
Brought forward ..	..	11,951	45,104
To reserve, &c.	69,530	..	172,737
Dividend	174,487	118,679	..
Rate per cent.	11 1/2	7 1/2	nil
Carried forward	11,951	45,104	..

* Covering period June 16 to September 30, 1924.

Operations, of course, have been handicapped by the strike of anthracite miners in July and August, 1925, while more recently the general stoppage in the industry has adversely affected the undertaking. It is reasonable to suppose that the past year's figures would have been even less satisfactory than they are had not the company been able to turn its attention to the purchase and sale of substantial quantities of imported coal. The

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

Established 1836.

A SPECIAL SCHEME

of Medical Overhaul for Life Policy-Holders

Head Office: 10, FLEET STREET, LONDON, E.C.4.
near Temple Bar.

Assets Exceed - - £18,000,000

General Manager: W. A. WORKMAN, F.I.A.

result of operations for the twelve months was a net profit of £127,633. This, together with the sum of £45,104 brought in, is transferred to the capital reserve account pending the sanctioning of an amalgamation with the United Anthracite Collieries, Limited. The terms formulated by the directors provide for a share-for-share exchange. The capital of the concern is therefore to be increased from £2,500,000 to £5,000,000. Of the new shares 1,000,000 are to be 7 per cent. cumulative preference, and the remainder will be ordinary shares which will not be entitled to any dividend or bonus declared on the existing ordinary capital. The sum of £201,238 now standing to the credit of the reserve is to be capitalised and utilised in paying up the 201,238 unissued shares, which will then be distributed among existing shareholders in the proportion of one in ten. Such shares are to be treated purely as an increase in the nominal amount of capital, and not as income. In addition, out of the surplus profits of each year, and after 10 per cent. has been distributed on the ordinary capital, £16,800 is to be placed to a special preference dividend equalisation fund until it totals £84,000. It is then to be maintained at that figure. The necessary resolutions are to be placed before the shareholders at the meeting to be held on December 15th next. It will be interesting to see whether the proprietors will consent to the creation of a substantial amount of new prior capital. So far as we can see, the scheme is an equitable one, and the directors will probably not meet with much, if any, opposition.

Richard Thomas.—The report of Richard Thomas and Co., Limited, for the year ended September 30th last covers five months of the stoppage in the collieries. During this period, state the directors, a substantial proportion of the company's plant has been kept in operation by supplies of foreign coal, purchased at high prices, "and there have been many interruptions caused by delays in shipment resulting in a serious increase in cost of production." Some satisfaction, however, is afforded by the announcement that "the principal markets for your products have been held." The following table summarises recent results:—

	Year Ended September 30.				
	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.
	£	£	£	£	£

	(2 1/2%)	(3 3/4%)	(5%)	(2 3/4%)	(2 3/4%)
Carried forward	163,680	163,953	200,955	230,541	179,117

Owing to the serious decline in profits it has not been deemed advisable to pay the dividend on the 6 1/2 per cent. cumulative preference shares for the last six months of the financial year, and whereas £55,369 has been set aside for depreciation and special expenditure, there has been a withdrawal of £44,000 from reserve for contingencies. A year ago the fund was reduced by £75,000. Reserves now total £1,336,693, against an issued capital of £5,910,906, and a balance-sheet total of £9,852,150.

In the present accounts there is included a loan account of £212,400, representing amounts due to bankers, but creditors have declined from £492,843 to £275,190. The mortgage redemption account has been increased from £50,900 to £152,500. Stocks amount to £318,303, against £462,200, and cash at bankers and in hand has declined from £132,429 to £38,265.

Ind. Coope.—Like most other kindred undertakings, Ind. Coope and Co., Limited, the Burton-on-Trent and Romford brewers, enjoyed quite a satisfactory experience during the year ended September 30th last. The gross profits, it is true, declined from £334,777 to £311,802, but the net figure is £226,638 compared with £220,918 owing to the fact that £21,000 more was received by way of interest and dividends, while the expenses for the past year do not have to be charged with anything in respect of writing off the costs of purchasing businesses, which last year involved the transfer of £17,466. In the following table is shown the measure of progress recently achieved:—

Year Ended Sept. 30th.	Gross Profits.	Interest on Debenture Stocks and Mortgages.	Depreciation.	Ordinary Dividend.	To Reserve, &c.	Carried Forward.
£	£	£	£	£	£	£
1914..	110,821	58,332	28,516	..	..	14,290
1915..	146,238	54,300	34,375	..	40,000	680
1916..	152,906	53,625	36,084	..	50,000	2,484
1917..	204,717	58,186	34,186	14,026	50,000	23,277
1918..	392,575	55,686	29,991	20,671	185,000	57,281
1919..	474,202	55,722	39,373	49,594	285,000	103,872
1920..	415,249	53,814	45,863	91,341	85,000	139,613
1921..	375,657	53,504	49,783	168,000	10,000	106,345
1922..	349,982	55,986	48,879	137,000	60,000	104,482
1923..	347,880	60,482	48,534	90,375	50,000	109,226
1924..	378,302	61,792	45,416	116,250	50,000	153,490
1925..	334,777	63,810	46,584	136,308	..	161,779
1926..	311,802	65,637	48,625	139,874	75,000	173,542

Whereas twelve months ago the directors reduced the goodwill item by £75,000 to £300,000, this time they make no provision for this purpose. On the other hand, they have augmented the reserve fund by £75,000, which appropriation brings the total of the account up to £575,000, as compared with an issued share capital of £699,374. The ordinary shareholders once more receive an aggregate return of 25 per cent., the rate which has prevailed for the past three years. The accounts show that the item of properties, plant, and machinery, &c., has gone up from £1,849,415 to £1,925,021, while the cash holding is now £251,958, against £221,910. Stocks, however, have declined from £248,194 to £193,500.

Carreras' Progress.—Of the non-combine tobacco companies, Carreras, Limited, is easily the most prosperous, and in respect of the year ended October 31st last profits were the highest in the history of the company. The rate at which the undertaking's figures have expanded in recent years is, in fact, little short of phenomenal. For 1924 the profit was £480,584; a year later it had jumped to £777,683, and twelve months later to £1,027,944. The ordinary shareholders, as will be seen from the following table, have been permitted to share in the success achieved, for, taking dividends and cash and share bonuses together, they have received in all during the last three years an aggregate return at the rate of 325 per cent.:—

	1923-24.	1924-25.	1925-26.
£	£	£	£
Profit	480,584	777,683	1,027,944
Brought forward	138,828	111,764	362,443
	619,412	889,447	1,390,387
To reserve, &c.	(a) 127,647	(b) 147,004	149,234
Preference dividend	20,000	20,000	20,000
Ordinary dividend	120,000	240,000	300,000
Ordinary dividend...rate %	50	50	50
Scrip bonus	100	25	50
Carried forward	351,764	482,443	921,153
a) Including £737 written off investments. (b) Including £2,000 written off investments.			

Owing, of course, to the distribution of scrip bonuses, the capital has been augmented from year to year. In 1924 the total issued share capital was only £540,000;

by 1925 it had been increased to £780,000, owing to the issue of 240,000 "A" ordinary shares, while the present accounts show an aggregate outstanding share capital of £900,000, owing to the capitalisation of £120,000 of undivided profit and its disbursement in the shape of a scrip bonus. This year's scrip bonus of 50 per cent. involves the issue of a further 300,000 ordinary shares, making a total issued capital of £1,200,000. The latest balance-sheet shows that the reserve fund stands at £300,000, while investments in allied companies are put at only £5,683. In regard to the latter item, it is not stated on what basis it is valued. If these investments are taken at cost it would not be surprising to learn that they constitute a hidden reserve of fair proportions. Freehold and leasehold premises, plant, machinery, &c., also seem to be conservatively valued, as they figure in the accounts for only £267,871. Goodwill amounts to £203,752, and stocks to £1,247,206, against £872,470 a year previously.

Amalgamated Cotton Mills.—The Amalgamated Cotton Mills Trust, Limited, had a decidedly unsatisfactory experience during the year ended October 31st last. Revenue fell from £88,269 to £12,786, and after meeting management expenses and interest, there is a loss of £56,757, which compares with a profit of £23,547 a year previously. Thus, after allowing for the sum of £2,771 placed to the reserve for income-tax, the outcome of the year's working is a deficit of £59,528. It is stated that no dividends were received from the subsidiary companies, whose figures, which are summarised in the report, show a loss of £375,977. In these subsidiaries the Trust, directly or indirectly, is the sole ordinary shareholder. In the case of one of them, Horrockses, Crewdson and Co., a reduction in capital is necessitated "owing to the accumulation of losses due entirely to depreciation in the value of the large trading stocks held." The Trust holds all the issued capital of Horrockses, and therefore suffers heavily by the decision to write down the 3,100,000 £1 shares to 11s each. Subject to the Court's sanction to the scheme, the sum of £1,395,000 so written off "will extinguish the losses to date, and should enable the company to carry the excess stocks now held for a sufficient period to allow them to be realised without further loss." This, together with the need for providing for losses in certain other subsidiary companies, has impressed upon the board the desirability of reducing the share capital of the Trust. Full details will, presumably, be laid before the shareholders at the annual meeting, to be held on Monday, December 13th next. The sum at which investments in cotton mill companies stand in the accounts is £7,955,451. These investments, it is explained, are taken at cost, and no provision has been made in respect of losses incurred since the shares were acquired. It is to be hoped that the directors of the Trust will spare no pains to see that these shares are written down to a value nearer their true worth. Such a course may involve the proprietors in some sacrifice. It is not, however, sufficient merely to write off losses already sustained, without placing the finances in such a position as to minimise the danger of a recurrence of adverse trading results in the future.

Progress at Letchworth.—Once again the report of First Garden City, Limited, is a little disappointing on the financial side, since the profits, being £2,314 lower than a year ago, only just cover the maximum dividend of 5 per cent. Consequently the directors cannot, as they hoped to do a year ago, make a start in paying off the arrears of back dividends. For the first seven months of the financial year the prospects were promising enough, but then the coal stoppage upset all calculations, especially as the company owns the gas, water, and electricity undertakings, and serves a considerable area outside the urban district of Letchworth. For the first time the results of these three undertakings are shown separately, and we observe that the net profits come to a little over 6 per cent. on an aggregate capital expenditure of £319,300. The company now supplies electricity to the town of Biggleswade and the intervening villages; the number of consumers in these places exceeds the estimate,

and new applications continue to come in, promising a large development of business. Altogether the output of electricity increased by 10 per cent. during the year, and 6.9 per cent. more gas was sold. Sixty-three more cottages are being built by the Urban Council, and on their side the directors are selecting recreation grounds on a scale to meet the needs of a future population of 35,000. Most of the money obtained by the successful issue of £200,000 in 6 per cent. mortgage debentures last January was used to reduce an overdraft from the Midland Bank.

Van Ryn Gold.—The distributions of the past financial year were adversely affected by capital expenditure, as well as by shrinkage in profits. The last-named feature arose mainly from the disappearance of the gold premium, although decline in the grade of the ore was also a factor. Thus the net earnings figure at £66,800, as against £97,300. The dividend total of 1s 6d—comparing with 3s 6d—absorbed £37,500; then £17,300 was transferred to a special reserve for miners' phthisis compensation, and £19,200 was spent upon the equipment and development of the recently acquired Modder West claims. It is hoped that these will have an important effect in extending the life of the property. Certainly the indications so far obtained have proved encouraging. Driving on the first level upon what is known as the Contact reef showed 35 per cent. of payability, the value being 6 dwts over 68 ins. A second ore body, named the "10 ft. reef," gave the high pay percentage of 72, the value being 11.1 dwts over 32 ins. Results at the second and third levels, where work is now in progress, are awaited with much interest. In the original property the ore reserves are computed at 1,298,200 tons, value 4.6 dwts over 47 ins, a small increase in quantity and decrease in value as compared with the figures of twelve months previously. The whole of this tonnage has been paid for out of past profits. With regard to the dividend outlook, the monthly profits suggest that for the current half-year there should be a reversion to the 1s rate paid for the first half of 1925-26.

South-West Africa Company.—Considerable disappointment was occasioned by the cut in the dividend from 2s to 1s per share. Actually the income from all sources of the year ended June 30th last, at £97,800, showed a small increase over that of the preceding period; the shrinkage in profit from £55,300 to £19,500 arose almost entirely from increase in the expenditure in Africa—apparently on "ore deposits other than Abenab." Although the additional plant sent out for the property just named has not yet come into operation, the output of vanadium expanded by 710 tons to 1,670 tons, yet the revenue from this source last year was scarcely so large as in 1924-25. Doubtless explanations on these two points will be given at the meeting which is to be held next Tuesday. But for the writing back of £15,000 reserve for income-tax not required, not even 1s could be paid in respect of last year, as the distribution will require £26,900. The company's investments—principally British Government securities—figure at £437,600, as against £479,900 twelve months previously. In addition, interests are, of course, held in the Otavi Mines and Railway and the Otavi Exploring Syndicate. The latter is stated to have greatly improved its mining plant; its prospecting concession, over 1,000 square miles, has been extended to November 17, 1931. A similar extension has been granted in respect of the South-West Africa Company's prospecting rights over about 20,000 square miles.

Santa Gertrudis.—At the meeting held on Monday the information contained in the annual report was supplemented, and in certain particulars clarified. One important point is the improvement which has taken place in the financial position. At the end of June, 1925, the company had outstanding 8 per cent. notes redeemable at a cost of £341,200, and income-tax arrears amounted to £105,000. Against these liabilities the cash assets stood at only £49,000. In the meantime a fresh note issue of £190,000 has been made at 7 per cent.; out of the proceeds and the profits earned the old note issue has been paid off, also the income-tax arrears, while a

dividend of 1s per share has been paid. On account of the current year one quarterly distribution of 9d has been disbursed and another is now declared. In future, however, on account of the labour and expense entailed, dividends are to be paid half-yearly; and in their amount the price of silver will be an important factor. The official view is that with silver as low as 52 cents per oz the company will be able to pay a minimum of 2s per share per annum. Another important point in the position consists in additions to the property. The original Santa Gertrudis Mine has now been worked out. Meantime, working arrangements in respect of other areas have resulted most satisfactorily, recent developments at deep levels in the Dos Carlos being particularly encouraging. This group has lately secured extra ground, and still more is available. The Santa Gertrudis, of course, is also interested in the Mexican Corporation and other undertakings.

Huronian Belt.—A noteworthy expansion in profits occurred last year, the total of £60,600 representing nearly three times the 1924-25 result, and comparing with £51,500 in respect of 1923-24, when 25 per cent. was paid upon the then issued capital of £150,000. For the past session 20 per cent. is to be disbursed, as against 10 per cent. previously—both upon £200,000; leaving the substantially enhanced balance of £54,900 to go forward. "Profit" being a blanket item, it is impossible to say how much was derived from share dealings in Toronto and how much from dividends and the like; it will probably not be far wrong to regard the former as the main factor. Of the undertakings in which the company is principally interested—the Keeley has maintained its 24 per cent. dividend rate, despite the fall in silver; the Vipond, although expanding its scale of operations, has not yet reached the dividend stage. The Canadian Lorrain and the Keeley Extension are merely prospecting; some encouraging discoveries have, however, been reported. Huronian Belt shares obviously embody a considerable element of the speculative.

Consolidated African Selection.—The financial year ended June 30th was marked by the entry of the company into the dividend list; the initial payment of 9d per share in February was followed up by one of 1s 6d in August, leaving a small balance to be carried forward. The year's revenue comprised £127,200 dividends from the affiliated African Selection Trust and interest from investments, plus £6,400 sundries. Debenture interest absorbed £12,000 in place of £6,600, the balance of the bonds having been issued. At the date of the report the combined liquid assets of the group are stated to show over £150,000 in excess of current liabilities. During the year the African Selection Trust expanded its diamond reserves to over 7,000,000 carats; the output was also greatly increased—no details, however, are given. The two additional plants brought into operation during the year are to be supplemented by a fifth, and a still further reduction in costs is looked for. Consequently there would appear to be the prospect of enhanced dividends on the part of the Consolidated Company. The 5s shares being quoted at 26s, the yield on last year's dividends is about 8½ per cent.

Malayan Tin Dredging.—This enterprise has been much in the public eye by reason of the raising of additional resources under the Trade Facilities Act, the splitting of the shares, and the flotation of a subsidiary. Additional dredge power being available, the output was increased, and realised a higher average price, the net profit coming out at £71,500, as against £51,400. The dividends totalled 30 per cent., in place of 25 per cent., and after the transfer of £5,000 to special reserve in accordance with the loan agreement, £68,300 remained to go forward, as against £56,500 brought in. In all, the company was guaranteed £250,000. Under the second mortgage of £150,000, about £100,000 was drawn, but has been repaid since the date of the accounts the balance of the capital—40,000 shares—has also been issued at 32s,

bringing the total up to a round £200,000. It would not be surprising if some questions on this transaction were to be asked at the meeting. The original property has been added to by the purchase of 58 acres, making the total 2,096 acres, whereof 600 have been worked out. Moreover, the company has acquired a further 1,680 acres some eight miles lower down the Kinta river; approximately 1,000 acres have so far been proved to carry payable values. This ground is to be worked by dredges Nos. 7 and 8, to which the recently installed electrical power will in due course be extended. On the basis of last year's dividend, the 5s shares at 30s yield only 5 per cent., but there is the prospect of considerably bigger things in the future.

Obersea Correspondence.

UNITED STATES.—STEADY MARKETS—THE TRADE POSITION—THE WHITE STAR DEAL.

(FROM OUR CORRESPONDENT.)

NEW YORK, November 30.

WHILE little change has occurred in the markets during the past week, the undertone has continued steady. The share market has experienced a mild reaction during the past few days, possibly in sympathy with a firming-up in the call-rate on the Stock Exchange, but no considerable volume of liquidation has appeared, and the market could hardly be characterised as weak. Meanwhile the bond market has continued conspicuously strong, dealers reporting that the demand for new securities considerably exceeds supply. The lists for the \$120,000,000 issue of 20-year 5 per cent. Standard Oil Company debentures were closed with an over-subscription at the time when the preferred stockholders' opportunity to subscribe for the debentures expired. No public offering of the debentures was made. As for the money market, month-end demands lifted the call-rate on the Stock Exchange to-day to 5½ per cent., this being 1 per cent. above the rate that ruled last week. However, the time rate was undisturbed at 4½ per cent. Probably the firming-up in call-money was prompted partly by the large reduction in re-discounts at the Federal Reserve Bank, that had taken place during the past few weeks. At November 17 re-discounts at New York had fallen to \$90,000,000, which was \$58,000,000 less than at the same time last year. The report for November 24 showed that the member banks in this district increased their discounts during the preceding week to \$149,000,000. That a firming in the call-rate should attend this movement is only natural. Even with the increase in re-discounts the total on November 24th was still \$44,000,000 below the corresponding total for last year. Practically all of the week's increase in re-discounts occurred at New York, and as the bank here lost a corresponding amount in reserves it would appear that money flowed away from this centre. The Thanksgiving holiday demand for currency also probably played a part in the added demands that were made on the Reserve system. Brokers' loans remained practically unchanged, and the expectation is that the firming in call-money will be transitory, and that the money market will settle down comfortably until the Christmas demand for currency arises. Some \$10,000,000 in gold recently has been shipped to Canada, but the premium on the exchange is declining, and it is thought that the movement is over for the time being at least.

Meanwhile it seems likely that recent somewhat pessimistic judgments on the course of industry and business were in part a by-product of the October break in the share market. Such breaks generally have an adverse effect on business sentiment in this country, and the present instance seems to furnish a case in kind. It will be recalled that during October sources of steel trade news predicted that steel output for the month would show a decline. As a matter of fact, a 2 per cent. increase was recorded. Then it was predicted that operations would fall off rather rapidly to about 75 per cent. of capacity. Actually it seems that November steel production will be only slightly below that for October. Automobile pro-

duction showed a considerable decline in October as compared with a year ago. Now, however, it seems that fresh buying of steel by automobile makers is developing, and it is believed that this buying forecasts an increase in automobile production during January. Similarly, with retail trade; a short time ago there was talk of slowness; now it appears that the stores are busy and that the prospects for holiday trade are excellent. While the seasonal tendency is now bringing a diminution in the movement of freight by the railways, the totals are still running at record-breaking levels for the season of the year. Altogether, it would appear that business is holding up better than had been anticipated, and that money is cheaper than had been expected. Sentiment has recovered with the share market; and the possibility that high public purchasing power may, in the entire absence of inflation, keep prosperity going is now recognised.

Sale of the White Star Line by the International Mercantile Marine Company furnished a surprise only in so far as the identity of the purchaser was concerned. It has been no secret, of course, that the company has wished to dispose of this holding and to do something to relieve the somewhat anomalous position in which it has found itself. Its British connections have always been an embarrassment to it when it came to securing tonnage from the Shipping Board; and, while the British lines have represented excellent earning assets, the company has not exercised real control, merely receiving the dividends that the British directors have declared. The common assumption is that the company will take the proceeds of the sale of the White Star Line, and of the sales of any other of its British lines, and apply these to the purchase of some of the Shipping Board's big units, thus building up a strong fleet of American tonnage. It is observed, of course, that the White Star purchase will be paid for in instalments, but it is possible that the International Mercantile Marine Company might purchase new tonnage on a similar basis. The company has outstanding almost \$36,000,000 of an issue of 6 per cent. bonds due in 1941, and they are secured by all the company's property. It is understood that the mortgage is worded so that other security may be substituted. In any event, it does not seem that the company intends to retire the bonds. Nothing very definite is known with regard to the company's plans, but it is assumed that its future success would depend very considerably on the price at which it might obtain tonnage from the Government.

FRANCE.—M. POINCARÉ AND THE FRANC—PRICES—DEVASTATED AREAS.

(FROM OUR CORRESPONDENT.)

PARIS, December 8.

M. POINCARÉ, in spite of pressure by both a section of the Chamber and certain newspapers, still declines to state whether he proposes definitely to adopt a policy of stabilisation or one of revalorisation. The essence of his policy was summed up in a phrase used by the Premier and Finance Minister in his speech in the Chamber yesterday: "The restoration of healthy financial conditions does not yet include the restoration of healthy currency conditions, but the one is an essential and preliminary condition of the other." In allowing the franc to rise above existing economic parities and considerably above the level (150 to the £) on which the estimates of foreign debt and other expenditure is based in the Budget now under discussion, M. Poincaré has adopted a policy which has been compared in importance with his decision to occupy the Ruhr. It will be admitted, however, that his attention so far has been devoted primarily, and almost entirely, to the reform of the public finances, the freeing of the Treasury from the grave dangers that have repeatedly threatened it during the past two years, and the stabilisation of the debt. The fact that the franc has recovered over 120 points since M. Poincaré took charge of the situation is patent, but this is merely the result of the steps that have been taken in quite other directions. These include the creation of the Caisse d'Amortissement, the consolidation in two or three months of 5,000 millions of floating debt, the fixing of the maximum total of the latter by law at its present figure, the making of provision that will ensure

the payment of all foreign liabilities down to the end of next year, the assurance of a reduction of the debt to the Bank by 2,000 millions on December 31st next, the strict balancing of expenditure by taxation, and the accumulation of a *masse de manœuvre* in the form of foreign currencies, sufficient to enable the franc to stave off further ruinous crises. Under the influence of all these consolidating factors the franc has naturally improved from around 245 in July to the neighbourhood of 125, and confidence has largely returned.

Evidence of this is shown in the fact that the new issue of 7 per cent. ten-year Treasury bonds, designed to replace the 1,395,000,000 of 1922 Credit National bonds, whose holders (out of a total of 3,000 millions) have given notice of their intention to demand reimbursement on February 1st, has been entirely taken up. The new scrip was obtainable solely in exchange for the older issue, and many of those who originally applied for reimbursement (as well as a large proportion of those who were prepared to renew) have subscribed the new bonds. The demand for National Defence bonds has proved so satisfactory that it has been found necessary to check their absorption by the public by reducing the rate of interest, to keep the total within the maximum fixed when the duty of extinguishing the floating debt was handed over to the Caisse d'Amortissement.

The continued improvement in the franc is causing a good deal of alarm in some quarters, but opinion generally seems to be about evenly divided on the subject. Many leading industrialists are reported to be strongly in favour of the present tendency being allowed free course, no matter what levels may be reached, it being argued that, although this may result in an economic crisis, the effect would be to eliminate shaky concerns, and thereby strengthen the general position. On the other hand, it is argued that it is essential that the franc should be definitely stabilised as soon as possible, otherwise the whole situation may again get out of hand, with the resultant undoing of all the good work that has been accomplished. Many experts argued recently that the franc should be stabilised at 162.50. M. Francois-Marsal urged 160 as the figure. M. Chappedelaine, the Rapporteur of the Budget, when sterling was oscillating around 161 and 162, insisted that it would be perilous to budgetary bases to allow the franc to improve beyond that level. It is not surprising, therefore, that with the franc well below 130, M. Chappedelaine, a day or two ago, sought an interview with M. Poincaré on the subject. He is reported to have asked the Finance Minister what steps he proposes to take to maintain budgetary equilibrium, in the event of further improvement of the franc, and to assure national production against an economic crisis. M. Poincaré expressed the opinion that there are at present no symptoms suggesting the possibility of an economic crisis.

Here again opinion in general is sharply divided. M. Jouhaux, the moving spirit of the C.G.T., insisted a day or two ago, at a meeting of the Socialist group of the Chamber, that "an unemployment crisis, due to the revalorisation of the franc," has actually begun. Reports are certainly current as to lack of orders and reduction of labour in several industries, but these, as usual, are not confirmed by figures of the unemployment bureaux. Last week's returns showed that the total number in receipt of unemployment allowances throughout the country was only 571. In any case, it is usually necessary for several months to elapse before scarcity of orders can make itself felt sufficiently to result in reductions in labour, whereas the recovery of the franc is of quite recent date. Certain concerns, it is true, are known to be somewhat hampered through the restriction of banking credits, while the fact that the last weekly Bank statement disclosed that private current accounts had swollen to 4,800 millions, or 479 millions more than the previous week, may be regarded as indirect proof of a slackening in industry. Taken all round, however, there is little evidence as yet of serious difficulty, and a good many authorities are disposed to agree with M. Poincaré in the belief that, although there will probably be a certain amount of stringency, a serious economic crisis is by no means inevitable, provided the proper precautions be taken opportunely.

Prices tend steadily in the directions imposed on the

Bishopsgate, E. C. 3

one hand by the improvement in the purchasing power of the franc, and by the necessity on the other for bringing quotations for exports to the level of world values. Domestic prices are undoubtedly falling, while export prices are expected to continue to rise until they are more consistent with those prevailing elsewhere. The index figures for November are not yet available, but M. Poincaré was able to state in the Chamber a day or two ago that the figure for wholesale prices, which stood at 768 at the end of October, had fallen by November 27th to 700. Home products showed a drop from 745 to 699, while imported commodities fell from 808 to 701. Retail prices do not yet, of course, reflect the downward tendency to the same extent; nevertheless, the figure of 632, returned at the end of October, had been reduced by November 27th to 621. This fall, although not very marked, is general, as every class of shop demonstrates.

The discussion of the Budget for the liberated regions revealed that the Crédit National has so far effected total payments of 66,300,000,000 in liquidation of war losses and for reconstruction purposes. Of this total, however, only 24,000 millions have been paid in cash, while nearly as much—21,000 millions, in round figures—have been paid in securities of various descriptions. These consist of States Rentes, 1,200,000,000; thirty-year bonds, 10,900,000,000; Obligations de la Défense, 8,300,000,000; ten-year bonds, 656,000,000; and ten-year Obligations, 900,000,000. Many of these descriptions are unsaleable in the open market, with the result that needy sinistrés who have been forced to realise their holdings have been compelled to part with them at a discount of from 30 per cent. to 50 per cent. The total loss to sinistrés who have been obliged to sell in these conditions is estimated by M. Philippoteaux, the *rapporteur* of this particular Budget, at 5,000,000,000. According to the same authority the maximum amount still required to complete the reconstruction work is 15,000,000,000, of which it is proposed to pay (spread over the next three years) 4,000 millions in cash, 2,000 millions in material, &c. (at the rate of 600,000,000

worth per annum), and 9,000,000,000 in ten-year bonds. It was stressed, in this connection, that by the end of September, 1930 (corresponding to the date when the constitution work is expected to be completed), the annuities from the operation of the Dawes plan should have yielded to this country a gross total of 31,000,000,000, but the whole of this will not, of course, be applicable to the devastated regions account. The productive value of the restoration work accomplished is seen from the fact that the reconstituted area, whose population of 5,700,000 is already paying between one-fifth and one-quarter of the total yield from the income and land taxes. M. Tardieu, the Minister for the Liberated Regions, may be excused, perhaps, in view of the magnitude of the work accomplished, for having stated to the Chamber that in six years after her great calamity France has done more than the United States, after the Civil War, was able to carry out in 30 years.

The short discussion on the liberated regions Budget, by the way, appears to have definitely interred what its inventors a year or two ago termed "the huge devastated regions swindle." As the result of Socialist insistence that many industrials had flagrantly inflated their claims for war losses, special tribunals were set up to revise an enormous number of the dossiers. On a grand total of over 80,000,000,000 of claims that were originally granted, the total reductions ordered since the tribunals were set up two years ago amount to 39,000,000,000, of which 2,254,000,000 have actually been recovered, the rest apparently consisting of reduction in as yet unpaid awards.

GERMANY.—CREDIT POLICY—FINANCES—PRICES—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, December 8.

In the past week two measures were taken calculated to further the credit policy recommended against considerable opposition by the President of the Reichsbank. The exemption of foreign loans from taxation was withdrawn, and an expedient was announced for contracting the volume of short-term credit and increasing the volume of long-term. Dr Schacht has repeatedly criticised the excessive pace of borrowing from abroad, and he has also shown his disapproval of the extreme fluidity of the money market, both for itself and in connection with the independent lending policies pursued by departments holding accumulated public funds—in particular, the Federal and Prussian treasuries, the railways corporation, the posts, and the social-insurance organs. Foreign borrowing and the condition of the money market are directly connected. Part of the money borrowed from abroad by industrial concerns for long terms appears temporarily as short-term credit in Berlin. The foreign loans, according to Dr Schacht, act in an inflationist direction. That is not shown by the relatively stable price-indexes; but the loans, Dr Schacht declares, counteract various tendencies making for a price-fall. He further doubts whether the service of the foreign debt will be as easy as it is to-day once the flood of new foreign loans has abated; and figures so far published of the foreign payment-balance seem to justify this doubt.

The tax exemption has been in force since August, 1925. It consisted in reducing the tax on the capital transaction (Wertpapiersteuer) from the normal 2 per cent. to 0.5 per cent., and in remitting entirely the "capital yield tax." The latter is really the flat income-tax rate of 10 per cent., payable by non-resident foreigners on all income from Germany and deductible at the source. The Finance Ministry was empowered to remit this tax on the interest of individual foreign loans, with the approval of the Reichsrat and Reichstag Committee. The exemption had to be separately applied for each loan, and it was usually granted, though of late there has been a tendency to employ the Government's discretionary power in order, by refusing the exemption, to prevent the contraction of undesirable or too expensive loans. Ground for the exemption was the general

refusal of foreign lenders to bear any German taxation. Payment of the tax by borrowers would have been equivalent to increasing interest rates, which when the system was adopted were considerably higher than now. The withdrawal of the exemption will not affect past loans, and on loans already negotiated pending applications for exemption will be considered on their merits.

The influencing of the money market is to be attained through the issue by the Gold Discount Bank of three months' bills for sale in the open market to the bidder at the lowest discount rate. For Germany this system, best known from British precedents, is new. The bills will be in denominations of 50,000 marks and 100,000 marks, to a total of 100,000,000 marks. They will be discountable, and taken as security for advances by the Reichsbank at its current rates. The yield will be invested by the Gold Discount Bank in the 7 per cent. three to five-years' mortgage bonds issued by the Rentenbank, which, in turn, provides the means for 7½ per cent. mortgage loans to agriculture. This plan is unusual, in that it involves securing short-term debts with long-term investments; but that there is any practical danger in the novelty is not clear. The effect will be—if, as is expected, the dimensions of the bill issue are later increased—to draw a great deal of money out of the market and to diminish the effect of the lending out of accumulated public funds in what the Reichsbank considers excessive quantities.

The month-end settlements of November put a much severer strain on the market than usual. Day money rose to 8 per cent., the highest rate for many months. In part this was apparently due to the Rentenbank repayment transaction reported last week, and also, against expectations, the yields of the American Stinnes and Elevated Railway loans were not available. A good deal of money was borrowed over the year-end at rates up to 7½ per cent. The changed money market condition is reflected in the Reichsbank's return for November 30th, where, though discounts increased by only 74 million marks, advances made the unprecedented jump of 295 millions to 321 millions. The increase in circulation by 512 millions is also unusually large.

The Finance Ministry's monthly return shows on the ordinary Budget account:—

Revenue—	— Millions of Marks. —	
	October.	April-Oct.
From taxation.....	741.0	4,100.6
„ administration sources	45.0	229.5
	786.0	4,330.1
Expenditure—		
General administration.....	364.1	2,504.6
Reparations payments	51.4	188.4
Subventions to states and municipalities ..	203.8	1,486.1
	619.3	4,179.1

Including 219.9 million marks, seven months' share from the surpluses of 1924-25 and 1925-26, the ordinary Budget account for the period April-October shows a surplus of 370.9 million marks. On the extraordinary account there was a deficit in October of 63.7 million marks, in April-October 391.6 million marks. The Government has a good deal of money in hand from the surpluses of two financial years and also revenue from the last financial year which has not yet been spent on the objects for which it was voted. It will face heavy new expenditure as soon as its productive employment schemes are taken fully in hand, but it is generally believed that the long-delayed Reichsmark loan will not be floated until after the beginning of the next financial year, by which time the decline in interest rates may have proceeded further.

The cost-of-living index number for November is 143.6, against 142.2 in October, and 139.8 in January. The *Frankfurter Zeitung's* wholesale index for November 30th shows a further fall in the prices of standard manufactured articles. The decline here in the past two years has been very great, and it seems to be only partly due to cheaper textile materials. The Prussian Trade Ministry's report for November is favourable, showing improvement in nearly all the industrial branches dealt with. In addition to coal and iron—in which production has been increasing for some months—increased output is recorded in chemicals. The October postal returns indicate a great increase in business activity. Railway goods traffic in the

third week of November declined very considerably. The coal output continues high, having now been for six weeks continuously (Ruhr only) over 400,000 tons per working day, or more than 25 per cent. above the lowest output in April. Rolling-mill output in October was 978,285 tons, against 773,128 tons in October, 1925; in the first ten months of the year 8,191,174 tons, against 8,853,175 tons in the same months of 1925. Exports of heavy iron and steel in October were 13 per cent. higher than in September; exports of machinery 9 per cent. smaller. Increased activity is reported in the electro-technical branch, and further Russian orders are reported. Exports last year in this branch were 350,024,000 marks, against 324,121,000 marks in 1913; in 1926, on the basis of the first ten months' returns, they will be about 376,000,000 marks. The engineering industry reports an increase in both home and foreign orders; firms working more than eight hours a week short time are now only about 10 per cent. of all firms. The nucleus of the shipbuilding trust has been created by a decision to fuse the Hamburg Vulkan and Weser Tecklenborg yards in the A. G. Weser Company. The entry of the Deutsche Werft of Hamburg, the most modern of yards, into this trust is spoken of. The Steel Syndicate retains its 20 per cent. limitation of output. The Western Steel Trust (Vereinigte Stahlwerke) is forming a new minor trust of Siegerland works. The textiles industry reports a very great improvement.

ITALY.—NEW LOAN—PASSING OF THE TREASURY CRISIS—EXCHANGES, PRICES, AND WAGES.

(FROM OUR CORRESPONDENT.)

TURIN, November 27.

No new features have developed since my last letter in the stock exchange markets. The number of securities which change hands daily is small; as can be seen from the interesting figures which are for the first time summarised by the Treasury, foreign exchanges hover between relatively small limits, excepting the French franc, whose fluctuations are more pronounced. Public attention is focussed on the new 5 per cent. national loan issue. Although the price of the old 5 per cent. is only about 84 to 84.50 lire, which, with a coupon of 2.50 lire due a month hence, means about 82.50 net, the new issue is a success. At the date of writing subscriptions total 1,000 millions lire. Undoubtedly subscribers are moved by a patriotic sense of duty. They feel that the Treasury must be put in a strong position, so as to be able to pursue a definite policy of defence of the lira. It appears from the Treasury account of October 31st that during the month of October 725 million lire of Treasury short bills had to be repaid on falling due. The cash in the exchequer went down to 62 millions lire, and the Treasury current account at the Bank of Italy, which at the end of February was 2,669.7 millions, and was still 1,970.4 millions at June 30th, was reduced to 632.1 at September 30th, and had been turned at October 31st into an overdraft of 129.7 million lire. At present the crisis, thanks to the consolidation of the Treasury bills, is over. Effective revenue in the first four months of the fiscal year, from July to October, was 6,287.4 against 5,984.1 expenditure, with an excess revenue of 303.2 million lire. As the only cloud in the Treasury sky were the bills becoming due, the way is open, with good revenue coming in and the proceeds of the loan, to the solution of the monetary problem.

Public opinion is somewhat incensed by what seems to be unjustifiable resistance by the retail trade to the reduction of prices. At a meeting of the High Council of National Economy proposals were made for accelerating the process of adaptation of prices to the improvement in the gold price of the lira. It cannot be said, however, that wholesale and retail prices have been insensible to the improvement in the foreign exchanges. The following table was construed from the figures published in the new Monthly Bulletin of the Central Statistical Board (*Bollettino mensile di Statistica dell'Istituto centrale di Statistica del Regno d'Italia*, Numero 1., November, 1926, Libreria dello Stato). Hitherto current official figures had to be sought in the useful appendices to the monthly Treasury Account. Henceforth the Treasury Account will

again contain only budgetary, public debts, and bank of issue official statements. Economic and financial statistics will be published in the new Monthly Bulletin of the Central Statistical Board, which is put under the energetic direction of Professor Corrado Gini. The first number is a rich mine of data, from which it would be possible to quote at length. As to the problem of the relations between foreign exchanges and internal prices, the figures in the Bulletin are as follows:—

	Gold Price of the Lira.	Wholesale Prices (basis 1913 = 100).	Retail Prices Milan (basis 1st half 1914 = 100).	Wages (basis 1913 = 100).
January	477.9	658.6	665	552
February ..	479.0	654.7	661	
March	480.0	640.3	647	
April	479.6	636.4	642	567
May	500.3	642.9	652	
June	527.7	654.1	650

The conclusion is that the gold price of the lira fluctuated very much more than prices. Against an increase of 111.3 points between January and August in the gold price (i.e., dollar or sterling price) of the lira, wholesale prices increased only 32.4 points, and retail prices even fell 13 points. When foreign exchanges improved and the gold price of the lira diminished 130.9 points, from the end of August to November 15th, wholesale prices diminished only 46.1 points, and retail prices even increased (up to the end of October) by 20 points. It cannot be said that fluctuations of foreign exchanges do not reflect themselves on internal prices; but their influence is slow, and sometimes is not wholly spent when a new movement begins in the inverse direction. Probably wholesale prices would have gone up after August, if the direction of foreign exchanges had not been inverted. One must add that wholesale prices would make a better showing, from the consumers' point of view, if it were not for the British coal strike and its repercussions on prices of metals and on freights. The only group which marks an increase between January and the second week of November is the mineral and metals group from 625.0 to 767.3. Therefore, when the consequences of the coal strike are over, the general price index will go down. Wages are continually increasing, but are as yet lagging behind in comparison with the cost of living. There is, therefore, a just ground for the contention of the workers' corporations that wages must not be reduced, and that, although rising, they are not in equilibrium with the increase of prices. Prices will have to move a long way downward before wages can be touched.

SPAIN.—POLITICAL POSITION—BUDGET—TRADE AND PRICES.

(FROM OUR CORRESPONDENT.)

MADRID, November 30.

For more than three years now the country has been under Primo de Rivera's rule, and his grip on the nation seems to be stronger than ever. The outbreak of the artillery corps last September, one of the greatest difficulties he has ever met, was easily overcome by sheer energy, and from December 1st the officers who desire it will be reinstated to their posts and the corps reorganised on a more economic scale. These decisions, after the punishment of those mainly responsible for the outbreak, will contribute to the pacification of that important section of the Army. The proposed organisation of a national Assembly on new lines—quite different from the old "Cortes"—has been postponed time after time. Economic and financial matters appear to be the most serious for the Government, for they have for a long time been promising essential changes in the Budget and tributary system, but have only kept on altering the end of the fiscal year. This used to be March 31st, and was changed in 1924 to June 30th, a supplementary three months' Budget being introduced. From the beginning

of 1927 onwards the financial year will be made to coincide with the calendar year, and another supplementary Budget was introduced for the second half of the present year. The deficits of recent Budgets have been as follows:—

	Pesetas.
Full year, 1923-24 (to end of March)	576,315,000
Full year 1924-25 (July 1 to June 30)	414,565,000
Full year 1925-26 " "	567,500,000

The figure for 1925-26 is only provisional. The supplementary Budget approved for the present half-year shows a total expenditure of 1,445,518,000 pesetas, against a total income of 1,478,092,000 pesetas, giving an estimated surplus of 32,574,000 pesetas. The proposed expenditure figure represents economies at the rate of about 200 millions per annum compared with 1925-26. As there is also a calculated revenue increase of 50 millions in the six months, the total reduction of the deficit should reach fully 300 millions per annum.

But apart from the ordinary Budget the Government approved last July an extraordinary Budget dedicated to expenses of a permanent nature to be executed during the present half-year and in the ten following years, amounting to 3,539 million pesetas, and distributed as follows amongst the Government Departments:—Presidency, 72,880,000; Home Office, 65,640,000; Foreign Affairs, 29,000,000; Education, 200,000,000; War Ministry, 631,578,000; Public Works, 1,600,000,000; Navy, 877,630,000; Treasury, 32,219,000; Justice, 30,000,000. The total amount of this special ten years' Budget will be covered by the issue of funded debt. The issue corresponding to the first instalment of 225 millions was made on November 16th in 5 per cent. funded debt (amortizable), free of the 20 per cent. tax, at 99 per cent., with the full quarterly coupon payable on January 1st. Applications amounted to 570 millions, or $2\frac{1}{2}$ times the amount offered, and the issue was therefore a real success. The Government is now preparing the Budget for 1927 in connection with the full reform of the fiscal system, and with the intention of considerably reducing the deficit. The extraordinary Budget will require about 450 millions for each of the next three years, and the ordinary Budgets perhaps other 250 millions, which makes 700 millions for the State; the country's savings are estimated at about 1,500 millions per annum, which leaves 800 millions for industrial enterprise, including railway construction, which is now in a period of great activity. There is thus no possibility of any reduction in the yield of capital in the near future, but the prospects are rather on the side of an increase, which might be considerable, as soon as the present commercial stagnation is over.

Although the industrial field is generally suffering from depression, specially the textile industries, the railways are the bright exception, owing to the epoch of new constructions opened by the recent organisation with Government control and assistance.

The volume of foreign trade in the first half of this year amounts to 2,011 million pesetas, with a small increase of 78 millions over the same period of 1925, but still 328 millions under 1924 figure. This affords a confirmation of the slackness of trade during 1925 and 1926. Imports have increased 20 millions compared with the first half of 1925, but are 279 millions lower than in 1924. Exports, on the other hand, increased by 58 millions, and are only 49 millions under the 1924 figure. The unfavourable balance of trade is thus correcting itself; it was 524 millions in the first six months of 1924, 332 millions in same period of 1925, and 294 the first half of the present year—i.e., at the rate of 588 millions for the whole year. As that amount is more than offset by the remittances from Spaniards in North and South America, without taking into account other invisible exports, such as tourists' expenditure in Spain, increasing every year, it may be taken that the trade balance has ceased to be a burden on the value of the peseta. Prices are slowly increasing; the food index number rose from 176 to 180, and industrial materials from 177 to 180, from June to August, although they are still under the total mean index for 1925, which was 183.

DENMARK.—POLITICAL CRISIS—GENERAL ELECTION—GENERAL CONDITIONS—TRADE BALANCE—BACK TO THE GOLD STANDARD.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, December 4, 1926.

As foreshadowed in my last letter, the Bills proposed by the Government in order to support trade have led to a political crisis and a general election. This election took place on the 2nd instant, and gave the following result:—The Venstre party (farmers) will have 46 seats in the Folketing, against 44 previously; the Conservatives, who scored the greatest increase in votes, will have their number increased from 28 to 30. On the other hand the Radicals, who supported the previous Government, lost four seats, and are now reduced to 16; while the Socialists lost two seats, reducing their number to 53. The election on the Foroya Islands will take place later, and will no doubt result in the "Venstre" party retaining the seat in question. Consequently, the "Venstre" party and the Conservatives will have 77 seats between them, against 69 Radicals and Socialists. As the "Venstre" and the Conservatives have the majority of seats in the "Landsting," the possibility of a Government block on this basis is there, but the two parties have rather diverging ideas regarding certain economic matters. For instance, the "Venstre" party has hitherto been against the Conservative desire for an emergency duty in support of suffering industries.

On the day following the election the Prime Minister, Mr Stauning, handed in the resignation of his Cabinet to the King, who will negotiate with the party leaders in the Folketing and Landsting in the course of the next few days. Until these political problems have been resolved trade will adopt a tentative attitude. The situation is practically the same as a month ago, though industrial unemployment has increased. However, some hope is entertained that a Government of anti-Socialists will be able to create more favourable labour conditions for production and trade than a Socialistic one, and many are looking forward to the possibility of some relief of the tax burden under the new Government.

At the end of November the number of unemployed in this country was nearly 63,000, against just over 51,000 at the same time last year, and about 24,000 in 1924. The number was nearly equal to that experienced during the year 1921, the previous highest, and it illustrates the difficulties of industry in the present situation. During each of the first ten months of 1926 the percentage of unemployment has been considerably higher than last year; for instance, in October 18.6 per cent., against 13.5 per cent., in 1925.

The balance of trade still wears a favourable aspect, although this to a certain extent reflects the depression. In September imports had a value of Kr. 142,000,000, against exports of Kr. 126,000,000, and there was thus an excess of imports of Kr. 16,000,000. But in October imports were reduced to Kr. 135,000,000, while exports were increased to Kr. 128,000,000, and the deficit of the said month was therefore Kr. 7,000,000 only. For the nine months total imports were Kr. 1,304,000,000, and exports aggregated Kr. 1,271,000,000, resulting in an excess of imports of Kr. 33,000,000 only, or just over Kr. 3,000,000 per month. This difference is considerably less than during last year, and the excess of imports will in any case be easily covered out of invisible income, as, owing to the English coal strike, the Danish mercantile marine has made bigger profits than last year. On January 1st the freight index of the Statistical Department showed a figure of 103.1 (against 100 for January-March, 1925). Afterwards freights were on the decline until May, when the figure was as low as 93; but since then there has been a rise every month, 129.8 being reached in September and 159.5 in October.

As a consequence of the effects of the coal strike, Danish wholesale prices showed a rather big rise. The index of the *Finanstidende* for August was 141, while during the following month the figure rose to 145, and during October to 150. However, subsequently the figure has declined to 145, principally owing to the breakdown of the coal strike. Further, it may be mentioned that the wholesale price index of the Statistical Department

rose from 162 to 178 during the period September-October.

At the end of November the note circulation of the Nationalbank was Kr. 378,000,000, against Kr. 433,000,000 a year ago. It is expected that from the New Year the bank will reintroduce the gold standard, and lately it has been assured that this will be on a gold ingot basis. Concerning this, negotiations are in progress at present, but these cannot be finally completed until the Rigsdag again meets about the middle of the present month.

JAPAN.—BUDGET FOR 1927-28—DEBT REDEMPTION PLAN—TRADE BALANCE—MARKETS AND PRICES.

(FROM OUR CORRESPONDENT.)

TOKIO, November 8.

The Budget estimates for 1927-28 were approved by the Cabinet Council on Sunday afternoon. The total national expenditure in the new Budget was fixed at 1,730,373,000 yen. This figure shows an increase of 132,082,000 yen upon the current year. The increase is chiefly accounted for by the naval programme for cruiser construction (4.7 million yen for the first year's instalment), increased grants in aid to elementary education (5 millions), subsidy to the reclamation work in Hokkaido (6 millions), war pensions (3.3 millions), and debt service (44.4 millions). The estimated revenue for the next fiscal year is placed at 1,499,736,000 yen, or a deficit of 230,637,000 yen against the approved expenditure. Of this, 70 millions is to be met by a new loan, and the rest by the previous year's surplus. The departmental estimates for next year and the comparison with the current year are set out below:—

Departments.	Estimates for 1926-27. Yen.	Estimates for 1927-28. Yen.	Increase (+) or Decrease (—) in 1927-28.
Imperial Household..	4,500,000	4,500,000	..
Army	200,202,000	212,067,000	.. + 11,865,000
Navy	239,028,000	255,426,000	.. + 16,398,000
Foreign Office	18,103,000	19,360,000	.. + 1,257,000
Home Office	238,934,000	257,424,000	.. + 18,490,000
Treasury	337,874,000	399,316,000	.. + 61,443,000
Justice	32,490,000	37,361,000	.. + 4,871,000
Education	124,093,000	140,439,000	.. + 16,346,000
Agriculture	44,935,000	49,322,000	.. + 4,387,000
Commerce & Industry	12,095,000	11,640,100	.. — 455,000
Communications....	346,040,000	343,514,000	.. — 2,526,000
Total	1,598,294,000	1,730,373,000	.. + 132,082,000

A special feature of the new Budget estimates is a new loan-redemption policy. The Government proposes to increase the statutory amount to be added to the sinking fund by applying part of each previous year's surplus, which in our practice does not automatically go to the redemption of debt. The sum to be allotted yearly to repayment of debt out of the surplus is fixed at 25 per cent. of it, and 44.4 million yen, or a quarter of the previous year's surplus, is budgeted for the next fiscal year. Under this new scheme the national debt to be redeemed during next year will be increased from 54 millions to 98.5 millions. Though the new Budget has been severely criticised as virtual abandonment of the present Government's avowed policy of economy and financial retrenchment, the new loan policy has been greatly welcomed by all sides as a new departure in our national finance in view of ever-increasing national debt, which now totals 5,100 millions, as against 5,026 millions a year ago, and 4,770 millions two years ago.

Foreign trade figures for last month reveal a fairly satisfactory improvement. The returns for October show the first comfortable favourable balance of 49,668,000 yen, imports totalling 142,149,000 yen, and exports 191,817,000 yen. As compared with the corresponding month of last year, however, both imports and exports disclose a rather serious decline, imports decreasing by 24,501,000 yen, and exports by 35,709,000 yen. But these are largely accounted for by the sharply appreciated value of the yen. The export trade was rather active during the month. As a matter of fact, raw silk, which predominates Japan's export trade, show a very slight decrease in value, despite the fact that silk-reelers complain of heavy losses resulting from the fall in prices, and at the moment are agitating for a maintenance of prices. Though the adverse balance of trade for the ten months ended October is 353.5 million

yen, as against 317.6 millions for the corresponding period of last year, if improvement continues for the remaining two months, the whole year's adverse balance on the visible trade figures should contract to close upon 300 millions, or an increase of only 50 millions, or less over that of last year.

Monetary ease continues. Despite the approach of the year-end, the discount market has not yet developed any appreciable hardening tendency. The note circulation contracted to the level of 1,150 million yen after the turn of the month; the fiduciary issue is nearly 20 millions below the statutory minimum. The stock market, after a temporary rise after the reduction in Bank rates, has been down to levels below the worst of the year. The Bank of Japan's wholesale index number for October recorded a still further drop of 1.79 points, the total being now 230.39, as against 232.18 in September and 265.14 in October, 1925.

Letters to the Editor.

INCOME-TAX AND PRICES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In the hope that I may draw Mr Sloan to support by some argument or evidence the statements in his letter which you publish in your issue of the 27th instant, I venture to suggest that they are entirely fallacious.

Your correspondent runs through every schedule of the Income-tax Act, and states dogmatically that the tax in each case is passed on by the payer by the simple expedient of adding it to the price of the goods or services he provides, thus raising the cost of living all round. There are many difficulties in the way of the apostle of such a doctrine.

In the first place, the tax is, in fact, levied on the surplus remaining after charging the cost of producing the income, and the manifest imperfections of the system by which this is achieved do not, I think, seriously affect the principle. The tax is, moreover, universal, subject to the statutory exemptions, and one aspect of Mr Sloan's theory is that *everyone* recoups from someone else the tax imposed on his (surplus) income. This is unconvincing as it stands.

If Mr Sloan is right, a rise in the rate of tax would be followed by a rise in all prices and remuneration for services, but if the producers sought to advance prices to cover their extra tax, could not the consumers justly retort that they were taxed to the same extent, and therefore were not even in the position to pay as much as before?

The theory that a seller can raise his prices to meet additional income-tax is dependent upon the assumption that he is not already getting the highest prices he can without injuring his business, and has a margin of price up his sleeve to meet possible rises in taxation, which, to say the least, is improbable.

If it happened that all producers attempted to raise prices to recoup their personal tax, it is reasonable to assume that the more enterprising would at once begin to cut, and be willing to bear more and more of the burden of the tax to secure custom, until the producers bore all the tax.

Admittedly, if the Government raided capital and used it to maintain people in idleness the falling off of production would raise prices; also if the money were used to provide useless work the resulting inflation of credit would have the same effect. Professor Jones has made this clear. This is, however, a different thing altogether.

There seems also to be something wrong with Mr Sloan's reference to the "disastrous effect in the wasting of assets and the destruction of capital." Allowance for renewals of capital assets is made in computing tax liability, though the alternative percentage deduction is often inadequate. One can

recall, moreover, the great extension of plant and other industrial capital which took place just after the war, when income-tax, corporation profits tax and Excess Profits Duty were taking the lion's share of the profits of industry.

It has been pointed out that taxation for repayment of debt definitely increases the supply of capital.

If all this is wrong, I err in good company, as the following short quotations show:—

"A tax on profits, like a tax on rent, must, at least in its immediate operation, fall wholly on the payer. If a tax were laid on the profits of any one branch of productive employment, the tax would virtually be an increase in the cost of production, and the value and price of the article would rise accordingly, by which the tax would be thrown upon the consumers of the commodity, and would not affect profits. But a general and equal tax on all profits would not affect general prices."—(J. S. Mill.)

"The extent to which income-tax payers in general can shift the incidence of the tax is, no doubt, so small as to be practically negligible."—(Professor Dalton.)

"This brings us back in a large degree to its non-transferability (i.e., of the income-tax); for taxes on rent, on the higher kinds of wages, or on employers' gains are not easily shifted. Therefore, speaking broadly, we may say that the shifting of income-tax is not to be expected." (Bastable.)

"The assertion is that income-tax is a charge upon the business which is transferred to the consumer in the form of a higher price, and that consequently a heavy income-tax raises the price-level. If it were true that such a tax was a charge which could be unloaded on the consumer the business man would have no complaint to make; as a seller his interest in the rate of tax would be merely academic. But income-tax is not passed on in that way; it is a tax upon realised income, that is (in the case of a business) upon the residue. And it is precisely because its incidence is upon the recipient or recipients of the residue that business men complain of the burden of the tax."—(Professor Jones.)

"The income-tax can hardly be said to enter into the fixing of prices in the class of business with which I am familiar."—(Mr. Gordon Selfridge.)

THE FRENCH FRANC.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Percy H. Joseph diagnoses the financial position in France with accuracy, but I doubt if his solution of stabilising the franc at reduced rates during the following years until the old parity is reached will meet the case. The object of stabilisation is to provide a certain measure of stability, and that would not be attained by adopting the suggestion. It is a difficult problem, but I venture to think justice would be meted out to the rentier by converting his bond into a new security with an additional income bond which would bear interest in later years, and would to some extent compensate the holder for some part of his lost capital. There is an expert committee in France, whose appointment I had the honour to suggest, to whom the whole matter should be referred, and who no doubt would provide the details of a settlement.

Stabilisation at or about the existing rate would be an immense boon to all interests, and all claims could, I believe, be adjusted to meet such stabilisation.—I am, &c.,
December 6th, 1926. D. M. MASON.

Books and Publications.

WHY AND HOW MEN MAKE MONEY.

SINCE most of us never succeed in making enough money to satisfy our assumed wants, the procedure of those who do has a fascination; we want to know how they do what we cannot, and what it feels like. On this question much more light is shown by the artless, but transparently sincere, autobiography of the late George Pauling than by the pseudo-psychological discourse of Mr Attwood. Mr Pauling, obviously, had drive, push, initiative: that combination of qualities—physical, mental, and moral—that go to the achievement of material success. The enormous appetite to which he naïvely refers more than once—on one occasion, for instance, he records how at breakfast at Delagoa Bay "three of us, I refrain from mentioning the names of my companions, had a thousand

"The Chronicles of a Contractor." Being the Autobiography of the late George Pauling. Edited by David Buchan, with an Introduction by J. O. P. Bland. Constable. 10s 6d.

"The Mind of the Millionaire." By Albert W. Attwood. Harpers. 7s 6d.

oysters with about eight bottles of champagne"—was only one sign of the lusty vitality of the man, which enabled him to rise, Antæus like, from the defeats of the earlier part of his career. He started with little enough else to help him. His father, an Indian engineer, had an odd trick of disappearing and leaving his family to fend for itself. He never had much of an education. One of his early jobs was that of a night watchman. But nothing daunted him then or later. Thus, in the early 'eighties, he put in for a Cape Government contract for 90 miles of very heavy railway work. He had not got the finance, but he had spotted a clause in the contract which meant that certain work, already done, would be credited to the successful contractor. "The difference meant that I got £17,000 practically before I did any work.....The contract I knew to be one out of which £100,000 to £150,000 might be made, and after I got the £17,000 on the first certificate I was able to keep financing the Kowie job, which otherwise would have been a source of continual worry to me." Incidentally, Mr Pauling's pages give a most vivid picture of the creation of the new South Africa, and throw some suggestive light on the large unscrupulousness of Cecil Rhodes and on the Jameson Raid. His South African pages are the most interesting, though there is a fresh quality in his accounts of railway and other constructional work in Syria, of his efforts in China, and of his engineering accomplishments at home. He says little about himself, except in the rather oddly touching references to his affection for his brother Harry; but a man emerges, and also a conception of motive. One sees pretty well why he went on and "made good." He enjoyed work; risk attracted him; the desire for self-expression moved, for him, along that line. Money was good, but not good merely in itself—rather as a sign and as an instrument. So long as money is the symbol of achievement and the implement of power men will go on amassing it beyond the limits of their enjoyment.

Mr Attwood brings back, all too vividly, those long journeys in American trains, when the eyes travel wearily up and down the long columns of the illustrated magazines and find the advertisements easier reading than the "stories." He has the fatigued and fatiguing "brightness" and the spurious fairmindedness that belong to magazine treatment. His subject is an interesting one: any honest illumination of motive is worth having; but his treatment is so scrappy and ill-organised, and his own point of view so uncertain, that interest evaporates as one turns over his discursive pages. The average American has, apparently, not made up his mind whether millionaires are a blessing or a pest; and Mr Attwood pretends to the same detachment, though one suspects him more and more of being the Devil's advocate. There is an appendix which contains some facts that are instructive as to the number and diffusion of millionaires in the United States; beyond that, his book is journalism.

AN OLD STORY RETOLD.*

In his "Economic History of England," whose second edition has just appeared, Mr M. Briggs has set himself to produce a useful compendium of facts. Unfortunately, the form which he has selected for their presentation prevents his book from being anything more. From the Elizabethan age onwards each group of facts is treated in splendid isolation—technical invention, agriculture, poor-law, banking, trade unionism, individualism, &c. The defects of this method are well illustrated in his chapter on the poor-law. Bentham and Utilitarianism, which are segregated in the chapter on "Laissez Faire," where their constructive and administrative aspects are wholly neglected, find no place in the poor-law section. There is no reference in this section (or, indeed, anywhere else) to public health. And the incident of the 1909 Royal Commission is treated without any reference to the development of local government organs outside the poor-law, whose coming precipitated the poor-law recommendations of the Minority Report. This is one example of a type of defect which characterises the book from start to finish. Their net result is to rob the reader

* "Economic History of England." By M. Briggs, M.A., B.Sc., University Tutorial Press. W. B. Clive. Price 8s 6d. Pp. vi. 548.

of any general grasp of the outlook, emphasis, and character of a particular period. Here and there small specific defects appear. Mr Briggs is singularly unfortunate in his summary of Malthus's population theory on page 232. Malthus's realisation of the prudential check did not destroy his objection to Utopian schemes, but rather strengthened it, on the ground that in a Socialist State the economic conditions for the exercise of such prudential checks would be absent. The Workhouse Test Act of 1722 is mentioned on page 247, and its importance emphasised, but its provisions are not indicated. On page 250 no suggestion is made that the "guardians" of Gilbert's Act differ from the guardians of to-day. On the same page reference is made to the "Justices of Speenhamland," and not to the Justices of Berkshire meeting at Speenhamland. The date of the first Coal Mines' Regulation Act is given on page 364 as 1814, instead of 1842. One could multiply such examples, whose net result is somewhat to diminish the value of Mr Briggs's book, even though it remains a useful compendium of facts.

BOOKS RECEIVED.

British and Foreign State Papers, 1923. Compiled and edited in the Librarian's Department of the Foreign Office. (London) H.M. Stationery Office, Kingsway. 17s 6d net.

A volume for the shelves of the intimate student of foreign affairs or of the international lawyer, this official publication contains the text of numerous international treaties and agreements concluded by Britain and other countries in 1923. This is the 117th volume of the series.

Traité Général de Science Economique. Par Christian Cornelissen. Vols. I. and II. (Paris) Marcel Giard, 16 Rue Soufflot, et 12 Rue Toullier. 120f.

These two volumes, aggregating well over 1,000 pages, are devoted to an examination of the theory of capital and profit.

Les Expériences Monétaires Contemporaines. Par George-Edgar Bonnet. (Paris) Librairie Armand Colin, 103 Boulevard Saint-Michel.

A review by a well-known French economist of the post-war monetary experiences of Britain and Europe.

La Banque à Succursales dans le Système Bancaire des Etats-Unis. Par Jean Steels. Introduction par Allyn A. Young. (Paris) Rousseau et Cie., 14 Rue Soufflot. (New York) Foreign Publications, Inc., 47 West 47th street.

One of the features of this book is Dr. Steels's comprehensive account of the problems of branch banking in the United States, which gains the special commendation of Professor Young, of Harvard, in the preface which he contributes to the volume.

The History, Law, and Practice of the Stock Exchange. By A. P. Poley and F. H. Carruthers Gould. (London) Sir Isaac Pitman and Sons, Limited, Parker street, Kingsway. 7s 6d net.

This is a fourth edition, revised and enlarged, of a work which those who are intending to enter the Stock Exchange should study, and existing members might with advantage place upon their office shelves.

Theorie der Wirtschaftlichen Entwicklung. Von Dr. Joseph Schumpeter. (München) Duncker und Humblot. M. 14.50.

This book deals with the theory of economic development, and illustrates very clearly the part played by capital. Chapters on credit and capital, the money market, interest on capital, &c., may be mentioned as a guide to the ground covered.

Beiträge zur Theorie des Geldes. Von Béla von Jankovich. (Wien) Manzsche Verlags- und Universitäts-Buchhandlung, Kohlmarkt, 20.

A treatise on the theory of money, discussed in the light of developments during the period, 1914-1925. The author deals with inflation, of which, he says, there were three distinct periods, in the different countries of Europe: price movements, exchange fluctuations, the influence of inflation on the credit system, and, later, stabilisation in Germany and Austria-Hungary. Numerous statistical tables are appended.

Die Modern Geldtheorie und Währungssysteme. Von Dr. Bruno Moll. (Stuttgart) Ferdinand Enke. M. 5.70.

An enlarged edition of a former work, entitled "Die Modernen Geldtheorien und die Politik der Reichsbank." It includes an interesting discussion of the merits and demerits of a paper as opposed to a gold standard.

Working Days. Edited by Margaret A. Pollock, with an Introduction by the Rt. Hon. Lord Buckmaster. (London) Jonathan Cape, Limited, 30 Bedford square. 6s net.

This is a collection of personal records of 16 working men and women written by themselves. The aim of the book is to give to the general public a vivid glimpse of the conditions under which various sections of their fellow men and women earn their living. The list of occupations covered includes railways, mines, building, agriculture, blast-furnaces, electrical engineering, and textile factories.

European Economic and Political Survey. Vol. II. No. 6. November 30, 1926. (Paris) The Reference Service on International Affairs of the American Library in Paris. Inc., 10 Rue de l'Elysée.

Includes, amongst others, an article on "The French Budget for 1927."

Whitaker's Almanack, 1927. Complete edition 6s net. Abridged edition, 1s 6d net. (London) 12 Warwick lane.

The 59th annual volume of "Whitaker" is as indispensable as ever as a mine of general information, and a reference book to which one may turn with confidence for correct facts. Few offices or households can afford to be without it.

The South American Handbook, 1927. Edited by J. A. Hunter. (London) South American Publications, Limited, Atlantic House, Moorgate. 2s 6d net.

An informative reference book on the countries of South and Central America, and also usable by travellers as a guide-book.

The Bankers' Magazine. December, 1926. (London) Waterlow and Sons, Limited, London wall. 2s 6d net.

Includes articles on "The Gold Shortage Question" and "Back to Individualism," the latter being by Mr Harold Cox.

The Banker, December, 1926. (London) Eyre and Spottiswoode (Publications), Limited, 1 and 2, Goldsmith street, Fleet street. 1s.

Includes articles on "German Economy," by Lord D'Abernon, and "The Banker's Manifesto," by Lord Hunsdon.

The Economic Journal. December, 1926. (London) Macmillan and Co., Limited. 6s net.

Contains an article by Mr A. W. Flux on British export trade.

International Labour Review. November, 1926. (London) George Allen and Unwin, Limited, Ruskin House, 40 Museum street, W.C. 1. 2s 6d.

Includes articles: "The Constitutionality of Labour Legislation in the United States of America: 1," by William Gorham Rice; "The Conciliation and Arbitration of Industrial Disputes: 1," &c.

The Railway Gazette. First South American Railway Number. November 22, 1926. (London) 33 Tothill street. 2s 6d.

Contains a detailed and illustrated survey of the railway systems of Argentina.

Institut Internationale de Statistique: Bulletin Mensuel de l'Office Permanent. Novembre, 1926. (La Haye) W. P. Van Stockum et Fils. 1.50 florins.

Commerce Extérieur de la République Tchèque-Slovaque en 1923 et 1924. (Prague) L'Office de Statistique.

An official publication of the Czechoslovak Government, on the country's foreign trade, containing a short introduction and over 400 pages of statistics.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
December 28.	December 30.

THE two chief causes that have recently spread depression over Stock Exchange markets, namely, the excited movements in the franc and the grave news from China, have made less play this week amongst the speculative and the semi-speculative sections. The approach of Christmas and the preparations for window-dressing at the end of the year are now cited as reasons for the quietude that prevails in parts of the House. Business is of the bread-and-butter order, though a good deal of activity continues to characterise some sections.

The War Loan has maintained three figures. Other gilt-edged stocks show a steadiness somewhat unusual at this season of the year. A few issues of very substantial amount, notably Amalgamated Press preference advertised this week-end, arouse attention, and interest in the foreign market is quickened by the expectation of an early advent of the Bulgarian Refugee Loan.

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business.

Traders interested in the Foreign Markets are invited to correspond with

THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

European Reconstruction loans have increased in popular favour, daily improvements in price reflecting the steady demand that there is for the 7 per cent. and 7½ per cent. varieties now obtainable. The market in Chinese bonds has been a shade less nervous, and hardy buyers have come forward to take some of the better secured issues. Chileans still dwindle in consequence of the nitrate outlook. Mexicans remain out of favour. In Brazilians there are few changes worthy of note. Peruvian Corporation stocks have been fluctuating according to the moods of Paris. The Belgian 7 per cent. issued at 94 has reached its highest price so far of 7½ premium.

Railway stocks are better under the leadership of London, Midland, and Scottish, and the Underground group is also better. Argentine Railways have shaken off some of their recent weakness, prices having gone down to levels at which they offer attraction from the yield point of view. United of Havana improved by reason of the brighter prospect which now opens for the sugar industry, a factor which has had a favourable effect upon the prices of sugar-producing shares.

The rubber market has toned up, thanks to a recovery in the price of the produce, which is thought to be due to the announcement that an American pool has been formed for the purpose of stabilising the price of rubber from the point of view of the consumer. Tea shares are neglected. The oil market has been going very softly, much of the dealing being of the professional order. The public are not taking much practical interest in oil shares at the moment. Amongst textile shares Courtaulds have further reacted on fears regarding the final dividend for the year, and the English textile shares are dull as a reflex of the reduction in the Bleachers' dividend. Napiers have been a strong and lively market amongst motor shares on amalgamation and bonus rumours. Dunlops, on the other hand, went back, being sold by people who have substantial profits, and who deem it wise to take them in view of the cut in the price of tyres advertised by a competitor.

Hudson's Bays strengthened while Sudans reacted, in spite of a satisfactory meeting this week. The Aerated Bread meeting fell on the same day, and led to a brisk rise in the price of the shares. In the tobacco group British Americans gave way in consequence of the grave news from China, where the company is said to have large interests. There was a rally from the lowest, and, although the tobacco market remains extremely sensitive, prices are tolerably well maintained. The shipping list is steady, P. and O. improving a trifle on Lord Inchcape's statement that the break-up value of the deferred stock is above the current market quotation. The feature amongst insurance shares is a jump in Motor Union, rumour reviving some of its previous gossip in connection with the company. The break in Hongkong and Shanghai banking shares has been followed by prompt recovery. The London banking group is quiet. It is assumed that the forthcoming dividends will all be at the same rates as those of a year ago. The cement and road-making shares are a little dull, on apprehensions lest the coal strike may have seriously interfered with their operations during the past few months, and the iron and steel department also shows a tendency to decline for a similar reason.

The South African mining market still clings to the skirts of Paris, whose operations in De Beers, Chartered, and Tanganyika give the list their daily colour. With the franc up to 125, the Frenchmen again turned out a certain amount of stock, not great in volume, but sufficient, in the absence of speculative enterprise on this side, to depress prices a little. There is more doing in the tin share market, where Malaysians have been steering a somewhat erratic course, with fluctuations confined within narrow limits. San Francisco mines are better on dividend hopes, to be resolved immediately. Bolivian shares are unaffected by the reported resignation of the Government, and Bolivia Concessions have again been a marked feature of strength.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded	213,160,515			
NATIONAL SAVINGS CERTIFICATES.				
April 1, 1926, to December 4, 1926, Dr £2,700,000.				
Net sales week ended December 4, 1926, Dr £150,000.				
To the Public—				
Newcastle-upon-Tyne Corporation, £1,500,000 5% Cons. Stk. (red. at par July 1, 1947-57), issued at 99½% (Dec. 9), 1,500,000 ..	1,492,500	75,000	1,417,500

370,141,418	367,549,656			

Newcastle-upon-Tyne Corporation.—This is an issue of £1,500,000 5 per cent. consolidated stock at £99 10s per cent., redeemable 1947-57. Principal and interest is secured upon all the property, rates, and revenues of the corporation, and provision has to be made for the redemption of the issue by means of sinking funds. The rateable value is £2,471,045, a penny rate producing £9,262. The total outstanding debt is £6,451,055, of which £4,528,205 is in respect of reproductive undertakings. The total assets of the Corporation amount to £11,499,944, and the total liabilities, including the debt of the city, according to the last published accounts, are £7,038,791. Of the present issue £396,286 is for the repayment of Corporation mortgages that will shortly expire, and the balance is for other capital purposes. This is an excellent trustee investment.

Amalgamated Press, Limited.—Authorised share capital £6,200,000, divided into 5,000,000 7 per cent. cumulative preference shares of £1 each and 2,400,000 ordinary shares of 10s each; the whole of the latter, having been applied for, will be allotted in full. There has been created £3,500,000 of 5½ per cent. first mortgage debenture stock. This is an issue of 4,500,000 7 per cent. cumulative preference shares of £1 each at par. The company has been formed to acquire (1) the business of the Amalgamated Press (1922), Limited, which includes: 512,500 ordinary shares of £1 each out of a total of 600,000 shares in the Imperial Paper Mills, Limited; the whole of the capital in the following publishing companies: the Educational Book Company, Limited, Fashions for All, Limited, and W. B. Horner and Son, Limited; investments in industrial companies of an ancillary character of the value of £393,374; the copyright and goodwill of wireless publications recently owned by Radio Press, Limited; (2) 68,350 of the remaining ordinary shares of £1 each in the Imperial Paper Mills, Limited; (3) twelve periodicals issued and owned by Cassell and Co., Limited, and the whole of the share capital of the Waverley Book Company, Limited. Combined profits, other than those from the periodicals to be acquired from Cassell and Co., Limited, and from the Radio Press, Limited, excluding inter-company dividends, after deducting the proportion of the profits of Imperial Paper Mills, Limited, attributable to the preference and ordinary shares not held, and after eliminating interest and dividends received in respect of certain cash and investments not to be taken over by the company, and after charging all expenses, including directors' remuneration and depreciation of buildings, plant, machinery, &c., but before deducting income-tax and corporation profits tax, are certified to have been as follows:—Year 1922-23, £863,707; year 1923-24, £801,965; year 1924-25, £870,004; year 1925-26, £857,388. The purchase consideration is stated to be £8,027,719, payable as to £5,310,003 in cash, as to £250,000 as a deposit, and as to the balance on

completion of purchase, and as to £2,717,716 in 5½ per cent. first mortgage debenture stock of the company. The capitalisation is inclined to be top-heavy. The information relating to assets might have been more informative, especially as this is obviously a flotation where there are assets other than goodwill. But the promoters have followed what is apparently now the practice among newspaper publishing firms—namely, capitalising concerns on recent profits. Whether or not the newspaper industry is at the zenith of its prosperity time alone will tell. It will be observed, however, that the above profit figures, since 1923-24, show a decline.

Scottish and Southern Counties Investment Trust, Limited.—Authorised share capital £600,000, divided into 600,000 shares of £1 each. This is an issue of these shares at par. When fully paid up the shares will be divided into 60 per cent. of preference stock and 40 per cent. of ordinary stock, the preference stock being entitled to a fixed cumulative preferential dividend of 5½ per cent. per annum. The company has been formed for the purpose of conducting the usual business of an investment trust company. The undertaking has a good board, and a London Stock Exchange quotation will be applied for.

Home and Foreign Investment Trust, Limited.—Share capital £500,000, divided into 50,000 shares of £10 each. This is an issue of these shares at par. When fully paid up the shares will be converted and divided into preference and ordinary stock in the proportion of 60 per cent. of the former and 40 per cent. of the latter, the preference stock being entitled to a cumulative preferential dividend of 5 per cent. per annum. The company has been formed in particular to conduct an investment trust business. The directors are influential men locally, and quotations are to be applied for on the Glasgow and Edinburgh Stock Exchanges.

Hutchinson Printing Trust, Limited.—Issued share capital £245,000, divided into 145,000 7½ per cent. cumulative preference shares of £1 each and 100,000 ordinary shares of £1 each. This is an offer of £300,000 7½ per cent. cumulative participating first preference shares of £1 each. The company has been formed in particular to acquire the entire issued share capital and control of several printing and bookbinding businesses. The net assets are certified to be £333,797. Combined profits, before charging directors' remuneration and expenses, income-tax, corporation profits tax, excess profits duty, interest on loans, bank charges, and certain expenses of a non-recurring nature, are certified to have been as follows:—1922-23, £50,516; 1923-24, £54,278; and 1924-25, £56,733. The total purchase consideration is stated to be £449,750, payable as to £204,750 in cash and as to £145,000 by the allotment of 145,000 7½ per cent. second preference shares, and as to £100,000 by the allotment of 100,000 ordinary shares. Based on the figures given, the preference shares appear to be fairly well covered, but it should be noted that the preference capital is top-heavy.

West Hampshire Water Company.—Issued share capital £99,996 4s, and issued loan capital £49,996 10s. This is an offer for sale by tender of £12,410 5 per cent. irredeemable debenture stock at the minimum price of £95 per cent. and 2,000 new ordinary £10 "B" shares, which rank for a maximum dividend of 7 per cent. per annum, the minimum price of issue being par. The company was incorporated by special Act of Parliament in 1893, and supplies a statutory area of about 132 square miles, including the borough of Christchurch and part of Bournemouth. The net revenue of the company for the year ended June 30, 1926, is stated to be £11,643, of which interest on the debenture stock, as it will exist after the present issue, requires £2,498. Dividends on the preference shares amount to £2,344, leaving £6,801 available for the ordinary dividends. The existing 7 per cent. maximum ordinary "B" shares, it is stated, last year received 6½ per cent. The present issue will be used for the repayment of debenture stock and the extension of works, plant, &c. Well-secured investments.

The following advertisements relating to public companies appeared in the Press during the week:—**Tetihe Mining Corporation, Limited**, having an authorised share capital of £425,000, divided into 1,700,000 shares of 5s each; of these 1,600,000 are issued, 1,200,000 being fully paid, and 400,000 to the extent of 2s 6d per share. **Fife Tramway, Light, and Power Company, Limited**, having an issued share capital of £1,000,000, divided into 500,000 6 per cent. cumulative preference shares of £1 each, and 500,000 ordinary shares of £1 each; there is also outstanding £214,585 5 per cent. debenture stock. **Kuala Kangsar Plantations, Limited**, having an authorised share capital of £350,000, divided into 3,500,000 shares of 2s each, of which 1,007,507 have been issued; the remaining 2,492,493 shares will be allotted in part payment of the purchase consideration.

To complete our record of new issues and summary of profit and loss accounts, company secretaries are requested to furnish us with copies of new prospectuses and reports and accounts. Our readers can also assist by forwarding copies of prospectuses and company reports and accounts which may fall into their hands.

COMPANY MEETINGS, &c.

BRITISH OVERSEAS BANK.

SUCCESSFUL RESULTS OF THE YEAR.

INCREASED DIVIDEND—GOOD PROSPECTS.

IMPROVED TRADE PROSPECTS.

CHAIRMAN'S REVIEW OF CONDITIONS ON CONTINENT.

The seventh annual general meeting of the British Overseas Bank, Limited, was held at the bank premises, 33, Gracechurch street, London, E.C., on December 7th, the Right Hon. Viscount Churchill, G.C.V.O., the chairman, presiding.

The Secretary (Mr A. E. Thorne) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,

The report and accounts for the year under review have already been circulated to you. May I assume it is your pleasure that these should be taken as read?

When I addressed you a year ago I spoke of the menace which lay before us in the problem of our coal industry. How serious the menace then was has been more than borne out by subsequent events, and it is unnecessary for me to emphasise again these troubles from which we are not yet clear. All the same, the time has come, I think, when we can take stock of our position. And, even in the chastened mood in which we now are, we can feel that the worst is over. Given once more a spirit of co-operation between employers and employed, given the readiness which is gradually appearing, to appreciate on both sides the lesson of these last months, we can look with confidence to the future.

In this industrial dispute mistakes have been made, but there are features also to which we can look back with satisfaction. Faced with a general strike, the country as a whole combined spontaneously to throw off this menace to organised national life in a manner which, in my opinion, no other country could have done so successfully. When the coal strike unfortunately dragged on, the underlying good sense and feeling of responsibility in almost all concerned prevented the few extremists from forcing, as was their intention, an industrial dispute into the more dangerous forms of a political struggle. Then, again, badly hit as our industries have been, they have stood the strain, and, during this period of enforced inaction, many lessons have been learnt by them which will assist in their future recovery. I might also point out that, during this crisis, never has there been even a suspicion that the maintenance of the gold standard to which we returned the year before was for one moment threatened.

INTERNATIONAL AFFAIRS.

Although to a large extent we have been this year immersed in our own domestic troubles, we can, nevertheless, look back with satisfaction on the continued improvement in the atmosphere of international affairs. The work of reconciliation begun at Locarno has been completed by the admission of Germany to the League of Nations and by the marked change in the relations between Germany and France. Elsewhere there has been peace, although, unfortunately, in China internal disorder has grown more pronounced, with regrettable reactions on its foreign trade.

IMPERIAL CONFERENCE.

In the constitution of our own Empire, the recent Imperial Conference has accomplished what, in appearance at least, is a far-reaching revolution, with a surprising speed and economy in discussion. The full consequence of these measures cannot yet be foreseen, but the unanimity with which they have been approved, both by the representatives at the Conference, and throughout the Empire, indicates that the Conference itself has merely set the seal on what had already largely been acted upon in practice and approved by public opinion.

IMPROVED POSITION ON CONTINENT.

Our more immediate neighbours have in most cases profited from our misfortunes, and the coal trades of France, Germany, Belgium and Poland, in particular, have secured profits which have materially contributed towards the recovery of these countries. In Germany there has been steady progress, although, as I ventured a year ago to suggest would be the case, this progress has been less rapid than was generally expected. Belgium, after a period of acute currency difficulties, is to be congratulated on the bold and successful step of stabilisation. Of France it is more difficult to speak. For a time the new Government of M. Poincaré, and the recovery in national confidence which accompanied it, seemed to promise that at last the hard facts of the financial situation were to be faced. But recent developments have

given reason to fear that even yet the lesson has not been fully learnt, and that the undoubted economic resources of the country may be still further strained and dissipated.

In Italy a novel political experiment, which the outside world finds it hard to understand, has veiled to some extent the very real attempts that have been made there to restore the economic balance of the country, to reorganise the national finances, and to maintain the stability of the currency. In Poland, also, there have been dramatic political changes, but in this case the crisis, which to many seemed to be the beginning of serious internal disorder, has called out the best in the new national life of the country. With a self-restraint and self-sacrifice which has surprised those who looked only to the past history of Poland, all parties have sunk their particular aims and have worked together for the common good. Undoubtedly Poland in particular has been helped over a period of serious difficulty by the English coal strike. But the breathing space thus given has been wisely used, and we can, I think, expect with confidence in the not distant future those measures of financial reform which are required to give more permanent stability. In North-Eastern Europe progress has been slow, but, in Esthonia especially, careful measures of reform are being quietly introduced. In Russia the year has been marked by what would appear to be the defeat of the extreme Left groups, and a progress, very gradual it is true, but definite, towards a policy which may make the resumption of international intercourse more possible.

CO-OPERATION WITH NATIVE BANKS.

During the year under review we have strengthened our connections with existing banking friends abroad, and have formed several new ones of much promise for the future. I think I may refer here to the policy with regard to foreign countries which we adopted when we commenced business seven years ago, and which since then we have consistently followed. By this I mean the policy not of opening branches or of acquiring banking institutions abroad, but of co-operating as closely as possible with native banks in each country, instead of competing with existing banks for local business. Experience has fully borne out the wisdom of our original choice of policy, and has strengthened us in our determination to maintain it. In Poland in 1919 exceptional conditions necessitated a departure from the strict letter of this principle. But I am glad to say that this exception was itself successful, and that, with the return to a more normal state of affairs, we have here too been able to obtain active local co-operation, which is always our main object. The recent improvement in Polish conditions has reacted satisfactorily on the Anglo-Polish Bank, in which, as you are aware, we have a large interest. Although the bank was only able to have the advantage of the fresh capital issued for a comparatively short time, a dividend of 8 per cent. was paid for last year, and from information we have in regard to the activities of the bank we anticipate that they will issue a thoroughly satisfactory report at the end of the present year.

INCREASED DIVIDEND.

When addressing you last I did not anticipate that your approval of a further increase of dividend would be again requested at so early a date. You will, however, see from the report and balance-sheet before you that the board are fully justified, after having made all the usual allocations in a generous manner, in increasing the dividend on the "B" ordinary shares from 3 per cent. to 6 per cent. per annum. We have had again a successful year, as you can yourselves judge from those figures, and the prospects are good for the future. At the same time I should like to sound a warning note in regard to later dividends, and to make it clear to you that the board do not contemplate increasing the dividend annually, however pleasant such action might be for the shareholders.

MR DUDLEY WARD ELECTED TO THE BOARD.

This is the first occasion on which we pay a full dividend on all our capital and, in the view of the directors, the moment was appropriate to show in a practical form our high appreciation

of the services rendered by the management in reaching this happy condition. You will accordingly see from the report that we have elected Mr Dudley Ward to a seat on the board, which appointment you will shortly be asked to approve. As Mr Ward is the only manager to-day who was also a manager when the bank commenced business, the choice naturally fell on him. No doubt the qualities which Mr Ward brings to the board are well known to you. But I do not think it would be out of place for me to say that his knowledge of economic questions, coupled with his intimate personal experience of many European countries, has been of inestimable value, and the directors feel that the appointment you are asked to approve to-day will add still further to his usefulness. The appreciation felt by the board for the work of the other managers is equally great, and I should like to take this opportunity of acknowledging the care shown in dealing with the business that comes before us, as well as our confidence in their judgment and experience when dealing with questions abroad.

While on the subject of management, there is a point which I should like to emphasise as it has given us the greatest satisfaction and confidence. I refer to the excellent *esprit de corps* and cordial relations existing in the personnel of the bank. We recognise that this is only possible owing to the lead given by the management, and that the spirit throughout the bank of friendly feeling and mutual support that is so important is due to them.

BALANCE-SHEET ITEMS.

On referring to the balance-sheet you will see that our current and deposit accounts have increased by over a million. The steadiness with which this item has figured in previous balance-sheets has been the subject of a surprise which I have mentioned on several occasions, as it is an item which fluctuates very much in the ordinary course of business, although the tendency is steadily upwards on account of our increasing connections. Acceptances on account of clients show a shrinkage of about a million and a-half, but, our business being commercial, it is naturally very sensitive to trade conditions, and it is interesting to find that this item should have fallen from the end of March until the second week of October, since when there has been a steady and substantial increase. I do not suggest that this movement is directly due to the coal strike. Indeed, you will see from a footnote to the balance-sheet that our liability for endorsements on bills has shrunk by some seventeen hundred thousand pounds. This is chiefly in connection with our syndicates, and has nothing to do with our domestic trade. It is, however, interesting to find that not only the beginning of the shrinkage, but the renewed activity in our acceptance credit business, coincides approximately with the beginning and end of the coal strike. The items on the other side of the balance-sheet do not appear to call for any further explanation and merely represent the ordinary fluctuations of business.

THE RESOLUTION.

I now move the following resolution:—

"That the report and accounts for the year ended October 31, 1926, as audited and certified by your auditors, now before the meeting, be approved and adopted; that the dividends recommended of 3 per cent. (final) on the "A" ordinary shares and 6 per cent. for the year on the "B" ordinary shares be approved such dividends to be paid to shareholders on the register of members at the closing of the books on November 22, 1926."

I shall ask Mr Hird to second that resolution, and then I shall be very pleased to answer any questions or comments which shareholders may wish to make.

MR HIRD'S SPEECH.

Mr Norman L. Hird (advisory director): Viscount Churchill and gentlemen,—I have pleasure in seconding this motion, and in doing so I think it is scarcely necessary for me to speak at any great length. The chairman, as usual, has dealt very fully with the balance-sheet and with the European position. I should, however, like to say just a few words, and in the first place I would emphasise what our chairman has said to the effect that the report is an extremely strong one. At any time we should have considered it a most excellent showing, but, considering the extremely difficult times we have been through, I think that the board of management and the shareholders are to be very much congratulated on the splendid results. I think it shows very clearly the very broad basis on which this bank stands that in a year such as this, where there have been no abnormal transactions and where the business has been what one might call "bread and butter" business, the results should have been so very good.

Our chairman emphasised the policy that was adopted when the bank was started, and I think you will all agree that the results have justified that policy. Representing one-third of the ordinary "B" shares, I need scarcely say that those I represent are quite

pleased to receive a higher dividend. We should have been equally pleased to wait for that dividend, but we were quite satisfied that the position of the bank was so strong that we had no hesitation in accepting it. As a banker—and I know Mr Hindley agrees with me—one is very much struck by the excellent organisation of the British Overseas Bank, and there is no doubt that it is due to that excellent organisation that the present success has been arrived at. One is also very much struck by the excellent feeling that runs right through the staff, and to which the chairman also referred. The management sets a fine example, which is followed right through. They are a very happy family and a very enthusiastic family, and I think you will agree that their enthusiasm is tempered by prudence.

Before sitting down, I should just like to pay a tribute to our worthy chairman, who has been such a great help to the bank, to my old chief, Mr Cairdner, for whom, of course, I have a very affectionate regard—feeling very pleased indeed at the success of his bold experiment—to the management as a whole, and to the staff, to all of whom I think we can fairly give our thanks. I formally second the resolution put by the chairman.

The Chairman: If any gentleman would like to make any remarks or ask for any information, I should be pleased if he would do so now before I put the motion. (A pause.) Well, as there are no questions, I shall formally put the resolution which I proposed and Mr Hird has seconded, and which I have already read to you.

The resolution was carried unanimously.

The Chairman: I will now ask Mr Hindley to move a resolution.

RE-ELECTION OF DIRECTORS.

Mr R. T. Hindley (advisory director): Gentlemen,—I consider it an honour and a very great pleasure to have this next resolution placed in my hands—the resolution for the re-election of directors and the confirmation of the appointment of a director. It is an added pleasure to-day, because the retiring directors include the name of the Rt. Hon. Viscount Churchill, our chairman. He has himself referred in his speech, and Mr Hird has also referred, to the spirit displayed throughout the service of this bank. I cannot help feeling that we owe a great deal of the formation of the *esprit de corps* which characterises this service to Viscount Churchill. We find in him an ideal chairman, who gives unstintingly of his very valuable time. We have in him one whom everyone honours—in whom everyone has entire confidence, and in whom we have a representative of this bank who does honour to the bank.

I feel that to-day, when for the first time the full basic dividend is paid upon all classes of shares, it is a very happy ending to Viscount Churchill's term of office as chairman, and that it gives you an opportunity to-day of reinstating him in that position for a further term, during which, I have no doubt, consolidation upon that basis will be steadily carried out.

The chairman's colleague on the board who comes before you to-day for re-election is the Hon. Bernard Rollo. I think I might refer to him as a one-volume edition of the Directory and "Who's Who." It is very valuable indeed, especially in the initiation and first years of the building up of a public institution, to have a colleague to whom one can turn and ask "Who is so-and-so? What are his connections?" and to have the answer at once without having to go to an inquiry agency. Mr Rollo, during all the period the bank has been in existence, has been of very great service to the board, and I am sure we are grateful to him for it.

Then we have in the same resolution to confirm the appointment of Mr Dudley Ward as a director of the bank. He has been a manager of the bank ever since its commencement. He is now associated with the board, and I am sure we all feel that it is a well-deserved honour. Mr Dudley Ward is of great service to the bank in many ways: we should have been delighted to see him here and to be able to say this in his presence, but he is at present abroad. I have the greatest confidence, gentlemen, in asking you to support me in the resolution which I now move:—"That the directors retiring by rotation, the Right Hon. Viscount Churchill, G.C.V.O., and the Hon. Bernard Rollo, be re-elected, and that Mr Dudley Ward's appointment to the board be confirmed."

Mr James Caird (director): I have much pleasure in seconding that resolution.

The resolution was unanimously adopted amid applause.

RE-ELECTION OF AUDITORS.

The Chairman: I should like a shareholder to propose the next resolution with regard to the auditors.

Mr C. J. Brand, J.P.: Lord Churchill and gentlemen, I propose "That the retiring auditors, Mr A. W. Tait, C.B.E., C.A., and Mr A. S. Macharg, C.A., be reappointed as auditors of the com-

pany for the current year, and that their joint remuneration be increased from 500 guineas to £750." Both those gentlemen are well known to us; they have been the auditors ever since the inception of the bank. Mr Tait and his firm, Messrs George A. Touche and Co. have a high reputation in the City of London, and although we Southerners may not be quite so well acquainted with Mr Macharg, I am sure that shareholders North of the Tweed have every confidence in him.

Our bank, in the eight years it has been established, has grown steadily and with it the work and responsibility of the auditors. An examination of our report and the list of our correspondents shows that the business is world-wide, and, as it is so largely involved in transactions in foreign currencies, the accounts must necessarily give our auditors much and continuously increasing work. I therefore think that we shall all agree that the proposed increase in their remuneration is both fair and right, and I have much pleasure in proposing the resolution.

The Chairman: Will another shareholder kindly second that?

Mr G. L. Hodge: I have great pleasure in seconding that. The resolution was carried unanimously.

CHAIRMAN'S TRIBUTE TO MR GAIRDNER.

The Chairman: Well, gentlemen, that terminates our proceedings but before we part I should like for a moment to commit an irregularity in that it is not on the agenda. I wish to say just a word as to the very deep debt which we owe to my friend, our deputy-chairman, Mr Gairdner. It would be superfluous as well as impertinent for me to dilate on the many fine qualities which have been the means of his achieving great success in any business which he has adopted. I am sure that we are very proud to have him here. No one knows more than I do what an enormous asset he is to the bank, and how his high character and the esteem in which he is held by all foreign bankers and business men abroad as well as in this country are of very great advantage to us in our business. I hope he will forgive me for saying this. I generally catch it rather hot from him afterwards for making such statements, but, nevertheless, I wanted to say what I have said, and I am sure you will all join me in offering him our most sincere thanks.

VOTE OF THANKS TO THE CHAIRMAN AND BOARD.

Mr Edgar Horne (advisory director): I am sure, gentlemen, you would not like us to go without thanking Lord Churchill for his chairmanship of the bank, and also the other directors and the board of management. I came down here this morning prepared with very strong arguments in support of this proposal if there was any occasion to use them, but the whole of those arguments have been taken out of my mouth by preceding speakers, who have used them much better than I could have done. Therefore, I should just like to move that a vote of thanks be given to all those gentlemen for what they have done on behalf of the bank. (Applause.)

Mr Arthur C. D. Gairdner (deputy chairman and managing director), who was received with applause, said: Gentlemen, Lord Churchill has said that he would catch it afterwards for what he said, but, on the contrary, I appreciate most intensely what he has said and the extremely nice way in which you have received it, because, after all, it is not always easy to do the right thing, and it is very pleasing to feel that sometimes one has succeeded. I feel that perhaps I have not been altogether unsuccessful from the way in which you have received the very kind words which Lord Churchill has addressed to you, and that feeling will encourage me to try to deserve more fully in the future those kind words and the kindly feeling with which I am surrounded. Thank you very much.

The Chairman: That is all, gentlemen. Thank you very much for coming here.

The proceedings then terminated

HARRODS (BUENOS AIRES), LIMITED.

SUCCESSFUL YEAR—FAVOURABLE PROSPECTS.

The thirteenth annual general meeting of Harrods (Buenos Aires), Limited, was held, on the 6th instant, at Harrods, Limited, Brompton road, S.W., Sir Woodman Burbidge, Bt., C.B.E. (the chairman and managing director), presiding.

The secretary (Mr R. H. Griffith) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report, said: The accounts show the best profits for the past six years. The marked progress made during the year ended August 31st is indicative of a very real forward step in the affairs of the company. Including dividends received from our associated company and income from investments, the profit for the year amounts to £72,855, as against £224,624 in the previous year, showing an

SECURITY FIRST ROYAL INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

improvement of £48,331, which is increased to £69,806 by the addition of £21,575 provided out of previous profits for liability under the Argentine Pension Law, since repealed. The total profit, therefore, amounts to £294,430. These results are obtained after charging all expenses as usual and making careful provision for depreciation. The profit earned is sufficient to pay the year's dividend upon the preference shares, also the full amount which is required annually for the interest and redemption of the funding certificates. After carrying nearly £7,000 to reserve, a balance is left of £62,826, which your board recommend should be carried forward to the credit of the ordinary shares. I am sure you will agree with the board's opinion that it is a sound policy to strengthen and consolidate our position before commencing to pay dividends on the ordinary shares.

Our buying houses in London and Paris handle the purchases for both this company and the South American Stores. We always purchase in the best international market, but, so far as is possible, we endeavour to purchase from British sources, and you will be glad to know that our purchases of British manufactured goods are larger than from any other country. I believe that when British trade recovers from the setback caused by industrial troubles, and when the competition of foreign countries with depreciated currency becomes normal, we shall be able to buy a yet larger percentage of our requirements in this country.

SOUTH AMERICAN STORES (GATH AND CHAVES).

The South American Stores (Gath and Chaves), Limited, have also shown an advance in their trading results for the year. The trading profits amounted to £452,543, compared with £426,407 for the previous year, and after deducting debenture interest and redemption, income-tax, &c., their distributable profit amounted to £217,327, being an improvement of £12,979 on the previous year. In addition, the sum of £50,073 arising from the provisions made in former years under the Argentine Pension Law, has been included in this year's accounts. The company has declared the same dividends as in the previous year, while their reserve has been increased to £150,000 by the addition of the substantial sum of £80,000.

The South American Stores new freehold building in Buenos Aires was opened in May of this year.

The Chilian Stores, a subsidiary of the South American Stores, made a profit of £20,504 during the past year, being an increase of £9,900 upon the previous year, and this profit has been retained in their business.

THE ACCOUNTS.

Dealing with the accounts, the Chairman said that the gross profit on trading was £475,426, an increase of £17,582. The total working expenses amount to £373,674, against £405,087 last year, so that we have made a saving of £31,413. The greater part of this comes under the heading of salaries, wages, and commissions, where we have an economy of £23,366. A part of the saving on this item arises from the repeal of the Pension Law. General expenses also show a substantial reduction. The net profit is £294,430, as against £224,624 last year, an improvement of £69,806 on the year. Adding the amount of our gilt-edged securities to the cash on fixed deposit and in hand, we have a total of nearly £600,000 liquid resources, an increase of £66,600.

The growth of the company's affairs is clearly demonstrated by the growth in the last three years of the combined profits of Harrods (Buenos Aires) and the South American Stores, after meeting all charges for debentures, depreciation, &c., but excluding any sum from the pension refund. These combined profits were for 1924, £213,000; for 1925 they rose to £252,000, while for 1926 they further advanced to £313,000. £80,000 has been placed to reserve in the South American Stores, and £62,000 is being carried forward to the credit of the ordinary shares in Harrods (Buenos Aires), thus paving the way for a dividend in respect of the current year. I am very pleased to be able to tell you that business for the current year is increasing satisfactorily, both in trade and profits, and there is reasonable hope of this improvement continuing. Should this position be maintained, your board are of opinion that we should earn in the current year sufficient profit to warrant the payment of a dividend upon the ordinary shares for that year, with a prospect of steadily increasing distribution.

The report was unanimously adopted.

THE BRITISH AND CHINESE CORPORATION, LIMITED.

CHAIRMAN'S REVIEW OF RAILWAY CONDITIONS IN CHINA.

The annual general meeting of the British and Chinese Corporation, Limited, was held on the 9th instant, at the Cannon Street Hotel, London, Major W. S. Nathan, C.M.G. (the chairman), presiding.

Mr E. R. Morriss (the secretary) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, and having dealt with the accounts, said:—

Our commitments with the Chinese Central Government under the heading of debtors and open accounts consist for the most part of advances on account of the Nanking Hunan Railway and on account of the Peking Mukden Railway for doubling the track from Tongshan to Chinwantao.

The first commitment is a silver advance of Kuping Taels 2,000,000, and Shanghai Taels 486,000, on which interest has accrued for one year and eight months. These advances were made in terms of the Nanking Hunan Loan Agreement of March, 1914, and are repayable from the first series of the bonds when issued. The European War then came, and conditions since have been such as to make a loan issue impracticable.

The second commitment, according to the terms of the Peking Mukden Railway Agreement of April, 1921, was repayable in monthly instalments of not less than £10,000 for principal and interest, and it should have been entirely extinguished by September of this year. Owing to the financial embarrassment of the Chinese Government and military interference with the railway, the repayments have had to be postponed.

STAFF.

I take this opportunity of informing you that the corporation has secured the services of Mr Boothby, lately engineer in chief of the Canton Kowloon Railway, who has already left for Peking, where his services and his valuable experience should be of great help to our representative.

GENERAL POSITION.

You will, I do not doubt, have been trying to keep yourselves in touch with what has been happening in China by following the Press telegrams and articles, but in view of the conflicting nature of the information, you may not be in a position to judge accurately the effect on our affairs. You will have read that chaos exists throughout a large part of the country. You will have an impression that there are warring factions which are damaging all commercial and industrial enterprises, but beyond that I cannot think you have been able to appreciate the true position. I will endeavour to show you what that position is, particularly with regard to the British and Chinese Corporation. Briefly it is this:—

RAILWAYS.

The railways are unable to withstand the interference of the military leaders. The Central Government, with whom all railway contracts and agreements have been made, has been reduced to a state of political impotency. It would take too much of your time to go into the general question of politics in China and I will therefore confine my remarks to the condition of railways and the probable future developments with regard to them.

PEKING MUKDEN RAILWAY.

At the present moment this railway is under the control of Chang-tso-lin, the Manchurian War Lord. It is working nearly to its normal capacity and earning enough not only to pay its loan services, but also to give a surplus on which it could meet the obligations guaranteed on its earnings. There is, however, a continual drain on its resources, firstly, for the conveyance of military traffic, and, secondly, for the provision of funds for military purposes. Pressure is always being brought to provide funds for the Tsuchuns.

CANTON KOWLOON RAILWAY.

The Canton Government has adopted a policy with regard

to this railway similar to that which they have shown towards all foreign institutions. They consider themselves to be the owners of the railway. They consider that the British staff is entirely under their orders, and that they are there on sufferance only. The earnings of the railway have increased partly owing to the divergence of seaborne traffic to the railway on account of the boycott, but the monthly earnings are used by the local Government as they consider desirable without regard to the loan obligations. In common with other railways, the line is badly in need of repair.

SHANGHAI NANKING RAILWAY.

This railway has enjoyed quite a long period of peace. On paper its total earnings exceed those of 1925, which was a record year. They include, however, transport rendered to the military at half rates, in terms of the loan agreement, which has not been paid for. The Chinese Government is withholding payment of one-fifth share of surplus profits for 1924 and 1925 until a decision is reached on the question of military arrears. The railway is badly in need of additional engines and wagons to cope with the enormous congestion of goods and produce awaiting transport.

SHANGHAI HANGCHOW NINGPO RAILWAY.

The earnings on this line have also exceeded those for the same period last year, but here, too, is the difficulty of coming to a settlement in respect of payment for military traffic.

It will be evident to you, gentlemen, from the foregoing remarks on the present position of the railways in which the corporation is interested, that the high hopes which we have always entertained of the inherent prosperity of Chinese railways are to-day clouded by the state of anarchy to which the country, and the zones of the railways in particular, have been reduced by internal strife. So far as this condition of chaos is being maintained and prolonged in the interests of individuals, whether in the North or the South, with hardly a pretence of consideration for the welfare of their country, it is to be unreservedly condemned.

RAILWAYS AND MILITARY OCCUPATION.

It has been abundantly proved in the past that there is no country in the world in which railway construction, under normal conditions of peace and ordered Government, is so successful and remunerative an enterprise as in China. Had the revolution afforded to China a stable Government, and the development of the railway programme followed its natural course, the picture I have drawn would have been a very different one. Unfortunately, the railways themselves, from which it was hoped the prosperity of the country would develop, have become both the prey and the weapon of the military forces of the conflicting parties. Each railway in turn has suffered from military occupation, during which the track has been torn up, bridges destroyed, and rolling-stock wantonly damaged and detached from service as barracks for troops. After actual hostilities on the line have ceased and traffic has resumed, revenues have been diverted to the uses of the military leaders.

But notwithstanding the disturbed conditions which have prevailed, the results obtained have been remarkable, and the earning capacity of the railways, after the theatre of war has shifted to another stage, has recovered with astonishing celerity. The railway staff have speedily repaired the damage suffered under military occupation, and solid construction and well-built rolling stock have lessened the effect of demolitions and neglect of maintenance.

I think, gentlemen, that the character of the Chinese people is reflected in the rapid recovery of the railways after the passing of the armed forces and the cessation of military movements. The Chinese are born travellers, and the long-suffering merchant or farmer, as soon as a lull in the fighting in his neighbourhood takes place, returns to his shop or to his fields and applies himself to recover lost time and opportunities. There ensues an insistent demand for the resumption of normal working of the railways, which immediately commence to earn an increasing revenue. Wherever railways have been constructed they have quickly become essential to the requirements of the people, and a large extension of the present system will be necessary for the progress and development of the country, and must occupy the foremost

place in the programme of that party which proves successful in establishing its control throughout China.

China offers the widest field for a prosperous railway system, and, considering the extent and great undeveloped resources of the country, only a small beginning has been made in the construction of that system. This corporation has taken no small part in the enterprises which have already been carried out, and I trust that our share in future development may be proportionately great.

You will see, gentlemen, from what I have stated, how the position of the British and Chinese Corporation stands to-day.

The board regret that they do not see their way to recommend the payment of a dividend which has been earned but not yet received in cash. In doing this they hope that you will not take a too pessimistic view of the position. We are merely marking time in the hope that some day, and we trust shortly, the innate sense of the Chinese will produce order out of chaos, and a governing body will be formed able to control the various forces now swaying the country. Then organisation will follow disorganisation, and the corporation will be in a position to assist railway development in China, which is much needed, in hearty co-operation with that country's Government and people.

The report and accounts were unanimously adopted.

TATE AND LYLE, LIMITED.

DIFFICULTIES OF THE INDUSTRY.

CONTINENTAL COMPETITION—HOME-GROWN SUBSIDY.

CONSERVATIVE FINANCIAL POLICY.

The twenty-fourth annual ordinary general meeting of the shareholders of Tate and Lyle, Limited, was held, on the 9th instant, at the Cannon-street Hotel, London, E.C., Sir Ernest William Tate, Bt. (the President), occupying the chair.

The President said: Gentlemen,—Before proceeding with the formal business of the meeting, I should just like to refer to the loss we have sustained in the past year by the death of our director, Mr John William Macdonald. Mr Macdonald had been associated with this company—more particularly with Tate's—for many years. He was a very able man, and we appreciated his services very much and deplore his loss. I must also refer to another loss which we have sustained—although not quite so directly concerned with the business. I refer to the death of Mr William Boyd, who was associated with Lyle's for many years. He also was a very valuable servant.

Mr A. W. Young (joint secretary) read the notice convening the meeting and the auditors' report.

TREND OF THE WORLD'S MARKET.

The President said: On the last two occasions I have had the pleasure of addressing you I had to report that our operations had been rendered difficult through the consistently downward course of the world's market.

During the year under review the trend of the world's raw market has been slightly upward, and with some approach to a normal balance between supply and demand. Raw sugar at its lowest was 9s 6d per cwt, and at its highest 13s 10½d per cwt c.i.f. U.K. This trend was chiefly due to the restriction of the large Cuban crop of this season by 10 per cent., or 450,000 tons below the estimate, and to the prospective arrangements for the delaying of the harvesting of next season's crop. In this respect the situation has been more satisfactory from a commercial point of view; but, on the other hand, other factors have arisen which have greatly intensified the difficulties of the British sugar refining industry. We have, of course, in common with all industrial concerns in this country, been adversely affected by the coal strike, which has added very substantially to our operating costs, and has also retarded the sugar consumption in this country.

"DUMPED" AND SUBSIDISED SUGAR.

But more far-reaching than this are the competition of the Continental sugar "dumped" here at prices much below the cost of production, and of the heavily subsidised white sugar of the British home-grown beet factories. The imports of dumped Continental sugar in the ten months of this year have risen from 327,000 tons last year to 501,000 tons this year. We have evidence to show that in the case of Czechoslovakia, which has sent us 247,000 tons of this quantity, the sale price in Great Britain was at one time as much as 5s per cwt below the price in Czechoslovakia. On the top of this the home beet industry is producing 140,000 tons this season of sugar subsidised to the extent of 10s 10d per cwt, which is more than the value of the sugar itself, as against 50,000 tons last year. When to this is added the

normal output of the British refineries, it results that during the four months October to January there is a supply of 195,000 tons per month, when the average consumption is only 142,000 tons per month. It is, therefore, little wonder that British refineries in London, Liverpool and Clyde should be compelled to curtail their output. The result of the present fiscal policy is to send gold out of England to pay for refining sugar on the Continent to let our own workpeople and machinery stand idle.

HOME-GROWN BEET-SUGAR INDUSTRY.

In connection with the home-grown beet-sugar industry, I do not think the magnitude of the taxpayers' assistance is generally understood. On the manufacture of 20,000 tons of sugar, the home-grown industry would receive approximately £540,000 in subsidy (quite apart from the £500,000 which would be realised on the sale of the sugar). This assistance, as you will see, is more than our net profits this year, which have accrued as a result of the manufacture of 600,000 tons, or 30 times as much, of refined sugar. Those are very startling figures, gentlemen.

Last year I explained our reasons for entering into the beet sugar industry at Bury St Edmunds, and spoke of our intention to erect another factory in Yorkshire. Since then we have very carefully reconsidered the whole position with the knowledge we have gained through working our Bury factory, and we have decided not to proceed with a second factory. Our reason for this decision is based on the fact that we are now convinced that the British sugar beet industry cannot hope to exist without a subsidy, and, while it is obvious that much money can be made on established factories with the enormous subsidy at present prevailing, with only one more year at the high rate and with a decreasing and ultimately ending subsidy, the prospect does not appear sufficiently inviting to warrant the large outlay of capital involved.

RESULTS OF THE YEAR.

In our accounts you will see that the net result of the year's working is only some £83,633 less than that of last year, but I may mention that this is due mainly to our raw sugar purchases, which have automatically appreciated in value. The trading profit on the output of our refined has been considerably reduced.

The directors have decided to put £100,000 to general reserve, and the properties having been efficiently maintained out of profits—a sum of over £300,000 having again been expended on renewals and repairs—and including the balance from last year, there is left £412,238 6s 4d to be allocated. The directors this year make what is to this company a new departure—the recommendation to place £90,000 to dividend reserve, and I wish to explain the reasons for this course. The balance-sheet before us gives the accounts to October 2, 1926. The conditions operating against us—namely, the dumping of foreign sugar and the competition of subsidised home-grown sugar, of which I have spoken—attain their fullest effect in October, November, and December, and it is the anticipation of the adverse effect of these two competitive sources of supply which induces us to keep in hand a reserve against it. It is true that the coal strike, happily now being over, puts an end to one source of loss, but its effects must, in our case, run on till the end of the year. It is also the case that the recent rise in the price of sugar shows a profit to-day on our stocks, as against the values on October 2nd, the date of our balance, but the directors think it wise to adopt a cautious policy until there is a further development of the situation.

THE DIVIDENDS.

I now beg to move: "That the directors' report and statement of accounts be adopted, and that the following dividends upon the company's issued capital be declared payable—namely, (1) to the holders of preference shares: interim dividend to March 31, 1926, at 6½ per cent. per annum, subject to tax, paid June 15, 1926; final dividend to September 30, 1926, at 6½ per cent. per annum, subject to tax. (2) To the ordinary shareholders: dividend for the year of 6 per cent., subject to deduction of income-tax."

Sir Leonard Lyle (the chairman) seconded the resolution, which was carried unanimously.

The President then moved: "That the four members of the board of directors—namely, Mr Philip Lyle, Mr J. J. Runge, Mr J. B. Crispin, and Mr C. E. Potter—who retire under the article No. 86 of the articles of association, be and are hereby re-elected directors of the company."

The motion was seconded by Mr Charles Lyle, and unanimously agreed to.

On the motion of Mr Duncan Macdonald, seconded by Mr C. J. L. Lyle, the auditors (Messrs Edmund D. White and Sons) were reappointed.

The President then announced that the dividend warrants would be posted on Tuesday, the 14th instant.

A cordial vote of thanks was given to the president and directors for the results which had been achieved, and the proceedings terminated.

J. AND P. COATS, LIMITED.

DIFFICULT YEAR'S RESULTS.

HOME AND FOREIGN MARKETS.

EXPLANATION OF REDUCED PROFIT.

FALL IN COTTON PRICES.

The thirty-sixth annual general meeting of J. and P. Coats, Limited, was held, on the 9th instant, within the Christian Institute, Bothwell street, Glasgow.

Mr W. H. Coats (the chairman) presided.

The secretary (Mr M. Neilson) having read the notice convening the meeting,

The Chairman said: Before going on to the next item, I have to record an apology for absence from my cousin, Lord Glentanar. He has unfortunately poisoned a foot, but a message to-day says he is getting on extremely well.

Mr W. H. Goff, C.A., read the auditors' report, and it was agreed to hold the directors' report and balance-sheet as read.

The Chairman, continuing, said: I must tell you quite frankly that I am rather disappointed. The figures in our profit and loss account for the year ended on June 30th are not so good as they were in the previous year, not because there was any material difference in either the volume of our business or the trading profit, but because prices of cotton began to fall in the early part of our fiscal year and continued to fall steadily thereafter, rendering it necessary to provide a large sum to write down our stocks to their market value at our balancing date.

WRITING DOWN OF STOCKS.

This writing down of value is by no means singular in our case, judging from what we have heard and read in the reports of other companies, and it accounts for much the greater part of the substantial difference between the figures in the balance-sheets of the previous year and the year under review.

In addition to this we had also to make provision for a further amount consequent upon the settlement of our liability to excess profits duty, which was recently effected with the Inland Revenue. It was fortunate, therefore, that your directors carried forward a larger sum than usual from the previous year's accounts, and this influenced them in coming to the decision to make no change in the payment of the dividend and bonus declared in the previous year without touching upon the dividend reserve fund.

The stock carried forward was not excessively large considering that it was designedly increased in view of the likelihood of trouble arising with transport facilities failing some settlement of the coal dispute before the end of April. The cause of the reduction in the prices of our raw material is attributed to the fact that two unusually large crops of American cotton were harvested in successive years, and considerable quantities remained unsold and were carried forward, owing to the smaller demand occasioned by dullness in the spinning trade. American cotton stands to-day at a substantially lower price than it did for some years before the war, and although we do not buy it in any large quantity, it has considerable influence on the prices of the finer Egyptian varieties which form our principal consumption, and although these have also fallen considerably, the prices of the grades necessary for the manufacture of our various products are still high in comparison with American cotton.

SETTLEMENT OF E.P.D.

You will have seen from our preliminary announcement that a settlement of the company's liability to excess profits duty has been arrived at with the Inland Revenue. The Commissioners duly stated the case concerning the method of valuing stocks, to which I referred last year. Two other points of difference were also the subject of stated cases, while there were a number of other points involving large sums, on which we and the Revenue were not agreed. After full consideration of the whole matter and again taking the opinion of counsel, which was to the effect that the results of appeals to the courts were uncertain, your board decided, in order to avoid protracted litigation, to approach the Revenue as to whether a settlement by compromise of all outstanding points could be arrived at. The Revenue authorities were found to be not unwilling, and accordingly negotiations were opened, which resulted in a complete and final settlement of all the points of difference. We did not get all we claimed, nor did the Inland Revenue. We did, however, effect a settlement much more satisfactory to the company than under the Com-

missioners' decision. I am advised that it would be injudicious for me to say more than this, and I will only add that I am very glad this long-standing matter is now finally out of the way.

Following my usual practice, I shall now say a few words about the course of our trade during the year under review, and first of all I may tell you that the long expected trade revival has not yet materialised. The usual fluctuations have been experienced. Some markets have done better, some have been just steady, and others backward.

FRANCE, HUNGARY AND RUSSIA.

After referring in detail to the trade in a number of countries, the Chairman mentioned that the mills which had been erected in France and Hungary were now completed and in operation. He continued: As regards Russia, there is no change in the situation since I addressed you at our last annual meeting. We have heard indirectly that Nevsky Mills are still being run by the Soviet authorities, but not up to their full capacity. Generally speaking, I am glad to say that the increases in some of the markets have more than balanced the decreases in others, and we have therefore little cause for disappointment when trade in general throughout the world is still not what we would like it to be.

THE FUTURE.

With regard to the outlook for the future, I have to say that so far there is little indication of any substantial revival of trade, but we are hoping that the settlement of the coal strike will put some life into business soon. I think it right to mention that the change in the date of the closing of our accounts, which you will be asked to sanction later, will necessitate our striking a balance for six months at the end of this year, and whatever the result of that may be, I would not advise you to multiply it by two in an endeavour to forecast what 1927 may yield, as that would be rather risky when the difference between one period and another may be more or less wide.

I wish to offer a word of explanation regarding the transfer of the sum of £100,000 from general pension reserve to the women thread-workers' benefit fund, which some of you may have noticed. Actuarially the further liability of the company to the latter is now calculated at £100,000, and by making the transfer from one account to the other of this amount the note as to contingent further liability which previously appeared in the balance-sheet can now be dispensed with.

Once more it is my privilege to ask you to join me in accord- ing a hearty vote of thanks to our staff and employees at home and abroad for their loyal service during the past year, and to assure them that this is highly valued. I now beg to move that the report and accounts for the year ending June 30, 1926, as submitted to this meeting be and are hereby adopted, and that the payments of dividends and of a bonus of 6d per share, less income-tax, on the ordinary shares, all as stated therein, be and are hereby confirmed.

Mr Robert Clark seconded the adoption of the report, which was agreed to amidst applause.

In reply to a shareholder, who asked a question regarding the war contingencies fund, Mr W. P. Stewart pointed out that the situation with regard to this was unchanged from last year. At the last meeting the Chairman explained that the greater portion had been earmarked for loss in Russia, and it was decided to keep the fund as it was in case of other things coming forward.

RE-ELECTION OF DIRECTORS.

The retiring directors, Lord Glentanar and Messrs Robt. Clark, P. Herbert Coats, John A. Coats, and A. H. Glen-Coats, were re-elected, as were the auditors, Sir R. C. Mackenzie, C.A., and Mr William H. Goff, C.A.

At an extraordinary meeting following the general meeting a resolution altering the date of balance from June 30th to December 31st was carried.

The proceedings closed with a vote of thanks to the chairman, by Mr Jas. Shields, of County Down, one of the shareholders.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.

LORD INCHCAPE'S REVIEW OF A DIFFICULT YEAR.

EARNINGS AFFECTED BY INDUSTRIAL UNREST.

PROSPECTS OF THE INDUSTRY.

The eighty-sixth ordinary general meeting of the Peninsular and Oriental Steam Navigation Company was held, on the 8th instant, at the offices of the company, 122 Leadenhall street, London, E.C.

The Rt. Hon. Viscount Inchcape, G.C.S.I., G.C.M.G., K.C.I.E. (chairman of the company), presided.

The secretary (Mr F. J. Abbott) having read the notice convening the meeting and the report of the auditors,

The Chairman said: He regretted the board were unable to place before the stockholders a more satisfactory statement. Like other shipowners, they had encountered difficulties in the past year, but fortunately they had, during the boom time, refrained from writing up their investments in allied concerns, which stood on their books at cost, and, with their assets, were worth to-day a good deal more.

Bills payable for new ships which stood a year ago at £6,779,000, stood at September 30th last at £3,906,241, a reduction of £2,872,759, while they held cash deposits from allied companies of about £5,311,000, which were treated in the accounts as a liability, although they were really the P. and O. Company's own property. Except a tender which would cost, delivered, £30,000, they had no commitments for new vessels, although they had it in contemplation, when things became normal, to replace some of their older tonnage. Since the year's accounts were closed they had paid off £150,000 of bills for new ships, and the sum outstanding was now £3,756,241. The shipbuilders and the discount market had not pressed them, but their determination was to discharge the outstanding bills for new ships as speedily as possible.

Just before the conclusion of the war they had contracted to occupy a certain number of berths in the yards of firms who had built for them for years; the slump came, and there was no prospect of building profitable ships at the ruling prices. In these circumstances the contracts were permitted to lapse, the builders refusing to exact any penalty. One good turn deserved another, and, when they came to build again for the P. and O. and its associates, the board's endeavour would be to help those who had helped them.

THE INSURANCE FUND.

The insurance account had increased during the year by £49,943, bringing the amount at credit to £3,328,223, from which nothing had been credited to profit and loss, the whole sum being treated as a liability. They could insure their outstanding risks to-day for a very much lesser sum. The board has under consideration the question of treating this fund as a reserve, and a year hence, his lordship added, he might have more to say on the subject.

WORKING COSTS.

For supplies, maintenance, and repairs they were paying averagely more by 75 per cent. than before the war. He had lately been scrutinising all the bills, which were staggering, and unless prices came down passage rates, much to his regret, would have to go up.

CHINA.

Many of their voyages had been disastrously short of cargo, and the condition of China had caused serious loss of traffic with that country.

Continuing, his lordship said that he believed antagonism to the British in China was largely due to the sending of our missionaries to that country. Christian missionary efforts among uncivilised peoples were doubtless fully justified, but China's ancient faiths were as sacred to the Chinese as Christianity was to ourselves, and the sooner our well-meaning people gave up their crusade in India and China the better it would be for all. Perhaps, he said, his hearers would think he had no more right to express these views than the Bishops had to barge into an industrial dispute. He could conceive no more mischievous speech than that delivered by Mr Lloyd George at Bradford on Saturday last. He agreed with every word of yesterday's leading article in the *Times*, and the castigation the ex-Prime Minister received at Nottingham on Monday from the Earl of Birkenhead was well deserved.

EXPANSION OF PASSENGER TRAFFIC.

Their passenger traffic, thanks to the efficiency of their commanders and the ships' companies, continued to expand in a

remarkable degree. No effort was spared to make the table attractive, and the change to the *à la carte* system of meals had been appreciated by passengers. While they got an occasional growl, they welcomed suggestions for the improvement of the ships' arrangements. Recently he had received a vehement expostulation against mixed bathing in the steamers.

On the other hand, they received every week a large number of appreciative letters. The cabin and public room equipment, decoration, and lighting of recent ships had been very carefully supervised; the passenger arrangements of many of their older vessels had been remodelled, and at the same time economy in every direction had been rigidly kept in view.

VALUE OF THE ASSETS.

A recent statement by their accountants showed that the P. and O. Company, if broken up to-morrow, would be able to discharge its entire obligations, and give the deferred stockholders a good deal more than to-day's market value of their holdings. But the P. and O. Company would not be broken up; it was, he said, a national institution, and their intention was to go on through bad times, giving good service to the public, in the conviction that good times would come again.

THE GENERAL STRIKE.

The general strike, although it lasted only 11 days, involved the company in serious loss. The "Kaisar-i-Hind" left for Bombay without an ounce of cargo, and had to embark her mails and specie at Plymouth. Many of the homeward passengers had to be landed at Plymouth and brought to town by rail. In this they were immensely assisted by the Great Western Railway, and for help in this connection the board's thanks were due to their colleague, Viscount Churchill, and his executive officers.

THE COAL STRIKE.

The coal strike, his lordship continued, has cost the P. and O. Company over £200,000; coal prices had risen, and the inferior quality of foreign coal had greatly increased consumption. Fortunately, nine of their steamers were oil-burners, and they proposed shortly to convert "Narkunda" and "Naldera" to burn oil.

While liners had suffered, tramp steamers had benefited by "carrying coal to Newcastle." Forty-nine tramp steamers owned by the P. and O. Company were, under these unnatural conditions, for the moment paying their way.

FREEDOM FOR TRADE UNIONISTS.

The unfortunate men, women, and children affected by the coal strike had suffered much hardship through Cook's consummate folly. His attempt to disregard economic laws had damaged the trade of the country to an extent from which it would take months, if not years, to recover. He observed Cook had now gone to Russia, and was going on to South Africa, doubtless to stir up trouble there. He thought, however, that he (Cook) had shot his bolt.

The extremists who had kept the miners idle for over six months had done as much material damage as could have been wrought by an enemy invader, and had, at the same time, sought to destroy the freedom of those whom they claimed to represent.

It was, his lordship continued, high time that trade unionists should be protected against the tyranny with which their movement had become infested, and the promised Government measures should be welcomed by all, unionists and non-unionists alike. There should be an end of picketing. Trade union benefit funds should be separately and independently audited. The members had now only power to contract out of the political levy, to do which made them marked men; instead they should be exempt from the levy unless they contracted in. If possible a secret ballot of each union should be instituted, not less than three-fifths total vote to be effective either to call or continue a strike. Speaking for himself, he was glad of Mr Baldwin's decision to withdraw the proposal for a compulsory tribunal, which would only have led to further trouble.

PEACE IN THE SHIPPING INDUSTRY.

During the year under review the shipping industry itself had run free of strikes. The leader of the Seamen's and Firemen's Union, Mr J. Havelock Wilson, had recently—he believed with the Prime Minister's blessing—initiated a campaign of working men in favour of industrial peace and conciliation, a movement which,

if it expanded, might well prove the country's economic salvation.

During the crisis of May last Mr Wilson, although dangerously ill, had spared himself no risk or effort to prevent his union from being drawn into the general strike, in which he (the speaker) was thankful to say he had been successful. There were other men—men such as Mr Brownlie, Mr J. H. Thomas, and Mr Frank Hodges—who stood out prominently and sanely in labour disputes. If the workmen of the country would be guided by such leaders, there would be a prospect of peace in industry for many years.

A few hare-brained, misguided beings were out to destroy the fabric of society. They would ignominiously fail. We have, he said, in the homeland, a population of 40 millions, every one free under the Crown to rise to any position; not a fraction of the people were disloyal to the throne. When we looked around us there was nothing in the world to equal the British Empire, with, at its head, a constitutional monarch, our beloved King.

COMPETITION.

It was, his lordship continued, prophesied that the company would be badly hit in a few years' time by aeroplanes and airships. He did not believe it, even if Empire Airways became a commercial proposition, which he greatly doubted, the P. and O. would hold its own for many a long day.

He noticed that someone, who so far as he knew had no experience of shipping, proposed to start a company with a capital of 11 millions to run seven 22-knot ships to India, Ceylon, and Australia. The promoter was a sanguine man. Steamers had a way of going out of commission; accidents happened; overhauls involving a lay-up of weeks or months were essential, and in a regular mail service stand-by ships were necessary. To provide 5 per cent. for depreciation, and 5 per cent. interest on capital, would demand a revenue of £1,100,000 a year. He had better put his money into War Loan, which would give him an assured £550,000 a year; his shareholders would never get as much out of the proposed venture. The P. and O. Company, with 400 ships and a capital of less than seven millions, found it difficult to provide £500,000 a year to pay its dividends. If the P. and O. and Orient companies, with their experience of the trade, had seen their way to cover expenses and a decent margin, they would have gone in for a 22-knot service long ago.

THE SUEZ CANAL.

Speaking for the P. and O. group, the largest contributors to the revenue of the Suez Canal Company, he would, he said, like to pay tribute to the courtesy and ready assistance extended by the Canal Company's capable officials to the owners and masters of all vessels passing through that great waterway. The transit of the canal had been shortened; its depth increased; the pilot service was excellent, accidents negligible, and everything done to give vessels expedition.

PUNCTUALITY OF THE STEAMERS.

Their mail steamers had run with fair punctuality throughout the year. One late arrival was due to a breakdown of the mail train in France, and to inferior foreign coal.

P. AND O. BOMBAY-CALCUTTA EXPRESS.

His hearers would, his lordship continued, be aware that a few years ago the Wagons-Lits Company built to the P. and O. Company's design, a new type of train for conveyance of the latter's passengers across France. That train, which they subsidised, gave great comfort and satisfaction to P. and O. passengers. Recently the board had arranged with the Great Indian Peninsula and East Indian Railway Companies to construct two very similar trains to run each way between Bombay and Calcutta in conjunction with the outward and inward P. and O. steamers. They were greatly indebted to the chairman of the railway board, Sir Clement Hindley, to Sir Robert McLean and Mr Colvin, agents respectively of the G.I.P. and East Indian Railways, for the enterprise they had shown in the matter. From reports received, the new trains and their general arrangements were proving very attractive.

THE YEAR'S WORK.

Together with their allies, they had had 433 steamers in commission. During the year these ships had traversed 17,000,000 miles of ocean, made 30,000 port entries, carried 15,000,000 tons of cargo, 350,000 animals, and over 2½ million passengers. The average daily number of their ships' companies was about 40,000, and the daily expenditure for wages and victualling of their crews was £15,000. It would be difficult to estimate the number of outside men to whom also these ships gave employment. To earn sufficient to cover the vast expenditure of these ships and to provide for depreciation and dividend was an anxious task in these times. They had, moreover, to meet the competition of foreign vessels, manned at lower wages than those in British ships.

So far as he was aware, the allied fleets had carried their 2½ million passengers without the loss of a single life, yet certain officials were pressing new and costly regulations, which it was

considered by the Chamber of Shipping would be of no practical utility. The cost of compliance with those regulations would eventually have to be borne by the public, and, in his opinion, it would be better to leave the mariners alone.

SIR GEOFFREY CLARKE, C.S.I.

He would, he continued, have great pleasure later in proposing the election to the board of Sir Geoffrey Clarke. They could have no better man as a colleague, for Sir Geoffrey knew the work of the P. and O. from A to Z.

PROFIT-SHARING SCHEME.

The amount invested in the company's profit-sharing scheme during the year was £300,000, on which interest at 7½ per cent. to be paid at the end of this year, had been charged in the accounts. The scheme provided a simple way of interesting their employees in the success of the company's operations.

APPRECIATION OF THE STAFF.

As a frequent traveller in the steamers, his lordship continued, he was lost in admiration of the skill and caution which permeated the bridge and the engine-room, between which departments there was now perfect harmony and co-operation, greatly to the comfort of all on board. It was no easy matter, in addition to keeping the engines moving, to maintain in perfect working order the electric light, the refrigerator plant, hot and cold water service, the ventilating system, &c., throughout the whole of the ship—with perhaps a thousand souls on board. Under their capable chief medical officer, Dr Chaplin, they had in the ships a fine body of medical men.

The work of the ships was carried on without noise; the vessels were kept like yachts with every part always tidy, and scrupulously clean. Civility and attention to passengers was observed; discipline as a rule left nothing to be desired. The skill, loyalty, and devotion of the staff were assets of which they had reason to be proud.

SOME SUGGESTIONS.

There were four suggestions which he would venture to make to their passengers, the first, not to leave the bath tap open and the plug in when vacating a bathroom, especially at night; the second, to insure their baggage and place valuables in charge of the purser; the third, to use ash receptacles, and not to place burning cigarette ends on the carpets or furniture; the fourth, to jerk their fountain pens on the blotting pads rather than on the floor. Speaking of this last recently to the wife of one of his colleagues, she remarked, "I am afraid it is a not uncommon practice, even ashore. I frequently have occasion to speak about it to my husband."

INDIA AND THE P. AND O.

Since they last met there had been a change of Viceroy in India. The Marquess of Reading, after five years' strenuous and successful work, had been succeeded by Lord Irwin, who appeared to be winning golden opinions from all classes of the community. Lord Reading came home and Lord Irwin went out by P. and O., and they had the honour, too, of bringing Mr Bruce, the Prime Minister, from Australia. All had been delighted with the ships in which they travelled.

A PERSONAL WORD.

He would conclude with a personal word. Looking the other day at the figures he had given them, and thinking of the numerous organisations which it fell to his lot to direct, and the amount of leisure and recreation he managed to secure—fishing and shooting in Scotland—he realised how much he was indebted to his capable, upright, loyal, and, if he might say so, affectionate coadjutors, in this country and all over the world.

Engaged in business from boyhood, he was rarely confronted by an emergency which he had not had to face before. He felt he did little real work nowadays; it was all done for him. But whether at home or abroad, he was kept informed, almost from hour to hour, of all that took place, and invariably had the opportunity to express his views. To proposals put before him his reply in most cases, though not in all, was the one word "approved." As Nelson said of his captains at the Nile, he (the speaker) and his coadjutors worked together as a band of brothers. To all those associated with him, at home and abroad, he expressed his grateful thanks. Before many years were over he would, he supposed, have to give up the work which he dearly loved. His one ambition was, when that time came, to leave every business of which he was the responsible head, including the old P. and O., in a sound financial condition.

The Chairman concluded by moving the adoption of the report and accounts.

Sir Charles S. Addis, K.C.M.G., seconded the resolution.

The Rev. H. G. Hoare expressed dissent from the chairman's views on missionary work in China.

In reply to a shareholder, the Chairman stated that under the

company's charter the directors' remuneration, divisible among the 15 members of the board, was fixed at a total sum of £5,000 per annum.

The resolution was carried unanimously.

On the motion of the Chairman, seconded by the Right Hon. Lord Kilbracken, G.C.B., dividends for the half-year ended September 30th last of 2½ per cent., less income-tax, on the Preferred

stock, and of 5 per cent., free of income-tax, on the deferred stock, were declared, payable on and after December 10.

The election of Sir Geoffrey R. Clarke, C.S.I., as a director was approved; Mr F. A. White and Colonel Sir Robert Williams, Bt., were reappointed auditors, and a hearty vote of thanks to the chairman and directors, as well as to the staff ashore and afloat, concluded the proceedings.

THE SCINDIA STEAM NAVIGATION COMPANY, LIMITED.

SATISFACTORY RESULTS OF DIFFICULT YEAR. QUESTION OF RESERVATION OF COASTING TRADE.

The seventh ordinary general meeting of the company was held, on October 30, 1926, at the Sudama House, Ballard Estate, Bombay, Mr Narottam Morarjee (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The profits of the company for the period of 11 months, including the amount of the balance of Rs.63,291-7-3 carried forward from the last year's accounts amount to Rs.11,85,636-5-1. Since I addressed you last December, the world conditions in the realm of shipping have not at all improved. There was a further decline in the general level of freights, and it was not without its effect on the level of freights on the coast. The basic rate of freight between Rangoon and Bombay was further reduced from Rs.13 to Rs. 12 net. Although the crops of rice in Burma were satisfactory, sudden and abnormal demand of this rice from China during the two busiest months of the season raised its price to an abnormal height. The result was that the demand for this rice from India completely fell off, and consequently ships had to lie idle at ports in Burma when cargo moves briskly. As you are all aware, the communal riots in Calcutta considerably dislocated the shipping trade of that port, and had not the growing export trade of Cocanada relieved that depression to some extent, the shipping on the coast would have been considerably affected. The railways have continued their policy of undercutting the rates of freight for the purpose of diverting the traffic from the sea to the rail route, and I may tell you that the piecegoods trade between Bombay and Calcutta has been almost entirely lost to shipping. Under these circumstances, I feel sure that the results of the working of the company would be regarded as satisfactory.

QUESTION OF NEW TONNAGE.

The shippers have continued to give their support to the steamers of the company, although they feel that we have not been able to place at their disposal all the tonnage that they required. We have, however, endeavoured as best as we could to meet their requirements with the help of chartered tonnage and have done all that was possible for us to do under the circumstances, to maintain the services that we have built up in the past. It is, however, obvious that the chartered tonnage is relatively not an economic proposition and cannot therefore effectively take the place of steamers owned by the company in supplying its shippers with suitable and regular tonnage required for the trade. Moreover, two of the old steamers of the company were sold during the year. They had also to be replaced by new steamers. Your directors, therefore, gave their careful consideration to the question of building new tonnage and requested one of their colleagues to proceed to England to study and settle various questions connected with the building of steamers on the spot.

There seems to be a considerable misapprehension in certain quarters in connection with this question. The company wanted to lay down a building programme to be determined finally in the light of financial facilities the company would be able to secure specially under the Trade Facilities Act. This was one of the main reasons that led your board to request Sir Lalubhai to proceed to England, but I regret to say that although the Trade Facilities Committee could see their way to help foreigners to build steamers in England, the Treasury had no money to give to an Indian company for the purpose of building steamers which would have given employment to people in the English shipbuilding yards. The building programme had, therefore, to be considerably curtailed, and ultimately, as stated in the report, orders were placed for the building of three steamers only in England, two steamers to replace those already sold and one steamer as a further addition to the fleet.

TRIBUTE TO WORK OF SIR LALUBHAI.

I have no doubt you will be pleased to learn that tenders for the building of steamers were invited from builders from different countries, and that all questions connected with the specifications, &c., of the steamers to be built were finally determined by the

board in the light of the opinion and suggestions received from London from recognised experts like Sir John Biles and others. I must here recognise the valuable service which Sir Lalubhai rendered to the company in this connection by a thorough discussion and close personal examination of all the complicated questions connected with the building programme with the help of both the experts and shipbuilders in England on the spot, and I may add that the lead given by Sir Lalubhai in this matter has considerably assisted your directors in forming their final conclusions.

The Chairman, after dealing with the question of Indianising the staff of officers and engineers employed by the company, and in dealing at some length with the speech of Sir Charles Innes in the Legislative Assembly last March, said:—Let me consider for a few minutes the way in which Sir Charles Innes treated the national demand for the reservation of the coasting trade in the Legislative Assembly last March. Let me, however, at the very outset make one thing very clear. There is now no question either as to the desirability or the necessity of creating an Indian mercantile marine. The Government have recognised the necessity for the creation of such an Indian marine as is amply indicated by the terms of reference given to the Indian Mercantile Marine Committee. One, therefore, expected that Sir Charles Innes would have laid down in his speech definite constructive proposals for the practical realisation of that national demand. There is, unfortunately, nothing in his arguments which reveal a real desire to help the Indians in building up an Indian mercantile marine. Let us, however, examine some of his main arguments against the policy of reservation.

Sir Charles Innes observes that the policy of reservation introduces the principle of expropriation. Is this really so? Even if the objection is admitted for the sake of argument, are the British companies really squeezed out, and is their property really depreciated? Sir Charles Innes naturally forgets that the reservation, as recommended by the Committee, is not to take place immediately, but during the course of 25 years. Can this be construed by any stretch of imagination as squeezing out? At a time when all countries, including important parts of the British Empire, are protecting their own industries for the purpose of promoting their own economic welfare, one fails to see where the principle of expropriation comes in when India wants to run its ships in its coasting trade, which has been universally recognised as the domestic preserve of each nation.

FLAG DISCRIMINATION.

And this naturally brings me to another argument advanced by Sir Charles Innes—namely, that the reservation of the coasting trade introduces the principle of flag discrimination. Mr Runciman, president of the Chamber of Shipping, London, who presided over that Conference, made the position clear in the following words:—

"May I point out that at the Conference last year resolutions which were carried referred in each case to international commerce, and I should gather that by international commerce was not meant the internal commerce of any power, but commerce conducted between nations? Under those circumstances, I think, it is clear that there was no intention on the part of the drafters to step into a purely domestic matter."

This makes it clear once for all that the most representative Conference—namely, the International Shipping Conference—composed of the leading shipowners of all the great maritime countries of the world, recognised in unmistakable language that the principle of flag discrimination had no application to the coasting trade of a country.

RESERVATION AND RATES OF FREIGHT.

Let us now turn to the argument of Sir Charles Innes that the policy of reserving the coasting trade will enhance the rates of freight on the coast. Complete reservation of the coasting trade of India is not going to come into existence on a given day. The process is going to be gradual, and would be spread over a period of 25 years, as recommended by the Mercantile Marine Committee.

Two different sets of shipping companies would be plying during the interval on the Indian Coast—Indian shipping and British shipping. Apart from other considerations, the existence of these two different interests side by side in the coasting trade in itself would be a sufficient guarantee to keep the rates of freight at a reasonable level. The process, as stated above, will be gradual, and the rates will, therefore, be maintained. Moreover, as soon as the principle of reservation is accepted, more Indian capital is likely to be invested in shipping in the coasting trade, and this internal competition is the best guarantee against any rise in the rates of freight. The fact of the matter is that it is not the policy of reservation that decides the rates of freight, but they are based on various factors which are independent of such a policy. One therefore regrets that Sir Charles Innes should have drawn such a frightening picture of the effect of the policy of reservation before the members of the Assembly and tried to impress upon their mind that the reservation of the trade on the coast would swell the rates of freight to a giddy height.

Another point which Sir Charles Innes tried to make was that the policy of reservation would adversely affect the coal trade of Calcutta. The fear that has been expressed by Sir Charles Innes about the difficulties which the coal trade will have to face is not borne out by actual experience.

I shall now only examine one more argument advanced by Sir Charles Innes before bringing these remarks to an end. Sir Charles Innes observes that the trade of India is a seasonal trade, and consequently nearly half the tonnage will lie empty during the slack season. No figures have been advanced by Sir Charles Innes in support of his contention.

The speech of Sir Charles Innes is a clear indication of the changed mentality of the Government of India towards the cause of Indian shipping. The work, therefore, that lies before us is really stupendous. I have, however, no doubt that my countrymen both inside and outside the Legislative Assembly will continue to put up a strong and continuous fight as they have done hitherto for the creation of this national industry and the development of a merchant fleet.

AERATED BREAD COMPANY, LIMITED.

SATISFACTORY RESULTS OF DIFFICULT YEAR.

The annual general meeting of the Aerated Bread Company was held, on the 8th instant, at the Cannon street Hotel, London, Sir Charles Cottier (chairman of the company) presiding.

The secretary (Mr A. G. Nisbet, C.A.) read the notice convening the meeting and the auditors' report.

The Chairman, in the course of his address, said: The gross profit on trading was £628,229, resulting (after deduction of working expenses and charges and including income from investments) in a net profit of £137,444, as against £157,416 last year. The gross profit is £29,727 below that of last year. You will have noted, however, that working expenses and charges over which a board of directors can exercise direct control are £10,330 less than last year. I, therefore, desire to draw particular attention to the causes contributing to the decreased gross profit and which, in many respects, are very much less capable of control. I refer in the first place to the general strike and the coal strike as particularly affecting your undertaking, because of the fact that the accounts before you have had to bear the effect of the whole period of those strikes and not a portion only, as in the case of some somewhat similar undertakings. In this connection it should be borne in mind that the accounts before you are made up to October 2nd last, and are, therefore, affected to the extent of practically five-twelfths of the whole.

Whilst the number of customers served by the company and its subsidiaries has been maintained, the amount spent per customer has shown a definite diminution.

WILTON ROAD SITE.

Secondly, I wish to deal with some other points which, whilst they have in this particular year been responsible for a reduction of profits, should in the near future advantageously reflect in additional profits. After some delay in obtaining physical possession of the Wilton road site, the old buildings have been demolished and a start made upon the new structure. As this valuable site is to be used for the erection of an important restaurant, which will mark a distinct departure from the company's ordinary depôts, and will possess facilities for all classes of restaurant and café business, a full licence was applied for, and I am pleased to say, on the plans submitted to the Justices, was granted. In the meantime, however, a very large capital expenditure involved in the purchase of the freehold is idle, the loss for the moment representing approximately an amount equivalent to one-half of the loss under review. In addition to this loss, the branch which the new building is replacing is for the time being out of action. This branch, under the old conditions, was, from the earning point of view, one of the best of the company's depôts. Notwithstanding the loss on the capital for the time being, and the tempo-

rary loss of the depôt, the board feel that the results from the new restaurant will abundantly justify the policy adopted. It having become necessary to carry out extensive structural alterations at Buszards' old-established business in Oxford street, in order to increase the seating accommodation and for further facilities for counter business, the board in January last commenced operations. Some delay occurred with regard to easements in connection with the buildings on either side. The freehold of one has been acquired, and all questions of difference with regard to the other have been amicably arranged. The development is nearing completion, and it is confidently anticipated that additional profits will arise from a long-overdue improvement in this old-established high-class restaurant. Here again, whilst the business has been carried on under a considerable handicap, having regard to the difficulties which must always arise in the maintenance of a business of this character whilst building operations are proceeding, there has necessarily been a temporary reduction in profits.

SOUND POSITION.

The last 12 months have been a very arduous period. It is a real pleasure, therefore, in the case of this company, to be able to recommend the payment of the same dividend as in previous years; to point out that your assets have been maintained and increased; and that your carry-forward is between £11,000 and £12,000 in excess of the figure brought in last year.

We look forward with confidence to the future, and fully believe that 1927 will prove a good year, not only for this business, but for the whole of industrial England. In 1926 our national and domestic difficulties were accentuated by the ruthless and criminal machinations of a few individuals, who, having themselves absorbed the demoralising nostrums of Moscow, have sought—and for a period with some success—to inject the British worker with their poisonous virus. Their deluded victims are now happily in revolt, and the nation is, we hope and believe, at long last emerging from the murk of this ill-conceived and wanton struggle.

The Chairman, towards the end of the meeting, mentioned that he had just received some statistics which showed that since the end of the coal strike, and the removal of the lighting restrictions, the company's business had shown distinct improvement.

The resolutions were unanimously adopted.

NELSON BROTHERS, LIMITED.

GOOD RESULTS—SOUND POSITION.

The forty-third ordinary general meeting of Nelson Bros., Limited, was held, on the 7th inst., in London, Mr. Harold Nelson (chairman and managing director) presiding.

Mr. W. A. Porter (secretary and director) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said that the capital account showed the result of the issue of the remainder of the authorised capital in April last—viz., 85,405 preference shares and 55,376 ordinary shares. The directors found that extra capital was needed to give more elasticity to the business and to obviate too great reliance on their bankers for their necessary requirements as a finance company.

The general reserve account had been increased to £575,000 by the addition of £32,841, being the bulk of share premiums account. The balance of the latter had been used internally to strengthen the position. The revenue reserve was increased by the addition of £25,000 from last year's profits, and now stood at £50,000. Coming to the profit and loss account, the balance for the year was £99,593, being an increase of £3,185, and in view of the difficult industrial conditions of the year he thought it was a matter for congratulation that they had been able to more than maintain their revenue and profits. The balance-sheet showed that there was a total increase in investments of £193,673, reflecting the employment of new capital.

The directors recommended a final distribution for the year of 5 per cent. and a bonus of 5 per cent. on the ordinary shares, both free of tax, making 15 per cent. for the year, equivalent to a gross dividend of 18½ per cent. They also proposed to transfer £10,000 to contingency reserve account, and the carry-forward was increased by £10,924 to £57,503. The shareholders were well aware of the disastrous effects of the dislocation of trade arising from the general strike and the prolonged coal strike, which was estimated to have cost the country some £300,000,000. These losses must be reflected in the balance-sheets of practically all industrial companies—at any rate those engaged in the basic trades of this country—and in making up the national balance-sheet next spring the task of the Chancellor of the Exchequer would not be a light one. Happily their company's interests were widespread, and in view of the recuperative power of this country the directors were not disposed to be unduly pessimistic.

The report was unanimously adopted.

CHINESE ENGINEERING AND MINING COMPANY, LIMITED.

COALFIELDS IN GOOD WORKING CONDITION.

INADEQUATE TRANSPORT RESTRICT SALES.

MORE ROLLING STOCK ORDERED.

The fourteenth annual ordinary general meeting of the Chinese Engineering and Mining Company, Limited, was held, on the 6th instant, at Winchester House, Old Broad Street, London, Mr W. F. Turner (the chairman) presiding.

The secretary (Mr Alf. W. Berry) having read the notice convening the meeting and the auditors' report to the shareholders,

The Chairman said: Gentlemen,—The report and accounts for the year ended on June 30th last, which are before you to-day, must be regarded as satisfactory in view of the difficult conditions which have existed during the year, to which I will refer presently. The net profit amounted to £235,607, and we propose to dispose of it by a final dividend of 5 per cent., free of income-tax, making, with the interim dividend paid in May last, a total for the year of 10 per cent., free of tax, the same as in the preceding year; that is £140,000; income-tax is £93,919; together £233,919, which leaves a small surplus.

The report shows that the gross profit of the Kailan Mining Administration for the past year amounted to \$5,336,408, compared with a gross profit of \$5,640,271 for the preceding year. After providing for interest on the 6 per cent. Kailan bonds, £54,000; redemption of bonds for the year, £24,000; reserve for depreciation, \$800,461; the proportion of profit to which the Chihli Provincial Government is entitled, \$105,771, and other items, there remains a net profit of \$2,839,290, as compared with \$3,116,238 in the preceding year.

DIVIDEND POLICY.

The proportion of this profit brought to credit of our profit and loss account, together with interest in China, is £230,732. The average rate of exchange for the year was 2s 2½d, compared with 2s 3½d. for the preceding year. Interest in Europe, and minor items, including £1,292 recovered in respect of a reparation claim, bring up the total credit to £256,513—£30,000 less than that of the preceding year. Administration and expenses of all kinds in Europe amount to £19,838, approximately the same as in the preceding year, but there is a debit this time on the exchange account of £1,066, leaving a net profit for the year of £235,607. The corresponding figure last year was £266,720. The balance brought forward from the previous year's account was £239,420, which makes a total credit of £475,028. Income-tax requires £93,919, so there remains a balance of £381,108 to be carried to the balance-sheet. The interim dividend of 5 per cent., free of tax, paid on May 26th last amounted to £70,000, which leaves available the sum of £311,108 shown in the balance-sheet.

The further dividend of 5 per cent., free of tax, to be declared to-day, takes £70,000, so there remains £241,108 to be carried forward to the next account, compared with £239,420 which was brought in. It has been suggested in the Press that a larger dividend might be declared. The answer is that we are distributing the whole of the profit of the past year, and to emphasise what we said a year ago as to the political and industrial situation in China necessitating the maintenance of a strong financial position on our part. The wisdom of this view has been confirmed by all that has happened since.

BALANCE-SHEET ITEMS.

The balance-sheet shows that there were practically no liabilities at June 30th other than those relating to income-tax, debenture interest and dividends outstanding, the total being £200,700 (inclusive of £22,213 reserve for income-tax at that date), compared with a total of £105,000 in the preceding balance-sheet. The 6 per cent. first mortgage debentures stood at £888,000 and the reserve for redemption of debentures at £324,000. On the other side, cash stood at £524,280, bills receivable were £30,094 and debtors £1,346. The property account is unchanged.

The next five items in the balance-sheet show our position vis-a-vis the Kailan Mining Administration. The first consists of stores, £13,382. This is the last of five annual instalments, and will therefore disappear. Then comes working capital, £288,795, which is practically the same as before. The loan account, £50,143, is unchanged. The current accounts, £272,186, consist mainly of our share of the profit for the past year. The last item, £33,651, railway car loan account, was explained to you last year. It is the balance of an advance for the purchase of railway wagons in Europe, which is being paid off by monthly instalments, and will be extinguished in a few months' time. The remaining items do not require any comment.

INADEQUATE TRANSPORT FACILITIES.

The sales of coal for the year are stated in the report to have been 2,898,000 tons, compared with 2,861,000 tons for the preceding year.

The next paragraph gives you in a condensed form the history of the year. It states that the business of the Kailan Mining Administration was restricted by military operations in North China in the late autumn and winter of 1925-26, and by the inability of the Peking-Mukden Railway to provide sufficient rolling stock for the transport of coal. At our meeting a year ago we gave you the sales up to the end of the third week of November, 1925, which showed an increase of 332,000 tons over the corresponding period of the previous year. This increase rose by the end of February, 1926, to nearly 600,000 tons, but from that time there was a steady decline, owing to insufficient supply of rolling stock, and the increase almost disappeared during the following four months, the sales for the year being only about 37,000 tons above those of 1924-25.

The general manager reports that "our sales were in every market limited by the amount of coal that we were able to transport."

The next paragraph of the report tells you that for the four months of the current year, July to October, the sales were 1,031,000 tons, compared with 1,249,000 tons for the same period of the preceding year. These figures are, however, more encouraging than appear at first sight. The sales for the four weeks of July were 172,000 tons, and for the four weeks of October 323,000 tons. For the four weeks of November the total is 332,000 tons, or an average of 83,000 tons per week. As the report states, the sales are limited to the present facilities for transportation, which consists solely of the cars owned by the Kailan Mining Administration. If the railway were able to supply locomotives and wagons we should be able to do a much larger business, notwithstanding the troublous times through which China is now passing.

FURTHER ROLLING STOCK ORDERED.

In order to meet this situation and provide for the future expansion of the business to something like the extent of the output capacity of the mines, orders have been placed in Europe for 12 additional locomotives and 300 wagons. Six of the locomotives were shipped in the month of August last, and should come into operation early in the New Year. Six more will be shipped in February next, and should come into operation before the end of the current financial year. To some extent these locomotives will serve to replace the shunting locomotives which, under stress of circumstances, had to be used for traffic on the main line as locomotive power was unobtainable. The first shipment of wagons should be made in February next, and the final one in March next. We cannot, therefore, expect to experience much appreciable benefit from this additional rolling stock during the current year, but it is obvious that in the year 1927-28, given something like normal conditions in regard to the railway, there should be a very marked expansion in our business. The Kailan Mining Administration entered into a new traffic agreement with the Peking-Mukden Railway in the month of September last for a period of five years. Hire-purchase agreements have also been entered into in respect of the new wagons and locomotives for terms of five and four years respectively, with an option of purchase by the Peking-Mukden Railway, the rolling stock in the meantime being used exclusively for the transportation of the Administration's coal and other products, subject to certain reasonable reservations.

I have not entered into particulars as regards the difficulties which have been encountered in carrying on the business during the past year. That these have been many and varied must be obvious to anyone who has followed, however cursorily, the course of events in China. It will be sufficient if I tell you that the general manager reports that, from every point of view, it has been the most difficult year in the history of the administration.

BENEFITS OF CO-OPERATION.

I do not consider it would be expedient or beneficial for me to dwell on the present political situation. It is, however, appropriate to say that in our case, as in every other field of trade and industry, the British and Chinese interests are really one. The Kailan Mining Administration is a joint British and Chinese combination, which has been in existence for 14 years. It is a shining

example of the benefits of co-operation, mutual confidence and good will. The natural resources of the Kaiping coalfields have been developed on a scale commensurate with their importance, markets have been found for the disposal of coal up to 4,250,000 tons in a year, a figure which we hope to see surpassed when the new rolling stock comes into full operation, and the general manager reports that the mines are equipped and developed up to a point which challenges comparison with coal mines anywhere in the world.

The engineer-in-chief reports that "the five mines now in service have never been in better working condition; their equipment is remarkable in every respect; their combined output capacity, given sufficient labour, is 20,000 to 22,000 tons a day, or easily a yearly production of 6,500,000 tons." We have stocks of coal ready for delivery amounting to about 1,300,000 tons.

TRIBUTE TO ADMINISTRATION STAFF.

Mr Young concludes his report with a reference to the administration's staff, whose loyalty, zeal and efficiency, he says, could scarcely be surpassed. I cannot conclude this short address better than by saying that we, as a board of directors, recognise

to the full our indebtedness and that of the shareholders to the general manager of the Kailan Mining Administration, the engineer-in-chief and other heads of departments, for the ability and devotion which they continue to show in the management of this great enterprise under most difficult conditions.

I now beg to move: "That the directors' report and accounts to June 30, 1926, be and they are hereby received and adopted, and that a final dividend be declared of 5 per cent., free of income-tax, making 10 per cent. for the year, free of income-tax, payable on December 7, 1926."

Colonel H. A. Micklem, C.B., C.M.G., D.S.O., seconded the resolution, which was carried unanimously.

Mr Edmund Davis proposed the re-election of Mr W. F. Turner, the Rt. Hon. Lord Southborough, G.C.B., and Mr Lambert Jadot as directors of the company.

Major W. S. Nathan, C.M.G., seconded the motion, which was passed unanimously.

On the proposition of Mr Dixon, seconded by Mr Gardner, Messrs Annan Dexter and Co., were reappointed auditors.

The proceedings then terminated.

THE SUDAN PLANTATIONS SYNDICATE, LTD.

NEW AGREEMENT WITH THE SUDAN GOVERNMENT.

DETAILS OF THE SCHEME.

SENNAR DAM IN OPERATION.

PROFIT AND LOSS ACCOUNT.

Having dealt with the balance-sheet, and referred to the investments in other companies, the Chairman proceeded: Turning now to the profit and loss account, our total receipts amounted to £706,000, compared with £305,000 last year, whilst our expenses, which include about £20,000 for increase of capital, writings off, bonus to staff, and £28,000 placed to reserve account, total £224,000, leaving us with a profit of £482,000, against £163,000 last year. Out of this amount we have paid you an interim dividend of 10 per cent. in September. We now propose to declare a final dividend of 15 per cent., but again postpone payment until January 13, 1927. We have made of late good headway in selling our cotton, but we would like to do just a bit more during the next few weeks. The amount carried forward will be £294,650, against £189,450 last year.

I now turn to the work done by us in the period under review.

Our Zeidab Station, for a change, did not do so well as in previous years. We had under cotton 5,240 feddans, and shipped 2,243 bales, all of which are disposed of.

This year we have practically the same acreage under cotton, and we have already picked 12,000 kantars, which is a considerable improvement as compared with last year's pickings at this date. Indications point to a final yield well in excess of that of last year.

In the Gezira we cropped last year 21,616 feddans of cotton, yielding 47,797 kantars, equal to 10,870 bales.

During the financial year ended June 30, 1926, we had under cotton 80,031 feddans, under durra 30,833 feddans, and under lubia 9,178 feddans.

The cotton crop amounted to 384,106 kantars, of which we shipped 89,641 bales to England, and sold locally 668 ..

making a total of 90,309 bales

In short, from four times the area we got eight times the crop of the preceding season—a very happy result, but not a result on which to base calculations of future prospects.

In addition to this, we shipped

34,900 tons of cotton seed to England, and 1,862 .. sold locally,

making a total of 36,762 tons, which are all disposed of at satisfactory prices.

For the coming season we have sown:

100,057 feddans of cotton,
50,188 durra,
50,000 lubia,

and our latest cables from our managing director tell us that the work done on all the crops has been good.

Owing to cold weather since the beginning of November, there has been some setback in the condition of the cotton, but granted warmer weather and favourable conditions for the remainder of the growing season, we may look forward to having a good crop.

The adjourned nineteenth ordinary general meeting of the Sudan Plantations Syndicate, Limited, was held, on the 8th instant, at River Plate House, Finsbury Circus, London, Mr F. Eckstein (the chairman of the company) presiding.

The Chairman said: In moving the adoption of the report and accounts at this our nineteenth annual general meeting, I do so with greater pleasure and more satisfaction than on any previous occasion. We have, indeed, every reason to be pleased, and the reasons for my satisfaction will be apparent when I tell you first that in this its first season the Sennar Dam and the somewhat complicated canal system dependent upon it have worked well and without serious hitch. This achievement is very creditable to the irrigation officials of the Sudan Government, and to our engineers and staff who collaborated with them. Secondly, that damage from bacterial diseases and insect pests was very slight; thirdly, that, in spite of the high proportion of our tenants who were new to the work, we had an exceptionally good crop—a much better crop, in fact, than we can expect to have every year; and, finally, that we have concluded negotiations with the Sudan Government for an extension of the period of our present concession, and for an increase of our present area from 300,000 feddans to a minimum of 450,000, and a possible maximum of 500,000 feddans.

Of these areas you will, of course, realise that under our present system of rotation, only one-third is grown in cotton in any one year.

This increase has been granted in view of the fact that it has been found possible in practice to make the volume of water allotted to the original project suffice for the irrigation of a larger area. There is thus no reason to apprehend difficulties resulting from opposition in Egypt, since the latter's rights are in no way infringed. There is, I would remind you, a definite allotment of water which cannot be exceeded without prejudice to Egypt, and the possibility of extending our area from 450,000 feddans to 500,000 feddans must, therefore, depend strictly on the economy in water which can be effected. The project has proved so beneficial to the native tenants on the original area that there has been a growing demand from the inhabitants of the adjacent areas for an extension of irrigation, and the Sudan Government on their part feel that this extension should be undertaken forthwith.

I shall give you further details as I proceed. In passing, I will say that in order to secure an extension of the area and of the period of our management, we have had to agree to make serious concessions. In all the circumstances, however, I believe that better terms were not obtainable, and that in agreeing to these sacrifices we have acted in your best interests. You will, however, be able to form your own opinion after I have explained to you fully what we have done in this respect.

On Thursday, January 21st, this year, Mr MacIntyre, our managing director, and I, accompanied by some senior members of our staff, as guests of the Sudan Government, attended the official opening ceremony of the Sennar Dam—certainly a red-letter day for us. This dam, two miles in length, a monument of foresight and engineering skill, will stand for all time as an achievement of which the British Empire may well be proud.

EXTENSION OF CONCESSIONS.

I come now to the really important part of my address. From the directors' report you have gathered that the Sudan Government are entrusting us with the task of not only continuing our present work for a longer period, but also of increasing the area of our activities. An extension of time was agreed to on the ground that it would be in the interest of all parties that we should be able to adapt our agricultural policy to a longer period than originally provided. We, on our part, have conceded in exchange a substantial reduction of our share of the proceeds. May I be permitted to say, at this stage, that in my opinion quite apart from financial considerations, the Sudan Government are thus setting a good example by making full use of private enterprise to collaborate with them in developing the natural resources of their country. In doing this I venture to say they are right, and they will be well served. I believe that an agricultural and commercial undertaking, such as we are engaged in can be better conducted by private enterprise than by any Government, however efficient, and that the trained man of business, provided he is competent, and has his heart in the right place, and provided he has the confidence of the Government he works for, and is supported by the shareholders of the company he serves, will be able to show the best possible results. It will be our endeavour to collaborate loyally with the Government as in the past, and to deserve the confidence which they have shown in extending the period of our management.

Now, under the old agreement, our limit of time was ten years from June 30, 1925, with a problematical further four years, and the limit of area was 300,000 feddans, of which 100,000 feddans had to be planted annually with cotton.

FEATURES OF NEW AGREEMENT.

The essential features of the new agreement which we have concluded—it will take some months yet to complete the final document—are as follows:

1. The period of the concession is extended to June 30, 1950, subject to certain rights of earlier termination which I will mention.
2. The area under our management is to be not less than 450,000 feddans, and may possibly amount to 480,000 feddans, or to 500,000 feddans.
3. The Government are to complete the major canalisation of not less than 45,000 feddans by July 15, 1928, a further area of not less than 75,000 feddans by July 15, 1929, and a further area of 30,000 feddans by July 15, 1930. It is not improbable that this programme may be accelerated.
4. Our syndicate has to complete within these periods the subsidiary canalisation and the other necessary works.
5. The proceeds of the crop are to be divided as follows:—

	Per cent.
For the seasons 1926-27 and 1927-28 ...	Government 37½
	Syndicate 22½
For the season following the completion of an additional area of 45,000 feddans	Government 38½
	Syndicate 21½
For the season following the completion of further 75,000 feddans ...	Government 39½
	Syndicate 20½
For the season following the completion of further 30,000 feddans ...	Government 40
	Syndicate 20

6. The Government have the right on June 30, 1939, or June 30, 1944, at their option, subject to giving one year's previous notice, to take over from the syndicate the management of the whole undertaking, assets, and liabilities, Gezira Light Railway and a reasonable sum for working capital. If this option is exercised, the Sudan Government has to compensate the syndicate adequately for loss of prospective profits, either by a lump sum or by yearly payments.

Provision is also made for termination of the agreement at any time in the event of serious and continued failure by either party to carry out its obligations.

7. Our pumping installations are to be taken over by the Government at an agreed price.

8. The syndicate is to repay the Government the £400,000 loan. There are, of course, a number of other clauses, including a general arbitration clause in case of disputes.

The main features of the proposed new agreement really follow those of the old agreement, inasmuch as the Sudan Government provides the land, the water, and the major canalisation, and the syndicate undertakes the subsidiary canalisation, the erection of additional ginneries, and arranges for ploughing, marketing of the cotton and seed, and general management as before.

The chief alteration is really the reduction of our percentage

of the proceeds of the cotton crop from 25 per cent. to eventually 20 per cent.

In addition to the above-mentioned areas we have come to an arrangement with the Government to put the Hag Abdulla pumping station once more in commission. This means for us a further area of 15,000 feddans, of which one-third will be under cotton.

The conditions of management for this additional area are exactly the same as for the 450,000 feddans.

Now, ladies and gentlemen, I have given you the essential points of the new agreement. The reduction of our percentage and the extension of period and area make it an entirely new business proposition.

Nobody realises more than I do the sacrifices your board has had to make. On the other hand we have now a fairly long life in front of us, and a larger area, and I ask you to give us the sanction of your approval for our action.

As in the past, your board will in the future do everything that is possible to make good, and we must hope that the good luck which we have enjoyed in the past may continue to follow us.

NEW ISSUE OF SHARES.

Naturally the new work we have to undertake costs money, and a good deal of money, apart from the additional floating capital. It is therefore the intention of your board to issue in the course of the next few months, at a modest premium, sufficient shares to produce the requisite funds. The exact date of this issue and the terms I am unable to fix to-day.

I must not conclude my address without placing on record the obligation under which we are to our staff in the Sudan for the magnificent results we have obtained during the past season.

At our headquarters at Barakat, in Mr McIntyre, our eminent managing director, in Mr Payntz-Wright, our able manager, in Mr Archdale, our indefatigable senior inspector, and in all their assistants, we possess a staff as good as can be found in a tropical country.

BONUS TO STAFF.

You will have noticed that we have set aside a sum of £12,500 as a bonus to our staff. Having established a provident fund to which we contribute on the £ for £ principle, we had intended to discontinue these bonuses. But in view of the exceptional efforts which our staff had to make during this first season under the new irrigation system, and of our exceptionally good crop, we feel that we ought to make an exception this year, and we trust that you will approve our action.

Ladies and Gentlemen, I end as I began in congratulating you on the continued prosperity of our syndicate. The baby born in 1904, after having gone through every possible and impossible infantile sickness, is now a strong youth, and will, I hope, in a few more years obtain vigorous manhood.

The Hon. Arthur M. Asquith, D.S.O., seconded the resolution, which was carried unanimously.

It was subsequently resolved by the shareholders—to mark their great appreciation of the exceptional services rendered to the company, and also to the Empire by the chairman—to ask his acceptance from the company of his portrait, painted in oils by an eminent British artist, as a token of their esteem, and as a memento of their admiration of his leadership in the great enterprise, beneficial to the shareholders, to the Sudan, and to the British Empire.

THE MEXICAN RAILWAY COMPANY, LIMITED.

INCREASED PASSENGER AND GOODS TRAFFIC.

POLITICAL AND ECONOMIC CONDITIONS IN MEXICO.

The 123rd ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 8th instant, at Winchester House, Old Broad street, London, Mr Vincent W. Yorke (the chairman) presiding.

The secretary (Mr C. Tennant) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, said: At our last general meeting I was able to say that I believed we had turned the corner, and that the position was better and more hopeful than for some time past. Though Mexico during the last six months has not made any notable advance towards prosperity, she has been free from political disturbances of any consequence, and I do not wish to qualify anything that I said at our last meeting. There have been, as you are no doubt aware, two regrettable features, the dispute between the State and the Church, into the merits of which I am afraid I am not qualified to enter, and a fresh interchange of Notes with the United States of America. As regards the religious dispute, the crisis would appear to be over, though the boycott instituted by the Church party has undoubtedly had a bad influence on trade; and as regards the diplomatic situation, it is much to be hoped that the great improvement of late years in the relations between Mexico and the United States will not be interrupted by recent happenings. As regards ourselves, it is, at any rate, satisfactory that we have earned quite a respectable sum of money (over £100,000) from the operation of the line during last half-year. These earnings have resulted in a most welcome improvement in our finances, so much so that I believe that we shall be able to discharge the whole of our debenture interest due on January 1 next for the first time for many half-years without having recourse to our bankers.

ADVERSE FACTORS.

The most remarkable feature of the half-year under review is that we have carried substantially more passengers in number and more goods in tons than in any one of the preceding five half-years. In spite, however, of the increase in work done, the total gross receipts are \$146,000 less than in the corresponding half-year. This is due to two reasons. In the first place, the number of first-class passengers has fallen off, which would indicate that the spending power of the people has been less, and that many who used to travel first class have been travelling second class, and in the second place, a great quantity of cereals which, being articles of prime necessity, are justly rated low, has been carried. The competition of the National Railways has also necessitated the lowering of certain through rates. There has been a serious falling off in the amount of pulque carried, which is also due to keen competition on the part of the National Railways, but this has been to a certain extent compensated by a considerable increase in the amount of fuel oil carried.

REDUCTION IN EXPENSES.

It is satisfactory to be able to point at last to a substantial reduction in expenses, and not in one department only. These work out for the half-year at 84 per cent., as compared with 90 per cent. for the corresponding half-year, and more than 100 per cent. for the preceding half-year. For this improvement the reduction in shop hands, about which I had much to say at our last meeting, is largely responsible. There is still much room for improvement in the expenses of the transportation department, but it is difficult for us to move forward until the National Railways have given us a lead; but we understand that they are giving special attention to the abnormal and unnecessary expenditure which is being incurred under this head on both their system and our own.

SOUND CONDITION OF PROPERTY.

Of the condition of the property I need say very little. I have no doubt that it is in the same excellent condition in which I left it in April last. Very good evidence of the high state of perfection which it has attained was given by the disastrous hurricane which visited Vera Cruz in September last. While all the neighbouring railways suffered serious damages and interruptions, the whole of our track and buildings withstood successfully a very serious trial, and our traffic suffered no interruption whatever. Since our last meeting we have opened a further section from Orizaba to Cordoba to electric operation, and we still have seriously under consideration the further extension from Cordoba to Paso del Macho. Although this will entail further commitments for capital expenditure, the advantage of eliminating the whole of the heavy grades from steam operation which could thus be effected makes the proposition a very attractive one, and I hope

that I may be able to say at our next meeting that we have been able to put the necessary work in hand.

We have been in the habit of stating in our report whether or not any sum in respect of the earnings of the half-year is payable to the trustees of the registered stocks, "A" and "B," but on this occasion we have not been able to do so, as our auditors, who are responsible for ascertaining the amount so due, are awaiting further information from Mexico before giving their certificate. It appears unlikely, however, that there will be any available balance.

CURRENT HALF-YEAR.

As regards the results of the current half-year, I may say that the gross traffic, which have averaged about 35,000 pesos per week as compared with a level of about 40,000 pesos attained in recent half-years, have been distinctly disappointing. The boycott due to the religious controversy, and serious competition on the part of the national railways, have both affected our takings. We can, however, point to a satisfactory diminution in expenses for the first four months of the current half-year of about £9,000 per month. Since the publication of the report a further return of net earnings for the month of October has been received, which brings up the total net earnings for the four months to \$538,000. If they continue at the same rate until the end of the year we shall have earned about £70,000 in the whole half-year, which, though less than the half-year under review, will compare favourably with the corresponding half-year, when net earnings were a minus quantity.

As regards the political situation, no information whatever has reached us from Mexico in support of the many disquieting rumours which have recently emanated from New York and been given prominence in our Press, and I have no reason for believing that the Government of President Calles is less firmly established than it was six months ago.

ECONOMIC CONDITIONS IN MEXICO.

Turning to the economic position of the country, it is unfortunate that the price of silver should have fallen so heavily in the last few weeks. The mining of silver is a very important business to Mexico, which not only gives much employment, but brings in a large revenue to the State, and provides one of its most valuable exports. The large amount of imported cereals which we are carrying, and hope to carry, is an unsatisfactory feature. Mexico is a country of great agricultural possibilities, and could easily produce under settled agricultural conditions more than enough to feed herself. On the other hand, the Government finances would seem to be well managed and in good order. According to figures recently published by the National Bank of Mexico, the public revenue is showing a comfortable surplus over public expenditure, and it is most satisfactory that the payments to the International Committee of Bankers are being regularly maintained.

GENERAL MANAGER'S CABLE.

I will now read a cable from our general manager:—
"Dispute between State and Roman Church still unsettled. Boycott by devout of amusement and luxuries, and their determined restriction of unnecessary expenditure, though weakening still continues; consequence great loss to commerce, and almost ruin of small shopkeepers. Many large orders on Europe and United States cancelled by importing houses, and effect on us will be felt later unless situation improves. Passenger traffic, specially pilgrimage, greatly curtailed. Maize, wheat, coffee, sugar cane, and tobacco crops prospect normal; imports of wheat from United States continue, and we have secured movement 300,000 bushels. Fruit traffic increasing. Silver fell to 20 per cent. discount end last month, but has again risen to 5 per cent. owing, it is reported, to the energetic Government action, otherwise situation would have been very serious for us. Am discharging 375 men from workshops end of year at cost of three months' pay totalling about 220,000 pesos. Reported National Railways of Mexico about to take similar action. Hope to install co-operative system in Vera Cruz shortly, which ought to attract imports and benefit us. Trains running punctually and general situation normal."

Although he takes a somewhat gloomy view of the prospects of business, you will observe that he expresses no anxiety as to the general situation. The news which he gives with regard to the further reductions in the shops is most satisfactory, and I think that he is entitled to our warmest congratulations for having brought the long and anxious negotiations with the Unions to this successful conclusion. The ultimate savings to the company should be in the neighbourhood of £80,000 per annum. I should perhaps explain that the co-operative system in Vera Cruz of which he speaks is, to put it shortly, a glorified system of piece-work under which, though the men may work harder than they now do, they should earn much more money. It is a system which has been worked very successfully for some years past at the rival harbour of Tampico, and has given great satisfaction to the public. The report and accounts were unanimously adopted.

BWANA M'KUBWA COPPER MINING COMPANY, LIMITED. **VAST POTENTIALITIES—CAPITAL PROPOSALS.**

The ordinary general meeting of the Bwana M'Kubwa Copper Mining Co., Limited, was held, on the 7th inst., at Cannon street Hotel, London, Mr Edmund Davis (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, said: As the Bwana Mine is now developed many years ahead of the capacity of the plant, development is being practically concentrated on the N'Kana and its extensions. The results obtained are far in excess of any of our expectations, and are so satisfactory that it has become necessary to provide additional funds at a much earlier date than was originally contemplated, so that the N'Kana property may be developed rapidly and brought to the production stage as soon as possible. This is of very great importance from the point of view of the eventual increase of the capacity of the Bwana plant. Our intention is, subject to the continuance of satisfactory developments on the N'Kana, to arrange for the construction of a line about 33 miles long from the Bwana plant to a central position on the N'Kana property. Given satisfactory railway rates, a further plant to deal with the N'Kana sulphide ores will probably be erected at Bwana, so that we may avoid the duplication of metallurgical plants and reap the benefits of centralisation in the way of lessened overhead charges and technical staff.

The N'Kana and extensions have now been proved over a length of 7,740 feet by means of shafts sunk at intervals of 800 feet, all of which are down 100 feet.

Tonnage is being proved at a rapid rate. At the mid-year, work on the Shapatu extension of the N'Kana lode indicated 500,000 to 600,000 tons of oxidised ore averaging 5.4 per cent. copper, and on November 5th the extensions reserves were estimated at 810,000 tons, averaging 5.1 per cent. copper (including dilution) based on ore 100 feet depth, 35.8 feet width, and 3,390 feet length.

Present developments being so satisfactory, we may have to give early consideration to an increase in the capacity of the plant at Bwana to 1,500 tons per day. This would consist of 900 to 1,000 tons from the Bwana mine and 500 to 600 tons from N'Kana, and should result in a production of about 20,000 tons of copper per annum. We have reserved N'Kana and its extensions, as well as five miles on each end, exclusively for very active development on our own account, the area thus reserved being about 70 square miles and we have made an arrangement with the selection trust group, with which Mr Chester Beatty is so intimately connected, to prospect the outside portion of our grant. They are to expend certain amounts on prospecting, and we not only retain a one-third free interest in any discoveries, but also have the right to find up to one-third of the capital which may be raised by any company and/or companies which may be formed to acquire any property covering any ore discoveries made. We have accepted a 5 per cent. interest in this business.

We have received a cash payment of £25,000 in connection with this transaction, and have sold the mineral rights over about 1,665 acres for £25,500 cash, of which we had previously received £5,000, and have now received the balance of £20,500. In addition to these transactions we have given an option on a block of claims, for which we have been paid £5,000. The option holders are to expend £10,000 between now and November next. Should they then wish to extend the option a further £10,000 will have to be spent in the following year and £5,000 in the succeeding six months. If the option is exercised we are to receive £25,000 in cash and £25,000 in fully-paid shares in a company with a capital of £200,000, of which £40,000 is to be for working capital and £50,000 to be held in reserve.

We originally paid £60,000 in cash and £143,750 in fully-paid shares, making £203,750 for the N'Kana grant. In connection with the two sales referred to we have received £50,500 in cash and if the further option to which I have referred is exercised an additional £25,000 in cash, bringing this total up to £75,500, and also £25,000 in shares in the contemplated company. We retain the N'Kana area of about 70 square miles, which, in our opinion, is alone worth the whole issued capital of our company. We also retain a one-third interest in any further discoveries made.

With regard to finance they were proposing to increase the capital from £1,500,000 to £2,000,000 by the creation of 2,000,000 shares of 5s each. Of those they had arranged for the underwriting of an issue of 400,000 shares to be made to the shareholders at the rate of 1 in 15 at 7s per share. There would thus remain 1,600,000 shares in reserve, which, in the course of time, should prove ample to provide funds required in connection with a sulphide plant, and for additions to the Bwana plant, and should

at the same time give them the necessary capital to retire the £300,000 of outstanding notes.

The report and accounts were unanimously adopted, and the resolutions with regard to the increase of capital were also passed.

NEW MODDERFONTEIN GOLD MINING COMPANY, LIMITED. **RECORD RESULTS FOR THE YEAR.**

The twenty-ninth ordinary general meeting of shareholders of the New Modderfontein Gold Mining Company, Limited, was held in Johannesburg on November 4.

The Chairman, Mr A. W. Rogers, in moving the adoption of the report and accounts, after referring to the retirement from the chairmanship of Sir Evelyn Wallers, said: I am sure you will agree that the results for the year are extremely satisfactory, new records having been made in tonnage crushed, in gold recovered, in profit, and also in footage developed.

The net profit for the year amounted to £2,037,575, and thus for the third year in succession we have established a record in this respect. After adding the balance of £363,236 unappropriated at the commencement of the year and £1,919 in respect of forfeited dividends, we had a total of £2,402,730 to the credit of appropriation account. Dividends Nos. 39 and 40, amounting in all to 110 per cent., absorbed £1,540,000, Government and provincial taxes amounted to £283,190, and capital expenditure on shaft sinking and equipment was £133,378. The unappropriated balance at June 30th last was £423,961—an increase of £60,725 over the amount unappropriated at June 30, 1925.

INCREASED TONNAGE MILLED.

The tons milled for the year amounted to 1,532,000, an average of 127,600 per month—an increase of 4,400 a month over the previous year. The working profit was £1,992,527. This was £54,000 more than in the year before, although the average price of gold was about 2s 9d an ounce less than in the year 1924-25.

The yield for the year averaged 10.243 dwts, an increase of slightly over 0.3 dwt. This increased yield is the result of further progress in cleaner mining, in stopping operations, and in a higher rate of sorting. The average stopping width during the year was 52.9 inches, as compared with 59.4 inches in the previous year, and the percentage of sorting on the surface was 20.6 per cent., as compared with 18.2 per cent. in 1925.

Working costs for the year averaged 17s 10d per ton milled, which was an increase of 9d per ton on the previous year. In view of the narrower stopping width and increased sorting an increase in cost per ton milled was not unexpected, especially when regard is had to the fact that there was a large expenditure incurred for ore transport and stopping equipment, and that the additional facilities for sand-filling mentioned last year were provided.

The development footage was again increased, the total for the year being 43,244 feet, as compared with 41,412 feet in the previous year and 29,044 for the year ended June 30, 1924. Out of the total amount of development, 20,175 feet were sampled on the main reef leader, of which 16,390 feet exposed payable reef, with an average value of 662 inch-dwts. A considerable amount of prospecting work was also done in the upper leaders in the north-west section of the mine; 3,148 feet exposed payable reef, giving a value of 72 dwts over a width of 4 inches. The payable ore developed during the year amounted to 2,278,900 tons of an average value of 8.9 dwts per ton.

ORE RESERVES.

A revaluation of the ore reserves was made as at June 30, 1926, with the result that the estimated quantity at that date was 9,289,800 tons of a value of 8.6 dwts over a stopping width of 54.8 inches. This compares with 9,090,100 tons at June 30, 1925, valued at 8.5 dwts. Included in the ore reserves are 854,100 tons of a value of 6.8 dwts not at present available for stopping. The average width upon which the ore valuation has been calculated was 54.8 inches, as compared with 61.5 inches for the previous year. It will be noted that, although the stopping width has been reduced so substantially, the tonnage in the reserve has been increased by nearly 200,000 tons, while the average value shows an increase of 0.1 dwt.

No. 2 circular shaft has been equipped to deal with development rock, and all the rock from the development done from this shaft is being hoisted through it. The permanent winding equipment is being installed as rapidly as possible, but owing to the industrial disturbances in England the delivery of the engine has been delayed. It is hoped, however, that the erection of this will be completed about the end of the financial year.

Capital expenditure for the year has amounted to £133,378. The programme for the current year entails an expenditure of about £200,000, almost entirely for the completion of the equipment of No. 2 circular shaft and other work connected with the transfer and treatment of ore from this shaft. When this work is finished we do not foresee any further capital expenditure of magnitude.

CURRENT YEAR'S RESULTS.

The results for the first quarter of the current financial year have more than maintained the average of the results for the year we have been discussing. The average tonnage crushed has been 132,000 tons per month, and the working profit has also shown an increase. Development results during the same period have been satisfactory, 3,395 feet having been disclosed on the main reef leader over an average width of 19 inches, of a value of 39.3 dwts. This is equivalent to 747 inch-dwts.

I think it cannot be gainsaid that the results which I have been privileged to describe to you to-day are very gratifying. In a very great measure they are due to the unceasing efforts to improve mining methods. There has been a marked improvement in the drill steel available for use underground, which at the New Modder has now reached a high standard of perfection. In development the footage advanced per machine shift during the year under review shows an increase of 33.6 per cent. The recent improvement in stoping efficiency is equally marked, the fathoms broken per machine shift for the month of June, 1924, 1925, and 1926 being 1.50, 2.96 and 3.37 respectively.

While the greatest possible credit is due to the management of the mine for the improvements that have taken place, a very large proportion of the benefit attained is undoubtedly due to the work done by the research organisation of the Central Mining/Rand Mining Group, who are able to carry out investigations and research on a scale which would not be practicable for any single mine. Considerable progress has been made during the last few years, and it is expected that further benefits will be derived from continued study.

Mr S. Alexander seconded the motion.

There being no questions, the motion was put to the meeting and carried unanimously.

At an extraordinary meeting which followed a motion for the purpose of amending the articles of association in respect of the directors' fees was put and carried unanimously.

DJASINGA RUBBER AND PRODUCE COMPANY, LIMITED. **CHAIRMAN CONFIDENT OF THE FUTURE.**

The sixteenth ordinary general meeting of the Djasinga Rubber and Produce Co., Limited, was held, on the 9th inst., in the Council Room of the Rubber Growers' Association (Incorporated), 2, 3 and 4 Idol lane, London, Mr Eric Macfadyen (the chairman) presiding.

Mr J. Mitchell Thom, representing the secretaries (Messrs Harrison and Crosfield, Limited), having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said: Our rubber crop amounted to 1,000,561 lbs for the twelve months. As the whole planted area, except about 700 acres, is old enough to be tapped, this represents a low average yield. You were reminded last year by Mr Miller, who occupied the chair in my absence in Java, that most of our rubber is planted in soil which has carried previous cultivations, and compares poorly in natural fertility with virgin land. The growth and general appearance of trees is quite good for six or seven years, but, after being tapped for some time, their condition begins to fall off, bark renewal proves slow, and, unless the future is to be seriously prejudiced, it becomes necessary to follow a highly conservative crop policy. The future of our estates in this respect has, as you have repeatedly been told, for some considerable time been the subject of earnest consideration by your directors. Four or five years ago we embarked upon a policy of building up our soil by means of green manuring which we knew must ultimately improve its condition, and we have since been conducting various experiments, at first on a very small scale, with a view to testing the possibility of more rapid amelioration by means of chemical manuring. On the strength of the results obtained, your directors have felt justified in authorising an extended programme of manuring during the current year, and, while we cannot look for any increase in crop for the current year, during which prudence demands the continuance of highly cautious tapping methods, we look with confidence to the gradual but progressive rejuvenation of our soils and a steady return to normal outputs in future years.

FORWARD SALES.

The price realised for our rubber was better by 1.36d than for the previous year. For the current year I cannot, of course, prophesy as to the price of rubber, but we have sold forward 275,360 lbs, out of a total crop which we again estimate at 1,000,000 lbs, at prices which look well on the present market, averaging approximately 2s 3½d per lb. We have also sold 35,840 lbs for delivery out of next year's crop at an average of 2s 8.19d. The slight increase in f.o.b. cost of 0.48d is accounted for by necessary provision for Java income-tax. During the current

year we must anticipate some increase in cost owing to the manuring programme, the benefit of which we cannot expect to realise in increased crop during the period, though we fully believe it will be more than compensated for as time goes on.

Our tea estate, thanks to good forward sales, was again a source of some small profit in spite of a poor crop. Labour was not too plentiful, but the main cause for the disappointing output was the after effects of a protracted drought, followed by several attacks of helopeltis and red rust. With a normal crop last year we should have done very well out of tea, but a crop of 312,732 lbs from an area of 1,672 acres all mature inevitably means a high cost per lb. The cost, is 0.54d per lb, compares with a price realised of 1s 1.84d net—equivalent to, say, 1s 4.12d London landed terms. After last year's experience we do not care to estimate for more than 385,000 lbs in 1926-27. I cannot put forward even this figure with much confidence, although if we come off lightly in the matter of pests we should exceed it. To the end of November the crop harvested was 186,277 lbs, against 130,426 lbs to November last year.

PROMISE OF IMPROVED RESULTS.

I have thought it right to explain very candidly the special difficulties this company has to contend with, but I should be giving a false impression if I did not add that I came away from Djasinga nine months ago with a conviction that, agriculturally, we had turned the corner, thanks to the good work of the men on the spot, and that with liberal financial provision for every hopeful development in cultivation, the future contains a promise of improved results. And I would like once more to remind those of you who may be taking stock of the value of your holdings that, provided the Ned. Indies Government adheres to its policy of expropriating freehold lands, Djasinga is bound one day to receive a substantial sum by way of compensation on this account, which amount, when we get it, will be available for investment in new plantings, from which, in due course, the earnings of the company should be augmented without corresponding increase in share capital.

In spite of the difficulties which I have stressed, the profit for the year amounted to £42,232 18s 4d, to which has to be added the amount brought forward of £13,235, making a total of £55,467 18s 4d. Out of this we recommend writing to general reserve £5,000, and paying an increased dividend of 8 per cent., absorbing £35,290 5s 7d, which will leave an increased carry-forward of £15,177 16s 9d.

Mr Noel Bingley seconded the resolution, which was carried unanimously.

PETER WALKER (WARRINGTON) AND ROBERT CAIN AND SONS, LIMITED.

BISHOP OF LIVERPOOL'S BILL.

The fifth annual general meeting of this company was held, on the 10th instant, in London.

Sir Charles A. Nall-Cain, Bart. (chairman and managing director), said that the profit had fallen from £607,566 in 1925 to £570,057—a figure slightly less than the 1924 result. The directors, however, recommended the maintenance of the ordinary dividend at 9 per cent. for the year, the transfer of £50,000 to reserve, and the usual grant to the staff benefit fund of £3,000, carrying forward £48,822 as against £45,710 brought in. The falling off in profits arose from the cessation of work in the coalfields, following the general strike in May last. The consolidated balance-sheet showed that properties and investments now exceeded £11,000,000. During the year they had acquired, through Peter Walker and Son, Warrington and Burton, Limited, three additional concerns—namely the Oldfield Brewery, of Wigan, Airey's Brewery, of Wigan, and the business of Messrs Richard Barker and Co., of Huyton. The additional barrelage of some 150 licensed houses so acquired was substantial, and would prove useful in reducing the production costs at Warrington. The reserves now totalled £817,000, and the balance of the combined profit and loss account appeared in the balance-sheet at £289,787 as against £268,073. The balance of profit for the year was £820,413 as against £903,664, a decrease of £83,000. The amounts transferred to reserve were £70,000 as against £130,000 last year, while the amount which would go forward was £159,037 as against £142,824 brought in.

As to the immediate future, two months of the current year had passed in the shadow of depression, but he was pleased to say that there were already signs of improvement, which the directors hoped would continue. Outside and politically there was little to comment upon, except that a Liquor Control Bill had been deposited in the House of Lords by the Bishop of Liverpool. To all intents and purposes it was practically the same Bill as that of the Bishop of Oxford, which was defeated in 1924. The essence of the Bill was that the brewery trade should commit suicide and incidentally pay for the rope. He repeated what he wrote to the shareholders in 1924 in calling their attention to the former Bill: "If the property rights of brewery shareholders are to be treated in this confiscatory fashion, precedent would be set, and there would be no logical reason for not accepting the confiscatory principle in the case of all other kinds of property."

The report and accounts were adopted.

STRAND HOTEL, LIMITED.

RECORD RESULTS FOR THE YEAR.

The ordinary general meeting of the Strand Hotel, Limited, was held on the 10th instant, at the Trocadero Restaurant, London.

Major M. Gluckstein (the chairman) said, in the course of his speech: I am able to place before you the report of another satisfactory year's business.

Although the latter half of the period covered by the accounts has been exceedingly unsettled, and the conduct of business generally rendered difficult, I am very pleased to tell you that our turnover and the profit resulting therefrom have exceeded those of any previous year. If you will kindly turn to the report, you will see that the profit, after charging all expenses and making the customary provisions, amounts to £112,216, an increase of £867 over that of last year. When the balance brought forward from last year is added the sum to be allocated amounts to £122,608.

We now propose to pay on the participating preferred ordinary shares a dividend at the rate of 15 per cent. per annum, making, with the interim payment, a dividend on these shares of 11 per cent. for the year; and on the deferred shares of a sum equal to that distributed on the participating shares.

The accounts disclose the very satisfactory position which the company occupies. During the past year our turnover continued to expand, and this fact is, I think, all the more gratifying when it is remembered that the trade of the country during the latter half of the company's financial year was so seriously hampered as a result of the general strike and the coal dispute. The reason of your company's continued prosperity is that its hotels do represent exactly what the public looks for in hotels to-day, and the steady demand for our rooms is not, therefore, surprising.

Last year I referred to the preparations we were making for an extension of the present Strand Palace Hotel, which will ultimately occupy an entire island site. Negotiations have necessarily been protracted, but I am pleased to inform you that a building agreement with the Crown has now been signed, and I hope that before our next annual meeting work will be well in hand upon a portion of the site. In addition to the main hotel extension, our building scheme includes, as I outlined last year, the erection of new staff premises as an annexe to, and connected with, the Strand Palace Hotel, and this work has recently been commenced.

The report and accounts were unanimously adopted.

BULLION.

The following statistics of imports and exports of gold for week ended December 8, 1926, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.	Exported from Great Britain and Northern Ireland.
From—	To—
British West Africa	Austria
Anglo-Egyptian Sudan	Netherlands
British Guiana	Germany
British South Africa	Switzerland
	Other countries
Total declared value of imports	Total declared value of exports
1,293,023	89,643

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follows:—

ARRIVALS.	WITHDRAWALS.
Dec. 4	4—Holland
6	6—Holland
7—Bars bought	7—Holland
8	8—Holland
9	9—Holland
10	10—Holland
Total	Total
462,000	20,000
Net withdrawals, £442,000.	

INDIAN TELEGRAPH TRANSFERS.

The Government of India announce that from April 1st to December 4, 1926, they have transferred £19,500,000 to the Secretary of State's balances from the currency reserve in England, and have sold in the week ending December 4th £500,000 Telegraph Transfers on London.

Messrs Samuel Montagu and Co. write on December 7th as follows:—

GOLD.

About £1,250,000 bar gold was available in the open market this week. Of this £627,000 was taken on German account, India and Egypt together taking about £30,000, and the home and Continental trade £140,000. The balance was secured by the Bank as shown in the figures below. The net receipt at the Bank during the week under review was £431,000, increasing the net influx since January 1, 1926, to £8,326,000, and decreasing the net efflux since the resumption of an effective gold standard to £3,269,000. It is reported that a Bill for the stabilisation of the Brazilian

paper milreis at a gold value of 6d has been provisionally approved by the Brazilian Chamber of Deputies. The new gold unit is to be styled a Cruzeiro, and will contain 800 milligrammes of gold 900 fine, and will be equivalent to 4 paper milreis.

SILVER.

The market has maintained a fairly steady tone throughout the week, although the undertone is still uneasy. This was shown on Monday, when free selling from China found few buyers about, and the price dipped to 24 1/2d for both deliveries, the lowest quotations for about six weeks. Yesterday a rally took place of 1/4d owing to business in India connected with options, and to a rather better feeling in China as to conditions in Hankow, but the market being heavy to-day quotations shed 1/4d. Cash supplies are now more plentiful and little wanted. The premium, therefore, on spot delivery, which had ruled to a greater or less degree for nearly two months, disappeared on the 3rd inst., and has not been obtainable since. United Kingdom imports and exports of silver during the week ending the 1st inst. were:—

	Imports.	£	Exports.	£
Norway		26,500	France	20,160
France		217,274	Egypt	35,773
Czecho-Slovakia		143,900	British India	213,818
U.S.A.		146,623	Other countries	14,033
Mexico		162,598		
Other countries		14,170		
		711,065		283,784

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The results for the month of November are as follows:—Production of oil, 24,400 tons; deliveries, 25,350 tons. Note.—The above output compares with 11,950 tons for November, 1925, and makes a total of 50,350 tons for the first two months of the company's new financial year, against 24,700 for the corresponding period of last year.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED.—A cablegram has been received from Burma reporting that the production of crude oil by this company and the Rangoon Oil Company, Limited, for the month of November amounted to 45,024 barrels.

BRITISH CONTROLLED OILFIELDS, LIMITED.—For the week ending November 24, 1926: Production, 53,107 barrels; shipments, 40, barrels.

BRITISH CONTROLLED OILFIELDS, LIMITED.—By cable for the week ending December 1, 1926: Production, 57,554 barrels; shipments, 6,800 tons.

HAMILTON'S OIL CONCESSIONS (ROUMANIA), LIMITED.—Production for November, 100 tons (October 130 tons).

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during November amounted to 121,831 barrels, or approximately 17

ordinary shares (less income-tax) amounting with tax to £12,000, to again carry to reserve account £5,000, to carry forward to next year £7,817. Turning to the balance-sheet we find cash has risen from £45,756 to £60,964. Debtors are lower at £29,326, against £37,485. Trade investments at cost stand at £35,247, against £31,550. The amount invested in Government securities at cost stands at £123,310, against £103,188. Stocks stand at £31,657, against £28,746.

WEARDALE STEEL, COAL AND COKE COMPANY.—The profit for the year ended September 30th amounted to £56,400, as compared with £106,200 for the preceding year. After payment of debenture interest and 6 per cent. preferred ordinary dividend a distribution of 6 per cent. is made on the ordinary shares, leaving £46,300, or £18,600 less, to be carried forward. A year ago an additional distribution of £10,000 was made on both the preferred and deferred ordinary shares.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Further rains over most parts of the country have not favoured the agricultural outlook. The finer grades of native wheat continue in request, but common qualities were neglected and tend easier. Imported descriptions were more firmly held in sympathy with higher forward offers, and a fair business transpired in spot and near-at-hand parcels. The demand for floating and forward cargoes fails to expand; in fact, there was little support forthcoming from this side, but prices ruled firmer owing to improved markets in America and Argentina. Sales included steamers of No. 3 Northern Manitoba mid-December loading from Vancouver at 52s 3d, No. 2 and No. 3 ditto arrived out to load 55s and 52s 9d respectively, white Pacific January 54s 9d, and Victorian early January 57s 9d to Mediterranean. Feeders quiet and generally lower to sell. Plate maize shipped sold 31s, and Dan-Gal-Foxanian mid-December loading at 31s 10½d per 480 lbs c.i.f. terms. Wheat firm. No. 1 Northern Manitoba quoted 62s 9d, No. 2 ditto 61s, No. 3 59s, No. 2 tough Manitoba 59s, No. 2 mixed Durum 57s 6d, choice white Karachi 60s ex-ship all per 496 lbs. English 11s 2d-12s per 112 lbs. Flour steady. London standard grade 48s, town whites 49s, patents 50s-51s per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 46s-48s 6d, Minneapolis 46s-48s, Kansas patents 45s-46s, Australian 45s 6d-46s per 280 lbs ex-store. Maize easier. Plate landed 33s 3d, ditto ex-ship 31s 6d, Plate Cinquantina 36s 9d landed per 480 lbs. Barley steady, quiet. Californian 40s-47s, Chilian Chevalier 52s-62s, ditto brewing 38s-48s, Australian Chevalier 47s-50s ex-store per 448 lbs, No. 3 Canadian Western 34s 6d ex-ship, Persian ex-ship 29s 3d, landed 30s, Russian 32s 9d, Plate 31s 6d, both ex-ship, Plate landed 33s 9d per 400 lbs. English malting 9s 6d-18s 9d as to sample, feed 8s 9d-9s 6d per 112 lbs. Oats slow. La Plata landed 23s 3d, ditto ex-ship 21s 9d per 320 lbs. English 8s-8s 8d per 112 lbs. Millers' offals steady. Broad bran quoted 7s 6d, middlings 8s 3d, fine ditto 9s 6d, bags included, ex-mill, feed oatmeal 9s 3d, light oats 8s 3d, ground oats 13s 3d per cwt free on rail. Oatmeal unaltered. London-made flaked 17s 6d, rolled oats 16s 6d, medium also fine-cut 16s 6d, coarse pinhead and whole groats 16s ex-mill per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1926-27, 1925-26, 1924-25, 1923-24:—

	1926-1927.	1925-1926	1924-1925.	1923-1924.

1925	549,795	457,465	77,065	11 10	10 9	9 3

AMERICAN WHEAT MARKETS.

The week's fluctuations have not been considerable. Despite fairly heavy country offerings, Winnipeg has presented a firm front, assisted by the buying policy of seaboard interests, while Chicago has been affected by the tightness of the December position, to which the ice-jamming on the Great Lakes has been a contributory factor.

	Jan. 2, 1925.	Dec. 10, 1925.	Jan. 7, 1926.	Dec. 2, 1926.	Dec. 9, 1926.

Visible supplies of wheat in Canada, at 39,490,000 bushels, show a decrease of 5,045,000 bushels as compared with the previous figures. Supplies a year ago stood at 29,222,000 bushels.

COAL.

Our Cardiff correspondent writes:—Work has not yet been resumed at all collieries, but production has steadily increased, and by the end of the present week amounted to between 50 per cent. and 60 per cent. of the normal. On Tuesday the embargo on steam coals was removed, and on Thursday that also on anthracite coal. Prices have been very unstable, but towards the end of the week were becoming stabilised between 31s 6d and 33s 6d for best Admiralty large, and between 22s 6d and 25s for best smalls. The system of maximum prices for house coals has been virtually abandoned, and producers are arranging their own pithead quotations. Foreign buyers are holding back, but many collieries are well stemmed over next week, and in some cases up to the Christmas holidays. There are large contracts on the market, but none of importance for supplies over 1927 has been concluded since the settlement.

Our Sheffield correspondent writes:—The local industrial situation is chaotic. Consumers are steadily refusing to place contracts, and with the collieries unable to dispose of their output, prices are constantly dropping. Several pits have ceased working owing to absence of demand. Shortage of wagons and delays in transport are also responsible for accumulations of coal at the collieries. The removal of the export embargo may steady the market.

Our Glasgow correspondent writes:—The Scottish coal market is returning to normal. To-day's prices are much below those ruling even a week ago, and with the decline a corresponding increase in demand has transpired both on home account and for shipment. Export business is as yet on a very small scale, but it is believed that values are not greatly above what foreign buyers will be prepared to pay, and shipments are expected to expand substantially from now on. Home business, although increasing daily, will not be normal until after the turn of the year, when the industrial works are again running fully. Market quotations are approximately as follows:—Screened steam, 25s to 27s 6d f.o.t. at pits, and 22s 6d f.o.b. for export; unscreened, 20s to 22s 6d and 20s respectively; trebles, 20s 6d and 25s; doubles, 27s 6d and 23s 6d; singles, 20s to 22s 6d and 22s 6d; pearls, 18s to 20s and 20s; dross, 17s to 19s 6d and 15s; house coal, 28s to 35s.

IRON AND STEEL.

The following is extracted from the weekly report of the London Iron and Steel Exchange:—Business is irregular, as buyers are waiting for British works to resume operations before entering into commitments. A very wide difference has developed in the ideas of the price of pig-iron for delivery before Christmas and in the first quarter of next year. For December delivery the high figures which have been quoted for several months are maintained, but the general view of prices is for a lower level for January-February delivery. This, of course, is on the assumption that a number of the British blast-furnaces will have started working by that time, and that supplies of English pig-iron will be once again upon the market. There is still considerable activity in the market for semi-finished material, and during the past week orders for a considerable tonnage have gone to Continental works. So far there is no indication as to when British semi-finished steel products will be available. Interest in the finished steel department centres chiefly upon the prices which the British works will quote when they resume operations. Everything depends upon how quickly the price of fuel becomes normal.

Our Middlesbrough correspondent's report, dated December 9th, is as follows:—Pig-iron: The continued scarcity of No. 3 Cleveland G.M.B. keeps the price high, the present quotation for prompt lots being 112s 6d per ton f.o.t. Eight more furnaces have been put into operation, but their output is required for the steel works. More furnaces will be started as fuel becomes more plentiful. By the beginning of next year it is expected that much more Cleveland iron will be available. Makers are therefore quoting 85s per ton for No. 3 G.M.B., January-February delivery, and 82s 6d for delivery further forward. Hematite production will probably not be resumed until the end of this year or the beginning of next. Makers are inclined to expect prices to be something like 90s per ton for East Coast mixed numbers during the first quarter of 1927. Manufactured iron and steel: The local steel works have good order books, but normal production is unlikely for some weeks yet. An advance of 10s per ton has occurred in the price of common iron bars, the quotation now being £12 5s per ton. Other minimum quotations are:—Steel ship plates,

£8 2s 6d; steel ship angles, £7 12s 6d; steel rails, £8 10s. Iron ore: Works have sufficient stocks for some time, but as soon as freights become more normal contracts already on the books will be fulfilled. Fresh purchases are unlikely yet awhile.

Our Sheffield correspondent writes:—Five local bar iron works which have been idle since the beginning of the strike restarted this week. The price of South Yorkshire Crown bars is £12 10s per ton, delivered, or 20s per ton more than in April. Two blast furnaces at the Staveley works are now operating, and the output is being consumed in the company's foundries. One blast furnace at Renishaw is to be started in a fortnight. The remainder in this district will not be put in blast until January. Derbyshire producers are quoting about 95s for foundry iron delivered Sheffield when the furnaces are working, which is about 15s per ton more than at the beginning of the year. Rolling mills report a falling off of orders, which is usual towards the close of the year. Sheffield steel makers report good prospects of business so long as prices can be kept at a reasonable level. The production of blast furnace coke is steadily increasing. No attempt will be made to restart the great open-hearth plants this year.

Our Cardiff correspondent writes:—The position generally is better than a week ago, but uncertainty exists as to the effect of the new stabilised coal prices on costs of production, and orders are being delayed. Prices, however, are much easier, and basis boxes are now ruling at between 21s 9d and 22s 6d. Galvanised sheets have been reduced to £17-£17 5s per ton, but tinplate bars are maintained officially at £6 15s, although with every prospect of an early resumption of work at the steel bar mills a decrease is likely, particularly in view of the fact that foreign bars are being imported at from 12s 6d to 15s per ton below local bars. Receipts from works last week totalled 31,716 boxes, compared with 27,664 boxes the previous week, but as shipments were 35,793 boxes, compared with 16,572 boxes, stocks have been slightly reduced.

Our Glasgow correspondent writes:—The iron and steel market continues quiet, consumers apparently holding off. Several iron furnaces have already been lit up, and Messrs Stewarts and Lloyds have relighted their steel furnaces. The other steel makers, however, have not yet come to a decision as to when they will resume, owing, it is understood, to difficulties regarding the price of fuel, and the fact that arrangements with the men as to the holiday period have not yet been completed. Order books are well filled, but supplies of finished and semi-finished materials cannot even under the most favourable conditions be available for several weeks. No. 3 pig-iron from stock in small parcels is quoted 110s per ton, and for the same quality for delivery ex-furnaces, the price is around 89s per ton delivered in trucks. The outlook on the Clyde is changed at £8 15s basis for plates. The outlook on the Clyde is somewhat better, a further batch of contracts having been placed this week, including two submarines for British Government, which Messrs Beardmore are to build; two motor-propelled oil tankers for the Standard Oil Co., New Jersey, to be built by Messrs Alexander Stephen and Sons, besides some Dutch naval work and several water tube boilers which have been secured by Messrs Yarrow and Co. Further shipbuilding orders have also been secured within the past week.

OTHER METALS.

TIN.—The market displayed quieter features, and values took a downward turn in sympathy with lower cable advices from the East, combined with freer offerings, particularly of cash and near positions. Some irregularity was noticeable at times, but the general tendency was in buyers' favour. Standard cash changed hands at £314 to £307, three months £297 15s, £299 5s and £296 15s. Sales in the East were reported at £311-£307 15s, £308 10s, and £307 5s.

COPPER.—General trading showed more activity, with a revival of speculative interest, and a better consumptive demand, which imparted a firmer tone to the market. Dealings were recorded in standard cash at £56 17s 6d to £57 7s 6d, and three months £57 11s 3d to £58 2s 6d and £58 1s 3d ton.

LEAD slightly irregular, due to liberal offerings, but sales were of fair extent. Good soft foreign pig. December, done at £28 13s 9d-£28 17s 6d, January £28 17s 6d to £29 1s 3d, February £29 3s 9d, March £29 5s-£29 10s, and £29 5s ton.

SPELTER opened steady, but later assumed a quiet tone. December sold £33 2s 6d-£32 16s 3d, £33 1s 3d, January £33 3s 9d-£32 17s 6d, £33 1s 3d, February £33 3s 9d, £32 17s 6d, March £33 3s 9d-£33 1s 3d, April £33 ton.

ANTIMONY dull. English special brands £74 10s-£75, foreign refined spot £57 ton.

ALUMINIUM quiet. Home delivery £107, export £112 ton. Quick-silver firm. Spot £17 15s to £18 per bottle. Tin plates easier as fuel supplies are more plentiful at lower prices. I.C. coke prompt, 22s-22s 6d, forward 20s 9d-21s 3d box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, December 9, 1926.

A moderate demand has been forthcoming for actual cotton, and values show but little change. Markets have been very quiet and featureless, but a little short covering took place during the week owing to the approach of the U.S.A. Agricultural Bureau Report.

The latter was issued yesterday, and gave an estimated crop of 18,618,000 bales, with 14,645,000 bales ginned; abandoned acreage, 2.9 per cent.; acreage harvested, 47,653,000 acres; yield per acre, 187 lbs, this being the largest yield for many years. The crop figures were smaller than was generally expected, and the slight rally after the publication of the figures has since been lost. Cotton is now well below the cost of production, and no matter what the size of the present crop may prove to be, prices in excess of those current to-day are likely to be seen in the future. America can and intends to see that cotton is not thrown away, and in view of the financial aid given to growers, next year's acreage is likely to be seriously reduced. Values for Egyptian cotton improved during the week on short covering and rumours that the Egyptian Government were likely to intervene to sustain prices. The latter having been disproved by events, prices have fallen back almost to the low level of last week. News from Cairo to-day is to the effect that the Chamber has passed a law limiting cotton acreage to one-third during 1927 and the following two years.

Spot sales for the week 3rd to 9th inclusive were 37,000 bales, of which 20,680 bales were American, 3,000 Brazilian, 7,500 Peruvian, 2,600 Egyptian, 2,900 African, 50 East Indian, and 270 sundries. Imports for the same period were 134,094 bales, including 116,720 American, 940 Brazilian, 6,610 Peruvian, 8,229 Egyptian, 1,555 African, 1 East Indian, and 39 sundries. Quotations to-day are:—Middling American 6.47d, Egyptian fully good fair saket 13.45d, fully good fair uppers 9.05d, Brazil good fair 6.72d, Peru good fair mod-rough 8.50d, smooth 7.72d, Tinnivelly fully good fair 6.00d, East African good fair 8.15d, and West African middling 6.32d.

MANCHESTER, December 9, 1926.

Trade has shown no expansion, the majority of buyers still being inclined to act with caution. The latest American crop statistics have not brought about any distinct change in values. The opinion is gaining ground that increased activity in yarn and cloth is not likely to show itself until there are indications of higher prices. A fair scattered business has been done in piece goods for India. Demand still runs chiefly on the lighter styles and fancies, although isolated transactions have occurred for Calcutta in grey shirtings. Political news from China has been a little more hopeful, but trade still lags. Home trade buying has been restricted. In American yarn quotations there has been increased irregularity, and, owing to the poor demand, spinners are experiencing some difficulty in clearing the production. Some falling off has shown itself in the business passing in Egyptian spinnings, buyers being afraid of lower rates.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—All sections of the industry appear to be taking a somewhat more optimistic view of the immediate outlook, but actual business conditions show little material improvement. The raw material is moving freely in all the world's markets, and values are firm, but this show of strength is not reflected in the demand for tops and yarns. Little improvement is expected till the holidays are over, and in the meantime most firms will be busier than usual with year-end "window-dressing." Stock-taking will be a depressing affair, and balance-sheets will show the effects not only of the loss of trade due to the miners' strike but also of the slump in values since the latter part of 1924. At the end of September, 1924, warp 64's tops were quoted at 82½d per lb; to-day the price is about 47d. The only consolation is that wool and its products are now on what may be regarded as a fairly sound basis, and with no heavy stocks in any country there should be scope for a steady business. So far as the home trade is concerned, improvement must come from the piece goods end; in other words, a much larger demand is wanted for cloth in order to bring more machinery into activity. Fortunately, the remarkable recovery in the franc is all to the good of spinners and manufacturers in this country, and if French currency can be stabilised much will have been done towards removing the unfair competition producers have had to meet during the last year or two. Meanwhile, users are only buying in comparatively small weights, but quotations for tops and yarns are steady.

COLONIAL WOOL.
(FROM A CORRESPONDENT.)

Competition was good during the last week of the London sales. Excellent clearances were made and the end came with values on about the same level as the opening. Two or three times French buyers seemed on the point of commencing extensive operations, but the further appreciation of the franc was the signal for retirement. The standard of values was established by German, Alsace and home trade buyers, each section giving support. It is not expected that the quantity of wool to be carried forward to the next series will be large, but it would have been much better if most of the second-hand parcels had been cleared. Several importers are anxious to sell, but refuse to face the loss involved in the acceptance of present market values. Next year prices may be somewhat higher, and an opportunity thus afforded to clear these wools at cost price.

We do not consider that values in the last week were at all times equal to the highest point of the beginning of the second week. In the case of clips offered in two portions, one earlier in the series and the other during the closing week, prices for the latter have not always been equal to the former, but taking the series as a whole, we are satisfied that some excellent work has been done. The decline in both merinos and crossbreds is covered by 5 per cent., except that scoured crossbreds have sold steadily at fully 10 per cent. less. The fall in shipes is mostly 5 per cent. American competition has been almost entirely missing, but the home trade has bought freely, paying well up to current prices in consuming centres. The majority of buyers are now willing to admit greater confidence in the future of prices than at any previous time this year. In certain respects, however, the outlook is none too bright. Spinners' margins are very narrow, and an extension of the demand for fully manufactured goods is urgently needed. The offering of these at attractive prices should, however, bring out more business. No one wishes to see higher prices for either raw materials or partly or fully manufactured goods, certainly not until a much larger consumption develops and machinery is far better employed.

THE JUTE TRADE.

DUNDEE, December 9.

The outstanding feature has been the very large demand for goods of 10 ozs 40 ins make. The urgent necessity of River Plate buyers to replace the goods damaged in the collision with another steamer of the ss. *Kumeric* at a point near Monte Video, effected a clearance of all stocks of Calcutta 10 ozs 40 ins at this centre, and buyers then turned their attention to the Dundee-made article. Manufacturers have sold practically the whole of their production of 10 ozs 40 ins goods for delivery in December, and even for the first fortnight in January business has been done on a fair scale. Manufacturers have raised their prices for all weights of 40 ins goods, and it would now be difficult to find a seller of 10½ ozs 44 less than 4½d and of 8 ozs at under 3½d. The value of

10 ozs 40 ins quickly rose from 4d to 4½d paid. Spot Calcutta goods commenced at 3½d for 10 ozs 40 ins, and there are buyers of further quantities at the highest price paid of 3½d, but only trifling lots available. Orders for cloth, previously withheld in anticipation of lower prices, may now come out. As regards the raw material, there are still no signs of a decline in values. Calcutta maintains a steady tone, with mills purchasing on moderate lines. First marks have been sold at £36 for a short group of good actuals. December and Lightnings are not obtainable at under £29 10s to £30 10s, though Daisee and Tossa sellers have accepted the lower rates of £27 15s and £31 10s respectively for assortment. Good jute continues scarce, arrivals in Calcutta being of poor quality. Yarns have been very slow. Common 8 lb cops are at 3s 2½d, and spools at 3s 4d to 3s 5d.

HIDE, LEATHER, AND ALLIED TRADES.

The three top weights in best ox and heifer hides were ½d per lb easier at the auctions held in Bermondsey last Thursday. Prices now range from 6½d to 8½d, with seconds selling from 6d to 8½d per lb. No change from the previous week was recorded in connection with cows, while second bulls made ½d per lb less money. The sheepskin market was stronger, wools selling from 6s 6d to 11s 6d and hogs from 2s 10d to 11s 6d per skin. The imported hide market is firmer, and fregorifics a shade dearer, probably owing to Russian buying. Argentine ox are now quoted at 8½d, but the home trade are very sparing buyers. Dry hides are firm, and quite a big business has been done in Africans. B.A. Americans are quoted at 11½d. The Chicago position is cabled as firm, with best heavy packers selling at 15 cents. In spite of the advance in price of many classes of sole leather, buying has been rather active this week. Light bends of 8 lbs average are almost unobtainable. Repairers are still very busy, and are taking good deliveries of their usual classes of bends. The upper leather position is very firm, advances of 2d to 3d per foot being obtained for coloured glacé kid. Carriers are more busy, orders having come to hand for wax kip leathers suitable for miners' and artisans' boots. The boot and shoe section is gradually improving, but orders for spring wear continue to come along very slowly. Russian boots have sold well, and makers have practically no stock on hand.

VEGETABLE OILS AND OILSEEDS.

Markets have been quiet. Linseed oil is in poor demand from consumers, but is maintained around £31 to £31 10s per ton naked ex Hull mill for spot and delivery forward to April, with business reported in London slightly below this figure. Cotton

oils are slow and easier, crude Egyptian offering freely at £30 15s, and technical refined at £34 10s, ex Hull Mill. Other soft oils are also easier. Castor oil, however, is firm at an advanced price. The new crop of Plate linseed has engaged some attention, and up to £15 2s 6d has been conceded for January-February shipment. Reports as to the condition of the growing crop vary, the latest indicating that the yield is likely to be less than anticipated, and much below last season's bumper crop. Old seed on spot and in near positions is scarce and at a good premium over shipment. Crushers, however, are only small buyers in view of the poor trade in oil. Cottonseed is easier, black Egyptians having been done at £8 10s on passage, with Sakellarides at £8 for shipment to March. Soya beans have been sold to the Continent at £11 5s. Castor seed is firm, and Calcutta to Hull has been done up to £17 15s., December-January.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—With sustained inquiries the market continued firm. No change in quotations of British refined or English-grown, the latter ranging from 31s 9d to 32s 6d, according to mark, ex factory terms. Imported granulated moved against buyers. Czecho, also Dutch J. 31s 9d. Shipment parcels sparingly offered and firmer. Czecho granulated, ready, 18s 7½d to 18s 9d; December, 18s 10½d; January-March, 19s 3d; April-August, 19s 7½d, f.o.b. Hamburg. Dutch J. ready, 19s, f.o.b., Rotterdam. Polish crystals, December, 18s 3d; January-March, 18s 6d, f.o.b., Danzig. Belgian crystals, December, 18s 7½d, f.o.b., Antwerp. Cuban 96 per cent., February-March, 19s 9d; Peruvian, December-January, 16s; preferential, February-March, 19s 3d, c.f. and i., U.K. White Mauritius, December-January, 21s 4½d, c.f. and i., London. White Java, January-March, to Calcutta, quoted, 21s 6d; July-September, sold, 18s 1½d; October-December, 18s 3d, c. and i. terms. White Terminal section active and higher, though slightly irregular at times, while influenced by the report that the Cuban President was to sign the Decree governing restriction of the crop. December, sold, 18s to 18s 2½d; February, 18s 6d; March, 18s 6d, 18s 8½d, 18s 7½d and 18s 8½d; May, 18s 9½d. 18s 1½d, 18s 10½d and 18s 11½d; August, 18s 11½d, 18s 10½d and 18s 11½d; December, 17s 4½d per cwt.

COFFEE.—There is a good steady demand from the home trade for all suitable qualities, and these realise full rates, but with no extension in export requirements medium and common varieties are barely steady. Kenya, mid to good mid, sold, 142s to 148s 6d; bold, 159s 6d to 160s 6d; peas, 159s to 160s; Kilimanjaro, bold, 141s 6d to 146s 6d; peas, 146s to 149s; new crop, bold Mexican, 164s; peas, 181s. Futures idle.

COCOA.—Spot market firm with a fair demand, and fine Grenada sold, 65s; Trinidad, 68s; Bahia, 62s. Accra, for shipment, advanced sharply, but lately disclosed some irregularity. F/F, November-January to January-March, sold, 49s to 56s and 54s, f.o.b.

TEA.—Indian auctions during the week amounted to 53,790 packages. There was a good demand for all teas possessing character of leaf and flavour at full to dearer rates. Medium sold well at a steady range. Good clean common wanted at ½d decline, while commonest kinds ruled ½d per lb down. Quality of some invoices from Southern India disclosed an improvement, and in such cases realised higher prices. Pekoe, sold, 1s 0½d to 1s 7d; orange, 1s 2½d to 2s 3d; broken, 1s 2½d to 2s 3d. Ceylon sales of 22,200 packages also attracted good support with regard to fine teas and where quality of same was maintained, while fetching full to dearer prices. Common, however, declined ½d to occasionally ½d per lb. Pekoe, sold, 1s to 2s 2½d; orange, 1s 5½d to 2s 5d; broken ditto, 1s 6d to 2s 7d. China teas continue in but retail support. Ningchows, sold, 1½d; Keemuns, 2s to 2s 4d; Panyongs, 1s 4d; Souchong, 2s 5d to 2s 6d. 4,266 packages Java were catalogued in auction, which met a very irregular market, while the bulk of offerings consisted of parcels possessing poor liquor in the cup. These marked a decline of ½d to 1½d per lb, and many lots were withdrawn. A few fine invoices sold steadily. Pekoe, sold, 1½d to 1s 1½d; broken ditto, 8½d to 1s 4½d; pekoe souchong, 1½d to 1s 1½d; orange, 1s 1½d to 1s 2d; broken orange, 10½d to 1s 7d per lb, in bond.

RICE.—There is nothing fresh to note in this market. With quite a lack of support from all quarters, due in a measure to weakness in the freightage situation, quotations in most instances are quite nominal. Bran firm, quiet. Rangoon, afloat, £6 2s 6d per ton, ex ship. Beans quietly, steady. Peas dull. Japanese, spot, 28s 6d; afloat, 27s 6d; December-January, 27s 9d cwt.

SPICE.—Pepper quieter, and with sellers more in evidence prices took a downward turn. Black Singapore, f.a.q., January-March, 11½d; Lampong, October-December, sold, 10½d to 10¾d; January-March, 11s; Muntok, L.S., October-December, 10½d; January-March, 11s 7d. Cloves firmer, and Zanzibar, October-December, sold, 9½d; January-March, 8½d. Pimento, spot, 8½d lb. Sago flour firm, and Sarawak, December-February, also January-March, sold, 15s 9d. Singapore flake tapioca, December-February, to Havre, quoted 16s; Penang seed, to London, 18s cwt. Ginger quiet.

FRUIT (Dried).—Currants continue in request at full to dearer rates. Pyrgos quoted 35s 6d; Patras, 37s to 38s; Gulf, 39s to 44s; Vostizza, 46s to 55s; Australian, 35s to 42s, as to quality. Sultanias quiet, and prices barely steady. Smyrna, medium to good, 66s to 72s; medium to fine Cretan, 67s to 85s; Australian, sold, 60s to 78s. Raisins sell readily at full rates. Valencia, quarter-boxes, sold, 56s to 74s. Dates move off quietly. Hallowee, new crop, 30s; Khadowee, 20s; air, 16s 9d; cartons, 34s to 36s, landed terms, London. Figs firm. Lacouns, 105s to 140s; layers, 68s to 80s; genuine, 32s to 34s. Evaporated fruits quiet, apart from rather more interest in medium size plums. Californian apricots, extra choice, 125s; South African, first grade, 132s 6d. Plums, Californian, new, 30/40's, quoted 64s;

50/60's, 51s; Oregon, old, 30/40's, 62s 6d. Pears, Californian, extra choice, 62s 6d; fancy, 72s 6d; Lake County, fancy, 80s. Apple rings, Californian, spot, 50s to 60s per cwt. Almonds firmly held. Mazagan, 160s; Magador, 160s; Sicily, 172s 6d.

CANNED GOODS.

CANNED FISH.—Market generally quiet, as usual at this period of the year, moderate supplies being ample for requirements. Sardines—Portuguese clubs quoted 4s 6d per dozen tins. Salmon—red, tall, 1 lb, quoted 45s to 47s; tall pink, 26s to 27s; halves, 38s to 39s; Siberian halves, 34s to 35s. Lobsters—best ½'s, 160s; ¼'s, 80s to 85s. Crayfish—½'s, 76s to 77s; ¼'s, 49s to 50s per case. Japanese crab unaltered. Herrings 7s per dozen tins.

CANNED FRUIT.—There is no general improvement in demand, fresh business being retarded by the arrival of contract parcels, and prices occasionally the turn easier, particularly for secondary qualities of peaches and pears. Californian Bartlett pears, 24-2½'s, quoted, choice, 12s to 12s 6d; secondary, 9s 6d to 9s 9d. Californian peaches, choice, 11s 9d to 12s 3d; seconds, 8s 6d to 8s 9d; Californian apricots, choice, 12s 6d; seconds, 9s to 9s 3d per dozen tins. Singapore pines in quiet request on the spot, while forward business is restricted owing to high selling limits. Italian tomatoes quietly steady.

CANNED MEATS move off quietly, on about former terms. Corned beef, 6's, quoted 38s to 44s, as to quality. Danish lunch tongues, 112s to 128s; American, 140s to 147s 6d, as to quality. Danish boneless hams, cooked, 1s 6½d per lb, for cases of six tins.

CONDENSED MILK.—Machine-skimmed remains steady on lighter supplies, but full-cream quiet. Evaporated milk continues in request. Cases of 48/16 oz tins quoted 18s 6d; 96/6 oz, 20s per case. Danish cream, 48/6 oz, 20s per case.

HONEY.—Market firm, especially for white grades, with a fair demand. Jamaica, 40s to 55s; Haiti, 37s 6d to 50s; Cuban, 35s to 50s; Australian, 40s to 50s; Californian, fine bri ht golden liquid, 55s per cwt. New Zealand, 18/7 lb tins, 85s per dozen.

RUBBER.

Quiet, and prices moved against sellers. Plantation standard sheet, spot and December, sold, 1s 6½d to 1s 6¾d; January, 1s 6½d to 1s 6¾d; February, 1s 7d to 1s 6¾d; January-March, 1s 7d to 1s 6¾d; April-June, 1s 7½d to 1s 7¾d; May, 1s 7½d lb.

GENERAL.

JUTE.—Market generally quiet, but steady. Firsts, October-November, continent, quoted £30 5s; November-December, £29 15s; December-January, £29 12s 6d; January-February, sold, £26 10s; February-March, £26 17s 6d ton. Hessians firm, especially for 10 oz, and December, sold, 31s 100 yards.

HEMP.—Manila sparingly offered and firm, but consuming demand keeps quiet. J, October-December, quoted £48; K, November-January, sold, £46; L, ditto, quoted £46; M, 1, £43; D.L., sold, £35 15s ton. New Zealand, also African sisal unaltered.

THE STANDARD LIFE
ASSURANCE COMPANY

(Established 1825.)

TRIENNIAL INVESTIGATION
as at 15th November, 1926.

The Directors of The Standard Life Assurance Company have pleasure in declaring a Reversionary Bonus for all ordinary participating policies in force on 15th November, 1926, at the rate of

40/- %

PER ANNUM

in respect of the past triennium.

They also intimate that in future bonuses will be declared
ANNUALLY.

The next Investigation will therefore take place as at the 15th November, 1927.

THE STANDARD LIFE
ASSURANCE COMPANY

Head Office: 3, GEORGE ST., EDINBURGH.

LONDON: 110, Cannon Street, E.C.4.
and 15a, Pall Mall, S.W.1.

DUBLIN: 59, Dawson Street.

CONDITIONS in Lombard street have been irregular this week. On the first two days supplies of short credits were fairly plentiful, but calling in of a substantial amount by one of the joint stock banks on Wednesday occasioned considerable stringency, and eventually the market had to borrow a fair amount from the Bank of England, On Thursday the money called in was lent again for a week.

Thursday the money called in was lent again for a week.

and credits were consequently in ample supply. Loans into the New Year are now in good demand at about $4\frac{1}{2}$ to 5 per cent. The discount market has been influenced by the changing monetary situation, and by the week's fairly heavy efflux of gold, though the rate for three months' bills has not been perceptibly higher than last week, yesterday's quotation being $4\frac{1}{8}$ per cent. The payment this week of some £19 millions for the service on the debt to the United States for six months had no effect upon the market, the necessary arrangements for this transfer being in operation more or less continuously.

	Dec. 17, 1926.	Dec. 10, 1926.	Dec. 3, 1926.	Nov. 26, 1926.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	4 (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	2 (Dec. 3, '25)
Discount Call	3	3	3	3	2 (Dec. 3, '25)
Houses Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$ (Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	..

Thursday's Bank return showed a decline of £1,140,700 in the stock of coin and bullion and an increase of £254,200 in the note circulation, so that the Reserve declined by £1,394,900, the Proportion falling to 26.7 per cent. Government securities were reduced by £7,275,000, but Other securities increased by £7,588,200; Public deposits rose by £2,340,100, but Other deposits fell by £3,486,800. Currency notes were increased by £1,812,000 to £291,226,300, which includes £1,288,700 for notes called in but not yet cancelled. The fiduciary issue is £233,687,500, or £14,215,000 below the maximum for 1926.

The Bank of France on Thursday reduced its rate of discount from $7\frac{1}{2}$ to $6\frac{1}{2}$ per cent., and the rate of interest on advances from $9\frac{1}{2}$ to $8\frac{1}{2}$ per cent.

NEW YORK MARKETS.

Our New York correspondent cables:—The directors' recommendation of a 40 per cent. stock dividend for United States Steel represents a good melon-cutting, which has long been anticipated on account of the corporation's great surplus and strong cash position. It also reflects confidence in industrial prospects by well-posted conservative financiers. The security markets have been buoyant on cheap money and greater optimism; the turnover exceeds two million shares daily, and the speculative public is intrigued. The Federal Reserve statements are complicated by the tax date, with the usual big Government borrowing, chiefly at the local bank. The circulation is higher and the system's ratio is 2.4 per cent. lower, but 1 per cent. above a year ago. The Bureau of Labour's index number for November shows a decline of 1 per cent. at 148.1, which is the lowest for the past two years. The chief declines are in farm products, cotton and silk, with industrials fairly steady.

THE STOCK MARKETS.

Business in the stock markets has been on a small scale, activity being confined to a few particular sections. Gilt-edged stocks have remained unusually firm for the time of year. The new Belgian scrip has risen to nearly $8\frac{1}{2}$ premium and other European issues continue to attract attention; Chinese bonds have fluctuated with the daily news from China. Home Rails are neglected, but Argentine railway stocks have been good on anticipations of better traffics in the near future. Rubber shares have drooped, the market being out of favour, and tea shares arouse no public interest. The publication of the Armstrong, Whitworth scheme produced heavy falls in the company's debentures and shares. In the industrial market tobacco shares were strengthened by the British American Tobacco Co.'s dividend announcement. Dunlops have been active, but close slightly lower on balance. Shares of cable construction companies were active on amalgamation rumours. Kaffir shares were unaffected by the December dividend announcements. Sub Nigels have been good. The issues of new capital by the Amalgamated Press, Scottish and Southern Counties Investment Trust, Limited, New Zealand Loan and Mercantile Agency, and Snia Viscosa were over-

subscribed. Underwriters of the Phoenix Oil Products issue were left with 19 per cent.

THE COMMODITY MARKETS.

Good progress is being made with the resumption of production in those industries affected by the coal stoppage, but the imminence of Christmas and a general expectation of further reductions in coal prices are producing a certain tendency on the part of buyers to hold off the market. Fuel production has further increased, and exports are being resumed, chiefly on pre-strike contracts. There is a large volume of inquiry for iron and steel, but prices are not yet low enough to attract new business on a large scale. Cotton has been firmer, but business in yarn and cloth remains quiet. Wool tops and yarns are moving only in small volume, but more activity is recorded in the high-class worsted goods section. The wheat markets have shown no marked activity this week. Sugar is similarly a quiet market, and though tea offerings have been on a larger scale than of late, demand has shown no marked response. Rubber remains steady, with off-grades in request. Tin has been firmer this week, copper irregular, and lead easier after a strong opening.

FOREIGN EXCHANGES.

The week in the foreign exchange market was dull, and the business done was very small. The New York rate opened at $4.84\frac{1}{2}$ on the 10th, and was steady there until just at the close on the 11th, when it declined fractionally. On Monday it was harder at just over $4.84\frac{1}{2}$, on Tuesday better again at $4.84\frac{1}{2}$, and finished at 4.85 . Wednesday's closing rate was $4.85\frac{1}{2}$, and there it has since remained. Forward rates were at 1-32c premium on spot, for both one and three months. It is difficult to say definitely to what influence the rise in the dollar rate may be attributed, but it is not inconsistent with the recent German heavy buying of gold here. The suggestion is that Germany's dollar credits are being converted into sterling for this purpose. The Berlin rate was very firm throughout, forward reichsmarks being at $1\frac{1}{2}$ pf and 2 pf discount on spot for one and three months. The Paris rate opened on the 10th at $124\frac{1}{2}$, a little weaker than the previous close, and, after touching 125, closed at $124\frac{1}{2}$. On Saturday there was a fall to $121\frac{1}{2}$ -122, on Monday another to $121\frac{1}{2}$ -122, but Tuesday saw a reaction to $122\frac{1}{2}$ -123. On Wednesday the rate was better at $121\frac{1}{2}$ -122, and yesterday it was very steady at $121\frac{1}{2}$, with one and three months' forward rates narrower at $\frac{1}{2}$ and $2\frac{1}{2}$ pf discount on spot. The lira rate opened at $111\frac{1}{2}$ on the 10th, and jumped to $106\frac{1}{2}$ next day. The Italo-German treaty and Count Volpi's optimistic speech in the Senate are quoted as possible causes. There was a good deal of fluctuation subsequently, the rate hardening to $104\frac{1}{2}$ at one time on Monday, weakening to $109\frac{1}{2}$ on Tuesday, and to $110\frac{1}{2}$ at one time on Wednesday; but it closed the day, however, better at 108. Yesterday the rate was worse at 109; one and three months forward delivery being at $\frac{1}{2}$ lire and $2\frac{1}{2}$ lire discount on spot. Of the gold exchanges, Amsterdam moved against this country on Monday, Tuesday, and Wednesday to $12.12\frac{1}{2}$ -13, but yesterday the rate fell away again to the opening level of 12.13. The peseta was better on balance yesterday at 31.83, against an opening level of 31.91, after touching 31.70-75 on Tuesday and 31.75-80 on Wednesday. Oslo was weaker on balance at 19.20 after opening at 19.15, as was the drachma at 387 yesterday, against 383. Bukarest closed fractionally better yesterday at 950. Fluctuations and weakness characterised the Rio rate, a reflection of the general condemnation here of the attempt to stabilise the milreis at 6d. The rate fell at one time to $5\frac{1}{2}$ d, but came along better this week to $5\frac{1}{2}$ d-7 d on Tuesday and Thursday, and remained there yesterday. The Buenos Aires rate hardened up considerably. After opening at 45 31-32d-46 1-32d, it had improved to 46 3-32d-5 3-32d on Thursday, and again to 46 1-32d-46 1-32d yesterday. The Montevideo rate also improved considerably, being at $50\frac{1}{2}$ d-51 d on Thursday and $50\frac{1}{2}$ d-51 d yesterday, after opening at $49\frac{1}{2}$ d-50 d. In the Far East the rupee remained steady at

is $5\frac{1}{2}$ d-25-32d throughout. The yen was weaker on balance yesterday at $2.03\frac{1}{2}$ d, against the opening rate of $2.04\frac{1}{2}$ d. The silver market was quiet and dull, with a weakish tendency, only the absence of supplies preventing a further easing of prices owing to the disinclination of buyers to come forward. Some selling on India and China occurred, but small business was done, and prices fell slightly. The silver exchanges were dull but steady, and the rates remained unchanged on balance, after occasional slight fluctuations in either direction.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 11th:—

(000's omitted.)			
EXPENDITURE.		RECEIPTS.	
Supply Services	£ 7,714	From Revenue	£ 12,568
Interest, &c., on Debt	5,083	Increase in Debt	860
Sinking Fund	290		
Sundries	56		
Increase in Balances	279		
	13,428		13,428

The revenue for the week amounted to £12,568,300, as compared with £10,102,900 in the corresponding week last year. Customs were slightly lower at £2,634,000, against £2,714,000; but Excise amounted to £1,946,000, against £1,886,000. Property and Income-tax brought in £895,000, as compared with £1,278,000, while Super-tax at £560,000 was £10,000 higher. Ordinary receipts amounted to £16,200, against £33,100, and Special Receipts were £2,181,800, against £1,600. The week's operations increased the National Debt by £860,000, and caused the following changes:—

(000's omitted.)			
	£		£
National Savings Certificates ..	150	Treasury Bills	2,770
Bank of England Advances ..	9,500	Public Department Advances ..	8,600
Sundries	860		
	10,510		11,370

The floating debt was increased by £1,845,000 to £832,756,000.

FINANCIAL YEAR, 1926-1927 (April 1 to December 11, 1926).

£		£	
Total Expenditure ..	577,152,697	Raised by Revenue ..	446,972,873
		Decrease in Balances ..	3,784,544
		Amount borrowed ..	126,395,280
Total	577,152,697	Total	577,152,697

ESTIMATES for FINANCIAL YEAR 1926-7.†

£		£	
Expenditure	825,727,000	Revenue	824,750,000
		Deficit	£977,000

† Revised in Exchequer Return dated July 26, 1926.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—British Columbia Electric Railway, Bank of London and South America, National Bank of Scotland, Western Australian Bank, Orient Steam Navigation Company, Dorman Long and Co., City of London Electric Lighting, Atlas Light and Power, Scottish Tea and Lands of Ceylon, Killinghall (Rubber) Development Syndicate, Singapore Para Rubber Estates, Richard Thomas and Co., Pekin Syndicate, Amalgamated Anthracite Collieries, Rudge-Whitworth, Steaua Romana (British), British Burmah Petroleum, Showell's Brewery, Mawchi Mines, Van Ryn Gold Mines Estate, and Johannesburg Consolidated Investment. An interesting review of conditions and prospects in South America was given at the meeting of the Bank of London and South America. The chairman of the Pekin Syndicate drew a gloomy picture of the situation in China. Both Sir Arthur Dorman, the chairman of Dorman Long and Co., and Mr. Arthur Dorman, the managing director, were optimistic in their remarks to shareholders. The latter mentioned that conversations have taken place to discuss a possible basis for participation in the European Steel Cartel, but that no decision has yet been reached.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE FUTURE OF THE LIBERAL PARTY.

If the session of Parliament which has just closed has not produced any decisive change in the immediate outlook of the political parties, it has at least thrown into clear relief certain problems, which for each of them may lead to important developments in the near future. The Conservative party, with its prestige enhanced by successes in the field of foreign policy, and by a very satisfactory Imperial Conference, need not perhaps feel any serious alarm at the dissatisfaction aroused by its ineffective and wavering handling of the coal crisis, or the decline in the Conservative poll at by-elections. It must feel, nevertheless, that it is entering on a period when two problems will be faced, on the handling of which its immediate future will largely depend, namely, the reform of the House of Lords, and the amendment of trade union law. For the Labour party the events of the last seven months have provided sufficient food for uneasy thoughts, and its chiefs must feel some anxiety as to the reflection which these events may produce upon the party strength. But for them the developments of the immediate future are to this extent beyond their control—that they depend more than anything else upon the methods adopted by the Government in relation to trade union questions. It is beyond doubt that any legislation which the working-classes could possibly interpret as an attack upon labour standards and organisation would swell the ranks and revive the strength of political Labour.

It is, however, the Liberal party whose domestic affairs and prospects have been most prominently canvassed during recent times. Considering its diminished numbers in the House of Commons and its alleged moribund condition outside, the Liberal party has managed to attract to itself an unusual share of public attention in the last few weeks. There is, however, universal agreement that the present state of the party is in no sense a true indication of the extent of "Liberal" opinion in the country. On the contrary, the feeling is widespread that, without going to the length of dramatic upheavals, there is nevertheless a need for important social changes which will give greater equality of opportunity, and also that in the sphere of industry there is room for considerable change in the relations of capital and labour, of producer and consumer, and of the State and industry, without losing the benefits of the incentive and freedom of private enterprise. In such matters the progressive reforming outlook which is typical of Liberalism has unquestionably permeated both of the other parties to a considerable extent. Or, again, who can fail to recognise that the results reached at the recent Imperial Conference in regard to the constitution of the Empire are the clear corollary of Liberal thought and policy in another sphere? The same is true of recent events in Ireland, Egypt, and in other parts of the world.

But if the nation is tending to adopt a liberal attitude in more important aspects of internal and external policy, is it desirable or—in the political circumstances of the day—is it possible that a separate Liberal party should continue in existence? The answer to these questions has a vital bearing on the future political structure of the nation.

On the whole, the more farsighted members of both the Conservative and the Labour parties recognise that it is desirable that the Liberal party should continue in existence. The Conservative realises that if the Liberal party were crushed out of existence it would leave as the only alternative to a Tory Government a Socialist Government which would be in grave danger of being unduly swayed by its left. At the same time no Government can expect to escape defeat for ever, and the Opposition must sooner or later take the reins. On the other hand, moderate Labour statesmen equally realise the danger of emphasising class conflict if the Labour party, based as it is on the trade unions, overthrows the Tory Government single-handed. They recognise that the outlook of the party must be broadened into a national one before they can properly undertake the government. In other words, the Labour party needs to imbibe the ideas which the

Liberal party is best fitted to supply. Neither Tories nor Labourites, however, seem able to translate this theoretical goodwill into actual help to the Liberal party by modifying in any way the party warfare in the constituencies or by agreeing to an electoral reform which would give fairer representation to minority parties. The future of the party must therefore depend on its own efforts, and on them alone. It is this fact which lends importance to the discussions of the last few weeks and to the efforts which have been made for restoring unity in the party.

The story of the division among the leaders of the Liberal Party, starting in the early years of the war and culminating—in spite of the effort to restore unity in 1923—in the dispute of June last, is a familiar story that need not be recalled here. It is all quite relevant when attempting to apportion credit or blame, but we do not propose to attempt that difficult task. Nevertheless, if recent events are to be understood, the important point to recognise is that the bulk of the Liberal Party, though disagreeing with many of the acts of Mr. Lloyd George in the last ten years, are not prepared to follow the action of Lord Oxford and break finally with Mr. Lloyd George and his supporters. In the country the partisans of both sides realise that for the most part they share a common outlook and common ideals; they are acutely apprehensive of being driven out of politics altogether or finding themselves compelled to choose between two parties, with both of which they are out of sympathy, and they feel that they have a policy of which the country stands in need. Hence arises an almost passionate determination to maintain the party in being. It was this that prompted the action of the National Liberal Federation at Weston when it declared its loyalty to Lord Oxford, but added, in effect, that it wished the party to be big enough to include Mr. Lloyd George. It was an attempt to "localise the conflict" and confine it to the leaders, while maintaining the party intact. But if there was to be one party there must be a single "neutral" organisation and one fund. The Administrative Committee of the National Liberal Federation has been giving effect to these clearly expressed wishes of the rank and file in discussing plans for a united organisation for the handing over of Mr. Lloyd George's fund to the central machine. The position of Lord Grey and those who think with him was made clear at Monday's dinner to Mr. Vivian Philipps. They cannot see their way to co-operate, but they do not propose to start a separate party or even a separate section of the party. This decision is wise, for the "non-co-operators" are rich in ability but poor in followers—a sort of Luxemburg army, with more officers than privates. They will continue to work for Liberalism in their own way, and, though refraining from taking part in the official organisation, will be found working for policies with which they agree.

The position would be clear if it were not for the individual case of Mr. Vivian Philipps, the chairman of the Organising Committee and the chief executive officer of the party. It is one thing for a man who cannot fall in with the majority wishes of the party to remain in it as a free-lance; it is quite another to dissent but to remain chief executive officer. It is unfortunate that Mr. Philipps should consider it his duty to insist that the Administrative Committee, consisting of men and women who have been his colleagues, must relieve him of his appointment; but they are left with no alternative. As the *Westminster Gazette* said in a leading article on Thursday:—"Those who wish him (i.e., Mr. Lloyd George) to be neither master nor paymaster have no option but to stand aloof from these transactions and maintain their freedom. That they will do with all possible charity to those who think differently, but they will do it with zeal and energy, believing that in this way alone it is possible to maintain the freedom and restore the fortunes of the Liberalism that they believe in." If the party is to continue as an active political force its affairs must be conducted by those who are willing to co-operate in the work of restoring its fortunes.

It is a mistake to assume that the Liberal Party has been bought, or that Mr. Lloyd George will henceforth control the machine. The "non-co-operators" include many famous Liberal names. But Liberalism is rich in

talent. Outside the list of the "12" there are many prominent Liberals, who are capable of taking a leading part in guiding the fortunes of the party, and their numbers have recently been reinforced by Sir H. Samuel, who has declared his intention of returning to politics, and Lord Reading, who is now taking an active part in running a Liberal journal. Moreover, though Mr. Lloyd George's money will form the greater part of the funds of the central office, the rank and file of the party is putting up a much larger sum in the local areas. The Liberal Party will be a really free party, capable of attracting back those who in recent years have tended to drift away from it, provided it can reveal internal sources of energy and enthusiasm.

GERMAN DISARMAMENT: A SOLUTION.

THE Council of the League are to be congratulated on having substantially settled a war-controversy which has been dragging on—as a dead weight upon the progress of reconciliation in Europe—ever since the Peace Conference. Once again, as at Locarno, Sir Austen Chamberlain has done his part by acting as a sympathetic and straightforward mediator; but the chief honours fall to M. Briand, who has borne the brunt of the negotiations. His position in Geneva—with M. Poincaré in the saddle in Paris—must at moments have reminded him unpleasantly of certain days at Cannes in 1922. Indeed, there were moments when it seemed as though another trial of strength between this strangely assorted pair of statesmen was inevitable. However, times change so inexorably that even a Poincaré cannot help changing with them. This time, M. Poincaré gave way; M. Briand received a distinct, though chilly, blessing from his Government, and the settlement for which he had been fighting so valiantly went through. Indeed, as a Geneva correspondent says on a later page, good business has been done there this week.

It will be remembered that, under the terms of the European peace treaties, the disarmament of Germany and her quondam allies was placed, in the first instance, in the hands of the victors in the war, who not unnaturally took extensive powers in a matter which they regarded as of capital importance for their security in the future. It was provided, however, that when the task of disarmament had been completed in this way, the permanent supervision necessary in order to prevent the work being undone should eventually be carried on by the League of Nations. The first phase, which proved even more complicated and controversial than had been foreseen, was repeatedly entangled in other controversies, particularly that over Reparations, and was finally interrupted altogether by the Franco-Belgian occupation of the Ruhr, since, so long as the German passive resistance lasted, it was made impossible for the French and Belgian members of the Inter-Allied Commission of Control to carry on their duties in unoccupied German territory. Nevertheless, before this interruption occurred a substantial part of the work had been done; and when the *détente* in Franco-German relations began in 1924 the prospect of concluding the Inter-Allied phase of the work of disarmament seemed sufficiently near at hand for the League to work out a scheme, in readiness for the moment when it would be called upon to take over responsibility. In fact, in the course of 1924, a scheme was not only drafted at Geneva, but was approved by the Council; but, unhappily, as the first phase drew towards a close, the mass of outstanding issues—for the most part relating to minutiae and technicalities which were incomprehensible to the layman—produced a volume of acrimonious controversy which threatened to poison the relations of the French and German Governments once again. It will be remembered how this weary controversy retarded,

though fortunately it did not prevent, the evacuation of the outermost of the three zones of Allied occupation in the Rhineland. In the informal memorandum, deposited with Sir Austen Chamberlain, in which the sense of the new agreement is put on record, it is apparently noted that, as lately as last June, more than a hundred issues were still unsettled. By the time when the late session of the Council opened the number of unsettled issues had been reduced to two—the question of the renovation of the fortifications of Königsberg in East Prussia and the question of the manufacture in Germany, for export, not only of war material but of plant intended to be used for the manufacture of war material elsewhere.
