The former question does not seem very important to the lay mind. That Germany should pay special attention to fortifications in East Prussia, and should struggle to obtain the utmost scope that the most favourable interpretation of the Treaty would allow her, is an inevitable reaction to the creation of the Polish corridor. If the moral effect of the corridor upon the relations between Germany and Poland can be effaced by time and Locarno, Germany will lose her zest for spending money upon keeping the fortifications of Königsberg up to an efficiency equivalent to that which they possessed upon the coming into force of the Treaty. On the other hand, if the corridor remains an open wound, restraints upon the fortification of Königsberg will do nothing whatever to diminish the resulting danger to the peace of Europe. Königsberg is a secondary affair. The definition of war material, however, may be a matter of far-reaching importance; for if the definition desired by the German soldiers and manufacturers were to be accepted, it seems as though Germany might be able to assist every unstable or aggressive country in the world—from Mexico to China and from the U.S.S.R. to Abyssinia—to equip itself rapidly with the plant for turning out munitions on the grand scale. Thus Germany might build up arsenals for herself abroad, or she might wage war by proxy, or she might put herself in a position to re-equip at short notice herself as well as her neighbours. We do not for one moment suggest that these ideas are in the mind of the present German Government, but it is quite legitimate that other Governments should take them into serious account.

These two questions still remain to be dealt with by the Conference of Ambassadors, and we do not doubt that—slowly and painfully—they will be solved like the 98 others which have been scotched since last June. Meanwhile, it has been agreed that they shall not be allowed to hold up the execution of the main agreement concerning the transition from inter-Allied to League of Nations control. This transition is to be effected by the withdrawal of the Inter-Allied Commissions of Control at a date not later than January 31st next; and the 1924 scheme, unlike other dead mutton, has come out of cold storage in considerably better condition than its original state. The original scheme provided for a standing supervisory organisation, in which the severity of the supervision would be relaxed and the work would be conducted by representatives of the League and not of the Allied Powers, but in which the principle of constant control would be maintained. The revised scheme provides—and this is both a great concession and a great improvement—that while the new machinery shall be in constant readiness at Geneva, it shall only be brought into play upon a specific order for investigation, which will be given by the Council of the League proceeding on a majority vote. This arrangement ought to save much friction—the more so since the *amour propre* of the four countries to which the scheme applies is to receive consideration in various ways. For example, any one of these four countries may have a member serving on the Commission of Investigation when it is in one of the other three countries that the particular investigation is to be carried out.

This settlement has been accepted, though somewhat sullenly, by public opinion in France, and is causing embarrassment to the Conservatives in Germany, owing to the difficulty which they are finding in picking holes in it. These two facts should cause satisfaction to all good Europeans.

THE OWNERSHIP OF BRITISH INDUSTRIAL CAPITAL.—I.

THE economic historian of the future, viewing in perspective the enormous expansion in the world's trade and industry during the nineteenth and twentieth centuries, may be inclined to assign to the nameless inventor of the principle of limited liability, as applied to trading corporations, a place of honour with Watt, Stephenson, and other pioneers of the Industrial Revolution. The genius of these men produced the means by which man's command of natural resources was multiplied many times over; the limited liability company the means by which the huge aggregations of capital required to give practical effect to their discoveries were collected, organised and efficiently administered. The main characteristics of the British limited company are its sharp differentiation between the provision and the management of capital; its compromise between the legitimate but partially conflicting desires of shareholders and creditors for the utmost degree of security; and its attributes of corporate personality and perpetual succession. For over sixty years English law has provided for the granting of such facilities to all who care to ask for them and abide by the rules of the game, and the limited company has long been the prevalent form of legal organisation for trading purposes. Over 220,000 concerns, with an aggregate nominal capital of nearly £10,000 millions, have been registered under the Companies' Acts since 1863, of which over 95,000 with a total paid-up capital of nearly £4,500 millions remain in existence to-day. It is true to say that much the largest share of British industrial resources is administered by British companies, whose earnings provide the lion's share of the nation's annual income, and whose "reserve allocations" are a substantial part of its annual savings.

Although the law insists on the registration, with a central authority, of fairly extensive particulars of internal organisation in the case of all companies, and presumes that everyone having dealings with these concerns is fully conversant with the information thus made available, public knowledge of the affairs of companies as a whole, as distinct from those of individual units, is meagre in the extreme. We do not know, for instance, whether their capital is mainly owned by many persons or by few—in other words, whether the holders of company shares are an oligarchy or a democracy. Nor can one state with confidence whether or no the control of company operations, which ultimately depends on voting power, is exercised by small bodies of "capitalists," or distributed over a host of smaller shareholders. No returns are available to show how far the capital of British companies is owned by persons domiciled in this country, or how far annual dividends fall to be remitted overseas, and thus constitute an "invisible" item on the import side of our trade balance. Many of these questions have a direct bearing on contemporary social issues, but the difficulties in the way of providing a satisfactory answer are well-nigh insuperable. In theory, any person may repair to Somerset House and study the record of every company registered. In practice the collation of information contained in some 95,000 files, some of which run

into several volumes, is too long and expensive a matter for any private inquirer.

While anything like an exhaustive survey of the subject would thus appear to be ruled out, there is no reason why a process of careful sampling should not yield useful results. The practice of judging bulk by sample is universal among merchants, and familiar to all statisticians. Provided the sample be not too small a part of the whole, and be taken without bias, it can legitimately form the basis of conclusions which, while falling many degrees short of exactitude, are vastly better than no conclusions at all. Applying the method of sampling to British joint-stock capital, we have examined the Somerset House files of a limited number of the best-known public companies of Great Britain, representing as many industries as possible. The results of the inquiry possess considerable interest, and will be summarised in this and succeeding articles.

The companies fall into two groups, as follows:—

Group 1.—Large-size Concerns:—Imperial Tobacco Company, Courtaulds, Anglo-Persian, Brunner Mond, Vickers, Dunlop Rubber, Cunard Steamship. Total paid-up capital examined,* £19½ millions.

Group 2.—Concerns of Moderate Size:—General Electric Company, Spillers' Milling, Phoenix Assurance, Ebbw Vale Steel, Bass, Ratcliff and Gretton, Marconi's Wireless Telegraph, English Sewing Cotton, Debenture Corporation, Cairn Line, Rover Company, Savoy Hotel. Total paid-up capital examined,* £32 millions.

Two sets of figures were taken in each case, viz.:—Series A: Every hundredth shareholding (approximately) in each company in Group 1, and every fortieth shareholding (approximately) in Group 2; Series B: All holdings of 10,000 shares (or £10,000 stock) or over.

We may first see what light is shed by these investigations on the question of the magnitude of average individual holdings of capital. The following table shows the number of shareholders (to the nearest hundred in each case) in relation to the total paid-up capital, as regards companies in Group 1:—

AVERAGE SHAREHOLDING.—GROUP 1.

Name of Company.	Class of Capital.	Total Paid-up Capital.	Total Shareholders.	Average Holding.
Imperial Tobacco.....	Preference..	£ 12,857,936	29,700	£ 430
	Ordinary ..	29,951,697	77,200	388
	Total ..	42,809,633	106,900	401
Courtaulds.....	Preference..	8,000,000	19,700	406
	Ordinary ..	12,000,000	28,200	426
	Total	20,000,000	47,900	417
Anglo-Persian Oil.....	Preference..	10,500,000	40,400	260
	Ordinary ..	8,950,030	17,100	524
	Total	19,450,000	57,500	338
Brunner-Mond.....	Preference..	4,000,000	11,000	364
	Ordinary ..	9,749,303	26,200	372
	Total	13,749,303	37,200	370
Vickers.....	Preference..	8,363,807	24,000	348
	Ordinary ..	4,105,161	46,400	89
	Total ..	12,468,968	70,400	182
Dunlop Rubber	Ordinary ..	6,723,042	51,600	130
	Ordinary ..	4,456,189	14,000	318
Total	..	119,657,135	385,500	310

The figures in the last column are instructive. The highest average holding—if the Anglo-Persian ordinary shares, of which a large block is held by the British Government, be omitted—is no more than £430, while the lowest (apart from the figures of Vickers and Dunlop, which are both affected by a recent writing down of capital) amounts to £260, and the mean figure for the £120 millions of capital examined to £310. The average holding of preference capital comes out at £350, and of ordinary at £291. The next table shows similar figures

* According to last statement filed in each case.

as regards the smaller companies, which are included in Group 2:—

AVERAGE SHAREHOLDING.—GROUP 2.

Name of Company.	Class of Capital.	Total Paid-up Capital.	Total Shareholders.	Average Holding.
General Electric Co. ..	Preference..	£ 3,600,000	13,000	£ 277
	Ordinary ..	2,141,975	10,100	202
	Total ..	5,741,975	23,100	249
Spillers' Milling	Preference..	1,159,986	2,400	483
	Ordinary ..	2,643,688	8,300	318
	Total ..	3,803,674	10,700	356
Phoenix Assurance	Ordinary ..	3,792,795	8,500	446
	Ordinary ..	1,200,000	4,400	273
Ebbw Vale Steel	Ordinary ..	2,500,000	7,800	321
	Total ..	3,700,000	12,200	303
Bass, Ratcliff, & Gretton	Preference..	1,360,000	2,000	680
	Ordinary ..	2,040,000	1,900	1,074
	Total ..	3,400,000	3,900	870
Marconi's Wireless Tel.	Ordinary ..	3,249,913	24,600	132
	Ordinary ..	1,000,000	6,300	159
English Sewing Cotton	Ordinary ..	2,000,000	9,700	206
	Total ..	3,000,000	16,000	188
Debenture Corporation..	Preference..	1,000,000	2,800	357
	Ordinary ..	1,000,000	2,000	500
	Total ..	2,000,000	4,800	417
Cairn Line.....	Ordinary ..	1,200,000	2,900	414
	Ordinary ..	1,050,000	8,300	127
Savoy Hotel	Preference..	250,000	1,000	250
	Ordinary ..	738,934	2,400	308
	Total ..	988,934	3,400	291
Total	..	31,927,291	118,400	270

Here the highest average is recorded by a brewery concern, and the lowest by a motor manufacturing company, but the spread of the remaining figures is not much greater than that recorded in the case of the bigger concerns in Group 1, and the average for the eleven companies is only 10 per cent. less. "Preference" holdings show a similar tendency to exceed "ordinary," the respective averages being £300 and £259. Taking all the companies in both groups together, the mean figures are: Average holding of preference capital, £340; of ordinary capital, £283; of all capital £301.

That £152 millions of industrial capital should be parcelled out among more than 500,000 holders, each possessing on the average no more than £300, does not necessarily prove that Great Britain is predominantly a nation of "small capitalists." It may be that investors are accustomed to keep their eggs in many baskets. The statistics do, however, suggest that the best known British companies tend to draw their individual supplies of capital, not from a few vast reservoirs, but from innumerable small streams. This highly important conclusion will be criticised and elaborated in a subsequent article.

THE NEW ELECTRICITY LEGISLATION.

(BY A CORRESPONDENT.)

AFTER many difficult months, the Electricity Bill has struggled past Scylla and Charybdis into the open sea beyond—scarcely the clean-cut vessel it was before entering the narrows, but still recognisably a vessel. In spite of the many obstacles to efficient performance which the opponents of the Bill in its original form have been able to create in the Committee and Report stages in both Houses of Parliament—notably the use of the machinery of arbitration on an excessive scale, and the direct limitation of the duties of the Central Board to co-ordination

rather than to complete executive control of electricity supply in this country—the foundations of a national system have been definitely laid. The constitution of the Central Electricity Board will decide the success or failure of the new legislation, and the great misfortune of the Electricity Bill as amended has been precisely its failure to protect the Central Board from pure obstructionism, or, at least, to give it a weapon powerful enough to overcome at once unjustifiable opposition.

The main principles incorporated in the new legislation are in line with the most advanced tendencies of modern economic thought. Centralisation of control, specialisation in the generation as apart from the distribution of electricity, concentration of output in the most efficient units, amalgamation of supply undertakings in joint electricity authorities acting in conjunction with the Central Board, standardisation and uniformity in production and in costing, regulation of price both to the distributor and the consumer, all enter into the new system, and have received the approval of engineering and financial experts. The electricity supply industry is in a peculiarly favourable position for reorganisation of this nature. In the first place, it has prepared and issued the fullest statistical records of production costs, output, and price, and its standards of efficiency can be measured with almost complete accuracy; in the second place, scientific and technical progress has been more rapid in it than in almost any other industry, especially since the end of the war, and such progress has been invariably towards the creation of larger productive units, more extensive transmission systems, and closer investigation of fuel economy resulting from more effective distribution of load; in the third place, it has no diversity of manufacture and no traditions to weaken seriously its power to advance steadily on a wide front; and, in the fourth place, it has enjoyed a monopoly, both regional and national, in production and price. Conditions were abnormally favourable to reorganisation on a scientific basis, and the Electricity Bill comes almost as the first stage in a natural process, which would in all probability have culminated without it in the formation of a great national system.

The magnitude of the task confronting the Central Electricity Board can be seen from the sixth annual report of the Electricity Commissioners now published. In six years only eight of the fifteen electricity districts provisionally determined have been finally approved and the work of reorganisation initiated: London and the Home Counties, South-East Lancashire, Mid-Lancashire, North Wales and South Cheshire, South-West Midlands, East Midlands, West Midlands, Edinburgh and the Lothians. The North-East Coast area, supplied by the Newcastle Electric Company and its subsidiaries, should be added to this list. The West of Scotland, West Riding (Aire and Calder), North-West Midlands, Mersey and West Lancashire, South Wales, Lower Severn and the North Lancashire districts have not yet been finally determined. In the nine areas where a central organisation, advisory or executive, has been set up, about 44 per cent. of the entire population of Britain is concentrated, and the output of electricity is equivalent to 63 per cent. of the total national output. The remainder of the country, including the seven electricity districts not yet approved, is responsible for 37 per cent. of the total output. In 1925-26 the production per head of population was, in the nine areas, almost exactly 270 units, and in the rest of Britain 125 units, the national average being 190 units. If we further develop our examination, reorganisation on what may be considered a permanent basis has taken place only in four areas, North-East Coast, South-East Lancashire, South-West Midlands, North Wales and South Cheshire; interconnection and selection of generating stations, long-distance transmission systems and pooling of power supplies have been almost completed, and the Central Board can do little more than recognise what has been done, concentrating its attention on other and less developed areas.

The first step would lie, therefore, in acceleration of the programmes already under discussion for the Mid-Lancashire, London and Home Counties, East Midlands, West Midlands, Edinburgh and the Lothians districts, creation of joint electricity authorities, wherever possible,

especially in the West of Scotland, West Riding, and North-East Midlands districts, so that some uniform plan of regional development can take place before the elaboration of the national scheme. The influence of reorganisation on the demand for electricity can be seen in the two averages of 270 units and 125 units noted above, while, in the four areas where scientific co-ordination is already in operation, the output per head of population is now in excess of 350 units. It will be difficult to ensure a general levelling-up of electricity production over the whole country (the concentration of industries in well-defined regions has been an important factor in causing diversity), but it is sufficiently clear that even in the most advanced districts considerable progress must still be made.

A disquieting feature in the situation has been, however, the decline in the rate of progress in electricity output during the last three years. The following table illustrates the position:—

THE GENERATION OF ELECTRICITY IN GREAT BRITAIN (1920-26).

Year.	New Generating Plant Sanctioned. (Kilowatts.)	Output of Electricity. (Millions of Units.)	Increase over Previous Year. (Per Cent.)
1920-21	687,247	5,167.3	..
1921-22	169,503	4,884.7	..
1922-23	422,338	5,738.7	17.5
1923-24	476,532	6,681.5	16.4
1924-25	479,877	7,415.3	11.0
1925-26	585,700	8,122.9	9.5

The assumption that saturation is being reached fairly rapidly might be justified on a cursory examination of these figures. If it is remembered, however, that industry, which accounts for 70 per cent. of the total demand, has been consistently depressed during the last four years, the decline in the rate of progress can be explained. It is quite possible that electricity has only reached about 20 per cent. of its potential demand in this country, and the position since 1921 must be considered as sub-normal.

In the year ending March, 1927, the increase recorded will probably be less than 2 per cent., owing to the coal strike; London and the Home Counties, South-West Midlands, North Wales, Edinburgh, and the Lothians have maintained their rate of progress, but the other areas have lost ground. In 1920-21 there was a definite shortage of generating plant, which the following years have gradually made good, 1925-26 being a record year, so that, at the moment, there is a surplus. The steady introduction of new generating plant has been one of the most remarkable developments. In April, 1925, the total capacity of the generating plant in the possession of authorised undertakers (apart from railway, tramway, and non-statutory authorities) was given at 3,723,514 kilowatts, while the new plant sanctioned over the period 1920-25 amounted to 2,076,146 kilowatts. If we add the total sanctioned for 1925-26—namely, 556,716 kilowatts—we can estimate the percentage of new plant at 60 per cent. of the total of all generating plant installed. Taking Britain as a whole, and allowing for the possibility that reserve plant (generally 33½ per cent.) will be composed preferably of older units, we can assume that practically the entire load on the generating stations is being taken, or will be taken in a short time, by plant not more than six years old. In this, the explanation for the swift rise in thermal efficiency may be found. In 1921-22 the average fuel consumption per unit generated was 3.11 lbs of coal, but in 1924-25 it had fallen to 2.53 lbs, and may be estimated at 2.42 lbs. in 1925-26—an improvement of 22 per cent. in five years. In South-East Lancashire the rise in efficiency from 1919-20 to 1925-26 was even greater than the national figure—in 1919-20 one unit of electricity required 3.11 lbs of coal, but in 1925-26 1.90 lbs sufficed, a reduction of 39 per cent. in six years. The net saving in coal due to higher efficiency can be calculated. The output of 1925-26, granted the thermal efficiency of 1921-22, would have taken 10,300,000 tons, instead of the 8,400,000 tons recorded.

The development of electricity supply, as recorded in the sixth annual report of the Electricity Commissioners, touches on many difficult and fascinating problems, which only the scientific and technical progress of the industry

will solve. The Central Electricity Board has before it a complicated task, but, if conceived on sound economic lines, its work must have a lasting significance for the industrial prosperity of the country.

THE SECOND DAWES ANNUITY.

THE Report of the Agent-General for the second completed year of the Dawes Plan, dated November 30, 1926, covers a period during which the German national economy has been passing through a phase of great difficulty. This very fact lends additional interest to the very elaborate and detailed exposition of the economic life of Germany, which, as we have had occasion to remark before, makes the Agent-General's Reports one of the most valuable international public documents to which students of European affairs can refer.

The total payment contemplated by the Dawes Plan for the second annuity year amounts to 1,220 million gold marks. The budgetary contribution and the transport tax were each to come to 250 millions, a sum of 500 millions being provided for the Reich by the sale of preference shares in the Railway Company, and, if necessary, a domestic loan was to be raised. Neither sales of shares nor a loan proved necessary; the German State holds shares to the amount of 500 million marks "in satisfaction of its right to the proceeds of sale of a corresponding amount of the shares, so that it has in substance chosen to invest such an amount in the preference shares of the Railway Company instead of attempting to use its right to the proceeds for the purpose of financing the Budget contribution and the payment from the transport tax." Further instalments were to come from the reparation bonds of the Railway Company, and from interest on the industrial debentures, to an amount of 595 and 125 millions respectively. As modified in practice, the annuity has been paid thus:—

	In Miln. Gold Marks.
Interest on German Railway Bonds	550
Budgetary contribution	250
Interest on German industrial debentures	125
Transport tax	242
	1,167

Whilst the *mode* of payment has thus been left unaffected, though the *source* of payment has in effect been somewhat modified, during the second year, what the Report itself describes as "a most important change in the arrangement of the annuities payable under the terms of the Plan" results from an agreement arrived at in the course of the present annuity year. In virtue of the original Plan, a rise in the yield of the controlled revenues made the German Budget liable for supplemental contributions.

The actual course of development, had the original Plan not been changed, would, in fact, have called for such supplemental contributions in the third and fourth years of the annuity. By an agreement concluded in September, 1926, Germany is to make a single payment of 300 millions in the third annuity year, instead of the two separate supplemental contributions. "The new arrangement.....means that the third annuity will amount to 1,500 million gold marks, as compared with 1,220 millions in the second annuity year, while the fourth annuity will stand at 1,750 million gold marks, and the fifth at 2,500 millions. The result is a better graduation of the annuities, which will reduce the danger of undue strain on the German economy and facilitate the even flow of deliveries and payments." Apart from the obvious technical advantages, the rearrangement is an interesting and convincing proof of that friendliness and mutual understanding which, as the Report remarks, is "indeed a growing tradition" of the actual working of the Plan.

Public opinion has already learnt the distinction between the budgetary problem and the transfer problem, and is in process of learning the distinction between the budgetary burden and the burden on the national economy. So long as the German Government raises the annuity by taxation, the budgetary burden remains, even though, from the standpoint of Germany as a whole, an

amount equal to the taxation so imposed is raised from abroad. The resources which Germany, through her taxpayers, is deprived of are made good, but the taxpayers still suffer a real loss.

During the second annuity year the net amount available for transfer came to 1,269.5 millions, in consequence of the carry-over from the previous year, and certain smaller items, being added to the actual annuity. The total amount transferred came to 1,175.9 million marks. Of this amount 760 millions represented payments in terms of gold marks for Army costs, deliveries in kind, and the like; 416 millions were transferred in foreign currencies, and, towards the end of the annuity year, an amount of 65 millions (included in the above total) was actually transferred in cash. Thus only about 5 per cent. of the total sum due has been a direct burden on the exchange. On the other hand, the position of the annuity, in relation to the German balance of payments, would appear to be other than that usually entertained. In the first annuity year the merchandise balance of 3,400 millions was increased by net payments made by the Agent-General, and additions to the stock of Reichsbank gold to a total of 4,500 millions. Against this the German loan of 1924 and earnings of shipping, totalling together 1,500 millions, reduced the net deficit to 3 milliards, conjecturally covered by short-term borrowings. In the second annuity year there was a favourable merchandise balance of 300 millions, increased to 600 millions through shipping earnings. Foreign long-term loans of 1,750 millions make the total 2,350 millions. The Reichsbank absorbed 495 millions more gold and devisa, the net Reparations payments came to 416 millions, so that Germany still had the right to draw 1,450 millions. But whilst in the first year foreign credits were the real source out of which foreign reparation payments were made, "in the second year of the Plan, reparation payments transferred in the form of foreign currencies, amounting in all to 416 million gold marks, were somewhat more than equalled by the surplus derived from the export of goods and services, amounting to somewhere around 600 million reichsmarks. It remains to be seen whether in the future a similarly fortunate result can be obtained.

Turning now to the internal German situation, there are various features of the German budgetary position rightly stressed by the Report. The financial position of the Reich has been greatly affected by the unemployment problem. This has involved not only considerable direct expenditure upon unemployment relief, but has stimulated the policy of capital investment for the purpose of providing "productive unemployment relief." Its further effects have been to make it necessary to include the proceeds of loans among the possible sources of income on the revenue side of the Budget, and to expand the "Extraordinary" Budget expenditure from 725 millions in 1924-5 to 1,308 millions in 1926-7. The expediency of the whole concept underlying the extraordinary Budget is questioned by the Agent-General, who raises the issue "whether it would not be sounder policy for the Reich, if it finds that its investment policy has led to a shortage in its working funds, to replenish its funds directly by realising on the investments themselves, instead of putting a further burden on the domestic capital market, by borrowing new money in the name of the Reich." The period of living on surpluses accumulated in the past having, for the time being at least, come to an end, the question of the financial relations between the Reich and the States is even more important than it was immediately after stabilisation, but though the Reich has called for returns in order that a definitive re-arrangement might be come to before March 31, 1927, "it now appears that the statistics already called for will not themselves be available for some time to come, and it has accordingly been announced that the present provisional status will have to be continued.....This further postponement, following several earlier delays, is cause for sincere regret, as a definite settlement is urgently necessary in the interests of the country as a whole."

The diminution in the financial resources of various Government departments has made the problem of the relation of the investment policy of these departments to the credit policy of the Reichsbank a less acute one, but there still appears to be room for improvement, especially

in regard to the activities of the Railway Bank, the "Verkehrs-Kreditbank," which makes most of its profits from interest on balances kept with other banks: "funds in such volume if invested primarily for profit and without due consideration for the Reichsbank's credit policy, are bound to have a disturbing and dislocating effect on the money markets. They are also bound to stimulate stock market speculation, if indeed they do not exert a dominating influence there. Under these conditions, the value of the Verkehrs-Kreditbank to the economic system is not apparent....."

The social and economic life of Germany has, of course, been dominated by the business depression. It is satisfactory, however, that widespread unemployment does not appear to have checked the growth of savings deposits, nor even produced a decline in wages, the facts seeming to indicate that "employers preferred to economise in the number of men employed rather than in the amounts paid to those retained. Toward the end of 1926 some small resumption of the upward tendency (of wages) was observed."

The depression has, of course, greatly stimulated the progress of the nationalisation movement, including under this head not only the elimination of inefficient concerns, but the tendency to horizontal instead of vertical combination, and the building up of the internal financial resources of enterprises. Wages have not risen, nor have lower prices been fixed for finished products; "industrial managers have evidently proceeded upon the theory that it was desirable first to pay off debts and increase working capital." Unfortunately, nationalisation is likely in the immediate future to keep up the level of unemployment, which "constitutes a social problem of the first importance.....Lasting relief is likely to come only when the economies made in production and distribution lead to the opening up of wider markets, and these in turn to greater production and the re-employment of workers."

INDUSTRIAL PEACE.—I.

(FROM A LABOUR CORRESPONDENT.)

THE question of industrial peace is again commanding considerable attention. The zeal of the supporters of this movement, however, leads them into two dangers. The first is the tendency to magnify the volume and intensity of open industrial warfare, and the second is to assume that there is some single royal road towards the establishment of a reign of industrial peace.

From 1910 to 1925 inclusive 292,730,000 working days were lost in Great Britain and Northern Ireland in consequence of strikes and lock-outs, or an average of about 18,295,000 working days per year. If we exclude the war years, the lowest figure for the past 16 years was 8,361,000 days lost in 1924 and the highest 82,269,000 in 1921, when there was a coal stoppage which lasted three months. The figures for 16 years are, of course, enormous in the aggregate, though on the average they work out at about one day per year per worker. The number of days for which sickness benefit is paid each year under the National Health Insurance Acts, in England and Wales alone, dwarfs into insignificance the time lost through industrial stoppages in the whole of Great Britain and Northern Ireland. According to the Chief Medical Officer of the Ministry of Health, the total number of weeks represented by the sickness and disablement payments in 1925 may be estimated at about eight million weeks' sickness and seven million weeks' disablement for men and at 5,500,000 weeks' sickness and 4,500,000 weeks' disablement for women. These figures, which do not include the first three days of incapacity, for which sickness benefit is not payable, give a total of 25 million weeks' work lost in 1925 through sickness.

It is impossible to compare the amount of lost time due to industrial disputes with the number of idle days due to enforced unemployment, but during the five years 1921-25 inclusive the number of unemployed has never fallen below a million, and has been much higher. It may be argued that at least some of this unemployment was

itself the outcome of industrial disputes; but, even so, it still remains true that there is far more enforced idleness arising from trade depression than there is lost time arising from strikes and lock-outs. It may also be urged that open or veiled industrial hostility is a factor in retarding the return of economic prosperity. The point, however, which is being made is that the leakage due to trade disputes is not nearly so large as the wastage due to other factors. These figures are given not to minimise the economic dislocation arising from industrial strife, but to put the problem in its true perspective so far as this can be done by the use of statistics.

Moreover, it is not to be assumed that industrial stoppages are spread over the whole of industry. In some trades they are infrequent and almost unknown. In others they are recurring phenomena. The table below shows the strikes and lock-outs of the 16 years, 1910-25, classified by groups of industries:—

Groups of Industries.	No. of Stoppages 1910-1925.	Percentage of Total.
Building.....	1,496	10.7
Mining and quarrying.....	2,816	20.1
Metal, engineering & shipbuilding.....	3,412	24.4
Textile.....	1,364	9.8
Clothing.....	762	5.5
Transport.....	1,062	7.6
Other industries and services.....	3,085	22.0

It will be observed that mining and quarrying, metal, engineering and shipbuilding account for nearly one half the disputes culminating in stoppages, and that the proportion of the total stoppages due to disputes in certain important groups of industries is relatively small. It may, of course, be argued that the number of people employed in these different groups varies, but even if we assume (though the assumption is not necessarily a sound one) that the more people there are engaged in an industry, the greater the likelihood of trade stoppages, the results still show a much heavier incidence of strikes and lock-outs in some groups of trades than in others:—

Group of Industries.	Percentage of Total Disputes. 1910-1925.	Percentage Employed of Total Population. (1921).
Building.....	10.7	4
Mining and quarrying.....	20.1	7
Metal, engineering, & shipbuilding.....	24.4	13
Textile.....	9.8	7
Clothing.....	5.5	5
Transport.....	7.6	7
Other industries and services.....	22.0	57

The foregoing table reveals the fact that building, mining and quarrying, metal, engineering, and shipbuilding are responsible for a greater proportion of the industrial stoppages which occur than the size of the industry—if this be a factor—would warrant. These figures, to those interested in the establishment and maintenance of industrial peace, call for an examination of the economic organisation and methods of negotiation, the general economic circumstances, and the psychology and outlook of the workers and employers in the various industries.

A national stoppage on the scale of those in the mining industry in 1921 and during the present year loads the total figures of time lost very heavily. Moreover, it is not generally recognised that, taking the past sixteen years, nearly one half of the 13,982 strikes and lock-outs in Great Britain and Northern Ireland recorded in the recently issued Abstract of Labour Statistics* lasted less than a week. Again, though the number of stoppages is large, it is small in relation to the large number of negotiations that take place about wages and other matters. The Ministry of Labour state, for example, that only 1.3 per cent. of the wage changes that took place last year involved a stoppage of work. Negotiation is, in fact, the normal method of settlement of outstanding differences. In general, though, of course, there may be exceptions, every practicable means of averting a stoppage is exhausted before a deadlock results in notices to strike or lock-out. Even where stoppages occur a settlement is reached in roughly three-quarters of the disputes in recent years by direct negotiation between the parties or their representatives, whilst subse-

* "Eighteenth Abstract of Labour Statistics of the United Kingdom." Cmd. 2740. 1926. 4s net. Obtainable from H.M. Stationery Office, Adastral House, Kingsway, W.C.2.

quent arbitration terminates only 2 or 3 per cent. of the strikes and lock-outs.

In any consideration of the problem of industrial peace it is important to bear in mind the various causes of stoppages. The following table analyses the causes of strikes and lock-outs from 1910 to 1925 inclusive.

Causes or Objects of Strikes and Lock-outs.	Percentage of Total Number of Disputes, 1910-1925.
Wage increases	41.7
Wage decreases	9.8
Other wage questions	13.5
All wages questions	65.0
Hours of labour	3.5
Employment of particular classes of persons	15.9
Other working arrangements, rules, and discipline	6.5
Trade unionism	7.1
Miscellaneous questions	2.2

It will be seen that about two-thirds of the industrial stoppages originate in wages questions, and of these two-thirds arise from demands for wage increases. All other questions are responsible for only a minority of the disputes resulting in stoppages.

It is, of course, difficult to arrive at any general agreement as to whether a particular dispute terminates in favour of the workers or the employers. But the Ministry of Labour have published their own analysis, which may be summarised as follows:—

Percentage of Disputes—	%
(a) Settled in favour of workers	25.8
(b) Settled in favour of employers	29.9
(c) Compromised	44.3

It will be seen that about a quarter of the stoppages of the last 16 years ended in favour of the workers, and rather more in favour of the employers, whilst over two-fifths terminated in a compromise. It is, of course, a hypothetical question whether the results would be substantially the same if the dispute had been settled without recourse to the strike or lock-out. It is, for example, open to argument that had there been no strikes the results would, on the whole, have been as favourable to the workpeople as they proved to be after a stoppage. On the other hand, it is equally a matter for argument that without a stoppage, and by resort to other methods, a proportion of the stoppages which terminated in favour of the employers might have swollen the percentage of settlements by compromise.

If we analyse the results of disputes further from the point of view of the numbers of workers involved in disputes over the past 16 years, the results are as follows:—

Stoppages Ended.	Percentage of Total Number of Workers Directly Involved.
In favour of workers	20.1
In favour of employers	15.4
By compromise	64.6

It will be observed that nearly two-thirds of the workers directly involved in stoppages during the years 1910-1925, inclusive, witnessed a settlement by compromise, and that the number of workers who emerged victorious was greater than the number for whom the settlement meant defeat. If the workers are convinced that the compromises reached after strikes are better than they would have been without a stoppage, and that compromised settlements, and even unsuccessful strikes, have averted worse evils, the strike weapon is hardly likely to be surrendered. On the other hand, if, as regards the great majority of stoppages which end in compromise, the employers believe that the results might have been less favourable to them had the lock-out not been used, they will not willingly surrender their right to lock out. Unfortunately, it is impossible to ascertain the nature of the compromises reached, which range from those in which the workers obtain nine points to those in which they lose all but one point. Nor is information available to show the character of the disputes in which compromises were reached. No doubt the greater number were wages disputes where, of course, compromise is much easier than in the case, say, of disputes on trade unionism which raise questions of principle that fall into the category of "non-justiciable" disputes. There is little of practical value to be drawn from the analysis of the results of industrial stoppages, except that the majority are settled

by compromise, and do not result in complete victory for either one side or the other.

The foregoing considerations, based upon the facts, must be borne in mind by industrial pacifists. A study of the facts goes to show that:—

(1) The vast majority of the issues on which there is disagreement between employers and workers are settled by direct negotiation, and a smaller proportion of cases by conciliation and arbitration, without resort to either the strike or the lock-out.

(2) The number of days' work lost by industrial stoppages is insignificant compared with the days lost through disease or enforced unemployment.

(3) A substantial proportion of the industrial stoppages are of short duration.

(4) There are certain groups of industries where strikes and lock-outs are more frequent than in the rest of industry.

(5) The majority of industrial disputes are settled by compromise.

THE ARMSTRONG-WHITWORTH SCHEME.

In our last issue, in commenting on the financial position of some of the important iron and steel companies of the North-East Coast, we gave figures showing the disastrous effect of the coal stoppage upon the results of these concerns. We did not suggest that financial reconstruction in the heavy iron and steel trades was inevitable, but the question naturally arises, and at the meeting of Dorman, Long and Co., Limited, the chairman, Sir Arthur Dorman, referred to it. "Rumours are rife about the position of the heavy steel trade," he said, "and we see many suggestions being put forward that there will have to be wholesale reconstruction," but added that he saw no reason to change the views he had expressed a year previously, which were to the effect that a writing down of capital was unnecessary.

The armament companies, however, are in different case. Vickers, Limited, has already been submitted to drastic reconstruction, and Armstrongs, whose accounts for the year 1925, published in June, showed a deplorable state of affairs, are faced with a similar process.

The scheme of arrangement put forward this week by the directors of Sir W. G. Armstrong Whitworth and Co., Limited, is something of an innovation. In such cases the rights of preference shareholders are usually the first to suffer, but in the present instance the position of ordinary and preference shareholders remains quite untouched—for the moment, at all events—the rights of the debenture holders being the subject of interference. Briefly, the scheme proposes a moratorium of five years on the debentures and notes other than the 4 per cent. first mortgage debentures. All profits until the moratorium is ended are to go to pay the interest on the securities affected.

It may be recalled that at the annual meeting in June the chairman gave a very frank review of the company's unhappy position, his remarks being largely based on a preliminary report made by Mr Frater Taylor and Sir Gilbert Garnsey. These gentlemen have now presented a supplementary report which says in effect that, as a result of their further survey during the current year, they are satisfied that the position as disclosed by them in their previous report was not exaggerated, and that, on the contrary, some matters have turned out to be worse than was expected. In the circular now issued to the debenture and note holders the directors, in a summary of the situation as disclosed at the annual meeting, state that "certain of the company's larger investments, and more particularly their civil engineering undertakings, have resulted disastrously. An outstanding example of the kind is undoubtedly the company's investment in the Newfoundland Power and Paper Company, Limited, which at the present time stands in the books of the company at £2,864,184, exclusive of guarantees, and on which there are little prospects of any return in the near future. It is not advisable, especially where a building-up policy is being attempted, to discuss critically the company's investments in detail, but, including S. A. Armstrong di Pozzuoli (Italy), Armstrongs have approxi-

mately £10,000,000 invested in undertakings foreign to their original business, on which no return is being made or is likely to be made for some time to come. It is appropriate here to say that there are certain companies, including the Newfoundland company, which have possibilities, but it is most obvious to all concerned that intensive work and considerable time must be spent on such enterprises."

Since 1922, debentures, notes and loans have increased from £5,109,100 to £14,393,600, the latter including bank and other loans for £5,292,900. The figures of profits given in the circular, which differ slightly from those disclosed in the annual reports, are as follows:—

Year.	Net Earnings Available for Interest.	All Interest Charges.	Surplus + or Deficiency.	Add Special Additions to Profits from Reserves, &c.	Balance as per General Profit & Loss Account.
1922	£ 436,342	£ 268,793	+ £ 167,549	£ 300,000	£ 467,549
1923	265,577	235,425	+ 30,152	406,224	436,376
1924	680,826	344,861	+ 335,965	169,285	506,250
1925	415,780				
Less—Provision for special losses	925,621				
	509,840	613,573	—1,123,413	1,131,911	8,498

Attention is called, first, to the seriously increased fixed charges which the company has to bear, and, secondly, to the disastrous results for the year 1925, in which special provision of £925,621 for actually ascertained losses had to be made. "The outlook for the years 1926 and 1927 is that full charges cannot possibly be earned. It will be appreciated that in any business connected with the iron and steel trade it is exceedingly difficult, under present circumstances, to forecast results with any degree of reliability. Further, any profits that may come from operations at Elswick, Openshaw, and the shipyards will be materially affected by losses sustained elsewhere, more especially on civil engineering contracts at home and abroad. As a result of the policy which is being pursued, no new civil engineering orders have been booked. Assuming that the company's request for temporary relief in respect of interest charges is granted, as well as the banking facilities which are being sought, it is believed that, with the financial provision which the company has been able to make through a satisfactory sale of its holding in the Armstrong Whitworth Development Company, sufficient funds will be available for carrying on the business." If the scheme is passed, the company's bankers have agreed not to demand payment during the moratorium period of the principal sum owing for advances up to £3 millions, or of the interest due, unless in any year there is a surplus, after paying interest on the debenture stock and notes, excluding the amounts held by the bank as collateral for the advance.

"It will be the company's deliberate aim to get rid of losing ventures on the best terms possible, and to encourage and aid those subsidiary companies where there are reasonable possibilities of protecting the investment. Generally, the policy will be to concentrate as far as possible upon the main works of the company on the Tyne and at Openshaw, but it is vital that the necessary opportunity should be given to the new management to re-study the situation, which, although admittedly very complicated, is still full of possibility, especially in view of the world-wide reputation of and goodwill attached to the name of 'Armstrong.'"

The effects of the main provisions of the scheme of arrangement are as follow:—

Under clause 1 the available net profits for the years 1926 to 1930 inclusive, and the six months ending June 30, 1931, will be utilised to pay the interest upon the second stock, the notes, and the consolidated stock in respect of the period ending July 1, 1931, together with interest at 5 per cent. per annum on any such interest which may not be punctually paid. The net profits will be applied in payment of, first, interest up to 5½ per cent. on the second stock, and the interest on the notes; secondly, the remaining 1 per cent. interest on the second stock and the additional interest of 5 per cent. upon any interest in arrear on the second stock and the notes; and, thirdly, interest at 6½ per cent. on the consolidated stock and the additional interest of 5 per cent. upon any interest in arrear on that stock. Interest will be payable within 14 days after the completion of the audited accounts of the company for each of the years 1926 to 1930 inclusive, and for the half-year ending June 30, 1931.

Under clause 2, in so far as such interest on the second stock, the notes, and the consolidated stock is not paid out of the net profits, the following amongst other provisions will have effect.

Under clauses 3 and 5 a calculation will be made as at July 1, 1931, of the amount which may then be due to each holder of second stock and each holder of consolidated stock for interest (including additional interest at 5 per cent. on any interest in arrear) and as soon as possible thereafter the company will issue to the holders of second stock registered "A" interest certificates and to the holders of consolidated stock registered "B" interest certificates equal in nominal value to the total amount of interest and additional interest for the time being remaining unpaid. The "A" and "B" interest certificates will carry interest at the rate of 6 per cent. per annum from July 1, 1931, until payment, and each series will be redeemed and paid in cash by 20 equal instalments on January 1, and July 1 in each year, commencing on January 1, 1932. The certificates redeemable on each occasion will be determined by drawings. The company will be at liberty to redeem all or any part of the "A" interest certificates and (provided that all the "A" interest certificates have been redeemed) all or any part of the "B" interest certificates at any time upon giving not less than one calendar month's notice. All interest to be represented by "A" and "B" interest certificates will be included in and secured by the mortgage or charge constituting the respective securities for the second stock and consolidated stock respectively. No further redemption fund payments in respect of the second stock will be made until November 1, 1932. The date for the redemption of the second stock will be extended from January 1, 1946, to January 1, 1956, and the date for the redemption of the consolidated stock will be extended from December 16, 1939, to December 16, 1949.

Under Clause 4 the principal of the notes and all interest thereon until payment, including the additional interest as mentioned in Clause 1 of Scheme will be payable on October 7, 1931, instead of April 7, 1927, and all such interest will be included in and secured by the charge constituting the security for the notes. The trustees for the note holders are to be authorised to agree to this scheme as holders of the £2,000,000 second stock, held as security for the notes.

Under Clause 7 the company is given power to mortgage or charge its assets (other than property and assets which are specifically mortgaged under the various trust deeds) in priority to the first stock, the second stock, and the consolidated stock provided that any such mortgage or charge shall be created for securing the repayment of advances to be made by bankers and/or others in the ordinary course of the business of the company and/or for securing guarantees or undertakings to be given by or on behalf of the company in favour of any Government or other customers of the company for the due performance of contracts or for work to be carried out, or for materials to be supplied by the company or by any of its subsidiary or controlled companies.

Under Clauses 8 and 9, until July 1, 1932, three-fourths of the directors of the company shall be representatives of the holders of the first stock, the second stock, the notes, and the consolidated stock nominated by the stockholders' committee, consisting of Sir George May, K.B.E., Mr Archibald H. Campbell, Mr J. H. Clifford Johnston, Mr R. P. Sloan, Mr J. Proctor Green, and Mr J. Frater Taylor, or their successors, and the company shall appoint any persons so nominated as directors of the company, and such of the present directors of the company as shall be required by the committee shall resign from the board. No meeting of the directors of the company will be effective unless at least a majority of the directors present thereat are directors nominated to the committee. The company shall make and retain all requisite alterations in its articles of association to give effect to this scheme.

Under Clause 10 the company shall not pay any dividend or any of its share capital until all postponed interest under the scheme and interest thereon have been paid.

Under Clause 12, if at any time before July 1, 1931, any of the events mentioned in this clause happen, and the said committee certifies that the scheme should in the interest of the holders of the second stock, the notes or the consolidated stock cease to have effect, the scheme shall immediately cease to have effect except as therein mentioned.

With reference to clause 7, which modifies the trust deeds securing the debenture stocks so as to allow the assets to be secured with bankers and others, the directors say that the want of the banking and other facilities has been found to handicap the carrying on of the company's business, and the granting of these facilities will be of considerable assistance in the future to the management.

The publication of the scheme was followed by a sharp fall in the prices of the company's securities on Monday, as may be seen from the following table, which compares Monday's and Tuesday's with those of last Friday and of the end of April:—

Name.	No. of Shares or Amt. of Stk. Quoted.	Middle Price End April, 1926.	Middle Price Dec. 10, 1926.	Prices.	
				Dec. 13, 1926.	Dec. 14, 1926.
Armstrong (Sir W. G.)	5,512,500	8/9	5/3	2/6—3/9	2/6—3/9
Whitworth and Co.	200,000	57/6	36/3	25/—35/—	20/—30/—
4% cum. pref. (£5)	1,000,000	9/3	6/3	2/6—5/—	2/6—3/9
5% non-cum. 2nd pref.	2,500,000	9/3	5/9	2/6—5/—	2/6—5/—
6½% non-cum. 3rd pref.	2,500,000	72½	66	55—65	52—62
4% 1st mort. deb.	£1,600,750	98	80	50—60	50—60
6½% 2nd mort. deb.	£3,300,000	94½	65½	42—52	38—48
6½% cons. mort. deb.					

The Consolidated Mortgage Debenture Stock, which was issued as recently as December, 1924, has lost over 50 per cent. of its market value since the beginning of the

coal stoppage, there having been a fall of over 20 points in the past week. The share capital is not touched upon in the present scheme "because it is considered that no useful trade purpose would be served by interfering with the share capital at the present time." Trade creditors will be satisfied in the normal way in the ordinary course of business. The necessary meetings have been called for Wednesday next, December 22nd. A letter from the Advisory Committee, recommending the adoption of the scheme, is circulated with the notices.

The directors point out that their great desire is to avoid default on any of the debenture stocks or other loan securities and the appointment of a Receiver. The concession already obtained from the company's bankers is of material advantage in this direction, and must help the company's standing from a credit point of view. The proposed scheme avoids the unsound policy of further borrowing to meet debenture interest, and the period of moratorium asked for is hardly unreasonable for a concern of such magnitude. Whether it will be sufficient, time alone can show. Much depends on how successful the company proves to be in its "deliberate aim to get rid of losing ventures on the best terms possible," and in adapting its armament plant to commercial purposes.

Notes of the Week.

The Aftermath of the Imperial Conference.—In attempting to appreciate the achievement of the Imperial Conference a few weeks ago, we suggested that its special importance—with which not only the delegates themselves, but the public in this country had become impressed as the work of the Conference proceeded—could best be measured by the difference in tone between the opening and closing speeches of General Hertzog. In this we did General Hertzog no more than justice, as the General himself has proved by the even more remarkable speeches which he has been delivering in South Africa since his return home. He has been telling his countrymen of all parties that the struggle for the complete independence of South Africa is over; that the old British Empire, which stood for the ascendancy of Great Britain over the Overseas Dominions, has ceased to exist; and that what remains is a free alliance between Great Britain and the six Dominions, "co-operating as friends and, so to speak, forming their own League of Nations." Nothing now keeps them within the Empire except their own free will, and any of them are free to leave the Empire at any moment; but, he added, that just for this reason, which removes the sentimental ground for a desire to secede, South Africa will be guided by her interests, which counsel her to remain where she is. The question of secession is postponed to an indefinite future. Still more striking is the gesture of reconciliation which he has made to his fellow-countrymen of English descent. He has told them that while he, naturally, cannot feel the same sentiment for England as they feel, yet the love and respect which he would feel for England if he was one of them would be strengthened by his pride in her as the country which, "through free institutions and a common-sense use of them," had brought the younger nations to being "as free as the Motherland and, at the same time, standing in the closest tie of affection." It would be difficult to praise too highly the manliness and statesmanship of General Hertzog's new attitude. Because he has been convinced by his own experience that the relation between South Africa and Great Britain has been transformed, he has had the courage to turn his back on his own political past and to cast into the melting-pot his political future. His speeches are reported to be producing "a political earthquake," and, for the moment, South Africans seem at a loss to know what the future alignment of political parties will be. General Hertzog will, of course, have alienated a few of the Dutch Nationalist "Die-Hards," and Mr Malan is reported to be persisting over the contentious question of the flag. Nevertheless, it now seems fairly safe to prophesy that the cleavage between the Dutch-descended and English-descended sections of the white population of South Africa will recede into the back-

ground of South African politics, and that social and economic questions will belatedly come into their own. The key question, on which all other social and economic questions in South Africa depend, is, of course, the question of colour. In grappling with this problem, South Africans will have ample opportunity to prove to the world that they have arrived at a political maturity corresponding to the status of full nationhood which they have acquired as self-governing members of the Empire. A curious contrast to General Hertzog's attitude is afforded by that of Mr Guthrie, the leader of the Conservative Party in Canada, who has criticised the resolutions of the Imperial Conference on the ground that they give the Canadian Parliament power to abolish existing constitutional safeguards which have hitherto been in the hands of the Parliament at Westminster. This somewhat captious criticism savours of party politics. We do not believe that it represents the considered opinion of Mr Guthrie's party. It assuredly does not represent that of the Canadian people as a whole.

The Civil War in China.—It looks as though we were on the verge of decisive operations in the struggle between the Nationalists and Sun Chuan-fang. Hangchow has now gone the way of Foochow, and this means that the Nationalists now command the whole of Fukien Province except the extreme north-eastern corner, where Sun Chuan-fang is collecting the forces that remain to him for a last stand at Kashing, on the Shanghai-Hangchow Railway, not more than 50 miles from Shanghai itself. It is probable that the Nationalist forces will converge upon Sun's forces from two directions simultaneously—an advance from Hangchow upon Kashing being accompanied by an advance down the Yangtse upon Nanking. Sun is reported to have informed the commander of the Shantung Expeditionary Force at Pukow, opposite Nanking, that he does not need his assistance. This may imply confidence that he can beat the Nationalists out of his own resources—and anything is always possible in the Chinese civil war, or has been so hitherto—or else it may simply mean that he would rather fight the Nationalists for the remnants of his domain, however heavy the odds against him, rather than surrender these remnants without a blow to the henchman of his rival, Chang Tso-lin. Certainly the odds are in favour of the Nationalists delivering a "knock-out blow" to Sun; and, in that event, what will be their policy towards Shanghai? Since the early days of its existence the International Concession at Shanghai has built up a tradition that its territory is neutral—both in Chinese civil wars and in wars of other kinds. The Municipal Council used jealously to prohibit the passage across their territory of Chinese troops under arms. Have they been refusing passage lately to the troops of General Sun Chuan-fang? Unless they have, it will be difficult for them to ward off the Nationalists, if these arrive at the border of the territory as victors. It is to be hoped that, before such a situation can arise, Mr. Lampson will have come to a satisfactory understanding with the representatives of the Nationalist Government.

Britain's Industrial Situation—Lord Weir's View.—A valuable contribution to current discussion of some of the more disquieting features of Great Britain's industrial situation was made by Lord Weir in the House of Lords last Tuesday. Taking as his text the events of the last few months, and the many outward and visible signs that mutual distrust and lack of confidence between the various partners in British industry are redounding to disadvantage of all concerned, Lord Weir made an eloquent plea that there should be "brought together in one council chamber a few men capable of concentrating on the industrial necessities of the time, apart entirely from political considerations—men of good intent, not coming as delegating organisations, but coming together as practical men to seek a solution of practical questions." One may venture to hope that those whose goodwill can do much to influence our industrial destiny during the coming crucial months will give the most earnest consideration to Lord Weir's suggestion. His preliminary picture may possibly be painted in unduly sombre colours; indeed, ex-

tant statistical evidence does not bear out his Lordship in all cases. His comparison between pre-war and post-war unemployment, for instance, is misleading, being based as to the earlier period on returns rendered to the Ministry of Labour by certain trade unions (in which the "heavy" trades and skilled workers generally were much more adequately represented than were other trades and unskilled workers), and as to the later period on the far more extensive figures obtained from weekly censuses under the Unemployment Insurance Acts. If the trade union figures are taken for the post-war period, the minimum percentage will be found to be 7.0 per cent. (in May, 1924), and not 10 per cent., as Lord Weir stated. The present total of 2,500,000 men, women, and children in receipt of Poor Law relief is admittedly abnormal, and will be substantially reduced as work is resumed in the mining areas and in other industries, particularly iron and steel, which were gravely affected by the coal strike. We venture, however, to join issue with Lord Weir, mainly as regards his statement that "the total productivity of the country, measured by any available test, is from 12 to 20 per cent. less than it was twelve years ago." This is probably true as regards the seven months of the coal dispute, but the context of Lord Weir's speech makes it clear that he was referring to conditions before that event. The exact ratio between productivity before and since the war is unascertainable, since the last census of production of which the results are available at the moment was taken as far back as 1907. But, as our readers are aware, we have from time to time endeavoured to make a broad comparison, in the light of a few leading indices, between the volume of pre-war and post-war British production, and are inclined to put the figure for 1925 at not very far below 100 per cent. of that of 1913. These slight defects do not, of course, invalidate an otherwise admirable case. If events prove that Lord Weir was speaking for employers generally, and his suggestion meets with a similarly frank response from representatives on the workers' side, a definite step will have been taken in the direction of improved relations in industry.

Overseas Trade in November.—On the whole the November trade returns are not so bad as might have been expected. Total exports are only £10½ millions less than in November, 1925, the decline in the previous month having been nearly £17 millions, and as imports fell by over £1 million, the excess of merchandise imports was only £9 millions greater than in November, 1925, or, in other words, November contributed far less than the preceding months to the increase in the visible adverse balance. A summary follows of the value figures of imports and exports for November and the eleven months of this year and last:—

MONTH OF NOVEMBER.					
	1925.	1926.	Increase (+) or Decrease (—) in November, 1926.		
	£	£	£	%	
Imports	114,595,037	113,293,397	— 1,301,640	— 1.1	
British exports	60,977,357	53,063,647	— 7,913,710	— 13.0	
Re-exports	13,538,265	11,001,326	— 2,536,939	— 18.7	
Total exports	74,515,622	64,064,973	— 10,450,649	— 14.0	
Excess of imports over total exports.	40,079,415	49,228,424	+ 9,149,009	+ 22.8	

ELEVEN MONTHS ENDED NOVEMBER.					
	1925.	1926.	Increase (+) or Decrease (—) in 1926.		
	£	£	£	%	
Imports	1,188,592,012	1,129,573,049	— 59,018,963	— 5.0	
British exports	707,317,749	602,185,110	— 105,132,639	— 14.9	
Re-exports	139,766,500	116,064,548	— 23,701,952	— 18.4	
Total exports	847,084,249	718,249,658	— 128,834,591	— 15.4	
Excess of imports over total exports.	341,507,763	411,323,394	+ 69,815,631	+ 20.0	

If we assume that the import excess for December is £54 millions, which was the figure for December, 1925, we get an estimated merchandise import excess of £467 millions for the whole year 1926, as compared with £393 millions for 1925. Last month's imports would have shown a substantial fall except for the coal dispute, which

compelled to country to import over £9 millions worth of coal, as compared with a negligible quantity a year ago; while on the export side our shipments of coal fell from £4 millions a year ago to a mere bagatelle last month, and iron and steel exports were £1½ millions down. The degree of disturbance caused by the coal dispute in the British export trade is illustrated in the following table, which shows the quantity figures for certain leading exports in the first four months of the year, before the dispute began, and in the succeeding seven months in comparison with the corresponding periods of 1925:—

	January to April.		May to November.	
	1925.	1926.	1925.	1926.
Coal	17,462,134	17,481,236	28,772,933	1,506,566
Cotton piece goods	1,575,121,000	1,407,533,100	2,476,439,600	2,187,139,000
Cotton yarn	65,339,500	62,884,000	105,245,500	90,637,800
Woolen tissues	47,466,100	40,861,900	75,761,500	69,877,800
Worsted tissues	18,822,800	15,940,200	23,705,200	24,323,300
Machinery	167,257	167,840	200,865	270,012
Motor cars	6,387	6,030	10,827	8,359
Iron and steel (total)	1,233,673	1,395,730	2,156,279	1,433,275
Pig-iron	162,436	176,680	264,521	97,369
Ferro alloys	46,905	15,923	58,211	18,076
Railway material	127,818	164,520	253,476	135,653

Machinery and worsted tissues alone show an increase for the seven months of the dispute, and in most of the other items the declines are formidable. In the seven months, May to November, imports of coal were valued at £37.2 millions, compared with a mere £11,594 in the same seven months of 1925; while coal exports for the same period at £825,412, compared with £15½ millions. Thus coal alone accounts for a swing over of £52 millions in the trade balance. Bullion and specie imports for the 11 months are £45 millions, against £33 millions exported. In the corresponding period of last year bullion and specie exports were £56½ millions and imports £45 millions. So far this year the United States has taken no gold from us, against £10 millions one year ago and £30 millions two years ago. Details of value figures of imports and exports under a number of categories are given on a later page of this issue.

Isle of Man and Channel Islands Taxation.—Mr Churchill has just announced in Parliament that he has accepted the offer of a lump sum of £500,000 from the Isle of Man as a contribution to the costs of the war, and this is in addition to the £260,000 already received, making £760,000 in all. This statement will be received with mingled feelings. The Committee of the Privy Council, under the chairmanship of the Duke of Atholl, which investigated this problem in the autumn of last year, pointed out the Isle of Man now makes a perpetual contribution of £10,000 per annum to the British Exchequer under the provisions of the Act of 1866, dealing with customs and renewable annually by the British Parliament. They argued that whether this payment was fixed with regard to the then existing yield of the insular Customs duties or in the light of the cost to the Exchequer of Imperial services, there could be no doubt that it was now disproportionately small. The Committee recommended that Parliament should be asked to amend the Act by increasing the permanent contribution of the island to £50,000, which appeared to them to be the smallest permanent contribution to the Exchequer which, in existing circumstances, the Isle of Man could properly make. It was also recommended that the additional payment of £50,000 necessary to make up a total contribution of £100,000 should be made for a period of 50 years; and that it should include the annual payment of £20,000 which the island now makes. The Committee added that their proposals involved for a limited period an additional payment of £70,000 to the British Exchequer, a sum which they were satisfied the Manx Government could raise without any difficulty, and which was only a fraction of the revenue derived in the island from persons resident in the United Kingdom. The permanent increase in the contribution would, under the Committee's recommendations, be £40,000 per annum—as distinct from the special and additional payment of £50,000 for 50 years. Stating it in terms of taxation at that time, the Committee remarked that their proposal involved the imposition for a limited period in respect of

Imperial or war burdens amounting to £2 per head in the Isle of Man; persons resident in the United Kingdom were then taxed to the extent of £11 10s per head in respect of Imperial and war services as a whole, of which £8 represented the war burden only. The Committee recommended that the Imperial contribution of Guernsey should be £75,000 per annum, payable for a period of a hundred years; and that Jersey should pay £120,000 annually for the same period. Agreement has not been reached with the Channel Islands, which have protested that the sums suggested are much too large. In all the argument constitutional issues have been carefully avoided, the sole aim being to get appropriate contribution towards the service of war burdens; and in that connection it is feared that the bargain which has been struck with the Isle of Man, which is very much less than what was recommended by the Privy Council Committee, may influence the agreement ultimately concluded with the Channel Islands.

Conditions in Northern Ireland.—Our Belfast correspondent writes:—The total gross tonnage launched from the Belfast shipbuilding yards during 1926 has been 92,525, as against 57,899 in 1925. The figures represent the combined output of the two firms, Harland and Wolff and Workman, Clark and Co., which have shipyards on the Lagan. The figures for the former firm's Belfast yards are 65,765 tons, while the tonnage launched from the yards of Messrs Workman and Clark was 26,760. Owing to the effect of the coal strike in stopping the delivery of steel material, it is stated that building was delayed, otherwise the output would have been greater. The Harland and Wolff firm has recently received some important orders, and a period of active construction is expected in 1927. Workman and Clark have six vessels under construction at present. Particulars regarding the yields of crops in Northern Ireland are not yet available, but in most cases it is believed that yields have been good. At a time when the potato crop in Great Britain and on the Continent has turned out poorly the production in Northern Ireland is expected to be above average. In a normal year approximately 140 to 150 thousand tons of potatoes are exported from Ulster ports to Great Britain, principally to Lancashire and South Wales. Up to the present the prices obtained this season have not been as remunerative to farmers as the shortage of the crop in Great Britain led agriculturists to expect, but with the settlement of the mining dispute it is hoped that prices will improve. Fair supplies of flax are reported to have been marketed, but there is no marked change in the linen trade.

Cotton Trade Short Time.—Our Manchester correspondent, telegraphing yesterday afternoon, says:—The Master Cotton Spinners' Federation reached an important decision to-day. Owing to the unsatisfactory way in which short time is being observed, it was decided to withdraw all restrictions upon working hours in the spinning mills using American cotton. A fortnight ago the hours were increased from 24 to 35 per week. This decision reflects an important change of policy on the part of the Federation. During the depression of the last few years the Federation has urged that output must be curtailed on an organised scale. Their attitude has now been altered, and in future individual firms will have to make their own arrangements as to production, and work out their own salvation.

Employment in November.—Employment during November remained bad, though some general improvement took place during the latter part of the month. According to the *Ministry of Labour Gazette*, among the 12 million workpeople insured under the Unemployment Insurance Acts in Great Britain and Northern Ireland, the percentage unemployed at November 22nd was 13.5,* as compared with 13.6* at the end of October, and 11.0 a year ago. The total number of registered unemployed at the end of November was approximately 1,545,000.* This compares with 1,610,000* a month ago, and 1,227,000 at November 30, 1925. Among the members

of trade unions the percentage unemployed at the end of November was 13.2,* against 13.6 at the end of October, and 11.0 a year ago. The following table gives the monthly movements in trade union figures for some years past:—

TRADE UNION UNEMPLOYMENT PERCENTAGES.								
	1913.	1920.	1921.	1922.	1923.	1924.	1925.	1926.
End of—	%	%	%	%	%	%	%	%
January ..	2.2	2.9	6.9	16.8	13.7	8.9	9.0	10.6
February ..	2.0	1.6	8.5	16.3	13.1	8.1	9.4	10.4
March	1.9	1.1	10.0	16.3	12.3	7.8	9.0	10.1
April	1.7	0.9	17.6*	17.0	11.3	7.5	9.4	10.0
May	1.9	1.1	22.2*	16.4	11.3	7.0	10.1	13.2*
June	1.9	1.2	23.1*	15.7	11.1	7.2	12.3	12.9*
July	1.9	1.4	16.7	14.6	11.1	7.4	11.2	13.2*
August	2.0	1.6	16.3	14.4	11.4	7.9	11.4	13.3*
September ..	2.3	2.2	14.8	14.6	11.3	8.6	11.4	13.6*
October	2.2	5.3*	15.6	14.0	10.9	8.7	11.3	13.6*
November ..	2.0	3.7	15.9	14.2	10.5	8.6	11.0	13.2*
December ..	2.6	6.0	16.5	14.0	9.7	9.2	11.0	..

* Excluding workpeople in the coal-mining industry who were disqualified for unemployment benefit owing to the dispute.

Employment was still seriously affected by the coal dispute, this being particularly the case in the mining, iron and steel, tinplate, heavy engineering and shipbuilding industries. There was also a further seasonal decline in the building trades.

Cost of Living.—There was little change in the cost of living during November, as compared with the previous month. The index number of the Ministry of Labour remained at 79 per cent. above the level of July, 1914. This compares with 77 per cent. at December 1, 1925. The following table shows the monthly movement of the index figure over a number of years:—

AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.—All items. (Food, Rent, Clothing, Fuel, and Light, &c.)								
1st Day of	1918.	1920.	1921.	1922.	1923.	1924.	1925.	1926.
Jan.	% 85.90	% 125	% 165	% 92	% 78	% 77	% 80	% 75
Feb.	90	130	151	88	77	79	79	73
March ..	90	130	141	86	76	78	79	72
April ..	90.95	132	133	82	74	73	75	68
May ..	95.100	141	128	81	70	71	73	67
June ..	100	150	119	80	69	69	72	68
July ..	100.105	152	119	84	69	70	73	70
Aug.	110	155	122	81	71	71	73	70
Sept.	110	161	120	79	73	72	74	72
Oct.	115.120	164	110	78	75	76	76	74
Nov.	120.125	176	103	80	75	80	76	79
Dec.	120	169	99	80	77	81	77	79

For food alone the index was also stationary at 69 per cent., as compared with 74 per cent. a year ago.

Iron and Steel Production and Exports.—The iron and steel production figures for November just published by the National Federation of Iron and Steel Manufacturers will prove, it may be hoped, the lowest for many years to come. The pig-iron output amounted to 12,700 tons, compared with 539,100 tons in April and 494,100 tons in November, 1925, and the steel output to 97,500 tons, compared with 661,000 tons in April and 653,800 tons in November, 1925. Two extra furnaces were blown in within the last few days of the month, making with the five which had remained in operation throughout the coal stoppage, a total of seven in operation at the end of the month. A few blast furnaces have resumed operations since the end of November, but the restarting of coke ovens and blast furnaces, especially after so long a period of inactivity, is a lengthy process, and many plants are not likely to be in full operation before the middle or end of January. Imports of iron and steel reached the high total of 422,700 tons, of which 75,500 tons were pig-iron, 75,700 tons billets, blooms and slabs, and 91,300 tons sheet and tinplate bars. The importation of semi-finished material has enabled the exports of iron and steel to attain an average of 171,100 tons in the last few months, the figure for November amounting to 166,400 tons, compared with 322,200 tons in November last year. Of the exports, 47,900 tons were galvanized sheets, 20,200 tons tinplates and sheets, and 15,200 tons wrought tubes,

pipes and fittings. Exports of galvanized sheets have been maintained to a remarkable extent, and since the commencement of the coal stoppage the average exports have been 75 per cent. of the pre-strike average. The recent issue of that part of the Annual Statement of Trade and Navigation of the United Kingdom for 1925 dealing with the destination of exports enables the exports of iron and steel in 1925 to be completely allocated to markets, and the following table compares these exports to the chief markets in 1925 with those in 1923 and 1924:—

EXPORTS OF IRON AND STEEL FROM THE UNITED KINGDOM,
1923, 1924, and 1925.

(In Thousands of Tons.)			
	1923.	1924.	1925.
Germany	312.2 ..	87.6 ..	76.1
Netherlands	97.4 ..	76.4 ..	101.7
Belgium	163.1 ..	165.5 ..	112.2
France	138.7 ..	123.1 ..	73.0
Italy	89.1 ..	92.9 ..	105.6
China	72.1 ..	63.5 ..	49.5
Japan	299.6 ..	238.1 ..	134.8
Argentina	173.8 ..	228.9 ..	272.4
U.S.A.	319.7 ..	135.2 ..	164.4
Total (includg. other foreign countries)	2,360.5 ..	1,923.5 ..	1,747.4
India and Ceylon	672.4 ..	595.7 ..	632.7
South Africa	184.3 ..	203.5 ..	217.5
Canada	120.9 ..	114.9 ..	102.1
Australia	488.1 ..	451.2 ..	432.4
New Zealand	132.9 ..	136.3 ..	152.7
Total (includg. other British possessions)	1,957.0 ..	1,927.9 ..	1,984.0
Total exported to all countries	4,317.5 ..	3,851.4 ..	3,731.4

In spite of a decline in the total volume of exports, the exports to countries within the British Empire show an increase, and now represent 53 per cent. of the total exports, compared with 50 per cent. in 1924 and 45.5 per cent. in 1923.

The Tin Position.—A correspondent writes:—As compared with the highest figures reached near the end of last month at £321 for cash and £304 for forward metal, the present price of tin is well down on balance, but prospects are nevertheless regarded more optimistically. The main reason for this is that the uncertainty and fears which existed a few weeks ago as to a contraction of the American outlet have been largely dissipated by the more encouraging reports as to American trade generally. The tinplate mills there are running again practically at a record rate, and the output for this year is expected to overlap all previous records. There is no doubt that America is disposed to make adequate provision for her heavy needs over the earlier part of next year, while particularly heavy buying of Straits tin was effected this week for shipment. There is, of course, now room for a recovery in the home outlet, since normal working conditions in the Welsh tinplate industry should be restored in the near future. When the price of the Welsh product becomes sufficiently attractive, and when more reliance can be placed on deliveries, there is no doubt that a much more active demand will come forward. For the moment the mills are still finding considerable difficulty in securing steel bars, but this should be remedied next month. The outlook as regards tin consumption is regarded as encouraging, although the price is admittedly high.

Imperial Chemical Industries, Limited.—Shareholders in the four companies concerned—Brunner, Mond and Co., Limited, Nobel Industries, Limited, United Alkali Company, Limited, and British Dyestuffs Corporation, Limited—have this week received circulars from their respective chairmen setting forth the offer to exchange their holdings into shares of the new Imperial Chemical Industries, Limited (the terms of which were set out in our issue of November 6th), and recommending acceptance. The boards of the four companies are unanimous in this recommendation, and say that: "We have no hesitation in asking our shareholders to follow the examples of ourselves and our boards, and to exchange their shares in the companies in which they are now interested for the shares in Imperial Chemical Industries, Limited. We feel confident that such an exchange will be beneficial to

them, that they will secure, from the wide scope of the new company's operations, an effective insurance against the results of fluctuations of prices or trade to which every individual company is subject, and that they will thereby be enabled to participate in the growing trade of the chemical industry and in the potential profits of its future developments." The estimate of the future income of the new company, if all the shares are exchanged, is in excess of £4 millions, a sum sufficient to cover the 7 per cent. preference dividend more than three and a-half times and to leave available for dividend on the remaining capital a sum of approximately £2,865,000. Assuming conversion of all the shares, the new company will have a paid-up capital of £56,802,996, of which £31,095,555 will be in ordinary £1 shares and £9,488,135 in deferred shares of 10s, the latter being entitled to one-third of the surplus profits after paying 7 per cent. on the ordinary shares, and the ordinary shares to two-thirds. The deferred shares have been created as a capitalisation of part of the estimated increase in future profits. A dividend of 7 per cent. on the ordinary shares would require £2,176,700, so that according to the estimate of profits there will be a substantial prospective surplus available for division between the ordinary and deferred shares. The exchange of shares will take place as at January 1st next, and shareholders in the separate undertakings will be entitled to any further dividends declared by them for the period ending on that date. In return for signed transfers, together with share certificates in the constituent companies, shareholders will receive allotment letters for the new shares, which will be negotiable in the ordinary way. In their circulars the directors of the four concerns point out to their respective shareholders that, quite apart from the obvious benefits to be derived from improved economic working and the pooling of financial, manufacturing, and technical resources, one of the advantages of an exchange is that there must inevitably be a much wider market for the shares in Imperial Chemical Industries, Limited, than exist at present for the shares of the participating companies. On the other hand, the market for the shares which are not exchanged must tend to become substantially restricted.

British-American Tobacco.—It falls to the lot of few companies to be able to record such a measure of progress as that achieved by the British-American Tobacco Company, Limited. The profits have risen continuously since 1921. The past year was a particularly prosperous one, the profits rising by more than £1,000,000 to £6,195,817, in addition to which there was a windfall of £755,299 on account of adjustment in respect of excess profits duty and United States taxation. The ordinary dividend has been reduced from 27½ per cent. to 25 per cent. This, however, does not mean a lowering of the return to the proprietors, as they are given this time, in addition to the dividend, a bonus of one new share for every four held. The following table affords a comparison of recent results:—

Sept. 30.	1914.	1920.	1921.	1922.	1923.	1924.	1925.	1926.
Profits, &c.	£ 2,177,022	£ 4,879,177	£ 4,323,481	£ 4,400,784	£ 4,494,972	£ 4,866,266	£ 5,145,238	£ 6,195,817

B'ght for'd	1,973,902	727,778	1,634,200	1,889,877	3,276,952	3,531,770	3,914,116	4,054,361
Carr'd for'd	930,319	1,636,463	1,890,188	3,276,952	3,531,770	3,914,116	4,346,576	2,068,452

* After deducting £4,047,514 in respect of capitalised bonus of one in four.

The accounts, which are made up to September 30th last, show that loans to, and current accounts with, associated companies have increased during the year from £5,913,374 to £8,589,445, while the holding of British Government securities is now £49,460, against £29,426, and investments in associated companies figure for £16,919,375, compared with £16,155,231. Stocks, on the other hand, have declined, the total of £5,023,031 comparing with £5,725,515 a year ago, while the cash item is lower by nearly £750,000. Against this, however, a substantial increase occurred under the heading

of sundry debtors, the aggregate of which is £5,199,836, against £1,876,550. The rise is largely accounted for by the raising of the amount of short-term deposits from £1,250,000 to £4,250,000.

Samuel Allsopp.—Like a number of kindred undertakings, the Burton-on-Trent brewing undertaking of Samuel Allsopp and Sons, Limited, was able to maintain its position during the past year, in spite of the continuance of widespread unemployment and the reduced purchasing power of the public. The accounts now presented cover the 12 months to September 30th last, and show that, while trading profit declined from £220,366 to £208,572, an increase in the amount received in interest and dividends raised the total profit to £280,670, against £281,961. The net profit, as will be seen from the following table, amounts to £103,789, compared with £102,008:—

	1914-15.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.	1925-26.

The participating preference shares receive a total distribution of 7½ per cent., and £1,709 is carried forward to their credit, while £801 is carried forward to the credit of ordinary shareholders. A dividend of 4 per cent. on the funded income certificates absorbs £541, and £1,846 is transferred to a sinking fund for their redemption. According to the balance-sheet, trade and other investments have gone up from £609,796 to £630,661, but the holding of 3½ per cent. Conversion Loan, taken at cost, has been reduced from £29,136 to £17,099. The cash item, also, is lower by about £8,000 at £143,811, while stocks have fallen from £279,919 to £252,705. The value of the breweries at Burton has declined from £540,033 to £530,093, but interests in freehold, leasehold, and other properties, &c., are £1,254,900, in contrast with £1,211,807. The financial position, as disclosed in the accounts, is fairly satisfactory, though goodwill still figures for £700,000. This is practically equivalent to seven years' net profits, and is more than double the amount of ordinary capital outstanding.

Oroville Dredging.—The shareholders in this company must heartily regret the action of the board in seeking fresh interests with a view to replacing the Nechi dredging subsidiary when the end of that enterprise came in sight. Not only has the company made large advances to the Colombian Corporation (which it formed), but it also took over from that concern a concession for the construction and operation of a road. The idea was that this road, besides facilitating transport to and from the property of the Colombian Corporation, would bring in a revenue in the shape of tolls. Failure has to be reported under both headings. The Constancia mine, having proved disappointing in all respects, has been shut down, and for some time past the directors have been endeavouring to get rid of the concession—also without success. Upon this undertaking nearly £160,000 has been expended, besides advances to the Colombian Corporation to the tune of £75,000. The case is one in which there has been mismanagement as well as misfortune; and it would not be surprising if criticism were heard at the meeting next Wednesday. During the year ended September 30th dividends totalling £102,000 were received from the company's holding in the Pato Dredging and other interests. After deduction of expenses—including a deficit of £12,950 on the operation of the road and £7,000 on the steamer—a balance of £61,000 remained. Of this £5,100 was absorbed by discount and stamp duty on one-year notes issued £5,400 loss resulted from the sale of an investment, and £27,000 from the sale of the steamer and barges. These items, however,

were more than offset by income-tax recoverable, leaving a net balance of £69,000, which increased the profit and less credit to £205,700. Against this book balance, however, the balance-sheet shows a cash deficit of £46,000, including loans from the bank and from the Pato Mines. The latter continues to make satisfactory returns; but, obviously no distribution to Oroville shareholders can be made while the balance-sheet is burdened with the losses above detailed. To clear the decks, it is proposed to write down the issued capital by four-fifths—i.e., reducing the £1 share to 4s. This scheme has been favourably received by the Stock Exchange, and will doubtless be approved by the shareholders. The last distribution was 3½ per cent. in December, 1923.

Sulphide Corporation.—Some months ago the expectation was entertained that for the year ended June 30th this company would be able to disburse 15 per cent. upon both classes of shares, the same as paid in respect of 1922-23—the year before the fire. The accounts now to hand indicate that the earnings in themselves would easily have provided the amount named; but they have been drawn upon to the extent of £83,000, "to cover the cost of water-powering and reopening operations at the Central mine." Moreover, £60,000 is added to the reserve for contingencies; thus only 10 per cent. can be disbursed. In respect of 1924-25, £60,000 was written off capital expenditure, and £32,500 off fire expenditure, the balance of £92,900 having been charged against reserve for contingencies. Upon the preference shares 7½ per cent. was paid; for the preceding year neither class of share received anything. As the reopening of the southern section of the Central mine is now proceeding—the reopening of the northern section was completed during the first half of 1925-26—increased supplies of ore are being obtained; progress is also reported in respect of other branches of the company's activities. It would therefore seem that better results may be expected during the current year. On the 1925-26 distributions the 15s ordinary shares, at 20s, yield about 8 per cent., while the £1 preference shares, at 25s., yield 8½ per cent. The latter are non-cumulative; after the ordinary have also received 10 per cent., both classes of shares rank alike for surplus profits.

Messina (Transvaal).—Last year's results benefited both from increased revenue and reduced expenditure. The reason for the former does not transpire. At 198,600 tons, the ore production shows an expansion of 20,300 tons, but, owing to the lower average contents, the copper produced amounted to 5,593 tons, in place of 5,640 tons. Probably the explanation is that the realisations do not correspond with the output. Mining and treatment costs are relatively lower than before, a saving of as much as 20 per cent. having been effected in the charges for smelting and converting. Thus the working surplus figures at £93,600 in place of £62,300. In 1924-25 debenture interest absorbed £6,900, and £35,600 was required for redemption. The issue having been reduced by purchase during the past session, and the balance paid off on June 30th out of the proceeds of an issue of shares, the amount needed for interest is less than before, and the appropriation in connection with redemption consists in £4,200 for premiums. Thus the company is able to pay dividends totalling 30 per cent., in place of 20 per cent., leaving £12,200 to go forward, as against a trifling sum brought in. On this dividend basis the shares yield nearly 13½ per cent. The outstanding features of the year's developments consisted in the extension of the stope areas in the Harper mine and the intersection at lower levels of the two principal ore bodies in the Messina mine. As a whole, however, the values disclosed showed an appreciable decline. Consequently, the ore reserves at 648,700 tons indicate an expansion of 20,600 tons, but the value of 3.15 per cent. copper compares with 3.18 per cent.

Southern Rhodesia Base Metals.—At the close of last week the £1 shares of this undertaking were sharply advanced to £6 7s 6d on it becoming known that a report—understood to be of highly favourable character—was

in process of issue. The document in question proved to be a statement by Mr P. K. Horner, consulting engineer to the general managers, and to have been compiled in connection with a new offer of shares at £4 each. 'Week-end reflection exerted a damping effect upon the enthusiasts; the price of the shares opened on Monday at about £6, and is now no better than £5 12s 6d. In point of fact, Mr Horner's report contains little that is new and much that is vague. Definite high assays are advised on one property at the bottom of No. 1 shaft (125 feet depth) and in a cross-cut at 100 feet. But in the main the report is of a very indefinite character. One reads that "there is no doubt that something like 19,000,000 tons of crude ore exists in these groups." "On the assumption that the actual outcrops are an indication of the importance of the ore bodies in depth." And so on. Without question, the possibilities in connection with the 65 ore bodies so far proved to exist are very considerable. Nevertheless, much money will have to be poured out and much time pass before the discoveries become translated into dividends.

Transvaal Gold Output.—The output of gold of the mines of the Transvaal during the month of November amounted to 840,276 ounces of fine gold, as compared with 853,296 ounces produced in October. The output during the month of November, 1925, amounted to 787,633 ounces. The following table shows the monthly output for the past seven years:—

	1920.	1921.	1922.	1923.	1924.	1925.	1926.
January..	670,503	651,593	639,728	764,469	796,768	823,692	796,270
February..	625,330	558,137	639,728	704,970	760,617	753,925	753,924
March ..	707,036	671,123	639,728	761,586	795,671	825,479	834,340
April	686,979	681,382	639,728	743,651	768,582	787,519	803,303
May	699,041	687,776	639,728	786,564	809,063	813,249	849,214
June	715,957	678,490	639,728	755,309	773,053	780,251	852,145
July	736,099	689,555	639,728	754,306	829,437	818,202	860,134
August ..	702,083	711,526	639,728	752,490	809,571	808,218	843,854
September	682,173	691,026	639,728	739,505	799,422	797,247	839,939
October ..	662,472	707,825	639,728	778,159	827,583	812,832	853,896
November	633,737	704,236	639,728	780,639	802,313	787,633	840,276
11 months	7,521,410	7,432,669	6,223,398	8,354,211	8,782,361	8,808,247	9,126,695
December	632,215	681,847	790,712	778,849	825,273	791,455	..
Total	8,153,625	8,114,516	7,020,110	9,133,060	9,597,634	9,599,702	..

It will be noted that totals for the eleven months show that the output of gold has expanded year by year since 1923. The following table shows the number of natives employed at the end of the last few months by members of the Witwatersrand Native Labour Association and Contractors:—

	Dec., 1925.	May, 1926.	June, 1926.	July, 1926.	Aug., 1926.	Sept., 1926.	Oct., 1926.	Nov., 1926.
Gold mines	166,385	183,905	183,092	182,262	184,032	185,063	181,513	177,544
Coal mines	16,606	16,246	16,448	16,648	16,827	16,762	16,737	16,813
Diamond mines ..	3,705	5,766	6,054	6,099	5,818	5,500	5,274	4,971
Total	186,696	205,917	205,594	205,009	206,677	207,325	203,524	199,328

The number of natives employed at the gold and diamond mines continues to decline.

At a meeting of the Royal Statistical Society in the Hall of the Royal Society of Arts, John street, Adelphi, W.C. 2, at 5.15 p.m., on the 21st inst., Mr H. W. Macrosty, O.B.E., will read a paper on "Inflation and Deflation in the United States and the United Kingdom, 1919-23."

Oversea Correspondence.

LEAGUE OF NATIONS.—GERMAN DISARMAMENT—ECONOMIC CONFERENCE—DANZIG, ESTHONIA, AND BULGARIAN LOANS—SECURITY—MANDATES.

(FROM OUR CORRESPONDENT.)

GENEVA, December 14.

GOOD business was done in Geneva last week. Whatever may be said in criticism either of details or of broad principles, a big step forward was made, and it must be agreed that the Foreign Ministers of the three chief

Locarno Powers have shown a genuine determination to pursue the policy described by Sir Austen Chamberlain as marking a change from war mentality to peace mentality. Dr Stresemann and M. Briand (especially) had clear risks to face at home, and at the most delicate period of the negotiations there were whispers of a repetition by M. Poincaré of the Cannes coup against M. Briand; but the French Foreign Minister won through, and secured the approval at home of an agreement acceptable to all parties. Who would have expected that M. Poincaré would have lived to permit interpretations of the Versailles Treaty to be referred, if need be, to the League? It is also a fact which would have been difficult to believe several years ago that a Poincaré Government would, after several years' controversy, ultimately admit that its scheme for a special permanent régime in the demilitarised Rhineland zone had no warrant in the terms of the Treaty.

Perhaps it is not recognised as it should be in England that industrial interests in Great Britain are credited with pressing the second of the two outstanding points—namely, the exportation of certain semi-manufactured war material. It is asserted not only in Germany, but elsewhere, that this has little relation to armaments control, but is rather a matter of maintaining industrial advantages. There has been remarkable silence on the side of British authorities in this respect, and this has turned suspicion, rightly or wrongly, into a widespread belief. Anyhow, the road has been cleared, and one further stage in the return to normal relations with Germany has been achieved.

The League Council itself did a useful week's work, much of which related to financial and economic questions. It definitely decided that the International Economic Conference should take place on May 4th next at Geneva under the presidency of M. Theunis, former Belgian Prime Minister. Invitations are to be addressed to States members of the League and to the United States of America, Russia, Turkey, Mexico, Ecuador, and Egypt. The Council authorised the issue by the Free City of Danzig of an international loan under the auspices of the League, subject to verification by the Financial Committee of the execution of certain measures required by the Committee. It is anticipated that the loan will be issued before the next session of the Council. It amounts to £1,200,000, including provision for the payment of Peace Treaty charges.

The Council approved also the issue by the Estonian Government, under the auspices of the League, of a loan of £1,350,000 for the establishment of the currency on a gold or exchange basis, relieving the Estonian Bank of certain assets unsuitable for a bank of issue and founding a mortgage institute. The conditions of the loan, issue price, rate of interest, amortisation, &c., are to be submitted for approval to a person appointed by the Financial Committee, who is also to approve the amount of the annuity necessary for the service of interest and amortisation of the loan. Securities for the loan are excise duties on tobacco, beer, matches, and other minor articles. The Council of the League is to appoint a trustee of the loan, and there is to be an adviser to the bank of issue nominated by the League Council. A protocol containing all conditions has been signed by the Estonian Finance Minister.

Some practical points of a more or less political kind were settled in connection with the Bulgarian refugee settlement scheme. Various measures have already been taken to get the scheme going, and the Bulgarian Government has been negotiating the loan, which amounts to £1,250,000 net. A great part of the necessary legislation has been voted by the Bulgarian Government or is now being discussed by it.

The Council decided to set up a special committee to prepare a preliminary draft convention for the suppression of the counterfeiting of currency on which information has been sent to the Financial Committee by about twenty banks of issue. The Committee is to be composed of experts in international criminal law from Great Britain, Belgium, Italy and Roumania, prosecution authorities appointed by the American, Austrian and Netherlands Governments, delegates from banks of issue in France, Germany, Sweden and Argentine, and the chairman of the Financial Committee.

The Council took various decisions bearing on security

and reduction of armaments. An effort is being made to meet the case of those States who say that what they can do by way of reduction depends upon what they can expect by way of assistance under Article 16 (penalties), and in this connection studies are being made into means of quickening the procedure of summoning the Council, &c. (which is related more to Article 11 than to Article 16), and of carrying out the obligations of Article 16. One of the interesting tendencies of recent discussions has been to emphasise the preventive side of Article 11 as against the penal side of Article 16; the League's task is primarily to prevent war, and all tightening up of machinery in this respect is to be welcomed. Some of the lessons of the Greco-Bulgarian conflict are being made use of, and a small committee, including Lord Cecil, is to prepare an exposé on measures which might be followed under Article 11.

The Council sent the replies of the Mandatory Powers on the proposed new questionnaire back to the Mandates Commission, asking it to re-examine the list of questions. The only reply which showed a proper appreciation of the Commission's duties was the one sent by Belgium.

UNITED STATES.—BOND MARKET—INDUSTRIAL CONDITIONS—NEW CONGRESS AND THE PRESIDENT'S MESSAGE.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 7.

DESPITE some flurry in call money, and a slight firming in the market for time money, the security markets have maintained a steady undertone. With the Standard Oil Company of New Jersey's new 5 per cent. debentures selling at a premium of better than two points over the issue price of 100½, considerable attention was attracted by the offering of \$50,000,000 debentures of the Standard Oil Company of New York on a basis to yield about 4.65 per cent. The low yield basis on which these bonds were offered was considered quite a compliment to a bond market that already had impressed Wall Street with its underlying strength. Meanwhile the share market has achieved new high average levels on a moderate turnover. Professional operations, supported by the large supply of investment and bank money, seem to have played a leading part in the upswing, but the public has shown signs of taking a greater interest in this market. With brokers prosperous, and with out-of-town firms seeking representation on the Stock Exchange, new high prices have been made for Stock Exchange seats. Two recently were sold for \$170,000 apiece, and a transfer of one has just been arranged at \$175,000. Coincident with the increased activity in the share and bond markets, brokers' loans have expanded. During the week ended December 1st local loans of this description, as tabulated by the Federal Reserve Bank, rose to \$38,000,000. As tabulated by the Stock Exchange, the increase during the month of November amounted to \$18,000,000, the total on November 30th being \$3,129,000,000. As for the money market, the firming in time money amounts to a division of business between 4½ and 4¾ per cent., whereas 4½ covered all transactions recently. A slightly firmer tone also has been manifest in the market for bankers' acceptances. Whether this tendency will hold remains to be seen; part of the change may be a reflection of the fact that time money loaned during the last month or so may have gone as concessions because of anticipations of extreme ease after the first of the year. The time loans being made now will, of course, mature later in 1927, when money rates again may have hardened.

Industrial news continues rather good, with the steel industry still making a showing that exceeds anticipations. Despite the many prophecies of curtailment, pig-iron production during November averaged slightly higher on a daily basis than during October. Steel prices maintain a firm tone, and the basis on which the trade rests seems pretty substantial. Automobile output has been considerably curtailed, but there are signs that activity at the motor plants will pick up again during January. Railway car loadings are continuing to decline in accordance with the seasonal tendency, but in the week ended November 20th—the latest for which data are available—still ex-

ceeded 1,000,000 cars, and ran well ahead of previous records for the week in question. With the security markets good, holiday trade promises to be excellent. Continuance of stability in commodity prices is indicated by the movement of the indices of Dun and Bradstreet during November. The former declined 0.1 of 1 per cent., while the latter advanced 0.3 of 1 per cent. In the previous month the two indices moved slightly in opposite directions, Dun's advancing and Bradstreet's declining.

The reconvening of Congress and the President's message are naturally coming in for attention, although Wall Street appears to be only moderately interested. The President's message is in his usual tone, and contains no surprises. He holds firmly to the doctrine of economy, although some of his advisers have been telling him that the public would like something else. He repeats his suggestion for a tax refund, expressing the belief that the surplus anticipated for the fiscal year ended June 30, 1928, is not large enough, and that sufficient experience has got to be gained with the present revenue law to make permanent tax reduction feasible. He indicates that if no reduction or refund is made the reduction in the national debt that will occur will be agreeable to him and beneficial to the nation. He holds firm on the tariff, and urges faster progress in the matter of railroad consolidations. The message does not mention the World Court. In this connection it is understood that sentiment in Congress is not at present favourably inclined toward foreign commitments, and it seems likely that the President will not attempt to force the issue. Altogether no great results are expected from this session of Congress. If the Appropriation Bills are passed most observers will be satisfied. Neither party has a real control of Congress, but the President can be relied on to veto any unsound legislation that might threaten business. And it may be repeated that what business in this country wants most from Congress is to be let alone.

Appointment of Pierre Jay, at present Federal Reserve Agent at New York, to take Joseph E. Sterrett's place as American member of the Transfer Committee, meets with universal approval here, where Mr Jay's intelligence, ability, and character are held in the highest esteem. When the change was announced Governor Strong, of the Federal Reserve Bank, issued a striking tribute to Mr Jay.

FRANCE.—BUDGET—CURRENCY PROBLEMS—PRICES AND EXPORT.

(FROM OUR CORRESPONDENT.)

PARIS, December 15.

THE Chamber, last Thursday shortly before midnight, after barely 40 hours of discussion, by 393 votes against 124, gave its approval of the Budget for 1927. The measure, which involves revenue and expenditure each surpassing the record total of 40,000 millions, was immediately sent up to the Senate, which is expected to pass it also in record time, so that both Chambers may adjourn for the Christmas recess either on Saturday or at the beginning of next week. The Upper House is proving even more expeditious in its methods than the Chamber. At yesterday's sittings alone no fewer than nine of the 18 departmental budgets of expenditure were disposed of, and there is every probability that the measure will be sent back to the Lower House on Friday, when the deputies will meet for the express purpose of considering the numerous small but useful reductions of estimated revenue and expenditure which the Revising Chamber has made. The Bill, as voted by the Chamber, provided for an estimated revenue of 40,099,161,036f, and estimated expenditure of 39,634,401,639f, thus anticipating a surplus of 464,759,397f (as compared with one of 699,616,404f arrived at by the Finance Commission of the Lower House). The Senate Finance Commission, on examining the Bill, recommended further cuts in both expenditure and revenue, the net result being to bring the estimated surplus down to a shade under 150 millions.

The most interesting portion of the report on the Budget drawn up by M. Henry Chéron, the Rapporteur of the Senate Finance Commission, is that in which he sets

forth the arrangements that have now been made to ensure the Treasury against a repetition of the difficulties with which it had to contend in 1925 and the earlier half of 1926. On July 21 last, it will be remembered, M. de Monzie, who was for a few days Finance Minister, had to inform the Chamber that he had received a letter from the Bank of France warning him that unless Parliament took immediate steps—"this very day even"—suspension of payment by the Treasury the next day would be inevitable. Socialist threats against acquired wealth had so alarmed investors that demands for repayment of National Defence Bonds that fortnight exceeded purchases by 1,500 millions. Thanks to the measures taken by the Poincaré Government since the fall of the Herriot Cabinet, the Treasury now has a margin of about 2,000 millions in the amount it can command at the bank, 3,000 millions of Defence bonds have been converted into long-term obligations, and provision has been made for the Treasury to be furnished during 1927 with 45,411,000,000f to meet liabilities that will not exceed 43,942,000,000f. The amount at the disposal of the Treasury, M. Chéron states, will be made up of 40,961,000,000f from the Budget (including outstanding revenue from this year), 4,000,000,000f from German reparation payments and 400,000,000f surplus receipts from the French railways, to be repaid to the common fund. The expenditure to be met will consist of the following items:—

	Francs.
Internal Budgetary expenditure.....	36,551,000,000
Foreign expenditure provided for in the Budget (on the basis of 150f to the £).....	2,831,000,000
Foreign commercial debts provided for in the Budget (on the same basis of 150f).....	1,542,000,000
British debt (Churchill-Péret agreement).....	300,000,000
To be reserved for eventual payments to Great Britain	450,000,000
Do do do United States	298,000,000
For advances to foreign Governments.....	240,000,000
Cost of army of occupation in Germany.....	555,000,000
Payments in cash to Crédit National.....	1,000,000,000
Extinction of six-year obligations.....	175,000,000
Total.....	43,942,000,000

The maturities of the coming year also include the reimbursement of 1,395,000,000f of 6 per cent. Crédit National Bonds, 1922, due for repayment on February 1st, whose holders had given notice of their decision not to renew, and of the issue of 4,387,000,000f of Crédit National Bonds, which fall due on September 25th. The maturity of February 1st has already been provided for by the successful issue of ten-year 7 per cent. bonds, and it is understood a similar method will be adopted in regard to the September maturity. Apparently the statutory annual reduction by 2,000 millions of the debt owing to the Bank by the State is not provided for in the Budget, but M. Chéron shows that no anxiety need be felt as to the ability of the Treasury to meet this obligation at the end of 1927. During the coming year the amortisation account will receive about 1,300 millions, which will be devoted to this purpose, and the Treasury will easily be able to furnish the balance of 700,000,000f out of its estimated available surplus of 1,469,000,000f.

While all real anxiety has ceased in regard to the ability of the Treasury to carry on comfortably during the coming year, the problems involved in carrying out a definite policy, either of stabilisation or of revalorisation, remain intact. It is universally recognised (except by the Socialist section) that it is useless to expect any substantial fall in production cost merely as the result of the very considerable fall that has already occurred in the cost of raw materials, and that unless wages are also brought to a lower level France will be left at an insuperable disadvantage in competitive markets abroad. The obstacle in the way of any scaling down of labour cost lies in the fact that so far, notwithstanding a drop of practically 35 per cent. since July in the index figure for wholesale prices, the cost of living is still on the up grade. Adequate up-to-date data as to the cost of living is not yet available beyond the end of September, but the index figure for retail prices in Paris at the end of November (based on 100 as representing the sale prices of 13 articles of common necessity, such as bread, meat, &c., of which only petroleum is of foreign origin) is returned at 628, as against 624 for October, 590 for September, and 574 for July last, a rise of slightly over 9 per cent. during the period in which the

wholesale index figure has fallen nearly 35 per cent. Apparently the statement made recently by M. Poincaré, to the effect that the index figures for November would show that cost of living has already begun to fall, has not been justified by the facts. M. Poincaré's statement was made to refute the argument that the claims of the French public servants to increased pay, on the ground of the rising cost of living, were justified.

The fact that retail prices are continuing to rise is of much greater importance at the present juncture than its application merely to civil servants would imply. The French industrial world is now facing a dilemma for which no solution is as yet in sight. The official index figures are now regarded as the only data upon which any reliance can be placed, and these for November, so far as wholesale prices are concerned, are as follows (based on 100 as representing wholesale prices in 1914):—

	Commodities.	End of		
		Sept.	Oct.	Nov.
General index figure.....	45	804	767	698
French native products.....	29	743	744	698
Imported commodities.....	16	912	808	700
Foodstuffs (general figure)....	20	706	695	643
Vegetable foodstuffs.....	8	801	790	687
Meat, fish, &c.....	8	554	568	570
Sugar, coffee, cocoa.....	4	846	773	714
Raw materials (general figure)..	25	889	831	747
Minerals and metals.....	7	941	855	788
Textiles.....	6	939	823	706
Various.....	12	827	822	747

The record shows that while the monthly figure representing wholesale prices of imported products has dropped 347 points since July, when the franc stood at 240 (as against 122 to-day), that for native French products has shed only 35 points. The fact that the figures for imported and native products have now been brought to within two points of each other would seem to indicate that the purchasing power of the franc at home and its exchange value abroad are now on a common level in the wholesale market. If it be accepted, as a basis, that foreign wholesale prices represent a rise of 40 per cent. in relation to gold, the French wholesale prices expressed by 698 may be taken as corresponding approximately to sterling at 125, or slightly above the recent level of the pound.

The difficulty French manufacturers have to face is that wholesale prices in this country, expressed in gold, are now higher than those of several of the European countries in whose markets they have to compete. The index figure (gold) for wholesale prices in Germany and Austria is between 120 and 130, in Belgium 130, and in Poland 100. If raw materials are to continue to cost the Frenchman more than they cost his foreign competitors, it is difficult to see how any cut in wages to levels below those obtaining abroad can provide a satisfactory solution, except at the cost of serious conflicts with labour, which would be particularly dangerous in present conditions.

The strain of the effort France is now making to right the situation is undoubtedly being severely felt by all classes. Industry of all kinds is loud in its complaints of lack of orders, and of the impossibility to keep labour fully employed. Short time is reported from many parts of the country, while appreciable percentages of workers have been temporarily dismissed in the automobile and similar industries, particularly in the Paris area. A substantial proportion of the present slackness is, of course,

usual in December, but this year, owing to the general economic situation, little hope is at present entertained of the customary revival of business in the early spring. Much naturally depends upon M. Poincaré's next steps. The Premier and Finance Minister is reported to be waiting until speculators, who have latterly been gambling on the rise in the franc, as they formerly gambled on its further fall, shall have exhausted their efforts. This development M. Poincaré believes he will be able to gauge only when the franc is found to have remained for some appreciable time at its present level, or thereabouts. When that moment has come, it is reported, an effort will be made towards definite although not final stabilisation.

GERMANY.—POLITICS—NEW LABOUR COURT—CREDIT—WAGES—INDUSTRY—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, December 15.

THE settlement of the military control question has been very well received. It may extricate the Cabinet from a difficult position. The Social-Democratic Reichstag group has declared that its recently-concluded agreement to keep in touch with the Cabinet has lapsed as a result of certain provocative speeches by the leader of the People's Party, Dr Scholz. It threatens to raise the whole question of the constitution of the Cabinet on the occasion of the third reading of the Supplementary Budget Bill; it may submit its own vote of non-confidence, and it may support a Communist vote against the Minister of Defence, Dr Gessler. Negotiations to avoid a crisis, or to delay it until after Christmas by postponing the Supplementary Budget discussion have taken place so far without success. A Cabinet resignation, perhaps a Reichstag dissolution, may result. It was hoped that Dr Stresemann, who is now back, would repudiate Dr Scholz and bring the People's Party into line. The success at Geneva is important, because a debate concerning it would to some extent obscure the domestic issue, and the Social-Democrats could hardly refuse their support in a vote on this point.

The Social-Democrats have not been propitiated by getting their way in important disputed points of the new Labour Court Bill. This Bill has been passed after controversies lasting for years. The aim of the law is to provide a homogeneous, specialised system of jurisdiction in disputes arising out of employment contracts, whether individual or collective. The first instance of the new Labour Court (from which professional lawyers are excluded) is entirely independent; the second instance is attached to the ordinary *Landgerichte*; and the third or cassation instance is an independent "Senate" of the *Reichsgericht*, on a level with civil and criminal "Senates." "Labour," in the meaning of the law, includes clerical and technical employees and apprentices, also persons who without formal employment agreements work for others, and, in certain cases, intermediaries in their relations to persons who give them work. In general, one employer and one employee sit with the judges as assessors, but two of each when collective Labour agreements are involved. Presidents of Labour Courts may be qualified persons who are not professional judges.

The money market has been somewhat easier. The return of money after the month-end Bourse settlements this time lasted longer than usual, and there was a large demand for the purpose of repaying the exceptionally big advances granted by the Reichsbank in the last week of November. Some 143 million marks of these advances remained outstanding on December 7th. Month loans were in demand and scarce. The short-term private discount rate was raised by $\frac{1}{2}$ per cent. Tenders totalling 136 million marks were made for the first issue of 100 million marks gold discount bank bills; most of the bills were sold at $4\frac{1}{2}$ or $4\frac{3}{4}$ per cent., some at $4\frac{1}{2}$ per cent. The effect of this new measure upon the money market is not yet visible. The Reichsbank's clearings increased very much in October and November, being 5,204 and 5,454 million marks respectively, against 4,650 and 4,216 million marks in the same months of 1925. The monthly average of 1913 was 6,136 million marks. The "Depot

Law" limiting the right to open and conduct banks has been prolonged until the end of 1927. The Reichstag Budget Committee has sanctioned the increase by 175 million marks of the Republic's guarantees for furthering foreign trade. This concerns three different existing kinds of export-credit insurance and a new plan for granting loans to exporter firms. The date up to which the Russian 300 million marks credit may be taken advantage of is to be prolonged. Negotiations over a great many proposed Russian orders are pending. A Dutch syndicate, it is reported, is putting up 30 million gulden for the financing of this credit.

The term for the reduced food import duties has been prolonged from December 31 to March 31, 1927. The higher duties in the Swedo-German Commercial Treaty, which, however, are lower than the maximum rates of the 1925 Minor Tariff, will meantime not come into force. Bills have been submitted reducing the sugar tax from 21 marks to 14 marks per 100 kilos, and increasing the sugar import duties (Tariff No. 176) from 10 marks and 8 marks per 100 kilos to 15 marks and 13 marks respectively. The loss, estimated at 75 million marks, from the reduction of the sugar tax, is to be made good by increasing receipts per hectolitre from spirits from 280 marks to 380 marks. The monopoly sale price of spirits, at present 430 marks per hectolitre, will be correspondingly increased.

Wages, which were stagnant for a couple of summer months, show a very slow rising tendency. The movement of weekly nominal wages since immediately after the currency stabilisation in eleven industries and railway transport has been:—

	Skilled.	Unskilled.
1924, January	27.45	22.74
1925, January	36.77	27.95
1926, March	46.02	33.89
1926, November	46.43	34.27

The highest average skilled wages in November were 55 marks 3 pfennigs in building, 50 marks 94 pfennigs in mining, and 46 marks 8 pfennigs in the metal industries; the lowest 29 marks 90 pfennigs in textiles for men, and 23 marks 38 pfennigs for women. The average skilled wage in six industries producing raw and half-finished materials was 47 marks 60 pfennigs, in five industries producing finished articles for consumption 38 marks 59 pfennigs. A good deal of criticism has been levelled at the official cost-of-living statistics; but these, if correct, show that, since the currency stabilisation, the real wage has risen as much as the nominal. In December, 1923, and in October, 1926, the cost-of-living index (100 in 1913-14) was the same, 142.2, and in the intervening time it never rose above 145, while it sank as low as 119.9. The index for November was 143.6. In the second half of November the number of publicly supported unemployed increased from 1,316,000 to 1,369,000, or some 4 per cent. Local reports for the first fortnight of December indicate a further increase.

The coal output continues high, having been (Ruhr only) well over 400,000 tons per day for seven weeks continuously, a figure never reached earlier in the year. The first British coal for Hamburg importers was delivered at the beginning of this week. A sharp drop in German bunker coal prices is expected after the drop which took place in Rotterdam when British deliveries there were resumed. German coal consumption figures (which are based, however, loosely upon production, stocks of producers, and import and export statistics) show an upward tendency in the last months, and reached 8,910,000 metric tons in September, against a monthly average of 8,683,000 tons in 1925, and 10,388,000 tons in 1913 (in the present area); the average monthly consumption of all fuel, reckoned at its coal value, in 1925, is returned at 11,335,000 tons, against 12,325,000 tons in 1913 (present area). The iron and steel home market is fairly active. The export market is much quieter; but the syndicate of the Iron and Steel Industries Association calculates that there is still a deficit in the quantity produced this year, due to the English strike, and declares that German works are ensured of sufficient orders for months to come. Imports of iron and steel and wares thereout (machinery excepted) in October were 126,897 tons, exports 509,762 tons; in the first ten months of 1926 947,854 tons and 4,398,390 tons respectively. Imports of machinery in

the ten months were 28,945 tons, exports 333,697 tons. Against the expectations of a few years ago, Germany's export trade in coal and heavy iron and steel has increased more rapidly than her exports of finished metal goods. The entry of Czechoslovakia, Austria and Hungary into the International Steel Cartel is not expected to affect markets much. Czechoslovakia, which is the most important producer of the three, is suffering badly from Polish underselling in South-east Europe, and as long as Poland remains outside the Cartel, the new member countries will not profit much. The railway-car construction trust is being enlarged to embrace about 30 manufacturing firms. It will be practically a compulsory trust, its existence depending upon a long-term arrangement for orders from the Railways Corporation under rigid conditions; among other things, it will be forbidden to sell to general consumers at below the prices charged to the Corporation. The North German Lloyd Company has decided to build two fast 46,000-ton steamers, which will cover the voyage Bremerhaven-New York in six days.

Bourse quotations last week dropped considerably, leaving some leading stocks below the levels of early September, when the last phase of the year's bull movement began. Trading in the first three days of this week was firm but quiet. To-day saw heavy buying of coal-steel stocks, particularly of Vereinigte Stahlwerke, and stocks closed at the highest prices.

AUSTRIA.—STATE FINANCES—ECONOMIC POSITION—MUNICIPAL EXTRAVAGANCE—BANKING—MONEY AND STOCKS.

(FROM OUR CORRESPONDENT.)

VIENNA, December 1.

THE new Chancellor, Dr Seipel, has given a splendid proof of good statesmanship by restoring peace amongst the parties within a short time and setting Parliamentary work afloat again, so that it was possible to pass the Budget estimate for 1927 and the much-contested so-called "Centralbank-bill." The ordinary Budget for 1927 shows a surplus of about A.S. 45 million (£1,300,000); as, however, an extraordinary expenditure for various works of public utility, amounting to A.S. 180 million (£5,230,000), will be needed the estimate results in a deficit of about A.S. 135 million (£3,930,000). The outstanding features in this Budget are the increase of expenditure for unemployment doles from A.S. 11,900,000 (£346,000) to A.S. 38,700,000 (£1,125,000), and the expansion of the revenue—in spite of the present economic depression—amounting to A.S. 124,500,000 (£3,620,000).

Through the "Centralbank-bill" the Treasury gets back the funds, amounting to A.S. 80,000,000 (£2,323,000), which it had placed at the disposal of the Centralbank in July last in order to avoid a public panic among small investors. The Bill provides for raising this money by an issue of Treasury bonds, which have to be taken over by all Austrian banks and savings banks. Interest and sinking fund on this loan will also be paid by the banks, which, for this purpose, will be entitled to deduct a certain percentage from all interests on deposits which become payable to their clients. Undoubtedly, this way of making good a public loss, which, after all, is only a concealed tax on deposits, will have a disadvantageous effect on the development of savings.

The "Centralbank" affair was hardly settled, when the investigation of the position of the Post Savings Bank ordered by the Government showed that this bank has suffered heavy losses. They were mainly due to unfortunate business transactions with the well-known financier, Mr Bosel, who had repeatedly received big loans against securities, which in the meantime have considerably depreciated. These securities were chiefly shares in the Unionbank, of which Bosel had become chairman two years ago after having acquired the control of this bank. As Bosel is not able to make good the losses, amounting to at least A.S. 110,000,000 (£3,200,000), the Government in its capacity as guarantor of the Post Savings Bank will have to find means to refund them and to reconstruct this bank.

Apart from the coal and lignite mines which have

been taking advantage of the consequences of the English coal strike, the situation of all Austrian industries leaves much to be desired. Many of the smaller firms especially suffer from the credit restrictions to which their banks were forced by the fall in bank deposits caused by the Centralbank and the Post Savings Bank "affairs." In Vienna the situation of industries and traded is made particularly difficult through the unbearable over-taxation on the part of the Municipal Council. This authority, which, as it is known, is controlled by the Social Democrats, still sticks to the wrong policy of carrying through a vast programme of public workmen's houses and all sorts of social innovations which even the richest countries cannot afford at present, such as luxurious public baths, the expenditure being paid out of current municipal tax revenue instead of contracting a loan. How far the infatuation of the Socialist despots goes may be proved by the fact that, in spite of the terrible economic conditions of industries and trade, and the general impoverishment of the population, in 1927 the sum of over A.S. 200,000,000 (£6,000,000) will be pressed out from the taxpayers for the continuation of this demagogic "social programme." In 1923, when the deceptive boom produced by inflation was at its height, the total of municipal taxes per head of the population (including children) amounted to A.S. 44 (£1 6s; now, in the time of deepest economic depression, it has risen to A.S. 130 (£3 15s) per head! It is true that in the Social Democratic Party itself the opposition to this financial policy is growing, as it is feared that it might have an undesired reaction on next year's general elections. Even the orthodox Chamber of Labour has stated recently that the financial policy of the Vienna Municipal Council has an unfavourable influence on unemployment. As a matter of fact the number of unemployed has again risen during last month from 140,000 to 160,000.

Through the failure of Mr Bosel, the Unionbank, which, it is true, was the least important of the big Vienna banks, has come into an awkward position. The majority of its shares are now in the hands of a public institute, the Post Savings Bank, and Mr Bosel has resigned from the post of chairman. Negotiations are at present in progress with two German banks, viz., Messrs. Speyer, Elissen and Co., Frankfurt, and the Commerz- and Privatbank, Berlin, which both wish to acquire the control of the Unionbank. Also the project of a merger of this bank with the Wiener Bankverein is under consideration.

During November there was a noticeable reaction on the Vienna Stock Exchange, owing to considerable holdings of securities from liquidating banking firms having been offered for sale and subsequent attacks of the bears. With the exception of mining shares all other securities fell by from 15 to 10 per cent., as compared against the average level of prices in October. Conditions on the money market continued to remain stiff during last month. Discount rates, which in the middle of September had fallen to $5\frac{1}{2}$ per cent., have risen to $6\frac{1}{2}$ per cent., which, however, is still $\frac{1}{2}$ per cent. below the official Bank rate. Business on the foreign exchange market was quiet, sterling moving between 34.35 and 34.40.

GREECE.—THE TASK OF RECONSTRUCTION—FINANCIAL PROBLEMS—BUDGET AND THE DRACHMA—SECOND REFUGEE LOAN.

(FROM OUR CORRESPONDENT.)

ATHENS, December 3.

THE news that the Council of the League of Nations would not deal at its December meeting with the issue of the supplementary loan for the settlement of the refugees was expected. When the first loan for the refugees was authorised, the Greek Government had undertaken to adopt the necessary measures to balance the State's Budget and obtain stabilisation of the currency. Neither of these conditions has been fulfilled. The Finance Committee of the League of Nations has duly informed the Greek Government, in the course of the year, that in order to recommend the raising of a second loan, political stability, equilibrium of the Budget, and stabilisation of the currency are required. It is anticipated that this

time all the necessary measures will be taken to ensure that these requisites will be effectively obtained. Political stability presupposes two things: (1) Settlement of the definitive form of the constitution, i.e., Republic or Monarchy, and (2) abstention of militarists from any further interference in politics. If, as seems now almost certain, a coalition Government of the five principal political parties is formed, and a spirit of sincere co-operation prevails among them, it may be said that a satisfactory arrangement of these two capital problems, on which the solution of the others more or less depends, will become feasible. The second requisite, viz., equilibrium of the Budget, will require a drastic curtailment of expenditure, and, perhaps, also a reduction of taxation—at least of indirect taxes, which are assessed at highly oppressive rates. The task of the future Minister of Finances will be extremely difficult. Professor Andreades wrote the other day that, financially, Greece had "fallen into a pit." However exaggerated this assertion might be, it is none the less true that the financial situation is grave. Excluding receipts from loans and book-keeping credits, the deficit for the last financial year exceeded Dr. 1,000,000,000, while that of the current year with increasing expenditure and declining revenue may reach Dr. 1,500,000,000. The picture becomes more gloomy if one takes into consideration the economic crisis through which Greece, like all countries which have indulged in currency and credit inflation, is passing, and which is bound to become severer with the effort to restore its finances and to stabilise its currency. To cut down a budget total of nine milliards by at least two milliards in order to obtain equilibrium, to make a scientific readjustment of existing taxation; to create fresh revenue, without imposing new taxes, in order to meet the burden of the war debt and of the proposed refugee loan; to do this under the present social, political and economic conditions of the country constitutes a gigantic task, which only a coalition Government with a strong man at the Ministry of Finance can possibly perform.

Once political stability and balancing of the State's revenue and expenditure have been achieved, stabilisation of the currency will be effected automatically—provided, of course, a sound monetary and credit policy is followed. The remittances of Greeks residing abroad, especially in America; the profits of the merchant marine; the income on important Greek funds deposited abroad and invested in foreign securities; and the repatriation of a considerable part of that capital, which has flown away from the country owing to the lack of confidence created by the political disturbances and their financial consequences; all these are factors which will swiftly turn the balance of foreign accounts in favour of Greece. This will be made easier by the restricted imports of goods from abroad, which the economic crisis and a high tariff entail, and which the growing industrial and agricultural development of the country will help to maintain, even after the economic situation has become healthy again. In the light of recent experience, one might even fear a sharp improvement of the currency, which, if left unchecked, would aggravate the economic and financial situation by lifting, perhaps temporarily, the external value of the drachma to a point not warranted by its internal value. While the cost-of-living index number has been steadily rising and is now 18 times higher than in 1914, exchange on London, after having reached 450 drachmæ in the course of the past months, has been fluctuating recently around 400—i.e., 15 times higher than the parity of exchange—has declined now to 378, and is showing signs of falling further should the political situation be satisfactorily settled. The price at which stabilisation of the currency will be eventually effected will have to be fixed after mature reflection. It will be the test of the Finance Minister's ability and firmness of purpose, for experience teaches that few Ministers can resist the temptation of demagogic policy, by preventing an undue rise of the external value of their country's currency. In view of the fact that Greece imports from abroad considerably more goods than it exports, it is clear that an important factor in the fixing of the internal level of prices is the rate of foreign exchanges. If, therefore, the invisible items of export at the moment of stabilisation were such

as to warrant the expectation that the external value of the drachma would remain for a long time at levels considerably higher than its internal value, it would perhaps be advisable to stabilise the drachma at a better rate in relation to the gold currencies than the internal price level would indicate. But, on the other hand, the eventual adoption of too low a rate of stabilisation might defeat its own end, through the large discrepancy between the internal and external value of the currency, by bringing into play the economic laws which tend to restore equilibrium of the two prices at the proper level. Some Greek experts aim even at a gradual revalorisation of the drachma to its pre-war gold parity. When the power of the currency to remain at the point of stabilisation has been tried for a reasonable time, a return to the gold standard might be made by the creation of a new monetary unit and the conclusion of an external loan, the proceeds of which would serve as a guarantee of the convertibility of the note issue.

As regards the issue of the second refugee loan, it was roughly estimated that a sum of £5,000,000 would be sufficient for the purpose. It is now considered, however, after careful examination, that the amount should be increased to £8,000,000, in order to meet all the expenses needed for completing the settlement of the refugees. Of course, the amount to be borrowed depends mainly on the resources of the Greek Treasury, which will be taxed, in addition, with the annual service of the War Debt to England and the United States. This debt amounts to some £25,000,000. The proceeds of the new loan will be used for completing the works already done, for settling 8,000 agricultural families, and reclaiming large areas covered by marshes and needed for the refugees, and for building houses for 35,000 urban families. These works are believed to be indispensable. In view of the economic difficulties of Greece and of the pitiable situation of the refugees, whom the agents of Communism are trying to exploit, it is imperative that the League of Nations should take up the matter as early as possible, and, by authorising the issue of the projected loan, enable the Refugee Settlement Commission to bring its task to an end.

CANADA.—ADVENT OF WINTER—CROP RETURNS—MARKETING PROBLEMS—GENERAL BUSINESS CONDITIONS—MOTOR PRODUCTION—MERGERS IN THE PULP AND PAPER INDUSTRY—RAILWAY EARNINGS—STOCKS—BRAZILIAN TRACTION COMPANY.

(FROM OUR CORRESPONDENT.)

OTTAWA, November 30.

WINTER has now definitely set in, but in Eastern Canada its incidence has so far been abnormally mild; the ground is frozen hard, but the snowfall has been light, and has disappeared in many places. Outdoor work on the farms has been suspended, but the forests are humming with activity, due more to the demands of the pulp and paper mills than of the lumber companies. The navigation season on the St. Lawrence is in its final stages, and on the inland waterways it promises to close earlier than usual. In business circles there is general relief at the termination of the British coal strike, for its effects upon Canada's export trade in foodstuffs were beginning to be quite serious. Moreover, it has resulted in at least a temporary forfeit of a large part of the valuable market which British coal exporters had built up in Canada; with the last shipment for the year now arrived, British coal imports to Montreal for the season reach a total of 106,015 tons, as compared with 438,841 tons in 1925.

The fate of the Western grain crop—which, imperilled as it was by inclement weather, was causing anxiety to the business community—has now been settled, and although much damage has been done, the crops which have been garnered throughout Canada are on the whole satisfactory, and represent a purchasing power for the farming communities which is but slightly below that of the crops of 1925. The latest official estimate of the wheat crop of the prairie provinces places it at only 1,685,000 bushels less than last year, which is a decline of about half of 1 per cent. The yield of oats is, how-

ever, much less satisfactory, having declined from 513 to 365 million bushels, a loss of 29 per cent., and most of the other field crops show a slight reduction in comparison with last year, but the Bureau of Statistics composite index of the yield per acre of the field crop, weighted according to values during the 10-year period from 1915 to 1924, and expressed as a percentage of the average for the same period, is 110, as compared with 112, the final index of yields for 1925. Despite the lateness of the harvest, the movement of the grain to the Great Lakes and tidewater has been remarkably active, and from August 1 to November 12 the farmers of Western Canada marketed 200,092,000 bushels of wheat, or 5 million bushels more than in the parallel period of 1925. But the export demand from Europe has been spasmodic and disappointing in volume, and as a consequence, at the middle of November the elevators at Montreal were filled almost to capacity, and the stocks of wheat at Fort William and Port Arthur were nearly 11 million bushels in excess of the quantity in store at the same date in 1925. Inevitably grain prices have shown a downward tendency on the Winnipeg market, and the problem of the disposal of the balance of the crop may present some difficulties. The rush of Canadian wheat down the lakes to be sold before the close of the navigation season has resulted in large demands for bulion in Canada, and early in November, when quotations for sterling in Montreal fell below the import gold point, shipments of sovereigns from London to Montreal were reported. Also, during the last week of November, when the Canadian dollar stood at $\frac{1}{16}$ premium in New York, a shipment of \$10,000,000 in gold was made to Canada by American banks.

The general improvement in commerce and industry which has been a feature of the current year has not been checked, and certain seasonal declines do not materially affect the generally favourable trend. The month of October established a new record for car-loading, exceeding by some 16,500 cars the best previous figure, attained in November, 1925. The gain for the week ending November 20th—only 194 cars—was trivial, but the total gain for the year has now reached the imposing figure of 263,230 cars, or roughly 10 per cent. Retail trade in winter specialties has been adversely affected by the mild weather, and country storekeepers complain that bad roads, due to prolonged wet weather, have kept the farmers from making their usual volume of purchases. But the purchasing power is still in reserve, and a very brisk Christmas trade is everywhere anticipated. Wholesalers report that the flow of orders is appreciably better than a year ago, and manufacturing operations are on the whole satisfactory. The iron and steel and the allied equipment and machinery plants have all an adequate volume of orders on hand, and are satisfied with prospects for the winter. The cloud of gloom which has hung over the industrial areas of Nova Scotia has at last been lifted, and both the coal mines and steel plants are busy, but the problem of the financial plight of the British Empire Steel Corporation has yet to be solved.

The outlook is decidedly better for the boot and woollen industries, which had been encountering difficulties, and the cotton, rubber, sugar, and motor industries are all in a healthy condition. The production figures of the motor plants are illuminating in light of their owners' lamentations in the spring that their ruin was imminent, owing to tariff reductions. There was the usual seasonal decline in October, when their output numbered 14,670 vehicles, a decline of 16 per cent. from September's production; but the aggregate production for the first ten months of 1926 totals 187,536 vehicles, with a sales value f.o.b. plant of \$114,450,116, as compared with an output of 142,567 units, worth \$92,434,978, for the parallel period of 1925. Out of the October production of 14,670 cars no fewer than 7,546, or more than half, were exported. The pulp and paper industries also continue to show a wonderful record of prosperity, and the increased output of newsprint is being easily disposed of at satisfactory prices; but in the finished paper lines competition appears to be stiffening. However, the newsprint manufacturers do harbour some apprehensions that over-production may bring difficulties to their industry next year and force

down prices to an unprofitable level. So rumours have lately revived of a series of mergers in the newsprint industry which would leave it under the control of three very powerful corporations.

The railway earnings continue to be extraordinarily good. In a recent speech Sir Henry Thornton, the president of the Canadian National system, asserted that its net earnings for the year would reach 45 million dollars. The net earnings of the C.P.R. for October were \$7,947,199, which is a gain of \$503,172 over the earnings of October, 1925, and has only been exceeded by one October in their history—viz. in 1923. Also, the earnings for the first ten months of 1926, placed at \$36,579,221, show a gain of $7\frac{1}{2}$ million dollars, and are the best showing for that period since 1917. One important event in the railway world is the completion of the new branch line which gives the valuable new mining field at Rouyn in Western Quebec a link with the Canadian National system. Although nominally built by a private corporation, its bonds were guaranteed by the C.N.R., which will operate it; and heavy traffic is anticipated in the transportation of large quantities of heavy materials and supplies which numerous mining companies like the Noranda are eagerly awaiting to make possible the development of their properties. Activity in the Northern mining fields shows no signs of abating, and some of the old-established mines like Dome and McIntyre have recently reported very valuable fresh strikes; again, the shares of the Noranda Company, which has not produced a single ounce of metal yet, have already been given a market value of about 37 million dollars.

During the past month there has been no definite trend in the Canadian stock markets apart from the Power group, which has shown steady strength. There has, however, been a sharp fall in Brazilian Traction, a very popular stock in Canada, due partly to the fall in the exchange value of the milreis and partly to some uncertainty about the future control of the company.

Letters to the Editor.

THE SITUATION IN CHINA.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The articles which appeared recently in your paper on the situation in China contain numerous grave errors of fact and give an entirely wrong idea of that situation and of the possibilities of finding a satisfactory solution. That these articles have been published by a financial paper of your standing greatly increases the danger of misleading the public into the facile belief that by a stroke of the pen and by some easy gestures of goodwill are to be solved all the great difficulties and the real dangers which face British interests in China.

You state that the comparatively high quotations of the 1896 or 1898 Customs loans as compared with other Customs loans, prove that there is "method in the Chinese madness."

It proves nothing of the kind, for the simple reason that the Chinese have nothing whatever to do with the payments of loans secured on the Customs. This is completely in the hands of the foreign Inspector-General, who is backed by the foreign Powers. An investor who buys Chinese loans secured on the Customs is gambling purely and simply on the will of the foreign Powers to maintain control of the Customs. The moment they give up this control and hand it over to the Chinese the Customs loans will fall to the same level as that of the unsecured loans and other debts for railway material, &c., which have been incurred by various Chinese authorities (both central and local). And the less said about them the better.

You attempt to belittle the importance and danger of Bolshevik influence in China.

Most people out here totally disagree with you, and believe that Bolshevik intrigues are the main cause of all the anti-British agitation, and constitute a very grave menace both to the foreigners and to the Chinese themselves. I shall not trouble to refer to the experiences of British merchants in Canton and Swatow, and now in Hankow, but would simply ask you how, if Bolshevik influence is only of a temporary nature, you explain the following facts:—

1. That, wherever the Nationalists spread, there at once anti-British agitation, boycotts and strikes break out, Labour unions, councils of workmen and peasants and all the other paraphernalia of Bolshevism are at once set up.

2. That the Nationalists have organised the Canton Govern-

ment on Soviet lines with Committees, Commissars, and everything else.

3. That Russian Soviet officers are attached in large numbers to the Nationalist forces which are conquering China, and that the Soviet Government has been steadily supplying them with money, arms, and munitions.

4. That the other parts of China which have not yet come under Nationalist control are still free from the symptoms mentioned in (1.), or that as soon as the Nationalists retire from an area these symptoms die away.

You have no evidence to prove that this is all a temporary phase. It is pure surmise on your part. Only the future could show whether you had been right. Whereas the actual existing facts show that Bolshevik influence is an all-powerful factor in the present Chinese situation.

Nor does it serve any purpose to talk about the conservatism of the Chinese masses. In all countries a small, energetic vocal group conducts the policy and governs. The masses simply follow. As well argue that Soviet Russia herself, after nine years of Soviet misrule, is not Bolshevik, because the millions of peasants are not Bolsheviks.

Nor are you even logical in your arguments in this matter: For in one place you quote the ancient civilisation of China as an argument against the possibility of Bolshevik ideas gaining a hold, and later on you are to be found lecturing the British merchant out here on the new spirit which has come over the Chinese. Which is correct?

It is a pity that you should have thought it necessary to raise the stale old cry about the "Treaty Port mind." I will not argue this point, which seems to me more one of opinion than of fact. And, besides, I might appear to be biased. But if you must speak in such a patronising and superior way about the attitude and mentality of the British out here, you might at least make your own views quite clear, especially on the very question for which you appear to be taking them to task. Yet I defy any reader to tell me what are your real views on the "when" and "how" of rendition of foreign privileges and control. Do you advocate gradual and conditional rendition, based on the progress made in government, administration and justice, which is all that the British merchants out here ask for, and which is what is being recommended by the Commission? Or do you advocate the immediate, complete and unconditional rendition, which is, as they have repeatedly announced, the minimum that the Nationalists will be content with and which presumably is therefore required to bring about the goodwill of the "Chinese people" on which you lay so much stress?

You tell us out here that the "gun-boat policy" is all nonsense and invite us to doff our armour and come out into the open and assure us that we shall not be shot at. Unfortunately you do not produce a single fact in order to substantiate your very generous guarantee, whereas foreigners out here, looking across from the safety of their concessions, which are further protected by garrisons and gun-boats, see all about them a perfect orgy of banditry, piracy, looting of foreign property in the interior, judicial murders, and brutal executions in every part of China, quite apart from all the pleasant incidentals of a few civil wars. I will quite admit that the safety and peace of a London office may give you a much less "prejudiced" mind than we are able to afford out here.

And now I come to your main thesis: That we British, having lost the goodwill of the Chinese, can only regain it by relinquishing our so-called special privileges, &c.

As usual you do not quote a single fact to prove your contention. If these privileges are at the root of the Chinese ill-will, why is it that all their demonstrations are directed against the British alone, who are only one of the numerous nations enjoying these privileges?

Again, if this feeling is so nation-wide, as you would have your reader imagine, why don't the merchants all over China simply refuse to have any dealings with the British or their goods? How is it that these anti-British demonstrations only manifest themselves in those parts of China under Nationalist and Bolshevik control?

And, on the other hand, if it is all a mere matter of giving up the privileges, how is it that the Germans and other nationals who have long ago had to forgo these rights are not doing the biggest trade and capturing all the business in China?

For myself, I have not noticed any special anti-British feeling amongst the Chinese. I have been called "foreign devil" hundreds of times, but have never been insulted as a Britisher.

The Chinese are one of the most race-conscious people in the world, and all through history have been tinged with anti-foreign feeling. And this, like a tap that can be turned on and off at will, is used by the politicians one moment against one nation and one moment against another, just as it suits their plans.

You state that the conciliatory policy of Japan has pacified the Chinese, and with the help of Customs figures seek to prove that this is reflected in her trade. You even go so far as to leave the reader to infer that what the British have lost in Canton the Japanese have gained in Manchuria.

Anyone who has the very slightest knowledge of China must

know that the two territories have absolutely nothing whatever to do with one another. The great increase in Japanese trade in Manchuria recently is entirely due to the excellent bean crops which are the staple produce of that country. So that has nothing whatever to do with your argument.

As to the conciliatory policy of Japan—which, by the way, was forced on her by America and England much more than by any Chinese boycott—having had any permanent influence on the Chinese, I myself as late as 1923 have seen anti-Japanese demonstrations here in Peking got up by the Government, with Feng Yu Hsiang's soldiers marching in the parade, to demand the rendition of Dairen and the S.M.R. What has happened since then is simply that the Nationalists under Bolshevik advice have singled us out as the more distant, more war-worn, and therefore less dangerous enemy, and have concentrated their attention on us. Naturally, the Japanese have been clever enough to keep out of the row, and have been making hay whilst the sun shines. Even you yourself will perhaps admit that the Chinese can hardly boycott every foreign country at the same time and still continue their economic life.

And now to consider your proposals for restoring order in China. There is, of course, the dear old story of a round-table conference of the fighting parties. Excellent, only you apparently forget to tell us exactly how they are to be brought together, or how, when brought together, they are to be made to adhere to their agreement, seeing that even amongst themselves within their parties they can never keep faith for more than a few months at a time.

Then there is your advice to the British Government to get the Powers together and stop the civil war and create a responsible Government in China. Excellent again, and I am really almost with you there. Only, unfortunately, you have left two quite important points unexplained: Firstly, how do you propose to get the Powers together? Secondly, when you have done so, how do you propose to stop the civil war and install a responsible Government without armed foreign intervention, which, of course, is not what you intend?

And, finally, you have the brilliant idea of "enlisting Chinese public opinion in the cause of peace by holding out to them as a prize the abolition of foreign privileges and the promise of large credits."

Sir, were it not for the reputation of your journal, I might really be led to believe that you were writing a satire.

As if the unfortunate Chinese people (as distinguished from the militarists and politicians) were not long ago heartily sick of the whole business, and would be only too glad to get peace on any terms, without any extraneous inducements, if they only knew how it was to be done! Not to mention the small fact that, in the present state of Chinese credit and with the abandonment of foreign control of the Customs, you might have more difficulty than you imagine in finding those large credits.

With your third article I have no great quarrel. It is a piece of fine writing, and the only fault I have to find is that it does not give a single fact to support the alluring picture of a regenerate, peaceful, flourishing China with unbounded opportunities for foreign trade.

What you have hoped to achieve by these articles it is difficult to understand. Certainly you will have deceived no one who has the slightest knowledge of the country, least of all the Chinese, who are quite aware that they have got us out the run. For that is what it really all amounts to.

As I read it, the position is as follows:

For the last fifteen years the Chinese have shown themselves totally incapable of establishing an ordered, civilised government on Western lines, nor is there the slightest indication to show that they are capable of doing so on their own. The Bolshevik system of a few clever rogues ruling over the masses with a hand of iron and using the slogan of anti-Imperialism (i.e., anti-foreignism) as their war-cry is more akin to the temperament and the history of the Chinese than the democratic and parliamentary governments of the West. It seems, therefore, highly probable that a Bolshevik government will soon be established all over China. But unfortunately, even this is not likely to be the end. For as the history of the last few years proves, the strong clan feeling of the provinces, the economic differences of interest between North and South, the inability of Chinese politicians to work together loyally for more than a very short period will prevent anything but a very temporary unity. Within a few months the Bolshevik leaders will be fighting amongst themselves again, and the confusion will be worse than ever.

As to this anti-British agitation, it is merely that the Nationalists availing themselves of the present exhaustion of the West, have adopted a policy of force and aggression—for what else are these artificially inspired boycotts and strikes?—to gain their political ends and put themselves in power. And under the advice of their Bolshevik friends from Russia they have concentrated first on us.

In that case the abolition of foreign privileges and control is going to settle nothing. While, on the one hand, such a step will, to say the least, imperil the vast capital invested in

Chinese loans and in property in the Concessions, will make conditions of trade vastly more difficult, and will make the conditions of life out here for foreigners still more insecure, it will, on the other hand, not have done the slightest towards stopping the civil wars, restoring order, or establishing good government. Nor will it in any way have allayed the hostility of the Nationalists, who will merely regard it as a further sign of weakness, and will, as all history shows, grow more aggressive and put forward fresh impossible demands.

Somewhere you will have to draw the line and make a stand or otherwise be prepared to be driven, not only out of China, but out of Asia altogether.

I see no other way of restoring peace and order in China but by foreign armed intervention.

If you consider that to be an impossible policy, then there is really nothing to be done but to prepare for the inevitable retreat. But in that case you should face the facts squarely, and prepare the public for an extended period of disorder in China, with ever-decreasing trade, instead of luring it on to throw away further capital and effort by painting an entirely false picture of the situation and of the future which has not the slightest basis in fact.—Enclosing my card, I am, yours, &c.,

NON-TREATY-PORT.

Peking, November 26th, 1926.

[To deal with "Non-Treaty-Port's" long letter point by point would require another article of the kind that displeases him; but the gist of his letter is contained in the last two paragraphs, in which he implies that there are two possible alternative policies, and two only, towards China: either "foreign armed intervention" or else "the inevitable retreat" (by which he presumably means the evacuation of the foreign trading communities from the treaty ports and concessions). If that were true, "Non-Treaty-Port" had better pack his trunks forthwith, since "foreign armed intervention" is out of the question, except for the strictly limited purpose of protecting foreign lives and property; and this would certainly be a prelude, not to the conquest of China by foreign armies, but to the evacuation of the foreign communities under naval convoy. "Non-Treaty-Port" accuses us of not knowing, or ignoring, the situation in China; but our ignorance cannot be more profound than his ignorance of the state of feeling in Great Britain and the other foreign countries concerned; and to our mind his letter is a perfect illustration of that "Treaty port state of mind" which we persist in regarding as one of the most dangerous elements in the Chinese situation. The foreign Powers will not go to war with the Chinese for the purpose of maintaining the economic and political privileges of their nationals in China, and this for several reasons: it would not be morally defensible; it would not pay even if it were practicable, since the cost of such a war would exceed many times over the value of our China trade; and it would not be practicable, since a war fought on behalf of this trade would infallibly give it the *coup de grâce*. What was obtained by war in 1839-1843 cannot be retained by war to-day. "Non-Treaty-Port," who is outraged because the Chinese contemplate depriving the foreigners of their privileges by force, ignores the fact that these privileges were acquired by force in the first instance. No doubt that was 83 years ago, and our presence in China since then has conferred benefits on her which offset the high-handed action by which we originally forced our way in; but "under-dogs" have immortal memories. This is, of course, the root difficulty of the third alternative which we advocate, of taking the initiative in attempting to reach an understanding with the Chinese. This attempt may fail, but at any rate both his Majesty's Government and the China and Far East section of the Manchester Chamber of Commerce (see the *Manchester Guardian*, December 17, 1926) consider that it is very well worth while to make it. That is why Mr Lampson has gone to Hankow. We should like to ask "Non-Treaty-Port": Does he approve of Mr Lampson's mission or no? If he does not, there is no more to be said; but if he does, then nothing could do more to embarrass his Majesty's Government and to militate against the success of their efforts to deal with a delicate and complicated situation than the display, by British residents in China, of just such a temper as "Non-Treaty-Port" displays in his letter to us.—ED. *Econ.*]

THE FRENCH FRANC.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I note from your last issue that Mr Mason is strongly in favour of the proposal that the French franc should be stabilised at around present values, and I have been wondering if this is the same Mr Mason who is chairman of the Sound Currency Association, and who has claimed a good deal of credit for having influenced our own Government to get our currency back to par value without delay. If so, I, and many others, would like to know how it was right that the pound sterling, which was worth anything between 14s and 15s, should be forced by artificial means up to its face value, and that it can also be right for France to stabilise at to-day's values.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15, Gracechurch St., London, E.C.3.
Capital Authorised £3,000,000
Paid-Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,512,884

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS, and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East on terms to be had on application.

Fixed Deposit Rates will be quoted on application.

On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.

JAMES STEUART, Chief Manager.

In the one case it meant a large bulk of British paper money being given the same value as gold and the value of British commodities reduced in proportion, and in the other case fixing the value of French paper money at its present market value, and thus leaving the price of French commodities at to-day's value.—Yours, &c., R. GRAHAM.
"Highfield," Offerton, Stockport, December 15th, 1926.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Whilst Mr D. M. Mason must be thanked for ingeniously suggesting the issue to the holders of the French currency loans of a supplementary income bond in connection with the anticipated stabilisation of the exchange, his expressions "to some extent" and "for some part" are much to be deprecated. The holder of French Rentes was not relieved of any part of his anxieties when the franc tended precipitously downwards, and no one has a right to disappoint him of any particle of his hopes when there is a prospect of recovery. He has carried his risks, and he demands his chances. He must be allowed to enjoy the latter not merely "to some extent" or in "some part," but to the full.—Yours, &c., F. O'HALLORAN.

Hampstead, N.W. 3, December 15th, 1926.

COALOWNERS AND SELLING ORGANISATIONS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Has it really come to this, that a paper bearing the name of the *Economist*, and claiming, I suppose, to represent the opinion of economists, thinks the policy of raising by combination the price of coal to the coal-using public, both householders and manufacturers, so obviously right that only crass ignorance or ineptitude could oppose it? You say (*Economist* of December 4th), "Optimism on this point is somewhat damped when we find that to the report of the Committee on the marketing of coal a minority report is appended, two of the three signatories of which are coal-owners, who, in effect, say that no improvement is needed and nothing required to be done. Sincerely do we trust that the coming months will show this *dolce far niente* attitude to be unrepresentative of the mineowners as a whole." As has been said, "something must be done" is the almost certain prelude to doing something superlatively foolish.

As the coalowners presumably stand to gain in their pockets by a scheme for raising the price of coal, this is only one more instance where that much-abused class has stood forth as the defenders of the public against the interests of their own pockets.

If it be said that the majority report of the Committee is on the lines of the Samuel Report, the answer is that the value of the Samuel Report is weakened because, as has been said (and never, so far as I know, answered), the Royal Commission seems not to have been able to see in the coal industry anything but a fund for paying wages to miners, and to have ignored the interests of the coal-using public (including, among others, the workmen in the iron and steel industries). If either can be said to be a public interest it is certainly not dear, but cheap coal.—I am, &c., A. A. MITCHELL.

7 Huntly gardens, Glasgow, December 14th, 1926.

Books and Publications.

ARBITRATION.*

DURING the past year or two the amazing prosperity of the U.S.A. has been the wonder, and perhaps also the envy, of an impoverished world, and all eyes are now turned to the Golden West as to an industrial Mecca. It is therefore the more gratifying to hear, amid the universal paeans on transatlantic achievement, a faint echo of

* "Arbitration and Business Ethics." By Clarence F. Birdseye. New York and London) D. Appleton and Co. \$2.50 net. 1926.

England's former greatness. It is indeed something more than an echo, for in this excellent work on arbitration by an American author it is roundly stated that this country is still first in the philosophy and practice of arbitration:—"In England substantially all the trades have been formed into self-governing associations doing a homogeneous business, and hence the organisation of business upon an elaborate and scientific basis has been carried very much farther than in the United States." There can be no doubt that in any sound scientific economic structure arbitration and conciliation must play a leading rôle, and we in this country have a thoroughly healthy and well-rooted tradition of arbitration in industry, going right back to the old mediæval guilds. Also, although we are sufficiently harassed by Government interference, there is not in this country an over-zealous Federal Trade Commission going fussily round with lantern and ferret to unearth all trade associations and bring their activities into the fierce light of the F.T.C. inquisition. Among these activities arbitration rules should not be suspect, but amid the shifting sandbanks of American law it is difficult for a trade association to find firm foothold, and its beneficent actions re arbitration are compromised by persecution in other directions.

This is a real difficulty in the U.S.A., especially in regard to arbitration of the common law type, owing to the extreme complexity and variability of the law in the U.S.A. There is no general uniformity in regard to arbitration among all the different States and the legal machinery is cumbersome. This is well emphasised in the present work, and Mr Birdseye, in fact, is severe in his condemnation of common law arbitration.

Both in this country and in the U.S.A. resort to the courts is avoided, and everywhere the commercial type of arbitration by trade associations, chambers of commerce, and other tribunals is growing rapidly in favour. Mr Birdseye gives a very interesting account of the history and present practice of commercial arbitration in its many and varied forms, including, in particular, the valuable work done by the Chamber of Commerce of the State of New York. Collective bargaining and arbitration between labour and capital, the supreme importance of attempted conciliation before arbitration, difficulties of compulsion, commercial courts, small claims courts, and a summary of general conclusions complete a very painstaking piece of work.

There are several valuable appendices, of which the Hart Schaffner and Marx labour agreement merits special notice. These are perhaps the most useful part of the book, showing the actual and practical working of arbitration and conciliation; whereas the text is apt to be platitudinous in places, with a certain amount of tautology and over-elaboration of statement; also we find a wearisome reiteration of the terms "ethical" and "ethical basis." There is, however, little ground for criticism, and the author is undoubtedly right in emphasising the ethical basis, so that we can take comfort in the reflection that although modern industry appears superficially to be little else than gross materialism, there is, nevertheless, unlimited scope for the highest ethical activity.

BOOKS RECEIVED.

History of Barclays Bank, Limited. Compiled by P. W. Matthews. Edited by Anthony W. Tuke. (London) Blades, East and Blades, Limited, 17 Abchurch lane. 2 guineas.

A well-produced and beautifully illustrated volume. It not only gives a comprehensive and most interesting account of the history and development of one of our greatest banks, but is also a welcome addition to general banking history.

German Currency: Its Collapse and Recovery. 1920-6. The Presidential Address of the Rt. Hon. Viscount D'Abernon. (London) Royal Statistical Society, 9 Adelphi terrace. 2s.

A verbatim report in pamphlet form of Lord D'Abernon's important address, on which comment was made in the *Economist* of November 20th.

Indian Administration to the Dawn of Responsible Government. By B. K. Thakore. Revised edition. (Bombay) D. B. Taraporewala, Sons and Co. Rs.6.

An historical review, with practical suggestions on the present phase. The author was formerly Professor of History and Political Economy in Deccan College, Poona, and his orientation towards Indian problems may be illustrated by the fact that he inscribes his book to the "sacred memory" of Burke, Bright, Mill, Gladstone, Hume, Morley, and Montagu—"great Englishmen, who were also great lovers of freedom as the most spiritual force in the uplift of humanity in every race and clime."

The Marketing Problem. By E. T. Elbourne. With a foreword by Sir Josiah Stamp. (London) Longmans, Green and Co., Limited, 39 Paternoster row. 10s.

A concise summary of American marketing devices, based on a survey made by the author in America in July, August, and September of this year. The aim of the book is, avoiding technicalities, to enable the British manufacturer or merchant to weigh up the significance of American practice.

The Consumers' Co-operative Movement in Illinois. By Colston E. Warne. (London) Cambridge University Press, Fetter lane. 17s 6d net.

The author, who is Assistant Professor of Economics in the University of Pittsburgh, opens with a description of the nature of the Co-operative Movement, and passes to his main subject, namely, the history of the consumers' co-operative movement in Illinois. He tells the story of the development of the American Rochdale plan, its failure, and its revival.

Fertilisers. By Herbert Cave. (London) Sir Isaac Pitman and Sons, Limited, Parker street, Kingsway. 3s net.

Presents in readable form and without undue use of technicalities an account of the sources, manufacture, and uses of fertilisers.

Bourne's Insurance Directory, 1926-27. (London) Stone and Cox, Limited, 188-9 Strand. 17s 6d net.

In its latest edition this old-established annual remains as indispensable as ever to all who are concerned with insurance matters.

Statistique Intellectuelle de la France. Par Tatiana Bercovski-Chestov. Année 1923-24. (Paris) Les Presses Universitaires de France, 49 Boulevard Saint-Michel. 35f.

A volume of statistics referring to public education, libraries, publications, and places of entertainment in France, compiled by the Statistical Institute of the University of Paris.

A Review of the Rubber Position. By Lt.-Col. C. G. Kunhardt. With an introduction by A. W. Still. (London) *Investors' Chronicle*, 8 Drapers gardens. 6d.

Colonel Kunhardt predicts a very considerable rise in the average price of rubber during the next four or five years.

OFFICIAL PUBLICATIONS RECEIVED.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C. 2:

China No. 3 (1926): Report of the Commission on Extra-territoriality in China. Cmd. 2774. 2s 6d net.

Report of the Industrial Assurance Commissioner for the year ended December 31, 1925. 2s 6d net.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
December 28.	December 30.

ACTIVITY in Stock Exchange markets during the past week has been mainly confined to half-a-dozen sections. There continues to be a fair amount of money available for investment. New issues offering good stock have found a ready welcome from the public. Well-secured debenture stock and preference shares are not easy to obtain at reasonable prices. Gilt-edged issues remain firm, the War Loan round about 100½. The strength of investment securities is the more notable by reason of the fact that the last weeks of December usually produce selling orders rather than buying; people prefer as a rule to have cash instead of shares at this particular time of the year.

The new Belgian scrip is nearly 8½ premium, and other European issues continue to attract favourable attention. The forthcoming Bulgarian Refugee Loan is assured of, at any rate, an attentive reception. Chinese bonds have been marked up and down according to the news of the day, without there being much business to produce the fluctuations. Peruvian Corporations kept fairly steady on the eve of the meeting next Monday, at which the chairman is expected to make an announcement in regard to the manner in which arrears of preference dividend may be dealt with. Lively fluctuations occurred in Turkish Unified. French and German bonds are quiet.

BARCLAYS BANK

LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

The Bank has close working arrangements with Agents and Correspondents in all the principal towns throughout the world, and is in a position to offer complete banking facilities to merchants and others for the transaction of

EVERY DESCRIPTION OF OVERSEAS BUSINESS.

Foreign Exchange transactions arranged.

Chief Foreign Branch	168, Fenchurch Street, London, E.C.8
West End Foreign Branch	1, Pall Mall East, S.W.1.
Liverpool Foreign Branch	45, Castle Street, Liverpool.
Manchester Foreign Branch	94, Portland Street, Manchester.
Bradford Foreign Branch	13, Market Street, Bradford.

Home railway stocks have sunk back into neglect. Grand Trunk Pacific debentures have gained a point or two. The Argentine railway list is strong, it being contended that the season of the year which is more particularly dangerous to the coming crops is nearly over, and that the outlook is promising for good traffics from the early part of the New Year. Other foreign rails show steadiness, and nitrate rails are better, in spite of the heaviness that continues to characterise shares in the nitrate-producing companies.

The most spectacular feature in the industrial market has been the result of the issue of the Committee's report on the Armstrong-Whitworth Company. This led to falls of about 25 points each in the company's two junior debenture stocks; the shares have also suffered severely. The rubber market remains dull and out of favour, nor do tea shares arouse any public interest. Prices therefore tend to sag. The most excited market of the week has again been that for Dunlops, in which the price has been rattled up and down, leaving a fall on balance due to sales by people rendered apprehensive by the cut in tyre prices made by some of the Dunlop competitors. Motor shares keep steady, with Napiers in the ascendant on bonus hopes.

The British American Tobacco dividend, making 25 per cent. net, though lower than that of last year, will be paid on a larger capital, and served to impart strength to the market, Imperial Tobacco shares being the chief gainer, on the consideration that the Imperial Company holds a very substantial amount of B.A.T. shares. Courtaulds have slipped under £5, and the English textile shares are dull. The electric lighting group is heavy, disappointment being expressed with the bonus share distributions to be made by the City of London, the County of London and the South London Companies. Gas stocks, on the other hand, are rather better. The shipping market is practically unchanged. Movements amongst banking shares are narrow, and in the case of the Far Eastern companies rather irregular. Sudan Plantations, Hudson's Bays and other land shares have suffered from neglect. The Brazilian Traction group is somewhat passive. Swedish Match shares enjoyed another sharp rise, on the expectation of the company acquiring Continental monopolies. A boomlet in shares of the cable construction companies is due to vague talk of possible amalgamations. The oil market remains firm as regards the good shares in its list. There is no change worth mentioning in wireless issues. Publication of their December dividend announcements by a number of South African mining companies has had little effect upon the Kaffir Circus. The outstanding feature of strength is Sub Nigel, where the developments reported from the property are exceptionally good. Apart from Sub Nigels, the market has been listless, with prices showing a dull tendency, in which Rhodesians have become involved as well as a few of the principal platinum descriptions. There is less doing than usual in diamonds. Amongst the base metal shares, Malayan tins are inclined to go back in price, apparently from want of public interest at the end of the year. West Africans have followed the same uninteresting track. There is so little business going on in Canadian, Mexican, Russian and other miscellaneous mining shares that movements have been nearly negligible.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded		216,756,575		
NATIONAL SAVINGS CERTIFICATES.				
April 1, 1926, to December 11, 1926, Dr £2,850,000.				
Net sales week ended December 11, 1926, Dr £150,000.				

To the Public—				
The Amalgamated Press, 4,500,000 7% Cum. Pref. Shares of £1 each, at par (Dec. 13)	4,500,000	4,500,000	562,500	3,937,500
"Snia Viscosa," £1,400,000 7½% Bonds, at 95 (Dec. 16)	1,400,000	1,302,000	70,000	1,232,000

"Snia Viscosa."—Share capital, 1,000,000,000 lire, divided into 6,666,666½ shares of 150 lire each, of which 5,000,000 shares have been issued and are fully paid and 1,666,666½ have been offered for subscription at par to the existing shareholders. This is an offer for sale of £1,400,000 7½ per cent. sterling first mortgage bonds at 93 per cent. The bonds will be redeemed in or before 1951 by an annual sinking fund of £61,000, beginning in 1929. The bonds will be secured as a first specific mortgage or charge under Italian Law on the land and buildings (other than the office buildings of Snia Viscosa, in Turin), now owned by the company and Unione Italiana Fabbriche-Viscosa and the Società Italiana Seta Artificiale, two of its subsidiary companies, and upon the entire share capital of these subsidiaries. The company, which was incorporated in 1917, "is the largest manufacturer in Italy of artificial textile fibre." The production of artificial textile fibres in 1925 amounted to 20,952,270 lbs. Combined profits, after charging all working and administrative expenses, but before charging interest on advances and current accounts, depreciation of buildings, plant and machinery, and profits taxes, and before crediting interest, dividends and other special profits, are certified to have been as follows:—15 months ended December 31, 1923, £675,586; year 1924, £1,546,992; year 1925, £1,575,023; seven months ended July 31, 1926, £406,485. The net assets (exclusive of goodwill and patents) are certified to be £8,078,960. The object of the present issue is to pay off all present bank loans and other similar liabilities, and to complete the development of the company's programme. The high rate of interest offered must be regarded as indicating the measure of risk involved. The value of the security is chiefly dependent upon a stable economic and political environment, while the immediate outlook for the artificial silk market is somewhat uncertain.

Scottish Drapery Corporation, Limited.—Authorised capital £1,500,000, divided into 750,000 7 per cent. cumulative preference shares of £1 each and 750,000 ordinary shares of £1 each. This is an issue of 600,000 of the preference shares and 650,000 of the ordinary shares, both at par. The prospectus states, however, that the number of ordinary shares offered for public subscription is limited to 150,000. The company has been formed particularly to acquire shares and other interests in drapery businesses. Arrangements have been made by which the company will acquire, directly or indirectly, controlling interests in Pettigrew and Stephens, Limited, Glasgow; Patrick Thomson, Limited, Edinburgh; Mr D. M. Brown, Dundee; and Messrs Watt and Grant, Aberdeen. Combined profits applicable to the interests to be acquired, after providing for all the charges and expenses of carrying on the businesses, but before allowing for Imperial taxation and depreciation of heritable properties, are certified to have been

New Zealand Loan and Mercantile Agency Company, Limited.—Issued capital £2,000,000, consisting of £1,000,000 5 per cent. cumulative preference stock and £1,000,000 ordinary stock; there is also £2,000,000 debenture stock, consisting of £1,000,000 4 per cent. first mortgage debenture stock and £1,000,000 4 per cent. second mortgage debenture stock. COMPANY MEETINGS, &c.

DORMAN, LONG, AND COMPANY, LIMITED.

RESULTS OF THE STRIKE AND COAL STOPPAGE.

PLEA FOR INDUSTRIAL CO-OPERATION.

PROGRESS OF BRIDGE CONTRACTS.

BRIGHTER PROSPECTS—FULL ORDER BOOKS.

The thirty-seventh ordinary general meeting of the shareholders of Messrs Dorman, Long and Co., Limited, was held at the registered office, Zetland road, Middlesbrough, on Tuesday, December 14th, Sir Arthur Dorman, Bart., K.B.E., presiding.

The Chairman, in moving the adoption of the directors' report and balance-sheet, said:—

The capital of the company has been increased during the year by the issue of £500,000 5½ per cent. debenture stock, bringing the total issue of that stock up to £4,000,000, less £72,350, which has been redeemed under the operation of the sinking fund. This issue was necessitated by the requirements of Messrs Pearson and Dorman, Long, Limited, in their development work in the Kent coalfield, to which I will make further reference later on.

Trading debts due by the company have been reduced from £1,132,346 to £611,609, but on the other side debts due to the company have been brought down from £825,497 to £372,616. These alterations are due to the restricted trade conditions brought about by the coal stoppage. The amount due to our bankers stands at £1,160,806, £168,736 above last year's figures, caused principally by additional expenditure on bridge contracts amounting to £475,000, plus a further investment in Pearson and Dorman, Long, Limited, of £67,500, and less the amount placed to our credit by the debenture issue I have mentioned.

On the assets side additions to capital expenditure during the year amount to £61,930.

Investments are increased by £128,864, the main increase being £67,500 paid in respect of calls on shares held in Pearson and Dorman, Long, Limited, £25,000 paid for the acquisition of further debentures in Wade and Dorman, Limited, who are the company's representatives in South Africa, and £25,000 in shares in the Hughes, Bolckow Shipbreaking Company, Limited, which investment was made with the view of improving our supply of scrap.

THE PEAK PASSED.

The assets also include expenditure on bridge contracts amounting to £1,147,600 in excess of receipts, so that the amount due to our bankers is practically accounted for by this item alone. We have now passed the peak of expenditure on the contracts we have in hand and the tendency henceforward will be towards a reduction in this item. I may say that nothing has been brought into the balance-sheet on account of profit on any of the bridges.

The net result of the year's operation is a loss of £178,962, to which we have to add £255,345 on account of debenture interest, interest on the 6 per cent. cumulative preference shares up to June 30th, and directors' fees. These figures, after deducting the balance brought forward from last year and after including £33,279 for redemption of the 5½ per cent. debentures, make necessary transfer of £345,532 from the general reserve.

It will be observed that it is not proposed to pay the dividend on the 6 per cent. cumulative shares, which in the ordinary course would have been paid on December 31st next. In coming to this decision your directors have had under consideration an adjustment of the period in respect of which this dividend has hitherto been paid, so as to make the dividend periods correspond with the company's half-yearly periods. If, as we may hope, matters improve during the next six months, your directors propose to pay a dividend for the period of three months from July 1st to September 30th and thenceforward to pay the dividend on June 30th and December 31st in each year in respect of the six months periods ending March 31st and September 30th respectively. I may remind you that the interest on this class of share is cumulative, and that when not paid it has to be carried forward as a liability.

EFFECTS OF THE STRIKE.

The result of the year's working is bad. I make no excuse for it nor do I offer any explanation beyond the deplorable upheaval through which we have passed during the last seven months. In the early part of the year the outlook seemed to have become brighter, and there appeared to be before us a prospect of returning prosperity, but unfortunately our hopes were rudely dispelled by the misguided tactics which led up to the general strike, followed by the coal stoppage.

For my part I cannot bring myself to believe that either of these

events had the wholehearted support of the majority of the workmen involved in them, and I cannot but look upon them as being to a large extent political. Is it too much to hope that the experience through which we have passed may have opened the eyes of our Labour leaders and shown them the danger towards which they were heading in following a band of political extremists whose sole object is to force upon the country an economic policy for which the country as a whole has shown no desire?

This country can only with difficulty support 40 per cent. of its population out of its own resources, and it depends for the needs of the remainder on a machinery of finance and credit which has taken centuries to build up. I do not believe it is the wish of the country that this machinery should be scrapped and something new and untried substituted for it.

In the iron and steel trade we have had in operation for many years a system of payment by results. In spite of extreme fluctuations that have been experienced in trade, the system has stood the test of time well, and the number of disputes has been remarkably few. Each side has trusted the other to observe honourably the terms of the agreement. We meet one another at frequent intervals to discuss our respective difficulties openly and frankly, and with the feeling that they will be recognised by the other side.

That this mutual trust has not been in vain I attribute largely to the fact that our problems have been purely industrial, and have been examined invariably without the introduction of political considerations.

Why cannot the same spirit be introduced into the coal industry, a spirit which recognises the right of either side to fair treatment by the other? I believe it can be, and already I see in many districts evidence of a feeling that the almost perpetual warfare that has gone on during the last seven years must stop before it leads to disaster. If out of the recent coal dispute there emerges a new and better spirit of genuine industrial co-operation, then I for one will say that our time of trouble has not been in vain.

A WORD TO THE MEN.

I have been engaged in the iron and steel trade for upwards of 50 years. I may fairly claim to have an intimate knowledge of its many problems, and I feel that I should be failing in my duty to our men if I did not take this opportunity of warning them with all the earnestness which I can command against being led away by the false preaching of those whose only aim is destruction, and who have never in their lives created anything of importance.

The effect of the coal stoppage on our business was direct and immediate. Our consumption of coal runs to about 7,000 tons a day, and no amount of foresight would have enabled us to overcome the physical difficulties of stocking even a few weeks' supply. We were thus compelled almost at once to close down our producing departments—namely, the blast furnaces, steel works, and rolling mills, and such stocks of coal as we had in hand, supplemented by purchases abroad and elsewhere, have been employed in keeping our coke ovens warm wherever possible, and in maintaining a limited output in our constructional department and the sheet and wire works.

The general result has been disastrous. We have not only had to suffer the loss of the profit we were earning when the stoppage began, but we have had to bear the heavy standing charges of our idle collieries and producing departments and the heavy increase of rates brought about by the amount of relief paid out by boards of guardians. I hope very earnestly that our business may never again have to withstand such a blow as the coal stoppage has proved to be, coming on top of many years of depression and of other troubles in the coal industry.

TIME USEFULLY EMPLOYED.

Advantage was taken of the enforced idleness to carry out a good deal of necessary overhaul and repair. This has added to the cost of standing idle, but it is work which cannot well be done at times when the works are in full operation, and it enabled us also to keep many of our staff at work instead of discharging them.

I think the policy was a wise one, and we are now resuming operations with our works in better order than they have been for years past. I will not enter into details, but will ask my son, our managing director, to address you more fully on this matter at a later stage.

Our constructional departments and our sheet and wire works have done well during the year, in spite of the coal stoppage. During the later months they were naturally affected to an increasing degree by the shortage of steel, but they have been kept in operation and have contributed materially towards lessening the effect on our revenue brought about by the suspension of our producing departments.

Our overseas branches in Australia, South Africa, and South America have also shown results which are satisfactory. Australia, in particular, where we have branches in Melbourne and Sydney, independent altogether of the Sydney Harbour bridge contract, has taken from us increased quantities of material, and the output of fabricated steelwork from the shops in those cities comes up to our expectations.

NEW SOUTH AFRICA MOVE.

In South Africa, Messrs Wade and Dorman are opening a new branch in Capetown, and here again the demand upon us for material is of great assistance to us. The situation in South America is somewhat different, because it is difficult there to compete against the low prices of Continental material. Nevertheless, our company in Buenos Ayres, the British Structural Steel Company, is doing very well, and justifying fully the step we took in acquiring so large an interest in that country.

THE BRIDGE CONTRACTS.

Our bridge contracts have proceeded almost normally, although here again difficulty has been experienced latterly with regard to the supply of steel. Progress on the Sydney Harbour Bridge has been entirely to our satisfaction. The foundations are nearing completion; the shops have been erected and equipped, and have commenced to turn out fabricated material, which we hear comes up in every respect to the highest standard. The granite quarry at Moruya has reached the final stage of development, and we have now commenced erection of the first part of the steelwork of the bridge. I am glad to say that the work has proceeded without serious hitch of any kind other than the trouble brought about by labour disputes in this country and in Australia.

Judging by the results up to the present, there is every reason to expect that the favourable estimate we formed of this contract will be fulfilled. Good progress has also been made on the other contracts.

At Newcastle-on-Tyne the situation is very much the same as at Sydney, the foundation work has been finished and erection of the steelwork commenced. At Khartoum four spans out of the eight have been erected, and it is expected that this bridge will be completed during the coming year. The bridge over the Nile at Dessouk in Northern Egypt is nearing completion, and we confidently expect that it will be finished in the early part of January.

During the year a further contract has been secured for the construction of a bridge over the Atbara in the Sudan. The staff and plant that have been employed at Khartoum will be available for this contract, and there should be no difficulty in completing it by the due date.

FUTURE SOURCE OF REVENUE.

Altogether, I am satisfied with the progress of the new department, and I look to it being a satisfactory source of revenue in the future.

As I have already stated, no credit has been taken on account of the profits already earned on these contracts, as we think it wise that this should be deferred until each contract has been finally closed.

Progress by Pearson and Dorman, Long, Limited, in Kent during the year has been very satisfactory, in spite of the many difficulties. The reconstruction of Snowdown Colliery is now almost completed, and coal is being worked in quantities which are increasing weekly. It is expected that a large output will be reached in a few months' time, and that with the facilities and appliances which are being provided it will be produced at a cost which will prove advantageous both to the firm and to their men.

It will interest you to know that several hundred tons of Snowdown coal were sent to our coke ovens in Middlesbrough during the stoppage, and that the results compare favourably with those we obtain from the best Durham coal.

At Bettshanger some little difficulty was experienced in passing through the water-bearing sands, but sinking has now reached a depth of some 1,800 feet, and it is expected to get down to the first important seam some time next month. Seams have already been passed through which are generally in accordance with borehole results, and one of which, a 3-foot seam, presents a good workable coal. They correspond closely with those at Snowdown, and we believe with confidence that the one to be reached next month will prove to be similar to that now being worked at Snowdown, and on which I have just commented so favourably.

PEARSON AND DORMAN, LONG'S.

During the year Messrs Pearson and Dorman, Long, Limited, obtained a guarantee from his Majesty's Treasury under the Trade Facilities Act for the issue of a loan of £2,000,000, which was fully subscribed. Among other conditions attaching to the loan

was the reorganisation of the capital of that company, which up to then had consisted in £500,000 of ordinary share capital, the rest of the expenditure having been found as and when required by the purchase of debenture stock by the two partners, ourselves and Whitehall Securities Corporation, Limited.

The reconstructed capital consists in £3,000,000 ordinary shares of £1 each and 1,000,000 deferred shares of 1s each, and in exchange for the moneys already subscribed by us for shares and debentures each of the partners received at par 500,000 £1 ordinary shares and 500,000 deferred 1s shares, all fully paid. They also received 1,000,000 ordinary shares of £1 each, paid up as to 5s, leaving a balance of £750,000 remaining uncalled from each of us to meet future requirements.

The sum furnished under the Trade Facilities Guarantee has provided Pearson and Dorman, Long, Limited, with funds sufficient to enable them to carry out the first stage of their programme of development, which will take some few years to complete. During that period further calls upon us for money will be small in amount.

ORDER BOOKS FULL.

Turning now to the future, as I foreshadowed last year there has been a great improvement in the shipbuilding trade, which I hope may continue, in view of the long period which has elapsed during which but little new building has been undertaken.

Thanks to a demand which already was increasing when our works were stopped, and to the accumulation of orders during the period of idleness, our order books are full for several months to come, so that for the first time for many years we shall be enabled to work at full capacity. This will help us materially in reducing the cost of production.

It may even prove that the present temporary shortage of supply may stimulate demand still further and afford the necessary impetus to carry us on well beyond the period of our present commitments. I would remind you, however, that the coal stoppage has lasted through well over two months of the current financial year, and that much leeway has to be made up before we begin to reap the benefit of these improved conditions.

Nevertheless, I think I may safely say that the prospects of the immediate future are brighter than they have been at any time during the last five years.

As regards the more distant future, conditions on the Continent are moving steadily in our favour, and there is evidence of an improvement in the world's demand for steel, which once it commences will, I think, increase rapidly.

Last year I said that the real remedy for our troubles was to come to an understanding with our Continental competitors which should be to our mutual benefit. We have not yet reached that stage, but, as you all know, the Continental makers have formed a pact between themselves with the object of controlling production. Great Britain has been invited to join in this arrangement.

A QUESTION OF TERMS.

We are in close touch with all that is happening, as our managing director has taken a leading part in the discussions which have taken place. The matter is receiving very careful and sympathetic consideration, but you will readily appreciate that, however desirable such an arrangement might be, much must depend on the terms offered to us. If they are not such as we can accept, we must go on along our own course confident of our ability sooner or later to restore the iron and steel trade of Great Britain to its proper place in the industry of the world.

During the last few months discussions of supreme importance have taken place between the Government of this country and representatives of the Dominions. I will not dwell upon the political results of the Imperial Conference, which are of the highest magnitude. From our point of view the industrial results may be equally far-reaching in their effect, and it is my earnest hope that out of the conference there may ultimately emerge a scheme of effective Imperial preference which will put the industries of Great Britain and the Dominions on the same level of comfortable security as that enjoyed by the industries of the United States. If this desirable result comes to pass, no one can be better placed than we are for taking full advantage of the improvement which will at once arise in these markets.

Rumours are rife about the position of heavy steel trade, and we see many suggestions being put forward that there will have to be a wholesale reconstruction. I will not repeat all I said last year when I went into this subject very fully, and I will content myself by saying that nothing has occurred during the twelve months to make me alter the opinion I then expressed.

COMPANY'S POSITION.

Your company is sound, it is not over-capitalised, and if our cash position may appear to be a bad one, it does not represent a series of heavy losses, but is due very largely to expenditure which must come back to us with profit. We have passed through a long period of unprecedented stress, and until this

year there has been no serious drain on our general reserve, which is still considerable. As for our investments, it is not our practice to publish a list of them, but I have one here for the inspection of any shareholder who wishes to see them and convince himself that the total value is not overstated.

It has been my practice annually to refer to the work done by our staff of every grade. This has not been a hollow compliment, but this year I want to pay them a special tribute. The conditions under which they have been working have been more than ever disheartening, yet no one has shown any signs of relaxing his efforts. During the coal stoppage many of them have been diverted to work other than their own. Some of our officials have been working in the collieries, even at the face, and the amount of coal that they have sent up has proved of enormous value to us in maintaining our works in a state of efficiency.

All ranks from directors downwards have consented readily to a reduction on their salaries, and while this in itself makes but a small difference towards reduction of the loss we have incurred, it nevertheless shows the spirit which pervades the whole organisation from top to bottom.

Sir Hugh Bell seconded the resolution.

THE STEEL CARTEL.

The managing director (Mr Arthur Dorman), in supporting the resolution, said: Before I refer to the company's works I would like to make a few remarks about the European Steel Agreement, to which the chairman has already alluded.

I am of opinion that one of the chief reasons for the adverse trade conditions which have existed during the last few years has been the lack of confidence created by the ever-changing level of prices. It is possible that some agreement with Continental makers may bring about the stability which is so necessary for the undertaking of new enterprises.

It is by no means certain that European countries will be satisfied in future merely to send cheap semi-finished material in large quantities into this country for fabrication here. In all probability their intention will be to develop further their finished trades, and so affect us even more seriously than they have in the past. If this view is correct, and a satisfactory arrangement can be made, I feel it is to the interest of all concerned that this country should have some voice in the general policy of the European Steel Agreement.

The agreement in no way controls prices, but only influences production after each country has produced the total quantity allocated to it.

You will be interested to hear that conversations have taken place to discuss a possible basis for participation, but the steel-makers of this country have not yet come to any decision.

We are fully alive to the requirements of our customers, and certainly have no intention of entering into any agreement which may be to their disadvantage.

RAIL-MAKERS AGREED.

During the year an understanding has been arrived at with the Continental rail makers, and the "European Rail Makers' Association" has been formed. Negotiations were of a lengthy and difficult description, but I am glad to say at the moment the various differences have been overcome. The object of the understanding has not been to get the better of our customers, but rather to maintain a more stable level of prices, and at the same time to leave a fair return to the manufacturer.

In June of this year I visited America in company with Mr W. L. Johnson, one of your directors, and Mr E. D. Morgan, general works manager of the Clarence Iron and Steel Works.

The reason of our visit was mainly to investigate American blast-furnace practice, and we were able to gather much useful information. Generally we formed the opinion that this country is behind America in blast-furnace methods, but with regard to steel furnace and rolling mills practice we did not consider that they have very much to teach us.

We intend to improve gradually our blast-furnaces by adopting mechanical charging and by the installation of larger blowing units. A great deal has been done in this direction, and we think that by continuing this policy we can considerably increase the present outputs. I mention these matters because criticism is levelled at the efficiency and management of our trade at the present time, and this criticism is usually of a very ignorant nature.

In the past year we have spent money in the further utilisation of blast-furnace and coke-oven gases, which we anticipate will result in considerable economies on the resumption of full operations.

EFFICIENCY PITCH.

We have made alterations at our coke ovens which have effected economies of labour, and have also carried out improvements to the soaking pits which heat the ingots for our rolling mills. In this connection I am glad to say that the majority of our workmen now understand that in the end these improvements are as much

to their advantage as to the interest of the shareholders of the company. We must continue this policy, as efficiency in our works is the real keynote of ultimate success.

Another question we have taken up is the unloading of ore at the wharves. Undoubtedly we cannot yet compare with a port like Rotterdam, where marvellous records in unloading are effected, but you must remember that they discharge into barges from both sides of the boat simultaneously. These barges are then towed up the Rhine and unloaded at the wharves of the various works in the Ruhr district. In our case we are only able to unload from one side of the boat, but the ore is discharged by grabs into trucks, and goes either for immediate consumption at the blast-furnaces or into the ore-stocking gantries, which have recently been improved. We have already succeeded in substantially increasing the rate of discharge, and intend to make further improvements in this respect.

IMPROVEMENTS AT THE PITS.

At our collieries we have also taken steps which we expect will tend to greater efficiency. In several places we have installed systems of intensive mining, such as belt conveyors and suction-filling plants, which we anticipate will reduce the working costs.

Another question which we have looked very closely into during the past year is the rating assessments of our various works. As you know, local rates are now a very heavy burden indeed, and are likely to be so for some considerable time. In many cases by agreement we have been able to obtain reductions which we considered fair, but in one case we were compelled to lodge an appeal at quarter sessions. We are quite ready to carry out our fair share of local taxation, but when I tell you that the total rates paid during the year under review amounted to approximately £160,000, you will understand that we are driven to protect ourselves to the fullest possible extent.

In the early part of this year our commercial manager (Mr J. A. Russell) paid a visit to India, which is one of the largest markets for our products. Their policy to-day is to encourage those firms that have establishments in that country, and it is our intention to open a branch there in the near future, with the ultimate object of establishing stock yards and constructional engineering works.

The year under review has been a very anxious one for us all, and we feel a great sense of relief that the end of the disastrous coal strike has now been reached. Our works are already in partial operation, eight blast-furnaces having been blown in. The Britannia and Redcar Steel Works have commenced rolling, and I hope that another week will see a resumption of operations at Acklam and Clarence. We have a good order book, with the prospect of working at full output for some months ahead, although it will be early in the New Year before we will be able to reach normal production.

AN OPTIMISTIC OUTLOOK.

Our works are in a very efficient state, and I look forward to better outputs than we have had in the past. At the same time considerable leeway has to be made up, especially as the first three months of the financial year will be adversely affected by the coal strike and the expense of restarting the works. Our output, however, is large, and should the world's conditions improve, as appears probable, I hope when we meet a year hence that a very much more satisfactory statement will be put before you.

You will be interested to hear that in addition to the officials and foremen of our collieries about 200 members of the staff volunteered for service at the collieries during the stoppage, where they rendered invaluable assistance by taking on all classes of work, including the hewing of coal. We have been able as a result of their efforts to keep the majority of our coke oven plants warm, and those are now in operation, enabling us to blow in blast-furnaces much earlier than would otherwise have been possible. We very much appreciate their loyal assistance, and I think that the time they spent at the collieries has not been wasted, for most of them obtained very useful knowledge of the inside working of a colliery.

In conclusion I would like to thank the staff for the loyalty they have shown to me and to the firm during what undoubtedly has been the most trying year of our history.

In this connection, I would like to make a special reference to our senior general works manager, Mr C. Moody, who, as president of the Iron and Steel Trades Employers' Association, has had a very difficult time, particularly during the general strike and the chaotic condition which followed. Many of these difficulties, I am happy to say, have now been surmounted, and we are looking forward to a better understanding with our men, as I think it is being slowly brought home to them that their own prosperity is bound up with the prosperity of the shareholders and of the management.

The resolution on being put to the meeting was carried unanimously.

The proceedings terminated with a vote of thanks to the chairman and staff.

BRITISH COLUMBIA ELECTRIC RAILWAY COMPANY, LIMITED.

"SPLENDID POSITION" OF THE COMPANY. INCREASE OF CAPITAL SANCTIONED.

The thirtieth ordinary general meeting of the members of the British Columbia Electric Railway Company, Limited, was held on the 16th instant, at the Great Eastern Hotel, Liverpool Street Station, London, Mr J. Davidson (deputy-chairman) presiding.

The secretary (Mr R. W. Bartlett, A.C.A.) having read the notice convening the meeting and the report of the auditors,

The Chairman, after paying a tribute to the late Sir Ernest Harvey, said: I am happy to say that we have with us to-day the president of the company, Mr George Kidd, who is here on a visit from Vancouver. Mr Kidd has been in charge of the company's affairs in British Columbia for the past 12 years, and it is primarily to him that you owe the present splendid position of the enterprise which is illustrated in the report and accounts now in your hands. I know that Mr Kidd very generously attributes the success of the company to the co-operation of his colleagues and his assistants in British Columbia, but they in turn have told me that the credit is due to Mr Kidd. At any rate, it is a happy controversy, and the more I hear of it the more I am sure that Mr Kidd must accept a very large measure of responsibility for the splendid position in which the enterprise is to-day. On to his able shoulders I propose to place the task of addressing you to-day.

MR GEORGE KIDD'S SPEECH.

Mr Kidd: Mr Davidson has said I am to have the task of addressing you to-day. I would say, however, that it is not a task but a very great pleasure to be able to meet you to-day. Many of the stockholders are known to me personally, because they have visited British Columbia and seen for themselves the properties they own. I wish a great many more of you could do the same, because I have never yet met a stockholder who has visited us and seen for himself the properties of the company and the activities of the communities we serve, who has not returned home satisfied with the present and full of enthusiasm for the future. Turning to the report and accounts which are now before you, we and your auditors, Messrs Price, Waterhouse and Co., have laboured to present these in the clearest form so as to give you a full and proper picture of your company's affairs. I think, and I hope you will agree, that we have succeeded so well that it is unnecessary for me to explain the figures in detail.

I think you will also agree that the results are eminently satisfactory, especially when I remind you of the very substantial reduction in our rates for commercial and domestic consumers of electricity which were put into force during the year under review. Capital required for present expenditure on further extensions and developments is well provided for. The physical condition of your properties is well maintained, and our relations with the local authorities and the public whom we serve are satisfactory. The trade and commercial activities of the Province of British Columbia show continued and stable expansion. The statistics relating to the production of minerals and forest products reveal substantial increases, and the development of the business of the Port of Vancouver tells the same story of progress and expansion. I do not want to trouble you with a lot of figures. One striking example will be sufficient—viz., that of lumber exported. The published figures show that for the first nine months of 1925 lumber exported from the Province of British Columbia was approximately 401,000,000 feet, whereas in the first nine months of 1926 approximately 545,000,000 feet were exported, an increase for the nine-month period of 144,000,000 feet, or over 35 per cent. These happy conditions are reflected in the report which is in your hands.

RANGE OF ACTIVITIES.

Due probably to the name of our company, which in no way indicates that we are engaged in selling electric current for commercial, manufacturing, and domestic uses, and that we also carry on a large and satisfactory gas business, the quotations for our securities appear in the London Stock Exchange official list under the heading of "Tramways and Omnibuses." No one acquainted with the character of your undertaking would think of looking for its securities under this classification. I propose, therefore, as briefly as possible, to give you some description of the services we render to the public of British Columbia. A population of approximately 375,000 persons is entirely dependent on your enterprise for the generation and distribution of electricity and the manufacture and distribution of gas for commercial and domestic uses, as well as for local transportation. As will be seen from our report, during the past year our hydro-electric power plants developed 389,418,400 kw.h., and we served 89.270 light and power consumers. We manufactured 891,304,100 cubic feet of gas for the consumption of 33,158 gas customers, and we carried 72,547,367 passengers, and hauled 417,003 tons of freight over our transportation system. In addition to the foregoing, we are gradu-

ally acquiring a number of motor coaches and lorries for the transport of passengers and freight. These motor vehicles act very largely as feeders to our railway system, and supply the rapidly growing demand for a service of this character. It will be apparent from the foregoing that such an extensive and varied system depends very largely for its success upon the character and capacity of the officials and staff who are responsible for its operation. I am glad to say that we have every reason to congratulate ourselves on having a first-class body of men, whose courtesy and efficiency are fully recognised by the public.

PENSIONS FUND.

You will see from the report that we recommend setting aside a sum of £40,000 as the nucleus of a fund for the payment of pensions to employees who have been in the service not less than 25 years, and who have reached the age of 65 years. This recommendation follows the modern practice of large companies who recognise the expectation of long and faithful service to some protection in old age. We have for some time granted loans to responsible and established employees for the purpose of building houses. We charge interest at the rate of 6 per cent. per annum, and require repayment by instalments spread over a period of approximately 15 years. This concession has been very much appreciated by the staff, and up to date some 142 homes have been provided by this means. We also carry a blanket life insurance policy, under which relatives of deceased members of the staff receive \$1,000 at a time when expenses are immediate and heavy. This policy towards our employees, together with the continued and substantial reduction in rates granted from time to time to the public as circumstances warrant, combined with the first-class character of our service, have resulted in an exceptional measure of public confidence, which was proved by the almost unique response to our issue of securities locally, to which I will now refer.

During the past few years public utility corporations on the North American Continent have experienced exceptional development and prosperity, due, in the main, to the continually increasing demands for electricity for both commercial and domestic purposes, but due also to the confidence which they have inspired in both the investor and consumer. This confidence has resulted very largely from a close study of what are generally described as "public relations," combined with the policy of offering their securities to their customers and employees. In the spring of this year your company followed this admirable example, which, as you will see from the report, was attended with unique success, and testifies as nothing else can to the confidence reposed in your company by the population we serve. Briefly, we offered \$2,250,000 6 per cent. preference stock in a subsidiary company called the British Columbia Electric Power and Gas Company, at 99 per cent., limiting the amount of any one subscription to \$5,000, and confining the application entirely to residents in British Columbia. Within six days of the opening of the lists we had applications for considerably over \$7,000,000, and were compelled to cease advertising and announce the closing of the lists. In order not to disappoint the public, we accepted \$5,000,000, which were allotted to some 10,523 applicants, of whom 1,359 were employees of the company. These facts, I think, sufficiently indicate the standing of the company in the communities where its operations are carried on.

PROVISION FOR INCREASED DEMAND.

In addition to the work and supervision involved in the operation of a system such as ours, it will be apparent that in the cities, towns, and districts of a province in which the population is rapidly increasing provision must be made some years ahead for the additional demand which will come upon our services. It takes at least three years to develop a hydro-electric power plant, and we must therefore always maintain a surplus of power to ensure continuity of service during construction periods. The average annual increase in the consumption of electricity has, for many years, been approximately 8 per cent. per annum. During the year with which we are now dealing this increase has exceeded 10 per cent., which if maintained means that the capacity of our hydro-electric system must be doubled every eight or ten years. Such a rapid rate of increase places a very heavy responsibility on your company to provide the capital necessary for development. So long, however, as the public depend upon us for their transportation, lighting, electric power and gas utilities, this is a responsibility which we must face, relying, as I feel sure we may with confidence, on the continued and steady growth of the territories we serve.

The growth of cities and towns brings with it other responsibilities involving heavy expenditure. In the early days of a community the practice is to distribute light and power by overhead lines carried on poles, this being the cheapest form of distribution. But with the growth of a city like Vancouver, when the central districts tend to become congested, it becomes necessary to eliminate overhead lines and substitute underground cables or

ducts for the carrying and distribution of electricity, and this can only be done gradually and at relatively heavy cost. In certain districts your company is faced with this condition of affairs, and has to make provision accordingly.

INVESTMENTS IN CANADA.

No doubt some of our stockholders have heard adverse criticisms of Canada as a field for investment due to the fact that unfortunately some undertakings which have raised their capital here for investment in Canada have failed or have proved only partially successful. Should any of you feel at all anxious with regard to our own or any other Canadian securities, I suggest that if in inquiry were made into the reasons for these failures it would frequently be found that insufficient investigation in the first place, or an unreasonably inflated capital, or mismanagement, or possibly all three, were generally responsible for the trouble.

I think a rebuttal of any such criticisms in a general sense can be found in the history of our company, which has now carried on business in Canada for 30 years, during which time we have had innumerable dealings with Governments, municipalities, and other public bodies whose respect and confidence I believe we have earned, as they certainly have ours, and to-day we are one of the most prosperous of Anglo-Canadian enterprises.

The Chairman:—Gentlemen,—I am sure that you have all listened with great pleasure to Mr Kidd's speech on conditions in British Columbia. Before inviting questions or comments I should like to move:—"That the balance-sheet as at June 30, 1926, together with the reports of the directors and auditors thereon, be and are hereby received and adopted."

Mr Kidd seconded the resolution.

The Chairman, in reply to questions, stated that there was no intention of making any further capital issue at present. The president had told the stockholders how rapidly the business was increasing, and it was desirable to have a substantial amount of authorised capital available for issue if required.

The resolution was carried unanimously, and the dividends recommended were declared.

A resolution was passed unanimously increasing the capital of the company to £5,320,000 by the creation of 320,000 new shares of £1 each, and an extraordinary resolution was also passed altering the memorandum of association so as to enlarge the company's facilities for the issue of securities by its subsidiaries.

BANK OF LONDON AND SOUTH AMERICA, LIMITED.

DIVIDEND MAINTAINED AT 11 PER CENT.

CHAIRMAN'S REVIEW OF CONDITIONS IN SOUTH AMERICA.

The sixty-fourth ordinary meeting of the shareholders of the Bank of London and South America, Limited, was held, on the 14th inst., at the head office, 6, 7 and 8 Tokenhouse yard, London, Mr J. W. Beaumont Pease (the chairman) presiding.

The secretary (Mr J. A. Stark) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and accounts, referring to the balance-sheet, said:

I will deal first with the item acceptances—account branches. I referred last year to a fall of nearly £2,000,000 in these, and a fall of about £1,800,000 has taken place this year. This is attributable not only to the reason which I mentioned last year—that is, a greater tendency to remit by cable—but to restricted trade with South America, and this latter cause is also responsible for the decrease in the next item on the balance-sheet.

Current accounts and deposits in currency at branches show a falling off of over £5,000,000. This, however, is more apparent than real, as this heading includes operations in exchange, certain of which have to appear on both sides of our sheet, and I will deal with them when I discuss our assets. Apart from these credit accounts connected with exchange, our deposits from the public stand at practically the same figure as last year. Bills for collection show a decrease of only about half-a-million, notwithstanding the depression in trade both in South America and, through the coal strike, in this country also. Rebate on bills not due is about £21,000 more than last year.

To turn to the asset side of the sheet, cash in hand is nearly £700,000 more than last year. The notable reduction in the next item is practically entirely due to exchange, our outstanding operations in this department having been very greatly reduced by the stability of the rate on New York, on Belgium, and on other countries, which has naturally precluded, or at least greatly diminished, the necessity to close exchange ahead for business concluded for payment at a future date. Our loans, advances, and discounts, you will be glad to hear, are fully maintained.

Bank premises, which stood last year at £1,835,000, now stand at £1,355,000, a reduction of £480,000, which is the result of the disposal of certain of our premises abroad in places where both the London and River Plate Bank and the London and Brazilian Bank were established.

Depreciation on capital employed abroad is £30,000 less than

in the preceding year, and will be further reduced by the sum of £81,218, which we recommend allocating to this item in order to write down the capital employed in Chile to the newly-established parity of 6d. I foreshadowed the desirability for this when I addressed you a year ago.

YEAR'S PROFIT.

Turning to the profit and loss account, our gross profit shows an increase of £60,000 over that of the previous year, which, however, is offset by the increase in our charges, amounting to £65,000. Comparison of these figures for one year with another is always subject to the rate of exchange ruling at September 30th in all countries where we are established, and as the reduction in our depreciation on capital employed abroad clearly shows, rates have, on balance, been higher this year than they were last year, which circumstance has contributed to the slight increase shown both in gross profits and in charges. The available balance of profit, including the sum of £411,300 brought in from last year, is £719,600, which compares with £725,100 last year. We propose to pay the same dividend as last year—11 per cent. per annum, to devote the sum of £81,218 to depreciation of capital employed in Chile, and to carry forward to profit and loss new account the balance of £390,605.

Last year I concluded my remarks on Argentina by quoting a cable from Buenos Aires, which warned us that the brilliant prospects for the wheat harvest had been dispelled by later conditions affecting the crop. The general quality of the grain proved to be poor and shipments have been lower than last year. On the other hand, exports of linseed and maize have been considerably greater than in 1925; both were heavy crops. There has been a marked decrease in the values of almost all Argentine products during the year, in sympathy with the general tendency of world prices to revert to pre-war levels, and pastoral interests, although prosperous on the whole, have also come under the influence of lower prices. Nevertheless, an atmosphere of greater contentment appears to have prevailed among cattle breeders than has been manifest in recent years, and this industry at any rate seems to have settled down definitely to post-war readjustment. Business in wool has been quantitatively on a high level, but here also values continued low. The position at the opening of the new season is substantially a sound one, the carry-over being comparatively small, whilst reports from European markets point to a firming up of prices. While lower values have ruled, the quantity of exports has increased, for the decline in wheat and meat shipments is more than offset by large increases in the volume of linseed, maize, wool, and other products, and the total weight of exports for the first nine months of 1926 was 607,354 tons (or say 7 per cent.) greater than in the same period of 1925. The fall in general values may be seen in the valuation of these exports, that of 1926, according to official figures, amounting to \$618,000,000 gold, or about \$75,000,000 less than the 1925 valuation of a lesser quantity. The year has hardly been a good one for importers for earlier expectations of an exceptional harvest, which failed to some extent to materialise, induced them to make heavy importations at the end of last year and the beginning of this, and the market became overstocked, with a consequence of pool sales as the result of a restricted purchasing power. A subsequent steady reduction of imports has gradually brought about more healthy conditions, and signs are noted of a reviving demand.

LATEST ARGENTINE REPORT.

A cable from Buenos Aires received yesterday states that "the Government estimate production cereals for this harvest just published gives 5,860,000 tons wheat, 1,820,000 linseed, 1,137,000 oats, 400,000 barley, being increases of 658,000 tons wheat, 29,000 barley, and decrease by 88,000 tons linseed, and 30,000 oats, as compared with last year. Estimated surplus for export 3,900,000 tons wheat, 1,400,000 linseed, 900,000 tons oats. Harvesting in Northern wheat zone well advanced, and grain good quality and weight. Southern zone not so far advanced, but equally promising. New maize crop reported in good condition. Grape vines in the district of Mendoza severely affected by recent frosts."

BRAZIL.

Doctor Bernardes, the outgoing President, handed over his office on November 15th to his successor, Dr Washington Luiz, who on that date outlined his policy, and promised to pay special attention to national finances, to stabilise exchange, and to guarantee paper currency by gold. He stated that stimulus would be given to agriculture and national industries, and that transport would be extended and the merchant marine increased, and, finally, that public expenditure would be restricted to essential services, and revenue raised to a level sufficient to meet this expenditure, and to maintain budgetary equilibrium and meet external obligations. In the last ten days an announcement has been made concerning the monetary policy of Brazil, and the proposed stabilisation of her currency. I understand that these proposals are put forward by the Finance Committee of the Brazilian Government, and that they are now before the Brazilian Parliament for approval or amendment.

Brazil's foreign trade during the last year showed less favourably than in the previous year, as her balance of trade fell from £26,750,000 to £18,500,000. For some months past the State of Sao Paulo has passed through one of the most severe industrial crises which has ever oppressed that State, and, indeed, a condition of trade depression actually pervades the whole of Brazil. There are two main reasons for this. One is the fall in the values of cotton, both raw and manufactured, and the second reason is the enforced limitation of coffee sales.

Weather conditions in Uruguay during the year have again been most favourable, and cattle and sheep are in excellent condition. The price of cattle from the estanciaero's viewpoint was somewhat less remunerative than during the previous year, and there would appear to be no immediate prospect of an improvement. The realisation of the wool clip, the quantity and quality of which is reported to be above the average, should assist the producers, as news from the consuming markets is favourable. The public finances of Uruguay are in a satisfactory condition, and for two years in succession revenue has exceeded expenditure. Trading in general has not been brisk during the year, a dullness, I believe, that is less due to lowered agricultural benefits than to the readjustment of business conditions to which I referred last year.

Although sharing the trade depression that is affecting South America generally, Paraguay is still making good progress, both economically and financially. The 1924-25 Budget showed a surplus of revenue over expenditure; interest on the external debt continues to be regularly met, and the quotation for Paraguayan bonds has materially appreciated during the year.

CHILEAN NITRATE INDUSTRY.

The nitrate industry in Chile has recently received a serious set-back. The check is the outcome of the economic law which rules that, other things being equal, the cheaper article must inevitably oust the dearer from the market. The association which controls the Chilean output of nitrate endeavoured to stimulate the sale of the staple by a reduction in the price of 10s per ton, but this has not been sufficient to meet the competition from the synthetic product, which, through continuous and successful experiments, has been greatly improved, and the sales for the current nitrate year in Chile will be, it is estimated, a million tons less than last year. The new banking law places certain restrictions on both native and foreign banks operating in Chile, such as, for instance, the limitation of the amount of public deposits that each bank may hold, to four times the amount of its paid-up capital and reserves in Chile, and the further limitation of the amount that may be advanced to any individual borrower, which is also based solely on the capital and reserves in Chile and not on the resources, as a whole, of the bank.

COLOMBIA.

The soundness of affairs in Colombia was put to the test during the year by the unprecedented drought which rendered the River Magdalena unnavigable for many months. This waterway is the chief freight artery of the country, and its paralysation caused accumulations of imports at its mouth, and of exportable goods at the various towns along its length. It speaks well for the commercial situation that merchants were able to meet the obligations relating to the suspended imports and to tide over a period that ultimately became very difficult through circumstances which a few years ago might have proved financially insuperable. Rains and the melted snow from the Andes have made matters almost normal again, and the congested goods are being gradually dispersed. Another serious fire occurred in the centre of Manizales in March last, and the premises, to which we had moved after the first fire, were burnt out. Fortunately, owing to the zeal and ability of Mr Donnet, the manager of our branch, aided by a loyal staff, no loss of books, cash, or documents was incurred, and our business was again carried on without interruption in other premises. Coffee-growing continues to be a profitable undertaking in Colombia, and the many new regions that are being cleared and planted with the trees are evidence of the healthy expansion of the industry. Coffee and bananas form the Republic's principal exports, and to these cotton may be added in the near future, as it has been decided to lend official assistance to cotton-growing, the possibilities of which were favourably reported upon by the British experts who visited the country during the year. The Government programme for the completion and improvement of the railways is proceeding steadily, and the improved credit of the Republic has made it possible to raise the loans necessary for the work. To assist in the further development of the country we are shortly opening a branch of the bank at Cali.

Our branches in Lisbon, Oporto, Paris, and Antwerp, and our agency in New York continue to show satisfactory progress, and are of great assistance to our business with South Africa.

The report was unanimously adopted.

ORIENT STEAM NAVIGATION COMPANY, LIMITED.

RESULTS OF DIFFICULT YEAR.

The annual general meeting of the Orient Steam Navigation Company, Limited, was held, on the 17th instant, at 3 and 5 Fenchurch avenue, London.

Mr Irvine C. Geddes, who presided, said that the profit on the year's working, after providing for depreciation, was £371,327 against £320,790 the previous year, but, whereas in the earlier year they had been able to make provision for contingencies before arriving at the balance, this year they had had to draw upon the reserves previously made in order to mitigate somewhat the adverse effect on the accounts from the loss of revenue and increased expenses incidental to the unofficial strike of seamen in Australia during the autumn of last year. But for that transfer, which was possible only because of the self-denying policy adopted in previous years, they would not have felt justified in recommending the same rate of dividend as for last year.

Last year the chairman had mentioned that the directors had in contemplation the capitalisation of a portion of the company's reserves. This year of grave industrial unrest had not been favourable to the realisation of that project, but the managers still had the subject under consideration.

PAST YEAR'S CONDITIONS.

The strike already referred to had been a disturbing feature in the year's trading, and rendered it difficult to give any realistic comparison with former years, but, taken broadly, there was no material change in the volume of passenger traffic. Their experience emphasised two features in the Australian passenger trade—its inelasticity and the seasonal character of its movement, which became more pronounced. Those features were unfortunate. An expanding traffic and a steadier load factor would make reductions, in rates or higher speeds, or both, economically possible. Third-class traffic followed the seasonal trend, though outward the position was helped by a steady, though relatively small, flow of migrants. It was to be hoped that as years went by they would be able to record a steady increase in that class of passenger.

Shippers of outward cargo continued to give the company good support, but thereto there was still a lamentable disparity between tonnage offering on the berth and the cargo available. That was also apparent in the homeward trade. In the early summer a reduction of approximately 10 per cent. in homeward rates had become operative, and subsequent events had shown that an increase, not a decrease, would have been justified.

The cost of bunker coal had risen by leaps and bounds, and, although with the resumption of work in the coalfields the reason for that increase was passing, they were committed to high-priced coal for some time ahead. Much of the coal used had been of inferior quality.

Their pleasure-cruising services had been well patronised, and arrangements made had been approved and appreciated by their clients. The "Otranto" had proved a most satisfactory addition to the fleet. They had placed an order with Vickers, Limited, for a fourth new ship of 20,000 tons to be named the "Orford." Representations made to the Port of London Authority regarding the provision of suitable dock facilities in Tilbury were at last bearing fruit. They understood that work had been commenced, and they could only hope that there would be no further delays. A start had also been made on the ocean landing stage, and on the completion of those improvements London would at last be in a position to cater for a modern passenger ship.

22-KNOT SERVICE IMPRACTICABLE.

With regard to the proposed 22-knot service to Australia, to which a good deal of publicity had been given, there was no reason to alter the views expressed by the chairman two years ago, that such a service could only be maintained, if at all, at the cost of a most formidable subsidy. Traffic in the Australian trade was neither of the character nor of the dimensions to support the North Atlantic standard of speed and fares. For the relatively small number of passengers, and the relatively small percentage of mail matter to which the maintenance of such a standard was a matter of urgent moment, they believed that the future lay in the air rather than on the ocean. Whether the Orient Company would ever be concerned with the manning of airships he did not know. In any event, they would not be a substitute for, but the complement of, ocean transport, and they would continue to maintain an efficient and up-to-date service.

Their future depended on the commercial position in Australia. The backbone of Australian prosperity was wool, and it was expected that this year the total clip would not fall far short of that of the previous season. The outlook for wheat was also good, and promised an exportable surplus considerably in excess of last year's, so that on the whole they could look forward with reasonable optimism to the immediate future in Australia. It was to be hoped that some of that prosperity would be reflected in the profit and loss accounts of shipowners who served Australia; a little encouragement was sorely needed.

The report and accounts were unanimously adopted.

THE SCOTTISH TEA AND LANDS COMPANY OF CEYLON, LIMITED.

SUCCESSFUL RESULTS OF YEAR'S WORKING. BOARD'S SOUND POLICY—GENERAL OUTLOOK.

The forty-ninth ordinary general meeting of shareholders was held within the company's registered office, Edinburgh, on Wednesday, December 15, 1926, Mr T. J. Carlyle Gifford, W.S., presiding.

Mr William Sime C.A., secretary, having read the notice calling the meeting and the auditor's certificate,

The Chairman said: Gentlemen,—I presume that, as usual, I may take the report and accounts as read.

While this is the forty-ninth annual general meeting of this company, it is the first under our new name of "The Scottish Tea and Lands Company of Ceylon, Limited." It is also the first at which we present a report and relative accounts bearing upon a full year's working of the amalgamated estates of over 6,000 acres of mature tea which this company now owns.

The past year has seen the completion of the changes in the company's capital resulting from the acquisition of the Haputale and Madulseema Estates. Our issued capital is now £428,875, in shares of £1 each, and we have neither debentures nor preference shares. It may be well to remind you of the actual changes since the close of the 1924-25 year, when our issued capital stood at £91,700. Two separate steps have since been taken. We allotted 79,850 shares of £1 each to the sellers of the Haputale and Madulseema Estates.

Our issued capital was thus increased to £171,550. We then capitalised a sum of £257,325, part of the reserve fund, and issued to our shareholders three new fully-paid shares for each two shares held, thus issuing 257,325 shares and raising the issued capital to its present figure of £428,875. That is a capital which makes it possible to have a proper market in the shares, a valuable convenience not formerly enjoyed by the constituent companies.

These operations have caused changes in the reserve fund, which in last year's balance-sheet stood at £89,899 10s 2d, and in this year's report stands at £175,809 4s 8d. Out of last year's profits we transferred £5,000 to the reserve fund, and the purchase of estates costing £435,457 by an issue of 79,850 shares added £355,607 to the fund, which then stood at £450,506 10s 2d. We capitalised and distributed to the shareholders £257,325, and have charged against the fund the expenses connected with carrying into effect the agreements with the Haputale and Madulseema companies, including stamp duties, which amounted to £17,372 5s 6d, thus leaving the figure of £175,809 4s 8d which you see in the balance-sheet.

PAST YEAR'S WORKING.

The results of the past year's working have been most satisfactory, and have enabled your board to recommend a total dividend for the year equivalent to 25 per cent. on the present capital. That is equal to an increase of 2½ per cent. on last year's dividend. It cannot be said that climatically the year was very favourable. On the Uva side of Ceylon, where lie all our new estates and Sarnia—the largest of our old estates—as well as Brookside and Alnwick, the rainfall for the year was below average, and a severe drought occurred. On the Kandy side the failure of the South-West monsoon of 1925 led to poor returns at the end of the year, and in 1926 we had a severe drought in the early months, though the rain when it did come, in May, was severe. Conditions of drought naturally cause disappointing crops, and the crop from our old estates was 87,000 lbs less than in the previous year. Cost of production also suffered. The average cost of production on revenue account for all our estates was 53.63 cents per lb. That is a comparatively high figure, and in considerable measure our new estates are responsible for it. But we were aware that their average crop per acre was lower and their costs higher than on our older estates, and that was taken into account in the terms of amalgamation. We are hopeful that in time their crops will increase under the present system of cultivation. The question of a reduction of costs has been considered by your board, and is receiving very close attention from Mr Hyde. Prices, on the other hand, have been good, the average for all Ceylon teas having been nearly ½d per lb. better than in the previous year. Our estates have done even better than that, as you will see by comparing the figures in the last two reports. Our highest average price has been obtained for the tea from Haputale—one of the new estates—the produce of which is sold in London under the mark of Kelliebedde. The average for the whole Haputale crop—all grades—was 1s 1½d per lb.

BOARD'S SOUND POLICY.

These last four years have been so successful, and the dividends

distributed have been so good, that I wish to explain what the directors' policy has been and is in these good times. We cannot hope to be able to forecast how long good prices will last. What we can do is to maintain a system of liberal cultivation and fine plucking, and that we are doing. Further, we have in view that our estates are situated at elevations at which a high class of tea can be grown, and that the land available for extensions of planting at such elevations in Ceylon is very limited. We have, therefore, been steadily planting such suitable land as we have, and if you look back over the company's reports you will see that in 1921 we had 2,788 acres planted in tea. To-day, apart from the Haputale and Madulseema Estates we have 3,193 acres in tea, so that in five years the area has increased by 405 acres. Of that 112 acres are the Kinloch Estate, bought in 1922, and we are left with 293 acres of extensions which have been financed entirely out of revenue. We have been able to buy good land suitable for planting adjoining Sarnia to the extent of about 170 acres in the last two years. We hope to plant a further 70 acres on Plaiderie this year. Extensions are also being taken in hand on the reserve land of the new estates, and we hope to plant this year 30 acres on each of Haputale and Mahadawa.

EXPENDITURE ON BUILDINGS AND MACHINERY.

In these good years, too, we have paid and made provision for paying for the cost of reconditioning or extending the cooly lines on all our estates in order to bring them up to the new Government standard. We have also replaced the old engines in the factories on most of our old estates. We have improved and extended several of the factories, and we have built a new bungalow on Plaiderie. Thus to-day Mr Daniell is able to report to us that the estates under his charge have all the power they require now, and that generally capital outlay should show a marked reduction in each of the next few years. In due time we may have to face some heavy expenditure on buildings and machinery on our new estates. However, up to date we have paid for all these extensions and improvements out of revenue, and this year we have made a substantial addition to the reserve for that purpose. In these ways and by liquidating the Kanganies debts out of revenue we have tried to make provision for a rainy day should it come. The net return from the company's estates and factories thus differs from the figure which would be shown by deducting the cost of production per lb from the average net sale price and multiplying the resulting figure by the number of lbs produced in the year. But I am sure that you will agree that in good times the wise policy is to meet such expenditure as I have referred to out of revenue rather than write up capital account.

TRIBUTE TO STAFF.

Before arriving at the net return from the estates, we have again made provision for what we believe to be liberal bonuses to the staff in Ceylon, and I am sure you will approve. The services of the staff will be the subject of a special motion at a later stage, but I cannot fail to record the board's high appreciation of the services of the staff, and in particular of Mr. Daniell and Mr. Hyde, our two general managers.

I would also like to express our gratitude to Mr Sime, our secretary. The recent amalgamation and the subsequent changes in the capital of the company have thrown much heavy work on his shoulders, and it has, of course, been very efficiently performed.

GENERAL OUTLOOK.

I shall only touch very lightly on the general outlook. We have Mr Dickson, of Messrs Dickson Anderson and Co., our selling agents in London, here to-day, and he will tell you something of the position from the point of view of those in direct touch with the market. But we are evidently faced with a heavy increase in the production of common teas this year in India, Java, and Ceylon, and though such tea does not directly compete with the finer teas we produce, and India has fortunately not increased her production of finer teas, still we shall be more at ease when we see that increased production out of the way. Russia has been disappointing as a consumer in 1926, and the habit of tea drinking does not grow so quickly in the United States as we could wish.

I now beg to move the adoption of the report and of the directors' recommendations contained therein, and I shall be glad to try to answer any questions any shareholder may wish to ask or to hear any remarks from shareholders. Meantime Dr. M'Kenzie Johnston will perhaps second my motion.

Dr R. M'Kenzie Johnston: I have to second the adoption of the report which has been put by you to the meeting, and I will do so without any comments, because you have dealt with it so fully and so widely.

The resolution was put to the meeting and carried unanimously.

Mr J. Maxtone Graham moved a vote of thanks to the staff in Ceylon, which was seconded by Mr Thomas Dickson, and cordially agreed to.

Mr. Thomas Dickson, in referring to the tea market, said the company had done exceedingly well up to date. Although crops from India, Java, and Ceylon for 1926 were heavier than last year, they were mostly of an inferior quality. This company was favourably placed, however, as it produced teas of the finest quality, and these are not likely to depreciate to any great extent.

The rest of the business was formal.

KILLINGHALL RUBBER DEVELOPMENT SYNDICATE, LIMITED.

SPLENDID RESULTS—INTERESTS IN TIN SYNDICATE.

The seventeenth annual general meeting of the Killinghall (Rubber) Development Syndicate, Limited, was held, on the 15th instant, at the registered offices of the company, 7 Martin's Lane, Cannon Street, London, Mr W. Arthur Addinsell, chairman of the company, presiding.

Mr J. Lewis, on behalf of the secretaries (Messrs Bright and Galbraith, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I move: "That the directors' report and accounts in respect of the year ended June 30, 1926, as submitted to this meeting, be approved and adopted; and that a final dividend of 30 per cent., making a total dividend of 50 per cent. for the year, be declared and paid."

My colleagues and I consider it a privilege to submit to you the statement of accounts for the year. Our net profit was £36,000; our capital is only £52,500.

That we were able to secure an average net price of approximately 2s 1½d per pound for our rubber is, of course, mainly responsible; also, the increase in the export rate, allowed by the restriction enactment, enabled an output of 463,193 lbs to be harvested, as compared with 267,017 lbs for the previous year.

Although we have secured a higher standard production on reassessment the exigencies of the restriction enactment must result in a lower output for the current financial period, and in the present state of the rubber market we can hardly expect to equal the amount of net profit.

You will observe, however, that the amount required to meet the total dividend of 50 per cent. for the year under review is approximately £10,000 less than the profit earned. If, when I meet you next year, I am able to submit a resolution which provides for a dividend of 50 per cent., it will, I hope, be at such a rate as in all the circumstances will be considered equally satisfactory.

THE ESTATE.

I am sure you will not expect me to comment upon the accounts in detail; also there is very little to be said in connection with the estate, where all works have been carried out in a systematic, efficient and economic manner.

You will see from the report that the board have authorised a slight extension to the planted area, and we shall continue this policy so long as there is any land available. The expenditure required for opening a comparatively small area year by year can be met out of revenue without affecting dividends, and does not necessitate a call on shareholders for additional capital.

Some few weeks ago you received a circular giving details of this company's interest in a syndicate which has been formed to prospect for tin in the locality of this company's estate. Operations are at present confined to an area on the Hongkong estate, which adjoins the southern boundary of Killinghall, and I anticipate that in the early months of the New Year you will receive further particulars and an invitation to subscribe for shares in a company to be formed to work that area.

I have pleasure in again recording the board's appreciation of the services rendered by the estate staff, including our local agents, and in expressing to them our thanks.

Mr Harold C. Rendle seconded the motion, which was unanimously adopted.

The retiring director and the auditors were re-elected, and a vote of thanks to the chairman and directors, and to the staff and agents in the East, concluded the proceedings.

CITY OF LONDON ELECTRIC LIGHTING COMPANY, LIMITED.

SATISFACTORY RESULTS.

CAPITALISATION OF RESERVES.

The ordinary general meeting of the City of London Electric Lighting Company, Limited, was held, on the 15th instant, at the registered offices, Falcon House, Aldersgate Street, London. Mr J. B. Braithwaite, the chairman, presided.

The secretary (Mr A. F. Harrison), having read the notice convening the meeting and the report of the auditors,

The Chairman, after expressing regret at the death of Sir David L. Salomons, who had been a director, with a brief interval, ever since the inception of the company, and explaining that the lateness of the meeting was due to their having awaited the settlement of outstanding questions in connection with the Act of 1925, said that it would be seen that the balance-sheet was presented in a changed form; that was to comply with the requirements of the Act of 1925. Dealing with the balance-sheet, he said that it would be seen that the capital expenditure from the inception of the company to June, 1925, was £4,151,919. Of that they had already written off in respect of demolition £980,784. It had always been the policy of the company whenever improvements were made in the generating plant to scrap their old plant and put in the very latest thing they could in order to secure the maximum of economy. In addition to the figure he had mentioned, they had written off £469,271 in respect of depreciation. In the revenue account it would be seen that the proceeds of sale of current stood at £750,271, as compared with £743,853, an increase of only about £7,500, but, if they had had the same average price as in 1924, the figure would have been £830,992, or an increase of £87,000. That showed the effect of the policy which they had always pursued of reducing the price to their consumers as rapidly as they possibly could. They had given away to the consumers £495,000 up to December 31, 1924, and in 1925 they had made them a further present of £87,000, so that within the last three or four years they had made reductions in the price of current which resulted in their consumers being £582,000 better off than they otherwise would have been.

FUEL ECONOMY.

The cost of coal and fuel was £112,575, as compared with £134,967, a decrease of £22,392, and yet, in spite of that decrease, they had sold 6,550,000 units more than in the previous year. When it was realised that they had generated and sold over 6,500,000 additional units for an economy in coal of £22,392, he thought it would bring very clearly before their eyes the wisdom of their adopting the most up-to-date plant and effecting the greatest economies possible. That result reflected the very greatest credit on their chief engineer, Mr. Frank Bailey, who was also one of the managing directors, and the whole of the staff at the Bankside Power House. He ventured to say that there was no power-house in the country that was generating electricity more cheaply.

The whole of the generating expenses, taking generation and distribution together, showed an economy of £19,000, as compared with the previous year's figure. Management expenses were practically the same. It was interesting to note that the bad debts were only £457, which he thought was a very satisfactory figure with a revenue not far short of £1,000,000. As they had over 18,000 consumers, he thought that reflected great credit on the commercial side of the undertaking. They had placed to provident fund £2,553 and to the benevolent fund £20,000.

The result was that in the new form of presenting the accounts they carried £397,696 to the net revenue account, as compared with £349,276, but that did not represent the position quite clearly, and, if they made the necessary adjustments in order to compare with the previous year's accounts under the old system of arrangement, the real improvement in the profit, as compared with that of 1924, was £73,065.

UNIFYING THE GENERATING RESOURCES.

With regard to generating arrangements as between themselves and the rest of the companies forming the Eastern Group, under the schedule to the Act of 1925 they had to make some arrangements for pooling or unifying their generating resources. They had suggested to the Electricity Commissioners a committee to deal with that, but the Commissioners were not quite satisfied with the proposal and had asked the directors to prepare certain figures and curves, which were being prepared. As a matter of fact, the directors of this company had taken time by the forelock and anticipated most of those things. When the Act of 1908 was passed he was chairman of the County of London Supply Company, and they at once interconnected their generating stations as far as possible, and, later, the Bankside station was connected up with Wandsworth, with the result that they had been supplying current to the County Company recently, and were doing so at the present time, so that, so far as the pooling of generating

resources was concerned, they had gone a very long way in the direction which the authorities had found to be desirable.

CAPITAL REQUIREMENTS.

With regard to capital requirements, the directors had thought it wise to provide for that by creating 5 per cent. consolidated debenture stock, £220,000 of which they had sold. He believed that stock was obtainable in the market free of stamp and fee at 99, at which it was a very fine purchase. In addition, they had offered the 4½ per cent. second debenture stockholders an opportunity to exchange into the new stock, receiving 95 per cent. of it for every £100 of their stock. Up to that morning holders of about £167,000 of the second debenture stock had sent in their requests to exchange. That represented about half the total, and they still had until the end of the year to decide, so that the directors did not yet know what the total would be.

The object of that issue was to provide for additional plant and for the enlargement of sub-stations. Owing to the increase of their load and the demand in the City, they had been compelled to face the question of providing additional space in their sub-stations. They thought that the £220,000 of new stock which they had sold would provide for their immediate capital requirements right into next year.

With regard to the Government Bill of 1926, which he saw from the papers that morning was supposed to be ready to receive the Royal Assent, it was a mystery Bill. They would naturally have supposed that before a complicated measure like that was introduced there would be some urgent public demand for it, either from the industry or from the consumers, but the report of the Electricity Commissioners, issued a day or two ago, only deepened the mystery, for it stated that since 1922 there had been an increase of 51.3 per cent. in sales of electricity; that did not sound as if the industry was at a standstill. It might be thought that no progress was being made in putting up new generating stations, but that report stated that during the year to March 31, 1926, they had authorised no fewer than 16 new generating stations and 585,700 kw. of additional generating plant; that, again, did not look as if the industry was at a standstill.

LOANS SANCTIONED.

As to capital, they found that the Commissioners sanctioned loans during the same period amounting to £9,683,301. It might be said that the cost of electricity was going up, but the report showed that the decrease in the cost was going on, and it was rather gratifying to those engaged in companies like theirs to find that the company's costs were lower than the municipal costs. From what he had said, the shareholders could see that the Bill was an absolute mystery. He could only say that he deeply regretted the measure. From all that one knew of the industry and saw in the Commissioners' report, the industry was at last beginning to go ahead and make satisfactory progress. Now there was introduced a new central electricity board which would be a further obstruction to progress, and would only result in raising the cost of electricity to the consumers and checking the development of the industry. He moved the adoption of the report and statement of accounts.

The Marquess of Winchester seconded the resolution, which, after the Chairman had replied to a number of questions put by Mr Hedges and other shareholders, was unanimously adopted.

ALTERATION OF ARTICLES.

The Chairman then moved an extraordinary resolution, having for its object the alteration of the articles of association to enable the reserves to be capitalised. He said that as the articles stood at present the company had no power to capitalise their reserves, and it was very desirable that they should obtain the power which the proposed alterations in the articles would give them. Whatever reserves they capitalised they were not entitled to get a penny more in the way of dividend. All they could get until 1932 was £120,000 a year, *plus*, if they could earn it, an amount equal to one-sixth of the consumers' benefit. That benefit was the difference between the standard price and the average price paid by the consumer. It was rightly called the consumers' benefit because it was in the consumers' pocket. The shareholders could not get it. If the resolutions were passed at that meeting and confirmed at the meeting in January, the board proposed, to begin with, to capitalise £400,000. That was to say, that the holder of 1,000 shares would get another 500 shares, but would get the same amount in dividend. Instead of getting 15 per cent., he would get 10 per cent., but the money received would be the same. It was not quite true to call the new shares bonus shares, because they did not increase the actual dividend by a single penny. All they did was to spread over a large area the amount the shareholder was entitled to receive.

Mr Frank Bailey, M.Inst.C.E., one of the joint managing directors, seconded the resolution, which was unanimously adopted, and the proceedings terminated with a cordial vote of thanks to the chairman and directors.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED.

POSITION AND PROSPECTS OF THE PLATINUM AND DIAMOND INDUSTRIES.

The Johannesburg Consolidated Investment Company, Limited, announces the receipt of the following cabled report from Johannesburg of the proceedings at the adjourned annual meeting held on December 14, 1926:—

At the annual meeting of shareholders adjourned from November 30th the permanent chairman, Mr S. B. Joel, presiding over an enthusiastic meeting, expressed pleasure at meeting the shareholders again in annual meeting. He was greatly impressed by the progress in every direction since his last visit to Johannesburg five and a-half years ago.

The report and accounts for the year ended June 30th last were unanimously adopted.

The net profit for the year was £743,538. The reserve fund was increased to £700,000, and dividends amounting to £592,500 had been paid. The carry-forward amounted to £179,200. The total value of the assets was £6,043,747, and the liabilities to the public £918,296, leaving £5,125,450 as the value of assets in excess of liabilities. These figures disclose an exceptionally strong financial position.

Speaking collectively of the mines of the group, the Chairman stated that the ore crushed for the year ended June 30th last totalled 7,783,700 tons, and the gold won 2,558,814 fine ounces, approximately the same as the previous year. Dividends totalling £1,814,703 had been paid, and the group had recently taken the premier position of profit-earners on the Rand. The total cost of production was £6,965,637, of which over £3,000,000 represented wages and £3,000,000 stores; a large proportion of which was for South African products, demonstrating the paramount importance of the industry to the Union. The previous year's average working costs for the group was 18s 7d per ton, and for the whole of the Witwatersrand 19s 3d. This year it was 17s 11d for the group and 18s 11d for the Witwatersrand. Improved machinery and methods might lead to a further reduction, though this depended largely on conditions outside the control of the group.

PLATINUM.

The company now possesses a controlling interest in Potgietersrust Platinums, Limited, which has recently absorbed the Rustenburg Platinum Company and the Premier Rustenburg Company. According to the consulting engineer's report, the enlarged company holds very valuable areas, in which a good deal of exploratory work has been done. In the Potgietersrust district development is in progress on certain farms on wide ore bodies carrying notable quantities of platinoids. One such body has been opened up along the surface for 2,500 feet, and on the first level its width has been ascertained by crosscuts for 800 feet along the strike in sulphidic ore. The vertical shaft has been sunk to the second level, 200 feet below the surface, and a crosscut is being driven to the ore body. A conservative estimate of the average width is 15 feet to 18 feet, and the dip is 35 to 40 degrees. A great tonnage is indicated in this ore body, and a small amount of development on the first level has exposed 75,000 to 100,000 tons of ore, from which a milling grade of over 7 dwts of platinoid should be maintained. Further north other ore bodies with a higher platinoid content are being opened up on the surface and first level with good results. In addition to platinum, the ore contains a considerable amount of palladium and little iridium. A crushing plant has been in operation for some little time, with a capacity of 100 tons per day, but experimental work has taken precedence of output. In the extraction accomplished by flotation plant, at present, 60 per cent. of platinoid is recovered, which is satisfactory in view of the difficulty of treating dolomitic serpentine, where sulphides are very finely disseminated. Better results are anticipated with certainty. The grade of ore crushed in November was 7.5 dwt, of which 3.2 was platinum and 4.3 palladium. Twenty-five tons of concentrates have been shipped to European firms for smelting and refining, and the future disposal depends on the results obtained from these shipments. The recently acquired areas in Rustenburg contain platiniferous occurrences of different nature, the precious metal carrier being a thin reef with very regular appearance. The strike dip and content outcrop can be followed many miles, and has been exposed by pits and trenches on one continuous stretch for 13 miles. The platinoid content over long stretches approaches that of Potgietersrust. The occurrences and percentage of platinum is higher, being in the vicinity of 75 per cent. The area is easy to develop, and rapid progress can be assured, giving unlimited tonnage in both Rustenburg and

Potgietersrust areas, and, as far as can be judged at present, the probability is that these districts will be able to supply all the platinum and palladium the world can absorb at a price which will leave a very satisfactory margin of profit.

DIAMONDS.

Referring to last year's meeting, the chairman stated that the hopes then expressed as to the benefits likely to result from the new syndicate and the more complete control of the diamond trade which it secured had been fully realised. The syndicate had now their own building in London, where diamonds were disposed of and handled in one office. The syndicate also had a building in Kimberley, where the diamonds were first sorted and shipped from. Great confidence had been created; sales had been of a satisfactory nature; and the industry had enjoyed a prosperous period. The control was further strengthened by the establishment of most friendly relations with Belgium and Angola producers, who recognised the importance of limitation of output and control. The chairman said he could not leave the subject without also referring to the production of alluvial diamonds in South Africa. This now only uncontrolled production of diamonds in the world of diamonds meant more to South Africa than to any other country in the world, both from the point of view of revenue and of employment; still, the Government had not yet brought it under control, a factor which might conceivably undermine the corner stone of the industry. The chairman further stated that it was hard to understand why the Government continued to throw open to public digging new areas of diamondiferous ground. There was some temporary gain perhaps to small numbers of diggers, but the majority fared badly, and large numbers were attracted who would otherwise continue to make a living at farming or other occupations. The problem of diggers was one which might give this or future Governments grave anxiety if allowed to grow, and the chairman hoped it would not be long before the present Government gave the subject careful consideration and decided on a new policy.

The maintenance of the price of diamonds, the chairman stated, was, if anything, more important to alluvial diggers than to big producers. Both the alluvial and the mine production branches were one industry, and it was only right that it should in some measure assist other producers in limiting production to conform to world's demand, and thus share in the sacrifice demanded of all producers in the common interest of the trade. The chairman said he felt sure, however, that when once the digging community realised the position it would be possible, with the assistance of the Government, to arrive at a satisfactory solution, which was absolutely essential for continued prosperity of the diamond trade, upon which both mining and alluvial producers were dependent, and South Africa in general. The diamond mining industry, the chairman continued, for many reasons deserved active support from the authorities. Next to gold mining it was the most important mining industry in South Africa, and had played, and was now playing, a very important part in the development and prosperity of the whole country. It was possible to estimate fairly accurately the amount of direct taxation paid by the four big producers. On the basis of their last published balance-sheets, under three headings—"income-tax," "export duty," and "owners' share of profits"—alone the State benefited by considerably over £2,000,000. The export tax collected from small mines and alluvial producers, taking as a basis 1925-6 figures, which constituted normal production, must bring the total revenue derived to over £3,000,000. It was important to note that the South-West Africa administration derived the bulk of its revenue from diamond mining, and it must view with concern the increase in alluvial production in the Union while its production, also alluvial, was limited, an anomaly made even more striking when it was realised that the new alluvial fields produced a considerable quantity of diamonds, which competed in the market with the production of the Premier Diamond Mine, in which the Union Government owned a 60 per cent. share.

The chairman refrained from dealing with the amount of indirect revenue contributed to the State derived from the diamond industry, but had no doubt it totalled a considerable sum. The prosperity of the industry had been achieved very largely by maintaining world's prices through the limitation of output, which had thrown a heavier burden than was generally realised upon the shareholders of the big producers. The alluvial production in the Union having risen as it had, it was reasonable that alluvial producers should share with other producers in the Union and outside the Union the responsibility of seeing that the quantity of diamonds put on the market was not larger than the market could consume. Concluding, the chairman expressed confidence that when the authorities and the alluvial diggers themselves realised the position means would be found to protect this important industry for the common benefit of all concerned, and the first opportunity after the return of the Premier would be taken to bring these facts before the Government. In the meantime the syndicate had been purchasing the bulk of these alluvial productions in order to protect this great industry.

WESTERN AUSTRALIAN BANK.

The annual meeting of shareholders of the Western Australian Bank was held on Wednesday, November 3rd, at the Banking House, St George's terrace, Sir E. H. Wittenoom (chairman of directors) presiding.

The directors in their report stated that the net profit was £116,180 8s 4d. An interim dividend at the rate of 17½ per cent. per annum was paid in May last, and the directors had decided to pay a final dividend at the rate of 15 per cent. per annum, making the distribution for the year equal to 16½ per cent., and the reserve fund figured at £1,269,240.

The Chairman, in moving the adoption of the report and balance-sheet, stated: With reference to the notice appearing in the report of a reduction of the dividend from 17½ per cent. per annum to 15 per cent. per annum for the half-year just closed, the directors desired to explain that they had decided upon that course in order to make provision for the outlay that must take place in the establishment and maintenance of new branches and agencies in the agricultural areas.

The pastoral country had had good useful rains, so much so that a large proportion, especially on the Murchison, had almost recovered its original excellence. The consequence had been a good lambing and shearing. It would, however, take some time to replace the number of sheep that had been lost in the drought. Wool was realising fair prices, though the British coal strike had had a lowering influence on rates at the last sales. It was hoped, however, that this was only temporary. Both store and fat sheep were in good demand, and fat marketable beef was readily saleable at remunerative rates.

With regard to agriculture, this must be looked upon as one of the best seasons on record. It was anticipated the harvest would be a record one, and it was hoped that these anticipations would be realised.

Mr H. Hocking seconded the motion, which was carried unanimously.

VAN RYN GOLD MINES ESTATE, LIMITED.

DEVELOPMENTS ON MODDER WEST SECTION.

The thirty-first ordinary general meeting of the Van Ryn Gold Mines Estate, Limited, was held on the 15th instant, Mr L. E. Burns presiding.

The Chairman, in moving the adoption of the report and accounts, said that the gross profit from mining operations reflected, unfortunately, an appreciably less satisfactory result than for the previous year. That figure, at £73,024, showed a decrease of £33,453 which was accounted for by two main factors. During the early part of 1924-25 they were still disposing of their gold at a premium which had resulted in an addition of £12,500 to the revenue over and above the standard price of gold. In the year under review that premium was obtainable no longer, and they had reverted to the standard price for their gold. The other factor was the gradual exhaustion of the high-grade foot-wall leaders which formed the mainstay of the mine during the many years of its successful career.

Fortunately, it had been possible to replace the tonnage from that source by ore derived from what they termed the upper leaders, as the result of the far-sighted policy of the management in South Africa of utilising a portion of the high profits obtained from the foot-wall leaders, and thoroughly to prospect and develop the upper or hanging-wall leaders. That policy had been amply justified, as those upper leaders had been proved to be payable over large stretches, and had furnished during the past few years, and would continue to furnish, large tonnages of payable ore to the mill. The policy adopted of exploiting those areas had added very materially to the life of the mine.

With regard to the results of development work on the Modder West section, a considerable amount of further work at the 100 feet level had been done with satisfactory results. The latest information received by cablegram was as follows:—"No. 1 (100 feet) level exposures of upper (or 10 feet) reef in three cross rises, showing 9 dwts over 60 inches, and 7 dwts over 54 inches, and 8.6 dwts over 57 inches respectively. No. 2 (200 feet) level exposures of upper reef in cross rises 35 feet south from shaft 8.2 dwts over 32 inches, 60 feet south from shaft 7.7 dwts over 42 in. No. 3 (300 feet) level the two reefs appear to have converged into one, and have been fully exposed over the exceptional width of 133 inches. The top portion—corresponding to the upper or 10 feet reef—assays 10.3 dwts over 30 inches." It would be seen that those figures indicated a gradual improvement in depth of the principal gold carrier, the upper reef, and he considered that they had every reason to be hopeful.

The report and accounts were adopted.

PEKIN SYNDICATE, LIMITED. EFFECT OF CONDITIONS IN CHINA.

The ordinary general meeting of the Pekin Syndicate, Limited, was held, on the 14th instant, at the Cannon street Hotel, London.

Major Walter S. Nathan, C.M.G. (the chairman) said that in regard to the profit and loss account, on the debit side, the London expenditure was £15,282, as compared with £14,964; Paris expenditure £1,478, as against £1,304; and China expenditure £11,663, as against £13,803; a total of £28,423, as against £30,071 last year. There was an amount of £3,945 reserved against shares in other companies, and he regretted to say there was this year a loss of £31,265 on the collieries, as against a profit of £56,304 last year and £114,000 for the previous year. On the credit side of the profit and loss account, the receipts from interest on loans, investments, &c., amounted to £29,927, leaving a debit balance of £33,707 on profit and loss account.

Turning to the credit side, the cash at bankers stood at £45,490, as against £68,990 last year, a decrease of £23,500; investments, £167,460, as against £76,050, an increase of £91,410; loans against security £279,000, as against £153,000, an increase of £126,000. If those three items—cash at bank, investments and loans against security—were added together, they amounted to £491,950, as against the total of these items in last year's accounts of £298,040, showing an increase of £193,910 in the cash assets of the company, which, he thought, should be considered as being quite satisfactory. This considerable increase in the assets of the company is due to the settlement arrived at with the Banque Industrielle de Chine during the past year, thus allowing the amount shown in last year's balance-sheet in regard to shares in and debt due from the Banque Industrielle de Chine to be cleared up.

CONDITIONS IN CHINA.

He addressed the meeting with rather mixed feelings. On the one hand, he had the satisfaction of presenting a balance-sheet which showed a very steady improvement in the financial position of the syndicate. On the other hand, the profit and loss account showed a considerable loss as a result of the year's operations in China. That loss was not due to any cause within the syndicate, but entirely to the political conditions in the country. Given peaceful conditions and consequent improvement in transport, there was no doubt whatever that their mines would have given better results than they had ever been.

Last year he was able to state that the position had been improved by the eradication of the Kuomintang influence in the area in which their mines were situated. That influence was still absent from the area, but he feared the possibility of its re-establishment. There was no reason to assume that the Cantonese army, well disciplined and led by its Soviet instructors, was going to stop where it was, or that its advance into Honan would be delayed. As far as at present could be foreseen there was no element in China capable of resisting that advance. If they considered what chance there was of any combined action by the Powers to confront the evils which they foresaw they must recognise the great difficulties in the way. Granted that the outside influence to restore order was absent, they could only rely on an indefinite hope that the Chinese themselves would grow to appreciate the necessity for foreign help in the development of their country, and would assert their sense of expediency by abolishing the elements which were doing such injury to their country.

SOUND CONSERVATIVE POLICY.

He was afraid he was drawing a gloomy picture, but he did not think it would be right for him to depict what was happening out there other than as it appeared to him after a deep study of the situation, he might enter into a great deal of argument as to what should be done by the Government to help them in their hour of need, but he thought no useful purpose would be served. He saw no immediate prospect of amelioration of present conditions. Their sympathy must be extended to their staff in China still working under such distressing conditions. It might be necessary shortly to consider their position, in view of the possible isolation of the somewhat remote district in which they were working. This matter would receive the most careful consideration of the board, and steps would be taken as soon as it was necessary to do so. In conclusion, he could only say that they must preserve their financial position by adopting a conservative policy. The board, therefore, was still unable to advise a dividend distribution. They must hope for better conditions, with the knowledge that, should events occur by which peace is restored to the country, their basis was sound financially, and that the earning capacity of their property was there, and only awaited a favourable turn of the tide to make it increasingly prosperous.

Colonel O. C. Armstrong, D.S.O., seconded the motion, which was carried unanimously, and the formal business having been transacted the proceedings terminated with a vote of thanks to the chairman and directors.

THE NATIONAL BANK OF SCOTLAND, LIMITED. SATISFACTORY RESULTS OF DIFFICULT YEAR.

The one hundred and first annual general meeting of the proprietors was held in the bank's head office, Edinburgh, on the 16th instant, the Right Honourable Lord Ronaldshay, P.C., the governor, presiding.

Lord Ronaldshay, in moving the adoption of the report and accounts, after dealing with the situation in Europe and the disastrous effects of the coal stoppage, said: Coming to the balance-sheet, the total figures are much the same as last year.

Note circulation shows little change, the amount current being £134,000 less than in 1925. Treasury notes continue to be taken in increasing numbers by the public in place of the notes of the Scottish banks, and this, to some extent, accounts for the fall, although present trade conditions are a factor in this respect.

Deposits have maintained a more steady level than during recent years—the total current being almost £31,000,000—a reduction during the year amounting to about £300,000. While, to some extent, this is due to restricted trade, it may be otherwise accounted for by the fact that small deposits are now finding their way into Government securities and other investments which did not obtain in pre-war years.

Turning to the assets side of the balance-sheet you will note that the liquid position, as regards cash in hand, bankers' balances, and money lent on short notice in London, is a very satisfactory one, the ratio against the bank's liabilities to the public being 23 per cent.

Investments have been slightly reduced during the year, but the total holding of Government securities, a large proportion of which is short dated, stands at £11,200,000, or over 30 per cent. of the bank's current liabilities.

The trade advances, namely, bills discounted, loans against stocks and advances on current account of a total of £16,240,000, stand at much the same figure as last year, and, while applications for credit during the past six months have, to some extent, fallen away, it is anticipated that now when trade is being resumed after the serious dislocation of the strike, they will again be forthcoming, and your directors are in a position to give every case their sympathetic consideration.

The profit and loss account shows little change, the net profit being £284,777, a reduction of £3,620 compared with 1925. Allocations of £50,000 to the reserve fund, £30,000 to the property account, £55,000 to the officers' pension fund, and £5,000 to the bank's annuity fund, allow of a carry forward to next year of £68,198.

The report and accounts were unanimously adopted.

STEUA ROMANA (BRITISH), LIMITED. INCREASED PRODUCTION.

The sixth ordinary general meeting of the Steaua Romana (British), Limited, was held, on the 15th instant, at Winchester House, Old Broad Street, London, Sir Charles Greenway, Bart., presiding.

The Chairman, in moving the adoption of the report and accounts, said: The dividend paid by the Roumanian Company for the year ended December 31, 1925, was 20 per cent. Their production for the year ended June 30, 1926, was 352,637 tons, as compared with 290,387 tons in the previous year. Since the above date production has again considerably increased. 31,000 metres were drilled during the year, being an increase of 36 per cent. Twenty-nine wells were drilling on the company's State lands; 7 were productive, and production was expected from a number of others in the spring. At Ceptura production was maintained, and pipeline communication had been established between that field and the refinery. Further wells were expected to come into production on this field early in the New Year.

No serious trouble has been encountered by the Steaua in the conveyance of its products during the year.

The production and export position of the Roumanian oil industry continues to improve, and it is estimated that the total production of the country this year will be about three million tons. Sir Charles Greenway pointed out that the Roumanian Government could materially assist oil exporters by the further reduction of export taxes.

Although British companies working in Roumania have come to an arrangement as to the payment of their war damage claims, and it is understood that French and Belgian companies have agreed to accept the same terms, no arrangement has yet been made with the Steaua Romana Company or with the American and Dutch companies operating in Roumania.

Turning to the accounts of the British company, the chairman said that 210,752½ shares in Steaua Romana were held, costing £1,146,531, which represented a substantial reduction in the average cost of the holding. The profit for the year, before making

provision for taxation, was £103,299 5s 2d. After providing for taxation the balance remaining was £83,934 5s 2d, which, added to the balance of £2,979 12s 5d brought forward from last year, made a total of £86,913 17s 7d.

Sir Albert Stern seconded the resolution, which was carried unanimously.

RICHARD THOMAS AND COMPANY, LIMITED. COAL STOPPAGE AND ITS RESULTS.

IRON AND STEEL INDUSTRIES AND EUROPEAN COMPETITION.

The annual general meeting of the above company was held on December 17, 1926, at the Cannon street Hotel, London, E.C.4. Mr H. C. Bond (chairman, who is also president of the National Federation of Iron and Steel Manufacturers) presided.

The Chairman, in moving the adoption of the report and accounts, after having dealt with the accounts, drew attention to the fact that during the year under review, ending September 30, 1926, the results included five months of the coal stoppage.

The company took steps, he said, to obtain supplies of steel and coal from abroad, and, in spite of difficulties of transport, a substantial number of the tinplate and sheet mills had been kept in operation.

IMPORTATION OF COAL AND STEEL.

The company had imported 56,451 tons of coal and 49,256 tons of steel during the five months, with the result that employment was given to a large number of people, and the wages paid out between May 1st and September 30th had amounted to £318,000.

In the main the company had kept its markets, and its customers appreciated the great efforts made, but the cost had been heavy, and the loss owing to the strike had been considerable.

While the loss to the company had been serious, it was, of course, small compared with the enormous loss sustained by the country as a whole.

POLITICAL AIM OF COAL STOPPAGE.

The Chairman then expressed the opinion that the aim of those responsible for the coal stoppage was a political one—to obtain control of the mines in order to cause them to be worked at the expense of the country. In his opinion, the only sure way to industrial peace in this or any other country was mutual understanding between employers and employed. He believed that the stoppage was largely due to a comparatively small minority, which did not represent the views of the great majority of workmen.

The company had made considerable progress in improving the quality of its manufactures, and had installed much new machinery with that object in view. The works in South Wales were fully capable of dealing with the modern requirements of customers. Tinplates were increasingly used, particularly in America.

The normal production of tinplates by the company exceeded 7,000 tons per week, making it the largest producer in Europe.

Through its subsidiary, the Grovesend Company, they had an important output of galvanized and black sheets, and they were confident as to the future of this business.

On the other hand, the company had in Lincolnshire a very large undertaking, embracing blast furnaces, coke ovens, by-product plant, steel works, and rolling mills which were erected during and after the war at a very high cost, and the value of this property stood in the books of the company much in excess of the figure at which the directors would wish it to stand. In consequence of the severe depression which set in in 1920 it had been impossible to set aside sufficient depreciation to provide for this fall in value.

QUESTION OF EUROPEAN COMPETITION.

The Chairman then referred to the necessity for the prevention of ruinous competition in Europe, economy in production by a greater concentration of similar products in those plants most suited to their manufacture, and an intensive campaign to increase the demand for iron and steel in the world's markets. In his position as president of the National Federation of Iron and Steel manufacturers he had taken a leading part in the recent negotiations between Germany, France, Belgium, and Luxemburg for the control of the production of steel. At this stage he could not do more than express his personal opinion that the solution of the difficulties of the industry lay in a closer understanding and co-operation.

He believed that the prospects of the pig-iron industry and the steel industry were more promising than they had been for some years.

THE COLLIERIES.

As regards the collieries, the position of the industry had been so abnormal that no comparison with previous years would be of any value. During the strike every effort had been made to maintain the underground workings in as good a state as possible, and the company owed much to the officials and staffs, who had again shown their loyalty and courage under difficult conditions.

Mr Bond then referred to the growing burden of local rates and social services, pointing out that these cost the company £102,000 per annum, equal to 2 per cent. on the share capital.

As regards the future, the effect of the coal strike was still being felt, but there was every reason to believe that the company would quickly resume its normal rate of profit.

The report and accounts were unanimously adopted.

RUDGE-WHITWORTH, LIMITED.

GOOD RESULTS DESPITE INDUSTRIAL UNREST.

The thirty-second ordinary general meeting of Rudge-Whitworth, Limited, was held at Coventry, on the 17th instant, Mr John V. Pugh, J.P., the chairman and managing director, presiding.

In moving the adoption of the report, the Chairman said: The net profit for the year of £27,680 was arrived at after writing off depreciations to the amount of £23,481. In the previous year, owing to the revaluation of buildings and plant, no depreciation was shown, and the depreciations written off in 1924 and 1925 were under £4,500. A comparison of the balance-sheet with that of the previous year showed that the liabilities to creditors and bank had been reduced by £76,523. On the other hand, the total assets were only decreased by £41,979.

Although the terms of the £37,500 second mortgage debentures demanded that 25 per cent. of any profits should be ear-marked for redemption and paid out, all or nearly all the second debenture-holders had waived their right to redemption, though, of course, a quarter of the profits would be put to this redemption fund.

The result of the year was a clear net profit of £27,680 and a surplus on disposal of depots of £6,862.

The total £34,543 was, of course, an agreeable contrast to last year, particularly having regard to the exceptional industrial difficulties of last year and their exceptional effect on a season trade. The industrial dislocation, step by step, was utterly unexpected, including the ability of the country to carry on with all mines shut.

EFFECTS OF STRIKE.

The immediate effect of that blow on industry was not so great as was expected. On the other hand, he thought it was now realised that the effect would last some time, that there would not be a sudden awakening, but that there would be what after all was better, a gradual and a sure development of big trade.

During this difficult time the company had been developing its products. As regarded motor-bicycles, they had done a lot of racing with their standard machines, and had put up an extraordinary series of reliability; that was to say, not winning but finishing at high speeds with every single machine entered, and with the machines perfect at the end of every event. This had told the world how fast and reliable their standard product was. In preparing these machines on the road, the track, and the bench, a lot of testing had been done, which had found out, under these extreme conditions, weaknesses which were not even suspected, and they had corrected all these weaknesses. They believed these corrections were necessary, because a year ago with the 500 c.c. engine they could only get 18 h.p., while to-day they had got no less than 30 h.p. He need hardly add that while they had been striving after speed and reliability, they had not neglected silence and had produced and standardised a simple silencing arrangement which they believed complied with the law in the strictest possible sense. On the industrial side of motor-bicycles they had done a good deal of development work, and had devised a trailer to be drawn behind an ordinary motor-bicycle and sidecar. It was a very efficient machine, suitable for the transport of all kinds of goods up to 8 or 9 cwt, and capable of being fitted with a great variety of bodies for different trades.

NEW PEDAL BICYCLE.

For 1927 they had changed their attitude altogether towards pedal bicycle design, and had gone through the whole thing from one end to the other from the riders' point of view. They had made drop-out wheels universal. They had gone further, and had made an oilbath gear-case which could be used in conjunction with these, not interfering with the drop-out principle. So that actually a wheel could be changed, i.e., one wheel taken out and another put back in its place with a machine with an oilbath gear-case on, and the total time taken was substantially less than half a minute. This time included the springing out of the brake stirrup. To permit the wheel to pass they had also developed rolling brake levers on such lines that they could be fitted to machines with grips well forward, giving a proper riding position. The chairman added that the past policy in selling and marketing their goods had been to run a series of their own depots or shops to do part of their business, and to do the rest through the regular dealers. No doubt when this system was inaugurated more than 30 years ago it was a very good system, and met the

conditions then prevailing. To-day in reviewing all their methods they had come to the conclusion that the mixed system was not suitable, and that they would mark their goods best by marketing them through the recognised and established dealers. They had taken no half-measures, but had stepped out of the retail trade absolutely and entirely. They believed the dealers not only appreciated this, but could handle the selling side much better.

Mr R. Percy Taunton (vice-chairman) seconded the motion, which was adopted, and Mr C. Herbert Smith was reappointed a director.

AMALGAMATED ANTHRACITE COLLIERIES, LIMITED. AMALGAMATION SCHEME APPROVED.

The third annual general meeting of the Amalgamated Anthracite Collieries, Limited, was held, on the 15th instant, at the Hotel Victoria, Northumberland avenue, London, the Right Hon. Sir Alfred Mond, Bart., M.P. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said that as the balance-sheet showed, the cash in hand at September 30th last was £227,101 7s 10d. Including that balance, the liquid assets of the company as at September 30th last exceeded £300,000. The net profit for the year, after allowing for substantial depreciation for wagons and steamers, had amounted to £127,632 15s 6d, and that although the collieries of the company were idle for three and a-half months. The whole of the net profits, together with the balance brought forward from last year, had been carried to capital reserve account, which account now stood at £242,291 16s 6d. That had been done under the scheme of amalgamation, in order that when the scheme was finally approved a bonus issue of shares (one share for every ten held) might be made.

COAL STOPPAGE AND FOREIGN COMPETITION.

Although the collieries were idle throughout the whole of the seven months' stoppage, the merchanting side of the company's business did a very extensive trade in the importation and disposal of foreign coals, thereby rendering valuable assistance both to the essential services of the country and to important industrial undertakings. The profits arising from that business had been substantial, and had largely offset the heavy expenditure of maintaining the collieries during their period of idleness. In that the company had been indeed fortunate. The loss in wages to the men employed in the mining industry of this country during the seven months' stoppage had been appalling. Some idea of that loss could be obtained from the wages lost by the men normally employed in the collieries of the company since July, 1925, to the present date. They had had eight and a-half months of strike and stoppage, and the loss in wages had been £600,000, and apart from that there had been very heavy expenditure which had had to be incurred in maintaining the collieries in a state of repair pending resumption of work. Their markets abroad, owing to the fact that the coal industry of this country had been out of business, had been in the hands of their competitors in Germany, Silesia, Russia, and the United States of America, and while, owing to the superiority of Welsh anthracite this interference with their markets was probably only of a temporary character, yet but for the stoppage, these foreign coals would never have been considered in serious competition with theirs.

They opened their Canadian market three years ago, and but for the recent stoppage they would this season have more than quadrupled their first year's tonnage. They had firmly established there the superiority of their anthracite over the coals of their foreign competitors, and on his visit to Canada three months ago he was greatly impressed by the extent to which they had developed that market.

SCHEME OF AMALGAMATION.

The outlines of the scheme of amalgamation with United Anthracite Collieries, Limited, were set out in the circular sent out to the shareholders. Equalisation of share values between the two companies would be met by the issue to the shareholders of the Amalgamated company of one bonus share for every 10 shares held, and this equalisation was consequent on the payment of dividends for the past year on the preference shares of United Anthracite Collieries, Limited, and for the preference rights of those shares and also in respect of the profits the Amalgamated Company had made from imported coals during the general stoppage. The scheme would be submitted for the approval of the Board of Trade and Railway and Canal Commission under the Mining Industry Act, 1926, which was passed this year to facilitate amalgamations of that character in the coal industry. This Act exempted from Stamp Duty the aggregation of the capital of the amalgamating companies, and also exempted from Stamp Duty the necessary transfer of shares which were not transfers in the true sense of the term, and were not Stock Exchange transactions. In that way

the Act encouraged desirable amalgamations in the coal industry which had been discouraged in the past by reason of the heavy Revenue duties involved, and to which amalgamations in other industries were still subject.

Their collieries had restarted on December 6th, and he had been informed that morning that they had got their output back to about 90 per cent. of normal. That was a result which reflected extreme credit on the management of their collieries. They were quite convinced of the great future of the anthracite industry in its utilisation in this country. They had in South Wales, in anthracite, the best smokeless fuel in the world, and nobody need wait for the invention of a smokeless fuel.

The report and accounts were adopted, and the amalgamation scheme approved.

SINGAPORE PARA RUBBER ESTATES, LIMITED. SUCCESSFUL YEAR—JORAK ESTATE.

The seventeenth annual ordinary general meeting of the Singapore Para Rubber Estates, Limited, was held, on the 14th instant, at 2, 3 and 4 Idol lane, London, Mr H. de C. Hamilton, the chairman, presiding.

The Chairman, in moving the adoption of the report and accounts, said that the profit for the year amounted to £31,589, and after providing £500 for depreciation of buildings and machinery the net profit amounted to £31,089, as compared with £15,317 for the previous year. The board now recommended the payment of a final dividend of 7½ per cent., making, with the interim already paid, 15 per cent. for the year.

The cost of harvesting the crop amounted to £19,376, an average cost of 9.25d per lb, compared with 9.5d last year. Rubber actually sold averages 2s 4.85d, per lb, against 1s 8d per lb in the previous year.

The total planted area was now 3,623 acres, and a further 140 acres were in course of planting, and when completed the total planted area would be 3,772 acres, equivalent approximately to £59 per acre, which would be a considerable improvement on the previous figure, which was £75 per acre.

The crop harvested was 502,482 lbs, of which 444,314 lbs came from Perhentian Tinggi. The crop from Perhentian Tinggi fell short of expectation, and the manager, in his annual report to the directors, gave the following reason: "Up to and including December, everything went well, but thereafter we experienced weather such as I have never known during my 25 years' experience in the Malay States. First, it was too dry to get any rubber, and then it was too wet." The directors were not entirely satisfied with that explanation, and Mr Bannon, one of the directors, who was out there on the spot, was looking into that particular matter.

As regards the Jorak Estate, when the company took possession the price of rubber was just about at the zenith of last year's sensational rise, and local labour was very scarce, very difficult, and very expensive. Mr Hadow, who visited the estate in January last, had recommended the cessation of tapping until proper organisation was provided and the regular labour force secured and trained. The board had adopted Mr Hadow's recommendation. The crop for the current year would depend on two factors: (1) The percentage exportable under the restriction scheme; and (2) the rate of progress in bringing new areas into the tapping round at Jorak.

The report and accounts were adopted.

SHOWELL'S BREWERY COMPANY, LIMITED. COMPANY'S STRONG FINANCIAL POSITION.

The annual meeting of Showell's Brewery Company was held at Winchester House, Old Broad street, London, on the 16th inst., Mr James Davenport (the chairman) presiding.

Mr W. G. Holland (general manager and secretary) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said that was the fortieth annual meeting, and they celebrated the occasion by submitting the strongest balance-sheet in the history of the company.

On the revenue account the amount to be dealt with was £38,617, as against £38,825, results practically identical with those of the previous year. The dividends on the preference stock absorbed £13,800, the dividend on the ordinary shares £12,000, and the transfer to reserve £5,000, leaving £7,817 to carry forward to next year.

He submitted that in a year of severe industrial disturbance these results were highly satisfactory. They said a great deal for the loyal and efficient work of Mr Holland and his staff. They certainly had had no strikes and no trouble with their men—in fact, when the general strike was called not a single man of theirs ceased work for a day.

They had not heard as much as usual of possible further legislative interference with their trade. Now that the coal strike was

out of the way he thought it would be too optimistic to think that this welcome rest from controversy would continue much longer. In fact, he was afraid it was already beginning. In the last few weeks they had had introduced in the House of Lords the "Liquor (Popular Control) Bill." He would like to suggest that a better title would be, "Liquor (Fanatic Control and Confiscation) Bill." The Bill, which was backed by the Bishop of Liverpool, proposed to set up machinery for a compulsory poll in each district in the third year after the passing of the Act on the three questions: (1) No change; (2) reorganisation; (3) no licence. The Memorandum of the Bill definitely stated that an area voting for no licence or for reorganisation was not committed to such system in perpetuity. That statement was grossly misleading and totally unfair. It meant to the ordinary man that by a subsequent vote any district misguided enough to have voted for no licence or reorganisation could by another vote go back to where it was. That was definitely barred. If the Bill was proceeded with it would be opposed vigorously, and he had so much confidence in the fair-mindedness of the people of this country that he was confident it would not get on the Statute Book just yet.

Mr J. J. Calder seconded the resolution, which was carried unanimously.

ATLAS LIGHT AND POWER COMPANY, LIMITED.

An extraordinary general meeting of the Atlas Light and Power Company, Limited, was held, on the 16th instant, at Winchester House, London. Sir George A. Touche, Bart., who presided, explained that the negotiations referred to at the recent annual general meeting of the company, designed to give the company an opportunity of enlarging the scope and basis of its business and extending its operations, related to the consolidation of the present interests of the company with those of the United Electric Tramways of Montevideo. These include not only the business previously owned by that company, but, in addition, the other large tramway system in the City of Montevideo, arrangements for the acquisition of which have recently been completed.

The Chairman indicated that, on the completion of the arrangements, the Atlas Company will own electric lighting and power supply business and an electric traction system in the City of Cordoba; an electric lighting and power business and an electric traction system in the City of Santa Fé, and the combined electric traction systems in the City of Montevideo, the latter having concessions which run until the years 1978 and 1980.

The Chairman stated that the profits of the companies about to be acquired have been steadily progressive of late years, and savings from combined operation in the City of Montevideo are expected. It is expected that the combined companies will be able to offer to the public of that city an even more efficient service than it has hitherto had. He expressed confidence that the position of the ordinary shareholders will be improved by the amalgamation, and looked forward to the company being able to pay a gradually increasing rate of dividend. He intimated that a large majority of the shareholders, both preference and ordinary, had already expressed themselves in favour of the scheme by sending their proxies to the board, while no one had expressed disapproval.

The resolutions were passed approving the conditional agreement, increasing the capital to £5,500,000, and making certain alterations in the articles of association.

At subsequent meetings of the preference shareholders and debenture stockholders resolutions confirming the above proposals were duly passed.

MAWCHI MINES, LIMITED.

The adjourned eighth ordinary general meeting of Mawchi Mines, Limited, was held, on the 16th instant, at Winchester House, London, Major F. W. D. Gwynne presiding.

The Chairman, having dealt with the figures for 1925, said that at the meeting on December 30th last shareholders were informed that Major Ball anticipated milling at the rate of 4,000 tons of ore monthly by February, 1926, and expected to produce about 210 tons of concentrates each month. Those estimates, however, had not been realised up to the present. The veins being developed commenced in shale, and while in the shale were comparatively soft and easily driven on, but as they entered the granite they became harder and the rate of driving decreased. The question of installing power drilling plant was receiving the attention of the board.

The average production of concentrates for the eleven months January 1st to November 30th, including output from the mill and concentrates brought in by native workers, was 143½ tons per month. In addition to the concentrates reported in the monthly milling statements, there was approximately 228 tons of buddle

product awaiting retreatment. It was anticipated that this would produce about 23 tons monthly, and that about 3½ tons per month of a concentrate containing 65 per cent. combined tin and wolfram would be obtained.

Transport had been very difficult during the greater part of the year. Their latest cable stated that on December 4th last there were 520 tons awaiting transport. There was also about 300 tons at various points in transit, making in all about 820 tons. Taking tin and wolfram at about to-day's current prices, that represented a money value of about £98,000 gross. Transport, however, was now moving more freely, so far 66 tons having been shipped this month, and it was expected that the remainder of the accumulation would shortly be *en route*.

As regarded ore reserves, Mr Euan-Smith, their local resident director, estimated the reserves of ore were:—Developed 53,500 tons, probable and possible 103,500 tons, making a total of 157,000 tons. There was reason to hope for a life of about four years from known ore bodies which would be developed and worked. As to prospecting, arrangements had been made and funds provided for prospecting to be carried out in other parts of the company's lease during the dry season.

Replying to questions, the Chairman stated that from restarting up to November, 1926, the output was 1,760 tons of concentrates, and, assuming the balance unsold realised about the present market prices of tin and wolfram, a profit of about £44,000 on working costs might be made for 1926. He emphasised that that must be considered purely as a rough estimate.

The report and accounts were unanimously adopted.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED. INCREASED PROFIT AND DIVIDEND.

The sixteenth ordinary general meeting of the British Burmah Petroleum Company, Limited, was held, on the 17th instant, at the Cannon street Hotel, London.

The Hon. Lionel Holland, the Chairman, said that there had been no outstanding feature during the 12 months under review. Conditions in the oil business generally, and with the company, remained much the same as they were at the last meeting. The demand for oil products continued satisfactory. The kerosene output was readily taken in India, where the consumption of petrol also was on the increase, while wax was disposed of without difficulty in the world's markets. Prices remained steady, but always at the low level which had prevailed since 1922.

Consumption, which even under unfavourable trade conditions increased rapidly, would, with any solid revival in trade, be increased with still greater rapidity, and although so long as the industry was given a free hand no shortage of supply need be feared, they might reasonably expect then more remunerative prices, which would enable the oil industry to enjoy its full share of an improving level of prosperity. In the meantime they had been able, by dint of economies and improved methods, not only to maintain the financial strength of the business, but once to increase the trading revenue as compared with that of the preceding year, and also the resulting profits.

Their trading profit for the year was £301,846, which was over £20,000 better than the figure for 1925, itself an improvement of over £85,000 on 1924. After providing for various allocations and charges they were left with a balance of profit of £83,230, against £53,149. They recommended a dividend of 7½d per share, free of tax. In view of the continued drop in the crude oil production and the absence of any improvement in prices, he thought he was justified in regarding it as a matter for satisfaction that they were able to declare a higher dividend than that for 1925.

The report and accounts were unanimously adopted.

THE BANK OF TAIWAN, LIMITED. (Registered in Japan, 1899.)

Capital Subscribed : : : £45,000,000
Capital Paid Up : : : £39,375,000

Head Office - - TAIPEH, FORMOSA.
London Office - 25 OLD BROAD STREET, E.C.2

SILVER.

Although the price of silver has been fairly well maintained, the market is not robust. A feature has been, and is, the shyness of buyers; this would have been shown by still easier prices had supplies been as plentiful as usual. Conditions, however, have been against free selling from China at this period. Possibly a certain amount of steadiness will be felt for a week or so until the next Bombay settlement steamer's consignment has been arranged. America has not had much opportunity to sell here owing to buyers usually being satisfied at "fixing." United Kingdom's imports and exports of silver during the week ending the 8th inst. were:—

	Imports.	Exports.
Mexico.....	338,630	38,500
U.S.A.....	43,534	55,200
British West Africa....	18,320	12,103
Other countries.....	644	
	401,128	105,803

† Tax free. m British-American Tobacco.—The dividend of 25 per cent., free of income-tax, absorbed £4,956,725. The dividend of 27 1/2 per cent., free of income-tax, in preceding year absorbed £4,487,734.

form no criterion of the future earnings of the company, and the dividends likely to be received from its investments which should greatly exceed in the future any past figures. With reference to the balance-sheet figures of the cost of the investments (£1,105,399), the directors are satisfied that the value thereof very considerably exceeds the figures in the balance-sheet. Cash stands at £169,622, against £72,927. Net profit has risen from £47,992 to £101,405. The ordinary dividend is 25 per cent., against 15 per cent. The sum of £59,785 is carried forward.

LONDON ELECTRIC SUPPLY CORPORATION, LIMITED.—We are informed that the company proposes to capitalise £199,800 out of reserves, and to distribute a share bonus of two new ordinary shares for every five ordinary shares held.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Climatic conditions were mostly favourable to agriculture this week, and early wheat presents a healthy appearance in most districts, while present indications point to a rather larger acreage than last year. Native wheat was in moderate supply, and all good milling samples encountered steady support. Prices, however, tend in buyers' favour in sympathy with the weakness of foreign descriptions. In the floating and forward cargo section a dull tone continues, the small business being chiefly on Continental account. Plate qualities were rather pressed for sale, and extensive charters of new season's grain have been made during the week. Freight rates from North America have fallen heavily, due to liberal offerings of cancelled coal vessels, and was reflected in prices for the commodity. Feeding stuffs also presented quiet

features, though Plate maize closed steady in view of small Argentine shipments. Wheat weaker. No. 1 Northern Manitoba quoted 60s, No. 2 ditto 59s, No. 4 53s 6d, No. 2 tough Manitoba 56s 6d ex ship, all per 496 lbs. English 11s 2d-11s 6d per 112 lbs. Flour quiet, and tendency easier. London standard grade 48s, town whites 49s, patents 50s-51s per sack delivered in the home counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 44s-47s, Minneapolis 45s-46s 6d, Kansas patents 43s-44s, Australian 43s 6d-44s per 280 lbs ex store. Maize closed firmer. Plate landed 32s 3d, ditto ex ship 30s 6d, Plate Cinquantina 36s 6d, landed per 480 lbs. Barley steady. Californian 40s-47s, Chilean Chevalier 52s-62s, ditto brewing 38s-48s, Australian Chevalier 47s-50s, ex store, per 44s lbs. No. 3 Canadian Western 34s ex ship, Persian landed 30s, Russian 32s 6d, Plate 31s 3d both ex ship, Persian landed 30s, per 400 lbs. English malting 9s 6d-18s 9d as to sample, feed 8s 9d-9s 6d per 112 lbs. Oats steadier on lighter offerings. La Plata landed 22s 9d, ditto ex ship 21s 9d per 320 lbs. English 8s-8s 6d per 112 lbs. Millers' offals quiet. Broad bran quoted 7s 6d, middlings 7s 6d-8s, fine ditto 9s 3d, bags included ex mill, feed oatmeal 9s 3d, light oats 8s 3d, ground oats 12s 9d per cwt free on rail. Oatmeal maintained. London made flaked 17s 6d, rolled oats 16s 6d, medium also fine cut 16s 6d, coarse pinhead and whole groats 16s ex mill per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1926-27, 1925-26, 1924-25, 1923-24:—

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1922 to 1925:—

		QUANTITIES SOLD.			AVERAGE PRICE PER CWT.		
		Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1926.	Owse.	Cwts.	Cwts.	Cwts.	s d	s d	s d
Dec. 4		322,402	531,211	66,189	12 1	11 1	8 4
11		305,637	460,285	63,747	11 10	11 0	8 3
1927		577,954	420,911	74,710	9 8	9 6	9 6
1928		442,203	456,362	66,999	9 10	10 7	9 2
1929		209,134	395,360	77,168	12 3	14 5	9 8
1930		588,906	423,709	60,961	12 3	10 10	9 3

Our Sheffield correspondent writes:—Coal prices continue to drop, but the decline in coke is more gradual. There is a large quantity of foreign coke still to be used. Foundry coke is being offered at 50s delivered. Special coke for melting crucible steel has been reduced to 65s delivered, compared with 40s before the dispute. Some cheapish lots of boiler slacks can be picked up occasionally. Coalowners are finding it difficult to sell their output.

Our Workington correspondent writes:—Conditions have not yet been stabilised. The demand for the time of the year is surprisingly small. Householders are buying sparingly, and Irish merchants have no large requirements to place until they have disposed of their stocks of Continental coal. Round coal for shipment is quoted between 30s and 40s per ton f.o.b., and small coal 21s per ton f.o.b. Best house coal locally stands at 42s 4d per ton at pit, and best house nuts at 41s per ton at pit. Gas coal is 33s 6d per ton. Coke is in brisk demand.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange: There is still more activity than is general at this season of the year under normal conditions, and feeling is optimistic that in the New Year, when the British steel industry is in a position to fully resume operations, busy trading conditions will develop. For the time being the volume of inquiry, both on home account and from abroad, is the most noticeable feature of the market. A further reduction in fuel prices is expected, and a consequent reduction in the price of iron and steel, and this is one of the principal reasons why buyers for the time being are disinclined to place large orders. A number of fresh furnaces have restarted operations, and dealings in British pig-iron have been resumed on a limited scale for the first time for many weeks. Steel furnaces have also been restarted in many districts. The change in the position of the British market since the end of the coal strike has had the effect of causing a general reduction in Continental prices, but excepting in the case of semi-finished steel, buying of this material has been on the light side. The demand for finished steel is not too active, although British works have taken some good contracts of late.

Our Middlesbrough correspondent's report, dated December 16th, is as follows:—Pig-iron: Foundry iron is still almost unobtainable, and only very small parcels are being made up to cover urgent requirements, on the basis of 110s per ton for No. 3 G.M.B. Two more furnaces have been started on foundry iron this week, but the output is to be used for their own steel plant. For delivery over the first three months of next year, sales have been made at 85s per ton. The makers' quotation is now 87s 6d per ton. There is very little hematite on offer for prompt delivery. For the first quarter of next year from 90s to 92s 6d is being quoted for East Coast mixed numbers. Manufactured Iron and Steel: There is enormous pressure for steel, and consumers are paying advanced prices to obtain delivery. Local steel plants are being gradually restored to activity, and a substantial increase in production should be reached by the end of the year. The principal quotations are as follows:—Steel ship plates, £8 7s 6d; steel ship angles, £7 12s 6d; iron bars, £12 5s; steel rails, £8 10s. Iron ore: No new business is yet reported.

Our Sheffield correspondent writes:—Progress towards normal trade conditions is slow, although there is increased activity at many steel works. Urgent and special orders for high-grade steel are being pushed forward, but production generally is being held back until coal is cheaper. Pig-iron producers are quoting for delivery in January and February. The price for Lincolnshire and Derbyshire foundry pig is 85s at furnaces. This is 20s higher than before the dispute. The largest of the open-hearth steel firms of the district is starting eight high-capacity furnaces next week.

Our Glasgow correspondent writes:—The half-dozen blast furnaces which were lit up a week ago in Scotland have not yet been added to, and the available amount of pig-iron is very limited. Until fuel and pig-iron are obtainable at economic prices the steel works have decided to make no attempt at a general resumption. Only one works is now making steel plates; some others are preparing to make a start in a small way, but it is now unlikely that manufacture will be in full swing until January. Business outlook is, however, showing a distinct improvement, work in hand in all branches of iron and steel manufacture being sufficient to justify optimism as regards the near future. Prices are being held very firm, except in the sheet trade. The prospects in the shipbuilding trade continue to improve, further contracts having been reported this week. The well-known Greenock Shipyard, formerly Caird and Co., now owned by Messrs Harland and Wolff, is to re-open shortly, after having been closed down for over a year. Two vessels are to be built there, one a large tug for the P. and O. Steam Navigation Company, and the other a cargo vessel. Further orders are also reported this week as having been secured by Messrs Lithgows and Co., Limited, Greenock, and by Messrs the Burntisland Shipbuilding Company, Limited, Burntisland, Fifehire. The demand for galvanised sheets has fallen slightly, and somewhat easier prices are heard of, especially for corrugated sheets.

Our Cardiff correspondent writes:—The position in the tinplate trade is rapidly improving, and it is expected that next week approximately 70 per cent. of the mills will be operating. Prices

are easier at about 21s 9d per basis box f.o.b. works port, for prompt plates, but for delivery early in the New Year 22s 6d is being quoted. Welsh bars are unchanged at £6 15s, while galvanised sheets have been ruling from £16 10s to £17 per ton. Some of the heavier plate rolling mills have restarted, and it is expected that several of the blast furnaces will be blown in early next month.

CUMBERLAND IRON. (WORKINGTON CORRESPONDENT.)

There is quite a confident feeling that six months' full production lies before iron and steel makers in the north-west of England. Hematite pig-iron smelters are already assured of disposing during the first three months of the year of a larger output than they obtained for some months before the coal stoppage began, and they are now booking orders, delivery on which will be spread over the second quarter of the year. It will be almost a month, however, before the 13 furnaces that were blowing in April can be put into blast, the main difficulty, of course, being that of getting the local coke supplies. A start is to be made next week, when the United Steel Company will relight two furnaces at Workington. There is no change in prices. Bessemer mixed numbers being quoted at £4 19s 6d at Glasgow, £5 3s at Sheffield, and £5 7s 6d to £5 17s 6d at Birmingham. For low-phosphorus iron 5s per ton has to be added to these figures. Business in the steel trade is hard to come by, but a few small orders for railway material are being booked. Rails are £8 10s, sleepers £10 10s, fish-plates £12 10s. Some of the iron ore mines have been re-opened, and a normal production is expected next month.

OTHER METALS.

TIN.—The market displayed firmer features, values responding to higher advices from the Straits, combined with active buying of both near and forward dates. Profit taking at times resulted in some irregularity, and the improvement was mostly lost. Dealings in standard cash were recorded at £307 to £311 and £307 15s, and three months £297 10s to £310 10s and £298 10s. Sales in the East were reported at £305 15s to £310 and £307 15s.

COPPER slightly irregular, with dealings on a liberal scale, and values barely steady on balance. Standard cash was dealt in at £57 10s-£57 11s 3d and £57, three months £58 5s-£57 17s 6d. LEAD opened firm, but after liberal dealings a quieter and easier tone set in, particularly with regard to forward positions. Good soft foreign pig December sold £29 3s 9d to £28 17s 6d and £29 2s 6d, January £29 5s to £29 6s 3d and £29 3s 9d, February £29 8s 9d to £29 10s and £29 5s, March £29 7s 6d to £29 11s 3d and £29 7s 6d, April £29 8s 9d ton.

SPELTER in fairly good request, but liberal offerings imparted a weaker tone. December sold £33 15 3d to £33 3s 9d and £32 13s 9d. January £33 15 3d, £33 5s, and £32 16s 3d, March £33 15 3d to £33 5s, and £32 13s 9d, April £32 18s 9d to £33 3s 9d, and £32 12s 6d ton.

ANTIMONY quiet. English special brands quoted £74 10s to £75, China regulus December-January sold £51 ton c.i.f. ALUMINIUM quiet. Home delivery £107, export £112 ton. WOLFRAM dull. December-January quoted 17s-17s 3d per unit c.i.f.

QUICKSILVER firm. Spot £17 15s to £18 per bottle. TIN PLATES easier. I.C. coke prompt 21s 6d to 22s, forward 20s 9d to 21s 3d per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, December 16, 1926.

Spot demand has continued moderate, but prices are about 25 points higher on the week. The future markets have shown a little more activity, but only for short intervals. With practically no hedge selling, and the basis in actual cotton continuing firmer, the small demand has forced prices up a little. This was accentuated yesterday by short covering, in the anticipation that small ginning figures, owing to bad weather, will be published next week. Spot sales for the week December 10th to 16th (inclusive) were 33,000 bales. These were composed of 20,300 American, 1,150 Brazil, 5,250 Peru, 3,400 Egyptian, 2,350 African, 10 East Indian, and 540 sundries. Imports for the same period were 108,606 bales, composed of 88,618 bales American, 2,126 Brazil, 1,023 Peru, 12,182 Egyptian, 4,415 African, 125 East Indian, and 117 sundries. Quotations to-day are: American middling, 6.80d; Egyptian Sakel, 13.80d; uppers, 9.40d; Brazil fair, 7.05d; Peru G.F. mod.-rough, 8.50d; smooth, 8.05d; Tinnivelly F.G.F., 6.25d; West African middling, 6.65d; and East African G.F., 8.50d.

MANCHESTER, December 16, 1926.

The market has continued to present a quiet appearance, and spinners and manufacturers have derived very little encouragement from the orders secured. Raw cotton rates have been rather firmer, and this development has resulted in more inquiry in piece-goods. The China market has displayed more interest, and in addition to a substantial contract in grey shirtings rather more lines have been put through in bleaching and finishing cloths. For India not more than a miscellaneous trade has been reported, chiefly in light fabrics. Operations for the minor outlets East and West have been restricted, and there has not been much activity in home trade goods. American yarns have been dull of sale, with considerable irregularity in prices. A fair demand continues to be met with in Egyptian yarns.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—A moderate amount of business is being done, and though there are no signs of any real activity a fairly general feeling of confidence exists. One of the most hopeful features is that wool values are on what is considered to be a reasonable level. The requirements of foreign mills are still considerable, and notwithstanding financial stringency Continental and Japanese importers appear to be able to finance their purchases. The firm hand which the banks are keeping on credits is naturally curtailing speculative buying, and this also tends to inspire confidence in current values. In Hawick and Galashiels machinery is well employed, while as regards the West Riding there is decidedly more activity in the worsted mills

International Securities Trust

OF AMERICA
A MASSACHUSETTS TRUST

First Among American Investment Trusts

Resources over \$20,000,000

Why the Investment Trust Bond?

NO. 3. LIQUID ASSETS

Because—resources of this Investment Trust are entirely in cash or marketable securities. Thus its position is "solid" because its assets are "liquid".

Back of each \$1,000 Bond at issuance there is \$1,800 in cash or readily negotiable investments at cost value, plus the Bond Interest Reserve Fund. Moreover, the market value of the securities pledged as collateral must never be less than \$1,150, plus reserve, for each \$1,000 Bond.

Series D due June 1, 1933, at price to yield about 5.50%
Series E due June 1, 1943, at price to yield about 5.60%

New York

engaged on the production of high-class goods. At present demand for piece goods favours novelties and fancies, and if only with the turn of the year more trade can be done in plain goods the position of the entire industry will be materially improved. At present both tops and yarns are moving only in small weights, but prices are very steady and the firmness of the wool markets encourages sellers to hold out for quoted rates.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The total quantity of wool sold this year in London is 712,000 bales, which is 11,000 bales more than during 1925, and the takings of both the home trade and the Continent this year have been substantially larger. The large home Continental operations have been the direct outcome of the activity during August and the buying done for Russia, the latter country having since made its influence felt in both Bradford and London. At the recent auctions Russia purchased considerable quantities of the best scoured wools from Queensland, and paid the highest price of the series. In all probability Russia will be a steady buyer in Coleman Street next year.

The interest already shown in scoureds is a forcible reminder of what took place before and during the first two years of the war. The fact that Russia does not purchase a bigger quantity of greasy combing wool shows that the mill equipment is not yet as efficient as either on the Continent or in this country. No doubt as time goes on Russian mills will become so well equipped that any class of raw material can be dealt with, and greasy Australian merinos will then appeal to buyers as strongly as scoureds. At present they are obtaining the best wool at the lowest price possible through the buying brokers. London is undoubtedly providing adequate supplies of really good wool, and this may be expected to continue. The following shows the total quantity of wool sold at each series in London this year and the proportion taken by the home trade, the Continent, and the United States:—

	Home Trade. Bales.	Continent. Bales.	U.S.A. Bales.	Total Sold. Bales.
First series	70,000	62,500	6,000	138,500
Second series	48,000	66,000	4,500	118,500
Third series	33,500	61,000	1,000	96,500
Fourth series	43,300	53,200	1,000	97,500
Fifth series	75,000	93,000	1,000	169,000
Sixth series	44,000	48,000	1,000	93,000
Totals	313,800	383,700	14,500	712,000
Total disposals in 1925	248,100	337,900	16,000	602,000

HIDE, LEATHER, AND ALLIED TRADES.

Heavy market hides were weaker on Thursday last, tanners having neglected this class of late. Best ox sold from 6½d to 8½d, the two heavy weight selections falling ½d per lb, and the two medium ¾d and ¾d. Seconds sold from 6d to 8d per lb, three classes declining ¼d to ½d. Calfskins were steady, best selections making 7½d to 12½d. Wools made 6s 4d to 11s 6d, and hogs from 2s 10d to 11s 6d each. Fregorifics remain very firm, and best Argentine ox have sold up to 9d, although the bulk of the business done has been on foreign account. The Chicago position remains steady, with best heavy packers still selling at 15 cents. Trade in sole leather has fallen flat in view of the approaching holidays, although manufacturers and repairers are still taking fair quantities of bends and offal. The scarcity of light bends is pronounced. The upper leather market is quieter, but with prices very firm. The demand for coloured glacé kid continues, and as first grade skins are scarce and prices of raw skins are advancing high prices will probably have to be paid for the finished article in the near future. Patent is selling well for spring shoes, and prices are advancing for certain imported tannages. Kip leathers are selling better owing to the increased demand for artizan boots, whilst there is a fair demand for box and willow of the cheap and medium grades. The boot and shoe trade is moderately well employed, and makers of Russian boots have been very busy in getting out orders prior to the holidays.

THE TIMBER TRADE.

(FROM A CORRESPONDENT.)

Thanks to the mild weather prevailing in the north of Europe, timber for building purposes has been imported very freely during the past month. Thus, with good arrivals in October and November (high freight costs notwithstanding), there need be little fear of any inconvenient shortage of supplies, as would certainly have been the case had the cold snap in early November been maintained. Taken on the whole, however, the supplies of wood in the country on January 1st next will not be of great volume if trade generally shows any great expansion. All industries (even including the building trade) are expected to consume at least a little more timber next year.

The increase in last month's imports was principally attributable to larger supplies from Finland, Russia, Sweden, and Danzig, in which all qualities, inferior to firsts, were represented. The fine qualities of Russian timber are valued on the U.K. market for joinery work, and are in keen demand, as are the Swedish shipments. Inferior woods will be in good request this winter for the cheaper class of houses, as well as for other timber work that does not allow of heavy expenditure on raw material. Spot prices for building timbers, naturally, must be somewhat irregular for the present, as new arrivals have paid enhanced freight rates compared with the wood purchased earlier this year. Prices have not made any sudden rise, but are steadily advancing, and their future progress will depend largely upon the extent of the deliveries into consumption week by week.

The Canadian section of the market is decidedly firm, and although imports of pine and spruce and Douglas fir decreased in November, these woods are in satisfactory demand, generally, with stocks on the whole small. Stocks of Canadian pine in London, however, are rather large in relation to the consumption, but this may be only temporary. All shipbuilding woods are in moderate supply, but demand is fair, with shippers' rates firm. Hardwoods are also firm in value, but the large stocks of the American varieties have been supplemented by increased arrivals, which have added to the anxieties of holders of stocks. American lumbermen, however, have a very good opinion of early future trade in Great Britain, and quote very firm rates for future business, supported by the much larger domestic consumption of States lumber compared with export. Mahogany logs are good sellers; fresh supplies have fallen in volume materially this year, stocks in first hands being very light, and further shipments of the better grades are invited.

Taking the wood market on the whole, supplies of both hard and soft varieties are fairly plentiful, particularly the poorer qualities, at present rates of delivery.

VEGETABLE OILS AND OILSEEDS.

Markets are quiet and somewhat depressed. Linseed oil is in poor demand from consumers, and is down 20s per ton on the week, current value being £34 3s per ton, naked, ex Hull mill, spot, and for delivery to April. Cotton oils are dull and inclined easier, crude Egyptian offering at £30 15s and technical refined at £34 5s. Other vegetable oils are also quiet, and trade slow.

In the oilseed section, Plate linseed for shipment has eased, £14 10s having been accepted for old crop, December loading, and £15 10s for new crop, January-February. The first official estimate of the new Argentine crop places the probable yield at 1,820,000 tons, which is a higher figure than generally expected. It is, however, 88,000 tons below the final estimate last season. Argentina has still about 200,000 tons old crop to ship, as against 45,000 tons at the same date last year. Another factor affecting prices is freight rates, which are much higher than last December. Calcutta to London has been done at £17, December shipment.

Crushers are only slightly interested, owing to the poor demand for oil. Egyptian cotton seed is easier, black offering freely at £8 12s 6d for this month's loading.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Market for actual parcels again disclosed general quietness, manufacturers and distributors alike being disinclined to embark upon fresh engagements at this advanced period of the year. Prices, however, were unaltered with regard to British refined, also all makes of British-grown granulated. Imported granulated easier. Czecho, also Dutch J, 31s 10½d. Shipment parcels slow but steady, on reserved offers from Continental refiners. Indian demand still slow, but previous rates were quoted for both Hungarian crystals and white Java for shipment thence. Raw refining kinds dull. 500 tons Brazilian, basis 80 per cent., December-January, sold, 12s 9d; 96 per cent., ditto, December-January, quoted 16s; Cuban, February-March, 16s; Peruvian, December-January, 16s 1½d, c.f. and i. terms, U.K. A quiet and easier tone governed the white terminal section. December delivery, sold, 18s 3d to 18s 1½d; March, 18s 8½d to 18s 6d; May, 18s 1½d to 18s 9d; July, 19s 1½d; August, 19s to 18s 10½d; September, 18s 6d; October, 17s 9d; December, 17s 3½d to 17s 3d per cwt.

COFFEE.—The spot market continues very firm for all the finer qualities suitable to the home-trade, and East African kinds are dearer. This is due more to supplies being in narrow compass than actual strength of demand. Common and medium export varieties are easier while still very slow of sale. Kenya, bold sizes, sold, 14s 6d to 16s 7d; peas, up to 170s. Costa Rica, new crop, bold, 176s to 185s 6d; Colombian, ditto, 151s. Futures idle and easier.

COCOA.—Spot market firm to dealer, with fair clearances during the week. Accra, sold, 65s to 68s; Grenada, 70s; Trinidad, 72s. Accra F/F, in forward positions, sold, 56s to 65s, f.o.b. terms.

TEA.—Indian auctions during the week were on a larger scale, while amounting to 58,450 packages. Generally good competition prevailed at opening, but a quieter tone set in later, which resulted in prices showing a good deal of irregularity, and in weakness in most cases. Common useful tea, however, engaged good support. Pekoe, sold, 11½d to 1s 7d; orange, 1s 1½d to 2s 3d; broken orange, 1s 2½d to 2s 9d, as to quality. Ceylon sales of 21,000 packages came to a very quiet market, and prices were ¾d to 1d per lb lower, particularly with regard to common kinds. Pekoe, sold, 1s 0½d to 2s 2½d; orange, 1s 6d to 2s 5½d; broken orange, 1s 2½d to 2s 6½d per lb in bond. The market for China teas ruled quiet. Keemuns, sold, 1s 7d to 2s; Monings, 8d to 10d. 7,820 packages Java and Sumatra offered met a quiet market at irregular and easier prices. General decline amounted to ¾d to 1d per lb. Pekoe, sold, 11½d to 1s 3½d; broken ditto, 8d to 1s 5½d; pekoe souchong, 10½d to 1s 0½d; orange pekoe, 1s 0½d to 1s 6½d; and broken orange from 8d to 1s 9d per lb, in bond.

RICE.—The Governmental forecast of the crop was received by cable to-day regarding Burma, and the total of 3,225,000 tons constitutes a heavy record out-turn, and compares with 3,100,000 last season. Market conditions still very quiet and featureless. Two Stars, Rangoon, spot, 16s 6d; new crop, January to March, 14s 3d. Italian and Spanish steady, quiet. Bran firm. Beans move off slowly. Peas quieter. Japanese, spot, 28s; December-January, 27s to 26s 3d paid; January-February, 27s 9d to 27s; February-March, 28s 3d to 27s 6d per cwt, c.f. and i., U.K.

SPICE.—Pepper quietly steady. Lampong, October-December, sold, 10½d; January-March, 11½d; Muntok, October-December, buyers, 1s 5½d; January-March, 1s 6d. Pimento, spot, 8d. Zanzibar cloves, spot, 9½d; October-December, 9½; January-March, 8½d; and affo lots sold, 9½d per lb. Tellicherry pepper, January-March, quoted, 10s; Aleppy, 100s cwt, c.f., i. terms. Singapore flake tania, December-February, to Havre, quoted 16s. Sago flour, January-February, to the U.K., sold, 15s 6d cwt, c.f. and i. terms.

FRUIT (Dried).—Currants sell steadily at full rates. Pyrgos quoted 35s 6d; Patras, 37s to 38s; Gulf, 39s to 44s; Vostizza, 46s to 55s; Australian, 35s to 42s, as to quality. Sultanas generally quiet. Smyrna, medium to good, 66s to 72s; medium to fine Cretan, 67s to 85s; Australian sell better at 60s to 76s. Raisins firm and only a few secondhand parcels available. Dates quiet. Hallowee, new crop, 30s; Khadrowie, 20s; air, 16s; cartons, 34s to 3s, landed terms, London. Figs slow. Lacouns, 95s to 130s; layers, 60s to 75s;

genuine, 32s to 34s. Evaporated fruits quiet, though there is rather more interest in large size plums. Californian apricots, extra choice, 125s; South African, first grade, 132s 6d. Plums, Californian, new, 30/40's, quoted 64s; 50/60's, 51s; Oregon, old, 30/40's, 62s 6d. Pears, Californian, extra choice, 62s 6d; fancy, 72s 6d; Lake County, fancy, 80s. Apple rings, Californian, spot, 50s to 60s per cwt. Almonds firm. Mazagan, 162s 6d; Mogador, 160s; Sicily, 175s.

CANNED GOODS.

CANNED FISH.—Market quiet, but generally firm, with moderate supplies on offer. Sardines—Portuguese clubs quoted 4s 6d per dozen tins. Salmon—red, tall, 1 lb, quoted 45s to 48s; tall pink, 26s to 27s; halves, 38s to 39s; Lobsters—best halves, 160s; quarters, 80s to 90s. Crayfish—halves, 76s to 77s; quarters, 49s to 50s per case. Japanese crab firm, and available supplies limited. Herrings 6s 9d per dozen tins.

CANNED FRUIT.—Market remained quiet, and general position unaltered. Californian Bartlett pears, 24-2½s, choice, 12s to 12s 6d; secondary, 9s 6d to 9s 9d. Californian peaches, choice, 11s 9d to 12s 3d; seconds, 8s 6d to 8s 9d; Californian apricots, choice, 12s 6d; seconds, 9s to 9s 3d per dozen tins. Singapore pines quiet on spot, but forward positions firm. Italian tomatoes quiet, but held for full recent figures.

CANNED MEAT.—I slow demand, and barely steady. Californian beef, 6s, quoted 38s to 44s, as to quality. Danish lunch tongues,

1128 to 1288; American, 1408 to 1478 6d, as to quality. Danish boneless hams, cooked, 18 6d per lb, for case of six tins.

CONDENSED MILK.—Machine-skimmed steady on light supplies, but full-cream quiet. Evaporated milk meets with good attention. Cases of 48/16 oz tins quoted 18s; 96/6 oz, 20s per case. Danish cream, 48/6 oz, 20s per case.

HONEY.—Market quiet, but prices firm for all the better grades while manufacturing kinds tend dearer owing to large offers made on Continental account. Good greyish set, Jamaica, sold 46s; bright golden set, 45s; Haiti, quoted 35s to 50s; San Domingo, 35s to 50s per cwt. New Zealand, 18/7 lb tins, 85s per dozen.

RUBBER.

Market quiet, but steady, for standard, but good attention is still given to off-grades, and these remain comparatively high in price—in fact, some are much above their intrinsic value, particularly where any speckiness is absent. Plantation standard sheet, spot, and December, sold, 18 6d; January-March, 18 6d to 18 6d; April-June, 18 7d to 18 7d lb.

GENERAL.

JUTE in fair request, and, while sparingly offered, prices ruled dearer. Firsts, November-December, sold, £30 5s; December-January, £30; January-February and February-March, £30 5s; March-April, sold, £30 5s. Lightnings, November-December quoted £25 10s ton. Hessians and twills firm, quiet.

HEMP.—Manila descriptions firm, and marked paucity of offers from the other side tends to curtail business. J, November-January, quoted £48; K and L, Q, £46 10s to £47; M 1, £43 10s; M 2, £38. New Zealand, fair, November-January, nominally £36 ton. African sisal unaltered. No. 1, f.a.q., November-January, £43 ton, and Kenya, £42 10s.

SHELLAC.—Market quiet. Fair T.N., spot, 185s; March, 190s; May, 191s to 187s cwt.

COPRA reservedly offered and market firm. Straits, F.M.S., December-January and January-February, to Rotterdam, quoted £25 17s 6d; February-March, sold, £26; Dutch East Indies, December-January, £25 11s 3d; Ceylon, ditto, £27 10s; South Sea, sundried, £24 5s; ditto, to Versailles, £24 5s; and smoked £23 17s 6d. Palm kernels, November-January, quoted £18 13s 9d ton.

ALFRED W. BERRY, Secretary.
22 Austin Friars, London, E.C.2.
14th December, 1926.

TALLOW.—Messrs Colchesters and Woolner write on December 15th as follows:—The tallow market was a little steadier during the week, and prices were fully maintained to-day, except for mutton. Rather more inquiry was experienced, but there was not much eagerness to take advantage of last week's reduction in values. At auction, to-day 945 casks tallow were offered, and 215 were sold. Quotations are:—Australian mutton: Fine, 40s; good to fair, 39s to 37s; dull to dark, 35s to 34s; hard, 38s. Australian beef: Fine, 40s; good to fair, 37s to 36s; dull to dark, 35s to 34s; sweet, 40s. Present shipment from Australasia: Good mixed, 37s 6d. Present shipment from South America, 38s. The market letter is unchanged. Town tallow, 34s 6d per cwt; rough fat, per 8 lbs, 1d; melted stuff, 24s per cwt. Quotations are: Town, 34s 6d, net cash, naked, ex works. Country—Frail casks, 34s; home melted, shipping casks, net f.o.b., good coloured, 37s; fair to dull, 35s to 34s. Bone fat: white, none; pale, none; benzine, 30s; melted stuff, 29s, f.o.b.

MISCELLANEOUS.—Cocoanuts quoted 25s per 100. Coir yarn, Ceylon, £22 to £38; Cochin, £26 10s to £45; Ceylon bristle, £18 to £23 10s; cinnamon leaf oil, 5d; citronella, Ceylon, 1s 3d; Java, 2s 1d.

THE MONEY MARKET.

As a result of last week's borrowings from the Bank of England, market supplies of credits were comfortable and sufficient for all requirements on the first two days of the week, short loans being obtainable at 3½ to 4 per cent., but on Wednesday the Bank had to be repaid, and currency demands for Christmas also had a slight effect, but conditions remained fairly comfortable. There was a little discounting of short bills at

the Bank of England at the official minimum. The discount market has been steady, being influenced by gold withdrawals from the Bank, much of which is believed to have been taken for Germany. The Continental demand for commercial bills has slackened, and on Wednesday the general rate for three months' bills was $4\frac{1}{8}$ per cent.

	Dec. 22, 1926.	Dec. 17, 1926.	Dec. 10, 1926.	Dec. 3, 1926.	Previous Rate and Date Changed.
Bank Rate	5%	5%	5%	5%	$\frac{1}{4}$ (Dec. 3, '25)
Banks' Deposit Rate	3	3	3	3	2 (Dec. 3, '25)
Discount, Call	3	3	3	3	2 (Dec. 3, '25)
Houses' Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$2\frac{1}{2}$ (Dec. 3, '25)
Market rate (3 months' bills)	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	$4\frac{1}{8}$	..

THE STOCK MARKETS.

A feature of a quiet week, so far as business is concerned, has been the strength of the gilt-edged market under the lead of Five per Cent. War Loan. In the foreign section Chinese bonds have been better, and Belgian Sevens have risen further to $9\frac{1}{4}$ premium, but there has been little real activity in French issues. Home Rails have been quiet, with a tendency to droop, but Argentine rails have been good. Rubber shares show a slight improvement, but in the industrial section Courtaulds and Dunlops have fluctuated. Newspaper shares, on the other hand, continue strong, and tobacco issues are firm. Bass ordinary shares advanced sharply on the announcement of a fusion of interests with Worthington. Armstrongs are again lower. The Rand dividends failed to stimulate the Kaffir market, and the tin share market is uncertain. The Bulgarian 7 per cent. Settlement Loan for $\pounds 1\frac{1}{2}$ millions, issued on Wednesday at 92, was rapidly oversubscribed, as was also the Nottingham Corporation issue of $\pounds 1$ million in 5 per cent. stock.

THE COMMODITY MARKETS.

Business has been below normal this week, owing to the imminence of the Christmas holidays. Coal prices are easier, production having shown a further increase, while transport difficulties are still in evidence. A few more blast furnaces have been lighted, but most iron and steel producers are awaiting the New Year before resuming normal production, and the market has a quiet appearance. Inquiry for cotton textiles has tended to broaden. Raw wool maintains its recent firmness. A large business has been done in hessian yarns at Dundee during the last few days, and prices have risen smartly. Rather more interest has been taken in wheat. Sugar is steady, coffee firm, tea quiet. A fair business has been done in the rubber market at prices showing little change from those of last week. Tin and copper have been irregular, after a firm opening, while lead prices have risen slightly on improved trade demand.

FOREIGN EXCHANGES.

The franc started the week firmly, and closed on Monday at 119 $\frac{3}{4}$, after having been at one time 119 $\frac{1}{4}$, or nearly two francs better than the opening rate, the forward rate for three months falling to $2\frac{1}{4}$ francs over the spot quotation. On Tuesday fairly heavy offering towards the end of the day depressed the rate to 121, and on Wednesday further selling sent the quotation up to 122. The Italian lira has this week moved in close sympathy with the franc; elsewhere movements have been small. The belga hardened a little on Monday, but lost the improvement on Tuesday, and is practically unchanged on balance. The New York Exchange eased a little on Monday, but has since been quite steady at just over 4.85 $\frac{1}{8}$. The rupee has shown an upward tendency, while the Far Eastern exchanges were generally steady. The price of silver has eased slightly in the absence of demand, and with India a seller. In the South American group the general tendency was to harden, but changes were very small.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended December 18th:—

EXPENDITURE.		RECEIPTS.	
(000's omitted.)		(000's omitted.)	
Supply Services	8,100	From Revenue	14,775
Interest, &c., on Debt	15,246	Increase in Debt	14,665
Sinking Fund	5,531		
Sundries	475		
Increase in Balances	88		
	29,440		29,440

The revenue for the week amounted to $\pounds 14,775,400$, as compared with $\pounds 14,555,000$ in the corresponding week last year. Customs and Excise were lower at $\pounds 1,506,000$ and $\pounds 7,989,000$, against $\pounds 1,795,000$ and $\pounds 8,099,000$ respectively. Property and Income-tax brought in $\pounds 848,000$, as compared with $\pounds 674,000$, while Super-tax amounted to $\pounds 460,000$, against $\pounds 500,000$. Ordinary receipts were higher at $\pounds 391,000$, against $\pounds 294,300$, and Special receipts at $\pounds 1,002,500$, against $\pounds 178,900$. The week's operations increased the National Debt by $\pounds 14,665,000$, and caused the following changes:—

(000's omitted.)		(000's omitted.)	
Bank of England Advances ..	2,000	Treasury Bills	3,175
Sundries	460	Public Department Advances ..	13,950
	2,460		17,125

The floating debt was increased by $\pounds 15,125,000$ to $\pounds 847,881,000$.

FINANCIAL YEAR, 1926-1927 (April 1 to December 18, 1926).

£		£	
Total Expenditure ..	606,504,528	Raised by Revenue ..	461,748,228
		Decrease in Balances ..	3,696,020
		Amount borrowed ..	141,060,280
Total	606,504,528	Total	606,504,528

ESTIMATES for FINANCIAL YEAR 1926-7.†

£		£	
Expenditure	825,727,000	Revenue	824,750,000
Deficit	£977,000		

† Revised in Exchequer Return dated July 26, 1926.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Ionian Bank, Carreras, W. Abbott and Sons, Camp Bird, Oroville Dredging, Colombian Corporation, and Anglo-Ecuadorian Corporation.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a review of the world's crops in 1926.

TOWARDS PEACE.

PROLONGED and persistent civil war in China and the biggest industrial dispute on record in this country seem to belie the suggestion that 1926 will be known as the year of "peace." Yet this may well be the verdict of history, for the admission of Germany to the League of Nations marks the real end of the Great War and introduces a new epoch in which the nations of the world will once more have an opportunity of concerting measures to preserve peace, and by so doing establish civilisation on a firm and permanent foundation. Will they succeed in a task of which they have made so sorry a failure in the two thousand years which have elapsed since the first Christmas?

Clearly all the moral forces which the world contains must be marshalled in this struggle.

It is doubtless always possible for the casuist to set up some kind of an argument in defence of brutality, and there are never wanting those who can reconcile so successfully the horrors and brutalities of war with the message of Bethlehem and the Sermon on the Mount. But whatever ingenious argument may be used to accommodate the Christian teaching to the continuance of war, the discerning mind must surely say that the moral as well as the material future of the world will largely depend upon our success or failure in eradicating international hatred and international war. In particular, it is to-day the supreme duty of the churches to fight to remove the spirit of hatred which alone makes war possible.

At the present time in this and in most European countries there is probably a greater horror of war, a stronger desire for peace than ever before. The memory of the four years' suffering and bitterness and torture is still so fresh in our minds that a new adventure in the same field is to most of us unthinkable. But generations come and go, and within a few years power will have passed into the hands of those who remember nothing of the war, who were children in 1918, and will think of the war as a piece of history to be learnt or not learnt, like the rest of history, as a task. It is with these young people and their succeeding generations that the future destiny of the world rests. If the present desire for peace is nothing more than a reaction from remembered agony, the distaste and repentance that marks the morning after the orgy; if our love of peace and dislike of war are based on nothing firmer than this emotion, what hope can there be of a secure peace for those who are to follow us?

It is commonly alleged that you can never change human nature, and that it is, therefore, hopeless to try to eradicate war. Such an argument is, of course, entirely contrary to the lessons of history and of science. While human physique is slowly but surely changing, the standards of human conduct are changing with startling rapidity. Is this evolution tending to make war a thing that no civilisation with any moral standards may even contemplate? In many other directions recent civilisation has produced changes of comparable importance. We have, for example, only to carry our minds back a hundred and fifty or two hundred years and see how slavery was regarded as a necessary evil or an actual good, only to read the life of Wilberforce and the story of the opposition and the indifference that he faced and overcame and compare it with the light in which the civilised world regards slavery to-day, to realise how great a moral change can be worked by the practical idealist. The irremovable evil and the economic necessity of the eighteenth century is the unclean thing, the impossible horror to the twentieth. Is it too much to hope that war may go the way of slavery, and that just as we cannot enter into the minds of our forefathers, who defended and justified the slave trade, so our successors will stand aghast at the thought of twentieth-century Europe settling its differences with the bombing aeroplane and the machine-gun?

To those who hope for this change in the moral outlook the past year has not been without encouragement. Black spots show up here and there; adventurous statesmen still toy with the thought of war, and another outburst in the preparation of armaments is threatened by the competitive naval programmes of Europe and the United States. In the laying of the foundations of mutual trust and co-operation, on which alone enduring peace can be built, the United States has the power to play, one may almost say, the decisive rôle. Is America's future policy towards Europe's struggles for peace to be that of President Coolidge's cruiser bill or that of the Columbian professors? However that question may be answered, there is, in any case, much in 1926 to be thankful for. The bonds of harmony and co-operation have been drawn tighter between the members of the British Commonwealth. Moreover, in Europe itself the sky is clearer and the atmosphere less heavily charged with hatred. The League of Nations is stronger, the relations of Germany to her old enemies, and especially to France, have improved to a point beyond the expectations of 1925, and the prospect of a general reduction in armaments,

though still remote, is not so distant as to be desperate. At the beginning of this week, Herr Stresemann declared in Hamburg that the ups and downs of domestic politics in Germany would make no difference to the foreign policy followed by Germany, which was supported by the overwhelming majority of the German nation, and added:—

Perhaps the most valuable success of Geneva lay in the fact that the method of open discussion for which the League offered so excellent an opportunity had once again fully proved its efficiency. They were still in the early stages of a new European development, and at this stage particularly it was important for the statesmen to provide food for their nations' belief in this development as often as possible.

No one would be bold enough to say, on the strength of this speech or any other speech, that the spirit of militarism is dead in Germany, or in France, or in Great Britain, but it is a great thing that responsible politicians in any European country should use this language of reconciliation, and if the "nations' belief" in open discussion instead of war is fostered continuously by the leaders of politics and the leaders of religion; if, moreover, those who rule our industrial fortunes can evolve from the disasters of this year a similar tone and spirit; then we may hope to move more quickly than we have hitherto dared to hope towards those higher standards in the conduct of human affairs which alone can assure peace in our children's time.

AMERICAN PROFESSORS ON INTERNATIONAL DEBTS.

ALL who come into touch with Americans on either side of the Atlantic have all along been aware that if the question of the settlement of Europe's war debts to America had been in the hands of certain expert or highly-educated sections resident in the East, the policy pursued would have been very different from the one actually adopted by Washington, with, no doubt, the support of an overwhelming preponderance of opinion over the length and breadth of the United States. Britain and other European debtors could not afford to leave the whole question of international debts indefinitely in chaos in the hope that a more liberal view of the problem would permeate American public opinion. They have, therefore, made their settlements, and having done so, can sit down with a certain sense of proud detachment and watch the lengthy process of such permeation. There are those who believe that nations will not, as the present settlements prescribe, continue through several generations to pay and receive from each other large annual tributes arising out of a war in which all were partners. Those who have made their compositions look vaguely for the day when a modification more helpful to world progress will be evolved, and accept the position that such modification can come only from the creditor. On the other hand, France, whose proposed settlement has not yet been ratified, is still in a position to attach immediate political importance to any straw which shows a change of wind.

Although, therefore, different nations will view it through different spectacles, all Europe will feel its interest quickened and its admiration aroused by the courageous step taken this week by Dr Nicholas Murray Butler and forty Professors of Columbia University in issuing a long and reasoned memorandum calling for a reopening of the debt settlement problem. The practical value of this document is not easy to assess, and time alone will show the power of its influence upon American public opinion. Clearly, however, it is of more than academic importance. If, in our country, the Professorial staff of Oxford or Cambridge, irrespective of party association, were to issue a statement condemning the settled policy of the Government of the day in a matter of first-rate international importance, the effect on British public opinion would be far from negligible. But the Columbia Professors, who sign this week's manifesto, are something more than ordinary University "dons." They are, as Dr Butler says, "no closet philosophers, but men in active touch with every phase of practical life, including finance, industry, commerce, and legislation." This claim is

sufficiently borne out by the inclusion among the authors of men like Dr Butler himself, and Professors Seligman, John Bates Clark, Wesley Mitchell, and Parker Willis, to mention only a few.

The Manifesto is a lengthy document, and we can only here attempt a brief summary. The keynote is struck in the opening sentences:—"In our judgment the war debts settlements are unsound in principle. Certainly they have created and are fostering a deep sense of grievance against us. We do not urge that the debts be completely cancelled. Whether there should be cancellation in whole or only in part depends on many complicated factors yet to be studied. What we do urge is a complete reconsideration in the light of present knowledge. To this end we believe that an international conference should be called to review the entire problem of debt payments and make proposals for readjustment." Having thus stated the purpose of their action, the signatories proceed to emphasise the "unprecedented effort" made by the nations of Europe in the last few months "to rid themselves of the menace of war," an effort which is also the subject of eulogistic appreciation in Dr Butler's explanatory note. "It is unthinkable," says Dr Butler, "that the people of the United States, with their traditions and their historic policies of international friendship and co-operation, will withhold any possible measure of support from this epoch-making movement." But, as the text of the Manifesto goes on to state, "the prime condition of the success of any such movement is mutual trust and understanding. Our war debt settlements have produced distrust and misunderstanding."

We in this country are wearily familiar with the facts and arguments in this debt controversy; and we feel like spectators in the gallery of the debating chamber as we hear the Professors faithfully reproducing them for the benefit of their own countrymen. They cover, indeed, almost the whole well-worn ground. On the moral side of the question they go almost further than British official argument has ventured to go. "Our declaration of war was followed by the mobilisation, not only of our manpower, but also of our material and financial resources. From the latter we made extensive advances to nations fighting a common enemy. . . . That the borrowers used the credits to help win their own wars is undoubtedly true; but the reason that we loaned the money was the fact that by so doing they were also helping us to win our war." Some credits, the Manifesto continues, were for military purposes, some for food and clothing, some were made after the Armistice. Too little account, it is argued, has been taken of the differences. Next the Professors quote the Secretary of the Treasury to the effect that Washington has, in fact, cancelled £1,007 millions of debt, but this is not so generous as it would have been "if these had been merely business transactions." In fact, it should be remembered, they say, that during this period America was fighting with money only, and the Allies, who were borrowing, were holding the trenches in the crisis of the war.

We will not follow the Professors further over this ground, refreshing though it is to hear them repeat the thoughts and arguments of millions of European "men in the street." It is when they turn from ethics to finance that they really contribute something new to the discussion. They begin with a devastating attack on the formula of "capacity to pay." Most of the settlements, they point out, are for 62 years. How, they ask, can the capacity of any nation to pay be assessed over 62 years? And they enforce the point by looking back over 62 years of the past. Nor can they reconcile with justice, or even with the "capacity to pay" formula, the fact that of their whole debts France is asked to pay 50 per cent., Belgium 54 per cent., Great Britain 82 per cent., and Italy only 26 per cent. In all this the signatories find causes of a dissatisfaction which "may easily wreck the plans for world order and peace, according to which Europe is rebuilding its shattered economic fabric." "Our debt settlements," they continue, "are part and parcel of a whole network of settlements between the other Powers. It is clear that the whole matter should be re-examined on a basis, not of immediate expediency, but of justice and of generous intention that would give no reasonable ground for misunderstanding."

The final sections of the Manifesto deal mainly with the "material interests" involved. It is stated that debt payment receipts in the next few years will constitute less than one-third of 1 per cent. of the American national income, or a matter of 2 dollars annually per head of population. "Payments that could at best mean a paltry gain for most American taxpayers mean to the over-taxed debtors a crushing load." In order to obtain this "paltry gain" at the expense of a "crushing load" for the debtors, the Professors continue, the United States incurs a "growing odium" in Europe. This point, in our view, they over-stress, especially when they connect this "odium" with the formation of European industrial cartels; but it is reassuring to see the realisation of the present position that is implied in the following sentence: "Already it is being pointed out that the reparation payments which threaten to hold Germany in financial bondage for two or three generations are necessary to permit the Allies to pay their war debts to us."

And so the Manifesto runs to its conclusion: "Thus the demands of justice are reinforced by the dictates of political expediency and the counsels of economic self-interest in urging us to meet halfway the countries of Europe in the international debts and reparations conference, which we here propose." If we do not look for sensational results from this Manifesto, or expect it to bring about a revolution in international finance, we may, however, regard it as a most hopeful sign of the trend of enlightened American opinion. In any case we may congratulate Dr Butler and the Professors of Columbia on their brave and practical contribution to the discussion of international relations, which is the more welcome and the more appropriate because it coincides with the traditional season of "peace and goodwill among men."

THE OWNERSHIP OF BRITISH INDUSTRIAL CAPITAL.—II.

In an earlier article we gave a brief outline of the methods adopted in a recent inquiry into the ownership of industrial capital in Great Britain. We may recall that two series of figures were taken from the Somerset House records of seven large-size concerns (Group 1) and eleven concerns of moderate size (Group 2), viz.:—Series A: Every hundredth shareholding (approximately) in each company in Group 1, and every fortieth shareholding (approximately) in Group 2; Series B: All holdings of £10,000 or over. We found that the aggregate capital of the 18 concerns, £152 millions, was shared among more than 500,000 shareholders, each holding £301 on the average, and came to the tentative conclusion that the best-known British companies tended to draw their individual supplies of capital from a multitude of small streams rather than a few vast reservoirs. This statement will be examined in somewhat greater detail in the paragraphs which follow.

In the first place we may inquire as to how shareholdings are distributed as between small, moderate, and large individual amounts. Is there any particular type of holding more popular with the British investor than any other? To use a technical term, what is the "Mode" as distinct from the "Mean" in this case? The following table throws light on these matters, as regards the large concerns in Group 1:—

DISTRIBUTION OF SHAREHOLDINGS.—GROUP I.

Company.	Total Shareholders.	Proportion of Total Shareholders, whose holdings are—						Total Holdings.
		Less than £100.	£100 to £500.	£500 to £1,000.	£1,000 to £1,500.	£1,500 to £10,000.	Over £10,000.	
Imperial Tobacco	106,900	36.7	48.4	8.3	3.2	3.1	0.3	100
Courtaulds	47,900	42.6	48.1	4.8	2.7	1.6	0.2	100
Anglo-Persian Oil	57,500	38.8	48.6	8.0	2.6	2.0	0.03	100
Brunner, Mond	37,200	29.2	55.0	10.2	3.1	2.3	0.2	100
Vickers	70,400	31.3	54.2	8.1	3.2	3.1	0.07	100
Dunlop Rubber	51,600	28.8	52.0	9.9	4.8	4.2	0.3	100
Cunard Steamship	14,000	25.0	47.4	12.1	3.5	11.7	0.3	100
Total—Large size concerns	385,500	34.6	50.6	8.3	3.3	3.0	0.2	100

* This column is based on Series B data.

As the figures are based on a sample of one holding in every hundred, precise exactitude cannot be claimed for them; but certain broad inferences may nevertheless be drawn with fair confidence. In every case we find shareholders "crowded" at the lower levels. Taking the seven companies as a whole, it will be seen that one-third of the total holdings are individually less than £100 (par value), 85 per cent. are less than £500, and 93½ per cent. less than £1,000. The precise proportions vary from company to company, but the tendency is the same throughout. The corresponding figures for the concerns with a moderate capital are:—

DISTRIBUTION OF SHAREHOLDINGS.—GROUP II.

Company.	Total Shareholders.	Proportion of Total Shareholders, whose holdings are—						Total Holdings.
		Less than £100.	£100 to £500.	£500 to £1,000.	£1,000 to £1,500.	£1,500 to £10,000.	Over £10,000.	
General Electric Co.	23,100	34.4	55.9	6.6	1.9	1.1	0.09	100
Spillers' Milling	10,700	26.8	58.9	8.2	2.1	3.7	0.3	100
Phoenix Assurance	8,500	49.0	37.0	7.6	2.2	4.0	0.2	100

* This column is based on Series B data.

In the case of these eleven companies, about 38 per cent. of the total holdings are less than £100, 88 per cent. less than £500, and 95 per cent. less than £1,000. The spread as between different companies is somewhat wider than in Group 1, but the averages throughout show a remarkable degree of similarity. That of the total investors in the 18 British companies over one-third own less than £100 of capital will come as a surprise to most people. These investors are probably "small capitalists" in appearance and in fact. The purchase of £100 of shares on the Stock Exchange may cost as much as £2 10s in fees, commission, and stamps, and the large investor who is "spreading his risks" over a number of companies usually regards £100 as an uneconomically small holding, for this and other reasons. The shares of some concerns in both groups stand, of course, at a substantial premium to-day, but others are at a discount, while in certain instances issues of bonus shares have gone to swell the total outstanding capital in recent years.

We may conclude, then, that if the companies in our list are representative of the majority of British industrial organisations whose securities are freely marketed on the Stock Exchange, capital ownership in this country is truly a democratic business. It is still possible, however, that the relatively small groups of shareholders at the higher levels may own such large individual amounts as to "swamp" the multitude of small holders. In other words, if 1 per cent. of the total shareholders in any company own 50 per cent. or more of its capital, they can regularly outvote the other ninety-and-nine per cent., and govern the company's affairs as they will. In order to ascertain how far this state of affairs obtains, we have extracted from the various registers particulars of all large holdings (i.e., holdings running into five figures), with a view to determining to what extent these tend to dominate the financial organisation of the different companies. The following table shows, as regards concerns in Group 1, the numbers of such holdings, and the percentage of the total issued capital which they control. The last four columns show the total large holdings responsible for one-tenth, one-fifth, one-third, and one-half of each class of capital respectively:—

LARGE SHAREHOLDINGS—GROUP I.
(i.e., Separate holdings of £10,000 or over.)

Company.	Nature.	Capital Examined.	Amount Issued.	Large Holdings.					
				No. of Holdings.	Proportion of Total Capital.	No. of Large Holdings comprising:—	One-tenth of Capital.	One-fifth of Capital.	One-third of Capital.
Imperial Tobacco	"A" Pref.	£4,959,249	32	32.8	2	7	7	7	31
	"B" Pref.	2,260,469	39	51.7	2	2	2	2	13
	"C" Pref.	2,682,218	25	59.4	1	1	1	1	4
	Ord.	29,951,697	233	43.0	3	11	75	75	75
Courtaulds	Pref.	8,000,000	42	28.4	4	10	10	10	10
	Ord.	12,000,000	57	26.2	5	23	23	23	23
Anglo-Persian Oil	1st Pref.	7,000,000	11	2.5	1	1	1	1	1
	2nd Pref.	3,500,000	3	0.9	1	1	1	1	1
	Ord.	8,950,000	4	14.1	1	1	1	1	1
Brunner, Mond	Pref.	4,000,000	17	8.9	1	1	1	1	1
	Ord.	9,799,303	56	31.4	1	9	9	9	9
Vickers	Cum. Pref.	6,863,807	16	4.2	1	1	1	1	1
	Ord.	4,105,161	30	4.8	1	1	1	1	1
Dunlop Rubber	Ord.	6,723,042	162	20.3	25	137	137	137	137
Cunard Steamship	Ord.	4,456,189	39	30.4	5	12	12	12	12

* The above figures exclude British Government's holding of £5,000,000 ordinary.

Only as regards the preference shares of a single company do we find the largest shareholders controlling more than half the issued capital, while in a number of cases the proportion of the whole represented by such holdings is extremely small. The large Government holding of 56 per cent. of the ordinary capital of the Anglo-Persian Company is, of course, an exception. The corresponding figures for Group 2 companies are:—

LARGE SHAREHOLDINGS—GROUP II.
(i.e., Separate Holdings of £10,000 or over.)

Company.	Nature.	Capital Examined.	Amount Issued.	Large Holdings.					
				No. of Holdings.	Proportion of Total Capital.	No. of Large Holdings comprising:—	One-tenth of Capital.	One-fifth of Capital.	One-third of Capital.

Shareholdings of £10,000 or over have a controlling interest only in one case, and only in a minority of instances do they represent as much as one-fifth of the total capital. It may be that some of the most influential investors in particular companies prefer to split up their holdings and to borrow the names of other persons for that purpose, but that this tendency will be sufficient seriously to affect the above broad conclusions is unlikely.

The facts elicited in the course of this article suggest several interesting speculations. One usually assumes, for instance, that financial control is a *sine qua non* of effective administrative control of a given company. The figures suggest that, in practice, this may not always be the case. Provided that the mass of shareholders receive their dividends regularly, the directors may hold their power indefinitely, and even when affairs go wrong, the board may have even more than the customary opportunities of a Government in power for influencing an incoherent body of electors. Experience seems to show that sitting boards of directors are overthrown only when some determined outside shareholding interest raises the standard of rebellion, and goes to considerable expenditure of time and money to organise the thousands of small shareholders whose votes are, in the last resort, the controlling factor. In other words, the figures raise the question whether the spreading of capital ownership does not make for inertia in the expression of corporate opinion. The question has many facets, but cannot be developed at greater length here.

THE DYESTUFFS POSITION.

(BY A CORRESPONDENT.)

THE air of mystery that has hitherto surrounded the world statistical position in dyestuffs is steadily being dissipated, and the recent publication of British production figures now permits a general review of the international situation. These figures are of particular significance in view of the inclusion of the British Dyestuffs Corporation in the recently formed chemical combine. The main fact which emerges is that the actual output of the various countries producing coal-tar dyestuffs is in excess of consumption. In addition, the potential capacity of the works now in existence is far more than sufficient to take care of any possible increase within the next several years. Brief reference to the position as it existed before the war helps to emphasise the significance of the situation at present. In 1913 the world production amounted to upwards of 150,000 tons of dyestuffs, of which about 125,000 tons were made in Germany, with exports accounting for more than 100,000 tons. Second in importance came Switzerland, with about 10,500 tons annually before the war, 90 per cent. of which was exported. In the United Kingdom production of dyestuffs in 1913 had attained 4,000 tons, about one-half being made from imported intermediates. Production in America in that year was not more than 3,000 tons, and the balance of the world total was spread over other countries in varying, but always small, amounts. The war brought about great changes, forcing producing countries other than Germany to increase output as rapidly as possible in order to cope with the unique opportunity offered by the more or less complete stoppage of German supplies. Further, and apart from the large-scale operations developed in America, Great Britain, and France, dyestuffs industries were built up in Italy, Japan, Poland, Spain, Czechoslovakia, &c. But in Germany also, where the dyestuffs factories had been temporarily converted into munition works, developments proceeded in the way of financial reorganisation, plant extensions, and technical improvements, thus preparing the way for a resumption of the pre-war monopoly that had been enjoyed. With the 25 per cent. increase in German output capacity, war and post-war expansion has resulted in approximately doubling the world's capacity production.

In regard to Germany, which, despite every effort on the part of other producers in the way of tariffs, subsidies, import prohibitions, and the like, still remains the most important factor in the international position, it is interesting to observe that great assistance was given to her dyestuffs industry in its post-war difficulties by the Allies themselves. In 1921 the output amounted to approximately 51,800 tons, rising in 1922 to 86,000 tons, or more than two-thirds of the pre-war total. In 1923 came the Ruhr occupation and consequent disorganisation, but this setback was counterbalanced by the Reparations paradox, through which Germany was relieved of several thousands of tons of dyestuffs, to the inevitable detriment of the industries of those of the Allies who took them. In 1924 German production recovered again to about 75,000 tons, from which figure it has varied little since, according to the recent report of the I.G. Farbenindustrie. There are many indications, however, that Germany is anticipating the ultimate recapture of the dyestuffs markets of the world. After consolidation of the manufacturing end, attention has been, and is being paid, to the perfection of the selling arrangements in foreign countries. In some cases, notably Russia, Japan, and Spain, national agreements have been concluded, while in others efficient centralised agencies have been formed, of which the recently constituted I.G. Dyestuffs, Limited, in this country is an example. This last instance is, indeed, typical of the patient methods adopted by the German industrialists, for the Dyestuffs (Import Regulation) Act of 1920 has still four years to run, and

proves an effective barrier to any immediate large-scale activity on the part of the new company. Much, however, can be done in preparation for the future in this respect. One other point in connection with the German combine is the wide embrace of its operations, for, besides comprising all the dyestuffs firms, it has interests in more than 40 other concerns all bearing upon the chemical industry—a factor which is frequently lost sight of by competing dye interests.

It is in America that the most remarkable developments in the dyestuffs industry have taken place within the last decade. From 2,940 tons in 1914 production advanced until in 1918, at 26,000 tons, it equalled the pre-war importation. In 1923 actual output amounted to the "peak" total of 41,700 tons, falling to 30,520 tons in 1924, but recovering to 38,400 in 1925. More than 90 per cent. of the home consumption is satisfied by domestic manufacturers, and about 11,500 tons were exported last year. The increased production has caused this large export trade, which is not, however, very remunerative. Very severe competition has resulted from the excess capacity for production, and several firms have been absorbed or eliminated during the past few years. There is a distinct possibility that amalgamation will be more resorted to in the future in order to reduce costs to meet the more insistent competition in the better qualities, for it is in these higher-priced commodities that the industries outside Germany find their greatest difficulty. Synthetic indigo and sulphur blacks, which comprise the bulk of the American exports, are among the cheaper colours, but progress, nevertheless, is being made in the manufacture of the more expensive vat dyestuffs.

In the case of Great Britain, in spite of import prohibition, financial assistance and other forms of nursing, the position is by no means so favourable. Immediately before the Dyestuffs (Import Regulation) Act came into force in January, 1921, the market was flooded with various products which had, of course, to be absorbed. By 1922 matters were more normal, and British production amounted to over 9,000 tons, more than twice the pre-war figure. In 1923 the occupation of the Ruhr by the French resulted in a reduction in the German output, and the production in this country rose to 14,670 tons, accompanied by a 350 per cent. increase in exports. But by this time the question of price had become acute here, and constant pressure was exerted by using interests to secure reductions, with some success. Quality was higher on the average, and 1924 saw a further improvement in volume to 14,780 tons. In 1925 a decline in British output took place, the actual figure being 14,420 tons, and had it not been for the increase of some 990 tons in synthetic indigo, which is to-day vastly overproduced, the position would be even less healthy than it is. Certainly British exports have been larger than imports since 1923, but the total exported has steadily declined, and this year is not likely to be more than two-thirds of the quantity shipped abroad in 1925, while imports (under licence) have advanced.

Turning to other producers, it is found that post-war developments in France have been excellent, production rising to 14,979 tons in 1924, but falling to 14,549 tons in the following year, owing to difficulties in the export markets similar to those being experienced by America. Current output in Switzerland is only about one-half of the pre-war figure. Japan has fallen off considerably from the 7,100 tons made in 1919, due to German competition. In Italy present production amounts to nearly 4,500 tons, with the outlook considered promising for future expansion. Poland, with a capacity for production of 2,000 tons, is making 600 tons. For all these, and other, national industries to succeed, it is absolutely essential that production should be satisfied by a much larger export market in non-producing countries than is at present the case. In the largest of such markets, China, ruthless competition has resulted in a situation bordering on the farcical, even before the present unrest in that country became so acute. It is almost certain that the only alternatives before the British industry, at any rate, are the elimination of certain producers, internal amalgamation followed by an agreement with Germany, or a gradual change over to the manufacture of other fine chemicals to which existing plant might be adjusted.

THE DIFFICULTIES OF RUSSIAN TRADE.

(BY A CORRESPONDENT.)

AT this time last year the Russian authorities were faced with the certainty that the 1925-26 grain export plan was a failure, and that they had been over-buying against it on the foreign markets. The balance of trade, an elusive conception as regards Great Britain, is readily calculable in the case of Russia. The State Planning Department budgets for the agricultural year to September. Invisible imports are non-existent; there are no long-term obligations abroad to be considered; the Planning Department simply estimates the value of exports for the coming year, and within the limit of that figure authorises such imports as are most urgently required.

Everything depends on the correctness of the estimate of exports, especially of grain, and in the autumn of 1925 this was badly miscalculated. After five years' persistent effort and careful management, short-term credits could be obtained abroad for permitted imports, and in anticipation of a large grain surplus, extensive purchases were made in foreign markets from August onwards. By December the authorities realised that the trade balance would show a heavy deficit instead of the expected surplus, and immediate steps were taken to make the deficit as small as possible.

The methods adopted are illuminating. First of all every effort was made to stimulate other exports, such as timber, flax, and dairy produce. These failed for the same reasons that caused the collapse of the grain export plan. The crops were excellent, but the peasants refused to sell for export. The Russian peasant has travelled far in the past seven years. The Soviet authorities have tried hard to cultivate a feeling of class-consciousness among the agricultural classes, and they have succeeded. The peasant is beginning to realise his power. For the first time in his history he now pays his rent and taxes in money only; his tenure is secure; a paternal government is teaching him to read, and for his reading is supplying him through the Press with very complete reports of prices and conditions in the world's markets. He knows the quantities of grain that the Grain Control Commission is authorised to sell abroad, he knows the sales that have been effected, and the approximate prices; he knows the shipping arrangements that have been made, and when he is offered what he considers too low a figure for his produce, he refuses to part with it. He has become so strong that he cannot be coerced. The peasant problem is at the bottom of all the political troubles in Russia this year. The thorough-going Communist of the old school, who is the driving force of the Opposition, sees the only hope of the survival of the present régime in the coercion of the peasant. The Stalin-Rykov group realise that such coercion is now impossible. The support of the peasant, negative though it be, is their sure bulwark against any attempt at counter-revolution.

The position was, and is, complicated still further by the increasing disparity between the external and internal value of the chervonetz. The chervonetz has been stabilised abroad, but the artificiality of the methods adopted has been shown once more by this year's decree prohibiting Russian banks from accepting chervontzi notes from their foreign correspondents. Chervontzi notes cannot be exchanged for foreign currency in Russia, and it is strictly forbidden to take or send any over the frontier. The continuous rise of prices in Russia is not a result of inflation; it is due to two main causes—distrust of the chervonetz in Russia itself, and the effect of the foreign trade monopoly. Russia is recovering fairly rapidly from the prostration of 1917-20, but the average Russian, with these years in mind, has no confidence in the chervonetz. He does not recognise it as a store of value; it is something which, when obtained, should at the earliest possible moment be exchanged against goods. The rapidity of its circulation is extraordinary. Luxury shops are springing up in all the large towns, and a suit of clothes may cost £50 or £60!

One of the effects of the foreign trade monopoly is to

create a scarcity value for all imported goods. Only a bare fraction of Russian needs are met by the imports allowed. The State trading organisations have to pay heavily for their credits abroad, their working expenses are big, and the State charges a large margin of profit so as to build up reserves. The prices charged by them are high, those charged by the co-operative societies to their members are higher still, while those charged by the private trader are much the highest of all. The State shops ration their customers severely; when the man in the street wants anything he goes to the private trader.

The prices of home products are affected sympathetically. Before the revolution the peasant reckoned that a pood, i.e., 36 lbs., of grain bought him a pair of boots. To-day he has to pay £5 for the pair of boots, so he demands more and more for his grain. The tendency is for agricultural products to fetch prices even higher than those obtaining abroad. This year, for instance, the export of eggs, which in 1925 was assuming very considerable proportions, collapsed almost entirely. Prices in the home markets were at times as much as 20 per cent. above London quotations. When one considers that the working expenses of the unwieldy exporting organisations amount to 30 per cent. or 50 per cent. of the sale price, one can appreciate the difficulties the Government had in trying to force exports.

Failing any method of stimulating exports, the authorities turned their attention to imports. As from the beginning of December, 1925, the Department of Foreign Trade stopped completely the issue of import licenses, unless, of course, in the case of deliveries under contracts placed prior to December, which could not be cancelled. The embargo was not lifted until October of this year, and then only to a very limited extent. We have therefore had the extraordinary spectacle of this great country buying nothing abroad for fully ten months.

What is the position to-day? Almost everything again depends upon the amount of grain that can be exported. The harvest is a good one. It is estimated that it exceeds last year's by over 3,000,000 tons, yet the Grain Control Commission announces that it has collected for export little more than for the same period last year. The rigid system of economy that has been introduced, the prohibition of private traders to compete with the State or Co-operative organisations in buying for export, the appeals to the peasants by every responsible member of the Government, have availed nothing. The same economic factors that militated against last year's export programme are even stronger to-day.

Every effort is being made to force the export of other products such as naphtha, and to simplify the working of the foreign trade monopoly. New organisations have been created to export coal, metals, flax, and so on, and sell directly abroad. It is supposed that in this manner foreign buyers will be brought into closer touch with the producers in Russia, and a certain number of economies effected. Such specialisation has, in fact, been in progress for some time, but the example of, say, the Grain Commission does not hold out many hopes of drastic savings in this direction. To foreign eyes the only remedy seems to be the relaxation of the foreign trade monopoly, but without the foreign trade monopoly the system of communist government would not last a year. Any attempt to discuss its modification is therefore instantly suppressed.

It appears probable that the volume of Russian foreign trade will be even smaller in 1926-27 than it was in 1925-26, but of what there is Great Britain will have a large share. We have so much greater a proportion of Russian business than before the war because, notwithstanding the political tension between the countries, and the official attitude of the banks, credits are cheaper here than anywhere else in Europe. This year the Russian authorities are adopting a very cautious attitude. They realise the importance of maintaining and extending their present credits, and they know only too well the desperate efforts it took in the winter and spring of this year to meet the bills for last autumn's purchases. They are no longer buying in anticipation of exports; they are waiting until the exports are in sight. Import licenses are granted very sparingly, and only for the most urgent requirements. It may perhaps be true, therefore, that sellers in this country can to-day accept Russian obligations with fewer misgivings than last year.

INDUSTRIAL PEACE.—II.

(BY A LABOUR CORRESPONDENT.)

THERE is a widespread disposition to assume that industrial disputes are due to the waywardness or recalcitrance of the workers. The only real way of regarding the problem of industrial warfare is as a problem of industrial relationships in which both the primary parties are involved. It is, moreover, an incomplete view which implies that all the error is on one side, and that whilst the workers are the dragons of war the employers are the doves of peace. In the recent mining dispute the "act of aggression" (whatever may be the merits of it) was committed by the employers, who demanded district agreements, longer hours, and lower wages, and the stubbornness of the miners in resisting this degradation of terms and conditions was fully matched by the coal-owners in their stubborn refusal to compromise or listen to conciliatory influences. This example not only illustrates the view that industrial peace is not a simple problem to be solved by a greater reasonableness on the part of the workers, but indicates that there are deep underlying influences which mere appeals for "peace in our time" will not remove.

There is general agreement as to the ultimate goal of industrial peace, but there is a divergence of opinion as to how it should be attained, and as to the terms on which it may be attainable. The question can perhaps be best considered in two stages—firstly, the improvement of the machinery already in existence for the peaceful settlement of disputes, and, secondly, the possibility of preventing stoppages of work.

In every industry, in more than ninety-nine cases out of every hundred, claims for the settlement of grievances or the adjustment of existing contracts of employment are the subject of negotiation between the representatives of the workers and the employers. The "lightning strike" is almost invariably the result of a new grievance, and in the majority of cases is foreign to the spirit of existing agreements. Negotiation is the normal method of disposing of industrial differences, and the settlement which is reached is incorporated in the vast body of "law" which governs wages, hours and conditions of employment, the relations between various groups and grades of workers, and the relations between workers and employers. The large number of industrial agreements duly recorded and signed by the parties is the code of "law" supplementing statute law regulating industry. These negotiated agreements, complex and often detailed in their application, are too often ignored by the industrial pathologists, whose methods are centred upon the eruptions known as strikes and lock-outs.

The constitutional machinery which exists for the regulation of a large sphere of industry and industrial relationships varies in both form and complexity from industry to industry. In some cases no provision is made for external assistance in the event of a deadlock between the parties, but in many of these instances the method of negotiation proves successful. In some cases, again, where negotiators fail to reach agreement, some prescribed method of conciliation is resorted to, whilst in others there is reference to arbitration. There is every reason why the various types of negotiating machinery should be examined with a view to the adoption in each industry of the methods of organising and conducting negotiations and deciding a settlement of differences most suitable to its circumstances. It may be that the machinery in those industries where stoppages have been most frequent could with advantage learn from the methods and procedure adopted in other industries. But mere machinery will not of itself ensure the peaceful settlement of disputed questions. It is obvious that negotiations must be conducted with patience and restraint. It is, moreover, equally important that both the disputants should meet on equal terms. This brings us to one of the roots of our industrial troubles. It is common in negotiations for the workers' side to be without the relevant facts on which the dispute turns. The worker's investment of his skill, labour, and life in an industry does not at present entitle his representative to the knowledge which is possessed by the investors of capital.

It is safe to say that many industrial stoppages in the past have been the direct result of the reticence of employers and their unwillingness to disclose the financial and other information on which alone successful negotiations depended. The first antecedent condition for the prevention of industrial stoppages is a full disclosure of the relevant facts. In other words, the employers must place all their cards on the table.

In the next place, and closely connected with the foregoing consideration, is the need for fuller consultation with the trade unions on the conduct of industries and industrial policy. Employers have delimited the "frontiers of control" so as to exclude from the subject matter of discussions all questions which do not directly affect wages, hours, and conditions of employment. The whole realm of commercial and financial questions is claimed to be within the indisputable jurisdiction of the employers. But, clearly, methods of production and management, methods of trading and financial considerations may determine whether a worker goes on short time, is dismissed, or suffers a reduction of wages. And trade union leaders, who for the most part are men of some experience and judgment, are clearly entitled to satisfy themselves that the workers' standard of life is not imperilled by unenlightened and unprogressive industrial leadership, more especially as so large a proportion of strikes and lock-outs arise from wages questions. There is now a welcome and growing movement in the trade union world to insist upon more efficient management and direction in industry. The tendency now, as may be seen from the coal crisis, is for the workers' representatives to demand that employers shall place their house in order before they claim sacrifices from the workers. Industrial peace will remain an unsubstantial dream so long as it is believed that improved economic conditions for the worker are unobtainable because of short-sighted and inefficient industrial management.

Whether the existing methods of dealing with industrial disputes are successful or not in the future in preserving the truce depends upon the general attitude of employers and the public towards the worker. There are still considerable numbers of workers whose wages are inadequate to maintain a reasonable standard of life, whilst insecurity is the common lot of all but a minority in industry. Moreover, though in recent generations the standard of life has been raised, yet, in spite of the enormous increase in our wealth and productivity during the past century or more, the workers' share of the annual national income has remained stationary. This, of course, raises many far-reaching and difficult problems, but, nevertheless, poverty in the midst of luxury, low wages and huge fortunes, inevitably create deep-seated discontent. Until the claim of the worker for more generous consideration is frankly accepted, and the expressions of goodwill towards the worker translated into a constructive policy, injustice will breed discontent, and discontent industrial conflict.

It cannot be too strongly emphasised that wages questions accounted for two out of every three strikes and lockouts during the past 16 years, and that two-thirds of such stoppages arose out of demands for wage increases. Demands for wage increases fall into two categories—those which seek in a time of rising prices to maintain real wages, and those which are a demand for an increase in real wages. During the years from 1910 to 1925 the majority of stoppages due to claims for wage increases were of the former kind. Some policy of price stabilisation, or some method of automatic readjustment of money wages to prices would remove the mere maintenance of real wages from the arena of industrial strife, and such wages disputes as occurred would be confined to those which arose from unsettled claims for an increase or decrease in real wages.

The improvement of existing methods, greater publicity, and an open agenda in industrial discussions and negotiations, a constructive policy for the improvement of wages standards, and the adjustment of wages to prices without recourse to stoppages would do something to minimise the risk of open industrial strife, though it is not suggested that these things would abolish strikes and lockouts.

But the industrial pacifist wishes to eliminate open

warfare from industry, and proposals have been made for some organisation in industry comparable with the League of Nations. The question as to whether the League will in existing circumstances prevent war, should a dangerous situation arise, need not be discussed; but it is necessary to point out that the analogy between the League of Nations and machinery for industrial arbitration, though plausible, is a false one.

Industrial arbitration involves the denial of the right of the employer to dispense with his workers if the terms of employment are such that he is unwilling or unable to accept them. It equally implies the abrogation of the worker's right to withdraw his labour if the terms offered him are in his view inadequate or unjust. In the last resort, though the employer may perhaps evade the logic of industrial arbitration, to the worker it means industrial conscription. Although the desire for industrial peace is strong in the hearts of certain employers and Labour leaders, compulsory arbitration is not accepted by all the leaders on both sides.

This is not to say that the trade unions repudiate industrial arbitration as a device for the determination of claims after the resources of direct negotiation and mediation have been exhausted. If we omit the abnormal war years arbitration may be said to end about one in thirty stoppages. But this is voluntary arbitration—the parties of their own free will agreeing to refer a dispute to arbitration on terms jointly agreed by the parties. This method will, no doubt, continue to be used when those engaged in a dispute feel that the issue is one which can be put to arbitration, but it stands on an entirely different footing from the imposition of arbitration compulsorily on the parties to a dispute.

Whether arbitration is likely to be acceptable depends upon whether the parties have confidence in it as a method of determining the issue in question. This is the fundamental problem. From the Labour point of view compulsory arbitration does not inspire confidence. Its real place is to be found where the opposing parties enjoy equality of status, and when the system—whatever it may be—in which the issue has arisen is one which in principle both parties accept. In industry neither condition is fulfilled. Labour is a subordinate partner, and as an organised movement does not accept the justice of the existing industrial order. Indeed, by a series of resolutions the Trade Union Congress is pledged to far-reaching changes in the industrial system, and in the status of the workers.

In general, the Labour Movement mistrusts compulsory arbitration. As a method it inevitably assumes the continuance of the *status quo*; in all its essentials it operates within the four corners of the existing order. It may be palatable to employers who themselves support the *status quo*, and the workers who are prepared to acquiesce in the existing system, but it cannot be regarded as a satisfactory method to those trade unionists who are seeking to raise their status and extend their influence in industry. The employers' view of industry is static. The organised workers are pursuing a policy of "encroaching control."

It is, of course, true that statistics show the inconclusiveness of strikes and lock-outs in the great majority of cases, and indicate that nearly half the industrial stoppages are ended by compromise. It may also be urged that the gains which accrue to the workers from strikes do not compensate for the losses involved. It may, moreover, be said that industrial stoppages involve non-combatants in losses. These arguments may be true, but the waste of industrial warfare calls rather for a recognition of the needs of a changing and developing industrial system than for attempts to stabilise the *status quo* by compulsory arbitration. The industrial system is changing, and will continue to change, and it is natural to suppose that the workers and their representatives will come to enjoy an improved status, take increasing responsibilities, and wield greater power. Unless this is accepted (even though its realisation may be gradual) and industrial relationships are put on a new basis, industry will be subject to recurring crises.

There is a further consideration to be borne in mind. The prohibition of industrial stoppages has been tried. It has increased the number of law-breakers without establishing the reign of industrial peace. And if some form

of compulsory arbitration were established it would be more likely to embitter industrial relationships than to achieve industrial harmony.

NEWSPAPER PROFITS.

THE trend of events in the newspaper world is giving considerable anxiety to many thoughtful people in two directions. The first is the continuous process of amalgamation, which many regard as a movement threatening the expression of free and independent opinion. From this movement arises another problem. As newspaper concerns grow in size, they catch the eye of the investor more and more, and a proper estimate of the risks and merits of newspaper investments is added to the tasks of the investor.

During recent years, and particularly in the last few months, many newspapers have been taken over and grouped together, to be followed by the formation of new companies appealing to the public to take up shares. In February, 1926, the Industrial Newspapers was formed with an authorised capital of £1,300,000. The company was formed to acquire and develop a group of eleven industrial publications, and the goodwill of E. S. Caton, Limited, as organisers and proprietors of the Tobacco Trade Exhibition. In October, 1926, the Illustrated Newspapers was formed to acquire the *Graphic*, *Drapers' Record*, the *Sphere*, the *Tailor*, *Men's Wear*, the *Bystander*, *Eve*, and part-interest in *Illustrated London News* and *Sketch*, and the whole of the issued share capital of Horton Kirby Paper Mills, Limited. The Amalgamated Press have been bought by Graphic Publications, Limited. On November 23rd it was announced that Mr Lloyd George has parted with his controlling interest in the newspapers owned by United Newspapers (1918), Limited, to a group represented by the Marquis of Reading, Sir David Yule, and Sir Thomas Catto. The Marquis of Reading will become chairman of the company. Finally, within the past fortnight we have seen an issue of £4½ millions in 7 per cent. cumulative preference shares of £1 each at par, by the Amalgamated Press, Limited, carrying the process of consolidation a step further.

In this article we confine ourselves to examining the recent financial results of a number of important newspaper undertakings. Our first table shows for seventeen concerns the net profit after payment of debenture interest during the past two years, and how the available balance was utilised:—

Name.	Year Ends.	Brought In.	Net Profit after Payment of Deb. Int.	Preference Dividend.	Ordinary Dividend.	To Reserve, &c.	Carried Forward.

b Includes amount brought in from preceding year's accounts.

The year, from the profit-earning point of view, has been a fairly good one. Of the thirteen companies whose comparative figures are available, nine record higher net profits. Allied Newspapers, Country Life, the Irish

Times, and the Sporting and Dramatic did not do so well as in the previous year. In the case of Allied Newspapers, however, the profits in respect of 1925-26 were arrived at after making provision for taxation. This was not done on the previous occasion. Thus comparison is vitiated, and the only indication of the progress achieved is the statement made by the directors that "profits are in excess of those for the previous year." Among the smaller companies the Financial News has done well in increasing its net profit from £11,828 to £34,076, while the London Express has also enjoyed a satisfactory experience, the profit figure in this instance being £26,116, compared with £10,266. The Times is another undertaking whose 1926 results show a decided improvement on those of a year earlier. The allocations made to reserve have, on the whole, been fairly generous. In particular, Allied Newspapers are taking advantage of the opportunity to build up the financial position, as much as £326,974 being set aside for contingencies, following the previous year's appropriation of £481,074. The Amalgamated Press, Country Life, and Irish Times made no changes in their reserve allocations, but while that of Associated Newspapers was reduced from £210,000 to £120,000, the Daily Mirror transferred £30,000, against £20,000; the Illustrated London News £21,850, against £18,601; Outrams £100,500, against £80,500; the Sunday Pictorial £45,000, against £40,000; and the Times £100,000, against £50,000. The London Express, which a year ago made no transfer, was able to set aside £17,000.

The following table shows principal liabilities and assets in the last two balance-sheets:—

Name and Date of Balance-Sheet.	Share Capital and Reserves.	Debentures and Loans.	Creditors.	Properties &c.	Stocks.	Cash.	Investments.	Debtors.

a Preliminary and Formation Expenses stand in balance-sheet at £69,674. b Preliminary and formation expenses stand in balance-sheet at £526,648. c Includes reserves against contingencies. d Loan account.

The directors of Country Life, Limited, are to be congratulated upon giving a list of their investments. They are shown in the balance-sheet at £17,756. Their market

value on December 31, 1925, was £18,207. In an article on "Newspaper Balance-Sheets" in our issue of December 26, 1925, page 1083, we congratulated the Financial News on showing its investments in two items in their balance-sheet for December 31, 1924—i.e., investments at cost (unquoted securities), £53,688; £20,000 5 per cent. War Loan, 1929-47, at cost, £20,069. In the December 31, 1925, balance-sheet the directors have taken a retrograde step, merely showing investments £102,185. The directors of the Daily Mirror Newspapers and the Sunday Pictorial Newspapers are to be commended upon the provision of more information in their latest reports. Instead of issuing a four-page report with the balance-sheet and statement as to profits both these companies now provide an eight-page report with profit and loss account, and also an appropriation account.

A number of alterations were effected in capitalisation during the year. Particulars of these are given in the foregoing table. The decline under the heading of "Debentures and Loans," shown by Allied Newspapers, is accounted for by the fact that advantage was taken of the favourable conditions in the money market to fund the bank loan of £1,350,000. This was effected by the issue of £1,000,000 of 5 per cent. debentures and the repayment of the remaining £350,000 "supplied out of the company's own cash resources." In addition to this, the company assumed a further obligation in respect of the formation of a new subsidiary called Allied Northern Newspapers. This undertaking was formed to acquire interests in Newcastle, Glasgow, and elsewhere. Debentures were issued by this concern to the extent of £2,300,000, and these are guaranteed by Allied Newspapers. The latter holds all the ordinary share capital of Allied Northern Newspapers, and this is included in the parent company's balance-sheet at a "nominal value" under the heading of "Investments," which total £3,007. No reason is given by the directors of Associated Newspapers in their report for the substantial rise in the item of investments. The increase in the Sunday Pictorial's investments also goes unexplained; but, in this case, the balance-sheet title of the item is, "Trade investments at cost or under a secured loan." It is, apparently, the secured loan which is responsible for the rise. This undertaking reduced its goodwill item during the year by £49,991 to £700,000, the requisite sum being transferred from the reserve for contingencies. The Sunday Pictorial, it may be mentioned, is one of the few companies which show their goodwill and copyright separately. The other undertakings which do so are:—George Outram, the Sporting and Dramatic, the Financial News, Country Life, and The Times. The Allied Newspapers, United Newspapers, Illustrated London News, Daily Mirror, Amalgamated Press, London Express, Associated Newspapers, and Irish Times do not. This is regrettable for the goodwill of a newspaper is its most important asset, and, as such, should be stated separately. Our final table show dividends in the past two years, the present prices and yields and the price of shares a year ago:—

Name.	Dividends.			Price.		Present Yield.
	1923-4.	1924-5.	1925-6.	Dec. 21, 1925.	Dec. 21, 1926.

(a) A capital bonus of 5s 6d per share making £1 shares 7½ paid. (b) Subject to 2s 6d per share tax (free is declared). A capital bonus of 2½ per share is proposed, making the shares 10½ paid. † Free of income-tax.

The Northcliffe will case has disclosed many possible methods of valuing newspaper shares, but few, apparently, were regarded as satisfactory. The growth in newspaper values and profits may be regarded as one of the remarkable aspects of post-war industrial conditions. Whether it is wise to base share values on the profits of the last few years is doubtful, especially in view of the fact that in many cases assets consist of that elusive item—goodwill.

THE RAND DECEMBER DIVIDENDS.

(BY OUR MINING CORRESPONDENT.)

In the earlier portion of the current half-year the idea was entertained that the December announcements of the Witwatersrand gold mining companies, as a whole, might compare favourably with those of June. Native labour was abundant, and on two or three properties developments of an encouraging character had occurred. Recently, however, a change came over the scene. The seasonal exodus of Kaffirs set in with unusual severity—one factor, it would appear, being the exceptional rainfall. In making their returns for November, quite a number of the companies explained that the results had been seriously affected by shortage of native labour. Operations have also suffered in two or three cases from accidents of one sort or another. Hence the declarations ceased to be awaited with any particular enthusiasm.

To this rule one prominent exception has stood out—Government Areas; and here the event exceeded expectations, a distribution of 40 per cent. being declared as against 32½ per cent. for several preceding half-years. Towards the end of the June period additional plant came into operation, increasing the profits by £20,000 to £30,000 per month; the November total was £230,000. In commenting upon the June announcements we remarked that "the expansion in the treatment plant will doubtless be reflected in the distribution for the second half of the current year."

Our usual tabulation of companies which have figured in the list during the past two years is appended:—

Company.	June, 1925.	Dec., 1925.	Total, 1925.	June, 1926.	Dec., 1926.	Total, 1926.

This table does not include declarations made at dates other than June and December.

The "Johnnies" group enjoys the distinction of presenting three examples of increase—that of the Government Areas, already referred to, the Langlaagte Estate and

Witwatersrand Gold. A year ago the last-named company passed its dividend altogether, mainly owing to the special appropriation required in connection with miners' phthisis. The Langlaagte is at length beginning to feel the benefits of the amalgamation and reorganisation of 1923. Unfortunately, owing to reduced earnings, and special expenditure, the Randfontein has not been able to make any distribution for 18 months. The dividend of the Johnnies Co. remains at 15 per cent., tax free, per annum. Possibly if the diamond position becomes clearer, the directors may be a little more liberal next June. Interim dividends were not, of course, in vogue before December, 1925.

On the whole the results of the Rand Mines group must be regarded as somewhat disappointing. True the Crown maintains its 1925 rate; Modder "B" total shows a small increase, and the Geldenhuis Deep re-enters the dividend list—from which it has been absent since 1924—with a declaration of 5 per cent. But the Rose Deep returns continue to dwindle, and the shareholders in the Durban Deep, the Nourse, and the Village Deep continue to receive no returns. The Consolidated Main Reef, which improved its interim distribution, now makes no declaration owing to the loss incurred through the breakage of a rock hoist, the cost of replacement, and the large capital expenditure on equipment to which the company is committed.

An agreeable impression was produced by the increase on the part of the Geduld, notwithstanding the company's engagements in connection with the lease area. The fresh expansion in the Sub Nigel rate was regarded as an earnest of still better things to come. It should be remembered that the last two dividends relate to the modified capital of £678,750 in 10s shares, as against £950,000 in £1 shares previously. As regards the Anglo-American Corporation group, the Brakpan maintains and the Springs slightly improves upon its 1925 total. People who had been hoping for an increased declaration from the West Springs met with disappointment. It is officially explained that of last year's profits £51,000 has been required for capital outlay. We may also recall that the initial announcement of December, 1925, represented more than six months' earnings, and was paid upon less than the present issued capital.

Of the General Mining subsidiaries, only two figure in the dividend list, and in each case a substantial cut has occurred. With the Meyer and Charlton the reason consists in the gradual exhaustion of the richer ore in the original mine, and its replacement by lower-grade material from the City and suburban section. With the Van Ryn Gold further special appropriations have been called for.

THE AUTOMATIC TELEPHONE.

(BY A CORRESPONDENT.)

WHEN Professor Fleming at the Royal Institution described the automatic telephone as the device which most nearly approached the human brain, it might seem to the lay-mind that no one could possibly indicate, in non-technical language, how the machine functions. Yet, paradoxically enough, it is in itself not a very difficult device to understand. In its development it is amazingly complex, for the automatic machine is to be called upon to notify the calling subscriber if the subscriber he wants is engaged or unresponsive, it is to be called upon to collect the appropriate number of pennies from coin-boxes and to do other differentiations. But apart from these embroideries, as we may call them, in itself it is not a difficult machine to understand. Let us imagine that a number of impulses can be sent over a subscriber's line and that each of these impulses exercises a relay, and that the armature of that relay works a series of cogs on a rod or a wheel. Then let us conceive of what are called "banks" of contacts, whereby each subscriber's line or each connecting line presents a terminal point ready to be touched by a brush, which, in turn, is directed both vertically and horizontally by the impulses. If we have a machine (a "dial") at the subscribers' end in order that the impulses may be sent out in a regular sequence,

then we have the essence of the arrangement. Impulses pick the thousands, the hundreds, the tens, and the units in sequence, being passed on from stage to stage immediately the individual sequences have been completed.

There are more ways than one of using the power of sequential impulses to make a choice. Some systems use both upright and horizontal motion. There are some which use upright only, some which use horizontal only, and some which eliminate motion by the use of relays. In fact, at the moment a wealth of research is being given to the subject. But what, perhaps, is most intriguing is the application of the principle to London. Most of us have already seen that the first three letters of the exchange name, in the new directory, are printed in capitals. As explained on the opening page of the directory, this has been done to pave the way for the general adoption of the automatic principle in London. Apparently for each of us in London seven digits will be needed, and the human memory revolts against the labour of carrying seven digits from the telephone book to the directory. So an ingenious method has been adopted whereby the first three digits are translated into letters in such a way that the three letters represent the subscriber's exchange. From the point of view of the mechanism itself, it is precisely the same thing as if seven figures had been used. In respect of London, however, with its vastness and its telephonic density—an increasing density—there is a particular problem. Manifestly, if a call comes from Croydon to Hampstead there must be the possibility of alternative routings should the direct routes, at any moment, all be occupied. The choice of alternatives is possible to an operator, but clearly presents difficulties to a machine. Those difficulties have been faced by several ingenious means, and these are the characteristic of the application to London of the automatic principle. Similarly, the difficulty of providing for the transition period has been surmounted by the provision of a flash indicator whereby demands originating at an automatic exchange are visually communicated to the operator at an exchange which is not automatic. Apparently, from the announcements made by the Post Office, this transition stage will take about 15 years, at the end of which there will be no fewer than 138 exchanges within London.

Here lies the real problem for all telephone administrations, and here lies, too, the economic problem. The future intensive growth of telephones is indisputable. It looks as if it would develop with increasing momentum. So the experts have to take a long vision and to consider all sorts of social, commercial, and industrial factors in order that they may calculate the number of subscribers at any future point, up to, say, 40 years. Thus the expenditure of capital in the provision of new plant must be with very wide considerations, and is not the merely immediate substitution of machines for hand labour. Then, again, the economic issue is by no means so simple as it looks. The intensive development has two aspects. It increases the consumption, and hasty thinkers may imagine that on that account it will cheapen the cost. But while it increases the consumption it offers a different article. If there are 100 subscribers, each of them has potential communication with 99; if there are 1,000, each of them has potential communication with 999. The organisation must provide for that potential communication, as at any moment there may be a demand for the potential to be made actual. It is for this reason that in most cases of telephone systems in large cities the tariff has actually increased with the telephone density. New York is an outstanding case of this development, and the tariff has been raised on more than one occasion, for the density-increase has been remarkable. Certainly one cannot conceive of the telephony of the future, in large cities, being run on the old lines, and the substitution of new plant, taking a number of years in the process and facing an increasing intensity of demand during the period of transition, must be a task of appalling difficulty. So we would conclude by saying that there is much more than meets the eye in the printing of the first three letters of the exchange in capitals.

Notes of the Week.

A British Move in China.—Last Saturday Mr O'Malley—who, in the absence of Mr Lampson on the Yangtse, is the British *Chargé d'affaires* in Peking—read to the diplomatic representatives of the other foreign Powers a note from the British Government, suggesting a new departure in the policy of the Powers towards China. The British Government is, of course, anxious to obtain the concurrence of the other Powers, in order that whatever action is taken may be taken in unison, and pending their reply to the suggestions contained in the note, its terms are officially being kept secret, and are not being communicated to the Nationalist Government in the South. It is stated that this new policy had been thought out before the recent meeting between Mr Lampson and the foreign minister of the Nationalist Government, Mr Eugene Chen, and that its terms may not be agreeable to the Nationalists in all respects. Nevertheless, the friendly tone of the recent conversations at Wuchang will assuredly give the new British policy a more favourable start than it might otherwise have had; and while it would no doubt be extremely hard to satisfy in every respect the somewhat exuberant demands of a youthful Nationalist Party, flushed with their recent sensational successes in the civil war, it is obvious, from such information as is yet available, that the new policy goes farther towards meeting the Nationalist demands than any suggestions that any foreign Government has put forward hitherto. The gist of the British note appears to be that, while Great Britain cannot commit herself to supporting any one of the present warring factions in China against others, she is prepared to make substantial concessions to the Chinese people forthwith—especially on the two capital questions of extra-territoriality and of customs tariff maxima—without waiting for the eventual elimination of all the present rival Governments in China except one. This presumably means that Great Britain will not at this stage recognise the Nationalist Government as the *de jure* Government of China, but that she will make the concessions which she contemplates to the several *de facto* Governments in the regions which they respectively control. This will not, however, involve recognition of these Governments as *de jure* Governments, even locally. The British Government does not wish to take any action, which might have the effect of retarding the reunion of China. Great Britain simply wishes to display her goodwill towards the Chinese people without waiting for the civil war to work itself out to its conclusion. At the same time this British gesture—especially if it is taken up by the other Powers concerned—ought to act as a powerful incentive to the Chinese to hasten the end of the civil war, in order that they may be able, at the earliest possible moment, to respond as a united nation to proposals which evidently go a long way towards satisfying their national aspirations.

The Change of Government in Germany.—The overthrow of the Marx Cabinet in Germany, which had long been foreshadowed, was opportunely delayed until the substantial settlement at Geneva of the chief outstanding international question of the moment—that is, the *régime* for the supervision of the disarmament of Germany by the League of Nations, which has now been settled and is to come into operation at the close of next month. Though the internal effect in Germany of Herr Marx's fall will probably be a shift towards the right, there is little fear that this will have an untoward effect on the international situation. To begin with, it is taken for granted that whatever coalition Government may be formed between whatever parliamentary groups, Herr Stresemann will once again be Minister for Foreign Affairs. It is also extremely probable that whatever the complexion of the next Government may be, the Ministry of Defence will no longer be occupied by Herr Gessler—the representative of the Democratic Party, whose weakness in face of the illegalities committed by General von Seeckt, the late head of the Reichswehr, has embarrassed Germany in her foreign relations, besides creating con-

siderable internal tension in Germany itself. Herr Marx has been overthrown technically by the Social-Democrats, but really by the Conservatives, whose votes give the Social-Democratic motion its majority, though the Conservative leader, Count Westarp, expressly dissociated himself from the speech in which the motion was presented to the Reichstag by Herr Scheidemann. The overthrow of the Government in this fashion forestalled the introduction of a second Social-Democrat vote of censure directed specifically against Herr Gessler—a matter in which the Conservatives might have taken a different line. Pending the formation of a new Ministry, the present Ministry is carrying on the business of Government. It is reported that President Hindenburg is inclined to entrust the formation of the new Cabinet to the former Chancellor, Herr Luther, who is at this moment on his way back to Germany from a tour in Latin-America.

Bankers and Deflation.—In an important paper read to the Royal Statistical Society on Tuesday last Mr H. W. Macrosty examined in great detail the history of inflation and deflation in the years 1919 to 1923. Mr Macrosty does not acquit the banks or the Treasuries of either country of responsibility for allowing the inflation to go too far; but he considers it inconceivable that stabilisation could have been attained at anything like the top level. He does not, however, consider the authorities mainly responsible for the rate or extent of deflation that subsequently occurred. Though in both cases a gradual return to the gold standard was favoured, "it is a different matter to admit that they took deliberate steps to bring the change about, or that, if they did, those steps were the effective cause of the economic débâcle that ensued" Mr Macrosty concludes:—

The preceding narrative should have made it clear that after the collapse of trade began and during at least the greater part of the depression there was no restriction of credit by the banks, either in the United Kingdom or in the United States. If banking statistics mean anything at all they mean this. When prices began to fall the banks found it necessary to "carry" their debtors in order to prevent an even more hideous collapse than what happened. In both countries they had to deflate speculation and apply the money to essential purposes. In both countries they supported the sorely stricken agricultural industries with great generosity. In both countries they had, at the end, to force the liquidation of "frozen" loans, where goods were held up for higher prices, and by thus compelling the circulation of commodities they enabled the recommencement of production. At the conclusion of the period under review the purchasing power placed at the disposal of the community by the banks was, considering the change in the levels of prices, not less than it was when prices were at their peak. From the spring of 1920 onwards there appears no reason for attributing our economic misfortunes to the banks.

So far as the Treasury are concerned, Mr Macrosty observes that "there was no hope of restoring the money market to health so long as it was dominated by the exigencies of the Government in keeping afloat a thousand millions of bills and so long as the market by refusing to renew could force the Treasury to inflate. . . . The position, of course, was that the public, unable to employ their money profitably in business, were glad to invest in the new Government securities and so allow the Treasury to retire bills which offered no attraction to the investor. The Treasury may have been willing and anxious to deflate, but in reality they only took advantage of the opportunities afforded by the monetary situation." Mr Macrosty does not deny that the policy of the banks and the Treasury affected prices. "What is here asserted is that that policy was not the only, or even a main, cause of the fall in prices." This reading of recent monetary history runs directly counter to that which is given in the latest edition of Mr Hawtrey's book on *Monetary Reconstruction*,* in which the variations in economic activity in England and America right up to 1925 are traced to central bank policy. So far, however, as the period with which Mr Macrosty was dealing is concerned, we have always held that the non-monetary influences were of greater importance than the monetary influences, and that no cheapening of credit could have restored production in this country until the fundamental conditions of economic health (notably efficient production and an appropriate balance between industries as well as between wages, prices, profits, and consumption)

* "Monetary Reconstruction." By R. S. Hawtrey. Longmans, Green and Co. London, 1926.

had been restored, not only at home, but in our foreign markets. Mr Macrosty mentions neither Mr Hawtrey nor Mr Keynes, but aims his shafts at Mr McKenna. We hope the chairman of the Midland Bank will take an opportunity of replying, for though the controversy may seem a matter of past history, it really goes to the root of an important question—namely, the rôle which monetary policy plays in economic life.

The Bulgarian Loan.—The London portion of the Bulgarian 7 per cent. Settlement Loan, 1926, amounting to £1,750,000, was issued on Wednesday, and, as anticipated, promptly oversubscribed. The terms—7 per cent. at 92—are the same as those of the recent Belgian loan, but the security, of course, is not of the same class. The loan is issued with the approval and under the authority of the Council, the Financial Committee and Assembly of the League of Nations, and has the consent of the Reparation Commission and of the Inter-Allied Commission, established under Article 130 of the Treaty of Neuilly. It amounts to £2,400,000 in sterling and \$4½ millions in dollar bonds issued in New York. The balance of £650,000 in sterling bonds not issued in London is being offered in Holland, Italy and Switzerland. The loan is a direct obligation of the Bulgarian Government, and the revenues hypothecated as security include the excise duty on salt and other articles, the net receipts of the match monopoly, and such other revenue (excluding Customs) as may be assigned if at any time the revenues mentioned should fall below 150 per cent. of the annual sum required for service of the loan. The revenues in question are to be paid into a special account under the sole control of a Commissioner appointed by the League of Nations. Redemption is at par on or before January 1, 1967, by an accumulative sinking fund of ½ per cent. per annum, but the Government reserves the right to redeem at par on January 1, 1939, or thereafter on giving six months' notice. The sums received from refugees as payment for the purchase of land, buildings or material, or as repayment of advances in cash or in kind are to be applied to additional amortisation in the same manner as the sinking fund. In a recent issue (November 13th) we reviewed briefly the scheme drawn up by the Financial Committee of the League of Nations for settling the large number of refugees which have become a social and political danger to the country. This reduced the total expenditure originally proposed by the Bulgarian Government from £2,650,000 to £2,250,000, and took two precautions to safeguard the stability of Bulgarian currency against a depreciation which might diminish the gold value of the assigned revenues. The first revised the statutes of the National Bank, bringing it into harmony with the accepted principles of central banking, and the modifications come into force on January 1st next. Secondly, an arrangement was made with the Reparations Commission under which payments of reparations over the exchange will, if the need arises, be controlled by a Transfer Committee. Recent figures of the revenues hypothecated for the service of the loan show that it is covered more than three times, and the control established in the interest of bondholders is satisfactory.

The Government and the Finance of Empire Development.

—It is understood that the recent proceedings in Parliament with reference to the Palestine and East African

Loans Guarantee Bill may be regarded as involving a definite and important Government decision regarding the finance of schemes of Empire development. In the past these schemes have relied frequently either on loans from the British Government or on grants in aid; within recent years contributions have been made to interest or other charges. In 1924, for example, the Government supported the £3½ million loan to East African territory interest-free. In the same year it adopted a recommendation of the Imperial Economic Conference of 1923 and set aside £5 millions, to be expended at the rate of £1 million a year in payment of three-quarters of the interest on loans raised in the open market by Dominion, Colonial, and other Governments, including protectorates, for works of public utility character in these areas, subject to the condition that orders were placed in this country. These examples encouraged the view that the Mother Country should assist overseas development, especially in the first few years of the schemes; and that, as a rule, the contribution would be most effective in the form of liability for the interest charges. In the case of East Africa the Ormesby-Gore Commission made a similar recommendation; but later the Schuster Committee and the Government definitely decided that the harbour, railway, port and other proposals should bear all their interest charges from the start; in other words, they should be *ab initio* on an economic basis. It has been urged that on this footing some of the proposals may not succeed. But the Government and the Treasury have apparently concluded that the time has arrived for a definite stand; and since the Palestine and East African schemes are only the beginning of innumerable others within the Empire, it is more important than ever that the liability of the British taxpayer should be limited to the contingency in the guarantee as to principal and interest. There, however, he is safeguarded, for it is intended that each scheme shall be carefully analysed by an advisory committee similar to that under the Trade Facilities Acts, and the guarantee will only be available when the Treasury are satisfied as to the application of the proceeds of the loans, the arrangements for sinking fund and other provision, and the position of prior claims within the territories which are assisted. Incidentally, it will be remembered that when it was decided not to renew the Trade Facilities Acts critics urged that provision should be made at least for schemes of Imperial development. Formally the Government were unable to agree; but in practice, if the Palestine and East African loans are taken as a precedent, the benefits of the guarantees under the Trade Facilities Acts will be available for specific promotions. The general policy has not been received with enthusiasm in some parts of British East Africa, mainly on the ground that unless there is initial gift the territories financially and otherwise will find it difficult to make progress. But the position of British finance is such that the decision must be regarded as final, and as indicating the method that succeeding Governments will be expected to adopt.

The Revolution in Lithuania.—The revolution which was carried out last week in Lithuania has passed off quietly, and little change is to be expected either in the internal condition of the country or in her relations with her neighbours. The revolution was made by elements of the Right, on the ground that the Government then in power, which inclined towards the Left, was showing itself too complacent towards Communist propaganda, which was said to have been organised from Russia. It is not improbable that such propaganda was taking place, considering that in the two adjoining Baltic States—Latvia and Estonia—there has been constant and well-authenticated trouble of this kind, which culminated in Estonia in the almost successful Communist outbreak of 1924. On the other hand, it is unlikely that such propaganda is being conducted by the Bolsheviks in Lithuania as earnestly as in these neighbouring countries. In Latvia and Estonia the aim of the Bolsheviks is not simply to convert two little bourgeois countries to the true faith, but to incorporate in the U.S.S.R., as federated Soviet Republics, two now independent countries which formerly belonged to the Russian Empire, and which contain Riga and Reval—the Baltic ports which are the natural outlets for the great

Russian hinterland. Though Lithuania (apart from the Memel district) likewise belonged to the Russian Empire before the war, it contains no port which is of vital importance for Russian trade, and it is also now isolated from Russia by a corridor of Polish territory which runs northward, through Vilna, to the frontier of Latvia, on the River Dvina. This Polish corridor creates a powerful bond of sympathy between Russia and Lithuania, for so long as it exists it gives them a common enemy in Poland. The Russian border of this Polish corridor is part of the Russo-Polish frontier fixed by the Treaty of Riga in 1921, which has incorporated large White Russia and Ukrainian territories in Poland. The Lithuanian border of the corridor leaves the city of Vilna in Poland. Neither Russia nor Lithuania are reconciled to this state of affairs, and their common desire to change it has brought them into alliance—notwithstanding the difference in their social creeds. In 1920, when the Red Army was marching on Warsaw, the Soviet Government concluded a treaty with Lithuania in which a common frontier between the two countries was laid down along a line which assigned Vilna to Lithuania. After the Polish victory, it will be remembered, the Poles not only compelled Russia to accept a Russo-Polish frontier considerably to the east of Vilna, but drove the Lithuanians out of Vilna by General Zeligowski's *coup de main*, which eventually received the endorsement of the Conference of Ambassadors. The Lithuanians have never recognised the title of Poland to Vilna, and the territorial terms of the Russo-Lithuanian Treaty of 1920, assigning Vilna to Lithuania, were reaffirmed in a further Treaty between the same two countries this year. It is significant that the members of the new Lithuanian Government are reported to be all supporters of this Treaty with the U.S.S.R., although they have overthrown the late Government on the ground of its alleged leanings towards Communism. The fact is that, while the propagation of Communism in Lithuania is a Lithuanian party question, the maintenance of an alliance with Russia against Poland is a national policy on which all Lithuanian parties are agreed. In this matter it makes no difference to the Lithuanians whether Russia is a Soviet Republic or an Empire, so long as she is as hostile to the Poles as the Lithuanians are. The present revolution shows, however, that a clear-cut separation between a pro-Russian foreign policy and an anti-Communist home policy is not always easy to maintain.

Co-Partnership in Industry.—In the course of the considerable publicity which has recently been given by the Press to the idea of improving the relations between Capital and Labour, reference has occasionally been made to the scarcity of concrete evidence of the spirit of industrial peace in the concrete form of co-partnership schemes. On this question the new Abstract of Labour Statistics (Cmd. 2740 of 1926)* contains some significant figures. Before 1881, 35 co-partnership schemes are known to have been started. Of these, five were still in operation at the end of 1925, the number of workpeople entitled to participate in them being 2,500. Progress during the next 40 years (always exclusive of schemes in co-operative societies) has been as follows:—

Decade.	Schemes Started.	† Discontinued by the End of 1925.	Still in Operation.	Numbers Entitled to Participate.
1881-1890.....	79	68	11	14,200
1891-1900.....	77	63	14	7,100
1901-1910.....	81	44	37	53,500
1911-1920.....	192	60	132	57,100

† Including a few "suspended."

Between 1920 and 1925, 55 schemes (covering 56,300 participants) were started, of which all but two were in operation at the end of the latter year. The total number of schemes, therefore, in existence a year ago was 252, with an aggregate of 190,700 employees entitled to participate. Of these workpeople, 38,500 were employees of gas companies and kindred undertakings, while 37,000 came under the category of insurance, banking, and finance. The

* H.M. Stationery Office. 4s net.

only other groups whose numbers were substantial in proportion to the total numbers in the respective industries were: Soap, chemicals, &c., with 28,100; and food and drink manufacture, with 24,300 participants. The classification of "dead" schemes under "cause of discontinuance" yields no striking uniformity of reason for non-success. The period of highest "mortality" appears to lie between the second and fifth year of operation. The fact, however, that less than 200,000 workpeople out of 17½ million "gainfully occupied employees" were covered by the co-partnership schemes surviving a year ago indicates only too clearly that this particular method of materialising industrial peace has done little more than touch the fringe of the problem as yet.

Swiss Budget for 1927.—Our Geneva correspondent writes:—The Swiss Parliament is now discussing the Federal Budget for 1927, which had already been examined by the Finance Committee and slightly altered, but which will be passed without any important modification. Receipts for 1927 are estimated at £12,387,000 and expenditure at £12,938,000, leaving a deficit of £551,000. By reducing certain expenses, the Committee brought down expenditure to £12,916,680, so that the deficit will be reduced to £529,680, a figure which it is hoped to reduce further in the course of the year if the Federal Council is allowed to increase certain taxes, such as the tax on coupons, the Stamp Duty, and the tax on malt. The Government outlines a programme providing for the financial reconstruction of the country, which includes four chief points: the progressive redemption of the Debt, the balancing of the accounts, the maintaining of the gold parity of the Swiss franc, and the gradual repayment of the deficit of the Pensions Fund for Federal officials. The National Debt stood at £92,175,304 in 1924, it was brought down to £90,204,807 in 1925 and to £86,738,800 in 1926. The Debt was reduced by £6,436,504 between January 1 and November 30, 1926, and the surplus of the Extraordinary War tax made it possible to repay a loan of £4,400,000 issued in the United States. In 1927 the Budget will for the first time include an allocation of £82,000 for debt repayment. The plan for the redemption of the National Debt, adopted last year, provides for its total repayment by the end of 1966. Between now and 1934 the surplus of the Extraordinary War tax will permit the reimbursement of £11 millions. As for the yearly deficits on the ordinary accounts, they have been reduced during the last few years. In 1921 the deficit reached £5,102,874, in 1922 it was £3,176,307, in 1923 it was reduced to £1,818,750, in 1924 to £864,251, in 1925 to £360,894, and it is estimated at £250,000 for the current year. The financial situation of the Confederation can therefore be considered as favourable. It was a relief to everybody here when, the other day, Mr. Musy, the chief of the Finance Department, declared that the Government would grant no subsidy whatever to the Federal Railways, but would help them to issue loans for meeting their requirements. The financial position of the railways is by no means satisfactory, and it was very much feared that the Government would comply with the wishes of certain high officials and agree to finance the railways; this would have meant that the taxpayer would have been called upon to make good the deficits of the railways. Up to the end of October, the Federal Railways' receipts totalled £12,566,000—compared with £12,969,000 during the corresponding period of 1925—and they registered a surplus of £3,994,000, as against £4,366,000 in 1925. This is not too bad considering that the goods traffic was very much affected by the trade slump; but, owing to the difficulties that had to be faced during the war, owing to the expenditure on electrification, increase in wages, &c., the railways' debt, which totalled £64,608,080 in 1915, reached £104,006,720 at the end of 1925, the interests to be paid on it being over £4,500,000 a year. It is, therefore, expected that the accounts for 1926 will leave a deficit of £480,000—the Budget for 1927 estimates the deficit at over £480,000, and this sum will be raised by £400,000 if the new rates of officials' salaries are accepted, and if it is decided to pay into the Rail-

waymen's Pensions Fund a yearly sum of £320,000 in order gradually to reconstitute the capital of that fund, which shows a deficit of £12,500,000. Railway fares are exceedingly high in Switzerland, and it is felt in some quarters that they ought to be lowered in order to encourage industry and commerce and to facilitate travelling. The Railways Board certainly lacks a certain boldness in this direction.

The Fall in Petrol.—For the second time within two months the price of the standard brands of petrol has been cut, and the Press is therefore talking of "a petrol war." At the beginning of November the retail prices "ex-pump" were reduced by 1½d per gallon, and on December 20th by ½d per gallon, and it is now so arranged that outside the London metropolitan police area petrol from the pump is 1d per gallon cheaper than petrol in the can. The following table shows the new prices per gallon according to the different zones:—

	Ex Pump.		In Cans.	
	s	d	s	d

These reductions are not the result of any fall in the world prices of petrol or of tanker freights. As regards the latter, tanker tonnage, which last June used to be chartered from the Gulf to this country at about 27s 6d per ton, is now fetching from 40s to 50s per ton. And American petrol prices, which did not fall this autumn by as much as they had risen in the early part of the year, have now begun to rise again. It is one of the curious features of the present oil situation in America that, although there is a record-breaking production of crude oil, the refined oil markets are keeping firm. This must be explained by the increase in consumption and the decline in gasoline (petrol) stocks. Taking the first nine months of the year, the production of gasoline in the United States at 213,676,000 barrels, increased by 10.7 per cent., and imports at 4,240,000 barrels by 45 per cent., while the domestic consumption at 189,796,000 barrels increased by 12.9 per cent. and exports at 33,654,000 barrels by 46 per cent. in all cases, as compared with the corresponding period of 1925. The net result was that stocks of gasoline fell from 38,875,000 barrels at the beginning of the year to 33,341,000 by September 30th. During the corresponding period of 1925 gasoline stocks had increased by 4,749,000 barrels. This is the first time since 1920 that these stocks have been lower at the end of September than they have been at the beginning of the year. It is probable that during the last quarter of the year stocks will increase by as much as 5½ million barrels, so that this year is likely to be the first since 1918 that the United States has disposed of more gasoline than it has manufactured and imported. A substantial increase in crude oil production has occurred since the end of September, but this is the period when the refiners take larger quantities of crude oil and manufacture ahead of current requirements in order to meet the estimated huge demand for gasoline next summer. For these reasons the price of gasoline in America has been rising. In this country the reductions in prices have merely followed upon the economies effected by the large companies in the distribution of petrol in bulk. It is not necessary to invent "a petrol war." The reductions made at the beginning of November differentiated against petrol from the can, and the present reduction merely fulfils the promises made to the garages that petrol from the pump should be cheaper than petrol supplied in bulk direct by the companies to commercial consumers. Competition is certainly not negligible, but the costs of distribution of the large petrol companies in this country are undoubtedly coming down with the growth of the pump system, and the consumers are getting some of the benefit.

Cotton and Artificial Silk Mixtures.—A correspondent writes:—Exports of cotton and artificial silk mixtures have improved during November, and the total for the month was 5,718,901 sq yds, against 4,980,614 sq yds in October. For the eleven months the total exports of

these mixture piece-goods is 55,499,734 sq. yds, from which fact the growing importance of this branch of Lancashire industry may be fully appreciated. The chief market is India, but Canada and Australia are also important, as well as the many minor markets to which Lancashire usually supplies ordinary cotton piece-goods. It is rather remarkable, in view of the present situation, that exports to China should have increased from 58,325 sq. yds in October to 172,809 sq. yds in November. It is, however, not safe to dogmatise on these figures, as variations are inevitable from a host of minor causes and delays. China is a large potential market for artificial silk, and as sales there at present are only equal to about 1-10th of a penny per head, there is room for vast improvement.

Artificial Silk and Price Changes.—A correspondent writes:—The recent reduction in the price of artificial silk yarn announced by the leading American producers is a matter of vital importance to the industry in this country, directly through the interest of Messrs Courtaulds, Limited, in the American Viscose Company, and indirectly through the possible alterations in prices here in sympathy with American charges. The reasons given for the somewhat sudden move on the part of the American producers are varied, but it is obvious that in some measure this was due to slackened demand, and, on the other hand, to the rapidly increasing import trade with the European countries. Artificial silk prices have in the past remained stable over considerable periods, and this factor has been pointed out to be very much in favour of the industry. Inevitably, however, with the multiplicity of companies and the increasing production, prices will tend to vary more, and it is by no means impossible that within a year or so, we may see established a market in artificial silk such as has been instituted in the case of all the older textiles. Despite the effects of the coal dispute, the English industry, in common with that of other European nations, is doing moderately well at present, and although imports into this country reached the highest figure for the year in the month of October, this was materially reduced in November, and, furthermore, there was no indication from the official figures that further price cuts had been effected on the European continent. Exports both of yarn and manufactured goods also improved in November, and altogether there was no justification for any immediate reduction in sympathy with the American move. It is understood that no change will therefore take place for some weeks at least. The last important reduction in English prices took place in July, and as the amount of yarn excised during the quarter ending September 30th rose to 6,722,074 lbs, against 5,951,953 lbs in the June quarter, it may be inferred that a large proportion of the loss of profit incurred by the reduction was made up by an increased turnover, or, rather, would have been, had it not been for the increased costs due to the coal trouble. From the investor's standpoint, therefore, the preservation of the present level of prices for a short while until the effects of the coal stoppage have been wiped off is very important, and there seems to be every likelihood of this being possible. Another factor which is at the moment exerting an influence on this question of prices is the low level to which cotton has fallen. There is always danger that if the price of cotton is low and the price of artificial silk is high, the public may revert to mercerised cotton as a decorative material. This factor alone is sufficient reason to justify the belief that though a price reduction is not likely immediately to follow the American move, it is still a matter which will have attention early in the New Year. If, however, by that time some compensation has been obtained for the coal dispute costs, then the next decrease in price will probably be effected without further danger to the profits of the larger firms.

Amalgamations and New Issues.—A Stock Exchange correspondent writes:—Stock Exchange markets are being kept in a state of lively animation by rumours of amalgamations, working agreements, and other such combined movements amongst various branches of industry. The modern tendency leans towards centralisa-

tion. Last month's amalgamation of the four chemical firms, Brunner Mond, Nobel Industries, United Alkali, and British Dyestuffs, excited the imagination of the speculator. The issue last week of the Amalgamated Press Company's $\frac{1}{4}$ million preference shares of £1 each is a step in the same direction. Amalgamation talk has had a sharp effect upon the prices of Henleys, Callenders, Enfield Cables, British Insulated, and shares of several of the other cable construction concerns, rises being based upon optimism regarding the likelihood of a combine in this branch of business. Selfridge's on the one hand and the Drapery Trust on the other, have been buying up drapery businesses in various parts of the country, giving such prices as have caused the mouths to water of people who hold shares in other concerns that have not yet, apparently, been the object of desire to either group. The conclusion of the coal stoppage unfolded a scheme for a working agreement between some of the principal companies, and the word "amalgamation" is as blessed to the ordinary shareholder as ever was Mesopotamia to the old lady of classical memory. Why there should be this glamour shed around the prospect of amalgamation, a good many people admit that they are puzzled to understand. In cases where shares in an existing company are bought outright by another company that desires to obtain control, the price given by the latter is usually so substantially in advance of the market figure for it to leave no doubt as to the reason for the earlier demand in the market. But where companies are amalgamated, or are content with a working agreement, there would seem to be no especial reason why prices should advance, other than that of the saving of expense and waste. It is, in the first place, the hope of being taken over at a price decidedly higher than that which rules in the market which brings about rises in the shares of companies around which rumour rings the nimbus of possible amalgamation. Speculation enters with zest into the game, its appetite edged with prospects of new issues of shares suitable for staggering purposes. Public interest becomes quickened: the market broadens. Here, then, are explanations for the popularity of amalgamations, so far as market prices are concerned. Closely akin to this matter is another point that perplexes the investor, who cannot see why a new issue, unless made at a price well below the market quotation for the existing shares, should be hailed as a bull point. Such increase in capital as is involved, for instance, in the distribution of a company's reserves through an issue of new shares is often deemed by the public as likely to reduce, automatically, the annual dividend. If a company paying 10 per cent. on its ordinary shares issues 50 per cent. more ordinary capital, the logical result should apparently be to lower the dividend to 6 2-3 per cent. on the whole amount. But speculation treats logic with a laugh, and points out that dividends upon increased capitals have been known to continue at the same rate as before. A company makes profits out of the employment of its reserves, and, human nature being incorrigibly bullish, the watering of capital is accepted hopefully. Nor do directors of most companies discourage the idea. More money implies more earning power; that is the theory, and one which is justified with just sufficient frequency to explain the fact that amalgamations, new issues, and distributions of capitalised reserves, are dear to the speculative element that lurks somewhere in the mind even of the austere investor.

Barclays (Overseas) Bank.—The first report of Barclays Bank (Dominion, Colonial and Overseas) gives a balance-sheet dated September 30, 1926, while the profit and loss account incorporates the profits of the Colonial Bank and of the Anglo-Egyptian Bank, Limited, for fifteen months, and of the National Bank of South Africa, Limited, for eighteen months. Any comparison with the profits of the individual banks for preceding years is therefore impossible. A net profit of £637,000 is now shown, and to this is added £27,400, being the undivided profit of the Colonial Bank as at June 30, 1925. Expenses of amalgamation and provision for income-tax absorb £230,200, the reserve fund is credited with £100,000 and the dividend on the 8 per cent. cumulative preference

shares requires £143,400. The A and B shares each receive a dividend of 3 per cent., which takes £76,400. This leaves a balance of £114,300 to be carried forward. These figures show that the cautious and conservative policy, to which the chairman referred at the time of the fusion, is being followed. The balance-sheet shows a total paid-up capital of £4,975,500, and a reserve fund of £1,100,000, while deposits figure at £51,838,300, and acceptances at £3,940,100. The credit side shows a liquid position, cash at £8,407,900 representing 16½ per cent. of deposit liabilities. Money at call stands at £2,705,000, remittances in transit at £2,854,800, and bills discounted at £14,088,100. Investments total £6,232,000, of which £5,611,100 consist of British and Dominion Government stocks. Advances stand at £22,754,000. The position disclosed appears to be thoroughly satisfactory, and although the dividend distributed on the ordinary shares may have meant a slightly lower return for the former shareholders of some of the amalgamated banks, there can be no cause for complaint if the directors choose in the new concern's early days to adopt a sound and cautious policy which is in keeping with the traditions of English banking.

Bass and Worthington.—It was announced on Wednesday that the two brewing firms of Bass, Ratcliff, and Gretton, and Worthington and Co., Limited, have entered into arrangements whereby their interests will be united. The arrangements have been carried through by the purchase and interchange of ordinary shares on the basis of a valuation made by Sir Arthur Whinney, who has been called upon to act in the negotiations and advise in the interest of both companies. The ordinary capital of Worthington and Co. amounts to £804,000, and is privately held. A dividend of 12 per cent. was paid for each of the years to September 30, 1925 and 1926. Bass, Ratcliff and Co. has an authorised ordinary capital of £2,720,000, of which £2,040,000 has been issued. The dividend for the past three years has been at the rate of 11 per cent., together with a bonus of 2 per cent. Under the new arrangement, each company will have seven directors, of which five will be common to both companies.

Palmer's Shipbuilding Reorganisation.—Special meetings of stock and share holders of Palmer's Shipbuilding and Iron Co., Limited, have been called for December 30th to vote upon a scheme of capital reorganisation which has been put before debenture holders and shareholders. The last annual report of the company, covering the year 1925, showed a debit balance at profit and loss account of £462,800, while the 5 per cent. cumulative preference dividend was in arrears since 1921. The directors, in their circular to stock and share holders now state that, with orders to the extent of over £2 millions on hand in the shipyards and engine works, and with the starting up of the blast furnaces and ironstone mine, the businesses of the company can only be continued if fresh capital is forthcoming. They have arranged with the company's bankers to make the requisite advances, and in addition not to require payment by the company under its guarantee for £500,000 in respect of advances to subsidiary companies before the end of 1929 if (a) accumulated revenue losses are written off, (2) values of certain assets are written down, (3) relief in respect of loan charges is afforded over a period of years, (4) no receiver or liquidator of the company is appointed, and (5) a scheme of arrangement is adopted and continues in force until December 31, 1929. An advisory committee has examined the position of the company, and approves the scheme now put forward, which, briefly, is as follows:—The issued share capital will be reduced from £1,454,080 to £513,520 by reducing the £1 ordinary shares to 5s. All arrears of preference dividend up to December 31, 1926, are cancelled, and the cumulative participating rights are done away with. In return an extra 2½ per cent. in dividend is given to the preference shares and a 10 per cent. premium on capital on a winding-up. It is proposed to create a new first debenture stock up to an amount not exceeding £650,000, and holders of the existing 5 per cent. stock are asked to exchange their holdings (£1 for £1) for the new stock,

which bears interest at an increased rate of 6 per cent. per annum. Holders of consolidated stock are asked to grant a moratorium for a period of three years. Interest at an increased rate will as far as possible be paid out of profits, and until all interest for the moratorium period is paid or provided for no dividends will be paid on share capital. Both classes of debenture stockholders are requested to agree to postponement of their date of repayment, to suspend the sinking fund for a period of years, and to grant banking facilities which the company requires to enable it to borrow on floating assets in the ordinary course of business, and to give guarantees to Governments and other customers in respect of shipbuilding and other contracts. The advisory committee strongly recommends acceptance of the scheme, the only alternative to which is the appointment of a receiver.

De Beers Dividend.—Our mining correspondent writes:—The anxiously awaited interim dividend proves to be at the rate of 15s per share. For the first half of 1925-26 12s 6d was paid, and for the second half 17s 6d. Some months ago the hope was entertained that the interim distribution on account of 1926-27 would be at the rate of 17s 6d, but in the meantime the situation has been changed by the rapid expansion in the output from alluvial sources, to which reference has lately been made in our columns. To keep its command over the price the Diamond Syndicate is under the necessity of purchasing the bulk of these alluvial stones, and of selling them in preference to the product of the mines. How long this condition of affairs will continue it is, of course, impossible to say; according to the latest available information, a distinct falling off has occurred in the alluvial yield. At the moment, however, the De Beers directors have obviously deemed it advisable not to be too liberal; indeed, it is rumoured that some of them favoured a cut to 12s 6d. On the basis of the current market price the shares give the fairly attractive yield of about 8½ per cent. A purchaser or holder must, however, be prepared for considerable fluctuations in the market price in accordance with the trend of the French franc. When the latter was on the downward track De Beers, Central Mining and similar international securities were heavily bought by French speculators and others as an insurance against the depreciation of the franc. As a result, prices were in some cases carried up to a level far beyond that warranted by the yield afforded. For example, De Beers 40 per cent. preference shares of £2 10s each touched £15 12s 6d, at which price the return did not much exceed 6 per cent.

Malayan Tin Dredging.—At the recent annual meeting an interim dividend of 7½ per cent. supplemented by a bonus of 10 per cent. was declared. Although this compares with a total of 10 per cent. a year ago, it failed to satisfy some of the shareholders, who took the view that too large a proportion of the profits had been devoted to the liquidation of indebtedness. As mentioned in a "Note" last week, the whole of the £100,000 raised under the second Trade Facilities loan arrangement has been paid off, although the instalments were not due to start until next year. It is possible that this procedure was followed by the directors in connection with the flotation of the property upon which the money had been spent; if so, an explanation to that effect might very well have been given. In dealing with the point the chairman remarked that "it is always a sound policy when conditions are favourable to put one's finances in order," and the bulk of the proprietors appeared to be in agreement with this contention. It was made clear that the Tanjong Tualang property—the one floated off—was identical with the new area acquired lower down the Kinta River, to which reference was made in the report of the manager; the Nos. 7 and 8 dredges are to operate upon this area. The purchase consideration of £210,000 in shares represented the cost to the Malayan Dredging Company of the land and equipment. The current market price of Southern Malayan Tin Dredging shares is 50s, hence the parent company already sees a handsome profit upon the flotation; it also holds an option until the end of 1928 upon 20,000 shares at par. Dredging by the subsidiary is expected to start in about three months' time. On a conservative basis earnings are estimated at 40 per cent.

Ferreira Deep.—From the earnings standpoint this company did not fare so badly last year, the shrinkage in the revenue per ton being largely offset by the treatment of an increased quantity of ore and a substantial economy in costs. The working profit of £57,900 was supplemented by £10,600, proceeds of assets realised during the period, and £3,600 Bewaarplaatsen money. In view, however, of the short remaining life of the property, a further £36,300 had to be appropriated for miners' phthisis, and after providing for taxes only 2½ per cent. dividend could be disbursed, as against 5 per cent. for 1924-25, and 8½ per cent. in respect of each of the two preceding years. The company's total outstanding liability in respect of phthisis compensation as per July 31st was fixed at £144,000, towards which £106,000 has so far been provided. Of 252,800 tons the ore reserves show a fresh reduction; the total represents little more than half a year's supply for the mill, and of it 53 per cent. is represented by shaft pillars and broken ore in the form of packs. As regards the outlook, the manager considers that under normal conditions it should be possible during the current year to continue operations on much the same scale as in 1925-26, but he foreshadows a further decline in the grade of ore sent to the mill. Irrespective of contingent liabilities on the one hand, and of the property and equipment on the other, the balance-sheet shows a surplus of £53,400, equal to a little over 1s per share, now quoted at about 3s. Ferrer's appear, therefore, scarcely worth holding.

Bankruptcy in 1925.—The forty-third general annual Report by the Board of Trade on Bankruptcy in 1925* shows that there were 4,708 receiving orders and administration orders under the Bankruptcy Acts in England and Wales, liabilities being estimated by the debtors at £10,617,900, and assets at £2,025,500. These figures represent decreases of 86 in the number, of £1,999,200 in liabilities, and of £328,400 in the assets as compared with 1924. Under the Deeds of Arrangement Acts there were 1,877 deeds, a decrease of 24, liabilities being estimated at £4,455,600, an increase of £127,300, and assets at £1,973,800, an increase of £7,500. The following table shows insolvency in England and Wales under both the Bankruptcy and Deeds of Arrangement Acts for a number of years past:—

	No. of Cases.	Liabilities. £	Assets. £
1919	910	2,373,798	949,691
1920	2,016	6,853,308	3,048,993
1921	4,840	21,887,373	8,898,253
1922	6,580	24,918,995	7,503,086
1923	6,856	16,003,435	4,840,889
1924	6,695	16,945,385	4,320,132
1925	6,585	15,073,468	3,999,231

Failures in Scotland numbered 248, against 247 in 1924, with liabilities of £690,100, against £1,993,500, and assets of £148,100, against £199,500. There were 22 cases of bankruptcy in 1925 in which the liabilities exceeded £40,000. In 13 of these, with liabilities amounting to £1,593,600, the failures are classified as "ordinary trade failures"; in eight cases, with liabilities amounting to £1,760,200, the failures were due to "financial and speculative enterprise apart from ordinary trading." The aggregate liabilities in the larger cases, viz., £3,453,800, are about one-third of the estimated liabilities under the whole of the receiving orders for the year, as compared with £5,227,200 in 1924, in which year the proportion was over one-third. The Bankruptcy Amendment Act received the Royal Assent on June 16, 1926, and came into operation forthwith, except for a provision making failure to keep proper books of account a criminal offence in the case of a first bankruptcy, which comes into force two years after the date of the Act. The Act embodies almost all of the recommendations of the Bankruptcy Committee, 1924-25, which related mainly to the detection and punishment of offences, and in addition the opportunity was taken of making a few amendments to the 1914 Act to meet difficulties that have arisen in the course of administration.

The Finances of Costa Rica.—In our issue of November 6th we published a note from a correspondent on the position in Costa Rica. Owing to confusion in transcription of manuscript, unfortunately unchecked owing to the sudden and serious illness of the correspondent, some erroneous figures regarding the finances of that country appeared in the note. Since 1922 annual budget surpluses have been achieved. In 1924 revenue was 23,259,050 colones and expenditure 19,549,401 colones, leaving a surplus of 3,709,649 colones. The estimates for 1925 (in colones) were: revenue 20,520,470, expenditure 20,025,510, leaving a surplus of 494,960. The total debt of the country in 1924 was 63,670,167 colones, of which upwards of 28 million colones was external debt (2.15 colones = the U.S. dollar).

FRANCE.—POLITICAL OUTLOOK—TRADE STAGNATION—REVENUE—OVERSEAS TRADE.

(FROM OUR CORRESPONDENT.)

PARIS, December 21.

THE Budget, for the first time in 40 years, having been disposed of by the middle of December, the Chambers have risen for the Christmas recess, and will not meet again until well into January. The chief preoccupation of members of both houses meanwhile will be the impending renewal of one-third of the seats in the Senate. These contests are of exceptional importance on this occasion, in view of the present chaotic situation of the various political parties, and of the guide the senatorial elections are expected to furnish in regard to the general elections for the Chamber, which must take place in rather over twelve months from now. There is every indication that the coming elections will decide the fate of the once all-powerful Radical and Radical Socialist party, which for so many years ruled France, as against the Nationalist Right on the one hand, and the Socialist and Communist Left on the other. The financial débacle brought about by the return to power of the Bloc des Gauches at the elections of 1924, thanks to the alliance of the Radicals and Socialists, has now brought the disappearance of the great Centre Party to within measurable distance. Three recent important by-elections have apparently shown that the Radical and Radical Socialist party is hopelessly split into two antagonistic halves, the one inclining definitely towards the Right and the other to the Left.

All indications now support the general belief that the economic and industrial crisis that was expected to follow the earlier stages of M. Poincaré's or any other plan for righting the financial situation has been reached. Manufacturers are everywhere complaining of cancelled orders to an extent never before experienced, and are either putting their plants on short time, or reducing labour forces to the lowest possible minimum. Unemployment is steadily increasing, the number of workers in receipt of unemployment pay last week being 3,549 (as compared with 1,396 the previous week, and some 500 a month ago). The Minister for Labour reports that 10,440 applicants for work last week failed to find employment, of which total over 10,000 were in the Paris area, 2,061 being shop assistants and clerks. (Unemployment during the last crisis in 1921 reached a maximum of 91,225 persons.) During the past two months the weekly amount of bills discounted by the Bank of France has fallen from 5,024,000,000 to 3,562,000,000 last week; private deposit accounts have swollen from 2,948,000,000 to 5,283,000,000 (indicating the increased amount of capital awaiting employment), while the note circulation has fallen from 55,431,000,000 to 52,536,000,000.

The Bank of France discount rate—which, after having for a long time stood at 6 per cent., was raised to 7½ per cent. as a protective measure at the period of the cataclysmic drop in the franc last July—has been brought

down to 6½ per cent. This is regarded by many as being still too high, in view of the present situation and of the lower rate prevailing in some other countries. Business remains stagnant on the Bourse, however, and price changes have been insignificant, unless in the downward direction. Another significant measure has been the stoppage of further issues of one-month National Defence bonds, and the decision by the Caisse d'Amortissement, which is now in supreme control of the floating debt, to replace them as from January 1st with two-year bonds bearing 6 per cent. interest, deducted in advance. The rate of interest on three, six, and twelve-months bonds of this kind has been reduced respectively to 4 per cent., 4½ per cent., and 5½ per cent. The reason for the latter step was that, with the return of confidence, the public has latterly been absorbing these bonds so satisfactorily that the limit fixed by the law creating the Caisse d'Amortissement was nearly reached. The suspension of further issues of one-month bonds is obviously due to prudential reasons, in accordance with the rest of the Poincaré policy.

It is somewhat puzzling to note, however, that simultaneously with the suspension of further issues of one-month National Defence bonds, which yield 3 per cent., the Treasury announces the creation of a service for accepting cash deposits, subject to one month's notice of withdrawal on which 4 per cent. interest is offered. No one will dispute the convenience of this method of furnishing the Treasury with liquid cash for use in case of need. What appears to be paradoxical, nevertheless, is that although the issue of further one-month bonds has been suspended, on the ground that the legal limit has been reached, there is apparently no limit to the amount that may be received of deposits subject to a month's notice. It is difficult to see how these new private deposit accounts with the Treasury can be regarded as anything but a disguised form of additional floating debt, the situation of which (unlike the debt to the bank) will escape public attention.

The revenue returns for November show that the total received by the Treasury during the month from all sources was 4,234,364,000, of which 4,175,322,800 was from "normal and permanent resources" (as compared with 5,016,100,800 in October and 3,035,921,200 in September). The degree to which the recovery of direct taxation has been speeded up by the present Government is strikingly shown by the official returns. The demand notes in respect of general and scheduled income-tax for 1926 (which were sent out only during September, October, and November) totalled 5,987,889,400, distributed over the following categories:—

	Francs.
General income-tax	2,762,534,400
Commercial and industrial profits	2,063,609,300
Incomes from salaries and wages	409,397,300
" " liberal professions	98,842,600
" " agricultural profits	76,652,300
" " developed real estate	641,684,200
" " undeveloped land	195,249,300
Cost of delivering demand notes	749,800

Of these total assessments in connection with income-tax for 1926, some 60 per cent., or 4,210,091,000, had been recovered by November 30th, leaving 1,777 millions outstanding. Demand notes levied down to November 30th for other direct taxation, including for local government purposes, totalled 5,144,188,400, of which 1,217,941,000 was called for on behalf of the State and 3,926,247,400 for the departments, communes, &c. The portion of these imposts due to the State this year includes the "civic tax," created specially for the current year and representing a total of 650,605,600. Of these 5,144 millions of "other direct taxes," 3,490,987,700, or over 65 per cent., was recovered by the end of November. The 3,926 millions levied for on behalf of the departments, communes, &c., although collected by means of the same demand notes, are not included in the figures of the annual national Budget.

The foreign trade returns for November disclose a heavy drop in exports and an appreciable falling off in imports, but still leave a favourable balance of over 330,000,000 on the month (as compared with one of practically 1,000 millions in October). The detailed figures,

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up	\$25,000,000
Surplus	\$35,000,000
Undivided Profits	\$6,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world, bringing them into contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE

2 and 3, Crosby Square
Bishopsgate, E. C. 3

showing the value of both imports and exports, as compared with those of the previous month and with those of November, 1925, are as follows:—

	November, 1926.	As Compared with	
		Nov., 1925.	Oct., 1926.
Imports—			
Foodstuffs	1,091,361,000	+ 261,324,000	+ 139,974,000
Raw materials	3,324,761,000	+ 75,890,000	+ 267,400,000
Manufactured goods ..	578,205,000	+ 79,051,000	+ 15,333,000
Totals	4,994,327,000	+ 416,265,000	+ 112,093,000
Exports—			
Foodstuffs	486,259,000	+ 88,379,000	+ 30,070,000
Raw materials	1,476,378,000	+ 252,028,000	+ 464,900,000
Manufactured goods ..	3,366,632,000	+ 768,294,000	+ 279,040,000
Totals	5,329,269,000	+ 1,108,701,000	+ 774,010,000

As in previous months, nearly 70 per cent. of the imports consisted of raw materials and only 11½ per cent. of manufactured goods, while exports comprised over 63 per cent. of manufactured goods and only about 28 per cent. of raw materials.

	First Eleven Months.		Inc. or Dec. in 1926.
	1925.	1926.	
	Francs.	Francs.	Francs.
Total imports	38,566,023,000	54,391,845,000	+ 15,825,822,000
Total exports	40,941,220,000	54,139,803,000	+ 13,198,583,000

The eleven months, therefore, have resulted in an unfavourable balance of 252,042,000, as compared with a surplus of exports, during the corresponding period of last year, amounting to 2,375,197,000. The drop of 774,010,000 in exports last month, or over 12½ per cent., was the result of (1) the general rising of commodity prices towards rates obtaining in sound money countries and (2) the operation of the new tax on exports.

GERMANY.—POLITICS—CREDIT—FINANCES— INDUSTRY—CROPS—BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, December 20.

THE formation of a new Cabinet has been postponed until after the holidays. The Reichstag reassembles on January 19th, and no solution of the crisis is expected until at the soonest a few days before. The prospect of a majority Cabinet is small. The German-Nationals were willing last week to save the Cabinet from being overthrown by the Left on condition that they were taken in; but their nearest neighbours in the Cabinet, the German and Bavarian People's parties, while they negotiated in this sense, rejected the National party's demand that they should enforce this by a threat to secede from the Cabinet. The relations between the People's party and the Nationals are now bad; and the Centre and German-Democrats are against any alliance with the Nationals. The "Great Coalition," that is, an alliance between the present Cabinet parties and the Social-Democrats, will also not be easy to form; and a Cabinet on this basis is hardly likely to last.

The money market last week was more strained than it has been for many months. Large demands were made for holiday expenditure, and for the year-end. The market is still to some extent under the influence of the Rentenbank repayment of 293 million marks at the close of November, and the Gold Discount Bank's new bill issue has diverted a good deal of money from the ordinary market. The mid-month settlements did not pass as smoothly as usual, and prolongation credits were dear. Relatively large sums in private discounts were offered. Persons needing cash tended to realise their exchange holdings, causing a slight decline in the dollar exchange. Day money at the end of the week was 4½-6 per cent., and month-money rose to 7-8 per cent., the demand far exceeding the supply. A certain nervousness is shown as to the year-end settlements. In some quarters the market phenomena of December are taken to indicate an approaching termination of the period of cheap and abundant money.

Taxation receipts in November totalled 625.3 million marks, as against 741 million marks in October, which sum, however, contained taxes falling due quarterly. The tax yield in the first eight months of the financial year, and the estimated totals for the whole financial year 1926-27 were:—

(Millions of Marks.)

	April- November.	Estimated Whole Year.
All taxes	4,726	6,555
Thereof—		
Direct	3,173	4,506
Customs and excise	1,553	2,049
Thereof Reparations—pledged...	1,513½	1,997

The yield of all taxes to date is 357 million marks more than the estimated share of the eight months. Some taxes, among them the corporation income and motor-car taxes, brought in more than the whole year's estimate, and the securities tax brought in nearly twice as much. The yield of railways' passenger and goods traffic taxes was 214 million marks out of 325 million marks, estimated for the whole year. Income-tax brought in 1,553½ million marks, its estimated share for the eight months being 1,400 million marks. The yields of the Reparations pledged taxes were:—

(Millions of Marks.)

	April- November.	Estimated Whole Year.
Customs	567½	670
Tobacco	448	655
Sugar	187½	265
Beer	184	235
Spirits monopoly	126½	172

The industrial situation has not changed materially, but there are reports of increasing seasonal unemployment. The weakening of the iron and steel export market continues; the home market is fairly active. Output of pig-iron in November was 983,298 metric tons, as against 760,353 tons in November, 1925; output in the first eleven months of the year, 8,578,728 tons, against 9,459,688 tons in the same months of 1925. Steel output in November was 1,257,007 tons, against 873,484 tons in November,

1925; in the first eleven months 11,037,036 tons, against 11,429,858 tons. The output of iron and steel has risen month by month, with only slight breaks, since last winter, when the lowest point was reached. The preceding high point was reached in March, 1925. The Western Steel Trust (Vereinigte Stahlwerke A.G.) has united all its export operations under a new company, the Eisen Union Export Company, with headquarters at Düsseldorf, and has reorganised its home trade under three companies, with seats in different cities. The plan to found a Potash Trust has been furthered by the purchase by the Burbach group of interests in the Wintershall Company. The present plan is to unite all potash concerns into a single company, and it is considered possible that the Alsace potash companies may come in. The Reichsgericht has rendered an important decision to the effect that employees must work overtime to the limits legally allowed, and this not merely in times of emergency, but also in ordinary times. The practical effect of this is that refusal to work overtime becomes good ground for dismissal.

The final crops report for 1926 shows a considerable decline as compared with 1925, which, however, was an exceptionally good year. Against the decline in wheat and rye there was a considerable increase in oats. The potato crop was about one quarter less than in 1925:—

Thousands of Metr. Tons.

	1925.	1926.	Average 1911-13 on Present Area.
Wheat	3,217	2,598	3,765
Rye	8,063	6,406	9,585
Oats	5,585	6,325	7,680
Barley	2,599	2,463	2,870
Potatoes	41,718	30,031	37,962
Sugar beet	10,326	10,495	13,986

Railways Corporation receipts in October were 439,485,000 marks, of which 288,345,000 marks was from goods traffic; expenditure 389,516,000 marks, this including 44,907,000 marks for service of the Reparation bonds, and payments to reserves.

The bourse last week was firm, with the chief demand for coal, steel, banking, and, as a result of the progress towards a trust, potash shares. Dealing was not very active. Bankers and other authorities differ as to whether the upward movement which began on the first day of January, 1926, is at an end. In some quarters the decline which began early in November is represented as being due to considerations of yield at last being taken into account, that is, to the purely speculative public being replaced on the market by investors. The *Berlin Tageblatt* publishes an analysis of balance-sheets and profit and loss accounts of 563 companies published for December 31, 1925, or later. The chief figures are:—

	Thousands of M.
Capital	1,167,803
Reserves	214,767
Long-term debts	363,880
Short-term debts	719,247
Net profits	28,960

The net profits figure is arrived at by deducting 34,397,000 marks losses of 258 companies from 63,357,000 marks profits of 305 companies. On all the 563 companies the net profits were 2.5 per cent. on capital, gross profits 10.3 per cent. The chief groups showing profits were the mining, iron and steel, chemicals, gas, water, and electricity, banks, transport, electrical and optical. The finished metals group, the engineering and motor-car, textiles, and clothing groups show losses. The figures as a whole are not promising; but examination shows that heavy average losses were suffered by a large number of small companies, whereas companies representing 1,045,525,000 marks capital out of the total 1,167,803,000 marks dealt with earned on an average over 6 per cent. net profits on their capital. The Disconto Gesellschaft's report shows that all stocks quoted on the Berlin Bourse rose on an average to 118.1 per cent. between December 31, 1925, and October 30, 1926, which was about the highest point, and declined to 113.8 per cent. on December 10th. On December 31, 1925, the quotation value of all shares was 70.9 per cent. of the capital. October 30, 1926, 161.7 per cent.; December 10th, 151.6 per cent. The total capital on October 30th was 10,390½ million marks; the quotation value on December 10th, 15,752 million marks.

HOLLAND.—EFFECTS OF BRITISH COAL RESUMP- TION—THE HOLLAND-BELGIAN TREATY—STOCK EXCHANGE—MONEY MARKET.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, December 17.

THE termination of the mining dispute in Great Britain has banished the fears which were entertained in certain quarters in Holland of the possibility of a coal shortage developing during the coming winter. Recently when the question of such a contingency was raised in Parliament the Minister of Mines spoke reassuringly of the situation. Though the Dutch collieries have entered into engagements for the supply of large quantities to foreign markets for a considerable time to come, home consumers came in for their share of the offers, and were consequently at liberty to conclude contracts with the Dutch mines if they so desired. Moreover, as the bulk of the Dutch output of house coal is consumed in the country itself, there was at no time any justification of fears regarding the supply of domestic coal.

It is evident that in the near future some of the recently acquired export channels will be closed to the Dutch collieries, and if the coming months see a return to a normal state of affairs in the coal market, we may assume that the shipping companies will have to face altered conditions. As a matter of fact, the freight market has of late shown a tendency to weaken, and Dutch owners, and those interested in the tramp trade in particular, must inevitably feel the consequences, especially when the demand for tonnage for grain cargoes has slackened. In addition, there is sure to be less activity in the port of Rotterdam than has been the case during the past half-year. In this period many vessels proceeded to Rotterdam—or, in order to avoid dock dues to the new waterway—only—to replenish their bunkers. The extent to which the port of Rotterdam has benefited will be seen from the following table, in which a comparison is drawn with Antwerp and Hamburg:—

	Rotterdam.		New Waterway.		Antwerp.		Hamburg.	
	Ships.	Tonnage.	Ships.	Tonnage.	Ships.	Tonnage.	Ships.	Tonnage.
11 months—								
1926	13,347	19,467,973	18,639	26,554,671	10,607	17,737,619	13,544	15,975,664
1925	10,206	15,265,943	12,749	18,681,139	9,126	15,637,058	12,270	15,345,116
Advance	3,141	4,202,030	5,890	7,873,532	1,479	2,100,561	1,274	630,548

If it is considered that the great increase in the returns for Rotterdam and the new waterway is to be attributed purely to the dislocated state of the coal market, it is evident that the trade of the port of Antwerp has made great strides. It was this factor which came into consideration during the numerous discussions respecting the treaty between Belgium and Holland, which has given rise to so much comment. The treaty has been responsible for a great deal of dissatisfaction among the public, and this dissatisfaction reflected itself in the voting which took place in the Second Chamber. After a masterly speech by the Foreign Secretary, who confined himself purely to a statement of the facts, which he considered must warrant the adoption of the treaty, it was passed by 50 votes to 47. Only three members were absent. If it is borne in mind that of these three members two were certainly against the treaty, and if one considers the great impression made upon the Chamber by the Minister's speech, the keen opposition experienced by the Government will be apparent. Considerations of an economic, and not of a political nature, have had the greatest influence. Any agreement which might tend to strengthen relations with Belgium would be most welcome in Holland, and if concessions are to be made the Dutch will not be found wanting; but the opposition is mainly directed against the proposed construction of a canal from Antwerp to Moerdijk (about 30 miles north of Antwerp). It is contended that this will cause a great deal of the river traffic to be diverted to Antwerp to the detriment of Rotterdam, and the present prosperity enjoyed by the Belgian port is cited in justification of these objections. The discussions in the First Chamber have not yet taken place, and public agitation continues to manifest itself. Petitions against the treaty have come in from various quarters, and several Chambers of Commerce have protested against its adoption, pointing out that their opposi-

tion is not directed against a treaty with Belgium, but against the present treaty, or rather against certain vital clauses contained in it.

Trade and industry and also the Stock Exchange are marked by relative quietude, and all concerned appear to be awaiting the further course of events. But in general a certain degree of optimism may be said to prevail. The increase in the rate of interest, which has been noticeable during recent months, has not produced any uneasiness. Nevertheless both the "prolongation rates" (advances on the collateral of stocks and shares and the private discount rates have been marked by a rise of some proportions. The "prolongation rates" are fixed under the supervision of the Stock Exchange committee, and consequently serve as a good guide to the general tendency. The rise set in during November, and appears to some extent to be due to a reflux of foreign capital which had sought shelter against a depreciation of certain foreign currencies. It is probable, too, that the steady flow of foreign issues offered to the public via the Dutch market has not failed to have its effect. During the last few days "prolongation rates" have been moving between 3½ and 4 per cent., the private discount rate being more or less maintained at 3½ per cent.

In connection with the "prolongation rates" the approaching close of the year is a factor which naturally tends to contribute to a rise in this direction. As regards the private discount market the fairly recent decision of the Netherlands Bank to extend its discount facilities to the bills of certain foreign banks has so far had but limited effect on the discount market. The opinion is held generally that though the measure may serve to promote the growth of the Amsterdam discount market, such a market must find its strongest help through foreign transactions being concluded in Dutch guilders. In addition it is desirable to have cheaper money at Amsterdam than in other discount markets, which, as a matter of fact, has so far been the case. Developments in the money market both here and abroad are consequently being followed with interest.

BELGIUM.—PUBLIC DEBT—TAXATION—RAILWAY TARIFFS—BOURSE—CAPITAL EXPORTS.

(FROM OUR CORRESPONDENT.)

GHENT, December 18.

THE aggregate ordinary and extraordinary receipts for 1927 are estimated at 9,578 million francs, of which about half will go to the service of public debt; 2,958 millions, or 30 per cent., are required for payment of interest and pensions; moreover, 1,789 millions, or nearly 20 per cent., will be available for debt redemption.

The position of the long and medium term debt stands as follows as compared with August 1, 1914 (in millions of gold francs):—

	1914.	1926.
Capital Amount—		
Internal debt	4,182	3,400
External debt	294	4,158
Total	4,476	7,558
Yearly Burden (Interest and Redemption)—		
Internal debt	147	190
External debt	17	199
Total	164	389

The external debt, which was practically negligible before the war, now exceeds the internal debt. The total public debt on October 31, 1926, amounted to 57,165 million paper francs, which included only 11 per cent. floating and medium term debt.

The service of the aggregate debt (excluding pensions) requires 177 million francs in 1914, against 3,255 millions in 1927, corresponding to 465 million gold francs, or 260 per cent., of 1914. The latter amount does not include the extraordinary grant of 1,663 million francs to the fund for amortisation of public debt.

Receipts from taxation for 1927 are estimated at 6,762 million francs, or 966 million gold francs, against 351 millions in 1913, which brings the average of taxation for 1927, in gold value, to 278 per cent. of 1913. The gold index for the yield of the different taxes in 1927 is, as compared with 1913, about 430 for direct taxation, 160

for Customs, 900 for excise, 470 per cent. for registration and stamp duties. It is generally expected that the improved financial situation will enable the Government to make a reduction in this heavy rate of taxation next year.

In order further to adapt railway rates to the lower value of the franc, a new increase amounting to 10 per cent. will take place on January 15th; this will still leave the average railway rates 10 to 20 per cent. below their pre-war gold value. In 1913 the passenger fares per kilometre were 0.046f for second and 0.038f for third-class, with a reduction of 20 per cent. for return tickets. Single tickets will now be on the average 560 per cent. of the pre-war monetary figure, but as return fares are now exactly double the price of a single journey, they will cost 700 per cent. of the pre-war price, which puts them at exactly the same gold value as in 1913. The transport of coal for 100 kilometres has increased from 4f in 1914 to 24f in 1927 (or 600 per cent. of 1914), which in gold is still one-seventh below the pre-war rate.

Industrial activity has somewhat slowed down. This is ascribed partly to the end of the British coal strike and partly to the effects of monetary stabilisation. The Bourse shows little strength, with the exception of Government stocks, which reflect growing confidence in the improvement of Government finance. The 6 per cent. consolidation loan has risen between October 1st and December 17th from 56 to 82.

The regulations restricting dealings in exchange and foreign securities have recently been abolished, and since December 16th the export of capital has been again free from restriction.

NORWAY.—LABOUR POLITICS—BUSINESS OUTLOOK—MONETARY CONDITIONS.

(FROM OUR CORRESPONDENT.)

TRONDHJEM, December 16.

POLITICAL events of importance have been few and far between in the last few months, and recent developments in Labour quarters are therefore causing some stir. Rumours had been current for some time that a coalition between two of the sections of the party was under contemplation, and yesterday a manifesto was issued by the Norwegian Labour Party and the Social Democrats in conjunction with the National Labour Union, containing the outlines of the programme for a politically united Labour Party. The programme will be discussed at the annual conferences of the Labour Party and the Social Democrats in January next year, and there is every reason to believe that the consolidation will materialise. It is obvious that a strong Labour Party, which will be the result of this coalition, will prove a powerful factor in economic and social struggles, the issues of which have been, and very likely will continue to be, of such extraordinary importance to industry as well as to our whole national life. Next year's elections, with a view to which this step has been precipitated, will probably show to what extent the new movement has taken hold of the labourers, but beyond doubt the psychological moment has been very well chosen.

The general outlook for industry and trade has not materially altered during the last two or three weeks, although the collapse of the British coal dispute has contributed to bring about a better business feeling, at least as far as certain export markets are concerned, such as wood, pulp, and paper. It is too early as yet to expect a real improvement, but if things do not take an unfavourable turn, one may expect increased activity and better prospects after the Christmas holidays.

The Norges Bank return of December 15th shows an expansion in the note circulation of nearly 8.5 million kroner. Loans and discounts have likewise increased, and deposits have been slightly reduced. The position is, of course, influenced by the usual increased demand for Christmas financing.

After the sharp appreciation of the krone which took place during November, with the quotation for sterling as high as 18.80, a reaction set in about two weeks ago, and with the official Norges Bank quotation at 19.25 the market now seems to have steadied down. The last stage back to gold parity, which recently seemed a question of days only, will probably be a long one after all. The stock

market remains rather quiet, and the share market is also featureless, with a minimum of business done.

Some rather serious cases of foot-and-mouth disease have been reported from a district in the neighbourhood of Arendal, but the authorities have taken all necessary steps to prevent the further dissemination of the disease, such as isolation of the farms in question and slaughtering of the cattle.

JUGOSLAVIA.—DEATH OF M. PASHITCH—POLITICAL OUTLOOK—TRADE AND TRADE BALANCE—BUDGET.

(FROM OUR CORRESPONDENT.)

BELGRADE, December 11.

THE political and therefore the economic position of Yugoslavia is bound to remain uncertain for some time, because of two simultaneous and important events. One is the Government crisis, which has been impending for some time, and which has been hastened by the publication of the Italo-Albanian pact; the other is the death of ex-Premier Pashitch, the leader of the Radical party. There can be no doubt that the disappearance of M. Pashitch will cause a regrouping of the factions within the Radical party, which has for some time been torn by dissensions, and may possibly also bring about a regrouping of parties later on. How long this will take it is impossible to foretell, but until this crystallisation has been accomplished there is little hope of any thorough economic reform such as the country so sorely needs.

In the meantime the stagnation in business, due on the one hand to a heavy and ill-distributed fiscal system and on the other to the fall in the price of agricultural products, still persists. The only liveliness appears to be in the coal trade and the building industry. The coal trade has suffered a long crisis, owing to high costs of production, and the competition of better foreign, chiefly British and Silesian, coal. But, as a result of the stoppage in the British coalfields, Italy appeared as a large buyer in Yugoslavia, and in most of the collieries in Slovenia, Bosnia, and Croatia stocks have run low, while in many cases contracts for advance sales have also been concluded. Thus, e.g., Trbovlje, the largest mine in the kingdom, has an order for 50,000 tons by February. The activity in the building trade, especially at Belgrade, is explained by the enormously high rents. The average rent per room at Belgrade is £3 per month, so that money invested in houses brings in anything from 16 to 20 per cent. This is due to the rapid growth of the city, which in 1921 numbered 111,000 inhabitants, and now, in 1926, has reached 243,000. Finally, catering for tourists is beginning to develop into an industry, the number of tourists during the first eight months of 1926 being calculated at 30,000, or 50 per cent. above the total for the whole of last year. The money left by tourists, chiefly in Dalmatia and Slovenia, is reckoned at 300 million dinars for 1924, 375 million for 1925, and 600 million in the first eight months of 1926.

Trade is dull, both imports and exports having shrunk in volume since last year, as is obvious from the following figures:—

	1925.			1926.		
	Tons.	Mill. Gold Dins.		Tons.	Mill. Gold Dins.	
Exports.						
September	421,812	.. 79.8		371,838	.. 59.3	
October	437,084	.. 77.4		418,944	.. 74.8	
Imports.						
3rd quarter		.. 197.5			.. 172.2	
First 9 months ..		.. 585.0			.. 517.0	

The shrinkage of exports applies only to value, and not to tonnage, the volume for the period January to October, 1926, being 4,085,151 tons, as against 3,666,007 for the same period of 1925. Trade for the first nine months shows a slight deficit, exports amounting to 509 million gold dinars, as compared with 517 million of imports. Considering the absolute lifelessness of the months June to September, when floods and storms prevented export, and also the increase in exports during October, there is a likelihood that the trade balance will be just favourable.

Under such conditions, it is natural that the Budget for 1927-8 submitted to Parliament should be smaller than its

predecessor, or in other words, that it should be the first "deflationist budget" rendered necessary by the decline in State revenue. The proposed Budget is balanced, and amounts to 11,690 million dinars, as against last year's Budget of 12,300 million, excluding supplementary credits. The main items of expenditure are as usual the Ministries of Communications (2,530 million), Army and Navy (2,350 million), and Finance (1,600 million). Revenue is anticipated chiefly from State industries (forests, mines, posts, domains, &c. (3,628 million), indirect taxation (3,531 million), monopolies (2,362 million), and direct taxation (1,618 million). Many eminent economists consider even this Budget too large, and feel doubtful whether the Minister of Finance will be able to realise his estimates.

INDIA.—THE ELECTIONS—THE RATIO—THE RESERVE BANK—TRADE FIGURES AND CONDITIONS—THE MONEY POSITION.

(FROM OUR CORRESPONDENT.)

CALCUTTA, November 25.

THE elections for the Councils and the Legislative Assembly have so far failed to provide any unexpected or sensational results. The local Council bids fair to return the non-Swarajists in a majority sufficiently comfortable to enable the House to work up to the reforms. As regards the Legislative Assembly, the general trend of returns to date has been satisfactory, and shows Responsivist successes in the Central Provinces, an equal division of votes between Independents and Congressmen in the Bombay Presidency, and further Swarajist victories in the Madras Presidency, while in the United Provinces the Liberals are gathering strength. The recent act of the Swarajist Calcutta Corporation in refusing an address of welcome to the Viceroy, and the refusal of the Congress party in the Madras Council to accept office, augur badly for that change of heart which would justify a revision of the reforms before the prescribed date of 1929.

It is expected that H.E. the Viceroy will open the winter session of the Council of State and the new Legislative Assembly on January 24th. The first measure to engage the attention of the Assembly will probably be the report of the Civil Justice Committee, while the recommendations of the Taxation Inquiry Committee, postponed from the last session, will inevitably take up a great deal of time. The most contentious measure to be debated, however, will probably prove to be the Currency Bill, embodying the recommendations of the Hilton Young Commission on Indian Currency and Finance. Last week the Finance Department issued a communiqué announcing that the Secretary of State and the Government of India were "prepared to accept on a whole the recommendations of the Commission, subject to such further consideration of details as may prove necessary. Legislation to give effect to these recommendations will be introduced in the Indian Legislature during the forthcoming Delhi Session." This communiqué was followed up this week by a trenchant speech by the Finance Member at Delhi University, when he covered most of the ground of the controversy. He confuted the Bombay 1s 4d school and the Currency League out of their own mouths from the evidence given before the Young Commission. Their lately assumed rôle of protectors of the agriculturist by ensuring through a reversion to the 1s 4d ratio that he receives 15 rupees for his produce instead of the meagre 13 which the 1s 6d ratio entails, is unconvincing when viewed in the light of the evidence given before the Commission by a prominent champion of the Currency League, and a Bombay millowner to boot, who admitted that a 1s 4d ratio would enable him to reduce the real wages of his employees without reducing their money wages, and at the same time enable him to sell his products to the consumers, who consist mainly of the agriculturist and the employees, for a larger number of rupees. The charge that the 1s 6d ratio is an artificial one, secured by Government's "manipulation" of the currency, was dexterously countered by the plea that the maintenance of a 1s 4d rupee would have meant an even more intense "manipulation." Many sincere advocates of the 1s 4d rupee are driven to admit that the postponement of the Currency Bill last autumn, with its conse-

GENERAL BANKING BUSINESS.

quences of giving further time in which internal prices may adjust themselves to the new ratio, has removed much of the sting from the protests against a 1s 6d rupee. The Finance Member reiterates that the question of the ratio is a dead issue, and that Government's reserves and other resources are ample to maintain the rupee at 1s 6d—witness Government's recent action in strengthening the reserves by paying off five crores of created securities out of balances. Further, the ratio has survived the acid test applied by recent bad trade conditions, a very easy money market, and the adverse effects of a heavy drop in the price of silver.

There seems little doubt that Government's present hope is that the recommendations, lock, stock, and barrel, will be incorporated into law and placed on the Statute Book with a minimum of delay.

The debate on the ratio has rendered one signal disservice to critics of the Bill. It has occupied such a disproportionately large area of the canvas that the other two main recommendations of the report, viz., the establishment of a gold bullion standard and a Central Reserve Bank, have scarcely been allowed into the picture at all. Yet these are the really important and epoch-making recommendations of the report, involving, as they do, the setting up of Indian currency autonomy and the substitution of untrammelled control in India of Indian monetary, credit, and currency policy in place of the present dyarchy shared by Simla and Whitehall. The debate on the best means of attaining this desideratum will evoke strong criticism of the Reserve Bank scheme, centring on the compensating privileges to be given to the Imperial Bank of India in consideration of the loss of its control of Government balances. These privileges will be watched with a jealous eye, both by the indigenous banks and the exchange banks incorporated in the United Kingdom. The shareholders in the Imperial Bank are to be given preference in subscribing the capital of the Reserve Bank—a privilege which should, within a reasonable time, prove to be the equivalent of receiving at par a gilt-edged security yielding 8 per cent. With the Indian money market in its present state this is a very handsome compensation. The suggestion is that the Reserve Bank should be the main Government bank in the financial centres, with the Imperial Bank acting as its agent in "mofussil." Judging by the suggested constitution of the directorate of the Reserve Bank, the two banks would appear to be virtually under the same control. It is agreed that the Imperial Bank must continue its excellent work of opening up new branches, and to do so it must be supplied with funds against its expenditure on non-self-supporting branches. Its prestige, too, must not be in any way impaired, while its charter must be so altered as to permit its incursion into the arena of competitive commercial banking. Of the 14 directors of the Reserve Bank, nine are to be elected by the shareholders of the Imperial Bank. It will be a matter of nice adjustment to decide the privileges and limitations of the reconstituted Imperial Bank; to decide between the number of sops to be thrown to Cerberus, and (to mix the metaphor) to what extent the wind must be tempered to the lamb, shorn of its chief asset—the free use of Government funds.

Trade conditions continue very dull, and trade figures for October are, on the whole, disappointing. Imports of private merchandise totalled Rs. 19,97,00,000, an in-

crease of Rs. 1,03,00,000 over the preceding month. The value of Indian export of produce and manufactures increased from Rs. 22,83,00,000 in September, 1926, to Rs. 23,13,00,000 in October, and re-exports increased by Rs. 20 lakhs to Rs. 80 lakhs. Treasure on private account, including currency notes, showed a net import of Rs. 3,01,00,000 in October, as against Rs. 1,89,00,000 in the preceding month and Rs. 5,74,00,000 in October, 1925. Over the seven months, April-October, the gold imports this year were Rs. 12.22 crores, as against Rs. 20.62 crores last year, while silver imports are Rs. 10.63 crores, as against Rs. 10.77 crores respectively. This year the visible balance of trade in merchandise and treasure, over the same seven months, is Rs. 17.70 crores, as against Rs. 57.68 crores over the same period last year. It is hoped that during the current month raw jute exports may reach six lakhs of bales, and that in quantity exports this season may, by the end of January next, overtake last season's. This month's hessian export may not exceed 10½ crores of yards, which will mean an addition of two crores to stocks. Coal is being exported at the rate of some 8,000 tons a day from Calcutta, but recent indications are that the consignees of at least one of the Port Said cargoes are negotiating a resale.

Money is practically unobtainable, and the call money rate is ½ per cent. The sustained demand for silver is bringing money into Bombay, and as considerably more than half of the jute crop has been financed and marketed, money is also coming back into Calcutta from the jute districts. It may be said that the jute crop this year has been moved without having the least noticeable effect on the money market. It remains to be seen whether the financing of the late cotton crop will affect the market. Banks seem to be sitting on over-bought exchange positions for near deliveries, and there is a considerable conversion of rupee securities into sterling securities at present owing to the impossibility of utilising rupee balances.

ARGENTINA.—GOOD CROP OUTLOOK—OVERSEAS TRADE—ANGLO-ARGENTINE COMMERCIAL RELATIONS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, November 19.

THE end of the year approaches with a favourable outlook for the wheat crop, notwithstanding damage caused by frost in the Pampa and parts of the Cordoba and Buenos Aires provinces. Reports during the last few days of further mischief, due to hail and rain storms in certain districts, are not taken in authoritative quarters as meaning any appreciable reduction in the yield. Harvesting has already commenced in the North, and so far the accounts coming in are satisfactory. On the whole, some setback must be admitted from the position as it stood a few weeks ago; but then some little writing down from the earlier estimates is anything but a new experience. The condition of the growing maize is officially described as magnificent, and given favourable weather conditions during the critical period from now to February, there should again be an excellent crop. Opinions as to linseed are somewhat contradictory, but the probability is that there will be a falling-off of no very serious nature from the last splendid production. Altogether, while it is too early as yet to build hopes on anything in the way of new records, the signs are that 1927 will be at least well up to average, especially as the final estimate of the Ministry of Agriculture confirms an increase of 2.1 per cent. in the area under cultivation. On the other hand, lugubrious reports have come in from the Mendoza district of extensive havoc caused by frost to the grape vines, and to add to the troubles of the wine industry, those who legislate for the province have considered this the right moment to hit it with a heavy increase in taxation.

There will, of course, be considerable stocks of grain to carry over as a result of the abnormal shipping condi-

tions, so that once a regular supply of tonnage at reasonable rates is again available there will be ample cargoes to keep the vessels busy. The freight market has been enjoying a relative amount of activity during the past few days, but obviously export on any considerable scale must await conditions far different from those ruling at present, and, pending a return to normality, shippers will perforce have to possess their souls in patience. The dearth of forward bookings, with its consequent reduction in the number of export bills coming into the market, has had the inevitable adverse reaction on exchange at a period of the year when an improvement is looked for as a matter of course, and the current rates are no better than they were last month. The evil, of course, is merely temporary, but it serves to illustrate how the sins of Mr Cook are visited upon a distant community.

The exports during the first ten months of the year amounted to a total of 10,278,531 tons, being an increase of 1,142,247 tons, or 12.5 per cent., as compared with the corresponding period of 1925, but their value was only 680,834,817 gold pesos, a decrease of \$70,028,029 (9.3 per cent.). The figures to the end of September showed a rise in volume of 607,354 tons (7 per cent.), with a drop in value of \$74,707,262 (10.7 per cent.), so that in spite of everything matters are left a little better.

So far from there being any improvement as regards bankruptcies, the declared liabilities for October, \$16,806,370, marked a new high record for the year, comparing with \$11,267,550 in September and \$12,156,312 in October of last year. The total for the ten months is brought up to \$139,225,970, an increase of \$37,192,040 in comparison with the same period of 1925.

The situation of Anglo-Argentine commercial relations was the main topic at the annual meeting of the British Chamber of Commerce this month. The chairman of the Chamber having drawn attention to the Board of Trade figures showing that the trade with Great Britain in 1923, 1924, and 1925 had left balances in Argentina's favour of 182, 258, and 198 million gold pesos respectively, the British Minister, Sir Malcolm Robertson, followed with a vigorous speech, in which he maintained that we were a long way from doing our fair share of the export trade with this country. "Do you suppose," he said, "that if one or two of our trade rivals, whom I need not specify, were in our position, that is to say, owning three-fourths of the railways of the country, the bulk of the shipping, public utility concerns all over the Republic, vast properties like those of the Forestal, Bovril, and Liebig's, besides innumerable private estancias; having financed the Government for the best part of a century through one of our leading and most highly respected banking houses; having taken, and still taking, by far the greatest proportion of all the main products of the country—do you suppose, I say, that if our rivals were in that position we should be able to sell even a hairpin in Argentina? And yet our export trade appears to be gradually giving way to that of other countries." Analysing the reasons for this, Sir Malcolm thought they could be summed up in the phrase that we did not study the market. We had mislaid our selling capacity, and it was time we found it again and were quick about it. He advocated that the British manufacturer should by all means keep up his first-class standard and finish, but that side by side with this he should go in for cheaper mass production with less finish, and sell his goods frankly for what they were. Then, turning to the Argentine side of the problem, the Minister recalled his argument in a speech delivered in July last on the same text, that the British consumer, who is mainly the working man, must always be the principal consumer of this country's produce, and that if he were out of a job and earning no money he must reduce his purchases of meat and other foods. "Buy from us that we may buy from you," said Sir Malcolm, should be the advice given by the one country to the other. These words have made an impression here, and our two British commercial weeklies criticise what they read as a threat, or at any rate a plea, to the Argentine consumer which is probably the last thing which Sir Malcolm had in his mind. On the other hand, *La Prensa*, for the Argentine Press, arrives at the conclusion that if the Englishman is Argentina's best customer it is for the Argentines to study him.

Letters to the Editor.

THE FRENCH FRANC.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I presume I had better reply to your correspondent, Mr R. Graham, who refers to my letter and wishes to know whether I am "the same Mr Mason who is chairman of the Sound Currency Association," that I have that honour. Your correspondent wishes to know why it was right that the pound sterling should be forced by artificial means up to its face value, and that it can also be right for France to stabilise at to-day's exchange. In the first place, the pound was not forced up by artificial means. It was debased by artificial means or by inflation of the currency, and was restored by the natural remedy for inflation, i.e., a gradual contraction of the currency. The simple reason why it has been possible in the one case, and I am afraid will be impossible in the other is, that the disease was, fortunately, attended to and cured in its early stages in this country, whereas it has gone so far in the case of France that an operation is necessary. In other words, the cure would be worse than the disease if the franc was forced up to the old parity. I admit this last restoration means a partial repudiation, and to meet that moral obligation I suggested a supplementary income bond as compensation. I wish I could add in full part, as your correspondent, Mr F. O'Halloran, no doubt would desire, but we have to face the facts of the case as they exist to-day, and in full part would, I believe, entail too great a burden upon the future revenues of France.—I am, &c.,

D. M. MASON.

December 20th, 1926.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of the 4th inst. you were good enough to print a letter from me on the above subject, to which Mr D. M. Mason did me the honour to reply in your issue of the week following, in which he states that I have diagnosed the financial position in France with accuracy, but he doubted whether my scheme for stabilising the franc would meet the case. Perhaps you will grant me the privilege of stating the position as I see it more fully in your valuable columns.

France is confronted with the double problem of how to treat her enormous debt with justice to everyone in relation to her present and future means, and at the same time not to injure the trade of the country.

Appreciating, as one must, the mentality of France in her just pride for all she has done for civilisation in the past, it is certain that her great wish is never to default in the debts she has incurred—incurred though they were through a war into which she was forced. I feel sure she intends at some future fixed date to bring her franc to the same parity in relation to the U.S. dollar and pound sterling, as obtained in the past, but unless she adopts some such scheme as I have formulated, it will be impossible for her to pay the enormous yearly interest charge on her debt. For although I have not the figures by me, I daresay at the old parity of 25.22 francs to the £ sterling her debt must be twenty thousand millions sterling, which, even at 5 per cent. interest, means an annual charge of one thousand million sterling. But with my scheme—and it is a very rough one—for the periods of interregnum and the initial price of franc stabilisation, can be fixed solely by those parties cognisant of France's resources and condition—viz., M. Poincaré's Government—when the franc has appreciated in course of years to 25.22 to the £ sterling, I do not suppose her annual charge would amount to more than one-third or even one-quarter of the above sum. I would point out how well also this would work out for France's foreign bondholders, as they would be receiving a gradually increasing rate measured in sterling, and would eventually be able to obtain, anyhow, the price at which the bonds were issued for their capital. Before the war a writer on economics stated that such a war as we have witnessed would never occur for the reason that it would bankrupt the world. History tells us that, given the will to fight, the question of finance never stopped a nation from fighting. The war took place. Then our Government, recognising that the first step to be taken to avoid disaster for the world was the stabilisation of exchanges, seized the psychological moment and stabilised ours, notwithstanding they foresaw a temporary upset to the trade of our country.

Not for the first time has our country sought to give a lead to the world. Cobden and Bright, recognising that the trade barriers of tariffs were a source of danger to the world's peace, successfully urged the policy of Free Trade, believing the world would follow in our footsteps. Unhappily, the world did not follow our example. We have again taken the lead in this first step by the stabilisation of our currency, and I feel sure that France, with her glorious past, recognising the duty she now owes to the world, will seize this favourable opportunity to do likewise. Should she see fit to adopt some such scheme as I have set out, she would not only be taking a worthy part in helping to set the world on its feet, as an unstable currency in a great country like hers makes trade most difficult for all, but I do not believe she would thereby see any great unemployment of labour such as we have, because her internal and external prices would be maintained at about a parity.—Yours, &c.,

PERCY H. JOSEPH.

West Bay Bungalow, Westgate-on-Sea, December 20th, 1926.

THE NEED OF ELECTORAL REFORM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Is it too much to hope that during the lengthy Parliamentary holiday extending well into the New Year, "reformers" of all parties may be induced to give consideration to an urgently needed reform?

The redress of grievances remains one of the three great principles won by the early Parliaments of England in the first hundred years of their existence—and fought for with varying success during the next 300 years. But at the present time so little attention is paid to matters of principle in the chaos of conflicting interests, that not only the violation of the three basic principles of Parliamentary Government, but also of the new one, of "one man, one vote," with its corollary, or aim at a fair representation in the House of Commons of those voters who poll, arouses no public interest.

As a result of the by elections contested since October, 1924, the Liberals have not gained a seat, although they have polled 22,000 more votes than they did in October, 1924, not including the 18,000 votes they polled at Ripon and Howden-shire.

The Conservatives have held twelve seats (five by majority polls and seven by minority polls). The Labour Party have won four seats (two by majority polls), and have held three others (two by majority polls).

The total decrease in the Conservative polls in these bye-elections (plus the loss at the three seats at Dundee, Oldham, and Stockport) amounts to 85,128, or almost one-fourth of their poll in October, 1924.

The Labour Party have added 24,868 to the total of their polls in these constituencies in 1924.—Yours, &c.,

H. JAMES ROBINSON.

Southall, Middlesex, December 15th, 1926.

Books and Publications.

BOOKS RECEIVED.

Volkswirtschaftliche Bilanzen. Von Dr P. Hermberg. (Leipzig) Akademische Verlagsgesellschaft, Markgrafenstrasse, 4. 5.70 marks.

This is the fifth volume in the series "Probleme des Geld-und Finanzwesens," edited by Dr Moll, of Leipzig. The first part is devoted to a general study of the balance of trade, the balance of payments, and the economic balance, i.e., the balance of production and consumption, and the part they play in determining the standard of economic success. In the second part, the growth of the balances of trade in different countries of the world is considered in detail.

Vom Nationalismus zu den Vereinigten Staaten von Europa. Von Arpad Török. (Wien) Moritz Perles, Seilergasse, 4. Mk. 6.00.

Written by an ardent supporter of a "United States of Europe," this book gives a critical survey of the growth of nationalism, capitalism, &c., and concludes by elaborating the idea of Pan-Europa.

The Fifty-eighth Annual Co-operative Congress. Edited by A. Whitehead. (Manchester) Co-operative Union, Limited.

A comprehensive annual report, running to over 700 pages, on the British Co-operative Movement.

The Groundwork of Economics. By H. A. Silverman. (London) Sir Isaac Pitman and Sons, Limited, Parker street, Kingsway. 4s 6d.

The author is External Lecturer in Economics at the University of Birmingham, and his aim is to meet the requirements of the ordinary reader who wishes to obtain a general introduction to economics. The book is also intended for candidates for the London Matriculation and the Higher School Certificate Examination of the Northern Universities.

The People's Year-Book, 1927. (Manchester) Co-operative Wholesale Society, Limited, 1 Balloon street. 3s net.

"An annual of facts and figures on Co-operative, Labour, and allied subjects," this volume, as in previous years, contains a wealth of general information and a number of interesting articles and illustrations.

Handy Insurance Chart, 1926-7. 6th Edition. (London) Post Magazine and Insurance Monitor, Limited, 9 St Andrew street. 3s 6d.

A standard reference book of great practical value to all who are interested in insurance companies and their finance.

Histoire Economique et Sociale de la Guerre Mondiale. La Santé et le Travail des Femmes pendant la Guerre. Par Marcel Frois. 2of. *Politique et Fonctionnement des Transport par Chemin de Fer pendant la Guerre.* Par Marcel Peschaud. 35f. *Paris pendant la Guerre.* Par Henri Sellier, A Bruggeman, et Marcel Poète. 10f. (Paris) Les Presses Universitaires de France.

Three more volumes in the French series of works in the Economic and Social History of the World War, produced under the auspices of the Carnegie Endowment for International Peace.

The Trade Balance. By Harold Storey. Reprinted from the *Liberal Magazine*, December, 1926. (London) Liberal Publication Department, 42 Parliament street. 2d.

An interesting study of the movements of our trade balance over recent years and an explanation of what the phrase "trade balance" means.

Standard Co-operative Book-keeping, Part II. By F. Hall. (Manchester) Co-operative Union, Limited, Holyoake House, Hanover street.

A text-book for students in classes organised by Co-operative Societies and a guide for secretaries of societies and their staffs.

International Year Book of Agricultural Statistics, 1925-26. (Rome) International Institute of Agriculture. 90 lire.

The International Year Book is well known to students of agriculture throughout the world as a standard reference work. The present edition contains the usual detailed tables of territorial area and population, agricultural production, live-stock, international trade, freight rates, fertilisers, &c., relating to all countries of the world. The text is given in both English and French. The years covered, in most cases, are 1909-13 (average), 1922, 1923, 1924, and 1925-26. The Year Book is unique among the world's agricultural publications.

OFFICIAL PUBLICATIONS RECEIVED.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C. 2:

Colonial Reports: No. 1,319. Unfederated Malay States under British Protection, 1925. 6s 3d net.

War Compensation Court. Sixth report. 1926. 3s net.

Sixth Annual Report of the Electricity Commissioners. April 1, 1925, to March 31, 1926. 3s net.

Containing statistics of the generation of electricity, consumption of electricity, and number of authorised undertakers during the year ended March 31, 1926, and an account of the work of the Commissioners.

Annual Statement of Trade of the United Kingdom with Foreign Countries and British Countries, 1925, compared with the years 1921 to 1924. Vol. I., 14s net; Vol. II., £1 5s net; Vol. III., £1 5s net; Vol. IV. to be published shortly.

The "annual statement" tells the full story of our overseas trade during the last five years, item by item, country by country, and part by part, and is invaluable to traders and others desiring adequate information relating to special branches of commerce in which they are interested. This wealth of detail makes the work unique amongst statistical records of British trade. Volume I. includes abstract tables showing imports and exports by volume and value and by ports of entry or destination; transshipments under bond; Customs revenue received; and transit traffic. Volumes II. and III. contain tables giving fuller information as to imports (with re-exports) and exports respectively. Volume IV. will be concerned chiefly with detailed tables of trade by ports.

Sixth Annual Report of the Controller of the Clearing Office, the Administrator of German, Austrian, Hungarian, and Bulgarian Property, and the Director of the Russian Claims Department. 1926. 2s net.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
December 28. December 30.

The strength of gilt-edged stocks stands out as a noticeable feature in the penultimate week of the old year. The War Loan is up to 100½, and this has a good effect upon gilt-edged and investment stocks as a whole. From the domestic point of view, the Stock Exchange has started Christmas quietly, and its past experience has demonstrated the desirability of placing a check upon horse-play that in previous years became a source of real danger to unwary members.

Belgian 7 per cent. scrip has risen to 9½ premium above the issue price of 92. A welcome to the Bulgarian Refugee 7 per cent. loan, to be offered at the same price, is considered assured in advance. The security is, of course, very different. Peruvian Corporation stocks gave way slightly after the meeting on Monday, but recovered later on. The chairman's statements in regard to arrears of dividends on the preference stock were considered a little intangible, although they indicate the board's intention to formulate a definite plan for settling the matter shortly. Chinese loans are better. In South Americans interest fell away considerably, nor has there been any real activity in French issues.

Home railway stocks are declared to be the subject of good buying, but if this is the case it is not reflected in the course of prices, which is generally downwards, although the declines are of a limited extent. Argentine Railway stocks have been, on the contrary, in good fettle, Central Argentines, Cordoba Central, and Argentine North-Eastern being singled out for special favour. Brazilian railways are steady, and other stocks in this section have been quiescent.

The rubber market went a mere shade better on the assumption that next February there will be another 10 per cent. cut in the exportable allowance. Tea shares were weak. The main excitement has centred around Courtaulds and Dunlops. Liquidation was said to be responsible for the drop in Courtaulds, and selling for that in Dunlops on behalf of people rendered apprehensive by the cut in tyre prices by competitors. A swift recovery followed, bears deeming it discreet to get back their engagements on the drop. Swedish match shares are strong, thanks to the impression that the company is about to secure the French as well as the German monopoly in matches. Insurance shares show a tendency to dullness, and in the shipping lists scarcely anything has moved. Banking shares are almost equally quiet. Nuclea Artificial Silk shares gained 3s in a day upon cessation of previous heavy sales. The textile market is inclined to go back. Tobacco shares remain hard and newspaper shares are very much in the ascendant. Marconis fell back on fears of what the auditors' report will show. It should be out early in January.

The electric construction group is not quite so good as it was, partly owing to the disclaimer of amalgamation by Sir George Hutton at the Henley's meeting, though he confessed to conversations between various companies. Armstrongs are lower, the ordinary shares standing at 2s 10½ and the 6½ per cent. consolidated debentures at 40. There has been a moderate advance in some of the gas stocks, and two or three nitrate producing shares are harder. London Electricity shares remain dull.

The South African market is irresponsive to a batch of good dividends declared by the gold-producing companies. Paris has had a good deal to say in the matter of moving prices, and the French have been sellers for choice. Chartered have gone back a few pence, and Globes, amongst other Rhodesians, eased off. The tin share market is uncertain, although here also the tendency has been for holders to lighten their books in anticipation of the end-December settlement. West African, Cornish, Indian and Canadian mining issues show few alterations.

NEW ISSUES.

The new issues of the week, and the current year, and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded	227,321,825			
NATIONAL SAVINGS CERTIFICATES.				
April 1, 1926, to December 18, 1926, Dr £2,850,000.				
Net sales week ended December 18, 1926, Nil.				

To the Public—				
Kingdom of Bulgaria, 7% Settlement Loan, 1926, £1,750,000	1,750,000	1,610,000	87,500	1,522,500
7% Sterling Bonds at 92½, red. at par on or before Jan. 1, 1927 (Dec. 22)

City of Nottingham.—This is an issue of £1,000,000 5 per cent. stock at 99½ redeemable 1943-1952. Principal and interest are secured upon all the property, rates and revenues of the Corporation and provision is made for redemption by means of a sinking fund. The rateable value is £1,661,376, a penny rate producing £6,400. The total assets amount to £17,308,555, and the total liabilities, including the debt of the City, according to the last published accounts, are £10,885,552. The outstanding debt is £8,044,922, of which £5,044,319 is in respect of reproductive undertakings; the estimated population is 270,600. The proceeds of the present issue will be applied for electricity works, street improvements, housing and other purposes and for paying off existing loans. This is an excellent trustee investment.

Kingdom of Bulgaria.—This is an issue of £1,750,000 7 per cent. sterling bonds to bearer at £92 per cent., redeemable 1967. Bonds are also being offered in Holland, Italy, Switzerland and the United States of America. The loan is issued with the approval of the League of Nations, and the payment of principal and interest is the direct obligation of the Bulgarian Government, and in accordance with the protocol the Bulgarian Government, with the approval of the Inter-Allied Commission and the Reparation Commission, has undertaken to furnish as security for the bonds the following revenues:—The excise duty on alcohol and other articles; the excise duty on salt and other articles; the net receipts of the match monopoly; all sums received after November 1, 1928, in respect of rent or interest due from persons assisted out of the yield of the loan, and also all sums received from such persons as payment for the purchase of land, buildings or material or as repayment of advances in cash or in kind; such other revenue or revenues, if any (excluding the Customs), as may from time to time be assigned if at any time the total yield of the above-mentioned revenues should fall below 150 per cent. of the annual sum required to meet the service of the loan. The first three revenues for the last completed year are stated to have totalled £800,000. There is an accumulative sinking fund of ½ per cent. per annum. The loan is being issued for the settlement of refugees, and all assistance given will be on terms of repayment. The proceeds of the loan will be under the direct control of a Special Commission appointed by the League of Nations. This issue is dealt with in a Business Note.

City of Lancaster (Tasmania).—This is an issue of £100,000 5 per cent. debentures at 97½ per cent., redeemable 1952. The interest is guaranteed by the Government of Tasmania, and the loan is secured upon all the corporate rates and revenues of the city. The loan is free of all Tasmanian taxes, present and future, unless held by persons domiciled in the State of Tasmania. The debt of the Council is £733,100, the population within the metropolitan area being 30,000. The unimproved capital value of lands is £7,367,900 and the annual value £368,395, while the revenue of the city for the year ended June 30, 1925, amounted to £215,993 and the expenditure to £203,628, including annual interest and sinking fund payments. The proceeds of the loan will be used to provide funds for loan redemption and municipal works, mainly sewerage, electricity, tramways and water. It is somewhat curious that the interest only is guaranteed by the Government of Tasmania. The information relating to the sinking fund is rather vague, and we notice that no mention is made of a Stock Exchange quotation.

The following advertisements relating to public companies have appeared in the Press during the week:—**Lightwood Concrete Aggregates, Limited**, having a capital of £40,000, divided into 40,000 shares of £1 each, of which 28,000 are issued. **Santa Rosa Milling Company, Limited**, having an issued capital of £400,000, divided into 137,500 7 per cent. non-cumulative preference shares of £1 each and 262,500 ordinary shares of £1 each; there have been issued an additional 100,000 ordinary shares. There is also outstanding £241,000 6 per cent. first mortgage debentures. **Suloh Rubber Estates, Limited**, having an authorised capital of £1,000,000, divided into 1,000,000 shares of £1 each, of which 550,000 were issued at par on December 4, 1925.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C.2.

COMPANY MEETINGS, &c.

IONIAN BANK, LIMITED.

ECONOMIC AND FINANCIAL CONDITIONS IN GREECE.

The eighty-seventh annual general meeting of the Ionian Bank, Limited, was held, on the 21st instant, at Basilidon House, Moorgate, London, Sir John Stavridi (the chairman) presiding.

The secretary (Mr R. H. Fry) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said that, when addressing the shareholders in January on the subject of the bank's work in Egypt, he referred to the increasing competition with which they were meeting, and spoke of the rate-cutting and increased credits used as a means to attract clients. He also said that it was against the board's policy to follow such methods; that their experience had taught them that "safety first" should be their maxim, even at the price of a temporary reduction of turnover. They had acted on their principles, and their decision had been fully justified, as the bank had suffered practically no loss through bad debts in Egypt during the past year. At the same time, the profits of the bank as a whole had been somewhat affected.

He visited Greece early this year, and spent several weeks in Athens in touch with the principal officers of the bank. He was greatly interested in the improvement he found, both in the country in general and in their own activities in particular. There was no doubt whatever in his mind that what was required to bring about an important revival of trade, business, and prosperity was a stable constitutional Government. They appeared on to be on the eve of seeing such a Government established.

As to the bank's activities during the past year, they showed continued expansion.

FINANCIAL CONDITIONS IN GREECE.

In Greece the year under review had been one of financial instability. It was impossible to describe how quickly financial and economic conditions could change, and the serious difficulties the managers out there had to face. Notwithstanding the hopes of the well-wishers of Greece that a status of budgetary equilibrium had been reached, it must, unfortunately, be admitted that this had not yet been attained. Repeated increases of taxation had raised the revenue from Drs. 76,500,000 (about £3,000,000) in 1912 to Drs. 4,158,000,000 (about £10,500,000) in 1925-26, but the comparison between these figures in drachmæ and in their respective approximate equivalents in sterling clearly showed the havoc and vicious circle created by a depreciating currency. Whereas revenue in drachmæ had increased 55-fold, when expressed in sterling it had only increased to three and a-half times the value of the 1912 revenue, when drachmæ were at par. Meanwhile, expenditure had also increased in a still larger proportion. During the year the external debt and the floating debt in gold had increased by about £12,000,000. The internal debt had increased by about Drs. 750,000,000. The fiduciary circulation showed no material increase in 1925. The cost of living in Greece had increased to 18½ times the pre-war level. It was higher than the ratio of exchange of the drachmæ to the £, which was about 16 times its par value.

The balance of trade and the economic balance continued unfavourable. Monetary conditions had been very stringent throughout the year. Maximum rates for interest and commission to be charged by banks had been fixed by Decree at 12 per cent. and 3 per cent. per annum respectively. This persistent stringency was attributable to the influx of the refugees and to the high cost of living.

AGRICULTURE.

Agriculture prospered in 1925. It was disappointing, however, that the production of wheat and other cereals had not shown the larger increase expected from the additional labour of the refugees. As a consequence, Greece would have to import a quantity of wheat about equal to her production, and a portion, 20 to 50 per cent., of other cereals. The reason for this disappointing result appeared to be that the refugees had turned their energies to the cultivation of tobacco, which was more profitable. It was high time that the Government should take in hand and remedy this most vital question, on the solution of which depended to so large an extent the rehabilitation of the economic position of the country. Fortunately, the monetary position had been somewhat eased recently through the return to more normal political conditions.

Referring to the cotton position in Egypt, the chairman said that the 1925-26 season had been most disappointing owing to the

SECURITY FIRST ROYAL INSURANCE COMPANY, LIMITED

6 HEAD OFFICES: LIVERPOOL AND LONDON.

fall in prices. The policy adopted by the bank saved them from capital losses, which were reported to have been considerable in Egypt last year. It had enabled them to husband their resources against such time as might appear favourable for a renewed expansion of their operations, and they would not be slow in availing themselves of the first favourable opportunity.

In conclusion, the chairman dealt with the accounts, and said that the board felt fully justified in maintaining the dividend and bonus at the same figure as last year on the increased capital. The bank continued to show a very strong position as regarded cash in hand, at bankers, and in transit, the figure at August 31st being £657,351.

The report and accounts were unanimously adopted.

CAMP BIRD, LIMITED.

IMPROVED POSITION AND PROSPECTS.

The twenty-fifth ordinary general meeting of Camp Bird, Limited, was held, on the 20th instant, at River Plate House, Finsbury circus, London, Mr F. W. Baker (chairman of the company) presiding.

The secretary (Mr E. C. Leaman) having read the notice convening the meeting,

The Chairman, in moving the adoption of the report and accounts, said:—I am sure it will be of interest to you to realise how completely our financial position has changed for the better consequent on the reduction of capital and as a result of the issue of the new shares at the premium at which they were placed. At the present time our authorised capital stands at the figure as appearing in the present balance-sheet; the issued capital as regards preference shares stands at the same figure, but the issued ordinary, instead of standing at 1,100,051 shares of 2s each, now stands at 2,528,848 shares, equalling £252,884. This issue produced on capital account £142,879, and on premium account £160,740, a total of £303,619. At July 1, 1926, we were owing in respect of arrears of preference dividend £250,105, which has since been liquidated as to approximately £137,420 in cash and as to £112,684 by the issue of funding certificates which the preference shareholders have accepted under the scheme of reorganisation, so that this large amount of indebtedness has been liquidated. Furthermore, as at July 1st we were owing a half-year's preference dividend, which has since been paid, and the current dividend payable for the period ending December 31st will be paid in January. In addition, as previously explained, the bank loan of £50,000 has been repaid, so that we are now operating with a clean sheet, and have no indebtedness of any kind.

It will be seen, therefore, that our cash resources have been strengthened by the addition of the proceeds of 2s per share on the new issue of shares, which realised £143,000 on capital account, after satisfaction of the preference dividend arrears, six-elevenths of which were paid in cash.

SANTA GERTRUDIS.

I will now deal with the position at the Santa Gertrudis group of mines, and with the interests of the Mexican Corporation. The proceedings at the meetings of these two companies held recently have been fully reported in the Press, and have doubtless been read by a number of shareholders here. Should, however, any of the shareholders desire a copy of the proceedings at these meetings the secretary will be very glad to furnish same on application.

The Santa Gertrudis company's financial position has been very materially changed for the better as a result of the successful operations at the mine. After meeting obligations, that company has paid, and we have received ourselves, a dividend of 1s per share in July. There has been paid, and we have received, a dividend of 9d per share in October, and I announced at the recent meeting a further dividend of 9d for the period ending December 31st, to be paid in January. Future dividends, as I explained to the Santa Gertrudis shareholders, will be dependent on the trend of silver.

Mr Rose has advised that, with silver at 52 cents, he can earn from \$100,000 to \$110,000 per month. This should enable a dividend—which in future will be paid half-yearly—of 1s for each six-monthly period. Any increase from 1s to 1s 6d, or even 2s per half-year, will depend on an enhancement in silver price over 52 cents per ounce.

MEXICAN CORPORATION.

I have now to turn to the Mexican Corporation. The ore reserves as at June 30 are estimated in the existing ore bodies at 5,861,000 tons, estimated to contain 47,960 ounces gold and 34,000,000 ounces silver. The cyanide mill treated 1,267,000 dry tons of oxide ore, containing 8,631 ounces gold and 6,000,000 ounces silver. The average milling rate was 3.473 dry tons per day. The sulphide concentrate ores are estimated at 129,000 tons. These reserves are on a conservative basis, and further large additions may be expected. The concentrating mill treated by selective flotation over 61,000 dry tons of sulphide ore, producing 4,576 tons of lead concentrates and 1,694 tons of zinc concentrates.

The result of the year's operations at the Fresnillo Unit has been disappointing, due to three main reasons. First, heavy fall in the price of silver; secondly, the delay in removing 700,000 tons of over-burden, to make possible the extraction of the higher silver values in the oxide ore bodies at the Catillas section of the mine; and, thirdly, the change in the mineralisation in the Cueva Santa sulphide vein system. Had silver prices remained at the average for the previous year, the Mexican Corporation's share of the profits in the treatment of the oxide silver ores above mentioned, together with the anticipated profits estimated at about \$7 per ton from the sulphide ores, would have enabled remittances from the Mexican Corporation S.A. to the London company of approximately £200,000 in a full year's operation. The amount actually earned by the local company was £60,000.

Mr Rose has reported that even with silver at 52 cents an ounce, and taking zinc and lead at present prices, the Mexican Corporation should earn at the rate of £10,000 per month as from February, 1927, based on the monthly treatment of 88,000 tons of oxide ores and 11,000 to 12,000 tons of sulphide ores. This sulphide tonnage is more than double the average monthly rate of last year. The profits should be increased as development opens up further sulphide ores, enabling a larger monthly tonnage treatment.

NEW INVESTMENTS.

I stated to you when the reorganisation scheme was sanctioned, and the new issue of capital made, that we should utilise the fresh working capital in making this company an active mining investment company, and with this end in view we have since July made several investments, which I will now deal with. We have taken advantage of the recent offer to subscribe for fresh capital in the Chemical and Metallurgical Corporation. We have made an investment in Lena Goldfields Notes, which we secured at a good price. They carry 8 per cent. interest, and we secured with them a large bonus in shares.

The business of the Durango Timber Company, Limited, was offered to us by Mr Rose, who is a director of the local company. An immediate income will accrue to the company from this investment, and the prospects for a substantial return in the future are good. We have with associates secured an option on the Lake George Mine, near Canberra, New South Wales. The outlook so far as we have gone is distinctly encouraging, and I hope when I address you next year that I shall be in a position to tell you that we have secured a large interest in a big base metal mine.

We have in co-operation with other mining interests joined in a working option of a tin property in Portugal. The prospects of this mine are favourably reported on, and should developments continue as satisfactorily as now showing, the public will be invited in due course to participate in this enterprise. In addition, we have acquired an interest in the V.O.C. Holding Company and other small interests, and we have £100,000 in Treasury bonds.

DIVIDEND PROSPECTS.

Gentlemen, I would now like to deal with the question of dividend prospects. When we issued to you our prospectus in July last, your board estimated and stated in that prospectus that the results for the current financial year—viz., the financial year ending June, 1927—should justify a dividend of 20 per cent., clear of income-tax, on the issued ordinary capital of the company, based upon the maintenance of normal conditions and on the price of silver at its then quotation, which was over 64 cents per ounce. Unfortunately, since July last there has been a steady fall in silver prices from the figure just given to its present quotation of approximately 54 cents. This fall has been reflected in the earnings of the Santa Gertrudis Company and the Mexican Corporation, and has in turn reacted on our earning capacity. But for this fall in the price of silver a dividend distribution at the rate of 20 per cent. for the current year on our ordinary share capital would have become an accomplished fact.

At the present price of silver the share of Santa Gertrudis and the share of Mexican Corporation's earnings coming to us should be sufficient to enable us to meet our preference dividend obligations, and unless there is some substantial appreciation in silver prices the prospects for dividends on the ordinary shares would

FIRE INSURANCE

covers the material damage to your buildings, stock and machinery, but it

DOES NOT COVER

the payment of rent, rates, taxes, salaries to permanent officials, interest and other standing charges during the period of reconstruction, nor does it guarantee your expected net profit. This is covered by insurance against

THE LIVERPOOL & LONDON & GLOBE INSURANCE CO., LTD.

Head Office: 1, Dale St., Liverpool. London: Chief Office: 1, Cornhill, E.C.3.
General Manager & Secretary—Hugh Lewis.

be dependent, in my judgment, mainly on your directors' efforts to utilise to profitable advantage the new working capital now at our disposal.

ORDINARY DISTRIBUTION PROSPECTS.

It will be of interest to you to know that our efforts in this direction for the period from June to the end of this year have been sufficiently encouraging to warrant the statement that if we are as fortunate for the remaining six months of the financial year yet to run the prospect of a dividend distribution on the ordinary shares will be reasonably assured. In making this statement I naturally count on the Santa Gertrudis Company receiving the monthly remittances indicated by Mr Rose at the rate to which I have previously referred, and that that company in turn will have paid us the anticipated half-yearly dividends, so that from this source alone our preference dividend payments can be provided for.

Gentlemen, this company has been in existence 26 years. We have during this period paid in dividends on our preference and ordinary capital the sum of £2,566,000, which does not include dividend payable on January 1st next. A further £72,000 has been satisfied out of profits for equipment of the Camp Bird Mine. In making these distributions we have exhausted the old Camp Bird Mine. We have exhausted the old Santa Gertrudis Mine, and are to-day entering a new field of activity; we have substantial assets and are free of debt, and are now able as a small unit to utilise our resources in carrying out that world pioneer work that has so materially helped in the past to build up the wealth of the Empire.

Mr L. W. Harris seconded the resolution, which was carried unanimously.

W. ABBOTT AND SONS, LIMITED.

GOOD RESULTS DESPITE ADVERSE CONDITIONS.

The seventeenth annual general meeting of W. Abbott and Sons, Limited, was held at the registered offices of the company, 34 and 36 Gresham street, London, on Wednesday, December 22, 1926, Mr O. H. Abbott, the chairman and managing director, presiding.

The Chairman, in moving the adoption of the report and accounts, said that, with the shareholders' permission, he would adopt the usual procedure and take the report and accounts as read. The company had now reached the seventeenth year of its existence, and in the year under review it was gratifying to find that, in spite of the general adverse conditions affecting theirs and similar businesses during that period—he referred to the general and coal strikes—the company had shown such a satisfactory result.

THE ACCOUNTS.

In reviewing the accounts, it would be seen that the year which ended August 31, 1926, after charging all trading expenses, and writing off £6,122 8s 10d for depreciation of leases, fixtures and furniture, had resulted in a balance of £43,884 2s 11d, and after deducting the further sum of £4,167 9s 5d charged against the gross profit there remained a balance of £39,729 17s 6d; to that must be added the sum of £18,863 15s 2d, the amount of the carry forward from last year, less the sum of £20,000 transferred to a special fund to meet loss on exchange, making a total of £58,593

12s 8d, which it was proposed should be dealt with as shown in the report.

The directors had pleasure in again recommending payment of a final dividend, making for the year 15 per cent.

The reserve account stood at £66,500, and, as stated in the report, the directors took the view that this must be considered as permanent capital employed in the business, it was therefore proposed to capitalise a sum of £30,000 of that reserve, by the distribution among the ordinary shareholders of a capital bonus at the rate of one ordinary share of £1 each to every three held by them.

IMPROVED POSITION IN FRANCE.

The violent fluctuations in the franc had been very disturbing to the smooth running of their business, but happily France now had a very strong Government, which it appeared was determined to balance the Budget, and the value of the franc to-day was sure evidence of the success of its policy. Whether that policy was leading to stabilisation or revalorisation, time would tell, but in either even their business stood to gain, as it was most improbable that any rate would be fixed higher than 165 to the pound, the rate ruling at the end of their financial year. They could therefore look forward with a reasonable amount of confidence that the nightmare of the franc had at last disappeared, so far as their business was concerned.

During the year they had opened among others a very fine branch in the heart of Oxford street, which should become an important acquisition, and was undoubtedly one of their finest advertisements.

The stocks showed an increase of £20,422 11s 3d, and was accounted for by the stocking of three new branches. The policy of drastically marking down selling prices, through sudden change in fashions, enabled them to keep all their stock on the move, they therefore carried no stagnant stock.

BOARD'S POLICY.

The directors' policy was to continue to acquire new premises where the position showed promise of a good return. There was no such thing as a "stand-at-ease" policy for a successful business to-day, it must either go forward or gradually become a back number. Business had become a science and the best brains in the world were pitted one against the other in evolving new and progressive ideas. They might rely on their directors being amongst the leaders and not the laggards.

Optimism was a tonic, pessimism was a poison, he was therefore subscribing to the former in looking forward to the current year being a bumper one.

The Chairman stated that he would like on behalf of the board, and he felt sure he might do so on behalf of the shareholders, to thank their staff, both in London and Paris, for their loyal services. He would especially mention the former for their steadfastness and voluntary offers of help during the General Strike, help which would have involved them in a considerable monetary loss.

The report and accounts were adopted.

CARRERAS, LIMITED.

RECORD YEAR—GOOD PROSPECTS.

The twenty-third annual general meeting of Carreras, Limited, was held, on the 20th instant, at Arcadia Works, 238 City road, London, Mr Bernhard Baron (chairman and managing director) presiding.

The secretary (Mr H. W. Danbury) having read the notice convening the meeting and the report of the auditors,

The Chairman said: I am pleased to be with you again, and take great pleasure in congratulating you on the year's business of the company. As you see, the available balance is £1,390,000, which is no doubt a record in the tobacco trade considering the small amount of capital with which we started and the small amount of cash that has ever been put into the business from outside. We have made the largest proportion of our working capital out of profits, and whatever bonus shares have been issued were issued for the benefit of the shareholders out of the profits earned in the business.

Some of the shareholders who have held shares since the inception of the company will remember that 15 or 18, or maybe 20, years ago I told them that the company had not touched the fringe of the business which I hoped in time we should get. Well, I may tell you now that we have only just about touched the end of the fringe, as the future is just as great as it has ever been. Our business for the two months of the new year is larger than it has ever been in any corresponding period, and I am satisfied that, as far as I can see, we will have a much better year this year than we did last year. I see no serious industrial troubles ahead for the next few years.

ESTABLISHED OVER ONE HUNDRED YEARS.

SCOTTISH UNION & NATIONAL INSURANCE COMPANY.

ASSETS £13,500,000.

FIRE. LIFE. ACCIDENT. MARINE.

Edinburgh: 35, St. Andrew Square.
London: 5, Walbrook, E.C.4 and 4, St. James' Street, S.W.1.

POPULARITY MAINTAINED DESPITE COMPETITION.

The competition which we have experienced is of the greatest benefit to our business, and with all the great guns which have been shooting at us by means of the heaviest advertising which has ever been known, and which must have cost millions, it has been proved that we are fortified by the appreciation of the public for our goods. They had not penetrated at any place, but have helped to increase our business all the time, not only here but all over the world, and I only hope that they will not stop it, as it keeps us all the time on guard.

The faithfulness of our workers is one of our greatest assets, as they do their work so conscientiously that the public get the best value and the best article—always the same, never varying.

FIVE FACTORIES OUTGROWN.

Since the company was formed we have outgrown five factories, and we have now started to build what I think will be the largest factory in London. We have secured a magnificent freehold site in Hampstead road, and we are now erecting a building which will be worthy of this great business. It will be equipped with the most up-to-date machinery and appliances for our manufacturing purposes and with every possible advantage for our people to work under the most hygienic conditions. Sixteen years ago, at our first meeting in this building, I told you that we should endeavour to outgrow the capacity of this factory. We did that over two years ago, when we had to secure an additional factory in New North street, to which we have added several floors since we started there. The enormous building we are putting up in Hampstead road will probably enable us to go ahead without interruption for a good many years, but it is quite possible that we may even outgrow that.

WORKERS' WELFARE—SOUND POLICY.

I cannot help but repeat again that we have as loyal a body of workers as any employer could desire, and I am pleased to bear testimony to the splendid efforts they have put forth during the past year. They work hard and they work cheerfully, and they take a real interest in co-operating for the progress of the business. I think as shareholders we should all be thankful to them, and I go still further and say that if all the manufacturers would treat their workers well, pay them a good living wage, so that they could have what they want in their homes, they would not alone have happiness, but they would make more money.

It has been a great pleasure to me to buy a large house, with grounds adjoining, situated in the healthiest part of Brighton, opposite Queen's Park, which I am having equipped with 20 beds so that our working people can go there for convalescence and recuperation, as may be necessary, and I hope it will be of great benefit to our people.

The Chairman concluded by moving the adoption of the report and accounts, and the payment of a dividend of 35 per cent., free of income-tax, making with the interim dividend 50 per cent, free of income-tax, for the year.

Mr Louis B. Baron seconded the resolution, which was carried unanimously.

ANGLO-EQUADORIAN OILFIELDS, LIMITED. GOOD PROGRESS—PRODUCTION DOUBLED.

The eighth annual general meeting of this company was held, on the 21st instant, in London.

The Right Hon. Lord Forbes, P.C. (the chairman), said that a profit and loss account had been opened, covering the second six months of the financial year to June 30th last, and the profit during that period provided adequately for depreciation. The result of the six months was a small loss of about £2,000. In view of the size of the undertaking and the pay-roll, and the fact that they were only just beginning to get oil in quantity, they were glad to start a profit and loss account so nearly square. He visited the property in December and January last, and was impressed with the growth which had taken place since his preceding visit. The foundations had been laid—he thought satisfactorily and efficiently laid—for entering upon the production stage. It was a remarkable fact that they had been so uniformly successful in finding oil in each well.

Production for the year was 27,632 tons, as compared with 12,230 tons for the previous year, showing an increase of over 100 per cent. Efficient preparations were being made to supply

the local market, which should not be an unprofitable one. The chief outlet, however, for the produce of the field would be overseas. Shareholders were informed at the last meeting that the first cargo of 5,000 tons had been successfully loaded. This had been followed by several others, and the quality of the oil was now becoming known in the market. Satisfactory contracts had been made for the disposal of the anticipated production of 1927. Recently the field had been visited by the President of Ecuador, and friendly relations existed between the company and the authorities. It would be seen from what he had said that solid and satisfactory progress had been made in all directions, and that the only drawback had been the slowness in arriving at a profit-earning stage, caused mainly by the lack of any local facilities and the hard stratum, which had made drilling somewhat slow.

Having paid a warm tribute to the field manager and his staff for their unabated keenness to make the company a success and to the agents for their capable management of the business side of the company's local interests, the chairman said that the latest telegram received from the field manager was as follows:—"Well No. 25 struck oil at 1,570 feet, and, in geologist's opinion, indicates large productive area to the east, with prospect of shallow drilling. Estimate production for the month of December at 4,500 tons." He then moved the adoption of the report and accounts.

Sir John B. Wimple, K.B.E., seconded the motion, which was unanimously adopted.

OROVILLE DREDGING COMPANY, LIMITED.

REDUCTION OF CAPITAL AGREED TO.

The 15th ordinary general meeting of this company was held, on the 22nd instant, at Winchester House, Old Broad street, London, E.C.

The Chairman (Mr F. W. Baker) said that the result of the past year's operations had, he was sorry to say, falsified any hopeful view expressed last year. The board of the Colombian Corporation decided that, owing to failure to prove any substantial additions to ore reserves, the difficulties occasioned by labour shortage, and the inability to then operate profitably, the best interests of shareholders would be served by closing down. The management in Colombia had been instructed to dismantle the mill and remove the plant and machinery to the storage depot at the Dos Bocas terminal, in the hope that negotiations could be satisfactorily terminated to transfer this plant to another property in Colombia on the basis that they secured an interest in this mine for supplying equipment.

At last year's meeting he pointed out that the balance-sheet of the Oroville Dredging Company did not show a really true position, because they were still carrying the cost of their original purchase of the American Oroville shares in their books at cost, amounting to £629,172, this item having then no value, as the Oroville properties had been exhausted, and before they could resume dividend distributions some steps would have to be taken to meet the losses sustained through their interests in the Colombian Corporation, and that in due course proposals would be submitted for the writing down of the capital to bring such capitalisation more into line with the actual value of the assets. The scheme now to be submitted was based on the maintenance of the capital at the same number of shares as it now stood at, but writing off 16s, making the new share a 4s fully-paid share. The price of 4s had been fixed because this represented what the directors considered a fair value for the company's holdings of Pato Mines,

and was based upon the price at which they had recently acquired an increased holding, so that to-day this company practically owned all the Pato capital. The effect of the reduction of the capital would be that the directors would be placed in a position to distribute the earnings coming through their holdings in the Pato Company.

The report and accounts were unanimously adopted, and at the extraordinary general meeting which followed the resolutions dealing with the reduction of the capital were unanimously agreed to.

BULLION.

The arrivals and withdrawals of gold during the past week as announced by the Bank of England, have been as follows:—

ARRIVALS.	WITHDRAWALS.
Dec. 18.....	£ nil
" 20—South Africa.....	500,000
" 21.....	20—Bars sold..... 79,000
" 22.....	21—Bars sold..... 353,000
" 22.....	22—Bars sold..... 221,000
Total.....	500,000
	Net withdrawals, £153,000.
	Total..... 653,000

From April 1 to December 18, 1926, £23,425,000 has been transferred from the paper currency reserve in England to the Treasury account of the Secretary of State for India in Council. Of this amount £1,425,000 was on account of telegraphic transfers on London sold by the Government of India.

Messrs Samuel Montagu and Co. write, on December 22, 1926, as follows:—

GOLD.

Gold to the value of £260,000 became available in the open market yesterday. About £60,000 was secured for India and the trade, the balance being absorbed by Germany. During the week under review £158,000 on balance has been withdrawn from the bank, reducing the net influx since January 1, 1926, to £7,091,000, and increasing the net efflux since the resumption of an effective gold standard to £4,504,000.

SILVER.

The silver market has been rather quiet during the week. China bears have done some covering, and a certain amount of inquiry has arisen for shipment to India, Calcutta as well as Bombay. Speculation is rather active in Calcutta, and purchases in connection with it have to-day rallied the market, which otherwise was inclined to be languid. Whether speculation has power to reanimate the depressed condition seen, for no fresh favourable factors, based on actual demand, have as yet been made manifest. America has been a seller on most days. United Kingdom imports and exports of silver during the week ended the 15th inst. were:—

Imports.	Exports.
U.S.A.....	£ 142,459
Other countries.....	8,944
	151,403
Germany.....	£ 27,720
Austria.....	19,220
Egypt.....	10,510
British India.....	562,889
Other countries.....	11,139
	631,478

NOTICES.

The directors of the Bank of Liverpool and Martins, Limited, announce that Mr H. Mancknols Walton, of Walverden House, Nelson, has been elected to a seat on the general board of the bank.

Lloyds Bank, Limited, announce that branches of the bank are now open at 12 Sydenham road, Sydenham, S.E. 26, under the management of Mr A. T. Bradley; at 146-148 Rye lane, Peckham, S.E. 15, under the management of Mr B. W. Haws; and at 160-162 High street, Acton, W. 3, under the management of Mr E. D. Bailey.

Barclays Bank, Limited, announce the opening of new branches at Parade buildings, 391 Shirley road, Southampton, under the management of Mr R. W. Cornes, who is also manager of 12 Above Bar, Southampton branch; and at 46 Lime street, E.C. 3, under the management of Mr F. D. Stanwell.

The appointment is announced of the Rt. Hon. Lord Strathcona and Mount Royal as a member of the advisory committee, Bank of Montreal, at London. The London committee of the bank now consists of His Grace the Duke of Devonshire, K.G., chairman, F. R. S. Balfour, Esq., Sir Hardman Lever, Bart., K.C.B., and the Rt. Hon. Lord Strathcona and Mount Royal.

Mr Matthew McConville has been appointed secretary to the London office of the Guaranty Company of New York, and Mr George A. Nickerson assistant secretary.

A branch of the Commercial Banking Company of Sydney, Limited, was opened at Guyra, in the State of New South Wales, on November 15th.

The National Bank of Commerce in New York have opened a representative office in Berlin at Unter den Linden 39, Berlin, N.W. 7, Germany. Mr Gustav Brunkman, who has previously had his headquarters at Copenhagen, will close his representative office in that centre and take charge of the representative office in Berlin.

† Tax free. ‡ 18 months.

about eight times interest and sinking fund requirements on the Series "C" bonds. The bankers' representative collects 100 per cent. of the import and export duties, all of which is available for bond service, if needed, and 70 per cent. of which is physically pledged for that purpose. Full interest and sinking fund requirements on the "A," "B," and "C" bonds for the year were met out of collections remitted by the fiscal agent by May 15th.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The forty-fourth application of the sinking fund available for the above debt was carried out to-day by the Council of Foreign Bondholders on behalf of themselves and the Disconto-Gesellschaft by public tender, the amount to be applied being £78,196 10s 7d. Tenders amounted to £120,740, ranging from 86½ to 90 per cent. Tenders at and under 87½ per cent. were accepted.

BANKS.

ITALO-BELGIAN BANK.—The accounts for the year ended June 30th last show gross profits of 21,147,055f and net profits of 10,767,654f, to which is added 1,212,784f brought forward from the previous year. A dividend of 75f per share absorbs 7,500,000f, directors' remuneration 1,240,148f, and special reserve 3,000,000f, leaving 240,290f to be carried forward. Current and deposit accounts figure in the balance-sheet at 434,059,823f, and depositors at 302,985,225f. Cash stands at 159,895,837f, bills receivable at 225,413,732f, Government stocks and Treasury bonds at 13,583,407f, and loans at 216,391,435f.

ULSTER BANK, LIMITED.—The net profit for year ended November 30, 1926, amounted to £210,727, against £216,380 in preceding year. The ordinary dividend is again 21½ per cent. The sum of £100,000 is put to superannuation fund and £50,000 to contingent fund. The carry-forward is £49,621. All ascertained bad and doubtful debts have been written off or fully provided for. The old-established agency of the bank at Crumlin has been converted into a branch. The investments of the bank total £10,116,898. Of this sum £9,568,057 is in War Loan and other securities of, or guaranteed by, the British Government. The remaining £548,841 is in Colonial Government stocks and other securities. Deposits and credit accounts amount to £20,823,751. Notes in circulation stand at £1,703,922. Advances stand at £11,261,533.

RUBBER, &c.

LUMUT RUBBER ESTATES.—The crop of rubber for year ended September 30, 1926, amounted to 1,515,669 lbs, against 843,262 lbs for preceding year. The net profit was £108,906, against £62,060. The sum of £13,000 is put to taxation and general reserve, against £10,000 in preceding year. The ordinary dividend is 45 per cent., against 35 per cent. The carry forward is £18,844. Cash is at £14,229, against £21,088. Investments stand at £100,209, against £50,185 in preceding balance-sheet. Out of the total of £100,209 the sum of £95,968 is in British Government securities.

PONTIAN (MALAY) RUBBER.—The yield of rubber for year ended September 30, 1926, was 297,951, an increase of 94,573 lbs. Estate costs of production were 10.65d per lb, against 9.74d per lb, the "all-in" cost being 11.64d per lb, against 11d. The net profit is £18,424, against £10,272. The ordinary dividend is 30 per cent., against 20 per cent. in preceding year. The total assets are £70,567, against £65,013. Cash is at £9,331, against £11,064. The company has £10,055 in Government securities at cost, against £3,949 in preceding balance-sheet.

UNITED SERDANG (SUMATRA) RUBBER.—The report and balance-sheet for the year ended August 31, 1926, shows that the total of all receipts amounted to £658,170, against £396,764. Cost of production amounted to £239,222, against £156,214. Profit amounted to £365,301, against £211,067. The ordinary dividend is raised from 25 per cent. to 40 per cent. The sum of £22,000 is put to reserve, against £12,736 a year ago. The carry-forward is £61,483, against £33,591 brought in. The balance-sheet shows total assets £1,338,077. The company has increased its holding of British Government securities from £269,813 to £377,942. The holdings are set out separately in the balance-sheet. Cash is at £27,020, against £22,509.

WATERFALL (SELANGOR) RUBBER ESTATES.—The crop of rubber harvested during year ended September 30, 1926, was 1,882,739 lbs, costing all-in 8.56d per lb. This crop was sold at any average price of 2s 0.17d per lb. The profit for the year amounts to £115,353 against £83,427, making, with the balance of £39,639 brought forward from last year, a credit balance of £145,992. The interim dividend of 10 per cent., less tax, paid to the shareholders on June 26, 1926, amounted to £33,493, leaving £112,499 to be dealt with. The directors recommend the payment of a final dividend of 12½ per cent., less tax (making 22½ per cent. for the year against 20 per cent., absorbing £41,890. Net expenses of debenture issue, £5,922, have been written off. The sum of £5,000 has been put to income-tax reserve account and £25,000 has been put to reserve. A balance of £34,687 is to be carried forward, subject to directors' additional remuneration (£2,500) in accordance with the articles of association. Total assets £679,895. Cash is at £53,270 against £46,957.

MISCELLANEOUS.

COLUMBIA GRAPHOPHONE COMPANY, LIMITED.—We are informed that Columbia Graphophone Company, Limited, has offered, subject to the consent of its shareholders, to purchase the outstanding shares of Columbia (International), Limited, by means of an exchange of shares, the basis to be one Columbia Graphophone Company, Limited, ordinary share for every two Columbia (International), Limited, shares, and also to purchase the options on shares of Columbia (International), Limited, on the basis of every six options. An extraordinary general meeting of Columbia Graphophone Company, Limited, has been called for December 29th to sanction these offers and to authorise an increase of the company's capital by the creation of 400,000 new ordinary shares of 10s each, part of which increase will be utilised for the above purpose. The new shares issued in respect of these offers will only rank for dividend from April 1, 1927.

EDISON SWAN ELECTRIC COMPANY, LIMITED.—The profit for the year, after making provision to the extent of £8,302 for redemption of debenture stock, is £71,405, against £88,344 for year ended June 30, 1925. Preference dividend absorbed £7,500. The ordinary dividend is again 10 per cent., absorbing £19,143. The sum of £40,000, against £50,000, goes to reserve. The carry forward is reduced from £20,276 to £29,037. Total assets are £1,110,393. Cash has risen from £75,436 to £86,201.

MARCONI'S WIRELESS TELEGRAPH COMPANY, LIMITED.—The directors of Marconi's Wireless Telegraph Co., Limited, have been informed by Sir Gilbert Garnsey, K.B.E., F.C.A. (of Messrs Price, Waterhouse and Co.), and Messrs. Cooper Brothers and Co. (the company's auditors) that the report of the results of their

investigation into the position of the company and of its associated and subsidiary companies will be completed early in January. When the report is received the directors will proceed to consider the proposals to be placed before the ordinary general meeting of shareholders. It is impossible at present definitely to fix the date of the meeting, but it will be held at the earliest possible moment.

SHAWINIGAN WATER AND POWER.—At a special general meeting of shareholders Shawinigan Water and Power Company gave unanimous approval to bylaw previously adopted by directors providing for conversion of shares of the company into shares without par value on the basis of four shares without par value for every share of par value one hundred dollars. 163,267 shares were represented at meeting. Presently outstanding 275,000 shares will be changed into 1,100,000 shares without par value. Date fixed for exchange of shares, February 1, 1927.

W. ABBOTT AND SONS, LIMITED.—The seventeenth annual report to August 31, 1926, shows a balance of profit of £39,739, against £23,096 in preceding year. The directors carried forward last year £38,863, but it should be pointed out that owing to the extraordinary fluctuations in the value of the franc during the year the directors decided to entirely eliminate all loss on exchange from the trading account. They have taken £20,000 from the carry forward, out of which this year's loss on exchange has been provided. There is, therefore, £58,594 available for distribution. Preference dividend absorbed £4,200. The ordinary dividend is again 15 per cent., absorbing £12,690. The sum of £4,000 is put to reserve and £700 is for directors' remuneration, while £37,004 is carried forward. The total reserve is now £66,500. The directors propose that £30,000 be taken from reserve to distribute a bonus to ordinary shareholders of one ordinary share for each three ordinary shares held. Total assets are £397,327. Goodwill stands at £30,000.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Tuesday Evening.

Weather conditions have been cold and dry, but generally favourable to cereal crops. With threshings on a more liberal scale of late, supplies of native wheat were adequate for requirements, and prices for the most part remained steady, in sympathy with imported descriptions. In the floating and forward cargo section the general tone remained quiet, higher cables from America and Argentina finding little response on this side, consequently initial advances were not maintained. Continental shippers continue to book space freely from the River Plate in order to cover recent liberal purchases, while there is also more interest in grain tonnage from North America. Two steamer cargoes of No. 2 Northern Manitoba early January shipment were sold to Portugal at 55s U.K. basis, and Pacific January 54s. Feeding stuffs tend firmer, demand being stimulated by colder weather, and a steamer of La Plata maize January sold at 20s 4½d c.i.f. per 480 lbs. Wheat steady. No. 1 Northern Manitoba quoted 60s, No. 2 ditto 59s, No. 4 53s 6d, No. 2 tough Manitoba 56s 6d ex-ship, all per 496 lbs. English 11s 2d-11s 10d per 112 lbs. Flour steady, quiet. London standard grade 47s, town whites 48s, patents 49s-50s per sack delivered in the Home Counties, with 6d-1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 44s-46s 6d, Minneapolis 45s 6d-46s 6d, Kansas patents 43s-44s, Australian 43s 6d-44s per 280 lbs ex-store. Maize again firmer. Plate landed 32s 6d, ditto ex-ship 31s, Plate Cinquantina 36s 6d landed per 480 lbs. Barley steady, but inactive. Californian 40s-47s, Chilean Chevalier 52s-62s, ditto brewing 38s-48s, Australian Chevalier 47s-50s ex-store per 448 lbs. No. 3 Canadian Western 34s ex-ship, Persian landed 30s, Russian 32s 6d, Plate 31s 3d, both ex-ship. Plate landed 32s 9d per 400 lbs. English malting 9s 6d-18s 9d as to sample, feed 8s 9d-9s 6d per 112 lbs. Oats firmer. La Plata landed 23s, ditto ex-ship 22s per 320 lbs. English 8s-8s 6d per 112 lbs. Millers' offals maintained. Broad bran quoted 7s 9d, middlings 7s 9d-8s, fine ditto 9s 3d, bags included, ex-mill, feed oatmeal 9s 3d, light oats 8s 3d, ground oats 12s 9d per cwt, free on rail. Oatmeal steady. London-made flaked 17s 6d, rolled oats 16s 6d, medium also fine cut 16s 6d, coarse pinhead and whole groats 16s ex-mill per cwt.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1926-27, 1925-26, 1924-25, 1923-24:—

	1926-1927.	1925-1926	1924-1925	1923-1924.

1925	771,420	388,401	74,989	12 7	10 8	9 4

AMERICAN WHEAT MARKETS.

An upward movement of prices has been recorded this week. Buying has been stimulated by an improved cash demand, and export inquiry is promising. Further frost and absence of snow covering has caused some uneasiness as regards the present crops. Cold weather is also retarding ploughing operations in Kansas.

	Jan. 2, 1925.	Dec. 22, 1925.	Jan. 7, 1926.	Dec. 16, 1926.	Dec. 21, 1926.

(a) December delivery.

COAL.

Our Cardiff correspondent writes:—Current business has been restricted to the sale and purchase of small parcels to complete cargoes sailing before the holidays. With output daily increasing and the supply of empty wagons scarce, quotations have shown an easier tendency all round, and for some qualities have been weak. Large foreign consumers have continued to hold off, but tenders have been opened for the supply of 160,000 metric tons to the Egyptian State Railways for the three months ending April, 1927. The lowest price tendered is for second quality South Wales coals, chiefly Monmouthshire, on the basis of 36s, c.i.f. Alexandria, but the contract has not yet been definitely fixed. The following are the approximate current quotations:—Best Admiralties, 30s to 31s 6d; seconds, 28s 6d to 29s 6d; best dries, 27s to 28s; Black Veins, 28s to 29s; Western Valleys, 28s to 28s 6d; best Eastern Valleys, 27s 6d to 28s 6d; best bunker smalls, 20s to 21s; ordinary cargo smalls, 17s to 18s; coking smalls, 21s to 21s 6d; anthracite best large, 47s 6d to 49s 6d; Red Vein large, 37s 6d to 39s 6d; French nuts, 57s 6d to 60s; stove nuts, 62s 6d to 65s; rubbly culm, 11s to 11s 6d; coke, special foundry, 50s to 52s 6d; patent fuel, 32s 6d to 37s 6d; pitwood, ex ship, 37s 6d to 40s.

Our Sheffield correspondent writes:—Owing to the refusal of industrial users to buy and the absence of demand from railway and gas companies, who have heavy tonnages of foreign coal in stock or on order, many of the colliery owners are unable to dispose of their outputs. They are now willing to accept contracts at 1s or 1s 6d per ton above the April rates, and business is being freely placed at such figures. Blast furnace coke has now dropped to 18s or 19s per ton for contracts. This being only 5s per ton above the pre-strike prices, pig-iron producers have begun to order.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The approach of the Christmas holidays has had less influence upon the market than usual, and the general feeling is optimistic regarding the prospects of the coming year. As yet only a comparatively small proportion of the plants of the British iron and steel works have resumed operations, as the makers are still waiting until adequate supplies of fuel and raw materials are available. The home trade business has slackened somewhat; but this is not surprising, as probably most of the orders which had been held up until the conclusion of the coal strike have now been placed. The effect upon the Continent of the re-entry of the British works into the market has been considerably to weaken prices. Competition between the Continental works is keen, and as a consequence during the last week or ten days the prices of several descriptions of steel have fallen to the extent of two or three shillings per ton.

Our Middlesbrough correspondent's report, dated December 21st, is as follows:—Pig-iron: There is still no substantial increase in the production of foundry pig-iron. Most of the furnaces which have been relighted are producing for steelworks' requirements. There is, however, no great pressure to buy. For fairly prompt delivery Cleveland No. 3 G.M.B. is 87s 6d per ton, while for forward 89s is asked. East Coast hematite ranges from 90s to 92s 6d, but is practically unobtainable. Some time must elapse before supplies are available in any quantity. Manufactured iron and steel: Steelworks are steadily being brought into operation, but outputs are not yet approaching normal; makers, however, have good orders on their books. Current quotations are as follows:—Steel ship plates, £8 17s 6d; steel ship angles, £7 12s 6d; iron bars, £12 5s; steel rails, £8 10s. Iron ore: No new business is being done. Only one or two shipments have been made.

Our Sheffield correspondent writes:—A little pig-iron is already being made, but none is procurable in the market. Supplies should be normal either in the last week of January or the first week of February. Current quotations are still high, the prices of foundry pig being 92s 6d or more delivered Sheffield. A number of large open-hearth furnaces in this district have been restarted on stocks of pig-iron and scrap on hand at the works. Resumption will not, however, be general until the middle of January. The accumulation of work is so large that the output of acid and basic steel of the next three months is certain to exceed that of any period during the present year. The various mills have been without billets for a long time, and will need great quantities for immediate use and to replenish their stocks. Makers of railway tyres, axles, and springs have considerable arrears of work. The Christmas stoppage will be shorter than usual this year.

Our Glasgow correspondent writes:—The position in the iron and steel market is slowly improving. A few more works have restarted, and arrangements for relighting furnaces are well far.

ward. Fuel prices are approaching normal, and it is probable that a fair number of blast furnaces will be at the production stage this week. Meantime there is a scarcity of pig-iron, some foundry grades being practically unobtainable, and stockholders are still getting high prices for small lots. Re-rolled steel bars are in good request to take the place of bar iron and works are well employed, foreign billets being used. Heavy steel sheets find a ready market and command good prices for quick delivery. Galvanised and corrugated sheets have dropped further from the strike level, and are now quoted £16 15s to £17 per ton f.o.b. for 24 gauge. Shipbuilding and engineering firms have a fair amount of work in hand. New contracts reported during the past week include a motor-propelled 20,000-ton vessel for the Clan Line placed with the Greenock Dockyard Company, and another two motor oil tankers have been booked by Messrs. Harland and Wolff.

Our Cardiff correspondent writes:—There has been a further improvement in the tinplate industry, more mills having resumed. Shipments have been more active, but prices are practically unchanged. Arrangements are being made for blowing in some of the blast-furnaces in the first and second weeks of the New Year.

OTHER METALS.

TIN.—The market for tin displayed firm features at opening session, and values responded to firm foreign advices combined with reserved sellers, but trading was on a reduced scale, and later prices declined on realisations. Standard cash sold £308 10s, £309 5s, and £306 10s., three months £300, £299, £299 15s, and £298. Sales in the East were reported at £306 5s to £307 10s per ton c.i.f.

COPPER commenced with a steadier tone, despite discouraging American advices, and a large business transpired, considerable attention being given to forward dates. Later, however, increased offerings resulted in slight irregularity and weakness. Standard cash sold £57, £57 2s 6d, and £57, and three months £57 17s 6d, £57 15s 10d.

LEAD values registered a slight improvement under a better trade demand. Good soft foreign pig, December, sold £29 3s 9d, £29 5s, January £29 5s to £29 7s 6d and £29 6s 3d, February £29 7s 6d to £29 8s 9d, March £29 7s 6d to £29 11s 3d ton.

SPELTER opened quiet, but improved later on buyers becoming more numerous. December-January, also February, sold £32 15s to £32 17s 6d, March £32 16s 3d, £32 17s 6d, and April £32 15s to £32 16s 3d.

ANTIMONY dull. English special brands quoted £74 10s to £75 foreign spot £55 to £56 ton.

ALUMINIUM quiet. Home delivery £107, export £112 per ton.

QUICKSILVER firm. Spot £17 15s to £18 per bottle.

WOLFRAM quiet, and quoted 17s 6d per unit c.i.f.

TIN PLATES steady. I.C. coke prompt quoted 21s 6d to 22s, and forward 20s 9d to 21s 3d per box, f.o.b. Swansea.

In some quarters inquiry has tended to broaden, and there is a confident feeling that trade will develop after the holidays. More evidence is accumulating that piece goods are wanted in certain markets abroad. Much interest has been taken in political developments in China, and a few more transactions have been arranged in cloth, most of the buying being in bleaching descriptions. For India a steady business has been done, chiefly for Calcutta and

Madras, in light whites. Sales of any importance for the minor outlets East and West have been few and far between, but a little more activity has been shown in home trade fabrics. The industrial situation in Blackburn tends to improve, but wretched reports are still being received from Burnley. American yarns have been dull of sale, and prices when tested have favoured buyers. Although organised short-time has been abandoned, it is doubtful whether production will increase to any material extent at present. A useful business has been obtained by Egyptian spinners, and rates all round remain steadier.

THE WOOL TRADE.

Our Bradford correspondent, writing on Tuesday, says:—The tone of the market remains good. For months past all business has been conducted on hand-to-mouth lines, and the general impression is that stocks are light. If, therefore, increased machinery consumption develops early in the New Year, there should be a fair amount of covering in both tops and yarns. The continued firmness of raw material values is also a bull factor of some importance. Indeed, the cable reports from New Zealand regarding the last sale for the first part of the season indicate a distinct hardening in prices of crossbreds. This will do no harm provided it is not carried too far, but it would be disastrous at this stage if values in the primary markets were forced up to any extent. The one thing needed more than any other in the West Riding is a steady raw material market with firm values; pronounced fluctuations one way or the other only tend to destroy confidence and restrict buying. There is still a big weight of wool to be lifted, and experience has proved over and over again that the prices of tops, yarns, and cloth cannot be forced up in sympathy with an advance in the raw material. In other words, business can be done at a price, but buyers cannot be persuaded to follow the market to a higher level when they are unable to pass on any of the advance. Quotations for tops and yarns are firm, but there is very little new business passing, and little or no change is expected for the remainder of this year.

COLONIAL WOOL.

(FROM OUR CORRESPONDENT.)

The holidays are approaching with the wool trade in fairly good heart, even though prices are now showing any upward tendency in consuming centres. Some crossbred topmakers are quoting a fraction more in consequence of the stronger advices from New Zealand, but it is doubtful if spinners will accede anything, because of the generally poor demand for yarns, some very low prices indeed having been taken for export. As low as 1s 11d has been taken for 2-12's delivered Leicester. When one reckons carriage, 2 1/2 per cent. discount, and agent's commission, the spinner is receiving about 1s 10d, and as the yarn is spun from a 44's top it is a mystery how any firm can accept such a price. Another example is that as low as 1s 10d has been taken for 1-16's for Germany. Neither wool nor tops have been bought anywhere for any spinner to get back his own on that basis. In the meantime, cables from Dunedin, where the last sale of the first half of the New Zealand selling season was held last Monday, show prices for wool exceedingly firm, and for medium and fine crossbreds slightly against the buyer. South American crossbreds also remain firm to slightly dearer, but several home trade firms are buying these in preference to New Zealand crossbreds. About 1,150,000 bales have been disposed of in Australia during the first half of the Colonial selling season, in New Zealand about 115,000 bales, and, according to our calculations, something like 275,000 bales in South Africa. This cannot but mean a considerable quantity of new clip wools arriving in consuming centres from now onwards, and most wants will therefore be well satisfied. In the meantime, values generally are steady. Nobody seems to be attempting to rush values, though we are surprised that New Zealand prices are still tending upwards. Consumption proceeds Both Australia and South Africa are enjoying a very favourable summer season. Further rains have fallen in Australia, and the drought has completely broken in Cape Colony.

THE JUTE TRADE.

DUNDEE, December 22. An outstanding feature has been the very large business in Hessian yarns. On Friday last Calcutta mills were buying large quantities of the raw material. Prices were raised, and a rush was made to 3s 2d for common 8-lb cops and 3s 3d for 8-lb spools. As a result, spinners have been able to increase their rates to 3s 3d and 3s 4d respectively, at which firm figures there is now less business. Other yarns, though not to the same extent, are all firmer. The price of 24-lb sacking web is now 4d to 4 1/2d, after having been at less than 5 1/2d to 5 3/4d for 3-ply 8-lb. Rove is from £22 for 200-lb and £32 for 48-lb.

Raw jute continues to display uncertainty, but there is little doubt that really good fibre will be held for high prices during the remainder of the season. Imports into up-country markets are still sparingly offered at from £16 10s to £18, lightnings at £30 to £31 10s, Daisee assortment at £28 to £29 and threes at £25 10s to £26, while Tossa is now at £32 10s for assortment, quantities during the past week. Dundee spinners have purchased fair buyers are at last realising that prices will not go lower. Prices are steady at 4 1/2d to 4 3/4d for 10-ounce 40-inch Hessians and 3 1/2d to 3 3/4d for 8-ounce. Heavy goods makers are booking larger orders.

especially for sacking, and there is less inclination to shade terms to secure business. Calcutta goods have advanced on large consuming demand in Calcutta, the mills selling forward well into next year.

HIDE, LEATHER, AND ALLIED TRADES.

No sales of market hides were held in Bermondsey this week, but at the provincial auctions prices of heavy hides were again weaker, all other selections maintaining recent prices. Overseas hides are quiet, tanners awaiting a fall in prices. Best Argentine fregorifics are quoted at 8 1/2d, the United States, Canada, and the Continent being the chief buyers. The Chicago market remains steady, with no important alteration in prices for packer hides. Business in sole leather has fallen off, shoe manufacturers being unwilling to buy more leather before stock-taking. The year, however, is closing in a hopeful fashion for tanners; stocks of bends and butts in the yards are low, and users have become reconciled to a higher range of prices. Light bends of 6-8 lbs average are now almost unobtainable. Orders for upper leathers have been small, but there are signs that shoe manufacturers are ready to place contracts for the New Year. Coloured kid is advancing in price, and black improving. Willow and box calf are in demand at firm prices. There has been a certain amount of activity in the shoe centres this week, owing to pressing orders. Russian boots have been sent out in volume, but the demand is fitful. Spring orders for utility and fancy goods are coming through in fair volume.

VEGETABLE OILS AND OILSEEDS.

Markets are unusually quiet, and business passing is on a very modest scale. Consumers of linseed oil are only buying to meet urgent requirements, and apparently are looking forward to lower prices. Meanwhile, value remains steady around £30 10s per ton naked ex-Hull mill for prompt and January-April delivery. Cotton oils have been in better request, and prices are steadier, crude Egyptian quoting £31 5s and technical refined £34 10s. Soya oil is steady, but palm oil is in poor request, both on home and export account. In the oilseed section linseed on spot and in near positions is scarce and at a substantial premium. Plate about due to arrive is quoted £16 7s 6d, while £15 10s has been paid for more distant seed, and £14 17s 6d for December-January shipment. New crop Plate has further declined, and £14 12s 6d has been accepted for January-February and £14 10s February-March, but very little actual business has been done, as the tendency is to believe that lower levels are in prospect in view of the big yield estimated. For Calcutta to London £16 17s 6d has been paid, December loading. Egyptian cottonseed has been fairly active, and £8 12s 6d freely paid for black on passage and all positions to March.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Market quietly steady. British-grown granulated, also British refined, sold to a moderate extent at unchanged rates. Of imported Czecho, also Dutch J, held for 31s 10d. Continental granulated for shipment fully steady, but buyers indifferent. Czecho, ready, 18s 10d; January-March, 19s 2 1/2d; April-August, 19s 7 1/2d, f.o.b., Hamburg. Dutch J, ready, 19s, f.o.b., Rotterdam. Polish crystals, December, 18s 6d, f.o.b., Danzig. Raw refining kinds slow. Brazilian, 96 per cent., January, sold, 15s 10d; and 80 per cent., ditto, sellers, 12s 9d. Peruvian, 96 per cent., December-January, c.f. and i., U.K., 15s 10d. White terminal section generally steadier, with business of fair dimensions. December, sold, 18s 2 1/2d; March, 18s 6 1/2d to 18s 7 1/2d and 18s 6 1/2d; May, 18s 10d, 18s 9 1/2d, and 18s 10d; August, 18s 11 1/2d to 19s; December, 17s 3d cwt.

COFFEE.—The market continues very firm for all the finer qualities, but common quiet. In auction, Kenya, common to good bold, sold, 142s 6d to 150s 6d; peaberry, 132s 6d to 157s. Kilimanjaro, good middling, 126s 6d; fair to good bold, 135s 6d to 145s 6d. Costa Rica, common to fine, 158s 6d to 184s; peaberry, 180s. Congo, small to common bold, 106s 6d to 127s; peaberry, 128s cwt. Futures inactive and nominal.

COCOA.—Market firm. Accra, F/F, January-March, sold, 63s to 62s per cwt, f.o.b.

TEA.—Auctions postponed until the 3rd proximo for the Christmas recess. Private market generally quiet but steady for all desirable liquoring parcels. There is only a quiet inquiry in force regarding China descriptions. Some medium keemuns sell at 1s 8d to 1s 10d; finest, 2s 8d; Souchongs, 1s 10d; Monings, 10d per lb, in bond.

RICE.—General demand still quiet, but quotations for Burma grain steady. Two stars, spot, London, 16s 6d; January to March shipments, 14s 1 1/2d, c.f. and i. terms. Other descriptions call for no comment. Beans selling slowly at previous rates. Japanese peas firmer, while influenced by reports that measures may be taken to restrict exports thence. Afloat parcels quoted 25s 5d; December-January, 27s 6d; January-February, 28s; February-March, 28s 6d; March-April, 28s 9d cwt.

SPICE.—Pepper dearer, with buyers well to the fore. Lampong, October-December, sold, 11 1/2d to 11 3/4d; January-March, 1s to 1s 0 1/2d; Muntok, L.S., October-December, 1s 6 1/2d; January-March, 1s 7d. Cloves dull, unaltered. Sago flour, January-March, 15s 4 1/2d cwt, c.f. and i. Tapioca unaltered.

FRUIT (Dried).—Trade quiet, requirements being filled for the Christmas trade. Pyrgos quoted 35s 6d; Gulf, 39s to 44s; Vostizza, 46s to 55s; Australian, 35s to 42s, as to quality. Sultanas, Smyrna,

66s to 72s; Cretan, 67s to 85s; Australian, 60s to 78s. Dates Hallowee, 30s; Khadowie, 20s; Sair, 16s; cartons, 34s to 36s. Anded terms, London. Figs Lacoums, 95s to 130s; layers, 60s to 75s. Evaporated fruits dull. Californian apricots, extra choice, 125s; South African, first grade, 132s 6d. Plums, Californian, new, 30/40's, quoted 64s; 50/60's, 51s; Oregon, old, 30/40's, 62s 6d. Pears, Californian, extra choice, 62s 6d; fancy, 72s 6d; Lake County, fancy, 80s. Apple rings, Californian, spot, 50s to 60s per cwt.

CANNED GOODS.

CANNED FISH quiet, but late rates were maintained in most instances. Sardines—Portuguese clubs quoted 4s 6d per dozen tins. Salmon—red, tall, 1 lb, quoted 45s to 48s; tall pink, 26s to 27s; halves, 38s to 39s; Lobsters—best halves, 160s; quarters, 90s. Crayfish—halves, 76s to 77s; quarters, 49s to 50s per case. Japanese crab realise full rates, and forward offers sparingly made. Herrings, 6s 9d per dozen tins.

CANNED FRUIT.—Market quiet, but an improvement in demand is anticipated after the holidays. Californian Bartlett pears, 24-2 1/2's, choice, 12s to 12s 6d; secondary, 9s 6d to 9s 9d. Californian peaches, choice, 11s 9d to 12s 3d; seconds, 8s 6d to 8s 9d. Californian apricots, choice, 12s 6d; seconds, 9s to 9s 3d per dozen tins. Singapore pines in limited supply, and forward quotations firm. Italian tomatoes quietly steady.

CANNED MEAT.—Market dull. Corned beef, 6's, quoted 38s to 44s, as to quality. Danish lunch tongues, 112s to 128s; American, 140s to 147s 6d, as to quality. Danish boneless hams, cooked, 1s 6 1/2d per lb, for case of six tins.

CONDENSED MILK.—Machine-skimmed steady on reduced supplies. Full-cream unaltered. Evaporated milk meets with good attention. Cases of 9 1/2 oz, 20s per case. Danish cream, 48/6 oz, 20s per case.

HONEY.—Market steady, with a fair demand. New Zealand, 18/7 lb tins, 85s per dozen; Jamaica, 33s to 55s; Haiti, 35s to 50s; San Domingo, 35s to 50s; Australian, 40s to 50s per cwt.

RUBBER.

A moderate amount of business was effected, and market disclosed no essential change. Plantation standard sheet, spot, and December, sold, 1s 6 1/2d to 1s 6 3/4d; January, 1s 6 1/2d, 1s 6 3/4d, and 1s 6 1/2d; January-March, 1s 7 1/2d, 1s 6 1/2d, and 1s 7d; April-June, 1s 7 1/2d, 1s 7 1/2d, and 1s 7 1/2d per lb.

GENERAL.

HEMP.—Manila quiet but firm, at full recent rates, as offers from the Philippines are still made with considerable reserve. J. November-January, quoted £48 10s; K and L 1, £47 5s per ton. New Zealand, also African sisal quiet, unaltered.

COMMERCIAL SERVICE

The Bank has over 330 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade between South and East Africa, the United States of America and the Continent of Europe.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South and East African matters of Trade and Commercial Interest.

The following notes on conditions in various trades and

countries call attention to some of the most startling tendencies:—

HOME INDUSTRIES.

Iron and Steel.—Supplies of domestic iron are now very scarce. Midland pig-iron is practically unobtainable, while Cleveland products show a steady advance in price week by week. Fair quantities of Continental pig-iron are on order, but early delivery is difficult to obtain. On the steel side more business is being done, resort being had to Continental imports, a number of re-rolling works having increased their output in this way. The galvanised sheet trade is more active, and a few tinplate manufacturers have restarted their works on imported fuel, but the amount of business that can profitably be transacted is limited.

Coal.—The posting of the mineowners' new terms under the eight-hour day has not been followed by any return of the men in large numbers, although in South Wales, Warwick, and other districts work of a partial character is going on in isolated cases. The continuance of operations in a large number of industries is becoming more and more dependent on the volume of foreign imports, local stocks under the control of the distributing authorities having now reached a significantly low point. The absence of a settlement in the next week or two may seriously affect next winter's business, since contracts for delivery up to the end of the year would under normal conditions be being made at the present time.

Engineering.—The increasing difficulty of obtaining raw material supplies has involved some further curtailment of operations during the last few weeks, though transport facilities have improved. Boiler makers and locomotive firms are among the most favourably situated, and the railways are placing a few rolling stock orders against the time when operations can be resumed. A certain amount of work is being carried out by textile machinery and machine tool makers, but the position is not as good as a month ago.

Electrical Industry.—The following index of production is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association. An explanation of the manner in which it has been computed will be found on page 888 of the *Economist* of November 28, 1925:—

INDEX OF ACTIVITY IN THE ELECTRICITY INDUSTRY.
(1920 = 100.)

	1924.			1925.			1926.		
	Home.	Exp't.	Total.	Home.	Exp't.	Total.	Home.	Exp't.	Total.
January	96	95	96	78	102	84	75	110	84
February	100	83	95	77	102	83	74	106	82
March	107	96	104	67	105	76	80	101	85
April	106	105	106	60	95	69	83	100	87
May	108	107	108	50	87	62	83	104	88
June	105	89	101	58	86	65	82	110	89
July	102	79	96	58	119	73	...	...	...
August	92	79	88	61	119	76	...	...	...
September	89	94	90	61	121	76	...	...	...
October	83	92	85	67	125	81	...	...	...
November	91	96	92	68	124	81	...	...	...
December	80	80	80	76	117	86	...	...	...

Activity is, on the whole, extremely well maintained, the difficulty of obtaining fuel being less than in most other industries owing to the high proportion of electrically driven plant. A number of small orders have recently been placed in the home market, and a number of more important contracts for generating plant are in prospect. Export activity maintains its recent recovery, Russian and Japanese inquiries being a noteworthy feature. The most active branches of the industry at the moment are those concerned with switchgear, transformers, meters, and household appliances.

Motor Industry.—The volume of output compares favourably with that of some other branches of engineering, but present conditions are appreciably affecting the amount of new business. The hopes of an extraordinarily good year, based on the results of last winter's exhibition, will not now be realised. On the overseas side, however, business is better, in the Dominions particularly, the British car having apparently done much to consolidate its position recently.

Cotton.—Our Manchester correspondent writes:—The position of spinners and manufacturers is no better than a month ago. All producers have experienced increasing difficulties in maintaining output, and the scarcity of coal has become more pronounced. Experiments with foreign coal have not been successful, and many firms have paid exorbitant prices for coal of very poor quality. The rise in values during the past fortnight has brought out more inquiry in yarn and cloth, but buyers have been slow in placing orders on a freer scale. Inquiry in piece goods for India has been fairly extensive. The China market is an unknown quantity, and trade of importance just at present cannot be expected. Production of American yarns is somewhat below 50 per cent. of capacity. A quiet demand continues for Egyptian counts, and spinners are working at about 75 per cent. of the full production.

Woollen and Worsted Trades.—Although the British woollen textile industry is not working at more than half the level prevailing before the strike, raw material values remain

remarkably steady, home buyers evidently expecting a considerable demand on the termination of the strike. Current business in the West Riding is very restricted, purchases of tops and yarns being confined to the minima for current requirements. Most mills are working only three days a week. The recent hot weather has caused an unexpected spurt in summer goods.

Chemicals.—Business was rather more difficult last month, with prices generally unaltered in the absence of large scale demand. Export inquiries are a little more numerous. Demand is chiefly for "seasonal" products, and prices for the coal tar group show firmness, supplies being recently difficult to obtain.

Building Trades.—Building operations have been hampered by difficulty in obtaining supplies of materials, and although the recent improvement of transport services may ameliorate its condition, the volume of activity remains somewhat below this time last year.

Agriculture.—Haymaking had a somewhat late start last month, but the subsequent hot dry weather greatly improved the prospects of the crop. Corn crops have made very satisfactory progress, wheat promising a full average and barley an average yield, while the oat crop is expected to be over the average in most parts of the country.

Shipping.—The continued absorption of tonnage for transportation of American coal to this country has produced an acute shortage of vessels in the grain markets normally supplied with shipping outward-bound with British coal. In consequence, certain homeward rates have soared to a level describable as a minor "freight-boom." Grain from North America, including Montreal, has moved slowly.

Retail Trade.—A large London store informs us that although the effect of lessened purchasing power, particularly among the lower middle and working classes, is noticeable, the fine end of the retail trade has been surprisingly good, especially at the sale period, some houses having maintained a level of business comparable with that of a year ago. A seasonal feature has been the demand for washing silks of all qualities, while the fine weather has given impetus to sales of linen and cotton goods.

UNITED STATES OF AMERICA.

Trade prospects continue to be optimistically regarded. The moderate recession since the early months of the year is now regarded as an inevitable feature of the normal annual cycle, and the results for the first half of 1926 show the national

THE STRIKE AND UNEMPLOYMENT.

We give below a summary of the effect of the general strike and the coal stoppage on employment in other industries, based on the weekly totals of workers registered at unemployment exchanges in Great Britain. The figures for corresponding weeks during the 1921 coal stoppage are appended to facilitate comparison:—

(000's omitted.)

Date.	1921.		1926.		Corresponding Weeks of 1925.	Total.

* Average figure.

† General strike, May 4-11, 1926.

Three facts should be noted in connection with the above table:—(1) The figures do not include the million-odd workers involved in the coal dispute, or the further 1½ to 1½ millions who ceased work during the general strike. (2) The three-fold classification of unemployed persons was adopted only in the present year. (3) In comparing the 1926 statistics with those of 1921, it should be remembered that the earlier period was one of increasing trade depression, apart altogether from the effects of the coal stoppage, while the trend of industrial activity in the early months of 1926 was definitely upward.

production and consumption at a higher level than ever before. Steel production was from 75 to 80 per cent. of capacity last month, as against 68 per cent. in 1925, the continued decline in the Steel Corporation's unfilled orders being checked by buying in anticipation of an increase of prices, which has now taken place. Building operations remain in advance of last year's, though the ratio has been falling steadily over recent months. The wholesale and retail movement of goods is steady, commodity stocks show no tendency to increase, money is easy, and prices firmer.

BRITISH EMPIRE.

The Canadian crop position is generally satisfactory. Drought and high winds caused anxiety in some prairie regions in the first part of last month, but subsequent heavy rainfall, followed by warmer weather, relieved the position. Slight change has taken place in the Australian situation, which shows normal seasonal quietude. Indian monsoonal rains show normal strength and extension for the most part, except in certain areas, such as the United Provinces, where the opening of the monsoon was reported feeble.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10, 1926 (pages 57-8) we described a new index of electrical production in the chief industrial areas of Great Britain, and set out the results for each month from January, 1924, to April, 1926. We are now able to give the figures for May and June of this year—a period of special interest, since it comprises both the general strike and the prolonged stoppage in the coal industry.

The effect of these disturbances of the free flow of industry and commerce is shown quite clearly in the index, although at first sight it would appear rather less marked than might have been expected. It is important to note, however, that even a reduction of 20-25 per cent. in industrial activity is sufficient to cause a serious crisis, and that among the basic industries shown in the index only coal mining, iron and steel and marine transport were directly affected by the general strike. The coal, iron and steel areas suffered the greatest reduction in activity. Compared with May of last year the index showed a fall of 33 points, which, allowing for the natural growth of the industry over the period (May, 1925-May, 1926), we may consider as equivalent to a reduction in activity of about 40 per cent. In June no recovery took place. General engineering showed a reduction of 21 points in May, equivalent to a fall in activity of 25 per cent., but the recovery which resulted in June was almost sufficient to bring the index back to normal again. Textiles showed a decline of 16 points, equivalent to a fall in production of about 19 per cent., with an almost complete recovery in June. Chemicals were affected least of all, and were steadily active during May and June. Marine transport showed a reduced activity in

June compared with other industries, even if it was less seriously affected in May than iron and steel. On the basis of the index, and allowing for the natural growth in the use of electrical power, we can estimate the reduction in industrial activity at 25 per cent. in May, and 10 per cent. in June.

The following table shows the figures under the various headings for each month of the current year, while the results since the beginning of 1924 are shown graphically in the annexed chart. For details of the earlier period, and a description of the method of compilation of the index, readers are referred to the article already mentioned:—

INDEX OF PRODUCTION OF ELECTRICITY.*

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

PRESENT POSITION OF RUSSIAN AGRICULTURE.

(BY A RUSSIAN CORRESPONDENT.)

THE period of the "militant communism" of the first year of the Russian Revolution is admitted to have been disastrous for agriculture. The direct exchange of production between country and town which was part of the scheme actually took the form—as little or no manufactured goods were available—of a requisition without compensation on the part of the Government of all food and other necessities of life in excess of the bare needs of the country population. In consequence, the peasants reduced the areas sown, grew only as much as sufficed for their own requirements, and by so doing gradually deprived the towns of food.

In the spring of 1921 a new agrarian policy was inaugurated based on a truer conception of life. Requisitioning was abolished, and the peasants were allowed freedom in the disposal of their produce. The Agrarian Code of 1922 further offered the peasants the fullest liberty in the choice of the system of farming their holdings, whether as collectivist "communes," or as single farms managed on an individual basis. The decree of the beginning of 1925 sanctioned the employment of hired labour in agriculture and also the renting of land. In one point only the earlier legislation remained unaltered, namely, in the land nationalisation; the sown land remains as before the property of the State which grants it to the peasants in usufruct without stipulations as to time or money payments.

Very rapid strides have been made in agriculture since 1922. The sown areas show a yearly increase, the harvests have become larger, and in 1925 amounted to 180 million tons, as compared with 205 million tons, which represents the average of the pre-war period 1909-1913. In 1922 the export of grain was resumed, after many years of isolation from the world market, and reached 40,000,000 poods. In 1923 the export amounted to nearly 140,000,000 poods of grain, including 45 per cent. of rye and 20 per cent. of wheat. In consequence of the failure of crops in 1924 there was little or no export of the principal kinds of grain. The first nine months (July to April) of the agricultural season, 1925-26, resulted in an export of some 125,000,000 poods, of which barley formed 31.7 per cent., wheat 27.4 per cent., linseed cakes 15.4 per cent., rye 9.7 per cent., &c. (*Economic Life*, No. 96, Moscow, April 27, 1926). The potential export of the years 1925-26 will, however, be much larger than the actual export. For reasons which are highly characteristic of the Russian village of to-day the peasants are keeping back and not sending to market large quantities of grain.

At the present time in the budget of the peasant farmer the various agricultural taxes and expenditure for land take a smaller part than before the war. Purchase and sale of land no longer occur, and for the present leasing of land takes place only in comparatively few cases. As regards the taxes, according to the inquiries made by A. L. Weinstein (*The Burden of the Taxes falling on the Peasantry and their Payment before the War and after the Revolution*: Moscow, 1924) they amounted before and after the revolution to the following sums (in pre-war roubles) per head of the agricultural population:—

	1912.	1918-1919.	1920-1921.	1921-1922.	1922-1923.
Direct taxes	1.80	3.90	10.30	6.11	4.72
Customs and Excise	4.56	...	...	0.10	0.93
Loss from depreciation of currency ..	...	3.00	0.40	1.10	1.40
Totals	6.36	6.90	10.70	7.31	7.05
In percentages of the farming income	10.8	16.7	26.1	20.9	18.6

The agricultural taxation was heaviest, both absolutely and relatively, in the year 1920-21, just before the proclamation of the new economic policy, when it was even higher than the pre-war taxation (not counting here the expenditure on purchase and renting of land). Since that year there has been a steady diminution of the

amount. The single agricultural tax which was introduced on May 10, 1923, had a markedly progressive character (which was still further strengthened by the Decree of April, 1926), and was also more easily borne by the mass of the peasantry. The burden of taxation is not so great as to be, in itself, a reason impelling the tenant to dispose of his grain.

On the other hand, in consequence of the improved economic circumstances of the country, the total peasant consumption has increased. Before the war 240.96 kilograms of breadstuffs were available per person in the "producing regions," and in the "consuming regions" 278.31 kilograms.

The increased consumption of breadstuffs, and with it the advance in the physical strength of the most numerous class of society, is of very great significance, especially when it is remembered that the U.S.S.R. of to-day is a nation of peasants in a much fuller sense than was the Russia of former days. The peasantry of the steppe land, which before the war was compelled by the burden of taxation to sell the greater part of its grain and suffered often from long-continued hunger, now eats its fill.

The Russian village of the present day suffers from quite another kind of privation, viz., a shortage of goods, an important demand for manufactured products. The old weakness of the Russian national economy is again manifest, the disproportion in the development of its different sides, industry and agriculture. This is now the more noticeable as the purchasing power of the country people for manufactured goods has considerably increased. According to the approximate calculations of the People's Commissary for Internal Trade (an office which has lately been combined with that of the Commissary for Foreign Trade), the receipts and the outgoings of the peasant community amount to the following sums (in millions of roubles):—

Sources of Income.	1924-25.	1925-26.
Sale of agricultural products	1,678	2,367
Sale of the products of the small (home) industries ..	175	285
From forests	225	258
Earnings of migratory labourers	160	200
Totals	2,238	3,110
Deductions to be made for agricultural single tax ..	340	280
Local charges, insurances, education, &c.	100	140
Net receipts	1,798	2,690

Of the receipts of the year 1925-26, which are about 50 per cent. higher than in the previous year, in order to satisfy the demand of the peasant class for manufactured goods, 145 million roubles (7.6 per cent.) would have had to be applied to the purchase of agricultural machinery, 255 million roubles (13.3 per cent.) for various metal products, 618.7 million roubles (32.4 per cent.) for cotton goods, 350 million roubles (18.3 per cent.) for shoes and furs, 304.6 million roubles (15.9 per cent.) for sugar, &c. The home industry is not, however, equal to this demand: metal goods come short by nearly 85 million roubles, cotton goods by 75 millions, agricultural machinery by 40 million roubles, and so on. As regard ploughs in particular, on every 100 farms in the Crimea in 1924 there were 35.4 ploughs, in the Ukraine 42.3, in Siberia 49.9 in the grain-consuming region 56.3. The worst shortage was in the grain-producing region, where only some quarter of all the farms were provided with ploughs. The rural population, not finding on the market any of the manufactured goods it requires, has no special economic inducement to place its own produce on it. Of the former fetish belief in money as a means of payment for the produce of his land the peasant who has witnessed as though in a dissolving view the ceaseless depreciation of the rouble, whether of the Czar, of Kerenski, of the Soviets, of the various Ukrainian Governments, has now but little.

The Russian peasantry will benefit from the agrarian revolution when the agrarian revolution is followed by industrial development. This, however, depends on the capital which can in the near future be made available for investment.

The Economist

France recent tendencies have made for decreased trade activity.

The following notes on conditions in various trades and countries call attention to some of the most striking features:—

HOME INDUSTRIES.

Iron and Steel.—August is usually a slack period in these trades, and in the absence of regular fuel supplies the industry remains in a state of suspended animation. Partial resumption of work in the Warwickshire and Cannock Chase mines has enabled a number of North-West Midland forges and mills to reopen, but coal supplies from abroad are too dear and too uncertain to permit of extensive operations elsewhere. Tin-plate factories have obtained increased supplies of foreign coal, and are endeavouring to overtake the orders on their books. Galvanised sheets remain in good demand. The settlement of the strike will probably be followed by marked activity all round as the accumulation of orders is fairly considerable.

Coal.—Interest remains chiefly centred in foreign coal imports, which continue to be dealt with at all the main ports. Prices, however, have shown a tendency to advance, and the quality of many cargoes still leaves something to be desired. Such supplies as are obtained from partially reopened Midland pits and from outcrop operations are being consumed locally, and do not affect the general position. There is a tendency to defer further forward orders for foreign coal in anticipation of an early termination of the dispute.

Engineering.—Activity in engineering remains below normal, but apart from holiday influences there has been no marked deterioration in the general position since our last report. Orders continue surprisingly satisfactory, all things considered, but difficulty frequently arises in fulfilling them owing to uncertainty as to fuel and raw materials, and occasionally through the curtailment of electrical power. The machine tool trade has received further new orders, while locomotive engineering will benefit from the placing of important Indian contracts. The home railways are continuing their programme of replacements. Textile machinery makers report quiet business. Shipbuilding and constructional engineering have suffered from the dearth of material.

Electrical Industry.—The industry is beginning to be affected by the reduction of coal stocks, and the normal seasonal lull was accentuated last month. The small motors and domestic apparatus sections are best employed, but the demand for industrial motors is stagnant. Makers of switchgear and transformers have a fair volume of orders in hand, but are less well employed than a year ago. There is, however, a prospect that certain deferred orders from Scotland and the North-East coast will take definite form shortly. The export side is slack, despite a few scattered orders for electric locomotives for the Dominions. Increased competition from German and Italian firms is being experienced in Near Eastern markets.

Cotton.—Our Manchester correspondent writes:—All engaged in the industry have experienced another difficult month. Although supplies of coal do not appear to be quite so scarce as a few weeks ago, spinners and manufacturers are harassed by high prices. An event of importance has been the inauguration of the Basic Prices Scheme for American yarns. So far spinners have been loyal to the rates issued by the Masters' Federation, but numerous buyers are resisting the advances required. Further progress has been made in the formation of the American Yarn Association, which is being established to grade yarns and fix minimum prices, a strong feature of the proposals being that the association will have power to impose penalties upon members who do not carry out the instructions of the board of directors. Buying in piece goods for the most part has been confined to small lots. India has given fair support, chiefly in the lighter styles of goods. Merchants with connections in China are despondent as to the outlook.

Woollen and Worsted Trades.—The raw material position remains satisfactory, current indications pointing to adequate though not over-abundant supplies during the coming season, and fairly steady prices. Activity in the manufacturing districts is restricted by local holidays and the continuance of the coal stoppage, but the general feeling is a little more optimistic. Stocks are believed to be of less than normal dimensions, and an expansion of business is looked for as soon as the industrial outlook has been clarified.

Boots and Shoes.—The trade remains quiet, many factories running half-time only. Holiday orders have been disappointing, and it is clear that buyers will not place large orders for coming months until the coal dispute is over.

Pottery.—The pottery districts have benefited from the partial resumption of work at neighbouring coal mines. More ovens have been fired recently, and a start made with the overtaking of arrears of orders.

Chemicals.—The industry maintains a satisfactory output, though business is restricted, and prices in some instances have fallen. The shortage of spot supplies of coal tar products is

very marked. The export figures for last month were surprisingly good, however, an increase of 5 per cent. being recorded, as compared with July, 1925.

Building Trades.—There was a slight increase in building activity last month, although in some districts a shortage of materials was still experienced as a result of the continuance of the coal stoppage. Operations remained on a larger scale than a year ago, a shortage chiefly of plasterers and bricklayers being reported from some districts.

Agriculture.—July was a good month for corn crops, and yields above the average are expected, particularly of oats. The greater part of the hay crop was secured in good condition before the break in the fine weather. Potatoes are generally healthy except in certain Eastern counties where disease has appeared.

Shipping.—A good deal of "tramp" tonnage is still employed conveying coal cargoes from North America. Chartering from the River Plate has fallen off, but the movement of new season's grain from Australia is providing a demand for cargo space at improved values. Elsewhere markets show no great change, the position having still a large element of artificiality in the absence of outward coal cargoes.

Retail Trade.—A large London store informs us that retail trade has been less brisk than is usual at this season. Hosiery continues to sell steadily, but short time in the factories may interfere with autumn deliveries. Among silks demand is centred chiefly on printed crêpe-de-Chines and georgettes, while artificial silks have shown signs of increased popularity after eighteen quiet months. Trade in men's wear has been less satisfactory than usual, there being a tendency for demand to shift from the better to the cheaper grades.

UNITED STATES OF AMERICA.

The absence of the usual slackening of business activity last month came as a surprise to most observers. The iron and steel industry, for instance, operated from 75 per cent. to 80

ELECTRICAL PRODUCTION.

In the *Economist* of July 10, 1926 (pages 57-8) we described a new index of electrical production in the chief industrial areas of Great Britain. We show below the results achieved up to July last.

INDEX OF PRODUCTION OF ELECTRICITY.*

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The partial revival of activity which took place in June after the general strike in May was purely temporary, as the Index shows, and the depression has become more intense in every industry, with the possible exception of general engineering and automobile construction. The coal mining, iron and steel, shipbuilding and heavy engineering industries group reached the record low point of 77, 11 points below the previous record in May, and 25 points below the corresponding index figure for 1925. Other industries in the group, such as heavy engineering and shipbuilding, are now suffering from the depression in coal mining and iron and steel. The fall in the index from 88 to 77 illustrates this point quite clearly. General engineering is still improving, and can show now a higher figure than even in July, 1925. Textiles suffered a relapse from the June figures, but were still better than in May. Chemicals also lost much of the advance in June, although they have been less adversely affected than almost any other industry. For the country as a whole the decline in activity in July was equivalent to 9 points compared with the previous month and 2 points compared with May. In making comparisons with last year the influence on the figures of the increasing "electrification" of British industry should constantly be borne in mind.

per cent. of capacity, as against 65 per cent. in July, 1925. Prices were maintained at the former levels established in June, and the Steel Corporation's order books showed an increased total figure for the first time in the last six months. Although the automobile industry has not maintained the pace of the early part of the year, building remains at a level little short of extraordinary. Textiles are rather more active, though some factories are working much below capacity. The wheat crop is about 30 per cent. above that of last year, and as prices have not fallen to the extent anticipated, and satisfactory results from other crops, including cotton, are more or less assured, farming demand in the autumn should be good. The usual indices—railway traffic, banking business, electrical power consumption, &c.—all indicate a higher level of business than a year ago, and all appearances are favourable to a continuance of satisfactory conditions over the next few months.

BRITISH EMPIRE.

Excessive heat in the Prairie Provinces of Canada towards the end of July to some extent affected the prospects for what had previously been a moderately good crop, and harvesting has since been interrupted by broken weather. Elsewhere, however, prospects are on the whole good. Employment is better than at this time last year, industrial operations being well maintained, especially in the automobile section. The Indian monsoon, for the fifth year in succession, has given good results, except in certain restricted areas, and with money at lower levels than a year ago, the next few months should witness a steady improvement in trade conditions. Australian reports show slight change, wheat prices being a little firmer and the outlook for the next season's wool crop favourable. Floods have caused considerable damage in Western Australia. South African business remained dull last month, largely as a result of adverse farming conditions and the comparative failure of the maize crop. The gold mining industry maintains a record volume of activity.

SOUTH AMERICA.

The mid-year season in Argentina has opened with a slight lifting of the depression which has existed during the last few months. Prospects for the new crops are favourable. Brazilian business remains dull, with credit greatly restricted. Chilean agricultural prospects are improving, but the nitrate industry remains under a cloud. Mining activity in Mexico is above last year's level, but business in general has suffered considerably as a result of the conflict between Church and State.

EUROPE.

Although there is no well-marked slackening in French production, business is rather more restricted than a month ago, various factors, such as exchange movements, increased railway charges, the raising of the discount rate of the Bank of France, &c., being chiefly responsible. Higher autumn prices for iron and steel are expected, but buyers are not inclined to increase their commitments. The textile trades have been unsettled by exchange fluctuations. Belgian industry shows seasonal quietude. German conditions are improving, especially in the heavy trades where the British coal stoppage is greatly stimulating activity. Engineering conditions are still largely unsatisfactory, but chemicals and textiles have marked a slight advance, and the unemployment figures are slowly declining. The Swedish situation remains sound, and Finnish prospects

have improved, but in Norway industrial activity remains below normal. Poland, like Germany, has benefited from the British coal stoppage, but many branches of industry remain stagnant in Czechoslovakia and Austria. The engineering and textile industries of Italy are maintaining a large output, though in some cases difficulty is being experienced in financing it. Spanish trade again shows a firmer tendency.

FAR EAST.

Trade in North China is slowly reviving, though confidence in the stability of present political conditions is still lacking. Favourable weather conditions have improved Japanese crops, and there is a generally hopeful feeling regarding autumn prospects, though markets are at present on the dull side.

UNEMPLOYMENT AND THE COAL DISPUTE.

We give below a summary of the effect of the coal stoppage on employment in other industries, based on the weekly totals of workers registered at unemployment exchanges in Great Britain. The figures for corresponding weeks during the 1921 coal stoppage are appended to facilitate comparison:—

(000's omitted.)

* Average figure. † General strike, May 4-11, 1926. ‡ End of 1921 stoppage.

Three facts should be noted in connection with the above table:—(1) The figures do not include the million-odd workers involved in the coal dispute, or the further 1½ to 1½ millions who ceased work during the general strike. (2) The threefold classification of unemployed persons was adopted only in the present year. (3) In comparing the 1926 statistics with those of 1921, it should be remembered that the earlier period was one of increasing trade depression, apart altogether from the effects of the coal stoppage, while the trend of industrial activity in the early months of 1926, previous to the stoppage, was definitely upward.

THE SWISS BALANCE OF PAYMENTS.

By virtue of her position as a land-girt "island" State, with frontiers marching with those of the greatest Continental Powers, together with the proverbial enterprise of her people, Switzerland has long been famous among the world's trading nations. The *per capita* value of her foreign commerce was exceeded in 1913 only by New Zealand and Belgium, and in 1924 only by New Zealand, Cuba, Australia, and, possibly, Holland. Her geographical situation, indeed, has been a predominant factor in shaping her political and economic destinies, more especially during the last twelve troubled years. During the war she filled the rôle, partly embarrassing and partly profitable, of a neutral entirely surrounded by belligerents, and later became the seat of a stable currency, while the exchanges of her neighbours were subject to the wildest fluctuation. These conditions have reacted on Swiss trade to a marked degree, particularly as regards those "invisible" items which loom so largely in the national balance-sheet. Into the statistical measurement of the changes under the various headings,

since 1913, the element of conjecture must largely enter, but the results of a painstaking inquiry recently carried out by the Swiss Bank Corporation show that the ultimate balance of payments has lately been much more in Switzerland's favour than in the pre-war year.

A "passive" merchandise balance is a permanent feature of Switzerland's situation, no less than of that of the United Kingdom. In 1913 imports exceeded exports by 543 million francs. During the war the adverse balance fell at times to a very low figure, exports actually exceeding imports by 69 million francs in 1916. The subsequent rapid growth on the import side was instrumental in producing an adverse balance of no less than 966 millions in 1920, but the figures have since shown marked improvement, the excess of imports in succeeding years attaining the following dimensions:—1921, 156 million francs; 1922, 153 millions; 1923, 483 millions; 1924, 434 millions; 1925, 595 millions.

The Customs service is probably one of the most

efficient in Europe, but as each year sees a large influx and efflux of tourists, and there has been an important augmentation in the price of many articles, more or less clandestine trade, which does not figure in the returns, may be of appreciable importance. Another unrecorded item concerns the export of electrical energy, which, negligible in 1913, rose from 6 million francs in 1920 to about 14 millions last year. The movement of the precious metals is a far more important factor to-day than in 1913. Very heavy gold imports in 1921-23 were succeeded by an efflux which in 1925 had reached large proportions. The following table sums up the results under the heads so far considered:—

"COMMERCIAL" BALANCE, 1913, 1924, 1925.

(Million Francs.)

	1913.	1924.	1925.
Merchandise.....Imports	1,979	2,504	2,634
Exports	1,358	2,070	2,039
Unrecorded ItemsImports	10	15	20
Exports	50	50	60
Precious MetalsImports	(58)	10	26
Exports	(34)	70	198
Electrical PowerExports	..	13	14
Total "Passive" Balance ..	605	326	367

Thus, despite the 33 per cent. increase in the value of imports last year, as compared with 1913, the net adverse trading balance was decidedly less than in the pre-war year.

Of all "invisible" items, tourist receipts are among the most vital for Switzerland. In this respect the years following the war were only a shade less disastrous than the war itself. Not only did many of Switzerland's impoverished neighbours find it necessary to economise in the matter of holidays, but the maintenance of a stable currency in Switzerland involved a high cost of living compared with that of surrounding countries. The numbers of visitors at the chief centres in the last two years, however, have shown a sensible recovery, and, taking the country as a whole, are probably not very different from those of the pre-war year. But the proportion of foreign to domestic holiday-makers has appreciably fallen. The records of certain of the most popular regions show that Swiss visitors accounted for over 40 per cent. of the whole tourist population last year, as against 20 per cent. in 1913. The proportion of Germans has fallen from 28 to 22 per cent., that of Frenchmen from 11½ to 4 per cent., and, curiously, that of Americans from 10½ to less than 8 per cent. The English percentage has risen slightly from 9½ to just over 10, but as the Englishman tends more and more to travel in conducted parties, his net expenditure in the country is found to be a declining quantity.

The number of visitors whose expenditure is a relevant item in the balance (i.e., those of non-Swiss nationality) is therefore probably less than before the war, but hotel charges are higher, as are other features in the Budget of the average tourist—railway, motor, and steamer charges, "souvenir" purchases, &c.—though visitors from countries with depreciated currencies are noticeably more parsimonious in their expenditure under these latter heads than in pre-war times. The net effect would seem to be that last year's tourist receipts did not differ greatly in absolute amount from those of 1913, though the 1924 receipts were certainly much lower. In 1912 Dr Zollinger estimated that Switzerland was a beneficiary to the extent of 265-270 million francs, while the Swiss Bank puts the corresponding figures for 1924 and 1925 at 205 and 270 millions. Against these receipts must be set the expenditure of Swiss residents abroad (estimated at 50, 55, and 65 million francs in 1913, 1924, and 1925 re-

spectively), so that the final result of the co-ordination of the beauties of nature and one-and-a-half milliard francs of Swiss capital, so far as it affects the "external" balance of payments, was a net gain of something like 215 million francs in 1913, 150 millions in 1924, and 205 millions last year.

Receipts from other services rendered by Swiss nationals to those of foreign countries fall largely into one or other of the following groups:—(a) Railway transit traffic, (b) insurance transactions, (c) minor items. Transit trade was unfavourably affected last year by the almost complete cessation of reparation coal deliveries by Germany to Italy, while the enhancement of the rates charged by the Federal railways produced a marked falling-off in West to East traffic. The net receipts accruing to Switzerland from insurance business are difficult of assessment. There has probably been an augmentation in the amount of such business accepted by Swiss companies on foreign account, while the operations of foreign companies in Switzerland itself are certainly less extensive than before the war. Under the sub-head (c) above may be grouped such items as commissions earned by Swiss banks, &c., less the remittances of workmen and other permanent or seasonal immigrants into Switzerland from Italy and elsewhere. The following table shows the estimated "favourable" balance under the three heads:—

BALANCE OF SERVICES, 1913, 1924, 1925.

(Million Francs.)

	1913.	1924.	1925.
Transit traffic.....	(40)	..	30-35
Insurance business	?	50	20-25
Minor services.....	?	15-20	30
Total	(? 110-150)	85-90	80-85

Coming next to receipts in the form of interest on investments, we encounter the same difficulty which has confronted inquiries into the British balance of payments since the war. The last attempts at valuation of security holdings abroad date from before the war, and the situation has since been radically altered. Authoritative estimates of foreign holdings in Switzerland are similarly lacking. The earlier years of the post-war period witnessed a very considerable shrinkage in the value of Swiss capital abroad, since so large a part of it was invested in countries such as Germany, which suffered the ills of inflation. Recently, however, results have been more favourable from the Swiss point of view. Monetary stability is now a less exceptional state of affairs among European nations, and Swiss investors have given increasing attention to issues of high-yielding foreign securities. Swiss external borrowings have diminished, and the American debt has been reduced. The outcome of these and other movements of a like nature was a balance in Switzerland's favour, put at 305 million francs last year, as against 210 millions in 1924, and something between 260 and 315 millions in 1913. The Swiss Bank presents these figures with reserve, and further details as to their make-up would seem to be called for.

Summing up the various categories, a final "credit" balance is struck of 223-228 million francs in 1925, comparing with one of 120 to 124 millions in the previous year. In 1913 the favourable balance was smaller, probably not exceeding 100 million francs at the outside. It is quite clear that the results of the past two years make a hopeful showing, as against those of earlier periods, and particularly those of the anxious years following the war. It should be pointed out, however, that account has been taken only of the permanent elements in the balance of payments. Temporary movements of capital, which may affect the balance one way or another, have been ignored.

The Economist MONTHLY SUPPLEMENT.

New Series.

SATURDAY, SEPTEMBER 25, 1926.

No. 40.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics," 1s 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

THE outward and visible signs suggest, at a first glance, that the state of trade this month is no worse—is possibly even slightly better—than a month ago. The unemployment figures for Great Britain show a decline of nearly 30,000 in the last four weeks, and are over 90,000 below the highest point reached during the present coal stoppage. From all the chief iron and steel centres

duction is still on a very small scale, except in certain branches, such as re-rolling, which can use supplies of imported steel, but the volume of orders recently obtained is of encouraging dimensions, and it is now practically certain that a period of marked activity will follow a settlement of the coal question. English iron and steel are almost unobtainable, but a fair amount of foreign material is on offer, while the reopening is announced of a large South Wales plate mill, imported fuel being utilised.

Coal.—Although the miners generally continue firm in their refusal to return to work without instructions from their Federation, about 80,000 have returned in Nottingham, Warwick, and other Midland areas, and production of all kinds is now estimated at about 500,000 tons a week, against some 4-5½ millions in normal times. A corresponding improvement has occurred in the position of certain local trades, but industry as a whole continues largely dependent on coal supplies from abroad, which are coming in fairly regularly, but are definitely dearer than a few weeks ago.

Engineering.—Activity is well maintained, all things considered, increased receipts of foreign iron and steel having assisted productivity in cases where the state of order books was satisfactory. A number of fair-sized contracts, including some from overseas, continue to be placed in this country. The constructional and equipment branches are among the best employed, and textile machinery is fairly active, but seasonal falling-off is being experienced in the demand for agricultural machinery, and marine engineering remains depressed in spite of a few notable orders for new ships.

Electrical Industry.—The following index of production is copy-right by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association. An explanation of the manner in which it has been computed will be found on page 888 of the *Economist* of November 28, 1925:—

INDEX OF ACTIVITY IN THE ELECTRICITY INDUSTRY.
(1920 = 100.)

	1924.			1925.			1926.		
	Home.	Exp't.	Total.	Home.	Exp't.	Total.	Home.	Exp't.	Total.

June	105	89	101	58	86	65	82	110	89
July	102	79	96	58	119	73	80	79	80
August	92	79	88	61	119	76	84	83	84
September	89	94	90	61	121	76	..	..	..
October	83	92	85	67	125	81	..	..	..
November	91	96	92	68	124	81	..	..	..
December	80	80	80	76	117	86	..	..	..

The export figures for July and August, 1926, are affected by the dropping-out of the twelve months' moving average of an unusually large order received in July, 1925. The rise in August, as compared with July last, reflects the placing of important contracts for Lancashire and the North of England and for Indian railway electrification, but apart from the prospect of early approval for a new large power station at Coventry, the outlook for the next few months is not as promising as might be desired. Until the Electricity Bill is passed and in practical operation, no large power developments can take place, and in the meantime it has been computed that new schemes involving a total of 700,000 kilowatts are held up. The most active sections of the industry are concerned with transformer and switchgear production, capacity in these branches being distinctly less than demand.

Motor Industry.—Some manufacturers are finding difficulty in obtaining prompt delivery of raw materials, but otherwise most makers are busy. Notable price reductions have been announced in the 1927 programmes, and a tendency towards increased production of six-cylinder models, with high ground clearance, reflects the growing importance of the export market, which now takes about 20 per cent. of the whole output of the industry.

Cotton.—Our Manchester correspondent writes:—The industry, to an increasing extent, is feeling the effects of the continuance of the coal dispute. Although supplies of fuel can be obtained, the high prices required are harassing all spinners and manufacturers. Spinners of American yarns have held firmly to the minimum basic prices, but the volume of trade has been disappointing, and the Masters' Federation is considering the question of restricting output on a larger scale. Since the middle of June the mills have worked about 50 per cent. of full production, but it is now suggested that the factories should run only one week in three, thus reducing output to 33 per cent. Manufacturers of piece-goods have again been full of complaints. Contracts for more than retail lots have been decidedly scarce. Inquiry for India has kept up fairly well, but most of the bids have been too low.

Woolens and Worsteds.—The London wool auctions have witnessed the anticipated increase of 5 to 10 per cent. in prices, but the impetus came from French and German buying, the West Riding being unwilling to operate extensively in view

of the difficulty of "passing on" higher prices, and the uncertainty of the home manufacturing situation pending a coal settlement. Yarn and piece-goods prices are firm, but the turnover is not very large, hand-to-mouth buying being the rule.

Boots and Shoes.—Apart from the sports section, trade is distinctly dull, the effect of the strike being very noteworthy as regards heavy footwear.

Pottery.—The curtailment of business over the last four months has resulted in the inability of many makers to meet the normal seasonal increase of demand. Production has progressively expanded recently, but deliveries are nevertheless being delayed in some cases.

Agriculture.—Cutting of corn was complete in most parts by the latter days of August, but although yields of barley and oats were good, wheat was less satisfactory than had been expected a month earlier. Potatoes have suffered from blight in some districts, but turnips, swedes, mangolds and sugar beet promise well.

Retail Trade.—A large London store informs us that retail trade has shown a slight improvement recently. The warm weather has elicited a demand for cotton goods, but checked the usual movement in woollens.

Shipping.—Continued heavy chartering of coal tonnage for the United Kingdom, coming in direct competition with the seasonal movement of grain, has enabled shipowners to make hay while the sun shone. A large amount of idle tonnage has been absorbed, but rates have nevertheless risen sharply, our Index showing a 30 per cent. advance since April last, exclusive of coal-carrying tonnage.

UNITED STATES OF AMERICA.

Reports continue optimistic, the usual seasonal falling-off in demand being somewhat conspicuously absent last month. The year is expected to produce a new "record" in steel production, and although building activity has fallen off, the automobile trade is expecting increased export business with the new models, and the textile group anticipates a steady improvement over the next few months. "Indicators" on the distribution side, such as cheque payments, car-loadings, and retail sales point to a healthy condition of affairs, and with the autumnal pressure beginning to be in evidence, money has tightened. The generally favourable crop situation promises that the balance between agriculture and manufacturing may be fairly evenly held, and that the favourable forecasts put forward regarding conditions as a whole may not be belied, at least so far as the next few months are concerned.

BRITISH EMPIRE.

Although the Canadian wheat crop largely recovered last month from the damaging heat of July, harvesting has been hampered by rain in some parts. Wool continues to reach the Australian ports in larger quantities than last year, but wheat is largely inactive. The monsoon has yet again proved very satisfactory in most parts of India. Jute and tea are expecting good results, and the situation in the cotton districts is likely to show an early improvement. Business in South Africa remains on the quiet side.

SOUTH AMERICA.

The expected favourable reaction in Argentine conditions has not made conspicuous progress, but a more favourable tone characterises reports from Chili and Brazil. Peruvian business remains sluggish. The "boycott" in Mexico is more effective in the country districts than in the capital, but declining oil production and the low price of silver are adversely affecting economic progress.

EUROPE.

The French metallurgical trades have lost the almost feverish activity of recent weeks. The wool textile industry is very busy, but silk is dull. Belgian trade is steady, while in Germany the amelioration of the recent depression continues, which are benefiting from conditions in Great Britain. Scandinavian conditions show slight change, Denmark and Norway showing a certain slow improvement, despite the generally depressed situation, while reports from Sweden and Finland all that was expected of it. Harvest prospects in these countries are, however, generally good. Polish industry maintains its recent improvement, and Czechoslovakian and Austrian conditions are somewhat better than of late. The Italian wheat, wine, and silk yields are less than last year's, but the hemp crop is excellent. Conditions are generally good as regards the textile trades, silk having recovered some of the ground recently lost, but the tightness of money still exercises a restraining influence.

FAR EAST.

Chinese business remains gravely handicapped by the unsettled state of many parts of the country. Japanese trade has not maintained its recent levels, the continued appreciation of the yen and the fall in silver having had a markedly prejudicial effect.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10, 1926 (pages 57-8) we described a new index of electrical production in the chief industrial areas of Great Britain. We show below the results achieved up to August last:—

INDEX OF PRODUCTION OF ELECTRICITY.*
(Monthly Average 1923-24 = 100.)

Date.	Britain, Excluding London and Wales.	Coal Mining, Iron and Steel, Shipbuilding, Heavy Engineering, and Automobile Construction.	Chemicals.	Marine Transport, Docks, &c.	Textiles, Cotton and Wool.
1925.

August	96	84	112	149	101

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

Apart from the chemical group, which was unchanged, and engineering, which showed a seasonal decline, the figures reveal a perceptible gain as compared with the previous month, though the general level remains well below that prevailing before the beginning of the coal dispute. Some idea of the general fluctuations of the index during the last two and a half years can be obtained from the above chart.

UNEMPLOYMENT AND THE COAL DISPUTE.

We give below a summary of the effect of the coal stoppage on employment in other industries, based on the weekly totals of workers registered at unemployment exchanges in Great Britain. The figures for corresponding weeks during the 1921 coal stoppage are appended to facilitate comparison:—
(000's omitted.)

* Average figure. † General strike, May 4-11, 1926. ‡ End of 1921 stoppage.
It should be noted in connection with the above table that the figures do not include the million-odd workers involved in the coal dispute, or the further 1½ to 1¾ millions who ceased work during the general strike.

WAGE CENSUS: TEXTILE TRADES.

IN March, 1925, the Ministry of Labour undertook an inquiry into the average weekly earnings and hours of labour of workpeople in Great Britain for the year 1924; this is the first time a comprehensive survey of wages has been made since the well-known wage census of 1906. The year 1924 was selected in order that the results might relate to the same period as the Census of Production which the Board of Trade had been authorised to undertake by the Census of Production Act, 1923.

On this occasion questions were not asked, however, as to the wages of different kinds of workers, or even for a separation of skilled and unskilled, but were confined to average earnings in four selected weeks during the year. Inquiry forms were addressed to nearly 300,000 employers, of whom 200,000 replied, and although a proportion of the replies did not contain information suitable for tabulation, it is expected that 150,000 returns will eventually be tabulated. Results have so far been issued regarding textiles, brick, cement, pottery, glass, &c., and the iron and steel and other metal industries. These three industries include approximately 2,200,000 insured workpeople, of whom 1,694,000 are covered in the Wages Census; results for engineering, the clothing trades and the remaining industries will be awaited with interest. It is not possible to compare exactly the numbers covered by the returns with the numbers of insured workpeople in the different trades, because the classification of industry adopted for the wage census follows that of the Census of Production, which is, by statute, confined to the industries in the Board of Trade's import and export list, whereas the classification of insured workpeople follows the classification adopted for the Population Census. Making the best comparison possible, however it would appear that the returns for the textile industry cover about 75 per cent. of the workpeople in the trade, brick, cement, &c., nearly 70 per cent., and iron and steel and other industries approximately 80 per cent. Information was sought and tabulated in respect of the four weeks ended January 19, April 12, July 12, and October 18, 1924. The figures for the metallurgical trades will be discussed in a subsequent article. The present review is concerned with the results for the textile group.

The following table shows the average weekly earnings in each of the four specified weeks for the males and females employed by those firms who gave separate particulars; in many cases, however, firms were unable to give information for males and females separately:—

AVERAGE WEEKLY EARNINGS.

Other textiles	9,607	47 11	20,421	24 0
	257,834	51 6	383,459	27 11

Among females, earnings are highest in the woollen and worsted, hosiery, jute, cotton, and "making-up and packing" industries and the lowest in linen, "other textiles," and lace; among males the earnings are highest in silk, bleaching, "making-up and packing," and hosiery, and lowest in linen and jute.

The Ministry's figures, as published, do not attempt to make any comparison between earnings in 1924 and earlier years. No previous official investigation of wages on a grand scale has been made since 1906, and the length of the interim is sufficiently great to destroy much of the value of the figures for comparative purposes. As a

matter of interest, however, we may set out the respective results side by side:—

AVERAGE WEEKLY EARNINGS of all WORKERS, 1906 and 1924.

Industry.	1906.*		1924.†

* Average of 12 returns, covering last pay-week in each month.

† Average of four returns, covering last pay-week in January, April, July, and October.

The 1924 figures are based on a much larger sample of the total workers concerned than are those of the earlier year, but as both may be taken as broadly representative of the various industries, comparison is not necessarily vitiated on that account, though the figures must for a variety of reasons be viewed with much reserve. There has clearly been considerable variation in wage movements as between different groups over the last eighteen years. While textile wages as a whole show an increase of nearly 120 per cent. in 1924, as compared with 1906, the increase in the case of cotton amounts to only 90 per cent., in woollens and worsteds to 150 per cent., and in silk—an industry with relatively low earnings in 1906—to no less than 180 per cent. Linon, on the other hand, another "low-paid" industry in 1906, remains one of the lowest paid to-day, while bleaching, &c., a branch which has long been regarded by some other sections of the textile trades as enjoying a privileged and quasi-monopolistic position, and enjoyed the second highest earnings of any group in 1906, has secured an increase of 130 per cent. and showed much the highest earnings in the group during 1924. These movements would seem, in many cases, to call for closer investigation than is possible in the absence of satisfactory data. In the case of the two most important groups, however—cotton and wool, which together accounted for nearly two-thirds of the workers included in the respective censuses—we can obtain a continuous picture over the whole period by examining the returns made by certain firms to the Ministry of Labour each month, and published in the *Labour Gazette*. These returns covered, in the case of cotton, about 130,000 workers in the pre-war and about 90,000 in the post-war year, while in that of wool the figures are about 70,000 and 45,000 respectively. To facilitate comparison the various amounts are stated in decimals of £1:—

AVERAGE WEEKLY EARNINGS of ALL WORKERS EMPLOYED by CERTAIN FIRMS, 1906 to 1925.

	1906.	1907.	1908.	1909.	1910.	1911.	1912.	1913.	1914.	1915.
Cotton	0.96	0.97	0.91	0.92	0.97	0.98	0.99	1.02	0.91	1.03
Woolen & worsted ..	0.79	0.79	0.77	0.80	0.84	0.84	0.86	0.87	0.84	0.98
	1916.	1917.	1918.	1919.	1920.	1921.	1922.	1923.	1924.	1925.
Cotton	1.13	1.26	1.49	2.20	2.60	2.04	1.91	1.72	1.77	1.85
Woolen & worsted ..	1.10	1.29	1.61	2.03	2.44	1.96	2.07	1.92	1.95	1.88

It would appear that from 1908 to the outbreak of war earnings in both industries showed a slow but steady upward movement, which, after a slight setback in 1914, became much more marked during the war years—especially after 1917—and reached a high peak in 1920. After a rapid decline in 1921 the trend has been somewhat obscured by quite considerable annual fluctuations, but, on the whole, earnings showed no great falling off last year as compared with three or four years ago.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, OCTOBER 23, 1926.

No. 41.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics," is 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

The usual quickening of business at this season is making what headway it can against a number of depressing factors. That in the twenty-fifth week of the coal stoppage trade would maintain even its present level is certainly more than one would have ventured to prophesy six months ago. The unemployment figures have fluctuated considerably during the past month, but are at the moment very little above the lowest point reached since the strike began. The tendency, on the other hand, for the numbers in the "Wholly Unemployed" category to increase, to which attention was drawn last month, still persists. Our index of electrical production shows signs of a seasonal quickening of business, which has doubtless been assisted by the large supplies of raw material obtained from overseas last month. The fuel situation is, however, causing anxiety. Supplies of coal from those mines which are at work have enabled local industries to augment their production, but industry throughout the country as a whole is still largely dependent on foreign supplies. As

It should be noted in connection with the above table that the figures do not include the million-odd workers involved in the coal dispute, or the further 1½ to 1¾ millions who ceased work during the general strike.

be obtained, and a more widespread belief in their continuance. The wool trade is anxiously awaiting the coal settlement, with fair confidence as regards the possibility of profitable business with wool at its present value. The chemical trades, however, are less active, and the effect of the recent spurt in pottery manufacture is subsiding. The boot and shoe trade are more actively employed, and retail business generally has responded to the more hopeful general outlook.

Outside this country conditions in the United States have so far shown no signs of any immediate recession in trade. Production and distribution are not in all cases fully up to last year's levels, but there is no evidence of stock accumulation or impending tightness of money. Except in Argentina, South American trade shows no appreciable improvement. Nearer home, France and Italy are experiencing the first signs of reaction, following a national deflationary policy, and in Northern Europe trade is inclined to dullness. In Germany, however, recovery from the depths of depression has made further headway. Trade is a little better in Southern China, but remains quiet in Japan.

The following notes on conditions in various trades and industries call attention to some of the most striking features:—

HOME INDUSTRIES.

Iron and Steel.—The heavy iron and steel trades have continued largely out of action in recent weeks. Interest is centred chiefly in the prospects of general resumption of operations in the near future. Many works have already made progress towards this end, but in all probability a general start will not take place before the New Year. Much depends upon the price at which fuel supplies can be obtained. A period of decided activity is indicated by the state of order books, but the presence of a number of pre-strike contracts on which little or no profit is to be expected makes for a certain caution.

Coal.—The steady return to work of miners in the inland districts has been reflected in a rise in home production to nearly two million tons a week. Imports show a less than proportionate falling off, but while chartering has proceeded much more cautiously this month, shipments will continue to arrive in fair quantities during the next two months. Many inquiries, both domestic and foreign, are being received for post-strike delivery, but very little actual business has as yet been actually concluded. On a final settlement of the dispute production may be expected to increase with very slight delay, pits throughout the country being in good order above and below ground.

Engineering.—Orders have continued to come in at a satisfactory rate, but the difficulty of obtaining material, particularly British material, has lately been somewhat accentuated, and deliveries have shown some degree of irregularity. Locomotive manufacturers are working on quiet though steady lines, although a number of important contracts recently secured from India and South America will make for more active production with the turn of the year. Agricultural machinery remains quiet, but the machine tool trade is rather better employed, and the improved outlook in the world's cotton trade as a whole has already been reflected in a somewhat better feeling in the textile machinery branch. Shipbuilding contracts have been placed in fair volume during the last few weeks, the prospect of a coal settlement having caused a certain "speeding up."

Electrical Industry.—The following index of production is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association. An explanation of the manner in which it has been computed will be found on page 888 of the *Economist* of November 28, 1925:—

INDEX OF ACTIVITY IN THE ELECTRICITY INDUSTRY.

December	80	80	80	76	117	86	..	..	..

The outlook for the home market was favourably affected last month by the placing of substantial contracts by authorities in Manchester and the Midlands. Demand for generating plant increased, numerous orders held back during the coal stoppage having matured. The industrial motors section reported a

slight accession of activity, but makers of switch-gear and transformers, though moderately busy on export account, were less favourably placed than during the previous month. German and Swiss competition has somewhat fallen off, and substantial contracts in South Africa and Australia have been secured by British manufacturers.

Motor Industry.—The majority of manufacturers are busy on orders placed at the Olympia Motor Show. Difficulties are reported as regards supplies of certain raw materials, but the position is otherwise satisfactory. The exhibition was well attended by traders and the general public, overseas traders in particular buying more largely than in previous years.

Cotton.—Our Manchester correspondent writes:—Spinners and manufacturers in Lancashire have again been harassed by the high price and scarcity of coal. Inquiry in piece goods has been of larger dimensions, and in certain quarters an increased turnover has taken place. The bulk of the demand has been for India in light fabrics, and certain Blackburn manufacturers have sold more freely than for a long time past. The Chinese market remains disabled, and trade is unimportant. In the American spinning section the Masters' Federation continues to maintain its short-time policy, the official weekly hours being 24. There has been a tendency, however, for spinners to increase output, and production recently has been nearly 65 per cent. of spindle capacity.

Woolens and Worsteds.—On the results of recent wool sales, in London and abroad, the trade is inclined to base its belief that a fair business may be done after the strike is settled. The price of tops has lately shown an advance, with more satisfactory clearances. Demand from consuming areas is rather better, though there is little change in the volume of production in spinning and manufacturing as compared with a month ago.

Boot and Shoe.—The position has taken a turn for the better, partly owing to improved coal supplies and partly to increased home demand in which recent weather conditions have played a part. The heavy section is better employed, and the Russian boot, the popularity of which has hung in the balance, appears to have again established itself in favour.

Pottery.—The improvement of recent weeks seems for the present to have reached its limit, and with the completion of arrears of home orders a slight slackening in production has taken place.

Chemical Industry.—Quiet conditions have prevailed in the chemical industry. Trade in coal tar products shows fair activity, due to a scarcity which is becoming world-wide rather than to an increased rate of business. This scarcity is reflected in a further decline in ammonium sulphate and coal tar sales.

Building Trades.—A seasonal decline in activity was recorded last month, and has since been accentuated by continued unfavourable weather. Employment in London and South-Eastern districts is slightly better than at this time last year, but elsewhere, particularly in areas most markedly affected by the coal stoppage, such as South Wales and the North-East Coast, the numbers employed are less than a year ago.

Agriculture.—Field work made good progress in most districts last month, and the lifting of root crops was greatly facilitated. The potato crop is light, but of good condition. Sugar beet has given a rather heavier yield than last year, the sugar content being as a rule good.

Retail Trade.—A large London store reports that retail business shows signs of steady improvement even in provincial centres adjoining mining areas. Recent cold weather has stimulated the demand for woollens and hosiery, but maintenance of supplies, pending a resumption in the coal trade, is becoming more difficult.

Shipping.—With much tonnage still engaged in the transport of American coal to Great Britain, homeward freights have remained for the most part firm on the high level established last month. The resumption of outward chartering from this country will be the signal for a gradual relapse in homeward rates, but it is likely to be two or three months before the tonnage is re-distributed normally.

BRITISH EMPIRE.

More favourable weather has facilitated the completion of wheat harvesting in Canada under better auspices than were expected. Australian wool is firm in tendency, chiefly as a result of European buying. Despite favourable auguries, Indian trade has been duller than was expected, with monetary conditions easy, but up-country clearances have lately been on a large scale, and the situation is expected to develop favourably. South African business was generally quiet last month, but in view of the better agricultural outlook, improvement is expected.

UNITED STATES OF AMERICA.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London, and may serve as an indication of the month:—

AMERICAN TRADE STATISTICS.—OCTOBER, 1926

October	125	110	148	149	148	131

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The changes in the various indices reflect a movement towards the resumption of normal manufacturing conditions last month. Allowing for seasonal changes and the natural growth of the industry, the decline in October, 1926, compared with October, 1925, was about 12 per cent. for the whole country; in coal mining, iron and steel and heavy engineering, 25 per cent.; in chemicals, 18 per cent. In textiles and in marine transport a slight increase was registered last month as compared with October, 1925, reflecting a considerable recovery from the worst effects of the coal stoppage. Resumption of activity in shipbuilding has raised the index for the North-East Coast area and the West of Scotland, but the areas manufacturing steel products are still in a state of paralysis. The process of adjustment to the special conditions caused by the lack of fuel and raw materials is now coming to an end.

summed up the situation by declaring that while certain maladjustments have appeared in a situation of general prosperity, no tendency exists towards rising prices or tightening credit, and there is nothing to show that the necessary adjustments cannot be made without serious disturbance.

SOUTH AMERICA.

Further improvement has taken place in Argentine conditions. Wheat exports have increased, and the wool situation is regarded as promising. The cattle market, however, is inactive. Brazilian monetary conditions are easier, but business remains slow. Peruvian trade continues in the grip of depression, and the promise of better things recently experienced in Chile has not been borne out in recent weeks. Mexican trade remains dull. A further contraction has taken place in the production of the silver mines.

EUROPE.

The appreciation of the franc's exchange value has already tended to bring about a slackening of French production. Belgian business is hampered by increased coal scarcity, and the necessity of making adjustments on the attainment of currency stability. The German coal industry continues active. Employment has improved in most industries, wages are again showing a rising tendency, and all indications point to a steady though not rapid trade revival. Polish trade continues on the more satisfactory lines lately established, but Czechoslovakian trade conditions remain unfavourable, apart from a certain seasonal improvement in the metallurgical sections. In Austria also improvement is seasonal. Monetary stringency is becoming more marked in Italy.

FAR EAST.

Japanese trade is not progressing so well as was hoped for earlier in the year. The continued decline in raw silk prices is causing some apprehension, and producers are limiting their output. North Chinese business is dull, but signs of revival are in evidence in the Shanghai district, while in the South generally an improvement in communications has been reflected in a greater volume of business.

UNEMPLOYMENT AND THE COAL DISPUTE.

We give below a summary of the effect of the coal stoppage on unemployment in other industries, based on the weekly totals of workers registered at unemployment exchanges in Great Britain. The figures for corresponding weeks during the 1921 coal stoppage are appended to facilitate comparison:—

(000's omitted.)

* Average figure. † General strike, May 4-11, 1926. ‡ End of 1921 stoppage.

It should be noted in connection with the above table that the figures do not include the million-odd workers originally involved in the coal dispute, or the further 1½ to 1¼ millions who ceased work during the general strike.

WAGE CENSUS.

MISCELLANEOUS TRADES.

In recent issues of this *Monthly Supplement* we have dealt with the results of the Wage Census of 1924, as regards the textile, iron and steel, engineering, shipbuilding, and metal industries. We now propose to examine the figures which have appeared in recent issues of *The Labour Gazette*, dealing with some of the smaller groups, namely: pottery, brick, glass and chemicals (covering 276,000 workers), paper and printing (233,500 workers), wood-working (174,400 workers), and clothing (486,600 persons). For considerations of space details are given in our tables only of those industries in which the Returns cover upwards of 20,000 persons. The figures are based on the results of the four weeks ended January 19th, April 12th, July 12th, and October 18th, 1924, particulars of which were collected by the Ministry of Labour.

Our first table compares the average wages of males and of females in the different branches of the various industries:—

AVERAGE NUMBERS EMPLOYED and WAGES PAID in 1924.

Industry.	Males.		Females.	
	No. of Work-people Covered.	Average Earnings in the 4 Weeks.	No. of Work-people Covered.	Average Earnings in the 4 Weeks.

It will be seen that among males wages are much the highest in the paper and printing trades, due largely to the high wages in "newspaper and general printing," where the average wage of the 85,571 males employed amounted to 75s 3d. It would be interesting to know what proportion of this total is engaged in "newspaper printing," and what in "general printing," and it is hoped that the Ministry of Labour will make this analysis in their final report. The lowest weekly earnings shown in the table apply to "mill sawing, machine-joinery, &c.," with an average wage of 51s per week, and although the lowness of this average is partly due to short-time in the January week, the highest average is only 52s 2d for the week ending October 18th. The average wage for males in the clothing industries is 54s 10d, varying from 44s 11d for the 646 males engaged in millinery and 48s 2d for the 10,012 in laundries, to 64s 3d for the 2,349 engaged in furriery and 65s 11d for the 2,095 engaged in mantle and costume making. It is interesting to note that the wages of tailors in the ready-made branch of the industry are higher by 2s 1d than in the retail bespoke branches; the average size of the firms in the bespoke trade is under 5, compared with 33 in the ready-made trade. The average wage in the pottery, brick, glass, chemical group, is 56s 6d, and varies from 51s 10d for brick, tile, &c., making, to 60s 5d for soap,

candle, oil, and tallow making. The low level in brick and tile-making is partly due to the seasonal character of this trade, the numbers employed in the January week being nearly 7,000 less than in the July week, and the average wages in the January week 6s 6d less than in the July week.

Among females the highest wages are earned by those engaged in the ready-made boot and shoe industry (30s 10d), mantle and costume making (29s 8d), newspaper and general printing (28s 8d), and dressmaking (28s 4d). The lowest earnings occurred in the pottery, brick, &c., group, where the average wage was 24s 8d per week, and as low as 22s 3d in pottery and 23s 4d in brick, tile, &c., making. Those engaged in explosives receive on the average 28s 11d per week, while the few females in cement manufacture earn on the average 29s 6d per week.

The following table compares wages in 1906 with those in 1924. In comparing the two periods allowance must be made for changes in the proportion of the sexes employed at the two periods, and variations in the numbers of juveniles and adults. It is clear that the 1924 figures relate to a much larger sample than the 1906 figures, for all groups are more than twice as big, and the woodworking group nearly three times as big, as in the former year. How far the increase is due to an actual increase in the numbers employed and how far to a greater number of returns is another question on which the Ministry of Labour may afford enlightenment in their final report.

COMPARISON OF AVERAGE WAGES, 1906 and 1924.

* Includes bookbinding and process blockmaking. † Average of 12 weeks in 1906. ‡ Average of the 4 weeks in 1924.

The effect of the working of the Trades Boards is very evident in the clothing group, where wages have risen on the average 141 per cent., the increase varying from 92 per cent. in bespoke tailoring to 146 per cent. in ready-made tailoring. Wages in the paper and printing trades have risen on the average by 154 per cent., from 95 per cent. in wall-paper manufacture to 172 per cent. in cardboard box manufacture; in woodworking the average increase of wages was 114 per cent., and in pottery, brick, glass, chemicals, &c., 105 per cent.

The Economist

MONTHLY SUPPLEMENT.

New Series.

SATURDAY, DECEMBER 25, 1926.

No. 43.

In the following pages we have aimed at compiling tables which will show summary figures for as many nations of the world as possible, and have endeavoured to combine brevity with comprehensiveness. The greater number of the figures are taken from the Monthly Statistical Bulletin of the League of Nations,* supplemented from our statistical records. We propose in these columns to give our own appreciation of the trade position, fortified by informed opinion, and to leave the figures to be interpreted by our readers each in his own way.

* "League of Nations Monthly Bulletin of Statistics," 1st 6d. Constable.

THE STATE OF TRADE AT HOME AND ABROAD.

THE return to work in the mines has occurred too close to Christmas to permit the recovery of trade in the heavy industries to get into full swing before the holidays. Production even now is not normal. There has been a certain difficulty in clearing coal from the pit head and in securing the unloading and rapid return of trucks from coal merchants. Seeing that the coal wagons of the country were distributed in a quite abnormal manner

in many districts at the beginning of the dispute, this trouble has been less than was expected. It will not be entirely overcome until prices have settled down to a new level, for until this happens buyers are keeping out of the market as long as possible. In the iron and steel industry the steel furnaces got off the mark very promptly, but the blast furnaces have been slower in lighting up, partly for technical reasons and partly because the price of coal and coke is still very high. In the circumstances it is not surprising that the composite firms controlling their own fuel supplies have got away quicker than those which have to buy in the market. A number of shipyards have more orders than they have had for some time past. In this industry, in motor engineering, and in other branches of engineering it is possible that the pace will be set by the rate at which material is forthcoming. Orders in the electrical industry show a fair increase both at home and abroad, while electricity production in the chief industrial districts rose in November, though it is still somewhat below the corresponding figure for November, 1925. But for the abnormal figure in the area in which the heavy industries are mainly situated, however, the figure would be well above that of last year.

An important feature of the month is the abandonment of short time by the cotton industry. It is clear that Lancashire could hardly hope for lower prices than those which have accompanied the present abnormal cotton crop in America. If she is ever to free herself from the expensive and disorganising system of short time she must do so now. Whether the new low level of prices will stimulate export buying to the extent required to keep Lancashire busy remains to be seen. The

wool and worsted industry has not yet experienced any definite change, but better trade in the New Year is looked for. The boot and shoe industry, on the other hand, is busy with spring orders. Retail trade is well satisfied with the Christmas demand. The pottery and chemical industries are expecting large orders in the New Year.

The unemployment figures are of less value than usual as an indicator of a change in the volume of industry, since there is the possibility of the transfer of large numbers of miners to the ordinary unemployed category, from been excluded. The foreign trade figures are also not of much importance, except to indicate our losses consequent upon the coal dispute. The figures for the eleven months of the year, however, call attention to the fact that the adverse visible trade balance at 413 millions is 72 millions larger than for the corresponding eleven months of 1925. Railway receipts are recovering, but the shipping freight boom is over. Industrial securities are steady, the market having discounted in advance the effects of the end of the dispute. Any tendency towards a psychological boom in industrials, moreover, has been damped down by the series of depressing industrial reports which have recently been issued by large concerns. The monetary statistics show next to no significant changes.

HOME TRADE STATISTICS—NOVEMBER, 1926

figure that will not involve deflation. In the Far East the political difficulties to trade remain as great as ever. In Europe the impetus given to trade by the British coal stoppage has come to an end, and France, Italy, and Belgium are all facing the consequences of stabilisation or of an appreciating currency. In Scandinavia conditions are still difficult, and it is only in Germany that the recovery from a low level of production is making substantial headway. There has been, however, a certain industrial improvement in Austria and Czechoslovakia.

The following notes on conditions in various trades and industries call attention to some of the most striking features:—

HOME INDUSTRIES.

Iron and Steel.—Events so far have largely borne out the views of those who predicted that production would not be under way until well into the New Year. Fuel supplies are coming forward fairly well but makers are inclined to hold out for further reductions. The restarting of steel furnaces has been more in evidence than the lighting of blast furnaces. Supplies of pig-iron are still extremely scarce, some producers intimating that they will have none to offer in the open market before March, 1927. Most of the blast furnaces at present blowing belong to companies possessing steel plant in addition. Most concerns have good order books, but present uncertainty as to future prices and dates of delivery is preventing much of the extensive inquiry of the moment from crystallising into definite orders. Finished steel is more readily available than a month ago, and prices have fallen. The tinplate industry is now working at about 70 per cent. of its normal capacity.

Coal.—About 730,000 workers were in employment early this month—possibly about 80 per cent. of the total expected to be employable in the near future—and production reached a level of 3½ million tons a week, or some two-thirds of the production in the last week before the stoppage. Exports have been resumed, but are in many cases in fulfilment of old contracts at prices which show very little profit. Imports of foreign coal ordered before the end of the strike are coming in in greatly reduced quantities, and will in a few weeks be negligible. British prices have not yet attained stability. Although large reductions have been made, the expectation of further concessions militates against the placing of long-period orders. A shortage of wagons has caused difficulty, particularly in Yorkshire, but this should be of a temporary character.

Engineering.—Many firms have an accumulation of orders, but are waiting until better supplies of material become available in the New Year before increasing their activity. The end of the strike has also encouraged the placing of numerous contracts, generally of fair size. Mining engineering firms have been busy carrying out adjustments necessary after the seven months' stoppage. The locomotive and carriage trades are fairly busy on orders secured some time ago, but textile engineering is quiet. The machine tool trade reports slightly improved conditions with a prospect of increased activity in the New Year. Shipbuilding contracts have been forthcoming in decidedly encouraging fashion during the last few weeks, particularly for oil-carrying tonnage.

Electrical Industry.—The following index of production is copyright by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association. An explanation of the manner in which it has been computed will be found on page 888 of the *Economist* of November 28, 1925:—

INDEX OF ACTIVITY IN THE ELECTRICITY INDUSTRY.
(1920 = 100.)

December	80	80	80	76	117	86	..	..	..

Several important orders on home and export account matured last month, but there is a tendency for inquiries to slacken on home account as a result of seasonal factors. The demand for small apparatus, meters, heating and cooking and other domestic appliances continues, while there are prospects of greater activity in the industrial motor and switchgear sections. India, South America, and the East have been the source of orders for traction material, complete power plant equipment and switchgear.

Motor Industry.—A feature of the last few weeks has been the volume of foreign orders, but shortage of materials is tending to hold back the industry. Although some of the larger works have recently secured fair supplies, many firms have

been unable to proceed with the mass production of new models exhibited at the last Olympia Show.

Cotton.—Our Manchester correspondent writes:—Trade has shown no great expansion during the last month, the majority of buyers still being inclined to act with caution. The latest American crop statistics have not brought about any distinct change in values, but have probably played an important part in the decision of the master spinners to abandon organised short time. A fair scattered business has been done in piece goods for India. Political news from China has been a little more hopeful, but trade still lags. Home trade buying has been restricted. In American yarn quotations there has been increased irregularity, and, owing to the poor demand, spinners are experiencing some difficulty in clearing their production. **Woolens and Worsteds.**—The end of the strike has induced a hopeful tone, which has not yet, unfortunately, taken any material shape. Raw wool prices are expected to be well maintained in the New Year, manufacturers having no large stocks on hand. Some improvement has been recorded in the demand for tops and yarns, but not very large quantities are moving. The makers of the better-class worsteds are more active than a month ago, but the piece goods end of the industry is still working on very restricted lines.

Boots and Shoes.—A welcome influx of spring orders has made for fuller employment in this industry, and the outlook is encouraging. Orders for the Russian boot have synchronised with the revival of colder weather, while arrears of the last seven months on the heavy side are beginning to be made up. **Pottery.**—The pottery industry is quiet, and is not expected to resume full activity until the New Year. The sections best employed are those with a large export business and makers of sanitary ware.

Chemical Industry.—Although business is generally limited to near requirements, extensive long-dated contracts are expected after the holidays. Stocks in most cases are moderate. **Building Trades.**—Activity showed a seasonal decline last month, accentuated by abnormally wet weather and a shortage of materials in some districts. Employment remains below last year's level, particularly in Wales and the North-East.

Agriculture.—Agricultural activity was greatly impeded last month owing to the heavy rainfall. The lifting of potatoes was, however, completed, the crop, though small, being generally in a clean and dry condition. Corn crops sown early have germinated well, but the condition of the later sowings is less satisfactory.

Shipping.—Since the end of the coal stoppage a fair amount of tonnage has been fixed for the coal export trade, frequently at rates above those of April last, but with a declining tendency later. Apart from heavy charterings of homeward grain tonnage from the Plate, freights have shown considerable irregularity, available tonnage being again in excess of requirements on many routes.

UNITED STATES OF AMERICA.

The following indices of American economic conditions have been forwarded to us by Moody's Investors' Service, of New York and London, and may serve as an indication of the main features in the business situation as it existed last month:—

AMERICAN TRADE STATISTICS.—NOVEMBER, 1926.

EMPLOYMENT†—(June, 1914=100) Oct. 115.9 Nov. 116.1
PRODUCTION— Compared with Nov. '25.

† Preliminary estimates made by Messrs Moody, subject to revision.
† Based on reports of U.S. Labour Bureau and of Bureau of the States of New York, Wisconsin, and Pennsylvania. ‡ Average of actual prices.

Moderate optimism still obtains, but signs of increasing irregularity have recently appeared. The volume of business is still very large, but comparisons with this time a year ago are no longer uniformly favourable. Steel production declined last month to about 75 per cent. of capacity, as against about 87 per cent. in October. Curtailment of automobile production continues, and the falling off in building operations has become more pronounced. Railway freight figures, on the other hand, have made new records, and labour is well employed throughout the country. Distributive and retail business is naturally most in the limelight at this time of the year, and here no large falling off is evident. The consensus of opinion is that while no fresh "records" are in prospect, a continuance of easy monetary conditions, high individual and collective purchasing power and improved conditions abroad should ensure sound conditions for some time.

BRITISH EMPIRE.

Canadian business is satisfactory, many branches of industry and trade being busy on Christmas orders. Indian monetary conditions remain abnormally easy, and little difficulty is expected in financing a low-priced and slow-moving cotton crop, a moderate jute crop, and a satisfactory Burma rice crop. The tendency of cotton cultivators to hold back this year's crop for higher prices has made for slow business conditions. Australian trade holds up well, and with steady wool prices and a heavy wheat crop the New Year opens propitiously. South African business is dull, though retail trade has improved seasonally with the approach of Christmas.

SOUTH AMERICA.

The decline in freight rates on the settlement of the British coal strike has improved cereal export prospects in Argentina, where trade during the past month has shown slow but consistent improvement. The decision to stabilise Brazilian currency and bring to an end the period of monetary deflation is expected to result in a betterment in the volume of general

business next year. Chilean conditions are quiet, and Mexican business is hampered by unsatisfactory prevailing conditions, but a slight improvement is reported from Peru.

EUROPE.

The continued rise in the French franc's exchange value, accompanied and evidenced by falling wholesale and rising retail prices, has put an end to all expansion in most branches of French industry. Home demand in iron and steel is limited, buyers holding off in the hope of further price reductions. The export trade is most active, but shipments are mainly against contracts made some weeks ago. Similar hand-to-mouth buying obtains in the wool and silk textile trades. Belgian trade has not come up to expectations. German trade has made further headway, coal and iron production having steadily increased, while textiles and chemicals have made a further gain. The unemployment figures, however, show a slight increase. Business in Denmark and Norway is still restricted and unsatisfactory, but the Swedish lumber situation is more promising than for some time past. Polish trade has maintained more or less the level of a month ago, but the dearth of money and uncertainty regarding the Government's financial intentions are limiting factors. Depression is less severe in Czechoslovakia, though some industries are short of fuel. Demand in Austria for textiles and metallurgical products has improved, but money remains tight. Italian business is limited by conditions of active deflation. The cotton and wool industries are quiet, but the silk trade shows a slight seasonal improvement.

FAR EAST.

The obstacles to Chinese trade brought about by political conditions have increased rather than diminished of recent weeks, but over the country as a whole, both North and South, the volume of trade has shown much of its accustomed tenacity. Japanese business shows no revival, the cotton industry being depressed, while the silk trade has found the results of the Government's recent efforts disappointing.

ELECTRICAL PRODUCTION.

In the *Economist* of July 10, 1926 (pages 57-8) we published a new index of electrical production in the chief industrial areas of Great Britain. We show below the results achieved up to October last:—

INDEX OF PRODUCTION OF ELECTRICITY.*

(Monthly Average 1923-24 = 100.)

* Prepared by the economic and statistical department of the British Electrical and Allied Manufacturers' Association.

The movement towards resumption of manufacturing activity, which was illustrated in the various indices for October, continued throughout November on a less marked scale. Comparison with November, 1925, would be misleading owing to the very rapid improvement in industrial conditions which took place in that month, but it is still fairly correct to state that subnormal conditions generally obtained in November, 1926. Textiles showed a rapid increase, however, and have more than recovered the loss on previous months, the index being now definitely higher than in 1925; marine transport is still active, with a tendency towards less prosperous conditions in the North-West; chemicals remain slightly depressed; general engineering maintains its rate of demand for electricity, while improvement, due to the higher output of coal and the resumption of work in blast-furnace plant, has characterised the North-East Coast and the West of Scotland. Sheffield, however, remains inactive. With the exception of the index for coal-mining, iron and steel, &c., all the indices came even closer together in November than in October, a fairly sure indication of reviving trade over the entire country.

UNEMPLOYMENT AND THE COAL DISPUTE.

We give below a summary of the effect of the coal stoppage on unemployment in other industries, based on the weekly totals of workers registered at unemployment exchanges in Great Britain. The figures for corresponding weeks during the 1921 coal stoppage are appended to facilitate comparison:—

(000's omitted.)

* Average figure. † General strike, May 4-11, 1926. ‡ End of 1921 stoppage.

§ Work resumed in most districts. Total unemployed, Dec. 6, 1926, 1,506,320; Dec. 13, 1926, 1,410,700.

It should be noted in connection with the above table that the figures do not include the million-odd workers originally involved in the coal dispute.

WORLD CROPS IN 1926.

TAKEN as a whole, the world's crops have made a satisfactory showing this year. In a few cases, notably maize and potatoes, yields have fallen below the average, but against them must be set plentiful harvests of wheat and rice, the staple foodstuffs of the human race, and a cotton crop which has surpassed even last year's high figures. The returns are based in numerous instances on estimates of a provisional character, and are subject to modification in the light of the results of those countries for which, as yet, no figures are available. The necessary adjustments will probably, however, be insufficient to upset the general conclusions drawn in the following paragraphs, which are based on data given in the last Bulletin of the International Institute of Agriculture.*

The following table shows the acreage and yield of the world's main cereals in 1925 and 1926, as compared with those of the quinquennium 1920-1924:—

ACREAGE and YIELD of CEREALS.
(000's omitted.)

Crop.	No. of Countries.	Area (Acres).			Production (Centals of 100 lbs.)		
		Average 1920-1924.	1925.	1926.	Average 1920-1924.	1925.	1926.
Wheat	35	195,251	195,296	202,290	1,718,037	1,823,54	1,855,220
Rye	23	41,217	44,330	43,215	446,008	550,164	470,659
Barley	33	45,805	49,501	49,462	477,485	560,695	530,922
Oats	29	9,335	102,397	102,170	1,050,940	1,175,484	1,106,061
Maize	14	124,231	124,713	127,170	1,850,545	1,897,587	1,808,122

Interest in Europe and America is chiefly centred on the results as regards wheat, the "noble cereal." Broadly speaking, the average yield in the 35 countries included above showed no considerable change as compared with the previous year, the increase in total production being accountable to the putting under cultivation of a somewhat larger acreage than in 1925. The return per acre, however, remains well above the 1920-24 average. Results have, as usual, varied considerably from country to country. Canada, with a slightly larger acreage than last year, has harvested a somewhat smaller crop, of possibly lower average grade than that of 1925, but of very satisfactory dimensions nevertheless. Spring-sown wheat has given disappointing results in the United States, but the more important winter crop, which is nearly 60 per cent. larger than in 1925, has more than counterbalanced this factor. India's harvest is slightly less than last year's, as a result, mainly, of a drop in acreage. European yields, while generally above the average, fall appreciably short of the "bumper" results of 1925. The French estimates show a drop of nearly 25 per cent., the Italian of 8 per cent., the German of 5 per cent., the English of 2½ per cent. Of the Danubian States, Hungary is down by 3 per cent., but Roumania, with a larger acreage, has increased her production by 6 per cent. No Russian figures are available, but that country is expected to figure amongst wheat exporters during the present season. The present Australian crop approaches "record" dimensions, and Argentine prospects are good, though no figures for that country are included in the table above. The International Institute estimates the world's exportable wheat supplies for 1926-27 at about 530 million centals, and the probable requirements of importing countries at 450-460 million centals, so that a fairly large carry-over may be expected at the end of the season.

The acreage and yield of the minor cereals—rye, barley, and oats—all show a certain falling off this year, though the figures in every instance are above those of the 1920-24 quinquennium. The disappointing nature of the maize figures is due to a 7 per cent. drop in the production of the United States, which normally accounts about two-thirds of the world's total out-turn.

The next table is concerned with a second group of crops destined, in one form or another, for human consumption:—

* International Crop Report and Agricultural Statistics. Compiled by the Bureau of Statistics, International Institute of Agriculture, Rome, November, 1926.

PRODUCTION of RICE, POTATOES, TOBACCO, &c.
(000's omitted.)

Crop.	No. of Countries.	Area (Acres).			Production (Centals of 100 lbs.)		
		Average 1920-1924.	1925.	1926.	Average 1920-1924.	1925.	1926.
Rice	7	24,138	24,477	24,719	458,715	469,024	498,380
Potatoes	23	22,487	22,079	22,126	2,173,208	2,446,713	2,042,157
Sugar-beet	16	3,378	3,847	3,927	696,328	897,232	739,504
Tobacco	8	2,003	2,089	1,946	16,253	17,151	16,310
Hops	4	72	75	76	769	894	896

The data as regards rice are too incomplete to be of great practical service, since they do not include any figures from India or China, the world's largest rice-growing areas. A small decline has been recorded in the Indian acreage this year, but yields should be fairly satisfactory. Japanese production is approximately equal to last year's and about 2 per cent. above the 1920-24 average, while the Javan crop is much the best of recent years. The potato crop must be counted a comparative failure this year, the abnormal summer rainfall in Europe (where about five-sixths of the world's tuber cultivation is carried on), and the subsequent drought having proved most detrimental to development. The sugar-beet figures cover about two-thirds of the world's harvests, and are less satisfactory than in 1925. The decreased tobacco yield is due largely to a decline in the area under cultivation, and will probably have as little effect on the price paid by the consumer as had the increased yields of earlier years. Hops are chiefly of European cultivation, and the figures may be modified when estimates for Germany, France, and Poland are available. So far, a fall of 6½ per cent. in England and 11 per cent. in Belgium has been set off by a 20 per cent. increase in Czechoslovakia, where improvement has in the last few years been very rapid.

The most interesting figures in our last table are those relating to the world's cotton:—

PRODUCTION of COTTON, &c.
(000's omitted.)

Crop.	No. of Countries.	Area (Acres).			Production (Centals of 100 lbs.)		
		Average 1920-1924.	1925.	1926.	Average 1920-1924.	1925.	1926.
Cotton	6	38,330	50,167	51,322	59,904	88,906	96,807
Flax and linseed	13	6,417	8,580	7,906	24,200	31,607	26,062
Silk	5	6,657	7,234	7,248	1650,270	1822,571	1815,639

* Quantities of eggs prepared for incubation, thousand ounces.
† Yield of cocoons, thousand pounds.

Although the statistics of cotton acreage and production are based on returns from six countries only, they include all producers of the first rank except India (whose cotton acreage is slightly less this year than last, but well above the average for 1920-24) and the South American States. The American figures, which are the highest in the history of that country, are the more remarkable in that they follow two seasons of more than average crops. Since 1921, when the yield per acre had fallen much below its pre-war level, owing to decreased use of fertilisers and to other conditions, a marked recovery has taken place. Prices having fallen during the last month or two to a level below that of 1913, efforts are being made to secure a considerable reduction in acreage next year, but that the "bumper" nature of the 1926 results is due, in part, to other factors is shown by the fact that while acreage this year was some 33 per cent. greater than the average for 1920-24, the crop was actually about 65 per cent. greater. The Egyptian figures were appreciably less this year than in 1925, but prices have, nevertheless, declined in sympathy with those of the American product.

The silk figures include about 90 per cent. of the ascertained world's production, apart from that of China, for which no trustworthy data are in existence. Italy has had a fairly satisfactory out-turn, despite the unfavourable season, but in many Asiatic countries the effect of excellent spring hatchings has been negated by a serious falling off in summer and autumn hatchings. Such figures as are available show a cocoon production about 25 per cent. greater than during the earlier post-war years, and nearly twice as high as in the quinquennium 1909-1913.

PRODUCTION. (Thousands of Metric Tons.)

1925

PEGASUS.

the winged horse of Greek Mythology, who, with Bellerophon, destroyed the three-headed Chimera, and was afterwards taken by the gods to Mount Olympus as the reward of great

ACHIEVEMENT

The growth of the Co-operative Insurance Society since its establishment in 1867 and the signal achievement attained during the last five years, may be best observed by a study of the following figures:—

YEAR	PREMIUM INCOME	ASSETS
1869	£276	£1,915
1880	£3,936	£15,986
1900	£27,201	£116,567
1918	£587,023	£995,003
1920	£1,384,933	£1,685,307
1921	£1,653,322	£2,082,579
1922	£1,704,699	£2,369,363
1923	£2,052,278	£2,987,160
1924	£2,489,109	£3,859,022
1925	£2,896,467	£4,929,057

Classes of business transacted—

LIFE ♦ ANNUITY ♦ PENSION
HOUSE PURCHASE ♦ BURGLARY
FIRE, WORKMEN'S COMPENSATION
HOUSEHOLDERS' COMPREHENSIVE
PERSONAL ACCIDENT ♦ LIVE
STOCK ♦ PLATE GLASS ♦ MOTOR
♦ FIDELITY ♦ WIRELESS ♦

Full particulars, with specimen rates of any of the above classes of Insurance will be gladly given. The C.I.S. has Branch and District Offices in all the Principal Towns.

CO-OPERATIVE INSURANCE SOCIETY LIMITED.

The Joint Insurance Dept. of the C.W.S. and S.C.W.S.
ESTABLISHED 1867.

Chief Office:
109, CORPORATION STREET,
MANCHESTER.

Other People's Opinions

THE DAILY TELEGRAPH (April 12)

A premium income increase of nearly £1,500 a week all the year round, succeeding past successful years, shows that the Society is well organised to undertake still larger increases in the future, and part of this organisation is the wise and safe investment of the funds that are entrusted to the Society and that will one day be needed to meet claims.

THE POLICY HOLDER (April 14)

Here we have proof of continued progress, for in the space of three years the new business of the ordinary Department has more than doubled in extent. This we regard as a beginning only of a forward movement which will reward the Wesleyan & General for its social services.

THE POLICY (April 17)

The year 1925 was a record period as regards new business in the Ordinary Branch. The number of new policies reached the large total of 8,881, assuring new sums amounting to £1,130,722 for single premiums of £1,262 and new renewal premiums of £65,645.

FINANCIAL WORLD (April 17)

A Society that has succeeded in building up such a strong position and is handling a business of such magnitude is obviously being administered with energy and sound judgment and has possibilities in the future that are . . . absolutely unlimited.

INSURANCE INDEX (May, 1926)

The eighty-fifth annual report of the Wesleyan & General Assurance Society strikes a very optimistic note, and deservedly so, for the operations of the Society during 1925 have been signalised by progress all along the line. The year has been one of excellent work and steady consolidation.

WESLEYAN & GENERAL ASSURANCE SOCIETY

GENERAL RESULTS OF THE YEAR.

In this introduction to the detailed figures for 1925 of British life, fire, marine, accident, and miscellaneous insurance business, we are concerned with the broad financial results. We show the net underwriting surplus of 22 leading companies, after allowing for claims paid and outstanding, expenses and commission, reserves for unexpired liabilities on the usual accepted scale, and expenses charged in profit and loss accounts. We have included the proprietors' share of life profits carried to profit and loss, and have taken the marine insurance profits or losses as stated by the companies. The net result for the 22 companies—including the principal non-tariff offices—is an aggregate underwriting profit of £6,740,594. In accordance with the financial principles of the insurance companies, principles upon which their security and earning capacity have always been based, the greater part of this profit has been carried to reserve undivided. This is invariably done in years good and bad. Apart from income taxes, which are properly chargeable against net profits, dividends to shareholders are to a very large extent based upon the interest earned by invested reserves, and not upon the underwriting profits.

During last year those interest earnings, net after deducting taxes and debenture interest paid out, amounted in the aggregate to £6,335,592, in addition to the underwriting profits of £6,740,594 given below. The total earnings from underwriting and interest therefore amounted to more than 13 millions for the year. Except for the four companies starred in our table, the taxes in the third column are British taxes on profits, or refunds of British taxes. Included in the figures for these four companies are colonial and foreign taxes, not chargeable on profits, but really part of the expenses of carrying on business in Dominion and foreign countries. The companies, other than these four, charge these colonial and foreign taxes to underwriting accounts instead of to profit and loss, and we suggest that this practice be generally adopted. The net amount of the taxes as shown in our table is £1,622,955:—

Total (22 companies)	6,740,594	6,335,592	1,622,955	6,708,427

* Including colonial and foreign taxes.

In the fourth column we give the amount, less tax, payable to shareholders on account of 1925. In many instances these dividends show increases on those of the previous year. The accepted practice is to increase dividends gradually as earnings from interest increase. The total amount set aside for dividends was £6,708,427. A glance at column two reveals the interesting fact that the whole of this large sum set aside for dividends, except £372,835, was provided by the net earnings from interest.

The drain upon the underwriting profits of £6,740,594 consisted, therefore, of this excess of dividends over interest receipts, and the sums required to meet taxes—in all £1,995,790. The balance of the underwriting profits, £4,744,804, remained in the hands of the companies as reserves or profit and loss balances, and became available as invested funds for the earning of interest in the future. These four and three-quarter millions of increased resources also made a substantial addition to the security upon which all the policy contracts are ultimately based. It is by following out, year after year, the principles illustrated by these figures for 1925 that British insurance companies have achieved their world-wide reputation for stability.

LIFE ASSURANCE.

NEW BUSINESS GOOD; EXPENSES LESS.

The popularity of life and endowment assurance, so marked a feature of recent years, shows no sign of abatement. The worse the trade depression the more steadily do men's eyes seem to turn towards life assurance as the one sure rock among shifting sands. We retain in our table given below the figures for 1920, the famous bumper year for new business, though in the case of many offices its records have been surpassed. Last year was emphatically good, the outstanding features being the public appreciation of non-profit life assurance at the low rates which have now become severely competitive between offices, and that strange rush after short-term endowment assurance at single premiums (the greater part borrowed from the offices) upon which we commented last year. Some details of this single premium business—colloquially known as super-tax dodging—are given in a separate section. We are not able to isolate non-profit new business except in the case of the Legal and General, which has given up issuing new policies with profits. Here we see surprising results. The new business of 1925 consisted of 6,958 policies assuring £3,811,562, as compared with 5,252 policies assuring £3,083,942 in the bumper year of 1920. Another example of largely increased business, though we cannot separate non-profit from with-profit assurance, is seen in the figures of the Sun Life office. Here we find the new business for last year 10,336 policies assuring £7,899,225, as against 12,630 policies assuring £5,312,477 in 1920. An interesting example is furnished by the National Mutual, which, while limiting the amount of new with-profit assurances accepted to £500 and upwards in the case of new entrants, revised downwards the non-profit tables. The result was a larger new business and a considerably higher average policy. The figures for 1925 were 645 new assurances for £758,672, as compared with 794 policies for 1924 assuring £672,038. The 1920 results were easily surpassed.

Our calculations of expense ratio, the proportion which the total outgoings from commission and expenses of management bear to net premium income, reveal reductions in nearly all offices. But circumstances have made these figures rather misleading. The rush for short-term endowment assurance at single premiums has added largely to the net premium incomes without involving corresponding increases on the expense side of the accounts. Should this single premium business continue as a regular assurance feature, then some adjustment will need to be made on the expense side—as has already been done by one mutual society—if only to save "expense ratios" from becoming wholly misleading. We may take it that there has been a real reduction in working costs since the high level of 1920—when commodity prices were nearly double what they are now—though that reduction in terms of premiums has not been so great as our unadjusted figures would suggest.

</

depreciation. Since 1921, however, life offices have been sailing in comparatively peaceful waters. The spectre of continual depreciation has been laid, and as income-tax has been brought down, net yields from interest have tended to rise. Life assurance companies do not pay the whole rate of tax upon their interest income. They are permitted abatement in respect of expenses of management; nevertheless, any reduction in the standard rate of tax does benefit them, or rather their policyholders, immediately and directly.

In the tables published below we give the funds and net interest yields for the years 1920, 1924, and 1925. Roughly, the improvement in net yield since 1920 has been round about $\frac{1}{2}$ per cent. per annum—less in some cases and more in others. As compared with a valuation rate of 3 per cent., the offices have a net yield from interest, after allowing for tax, of $4\frac{1}{2}$ per cent., and even more. As a general rule the life departments of the big composite offices do not show so large an advance in this respect as the mutual life offices, though there are exceptions. Taken as a whole, the margin of interest available for profits is highly satisfactory to policyholders.

INVESTMENTS IN GOVERNMENT SECURITIES.

Since we began, in our Insurance Review for 1924, to give particulars of the amounts of life office funds invested in British and Colonial Government securities there have been rather marked changes in practice. In 1924 and again last year British Government securities tended to become less popular, while Indian and Dominion Govern-

ment investments, on the whole, gained in popularity. The proportion of total funds held in securities of the British Government is distinctly lower, and in a good many instances the actual holdings are less. The offices, though showing this general tendency, differ very widely in their attitude towards the securities offered by our home Government. Among composite offices, for instance, which publish separate balance-sheets for their life departments we find the Commercial Union with 52.2 per cent. of its life funds invested with the Government, while the Alliance has 30.5 per cent. and the London Assurance has 31.5 per cent. It is much the same with the proprietary life offices. The Prudential had last year 38.2 per cent. of its funds (as against 44.7 per cent. in 1923) in Government stocks, while the Pearl had 49.3 per cent., the Sun Life 46.1 per cent., and the Clerical, Medical and General 24.7 per cent. The practice of the mutual life offices shows even greater diversities. The National Mutual had last year 52.7 per cent. and the Scottish Widows 51.9 per cent., while the London Life was content with 32.4 per cent. and the Old Equitable with no more than 15.5 per cent. The Eagle, Star, &c., company is a steady supporter of Government securities with 52.6 per cent., whereas the Friends' Provident holds no more than 8.2 per cent., and that was an increase on the previous year. The biggest change is seen in the holdings of the Norwich Union Life—which paid the Phoenix £6,088,174 in Government stock for the shares of the Norwich Union Fire—and in consequence shows a reduction in its holdings from 31.3 per cent. in 1924 to 5.9 per cent. in 1925.

MORTALITY EXPERIENCE FAVOURABLE.

The new life annuitants' table of the Institute of Actuaries has come into use for current valuations, but some time will pass before the British Offices' Life Tables, which represent the mortality of past generations, are superseded by more modern data. Their faults are on the right side, but how far they misrepresent twentieth century rates of life assurance mortality may be seen in almost every life office report. Therein we find the statement, sometimes illustrated by precise figures, that the mortality experienced during the past year has been much less than that shown by the tables employed. In some few instances offices have revised their non-profit premium rates in a downward direction—with-profit rates are corrected by bonus distributions—by making use of their own recent experience in death rates.

The divergence between actual deaths paid for and deaths "expected" by the British Offices Tables continues

to widen, and, as usual, we bring together examples taken from the latest reports of life assurance companies. The greatest divergence is shown by the temperance departments of companies like the United Kingdom Provident and the Abstainers. Here, in addition to improved medical selection at entry, and generally improved mortality, we get the self-selection of careful folk who, when giving up intoxicating liquors, give up many other seductive interferences with good health. We print below some figures of mortality experienced in comparison with mortality shown by tables.

ABSTAINERS AND GENERAL.—In the abstainers' section during the period of 42 years, 1884-1925, the actual deaths numbered 2,194, against the number expected of 4,446, or less than 50 per cent.

CLERICAL, MEDICAL, AND GENERAL.—For last year the claims by death were 61 per cent., and for the past four years 60 per cent. of the amounts expected.

EQUITY AND LAW.—The deaths claims last year were 36 per cent. of the amount expected.

NATIONAL PROVIDENT.—During last year the death claims were 58 per cent. of those expected by the tables.

NORWICH UNION.—The mortality experienced in the five years 1921-25 was 66 per cent. of that shown in the tables.

LONDON LIFE.—The death claims were 59.6 per cent. of the amounts expected.

SCOTTISH AMICABLE.—The rates of the mortality last year were approximately 74 per cent. of those expected.

SCOTTISH PROVIDENT.—In the case of this company the mortality experienced worked out at 68 per cent. of that shown in the tables.

SCOTTISH TEMPERANCE.—During the 40 years 1883-1922 the mortality rates, including war claims, were 54 per cent. of those expected.

SCOTTISH WIDOWS.—The death claims in 1925 were 68 per cent. of the expectation.

UNITED KINGDOM PROVIDENT.—In the temperance section last year the actual to expected claims were 58.4 per cent., and in the general section 83.2 per cent. The average for both sections, taken together, was 66.9 per cent.

VALUATIONS: HIGH BONUSES DECLARED.

Several important offices made their periodical valuations as at the end of last year, and the results are extremely favourable. The bonuses declared have either reached the highest previous level of the office distributions, or have surpassed them. Instead of the depreciation which worked such havoc for many years before 1921 we have many stories of an appreciation for which credit has not been taken. Again and again comes the statement that the market values of securities substantially

exceed the balance-sheet values, and have been allowed to remain as a hidden reserve to meet possible depreciation in the future. High rates of interest, providing a handsome margin of interest earnings over those assumed in the calculations; a very low mortality among assured lives; and a fall in the rate of expenditure to premiums, have all contributed to the satisfactory results. The general practice has been to declare a handsome, though not lavish, bonus, and to carry forward a liberal part of the ascertained margin between assets and liabilities.

Among the notable life offices or life departments to publish their valuation results this year are the Atlas, the London Assurance, the North British, the Northern, the Norwich Union, the Phoenix, the Royal Exchange, and the Scottish Amicable. We give below summaries of the results and bonuses, and also those of the companies which value annually. These summaries make agreeable reading, and indicate that life assurance has become established upon a sound and profitable basis, which, in so far as one can see, should endure for several years to come!

VALUATION RESULTS AND BONUSES.

ATLAS.—A valuation as at December 31, 1925, was made at 3 per cent. interest for with-profit policies and immediate annuities, and at 3½ per cent. for non-profit policies and deferred annuities. The OM (5) and British Offices' Life Annuity Tables were used. The surplus was £273,890, including £112,896 brought forward. The valuation basis was strengthened by £46,000, and £29,325 written off securities. A compound reversionary bonus for the three years 1923-25 was declared at the rate of 36s per cent. per annum, and £30,100 carried forward.

The interim bonus remains at 36s per cent per annum compound.

BRITANNIC.—In the ordinary branch the annual valuation for 1925 was made by the OM table at 3 per cent. interest. The surplus was £240,591, including £61,066 brought forward. The reversionary bonus in the immediate profit class was at the rate of £2 per cent. on sums assured, the same rate as in 1924. In the industrial department the bases were as follows:—(1) Weekly business.—All endowment assurance policies were valued on a net premium basis by the English Life Table No. 8 (males) at 3½ per cent. interest. All whole-life policies were valued on a gross premium basis by the English Life Table No. 6 (males) at 3½ per cent. interest—the margin thrown off as a provision for future expenses being 40 per cent. After eliminating negative values, the resulting margin for all classes averaged 40.4 per cent., as compared with 39.5 per cent. a year ago. (2) Monthly business.—All policies were valued on a net premium basis at 3½ per cent. interest—the Tables of Mortality being English Life No. 8 (males) for endowment assurance policies and English Life No. 6 (males) for whole-life policies. A surplus of £148,521 is disclosed, which included £35,611 brought forward from the previous year. The total surplus was £389,112, of which £131,264 went in bonuses to ordinary branch policyholders, £25,000 to ordinary branch contingency fund, £30,000 to staff pension fund, £89,584 to profit and loss, and £113,264 was carried forward.

CO-OPERATIVE.—A valuation for five years ended December 31, 1925, was made at 3½ per cent. on considerably strengthened bases. In the ordinary branch the surplus was £329,341, and in the industrial branch £42,005. A sum of £221,296 was divided

among participating policyholders entitled to share in the ordinary branch, £70,000 reserved for future bonuses to policyholders under the deferred bonus plan, and £38,045 carried forward. The immediate reversionary bonus was at the rate of £1 18s per cent. per annum on sums assured since the last distribution, and in addition a special reversionary bonus of 10s per cent. on sums assured "to holders of such policies which were in force on December 31, 1925, for every year a bonus was allotted at the 1920 valuation." At the 1920 valuation the reversionary bonus was at the rate of £1 per cent. on sums assured for each year's premium paid since the 1910 valuation. Of the industrial branch surplus of £42,005 the sum of £32,513 was apportioned to policyholders and £9,492 carried forward.

GENERAL.—Valuations for the five years ended December 31st last were made for the life business of the General Accident, &c., Company, and for three years in regard to the business of the allied General Life Company. The reversionary bonuses allotted to General Accident policyholders were at the rate of £1 15s per cent. per annum on sums assured, and the compound reversionary bonuses allotted to General Life policyholders (who entered on and after January 1, 1898) were at the rate of £1 5s per cent. per annum on sums assured and existing bonuses. The reversionary bonus allotted to General Accident life policyholders five years ago was at the rate of 10s per cent. per annum on sums assured, and the compound reversionary bonuses to General Life policyholders three years ago was at the rate of £1 5s per cent. per annum on sums assured and existing bonuses.

LONDON ASSURANCE.—The valuation for the five years ended December 31, 1925, was made by the OM table at 3 per cent. interest. No credit was taken for the appre-

ciation in the values of investments. The surplus was £576,800, including £98,595 brought forward. A compound reversionary bonus at the rate of £2 per cent. per annum on sums assured and existing bonuses was declared, £205,500 being carried forward. The interim bonuses payable during the current five years are to be at the full valuation rate. No bonus was declared on account of the five years 1916-1920.

LONDON AND MANCHESTER.—The annual valuation for the year ended March 24, 1926, was made by the OM table with net premiums in the ordinary branch and by the English Life No. 6 table in the industrial branch at 3 per cent. interest. In the industrial branch not more than 61 per cent. of the office premiums in the case of whole life assurances, and not more than the net premiums in other cases were taken credit for. The surplus was £270,801, including £74,294 brought forward. The sum of £85,644 was distributed to ordinary branch policyholders as a reversionary bonus at the rate of £2 per cent. on sums assured, £36,000 was carried to staff pension fund, £49,399 distributed in dividends to shareholders, and £89,758 carried forward. The above reversionary bonus was at the same rate as for 1924-25.

LONDON LIFE.—The annual valuation at 3 per cent. interest by the OM (5) table permitted of an increase by two for the third successive year in rates of reduction of premiums, so that for the year beginning July 1, 1926, the rates for fully-participating policies will range from the equivalent of 135 per cent. for the First Series to 52 per cent. for the Twentieth Series. The reversionary bonus in respect of policies with full participation was 36s per cent. on sums assured and existing bonuses, the same rate as for 1924.

METROPOLITAN.—The annual 3 per cent. valuation by

the OM (5) table enabled the directors to increase the respective rates of abatement of premiums by 2 per cent., carrying forward £26,646 unappropriated. The rates of abatement for the several series for the year ending April 4, 1927, will be:—First Series, 89 per cent.; Second Series, 74 per cent.; Third Series, 59 per cent.; Fourth Series, 49 per cent.; Fifth Series, 44 per cent.; and Sixth Series, 39 per cent. when entitled.

NATIONAL MUTUAL.—The annual valuation for 1925 was made by the OM tables and British Officers' Life Annuity Tables at 3 per cent. interest. The assets were revalued. The gross surplus was £686,815, including £870 paid in interim bonuses. A compound reversionary bonus was declared for 1925 at the rate of 44s per cent. on sums assured and existing bonuses, £595,648 being carried forward, as against £575,290 brought in. Interim bonuses payable during 1926 are to be at the full valuation rate. The compound reversionary bonus declared a year ago was at the rate of 42s per cent.

NORTH BRITISH.—A valuation of life assurances for the three years ended December 31st last was made by the OM tables at 3 per cent. The surplus was £1,304,704, including £43,745 paid in interim bonuses. It was decided to divide £1,250,268, leaving £54,436 to be carried forward. North British policyholders received for the three years 1923-25 a compound reversionary bonus at the rate of £1 16s per cent. per annum on sums assured and existing bonuses.

NORTHERN.—A valuation of the participating branch for the two years ended December 31st was made by the OM table, with 2½ per cent. interest (with net premiums at 3 per cent.). The securities were re-valued, but no security was taken in excess of its cost price or market price, whichever was lower. The surplus was £289,838. Policy-

holders received reversionary bonuses at the rate of £2 15s per cent. on the original sum assured for each of the years 1924 and 1925, leaving £17,529 to be carried forward. Interim bonuses for the current five years are to be at the rate of £2 per cent. per annum. Policies do not receive bonuses until after five years' premiums have been paid. The non-participation endowment and annuity branches (of which the profits belong to the shareholders) showed an aggregate surplus of £183,456, in addition to an appreciation in securities of £71,910.

NORWICH UNION.—A valuation for the five years ended December 31st last was made by the OM table with 2½ per cent. interest. The total surplus was £2,846,217, including interim bonuses of £133,423. The reversionary bonuses (the largest in its history) allotted to policyholders under the society's system will cost £2,458,409, and, after allowing for the interim bonuses paid, the sum of £254,385 was carried forward. The new series whole-life bonuses range from £2 6s per cent. per annum at age 22 up to £4 10s at age 85; for endowment assurances they range from £1 10s per cent. per annum at age 40, to £2 3s at age 60, and up to £2 16s at age 75 and over. The interim bonuses payable in 1926 will be at the full 1925 rates.

PEARL.—The annual valuation for 1925 was made in the ordinary branch by the HM table with 3 per cent. interest, and showed a surplus of £572,790, including £51,248 brought forward. The reversionary bonus for the year was at the rate of £2 per cent. on sums assured, the same rate as for 1924. In the industrial branch the basis was the English Life Table No. 6, with 3 per cent. interest, the percentage of premiums reserved for expenses being 39.5 per cent. on the whole life class. The surplus was £292,760, including £77,942 brought forward. The

PHOENIX HOUSE, KING WILLIAM ST., LONDON, E.C.4.

THE STANDARD LIFE ASSURANCE COMPANY

BONUS YEAR - - - 1926

The Valuation of The Standard will take place as at 15th November next, and With-Profit Policies effected before that date will share in the divisible surplus then declared.

The Standard is a Mutual Company, and the profits belong to the Policy-holders.

A strong Valuation means strong Reserves.

Strong Reserves mean a large interest profit. Interest Profit is the largest factor in Bonus results. The Standard values on a stringent 2½% basis. There is no stronger basis used by any British Life Company. The prospects are therefore excellent.

The Directors have increased the Intermediate BONUS

on all With-Profit Policies becoming claims by death or maturity on and after the 15th February, 1926, to 40/- % per annum.

Managing Director - NORMAN M. WALKER, F.C.I.I.

total surplus of £865,550 was allotted as follows:—£394,714 to ordinary branch policyholders, £228,225 to profit and loss, £100,000 to staff pension fund, and £142,611 carried forward.

PHENIX.—A valuation was made for the five years ended December 31st. The market values of the assets were in excess of the balance-sheet values. The basis was the OM table for assurances and OA for annuities, with 3 per cent. interest. In the participating section the reversionary bonus declared was at the rate of £2 5s per cent. per annum on sums assured, a rate higher than that declared on any former occasion. In the non-participating section £100,000 was carried to profit and loss. The balances carried forward were £128,045, as against £84,369 brought in. Interim bonus for the current five years has been provisionally fixed at £2 per cent. per annum on death claims and £2 5s on endowment assurances maturing. There was no bonus distribution on account of 1916-1920.

PIONEER.—The bases for the valuation as at March 31, 1926, are stated to have been again improved, the proportion of office premiums reserved for future expenses being raised from 34 per cent. to 34.5 per cent. over the whole industrial business, representing 27.5 per cent. in respect of monthly premium policies and 35.05 per cent. for weekly premium policies. A special reserve of £5,000 has been created towards meeting additional liabilities accruing in 1928 imposed by Industrial Assurance Act, 1923. The life assurance funds, valued at £536,584, showed a surplus over liabilities of £8,731. The valuation rate of interest was 3½ per cent.

PRUDENTIAL.—For the past year the ordinary branch was valued by the OM table at 3 per cent. interest. The surplus was £2,727,974, including £330,111 brought for-

ward. The reversionary bonus for 1925 allotted to ordinary branch policyholders was at the rate of £2 2s per cent. of sums assured (the rate for 1924 was £2 per cent.). The ordinary branch surplus was apportioned as follows:—£500,000 to investments reserve fund, £1,837,308 in bonuses as above, £202,718 to profit and loss, and £187,948 carried forward. In the industrial branch the surplus was £4,359,811, including £160,402 brought forward; the English Life Table No. 8 was used with 3 per cent. interest. The net ratio of expenses to premiums in the industrial branch last year was 26.59 per cent., as against 27.86 per cent. in 1924 and 40.5 per cent. in 1920. The industrial branch surplus was apportioned:—£500,000 to investments reserve fund, £2,097,737 set aside to provide a bonus for industrial policyholders, £647,282 carried to profit and loss, £440,945 reserved as a bonus to the outdoor staff, £250,000 transferred to common contingency fund, £167,979 to special contingency fund, and £255,868 carried forward. The bonus to industrial policyholders took the form of a contingent reversionary bonus, vesting after 10 years from the date of the policy, of £1 10s per cent. on the sum assured, added to all with-profit policies issued on and after January 1, 1923, and on which premiums were being paid on December 31st last. It was decided that the reversionary bonuses declared for 1923 and 1924 should vest after 10 years instead of after 15 years.

REFUGE.—The annual valuation for last year of the ordinary branch was made by the HM table, with 3 per cent. interest. The surplus was £1,340,848, including £545,669 brought forward. A reversionary bonus of £2 per cent. was declared for the year in the ordinary branch (the same rate as for 1924), £565,768 being carried for-

ward. The industrial branch was valued by the English Life Table No. 8, with 3½ per cent. interest for weekly whole-life assurances and 3 per cent. for the remainder. The valuation was on a net premium basis, except for weekly whole-life assurances, in which the reductions in the office premiums before valuation averaged 36.29 per cent. The surplus was £49,121.

ROYAL EXCHANGE.—A surplus of £754,350 was shown by the valuation for the five years ended December 31st last. A compound reversionary bonus has been allotted to participating policyholders at the rate of £1 15s per cent. per annum on sums assured and existing bonuses, costing £551,888. The proprietors' share in the surplus was £75,435, and £127,027 was carried forward. There was no distribution of bonuses at the 1920 valuation.

SCOTTISH AMICABLE.—A valuation was made for the five years ended December 31st last. The balance of profit on realisation of securities was applied in writing down the remaining assets, and the market values were then substantially in excess of the amounts in the balance-sheet. Assurances were valued by the OM and OM (5) tables, at 3 per cent. interest, and annuities by the new Annuity Table, at 3 per cent. The total surplus was £1,079,699, including £52,166 paid in interim bonuses. Ordinary with-profit policies received reversionary bonuses at the rate of £2 per cent. per annum on sums assured and existing bonuses, £100,000 was carried to general reserve, and £189,024 forward, as against £101,443 brought in. Interim bonuses will be at the rate of £1 15s per cent. per annum. Five years ago the bonus was at the rate of £1 10s per cent. per annum.

SCOTTISH LIFE.—The valuation for the five years ended December 31st last was by the OM table, with 3 per cent. interest. No credit was taken for appreciation in the

value of assets. The surplus was £615,731, including interim bonuses paid of £30,009. On policies effected in and since 1920 the reversionary bonus declared is at the rate of £2 2s per cent. per annum. The interim bonus for the current five years will be at the rate of £2 3s per cent. per annum. In respect of policies effected before 1920 there was a special bonus at the rate of £2 7s per cent. per annum. Interim bonuses will be £2 3s per cent. per annum on whole-life policies, and £2 7s on endowment assurances matured. The balance carried forward was £25,376, as against £11,550 brought in. At the 1915 and 1920 valuations the bonus was at the rate of £1 per cent. per annum.

STANDARD.—In connection with this company's centenary and new Act of Parliament, under which the management and control have become vested in the policyholders, a special valuation was made as at November 15, 1925. The basis for assurances was the OM (5) table, with 2½ per cent. interest (3 per cent. for net premiums valued). The results permitted the directors to increase the rate of intermediate bonus payable on claims to 40s per cent. per annum. Under the new Act of 1925 £850,000 of 5 per cent. perpetual stock was created and allotted to the shareholders in lieu of their share capital and of their right to a proportion of the profits.

WESLEYAN AND GENERAL.—The annual valuation for last year was made in the ordinary branch by the OM table, at 3 per cent. for with-profit, and 3½ per cent. interest for non-profit assurances. The surplus was £130,019, including £31,402 brought forward. A reversionary bonus of £2 per cent. (becoming effective when a policy has been two years in force) was declared, the same rate as for 1924. After transferring £5,000 to investment reserve and £10,000 to staff pension fund,

£38,867 was carried forward. In the industrial branch, valued by the English Life Table No. 6, with $3\frac{1}{2}$ per cent interest, the provision for future expenses was 35.13 per cent. of the premiums. The industrial surplus was £34,645. After transferring £5,000 to investment reserve, and £10,000 to staff pension fund, £19,645 was carried forward, as against £18,704 brought in.

FIRE INSURANCE.

A FAVOURABLE YEAR OUTSIDE AMERICA.

Apart from the experience of British companies and their American subsidiaries in the United States last year, the fire insurance results were favourable. But the business done by many companies in America is so large that the profits or losses made there in any year dominate the accounts and determine the general character of the "fire insurance year." We give in our next section details of the American results; in this general article we are concerned with the results as a whole over the world-wide business of the British offices.

The aggregate premiums of 21 companies, after deducting re-insurance premiums, amounted to £53,157,936, and in nearly all cases there was an increase in premiums during the year. After allowing for claims paid and outstanding, expenses and commissions, and the increase in the reserves for unexpired liabilities, the aggregate underwriting surplus amounted to £4,048,651, or 7.6 per cent. of the premium income. This was the trading profit. All the companies, except the Motor Union in its fire account,

showed a profit. We welcome back into the ranks of the companies showing independent returns that fine old office the Norwich Union Fire, of late years absorbed by the Phoenix, but last year sold by the Phoenix to the Norwich Union Life Assurance Society. The most successful company last year was the Alliance, which does no fire business in the United States, with a surplus of 19.3 per cent. of the premiums against 22.5 per cent. in 1924 and 15.2 per cent. in 1923. These are remarkable results, and are due to the Alliance's very choice and carefully-managed home fire connections. Next comes the London and Lancashire with a surplus of 14.6 per cent. against 13.1 per cent. in 1924 and 13.4 per cent. in 1923. The London and Lancashire has been notably successful in the United States in recent years. The Guardian, which, like the Alliance, keeps out of the United States, had a surplus for last year of 14.5 per cent. as against 14.9 per cent. in 1924 and 11 per cent. in 1923. The Sun, which did not do well in America, so far recovered on the rest of its business—it has old and very valuable connections at home—as to show a surplus of 12.1 per cent. as against 12.2 per cent. in 1924 and 11.9 per cent. in 1923.

The very big companies more nearly approached the average in their surpluses or fell below it. The Royal had a surplus of 7.3 per cent., as against 7.9 per cent. and 8.4 per cent. in the two previous years; the Commercial Union showed a surplus of 6.8 per cent. as compared with 7.1 per cent. and 7.4 per cent.; the North British did well with a surplus of 9.1 per cent. as against 9.6 per cent. and 8.8 per cent.; the Phoenix (for last year shorn of the Norwich Union Fire) had on its smaller premium income a surplus of 6.6 per cent. as against 6.4 per cent. in each of the years 1924 and 1923; and the Liverpool and London

and Globe (now owned by the Royal) had a small surplus of 4.4 per cent. as compared with 5.9 per cent. in 1924 and 5 per cent. in 1923.

In our tables below we give comparative figures in most cases for the four years 1922, 1923, 1924, and 1925. It will be observed that, taken as a whole, last year's results do not compare unfavourably with those of the previous three years.

PROFITS AND LOSSES IN THE UNITED STATES.

Although there was no conflagration of moment in the United States last year, and premium incomes generally increased with the large expansion in building operations, the severe competition tended to keep down rates and to make fire insurance business rather unprofitable. The aggregate net premiums of 21 British companies and groups (of American subsidiaries) amounted to £32,924,051, as compared with £31,153,604 in 1924, an increase of £1,770,447. The claims were 51.5 per cent. of the premiums, as against 53.9 per cent., and the total expenses were 45.1 per cent., as against 45.6 per cent. After allowing for the increase in liabilities for unexpired risks on the standard British basis of 40 per cent. of the increase in premiums, there was an aggregate surplus of £382,863, or 1.2 per cent. of the premiums, as compared with an aggregate surplus for 1924 of £720,064, or 2.3 per cent. of the premium income. These profits can only be described as poor when we set them against the large amount of business done and the huge risks undertaken.

The results for the individual companies have been calculated on the same basis as for the aggregate results, the reserves for unexpired risks being taken at 40 per cent. of the premiums. Of the companies whose figures for the three years 1923, 1924, and 1925 are given in our tables, the most successful was the London and Lancashire, with a surplus of 6.9 per cent. of the premiums, as against 6.7 per cent. in 1924 and 11.3 per cent. in 1923.

Next came the Scottish Union, with a surplus of 6.4 per cent., as against 8.2 per cent. and 5.4 per cent. Of the big companies, the Royal did well to achieve a surplus of 4.5 per cent., as against 3 per cent. in 1924 and 7.2 per cent. in 1923; the North British also did fairly well with a surplus of 3.9 per cent., as against 5.3 per cent. and 6.1 per cent.; and the Phoenix, with 3.8 per cent., as compared with 5.9 per cent. and 3.4 per cent. Many of the other companies or groups showed underwriting deficiencies.

ACCIDENT AND MISCELLANEOUS INSURANCE.

FAIRLY GOOD RESULTS.

A very great expansion has taken place in recent years in the motor car, accident, employers' liability, and miscellaneous sections of insurance business. Some of the British companies—notably the Employers' Liability, Commercial Union, Royal, Liverpool and London and Globe, Phoenix, and General Accident—do a big "casualty" business in the United States, and the ex-

pansion in the use and insurance of motor cars, both private and commercial, has made motor car insurance second only in volume and importance to fire insurance itself. The importance of the once despised miscellaneous branches was seen during the late British general strike, when the insurance offices stepped in and powerfully assisted road transport by covering, without extra premium, the risks of private motor cars against damage in riot and civil commotions. These risks, in so far as they affected property, were generally covered during the strike at 3d per cent.

Workmen's compensation business in the United States has been improving since 1923 by the official revision upwards of notoriously unprofitable rates, and the general results for last year over the whole of the accident, motor car, and miscellaneous categories have been fairly satisfactory. The margin of profit has not been large, but for all companies in our tables it has been on the right side. This is in striking contrast with the long list of deficiencies in American fire underwriting.

The aggregate net premiums of 22 companies for last year came to £46,948,670, and the aggregate surplus—after allowing for claims, expenses, and unexpired risks—was £2,003,760, or 4.2 per cent. of the premiums. The Alliance did well with a surplus of 11.5 per cent., as against 9.6 per cent. in 1924 and 9.3 per cent. in 1923. The North British, through its valuable subsidiary the Railway Passengers' Company, had a surplus of 9.6 per cent., as compared with 10.3 per cent. and 13.7 per cent. in the two previous years. The London and Lancashire's 8.8 per cent. surplus also was fairly good, though the 9.5 per cent. of 1924 and the 12.2 per cent. of 1923 were better. The very large Commercial Union (with the Ocean) yielded the average surplus of 4.2 per cent., against 3.9 per cent. and 2.1 per cent., and the Phoenix (which has been revising the acquired business of the London Guarantee and Accident) did better in 1925 with a surplus of 2.3 per cent., than in the previous years, when deficiencies were shown. The Scottish Union, with 9.3 per cent. surplus, and the Atlas, with 9 per cent., had

REFUGE ASSURANCE CO. LTD.

ESTABLISHED 1864

Chief Office:
OXFORD STREET
MANCHESTER

(For the Year ending December 31st, 1925)

ANNUAL INCOME EXCEEDS

£8,500,000

ASSETS EXCEED

£32,000,000

CLAIMS PAID EXCEED

£46,000,000

IS YOUR INCOME SAFE?

Dividends have a habit of crumbling. No matter how carefully you arrange your investments, you can never be sure that next year will not find you worse off than you are to-day. Can you afford to take the risk?

You can get a guaranteed income for life if you purchase a Canada Life Annuity. It is, humanly speaking, equivalent in safety to a Government pension. It cannot shrink. What you contract to get is paid you punctually. And you get a much larger income.

FOR INSTANCE—

A man of 62 who takes out a Canada Life Annuity for £1,000 gets a yearly income of £100 12s. 1d. A woman of 67 gets a yearly income of £101 12s. 6d. for the same investment.

OVER 10% PER ANNUM

Other ages pro rata, on equally generous terms. You can invest any amount from £100.

The Assets of the Canada Life Company are over £23,000,000, and are under direct Government supervision. Write at once for full particulars to the Canada Life—the oldest Colonial Life Assurance Company, and the office that gives the best value for Annuities.

Write to-night (stating age) to J. R. Wandless, F.I.A.

MARINE INSURANCE.

CONDITIONS STILL UNPROFITABLE.

Marine insurance, immensely profitable during the war, has become of late years rather a melancholy subject. Although many efforts have been made to improve the conditions under which time risks upon hulls are written, this important branch is still regarded as unprofitable. The market is too big for the business offering, and though underwriters are showing more willingness to reduce their lines, the conditions remain unfavourable for any real improvement in rates. The companies are marking time and trying to keep themselves from suffering losses.

We give below the figures for five closed years of the companies which present their accounts on the Liverpool form, under which underwriting accounts are kept open for two years and are then closed with a transfer to suspense account. The year 1924 for these five companies closed with two small profits, two "as you were's," and one considerable deficiency. The Merchants' Marine Company, since its purchase by the Employers' Liability, has turned out so badly that the purchasing company is prudently writing down the purchase price in its balance-sheet.

For eight other companies, which adopt the fire insurance practice of presenting premiums, claims, and expenses for each year, we give the results for eight years, and then reckon the aggregates of premiums, claims, and expenses. It would appear from the remarkable results achieved by the Commercial Union—with claims and expenses in eight years amounting to no more than 72.3 per cent. of the premiums—and the favourable figures of the London and Lancashire (which includes the fine business of The Marine Company), that there is still money to be made out of marine insurance, especially in cargo business, by the careful selection of risks underwritten. The consistent earning capacity of the Commercial Union, in bad as in good years, always has been a bit of an insurance market mystery for 30 years past. In the eight years 1918-25 all the companies, except the British Dominions, which just about balanced premiums against claims and expenses, come out with a margin on the right side. Two of these years, 1918 and 1919, were profitable.

Sums assured at age 11 for a Weekly premium of One Penny ...	£10.5/-	£12	£14.12/-
Profits allocated to Industrial Branch policyholders in each of these years ...	£200,000	£906,650	£2,097,737

Free policies are now granted under both weekly and monthly premium policies, provided they have been 3 years in force.

Extract from Chairman's Speech—4th March, 1926.

"It is an economic fact that a properly organised and adequate system of insurance costs a nation far less than haphazard and expensive palliatives to which it is otherwise compelled to resort after the event. We do seriously contend that the achievements of the Prudential in the past, and its possibilities for the future, contain a guarantee that the Prudential system can and will provide, for all sections of the community, assurance at an economic cost which is not attainable by any other means."

The Economist FRENCH FINANCIAL SUPPLEMENT.

SATURDAY, JULY 31, 1926.

REPORT OF THE EXPERT COMMITTEE.

Whatever may be the immediate fate of the Report produced by the Committee of Financial Experts appointed by M. Peret, there can be no question but that it marks an important milestone in the post-war financial history of France, and will occupy in the French banking, economic, and financial sphere a place similar to that held by the Cunliffe Reports in this country. It is an authoritative statement of French banking and economic opinion, and whether it is adopted in full or not, it will be a standard by which to judge future French policy. In view of its importance we, therefore, give our readers the following verbatim translation of the report.

INTRODUCTION.—THE WORK OF THE COMMITTEE.

THE Committee of Experts, appointed by the decree of May 31st, has been entrusted with the task of advising on the questions submitted to it by the Ministry of Finance, especially on the measures necessary to secure the re-establishment of a sound financial position.

It has, in fact, been bound to examine the whole broad problem, which it considered incapable of sectional treatment, embracing, as it does, questions of money, of public credit, of the Treasury, of the general economic position of France. During its daily sittings it has conducted a detached and methodical examination of the problem.

It gladly recognises that all the documentary evidence required has been placed at its disposal. The help which it has received from the Ministry of Finance and various technical advisors has been valuable, and for this assistance the Committee expresses its gratitude.

In the solutions put forward in this report, little that is new will be found. The range of available solutions is, indeed, extremely limited, long familiar to experts, and freely discussed both in economic circles and by the general public.

Need it be said that no political bias or doctrinaire preference has restricted the outlook of the men of widely differing views to whom this task has been committed?

The recommendations which they make will perhaps dispel certain illusions. They imply, in effect, new sacrifices from all classes, or rather they reveal clearly the true nature of the burdens which, though not fully perceived, are already crushing the nation, whose very unawareness may prove its undoing.

The Committee considers that the time for half-truths is past.

It has endeavoured to disentangle the essential features of the financial situation, and to present a complete and orderly plan. It feels bound to state, at the outset of its report, that it is useless to undertake the work of reconstruction without the will to carry it through to the end, or to separate particular parts of its plan from the rest, since such omissions might compromise everything. The report forms an integral whole.

In the present phase of monetary disorganisation the carrying out of a programme of financial restoration demands a rapidity and decision, and often a discretion, hardly to be reconciled with the inevitable delay and uncertainty of Parliamentary procedure. When it is a question of defending the national currency, the executive power, with its machinery for action, is alone equal to the task of meeting emergencies, repelling attacks, and taking advantage of favourable circumstances. The

adoption of the reorganisation scheme as a whole, and the voting of the necessary resources, can only come from Parliament. But this once quickly accomplished, it is essential that Parliament should hand over to the Government, in the fullest measure permitted by the Constitution, the duty and the responsibility of carrying out the plan of restoration.

I.—FEATURES OF THE PRESENT SITUATION: OBJECT OF THE REPORT.

The essential feature of the present situation is monetary instability. Its origins have frequently been described; its consequences are felt by everyone who, as regards his patrimony, his business, and even the conditions of his daily life, experiences the reactions of national impoverishment.

Nevertheless, public opinion remains strangely blind on this subject. Many foreigners misunderstand the underlying causes of the French situation. As the result of a superficial survey, they go on repeating, all round the world, that France is rich; that it has not been impoverished by the war; that it is merely the victim of bad financial policy; that the recovery of a stable currency lies in its own hands. To deal faithfully with these facile critics, it is necessary to repeat once again that the fall of the franc originated in the frightful destruction of wealth resulting from the war, the enormous expense of defending an invaded country and protecting the freedom of the world, and the necessity of bearing alone the burden of restoring the devastated territories.

No one thinks of denying that the legislature has been too slow in voting necessary taxes, that there have been abuses of inflation and of loan policy. Indubitably, mistakes have been committed. But, when all is said and done, these mistakes are trifling in effect in comparison with the decisive cause of the fall of the franc—namely, the crushing burdens due to the war and its consequences.

Many Frenchmen long hugged the illusion that Germany would bear a large part of these burdens, and that the Allies would generously wipe off the state debts contracted for the defence of a common cause.

To-day, these illusions are shattered. Our claim upon Germany is fixed. Our debts to the United States and Great Britain are about to be fixed likewise. It is doubtful whether the net result of these settlements will leave any substantial margin in our favour. Compensation to war victims, reconstruction of devastated areas and of the nation's industrial equipment, will, for the most part, be ultimately paid for by French capital. It is not in the Committee's province to frame protests on this matter. It does, however, believe that one clear conclusion

emerges from the above brief recapitulation—we must rely upon our own efforts to put our financial house in order, to restore our credit, and to protect our economic independence. The more clearly we demonstrate our determination to put matters right, the more favourable will be the terms upon which foreign assistance will be made available.

The task is not impossible, but it will be long and painful. Before considering the stages through which it can be accomplished, it is first necessary to determine the end to be attained. This end, the Committee states emphatically, is monetary stability. The fall of the franc has seriously damaged the economic life of the nation. It has aggravated the destruction of capital wrought by the war. The country has been under the impression that it was maintaining its spending power, while it was actually dissipating its heritage.

Trade and industry, it is true, have enjoyed apparent prosperity. Even now there is no unemployment, sales are easy, export is active. Many French people are living in a fool's paradise. Enlarged paper profits, in many cases, do not represent any real profits at all. The people of France are working and producing; the majority of them, unawares, are growing poorer.

Some new fortunes have been made. They are too often the unwholesome and perishable fruit of franc depreciation, which, by automatically lightening debts, brings easy profit to debtors; but creditors grow weary, the spirit of thrift disappears, credit becomes impossible, production is threatened.

In France, a country of middle classes, a country whose industrialisation is limited, a country whose prosperity depends, above all, upon the ability to save, monetary instability is particularly serious. If prudence were to be discredited, if the attraction of speculation and gambling were to take the place of devotion to effort and productive work, we should very soon see an end of our best national traits.

In order to protect the economic life of the country it is necessary to restore to the franc the fundamental characteristic of a currency stability.

This appears all the more essential as one reflects upon the reactions of the fall of the franc in the sphere of public finance. If currency depreciation lightens the real burden of the charges of the National Debt, it at the same time makes more burdensome the liabilities of the State in the rôle of consumer or foreign debtor; it is the creator of the disorganisation which it accentuates; Budget forecasting and reasoned fiscal policy become impossible; public credit disappears.

The State cannot live without credit. If it is resolved not to have recourse to borrowing to meet new expenditure, the renewal and consolidation of debts previously contracted must be assured.

This necessity has been overlooked in the course of the last few years. After an abuse of appeals for credit, which has undermined all confidence in the execution of State engagements, new apprehensions have been excited by various threats in relation to capital. Thus Budget deficits, together with the cost of Reparations, have encouraged an abuse of share issues, and an even graver evil, inflation. This has caused the rise in the exchanges and the rise in prices which, in turn, by shaking the position of the Treasury and compromising the balance of the Budget, produces fresh inflation. An end must be put to this process.

The Committee's Report shows how public finance can be put straight, in its view, by balancing the Budgetary and Treasury accounts. It adds, however, that these recommendations are not to be separated from the basic problem to which all its other recommendations are specifically addressed—the stabilisation of the currency.

The diffusion of National Defence Bonds has made the Treasury the greatest of deposit banks. It can only recover the confidence of its clients and meet its engagements when the holders no longer see the value of their scrip melting away in their hands. To renew and consolidate the bonds the State must offer its lenders a security guaranteed by a stable currency. This conclusion inspires the entire Report. Before reaching it the Committee examined the hypothesis of a return of the franc to pre-war parity. It rejected this on grounds that appeared to it to be decisive.

The integral revalorisation of the franc is chimerical to-day, because it implies a continuous and systematic deflation ruinous to the taxpayer, who would be crushed by the burden of a National Debt equal in nominal value to the entire wealth of France, and not less ruinous to industry, commerce and agriculture, which could support neither an indefinite reduction of prices nor the effect of engagements contracted since depreciation began.

Incessant adjustments of prices, wages, and interest would cause perpetual economic crises so severe as to involve a constant upheaval of social life. For a very long period the worker would be deprived of any security for the morrow. Such a policy would not conduce to increased justice, since those who profited by this new period of instability would not be the victims of the earlier period. Actually, in modern economic life, contracts are renewed, shares change hands, and goods pass too rapidly to afford any hope of redressing injustice by a long process of revalorisation of the franc.

These reflections have convinced the Committee that the franc must be stabilised as soon as possible; its task has been to determine the conditions in which that can be done.

II.—CONDITIONS OF A STABLE CURRENCY.

The franc will not be completely stabilised until the holder of notes has the right to demand a sum in gold corresponding to the nominal value of his note—until, that is to say, forced circulation has been abolished. As the Committee will show later, such abolition does not necessarily imply the return of the franc to pre-war parity; it demands solely a new legal definition of the value of the franc. This legal stabilisation is the logical consummation of all the reforms recommended by the Committee; it will set the sanction of definite accomplishment on the work of rehabilitation and re-establish French currency on a wholly sound basis. But the Committee refrains from advocating the immediate passage of such a stabilisation law; it regards it as essential that it should be preceded by a considerable period of actual stabilisation. The conditions of such a stabilisation are partly moral and partly technical.

From the moral point of view, confidence in the currency needs to be established by appropriate measures, such as the Committee will set out. Frenchmen and foreigners alike must have absolute confidence in the security of capital, in respect for engagements, and in a continuity of policy, without which the plan is impracticable. From the technical point of view, actual stabilisation pre-supposes—

1. Equilibrium in the trade balance, obtained by arresting the escape of French capital, securing of exceptional and provisional foreign credits, and ensuring a progressive return of expatriated French capital.
2. Absolute realisation of budget equilibrium.
3. Treasury equilibrium.
4. A definite settlement of our foreign debts.
5. Adaptation of the general economy of the country to the new monetary situation.
6. The existence, in the bank of issue, of cover in gold and foreign currency sufficient, with its commercial assets, to back the note circulation.

In the following chapters the Committee examines these technical conditions in detail. The problem presents serious difficulties, but it will be seen that it is not insoluble, provided that the measures recommended are accepted and carried out as a whole.

III.—THE BALANCE OF PAYMENTS.

The state of the French trade balance is a basic factor in currency stabilisation, but its analysis permits of more or less approximate results only; nevertheless, the following general conclusions may be drawn:—

I.

Before 1914, France generally had a favourable trade balance. It exported less than it imported, but the adverse balance was more than compensated by income drawn from investment abroad, and every year showed a credit balance of capital capable of fresh investment abroad.

II.

This state of things was profoundly altered by the war. On the one hand, our holding of foreign stocks diminished considerably in amount, many of our debtors

having repatriated or refunded the securities; moreover, it depreciated either as a result of the total default on the part of certain borrowers, or of the failure of others to meet their contractual obligations (payment in gold, for example). On the other hand, the adverse trade balance, which averaged 1,500 millions before the war, rose from 1914 to 1920 to a total of 109 milliards of francs. The steady piling up of this adverse trade balance made us foreign debtors on a large scale. If, during the war, the exchange preserved a certain measure of stability, this was wholly due to the extensive credits granted us from abroad. The exchange crisis of 1919-20 was caused by the cessation of these credits.

III.

Since 1920, the trade balance has stood round about equilibrium, and other important elements (invisible exports, expenditure in France by foreigners, &c.) have come in to reduce our debt burden.

During the last three years the foreign trade position ought to have been easily enough balanced, but the sale of francs on a large scale by foreigners, and the export of French capital, to an amount very difficult to estimate, have had the most disastrous reactions on our national economy, and acted as a determining factor in the fall of our exchange.

At the same time, the foreign holdings thus built up form an available reserve capable of rendering effective assistance to maintaining the stability of the franc, when that has been rendered possible by other measures.

Measures designed to facilitate the repatriation of such capital will, *pari passu*, rectify our adverse trade balance. The actual position of that balance does not appear to be of a nature to prevent the work of stabilisation.

IV.—BUDGETARY SITUATION.

The Committee heard the Director of the Budget, who put before it a document on the Budget situation, of which the main features will be found in the Annex.†

The Committee recalls that in the 1926 Budget the distinctions between ordinary, extraordinary, and special Budgets was abolished.

The general Budget for 1926 is as follows:—

Receipts	37,498,739,468
Expenditure	37,338,389,202
Surplus	160,350,266

Outside the general Budget, 12 subsidiary Budgets amount to a total of 6,636,523,202. Of these 12, the most important are: Posts, Telegraphs, and Telephones (2,662 millions); State Railways (2,140 millions); Alsace and Lorraine Railways (1,013 millions).

The summary survey of the budgetary position may be completed by recalling that the net receipts accruing from payments made by Germany in execution of the Peace Treaties do not appear in the Budget, and are carried to the credit of a special Treasury account.

In Annex (2) a detailed note will be found on the utilisation of the sums paid by Germany. Here the Committee need only note that the Treasury from now on is released from any indemnity payments to sufferers from war losses (*Sinistrés*) in the devastated areas; an important result secured, for the first time, in the 1926 Budget.

Examination of the Budget situation led the Committee to the following conclusions:—

(a) The Actual Situation.

1. A serious effort has been made to balance the Budget for 1926, but the Budget actually voted shows a very narrow margin of receipts over expenditure—160 million francs on a total of 37 milliards, or about 0.43 per cent. Indirect taxation, whose yield was estimated on the basis of 1924 collection, has already appreciably exceeded that estimate, to an extent which, it may be hoped, will, by the end of the year, cover the additional credits granted during the financial year.

2. Three essential reservations must be made from the generally satisfactory impression left by an examination of the Budget position.

(a) There is a danger that the balance of the Budget may be upset by the variations of the exchanges and the rise of prices.

(b) From now on expenditure votes are likely to increase to meet the increase of salaries, and the expense of the expeditionary forces in Morocco and Syria (second half-year).

(c) Certain expenses, left to the Treasury account in the 1926 Budget, ought to be incorporated in the Budget.

(a) *Budget, Balance, Exchanges, and Rising Prices.*—The Budget provision, whether under receipts or under expenditure, dates from a time when neither exchanges nor prices had reached their present level. It was fixed at a moment when

† Annex 1.

the £ sterling was quoted at 125f, whereas to-day it stands about 170. Every upward movement of the exchange and of prices which carries with it an immediate increase in certain expenses (foreign debts, purchase of commodities, material, &c.), compromises the balance of the Budget; therefore, it is essential to remove it as far as possible from the effects of variations in prices and exchanges. The Committee's views on this subject will be found in the chapter on fiscal questions.

(b) *Credits Increased for the Second Half-Year.*—In the same Annex will be found an estimate of the increased credits necessary to meet the increased cost of official salaries, and the expenses of the expeditionary forces in Morocco and Syria for the second half-year.

(c) *Expenses to be Incorporated in the Budget.*—For too long the budgetary deficits and extra budgetary expenses have been met by appeals to the Treasury. Such a method should be definitely abandoned. Even now the Treasury assumes certain charges which it cannot and ought not to bear, which should be met either by special measures, or by the special Budget credit. The Committee's views on this head will be found in the chapter on the Treasury.

(b) Questions Relating to the Budget.

So far as 1926 is concerned, it is necessary that a real balance should be secured by immediate economies and increases in receipts to meet both the supplementary expenses occasioned by the rise in exchanges and prices, and the cost of the Moroccan and Syrian campaigns, and to cover payments improperly left to the Treasury account. Before, however, measuring the extent of this new budgetary effort, the Committee thinks it necessary to lay down for the future a whole series of measures, some of which are no more than a return to the application of principle.

In the view of the Committee, budgetary methods must be profoundly modified, if order is to be restored to the public finances.

It attaches special importance to the following recommendations:—

(a) *Preponderance of the Finance Minister in all Financial Questions.*—To the full extent permitted by the constitution, the Finance Minister ought to be the Minister in effective control of Budget equilibrium; his rôle should not be confined to finding receipts to meet the expenditure proposed by his colleagues. No doubt he already exercises control over the estimated expenditure of all the Ministries. The law of June 27, 1925, reinforced his authority in this connection. But it is necessary to go further in this direction.

(b) *Timely Voting of the Finance Bill, i.e., before the Opening of the Financial Year.*—The system of "provisional twelfths" is a source of disorder and deficit. The Budget ought to be drawn up in its entirety, and voted before the opening of the financial year. To allow it to be prepared and voted under favourable conditions, the opening of the financial year ought to be fixed with due regard to the session of the Chamber. The Budget is always discussed at an extraordinary session, that is to say, in the last two months of the year. These two months are manifestly insufficient for a thorough examination; that is why the opening of the financial year should be fixed for April 1st, as was proposed by the Finance Minister on January 13, 1920.*

(c) *Unity of the Budget.*—The Budget ought to include all the receipts and all the expenses of the State. A serious effort has been made in the course of the last few years to return to a unified Budget. This aim, however, has not been pursued far enough. On the one hand, certain receipts are subject to a special appropriation which does not appear to be justified; for example, deductions allowed on the receipts from gaming and lotteries, and on the total of the sums due from the Bank of France;† on the other, certain services have been erected into autonomous departments,‡ and so withdrawn from the economies demanded by actual circumstances. A severe revision is required; the Treasury must have restored to it all the receipts deflected from the Budget, and the organisations which are benefiting by grants from public funds must submit to the control of the Finance Minister and of Parliament.

The actual administration of communal funds,§ which withdraws from the body of the Budget an important portion of the receipts coming in from hygienic drinks, alcohol, motor-cars, business turnover, royalties, &c., calls for sharp criticism. An annually mounting total is badly distributed, and often serves to encourage expenditure on the part of local bodies.

This administration can only be modified by undertaking a reform of departmental and communal finance. This reform demands immediate study by the Finance Ministry. From now on the surpluses above estimates made on the 1925 Budget basis ought to be carried forward to the 1926 Budget.

(d) *Parliamentary Initiative in Expenditure. New Expenditures.*—With a view to putting the brake on increase of expenditure, Parliament ought to limit, much more strictly, its rights of initiative in matters of expenditure. While respecting the constitutional rule, it would be well to leave initiative in expenditure as far as possible to the Government, which is re-

* Chamber Doc. 166, page 128 *et. seq.*

† Annex 3, Budget. ‡ Annex 4, Budget. § Annex 5, Budget.

sponsible for balancing the Budget. In present circumstances certain expenses, useful in themselves, and even covered by new receipts, demand resources which would be better employed in the reduction of the Debt. A number of expenses indispensable for the improvement of the industrial equipment of the country, and therefore actually productive, should be met, as far as is at all possible, out of resources other than those of the State. At the present moment, the extension of the State's industrial enterprises should be avoided.

(e) *Publicity of Budgetary Operations.*—Public credit rests essentially on a knowledge, at once precise, detailed, and easily verifiable, of all the essential elements of financial administration. This publicity is insufficiently organised. It would be desirable to enforce the strict application of the law of April 30, 1921 (Art. 45), and even to publish monthly in the *Journal Officiel* the tabular statement then laid down. The Committee also notes that the receipts and expenditure effected in France under the Dawes scheme do not receive sufficient publicity.

(c) New Budgetary Effort.

The various operations of consolidation and amortisation, which are the conditions of the financial restoration of the country and of its monetary reconstruction, will necessitate the creation of new and important resources. Thus, the Committee emphasises the fact that an energetic reduction of public expenditure should at once take place. This is a *sine qua non*. The taxpayer must be given the certainty that he is not being asked for useless sacrifices.

(a) *Reduction of Expenditure.*—Can expenditure be reduced otherwise than by economies? The Committee pronounces firmly against any reduction in expenses of an obligatory, contractual character, such as the service of the Debt. In particular, it rejects any forcible reduction in the rate of interest on Government stocks, and any suspension of the sinking fund. It considers that any such failure by a State to honour its engagements would bring about the ruin of public credit. That credit should be fortified by respect for obligations duly contracted.

At the actual rate of exchange, the service of the Consolidated Debt does not appear to constitute an excessive burden; at the same time, its lightening is extremely desirable. It seems that, so soon as a favourable moment arrives, a means of ensuring the progressive extinction of the public debt, to the mutual advantage of the State and of the Bondholders, might be sought along the lines of submitting, to those holders, a purely voluntary proposition. If the rate of capitalisation of the redeemable debts remained much below that of the perpetual debts, this fact might offer the elements for such a proposition.

Since the Debt service cannot be reduced from now on, the lessening of the Budget burden must be sought through economies. In this connection, the Committee can only suggest a general method of work. It has not the time to undertake a detailed and profound analysis of a plan of economies; it can claim neither to trace the outline of such nor to estimate its possible results. At the same time, it is clearly of opinion that if an immediate effort is not made along these lines, and pursued with tenacious and persevering will, the work of restoration will be compromised. Such a reduction of expenditure is the more indispensable since there is reason to anticipate a falling off in the yield of taxation in the crisis caused by stabilisation.

Opinion, both at home and abroad, regards the sterile attempts at reform made hitherto with disappointment. The Committee recalls that a Report was presented by the Commission instituted by decree of August, 1922, and that nothing seems to have happened as the outcome of that Report. It notes, further, that the Higher Committee of Inquiry, set up in 1925, recommended measures which do not appear to have been all followed.

The Committee is under no illusion as to the possibility of immediate and important economies being effected by way of budgetary reduction, within the actual classification of the Budget. Real economies can only be secured by a modernisation and simplification of administrative methods, by a fusion of services, and, at times, by the suppression of entire services. The first act in such a reform would be a reduction in the number of Under Secretaries of State and also of Ministries. Some of them perform a double task. Others, like that for the Liberated Areas, ought not to survive the exceptional reasons which brought them into existence. A special commission, with a small personnel, composed of experienced administrators, should be charged with the duty of initiating the suppression of all useless public bodies. As for local services, the development of transport ought to permit their reduction and adaptation to the needs and the wealth of diverse regions. The enlargement and regrouping of a large number of administrative units (departments and arrondissements) gives the basis for such a reorganisation of local services, of which some could be suppressed *en bloc*. This important work ought to be confined to a small commission of technical experts. The alleviation of the burden imposed on the National Budget by the various categories of subsidies to departments and communes (expenses of constructing cross-

roads, public relief, &c.) is to be sought by making the local budgets bear a larger share of these expenses. In such a case there is no other method of preventing abuse.

One other point should be mentioned here: the final reconstitution of the liberated regions. The expenses that remain to be met on January 1, 1927, appear to be in the neighbourhood of 12 to 14 milliards. It will be possible, in the course of subsequent financial years, to continue to charge annually on the receipts under the Dawes Plan: (a) Payments in gold amounting to 1 milliard. (b) Payments in kind amounting to 400 millions. The Sinistrés will also receive, in various forms, amortisable stock whose service (interest and sinking fund) will be charged against the Budget or the receipts of the Dawes Plan. In such circumstances, the gigantic effort of reconstruction could be completed in a small number of years. Such a result, however, could only be retarded if the uncertainty at present weighing on the Sinistrés were not removed, as soon as possible, by the questions that concern them being at last definitely settled.

(b) *Increase in Receipts.*—To secure that the Budget balances, that the Treasury is freed, and that necessary operations of consolidation and amortisation are carried through, a considerable increase in receipts is indispensable. The sums to be found are of the following order of magnitude: 2,500 millions for the 1926 Budget, and nearly 5 milliards in all for the 1927 Budget. The Treasury position is such that resources adequate to disentangle it ought to be procured immediately.

V.—FISCAL PROBLEMS.

(a) General Considerations.

Before entering upon a detailed examination of the observations suggested by our fiscal system, the Committee must make the point that, at a period of monetary instability, a country is not entirely free to choose what taxes to impose. The example of other nations which have passed through similar crises shows that the only taxes capable of ensuring a balanced budget, in the present circumstances, are those levied on general consumption, which have an immediate and regular yield, increasing with a rise in prices. Direct taxes, on the other hand, are, of course, collected on the basis of demand notes, normally made out before the collection takes place; these notes in their turn correspond either to lump sum incomes estimated far ahead, or to effective incomes realised one or two years previously.

M. Jéze cannot accept a certain number of the recommendations contained in this chapter on fiscal questions, which appear to him to be based on exclusively technical considerations. He records his opinion that the choice of taxes is a purely political problem; public burdens must be distributed among the different social classes. Technically, productivity is the primary quality of a tax. It is not the only one to be taken into account. The distribution of burdens in accordance with the economic capacity of each taxpayer must also be kept in mind. In a period of deflation, whatever precautions be taken to accelerate collection, the value of the tax contracts, so to speak, gradually, at the rate of the depreciation of money between the period of assessment and actual collection. If stern measures are taken, or rates raised, the effect will be to encourage the export of capital, and so indirectly hasten the exchange crisis. When normal conditions are re-established, it will be the business of the legislator to decide whether he will admit extraneous considerations into the determination of his fiscal policy, but so long as monetary instability is not definitely at an end, the Treasury runs grave risks if it commits itself to a system principally based on direct taxation.

Moreover, the Committee is not of opinion that a system of heavy direct taxation, striking, as it does, at production and work, does, in fact, spare the great mass of consumers. Fiscal charges which, in the form of direct taxes, burden agriculture and commercial and industrial activity, finally enter into price, raising it, often, by more reaction on the cost of living of the new indirect taxes recognised as being technically necessary for the balancing of the budget, it is trifling in comparison with the effects of a new and rapid devaluation of money.

It is necessary to insist upon the fact that the variable expenses in the Budget, which may rise with a rise in prices, must be wholly covered by receipts equally variable, whose yield will follow the rise in prices. Since no such category exists, and a portion of the variable expenses are covered by fixed receipts, if a rise in the exchange, and a consequent rise in prices, takes place while

the Budget is being carried through, its initial equilibrium is liable to be upset.

The following conclusions emerge from the studies of the Committee:—

Out of a total expenditure, including that of the Budget proper and the principal annexed budgets (State railways, railways and manufactures of Alsace-Lorraine, B.T.T.), it is clear that expenses on material and works (8,494 millions) vary directly with the price index; expenses on personnel and pensions (14,900 millions) may likewise vary, subject to a more or less marked lag, with exchanges and prices; finally, our payments abroad, accounting for 1,678 millions in the 1926 Budget, are directly and automatically variable with the exchanges. This gives a grand total of 25,072 millions of variable expenses. On the other side, for the same budgets, there are 1,080 millions of receipts varying automatically with the exchanges, and 19,064 millions estimated by the departments as susceptible of variation with prices, making a total of 20,144 millions—or a deficit of five milliards in variable receipts against variable expenditure. It should be noted that this calculation is based upon the assumption that the major portion of direct taxes (5,734 millions out of 8,314) constitute variable receipts. At the same time, if it be strictly accurate to say that a portion of direct taxes are capable of varying from one financial year to another, in consonance with the general price movement, though at a flattened curve, and at an interval of one or two years, it must equally be recognised that taxes of this type, collected on the basis of demand notes, necessarily remain unalterable within a given financial year. Thus, if, in the course of a year, a marked rise of the exchange, leading on to a rise in prices, and wage adjustments, takes place, no compensation can be anticipated, within that year, in the yield of direct taxes.

So, considering each Budget year by itself, it may be stated with truth that the insufficiency of variable receipts in relation to variable expenditure is not 5 but 10 milliards. The annex on the Budget problem shows the modifications of receipts suggested by the Committee to meet the major part of this inconvenient feature of our actual Budgets.

(b) Specific Observations on Certain Taxes.

Direct Taxes.—The yield of income-tax does not correspond to its nominal scale—60 per cent. It was hoped to increase the yield by such more or less automatic methods of control as the collection or coupon book (*le bordereau ou le Carnet des coupons*) and the affidavit. The Committee's inquiries, however, show that such devices are incapable of producing any appreciable increase of receipts for the Treasury. The collection-book system overwhelms the already overburdened administration by accumulations of papers. Fraudulent persons would not fail to distribute their coupons among numerous establishments and between various localities in such a manner that it would be largely impossible for the banks, owing to the large attendances on days when payments fell due, to check the identity of the bearers or verify the names and addresses. As for the coupon book, the Treasury itself is apprehensive of the frauds to which it would give rise, and declares that it sees no way of meeting the case where an unscrupulous taxpayer claims a new book on the pretext that he has lost his old one. Further, nothing but harm to that spirit of economy so necessary for the economic revival of the country could result from the subjection of the mass of smallholders, not liable to general income-tax, to all these formalities. Such measures could not but encourage the export of scrip and capital. The Committee is convinced that they should be abandoned. By way of compensation, internal checking should be strengthened by a complete and rapid grouping of the direct taxation and registration departments, and even, as soon as circumstances permit, by their fusion. The result of such a step would be that the collectors of income-tax would have at their disposal the complicated and full information possessed by the registration department. This strengthening of control would be more efficacious than vexatious expedients that cause a flight of capital.

The yield of income-tax could further be notably increased if the collecting authorities (*régies*) had the neces-

sary personnel. As it is, the registration department—more acutely still the income-tax department—are suffering from a crisis of which the Committee has taken due note; there are some hundreds of vacancies in the checking grade, representing a fifth of this grade in direct taxes (in Paris a quarter); there is, above all, a dearth of officials in the higher grades, on whom the efficiency of collection in large measure depends. Hamstrung by the principle of the equalisation of remuneration, which leaves out of account the severe competition for entry, the qualifications required, and the needs of the service, the department cannot attract the officials whom it needs. Nor can it retain them, for the salaries of the middle and higher staff have been raised to a degree proportionate neither to the rise of prices nor the rise acquired by the subordinate agents of the State. It is urgent that, all other considerations apart, steps should be taken such as may be necessary to safeguard the recruitment, professional quality, and authority of the agents of the finance department, if effective measures are to be taken to suppress fraud and get out of the income-tax the large surplus which it is capable of yielding. Further, the Committee anticipates good results from the putting into practice of Article 9 of the law of July 13, 1925, permitting a taxpayer whose apparent expenses exceed his declared resources to be officially levied for income-tax. It does not hold that any automatic ready-reckoner need be substituted on the basis of the rent paid, the number of domestic servants, &c. Rent restriction has engendered such confusion that the most shocking inequalities would result from any effort to take rent as an index of income.

As to the checking of income derived from securities, its view is that it should be possible, by generalising the payment of coupons by transfer to the credit of the account of the recipients either in banks, Ministerial offices, public departments, &c., to obtain results which could not be secured by other methods. The nominal rate—60 per cent. (increased by 25 per cent. in the case of bachelors)—is in itself very high. True, owing to various deductions, this is not the effective rate; it does, however, discourage saving and the spirit of initiative; it impedes the accumulation of capital; it encourages fraud and the export of capital. A reduction in the rate is desirable; it would indubitably cause a rapid development of the subject of taxation, lead to more truthful returns, and gradually bring about an improvement in the yield. This has been the experience of many countries.

On the other hand, it appears that the social effect of increases in indirect taxation might be offset by raising the exemption level from 7,000f to 10,000f. This would relieve the administration from the necessity of checking a mass of troublesome and not very productive returns, and enable it to concentrate its attention on taxpayers of more interest to the Treasury. The reform thus suggested might be balanced, internally, either by a revision of the graduation scales or by a very slight rise in the rate applicable to capital incomes and mixed incomes. Incomes derived from unimproved land and from agriculture certainly do not make an adequate contribution to the Budget. The land-tax on property other than buildings is based on rental values fixed at the time of the 1910-12 revision. That is to say, these cadastral rents no longer correspond with actual facts. Owing to important fluctuations in rents, consequent on the depreciation of money, it is hardly probable that a serious revision can be undertaken for some considerable time. All that can be done is to increase by a lump sum assessment the rental value which serves at present as basis for the tax. An increase of 100 per cent. in the principal would produce an increased yield of some 200 millions.

The tax on agricultural profits in 1925 affected 354,138 taxpayers and produced 72,635,274f. The rate of tax, 7.20 per cent. when the 20 per cent. increase is included, is applied, subject to certain abatements at the base, to an assumed profit equal to the rental multiplied by a variable co-efficient. In default of getting from all cultivators a return which showed their real profit, the general suppression of the lump sum system cannot be advised; but a revision and simplification of these co-efficients would make it easy to obtain from this tax a supplementary yield of 100 millions, which seems far from excessive. The Committee draws attention to the fact

that persons assessed for taxation of agricultural profits are to-day entitled to prove that their real profits are less than the amount of the lump sum assessment, while, in the contrary case where the real profits exceed the lump sum assessment, the tax collector is not permitted (even if he has the means) to act upon the proof; the lump sum system operates solely to the detriment of the Treasury. Return should be made, as speedily as possible, to the system authorised by the law of August 12, 1919, abrogated by the law of June 25, 1920, permitting cultivators to be taxed on their real profits, wherever the collector can establish their amount.

Succession Duties.

The maximum of 80 per cent. decreed by the law of June 25, 1920 (Art. 30) practically never operates; it acts merely as a useless scarecrow, and ought to be reduced. Further, the rates on the higher scales, in direct line of succession where there are fewer than four children, and even for collateral succession, might also be reduced. Their productivity is trifling in a country like France, where very large fortunes are rare, and they encourage dissimulation. The Committee holds that the duties might be revised so as to maintain the yield of the tax while reducing some of its exaggerated features. It also seems to it desirable to authorise the deduction of debts on a more generous scale, and so avoid certain obvious abuses.

French Securities.

French securities are subject to a series of taxes, whose rates have been successively raised, and whose total to-day amounts, in a large number of cases, to an imposition so exorbitant that saving tends to avoid investments of this form. There should, as soon as possible, be a complete overhauling of a system which tends, in its excesses, to encourage speculation at the expense of a spirit of thrift, and to make the financing business of enterprise exceedingly onerous, if not impossible. At the existing rates, without taking into account the temporary increases resulting from the law of December 4, 1925, the total tax burden on the coupons of bearer bonds generally and markedly exceeds 20 per cent. of their amount; on share certificates the tax reaches and often exceeds 30 per cent. or 35 per cent. (apart, of course, from the general income-tax). A substantial reduction in the transfer tax would meet the most crying evils. It is necessary to restore French stocks to public favour and bring capital back to our market. The momentary loss of revenue would be rapidly compensated by gains accruing from the revival of the market and a resumption of new capital issues.

Foreign Securities.

The grave inconvenience of the system of composition for foreign securities has long been known. The Committee can only recommend the adoption of the principles laid down in the Bill introduced by the Government in 1921. The composition system ought to be suppressed. All foreign securities, without distinction, should be subject to a single system—stamps in ready money, a tax of 8 to 10 per cent. in addition to the 12 per cent. income tax. This tax would be collected on the lines fixed by the law of March 29, 1914, for non-compounded securities. The exchange tax should be maintained, provisionally. Securities exchanged for an inscribed certificate handed over by a bank designated by the company issuing the stock and sanctioned by the Minister of Finance might be exempt from the additional tax. Composition might be kept, voluntarily, for shares belonging to a series already compounded for.

Fixed Registration Duties.

A certain number of fixed registration duties, whose rates were fixed by old laws, might, without inconvenience, be adjusted to the depreciated value of money. In the matter of stamps, the *ad valorem* duties should be further increased.

Transfer of Real Property.

The Committee feels obliged to say that, especially in the case of transfer of real property, the duties at present in force, sometimes prohibitive, seem designed to produce a falling off in business, and act detrimentally to the productivity of the tax.

Indirect Taxes.

As regards indirect taxes, a large number of specific

duties could be increased. In the case of sugar, a rise in the duty is particularly justified; the rate, 25 francs before the war, is now 50 francs; by raising it to 100, or only four times the pre-war rate, the Treasury would tap 400 millions of additional receipts. An increase of 0.05 francs per litre on wine, with corresponding increases for beer and cider, would yield 300 million francs. Were these proposed modifications of duties submitted to Parliament, they ought to be passed rapidly, to prevent forestalling.

Customs Duties.

The last adjustment of Customs duties took place in 1922. At the moment, these duties, taken as a whole, represent less than half the 1913 tariff, if the rise in prices and depreciation of money be taken into account. If stability in the yield and in the degree of protection are to be secured, an immediate and thoroughgoing reform is necessary without delay. Without undue delay, and, in any event, before the close of the year, a new tariff ought to be adopted, based upon the actual currency position, and automatically adjusted in accordance with a general index of internal prices. Such a tariff, not too protectionist, should be appropriate to the economy of the country and facilitate negotiations with foreign countries. One might reasonably expect to see the present yield doubled.

Business Turnover.

The law of April 4, 1926, completely upset the turnover tax in the most unfavourable sense from the point of view of yield, while making its application exceedingly difficult, whether to home or export business. Taxes on production at present co-exist with the tax on turnover. No less than 14 different rates have to be applied; the distinction between these various categories raises countless problems and endless discussions with the payers; the personnel of the civil service, paralysed by examining useless classification questions and the individuals who contest them, is distracted from the detection and prosecution of fraud, to the great loss of the Treasury. The goodwill of the taxpayer is exhausted in sterile controversy with officials, and more irritated by this perpetual friction with authority than by the tax itself. A compromise system which gives satisfaction to no one should be put an end to, and the turnover tax given its proper character of a very simple and highly productive impost. The 2 per cent. rate ought to be uniformly applied at home, without any distinction as to the character of business. As regards the export taxes, which yield at present under 80 millions, the Committee's view is that on the eve of a stabilisation that may alter the trade balance, it is preferable to give them up altogether.

Transport Tax.

French railway rates, despite the recent increases, remain at an extremely low level, and one that, if monetary depreciation be taken into account, does not correspond to the value of services rendered; they are 50 per cent. below the lowest European rates, with the exception of the Belgian. They ought to be raised, first, by an amount sufficient to enable the companies to cover their costs of working and financial charges. Then, without aiming at raising our tariffs to a gold level equal to the lowest European, it ought to be possible to raise them by a percentage, the fruits of which would swell the Treasury receipts. As an indication, a further increase of 15 per cent. on passenger and goods rates would give the State a supplementary revenue of about 1,800 millions. Such a step ought to be accompanied by an equivalent tax on canal transport, and an increase in the duties on public motor transport.

State Manufactures.

The Committee has not had time to examine thoroughly the tobacco and match monopolies. By referring to a report of March 30, 1925, presented by the Commission d'Etudes appointed in 1923 by the Finance Minister, it finds that effect has been given to the Commission's view on the necessary raising of prices. The sale prices of tobacco were raised in April, 1926, and are to-day five times what they were in 1913. In this connection it is to be hoped that Parliament will do as it has done in the case of matches and authorise the Finance Minister to raise the selling price by stages corresponding to the

depreciation of money. In this way the piling up of stocks, which causes delays and inconvenience every time these prices are discussed in the Chamber, will be avoided. Otherwise, although it is opposed to the principle of independent offices and budgets which destroy budgetary unity, the Committee is of opinion that the necessities of good industrial management of the tobacco monopoly justify the grant of financial autonomy to the tobacco administration. It therefore recommends the institution of a National Tobacco Office. This step, already outlined by the Commission referred to (a draft bill is attached to its report), ought to be accompanied by the necessary precautions.

Posts, Telegraphs, and Telephones.

The Minister should be authorised, as in the case of the products of State manufactures, to raise prices and rates within the limits of the general price index.

Land, Arsenals, Ports, and Stocks.

The Committee holds that in the present circumstances the increased taxes that must be imposed make it a duty more than ever incumbent upon the Government to proceed to a rigorous revision of the constituent elements of the private domain and the stocks not immediately utilisable held by it under various claims, and to the necessary realisations, and it would also suggest that so far as the equipment of the ports and the work of the arsenals is concerned, effort should be concentrated on some well-chosen point, instead of being scattered in accordance with considerations that have nothing to do with wise management of our finances or the real interests of national economy. Finally, it must never be forgotten that since the return to monetary stability must of necessity provoke a certain industrial and commercial crisis, and lead to a contraction of business, there may, during its course, be a falling off in the yield of certain taxes. Therefore, to insure the maintenance of Budget equilibrium, energetic steps ought, as has already been said, to be taken from now on to reduce, provisionally at all events, every public expenditure, to cut out any which are not strictly indispensable, and thus compensate, during the months ahead, for the possible adverse reaction on the tax yield by immediate and effective economies.

VI.—THE TREASURY.*

The attention of the Committee of Experts has been particularly directed to the position of the Treasury, since its embarrassments are the origin of a large part of our difficulties.

The Treasury may be influenced by the four following factors:—

1. Demands for repayment of the Floating Debt and of the Short-Term Debt.
2. Extra-budgetary expenses.
3. Budget deficits.
4. A temporary want of balance between Treasury receipts and expenditure.

A favourable element is the fact that no payment on the short-term debt falls due before the month of February, 1927, when a facultative maturity of the 6 per cent. Bonds, February, 1922, of the Credit National (total amount in circulation, 3,018 millions) falls due. (See Annex for the table of maturities of the short-term debt.) The measures proposed by the Committee will enable the delay before this payment to be utilised so as to reduce its inconvenience to a minimum. Profoundly convinced that an end must be put to inflation, the Committee has sought for means calculated to fix the State's advances at a definite figure, to give every possible guarantee for repayment, and to insure the earliest possible consolidation.

(a) Repayment of the Floating and Short-Term Debt.

(See Annex for the position of the Floating Debt.)

The Committee has concerned itself with the following elements in these debts:—(a) Special Current Accounts of the Treasury. (b) National Defence Bonds. (c) Ordinary Treasury Bonds (maximum, 1 year). (d) Short-Term Treasury Bonds (3-10 years) and Short-Term Credit National Bonds. (e) Advances of the Bank of France.

(a) *Special Current Accounts of the Treasury.*—The total of these current accounts to-day is about 1,600 millions. A few months ago this figure was much higher; it is still too large for a normal period, and is due to certain preoccupations which should disappear with the restoration of sound finance. Accounts of this nature are particularly unstable and finance. Accounts of this nature are particularly unstable and finance. Accounts of this nature are particularly unstable and finance. Their inopportune moment, to cause considerable withdrawals. Their reduction must be accomplished, and, if necessary, assisted by a modification of the governing conditions.

* See Annex. Treasury.

(b) *National Defence Bonds.*—The volume of National Defence Bonds constitutes the most important problem since, in the past, the Treasury has been in difficulties when the volume of repayments exceeded that of subscriptions. Two causes for the non-renewal, on maturity, of this category of Treasury Bonds can be distinguished: apprehensions of various kinds, and commercial needs. Among the causes of apprehension, outside monetary instability, must be mentioned such as arise from the prospect of certain compulsory measures contemplated at certain moments, and, notably, of compulsory consolidation. The holders of State scrip, even if the measures in question do not apply to the special category which they hold, expect that they will, in the long run, be extended to it. Confidence in the execution of State promises is indivisible. The Committee, after reviewing all the hypotheses of this nature, has rejected compulsory consolidation, the capital levy, the forced loan, and the reduction of interest on State securities, since such measures are contrary to the end it has in view. If the State will resolutely renounce such solutions, if it will declare its intention to meet all its engagements (and the measures here recommended, taken as a whole, should enable it to meet them), and if it will make a start on monetary stabilisation, such apprehensions will gradually vanish and the bonds will be renewed.

Application for payment of bonds paid up may equally arise from the needs of commerce, either in the case of rising price levels or of an economic crisis. The rise in prices ought to be checked in the near future by stabilisation; an economic crisis is inevitable in the event of stabilisation, but it is unnecessary to exaggerate its effect on the circulation of National Defence Bonds, and, in particular, of the One-year bonds, the great proportion of which is held by the rural population. Moreover, it is only at the first onset of the crisis that this phenomenon seems possible; as soon as its first effects have passed off a certain monetary ease ought to present itself. Despite these considerations, the Committee is of opinion that it is absolutely indispensable to pursue a policy of progressive voluntary consolidation of the National Defence Bonds. To this end, it recommends that the holders be offered, so soon as the circumstances appear favourable, a first consolidation loan, corresponding to the conditions of the market and the legitimate desires of subscribers for security. It might likewise be of advantage to offer holders of National Defence Bonds (and of short-term bonds of 3-10 years) the opportunity of exchanging them for existing securities or securities of new types. Until these operations are carried through it will be well to take a series of steps calculated to give every possible guarantee of the redemption of National Defence Bonds. To this end it seems of primary importance to separate sharply from the Treasury the National Defence Bond which may be regarded as a legacy from the past. The administration of National Defence Bonds should be entrusted to a "*Caisse de gestion des bons de la Défense Nationale*" administered by the *Caisse des dépôts et consignations*, which possesses the necessary machinery. This "*Caisse de Gestion*" would undertake the interest, renewal, and redemption of the bonds. The terms of issue would be fixed by the Finance Minister on the proposal of the supervisory commission of the *Caisse des Dépôts et Consignations*. The presence on this commission of representatives of the general direction of funds, and of the Bank of France, provides assurance that the rates and dates would be fixed with due regard for all the elements of the market, and especially, of the conditions governing the Treasury's other liabilities, and of commercial operations. Rates and dates should be adjusted with the utmost flexibility. The maximum fixed for the Floating Debt by the law of June 27, 1925, is both vague and variable. It exceeds by more than 10 milliards the actual Floating Debt of the Treasury. The Committee proposes to reduce the maximum total of bonds, of which the *Caisse de Gestion* shall take charge, to 49 milliards, that is to say, to its actual total. The one practical means of limitation available for the *Caisse* is the movement of rates of interest, which will not give immediate results in view of the very large number of offices delivering the bonds. It will, therefore, be well to allow the *Caisse* a margin of 6 per cent. of the amount of the bonds in order to give time to allow its steps to take effect. After each redemption operated by the *Caisse de Gestion*, as will be pointed out below, the limit should be lowered at the close of the year by the amount of such redemption. If, when the *Caisse* comes finally to be liquidated, there is any balance, it should revert to the State.

The resources of the *Caisse* will be as follows:—

1. A *budgetary annuity* equal to the total interest of the bonds in circulation, taken over by the *Caisse* at the opening of the year. The excess of such annuity, where it is not wholly used up, will go to the redemption of the bonds. Where, on the other hand, the annuity proves insufficient in the course of the year, supplementary credits may be demanded.
2. A *redemption annuity* of at least 500 millions, equally charged to the Budget. Such annuity to be applied to the due amount to the extinction of the Defence Bonds.
3. An *original endowment*. From the start the *Caisse* should be provided with a substantial reserve, which might grow in

the future and would permit it to meet the eventual demands of redemption.

To this end the Committee proposes the following solution:—As will be set out further on, one of the preliminary measures to be taken with a view to stabilisation is the placing of loans of as long term as feasible in the great international markets. The State will then hand over to the Bank of France the foreign currencies accruing from these operations, or previous operations, and the corresponding value of these currencies, in francs, will, up to a sum of 4 milliards, be placed to the credit of a special account opened by the Bank of France in the *Caisse de Gestion* of the National Defence Bonds. This special account, by its very existence, will be calculated to reassure holders of bonds, and in all probability will only function to a very small extent, since the regular redemption of the bonds is guaranteed by the budgetary annuity.

In the last resort, when other financial operations of an analogous nature have been carried through by the State—notably, the issue of shares provided by the Dawes Plan—50 per cent. at least of the franc-value should, under the same conditions, be carried to the credit of the *Caisse de Gestion*, until the credit balance of its account amounts to 20 per cent. of the National Defence Bonds in circulation. As for the shares issued under the Dawes Plan, a note explaining the nature of their guarantee will be found in the Annex.

4. *Appropriation of Tobacco Receipts.*—Apart from these resources the *Caisse* will receive, under a special guarantee, the net product of the tobacco monopoly, which has been set up as an independent office. By a special appropriation the whole net receipts of the office will be turned over to the *Caisse de Gestion* of the National Defence Bonds, and added to the sum provided in the Budget for the interest and redemption of the Defence Bonds. (See Annex for a survey of the receipts of the Tobacco monopoly.) This appropriation will enable the *Caisse* to obtain, if necessary, either on commission or from the public, or from the private banks, or, if the worst came to the worst, from the Bank of France, temporary advances on the home market. Lenders, in such cases, would merely discount certain receipts. Obviously, where such advances are employed, the replacement of the corresponding receipts would have to be provided in the Budget. The Bank of France would continue to discount National Defence Bonds on the terms now in force. Thus guaranteed, the bonds ought to keep public favour. The *Caisse de Gestion* of National Defence Bonds would publish a balance-sheet every fifteen days, showing: the figure of the maximum limit in force for Defence Bonds; the amount of Defence Bonds in circulation; the amount of the credit account with the Bank of France, or, eventually, the loans contracted by the *Caisse* in the form of advances from the receipts from the tobacco office; the rates in force for each maturity; similar figures covering the preceding period and since the opening of the *Caisse's* operations.

(c) *Ordinary Treasury Bonds (1 year maximum).*—The ordinary Treasury Bonds actually in existence, amounting to 2,600 millions, ought likewise to be regarded as a legacy from the past, and on that ground handed over to the administration of the *Caisse de Gestion* of National Defence Bonds on the same terms as the National Defence Bonds themselves. These Treasury Bonds would not be renewed in this form by the *Caisse de Gestion*. Later on, the conditions under which the Treasury may be authorised to issue new bonds for its ordinary needs will be indicated.

(d) *Short-Term (3-10 years) Treasury Bonds and National Credit Bonds.*—It is desirable that these bonds should be progressively reduced, either by consolidation loans or by redemption. The first consolidation operations in relation to the Defence Bonds ought, in the view of the Committee, to be devoted preferably to Treasury or Credit National Short-Term Bonds falling due in February and September, 1927. Further operations will be undertaken in view of later maturities. The Committee is convinced that the improved atmosphere which will follow on the restoration of sound finance and monetary stabilisation will allow such loans to secure good results. A redemption fund for the extinction of this short-term debt does not seem necessary: it seems preferable to charge it to the Treasury.

The Committee thinks that the steps to be taken by the Treasury for the maturities of 1927 should be governed by the following considerations:—It may be recalled, in the first instance, that the February cancellation is merely facultative and applies only to some 3 milliards of bonds, and that the proportion of demands for redemption actually reached on previous occasions was hardly above 50 per cent., in spite of specially unfavourable circumstances. Therefore, unforeseen events apart, one is entitled to assume that claims for redemption will fall far short of the nominal total; on any hypothesis, the sums which the Treasury will actually have to pay out will be indubitably far below the demands for redemption, since a large portion of the latter will be mere book-keeping transactions, or subscriptions to other Treasury issues. For the same reason the February, 1927, maturity of 1922 Treasury Bonds, second series, amounting to 4 milliards, is by no means alarming, although in this case redemption is obligatory. The operations of voluntary consolidation, whose realisation ought,

if possible, to occur in the near future, will, without doubt, have sensibly reduced the number of shares of this issue in circulation. On the other hand, the Committee is informed that various public banks hold considerable blocks of short-term Treasury Bonds of various issues.

Immediate negotiations with these organisations ought to enable a friendly arrangement to be reached for the voluntary conversion of these bonds into terminable annuities. This operation was effected several times before the war.

It is further desirable that the *Caisse des Dépôts et Consignations* should, from now on, devote a considerable proportion of its resources to the repurchase on the market, in virtue of analogous arrangements with the Treasury, of short-term Treasury Bonds: such purchasing to be directed by preference to bonds of the nearest date of maturity. To give the greatest possible scope to such purchasing, the Committee suggests the employment, through the *Caisse des Dépôts et Consignations*, of such supplementary resources as may be available in the war pensions account, thanks to the termination of pensions, and of the Budget annuity of 500 millions which the Committee proposes to assign, from 1927 on, to the redemption, by repurchase on the Bourse, of short-term bonds and, ultimately, of consolidated *rentes* (see Annex, Treasury).

Finally, reference should be made to the paragraph which follows, on "Temporary want of balance between payments into and out of the Treasury," where proposals are made for the constitution of a margin of 3 milliards to back new advances to the State.

(e) *Advances to the State by the Bank of France.*—New advances to the State shows a debit balance of 37.3 milliards, while the legal maximum is 38.5 milliards. The Committee recognises the necessity of a progressive reduction in these advances. Their disappearance will improve the cover of bank notes; gradually the backing of the note will be the reserve and commercial assets only.

At the same time, the taxpayer must not be overburdened. Keeping both these sets of considerations in mind, the Committee estimates that the annual reduction in advances by the Bank of France should be limited to the amount of the interest earmarked for the sinking fund account. Further, the Committee holds that it would be well to make uniform the conditions under the heading of new advances to the State and of bonds discounted for foreign Governments. The agreement to be reached on this subject between the State and the Bank of France might, at the same time, ease the burden of the next few years at the expense of those following stabilisation, in view of the fact that after stabilisation a considerable proportion of the advances made to the State will actually be extinguished by the revaluation of the metallic stock.

Subject to these observations, the Committee proposes to provide an annuity of, say, 1 milliard in the Budget.

(b) Expenses outside the Budget.

Thanks to an effort, to which the Committee desires to pay homage, the 1926 Budget has been charged with a number of expenses previously left to the Treasury. The latter, however, has still to support the following:—(a) Expenses of the State railways and those of Alsace-Lorraine. (b) Interest on advances from the Bank of France. (c) Reduction of advances by the Bank of France to the State. (d) Partial redemption of foreign debts. (e) Advances to foreign Governments.

(a) *Expenses of the State Railways and those of Alsace-Lorraine.*—The Committee holds that all the main lines, including those of the State and of Alsace and Lorraine, ought to make such adjustments, as automatic as may be, of their rates as will enable their profit and loss accounts at least to under this head.

So far as works on capital account are concerned, it does not seem reasonable in present circumstances to count on share issues which, as a matter of fact, have for some time past only been realised by the State Railway to a very modest extent, and with the assistance of various banks, no public issue having been practicable.

Although in normal times it is legitimate to have recourse to loans for expenses of this character, the Committee recommends that until the new order is installed the absolutely indispensable minimum for works shall be covered in the Budget. Works that are not thus urgent should only be carried out to the extent to which funds can be obtained by financial operations.

In any event, no payment ought to be left charged to the Treasury.

(b) *Interest on Advances from the Bank of France.*—This ought likewise to be incorporated in the Budget.

(c) *Reduction of Advances by the Bank of France to the State.*—This question has been treated in connection with the Floating Debt. (d) *Partial Redemption of Foreign Debts* (see Annex for table of payments). The sums already charged to the Budget ought, of course, to remain so charged. The other payments of this nature which to-day remain charged to the

Treasury are too irregular to allow of their inclusion in the Budget.

It will be well, in relation to all sums of importance, to negotiate such arrangements with the creditors that the annuities to be paid under this head, the disbursements of lesser importance required to meet various maturities, and such as result from the debt arrangements come to with the various foreign Governments, shall be charged against the anticipated receipts from the Dawes Plan.

Then the Budget would not have to carry any new charge under this head except such as might be caused in the credits already included in it by a rise in the exchange. Here again, then, there ought in the future to be no recourse to the Treasury.

(e) *Advances to Foreign Governments.*—The Committee envisages the inclusion in the Budget of the credits necessary to meet expenses already contracted.

(c) Budget Deficits.

The measures taken to secure that in all circumstances the Budget shall balance ought, for the future, to obviate the recurrence of Budget deficits and remove altogether this source of Treasury embarrassment.

(d) Temporary Want of Balance between Treasury Receipts and Payments.

The Treasury may be momentarily thrown out of equilibrium for the following reasons:—(a) The yield of taxation is less substantial in the first half-year than in the second. (b) During the first half of the financial year the Treasury has to make advances to departments and communes on account of their taxes; such taxes come in during the second half of the financial year. (c) The Treasury has to meet end of the month demands. (d) Certain important items of expense, such, for example, as the service of the Debt, are unequally divided between the different months of the year.

The Committee once more lays stress on the vexatious consequences from this standpoint of the late date at which the Budget is voted. The reduction in the Treasury's current accounts, recommended elsewhere, will have a favourable influence on the scale of the end-of-the-month settlement.

In any event, however, no Treasury can live without a certain, sufficiently elastic, supply of cash in hand. Before the war, on a Budget of about 5 milliards, Parliament authorised the Finance Minister to issue annually 600 millions of Treasury Bonds. The expansion of Budget figures, and the multifarious new obligations which the Treasury of the State has got to meet, seem to-day to justify a power to issue bonds up to 5 milliards, as the Treasury's normal supply of cash in hand.

In virtue of the annual authorisation by Parliament, the Treasury would be able to issue, up to the level of this total, ordinary Treasury Bonds at the rate and maturities corresponding to its needs and its receipts, so as to make their normal redemption certain. Such bonds would be quite separate from the ordinary Treasury Bonds now in existence, which the Committee would have transferred to the *Caisse de Gestion* of National Defence Bonds as a preliminary to their speedy extinction. It appears that by varying the rates of the new Treasury Bonds as suited it, the Treasury would be able to achieve the desired result.

As a supplementary means of securing elasticity for the Treasury, the Committee suggests that out of the product of the first financial operations abroad, referred to in connection with the National Defence Bonds, a sum of 3 milliards should be carried by the same mechanism to the credit of the account of new advances to the State in the books of the Bank of France. This transaction would reduce, by the same amount, the debit total of the account, without, as a consequence, lowering the limit of advances to the State. There would thus be built up a total margin of several milliards, to which the Treasury resources, up to the limit of the 5 milliards mentioned, would be added.

Taken in combination, these measures ought to free the Treasury from its present anxieties, place at its disposal the temporary credit instrument which it requires, and permit the redemption of the floating and short-term debt, and, progressively, of the advances made by the Bank of France.

VII.—STABILISATION.

(a) Its Necessity.

Behind all the Committee's proposals is the presumption of monetary stability.

On the one hand, their object is to render it possible. On the other, their execution is conditional on exchange stability. Without stabilisation neither the balance of the Budget nor of the Treasury can be re-established, nor the trade balance restored. Inversely, unless the Budget is rigorously balanced, unless there is a definite limitation of advances to the State from the Bank, and unless measures are taken first to balance and then to redeem the Floating Debt, monetary stabilisation is impossible.

Stabilisation demands courage, for whatever be

the method adopted the future economy of the country must be modelled on the rate finally reached. The rise of prices, then their arrest; the slackening off of internal consumption and of exports; the adaptation of wages; the eventual rise in discount and interest rates; here are the elements of an economic crisis which will compel the reorganisation of business. Many enterprises of the inflationary period will have to be modified or disappear. The habit of working with sound currency will have to be resumed, and that presupposes changes in mentality and in method.

The present appearance of great economic prosperity cannot go on. There will be undoubted difficulties, but they are inevitable to-morrow, and will be worse if they are postponed.

The real choice is not between a continuation of the present economic condition and stabilisation, but between the necessary crisis and a system of monetary disorder, with all the disasters involved in the accelerated fall of the franc—unbridled speculation, moral deterioration of the nation, impoverishment, social disorders, and a period that, willy-nilly, must one day end in a stabilisation crisis. The longer it is put off the more serious will it be. Whatever choice be made, it is inevitable.

To-day, courage to undertake stabilisation may save what still remains of the patrimony of France, a portion of its savings, and, in consequence, the reserve of credit which French production requires for its development.

If this courage is not forthcoming the depreciation of the currency is bound to grow worse. When, after this failure, the necessary effort is at last undertaken, the French economic system will be incapable of standing alone. Capital will be gone, annihilated by depreciation, and only obtainable for production at prohibitive rates of interest; the cumulative rise in commodity prices would close foreign markets against us. Neither industry, agriculture, nor commerce will find in France the ready money they require. There can be no other result than a fatal development of dependence upon foreign capital.

Such are the effects, as disastrous as they are certain, of a policy of temporisation. It must be avoided. The stabilisation crisis is not part of stabilisation in itself; it is the result of the period which precedes stabilisation, and the longer such period has been the greater the suffering it causes. To-day the necessary task can be accomplished in relatively favourable conditions. No effort ought to be neglected in undertaking it.

(b) *Mechanism of Stabilisation and its Stages.*—Stabilisation presupposes the possession by whosoever is to carry it through of a considerable stock of (1) foreign exchange to prevent a fall in national money; (2) francs, so that the surplus foreign exchange on the market can be absorbed.

The State is not in a position to undertake this operation. In almost every country which, in the last few years, has achieved stability, the task of ensuring it has been confided to the Bank of issue (Austria, Hungary, Czechoslovakia, Finland, Great Britain). Only the Bank has at its disposal a sufficient stock of foreign exchange, obtainable on the basis of its gold, and the power of reconstituting that stock by attracting foreign capital. Again, only the Bank has the necessary resources in national money to buy the surplus foreign exchange offered on the market.

Intervention in the exchange market does not presuppose grand strategic operations, but rather a constant watching of rates, the Bank one day absorbing an excess of foreign exchange, and selling the next, when offers are insufficient.

In England the Bank, legally released from the obligation to redeem notes in gold at home, merely supports the *international value* of the notes by using, directly or indirectly, its metallic reserves, which its discount policy puts it in a position to defend. It is to a system analogous to this that we in France should turn. Stabilisation raises questions of the moment, the level, the method, and the means.

The *moment* is, obviously, the earliest possible moment, that at which the totality of other measures proposed by the Committee come into action; the operation ought to be undertaken in immediate connection with the carrying out of the general plan which the Committee suggests. The

recommendations would not work without a simultaneous stabilisation; without the execution of these recommendations stabilisation would be impossible.

The level can neither be selected now nor publicly announced. There is a choice between two extreme limits; the franc rate resulting from the cost of living index at the decisive moment of the operation; and the actual franc rate at the same moment on the exchange market. The figure of stabilisation must be sought between these two limits, account being taken of all the circumstances, notably of the necessity of retaining or attracting foreign capital, and inducing the rapid return of expatriated French capital. From this standpoint, as well as from many others, it seems desirable to choose a rate more favourable than the actual rate.

The method. In all probability a pre-stabilisation period must be envisaged, long or short, during which a policy of regulating rates and of approaching, little by little, to the desired rate, as and when circumstances favour, must be accepted. The tactics to be followed by the Bank cannot be laid down in advance. Evidently its conduct will, to some extent, be dictated by the degree of facility with which it obtains foreign credits. It is, however, worth recalling that the sooner fixation of the rate is accomplished the sooner will the gap between interest rates on the French and on foreign markets begin to exercise its attractive effect on foreign resources, an action which should be accelerated, and which will in high degree facilitate the success of the operation. Such action is impossible so long as persistent exchange variations threaten to annihilate the advantage accruing from the gap in rates.

The means. All the means available for a Bank of issue depend on the existence of its own reserve (gold and currency), reinforced by the long or short term credits which it can secure, whether directly or by the intervention of Government. Until that natural repatriation of exported French capital takes place, which will definitely assure stabilisation, instruments of exchange on a large scale must be put at the disposal of the French market in the next few months. From the exclusively commercial point of view, these means ought to be all the more considerable because the first months after stabilisation will be those in which the seasonal demands for currency will be most acutely manifested (July-September for corn and silk, August-December for cotton, September-January for wool).

These needs are important, but they must be looked at in relation to the annual commercial balance as a whole; the problem mainly consists in carrying over to the spring months, which are generally better supplied for familiar reasons, a part of the demands which overload the autumn market, and at certain times weigh down the international value of French currency.

What, then, in addition to the normal supplies of exchange derived from our export trade are the resources upon which it will be possible to rely to meet the exchange demands that will arise on our market in the spring of 1927? They are of three kinds:—1. Long-term loans already obtained and to be obtained by the French Government (Morgan loan of 1924, Stabilisation loans). 2. Credits to be obtained by the Bank of France. 3. Private and commercial credits.

It is not for the Committee to fix the scope and methods of the means contemplated under 1 and 2. It is, however, essential that the facilities obtained should be as extensive as possible, since their magnitude is an element in the success of stabilisation. The first operations might extend to the sum of 200 million dollars or their equivalent.

In relation to the loans contemplated under paragraph 1 an agreement must be arrived at between the Government and the Bank of France that the currency acquired as the result of these financial operations be devoted to stabilisation. Such agreement will regulate the questions of the interest accruing on deposits of currency abroad and of the exchange risks.

Looking at the question simply and solely from the point of view of the financial restoration of the country and the monetary stabilisation called for by the country as a whole, the Committee is convinced that these ends cannot be achieved unless a considerable body of exchange media is at once available. There are objec-

tions to the use in the first line of the metallic reserve of the Bank of France.

The indispensable resources must, therefore, be furnished by foreign aid. Such aid, of which we must at the outset be assured, is conditional on the conviction, which we must give to all, that we are firmly determined to stabilise the franc and to take all the necessary steps to that end.

Further, it implies the settlement at the earliest possible moment of the amount of all our debts to our Allies, and the spreading of the instalments over a long period of years. Should we find lenders in the existing state of uncertainty, if only on account of the heavy maturity of 400 million dollars which, apart from any new arrangements, we have to face in 1929?

The Committee, while fully seized of the considerations on the other side, unanimously take the view that these facts make it indispensable to ratify at once the Washington agreement, and proceed with the smallest possible delay to arrive at a definite settlement with Great Britain.

So far as private credits are concerned, the Committee is of opinion that by appropriate measures contemporaneous with stabilisation, it would be possible to facilitate the investment in France of foreign capital already attracted by the high ruling rates of interest, and also to hasten the return of the French capital actually available.

Thus the Bank of France could receive all deposits in appreciated currencies, whether from abroad or from its own nationals. These deposits would help to strengthen its foreign exchange reserve, and so reduce the sums to be employed out of the credits at its disposal, resulting from 1 and 2.

The question of the return of expatriated French capital raises that of the suppression of the law on the export of capital. The abrogation of this law could be realised in the near future without inconvenience. It does not, as a matter of fact, appear that the said law has really, so far, had any useful results. It has certainly sometimes impeded natural movements which assist the national currency. In any event, it would require to be modified as soon as the plan comes into operation, in directions which should prepare the way for a progressive return to a completely free circulation of capital.

To this end the Committee suggests that the Bank of France should afford every facility for the opening in its books of foreign currency accounts, whether in the name of industrials and business houses or of individuals; accounts of which the holders would have entire freedom to dispose, whether they re-export the currency, sell it in France, or change it into francs. The Bank of France could allow such depositors advances in francs at a rate to be settled, with a margin of guarantee sufficient for itself, against the foreign currency deposits of this kind which it received.

The Committee further suggests a new amnesty for the offence of exporting capital in favour of persons or companies resident in France, who own foreign currency and are willing to place that currency at the disposal of the Bank of France.

Further, the redundant texts bearing on the application of the law of April 3, 1918, ought to be unified and simplified.

Finally, a better organisation of commercial credits is to be recommended to remedy to some degree the inconvenience caused by the concentrated demands for currency arising out of seasonal requirements. This would facilitate the task of our bank of issue in the defence of the national currency, which it must undertake. (See Annex on commercial credits.)

So much having been laid down, the operations of stabilising the franc divide themselves into three periods: (a) *Pre-stabilisation* period, with the exchange oscillating about a rate more or less fixed in advance; (b) *Period of stabilisation in fact*, during which the Bank at a fixed rate. (c) *Period of stabilisation in law*, dating from the moment when the situation already existing, in fact, has been legalised and confirmed; at this stage the problem of the monetary standard and of the definitive regulation of the advances made by the Bank to the State must be solved.

First Period—Pre-Stabilisation.—This period should be as short as possible.

From the moment when the plan is put into operation steps must be taken to restore public confidence in the national money, and to restore, at once, a necessary and perfectly legitimate elasticity to its circulation.

These steps are as follows:—

1. The maximum of advances to the State must be definitely fixed at the present actual figure.

2. This done, there is no longer any call for fixing a rigid maximum circulation. To do so, in fact, seriously inconveniences commercial activity, and may hamper the Bank of France in its purchase of the foreign exchange and gold necessary to strengthen its reserve. From now on it is the business of the State and of the Bank of France to discover a more flexible system, until legal stabilisation permits the fixing of a proportion between the reserve (gold and exchange) and the circulation. In any case the notes that may in future be issued against purchases of gold or currency will not count towards the maximum circulation.

3. The reserve should be strengthened by the acquisition of gold coin at home, at a rate near the current exchange rate. The 1916 law forbidding the sale of gold pieces at a premium should be suspended, the Bank being given a monopoly of purchase. The Treasury should lend its departmental assistance to the bank in such purchases. The gold export embargo should remain in force, the Bank alone being authorised to effect such exportation.

Second Period—Stabilisation in Fact.—This period will begin at the moment when the Bank, having definitely selected a rate at which to stabilise, decides to purchase and to sell gold at a fixed rate, and to sell foreign exchange with a gap between the selling and buying prices corresponding closely to the export and import goldpoints.

If, as is probable, with a well-organised purchase of gold at home, the reserve continues to grow (the circulation not covered by gold and exchange rather remaining stationary, as is normal in a period of economic deflation) the return to internal convertibility may be fairly rapid. The eventual inconveniences of such a return might be met by deciding to limit the operation of conversion to the head office of the Bank.

Let us state at once that, in our view, no practical importance attaches to a speedy return to the internal convertibility of the note; but the demonstration of its possibility may have an important effect on general confidence in the note. It is, doubtless, during the second period that it will be wise to restore a complete freedom of circulation to capital.

Third Period—Stabilisation in Law.—When stabilisation in fact has once been established the transition to stabilisation in law will be relatively easy. Laws must be passed, notably to fix the new monetary unit, to regulate the advances of the Bank of France on the basis of a revalorised reserve, and to give permanence to the state of things created during the second period by transforming into a legal obligation the duty assumed by the Bank of maintaining a fixed rate of exchange up to the moment of the re-establishment of simple convertibility.

On the *monetary law* all that need be said is that the choice of the weight and fineness of the new gold monetary unit will be determined by the effective stabilisation rate in combination with commercial convenience.

As for the advances by the Bank to the State, the revaluation of the reserve already referred to will automatically liquidate a portion of this debt, as the entry "new advances to the State" will be diminished by the whole amount added to the reserve. There will remain a much reduced total of advances represented in the circulation by notes constituting the "residue of inflation," secured only by a credit against the State.

It has been proposed that these notes should be separated from the others, the State being charged to assure their gradual conversion and amortisation. This solution should, we think, be rejected; either the two kinds of note will be interchangeable, and so, in practice, constitute a single circulation; or their mutual values will be variable, and the internal exchange thus set up will merely aggravate the situation.

The one problem is the gradual amortisation of what will remain, at this juncture, of the advances to the State. The Committee is of opinion that such amortisation should proceed at a rate so moderated that the notes

which are backed by a credit against the State may be gradually replaced by notes with a commercial backing.

The process should stop at such a point that the State will be assured, to meet the normal needs of the Treasury for cash in hand, of a "permanent advance" above the actual advance—200 millions only—and adapted to the depreciation of the franc.

Such are the successive steps which will enable the monetary stability which is indispensable for the country's economic life to be definitely assured.

VIII.—ECONOMIC CONSEQUENCES OF FINANCIAL RESTORATION.

The economic consequences of the Committee's proposals have already been touched on in the chapter dealing with stabilisation. It is, however, necessary to repeat them briefly here, and indicate the suggestions for the future to which they give rise.

(a) The Industrial Crisis

While the restoration of sound finance is urgent and indispensable, it cannot be denied that it will provoke a grave economic crisis, which, however, will be brief, and such as has been passed through by all the nations which have carried through a monetary reform. The constant fall in the value of French currency ever since the Armistice has only been followed at a considerable distance by rising wholesale and retail prices. While complicating working conditions, this fact has nevertheless made it easy for businesses to extend their sales. Indeed, it has allowed some of them to develop abnormally in responses to the needs of a home consumption, which developed all the more rapidly because of a decline in saving due to the fall in the value of the franc and to meet foreign demands facilitated by the depreciation of our money. Statistics of imports and exports prove this; they show a decline in the import and an increase in the export of "manufactured goods."

(b) Consequences of the Crisis.

Inevitably, exchange stabilisation will be followed by a readjustment of internal prices. The increase in cost of production which will result will reduce exports at the moment when internal consumption will be restricted by the rise in the cost of living. A temporary but severe disturbance of markets will follow, with excessive competition as the result of a scramble to realise. When to this one adds a probable rise in discount rates a restriction and stringency of credit at a moment when sales are falling off, one must face the prospect that a certain number of enterprises will be endangered, the weakest of them will fail, and those whose prosperity has been artificially supported by the fall of the franc will drop out altogether. Such is the heavy price that those whose lives are bound up with the national industry will have to pay for the financial rehabilitation of the country! The sound elements in production and distribution, if they are to survive, must improve their conditions of work. Those on the margin of normal industry and business will doubtless have to disappear.

The severity and duration of the crisis will depend on the rapidity of this evolution, and on the assistance which the enterprises that deserve it can obtain. Nevertheless, long or short, it is not to be expected that it can be accomplished without causing unemployment and all its social consequences, so true is it that all workers—labourers, employees, and employers—are dependent on one another. This solidarity means that they will profit or suffer together, according as business flourishes or fails.

The reaction of the crisis will affect the State itself in a falling-off in the yield of taxes paid by the productive forces of the country. Whether on the schedule of industrial and commercial profits, on the income-tax, on the turnover tax, the transfer and registration taxes, the Treasury's returns will be directly affected by the momentary slackening of trade. The State will have to seek compensation in the reduction of expenditure. At the same time, the prospect of an economic crisis should not delay the application of measures designed to secure financial health.

The present situation, in fact, falsifies normal conditions of trade; creating an illusion of prosperity, it really involves an impoverishment of business owing to

the decline in real profits and the progressive diminution of working capital. If it is prolonged, working capital will completely disappear; the crisis will be aggravated in intensity and duration. There will, moreover, be the risk that important elements in the country's production will pass into foreign hands.

It is impossible to over-emphasise the fact that there is no escaping the necessity of monetary stabilisation, and that the longer it is delayed the more formidable will be its effects.

(c) Remedies.

Finally, it is to be hoped that if, from now on, trade and industry will face the danger, they may be able to mitigate and overcome its consequences.

I.—In order to organise themselves they ought to know how to take advantage of the period that will elapse between the application of the measures herein set out and the rise of the cost of living to the level of world prices.

Internal organisation of each industry and each business might be set up, tending: (a) To reduce cost of production by technical improvements; (b) to reconstitute working capital partially eaten up by inflation, by the return and mobilisation of capital and by financial assistance.

Organisation on a combined plan permits: (a) Closer and more regular relations, and more active collaboration between the different branches of organised production and the great administrative services of the country; (b) *rapprochements* between nations which will help to regularise their trade; (c) centralisation of foreign purchases and sales, with a view to securing important commercial credits such as will relieve the exchange market. In the annex will be found a plan by which chambers of commerce and syndical organisations may be enabled, with the support of the banks and of the Bank of France, and on the basis of acceptances granted to French buyers by their foreign sellers, to insure their purchases and sales of foreign exchange being set off against one another, the exchange market being concerned only with the final balance. (d) The adoption of a general scheme which should mitigate the unemployment crisis by a better distribution of work and a new distribution of foreign labourers, of whom a larger proportion than is the case to-day might assist towards reconstituting the rural population, and another portion might return to its country of origin.

II.—These various measures require to be supplemented by action on the part of the public authorities. It is more especially in their province to: (a) Increase, for the future, and improve, from now on, the productive possibilities of the country, not by repealing the Eight Hour Day, but by permitting it to be applied with sufficient flexibility to remove restrictive regulations by which national effort is liable to be paralysed; (b) end the system of export and import prohibitions which sterilises initiative; carry on a policy of free expansion and moderate protection, by the readjustment of the Customs tariff in the light of the new situation of the country, agricultural and industrial, and by the adoption of principles of agreement (return to the most-favoured-nation clause, for example) which would make the conclusion of commercial treaties easier; (c) assist the use throughout the country of raw materials derived from French soil (displaced at present, too often, in certain areas, by imported supplies) by modifying railway rates; (d) encourage the development of colonies which could supply the mother country with numerous commodities now purchased abroad; (e) give more elasticity, as has been suggested above, to the tax system applied to capital employed in production; limit, as far as possible, for the moment, every sort of burden which may be imposed by the new arrangements on such production, which, though they make no appearance in the Budget, do nevertheless constitute actual taxes.

III.—The employment of these measures will assist in reducing the intensity and duration of the crisis. They will not, however, suffice unless the country recovers, contemporaneously with monetary equilibrium, the two

ruling qualities on which was based its prosperity in the past—the spirit of work and the spirit of thrift.

To work harder and save more—such is the obligation imposed upon all. Work harder, because the reconstruction of national wealth implies increased production. Save more, because this is the sole means of insuring the formation of new capital, which will, in turn, generate new productive resources.

Saving implies the power of self-restraint. Before the war the country was enabled to be self-sufficient by its harmonious balance. Its agricultural wealth, its work, and its savings maintained a level of prices at home substantially below the world level. It can be so again, for its powers of work are not destroyed, its habits of saving are discouraged rather than seriously impaired, and its native reserves, although in flight, have not disappeared.

All these forces must co-operate to redeem and reduce the inevitable crisis. They will ensure to the country both the means of preserving large export possibilities and the certainty of reverting rapidly to normal life and the restoration of prosperity.

CONCLUSIONS.

Distinguished as it is by monetary instability, the present crisis originates in Budget deficits, the abuse of short-term loans, and inflation.

The Committee in its report has laid down a series of measures capable of insuring a rigorous balance of the Budget, relief to the Treasury, and monetary stability.

In broad outline these measures can be summed up as: an energetic reduction of State expenditure; the establishment of expanding receipts of immediate yield; the restoration of the independence of the Bank of France, by shutting off resort, direct or indirect, to advances from the Bank as the means of covering new expenses of the State; the gradual reduction of the advances from the Bank of France to the State; guarantee of sound functioning of the Treasury; its return to its normal rôle by freeing it of a large part of the floating debt; the transformation, by voluntary consolidation operations, of national defence and short-term bonds into securities, subject to gradual amortisation; the realisation, within a limited period, with the assistance of the Bank of France, of that monetary stability which alone can make the preceding measures at once possible and of lasting efficacy; an effort to retain attract, and cause the return of capital, and pave the way for its free circulation in the near future; the contracting, with a view to stabilisation, of loans in foreign currencies of as long a term as possible, and of foreign credits; the pursuit of an economic policy calculated to mitigate the inevitable crisis resulting from a return to sound money, and to restore the prosperity of the country.

This programme assumes the faithful observation by the State of its obligations, and the settlement of inter-Allied debts.

The members of the Committee are unanimous in holding that: the measures they recommend, logically and progressively applied, are capable of retrieving the situation; continuity of view and effort is necessary; fragmentary programmes and partial solutions will be fragile and ineffective.

It should not be concealed that financial reconstruction will be accompanied by difficulties and suffering; postponement will merely aggravate them.

If France is able to accept discipline, to work with ardour and constancy at the task of its own re-establishment, to produce and to economise, economic order and prosperity will not be long in reviving.

PART III. The Future of Reconstruction.....		24	

The aim of this Supplement is to give our readers a summary of the principal data relating to the economic life of the Danubian countries, and, in particular, to outline the progress of economic reconstruction in a part of Europe which was particularly affected by the war and the Treaty settlement. These States, old and new, have many problems in common. An attempt has, therefore, been made to treat the region as a whole; to give a short

account of the particular features of each State in turn; and, lastly, to review the general tendencies of the past seven years for the light they throw on the factors determining the course of further reconstruction in the future. The Supplement has been prepared by Mr I. L. Evans, M.A., Fellow of St. John's College, Cambridge, and Lecturer in the Economics of South-Eastern Europe at King's College, London.

I.—THE DANUBIAN STATES.

The work of economic reconstruction in the Danubian Succession States is still far from complete. Four and a-half years of war played havoc with the whole region. Vast areas actually came within the fighting zone, and countries like Serbia and most of the Old Kingdom of Roumania suffered from the extortions of hostile armies of occupation. This, as is only too often forgotten in more favoured lands, was the prelude to national independence: to a redrawing of frontiers which, even in normal times, would of itself have been the source of very considerable difficulty in the economic sphere. Moreover, the old economic order had broken down under the strain of the war, while the new did not even exist on paper in the year of grace 1918.

Under the old régime, by far the greater part of this Danubian area acknowledged the sway of the Habsburgs. It is this fact, combined with a certain natural unity given to the whole region by the River Danube, which calls for a general survey of the six Danubian countries—Austria, Czechoslovakia, Hungary, Roumania, Bulgaria and Yugoslavia—despite the great variety in economic development and general civilisation. History and geography combine to justify such a procedure, though it must be admitted that variations in local frontiers, no less than the general inaccuracy of official figures, make it difficult to give a reliable series of statistical pictures. The following summary of the Austro-Hungarian monarchy, together with the three Balkan States which touch the Danube, as comprised within the frontiers established in 1878, and the former Russian province of Bessarabia, will serve as an introduction to our subject:—

THE DANUBIAN LANDS IN 1910.

Country.	Area.	Population.		Railways.	
	Thous. Square Miles.	Total (Mill'ns)	Per Square Mile.	Thous. Miles.	Miles per 1,000 Sq. Miles.
Austrian Empire	115.8	28.6	247	14.1	121
Austria (excluding Galicia)	85.5	20.5	240	11.5	135
Hungary	125.6	20.9	166	12.8	102
Bosnia-Herzegovina	19.8	1.3	96	1.1	54
Roumania	50.5	7.0	138	2.2	44
Bessarabia	17.6	2.4	139	0.5	31
Bulgaria	37.2	4.3	116	1.1	28
Serbia	18.6	2.9	156	0.4	23
Total Danubian Lands (excluding Galicia)	354.8	59.9	169	29.6	83

These figures, naturally, relate to the areas of the Balkan States prior to the outbreak of the Balkan Wars, which, incidentally, completely disorganised the statistical

returns of the States concerned. They thus exclude Macedonia ("Southern Serbia") and the net additions made to Bulgarian territory in 1912-13. It should, however, be added that they include those parts of the old Austria which were ceded to Italy.

For our present purpose it will suffice to point out that, taking these lands as a whole, approximately two-thirds of the total area and something less than three-quarters of the total population was under Habsburg rule. With the exception of Bosnia, the density of population was here greater, and the railway equipment much more developed, than in the small national States. Industry was expanding rapidly in the Dual Monarchy in the decade leading up to the war, for something in the nature of an "industrial revolution," to use a much-abused term, was then taking place in the lands of the Middle Danube. Around the Habsburg dominions themselves a high tariff wall had been built, and, within this, there was also a common currency system, and, to some extent, a common system of law and administration. It is true, however, that ever since the famous "Compromise" of 1867, the kingdom of Hungary had been forging ahead on its own lines. In particular, its railway system was quite distinct from that of Austria and what were virtually discriminatory railway rates formed one of the many weapons with which the Magyars were busily building up a specifically national Hungarian industry. Moreover, the two halves of the Dual Monarchy had different tariff interests (as witness, for example, the burning question of duties on iron), and in this, as in many other economic matters, the gulf between Budapest and Vienna was growing steadily wider in the years immediately preceding the war. The fate of the ten-yearly agreement between the two countries, which was to have come up for revision in 1917, was in some doubt before the outbreak of hostilities. In other words, economic nationalism was already rampant in the Habsburg dominions by 1914, though the principal line of cleavage was the frontier separating the Austrian half of the Empire—that curious conglomerate stretching from the Bucovina in the far North-East, through Galicia, the lands of the Bohemian Crown, Austria proper, and the Slovene country to Dalmatia and the Montenegrin border in the South-East—and the compact kingdom of St Stephen, whose economic life was being centred more and more on Buda-Pest and the Middle Danube. This line, be it noted, cut across the ethnic limits of Roumanians, Czechoslovaks, and Southern Slavs, and was far from being acceptable to the majority of the subjects of Francis Joseph. Moreover, the national frontiers of Roumania separated the Roumanians of the old kingdom from their fellows in Transylvania and the Bucovina; while the Danube and the Save at Belgrade cut off the little

kingdom of Serbia from millions of Serbs and Croats who lived under Habsburg rule.

It is clear, then, that the abundance of frontiers and the predominance of economic nationalism are no new features of Danubian economic life. From the economic point of view, however, it is interesting to remember that the changes that were taking place in the old Dual Monarchy in consequence of the existence of this frontier between the two halves of the Habsburg dominions, were geographically not the same as those which have come as a result of the Peace Conference. Moreover, the Austro-Hungarian Empire had itself existed in its dual form since 1867, while the modern economic development of Austria and of Hungary had both been directed with a view to the furtherance of a political system.

By the end of 1918 the old order had collapsed. The financial position was more than precarious; the transport services were completely disorganised; and agriculture and industry were alike exhausted after the excessive burdens that had been laid upon them by the war. It was, therefore, from the ruins of the old order that the new was to arise, and that during a period of general impoverishment in most parts of the world which inflation and profiteering made to appear like prosperity. From these inauspicious beginnings, and in spite of a whole series of blunders due to generations of suspicion and hatred no less than to inexperience and ignorance, a new economic system is gradually being evolved in the Danubian lands.

Before considering the general work of reconstruction which has already been accomplished, it may be as well to begin by summarising the available data relating to the area and population of the six Danubian countries in their new form. These statistics vary considerably in reliability, while the figures relating to Roumania are estimates only, as no census has been taken since the war. Moreover, the returns as to the relative share of the rural and the urban elements in the total population are not strictly comparable with one another, owing to different methods of calculation. The following table does, nevertheless, give a sufficiently accurate general picture of these countries, while a comparison with the corresponding figures for Germany and France is not without interest:—

Country.	Area Thous. Square Miles.	Population.			
		Census of	Total (Millns.)	Per Square Mile.	Per- centage Rural
Austria	32.4	1923	6.5	202	51
Czechoslovakia	54.9	1921	13.6	248	57
Hungary	35.8	1921	8.0	222	70
Roumania	114.3	1920*	16.0	140	83
Bulgaria	39.8	1920	4.9	122	89
Jugoslavia	96.1	1920	12.0	125	..
Total Danubian States	373.3	..	61.0	164	..
France	212.7	1921	39.2	184	54
Germany	182.2	1919	59.9	328	..

* Estimate.

It will be seen that, although the area of the Danubian region as a whole is over twice that of Germany, the average density of population is only half that of the Reich. Conditions, from this point of view, remind one rather of the situation in the Germanic States towards the middle of last century. At the same time, it may come as something of a surprise to see that, in three of these Danubian States, the population per square mile is considerably in excess of that of France.

From the point of view of density of population and general economic development the Danubian States fall into two main groups. Urbanisation has proceeded furthest in the two Western States of Austria and Czechoslovakia. The figure of density of population in the case of Austria would be much higher than it is but for the great expanse of Alpine land, which is included in the territory of the Republic. Both countries possess highly developed industries which, in Habsburg days, had grown up, in large measure, in mutual interdependence upon one another. Hungary, which in many respects occupies a position intermediate between Austria and Czechoslovakia

on the one hand and the countries of the Lower Danube on the other, is predominantly an agricultural country. Its territory, however, is rich and, in the main, thickly settled, while the industrial life of the country is already past the initial stages. In all these three States the population is over 200 to the square mile.

To the other group belong Roumania, Bulgaria, and Yugoslavia. The new kingdom of Roumania is easily the largest in area of all these countries and also has the largest total population. Indeed, Roumania, with over 114,000 square miles, is almost as large as the old Austrian half of the former Empire, which had an area of 115,832 square miles. The country, however, despite its great natural resources, is relatively under-populated, and remains predominantly agricultural. The low density of population in Bulgaria and Yugoslavia is clearly due, above all, to the very mountainous nature of these two countries, though it seems certain that there is considerable scope for further economic development, more especially in the latter case. In all three countries the process of urbanisation has not as yet proceeded very far, and industry on a factory basis is as yet in its infancy, with one or two prominent exceptions, such as the Roumanian oil industry and the ironworks at Reshitza in Transylvania, which formerly belonged to the Hungarian State.

A further guide to the general economic development of these countries is afforded in the following table, which summarises the position in regard to railway transport:—

Country.	Thousand Miles of Line.	Approximate Mileage.	
		Per 1,000 Square Miles of Area.	Per 10,000 Inhabitants.
Austria	4.1	127	6.3
Czechoslovakia	8.5	156	6.2
Hungary	5.3	150	6.6
Roumania	7.3	64	4.6
Bulgaria	1.6	41	3.3
Jugoslavia	6.2	65	5.2
Total Danubian States..	33.0	88	5.4
France	25.8	121	6.6
Germany	34.3	188	5.7

Here, again, it will be seen that Germany, with an area less than half that of the Danubian region, has a greater railway mileage, while the three Western Danubian States have a greater railway equipment, per 1,000 square miles of area, than has France. On the other hand, the distinction between the Western and the Eastern group of Danubian States is even more marked in this table than it was in the case of the figures of population, which were given earlier.

This rough survey of general economic development should be borne in mind when we come to consider the main trends of reconstruction in these countries. Generally speaking, it is natural to expect that a wholesale re-drawing of frontiers will lead to greater disturbance in an advanced than in a more primitive economic society. Industrial countries like Austria and Czechoslovakia will be likely to be faced with more difficult problems than the rural lands to the South and East; and this remains true even when allowance has been made for the greater direct war losses suffered by Roumania and Serbia.

II.—CURRENCY STABILISATION.

No sphere of economic life attracted quite so much public attention in the years immediately following the war as did that of currency and exchange. The Central Powers had financed military operations very largely by recourse to almost unlimited inflation. The actual note circulation of the Austro-Hungarian Bank, which stood at 2,325 million crowns at the end of June, 1914, rose to 5,137 millions by the end of that year; to 10,889 millions by the end of 1916; and to 35,589 millions by the end of 1918. This wholesale inflation was only partially reflected in the Zürich rate for the crown. The average of 104f 79c Swiss for 100 crowns in 1913 had only fallen to an average of 44f 40c Swiss for the last year of hostilities. At the very best, therefore, the Austro-Hungarian Succession States found themselves faced with a greatly inflated and rapidly depreciating currency at the very difficult moment

of national reconstruction. By the end of 1918, indeed, the value of the crown had fallen to about a quarter of its parity, and, moreover, State deficits continued to be met by ever-increasing issues of new banknotes. The old order had broken down, and the Austro-Hungarian Bank was quite unequal to the problems of the new situation.

CZECHOSLOVAKIA.

The first move towards a restoration of sane financial conditions was made by the new Czechoslovak Republic under the leadership of its energetic Finance Minister, Dr Rasín. The sudden stamping of all the Austro-Hungarian banknotes on Czechoslovak territory in February, 1919, led to the establishment of an independent exchange rate for the Czechoslovak crown and the Banking Office of the Ministry of Finance in Prague took over the administration of the notes circulating in Czechoslovakia. At the time of stamping, one-half of the private holdings of banknotes was withheld and converted compulsorily into non-transferable State bonds bearing interest at the rate of 1 per cent. This measure, which did not apply to public funds or to such liquid funds of the banks as were advanced to the State on current account, reduced the total note circulation on Czechoslovak territory by about one-third. The resultant stringency on the money market was met by the issue of notes against bills of exchange and loans. In this manner the market itself came largely under the control of the Banking Office and the first step was taken towards establishing a new national currency.

To meet the Treasury bills and current accounts that had been taken over by the State, and to pay off the 1 per cent. bonds which had been withheld on stamping, a capital levy and increment tax was introduced early in 1920, though it was some years before the proceeds began to flow in in really appreciable amounts. Of greater immediate importance were the various measures adopted to increase revenue and diminish expenditure on State administration, which finally led to a balancing of the Budget in 1921.

Meanwhile the new currency had been fluctuating rather violently. The lowest quotation of 4 Swiss centimes had been reached in 1919. In the following year it moved for a considerable period round about 10 centimes, only to fall again in 1921, when at one moment it actually stood as low as 6 centimes, owing to the political uncertainty resulting from the attempted restoration of the Habsburgs in Hungary. Immediately after the war the country was importing raw materials in large quantities, though the boom in trade during 1921 greatly helped Czech exporters. It was not until the third quarter of that year that the Czech crown broke away from the German mark, which had been leading the new Central European currencies in their downward rush; while, over the turn of the year, the new Republic achieved a favourable trade balance for the first time. In the first half of 1922 the crown rose as high as 12 centimes, and the loan which was successfully issued upon the London market towards the middle of that year drove the exchange up still further to about 19 Swiss centimes.

To ensure that this advance should be well maintained, the Government decided upon a policy of deflation, and this was carried out with considerable vigour. Some idea of the currency and banking side of this process is given in the following brief summary:—

(In Millions of Czech Crowns.)

End of January.	State Notes in Circulation.	Bullion and Foreign Holdings.	Bills Discounted.	Cumulative Net Proceeds of Capital Levy.
1921	10,888	330	1,794	205
1922	11,230	1,444	1,092	862
1923	9,222	1,230	496	2,157
1924	8,810	2,165	722	3,462
1925	7,917	1,672	1,083	4,128
1926	7,245	2,251	1,113	4,722

The cumulative net proceeds of the capital levy do not, of course, represent any very considerable sum when

compared with the total budget receipts for meeting current expenditure during these years (cf. p. 16). They have been included in this table as representing an important stage in the gradual liquidation of the difficult currency situation which was inherited from the days of the old Dual Monarchy.

The general consequences of the policy of deflation, which lasted throughout 1922 and 1923, will be considered later. By the following year, however, the idea of forcing up the value of the currency still further was definitely abandoned, and since then the exchange rate has been maintained at around 30 Czech crowns to the dollar.

The fall in world prices has naturally been reflected in Czechoslovakia, and this, in turn, has led to a gradual reduction in the note circulation. The currency position now appears to have been definitely stabilised, and the introduction of a legal gold standard is only a matter of time. It may be added that, in April last, a new National Bank of Issue commenced operations, and the former Banking Office thus came to an end.

AUSTRIA.

In marked contrast with Czechoslovakia, where the nation's will to live made itself felt almost from the start, even when serious financial sacrifices were demanded from the individual citizen, is the story of currency stabilisation in Austria, that tiny remnant of a once mighty Empire. As we have seen, the policy initiated by Dr Rasín was based on the assumption that the final solution of the currency question could only be achieved when the whole complex of economic and financial problems had first been solved. In so far as any clear view was held at all in the new Austria, this theory also found acceptance there. Before very long, however, it became abundantly clear that Austria was most unlikely to succeed in the difficult task of economic reconstruction if left to her own unaided resources.

The Austro-Hungarian Bank continued its war-time policy of inflation. The Austrians appeared willing to go on printing so long as any foreigner was prepared to give more for the notes than they actually cost to produce. Vienna became a prey to international speculators of the most dubious character, and the phenomenon of an exchange rate falling even faster than prices could rise became the order of the day. At the beginning of 1920 100 Austrian crowns were still worth 2.25 Swiss francs at Zürich. By the following January this figure had fallen to 1.30 Swiss francs, while in January, 1922, 100 crowns were only worth 8 centimes. From the start the Austrians themselves had no confidence in their own currency, and the catastrophic fall which took place during the summer of 1922, when the dollar rate actually rose as high as 83,600 crowns (August 25th), made it perfectly clear that international action alone could save the situation.

As early as the previous summer the Financial Committee of the League of Nations had made a study of the Austrian situation, and had recommended a far-reaching scheme of financial reconstruction. It was not possible, however, to obtain the credits which formed an essential part of the scheme until the various Governments which had claims against Austria, whether in respect of relief credits, reparations, or the cost of the armies of occupation, were prepared to forgo them, and thereby free the assets. Great Britain, France, Italy, and Japan had already done so in March, but the necessary consent of the other Governments was not obtained until the summer of 1922. Meanwhile, Great Britain had advanced 2½ million sterling, all of which was swallowed up in the first half of the year, and credits made available by France, Italy, and Czechoslovakia had, in large measure, met with a similar fate.

In August, 1922, the question came once more before the League, and the Financial Committee stressed the essential importance of reforming the various State enterprises (which between them involved an annual loss of nearly 7 millions sterling), together with a wholesale reduction in the number of officials. It also considered that the Customs and tobacco monopoly alone would

provide sufficient security for the service of the proposed loan. Everything depended, therefore, upon the acceptance by the Austrian Government itself of a certain well-defined measure of outside control over its own internal affairs in order to guarantee that the reconstruction plan should, in fact, be carried through.

By October 4, 1922, an arrangement was arrived at, and the complete scheme, comprising three Protocols, with their annexes, was concluded and signed at Geneva by the Governments of Great Britain, France, Italy, Czechoslovakia and Austria. It is not possible here to give more than the merest outline of the organisation and working of the League plan, which led immediately to currency stabilisation, laid the basis for a new organisation of Austrian economic life, and is, perhaps, above all important in that it constitutes a significant new departure in international relations.

Austria undertook to carry out a programme of reform, both by reducing expenditure and by increasing the revenue from taxation, which was expected to lead to a balanced Budget by 1924. The deficit anticipated during the first two years of reconstruction was to be covered by a loan guaranteed by certain foreign Governments. In particular, Great Britain, France, Italy, and Czechoslovakia between them undertook to guarantee a little over four-fifths of the sum required.

On the other hand, the Austrian Government surrendered its right to issue paper money, and undertook not to negotiate further loans without special authorisation. For the future, the currency of the country was to be under the control of a new bank of issue.

To ensure that the scheme should be properly applied, the Council of the League of Nations was to appoint a Commissioner-General, who would be an officer of the League and would live in Vienna in order to supervise the actual work of reconstruction. He was to be aided by a "Committee of Control of the Guaranteeing Governments" to look after their special interests. The rights and powers both of the Commissioner-General and of this Committee were, naturally, clearly defined.

A special delegation appointed by the Council of the League arrived in Vienna in October, 1922, charged with the preliminary work of supervision, and on December 15th of that year Dr Zimmerman, the Commissioner-General, entered upon his duties in Austria. Meanwhile, the Austrian Government had passed the necessary legislation envisaged in the Geneva Agreement, and the reconstruction plan was in full swing.

The acceptance of the League scheme had an immediate effect upon the Austrian currency. As we have already seen, the dollar rate reached its maximum towards the end of August, 1922. The Geneva discussions were at once instrumental in restoring confidence, and the crown actually appreciated. On November 18th the inflationary issue of notes by the Government itself came to an end, and from that time up to the present the variations in the value of the Austrian currency on the New York market have not exceeded 1 per cent.

A further step was taken in an Austrian Federal law of December 20, 1924, which established the *schilling* as the new currency unit. This is equal to 10,000 paper crowns, and has a par value of 34.58½ to the pound sterling. It was introduced for almost all public purposes in the following March, and during the course of the year 1925 became the universal medium of circulation.

The further progress of the reconstruction scheme in the realm of public finance will be referred to in a later section. For the present it is interesting to note that the introduction of a stable exchange for the national currency was made at a time when its external purchasing power had fallen far below the internal. No attempt was made to force up the value of the crown on foreign centres, and so, reckoned on the new basis, with prices rising towards the general world level, the country was faced with a considerable shortage of currency. An increase in the note issue, now that it would no longer be used to make good a Budget deficit, became both possible and desirable, and, provided that it did not proceed too rapidly or too far, would not affect the exchange value of the currency. A short summary of the relevant entries in the balance-sheets of the Austrian National Bank, which was opened on January 2, 1923, is given in the following table:—

First Week of	(In Million Schilling.)				
	Liabilities.		Assets.		
	Bank Notes.	Call Deposits, &c.	State Debt.	Cash Reserve.	Bills Discounted.
Jan., 1923 ..	405	42	256	120	73
July, 1923 ..	537	63	255	283	70
Jan., 1924 ..	681	86	253	437	125
July, 1924 ..	776	94	224	335	319
Jan., 1925 ..	790	90	218	352	182
July, 1925 ..	805	49	203	445	86
Jan., 1926 ..	826	91	188	502	167
July, 1926 ..	844	57	183	533	85

It will be seen that the cash reserve has increased about twice as fast as the note issue, while there has been a steady diminution in the volume of State debt held as security for the notes themselves. The movements in bills discounted reflect the extent to which the bank has been obliged to step in and help the market through its worst difficulties. During the first half of 1924 the country passed through a serious financial crisis, due in no small measure to the unsound speculation prevailing on the Stock Exchange and to considerable profit-taking by foreigners and others, but actually precipitated by the speculation in the French franc which came to a climax in April. At this period the National Bank discounted fairly freely, but immediately thereafter withdrew to its proper sphere as a National Bank. A similar policy was adopted, but on a much smaller scale, during the severe economic depression which characterised the second half of 1925 and the first few months of the present year, though now things are nearer normal once again.

The contrast between the process of currency stabilisation in Austria and Czechoslovakia is very striking. In the latter case the equilibrium of revenue and expenditure came first, to be followed by the achievement of a favourable balance of trade. These things accomplished, a foreign loan was used, in part, at least, to force up the exchange value of the Czech crown. After two years of deflation, a policy of stabilisation was adopted, and the final adoption of a definite rate of convertibility into gold is now only a matter of time. In Austria this process was reversed. The prospects of a foreign loan arrested the downward rush of the crown, while the proceeds enabled budgetary equilibrium to be established. Moreover, stabilisation was followed by an increase in the amount of money in circulation. The foreign trade situation remains a matter of some anxiety, but the convertibility of the new currency seems amply guaranteed by the reserves. Finally, while Czechoslovakia struggled through to more normal conditions by taking the financial situation in hand in good time, Austria was only saved from imminent disaster by the application of an interesting plan of international control over some of the most important of her own internal affairs.

HUNGARY.

The currency history of the new Hungary affords many interesting points of contrast and of resemblance with that of Austria. The problem of economic readjustment in a predominantly agricultural State like Hungary was, of course, much simpler than that of the two largely industrialised countries which we have just been considering. On the other hand, the political situation in the first year of national existence was one of extreme difficulty. On March 21, 1919, a Soviet Republic was proclaimed. The Austro-Hungarian Bank, which was still functioning for Hungary as well as for Austria, declined to afford any credits to the new Government, which, for its part, obtained control of the Postal Savings Bank (Postsparkasse), and issued the so-called "green notes" as fast as it could print them. For the four months of its existence the Bela Kun régime did its best, in accord with the best Moscow precedents, to discredit the whole structure of monetary economy.

Unfortunately, the counter-revolutionary Government which followed not only had recourse to new issues of Austro-Hungarian Bank notes, but actually continued to issue Postal Savings notes. These two issues circulated at different rates, and it was not until the Treaty of Trianon that the affairs of the Austro-Hungarian Bank were liquidated, with the result that in the summer of 1921 a new national currency was introduced in the place

of the notes of both kinds which had hitherto been in circulation.

In contrast with the action of Czechoslovakia, the stamping of notes circulating in Hungary came too late, and wholesale inflation, with its unpleasant cumulative effects, was already in full swing at the time of the introduction of the new Hungarian crown. As the exchange rate of the crown played a considerable rôle in determining the action of the Government, it is as well to begin by summarising the Zurich quotation during the inflation period:—

(Swiss Francs for 100 Hungarian Crowns.)

Year.	End of January.	End of July.
1920	2.75 ..	3.40
1921	1.20 ..	1.55
1922	0.775 ..	0.29
1923	0.2025 ..	0.0205
1924	0.0128 ..	0.0069

During the first half of 1921 the Budget reform plan of the Finance Minister Hegedüs was sufficiently successful to make it unnecessary for the Government to have recourse to the printing press for a considerable period. But the capital levy scheme proved disappointing in application, and inflation on Government account started anew, even though not to quite the same extent as in certain other inflationist countries. The fall of the currency in the second half of 1921, however, soon led to ever-increasing demands for credit accommodation on the part of the market, and, unfortunately for Hungary, the Bank Office (Noteninstitut) met this demand by constantly adding to the note issue. By the end of 1922 this had risen to a legal maximum of 37 milliards; but sanction was continually obtained to raise the maximum, and, in its last weekly statement, on June 23, 1924, the Bank Office rejoiced in an issue of 1,455 milliards.

The disastrous consequences of currency depreciation and the dangers of the vicious circle of inflation had already made themselves felt in 1923. The neighbouring State of Austria, however, seemed to offer an example which Hungary might do well to follow. The conclusion of a foreign loan was, nevertheless, a matter of greater difficulty than in the case of Austria. For a variety of reasons, Hungary was an object of the greatest suspicion on the part of the neighbouring States of the Little Entente. They felt, above all, that the country should be able to carry through the necessary reforms without impairing their claims to Reparations, while the proposal for a League reconstruction plan on the Austrian model was regarded merely as a device for avoiding her obligations. Accordingly, long and weary negotiations were necessary before the Reparations Commission finally consented (on February 21, 1924) to modify its claims sufficiently to enable a foreign loan to be obtained.* Meanwhile, however, much had happened. In the previous September a Hungarian delegation, led by the Prime Minister, Count Bethlen, had gone to Geneva to invite the League to elaborate a plan for the financial restoration of the country. The representatives of the Little Entente accepted the principle involved, and the Financial Committee in due course proposed a scheme which was accepted by the Council of the League on December 20, 1923. Some delay ensued until the Committee of Reparations gave its final decision, but, on March 14, 1924, the Geneva Protocols were signed during the session of the Council of the League, and a new chapter opened in the financial history of the new Hungary.

In the main the scheme followed that which had proved successful in the case of Austria, but there were certain modifications due to experience gained in this type of reconstruction work and to the special necessities of Hungary. The principal points of divergence were the following:—

(1) The Austrian loan (of a maximum of 650 million gold crowns) was guaranteed by foreign countries. The Hungarian loan (of a maximum of 250 million gold crowns) was to be issued by the Hungarian Government, with the

* The payments to be made by Hungary on Reparation account were to be as follows:—Down to the end of 1926, the equivalent of 880 tons of coal per working day. For the following 15 years a schedule of payments beginning with 2½ million gold crowns for the first half of 1927 and rising to 7 millions for the half-year ending December 31, 1943.

blessing of the League, it is true, but without any further guarantee.

(2) While the various liens held by foreign countries on Austria were completely lifted for a period of 25 years, Hungary was left with certain Reparation charges to meet, though these were greatly reduced in amount.

(3) For Austria a "Committee of Control of the Guaranteeing Governments" was appointed, while in Hungary its place is taken by a Committee of Control appointed by the Reparations Commission.

(4) Of some interest is the fact that, whereas the Austrian National Bank must see to it that the currency "shall at least not depreciate," the rôle of the Hungarian Bank is to maintain the "stability" of the Crown. In practice this distinction has not been of any importance.

(5) The Hungarian Bank, unlike the Austrian, is empowered to discount agricultural bills, up to six months, provided this does not interfere with the general liquidity of the Bank.

In Hungary, as in the case of Austria, it was an essential part of the League scheme that a National Bank should be set up which should be, so far as possible, independent of the Government. The Delegation of the League which went to Hungary in March, 1924, advised the Government not merely as to the budgetary reforms to be introduced, but also as to the law creating the new National Bank, which was actually passed in the following month. On June 24th this institution commenced operations, but the situation was one of some difficulty, as the Bank had virtually no funds available for maintaining the exchange, and the League loan could not be placed immediately. The situation was saved by the intervention of the Bank of England, which made an advance of four million pounds. This action did much to determine later policy, for, in consequence of so close a collaboration, it was decided to link the Hungarian crown to the pound—a currency which at that time had not itself been stabilised. Since the beginning of August, 1924, the National Bank of Hungary has maintained the exchange at the new parity of 346,000 crowns to the pound sterling. It should be noted, however, that the arrival of the Commissioner-General of the League in Budapest in May did not prevent a very considerable increase in the note circulation during the first few months of the application of the reconstruction scheme. Moreover, some little time elapsed before the definite stabilisation of the currency was taken in hand. The later development of the currency situation is outlined in the following table:—

	(Milliard Crowns.)		
	Note Circulation.	Cash Reserve.	Treasury Advances.
End June, 1924.....	2,894	938	1,980
Dec., 1924.....	4,514	2,479	1,975
June, 1925.....	4,583	2,737	1,959
Dec., 1925.....	5,194	3,341	1,954
June, 1926.....	4,943	2,865	1,897

Unlike the case of Austria, the great increase in the note circulation came mainly in the initial stages of the work of reconstruction. While advances made to the Treasury have been slightly reduced, the cash reserve (including holdings of foreign currency) increased enormously down to the end of last year, though not relatively as much as that of the Austrian National Bank. Perhaps the greatest difference between the two schemes in their practical application has been the fact that, whereas the Austrian currency was brought almost immediately on to a gold standard, the Hungarian crown, through its association with the English pound, continued to appreciate for several months, and only achieved a final gold parity with the restoration of the gold standard in this country in April, 1925. The disadvantages of this arrangement appear to have been quite slight, whereas it is certain that the close association of the Hungarian Bank with the Bank of England has greatly simplified the task of financial consolidation.

The last step towards establishing a definite currency policy was taken in March of the present year, when the new "Pengö" currency was introduced, the unit adopted being equal to 12,500 of the old paper crowns, and having a par value of 27.82 to the pound sterling. It seems most unfortunate that this ratio should have been accepted rather than the simpler one of 10,000 paper crowns to the new unit, which would have made the pengö approxi-

mately equal to the Austrian schilling. The multiplication of new currency standards has been one of the many regrettable consequences of wholesale inflation in post-war Europe.

The main stages of Hungarian currency history have thus been similar to those of Austria. The preponderance of the rural element has, however, greatly simplified the task of economic reconstruction, which must proceed hand in hand with currency reform, and has helped to ensure a brilliant success for the League plan. At the same time, the tact of the Commissioner-General, Mr Jeremiah Smith, jun., of Boston, U.S.A., no less than the political sense of the Hungarian Prime Minister, Count Bethlen, have greatly expedited the process of recovery.

BULGARIA.

The only other Danubian country which has as yet stabilised its currency is Bulgaria. Like the other enemy States, this smallest of Germany's Allies had indulged fairly freely in inflation to meet her military expenditure. Her note circulation, which stood at 189 million leva (francs) at the end of 1913 had risen to 2,299 millions by the end of 1918. Like Austria and Hungary, moreover, her credit was greatly weakened and the general position rendered insecure by the existence of a large burden of Reparations, which would presumably have to be met at some time or other. Under these conditions, further inflation was virtually inevitable, and the exchange value of the lev depreciated merrily for the first four years after the conclusion of hostilities. In the following table will be found the Sofia selling rates for the dollar (maxima, minima, and mean; parity, one dollar = 5.1825 leva), together with some indication of the movements in the quantity of notes in circulation since 1919:—

Year.	One Dollar = Leva.			Notes in Circulation at End of the Year. (Million Leva.)
	Max.	Min.	Mean.	
1919	42.00	10.97	24.17	2,858
1920	97.00	42.00	64.44	3,354
1921	191.00	77.00	112.75	3,615
1922	180.00	126.00	150.18	3,886
1923	185.00	77.00	126.76	4,139
1924	140.10	134.30	139.17	4,530
1925	139.00	139.00	139.00	3,655

It will be seen that the situation grew steadily worse down to 1922, a year which witnessed the lowest mean quotation reached by the lev. In March of the following year, however, the Inter-Allied Commission in Sofia signed a Reparations agreement with a schedule of immediate payments clearly within the then capacity of the country*; while in June the ugly weapon of assassination removed the Prime Minister and leader of the Peasant party, M. Stambouliski, who, whatever his other merits might have been—and they were undoubtedly many—was hardly the man to win the confidence of financial circles either in Sofia or abroad. The "revolution" was of short duration, and the "bourgeois" Government which followed succeeded in re-establishing order, while a good harvest in 1922 and in the following year combined to bring about a marked rise in the lev exchange. Moreover, the budgetary deficit for the year 1921-1922 was turned into a surplus in 1922-23, and this satisfactory situation has since been maintained.

Bulgaria, by the end of 1923, had thus taken the necessary preliminary steps, and, though a considerable increase in imports had slightly lowered the value of the currency, the time for stabilising the lev appeared to have arrived. The rate aimed at was somewhere about the actual level, and was finally fixed at 139 leva to the \$. It should be noted that a law of June, 1924, re-defined the status of the National Bank, which is, however, a State institution. Its advances to the State must not exceed a maximum of 4,700 million leva; while the maximum fiduciary issue is defined as being the total of the State debt plus a sum equal to 12 times the cash

* Payments were to be made in gold francs as follows:—
1923.. 2.5 Millions | 1926.. 7.0 Millions | 1928-33.. 10.0 Millions.
1924.. 5.0 " | 1927.. 8.0 " | 1934-35.. 43.2 "
1925.. 6.0 "

reserve. According to the balance-sheet of March 31st last, advances to the State stood at 4,602 millions, and the fiduciary issue, which might legally have reached a maximum of 5,400 millions, actually stood at 3,465 millions. The currency stability which has been maintained for over two years, has been accompanied by a very great shortage of currency within the country. The notes in circulation on March 31st last only represented some \$25 millions, as against a circulation of over \$36 millions at the end of 1913. The population has meanwhile slightly increased, though, of course, the internal purchasing power of the gold lev remains considerably above what it was before the war.

Financial reconstruction in Bulgaria is nearing completion, though the problem of the refugees, to which reference is made in a later section, has recently caused great anxiety. With the assistance of the League of Nations, the solution of this question will probably not long be delayed, and the scheme of financial reconstruction, which the Government has carried through unaided, should not be imperilled thereby.

ROUMANIA.

The recent currency history of Roumania is, in many ways, one of the most curious in the strange tangle of post-war European finance. At the end of 1913 the Old Kingdom of Roumania, with a population of some seven millions, had a total note circulation of 437 million lei (the lei being equal to the gold franc). The expenses of the period of armed neutrality added considerably to the circulating medium; but their effect was nothing compared with the costs of the war itself, and, above all, of the enemy occupation of the country. The German military administration, through the intermediary of the Banca Generala, left new Roumania with a legacy of 2,173 million lei of uncovered banknotes, while by the end of 1918 the note issue of the Roumanian National Bank itself had increased to 2,489 million lei. The currency chaos was further added to by the existence of vast quantities of Austro-Hungarian notes, which circulated in Transylvania and the Bucovina, and of Russian roubles in the other new territory of Bessarabia. Crowns and roubles alike were converted into lei as from 1920 at the rate of two to the lei; this meant a further addition of 5,562 million lei to the currency.

The general situation after the war was far from being one of peace and normal development. The country had suffered cruelly from the effects of foreign occupation, and, in 1919, was at war with Hungarian Bolsheviks, while the proximity of Russia was a constant nightmare. Under these conditions, Budget consolidation and financial reconstruction were virtually impossible, and inflation proceeded merrily. The following table gives the dollar rates and the total of notes in circulation since 1919:—

Year.	One Dollar = Lei at Bucharest. (Monthly Averages: Par \$1 = 5.18 Lei.)			Notes in Circulation at End of Year.
	Highest.	Lowest.	Average.	
1919	36.0	21.5	26.3	..
1920	80.3	37.5	57.4	10,933
1921	152.5	55.5	90.4	13,722
1922	173.5	137	151	15,162
1923	230	177	205	17,917
1924	241	185	204	19,397
1925	226	191	..	20,126

Down to the end of 1921 the Government had continual recourse to the printing press to make good budgetary deficits. From the beginning of the following year down to the present time, however, all printing on Treasury account has ceased. Further increases to the note circulation since that date have been for commercial purposes, discounting of bills, and the like.

From 1922 to 1924 the balance of trade was favourable, while the excess of imports last year was too small to have any important lasting influence on the currency. Throughout the period, moreover, the Budget has been balanced. What, then, is the real explanation of the very large fluctuations which have taken place in the exchange rates since that time?

The year 1922, the first year in which the return to more normal conditions was being accomplished, could hardly

have been expected to have witnessed an immediate return of confidence, more especially as the harvest was decidedly mediocre. The situation in the following year was certainly better on the whole, and yet there was a very marked fall in the lei exchange. It seems highly doubtful whether the increase in the note issue had any share in this movement. Not only was the gold value *per capita* of the currency infinitely smaller than that of pre-war days (approximately one-fourth at the end of the year), but, in a country like Roumania, where hoarding is fairly common, it is unlikely that so small an increase would have any appreciable effect upon the volume of currency in actual circulation. At this point it is as well to notice that, whereas the annual average quotation for the dollar at Bucharest has remained fairly constant since 1923, fluctuations became greater rather than less in the following year, while the collapse of the lei, which occurred earlier in the present year, although quotations are now back to somewhere near the average level, has shown how unstable is the general exchange position.

As in most other Continental countries since the war, and more especially in those of Central and Eastern Europe, the real difficulty has certainly been a lack of confidence in a discredited currency. Elsewhere stabilisation has come to be regarded as the inevitable solution, to be followed by the accumulation of an adequate cover for the revalued note issue, and, finally, by the introduction of a new currency. In Roumania, however, the Government has throughout been influenced by the desire to increase the value of the currency. Strange though it may sound, it is nevertheless true that it was long hoped in official circles that the lei might be brought back to its pre-war parity. In consequence a restrictive trade policy was adopted. Export prohibitions, export duties, and import restrictions were combined with an elaborate scheme of official maximum price-fixing within the country itself. Internal prices were not to be allowed to rise to meet world prices, calculated at the ruling rates of exchange; the ultimate objective being to increase the external purchasing power of the lei.

Roumania is, of course, a predominantly agricultural country, and therefore strongly influenced by seasonal movements. When grain exports are taking place, there is a keen foreign demand for the lei, and the exchange rises. At other months of the year the position is reversed, while the same is true if, as was the case over the turn of last year, anything happens to prevent the grain from being moved from the Danubian ports (as, for instance, when the river freezes earlier than usual). After the harvest each year the Government has regained faith in the future of the lei, and during the first few months of 1924, for example, actually chose this moment for attempts at deflating the note issue. Such action was necessarily followed by a corresponding reaction, with the result that exchange fluctuations were thereby increased. In addition, regulations restricting dealings in foreign exchange have proved annoying rather than effective; the inelastic application of export regulations have hindered trade; while the policy of keeping down home prices by Government decrees has broken down in practice. At long last the desirability of stabilisation is being seriously considered, and the excellent harvest this year should afford a first-class opportunity for the accumulation of foreign reserves. The moment for a satisfactory solution of the lei exchange seems now at hand, though it remains to be seen whether advantage will be taken of it.

JUGOSLAVIA.

The currency history of the new kingdom of the Serbs, Croats, and Slovenes is in many ways intermediate between that of Roumania on the one hand and that of Czechoslovakia on the other. At the end of June, 1914, the Serbian National Bank had a note circulation of 91 million dinars (gold francs). This was increased enormously during the war, and when the bank itself was transformed into the national bank of the kingdom of the Serbs, Croats, and Slovenes on February 1, 1920, it had already risen to 813 million dinars. Meanwhile, however, the Austro-Hungarian Bank had also flooded the new territories with its banknotes; and, although Jugoslavia was the first of the Succession States to break

away from the old currency unit—which it did by carrying through the stamping of all Austro-Hungarian notes on its territory, without previous warning, in January, 1919—it was none the less faced with a heavy legacy of paper money. The first year after the war was a period of financial chaos—two currencies were in circulation, and exchange regulations merely increased the fluctuations of the dinar on foreign markets. The founding of the new bank was the first step forward. This institution issued its notes in place of the old Austro-Hungarian stamped notes in the ratio of one dinar to four crowns. This was, perhaps, less generous than the policy adopted by Roumania in her new territories, but had at least the advantage of bringing the total note issue within more manageable proportions. At the end of 1920, despite inflation on Government account—which lasted, incidentally, down to the beginning of 1923—the note issue only amounted to 3,344 million dinars. Movements in the exchange and the circulating medium are summarised in the following table:—

Year.	Annual Average in New York. One Dollar = Dinars. (Parity—\$1 = 5.18 D.)		Notes in Circulation at end of the Year.
1920	26.2		3,344
1921	42.2		4,688
1922	73.7		5,040
1923	93.3		5,790
1924	77.9		6,002
1925	58.6		6,063
1926 (six months)	56.7		5,494

(end of June)

The dinar exchange moved fairly steadily in a downward direction until the end of August, 1922. A temporary improvement was registered during the next few months, owing to the use made by the Government of the first section of the loan which had been negotiated through the New York firm of Blair. This was not, however, lasting in its effects, and the close of the year witnessed a very rapid fall, which continued down to the month of February, 1923.

The advent of the new Finance Minister, M. Stojadinovic, marked the end of the old inflationist policy, which henceforward gave place to attempts at deflation, and, above all, to the gradual abolition of all the hindrances which had weighed so heavily on the foreign trade of the country. Economy in national expenditure, discouragement of imports, and, almost more than all this, an active policy of encouragement to exporters, combined to bring about an improvement in the national currency. The appreciation of the dinar was, of course, enormously helped by the excellent harvest results in 1924, when world prices for cereals were high, and since then there has been a tendency for the rates to fluctuate much less violently.

For many months past, the exchange rate has been maintained at around 275 dinars to the pound, and the time now seems to have come for a definite revaluation of the currency. Adjustments to the new price level within the country, necessitated by the appreciation of the dinar, have already taken place, and a further reduction in the note issue could not fail to be a great inconvenience. It is extremely gratifying to see that the chaotic currency conditions which prevailed up to less than four years ago have now given place to a state of affairs which, if not completely satisfactory, nevertheless affords an excellent basis for a final regulation of the currency problem.

III.—AGRICULTURAL PRODUCTION.

The prosperity of the Danubian lands depends, above all, on their agricultural production. This influences their general purchasing power, determines, in large measure, the volume of their foreign trade, and is the most important factor in their economic and financial life. The war, however, caused much indifferent cultivation, drained the rural districts of their labour supply, and sadly reduced the live-stock equipment. This was particularly true of Roumania, the richest granary of the Danubian lands, where warlike operations and the ensuing military occupation wrought havoc with the whole economic structure of the country. In addition, moreover, the war years disorganised the transport equipment of all these States, in greater or lesser degree, and in many parts there was actually a great shortage of

seed corn for the spring sowings of 1919. Finally, in several of the Danubian countries the turmoil of war-time and the influence of the Russian revolution necessitated a complete change in the system of landholding, and led to a whole series of measures of expropriation of the large landowners. This wave of "Agrarian Reform"—or "Agrarian Revolution," as it is sometimes called—will be considered briefly in a separate article. For the moment, it has to be referred to as one of the many disturbing factors in the rural economy of this part of Europe, though it is as yet too soon to attempt an estimate of its probable effects upon agricultural production in the long run. One point, however, stands out at the outset. As a consequence of years of war and all that this implies, large areas had passed out of cultivation by the year 1919, and the first great problem was to restore these to production.

The progress towards more normal conditions is shown in the following table. A word of caution will not, perhaps, be out of place as to the interpretation which may be placed upon these figures. The pre-war average, in particular, cannot be regarded as beyond suspicion. The figures are compilations of estimates for the present area of these six countries, which do not all refer to exactly the same period. Moreover, no satisfactory estimate has as yet been published of the pre-war production of Yugoslavia, and the margin of error is here considerable. It should also be pointed out that there is no good reason for regarding the five years before the war as "normal," for cereal production in parts, at least, of South-Eastern Europe was being forced during that period at the expense of a more rational husbandry. Finally, agricultural statistics in these countries seem to be even less reliable than other official figures. Despite all these reservations, however, our table of the area down to the principal cereals in the six Danubian countries does suggest that a striking recovery has taken place since the war.

AREA DOWN TO THE PRINCIPAL CEREALS in the SIX DANUBIAN STATES.*

(In Million Hectares.)

	Pre-War	1920.	1921.	1922.	1923.	1924.	1925.
Wheat	8.6	6.2	6.8	7.3	7.3	8.2	8.4
Maize	7.5	6.7	7.0	7.0	7.0	7.4	7.9
Rye	3.0	2.5	2.4	2.5	2.5	2.5	2.6
Barley	3.5	3.3	3.4	3.6	3.7	3.7	3.5
Oats	3.1	2.9	3.2	3.3	3.3	3.2	3.1
Total	25.7	21.6	22.8	23.7	23.8	25.0	25.5
As % of pre-war ..	100	84	89	92	93	97	99

* The situation in the individual countries will be referred to in later sections.

At the present time, then, the area down to the principal cereals is virtually back to that of earlier days, and this fact is, of course, the basis of all hope for economic reconstruction in the Danubian lands.

The actual harvest results have naturally been more variable, and climatic conditions have not been particularly favourable since the war. This is perhaps particularly true of Roumania, where up to the present year the weather has been far from kind to the crops. A summary of cereal production in the region as a whole will be found in the following table:—

PRODUCTION of the PRINCIPAL CEREALS in the SIX DANUBIAN STATES.
(In Million Metric Tons.)

	Pre-War	1920.	1921.	1922.	1923.	1924.	1925.
Wheat	9.7	5.5	7.0	7.3	8.5	6.8	9.7
Maize	11.0	9.3	6.2	7.3	8.3	10.8	11.7
Rye	3.6	2.2	2.8	2.8	3.1	2.5	3.5
Barley	4.2	3.3	3.1	4.1	3.8	2.6	3.7
Oats	3.5	2.8	3.0	3.4	3.5	2.8	3.4

Until last year, though with one or two exceptions, such as that of barley and oats in 1922 and 1923, and maize in 1924, the yield of the principal cereal crops, taking the area as a whole, remained considerably inferior to the pre-war average. The area devoted to the bread crops and maize, which between them provide the main food of the people—rye being most important in the North-West and maize in the South and East—was also less than that of earlier days. The reason for this is, in part at least,

the restrictive policy adopted with regard to the export of these cereals by several of the Governments. The objective was to guarantee the supply of food for the home market. The actual result was to reduce the area down to these crops. As a consequence of this, we find Roumania exporting barley and oats instead of the more valuable wheat and maize, for which the country was so well known before the war. With the passing of the régime of export prohibitions, however, things have returned to a much more normal state. In particular the principal crop—maize—has improved enormously since the disastrous harvest of 1921, which, it will be remembered, was the year of the Russian famine. In spite of the good showing last year, it may be, however, that the increase in peasant proprietorship will tend to diminish the area and the output of wheat, since this cereal is rather more risky than maize. This latter is the peasant crop *par excellence*, as it is easy to grow and provides an abundance of fodder.

In no respect, however, has improvement been so marked as in the general livestock position. Here the ravages of the war were particularly felt, and reconstruction was a matter of the very greatest urgency. It is unfortunately impossible to give a general table showing this development, since the data for the different countries refer to different years. The following figures relating to Roumania are, however, of interest as showing what has been accomplished in a territory particularly hard hit by the war in this respect. The figures relate throughout to the present area of the country:—

LIVE STOCK in ROUMANIA. (In Thousands.)				
	Last Pre-War Census.	1919.	1924.	1925.
Cattle	5,743	4,634	5,399	5,049
Horses	2,267	1,381	1,845	1,875
Pigs	3,471	2,289	3,133	3,088
Sheep	13,020	7,790	13,612	12,950

It seems probable that both the fall in the number of horses and the increase in the number of sheep should be regarded as a consequence of the agrarian reform, though a comparison between the figures of the last two years would seem to suggest that this tendency may not be permanent.

Apart from cereals and livestock there are two other aspects of agricultural production in the Danubian region which call for special mention. These are sugar-beet, which is, of course, particularly developed in Czechoslovakia; and tobacco, which is a very important crop in Bulgaria, and, to a lesser extent, in the other countries of the Lower Danube. It is unfortunately not possible to give the pre-war figures for the whole region, but the following tables outline the progress that has been registered since 1921:—

SUGAR BEET.
(Returns for the Six Danubian States.)

	1921.	1922.	1923.	1924.	1925.
Area in thousand hectares	322	314	375	517	486
Production in million metric tons ..	5.4	6.9	8.3	12.4	12.9

Czechoslovakia accounts for over two-thirds of the total, and here, at any rate, the figures have quite definitely caught up with those of pre-war times. The reduction in acreage last year was due almost entirely to Bulgaria, where the 1924 season was marked by a temporary over-production of this crop.

TOBACCO CULTIVATION in BULGARIA, ROUMANIA, JUGOSLAVIA, and HUNGARY.

	1921.	1922.	1923.	1924.	1925.
Area in thousand hectares	75	85	108	129	119
Yield in thousand metric tons	57	64	80	118	86

The production in Bulgaria is well above that of pre-war days, and it seems likely that tobacco, which is a favourite peasant crop, will develop still more in the future, provided, always, that proper measures are taken to avoid undue exhaustion of the soil.

This brief summary has afforded some indication of the extent to which agricultural production was injured by the war, and has also given a gratifying picture of the

gradual return to more normal conditions which has taken place since the termination of hostilities. Progress, it is true, has been slow. Indeed, in this part of Europe things hardly ever do move fast. At the same time, the ravages of the war seem, at long last, to have been made good, and the basis of the purchasing power of the area has been largely restored. To understand the changes which have occurred in the distribution of this purchasing power as compared with that of earlier days it is, however, necessary to outline briefly the profound modifications which have been effected in the system of landownership in certain of these countries.

IV.—AGRARIAN REFORM.

Down to the middle of last century serfdom predominated throughout the Danubian countries. The revolution of 1848, however, led to its abolition in the Habsburg dominions, while the same result was achieved in Roumania by the decree of Prince Cuza in 1864. With the exception of Bosnia and the Herzegovina and parts of Southern Serbia, where a variant of the old Turkish system of land tenure still survived, servile status had disappeared from this part of the world long before the war. The distribution of land, however, varied enormously in the different parts of the region. In the territory of what is now the Austrian Republic, peasant proprietorship has long predominated. Indeed, landowners with more than 250 acres of agricultural land only accounted for a fraction over 6 per cent. of the total of agricultural land. In Bulgaria the proportion was still smaller (approximately 5.5 per cent.), while in the old kingdom of Serbia owners of over 50 acres actually represented less than 3½ per cent. of the total. The contrast between conditions in these mountain lands and those ruling in the rich Danubian plains in Hungary and Roumania was, indeed, most striking. In the old kingdom of Roumania, for instance, between 48 and 49 per cent. of the agricultural land was in the hands of owners of 250 acres and over, while over 7 million acres (out of a total of something under 20 millions) was owned by persons with estates of 1,250 acres and over. These latifundia found their counterpart in Hungary, where estates of over 100 yokes (140 acres) accounted for approximately 56 per cent. of the total agricultural area in 1913. The situation in the territories now included within the Czechoslovak Republic was, to some extent, intermediate between these extremes. Large estates (of over 250 acres) formed 37 per cent. of the total in the former Austrian lands, but considerably more in Slovakia.

Before the war, then, the concentration of land in the hands of a few large landowners, and the existence, side by side with these large estates, of a class of small peasantry whose holdings were tending to become smaller with each succeeding generation, was thus a fairly general phenomenon through wide areas of this Danubian region. Long years of hostilities, however, created considerable discontent among the masses, while in Russia the overthrow of the Tsarist régime, in 1917, was followed almost immediately by the wholesale confiscation of the large estates in that country. The example was not altogether lost on the new Governments, and legislation aiming at "agrarian reform" was hastily introduced in several of the Succession States. The expropriation of the large landowners was thus, in part at least, an insurance against the spread of Bolshevism. In some cases, moreover, the landowners belonged to the former ruling races, whether German or Magyar, and their dispossession was regarded by many as a necessary condition for guaranteeing the predominance of the "new" nations in their own national States. The motives were thus in the main political, national, or social rather than economic; and much of the legislation itself was hastily conceived and badly applied. A broad historic movement of this kind, however, cannot be measured by quite the same standards as ordinary domestic legislation. Moreover, the time has not yet come for an impartial estimate of its effects even in the purely economic sphere. In this short article we cannot, therefore, do more than give the briefest of summaries of the course of the movement itself, and indicate one or two of its more obvious consequences.

In Austria and Bulgaria, where peasant proprietorship already predominated, this "green wave" has not led to

any material modification of the conditions of landownership. In Roumania, on the other hand, a decree issued at the end of 1918, supplemented by a series of laws enacted in 1921, led to the passing of nearly twelve million acres of land into peasant hands. In consequence, estates of over 250 acres only represent some 14 per cent. of the total of agricultural land, while the compensation paid to the dispossessed owners has dwindled away to almost nothing as a result of currency depreciation. In Yugoslavia, expropriation was confined mainly to the territories formerly under Hungarian rule. Between two and three million acres of land have changed hands, while, in addition, the servile status which still survived in Bosnia and Macedonia was finally abolished.

Agrarian reform in Czechoslovakia has taken much longer to apply, owing to the fear of disturbing the more highly developed organisation of agriculture in the country. Land liable to ultimate expropriation (i.e., estates of over 375 acres of arable, or 625 acres of land of any description) was "sequestered" in 1919, though the process of allotment only proceeded very slowly down to the end of 1923. By the end of the following year, however, 513,265 hectares of arable land has been allotted, and this had risen to 746,136 hectares by December, 1925. There then remained a further 154,504 hectares for distribution.

The case of Hungary is quite different from that of the other countries, since, by a law passed in 1920, expropriation is in the main permissive. Down to the end of last year approximately one and a quarter million acres of land had passed into peasant hands and holdings of 140 acres and under now constitute rather more than half the total area.

Taking the Danubian region as a whole, this extension of peasant proprietorship at the expense of the former large landed proprietors is certainly one of the most striking and significant events in its whole history. In all of these countries, with the solitary exception of Hungary, large estates are now virtually a thing of the past. The centre of social power has already shifted, and the centre of political power is bound, sooner or later, to follow suit.

It is not easy to say to what extent this wholesale change in landownership has affected agricultural production. In some parts there was a very wide discrepancy between the unit of ownership and the unit of cultivation. Thus, in the Old Kingdom of Roumania, approximately half the area of the large estates was farmed out to peasants either as cash tenants or as metayers. In these cases it is difficult to see how changes in the legal ownership can have much influence on the economics of production. In general, however, it would seem as though peasant proprietors in this part of the world will tend to increase the animal contingent even at the expense of cereals. The quality of the livestock, moreover, usually leaves very much to be desired. Peasants also show marked preferences in the crops they cultivate. Thus, in the Lower Danube lands, wheat is likely to suffer at the expense of maize. While they certainly do not cultivate as well as the best of the former large proprietors, it should not be forgotten that many of these latter provided but poor examples of scientific agriculture. Moreover, while agrarian reform has diminished the size of the large estates, it has also increased that of the small holdings, many of which, before the war, were hopelessly inadequate, and, owing to their diminutive size, almost impossible to cultivate well. The final results of recent legislation will, however, depend very much upon whether the clauses in the various laws relating to the consolidation of the peasant strips (commassation) are seriously applied.

Whatever may be the future of agricultural production under a régime of peasant proprietorship, it seems clear that the actual amount of food consumed by the peasantry is likely to increase. Accordingly, the amount available for export cannot be expected to attain the pre-war level for many years to come, if, indeed, it ever will. This, in turn, naturally affects the demand for manufactured goods, and, in particular, for luxuries and semi-luxuries, the market for which, in these countries, used to be confined to the large landlords and their retainers, or else to the middle classes, who have been particularly hard hit by inflation. It is, of course, true that a class of prosperous "medium" peasants is already springing up in many of

In pre-war days the Danubian countries were far behind the States of Western Europe in the volume of their foreign trade. This can best be illustrated by a summary

table of imports and exports in the year 1912. In the case of Bulgaria and Serbia, which were then already in the throes of war, the previous year has been taken:—

Country.	Total. (In Million £'s.)		Per Head. (In Shillings.)	
	Imports.	Exports.	Imports.	Exports.
Austria-Hungary	153.1	122.1	62/-	49/-
Austria	189.1	168.7	132/-	118/-
Hungary	92.3	81.9	88/-	78/-
Roumania	25.3	25.5	71/-	72/-
Bulgaria	7.9	7.3	36/-	33/-
Serbia	4.6	4.6	31/9	32/3
Germany	522.9	438.1	160/-	134/-

The figures relating to Austria-Hungary are for the trade of the Dual Monarchy with the rest of the world. Those for Austria alone are for foreign trade, *plus* trade with Hungary; and those for Hungary alone, for trade with the rest of the world, *plus* that with Austria proper. By way of further elucidation of these figures, the following facts may be added:—In 1912: 32 per cent. of Austrian imports came from Hungary; 39 per cent. of Austrian exports went to Hungary; 72 per cent. of Hungarian imports came from Austria; 74 per cent. of Hungarian exports went to Austria. Hungarian trade was thus confined principally to the former Austrian Empire, while trade with Hungary formed well over one-third of the total foreign commerce of Austria proper. The lion's share of the trade of the Austro-Hungarian Monarchy with the rest of the world (approximately 84 per cent. of both imports and exports) fell to the lot of Austria, and in this, of course, the lands now comprised within the frontiers of German Austria and Czechoslovakia were together responsible for far and away the greatest part.

It is interesting to notice that the foreign trade of the Old Kingdom of Roumania, *per capita*, was greater than that of the Dual Monarchy. Indeed, the essential features of Austro-Hungarian economy were, firstly, the trade within the different parts of the old Austria proper, and more particularly between Galicia and the Bohemian lands, on the one hand, and the Vienna district and Styria on the other; and, secondly, the trade movements between Austria and the former kingdom of Hungary. As to trade with the outside world, approximately 40 per cent. of both imports and exports came from or went to Germany, and here the Bohemian lands were naturally the most important factor. The three States of the Lower Danube between them did not account for 7 per cent. of Austro-Hungarian exports, and, strange though it may sound, German trade with these countries in the last two years before the war was actually greater than that of Austria. This was due mainly to the tariff policy adopted by Austria-Hungary, but, in part, also to other political considerations.

Serbia, with no outlet of its own to the sea, did a little over 40 per cent. of its foreign trade with the Dual Monarchy. On the other hand, less than a quarter of the imports of Roumania and Bulgaria came from that country, while the overwhelming proportion of their exports went elsewhere—to Western Europe in the case of Roumania, and to the Levant in that of Bulgaria.

Taking all these Danubian States together, and ruling out trade within the region itself, we find that the total foreign commerce of Danubian Europe before the war amounted to about £174 millions of imports and £143 millions of exports. This only represented an average *per capita* of some 53s in the case of imports, and 44s in that of exports.

The pre-war position may be summed up by saying that the high tariff wall surrounding the Dual Monarchy cut off these lands from the countries of the Lower Danube, and, at the same time, encouraged a large internal trade within the Austro-Hungarian Empire itself. This was the basis of the prosperity of the industries of the Czech lands no less than of those now comprised within German Austria, though trade with Germany was also of particular importance in the former case. It is true that Austria and Hungary were rapidly drifting apart in economic

matters, and that the survival of the Customs Union between them was becoming more problematic with each decennial treaty. It existed, however, down to 1914, and was maintained, of course, during the war years. Moreover, the cleavage in economic matters, as we have already pointed out, came between the two halves of the Monarchy, and thus was on political, and not ethnographic lines. So long as it survived, this Customs Union enclosed within its frontiers one of the largest free-trade areas in the world.

With the establishment of the new national States all this was changed. The essential feature of the new order was not merely the multiplication of frontiers, for old ones were removed as well, but rather their redrawing and, more particularly, their establishment across areas which had for long been interdependent. The new States inherited the high-tariff policy of the old Empire, and in most cases went further in this direction than even the Habsburgs had done. Each State had a currency of its own, and its "defence" became a matter of political prestige. This, in turn, seemed to necessitate a limitation of imports—a policy also encouraged by the violent desire of each nation-State to become entirely self-sufficing in the economic sphere. The first chapter in the post-war commercial history of these countries is thus an era of import prohibitions, side by side with high tariffs on other commodities. These duties were partly protective, and partly intended to yield revenue—a very urgent matter in the first few Budgets after the termination of hostilities. In some cases, exports were curtailed by means of prohibitions and export duties.

The results of this suicidal policy soon began to make themselves felt. Trade with extra-Danubian countries could not adequately compensate for the falling-off in what was formerly internal trade, although Czechoslovakia achieved a fair measure of success in this direction. Moreover national self-sufficiency led to a duplication of factories in the different States, without leading to a corresponding increase in output. In certain branches six factories now exist to cover the same geographical area as that formerly served by one undertaking. This has happened, moreover, at a time of general impoverishment and financial crisis, and has increased still further the demand for, and therefore the price of, capital, which would, in any case, have been high enough in consequence of the prevailing shortage and the needs of legitimate reconstruction after the ravages of the war.

It would be idle to suppose that these rather obvious considerations have as yet been realised in the Danubian States. Slowly, however, people have come to see that restrictions on international trade sometimes hit hardest those they are intended to benefit. In any case, the era of prohibitions is now at an end, and freedom in exchange dealings has been virtually re-established everywhere. Recent tariffs, however, seem to be moving upwards. On the other hand, a network of commercial treaties has sprung up, slowly but surely, between the different Danubian States. Relations between Austria and Czechoslovakia, in particular, have improved enormously, and even Hungary, which has been the most vigorous exponent of high tariffs, recently concluded a commercial treaty with Austria, and has negotiated a temporary

THE AGRARIAN REVOLUTION IN ROUMANIA

By IFOR L. EVANS

LONDON, Fetter Lane, E.C.4

agreement with Czechoslovakia, which it is hoped will soon lead to something definite at long last.

It is impossible, in a limited space, to describe this network of commercial treaties. It must suffice to say that, with the passing of import prohibitions and the spread of the most-favoured-nation clause, matters are slowly becoming more tolerable. At the same time, the rates of duty remain inordinately high, and the volume of foreign trade is still regrettably low. In the following table we have summarised the trade returns of these six countries in 1925, reducing all the figures to a common sterling basis. In the case of Roumania, the figures are only very approximate, as the exchange has been fluctuating widely and returns are only made quarterly:—

FOREIGN TRADE in 1925.

	Totals. (Million £'s.)			Per Head. (Shillings.)	
	Imports.	Exports.	Balance.	Imports.	Exports.
Austria	83.5	56.5	— 27.0	257/-	174/-
Czechoslovakia	106.8	114.1	+ 7.3	157/-	168/-
Hungary	30.8	29.1	— 1.7	77/-	73/-
Roumania	30.0	29.0	— 1.0	37/-	36/-
Bulgaria	10.8	8.4	— 2.4	44/-	34/-
Jugoslavia	30.5	31.0	+ 0.5	51/-	52/-
France*	426.3	448.8	+ 22.5	218/-	229/-
Germany	608.5	430.7	— 177.8	203/-	144/-

* Total of monthly figures converted at the average of daily rates for the month.

The volume of Austrian imports gives some idea of the extent to which this little Republic depends upon foreign trade. As we have already indicated, her industries in pre-war days were engaged, even more than those of Czechoslovakia, in satisfying the demands of what was then the home market, but has now become foreign territory. It is natural, therefore, that she should suffer acutely from the exaggerated tariff policy of the other Succession States. The Czech export trade is helped by the world demand for sugar and coal, though this latter has not been an unmixed blessing of recent years. Both these products, and more particularly the former, loom large in the exports of the country. Moreover, Czechoslovak industries have the advantage of a much larger home area to serve than the Austrian, and they are also better placed for competing on the world market. Dependence upon trade with Germany, however, is making itself felt in a rather unpleasant fashion in Czechoslovakia this year, as the purchasing power of this, her principal customer, is, for the time being, sadly diminished by the serious crisis through which the country is passing. The recrudescence of Protectionist sentiment in the Reich, as shown in the new tariff passed last year, is also causing considerable difficulty to Czechoslovakia and Austria alike.

The foreign trade figures of the other Danubian States in any year are largely dependent upon the harvest conditions in the year in question and the carry-over from the previous year. In 1925 the situation was decidedly favourable in Hungary and Jugoslavia, though conditions in Roumania were exceptionally bad, and made all the worse by transport difficulties in the late autumn. A comparison with our table of foreign trade in pre-war days is, unfortunately, almost impossible to make. In the case of Roumania, for example, the home market has expanded enormously. The new provinces appear as buyers of oil from the old kingdom, while, so far as cereals are concerned, Bessarabia is a large exporter, whereas Transylvania and the Bucovina are almost certainly cereal importers on balance. When all allowances have been made, however, the foreign trade figures for 1925 cannot be regarded as satisfactory, and are certainly well below those of pre-war days.

Taking the six countries as a whole, and ruling out trade between themselves, the total foreign commerce of the Danubian area with the rest of the world last year may be estimated approximately at some £193 millions of imports and £164 millions of exports. These totals cannot strictly be compared with those given for the year 1912, as the area is not identical in the two cases. The 1912, as the area is not identical in the two cases. The rough estimates *per capita*, however, may be used with greater safety. These work out, for 1925, at 64s of imports and 55s of exports, as against 53s and 44s respectively in 1912. If we bear in mind the change in

the general world price level, it will be seen that trade with the extra-Danubian countries last year could not have been more than about 75 to 80 per cent. of that of 1912. The internal trade within the Danubian region itself, however, has almost certainly diminished considerably more than this, though it is, unfortunately, impossible to give even a rough estimate of the actual fall.

It seems quite clear that the volume of trade with the extra-Danubian countries has fallen considerably as compared with pre-war days, while trade between the Danubian countries themselves still remains far from normal. The causes of this state of affairs are, firstly, the fall in agricultural production—this being the basis of the purchasing power of the region; and, secondly, the series of measures which have been adopted by the new States to hamper trade. The relaxation of import prohibitions has led to an increase in trade, and the same result is slowly being achieved by the growth of commercial treaties between these States and one another. Nevertheless, Customs duties remain inordinately high.* This leads to a contraction in the volume of trade, and, in consequence, to a diminution of industrial production. The more immediate sufferers are the highly industrialised States like Austria and Czechoslovakia, though even they do not as yet seem prepared to work as closely together as the economic needs of the two countries demand. The attempt to foster industries artificially in the other States is making for an unwise and inefficient distribution of their national resources; helps to keep the rate of interest unnecessarily high; and, in general, acts as a check to economic reconstruction.

The period of economic chauvinism, however, is slowly passing. In its turn has come the age of rather more moderate economic nationalism. It may be that the time is not now very far distant when enlightened self-interest will point the way to economic co-operation as the only sure method of bringing prosperity once again to a region that has had more than its fair share of suffering from the war and the legacy it has left of hatred and cupidity.

PART II.

I.—AUSTRIA.

The political life of the Republic of German Austria, which, despite its small size, is none the less a Federal State, has arrived at something like stalemate. In Vienna the Social Democrats have a stronghold which guarantees them some place in the Austrian political world. Elsewhere the Christian Socialists seem secure, and, as Vienna is not Austria, enjoy a majority in the Federal Parliament. The two wings of this party—the one urban and clerical, the other a peasant party in embryo—work fairly harmoniously together, and a relatively stable Government seems assured in consequence.

The main event of the present year has been the termination of the work of the Commissioner-General of the League of Nations, who had exercised some measure of control over Austrian affairs since the reconstruction plan was inaugurated in 1922. As from June 30th last Austria regained her independence in fiscal matters—provided always that the bondholders' claims are satisfied. Thus ended a remarkable experiment in international affairs, and one which, despite its difficulty, has been crowned with a very considerable measure of success. A crumbling currency has been stabilised, and budgetary

* As an example, we may cite the following estimates of the level of the tariff burden on Austrian goods in the adjoining States, which are given by the Commission of Inquiry into Austria last year. Two methods of calculation were adopted, the one giving a minimum, the other a maximum figure. The actual burden is probably somewhere between these extremes.

	Min.	Max.		Min.	Max.
Germany	14	17½	Hungary	28	40
Italy	16	21	Roumania	19	23
Czechoslovakia ..	21½	30½	Jugoslavia	27	41

Calculated in this manner, the Austrian rate would be about the same as that of Italy, and thus the lowest of any of the Succession States.

NATIONAL BANK OF CZECHOSLOVAKIA.

The National Bank of Czechoslovakia was established by an Act of Parliament which was passed on April the 25th, 1925, and came into force about a year later. The functions of this bank comprise the administration of the currency, the recording of bank credits, the transaction of clearing operations and the management of the State Treasury. With regard to the currency, one of the duties of the bank is to maintain the relation of the Czechoslovak crown to foreign undepreciated currencies at the average level of the last two years before the passing of the Act, in the preamble to which this level is specified as being between 2.90-3.03 dollars per Kc 100 on the New York Exchange. The bank has to carry this out by other means than the redemption of notes, the process which is suspended for the present and which will be introduced later by a special enactment. The main resource in carrying out the gold standard exchange policy is a metallic covering prescribed by law, and representing 20 per cent. of the banknotes in circulation. For a period of fifteen years this covering is to increase at the rate of 1 per cent. annually, so that when the first charter of the bank expires the total covering will amount to 35 per cent. The whole of the present State note circulation ranks as banknotes, so that the banknotes of the National Bank are covered on the one hand by claims on the State to the amount of the uncovered State note debt and on the other hand by precious metals and commercial paper (bills, loans and commercial claims abroad). The obligation to maintain the prescribed covering is not absolute, as a breach of the duty is only subject to a tax on a progressive scale. The metal covering, however, is not the sole basis of the currency policy of the bank, which administers also a loan of 50,000,000 dollars borrowed from America for this express purpose. The State note debt consists of the banknotes, the current accounts and the Treasury notes of the former Austro-Hungarian Bank on Czechoslovak territory, which were taken over and converted into Czechoslovak State

notes by a process of stamping. This debt was reduced by withholding half the notes presented by private persons for stamping, and by converting the notes thus retained into State bonds bearing 1 per cent. interest. The debt has been further reduced by payments on account of the tax on property. Persons assessed for this tax have paid it partly by means of the 1 per cent. bonds referred to and partly in cash. Up to the end of June, 1925, the amount yielded by this tax was 4,361 million crowns, and the uncovered State note debt now amounts to 5,368 millions.

The administration of the currency is fully concentrated, for, as already mentioned, the National Bank is granted the privileges of a bank of issue for a period of fifteen years. During this period the State undertakes to issue no State notes, and to declare the State notes already in circulation as banknotes, subject to the exception already indicated with regard to covering. For the present, the banknotes are not exchangeable for coin, and their circulation is compulsory. The bank attends to the circulation of coin in the country by taking over the coins from the State authorities, placing them in circulation, exchanging them, withdrawing them. Another duty of the bank is to keep a record of commercial credits throughout the State. The abuse of credit and the obtaining of credit from several banks who are mutually unaware of the various advances are prevented by the bank, which is entitled for this purpose to ask for all vouchers and other particulars deemed necessary in this connection.

The joint-stock capital of the bank is 12,000,000 dollars, and each share, the nominal value of which is 100 dollars, bears the name of the owner. The head of the bank is the Governor, nominated by the President of the Republic, together with a board of nine directors. Six of these directors are elected at the general meeting and three are nominated by the President of the Republic. The tenth member may be co-opted. The general meeting elects an audit committee for a period of five years.

The following table shows the financial position of the bank on August the 31st, 1926:—

ASSETS.

(In Czechoslovak Crowns, 000's Omitted.)

	Statement.	Changes as Compared with the Statement on August 23, 1926.
Gold and silver holdings	1,033,550	 + 37
Balances abroad and foreign currencies	1,323,522	 + 9,698
Other cash	6,243	 — 535
Bills discounted	129,874	 + 2,559
Securities discounted	960	 + 805
Advances on collaterals	59,669	 — 2,828
State notes debt balance	4,883,746	 — 918
Assets of the Banking Office of the Ministry of Finance in liquidation, in charge of the Czechoslovak National Bank	653,933	 — 673
Other assets...	783,566	 + 241,387
	8,885,063	 + 267,532

LIABILITIES.

Capital fully paid up (\$12,000,000)	406,800	
Bank notes in circulation	7,161,203	 + 618,289

	Kc 1,274,486 571.49

Metallic cover	Kc 2,302,914,841.88
	69.6 per Cent.

reform is now an accomplished fact. The following table summarises the closed accounts for the past three years:—

	(In Millions of Schillings.)	1923.	1924.	1925.
Budget Administration—				
(a) Ordinary transactions—				
Expenditure	779 65	809 99	741 38	
Receipts	697 45	900 62	908 47	
Surplus	— 82 20	— 90 63	— 167 09	
Deficit	— 76 08	— 103 67	— 90 64	
(b) Investments				
Budget surplus	— 158 28	— 13 04	— 76 45	
Budget deficit				

The improvement outlined in these figures is most remarkable. The era of budgetary chaos ended in 1922. While expenditure remains higher than that anticipated in the reconstruction plan, Budget equilibrium has been achieved, thanks to the large increase in receipts. Last year there was a surplus, in spite of very considerable investments of a more or less productive nature. For the first six months of the present year there will probably be a deficit of about 36½ million schillings, though this is due to expenditure on investments during the period amounting to over 74 million schillings. This satisfactory state of affairs has only been brought about by reform in many directions. The State railways have been reorganised, and although they remain in a difficult position, are well on the way to complete recovery. This is largely due to the creation of an autonomous administration for the railways, under the chairmanship of Herr Gunther, a leading figure in Austrian industry. Large numbers of officials have been dismissed, more especially on the railways, and this application of the axe, though painful, has certainly prepared the way for sounder administration. At the end of last year the Federal Government employed 164,310 persons, of whom 65,414 were railwaymen. By that date 81,702 officials had been discharged, 38,357 being railwaymen, since the applications of the reconstruction scheme in October, 1922.

The total of the international loan necessary for the work of reconstruction was 650 million gold crowns, or 936 million schillings. By the end of the period of control the net yield of this loan—879.8 million schillings—had been accounted for as follows:—

	Million Schillings.
1. For repayment of credits granted during the inflation period	175 60
2. Security for service of loan for first six months	51 50
3. Cover for investment expenditure	332 56
4. Cover for current deficits	115 44
The amount unused, with accumulated interest, stood, in June last, at	217 60

It will be seen that the cover for current deficits only amounts to about 13 per cent. of the total loan. The investments include expenditure incurred for the electrification of some of the railways and the reorganisation of the dairy industry of the country.

Financial reconstruction, however, has also necessitated a whole series of readjustments in the economic sphere, and these have not been by any means easy to accomplish. They are due in part to the after effects of inflation, and also to the difficult process of post-war reconstruction in Europe as a whole. It is hard, indeed, to say to what extent they may be regarded as a specifically Austrian problem.

In agriculture much has already been done to make good the damage caused by the war, as the following table, reviewing the cereal production of the last two years, shows:—

	Area.	Yield.
	(In Thousand Hectares.)	(In Thousand Metric Tons.)
	Pro-War. 1924. 1925.	Pro-War. 1924. 1925.
Wheat	198 .. 195 .. 197	271 .. 231 .. 326
Rye	419 .. 375 .. 381	568 .. 411 .. 623
Barley	136 .. 138 .. 141	169 .. 157 .. 228
Oats	344 .. 309 .. 317	405 .. 332 .. 485
Maize	49 .. 60 .. 56	73 .. 94 .. 120
Potatoes	155 .. 167 .. 173	1,296 .. 1,647 .. 2,230
Sugar beet	16 .. 19 .. 21	325 .. 433 .. 548

The comparison with the pre-war figures (average, 1909-13) are somewhat misleading, since they do not include the Burgenland, which has since been incorporated in Austria. The increase in root crops like potatoes and sugar-beet is, however, well established, and is a most welcome sign. Considerable progress has been made

in Austrian agriculture since the war. Credits have been made available out of the remainder of the League loan for the purchase of fertilisers and seeds, and a long-term loan has also come from the same source for the reorganisation of the dairy industry of the country. In a word, agriculture, which is by far the greatest industry of the country, has already done well, and promises still better for the future.

The source of greatest anxiety in present-day Austria is, perhaps, the foreign trade situation, and here the situation still leaves much to be desired. We may begin by summarising the figures for the past four years:—

	(In Million Schillings.)	Imports.	Exports.	Deficit.
1922	2,464	1,544	920	
1923	2,688	1,591	1,097	
1924	3,473	1,988	1,485	
1925	2,882	1,948	934	
1st. Quarter,				
1925	626	450	176	
1926	681	394	287	

Down to 1925 imports increased at an alarming rate without there being any adequate increase in exports to correspond. Last year, however, the situation changed considerably for the better, and the slight fall which occurred in the value of total exports was more than accounted for by the general fall in prices. Indeed, the quantities exported actually increased by about one-third. It is unfortunately true, however, that the quantity of raw materials exported rose more than that of finished goods, while several important exporting industries registered a decline both in quantity and in value—notably the woollen trade, ladies' dresses, furniture, leather and shoes. As compared with the same quarter of 1925, the figures for the first three months of the present year are rather disturbing. While imports were greater, exports were considerably less. The figures for April, which are the latest at present available, do not do much to dispel the gloom. Imports stood at 217.7 million schillings, and exports at 137.6 millions, thus leaving an adverse balance of over 80 million schillings on the month's trade.

The changes that have taken place in the direction of Austrian trade of recent years are indicated in the following summary:—

AUSTRIAN TRADE.

	Imports.				Exports.			
	1922.	1923.	1924.	1925.	1922.	1923.	1924.	1925.
	%	%	%	%	%	%	%	%
Danubian States	40.1	41.3	41.2	39.8	42.1	37.3	36.8	35.6
North Central Europe	26.9	24.2	22.5	24.4	23.9	21.0	23.0	23.4
Western Europe	15.8	18.7	19.7	17.1	23.0	23.4	25.9	23.4
Other countries	17.2	15.8	16.6	18.7	11.0	14.3	14.3	17.6

Although the Danubian States may be regarded as Austria's "natural" market, it will be seen that their share of Austrian exports has grown progressively less—precisely at a time when the purchasing power of the region as a whole has been gradually rising. The most striking feature of these figures is the steady expansion of trade with extra-European countries. In a word, Austria, which previously relied upon Danubian trade, is now being forced more and more on to the world market.

If we bear in mind the protective duties in force in the neighbouring States, it is, perhaps, not altogether surprising—though none the less regrettable—that Austria herself should recently have turned towards higher duties. In July last a new Customs Bill was passed, envisaging a large measure of protection for the iron and steel and textile industries, and extending the protective principle to agricultural products as well. The duties are to come into force by way of administrative decree, and appear to be intended primarily as a bargaining counter in commercial negotiations with other States.

II.—CZECHOSLOVAKIA.

Until quite recently the political life of Czechoslovakia has been dominated by the coalition of Czech parties, organised, in spite of widely diverging social aims, on the basis of the will to live of the Czech people and the need for consolidating the new nation-State. The Opposition was thus made up of representatives of the German and Magyar minorities, together with a certain number of Slovak malcontents. This continuation of a nationalist

orientation, although, in many ways, a perfectly natural legacy from Habsburg days, hardly constituted the best possible basis for a sound political life, and, moreover, ran counter to the equally natural cleavage of opinion on economic issues. This year, with the advent of a tariff embodying a whole series of concessions to the agrarian interests, the economic moment has come much more to the fore. The old national bloc has been very much shaken, and, for the moment, a Government of officials is in power. It appears as though the division between Right and Left, irrespective of national allegiances, will gradually become the dominant feature in the Parliament and government at Prague, and this is probably to be welcomed in the interests of political and economic consolidation.

Financial reconstruction has proceeded apace since the foundation of the Republic in October, 1918. Figures of the actual revenue and expenditure will be found in the following table:—

(In Millions of Czech Crowns.)				
Year.	Actual Expenditure.	Actual Revenue.	Balance.	
1919	7,449	4,736	— 2,713	
1920	13,538	12,735	— 803	
1921	18,156	20,727	+ 2,571	
1922	18,335	18,939	+ 604	
1923	16,605	15,664	— 941	
1924	15,360	16,691	+ 1,331	

The first task of creating a revenue-raising machine for the new State had been virtually accomplished by 1921. With the appreciation in the crown which took place in the following year, every effort had to be made to bring the budgetary position into accord with the new value of the currency. Expenditure was reduced, thereby enabling the burden of taxation to be reduced also. The difficulties of the present situation, however, would seem to call for still further reductions, in order that the fiscal burden on industry should be made easier to bear. This year there will probably be a small surplus, even when investment expenditure is included. In the main, this record is one of very remarkable achievement, and is, of course, the basis of the sound currency and credit position enjoyed by the country.

As in the other Danubian countries, though not to the same extent as in most of them, agriculture is much the most important industry of the country. Here, also, considerable progress has been made, though, until last year, the yield of the principal cereals remained well below the pre-war level. This is accounted for in large measure by the reduction which has taken place in the area sown with these crops:—

	Area (In Thousand Hectares).			Yield (In Thousand Metric Tons).		
	Pre-War	1924.	1925.	Pre-War	1924.	1925.
Wheat	703	606	617	915	877	1,070
Rye	1,041	838	846	1,443	1,136	1,476
Barley	944	678	694	1,466	971	1,246
Oats	993	846	837	1,226	1,204	1,304
Maize	145	157	156	217	260	306
Potatoes	768	634	639	7,516	6,514	7,499
Sugar beet	289	303	307	6,994	8,374	9,075

The increase in the area down to sugar beet, no less than the increased yield of this crop, is an outstanding feature of Czechoslovak agriculture of recent years. It is true that this tendency has made itself felt on a world-wide scale. Its working in Czechoslovakia, one of the principal sugar-exporting countries of the world, is none the less interesting on that account. In the following table will be found the relevant data for the post-war years:—

SUGAR PRODUCTION.				
Season.	(Thousand Hectares.) Area Down to Beet.	(Thousand Metric Tons.) Production of Raw Sugar.	(Thousand Metric Tons.) Exports of Refined Sugar.	
1912-13	318	1,423		
1918-19	201	624		161
1919-20	183	507		341
1920-21	193	717		414
1921-22	192	663		376
1922-23	185	744		389
1923-24	226	1,002		658
1924-25	303	1,429		1,015
1925-26	307			

The steady increase which has taken place since 1921 has been continued into the present year (1925-6). During

the first nine months of the sugar year (i.e., down to the end of June last) the production of raw sugar totalled 1,504,563 tons, as against 1,408,498 tons during the corresponding period of the previous year. This is already the highest figure ever attained in any one year. Exports over the nine months stood at 884,245 tons, as against 894,757 during the previous year. This enormous production, however, has coincided with a fall in world sugar prices. The position during the coming year will not be up to this standard. The area down to beet is slightly less, and the yield is expected to be inferior to that of last year.

If we turn next to the foreign trade returns, we shall find still further evidence of the success with which the country has adapted itself to changing world conditions:—

(In Million Czech Crowns.)				
	Imports.	Exports.	Surplus.	
1922	12,650	17,873	5,222	
1923	10,222	12,573	2,351	
1924	15,855	17,022	1,167	
1925	17,594	18,799	1,205	
Six months—				
1925	8,045	8,920	874	
1926	7,510	7,907	397	

It will be seen that the situation this year has presented great difficulties to the Czech export trade, the volume of which has fallen considerably in comparison with the corresponding period last year. In particular, the surplus of exports over imports has been very greatly diminished—a state of affairs not altogether satisfactory to a debtor nation like Czechoslovakia.

The direction of foreign trade is summarised in the following table:—

(In Million Czech Crowns.)									
	Imports.				Exports.				
	1921.	%	1925.	%	1924.	%	1925.	%	
Danubian States—									
Austria	1,245	7.9	1,294	7.4	3,523	20.7	3,258	17.3	
Hungary	880	5.5	1,121	6.4	1,134	6.7	1,178	6.3	
Roumania	467	2.9	369	2.1	796	4.7	840	4.5	
Jugoslavia	418	2.6	502	2.9	830	4.9	820	4.4	
Other States—									
Germany	5,583	35.2	5,497	31.2	3,318	19.5	4,232	22.5	
Poland	729	4.6	1,238	7.0	558	3.3	658	3.5	
Great Britain	448	2.8	653	3.7	1,586	9.3	1,534	8.2	
United States	689	5.6	1,117	6.4	718	4.2	756	4.0	

It will be seen that nearly a third of Czechoslovak exports go to the other Danubian Succession States. The percentage share of these four countries together has moved as follows of recent years:—

	1921.	1922.	1923.	1924.	1925.
Imports	17.7	18.7	14.5	18.9	18.8
Exports	51.5	37.9	34.1	37.0	32.5

The general distribution of Czechoslovak exports offers striking resemblances with those of Austria. In 1924, indeed, Czech exports to the Danubian countries were, both absolutely and relatively, greater than those of Austria, though the figures for last year show that the steady fall in the percentage share of these countries, which was so marked down to the year 1923, has continued still further. The relative importance of this market to Czechoslovakia is thus, on the whole, slightly less than it is in the case of Austria. Exports to Germany and Poland (North Central Europe) have increased relatively more from Czechoslovakia than they have from Austria; while Austrian exports to the rest of the world have, on the whole, risen more than have those of Czechoslovakia. In both cases the percentage share of Western and extra-European countries amounts to about 40 per cent. The importance of trade with the neighbouring countries is thus quite apparent, and any hope of a permanent revival must perforce be based upon greater facilities for international commerce.

III.—HUNGARY.

The political life of Hungary has always been one of considerable excitement, and characterised, amongst other things, by the existence of a large number of political parties. In the main, however, the personal element predominates, and, in the present case, the Government bloc is held together mainly by the personality of the Prime Minister, Count Stephen Bethlen. For Hungary, of course, the Peace Treaties brought a reconstruction of political frontiers which cut up the old kingdom of Saint

Stephen beyond all recognition, and proved a very bitter pill indeed for the dominant Magyar aristocracy to swallow. The Bolshevism of Bela Kun at least offered a pretext for the overthrow of the new order, but when this was countered by the Roumanian occupation of Buda-Pest the days of the Hungarian Soviet were at an end. The political pendulum swung to the opposite extreme, and plans for a restoration of the Habsburgs formed the principal topic of conversation. This solution was checked by the vigorous action of the Little Entente; and gradually it came to be seen that the first need of the new ("Rump") Hungary was to set its own house in order rather than to attempt to overthrow the Peace settlement itself. The great merit of Count Bethlen is that he saw the need of this practical solution and carried it through with considerable tact. Financial reconstruction was achieved by the acceptance of a measure of League control; and the success with which he negotiated the necessary preliminaries, no less than the loyalty with which he co-operated with the Commissioner-General of the League in Buda-Pest, has shown that Count Bethlen is a statesman of no mean ability. Militant irredentism has lost ground, though the forgeries which occurred earlier in the present year, no less than the trials which followed, show that there still remain elements in the country which prefer strife to reconciliation, and do something to justify the suspicion with which Hungary is even now regarded by its neighbours.

The application of the League scheme of financial reconstruction has been a brilliant success. The plan came into operation on May 1, 1924, and the two financial years which have since passed each closed with a substantial surplus. This is particularly satisfactory in that quite considerable reductions in taxation were made during the year. Since July 1, 1924, no portion of the Reconstruction Loan has been spent for budgetary deficits, a result due, not to a fall in expenditure, but to a very gratifying increase in revenue. At a meeting of the Council of the League, held on June 10th last, it was accordingly decided:—"That the financial stability of Hungary being assured, the functions of the Com-

missioner-General shall be brought to an end on June 30, 1926." The position of the receipts and disbursements of the Reconstruction Loan as at that date was as follows:—

(In Million Gold Crowns.)			
RECEIPTS.		EXPENDITURE.	
Net proceeds of Loan	253.8	Expenses of issue	0.5
Net exchange profits to date	13.1	Budget deficits, &c., to June 30, 1924	69.6
		Special reserve	15.6
		Capital investments, 1925-26	50.0
		Advances for silver purchases and Mint expenses (to be refunded)	11.7
		Total expenditure	147.4
		Balance	119.5
	266.9		266.9

The capital investments were approved by the Council of the League, and have been made for public utilities which may be expected to increase the taxable capacity of the country.

In a word, the termination of control has left Hungary in a strong financial position. The National Bank is firmly established, and some indication of the improvement in the credit of the country is given by the successful flotation of loans on the London market by the Hungarian Land Mortgage Institute in January, and the Hungarian Counties a few weeks ago.

The basis of the prosperity of a country like Hungary, where over 70 per cent. of the total population are returned as living in villages, is naturally its agriculture:—

	Area (Thous. Hectares).		Yield (Thous. Metric Tons).	
	Average, 1911-15.	1924.	Average, 1911-15.	1924.
Wheat	1,511	1,416	1,458	1,935
Rye	680	663	684	804
Barley	525	408	418	714
Oats	345	287	294	440
Maize	859	995	1,044	1,506
Potatoes	242	251	256	1,942
Sugar beet	59	68	66	1,502
Tobacco	38	15	16	46

THE BRITISH OVERSEAS BANK LIMITED

Capital Authorised - - - £5,000,000

Issued and Paid-up - - - £2,000,000

The Bank is able to offer to its clients at home and abroad exceptional facilities in foreign exchange and in the financing of every form of foreign trade, and to provide up-to-date credit reports and information as to business conditions in all parts of the world. Correspondence invited.

The area down to these eight crops together last year was very nearly up to the pre-war average (4,236,000 hectares, against 4,259,000). With the exception of maize and the root crops, however, production remained below the level of 1911-15. It is greatly to be hoped that improvements in agricultural credit facilities will lead to the complete recovery of Hungarian agriculture.

The foreign trade position has also improved noticeably during the period of reconstruction:—

Year.	(In Millions of Gold Crowns.)			Index Numbers.		
	Imports.	Exports.	Import Surplus.	Imports.	Exports.	Imports.
1920	417.3	164.3	253.0	100	100	100
1921	520.7	253.9	266.8	125	155	125
1922	539.4	330.1	209.3	129	201	129
1923	423.0	338.1	84.9	101	206	101
1924	702.8	575.0	127.8	168	350	168
1925	742.1	701.3	40.8	177	426	177

The figures for the earlier years are not entirely reliable, on account of the violent fluctuations which were then taking place in the value of the paper crown. The table, as a whole, however, gives some indication of the remarkable expansion that has taken place in the foreign trade of the country, and, more particularly, in the volume of exports. This has been especially noticeable during the period covered by the reconstruction scheme, when the excess of imports has been very considerably diminished.

The percentual share of the principal countries in Hungary's foreign trade is indicated in the following table:—

Country.	Imports.			Exports.		
	1923.	1924.	1925.	1923.	1924.	1925.
Danubian States—	%	%	%	%	%	%
Austria	26	23	23	44	36	34
Czechoslovakia	24	25	25	12	24	24
Roumania	10	8	8	9	5	4
Jugoslavia	3	4	3	7	6	8
Total	63	60	59	72	71	70
Other countries—						
Germany	14	13	15	6	8	10
Poland	6	6	5	2	3	5
Italy	3	4	5	8	6	4

Hungary is thus even more dependent than the other Succession States upon trade within the Danubian region itself. This is quite understandable in view of her geographical situation, and the fact that the industrial areas of Austria and Czechoslovakia are the historical and natural markets for her agricultural produce.

IV.—ROUMANIA.

The political life of the new Kingdom of Roumania of recent years has been the record of one strongly organised party—that of the Liberals under the leadership of M. Ion Bratianu—which, although only representing a minority, has nevertheless managed to maintain its position in face of a group of opposition parties which are hopelessly divided against themselves. During their long tenure of office, which started early in 1922, and only came to an end this year, the Liberals have consolidated their position in the economic life of the country, and have preferred to retire and leave the succession to the small group led by General Averescu, rather than continue to face an unpopularity which was growing steadily in intensity. In a word, with the "economic citadel" of the country in their hands, they have chosen to hand over the burdens of administration to a successor, and bide their time. The strongest party in the old kingdom and in Bessarabia—the Tsaranist or Peasant party—is handicapped by the fact that it is fairly new, and is entirely without influence in high places. Its inability to co-operate with the Transylvanian Nationalists has also helped to condemn it to continued opposition. These rather curious combinations are, of course, made possible by reason of the fact that the Government in power can always win a general election, so great are the advantages of holding the reins of office in one's hands.

Immediately after the war the finances of the country were in a hopeless state of chaos. There were actually no budgets issued, and it is not until the year 1921-2 that we can begin to follow the financial situation. Note printing to cover the excess of expenditure over receipts ceased in 1922, and thereafter revenue has regularly exceeded the

budget estimates. All such surpluses have been at once used to open supplementary credits, thanks to which official salaries have been increased, and additional funds spent on railways, schools, and so on. The effective receipts over the last few years are shown in the following table, together with the rough equivalent in dollars. It should be noted that down to 1923 the budget year ended on March 31st. For that year accounts were drawn up for the remaining nine months, and thereafter the budget year has coincided with the calendar year.

Year.	RECEIPTS.		Approximate Dollar Equivalent in Millions.	
	In Millions of Lei.			
1914-15	568		113.6	
1921-22	8,052		89.5	
1922-23	14,579		96.5	
1923 (9 months)	19,152		93.4	
1924	28,908		141.7	

The amounts, even in gold equivalent, have thus at last surpassed those of the last year before the war. It should not be forgotten, however, that Roumania was then a kingdom of some 7,000,000 inhabitants only, whereas the present population of new Roumania must be somewhere in the neighbourhood of 17½ millions.

Unfortunately, this Budget equilibrium has been established, thanks very largely to the completely inadequate remuneration received by the officials. It is thus to some extent a "Budget of misery," which has naturally had serious consequences in the general life of the country. At the same time, much has certainly been done to remedy the chaotic conditions which were inherited as a legacy from the war, though normal finances cannot be established until the currency is finally stabilised.

In Roumania, as in so many other countries, the administration of the State railways has been made autonomous (Law of May 16, 1925), and their finances will no longer appear on the Budget. It is hoped, also, that receipts from the various State properties will show considerable expansion in the near future.

The leading industry of the country—agriculture—has made very considerable progress since the war. Until this year, however, production has remained considerably below that of the period 1909-1913:—

	Area (In Thousand Hectares.)			Yield (In Thousand Metric Tons.)		
	Average 1909-13.	1924.	1925.	Average 1909-13.	1924.	1925.
Wheat	3,580	3,172	3,301	4,085	1,917	2,847
Rye	491	271	270	470	151	206
Barley	1,366	1,851	1,704	1,375	670	1,036
Oats	875	1,237	1,185	905	610	764
Maize	3,908	3,621	3,931	5,175	3,949	4,457
Potatoes	..	189	186	..	1,669	1,559
Sugar beet	..	54	58	..	873	1,177
Tobacco	..	31	37	..	21	16

The area down to the five principal cereals last year was actually up to that of our pre-war average, though the crop was considerably smaller. This was least noticeable in the case of maize (86 per cent.), most striking in that of rye and wheat (44 per cent. and 70 per cent. respectively). While both 1924 and 1925 were but indifferent harvest years, it would seem as though the crop this year is a bumper one. It would be unwise, however, to accept the current, at their face value, since it would seem virtually impossible for the railways and ports of the country to handle anything like five million tons of cereals. This question of transport virtually dominates the whole export position, and a speeding up of the process of railway reconstruction and new building—which, of course, implies a considerable capital outlay—is a matter of the very greatest urgency.

After agriculture, the principal economic resource of Roumania at present is oil. Here really remarkable progress has been made in the last seven years.

Year.	Oil (Thousand Tons).		Year.	Production. Exports.	
	Production.	Exports.		Production.	Exports.
1913	1,886	1,005	1922	1,373	430
1919	920	39	1923	1,512	384
1920	1,034	247	1924	1,860	436
1921	1,163	362	1925	2,314	783

The destruction of oil-wells by a British mission during the war will still be remembered. Although the Germans during their occupation worked very hard to restore this area to production, the actual output in 1919 was still under half that of the pre-war record year, 1913. It is interesting to note, however, that this figure was almost reached in 1924, and easily outdistanced last year. This was due, not merely to the recovery in the principal producing district of Prahova, but also to rapid development in what is almost a new region, that of Dâmbovitza. Further details of the character of the exports will be found in the following table:—

OIL EXPORTS (Thousand Tons).			
	1913.	1924.	1925.
Crude oil	26.9	1.0	..
Refined oil	428.1	212.0	329.8
Benzine	241.7	162.6	265.2
Mineral oils	7.8	26.6	41.8
Petrol residues	300.8	33.7	146.3
Total	1,005.3	435.9	783.1
Value in million gold lei	141	70	142 (approx.)

The nature of the oil products exported last year, as compared with 1913, would suggest that the reduction in exports is not nearly so marked as the mere totals seem to imply. As in the case of cereals, however, further progress in exports is dependent upon improved transport facilities. It should, nevertheless, not be forgotten that the home market for oil is now much greater than it was, though it seems not impossible that production should increase even more rapidly than consumption in the near future.

A few words seem necessary as to the conditions under which the Roumanian oil industry has been financed. At the beginning of 1916 approximately 456 million lei had been invested, and, of this, only some 25 millions was in Roumanian hands. After the war every effort was made to increase the participation of home interests. The State, as we have seen, expropriated millions of acres of land, which was, in turn, subdivided among the peasantry. Mineral and other rights to the subsoil, however, the State reserved for itself. (Article 19 of the Constitution of 1922.) The conditions under which concessions should be given were embodied in a special mining law, promulgated in July, 1924. To acquire a concession a company must be constituted in accordance with Roumanian law. Its capital must be held as to 60 per cent. by Roumanian nationals, though in the case of existing concerns which undertake to "Roumanise" themselves within 10 years, this quota is reduced to 55 per cent. Two-thirds of its directors, together with the president, must be Roumanian nationals. Moreover, 75 per cent. of the employees must also be Roumanians. It should be pointed out that this law applies to new concessions. Those already existing at the date of its promulgation, provided they were actually being exploited, were to continue in force for as long as they had to run.

It is not surprising that this legislation should have met with vigorous protests from foreign groups interested in the Roumanian oilfields. The mining law, however, has remained on the statute books, though its application has not been without interest, in view of the shortage of capital in Roumanian hands. Foreign interests have worked through Roumanian companies, and "men of straw" have been discovered whose official existence brings the undertakings within the letter of the law. The increase in output last year shows that, in practice, the flow of capital into the industry has not been seriously checked.

The foreign trade of the country has developed as follows of recent years:—

Year.	Quantities. (Thousand Tons.)		Values. (Million Lei.)		
	Imports	Exports	Imports	Exports	Balance.
1913	1,347	4,569	590	671	+
1921	615	2,713	12,145	8,263	— 3,882
1922	584	4,070	12,325	14,039	+ 1,714
1923	703	4,878	19,713	24,373	+ 4,660
1924	801	4,731	26,192	27,824	+ 1,632
1925	926	4,615	30,098	29,025	— 1,073

HUNGARIAN GENERAL CREDITBANK

Founded 1867.

Telegrams: CREDIT.

Share Capital and Reserves
approximately 65,000,000 Pengő

The Institution, established in 1867, by means of its constantly developing banking activity, based on broad foundations, and by means of undertakings belonging to its sphere of interest and covering almost all lines of production, such as industry, commerce, agriculture, as well as transport, has always played a prominent rôle in the general economic life of Hungary, as well as in the credit life of the country.

The Creditbank, as the leader of the so-called Rothschild group, in its capacity of managing credit transactions involving the State, has caused the various loans of the Hungarian State to be listed on many money markets of Europe. It has also prominently co-operated in placing the Bonds of the Capital City of Budapest, as well as other public bonds, and lately, in 1926, in the case of the Loan of the Hungarian Counties secured in London through the intermediary of the Rothschild group. The Bank has further participated, during the last decades of the past century, in the construction of those railway lines which constitute, so to say, the backbone of the present system of the Hungarian State Railways.

Besides these activities, and developing current banking business, the Bank preferred to organise industrial undertakings and to reorganise in their financial affairs those already existing, and thus not only has the economic life of the country been enriched by a whole line of well-founded and flourishing enterprises, but also the Institution has acquired the greatest Hungarian Industrial Concern. This circumstance ensures for the Hungarian General Creditbank a far-reaching expansion and a very strong position.

Of the undertakings belonging to the sphere of activity of the Bank, which represent almost all lines of industry, commerce, agriculture and transport, the following deserve special mentioning:—

Ganz & Co., Danubius, Machine and Railway Carriage Manufacturing and Shipbuilding Co., Ltd.;
Ganz Electricity Co., Ltd.;
Small Arms and Machine Factory Co., Ltd.;
Hungarian Sugar Industry Co., Ltd.;
Agricultural Industry Co., Ltd.;
Hungarian General Colliery Co., Ltd.;
Hungarian Coal Mining Co., Ltd., of the Urikány-Zsil Valley;
Beocsiner Cement Factory Union Co., Ltd.;
Mineral Oil Refining Co., Ltd.;
"Tabacus" Tobacco Trading Co., Ltd., formerly M. L. Herzog & Co., Cavalla;
Hungarian Levante Sea Navigation Co., Ltd.;
Royal Hungarian River and Sea Navigation Co., Ltd.;
First Hungarian Rice Mill and Rice Starch Manufacturing Co., Ltd., in Fiume;
Hungarian Cotton Industry Co., Ltd.;
First Hungarian Worsted Spinning and Weaving Factory Co., Ltd.

Special mention should be made of the broadly developed branch system of the Institution which is joined by a great number of Home and Foreign financial institutions belonging to the sphere of interest of the Bank; further, the goods departments of the Institution, such as grain, sugar, coal and wool, must also not be forgotten.

Before the war Roumania, as a large exporter of cereals and oil, almost always enjoyed a favourable balance of trade. In 1919 the position was reversed, and Roumania actually became a cereal-importing country. From 1922 to 1924 inclusive, however, there was a considerable surplus of exports, though last year this had changed into a small excess of imports. It seems virtually certain that the situation in this present year will once again be favourable.

Textiles—raw cotton, cotton goods, and woollens—together account for well over one-third of the imports, metals and metal products taking the second place with, approximately, 20 per cent. of the total. On the export side come cereals (44 per cent. of the total in 1924, though only 25 per cent. last year); timber (say 20 per cent.), oil (20 per cent.), and animals and animal products (from 10 to 15 per cent.). The timber resources of the country are very considerable—forests covering approximately a quarter of the total area—and should prove an important article of export. Before the war the old kingdom of Roumania was approximately self-sufficing in animals and animal products. With the addition of Transylvania, however, this item may well loom larger in the export figures in the near future.

V.—BULGARIA.

The political situation in Bulgaria after the termination of hostilities was one of considerable difficulty. The unsuccessful outcome of the war completely discredited not only King Ferdinand, but also all those politicians who had identified themselves with his régime. In their place the peasant party came to the fore, under the leadership of the masterful, but somewhat unscrupulous Prime Minister, M. Stambouliski. The abuses of the new order, however, naturally provoked a reaction amongst the "intellectuals" and the town dwellers, and when the peasant dictator lost the support of the Macedonian irredentists, owing, largely, to his advocacy of a close understanding with the Serbs, his doom was sealed. His assassination in the early summer of 1923 led to the establishment of a "bourgeois" Government under the leadership of Professor Tsankoff. Unfortunately, the political pendulum had merely swung from one extreme to the other, and, although it did much in the interests of financial reconstruction, the new Government indulged in political repression of too drastic a nature to enable it to carry through that policy of national reconciliation which was so obviously essential to this, the smallest of the Danubian States. Accordingly, at the beginning of this year, M. Tsankoff and his Government made way for M. Liapcheff, who is, incidentally, himself of Macedonian origin and a moderate. His policy may be described as one of amnesty and forgetfulness. He has already achieved much in this direction, but his extraction has combined with the activities of Macedonian komitais to make his Government suspect to the neighbouring States. "International incidents" between Bulgaria and Serbia in particular, and, to a lesser extent, between Bulgaria and Greece and Roumania, have been of regrettably frequent occurrence recently, but here, as in so many other respects, the possibility of an appeal to the League of Nations has acted as a powerful moderating influence.

The process of financial consolidation, to which reference has already been made in our section on currency stabilisation, is further illustrated by the following figures of actual budgetary receipts and expenditure.

(In Millions of Leva.)			
Year.	Receipts.	Expenditure.	Balance.
1914	224 ..	292 ..	— 68
1920-21	2,006 ..	3,233 ..	— 1,227
1921-22	2,844 ..	4,380 ..	— 1,536
1922-23	4,423 ..	4,212 ..	+ 211
1923-24	5,357 ..	5,147 ..	+ 210
1924-25	6,855 ..	5,898 ..	+ 959

While every effort has been made to reduce the expenditure side of the Budget, including an attempt at a progressive reduction in the number of officials, it will be seen that budgetary equilibrium has been established thanks to the increase in revenue which has followed upon the stabilisation of the lev.

In a land of peasant proprietors like Bulgaria, particular interest attaches to the statistics of agricultural production.

	Area. (Thousand Hectares)			Yield. (Thou. Metric Tons.)		
	1914.	1924.	1925.	1914.	1924.	1925.
Wheat	1,010	996	1,027	625	771	1,351
Rye	198	167	183	155	112	226
Barley	225	212	220	194	173	319
Oats	163	151	143	110	107	148
Maize	603	593	620	776	693	715
Potatoes	4	10	11	16	49	66
Sugar beet	15	25	1	190	400	16
Tobacco	17	47	51	13	44	41

Unfortunately, there does not appear to be any statistical material available relating to the pre-war average of the area and production of the principal crops in Bulgaria. This is due largely to the territorial changes and general dislocation caused by the Balkan wars. The area down to cereals last year, however, was almost equal to that of 1914, while, with the exception of maize, the yield during the past two years was decidedly superior to that of the last year before Bulgaria's entry into the world war.

The foreign trade statistics of the country are summarised in the following table:—

(In Million Leva.)			
Year.	Imports.	Exports.	Balance.
1911	199 ..	184 ..	— 15
1922	4,037 ..	4,329 ..	+ 292
1923	5,124 ..	3,537 ..	— 1,587
1924	5,557 ..	4,902 ..	— 655
1925	7,291 ..	5,642 ..	— 1,649
Six months—			
1925	3,694 ..	2,544 ..	— 1,150
1926	2,925 ..	2,524 ..	— 401

The picture given by these figures is not altogether satisfactory. In particular, the large import surplus recorded last year is a rather disquieting symptom. A great reduction in peasant consumption, combined to some extent with a fall in the imports of luxury goods, has, however, resulted in a marked improvement during the first half of the present year.

The principal countries with which Bulgaria carried on her trade during the past two years were as follows:—

	Imports.		Exports.	
	1924.	1925.	1924.	1925.
	Total. %	Total. %	Total. %	Total. %
Germany	1,126 20.3	1,430 19.6	867 17.7	1,131 20.0
Italy	789 14.2	1,020 14.0	502 10.2	771 13.7
Great Britain	724 13.0	959 13.1	25 0.5	28 0.5
Austria	590 10.6	702 9.6	531 10.8	461 8.2
Czechoslovakia	316 5.7	570 7.8	385 7.8	350 6.2
France	419 7.5	493 6.7	632 12.9	311 5.5
Belgium	307 5.5	252 3.5	205 4.2	240 4.3
Turkey	176 3.2	199 2.7	225 4.6	224 4.0
Netherlands	117 2.1	193 2.6	131 2.7	242 4.3
Other countries	993 17.9	1,473 20.4	1,398 28.6	1,884 33.3
Total	5,557 100	7,291 100	4,902 100	5,642 100

It will be seen that trade with the other Danubian States plays only a relatively small part in the imports and exports of Bulgaria. The natural outlet of the country is the sea—which at present means the Black Sea only, since the prospect of a strip leading to the Aegean, which was held out in the Treaty of Neuilly, and which would be of the greatest service in developing the trade of the southern regions of the country, has failed to materialise.

In the main the re-establishment of budgetary equilibrium and the stabilisation of the currency, together with improvements in agricultural production and foreign trade, provide a most gratifying picture of economic reconstruction. There remains, however, one very difficult problem which not only threatens to compromise the success of this work, but also makes it hard to maintain peace within the country and good relations with the neighbouring States. We refer, of course, to the large numbers of refugees who have come to Bulgaria, whether from Yugoslavia, Greece, or Roumania. Since 1913 nearly 52,000 refugee families—say, 220,000 persons, of whom 116,000 are capable of working—have arrived in the country. Of these approximately 30,000 workers have already been definitely settled, either by the Bulgarian Government, or through their own resources, and another 25,000 could probably be established in urban districts with the aid of partial assistance from the Government. The crux of the present problem,

therefore, is the manner in which the remaining 30,000 families of agriculturists (say 60,000 workers, or 120,000 in all) can be settled on the land. Left to its own resources, it would seem fairly obvious that the financial position of the country would effectively prevent Bulgaria from solving this most difficult question. An appeal was accordingly made to the League of Nations last May, and the Financial Committee, after hearing evidence carefully collected on the spot, issued a report on June 9th. The essence of their scheme, which was adopted by the Council of the League on the following day, may be summarised as follows:—

(a) "For the purpose in view, a loan giving a net yield equivalent to not more than $2\frac{1}{4}$ million pounds sterling would be sufficient.

(b) "This sum should be devoted as to about two-thirds to the provision of houses, initial equipment, and advances, and as to one-third to the preparation of land, so as to make it suitable for settlement and communication."

(c) "While the exact terms of the loan would be for arrangement between the Government and the lenders," the Committee regards it as necessary that:—

(1) A satisfactory agreement should be negotiated with the bondholders of the pre-war loans; and

(2) That the statutes of the National Bank should be so modified as "to bring them into conformity with the best principles of central banking." Further details in this latter connection "could be discussed in due course with the Committee."

(d) "The refugee loan would have to be secured by a first charge on adequate specific revenues.....such as the excises on salt and alcohol, and the match monopoly."

(e) The product of the loan should be subject to the independent control of an agent appointed by the League; while the revenues assigned to the service of the loan should be controlled, through a local representative, by trustees also to be appointed by the Council.

(f) Finally, as the work is urgent, and the loan, even with the blessing of the League, will take some time to float, an advance of about £400,000 should be made available immediately.

Unfortunately, the acceptance of this draft scheme by the Council aroused the suspicions of certain of Bulgaria's neighbours. In particular, the Yugoslav Government, in a memorandum sent to Geneva, suggested that the number of refugees in Bulgaria had been greatly exaggerated and that the proceeds of the proposed loan, while relieving the Bulgarian Government of certain financial burdens, would enable it to finance the building of strategic railways and thus menace the *status quo* in the Balkans. The delegates of Roumania, Yugoslavia and Greece at Geneva even went so far as to claim representation for their Governments on the Commission of Control of the Loan in order to ensure that the proceeds should be applied solely for the purposes of relief. To this M. Bouroff, the Bulgarian Foreign Minister replied, in a speech in the Sobranie, that his Government would forgo the loan rather than undertake to submit to the financial control of the neighbouring States. A deadlock was avoided by the action of the Council of the League. It decided that there should be no Commission of Control, though it would always remain open to the interested Governments to make representations to the League Commissioner or, in addition, to bring any complaints before the Council of the League itself.

With the political difficulties thus smoothed over, negotiations for an agreement with the pre-war bondholders had already proceeded far enough last month to enable the Bank of England to advance the sum of £400,000 to the National Bank of Bulgaria for the purchase of seed corn for the autumn sowings of the refugees. An agreement, moreover, was recently signed at Geneva by the Bulgarian Finance Minister, M. Molloff, with representatives of the bondholders, which secures better terms than those offered hitherto. When formal approval has been given to this settlement by the Bulgarian Government and the bondholders, and it has further been approved by the Bulgarian Sobranie, the most important outstanding difficulty in the way of the flotation of the loan will have been overcome. The change in the status of the National Bank will not be difficult to arrange, and

nothing now seems likely to prevent the passing of legislation guaranteeing the service of the loan.

This new League scheme offers the possibility of settling once and for all one of the most difficult problems now facing South-Eastern Europe, and promises, with international co-operation and advice, to complete the work of reconstruction in a country which has already done very much to help itself.

VI.—JUGOSLAVIA.

Down to the year 1918 the various branches of the Southern Slav people—Serbs, Croats, and Slovenes—had never been united together in one State. It is not surprising, therefore, that the formation of the Triune Kingdom, while itself the greatest event in Yugoslav history, should nevertheless fail to satisfy every local and regional wish. It had been achieved, thanks, primarily, to the Serbs, to whom it appeared, not altogether unnaturally, as a Greater Serbia. The Croats and the Slovenes, on the other hand, with a mentality and political psychology formed on the Central European model, had traditions of their own which did not always fit in with Serb aspirations.

Immediately after the war the reins—and, with them, the fruits—of office fell to the Serbs; while the Croats, and more especially the Croat peasant party, under the leadership of M. Raditch, felt themselves left out in the cold. After several years of complicated manoeuvrings, the Croats gradually came to realise the futility of a policy of abstention and negation, and prepared to co-operate with the Serbian Radicals, and their veteran leader, M. Pashitch. The political marriage was solemnised last year, and ever since, observers, both inside the country and out, have been wondering how long it could possibly last. There have been indiscretions and rumours in plenty, and, last April, the Radical Prime Minister, M. Pashitch, and with him, the Radical Finance Minister, M. Stojadinovic, both resigned from the Government. The continuance in power of the ruling coalition has thus been made dependent upon their continuing to receive the Parliamentary support of the Radical party. It is too soon to say that anything like a final understanding has been reached between the political representatives of the different sections of the Southern Slav people. It is true, however, that they have begun to co-operate, and are all slowly adjusting themselves to the idea of the nation-State. Foreign relations also prove a bond of union, and, with them, the gradual development of a national economy. It is, indeed, in the economic rather than in the political sphere that the most noticeable improvements have taken place. The Budget has been balanced; the currency is virtually stabilised; agricultural production has expanded, and considerable progress has been made in adapting the old railway system to the new needs of the country.

There has been, perhaps, a certain element of good fortune in the record of Yugoslav agriculture of recent years. The harvests of 1924 and 1925 were particularly favoured by the weather, and this, in the case of the former year, was the first occasion on which the sowings of wheat and maize were up to pre-war standards. It must, however, be admitted that, in the absence of any official estimates, the pre-war averages given below can only be regarded as the merest approximations. The margin of error may, indeed, be considerable.

	Area. (Thousand Hectares.)			Yield. (Thou. Metric Tons.)		
	Pre-War Approx.	1924.	1925.	Pre-War Approx.	1924.	1925.
Wheat	1,600	1,717	1,773	1,800	1,572	2,240
Rye	190	195	199	190	141	214
Barley	270	364	357	300	293	400
Oats	420	353	346	430	302	368
Maize	1,900	1,965	2,113	3,200	3,795	3,791
Potatoes.....	?	218	231	?	1,027	1,224
Sugar beet.....	?	48	33	?	1,063	511
Tobacco	?	35	15	?	36	12

Whatever the precise relationship may be between the figures for 1924 and 1925, and those before the war, it is beyond dispute that they mark an enormous advance on those of the years which immediately preceded. This has naturally affected the foreign trade returns of the country.

which have undergone a complete transformation during the past seven years, as the following table shows:—

Year.	Quantities.		Values.	
	Imports.	Exports.	Imports.	Exports.
1919	155 ..	283 ..	712.2 ..	164.0 ..
1920	440 ..	915 ..	746.9 ..	284.6 ..
1921	734 ..	1,584 ..	538.1 ..	321.2 ..
1922	1,232 ..	2,214 ..	452.3 ..	259.2 ..
1923	1,123 ..	3,026 ..	493.4 ..	477.9 ..
1924	1,128 ..	3,916 ..	578.6 ..	671.3 ..
1925	1,514 ..	4,398 ..	769.1 ..	782.4 ..

The import surplus diminished steadily down to 1923, to be followed by a favourable balance of trade in the two succeeding years. While both exports and imports were considerably higher in 1925 than in the previous year, the rise in exports was less than had been expected. This was due mainly to the fall in world cereal prices. The principal articles of foreign trade in 1925 were the following:—

Imports.			Exports.		
	Value Mill. Gold Dinars.	%		Value Mill. Gold Dinars.	%
Cotton fabrics....	121	15.7	Maize	181	23.1
Woolen fabrics ..	54	7.0	Wood (for building)	98	12.6
Cotton yarns	35	4.5	Eggs	53	6.8
Machinery, &c. ...	32	4.2	Wheat	44	5.6
Iron goods	31	4.0	Live cattle	37	4.7

The most important markets for Yugoslav produce are the neighbouring countries of Austria and Italy; these two, together with Czechoslovakia, also provide most of the goods imported into the country. Some idea of the percentage share of the principal countries trading with the Southern Slav State is given in the next table:—

	Imports.			Exports.		
	1923.	1924.	1925.	1923.	1924.	1925.
Austria	26.9 ..	19.8 ..	18.3 ..	28.9 ..	24.5 ..	18.5 ..
Czechoslovakia ..	18.5 ..	20.1 ..	17.8 ..	7.8 ..	9.9 ..	9.4 ..
Hungary	1.7 ..	2.9 ..	5.0 ..	4.8 ..	7.9 ..	5.1 ..
Greece	2.0 ..	3.2 ..	3.0 ..	5.7 ..	7.1 ..	7.4 ..
Italy	17.7 ..	20.5 ..	18.8 ..	28.7 ..	28.8 ..	25.3 ..
Germany	8.7 ..	8.3 ..	9.9 ..	4.2 ..	4.1 ..	7.1 ..
Great Britain	9.9 ..	10.6 ..	8.1 ..	2.1 ..	1.4 ..	...

While British exports to Yugoslavia were greater in 1925 than in any earlier year, their relative position has declined, while that of Germany has improved. Down to 1924 something over 40 per cent. of Yugoslav trade was done with the other Succession States. The item "Exports down the Danube via Braila and Roumania," which appeared in the trade returns for the first time last year, makes it difficult to identify the ultimate destination of nearly 14 per cent. of the total exports of the country.

PART III.

THE FUTURE OF RECONSTRUCTION.

Our survey of the Danubian countries has shown that much has already been accomplished towards restoring more normal conditions in almost every branch of national activity. In the political sphere, the new order established by the Peace Treaties has already come to be accepted as the basis of further progress. Seven years ago it was regarded by many as a very dubious experiment which seemed foredoomed to failure. Adherents of the old order existed in considerable numbers in almost all the countries concerned, and many were prepared to advocate an appeal to force in order to overthrow the Treaty settlement itself. This state of mind has slowly disappeared, and irredentism is now on the wane. The actual danger of warlike operations was largely countered by the creation of the Little Entente. In origin this was merely a league of three new national States organised to defend their very existence as States. In fact, it has proved itself to be an association of countries co-operating on many questions and frequently representing, as a group, a point of view more moderate than that of certain of its individual members.

It is interesting to note that there has been, on the whole, a marked change of opinion in Hungary, a country to which the Treaty settlement was most unwelcome. Although cases like the famous forgeries trial this year have shown that irredentism is still far from dead, there seems to be a growing body of opinion in the country which accepts the new order as a compromise, unwelcome though it be, which can nevertheless be made to work.

The spirit of sweet reasonableness has also been fostered in considerable measure by the League of Nations. Quite apart from its special activities in this part of the world, the League is of the greatest importance as a moderating influence, if only because it provides an international forum in which these various peoples are all represented. The creation of relatively small national States calls for a larger and more comprehensive body. The League thus appears as a necessary corollary of the Treaty settlement. It provides a bond of union, and enables States which may be divided in their local interests to co-operate in the wider sphere of world affairs.

The direct political rôle of the League is, of course, closely circumscribed. In particular, there have proved to be many practical limitations to the application of the Treaties which aim at the protection of minorities. Even in purely political matters, however, much has been done to smooth over frontier disputes like those which have arisen between Bulgaria and Greece, while the very existence of an international tribunal to which recourse might be had, has done something to moderate the more extreme claims of ardent nationalism.

In the economic sphere the chaotic conditions which followed immediately upon the conclusion of hostilities have already given place to a much more ordered state of affairs. The currencies of Austria and Hungary have been brought on to a new gold basis, and seem to be amply covered by the reserves of the national banks. Czechoslovakia, the pioneer of currency reform in this part of Europe, has long enjoyed a stable exchange, and in this it has been followed by Bulgaria and Yugoslavia. The wisdom of a policy of stabilisation has been amply established, and there are reasons for hoping that Roumania will now soon follow suit.

No branch of economic life was more disordered seven years ago than transport. It has not always been easy to make good the ravages of war, while the creation of new frontiers of itself necessitated an entirely new orientation of the railways of the region. This has all taken time, and, as one proceeds eastwards, one realises only too easily how much still remains to be done. A comparison between conditions as they were in 1919 and as they are at the present day, however, will show at once that enormous progress has already been achieved.

Above all other economic considerations, however, is the fact that agricultural production has now at last returned to something very near the pre-war level. This is obviously of the greatest importance, since agriculture is, and seems long destined to remain, the leading industry of South-Eastern Europe. Conditions are, of course, still very primitive in many parts of the region, and production, even before the war, was as nothing compared with what it might become if more scientific methods of agriculture were employed. Nevertheless, the ravages of war seem, at last, to have been made good, and this during a period when social and political considerations led to a wholesale redistribution of landownership in several of the Danubian States.

If we turn to the various branches of industrial production proper, the progress already achieved is only too liable to be obscured by the considerable volume of unemployment still prevailing in Austria and, to a lesser extent, in Czechoslovakia and Hungary. The picture, however, is in many respects typical of the economic life of the region as a whole. Much has been done to create a series of semi-self-sufficing units, which are prosperous enough up to a point. Further progress can

only be registered when the possibilities of greater production are to hand. These imply, firstly, a larger volume of capital available for investment at rates which are not prohibitive. In this direction the situation has improved very markedly of recent years, thanks largely to the advent of foreign capital seeking investment in this part of the world. There is, however, still room for improvement, and, in particular, for an increase in the habit of saving, which suffered enormously as a consequence of the false prosperity of the inflationary period. Even more important, however, is the fact that greater production in these States necessarily implies a greater exchange of goods, and for this it is essential that the hindrances which still hamper trade should be removed.

The really important question which arises in any discussion as to the future course of economic development in South-Eastern Europe is, therefore, this. Are the States concerned satisfied with the limited—though undoubtedly—progress which has already been achieved on the basis of a restricted home market, or will they consider seriously the supreme need of developing their resources to the fullest possible extent, even though this implies a considerable measure of international co-operation and closer economic collaboration towards the common end? It may, perhaps, be worth indicating very briefly some of the most important questions that await solution if the principal obstacles which now retard further progress are to be removed.

Currency reform may be taken as representing one of the most successful chapters in the history of recent economic reconstruction. It should not be forgotten, however, that whereas there were only two currency units circulating in the whole Danubian area before the war—the crown and the equivalent of the franc (leu, dinar, or lev)—there are now six distinct currency units in circulation. In one case, at any rate, it would seem as though the ratio for the conversion of the old and discredited paper crowns into the new currency had been chosen with the deliberate aim of making the new unit as different as possible from that adopted in a neighbouring State. From the broader world point of view, the very existence of all these separate currency units cannot but appear as a hindrance to trade. Some form of co-operation on lines similar to the monetary unions of pre-war days would obviously assist greatly in easing this situation.

Closely connected with the regulation of the currency is the question of the status and functions of the national banks of these Danubian States. It has now come to be recognised fairly generally that, in accordance with the best banking practice, the central bank of issue of a country should be, so far as possible, independent of the Government. Only thus can the note issue be safeguarded against inroads on the part of the Treasury, and, therefore, only thus can the currency and the Budget be maintained on a sound basis. In South-Eastern Europe, however, the traditions of pre-war days and the situation immediately after the conclusion of hostilities alike militated against the ready acceptance of this doctrine. To-day the only Danubian States in which the independence of the national bank is adequately safeguarded are those in which the League has been directly and actively interested. In Austria and in Hungary the independence of the new banks of issue was a preliminary condition of financial reconstruction; and a similar clause has also been inserted in the refugee loan agreement recently concluded with Bulgaria. In addition to ensuring the independent status of the various national banks, it seems fairly clear that the restoration of more normal conditions in the general economic life of the world necessarily implies a fairly close co-operation between the various national banks themselves. In the case of the three countries mentioned, the association of the national banks with the Bank of England has been assured almost automatically. There are now signs that the advantages likely to accrue to all parties from co-operation of this kind are not altogether lost on financial circles in one, at least, of the other three countries, and further developments in this direction may not be much longer delayed. Here, then, a closer co-operation of the various national banks of the Danubian States with one another and with the principal financial institutions of the world should prove of great assistance in the general work of reconstruction and economic con-

solidation. The problems involved are wider than those of any one particular region, and it would indeed be regrettable if considerations of nationalistic pride in its narrowest forms should check a movement which is so essential to the world at large.

In the matter of transport, again, much could be achieved by still closer collaboration between the interested parties. The Danube could only perform the rôle of a great international highway, which seems indicated for it by nature, if and when the various riparian States are prepared to work closely together with this end in view. Similarly, there is still room for closer co-operation between these States in questions of railway rates and the solution of general transport problems. Here, too, reference should be made to the need for comprehensive programmes of road construction and improvement, which, in a country like Austria, for example, would do much to encourage the tourist traffic; and even more, perhaps, to the desirability of simplifying the burdensome formalities which are still associated with passports and visas in this part of the world.

Nothing, however, is quite so important as the need for a change in the general attitude still prevailing towards the many direct hindrances to trade, such as Customs duties and the various legal requirements which are connected therewith. The ultimate interests of all parties concerned call for greater and more efficient production, and this in turn implies a greater volume of foreign trade. If this is true as a general proposition, it is doubly so in the case of a region with the economic traditions of the former Austro-Hungarian Empire behind it. Certain of these countries, as we have seen, are very largely interdependent and complementary to one another. Political considerations make a Danubian Customs Union (Zollverein) an impossibility at the moment. It obviously could not be made to embrace all the Succession States—including Italy and Poland—while the trade interests of the countries of the Lower Danube would not always be easy to bring into line with those of the three States to the North and the West. Even the Peace Treaty, however, envisaged the possibility of some such union between the three new States of Austria, Czechoslovakia, and Hungary, though this has failed to materialise during the period of five years in which the Signatory Powers declared that they would not regard any such move as infringing rights that might be enjoyed by them in virtue of the most-favoured nation clause. Whether the particular needs of this group of States will ultimately find expression in some such concrete form or no, however, it does seem essential that two conditions should be fulfilled in the tariff policy of all the Danubian States. On the one hand the network of commercial treaties already existing should be extended and amplified; and on the other the general level of duties, which is now almost unbelievably high, should be very substantially reduced.

Without further and closer co-operation on these and similar lines, it seems highly unlikely that the undoubtedly great resources of the Danubian basin can be developed much further than they are at present. The greater well-being enjoyed to-day is due in large measure to the abolition of those prohibitions of imports and exports which made the first period of reconstruction at once so difficult and so long. The second period begins under better auspices. It is no longer held to be unpatriotic to refer to ideas such as the community of interests existing between the several States. People are slowly coming together to discuss economic questions in their bearings on Central and South Central Europe as a whole. Problems that were once regarded as being purely political are now slowly returning to the domain of the economic specialist, where they more properly belong. The story of reconstruction has thus entered upon a new and decisive phase. In no Danubian country can the present economic situation be described as free from serious difficulties. Given the will to co-operate and a view extending wider than the proverbial village pump, there seems, however, to be no serious reason why enlightened self-interest should not go far to restore this region to that place in the world to which it is entitled by its great natural resources and the genius of its peoples.

THE NATIONAL BANK OF ROUMANIA.

(BANCA NATIONALA A ROMÂNIEI).

The National Bank of Roumania was founded, by a law of April 17, 1880, with a capital of 30 million lei, of which only 12 million lei were paid up on its establishment. Two-thirds of this amount were obtained by public subscription, the remainder being provided by the State. In 1901 the State sold its shares. Since that date the whole of the capital of the National Bank of Roumania has been in the hands of the public. The National Bank obtained the exclusive right of issuing bank notes, which had to be covered by assets that could easily be realised. The Bank was obliged to have a metallic reserve of gold equal to at least 40 per cent.—or, in certain exceptional cases, 33 per cent.—of the amount of notes issued; 30 per cent. of this metallic stock could be held in the form of bills on London, Paris, Berlin, and Brussels. The notes themselves were convertible into gold on presentation at the Bank.

The activity of the National Bank of Roumania, which was closely connected with the general monetary policy of the country, can be divided into three periods:—

(1) PRE-WAR.

In accordance with sound financial principles, the independence of the Bank was always maintained—with the sole exception of a loan for 15 million made in 1901—as against the needs of the Treasury, and the convertibility of its notes in circulation was likewise assured. The rate of exchange of the Roumanian currency was always kept at its legal parity.

The currency situation during the 34 years which intervened between the founding of the National Bank and the outbreak of

the Great War is summarised in the following table:—

(In Millions of Lei.)

Year.	Notes in Circulation.	Gold.	Cover. Bills, &c.	Total.	As % of the Note Issue
1880.....	10	..	..	5	50
1890.....	122	45	..	45	37
1900.....	120	39	10	50	41
1910.....	339	120	48	168	49
1913.....	437	151	56	208	47

(2) WAR PERIOD.

The situation of the country compelled the National Bank to change its financial policy so as to provide assistance for the Government. Between 1914 and 1916, when Roumania joined the Allies, the Bank made several advances to the Treasury, covering these issues by means of the gold reserves it had built up in earlier years. These loans were, moreover, repaid to the Bank out of the proceeds of the first loan issued on the home market in April, 1916. During the war period (1916 to 1918) the Bank granted new loans, which were covered either by bills held by the Bank abroad, or by new assets made available, thanks to the solidarity of the Western Allies. Two important events, however, seriously weakened the currency position of the country:

(1) The gold reserve of the Bank was sent to Russia at the request and under the guarantee of the Allies, and, up to the present moment, this has not been returned.

(2) The German armies of occupation issued some 2 milliard lei of uncovered notes, a total roughly equal to twice the note circulation of the National Bank at the time when Roumania entered the war.

The note issue of the Bank itself and the cover held changed as follows during these war years:—

(In Million Lei.)

December 31st.	Note Circulation.	Of which:		For State.	For Commerce.	Cover.			Relation Between the Cover and Total Circulation.
		On Behalf of the State.	For Commercial Purposes.			Gold.	Bills.	Total.	
1914	578	120	305	20	52	154	62	216	37
1915	762	314	236	41	31	220	80	301	39
1916 (August 13th)	1,069	215	134	20	12	487	80	568	53
1916	1,451	505	184	34	12	493	80	574	39
1917	1,961	1,059	164	54	8	493	196	689	35
1918	2,489	1,604	106	64	4	493	348	842	33

(3) POST-WAR.

On account of her geographical situation Roumania was obliged to continue the war in defence of her frontiers against her old ally of the East, Bolshevik Russia, and against Hungary, whose revolutionary armies were attacking her on the Theiss.

Roumania thus had to finance once again a real war at a time when the exhaustion caused by enemy occupation, by the Great War, and by the Russian army, had reduced the resources of the State to practically nothing. Under such circumstances the only way in which these new expenses could be met was by recourse to

the note issue of the National Bank. At the same time the unification of the currency, which was a most urgent need, necessitated the conversion, not only of the notes which had been issued by the German army of occupation, but also of the Austro-Hungarian crowns and Russian roubles which were in circulation in her new territories. Without any addition whatsoever to the currency reserve, these transactions called for an increase in the note issue of more than 7 milliards of lei, and completely ruined the national currency.

The following table shows the march of events since 1919:—

(In Million Lei.)

December 31st.	Note Circulation.	Issues.		Cover.		Total.	The Cover as % of the Total Note Issue.*
		On Behalf of the State.	For Commercial Purposes.	Gold.	Bills and Treasury Bonds.		
1919	4,215	3,800	217	495	915	1,410	33
1920	9,485	8,198	903	495	2,704	3,200	33
1921	13,722	12,363	2,002	495	4,086	7,581	33
1922	15,162	12,317	4,045	533	4,637	5,170	34
1923	17,916	11,107	6,218	554	5,456	6,011	33
1924	19,356	10,795	8,032	562	5,936	6,499	33
1925	20,136	10,787	9,097	566	6,333	6,895	34

* It will be noticed that the cover is made up almost entirely of Treasury Bonds.

The consequences of inflation did not take long to show themselves in a disordered Budget and in the rapid fall of the national currency. An energetic policy of reduction of expenditure, and a return to the normal working of the public services, and the resumption of national production, however, enabled the Government, by the year 1921, to carry on without having any further recourse to the note issues of the National Bank. The State Budget was balanced in spite of the resumption of the service of the public debt and the very difficult currency situation. In addition, the Government was able to pay back over one milliard of lei of its debt to the National Bank. When issues of notes for Treasury purposes had ceased the Bank was able to resume its normal functions, and to confine its activities to the needs of commerce and the reinforcement of the cover of its note issue.

The results obtained as a consequence of its policy of Budget reform have enabled the Government to consider the possibility of acquiring the necessary resources for the repayment of the floating debt of the State to the National Bank.

With this end in view, two conventions were concluded with the National Bank on May 19, 1925.

The first Convention is intended to ensure the liquidation of the debt to the National Bank (approximately 10.7 milliards of lei) by annual graded payments over a period of 15, or possibly 20, years. For this purpose a special liquidation fund has been set up for the redemption of the notes issued on behalf of the State. Payments to this fund, which amount approximately to 700 million lei per annum, are to be made automatically and quite independently of Budget fluctuations. Should currency requirements prevent the immediate withdrawal from circulation of the amount deposited, this liquidation fund can serve temporarily as a cover for the note issue. The liquidation fund is provided as to one-third

out of a budgetary grant representing a third of the proceeds of the turnover tax, and as to the balance by new resources or by resources of which the State has not as yet taken advantage.

The second aim of the first Convention is the strengthening of the real cover of the fiduciary issue. The issues of the Bank are divided into two categories: the **covered issue**, equal to four times the real cover held by the Bank (that is to say, a present issue of 4,800 million lei), and the **non-covered issue**, representing the difference between the covered issue of the National Bank and the total of notes in circulation.

A "fund for the reinforcement of the issue" is created out of profits obtained from the non-covered issue, reserves that the National Bank has already constituted by an increase of its metallic stock (over and above the statutory reserve), and including a part of the amounts paid as premium to the subscription of the new shares of the National Bank and an allowance of 20 per cent. on the profits of the covered issue.

The National Bank cannot exceed the total issue reached in December, 1924, save in the event of its being able to maintain the proportion of 33½ per cent. of gold bills and exchange prescribed by its statutes.

Second Convention. The terms of this Convention aim at adapting the National Bank to its new functions.

In addition to the dispositions connected with the internal organisation of the Bank, the Convention extends the privilege of the Bank for a further 30 years, that is to say, up to 1960. It also stipulates an increase of the capital of the Bank to 100 million of lei, of which 33.5 million are to be subscribed by the State, 30 million are on account of the former shareholders, and 36.5 million by new shareholders.

Summary Statement of Position on August 28, 1926.

Assets.		Liabilities.	
	Lei.		Lei.
Metallic reserve:		Capital	100,000,000
Gold and bills	1,340,075,045	Premium paid on new capital issue	365,320,000
Treasury bills	5,679,833,333	Reserve fund	65,551,406
Silver, &c.	20,638,381	Amortisation fund	184,943,358
Portfolio	8,675,751,720	Bank notes in circulation	21,048,719,470
Advances to Central Organisations of Popular Banks and Co-operatives	1,405,741,477	Profits and losses	40,151,694

THE SKODA WORKS

PRAGUE CZECHOSLOVAKIA

(Limited Company, formerly THE SKODA WORKS, PLZEN)
(Incorporated under the law of the State of Czechoslovakia.)

SHARE CAPITAL (in Czech Crowns) 200,000,000
all issued and fully paid up.

The Company's manufactures include one of the largest outputs in the world of steel ingots, castings and forgings up to 100 tons weight; locomotives and locomotive repair work; high power gas engines, steam turbines, petrol tractors, motor cars, aeroplanes and aeroplane engines, electric, sugar, brewery, alcohol and agricultural machinery, gear cutting and every description of general engineering machines.

The Works were established in the year 1869, and are situated on the outskirts of the town of Pilsen, at Hradek near Pilsen, at Mlada-Boleslav, in Prague and in Hradec, all in the state of Czechoslovakia. They are now believed to be the largest steel and engineering works in Europe in one ownership. The Company has at the present time about 24,000 employees.

The Total Assets exceed £11,200,000.

For the purpose of converting crowns into sterling the rate of exchange used is Cz. Crs. 164 to the £.

The Company has the following Debentures outstanding, secured by Trust Deed, for which the Royal Exchange Assurance is Trustee:—

£2,500,000 7½ PER CENT. FIRST MORTGAGE STERLING DEBENTURES.

Redeemable at par on or before June 1st, 1951, by annual drawings or by purchase at or under par. Registered in denominations of £50, £100 and £500. Interest payable 1st December and 1st June. There are also outstanding £678, 300 8 per cent. First Mortgage Debentures, which will be paid off on January 1st, 1927; the sum required for this purpose is deposited with the Trustee.

REGISTRARS.—BRITISH & ALLIED INVESTMENT CORPORATION, LIMITED, 6, Princes Street, E.C.2.

The following is an abstract of the Report from Messrs. Fuller, Horsey, Sons & Cassell, of 11, Billiter Square, E.C.3, dated May 8, 1922:—

"THE SKODA WORKS AT PILSEN, IN OUR OPINION, IS ONE OF THE BEST ORGANISED AND EQUIPPED WORKS WE HAVE BEEN PRIVILEGED TO INSPECT DURING A LONG AND VARIED EXPERIENCE."

Dividends paid for the past four years are as follows:—

Year.	1922	1923	1924	1925
	10%	10%	12½%	13½%

For the years 1920 to 1924 the Profits, before providing for either Depreciation or Profits Taxes, but after charging all expenditure incurred for maintenance of property and plant, were as follows:—

Year.	Amounts.
1920	£ 271,839 18 2
1921	£ 404,212 12 7
1922	£ 731,717 4 9
1923	£ 838,104 12 8
1924	£ 542,974 0 10
1925	£ 512,570 4 4

THE ENGLISH BANK FIGURES.

A YEAR ago we recorded, in our autumn Banking Supplement, the effect on our banking system, to the limited extent to which they could be traced from the figures published, of the return to the gold standard. This year's figures cover a period in which our banks and the whole of our economic machinery have been subjected to a very different strain—that of the general strike at the beginning of May, followed by the coal stoppage, which is still a cause of growing loss and discomfort to the community and of distress to investors and workers directly affected. As was to be expected, the banking figures give practically no indication of the dislocation in trade which so unfortunately interrupted a period in which it was possible to hope that revival was at last in sight. If good trade and active production mean that the banks are likely to be called upon for increased accommodation by their customers to supply the sinews of expanding output, it is equally true that stagnation and depression impose upon the banks the difficult duty of helping solvent customers through a period of temporary obstruction, in which half-finished goods cannot be completed and commodities that are ready for sale cannot find a buyer. Industry and enterprise have to lean upon the friendly support of the banks both in good times and in bad; and only those who have access to the facts behind the figures can be sure whether support is being given to a fit and vigorous athlete speeding on his course, or to an invalid who will be quite well again soon, but needs careful nursing for the present.

So much is this so, that if it were possible to put the aggregate figures of those of the home banks which publish them at the end of June before someone who had heard nothing about the course of English trade during the period covered, he might, quite possibly, and with plenty of reason, infer that they reflected a time of comfortable expansion. It is true that the aggregate balance-sheet, produced on the next page, shows a slight decline in acceptances and endorsements between June 30, 1925, and the same date in 1926; but, as will be seen, the figure is well above that shown in 1924, and what is still more remarkable, it is more than 60 per cent. above the level of June, 1921. But it is from the discounts, loans, and advances item that an uninitiated observer might most easily draw an inference of satisfactory trade expansion, for it has advanced during the year under review by more than £34 millions, and showed, at June 30th, the highest proportion to total assets that has been displayed since 1921. In fact, as is well known to our readers, who are versed in these mysteries, this total includes so many cross currents, caused by movements of Treasury bills, advances to stockbrokers, loans to customers for other than commercial purposes, and other such influences, that it is a most untrustworthy barometer as indicating the condition of trade. And though the full effects of the coal stoppage had by no means been shown by June 30, it seems probable that the very moderate recovery in trade that took place before May had less effect on expansion of credit than the subsequent reduction in the rate of consumption.

From the investments item it is at least safe to draw a definite inference which is also satisfactory, namely, that by the continued reduction under this heading, the banks are making further progress in the process by which they are ridding themselves of the inordinate holding of securities, which was forced upon them by the Government during the war period, and are thereby setting free funds for the performance of their most important duty, which is that of financing trade and enterprise. Securities to an aggregate value of more than £24 millions have been disposed of, bringing down the total by about 33 per cent., as compared with the 1922 figure. At June 30, 1922, the investments formed 21.9 per cent. of the total assets, and the proportion has now come down to 15 per cent., the lowest shown since the war, though still well above the 13.5 per cent. of June 30, 1914.

A small increase, all in the right direction, in capital and reserves, and a tiny decrease in cash in hand are the only other movements in the minor items, and the net result is a small increase in deposits—the smallest movement in them, as the following table shows, since war made bank figures the plaything of politicians:—

INCREASE OR DECREASE IN DEPOSITS.

	Million £
June 30, 1915	197.2
" 1916	44.5
" 1917	81.1
" 1918	282.5
" 1919	406.2
" 1920	103.4
" 1921	20.3
" 1922	27.9
" 1923	113.9
" 1924	11.9
" 1925	19.4
" 1926	4.2
	+ 990.1

Special interest attached to the figures of the Bank of England's weekly return at the end of June, because it was made up on the last day of the half-year, and so showed the full effect of the large amount of credit in the books of the Bank, which has to be created for balance-sheet and other purposes at that date. This somewhat artificial demand is not so considerable at June as on December 31st, but it sufficed to cause in the last week of the half-year increases of £11½ millions in Government securities and nearly £36 millions in Other securities. Almost the whole of the sum so raised, with the addition of £8 millions taken from the Public deposits, was left at the credit of the Other deposits, which were swollen by over £54 millions in one week, though it should be added that they had been reduced in the previous week to an exceptionally low level—£100.3 millions. The fact that the 1926 return was made up on June 30th renders the comparison between it and those of former years somewhat illusory. The figures, however, have some interest as giving an indication of the effect on the Bank's position of the war-time expansion of credit, and of the absence of any evidence of that "deflation" by means of which our financial authorities are so often accused of having checked trade activity. If the total of other deposits be taken as a test, the following table shows an unbroken record of increase:—

BANK OF ENGLAND.
(Million £'s.)

	July 1, 1914.	June 29, 1921.	June 28, 1922.	June 27, 1923.	July 2, 1924.	July 1, 1925.	June 30, 1926.

As to the gold position, it will be remembered that in April, 1925, the gold in the currency note reserve, which then stood at £27 millions, was returned to the Bank of England in exchange for its notes, with the result that last year's table showed an increase of £29½ millions. During the year to June 30th last there had been an outward flow of gold, very moderate in volume in view of the industrial difficulties with which the country was struggling. Since then there has been a considerable addition to the Bank's gold stock, in spite of the continuance of the coal stoppage. This movement has been more flattering as evidence of the confidence of England's foreign customers than trustworthy as a true indication of the effect of the present of England's figures, which have always been a very puzzling guide to those who have to try to grope their way to conclusions about England's true economic position, are now made still more so by its questionable connection, referred to in our issue of September

(In Million £.)

4th last, with foreign banking ventures. As we then showed, the action of the Bank of England in backing the Anglo-Austrian Bank with capital and patronage laid the Bank open to the charge, believed by no one at home, but by plenty of people on the Continent, that its policy in Central Europe was not disinterested. For our present purposes it has the disadvantage of making the figures of the Bank's weekly returns less

than ever informing. It may be that where so much was already obscure, the addition of a comparatively small new obscurity is a mere drop in an ocean of darkness, but at a time when there is a strong demand for more light on the financial and other methods by which our industry is carried on, it is a pity that our financial leaders should draw the curtains still more closely.

IRISH FREE STATE BANKS.

In our Banking Number of May 29th last we showed that the net profits of the three banks of Northern Ireland had declined, and our figures of the six Irish Free State banks now show the same movement. The figures of four of these banks cover the year to June 30th last, and of one come down to August 31st, while those of the Bank of Ireland relate to the calendar year 1925. In every case there is a decline in net profits, but dividends have not been reduced. Indeed, the amount distributed to shareholders is £52,000 greater, the Bank of Ireland having raised its rate from

13 to 14 per cent., paid free of tax. Difficulties of arriving at agreement with the authorities as to the amount of income-tax for which the banks were liable to both the British and Irish Free State Governments have complicated matters in the past few years, and dividends for some half-years were paid free of tax and some less tax. Agreement, however, has now been reached, and dividends are mostly paid less income-tax. The following table gives net profits and appropriations for the six banks, together with the profits and rates of dividend for the preceding 12 months:—

IRISH FREE STATE BANKS.

	Year Ended.	Net Profit.	Dividend.	To Reserve, &c.	Pre-mises.	Staff Funds.	Carried Forward.	Profit and Dividend, Previous Year.
		£	£	£	£	£	£	%
Bank of Ireland	Dec. 31	590,724	387,892	207,231	..	..	4,199	595,821
Hibernian Bank	June 30	103,197	56,270	30,038	12,500	..	4,409	103,278
Munster and Leinster Bank ..	June 30	184,159	90,000	65,000	30,000	..	841	190,727
National Bank	June 30	364,585	185,937	140,000	40,000	..	1,852	366,587
Provincial Bank of Ireland ..	June 30	12,842	63,292	30,000	20,000	..	12,550	138,388
Royal Bank of Ireland	Aug. 31	70,531	24,125	45,000	..	..	1,406	73,842
		1,439,038	807,295	517,269	102,500	..	11,978	1,474,643

(a) 5 per cent., free of tax.

(b) 9 per cent., free of tax.

* Free of income-tax.

Allocations to reserve have been reduced in all cases except the National Bank, whose appropriation a year ago totalled £125,000. The amounts written off premises are the same in the aggregate, but the staff funds get nothing, as compared with £22,000 a year ago.

The balance-sheet figures are set out in detail on later pages, but in the table below we give the aggregate items of the six Free State banks for the past five years and of all the Irish banks for a number of preceding years. This shows a further contraction in the last year, total deposits having declined by £7½ millions, and this reduction is balanced by decreases of £2 millions in discounts and advances (of which over £1½ millions was accounted for by the latter), of £4 millions in investments and of over £1½ millions in cash and money at call. Deposits, it will be seen, have declined by £20 millions as compared with 1922, while discounts and advances have fallen by only £2½ millions. A large proportion of the banks' assets is held in the form of investments and cash, and it is these items which have been reduced in the past five years. As a correspondent pointed out in an article in our monthly Trade Supplement of February 27th, according to the general practice of banking in Ireland, the granting of a credit does not create a fresh deposit except in a negligible number of special cases. Thus the amount of deposits has a general rough correspondence to the levels of cash and investments on the other side of the balance-sheets, subject, of course, to modifications as to notes in circulation on the one side and to discounts and advances on the other. A large amount of farmers' and traders' savings in Ireland are left on deposit account in the banks, and as there has been little or no capital investment by the ordinary Irish citizen in the past few years, it appears that the

three bad seasons of 1922, 1923, and 1924, accentuated by the effects of insurrectionary damage, with resultant business stagnation and very heavy rates and taxes, have compelled farmers and traders and private citizens to fall back on their savings to tide them over bad times.

The Banking Commission which sat in Dublin in the spring and was presided over by Mr H. Parker Willis, late secretary of the New York Federal Reserve Board, has not, at the time of writing, issued its report. Proposals had been put forward for the creation of a separate Irish currency, but the Commission's terms of reference covered a wider range, including general problems of Irish banking, note issue, legal tender, credit regulation, and so on. While the Commission was still sitting reports were current that progress had been made along lines pointing towards an ultimate recommendation of a separate currency. Writing in April, our Dublin correspondent suggested that this would be effected by the issue of Saorstát Eireann notes, which would supersede the existing bank-notes, and which would alone be legal tender. They would be inconvertible in Ireland, but measures would be devised for supporting them at parity with the pound sterling by providing a backing of 25 per cent. of gold and 75 per cent. of gilt-edged securities, in accordance with well-known precedents. Considerable adjustments between the Free State and the banks and between the banks *inter se* are involved. Our correspondent added that the "scheme suggests obvious risks, and will require mature consideration, with particular reference not so much to the not fully explained adverse trade balance, but to the idiosyncrasies of the Irish depositor, the Irish investor, and traders." Apart from the undesirability of adding to the number of the world's currencies we question whether a less favourable opportunity than the present could be chosen by the Irish Free State for launching out on currency adventures.

* Irish Free State.

AFRICAN BANKS.

With the absorption by Barclays Bank (Dominion, Colonial, and Overseas) of the National Bank of South Africa, the number of South African commercial banks having offices in London is reduced to two, of which one—the Netherlands Bank of South Africa—is a Dutch concern. The Standard Bank of South Africa is thus the only British bank operating in South Africa and having an office in London, which still retains its identity. The National Bank of South Africa, now merged with the Colonial Bank and the Anglo-Egyptian Bank to form Barclays' new subsidiary*, absorbed in 1912 the Bank of Africa and in 1914 the Natal Bank, while the Standard absorbed in 1914 the African Banking Corporation. In our statistics of African banks which follow are included the figures of the Bank of British West Africa, making a total of three African banks as compared with a maximum number of nine in the year 1910.

In South Africa the past season was a satisfactory one, and the country enjoyed another year of prosperity. This was reflected in the Government finances, the Union Budget statement showing a surplus of £500,000, against an estimated deficit of £187,000, and the railways a surplus of £673,000, against an estimated deficit of £61,000. The output of gold in 1925 exceeded all previous records, and sales of coal were also higher than ever before. The excess of exports in 1925 at £19 millions compared with £12 millions in 1924 and £8½ millions in 1922. These figures show that the country is making steady progress from the depression of 1922, and it is not surprising to find that the profits of the Standard Bank of South Africa continue to expand. At the annual meeting in July last the chairman said that the directors considered this improvement to be based on a really sounder situation, which appears likely to continue for a time unless quite unforeseen circumstances

* Barclays Bank (Dominion, Colonial and Overseas) has an authorised capital of £10,000,000, of which £6,975,500 is issued and subscribed, £4,025,500 being paid up, whilst the reserve fund now stands at £1,000,000. In addition to this reserve fund, there is an uncalled liability of £2,000,000 in respect of the 500,000 "B" shares of £5 each, £1 paid, held by Barclays Bank, Limited, and by virtue of which holding that bank has a controlling interest. On the board there are four directors of the Colonial Bank, three directors of the Anglo-Egyptian Bank, and a director, as well as a member of the London committee, of the National Bank of South Africa. In addition to the central board, local boards consisting of a number of directors of the former banks function for each of the three sections, while the administrative officers and staffs have retained their positions.

arise. They, accordingly, paid a bonus of 2½ per cent. to shareholders, restoring the total distribution to 16½ per cent., which was paid for 1918 and the four succeeding years. The profits of the Netherlands Bank of South Africa show a substantial increase, but this is, no doubt, partly due to the acquisition in May, 1925, of the Transvaalsche Handelsbank. The Bank of British West Africa recorded a small increase in profits. The Egyptian business of this bank, it may be recalled, was amalgamated with that of Lloyds Bank in 1924, and at the annual meeting in June the chairman expressed the hope that their arrangement would prove

reasonably profitable, although it would be another year or two before the benefits of the combination were fully experienced. He added that the bank in Morocco was establishing a secure and satisfactory position.

The table summarising the main items of the balance-sheets shows a further reduction in the circulation of notes.* The total of £480,700 is entirely made up of Standard Bank of South Africa notes, and these represent notes circulating in Rhodesia and elsewhere outside the Union, the South African Reserve Bank now having the sole right of note issue in South Africa. The balance-sheet of the latter as at March 31st last shows notes in circulation at £8,166,700 and cash at £7,654,700. Under the Currency and Banking Act of 1920 the Reserve Bank's note issue has to be secured by at least 40 per cent. in gold, and as to the remainder by commercial paper or trade bills, and by a first charge on all the assets of the bank. The amount of gold held by the Reserve Bank decreased by £4,800,000 and the note circulation by £3 millions, the increase of gold in the hands of the other banks being £1,100,000, leaving an amount of £3,700,000 to be accounted for as in the hands of the public. It thus appears that while the note circulation in the hands of the public is £2,300,000 less, allowing for a reduction of £700,000 in other banks, the gold circulation, except such portion as may have

been exported privately, is £3,700,000 more. The Reserve Bank has now opened branches at five of the most important towns of the Union, but is restricted from doing an ordinary commercial banking business by the Currency and Banking Act. At the annual meeting the chairman said, in this connection, that "although we have not so far done much business on the lines permitted to us by the Act, i.e., the discounting of bills, for one simple reason amongst several, viz., that bills are not plentiful in this country, our presence in these towns has not been without its effect on the general financial position. I need not enter into detail in this matter, but there is no doubt that the establishment of the Reserve Bank in some of the commercial centres of the Union has caused a movement towards lower rates in the discounting of import and export bills, which the improved conditions of the country undoubtedly called for."

The Standard Bank of South Africa shows a reduction of half-a-million in the total of bills discounted, but loans and advances are £4½ millions higher, deposits being £2½ millions higher. The deposits of the Bank of British West Africa show a reduction of £700,000, but this was anticipated as a result of the amalgamation of the Egyptian business with Lloyds Bank.

AUSTRALASIAN BANKS.

JUDGING by the profits disclosed by the Australian banks, the past season was a profitable one from a banking point of view. Net profits were in nearly all cases substantially higher, and in several instances

dividends were raised. Since the adoption of the gold standard the exchange position, which created so much difficulty in the post-war years, has become normal and while this has to some extent affected

banking profits adversely, it has been of great benefit to the trading community. The two New Zealand banks included in our statistics also record an increase in profits, but in each case a larger capital was employed. Indeed, at the annual meeting of the National Bank of New Zealand the chairman, the Hon. W. Pember Reeves, said that "it has not been an easy matter to expand our gross profits.....We have to remember that the fall in prices of New Zealand exports affected our bill business, as did also the lateness of the season, and the British seamen's strike. The greatest adverse influence, however, was the, perhaps, too drastic reduction in exchange rates agreed to by the Australian and New Zealand banks after the restoration of the gold standard here." The increase in profits of the Australian banks is the result mainly of a favourable season and of good prices.

The aggregate balance-sheet figures, which are appended, show an increase of £10 millions in deposits and £5 millions in discounts and advances, while investments have risen by £9 millions. The Australian figures of the Commonwealth Bank of Australia as at June 30th last, which are not included in the aggregate figures below, show an increase in total deposits. The deposits and cash items increased during the last quarter, as usual when large taxation receipts have come in to the credit of the Commonwealth and those of the State Governments which keep their accounts with the Commonwealth Bank. Our Melbourne correspondent points out that since the large gold imports of the first half of 1925, when a number of the ordinary banks brought £10½ millions from America and South Africa, a good part of the gold has passed into the hands of the Commonwealth Bank, which has recently re-exported the greater part of the amount, partly to India, but principally to San Francisco. The steps taken by the ordinary banks to enlarge Australian gold stocks have thus finally been followed by comparatively little result, the opinion of the Commonwealth Bank being that large gold holdings are "uneconomic." This requires to be taken in conjunction with the provision introduced into the Commonwealth Bank Act two years ago, by which the banks were compelled to settle clearing balances through the Commonwealth Bank, the result being that the banks have now balances of £6,045,894 with the latter. This book credit, therefore, replaces gold which otherwise the banks in all probability would have retained.

In a review of Australasian banking results in the second quarter of this year the *Australasian Insurance and Banking Record* says that the demand for accommodation which the banks have experienced from their customers has been active for some considerable time past, and the figures, when separated, show that while in Australia an increase in deposits has been accompanied by a greater increase in advances (after allowing for the increase of nearly

£4 millions in Government and municipal securities), the experience in New Zealand has been that of a reduction in total deposits accompanying an increase in advances. In Australia the tendency indicated by the banking figures differs from that of the investment market in a somewhat anomalous fashion. The yield obtainable on high-class securities has been declining gradually during the past year, and, apart from the ordinary influence of fresh accumulations of money available for investment, the movement has been assisted by sinking fund purchases of Commonwealth securities, the amount thus taken up being a set-off against fresh borrowings for public works on account of the States. On the other hand, the banking figures indicate that the banks have met their customers' requirements to a substantial degree, and even although there may not be an actual hardening in rates, it would be only natural that further demand should be looked at somewhat critically. The form taken by demand for money in relation to supplies available has undergone various changes as compared with a dozen years ago. The great increase in the amount of Government securities in existence in Australia has provided a highly eligible form of investment for trust money and for the funds of insurance offices, as an alternative to lending on mortgage, a good interest return on Government securities being accompanied by an absence of the attention required and occasional delays in interest payments in the case of mortgages. The various Governments are rarely off the market, whether as direct borrowers over the Treasury counters or indirectly through the medium of State banks, while the demand from municipal bodies is also a substantial factor in absorbing money. While all this tends to limit the supply of money available for direct lending on mortgage, the tendency is for borrowers to look more to the banks for accommodation, and at the same time the official absorption of money in different channels places a limit on the amount available for private enterprise and lending in ordinary forms by the banks.

The season in New Zealand was not so satisfactory, and the trade figures for the year ended March 31st last show an excess of imports amounting to £4,328,000, exports having declined by £6,080,000, and imports increased by £3,200,000. The increase in imports was no doubt partly due to a rush of imports before the alteration in the preferential tariff on April 1st last, under which goods subject to British preferential tariff must be at least 50 per cent. of British origin, instead of 25 per cent. as previously. The New Zealand banking figures at March 31st show an excess of advances over deposits, whereas there is usually an excess of deposits over advances, and the position disclosed this year has resulted in a restricted policy by all the banks in advances—including a certain pressure on importers to reduce importations.

BANK SHARES.

UNTIL comparatively recent times the ordinary investor was rather effectively deterred from taking an interest in bank shares by the twin facts that practically all bank shares were of large denomination, and that practically all carried large callable liabilities. These two objections have been partially removed in recent years, and in the following table we are able to show a long list of bank shares, many of them of small denominations, on which there is no uncalled liability:—

Bank.	Denom-ination.	Am't Paid Up	Price Sept. 30, 1924.	Price Sept. 30, 1925.	Price Sept. 30, 1926.	Yield %
Agricultural Bank of Egypt	£ 5	£ 5	7½	8½	7½	4 1/2

* Free of tax.

In the case of the greatest banks in the world—for instance, of Britain's "Big Five"—the risk of a call on unpaid capital may be practically disregarded. But in reviewing the bank share market as a whole the possibility of a call must be regarded as, in some cases, less remote. In the above table a number of Dominion and foreign banks figure. Among them are very strong institutions, whose shares offer attractive yields and are good for mixing in a sound investment list. Never-

theless, the investor must exercise discretion in purchasing overseas bank shares, and should, through his broker or other financial adviser, acquaint himself fully with the banking laws of the country in question, as well as the taxation laws and the economic conditions.

In the following table we set out a comparison of the prices of a number of banking shares, British and overseas, covering a period of three years, and ending with the yield obtainable at the prices of last month:—

Share.	Am't of Share.	Paid up.	Price Sept. 30, 1924.	Price Sept. 30, 1925.	Price Sept. 30, 1926.	Yield %
Bank of England	Stock	£ 100	£ 259½	£ 252½	£ 219½	4 1/2

† Free of tax.

The 1925 fortunes of banks in various geographical groups are dealt with on other pages of this Supplement. Looking through the above list, the main impression is the stability in quotations and yields over a period which has, in various areas, been anything but free from economic trouble.

CANADIAN BANKS.

THE Canadian banks with London offices, with whose figures we are concerned in this article, are becoming "beautifully less" in numbers with the passage of the years. Last year our table included seven. This year the number is five, the reduction being caused by the absorption of the Union Bank by the Royal Bank of Canada and the disappearance of the Colonial Bank, which, as explained in a previous article on African banks, has been reconstituted under the title of Barclays Bank (Dominion, Colonial, and Overseas), and has made some absorptions of its own. No balance-sheet of the new concern has yet appeared. The Royal Bank also purchased early in 1925 the entire capital stock of the Bank of Central and South America, a purchase which gave the bank a big business footing in Colombia, Peru, Venezuela, and Costa Rica. In the annual report the deal with the Union Bank is described as follows: "On May 2nd we concluded an agreement with the directors of the Union Bank of Canada to

purchase that bank for a consideration of 40,000 shares of our stock. The agreement was ratified by the shareholders of both banks on July 21st.....The transfer was made on September 1st. By this transaction we have acquired on satisfactory terms assets valued at approximately \$100,000,000 a valuable business connection, especially in Western Canada." In reading the Royal Bank figures for 1925 it must, therefore, be remembered that the absorption of the Union Bank only took place three months before the close of the financial year. After the elimination of redundant branches the two amalgamations mentioned resulted in an increase of 266 in the number of branches of the Royal Bank.

The following table of profits and dividends shows that the results were satisfactory to shareholders, net profits having risen in the case of four out of the five banks. The Canadian Bank of Commerce raised its dividend from 12 to 13 per cent., while the other four maintained the previous year's rates:—

	Year Ended.	Net Profit.	Dividend.	To Reserve, &c.	Pre-mises.	Staff Funds.	Carried Forward.	Profit and Dividend for Preceding Year.
		£	£	%	£	£	£	£
Bank of Montreal	Oct. 31	920,993	882,385	14	121,618	..	32,980	890,901
Bank of Nova Scotia	Dec. 31	427,584	820,000	16	20,000	50,000	22,584	429,008
Canadian Bank of Commerce	Nov. 30	716,551	534,247	13	108,904	30,823	3,389	741,098
Dominion Bank	Dec. 31	281,868	156,000	18	33,589	20,000	12,835	228,816
Royal Bank of Canada	Nov. 29	816,320	611,200	14	84,000	80,000	21,126	775,695
Total		3,112,822	2,458,782	..	868,065	180,822	26,974	3,058,616

As will be seen from the dates of the balance-sheets shown in the accompanying table, it is the 1925 conditions in the Dominion which must be studied in connection with the results under review. Perhaps the most concise summary of the year's features was that given by Sir Frederick Williams Taylor at the meeting of the Bank of Montreal, who said that "conditions were neither so good nor so bad as extremists on either side have stated." There was, indeed, both pessimism and optimism. The year began with a very poor outlook indeed, but thanks mainly to the reaping of a harvest whose abundance was widely diffused, the situation had by the autumn taken on an entirely new aspect. Two very favourable features were the full readjustment of a proper balance between prices of agricultural produce and prices of manufactured goods, and a rise in the favourable balance of merchandise trade from 262 to 392 million dollars. On the whole the year 1925, thanks to the way in which the autumn redeemed a poor start, may be looked upon as one of recovery and expansion, and from the purely banking point of view may be set down as satisfactory. Certainly, in one respect it provided a very happy contrast with its

predecessor. The year 1924 saw a host of banking troubles, minor, perhaps, in themselves, but sufficient in their cumulative effect to shake for the time being the public faith in banking institutions. Last year has seen the passing of this phase, and the great Canadian banks emerge from the period not merely stronger in themselves, but with a prestige enhanced by the manner in which difficult times have been successfully weathered.

The economic expansion of the last part of the year is reflected in the figures contained in the subjoined table. In spite of the elimination of the Colonial Bank, deposits in the aggregate were £10 millions higher than at the close of the previous year, while on the other side of the account discounts and advances were over £8 millions higher. At the annual meetings the tone of the chairmen's speeches was generally optimistic; Sir John Aird, in particular, the chairman of the Canadian Bank of Commerce, remarked that the stage was set for all-round improvement. So far as the current year has gone, there is nothing to suggest that his prophecy, so far as banking business, at any rate, is concerned, is proving anything but correct.

INDIAN BANKS.

THE year 1926 will be remembered, doubtless, as a very important date in the history of Indian finance, currency, and banking, for it has seen the publication of the Report of the Royal Commission consisting of British and Indian experts, containing important recommendations, which, although they have not yet actually been acted upon, must, at any rate, guide the future policy of Indian Governments. This Report has been discussed at some length in the *Economist* (August 7th), and we can here only make brief reference to it in so far as it relates to the Indian banking system. The Report recommends the adoption of a gold standard (but, as in Britain, without gold currency), and in order to achieve "unity of policy in the control of currency and credit for the achievement of monetary stability" the establishment of a Central Banking system. The Commission, with one dissentient, rejected the idea that the Imperial Bank of India should become the Central Bank. They argued that a Central Bank should not do a general commercial business, and that, since the Imperial Bank has built up a flourishing business as a commercial bank, which in the best interest of India ought to be maintained and developed, it is precluded from becoming the Central Bank. Among the members of the Commission signing this recommendation were several directors of the

Imperial Bank itself. The Commission argued that the Central Bank would not be in danger of becoming a cut-throat rival to the Imperial Bank.

The Commission also laid stress upon the importance of developing banking and investment facilities and of "finding means to encourage the people of India to divert their savings to profitable channels of investment." The passages dealing with this important subject merit quotation:—"It does not fall within our terms of reference to suggest in detail all the measures which may be taken to this end. But, since the smooth working of a system of currency cannot but be impeded by the existence of large stores of currency in hoards, it is proper for us to urge, and we do urge emphatically, that nothing should be left undone which will tend to facilitate and encourage banking progress in India.We are impressed by the great and growing activities of the Imperial Bank in the direction of the extension of up-country banking.....In any scheme of banking reform that may be planned, we trust that due emphasis will be laid on the provision and extension of cheap facilities to the public, including banks and bankers, for internal remittance." In the latter connection the abolition of the stamp duty on cheques is recommended. If the spread of sound banking facilities and the growth of the banking habit among the vast population of India result from the Commission's Report, its work in this direction alone will prove enormously beneficial. Signs of the times which

appear favourable in this connection are the great growth in the numbers of those wishing to enter the banking profession, and the imminent establishment of an Institute of Bankers.

It is, however, 1925 and not 1926 that has to be

considered in relation to the bank results, which are tabulated on this page. Dividends, it will be seen, were in each case the same as in 1924, and 1925 profits approximate very closely to those of the preceding year.

* Free of tax.

When we come to study the table appended to this article we find a jump of £12½ millions in deposits balanced by a similar rise in discounts and advances. This is mainly caused by the figures of the Chartered Bank, whose balance-sheet showed an increase of £9 millions in deposits and £7 millions in bills discounted. The chairman, Sir Montagu Cornish Turner, in his speech at the annual meeting of the bank threw little light upon the causes of this big movement, merely stating that it "indicated that larger business is passing through this bank."

The year 1925 was a reasonably good one for India. For the fourth year in succession there was a good monsoon. The trade balance moved in India's favour. Tea and rubber were prosperous, and cotton, rice, oil-

seeds, and other commercial crops satisfactory. As appeared very clearly indeed from the Budget statement of the Finance Member, India's general economic progress over the past few years has been very satisfactory. At the same time, the Viceroyalty of Lord Reading, which has just ended, has seen a very decided improvement in the political position. The two are to no small extent bound up together. Good monsoons cannot, of course, continue for ever; but the circumstances that are under human control are steadily being moulded into more satisfactory shape. With the exchange problem definitely settled and the political and financial progress of recent years continuing, the outlook should be satisfactory; and few things could contribute more to progress than the spread of soundly managed banking institutions.

FOREIGN BANKS WITH LONDON OFFICES AND BRITISH BANKS TRADING OVERSEAS.

Our final article refers to all those banking institutions trading overseas which have offices in London, which have not come within the categories already dealt with. These are divided into two groups, the first comprising British banks with headquarters either at home or abroad, and the second with foreign institutions with branch offices in London.

It is, of course, very difficult to draw a distinct line between the various British banks operating abroad, but in our first table will be found a small group of companies, including a few concerns of comparatively recent growth, together with some dating back before the war.

Expansion has again occurred in the business of

the British Italian Banking Corporation, profits having advanced from £53,532 to £59,552; the dividend was maintained at 6 per cent. The table, it will be noted, shows a substantial rise in deposits, cash, investments, and discounts. Late in 1925 an arrangement was arrived at between the Anglo-Austrian Bank of London and the Banca Italo-Britannica (the corporation's collaborator in Italy) whereby the Banca Italo-Britannica was to open a branch at Trieste and take over as from January 1, 1926, the business carried on by the branches of the Anglo-Austrian Bank in Italy. The directors state that the corporation has subscribed 6,000 new shares of the Banca Italo-Britannica, thus raising its holding to

9,880 shares; the general reserve has been reduced in order to provide a special reserve against depreciation. At the meeting, the new chairman, Sir Felix Schuster, made an extensive survey of Italy's economic position in the light of a recent visit, supplemented by useful figures of our trade with Italy. The report of the British Overseas Bank partly reflects the success which has attended the efforts to restore economic equilibrium in Europe, the net profit for the year having amounted to £126,015, against £105,548 for the previous 12 months. This enables the first distribution to be made on the "B" shares—at the rate of 3 per cent. per annum—which are held by banks and other financial institutions; the "A" ordinary shares again receive 6 per cent.

The results of the British Trade Corporation gain added interest by reason of the recent announcement of its fusion with the Anglo-Austrian Bank. The matter was fully dealt with in the *Economist* of September 4, 1926. It may be recalled, however, that a new bank has been established in London under the name of the Anglo-International Bank, Limited, having a nominal capital of £2,000,000 in ordinary shares of £1 each, and a paid-up capital of £1,960,000. With a strong board, a reduced capital, a restricted objective, and with the prospect of steady recovery in Central Europe, the new bank should have fair prospects of building up a profitable business. This should in time enable it to stand on its own feet as a purely private institution.

As regards Continental banks, the detailed balance-sheets will be found elsewhere. In France an outstanding feature was the easy conditions prevailing in the money market. The important increase in bank deposits, accompanied by growing figures for "cash" and bank balances, together with the very slow increase in the clearing house returns, are indications of this monetary ease, which is the result of inflation following the repayment of Treasury bills and bonds during 1925 by means of increased note issue. Turning to the more important banks, the Credit Lyonnais returns net profits at a slightly lower level than last year, the figure being 42,928,140f. But deposits, including current accounts, rose from 5,148,435,945f to 6,673,787,884f, while bills receivable and French Treasury bills increased from 3,644,158,006f to 4,797,928,389f. The ratio of reserve to paid-up capital remains at 90 per cent. The discount of commercial paper, states the report, continues to increase. The report of the Société Générale pour Favoriser speaks of the year 1925 as having been a difficult one so far as financial conditions were concerned. All the same, profits, at 35,053,617f, showed an upward movement of 1,513,741f. The total of the balance-sheet is 8,430,550,794f, in contrast with 6,358,995,221f. "Comptes de cheques" and "Comptes courants divers" are substantially higher at 2,028,948,784f and 5,252,543,466f respectively.

The Comptoir National d'Escompte de Paris presents a total balance-sheet figure of 6,031,855,121f, as compared with 4,753,479,043f "Comptes de cheques et comptes d'escompte," totalling 3,504,573,971f, show the considerable increase of 978,949,450f. Profits con-

tinue their upward course, last year's figure being 1,397,955f higher at 37,027,508f. The progress of the Société Belge de Crédit Industriel is again notable, deposits having increased from 68,341,557f to 74,059,246f. The report of the Banca Commerciale Italiana states that the "profits accrued from our participations and investments have been considerable, but equally conspicuous have been the results of our current banking business.....To the gratifying results at home are to be added those achieved by our foreign branches and affiliations." The net profit at 102,133,217 lire is 15,000,000 lire more than in 1924; "the higher yields on long and short-dated investments are, of course, largely responsible for this rise." Dealing with the general situation, while it is admitted that certain aspects may not yet be quite clear, it is stated that industrial and agricultural production is on the increase, and this is regarded as a healthy sign. The debt settlements with Great Britain and America are characterised as "fair and honourable" and as marking "the close of a vital phase in what has come to be known as the 'fight for the lira,' which latter has at last been freed from its former subservience to the movements of the French and Belgian francs." The disparity between prices in Italy and abroad (as expressed in lira), it is pointed out, is growing less and less, and is now very little different from that which existed in pre-war times. This stability has resulted in a certain amount of dislocation to some industries, but the view is expressed that it will not seriously prejudice the country's productive capacity in general. The Credito Italiano continued to make progress, the volume of transactions amounting to 814 milliards of lire, being an increase of 116 milliards in the year. Profits rose from 49,500,503 lire to 55,590,268 lire, thus enabling the dividend to be raised from 9 per cent. to 10 per cent. Advantage is again taken of prosperity to strengthen the reserves, which now stand at 150,000,000 lire. "During the past year," according to the report, "we have still further extended our foreign relations."

The Moscow Narodny Bank, the principal aim of which is to finance the export and import operations of the Central Co-operative Organisation of the U.S.S.R. trading on foreign markets, records a year of satisfactory progress. The turnover reached £141,274,649, as compared with £69,928,879 for 1924; total assets amounted to £5,429,509, against £3,280,021. At £52,565, the net profit was more than double last year's figure. All the shares of the bank were transferred to the All-Russian Co-operative Bank. The bank was able to extend its business beyond Great Britain, more particularly in Germany, France, and the United States. Continued expansion is reported by the Bank of Athens. The balance-sheet total has risen from Dr 1,412,157,800 to Dr 1,577,319,982, and the balance at profit and loss is some Dr 3,000,000 higher at Dr 56,576,381. The report deals at length with the bank's foreign activities. The Ionian Bank again returns higher earnings, net profits being £69,400, as compared with £63,077, thus enabling last year's increased dividend of 8 per cent. to be maintained. The balance-sheet total, however, is lower, the movement in deposits chiefly accounting for the decline.

At the annual meeting of the Hongkong and Shanghai Banking Corporation the chairman declared that the year under review would "long be remembered as one of the most unsatisfactory and difficult that merchants in China have experienced. Trade has been hampered in every direction, civil wars, strikes, and

boycotts being the order of the day....." In these circumstances, he regarded it as a matter for congratulation that the earning power of the bank had been so little affected, the net profit being \$15,846,978, against \$16,383,882 for 1924; the dividend, including bonus of £8 per share, was repeated. As to the future, the chairman was not unhopeful. Alluding to South China, he said: "Our Chinese friends and neighbours are rational people, and sooner or later more reasonable counsels must surely prevail." The report of the Ottoman Bank for 1925 showed that there was an available balance of £410,040, including the amount of £326,952 brought forward from the preceding year. Of this, £400,000 was allocated as provision for depreciation of currencies. At the meeting the chairman stated that there was reason to hope that this would henceforth be sufficient to meet any likely eventualities, and that, excepting the abnormal, future profits should be available for dividends. The Turkish Government, he further stated, had prolonged the bank's concession until 1935. As for Turkey's basic industry—namely, agriculture—marked progress had been made in comparison with

previous years, and Turkey's monetary policy was "above criticism."

The annual report of the Anglo-South American Bank has not yet appeared, but the preliminary figures just issued show a further recovery in net profits, which amount to £471,714 for the year ended June 30th last, as compared with £431,021 for the preceding year and £425,908 for 1923-24. The dividend is maintained at 10 per cent., the sum of £125,000 is applied in reduction of cost of capital employed in South America and other countries, £12,229 is transferred to legal reserve in Chile, and £25,000 is added to the staff pension fund, and £375,025 is carried forward, as against £414,925 brought in. The Bank of London and South America (the combination of the London and River Plate Bank and the London and Brazilian Bank) earned net profits of £454,307 in the year ended September 30, 1925, and a dividend of 11 per cent. was paid. There is not a strictly comparable figure for the preceding year—the first after the amalgamation—since the London and Brazilian Bank figures covered 20 months, while those of the London and River Plate Bank were for 12 months.

DISTRICT BANK

LIMITED

ESTABLISHED 1829.

Chairman: SIR CHRISTOPHER T. NEEDHAM.

Managing Directors:

ANGUS A. G. TULLOCH, Esq., D.L.
(Deputy Chairman)
WILLIAM ROLPH EASTERBY, Esq.

JOINT-STOCK BANKS OF ENGLAND AND WALES

BANK OF ENGLAND.

At the half-yearly Court of the Bank of England, held on September 23rd, the Right Honble. Montagu Collet Norman, the Governor, stated that the profits of the half-year ended August 31st, after making provision for all contingencies, had been £693,661, making the amount of the "rest" on that day £3,716,652, and that after providing for a dividend of 6 per cent., less income-tax, the "rest" would be £3,018,108.

We report to the Shareholders that we have obtained all the information and explanations we have required. We have verified the Securities representing Investments of the Company, those held against Loans made by the Company, and all Bills discounted in hand. We have also verified the Cash Balances and vouched the Securities and Bills given as collateral Security for Loans, and we now have to report to the Shareholders that the foregoing accounts agree with the books, and that, in our opinion, the above Balance Sheet is properly drawn up, so as to exhibit a true and correct view of the state of the Company's affairs, according to the best of our information and the explanations given to us, and as shown by the books of the Company.

New Business Contacts.

AS soon as your busi-
ness enters new mar-
kets, the credit rating of
prospective customers be-
comes of vital importance
to you.

In order to assist busi-
ness houses to an accurate
estimate of new connec-
tions, confidential credit
information is furnished
through special depart-
ments conducted at the
Bank's Head Office, Mon-
treal, and the New York
and London offices.

You will find our Monthly Business
Review helpful. We shall be glad
to place your name on our
mailing list.

	9,682,404		9,682,404

*This includes £183,405 value of Victory and Treasury Bonds deposited at Bank of England under Government regulations.

The report submitted to the meeting, held on June 30, 1926, states that the profits for the year ended March 20th last, after making provision for expenses of management, general charges in London and at chief office and branches, income-tax, royalty, and bad and doubtful debts, amount to £129,402, to which has to be added £34,566 brought forward from last account, making a total of £163,968. From this amount there has to be deducted £20,000, representing the interim dividend for the current year of 4s per share, paid free of tax on December 22nd last. The directors now propose to pay a final dividend of 6s per share, free of income-tax, which will absorb £30,000,

making 10s for the year, to add £50,000 to reserve, raising it to £470,000, to write off bank premises £30,000, and to carry forward the balance of £33,968 to next account. 10s per share, free of tax at 4s in the £, is equivalent to 12s 6d per share gross, or 9.61 per cent. per annum.

IONIAN BANK, LIMITED.

BALANCE-SHEET—August 31, 1925.

The exchange for drachme is taken at 324.00 per £, for £s at 97.50 per £100 and for £s at 8.46 per £.

(A.M.P.)

Established 1849.

(A.M.P.)

SEVENTY-SEVENTH ANNUAL REPORT.

Remarkable Figures.—Ordinary Department.

NET NEW BUSINESS.—26,062 Policies Assuring £13,704,391, with Annual Premiums of £420,848.
DEATH CLAIMS.—£1,680,472, including Bonus Additions of £593,045. This is only 55 per cent. of the "Expected."
MATURITY CLAIMS.—£1,173,143, including Bonus Additions of £334,821.
ACCUMULATED FUNDS (including Industrial) have increased by £3,812,775 and amount to £59,625,554.
WAR AND REPATRIATION LOAN SUBSCRIPTIONS total over £14,779,000.
THE DIVISIBLE SURPLUS is £2,428,221, which represents a return of 54.5 per cent. of the premiums received under participating policies. The corresponding Reversionary Additions amount to about £4,150,000.
THE VALUATION (on a Pure Premium Basis) has been made at 3 per cent.
THE EFFECTIVE RATE OF INTEREST (after deducting Income Tax) was £5 10s. 6d. per cent. There is therefore an Interest Margin of over 2½ per cent.
THE EXPENSE RATE (excluding Taxes) was 12.46 per cent. of the Premium Income. This is only about three-quarters of the provision for expenses included in the Premiums.
THE TOTAL ASSURANCES issued in 77 years amount to £267,094,623, of which £145,889,474, or nearly 55 per cent., are still in force.

LONDON OFFICE: 73-76, KING WILLIAM STREET, E.C.4.
W. C. FISHER, Manager for the United Kingdom.

Appearances

No greater spectacle of seeming strength and security was ever presented than by Cardinal Wolsey in the heyday of his career.

None the less he collapsed like a pricked bubble in the hour of trial, and those who had trusted to appearances were painfully undeceived.

This principle is of vital importance in relation to security, for protection must not depend upon appearances, but entirely on the strength of your defence. The value of a safe or strong room is the degree of service rendered in time of need—when the modern burglar attacks it or it is severely tested by the ordeal of fire.

That the price of work of quality must be in ratio to the skill and cost of labour attending the manufacture is not always appreciated. We refuse to lower our standard of craftsmanship to obtain business that is given entirely on a question of price.

SPECIAL SUPPLEMENTS TO THE ECONOMIST

FINANCES OF FRANCE

- Report of the Expert Committee.

BRITISH BUDGET

Survey of the National Accounts, Future Prospects and some comparisons.

DANUBIAN

The aim of this Supplement is to give our readers a summary of the principal data relating to the economic life of the Danubian countries, and, in particular, to outline the progress of economic reconstruction in the part of Europe which was particularly affected by the war and the Treaty settlement. These countries, and not only have many problems in common. An attempt has, therefore, been made to treat the region as a whole, to give a short account of the particular features of each State in turn; and, lastly, to review the general tendencies of the past seven years for the light they throw on the factors determining the future of further reconstruction in the future.

A few copies of the above SUPPLEMENTS are still available and may be obtained, post free, 7d., from the Publisher.

Offices: 3, ARUNDEL STREET, STRAND, W.C.2.
