THE MONEY MARKET.

THIS week included the turn of the year, and on Monday, December 31st, the joint-stock banks were engaged in making up their cash to the level required for their annual balance-sheets. This gave rise to the usual extreme shortage of money on that day, and in preparation therefor the market had been borrowing from the Bank on every working day from Christmas Eve onwards. Most

of this money was borrowed for the usual week, but on Christmas Eve the Bank lent for eight days so as to carry borrowers over into the New Year, while the last to borrow from the Bank on December 31st are finding themselves unable to get out before January 9th.

Short-loan rates on Monday naturally ran to 5 per cent. or over, but on Tuesday the joint stock banks released their surplus cash, and rates promptly fell to a nominal 2 or 2½ per cent. During the ensuing few days anomalous conditions have prevailed. Money has been ridiculously abundant, so much so as to be almost unlendable, while on Wednesday February bills were selling at the low rate of 4 per cent. Market rate the same day was 4 1/4 to 4 5/16 per cent., as against 4 7/16 per cent. the previous week. At the same time the market was distinctly of the opinion that these low rates were not likely to last for more than a few days, and that next week conditions would stiffen.

This view is on the whole well-founded. For one thing the market is now having to get out of the Bank, and this alone is drying up supplies of money. Again, since the end of the year the joint-stock banks have been driven to buy bills in order to find employment for the cash they had called for their balance-sheets. Finally, the Bank is no longer supporting the market by buying bills. Instead it is pursuing the same policy as it did in the first week of July, and is using the present abundance of money as the occasion to sell bills. This not only gives the Bank a nice turn on the bills it bought a few weeks ago, but also enables it to gain a firm grip on the market. It is suggested that on Tuesday it sold several millions of Februaries, and that it intends to continue doing so until it has narrowed the basis of credit to the point which will drive market rate back to at least a full 4 5/16 per cent. In fact, by Thursday the rate had already returned to that point.

Bearing these factors in mind, the market this week has been selling rather than buying bills, and even so it is doubtful if it will entirely escape from the Bank next week. It is clear, therefore, that last Monday's callings by the joint stock banks have produced their usual annual upheaval. In one respect, however, the disturbance has this year been somewhat mitigated. Immediately after Christmas there was an influx of bank-notes back from the public, first into the tills of the banks and thence into the reserve of the banking department of the Bank of England. This influx augmented not only the Bank's reserve, but also the cash holdings of the joint-stock banks. The result was that this year the banks had to call less from the market than they have had to in previous post-war years, when the returning notes went to the currency note account. This mitigation of the New Year pressure is the result of the note amalgamation, and so can be expected to recur in future years.

	Jan. 3, 1929.	Dec. 27, 1928.	Dec 20, 1928.	Dec. 13, 1928.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	4½	4½	4½	4½	5 (Apl. 21,'27)
Banks' Deposit Rate	2½	2½	2½	2½	3 (Apl. 21,'27)
Discount { Call..	2½	2½	2½	2½	3 (Apl. 21,'27)
Discount { Houses } Notice	2⅝	2⅝	2⅝	2⅝	3½ (Apl. 21,'27)
Market rate (3 months' bills)	4 5/16	4 7/16	4 7/16	4 1/2 - 5/16	..

The Bank return this week reflects in the main the movements discussed above, though it is complicated by an increase of £9,367,335 in Public Deposits, possibly the result of revenue from motor licences. Notes to the amount of £9,948,416 have returned from circulation, which, with further gold losses of £737,741, accounts for the increase of £9,210,675 in the banking department's Reserve. The market has borrowed a further £21,813,196 during the week, while, possibly as the result of Tuesday's sales of Treasury bills by the Bank, Government securities have fallen by £4,656,892. As the net result of these, coupled with minor movements in the other items, Bankers' Deposits have risen by £14,526,334. The decline in the note circulation and market borrowings helped to swell Bankers' Deposits, but the increase in Public Deposits and the decrease in Government Securities had the contrary effect. The increase in the Reserve has raised the banking department's Proportion by 2 23-32 per cent. to 24 7-32 per cent., but gold losses and the net increase of £14,464,770 in the Bank's total outside liabilities have lowered its Reserve ratio of gold against liabilities by 1 1/16 per cent. to 29 5/16 per cent. This last ratio should recover in its turn next week when the market gets out of the Bank.

NEW YORK MARKETS.

The weekly Federal Reserve statement reflects the large settlements taking place at the turn of the year; member banks have borrowed heavily in order to make good the temporary withdrawal of corporation funds for dividend and interest purposes. The System ratio is down to 54.1 per cent., and the earmarking of gold for foreign account has begun with $25 millions last week, presumably for France. The Reserve Banks were inclined to show less support for the bill market, and the rate is expected to advance. Circulation is not down by much, but a deflation of $300 millions on the month is expected; money, however, is likely to continue firm, and the real test of strength is given by the share market, for which brokers' loans showed an increase of $238 millions in the week.

THE STOCK MARKETS.

In the week broken by the New Year holiday the stock markets were steady rather than active. Gilt-edged stocks were firm on dividend re-investment, War Loan taking pride of place. The firmer tone of home rails was checked on the publication of the week's traffic returns. Among industrial stocks a few "internationals" were in demand under New York influence, margarine and match issues showed strength, cable stocks were quieter, and textile and brewery shares irregular. Rubber shares were marked higher in some cases, and tea shares were harder. Only a moderate interest was taken in the oil share market. Among mining issues Rhodesians largely monopolised attention, a number of spectacular rises being recorded, while copper share values reflected the rising curve of prices for the commodity.

THE COMMODITY MARKETS.

The hope of a fair number of orders after the holidays continues to prevail in most markets. Coal prices in South Wales have been steadier, but the reopening of some of the Nixon Navigation pits is expected to give rise to an easier tendency, and business is impeded by uncertainty as to the future of the output regulation scheme. A spirit of confidence pervades the leading iron and steel districts, though malleable iron bars are still a weak spot in the Glasgow market. Tin is weaker, but other metals continue firm. Inquiry for Manchester cotton goods has been encouraging, and increased activity is expected. Bradford expects a substantial buying movement, as wool is not likely to go any cheaper and may rise again under the pressure of Continental buying. Stocks of Colonial wool are light. A short jute crop is forecast, and increased buying activity is anticipated in consequence. Hides and leather are quiet, but shoe manufacturers expect a fair number of orders shortly. The market in vegetable oils and oilseeds is easier, but cakes are in good demand and remain firm. Wheat has risen on the week.

FOREIGN EXCHANGES.

After considerable activity at the end of Christmas week the Foreign Exchange market became almost dead, all centres being closed on New Year's day and many on the preceding Monday, whilst holidays were in force in the Far East and South America on the following days. Sterling weakened from 4.85⅝ to 4.85 3-32 with the return of funds to New York after the New Year, and several Continental exchanges were affected by this factor and by the combination of operations in sterling and dollars. Paris widened from 123.95 to 124.10, Brussels lost over a point at 34.88½, Amsterdam a point at 12.08½, and Stockholm over three points at 18.13¼. On the other hand, Milan gained eight points at 92.64 and Oslo recovered from 18.19¼ to 18.18. For a reason not at present easy to fathom, reichsmarks were again freely offered, without much effect on gold takings, and the rate fell away from 20.37½ to 20.39½. The transfer of Swiss funds to London probably accounted for the decline in Geneva to 25.19 after touching 25.15¼. Among the forward quotations, movements took place in the dollar, for which discounts for the two periods widened considerably to ⅜ cent and 29-32 cent. The previous discount on Paris forward changed to par for both periods. Forward Amsterdam was less offered at narrower discounts of 1/16 cent and 1¼ cents, as were reichsmarks at 3 and 7 pfennigs discount for one and three months respectively. The silver market was inactive with the holiday season, and prices were rather lower. Shanghai lost 1 1/16d at 2s 7½d, but Hongkong was unchanged.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half-a-guinea) to cover the cost of any special work involved.

THE STRAIGHT ROAD.

In times of economic depression like the present the way of the commentator and the prophet is hard. If he talks prosperity he is accused, and rightly, of helping to maintain an atmosphere of unreality in which problems will not be resolutely faced and solved. If he counsels caution in outlook he is classed with the Jeremiahs who stifle at birth that confidence which is essential to enterprise and recovery. It is with resignation, therefore, rather than surprise that we find ourselves taken to task for venturing to suggest that the picture of the potentialities of 1929 should not be painted with a brush loaded from too bright a palette. Our plea was for sobriety in New Year prophecy, and on the whole our prayer seems to have been answered. The country has at any rate been spared for the first time for several years the ebullition of an optimism which is more seasonable than rational; and running through the messages which some of our industrial captains have given to the nation we detect gratefully a note not of exuberance, but of quiet confidence based upon a belief in the nation's ability to attack with increased efficiency and determination the stubborn problems which can only yield to the application of these qualities—qualities which in the past have not been lacking in times when great national efforts have been called for.

Lord Melchett tells us that "the first signs of revival of British trade are on the horizon," but he passes quickly to a reminder that improved organisation and better industrial relations are essential to real recovery. Sir Hugh Bell, the veteran iron master, announces his confidence in the future of the important industries of the North-East, but adds that he "dreams of no Eldorado round the corner." Sir Arthur Dorman thinks that the blackest days of depression in the iron and coal trades are passing, while Lord Ebbisham, president of the Federation of British Industries, devotes his New Year message to an appeal to the British manufacturer to recapture the spirit of the merchant adventurers of two and three centuries ago, and to go and inspect his foreign and Dominion markets for himself. From the banking world comes the message of Mr R. H. Tennant, chairman of the Westminster Bank, who, while pointing to certain satisfactory omens, goes no further than to suggest that "British industry will gradually emerge from the shadows in which it has been enveloped during the past few years."

Perhaps the most arresting of comments by industrial leaders on the prospects of the coming year is that contained in a long letter by Lord Weir to the *Times* of January 1st. There is much in his letter with which we cannot agree. His preoccupation, for instance, with the possibilities of the home market somewhat mars his perspective of the troubles of our great export industries, and he slips into the assumption that a tariff on imported steel would remove the troubles of the iron and steel industry—a matter on which we have already given our reasoned views in the opposite sense. Nevertheless, we may commend the tone and virility of his letter to those professional croakers who predict that Britain in the changed post-war world cannot hold her competitive position, and must slowly decline to the position of a second-rate industrial nation. It is true that British manufacturers have to face a world that is in many respects changed, and changing still. It is true, too, that the task of adaptation to new conditions and requirements, more difficult for British industries with their long traditions than for those of newer lands, has been too slowly and too reluctantly undertaken. But there is one priceless asset which Britain possesses whose value has not sensibly changed—her geographical position with her unrivalled series of ports looking across to the highways of the European Continent. Of this great but oft-forgotten fact Lord Weir does well to remind us. "This Great Britain of ours," he writes, "is the best and most effective location in the entire industrial world for the efficient production of many basic products." Lord Weir reminds us, too, of our reservoir of unrivalled skilled workers. "As regards operative labour, anyone who has experience of the degree of intelligence of average American labour appreciates the much higher value of our British worker."

From these messages it is possible to cast for 1929 a horoscope not altogether lacking in confidence. They remind us of the natural assets which we possess, and show full realisation of the tasks of reorganisation which must be achieved if these assets are to be put to their best advantage. Let us add to them the dictum of Sir Hugh Bell, who gives as his slogan for the coming year, "Remove the Barriers." One of the favourable tendencies of the year that is past has been that the tariff obstacles which British exporters have to overcome on the Continent of Europe are being slowly diminished by a network of commercial treaties under which Great Britain enjoys most-favoured-nation treatment. Under the stimulus of the Economic Committee at Geneva this march towards a saner fiscal policy in Europe may be expected to continue, always provided that the wisdom of British public opinion forbids a backsliding of British policy towards Protection, a retrograde step which could not fail to have a profound effect upon the policies of other nations. The chief task of 1929 is to cut out the dead wood and to proceed through sacrifice to the efficiency which spells achievement. Experimental dalliance in the primrose paths, whether of Protection or inflation, to which we are called by siren voices, can only postpone the solution of problems which grow more stubborn as the months pass by, and at best divert from them the energies and the thoughts of the business world. No one, as another New Year message says, was ever lost on a straight road. The adage is a good one to remember in a year in which a General Election will be held, and in which the public will doubtless be asked by contending politicians to try all manner of short cuts to prosperity, alluring at first glance, but in reality likely to prove the longest way round.

THE END OF THE CHINESE CIVIL WAR?

With the New Year dawns a big new hope for China. Last Saturday, December 29, 1928, General Chang Hsueh-liang, the son of the late General Chang Tso-lin, whose military organisation controls the three Manchurian provinces and the district of Jehol (*i.e.*, that part of the metropolitan province of Chihli which lies outside the Great Wall), took a step which may well prove to be of historic importance. He declared his adhesion to the "Three Principles" of Dr Sun Yat-sen, recognised the authority of the Kuomintang Central Government of the Chinese Republic at Nanking, and ordered the hoisting of the Nationalist flag throughout his territories. This action crowns and completes the formal reunion of China in the eighteenth year of the Revolution, or—one might almost say—in the eighteenth year of the Civil War, for China has been a house divided against itself since the

morrow of the overthrow of the Manchu Empire in 1911. It is true that there remain three provinces in the far south-west—Szechwan, Kweichow and Yunnan—which have not yet come into the fold, and of these Szechwan, with an estimated number of inhabitants exceeding that of the British Isles, is the most populous province of the Republic. The separatism of these three provinces, however, is passive rather than active. Thanks to the accident of their geographical seclusion, they have been able to keep more or less clear of the main civil war (though they have indulged in local civil wars among themselves), and, so long as the chaos in the centre continued, they felt no call to demonstrate their patriotism by flinging themselves into that witches' cauldron. Even the province of Shansi, which immediately overhangs Peking from the west, but which is also secluded, in its own way, by a girdle of mountains, refrained from intervening in the main civil war until its "model tuchun" felt that the moment had arrived when, by hoisting the Kuomintang flag and throwing his weight into the balance, he could ensure a Nationalist victory and give "the Northern War-Lords" their *coup de grâce*. And this was while Chang Tso-lin was still alive and in arms against the Nationalist cause. Now, therefore, that Chang's son and heir has rallied to the Kuomintang, we may prophesy with reasonable assurance that if the union between Mukden and Nanking and Canton endures, the last outlying provinces will rally to United China in 1929, as Shansi rallied in 1927.

Outer Mongolia and Tibet are another matter, for these were dependencies of the Manchu Empire, linked with China by little more than a common subjection, and they have taken advantage of the overthrow of the Manchu Dynasty to establish their own National independence as the Chinese have been establishing theirs. Tibet has actually declared her independence, and the Soviet Republic of Outer Mongolia, while still professing a formal recognition of Chinese suzerainty, is at present less subject to control from Nanking than to control from Moscow. Outer Mongolia and Tibet, however, are backward countries, whose enormous extent on the map tends to obscure the scantiness of their population and the rudimentary state of development of their natural resources; and though, if China eventually finds herself compelled to cut her losses there, that sacrifice may be painful to Chinese national pride, it will involve no appreciable diminution of Chinese power and prosperity. On the contrary, such an amputation might prove to China's material advantage, by relieving her of responsibility for outlying, exposed and poverty-stricken dependencies which could only be a tax upon the Chinese Treasury and the Chinese Foreign Office for many years to come.

It is far otherwise with the three Manchurian provinces and the district of Jehol, which have just signified their adhesion to the Central Chinese Government at Nanking—though Manchuria, like Mongolia, lies outside the Great Wall and, also like Mongolia, was a land of prairie and steppe and desert, abandoned to nomadic pastoral tribes, when the Manchu barbarians conquered China three centuries ago. The difference is that, in contrast to outer Mongolia, which has remained much what it was then (the Tartar very readily revealing himself as soon as anybody scratches his Soviet Socialist veneer), Manchuria, like Jehol and the other adjoining parts of Inner Mongolia, has been transformed out of all recognition by the Chinese peasant pioneer. While Chinese *literati* were instilling the Confucian culture into Manchu Emperors and their court at Peking, and into Manchu governors and garrisons in the Chinese provinces, the northern Chinese peasantry, no longer divided by a frontier from the homelands of their Manchu conquerors, began a mighty movement of agricultural colonisation in Manchuria—a peaceful penetration which was a far more thorough and enduring form of conquest than the Manchu feat of arms which had opened the door for it. Thus Manchuria, united with China under the common rule of a Manchu Dynasty at Peking, saw her native nomadic tribesmen give ground, slowly but surely, to Chinese cultivators. This process, already well under way by the last decade of the nineteenth century, received a powerful impetus when, thirty years ago, the Russian Empire stretched out its long arm over Manchuria and built across this promising territory, which she then hoped to make her own, a short cut for the Trans-Siberian Railway on the last lap of its immense run from Petrograd to Vladivostock.

Manchuria, as soon as she entered upon her "railway age," began to "boom," with all the American connotations of that expressive word. The Russo-Japanese War no more interrupted the process than the American Civil War interrupted "the winning of the West," and when the Treaty of Portsmouth had divided the Russian-built backbone of the Manchurian railway system into a Russian and a Japanese zone, railway construction was given the new stimulus of national competition—the Russians and Japanese building against each other, and the Chinese against both the other two. Meanwhile, the flow of Chinese immigration, with these new railways to carry it, swelled into a mighty tide, and this tide has reached its greatest dimensions during the last agonies of the Chinese Civil War which has just come to an end. While Northern China was in chaos—trampled under foot by successive armies contending for the prize of living off the unhappy civilian population—Manchuria, next door, with its empty lands to bring under the plough and its railways to bring in the colonist and take out his produce to profitable markets, was still enjoying a more or less orderly and efficient local government. The attraction to the peasant of Chihli and Shantung was irresistible; and thus, paradoxically, the Chinese people, at a time when it seemed to be placing itself at the mercy of its neighbours by indulging in an aimless and interminable civil war, was taking the last step to make the promised land of Manchuria irrevocably its own.

At this moment, the process has accomplished an important stage on the way to completion. Manchuria, opened up by foreign capital and enterprise and colonised and brought under the plough by Chinese peasants, has formally adhered to a Chinese Republic which is itself internally united for almost the first time since its foundation. Is this the end of the story? No. For there is another party to be reckoned with, besides the extinct Manchu nomads and the discomfited Russian imperialists and the peacefully penetrating Chinese peasants; and this other party is Japan.

It would be a grave mistake to review the recent past and look into the immediate future of Manchuria without taking the Japanese into account; for, as far as the South (that is, the most highly developed part) of Manchuria is concerned, the Manchurian "boom" has been a joint "Sino-Japanese" achievement. The Chinese have, indeed, provided the population; and it may be conceded at once that a nation that populates an empty land will inherit that land in the long run. But it is the Japanese who have provided the lion's share of the technical skill, the industrial enterprise, the law and order, and not least the markets for the produce which the aforementioned factors have made it possible for the Chinese colonists in Manchuria to raise. The Japanese contribution to the development of Manchuria has been as indispensable as the Chinese; and while the joint achievement has provided China with an outlet for her surplus population, it has provided Japan at the same time with a source of foodstuffs and industrial raw materials which has become an integral part of her national economy. Evidently the respective interests of the two parties in Manchuria are so important that if either were so ill-advised as to attempt to ignore or oust the other a conflict might arise of such violence that it would not easily be confined within the regional limits of the Far East. But we hasten to add that that conflict would be a folly as well as a disaster, because, fortunately, the respective interests of China and Japan in Manchuria are really complementary and not at all incompatible. What China really wants is, first, the land to colonise, and, second, the maintenance of her sovereignty over a country which is being settled by her own people; and Japan is not in competition with her on these points, for the Manchurian climate repels the Japanese settler, and Japan's economic stake in Manchuria can be secured in the future, as in the past, without the establishment of Japanese rule. It is for Japanese statesmen to assure the Chinese that they have no political designs in Manchuria, and for the Chinese to assure the Japanese that they do not mean to use their sovereignty to the prejudice of Japanese economic interests, which are not only legitimate, but mutually beneficial to both parties.

If Chinese and Japanese statesmanship rises to the occasion, then the formal reunion of China, the Manchurian provinces included, under a Republican central Government at Nanking may be one of the great landmarks in the recovery of the world from a bout of revolution and war. Culturally, China, as we suggested last week, may then succeed in entering the Western comity of nations on an equal footing. Economically, the vast Chinese market, which has hitherto been barely tapped, may then be thrown open not only to Japanese, but also to European and American industry. As far as this country is concerned, the way for this has been cleared by the conclusion of the new Sino-British treaty, of which we give further details in this issue in another place. Here is a prospect which is full of encouragement for the New Year. But it depends on the vital condition that the Manchurian question is wisely handled by the two Governments immediately concerned. It would be no comfort to witness the end of the Chinese civil war if this were merely to be the prelude to another conflict in the Far East—this time of international dimensions.

MONEY IN 1928.

Last year proved in many respects the most interesting year experienced by the money market since the war. It is true that the market was spared the upheavals of the spring and autumn of 1925, when the restoration of the gold standard in April was followed by the heavy gold losses of the three autumn months. But the fact remains that even if events last year were of a more subdued character, there was no lack of interest and even at times of excitement.

The fundamental fact of the year's history is that it witnessed first a gain by the Bank of England of £24 millions in gold and then a loss of £22 millions, without any change in Bank rate. As the Bank's gold stocks were £152 millions at the beginning of the year, and £176 millions at their highest, this meant that the basis of credit was first expanded by 15.8 per cent. and then contracted by 12.5 per cent., without the Bank finding it necessary to take account of these movements to the extent of changing its rate. This alone marks out 1928 as being an unusual year.

Discount rates, of course, did not escape the influence of these gold movements. In the first week of January the market broke away from the "controlled" discount rate of $4\frac{5}{16}$ per cent. on three months' bank bills tacitly enforced by the Bank during the preceding autumn, and despite an immediate attempt by the Bank to regain control, and in the face of a rise in the New York rediscount rate from $3\frac{1}{2}$ to 4 per cent. on February 2nd, market rate had fallen by the end of March to 4 per cent. It would be wrong, however, to suggest that conditions were easy during those three months. Tax collection was continually the cause of stringency, which was only partially abated by the acquisition by the Bank of £6 millions of gold and by the net redemption of £124 millions of Treasury bills during that period.

Monetary conditions were moderately easy in April, but difficult in May, partly because the New York rate went to $4\frac{1}{2}$ per cent. in the middle of that month. June was a period of relative ease, due to a sudden influx of gold from the United States. This movement was not easy to explain, especially as rates in New York were already above the London level, and there were those who described the movement as being artificially and deliberately engineered. The American exchange, however, was at that time practically up to the import gold point, so there was no escaping the fact that the relatively high level of New York rates did not suffice to prevent an efflux of funds. In London, the arrival of this new gold, amounting during the second quarter of the year to a round £15 millions, brought market rate down to $3\frac{1}{8}$ per cent., and led to talk of an imminent reduction in Bank rate.

Fortunately the Bank of England took the long view, and in the midst of the summer ease kept its eye on the approaching autumn strain. During the first half of the year it had already partially neutralised its acquisition of £21 millions in gold by the sale of £12 millions of its securities. In July and August it intensified its neutralisation policy, for against further gold acquisitions of only £3 millions it sold £19 millions of securities. The net result for the first eight months of the year was a sale of £31 millions of securities, against a gain of £24 millions in gold.

The Bank at that time did not escape severe criticism, on the ground that by its neutralisation policy it had prevented the gold arrivals from expanding credit, and so stimulating trade. This policy, however, was both costly to the Bank itself, and also in all probability justified. On July 7th, New York went to 5 per cent., and there followed a severe struggle between the American reserve banks and the Wall Street bulls. This struggle drove money rates up to a high level, so high that New York began to attract funds from all over the world. This movement of money to New York set in at the end of the summer and continued throughout the autumn. To it was added in September the usual seasonal flow of money to America in payment for cotton and grain, and as this year London resumed its former function of financing American produce shipments, by the end of September the strain had become severe. The Bank's foresight was fully justified.

The history of the autumn was a simple one. During the last four months of the year the Bank lost £22

millions in gold. Not all of this went to America, for financial cross-currents between London, Paris, Berlin and New York diverted much of it to Germany. Market rate, which had been 3⅞ per cent. at mid-summer and 4¼ per cent. at the end of August, rose by the end of the year to 4⅜ per cent., and if in June the market was talking of a lower bank rate, by November it was beginning to envisage an increase.

The Bank, however, continued its policy of gold neutralisation. Just as earlier in the year it had sold securities against its acquisition of gold, so in the autumn did it buy securities to balance its gold losses. Between August 31st and December 19th it bought £16 millions of securities against its gold losses to date of £22 millions. These figures give the key to the Bank's technique. Last year it deliberately abandoned changes in its rate as an instrument of control. In its place it relied entirely on its open-market policy, which it used in the direction of neutralisation.

The other chief event of the year was the unification of the note issue under the control of the Bank of England, together with an amplification of the form of the Bank's weekly return. The chief effect on the money market has been a partial replacement in the Floating Debt of Advances by Public Departments by Treasury bills, but as the bulk of the fresh Treasury bills are probably held by the Bank itself against its notes, the market has not been affected. The other change arising from the note amalgamation is that bankers' deposits at the Bank and the banking department's reserve both have now to bear the brunt of seasonal withdrawals of notes by the public. Experience may show that this will at times have an important effect upon the market.

In the tables below we give average money rates for the past six years :—

DAILY AVERAGE OF MONEY RATES.

BANK RATE.

	1923.	1924.	1925.	1926.	1927.	1928.

SHORT LOANS.

	1923.	1924.	1925.	1926.	1927.	1928.
	£ s d	£ s d	£ s d	£ s d	£ s d	£ s d
1st half..	1 10 1	2 9 10	3 9 8	4 1 2	3 17 6	3 13 0
2nd half .	2 3 4	2 15 0	3 8 10	4 1 0	3 12 6	3 12 0
Whole y'r	1 16 8	2 12 5	3 9 3	4 1 1	3 15 0	3 12 6

The margin between market rate and Bank rate for 1928 was 7s. per cent., which is the smallest margin recorded for the years covered by the table. As was to be expected, market rate was considerably closer to Bank rate in the second half of the year, when more stringent conditions prevailed. The margin between market rate and short loans was 10s 6d per cent., which is the biggest margin since 1925. The market, therefore, has from this standpoint been more comfortably placed than in either 1926 or 1927.

The following table shows the position of the Floating Debt. It reveals the decline in Public Department advances :—

The year was mainly remarkable for the three successive increases in the New York rediscount rate, to each of which reference has been made above.

THE FOURTH YEAR OF THE NEW REICHSBANK.

THE formation of the new Reparations Inquiry, to which we refer on a later page, and the imminence of the commencement of its labours, lends enhanced importance to the publication of documents from which the public is able to inform itself upon various factors in Germany's financial and economic position. Two such documents have recently been published. One is Mr Parker Gilbert's annual report, issued in Berlin on Wednesday, detailed discussion of which must await the receipt of the full text. The other is the report of the Commissioner of the Reichsbank, covering the fourth year of the operation of that central institution under its new *régime*.

In this report the Commissioner has not had occasion to deal with such dramatic events as those which occurred in the early part of 1927, or to chronicle the impotence of the central bank in face of the steady falling away of market rates under the impulsion of foreign moneys which was such a feature of 1926. Nevertheless, from the technical standpoint the period covered in the present survey is of great interest. It coincides with a considerable increase in the gold holdings of the Rentenbank, an increase which, as our readers will be aware, has been the occasion of a good deal of comment in the London market; further, it covers the spectacular developments in Wall Street, accompanied as these have been by a considerable rise in American interest rates. Some, if not conclusive, evidence is thus afforded of the ability of the German money market to lose an important source of supply without undue strain.

The explanation is, of course, that the spread of interest rates is still sufficiently great to attract money to Germany, if not from one centre, then from another. It is fortunate that the period of high American rates coincided with the post-stabilisation ease of the Paris market, for the result has been "a re-shuffling in the parts played by the various lending countries, and that France, in particular, has come to the front." It is true that the Commissioner points to the fact that events abroad have not been without their influence in Germany, since it is no longer as easy as it was to place long-period loans. On the other hand, short-period relations are becoming closer: "The relations between the German money markets and foreign countries have gradually but considerably increased in volume and variety, and the number of those who are in regular short-term credit

relations with other countries, outside of the money market, has increased." Indeed, the closeness of these relations is proving embarrassing in any attempt to estimate the total indebtedness of Germany on short and long account, as Dr Bruins expressly points out. The relation of the experiences of 1927-8 to the theoretical problems of transfer are not specifically alluded to by the Commissioner, but they would seem to confirm the view that the elasticity of the international short-loan market is nowadays more than sufficient to overcome any temporary difficulties that may arise in consequence of any shortage of foreign exchange at the command of the Berlin market at a particular moment.

Meanwhile, the world is presented with the extraordinary spectacle of a debtor market importing gold upon a very large scale. Between August, 1927, and November, 1928, the increase in the holdings of the Reichsbank has been just over 770 millions, of which increase much the greater part has taken place since April of this year. This movement has taken place in spite of a reduction of 6 marks in the Bank's buying price for gold, from Rm. 2,790 to Rm. 2,784 per kilogram of fine gold, a reduction which took effect in October of last year. The explanation given of this movement by the Commissioner is the "tension on the New York money market, together with the repeated increases in the American discount rate," resulting in heavy withdrawals of capital on American account and pressure on the pound sterling and gold exports from London; "owing to favourable position of the reichsmark, much of this gold has found its way to Germany." Further details are not given, but readers of the *Economist* will recall the explanation we gave at the time. Last autumn French banks were in possession of large dollar balances, acquired through the "flight back to the franc" since its "de facto" stabilisation. The French banks were at that time also lending short money to Berlin. Finally, London needed dollars in order to finance American cotton and grain shipments. The result was that France sold dollars to London, and lent the sterling so obtained to Germany. This, in conjunction with other loans direct from London to Germany, drove the Berlin rate on London down to the lower gold point and caused the resulting gold shipments.

There is a further aspect of the situation for the full elucidation of which we must doubtless await the annual report of the Reichsbank itself; a document which necessarily permits somewhat freer examination of policy than the report of the Commissioner. This aspect is the open-market policy of the bank. As already mentioned, in 1928 it was possible for the Reichsbank to keep in close touch with the market. "Contact," remarks the Commissioner, "is now fully established," whereas "in 1926 the Bank was hardly in touch at all with the money market." How has this been possible? The Commissioner gives one the impression that this fortunate state of affairs is regarded by him as a somewhat fortuitous one, when he remarks that "as was to be expected under these circumstances, the Reichsbank during the period under report was faced by no acute questions of credit policy. The discount rate, as stated, remained unchanged, and the Bank was able to confine itself to a systematic nursing of the private discount market, for which the public monies at its disposal and the rate through its agency of Treasury bills of the Reich afforded ample opportunity." We do not know what precise connotation the Commissioner desires to give to his phrase "systematic nursing," but it is quite obvious that the objective conditions are such as to enable the Bank to maintain open-market rates in the neighbourhood of the Bank rate, and thus to make the former rather an index of the success of Central Bank policy than an objective measure of supply and demand. The policy of the Reichsbank would thus appear to be very similar to that pursued by the Bank of England in recent months.

The interest of the Commissioner himself on this occasion is very largely concentrated upon the capital situation in Germany. "The high rate of interest and the disproportion which it reflects between the supply and demand of capital," he remarks, "constitute the main difficulty confronting the German economy at this time." Apart from the question of the rate of saving, which on the whole he is inclined to view optimistically, he sees relief in two

directions. The most urgent capital requirements have already been met, whilst "one particular factor which will undoubtedly be felt in this connection is the falling off to be expected in the near future in the supply of new labour which has been the sequel to the decline in the number of births during the war years." The significance of this factor is shown by the diminution of the population of school age which "during the years 1922 and 1925 inclusive remained on an average under 900,000, or only a little more than half the numbers of previous years when the figure of births was not subject to the influence of the war." Thus the housing programme of the cities will tend to be modified in the future, as there "will probably be a decrease instead of an increase in the aggregate numbers of the working population." The importance of the decline in the number of births during the war has not hitherto been fully appreciated in any of the countries engaged in the late war.

Meanwhile the problem remains, and is leading to some further undesirable results, in particular to "long-term capital requirements being met for the present by short-term borrowing only." It is a fortunate circumstance, as the Commissioner remarks, that recent events have shown that the elasticity of supply of foreign funds is considerable. From the standpoint of Germany's capital needs, moreover, it is perhaps also satisfactory that "the sharp distinction between internal and external loans is disappearing more and more. Large amounts of reichsmark and gold mark bonds (more particularly mortgage bonds) issued in Germany have been placed abroad. Furthermore, an increasing inclination is noticeable in various countries to take a hand in the German share market. There are no figures available, but from observation it may be taken that on the whole large amounts are involved." It need hardly be pointed out that the larger the points of contact so established the less the chance that all of them will prove disappointing in a moment of crisis. The progressive reincorporation of German economic life into the international economic system also appears in the circumstances that "quite appreciable amounts of German loans sold abroad would appear to have been repurchased on German account during the past few years .....In addition, various foreign shares have been admitted to the German Stock Exchanges." Whilst these cross-movements make it more and more difficult to establish a figure for Germany's net foreign indebtedness, they are also a guarantee against the enforcement of any policy which would treat Germany as an isolated economic fragment.

OUR INDEX NUMBER: A YEAR'S PRICES.

[*A description of our revised index number, the 1928 figures of which we give below, was contained in an article in the* ECONOMIST *of December 15, 1928.*]

As the result of a number of conflicting movements our Index Number of wholesale prices at the end of last month works out at 95.0 (1927 = 100), as compared with 95.3 at the end of November. In the cereals and meat section lower values for English grain, rice, and La Plata maize slightly more than offset rises in the prices of English beef and of both home-grown and imported mutton. Amongst "other foods," cocoa and sugar were cheaper, while tea and butter advanced in price. In the textile group American cotton and yarn were lower, while a

small upward movement in the price of hemp was counterbalanced by a decline in flax. The features of the mineral group were a sharp reaction in tin, as opposed to higher values for copper and spelter. A further decline in the figure for the miscellaneous section was caused by lower values for hides, leather, and linseed oil. Our first table gives the monthly indices for the past year of each of the five groups, and the total, together with the annual averages (geometric means) since 1924 :—

1927 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	114·2	106·7	136·8	119·4	105·6	115·7

,, Dec., ,,	97·6	90·2	101·7	94·1	91·4	95·0
Average, 1928	103·6	93·8	105·1	92·1	95·8	98·1

It will be observed that the average level of wholesale prices in 1928, as measured by our Index Number, was 1.9 per cent. lower than in 1927, increases of 3.6 and 5.1 per cent. respectively in the case of cereals and meat and textiles being outweighed by falls of 6.2, 7.9, and 4.2 per cent. recorded for "other foods," minerals, and "miscellaneous" commodities. When last month's figures are compared with those for December, 1927, it will be seen that the complete index has on balance declined during the past twelve months by nearly 4 per cent. This fall is due to lower values in the "other foods" and "miscellaneous" sections, the net changes on balance in the other groups being negligible.

In our next table we give actual price-quotations of a number of important commodities at the end of each of the past four quarters, the prices ruling at the end of each of the past three years being added for purposes of comparison :—

	End 1925.	End 1926.	End 1927.	1928. End March.	1928. End June.	1928. End Sept.	1928. End Dec.

Coal, best Welsh, per ton	22/9	29/3	19/1½	19/3	19/3	19/3	19/4½
Tin, Standard, per ton	£287/5/0	£300/7/6	£265/2/6	£239	213/15/0	225/15/0	£225/15/
Petrol, No. 1, per gallon	15·50d	15·00d	11·50d	11·50d	15 25d	15 25d	15·25d
Linseed oil, per ton	£33/10/0	£31/5/0	£28	£29/10/0	£29/10/0	£29/10/0	£29
Rubber, plant. sheet, per lb.	46d	19·12d	20d	13·25d	9·31d	8·56d	8·69d
Cement, Portl'd., per ton	60/9	60 9	54/	54/	54/	54/	47/

As compared with a year ago, imported wheat, sugar, wool, tin, rubber, and cement are all substantially cheaper. On the other hand, the prices of beef and mutton, jute, and No. 1 petrol have advanced.

It will be seen from the first of the two foregoing tables that the general level of prices rose steadily from the beginning of the year until the end of May. This upward tendency was then arrested and gave way to a downward movement, which amounted by the end of September to a fall of nearly 6.3 per cent. During the past quarter a greater degree of stability has been maintained.

The advance in the price level which characterised the first five months of the year was occasioned partly by an increase in cotton and jute values, but mainly by a substantial upward movement in the prices of English grain stuffs, potatoes, meat and bacon—a (largely seasonal) movement reversed during the second half of the year. Canadian wheat reached its highest point at the end of April, and fell heavily during the next four months, after which a slight recovery occurred. In the "other foods" section, during the last three quarters of the year the trend of most prices has been consistently downwards, cocoa, sugar and coconut oil all declining substantially. The price of tea, however, has remained relatively stable throughout the year.

During the second half of 1928 cotton prices—after their recovery, already noted, between January and June—weakened again. Wool values, stable in the first half of the year, also declined from July onwards until the end of October, when the downward movement was checked. Up to the end of March flax prices were firm; subsequently they moved to an appreciably lower level, from which a small recovery took place at the close of the year. In the minerals group the only two commodities whose prices fluctuated remarkably were tin and copper. Having fallen in the first half of the year by over £50 per ton, the price of tin altered little until October, when an upward movement started which gained strength in November and raised the quotation in one month by £13 per ton—a rise succeeded by an equal fall in December. Copper, whose price had varied little during the first nine months of the year, responded during the fourth quarter to increased buying, and rose by about £10 per ton. The features of the year in the "miscellaneous" group were the fall in rubber prices in April, a rise in the same month in the price of petrol as the result of increased taxation, and a decline towards the end of the year in hides and leather values. Fuel oil and creosote also became cheaper as the year proceeded, and the price of cement was reduced in October.

The next table shows our Index Number calculated with 1924 as the base year :—

1924 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1925	99·9	94·7	90·6	93·6	102·9	96·8
,, 1926	90·0	90·6	71·1	100·3	98·4	89·9
,, 1927	87·5	93·8	73·1	83·7	94·7	86·4
End March, 1928	93·7	90·9	78·6	76·6	91·8	86·4
,, June, ,,	98·8	86·8	80·3	76·4	90·8	86·9
,, Sept., ,,	84·5	87·6	74·1	76·9	90·2	82·7
,, Dec., ,,	85·5	84·5	74·3	78·8	86·5	82·1
Average, 1928	90·7	87·9	76·8	77·1	90·7	84·8

The average of our complete Index Number for 1928, it will be noted, is approximately 15 per cent. lower than the average for 1924. As compared with four years ago, the 1928 average figures for the textiles and minerals groups both show a fall of some 23 per cent. "Other foods" have declined by 12 per cent. in the same period, and the cereals and meat and "miscellaneous" sections each by slightly over 9 per cent.

In the concluding table we give the figures of our Index Number converted (by the method explained in the *Economist* of December 15th last) to a percentage of the average level of 1913 :—

1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924	168 5	215·8	214·7	149·3	122·6	166·2
,, 1925	168·4	204·2	194·6	139·8	126·2	160·9
,, 1926	151·7	195·3	152·6	149·8	120·7	149·4
End June, 1927	147·6	202·2	157·0	125·1	116·1	143·7
,, Dec., ,,	155 5	199·4	157·3	123·9	113·9	144·1
,, June, 1928	143·7	198·6	160·9	117·8	117·8	141·9
,, Dec., ,,	166·4	187·3	172·3	114·2	111·3	144 5
Average, 1928	144·0	182·4	159·6	117·7	106·1	136·5
	152·9	189·7	165·0	115·2	111·2	140·9

At the end of last month the average level of prices, thus measured, was 36.5 per cent. higher than in 1913, whereas a year ago it was 41.9 per cent. higher. There is still a striking disparity between the indices of the minerals and "miscellaneous groups" and those of "other foods" and textiles.

FRAUD IN INSURANCE.

WE described a fortnight ago a remarkable fraud which had been attempted by a Latvian financier on a marine insurance company in London and on certain Lloyd's underwriters. It ran to the enormous figure of £430,000, and the transaction from start to finish was a cold-blooded swindle spun out of nothing by ingenuity and cunning; but it cost the defendants £80,000 to resist, and the whole of this sum must either be paid for out of the premiums of more honest men or be a dead loss to the underwriters on the policy. Those who followed the case in detail must often have thought of the old insurance tag, "Get rid of the moral hazard and premiums could be reduced all round by 50 per cent."

How far is this old tag true? Is it a fact that insurance companies are every day made the victims of dishonesty, called upon either to pay claims that they know to be fraudulent, or to resist them at great expense and the risk of great danger to their reputation? Does the claim-settler of every insurance company really have to live in an unchanging atmosphere of suspicion, looking for a swindle in every claim and for a rascal in every claimant? No. The answer is that he does not.

Casting back in memory over the last ten years, one can recall a certain number of trials on insurance policies in which a defence of fraud was set up—and set up successfully. First, there was the large group of actions that arose out of the post-war shipping slump and the loss of foreign steamers, mostly Greek or Spanish. These steamers at the time they were lost were insured (in accordance with marine practice) for agreed values, and, owing to the sudden plunge of the shipping trade from prosperity to depression, all the agreed values were much above current market values and the capitalised earning power of the steamers. The owners' honesty broke under the strain, and the boats were deliberately scuttled. Next, there was a very peculiar case of a collection insured (not on a marine policy) for an agreed value by a wealthy foreigner and stolen from him on the Continent. There was in this case no suggestion that the theft had been "staged" by the owner, but after the loss he allowed himself to be led by his collector's vanity into a grossly inflated claim, and he lied elaborately to make his claim good. He was not, like the Latvian financier, fraudulent from the beginning; nor was he, like the Greek owners, guilty of the deliberate destruction of his property. He started with an honest loss, and turned it by his own perversity into a fraudulent claim.

These are the only cases that spring to the mind of insurance frauds exposed in civil actions in open court since the war; not one Englishman was concerned in any of them, and when we consider what the course of prices has been in the last ten years, the number of firms that have been left with overvalued stock and unsaleable goods, and the advantages they could have drawn from a really workmanlike fire or burglary, we are bound to admit that it is a remarkably small crop. But before we decide on the strength of this experience that human nature is fundamentally honest, and that mankind seldom or never swindles its insurers, there are one or two considerations that have to be borne in mind.

Most fire and burglary policies contain an arbitration clause, and a case may be fought and decided in secret before an arbitrator without any whisper of the action reaching the general public. This is an important fact too often forgotten when commercial litigation—and particularly insurance litigation—is discussed, for the number of law suits fought out and reported in open court is only a fraction of the total number of commercial suits. In the last few years there certainly have been arbitrations in which fraud was pleaded by a defendant insurance company, and one large claim, in which the sum in dispute was over £100,000, raised considerable interest in the world of picture and curio dealers, which supplied the usual platoon of expert witnesses associated with this type of case. If the case had been fought in open court it would have interested a great many people besides the dealers, for it was a pretty story.

An insurance company, it must also be remembered, may be convinced that a claim is fraudulent, and yet prefer to resist the claim on some ground other than fraud. Companies and underwriters generally hate to take technical points against their policyholders, but the technical points are always there, and a rogue who is trying to work a swindle very often stumbles against one or other of them. An insurance contract is sometimes like the Spanish monk's bible :—

"There's a great text in Galatians
Once you trip on it entails
Twenty-nine distinct damnations,
One sure if another fails."

On one, two, or three of the twenty-nine damnations the fraudulent policyholder can generally be held—a proposal form filled up wrongly, a material fact withheld, a misrepresentation made when the risk was offered—points that an insurer would not normally make against a client, but may quite properly take when he knows that fraud is there, but cannot for some reason be pleaded.

Again, many claims which are really fraudulent are settled or compromised by the insurers who find it more prudent to be robbed than to fight. The point has to be made with some discretion, for we do not want to provide young criminals with an elementary text-book, "The Beginner's A B C of Insurance Fraud." But it is a fact that a small swindle is more satisfactory to work than a big one, and it is much safer and much easier to get away with the goods if you fetch them in small parcels. In the last few years boats of low value have undoubtedly been scuttled and claims on them paid in full by underwriters (who knew they had been scuttled) simply because the value at stake did not justify the expense involved in proving fraud. If the Latvian financier had been a little more moderate in his demands he might possibly have got from his underwriters a very good compromise, for the underwriters might not have spent £80,000 in costs to disprove a claim for £50,000 or even £70,000.

For these reasons it must not be thought that the number of fraud cases fought out in court is a true index to the number of frauds attempted. Exactly how numerous they are it is clearly impossible to say, but it is safe to assume that in certain trades arson—a very difficult crime to detect—is not unknown, and in others the faked burglary—which is probably easier to detect—has at times been fairly common. It may also be assumed that some modern developments, especially the agreed value policy for jewellery, pictures, and collections of curios, have provided a new temptation and helped to lead erring footsteps into crime. Agreed values have always been recognised in marine insurance, but 20 years ago they were *anathema* to the orthodox fire manager, who regarded them much as the fundamentalist regards the Darwinian theory. The orthodox fire manager had to bow to modern thought, and give his clients not only agreed values, but policies against loss of profits and policies for full replacement cost and all the rest of the heresy-monger's travelling stock. His office in the long run has undoubtedly gained by this apostasy, however reluctant; but he was not altogether wrong in his view of human nature, and the fraudulent claim-maker, rare as he is, probably feels more at home with agreed value policies on pictures and jewellery than with any other form of policy.

Notes of the Week.

Nine Months' Revenue.—The revenue returns for the first nine months of the current financial year, which are set out in detail on another page, reveal a decline in ordinary revenue of £8,447,000, as compared with the corresponding period of 1927-28. Of this, inland revenue has fallen by £18,547,000, this being due to a decline of £26,167,000 in income and super-tax. About £17,000,000 of this last decline is due to last year's change in the procedure of Schedule A collections, and so has already been allowed for. The remaining £9,000,000 is a more serious matter, and suggests that by the end of the year income and super-tax may not quite reach its estimate. On the other hand, stamps and death duties together show an improvement to date of £8,290,000 on last year's results, and should end up in excess of the current year's estimates. If so, inland revenue should about come up to the Chancellor's expectations, though he does not seem likely to have much margin. Customs and Excise together show an improvement to date of £3,185,000 on last year. This again is hardly good enough on the basis of current estimates. Non-tax revenue is so far £6,916,000 better than a year ago, but comparisons are not easy to make, as last year included the second road fund raid, while this year includes the Treasury appropriation of the old currency note reserve. Still, current results under this heading are so far well up to the year's estimates. Regarding revenue as a whole, it seems that the Chancellor ought to realise his estimates, and with a little luck may have a small margin in hand. On the expenditure side, the supply services seem to be working out according to plan, and the Chancellor may effect a slight saving on his estimates. On the other hand, the interest on the National Debt once more, as in the two previous years, appears likely to exceed its estimate; if so, it will neutralise any savings that seem likely to be made on supply services. Taking the accounts as a whole, so far as can be seen at present the Chancellor should realise his budget hopes, but his margin will be a small one. That is how the prospect looks at the moment, but it is necessary to enter the *caveat* that the last and most important quarter of the financial year is often capable of producing surprises in one direction or another.

The Reparations Committee.—The announcement of the names of the two British representatives on the new Committee of Experts to determine Germany's final liability marks a new stage in the preliminaries that have to be arranged before the actual investigation can begin. The British names come as no great surprise. Sir Josiah Stamp's appointment was almost a foregone conclusion, after the big share he had in the recommendations and success of the Dawes Committee, and while it may seem rather exacting to ask him to repeat his work of five years ago, his appointment is one of the best guarantees we can have that the conclusions of the present Committee will provide an equitable and acceptable solution to this vexed problem. Sir Robert Kindersley, the other British representative on the Dawes Commission, is, unfortunately, for reasons of health, not available to-day, but the appointment of Lord Revelstoke is one that will command universal assent. The head of Baring's is, both by tradition and by his own knowledge and experience, well qualified to investigate a problem determined largely by questions of international finance. Interest must for the moment centre on the appointment of the remaining members of the Committee, especially upon the German and American names. Once these are known, the Committee will doubtless get to work at once. In fact, it is possible to deduce from the delay in publishing his report on the results for the fourth year of Reparations that ended August 31st that Mr Parker Gilbert, the Agent-General for Reparations, had hoped that the new Committee would by now have been in session. Detailed consideration of the report itself must be left until another week, but one or two broad conclusions and impressions can be commented upon at once. The main lesson of the Report is that, in so far as the raising of the full sum required for Reparations is concerned, the task is proving well within Germany's powers. The position as regards transfer also seems to be smoother than was expected, as is proved by the recent flow of gold to Germany, but there is one important element of doubt. If and when Germany ceases to raise from foreign investors and bankers either long or short term loans, will her normal export surplus be sufficient to finance both Reparations transfers and the service of foreign loans? This is one of the most important points that the new Committee will have to consider.

Monsieur Poincaré.—On the last day of 1928 Monsieur Poincaré tendered his resignation, for the second time in two months; but this time he did not even have the bother of reconstructing his Cabinet, for, at the request of his colleagues, his resignation was withdrawn. Whatever the technical grounds for these last two French Ministerial crises may have been, the political effect has been to confirm Monsieur Poincaré in office at the price of compelling him to rely more and more on the Right. In one way, this is not a bad thing, for a reactionary régime is never so powerful as when it is partly camouflaged by the support of more progressive elements. In this case, however, there are two further questions to consider: first, will Monsieur Poincaré really retire if and when he has completed the reconstruction of French finances—including in this task a definitive settlement of the Reparations question? Second, is the French Right, on which he has now been driven openly to rely, strong enough in the country to maintain in power a reactionary Government, with or without Monsieur Poincaré, for any considerable time to come? The trouble about Monsieur Poincaré is that, while he may sincerely intend to be confining himself to his financial task, his personality is so dominating and his political prepossessions so hard to reconcile with the cause of European appeasement that, before leaving office, he is capable of "queering the pitch" on such vital matters as the evacuation of the Rhineland and the reduction of armaments. It will be a black look-out for Europe (and for the world) if we have another period of years to live through with Governments still in power in France and Great Britain simultaneously which, by instinct, prepossession, and tradition, are apt to frame their actions without that appreciative sense of the new world outlook which alone can give them vision of the road on which they set their feet.

The League and Gold.—Those who studied in the supplement to the *Economist* of November 10th the memorandum of Sir Henry Strakosch on Monetary Stability and the Gold Standard, and his plea for the full international investigation of the problem, will be glad to hear that the Council of the League of Nations, at its recent meeting at Lugano, sanctioned the holding of an expert inquiry. The Financial Committee of the League reported to the Council that a systematic international investigation should be made. It suggested that a special committee should be constituted "to examine into and to report upon the causes of fluctuations in the purchasing power of gold and their effect on the economic life of the nations." This special committee, it was suggested, might consist of eight or nine persons, including a few members of the Financial Committee, and for the rest other persons of international authority. This recommendation of the Financial Committee was endorsed by the Council, and it is welcome news that this important international problem is now to be fully and authoritatively investigated.

Cotton Mill Amalgamation.—Our Manchester correspondent writes:—Although developments relating to the formation of the cotton mill combine in Lancashire have been checked by the recent holidays, some progress towards a satisfactory conclusion has been made since the beginning of last week. It is understood that representatives of the Cotton Yarn Association, Limited, were in London on Wednesday last, and it was expected that some headway would be made in meeting the difficulties which have been encountered in connection with the London banks. The promoters of this movement in Lancashire are much more hopeful of success than a little time ago. It is reported that one of the London banks has agreed to fall into line with the scheme which has been approved by the Manchester banks, and another London bank has seen its way to modify its opposition to the proposals. It was confidently stated on the Manchester Royal Exchange on Wednesday last that the scheme would go through, and it is probable that the combine will cover about 5 million spindles. It must be remembered that the proposals put forward will have to be approved by the shareholders of the individual mills, and the opinion may prevail in some quarters that the sacrifices to be made by shareholders, loanholders, and creditors are too heavy compared with the concessions granted by the banks. The supreme problem in this scheme of amalgamation is that the companies affected are practically bankrupt and the total liabilities of the firms are much larger than the assets. It is recognised, however, that if the present difficulties can be overcome the overhead charges of these concerns will be reduced, and to that extent the mills will be in a better position to compete in the markets of the world. Lurid light is thrown upon the position which has to be faced by the annual statement just issued by Mr F. W. Tattersall. According to public records, 74 cotton companies have gone into liquidation, these comprising 13 spinners, 21 manufacturers, three spinners and manufacturers, and 37 merchants, agents, &c. Thirty-four companies put forward schemes of arrangement with creditors and loanholders, these comprising 33 spinners and one manufacturer. The paid-up capital of these concerns was £7,649,466. Receivers have been appointed for 26 firms, representing seven spinners, four manufacturers, ten spinners and manufacturers, and five merchants. The paid-up capital of these concerns amounted to £1,790,984. Twenty-five firms have been made bankrupt, comprising one spinner, two manufacturers, and 22 merchants, agents, &c., the unsecured liabilities being £523,092 and assets £75,606. Nineteen firms—three manufacturers and 16 merchants, agents, &c.—have made deeds of arrangement with their creditors, the unsecured liabilities being £238,237 and assets £113,912. Seventy-three cotton companies, made up of 71 spinners and two manufacturers, have made calls on the shareholders for unpaid share capital, the total amount being £2,854,279.

The Resignation of the Jugoslav Cabinet.—The Jugoslav Coalition Ministry resigned last Sunday, December 30th, 1928, and the circumstances of its resignation may open the way for an improvement in the relations between Croats and Serbs—relations which have reached the verge of a complete rupture during the past year. The circumstances are hopeful because they suggest that this Serbo-Croat question, on which the future of the Serb-Croat-Slovene State hangs, has at last become a party question among the Serbs themselves, instead of a question of national ascendency in which all Serbs combined in order to keep the Croats under Serbian domination. One Serb party, the Democrats, seems to have awakened to the fact that a policy of Serbian domination in Jugoslavia is incompatible with the survival of the post-war Triune Kingdom. Either the three partners must possess, enjoy and feel that they enjoy equal rights, or the partnership will be short-lived. It is because they have realised this that the Serb Democrats have revolted against the Coalition Government; and that really means a revolt against the Serb Radicals, for the Radical Party, holding eight seats out of sixteen, has been the dominating force in the late Coalition Ministry, though the Prime Minister was Father Koroshetz, a Slovene Clerical. It is to be hoped that the fallen coalition will not simply be reconstructed, but that the new Government will have new blood in it and a new policy. The coalition has had no better medicine for Croat discontent than repression. The first thing to be done is to revoke these repressive measures; but that essential negative step ought to be followed up promptly by negotiations between responsible leaders of the three Jugoslav nationalities for a revision of the constitution. The ideal is the maximum of devolution compatible with the maintenance of the unity of Jugoslavia *vis-à-vis* other countries. The present unit *régime* cannot endure, for the three components of the Jugoslav national State have had such different histories that it was vain to hope that they could be fused into a single undifferentiated community in the twinkling of an eye—especially when the unit State was dominated by the Serbs, who are the least civilised and progressive of the three sister nationalities. The ultimate choice which the Serbs have to face is between devolution and disruption; and the sooner they face it the better for them, for Jugoslavia and for Europe—since the disruption of Jugoslavia might throw the whole of South-Eastern Europe into the melting-pot again. From the international point of view, too, this is the moment for Jugoslavia to put her house in order, for the Italo-Jugoslav Pact of 1924 lapses this month, and Signor Mussolini seems to have made the statesmanlike suggestion that the occasion should be taken for a comprehensive settlement of outstanding difficulties. If political stability could be achieved in the Adriatic and its eastern hinterland, all Europe would feel the beneficial effects.

The Development of the Tropics.—One of the most striking features of economic development in the 20th century is the renewed importance of tropical production, which in some respects is a return to the situation in the 18th century in contrast to that in the 19th. In the 18th century, a single West Indian Island might almost outweigh the whole of Canada in the higgling of the diplomatic market. Thereafter the development of coal and iron, the discovery of substitutes for tropical products during the Napoleonic Wars, and finally the emancipation of slaves, all combined temporarily to give the temperate zones the lead in the economic life of the world. Nowadays, rubber, tin, cocoa, coffee and a dozen other modern staple commodities are bringing the tropics to the fore again, and all the countries in the temperate zones which happen to have tropical colonies or dependencies are taking stock of their tropical assets and considering how to make the most of them. Now that most parts of the British Empire in the temperate zones have become self-governing members of the British Commonwealth of Nations, the British "Colonial Empire" that is still controlled from Whitehall has come to be mainly a tropical empire, which in extent of territory and in potential wealth ranks high among empires of this class—for example, the Dutch Empire in the East Indies, the French and Belgian Empires in Tropical Africa, and the dependencies of the United States in the West Indies, Central America and the Philippines. The technical problems which each British tropical colony has to solve, if it is to make the most of its resources, are often similar to, if not identical with, the problems of other British tropical colonies, or of the tropical colonies and dependencies of other Powers. But the British Tropical Empire labours under the disadvantage of being scattered all round the globe, and of having been acquired piecemeal, so that each colony has its own separate administration, history and traditions. Thus, hitherto, our right hand has been apt not to know what our left hand has been doing, until certain British statesmen and administrators have lately come to realise how much we stand to gain by the pooling of knowledge already acquired and by co-operation in further research. One of the pioneers of this fruitful idea has been Mr Ormsby Gore, the Parliamentary Under-Secretary of State for the Colonies in the present Government; and he has followed the idea out in a practical way by making a number of official tours in successive groups of colonies with an eye to strengthening the liaison between their administrations on the technical side. Last year he visited Ceylon, British Malaya, and the adjoining Dutch Colony of Java, and he has presented the results of his personal studies in an interesting and valuable report which has been published as Cmd. 3235 of 1928.

British Trade with China.—Far-reaching as the political implications of the new Sino-British Treaty are, its immediate provisions are primarily economic in character. Recognising China's complete freedom in the fixing of her customs duties, it provides for reciprocal most-favoured-nation treatment as between all parts of the British Empire on the one hand and China on the other. This involves an immediate raising of the general tariff to the level agreed on by the Tariff Conference of 1926,

but it is stipulated that there shall be no further rise within a year. An extremely important Annex to the Treaty, if only it proves possible to implement it, is that which contains the assurance of the Nanking Government that goods which have once paid import duty as established under the Treaty shall be freed "as soon as possible" from the payment of all other coastal or internal levies. It must, however, be admitted that there seems little prospect at present of this Annex becoming more than the expression of a pious hope. At the lowest estimate, British trade with China is bound to benefit perceptibly from the increase in goodwill which has resulted from our recognition of her Government, accompanied, as it was, by ceremonial formalities which other countries omitted, and which appeal particularly to the courteous Chinese. Thus the survey of economic conditions in China, which the Department of Overseas Trade published (54-15-0-28) shortly before the signing of the Treaty, now becomes of particular interest as throwing light on the position and prospects of our market in China. Though the dominant note of this Report is far from optimistic, there is a hopeful undertone based on the "remarkable capacity" of the Chinese people "for carrying on in the face of apparently insurmountable obstacles, and in particular their ability to resume 'business as usual' whenever they are given even the slightest breathing space." This gleam of hope is welcome, for the material obstacles to commerce are at present serious. A large part of the Chinese railway system, where it is not altogether out of commission, is able to maintain only skeleton services; though motor transport is popular, the state of the roads is atrocious, and there are great difficulties in the way of direct trading with Chinese manufacturers. Nevertheless, many of the obstacles show signs of abating, and in 1927 China did a foreign trade which has only been exceeded by that of 1926. When allowance is made for an overestimate due to changes in the value of money, the fact remains evidence of surprising economic vitality, and regarded in that light it is encouraging for British traders. The items of which this trade is composed are, however, less satisfactory from the purely selfish point of view of British exports. About half the Chinese imports consist of goods in which we could never compete, such as rice, oils, and sugar. Conspicuous among the exports are cotton yarn and piece-goods, which rose steadily from 1.7 and 1.2 million taels respectively in 1922 to 18.8 and 14.4 millions in 1927. To this corresponds an increase in output of cotton goods for home consumption, which, together with the growing Japanese competition, is seriously menacing the market for British cotton goods in China. There has been, indeed, a growing tendency for many kinds of British exports to be undersold in China by goods from other countries. So far, however, British goods have generally held their own, and in some lines—as, for example, motor cars and dyes—are actually gaining ground. Evidently there are no external reasons why Great Britain should not, in future, play a large part in whatever trade China has to offer. British manufacturers have of late years been severely belaboured for their lack of enterprise and adaptability in dealing with markets abroad; in this Report they receive unusual commendation for their knowledge and experience of local business conditions. "Such consolation," writes Mr Fox, "as may be derived from a situation profoundly unsatisfactory both for the Chinese and ourselves, is that when the long-looked-for trade revival does come we are in as good a position as any of our competitors to meet and take advantage of it."

Bankers' Clearings in 1928.—It is a commonplace to call attention to the continually growing use of cheques, but nothing provides such an incisive reminder of the fact as a glance down the Bankers' Clearing House statistics of the last 50 years. Over and above that, the figures for 1928 have a peculiar interest, because the previous records for day, week, month, and year were all broken. Monday, December 31st, with a total of £273,764,000, surpassed the record of Thursday, April 30, 1925, by £10,509,000. The week ended July 4th (£1,093,329,000) exceeded the week ended October 5, 1927, by £57,507,000, and the month of October (£3,960,965,000) exceeded January, 1925, by £190,101,000; January, 1928, came close behind with £3,933,731,000. Here is a comparison of the last three years:—

	1928.	Increase over 1927.		Increase over 1926.	
	£	£	%	£	%
Town clearing	39,311,117,000	+ 2,491,435,000	6·7	+ 3,064,688,000	11·2
Metropolitan clearing	1,854,190,000	+ 96,118,000	5·4	+ 193,433,000	11·6
Country cheque clearing	3,039,422,000	+ 66,595,000	2·2	+ 221,554,000	7·8
Grand total	44,204,729,000	+ 2,654,188,000	6·3	+ 4,379,675,000	10·9

The Metropolitan figures for 1928 were surpassed by those of 1920, the country figures by those of 1919 as well, but the town and the grand total figures establish records easily. Town clearings are responsible for 93.8 per cent. of the increase in the grand total over 1927, which therefore reflects the increased activity in the short money market and on the Stock Exchange, the sale of Treasury bonds and other Government transactions, and the rising tide of new capital issues, rather than great expansion of trade. Doubtless the illness of the King explains why December was the one month to show a decline from the previous year. In the metropolitan figures, which are not heavily weighted by purely financial operations, and thus reflect fairly accurately the business of the metropolis, all months shown an increase. The country cheque clearings provide the best index of general trade conditions, and considering the gloom that has been deepening over coal ever since the summer of 1927, and the dull state of other important industries, they are not unsatisfactory. The totals of the eleven provincial clearings mark increases in each of the first two quarters, considerably larger decreases in both the last two, and a decrease of £36,427,000, or 2.1 per cent., on the whole year. Sheffield (11 per cent.) and Leeds (7.1) declined seriously; Bradford, Manchester, and Newcastle-on-Tyne in a less degree; Birmingham (3.5) and Bristol (3.1) had the greatest percentage increases. Returning to the London figures, it is unsafe to base too optimistic prophecies on the expansion of monetary operations that they record, but the growth of London's financial business is not without its satisfactory aspects.

Newspaper Insurance.—With a unanimity which—if there be no preconcerted agreement in the background—amounts on the face of it to a remarkable coincidence, the various units of the "popular" Press announced on New Year's Day that free insurance benefits in 1929 would be substantially modified. The revised policies now offered to readers approximate fairly closely to a standard form with minor variations only as between competing journals. The sum payable on death by accident to a passenger train, which had been raised by certain rival newspapers to the exaggerated figure of £12,500, is now limited to a maximum of £5,000. As a compensation—of which much is made in advertising the "extension" of the schemes—papers which formerly did not cover accidents to children now offer sums of the order of £5 if the child of a reader breaks a bone in an accident. Except in an abnormally disastrous railway year, these two changes in the schemes operated by the "big circulation" Press are unlikely, on balance, to represent an appreciable saving in newspapers' insurance costs. Much more important financially are the reductions made in the amounts payable on death by accident "at work," "in the home," or through "street accidents." These common risks, against which £100, instead of £250-£300, is now offered, were known to be proving extremely expensive for newspapers, and it is probable that the scaling down now effected will result in a saving of as much as 25 per cent. in the aggregate cost of insuring registered readers. From the point of view of the newspaper industry as a whole, we welcome this evidence that the process of buying circulation by increasingly spectacular offers of free insurance is apparently arrested. Carried to extremes, it was a process which threatened to end by undermining the solvency of many papers, and discrediting journalism. If insurance of registered readers be kept within the limits now seemingly agreed, healthy competition through merit will have a better opportunity to raise the general standard of the "popular" Press of the country.

THE REVENUE.

I.—An Account of the Total Revenue of the United Kingdom in the undermentioned period of the Year ending March 31, 1929, as compared with the corresponding period of the preceding Year.

	Quarter from October 1 to December 31, 1928, compared with the corresponding Quarter of the preceding Year.				Period from April 1st to December 31st, 1928, compared with the corresponding Period of the preceding Year.			
	Quarter ending Dec. 31, 1928.	Quarter ending Dec. 31, 1927.	Increase.	Decrease.	Period ending Dec. 31, 1928.	Period ending Dec. 31, 1927.	Increase.	Decrease.

Treasury, December 31, 1928.

Agricultural Research.—A very useful summary of the annual progress of agricultural research has again been published by the Research Committee of the Royal Agricultural Society. It relates to the year 1927, and, consisting as it does of seven articles by different writers and comprising in all only 190 pages, its belated appearance cannot be readily explained. The subjects dealt with are Crops and Plant-breeding, Dairy Husbandry, Agricultural Economics, Agricultural Engineering, Animal Nutrition, Soils and Fertilisers, and Veterinary Science. All are written by well-known authorities, and farmers may confidently rely on the trustworthiness of the information given. The extent and range of the research work continually in progress at the various experiment stations, and the number of papers and reports in which the results are embodied, increase year by year, and only by such a publication as this can farmers hope to keep themselves informed. As usual, the article on Soils and Fertilisers by Sir John Russell is conspicuous not only by the importance of the subject, but also by the lucidity of its exposition. The writer explains that much of it was written during an agricultural tour in Australia and New Zealand, and it embodies some results of experiments which he saw in those countries. Sir John Russell has also made similar tours in recent years in the United States, Canada, and the Near East. He has consequently acquired wide knowledge, derived from personal observation, of the position and progress of agricultural research throughout the world, and has made a special study of the situation within the British Empire. Last year an Imperial Agricultural Research Conference met in London under the chairmanship of Lord Bledisloe, at which representatives attended from all the Dominions, from India and from over a score of colonies and protectorates. The main object of the Conference was to make a comprehensive survey of the agricultural research institutions and activities within the Empire. The admirable work done by some of the institutions is well known to those interested in the subject, but there are others where, with limited resources, one or two workers are devoting their lives to research in practical isolation. The result is a certain amount of wasted energy and overlapping of effort. The conference having obtained full information, proceeded to consider plans for co-ordinating the work of the various institutions. It was decided to recommend the establishment of nine recognised centres or clearing houses of information, or rather to add to the functions of existing institutions the duty of keeping in touch with research workers throughout the Empire, and of collecting the results of their work. It is proposed that eight of these centres should be situated in Great Britain and one in South Africa. The institutions to be responsible for the different branches of science are:—Soil-Science, Rothamsted; Animal Nutrition, Rowett Institute; Animal Health, Veterinary Laboratory, Weybridge; Agricultural Parasitology, Institute near St Albans; Plant genetics, Cambridge and Aberystwyth; Fruit production, East Malling, Kent; Veterinary Research, Onderstepoort, South Africa. It is proposed that all these stations should be financed from a common fund contributed by the various Governments, the fund to be administered by an executive council composed of representatives of the contributing Governments. It is to be hoped that the necessary funds will be forthcoming. In the meantime the Rockefeller Foundation has given practical evidence of its interest in agricultural research, its confidence in British workers in this field, and its appreciation of the importance of the work, by offering the University of Cambridge the sum of £700,000 for agricultural research, provided that a proportionate sum is raised in this country. Grants from the Exchequer and from the Empire Marketing Board have reduced the amount required to meet the conditions of the Rockefeller gift to £145,000.

Bankruptcy in 1927.—The number of bankruptcies under the Bankruptcy Acts and the Deeds of Arrangement Acts, taken together, amounted in 1927 to 6,170. This was an increase of 168 on the number in 1926, but the smallest number recorded in any other year since 1921. The total liabilities amounted to £12,734,104, or £1,120,867 less than the preceding year, and the lowest total since 1920. The percentage of assets, as estimated by debtors, to liabilities similarly estimated, was 29.8, a better percentage than in any of the last six years except 1926. The average amount of liability, about £2,600, is the lowest recorded during the post-war period. The statistics for individual occupations are significant. For each of the last three years—the Board of Trade report only gives occupational figures from 1925—farmers have headed the list in respect of number of bankruptcies, though the scale of their liabilities is surpassed by company promoters and general merchants. Builders and grocers follow closely, not always in the same order. In 1927 468 farmers, 337 grocers, and 287 builders went bankrupt. Drapers, publicans, boot and shoe manufacturers, and greengrocers are also high on the list, and bankruptcies have become more numerous among the three first-named, amounting to 205, 175 and 151 respectively, in 1927, as against 176, 156 and 123 in 1925. The total liabilities of publicans and boot and shoe makers have, however, diminished; curiously, the size of the liabilities of bankrupt businesses seems to vary inversely with their number. Coal and coke merchants, bakers, and confectioners also figure largely among the number of bankrupts, but not so largely as in 1925. In interpreting these figures, which at first sight suggest that retail trade is an abnormally hazardous undertaking, it must be borne in mind that the statistics do not show the proportion of bankruptcies and persons engaged in each occupation, which might well tell a different story.

The Corn Returns.—A recent question in the House of Commons relating to the corn returns is, writes a correspondent, a reminder of their antiquity. The earliest statute for the official settlement of corn prices was passed in 1570. By this the Lord President and the Council in the North, the Lord President and the Council in Wales, and the Justices of Assize, within their respective jurisdictions, were enjoined to confer with the inhabitants on "the cheapness and dearth of all kinds of grain," to determine the average price for that year, and to permit or prohibit the exportation of grain. In 1685 the duty was placed, in London on the Corporation, and in all maritime counties on the Justices in Quarter Sessions, to determine half-yearly the average market price on the oath of two skilled persons. In 1770 weekly averages were for the first time adopted, the prices being fixed by persons appointed by the Justices for at least two and not more than six provincial towns—London being specially provided for. By the same Act publication in the *London Gazette* was enjoined, and an officer of the Treasury was appointed to receive the returns and be responsible for the publication. Twenty years later all previous Acts were repealed, and the system on which the returns were collected was devised on the general lines which have subsequently been adhered to. The obligation was placed on corn dealers, under penalty, to make a weekly return of all corn and oatmeal bought by them during the previous week. The returns were to be sent to the Receiver, who was to calculate and publish the average prices. The returns were collected from 213 towns. By an Act passed in 1821, the number of towns was reduced to 147, and inspectors were appointed in each town to collect the returns and make a weekly account to the Receiver of Corn Returns, who was to be appointed by the Board of Trade. The inspectors were appointed, in London, by members of the Corn Exchange, and elsewhere by the Justices. Further amending Acts were passed, but the changes made were slight. In 1864 returns of rye, peas and beans, which had up to then been required in addition to those of wheat, barley and oats, were abolished. In 1882 previous Acts were repealed, and the law was consolidated. Weekly returns were to be made by buyers of wheat, barley and oats in London, and in not less than 150 or more than 200 other towns, the list of towns being fixed by Order in Council. The responsibility of administering the Act was placed on the Board of Trade, and transferred in 1892 to the Board of Agriculture. The local officers of Inland Revenue act as inspectors of corn returns and receive, tabulate, and forward them weekly to the Board (now the Ministry) of Agriculture. The Act contains detailed instructions as to the method of calculating the averages. When the Tithe Commutation Act was passed in 1836 it was provided that in the month of January in each year the average price of an Imperial bushel of British wheat, barley and oats was to be calculated from the returns for the seven years ending Christmas, and advertised in the *London Gazette*. This septennial average fixed the value of the tithe rent charge for the ensuing year. A few weeks ago a question in the House of Commons suggested that the corn returns under the Act of 1882 were collected "to obtain the average prices for the computation of tithes," and as the value of the tithe rent charge is now fixed under an Act passed in 1925, they are unnecessary. It will be observed from the brief summary of their history that the corn returns, being an authoritative and long-standing record, were merely adopted for the purpose of tithe computation. They were never devised for that purpose, and continued before and after as an independent statistical record used by traders, economists, statisticians, and others. To discontinue them would certainly be a retrograde step at a time when the demand for price records becomes more and more urgent. The returns cost practically nothing to collect.

Prospects of British Trade in India.—Apart from the labour situation, which is characterised by a certain amount of unrest resulting from the increasing mechanisation of industry, conditions in India during the past year have appeared increasingly favourable to trade. According to the Report (54-33-0-28) by Mr Thomas M. Ainscough, just issued by the Overseas Trade Department, the stabilisation of the rupee, together with six successive favourable monsoons, has established India's credit on a more favourable basis than ever before. The jute, tea, and engineering industries are fairly prosperous; cotton stocks are light, and heavy purchases are expected if Lancashire prices fall to 9d; large public works of all kinds are expected to create a heavy demand for machinery and engineering products; and India's own production of iron and steel, though expanding, cannot keep pace with the anticipated increase in demand. A glance at the statistics of India's foreign trade by countries, however, reveals that Great Britain cannot expect to reap the advantages of the improvement in the Indian market without making very definite efforts in that direction. Before the war the United Kingdom was responsible for 63 per cent. of India's imports; in both 1926-27 and 1927-28 her share was only 48 per cent. The proportion contributed by the rest of the British Empire remained stationary at 7 per cent., while that of foreign countries rose from 30 per cent. to 45 per cent. The largest part in this change has been played by the United States and Japan, whose shares rose from 3.1 and 2.5 per cent. before the war to 8.2 and 7.2 per cent. respectively last year. Belgium and Italy have also substantially increased their still comparatively small contribution, and the Report states that "foreign competition now enters into practically every trade, *including those which have hitherto* been almost exclusively British." Its success, especially in the case of the United States is attributed to the circumstance that: "The American manufacturer appears to have grasped the fact that he must follow up his goods until they reach the hands of the consumer. He assists his agents in every way by granting adequate advertising and travelling allowances, and by visiting the market either himself or in the person of an energetic representative." The great majority of British manufacturers, on the contrary, "have not yet appreciated the changed conditions in India which tend to weaken our position and which call for revised methods of organisation in order to meet them.....They have been prone to consider that once they received payment for the goods in London their interest in them ceased. They have not realised that mercantile agents in India have, as a rule, far too many irons in the fire to give close personal attention to any one agency unless they are assisted and prompted to do so by the manufacturer." Mr Ainscough stresses this point most emphatically, and, further, calls attention to the fact that the new rupee tender system for Government purchases will make it absolutely imperative for British firms, if they are to secure their share of advantage from the impending schemes of railway construction, harbour development, and hydro-electric enterprises, to develop a thoroughly efficient sales, technical, and service organisation on the spot. It is earnestly to be hoped that this advice will be taken to heart; we cannot afford to lose any more ground in overseas markets.

Conditions in Japan.—The course of foreign trade during November was again discouraging, writes our Japanese correspondent. The export season apparently came to a close in the latter part of the month, and the heavy import season has set in a little earlier than usual. The November returns show that, as compared with the corresponding month of 1927, imports at 163,014,000 yen advanced by 17,473,000 yen, while exports at 153,278,000 yen fell by 4,594,000 yen, the adverse balance of trade being thus 9,736,000 yen, as against a favourable balance of 12,331,000 yen in November, 1927. Taking the first eleven months, the total visible adverse balance of trade amounted to 193 million yen, or 31.6 millions more than in the same period of 1927. The anticipations entertained a few months ago, in view of the much more satisfactory record of the first half-year, that the year's foreign trade accounts would be easily balanced by the non-merchandise services have been rudely disappointed. The Government's resources at foreign centres, though they remain unpublished since August, are suspected to have been substantially depleted, and in a few months' time will be in need of replenishment by gold shipments or otherwise. Japan's position as regards international payments is naturally causing anxiety in some quarters. Speaking at the Bankers' Conference held at Osaka last month, the Finance Minister intimated that the Government had no intention of lifting the gold ban immediately, as had been suggested by the bankers. The tremendous stir created by the bankers' campaign for an earlier removal of the gold embargo has completely subsided. The value of the yen has settled down to the level which prevailed before the return-to-gold campaign, while the prices of securities have recovered all round. Gilt-edged stocks, in particular, have regained the lost ground. According to the statistics compiled by Nippon Kwango Ginko, security prices generally maintained a higher level, and the average yields of leading stocks on December 1st were down at 6.27 per cent., as compared with 6.28 per cent. a month ago, and 6.31 per cent. at the beginning of the year. Monetary conditions are fairly comfortable, and there is no definite sign of seasonal stringency despite the approach of the year-end. The Government's interest disbursements and the repayment of industrial debentures appear further to have eased the position. Short loan rates are lower, overnight money being readily available at as low as 5 rin or 1.82 per cent., though discounts are a shade tighter. The Bank return for last Saturday reveals that note circulation at 1,262.6 million yen was only slightly higher than at the same date of last month. The year-end is expected to be negotiated without undue difficulty. The Bank of Japan's index number of wholesale commodity prices for November registered a slight drop, the total being 229.7, against 229.71 for October, and 222.86 a year ago. A substantial decline in cereals was offset largely by a rise in textiles and building materials.

Spanish-Argentine Trade Financing.—Our Buenos Aires correspondent writes:—A decree, signed by H.E. President Irigoyen, and countersigned by Dr Fleitas, Minister of Agriculture, has announced that arrangements have been made for the granting of a six months' credit by the Banco de la Nacion Argentina to a group of local banks, plus a cereal export house, for the sum of $50,000,000 paper, renewable at need for a further six months, the interest on such balances as may at any time be outstanding being 5 per cent. per annum. The banks are as follows.—Banca de la Provincia de Buenos Aires, Banco Español del Rio de la Plata, Banco de Italia y Rio de la Plata, the cereal firm, also well known as financiers, being Louis Dreyfus y Cia, Limited. The object of this operation is to facilitate sales of cereals to Spain without further depressing the value of the peseta, and a group of Spanish banks, including the Banco Urquijo, Banco de Bilbao, and Banco Hispano-Americano, will employ the funds in conjunction with the Spanish buyers, at a rate not to exceed 5½ per cent.

per annum. It is stipulated that the credit must be employed solely for the purpose of acquiring Argentine produce during 1929, but buyers are free to choose their own channels as regards their purchases, documents presumably being passed through the Argentine and Spanish banking consortiums as a *sine qua non*. How the question of exchange will eventually be dealt with is not yet evident, but, leaving this important item aside, it is clear that Argentina, with her big crop in prospect—5,000,000 tons of wheat are talked of as probable—and Spain, which is some 700,000 tons short of that grain, to say nothing of maize, have made a mutually satisfactory arrangement. Always provided, let us add, that nothing happens to depress unduly either the price of cereals in the world market, or the quotation for the peseta in the international money market twelve months hence.

Canadian Welcome to Barclay's.—Our Ottawa correspondent writes:—The news of the active entry of Barclay's Bank into the Canadian field has had a cordial reception in every direction. The officials of the Canadian banks have been exceedingly generous in their welcome. Mr A. E. Phipps, the general manager of the Imperial Bank, who is president of the Canadian Bankers' Association, promptly repudiated the suggestion that his organisation would oppose the charter for the new bank, and Mr Logan, the general manager of the Canadian Bank of Commerce, gave his blessing to Barclay's enterprise on the ground that it would bring more capital to Canada. Papers of all shades of opinion have indulged in favourable comments, and such newspapers as have been lamenting the centralisation process visible in Canadian banking since the war ended are almost enthusiastic in their welcome. One ground of approval is that the advent of Barclay's Bank will facilitate the introduction of British capital into Canadian enterprises and strengthen the financial links of the Empire. But even greater stress is being laid upon the new move as an indication of a decided change of heart in London towards Canadian enterprises. Canadians have for some years past been acutely conscious that, as a result of the Grand Trunk *débâcle* and the grievances cherished by many British investors against the Canadian Government, the London money market has been very lukewarm to Canadian enterprises. Now hopes are aroused by Barclay's venture that the past has been forgiven, and that the London market will give a more cordial welcome to Canadian issues.

New Life Assurance Business.—The New Year has produced the usual batch of announcements by the life assurance companies as to the new business transacted during 1928. On this occasion there is a pleasing unanimity in recording increases, in some cases of a substantial nature. Unfortunately, this result cannot be ascribed to a general trade revival; rather has it been achieved in spite of trade conditions. Possibly the explanation for these increases, and for those also of the past two or three years, is to be found in the cumulative effect of life assurance propaganda in gradually awakening a sense of the pitiful inadequacy of the average life policy per head of population in this country. Whatever the reason, the figures are certainly encouraging. Fourteen offices have so far published their figures of net new business, and these are as follows:—

NET NEW BUSINESS.

Office.	1927. £		1928. £		Difference. £
Atlas	2,946,816	..	3,400,000	..	453,184
British General	310,088	..	405,616	..	95,528
Britannic	2,162,554	..	2,500,000	..	337,446
Clerical, Medical & General	1,920,356	..	2,000,000	..	79,644
Equitable	818,323	..	1,000,000	..	181,677
Equity and Law	1,177,461	..	1,880,539	..	703,078
Friends' Provident	1,439,651	..	1,556,000	..	115 349
Legal and General	6,649,164	..	7,613,000	..	963,836
London Life	2,206,567	..	2,502,912	..	296,345
National Mutual	807,203	..	1,007,339	..	200,136
National Provident	1,190,497	..	1,511,000	..	320,503
Pearl	10,215,579	..	11,924,979	..	1,709,400
Phœnix	2,881,330	..	3,004,000	..	122,670
Prudential	16,941,000	..	17,400,000	..	459,000
	51,666,589	..	57,704,385	..	6,037,796

The most notable result is that of the Equity and Law, whose new business shows an increase over 1927 of as much as 60 per cent. A curious feature of the 1928 business is the very large amount reassured, namely, £834,000, and the fact suggests that the company handled some unusually large policies, possibly of the single premium super-tax saving variety. The British General, now controlled by the Commercial Union, shows a 30 per cent. increase, although the total is a small one. A pleasing increase of some 25 per cent. is recorded by the National Mutual, and it would seem that the merits of this very strong society are becoming more widely recognised. The announcement of the London Life is accompanied by an analysis of the composition of the business. From this it appears that as much as 40 per cent. of the total is due to non-profit business, and further that nearly the whole of the total increase of £296,000 has arisen from policies effected under the society's distinctive system whereby the bonuses are declared in the form of reductions in the premium. Of the ordinary-cum-industrial life offices, the returns of three are so far available. The Pearl and Britannic again report large increases equivalent to 17 per cent. and 16 per cent. respectively, but the increase of some 3 per cent. shown by the Prudential, although on a much larger total, is comparatively small. In addition to the British offices two Colonial companies have published the totals of their new business. The new business of the National Mutual of Australasia is stated to have amounted in 1928 to £9,807,845, compared with £8,234,713 in 1927, and that of the Manufacturers' Life of Canada is given as £17,840,000, compared with £15,940,000. Of these totals probably about 25 per cent. in the case of the Australian office was derived from Great Britain, while the British business of the Manufacturers' Life is a minute —though increasing—proportion of the whole.

Atlas Assurance Company, Limited.—The "Atlas" anticipated January 1st in order to make last Saturday a bonus announcement of a spectacular character. The company distributes bonuses to its with-profit life policyholders once every three years, and for the triennium ended December 31, 1928, has declared a compound reversionary bonus of 42s per cent. per annum, together with a special compound bonus of 18s per cent., making a total bonus of 60s per cent. compound per annum. The ordinary bonus of 42s per cent. compares with 36s per cent. in the preceding triennium, and with 30s per cent. in the first triennium after the war. The extra bonus of 18s per cent. is announced as a special bonus not likely to be repeated, and its purpose is presumably to compensate the older policyholders for the loss of five years' bonus during the war. In the company's preliminary announcement it is stated that the surplus earned during the last triennium was expected to amount to £600,000. The surplus earned in 1926 was £188,000, and in 1927 £172,000, so that for the year 1928 the surplus earned has presumably increased to about £240,000. The really challenging part of the announcement is contained in the fact that for the year 1929 (the first year of the new triennium) an interim bonus of as much as 48s per cent. compound has been declared. This is a very high rate indeed, and it at once puts the company amongst the first rank of high bonus offices. In addition to a carry-forward of over £200,000 at the beginning of 1928 the company has the advantage of a hidden reserve of nearly £500,000, being the difference between the market value and book value of the Stock Exchange securities. In fact, the Atlas life department is now in a very strong position. The two most important factors which are responsible for the company's capacity to earn large bonuses are firstly the high rate of interest earned, and secondly the large proportion of without-profit business. In the year 1927 the net rate of interest earned worked out at £5 8s 11d per cent., and was the highest of any of the British offices shown in our Insurance Supplement of July last. As regards the without-profit branch, the company has developed a considerable group insurance business, and a large annuity business, with the result that at the end of 1926 some 54 per cent. of the total net liability in respect of policies was due to without-profit business. Apart from doubts which inevitably arise as to ability to maintain these very high bonuses, there is room for the view that their existence is in itself a confession of a serious anomaly now existing in the conduct of life assurance, namely, that premiums which are capable of producing very high bonuses might be regarded as excessive in regard to the protection afforded.

National Mutual Life Assurance Society.—This society has announced its intention to declare for 1928 a compound reversionary bonus at the rate of 45s per cent., together with a special additional differential bonus of 6s per cent. for whole-life policies, making 51s per cent. compound for such policies in all. These bonuses are at the same rates as those for the preceding year. The year 1928 marks the close of the first five years of annual bonus distribution, and the completion also of the first decade since the war. The last quinquennial distribution was made at the end of 1923, when a 42s per cent. compound bonus was declared for each of the five years 1919-1923, inclusive, and the rate has been gradually increased since then to the present figures. Thus the average rate of bonus for the whole period of 10 years works out at 43s per cent. compound for endowment assurance policies and 45s per cent. compound for whole-life policies. This is a record of which the society has good reason to be proud and the with-profit policyholders to be duly appreciative.

Fire Losses in the United States and Canada.—The statistical record published by the *Journal of Commerce*, New York, relating to losses by fire in the United States and Canada, indicates a marked upward tendency in fire losses during November. The actual total amounts to $22,287,800, as compared with $18,992,200 in November, 1927, an increase of 17 per cent. Nevertheless, the aggregate losses for the 11 months of the current year compare favourably with those of the same period in 1927, the actual figures being $271,763,560 for 1928, as against $288,652,600 for 1927, a reduction of 6 per cent. Having regard to the preponderating influence of American fire business in the totals of the British fire offices, these figures are a favourable augury for the 1928 accounts. On the other hand, it has to be remembered that home fire losses have been running this year on a higher level than in 1927, and in addition the offices have had to meet this year substantial losses arising from hurricane damage in the West Indies.

UNITED STATES.—STOCK EXCHANGE—MONEY—INDUSTRY—PRICES.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 21.

IT is a matter of common comment in Wall Street that the share market has given a remarkably good account of itself since the sharp break at the end of November. After the first sharp rally, there was little conviction that a bear market had started, but there was a general disposition to believe that a "secondary reaction" would carry prices down to and perhaps below the level reached on the break. As a matter of fact, the secondary reaction has failed to put in an apearance. Marked dullness did set in, with the daily turnover falling as low as 2,000,000 shares, but prices receded very little. During the past week the rally has been extended further, on a moderate increase in volume, until at the present time a very considerable part of the November loss in average values has been recovered. At times this week the market has been distinctly buoyant. Part of this strength probably was attributable to the relatively easy condition of the money market during the early part of the week, the call rate on the Stock Exchange dropping to as low as 6 per cent. But the rise of this rate to 9 per cent. to-day did not rob the market of its vitality. As a result, opinion now is swinging to the idea that the rally may continue during the last week of this year, and the beginning of next year, notwithstanding the expected firmness in money.

It is still early to speak definitely regarding the action of the money market over the year-end, but the much-heralded tightening so far has been relatively moderate. In any event, to-day's high of 9 per cent. seems low in comparison with the 15 or 20 per cent. that was forecast a week or so ago. Ease early this week was a perfectly natural aftermath of the December 15th tax date, but it has persisted longer than would have been expected purely on the tax-date theory. Some aid to the money market was probably furnished by the reduction in brokers' loans accomplished in the two weeks ended December 19th. In the first of these two weeks the drop in these borrowings, as reported by New York City member banks, was $218,000,000 (this constituting a record reduction for a single week); in the second week it was $65,000,000. This total of $283,000,000 for two weeks is of itself substantial, even if it does not seem so impressive when compared with an increase during the autumn bull market of $1,211,000,000, and with an increase to $1,584,000,000 since the first of the year. However, experience indicates that after a break in shares the decline in brokers' loans continues for a few weeks after prices have started to recover. Following the break of last June, brokers' loans declined $404,000,000 in four weeks before they again started their upward course.

As for Federal Reserve policy, this week's statements are complicated by the effects of tax-date operations and holiday trade. Discounts are off $82,000,000, this reduction breaking the tendency of the preceding two weeks, but being the the natural result of the passing of the tax-date. Reserves are off $22,000,000, despite the inportation during the week of $10,000,000 more gold from Canada. However, this loss in reserve, and an increase of $56,000,000 in circulation, may be attributed to the holiday demands for currency. An increase of $55,000,000 in holdings of Government securities purchased in the open market would ordinarily indicate official intervention on the side of easy money; in the present instance it merely reflects

the persistence of a large Treasury overdraft pending the collection of tax checks. A reduction of $41,000,000 in holdings of bills bought in the open market, on the other hand, normally would suggest that the authorities wished to harden money; this time it finds an offset, however, in an increase of $37,000,000 in contingent liability on bills purchased for foreign correspondents. Altogether, there is nothing in the statements inconsistent with the theory that the Reserve banks maintained a passive attitude during the week. With regard to the immediate future of the money market, the present view is that rates will be more stable after the turn of the year, but that the general level will remain fairly high. There always is a large return flow of funds to this district early in January, but it is felt that heavy maturities in the bill market will tend to offset the easing influence of this flow. As a matter of fact, the bill rate has been rather firm this week, some dealers insisting on a higher rate. Meanwhile 30-day time money has lent for as high as 8½ per cent., and generally at 8¼. Sixty and 90-day money commands 7¾ per cent. As to the general banking position, it may be noted that the total volume of Federal Reserve bank credit now being extended amounts to $1,700,000,000, as compared with $1,532,000,000 a year ago, and that discounts for member banks amount to $946,000,000, as against $578,000,000. This condition does not seem to furnish the background for an easy money market.

Opinions on spring business remain optimistic. Industrial activity still is holding up well with the steel industry operating at approximately 80 per cent. of capacity, which is very good for this season of the year. Steel prices continue firm, even though there has been a slight seasonal year-end weakening in pig-iron. Altogether there is a disposition to believe that the upswing in business activity that started a year ago will continue into the spring. The estimates of leading automobile makers as to total 1929 output are very large.

Wholesale prices in November were about 1 per cent. lower on the average than in October according to the weighted index of the Bureau of Labour statistics. The November level of 96.7 per cent. of the average for 1026 exactly corresponds to that for November, 1927. The decline on the month is due, however, not to industrial products, but chiefly to farm products, food, and hides and leather. The cloths and clothing group is unchanged, and metals and metal products, building materials, chemicals and drugs are slightly higher. Of 550 commodities, 140 are higher, 148 are lower, and 262 are unchanged.

FRANCE.—POLITICS—FINANCE—MONEY—INDUSTRY.

(FROM OUR CORRESPONDENT.)

PARIS, January 2.

AFTER a long series of incidents in both Houses, which more than once threatened to result in serious complications, the Budget Bill has finally become law. The most serious obstacle was the insistent demand by a majority in both Houses for increased pay for both Deputies and Senators. In view of the remarkable manifestations of opinion throughout the country, both in the Press and generally, the advocates of the proposal hastily dropped their original demand, and a compromise, as foreshadowed here last week, was arrived at. Senators and Deputies whose homes are outside the capital will henceforward draw an additional 1,250f per month, to enable them to maintain a second residence in Paris, with certain additional allowances, in the case of married men, for family charges. The adoption of this proposal was chiefly due to the fact that M. Chéron, the Finance Minister, apparently for tactical reasons, strongly supported it in both Houses, in direct opposition to his leader, M. Poincaré, who made no secret that he was opposed to any increase, and plainly signified his attitude by leaving the Chamber when the matter came up for discussion. At Monday morning's meeting of the Cabinet M. Poincaré, admittedly influenced by the difference of opinion between himself and the majority of the Ministry, intimated that he regarded his task as accomplished with the passage of the Budget, and announced his intention to resign office forthwith. After some discussion, in which he was unanimously appealed to by his colleagues to remain in office, M. Poincaré withdrew his resignation. The fact has been received with deep satisfaction by almost every section of public opinion, and there can be no doubt the Premier has emerged from the unfortunate "Parliamentary pay" controversy with appreciably increased authority.

The 1929 Budget works out as follows:—

	Francs.
Estimated revenue	45,430,717,348
Estimated expenditure	45,366,130,503
Estimated surplus	64,586,845

The estimated surplus of rather over £500,000, after providing for expenditure of £363,000,000, is trifling; but if we may judge from the results secured by M. Poincaré's previous two Budgets, this surplus will, in all probability, be largely exceeded. His realised surplus in 1927 amounted to over 1,500,000,000f, while the actual yield for the first 11 months of 1928 is already known to have been 2,900 millions more than was estimated for, with another month's revenue still to be added. Supplementary credits accorded since the passage of the 1928 Budget totalled, on balance, at the beginning of December (after allowing for credits not utilised) 1,085,992,679f, which will absorb a substantial portion of the already realised surplus; and it may be taken for granted that most, if not all, the balance will be utilised, as in the past, to meet extra expenditure that has, in accordance with the usual practice, been omitted from the new Budget, in view of probable surplus revenue under the old one. As is generally known, the law stipulates that all Budget surpluses shall be passed to the Caisse d'Amortissement, for debt reduction purpose. The demand for supplementary credits are invariably so numerous, however, that by the time the last "*collectif*" for 1928 comes up for examination, next July, very little, if any, of the surplus will be left for the purpose designed.

A writer in *Le Capital* estimates that the burden to be borne by the French taxpayer in 1929 will amount, in round figures, to 60,000,000,000f, made up as follows:—

Taxation levied under the Budget	Francs.
Postes, telegraphs, and telephones	45,430,000,000
Caisse d'Amortissement (tobacco monopoly, successions, transfer tax on property sales)	2,806,000,000
Local taxation (departments and communes)	5,300,000,000
Common funds (State and local government bodies)	4,000,000,000
Octrois and sundry taxes (pari mutuel, City of Paris special taxes, &c.)	845,000,000
	1,800,000,000

From this should be deducted, however, the revenue of the Post Office (which can scarcely be regarded as "taxation," particularly as the department is now more or less industrialised and has its own independent Budget, and some 4,000 millions representing that part of the revenue of the Caisse d'Amortissement which is drawn from the tobacco monopoly, and out of which the working cost of the tobacco undertaking has to be provided. These deductions made, the total burden of State and local taxation during 1929 may be estimated at 53,000,000,000f (say, £424,000,000). Taking the amount of local taxation included in this total as 6,250,000,000f (although the writer in question does not touch this point), the estimated burden of State taxation proper to be carried in 1929 may be placed, according to these figures, at 46,750,000,000f (say, £374,000,000).

The year is opening well from the point of view of the national finances. Indirect taxation continues to show a surprisingly high yield, that from the tax on turnover, which is an admirable gauge of industrial and commercial activity, having been 471 millions more during the first eleven months of the past year than during the corresponding period in 1927. The yield from indirect taxes for the eleven months so far reported has been 2,881 millions more than expected, and 3,190 millions more than in 1927. The yield from direct taxation by the end of November was already some 300 millions above the estimate for the whole year, and would undoubtedly have been still higher but for the fact that the position of the Treasury has latterly been so satisfactory that there has been no need to resort to the speeding-up methods necessary in previous years

Last week's Bank statement, which brought the situation down to December 21st, showed that the Treasury balance amounted to 7,271½ millions, of which over 4,000 millions must be ordinary revenue, independent of the 3,200 millions "loan without interest" which was advanced by the Bank to the Treasury on stabilisation, to furnish it with "working capital" and deliver it from the necessity of borrowing to meet current needs. The Treasury's balance now amounts to more than the whole of the Bank's private deposit and current accounts, which are returned at 6,282 millions. The Caisse d'Amortissement is also well supplied with surplus funds, its balance last week being over 5,193 millions. Last week's statement disclosed that the Bank's huge stock of forward exchange had been reduced to a remaining balance of 25¼ millions, so that it may be assumed that by this time, with the end of the year, this item has ceased to figure. In view of the fact that the Bank during the week ending December 21st disposed of 374⅜ millions of its stock of 13,656 millions of foreign exchange, plus 98 millions of forward exchange, it is to be inferred that these available resources have been devoted to further gold purchases. It is unlikely, as the dollar is now appreciably below gold export point and sterling below metallic parity, that the Bank sold its exchange in the open market; therefore, a further increase in the gold reserve may be expected to be announced. The Bank's stock of gold, which was increased by a further 112½ millions during the week, totalled 31,834½ millions on December 21st, and its available balances abroad to 13,656½ millions. The Bank's sight engagements were covered on December 21st up to 39.32 per cent. by gold, as against 38.19 on November 9th, the obligatory legal minimum being 35 per cent.

Steel and iron production figures for November, which are made public to-day, disclose a fractional falling off in the output of both products, but in no way diminish the certainty that 1928 will rank as a year of the greatest activity ever known in the French metallurgical industry, if not as one of the greatest profits. The total output of iron in November was 850,000 tons, as compared with 857,000 tons in October last, 762,000 tons in November, 1927, 789,000 tons in November, 1926, and a monthly average of 749,000 tons in 1913 (Alsace-Lorraine included). The total output of steel was 800,000 tons, as against 834,000 tons in October last, 682,000 tons in November, 1927, 714,000 tons in November, 1926, and 559,000 tons (Alsace and Lorraine included) in 1913. The number of blast-furnaces in activity in November was 152, as compared with 150 in October, 140 in November, 1927, 155 in November, 1926, and an average of 190 (Alsace-Lorraine plants included) in 1913. The market remains very firm, certain quotations have again risen, and delivery dates are very long.

GERMANY.—NEW YEAR'S OUTLOOK—CAPITAL—INDUSTRY—FOREIGN TRADE—RAILWAYS.

(FROM OUR CORRESPONDENT.)

BERLIN, January 1.

THE domestic political outlook for 1929 is uncertain. The most important immediate problem is the Budget for 1929-30. The Finance Ministry has also to put through the Bill unifying local taxation methods. and to frame a new *Ausgleich* with the States and municipalities. A Bill for the Protection of Labour and a Bill purporting to put through the recommendations of the Geneva Economic Conference of 1927 (including the duty reductions) have to go through, and the Ministry of Justice has before it a general reform of the criminal law.

The general expectation is that trade will develop much as in 1928, with a further moderate decline of industrial activity and probably a further expansion of export trade. The reaction from the trade boom of 1927, of which signs were already visible in the autumn of that year, does not yet seem to have run its full course. Production of the heavy industries is expected to decline further, but there are some signs that the finishing industries, which last year suffered from the saturation of the home market, may recover. It is officially estimated that home selling in 1928 was maintained at very near the high level of

THE BRITISH LINEN BANK.

Every description of Banking Business transacted.

1927, so that the "reaction" was really nothing more than a slowing down of the natural increase of consumption. Money rates, which in 1928 remained near the high levels reached in 1927, are expected to decline, but there is no prospect of much improvement in the home capital market, and the volume of long-term borrowing, which has varied within very narrow limits since 1925, is likely to be maintained if foreigners are willing to lend. It is not considered that the expected Reparations settlement will have any great immediate effect upon trade.

At the end of the year the demand for money was normally heavy, but it was easily met, day loans at 8½-9½ per cent., month loans 8½-10 per cent., commercial bills with bank endorsement 7 per cent., and private discount 6⅝ per cent. The Reichsbank seems to have been subjected to heavy pressure in the last week of December, but the return for the 22nd shows that it was well prepared. Discounts usually rise in the third week of December, but this time the increase was only 43 million marks, as against 146 million marks in the same week of 1927; and the whole discount portfolio is only 1,934 million marks, as against 2,417 million marks a year before. Advances are also slightly lower. The gold reserve rose further by 39 million marks to 2,729¼ million marks; and the combined gold and exchange cover for Reichsbank and Rentenbank circulation, which is 4,996 million marks, against 4,746 million marks a year ago, is 57.7 per cent., against 45.1 per cent. The Reichsbank is reported to have bought 10 million roubles more Russian gold, making altogether purchases of 30 million roubles in the last two months. The monthly balance-sheets of the seven chief Berlin banks for November 30th show an increase in deposits of 315 million marks, as against an increase of 300 million marks in October. In the first eleven months of 1928 deposits increased by 1,786 million marks, of which a large part consisted of foreign funds.

Home loans in December totalled 38 million marks, capital increases of joint stock companies 148 million marks, capital reductions 27 million marks, foreign loans 65 million marks. Most of the foreign borrowing of 1928 falls to municipalities, electricity works, and agriculture. Borrowing by industry was small. The United States lent 1,153 million marks, Holland 186 million marks, and Great Britain 135 million marks.

The wholesale prices index number for December 19th is 140.3, as against 140.0 for the two preceding weeks. Coal production in the last reported week shows a further increase. Production in January-November inclusive was 139,056,955 metric tons, against 140,359,200 tons in the same months of 1927; lignite 152,124,623 tons, against 136,673,193 tons; coke 31,139,843 tons, against 29,321,073 tons. Coal export is increasing, and in January-November inclusive was 21,748,000 tons, against 24,975,000 tons in the same months of 1927. The arbitration decision in the shipbuilding wages dispute has been rejected, and the strike, which began three months ago, continues. Potash sales in 1928 are provisionally returned at 1,424,000 tons (of pure potash), against 1,238,000 tons in 1927, the value at 220,000,000 marks. Sales at home were 862,000 tons, against 779,000 tons; exports 562,000 tons, against 459,000 tons. Potash was increasingly sold in the form of mixed fertilisers; and the I.G. Farbenindustrie, the chief of several mixed fertiliser producers, is now the biggest single customer of the Potash Syndicate. Reports on the textile industries in 1928 complain of English, French, Czechoslovak and Belgian competition in woollen and

cotton manufactures, and in particular of competition from Alsace since the coming into force of the commercial agreement with France. Textile wages in France and Czechoslovakia are affirmed to be 30 to 50 per cent. lower than German. German spinners and weavers declare that they can compete with Alsace only if they cut prices below the profit margin. The woollen branch began the past year better than the cotton, but afterwards, apart from a brief seasonal recovery in the autumn, declined. The linen mills have partly gone over to other kinds of textiles, linen prices being too high for the consumer. The home flax production is stated to have covered only 33 per cent. of the demand in 1927, as against 60 per cent. in 1924. Import of boots and shoes in the first ten months of 1928 was nearly 60 per cent. higher than in the same months of 1927. The agitation for measures against Czechoslovak competition is increasing.

The foreign trade returns for November differ very little from those of October. The import figures for the eleven months of 1928 also closely resemble those of 1927, but the export figures show a large increase, which falls almost entirely to manufactured goods. The average monthly export of manufactures has increased as follows: 1924, 432 million marks; 1925, 552 million marks; 1926, 580 million marks; 1927, 627 million marks; 1928 (eleven months), 707 million marks. Comparative figures for 1928 and 1927 are:—

	Marks (000's omitted). January to February. 1927.		1928.

The Railway Corporation's provisional report for 1928 returns receipts at 5,039 million marks, or 4.7 per cent. more than in 1927. The corporation has had to meet 651 million marks extra annual expenditure. The advance in fares and rates will yield only 250 million marks, and in order to balance accounts it will be necessary to postpone necessary works.

AUSTRIA.—FOREIGN LOAN—TAXATION—STOCK EXCHANGE—HOUSING—TRADE.

(FROM OUR CORRESPONDENT.)

December 21.

THE preparation for the taking up of a State investment loan of 100 million dollars in America has progressed considerably. After a very short deliberation the American Congress approved the Bill, rejected in spring, concerning the participation of the United States in the London Relief Debt Agreement, and the relinquishing by America of the right of seizure. As is well known, Austria has undertaken in the London Agreement to make payment of 856 million schillings in 40 yearly instalments from 1929. The instalments are not equal; they amount to 1.15 per cent. for each of the first five years, 1.87 per cent. for each of the succeeding ten years, and for each of the last 25 years 3.02 per cent. of the original principal. The present value of these commitments is calculated at 315 million schillings. It is assumed that the Senate, which must also pass this Bill, will raise no objection, so that only Italy's participation is still required. In view of political relations, it is not certain whether Italy will prove accommodating, but in financial circles it is believed that the releasing of the proceeds of the loan will nevertheless be possible; it is reported that an understanding in this direction has already been arrived at with the American financiers.

The burden of taxation and the social imposts, which latter, on account of a rearrangement of the sick benefit contributions, require a further payment of 14 million schillings per year from the employers, are among the outstanding causes of the unsatisfactory balance-sheets of industrial enterprises. According to the most recent statistics, covering the year 1926, out of 515 industrial stock companies no fewer than 175 closed their books with a loss. At the same time taxes have been further increased. In connection with the new arrangement in the matter of distributing certain revenues among the State and the individual Federal countries, an increase of the national tax on beer from 6 schillings per hectolitre to 9.8 schillings is contemplated, and the price of beer has risen correspondingly. In order to check importation from Czechoslovakia, the tax on sugar has been raised from 10 to 16 gold kronen per 100 kilogram. As a result the retail price of sugar, which is still lower in Austria than in any other country in Europe, has gone up by about 10 per cent. A further considerable burden is threatened in the form of increased rates on the Federal Railways, contemplated for March or April. Some passenger fares for short local journeys will be put up by 40 per cent., in spite of the fact that omnibus competition is becoming increasingly keener. As the premiums paid up to now on express train fares, which on certain lines were very unjust, are to be done away with and incorporated in the fare, the increase in regard to the longer journeys in express trains is inconsiderable. Freight rates have also not been advanced uniformly. Bulky articles, for example, coal, wood, and building material, have been selected for special attention. In future, passenger fares will amount to 108 per cent. of pre-war rates and the goods tariff to 123 per cent.

Stagnation still prevails on the Vienna Stock Exchange, though it was interrupted at the beginning of the month by a sharp decline in several Polish industrial shares. A foreign group of doubtful character had been operating for months in the shares of the Golleschau Cement Works, which were quoted in February at 110 schillings, and had driven the price up until the shares were quoted at nearly 500 schillings in November. The reason given for the advance was a prospective issue of gratis shares. When it became known that no issue of gratis shares was contemplated, a bear movement set in, and, owing to the limited capital of the speculators and lack of timely intervention, serious regression ensued. This occurrence forced two old banking houses into insolvency. The leader of the group of speculators was arrested, and criminal proceedings are also being instituted against several other persons who participated in the movement. For a while these events absorbed the whole interest of the market, and, even afterwards, business was restricted and changes in rates were minimal. That the general public has little interest in the Stock Exchange is evidenced by the circumstance that savings deposits are being steadily augmented, in spite of the slow formation of other forms of capital. In November the deposits rose by 19 million schillings to a total of 1,071 millions, while in October the increase was 13 millions.

The fight over the abolition of the Rent Restriction Act has reached a new stage. The Government has complied with the demand of the Social-Democratic opposition and submitted a housing programme for the erection of 6,000 dwellings per year for three years with extensive assistance on the part of the State. It is proposed to reanimate private enterprise in building, which has now been dormant in Austria for 14 years, by assuming the debt service for 60 per cent. of the cost of the new house building in the form of a secondary mortgage, which, in conjunction with the guarantee of the State, is to form the basis of obligations. The expenditure which the State will thereby incur is to be covered by an increase in the imposts for housing purposes, which up to the present have been collected by the municipalities; furthermore, those houseowners who acquired their property with depreciated money during the period of inflation are to pay a special impost. The Government aims, through a combination of the fostering of house building and a general increase of rents, at gaining a gradual and very modest

return on house property. In principle the Social-Democrats have accepted the housing programme, but they are still opposed to any increase of rents, in excess of the contribution to the fresh building, which would accrue to house owners. However, it is believed that a compromise will be arrived at on this occasion. A strong impulse toward animation of the building trade would be very beneficial to industry in general, which is showing all the unfavourable symptoms usual at this time of the year. In the course of November the number of persons in receipt of unemployment benefit jumped up by 33,000 to 155,000. This tendency continued during the first half of December, so that the number of unemployed in Vienna alone rose by 5,000 to 69,000. After the unsatisfactory state of affairs reported by retailers during the past two months, Christmas business has been fairly good, but at the best it will not surpass even the level of last year's Christmas trade. For some time now there has been an unfavourable tendency in foreign trade. In November imports showed an advance of 14.8 million schillings over October imports, and reached a total of 294.2 millions, while exports, on the other hand, declined by 13.6 millions to 193.3 millions. The result is a deficit of more than 100 million schillings, which is the highest for any individual month during the whole year. For the first 11 months of 1928 the deficit is 920.6 millions, which is 54.7 millions less than the figure for the corresponding period of last year, so that, in spite of the increase in the foreign trade figures, there is a slight improvement in the balance. The falling off in exports to Germany is particularly noticeable; the total for November is 10 per cent. lower than that of the same month of last year.

HUNGARY.—ECONOMIC PROGRAMME—FOREIGN TRADE—NEW TREATIES—AGRICULTURE.

(FROM OUR CORRESPONDENT.)

BUDAPEST, December 16.

THE Prime Minister, accompanied by the Ministers of Economics and Finance, attended the December session of the League of Nations. It is officially stated that their visit was intended to renew the contact with the League authorities, especially to meet the members of the Economic and Financial Committee. The friendly relations which were established at the outset of the reconstruction scheme have been maintained even after the cessation of the League's control, which clearly demonstrates how much the Hungarian Government appreciates the invaluable assistance rendered by the League. During the conversations in Geneva it is stated the Minister of Economic Affairs, Dr. Bud, acquainted the Economic and Financial Committee with the economic programme of the Government, which is the corollary and complement to the financial reconstruction so successfully accomplished by close collaboration with the League of Nations. The most notable features of the economic programme are the reclamation of the several hundred thousand acres of marshy land for cultivation, the afforestation of land unfit for cultivation, a vast roadmaking scheme, railway improvements, and electrification. There is also in progress a thorough revision of the railway tariffs, which at present seriously hinder agricultural export, and in accordance with the spirit of the recommendation of the World Economic Conference at Geneva, the autonomous customs duties will be reconsidered with a view to removing existing inequalities which are adversely affecting economic reconstruction.

Foreign trade returns disclose a heavy adverse balance amounting to 316 million pengös in the first ten months of the year, as compared with 300.5 millions in the corresponding period of last year. Imports totalled 969 millions, as against 939 millions; exports amounted to 652.9 millions, as against 638.9 millions. Business continues to expand, and large investment and building programmes account for the heavy imports, which were fostered by abundant foreign accommodation. On the other hand, the low world prices of agricultural products caused the farmers to withhold their stocks, so that exports were low. The large adverse balance is causing serious concern to the Government, and is discussed eagerly by the Press. The remedies suggested are even more depressing than the deficit in itself, which is not at all alarming, and easily explained if we take into consideration that Hungary borrowed abroad some 240 million pengös in long-term loans, while the short-term loans are estimated at about 70 million pengös, which figures very nearly coincide with the total deficit in exports of merchandise.

The stoppage of grain export is keenly felt, and agriculturists and merchants are blaming each other for the delay, while the industrialists take the opportunity of declaring that the future and the well-being of the country is in industrial protection. Fortunately, however, there is little prospect of such a disastrous change in tariff policy, and the Government is about to free the population from the onerous burden inflicted by the high protection of some industrial commodities. An analysis of the foreign trade figures reveals that the complaint of the textile manufacturers that the lowered tariffs are ruining the home industries and fostering the importation of foreign products, is entirely without foundation, for in the first nine months of the present year Hungary has imported 155.4 millions worth of textiles, as against 161.2 millions in the corresponding period of 1927, when the tariffs were considerably higher. On the other hand, Hungary has exported textile goods to the value of 32 million pengös, as against 20.7 millions in 1927, which clearly shows that excessive protectionism served only to delay efficient production, and to inflict an unnecessary burden on domestic consumers. As to the remedy of the deficit of the foreign trade, there are only two alternatives, either to cease borrowing abroad, or to promote exports. It is reassuring that the Minister of Economic Affairs intends to solve the problem not by prohibition and vexation on the imports, but by fostering the export trade. It should be remembered that, although the wheat surplus available for exports is some 6 million metric quintals more than last year, nevertheless exports in the first three months of the campaign amounted to only 969,700 quintals, as against 1,409,300 in the corresponding quarter of last year. The protective duties of neighbouring industrial countries greatly affect the natural trend of Hungarian agricultural exports, and are undoubtedly creating a serious trade dislocation in the Succession States, as the purchasing power of the population in the countries concerned is effectively impaired by uneconomic production caused by mutual fighting tariffs.

Negotiations for a tariff treaty with Germany are in progress. The absolute refusal of Germany to come to a veterinary agreement with Hungary is keenly resented, as it is at present impossible to export live-stock to Germany. Considering that the export of live-stock is the only way to pay for the imports of manufactured goods, it is probable that the negotiations will end in a deadlock. Tariff treaties with Italy and Poland were recently concluded, and at the same time a treaty of arbitration and conciliation was signed with Poland in Warsaw.

The Statistical Bureau has published interesting data as to the present state of indebtedness of agriculture. The total debt on June 30, 1928, stood at 972 million pengös (£35,000,000), which is approximately 8.2 per cent. of the aggregate value of the landed property concerned. The annual burden of interest and sinking fund is about 107 million pengös, which is much less than before the war. In the next two years some 200 million pengös will be available for the landowners as indemnity for the land expropriated in 1920. This will enable the farmers to repay their most onerous debt and to equip their land with up-to-date implements. The position of agriculture at present, in spite of the good harvest, leaves very much to be desired. The great discrepancy between prices of agricultural and of industrial products is world wide, but the position in Hungary is even worse than elsewhere as the result of industrial protection.

CANADA.—VALUE OF 1928 CROP—WEATHER AND BUSINESS—TIGHTNESS OF MONEY—STOCK MARKETS—GRAIN GRADING—AMERICAN PENETRATION.

(FROM OUR CORRESPONDENT.)

OTTAWA, December 18.

THE Dominion Bureau of Statistics in its latest crop survey now intimates that the value of the field crops of Canada for the year 1928 will be rather lower than the figure for 1927. Appended are the comparative values

of the principal field crops for the last three years :—

	$
1926	1,104,983,100
1927	1,134,192,600
1928	1,051,043,000

The following are the particulars of the chief crops, the comparative figures for 1927 being given in brackets :—

	$	$
Grain crops	733,845,000	(797,536,600)
Potatoes	45,227,000	(54,341,000)
Hay, clover, alfalfa, &c.	189,026,000	(206,781,000)
Root and fodder crops	82,945,000	(75,534,000)

The decline is not serious in the aggregate, but it is very disappointing in view of the superabundant yield of grain which the prairie provinces showed at the end of August. The heavy prairie crop was expensive to harvest, and now the Western farmers are complaining that it is one of the least profitable of recent years. The general fall in grain prices which has taken place is largely responsible for the decline in the aggregate value of the crop, and the Bureau's bulletin gives the following comparative average grain prices at the point of production :—

	1926.	1927.	1928.
	$	$	$
Wheat	1·09	1·00	0·79
Oats	0·48	0·51	0·46
Barley	0·52	0·66	0·54
Rye	0·77	0·81	0·76

The closing of navigation on the St Lawrence, which blocks one outlet for Canadian grain, has during the week ended December 8th materially lowered the car-loading figures for grain, but their decline is responsible for practically the whole decrease—from 84,225 to 75,359 cars—which was shown by last week's car-loading bulletin, and the movement of general merchandise shows little abatement. Mail order houses and all classes of shops report that their volume of Christmas trade is well ahead of last year's level, and that the public has apparently lots of ready cash to spend. It has been explained above that the farming community will probably have rather less purchasing power than a year ago, but yet the orders being received from the rural districts indicate a generally prosperous condition. Most manufacturers are operating on a satisfactory scale, but the newsprint industry, despite the recent conferences, has obviously not surmounted all its difficulties, and the woollen textile mills are still complaining about the severe effects of foreign competition, which keeps their operations well below capacity. The lumber business has better prospects than it has had for some years, and there will be a larger cut of timber this winter. One stimulus to the demand for first-rate lumber is the steady development of the aeroplane industry; commercial aviation is making great headway in Canada, and promises to play an important part in the commercial life of the Dominion. Some of the Canadian companies engaged in this field have made advantageous affiliations with large American corporations, and the Canadian Vickers Co., of Montreal, which was originally a shipbuilding concern, is turning its energies to the construction of aircraft, and has already substantial orders on hand.

The tightness of money which has prevailed for some months has lately been accentuated by the desire of the banks to make a strong cash showing at the end of the year. In banking circles the feeling prevails that too much money is at present tied up in speculative ventures, and the banks are persevering in their policy of trying to restrict marginal trading in stocks. With the exception of special favourites like International Nickel and Brazilian, the local stock markets have been both dull and weak during the past week, and for the week ending December 15th the Bureau of Statistics "Investors" Index of industrial common stocks was 227.0, as compared with a figure of 236.3 for the previous week. Commodity prices show a slightly downward tendency, and the Bureau of Statistics' index number of wholesale prices fell 1.6 points in November, the figure being 148.6, as compared with 150.2. Forty-five price quotations were higher and 43 lower and 148 unchanged; the declines were of greater importance, the most serious being in the classification "vegetables and their products," which fell from 145.9 to 143.3.

The question of the grading system now employed for Canadian wheat and other grain has been a thorny topic in grain trade and farming circles for some time past, but it has now been brought to a head by a letter addressed to Premier Mackenzie King by Mr F. W. Urquhart, the secretary of the Liverpool Corn Trade Association. Admittedly, the quality of the western wheat crops of 1927 and 1928 has been poor as the result of weather damage, and the consequence has been an intelligible anxiety to raise grades to as high a level as possible; but the charges made in the letter of the association are too grave to be neglected. Mr Urquhart's letter begins by intimating his instructions to call attention to the unsatisfactory grading of the Canadian crop of 1928 and its predecessor, and it recalls previous representations made to the Canadian Board of Grain Commissioners with a view to a reform of conditions. But apparently little improvement has resulted, and Mr Urquhart intimates that complaints, whose justice has been carefully investigated, are still coming in about recent shipments where the quality of wheat was distinctly inferior to what the Government certificates guaranteed. The letter then proceeds thus :—

> In years gone by complaints were few and far between, but since the autumn of 1926 they have been numerous and the confidence which the trade used to place in Canadian certificates has been badly shaken. My directors find that the whole United Kingdom and Continental markets are becoming very dissatisfied with the arrivals of wheat under "Certificate Final," and unless matters improve there will be strong agitation to discontinue this method of trading and to insist upon buying on a standard sample in the same way as trade is done with other countries such as the Argentine and Australia.

The letter closes with an expression of hope that the Canadian Government will at once authorise an investigation productive of reforms in the present system which will meet the constructive criticisms and suggestions already submitted by the British grain and milling trades.

This threat by the Liverpool Corn Exchange to refuse to accept Canadian certificates would, if acted upon, deal a very serious blow to Canada's grain trade and have far-reaching consequences upon the whole economic life of the Dominion. A Royal Commission appointed by the provincial Government of Saskatchewan is investigating the grain trade, and if it evolves a report in the near future its contents may help the Federal Government in the formulation of a reform policy which will satisfy the British critics of the present system.

The process of the absorption of Canadian enterprises by great American corporations still goes merrily on, and the latest instance is the acquisition by the Borden Company of New York, one of the great dairy corporations of the United States, of the Chateau Cheese Company of Ottawa. This latter concern has since 1922 built up a huge business in the manufacture and distribution of cheese, butter, and milk, and it is understood that the price paid by its new American owners is in the vicinity of $3,000,000.

ARGENTINA.—CROPS—RAILWAYS—MONEY—FREIGHTS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, December 4.

THE general outlook throughout Argentina may be summarised as satisfactory. The crops of wheat and linseed are reasonably safe and well above the average as regards yield. Extraordinarily high estimates have been made public in connection with both crops by private individuals, a possible yield of 2,500,000 tons linseed and 7,500,000 tons wheat being suggested. Harvesting is in full swing in Buenos Aires, Entre Rios, Cordoba, and Santa Fé, nor is there likely to be any appreciable reduction in final results owing to agrarian strikes or cyclonic damage in the south of Cordoba and parts of Santa Fé province; the effects of these local difficulties tend to be exaggerated, especially given the superabundance of wheat and the reasonable fear that prices will keep low. Following this bountiful yield comes promise of a proportionately heavy maize crop, hence the activity with which railway interests are increasing their stocks of locomotives and wagons, and adding to their storage accommodation at the up-country stations.

The managers of the various railway companies, through their legal representatives, addressed a lengthy and reasoned reply to the queries put by H.E. President Irigoyen in the course of the interview which he held with the railway managers a month ago. It is characterised by a readiness to put into effect all improvements recommended which will tend to cheapen and expedite the movement of the country's produce, and the tone throughout gives further evidence of the good understanding prevailing. Extensions, amounting in all to 1,000 kilometres, are projected by the Southern system, and it is also reported that considerable activity may shortly be expected on the Central Argentine and other lines.

Financially, the present position is characterised by easy money, high prices for investment stocks, and little private enterprise. Bank deposits are rising, and as yet no demand for money has set in on behalf of the cereal exporters. Rates for discounts and advances are still 5½ to 6 per cent. per annum, and it is thought that this ease will continue well into the New Year. Exchange rates indicate slight weakness in the Argentine dollar, the latest quotations, banks' cable drawing rates, being 47 11-32 on London and 104.50 on New York. Heavy drawings on behalf of importers, dividends, and the Argentine Government fully explain this recession, which will, in all likelihood, be more than recovered by the middle of January. There has been a steady increase in imports during the last half of the current year, and as 90 days is the customary credit term, many obligations are now due to be remitted. Excellent business is reported in the retail trades, but there is a distressing absence of British manufactured articles in nearly all the smaller lines; an absence explicable only on the ground that such articles are either not known or are not suitably handled for export. This is all the more regrettable inasmuch as the acquisitive capacity of the private individual in Argentina is likely to be much increased in the course of the next twelve months, and prosperous production means freer outlay all round.

Whether this prosperity will enable the country to borrow at home some of the funds that are bound to be needed in order to carry out the various public works projected is difficult to say. The advisability of so doing is obvious, and it will be interesting to see whether the Province of Cordoba, in the market for $65,000,000 paper, can meet its desire for consolidation of existing debts without going abroad. Other provinces are also reported to be seeking funds, but as yet there is no news of any forthcoming national loan. Cereal quotations at date read :—Wheat, $9.35 paper p. 100 kilos spot, with $9.50 for January; maize, $8.90 and $9.15; linseed, $15.85 and $15. News that Spain will be in the market for 150,000 tons of maize, to be bought under the recently arranged credit, has given tone to the market, the more so as stocks of this grain are rapidly falling. It is also said that shipments of wheat to the Peninsula, thanks to the same financial aid, will also be made very shortly. In the freight market tonnage was freely booked during the beginning and middle of November, and rates are firmer on the basis of 24s San Lorenzo range to U.K./Cont., November-December loading, and 25s has been booked for January loading at Santa Fé, with 24s Bahia Blanca to Valencia/Barcelona, December loading. Berth rates are also firmer on the basis of 20s grain to U.K. If the anticipated heavy flow of grain towards the end of December is realised there may be close on a million tons of cereals and seed to be shipped, in which case a further upward movement in freight rates may confidently be predicted.

Letters to the Editor.

COAL TRADE PROBLEMS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Perhaps the aftermath of Christmas has induced in me an abnormal cynicism, but I seem to detect in your correspondent's article on Coal Trade Problems exemplification of the proposition from which discussion of international trade finds it difficult to escape, to wit, that political interferences with trade are like onions at dinner—you like your own but detest your neighbour's. For your correspondent, claiming that in an "unhampered application of the law of comparative costs" alone lies hope for the coal trade, cites as evidence "direct and indirect subsidies" to various Continental mining industries, leading off with "preferential transport conditions" in Poland and Germany; yet he is silent concerning the artificial stimuli of the same nature granted in this country. The subsidy of 1926 to the coal-mining industry is of the past, and is most happily forgotten. But since December 1st last Exchequer money has been used to compensate the railways for freight rebates on exported coal, and coal delivered to iron and steel works, amounting to some 30 per cent. of the total carriage charges; the mining industry is likewise benefiting from a 10 per cent. rebate on the carriage charges on pit props, &c., and from an anticipation by ten months of the relief of three-quarters of the rates on private mineral railways. Is your correspondent really agitating for the abandonment of these "indirect subsidies," whose international reaction we have not yet been able to perceive?

There is no need nor ground for using the plaudits given by the coal industry to these sops as justification for further governmental interference with international trade. Rather the facts suggest that co-operation to modify international competition "within the limits of the present distinctive national policies" is more necessary than ever, and that the Government has sadly erred in confusing with gratuities to certain forms of industrial endeavour a splendid opportunity for reform in principle of the whole rating system. In default of these things, it is not very helpful for pot to call kettle black.—I enclose my card, and remain, yours, &c.,

Oxford, December 31st, 1928. SOCTUS.

POTTERY AND SAFEGUARDING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The Board of Trade figures for the ten months ended October 31, 1928, compared with the same period last year, are instructive, and prove conclusively the fallacy of the Free Trade theory that if you protect your home trade your export trade must suffer. The figures prove precisely the contrary.

The china trade, which has been safeguarded since April, 1927, shows a decline in imports from £473,684 in 1927 to £268,862 in 1928, or a drop of getting on for 50 per cent., while the exports have risen from £378,481 to £388,377, or nearly 3 per cent. increase.

How different is the case with earthenware, which is not safeguarded! For the month ended October 31, 1928, the imports have grown from £25,337 last year to £37,000 this year, an increase of 50 per cent. I am unable to give the figures for the whole year of 1927, as until May of that year, when the duty had been put on china, the china returns were included in general earthenware, making a comparison impossible, but the facts are that the imports in May, 1927, which were round about 7,000 cwts, went up to 15,000 cwts in October, 1928, or an increase of 100 per cent. On the other hand, exports have fallen from £2,743,681 for the ten months ended October 31, 1927, to £2,318,469 for the corresponding ten months of 1928, or 15 per cent.

So here you have a safeguarded industry reducing its imports (thereby improving its home trade) and increasing its exports, while, on the other hand, the non-safeguarded industry loses 15 per cent. of its exports while its imports have increased by 100 per cent.—not much doubt as to which policy is most beneficial to the workers of this country.—Yours faithfully,

T. B. JOHNSTON.

The Bristol Pottery, Fishponds, Bristol, December 29th, 1928.

[The differentiation between china and earthenware in the Board of Trade returns before and after the imposition of the duty on china has resulted in a confused statistical position from which Mr Johnston draws conclusions with more temerity than logic. For example, if earthenware and china were mixed up until May, 1927, what value is to be attached to his china figures for January-October, 1927, when he professes his inability to give the earthenware aggregate for the same period?

Admittedly imports of china have fallen since the imposition of the duty, but we cannot agree that this has any bearing on the slight increase, quoted by Mr Johnston, in the aggregate value of exports. Before the duty the average landed value per cwt of our china imports was roughly £3 10s, whereas this year the average price (landed value, before payment of duty) works out at about £6. The duty, which is reckoned by weight, has therefore obviously excluded the cheapest forms of china. Now the average value of our china exports is £20 per cwt. Apart from the fact that, reckoned by weight, exports in 1928 (January-October) are shown by the Board of Trade returns to have declined by 2,000 cwt, or 10 per cent., it is difficult to comprehend how exports of this expensive china could benefit by excluding cheap ware at one-sixth the price. As regards earthenware, any increase in imports which has occurred is a natural consequence of the

loss through "Safeguarding" of cheap imported china, though in fact imports have not expanded to a point sufficient to replace the chinaware excluded. The British export trade in earthenware is depressed through having to contend increasingly with Continental Felspar china in foreign markets. It cannot be seriously suggested that this competition could be met by a British "Safeguarding" duty on earthenware imports.—ED. *Econ.*]

DRESS GOODS AND SAFEGUARDING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In view of the prominence into which the industry is being currently placed by reason of the application for Safeguarding, I think it would serve a good purpose that your attention should be drawn to the need for a correct terminology in references to it. So often the term "woollen" is employed when "worsted" is meant. I give a good example, which is a successor of many previous ones—on page 1155 of your issue of December 22nd, when you head an article "Safeguarding of Woollen Dress Goods." The application is essentially put forward by the Bradford and District Manufacturers' Federation, which deals entirely with worsted dress goods, and, as should be well known, there is a very clear distinction between the two processes woollen and worsted.

On the grounds of traditional observance of correctness in terminology on the part of your publication, I feel I may be permitted to draw your attention to this. The correct term which should be employed with regard to all matters affecting the machinery operation of the wool fibre should be the "Wool Textile Industry." This then safely covers all branches which specialise in different forms of its manipulation.—Yours truly,

F. VERNON WILLEY.

50 Parliament street, Whitehall, S.W. 1, January 2nd, 1929.

Books and Publications.

THE FREEDOM OF THE PRESS.*

RECENT events in the publishing world have added much to the interest with which Mr W. H. Wickwar's story of "The Struggle for the Freedom of the Press, 1819-1832," will be received. Using as materials the multifarious literature of the time, newspapers, books and pamphlets, the invaluable collections of news cuttings, &c., made by Francis Place, the Home Office records, and a variety of minor sources, he has compiled a scholarly monograph on an exceedingly important aspect of the history of democracy. This summary statement does scant justice both to the immense industry he has displayed in collecting his materials and the not less admirable way in which he has selected those most relevant and most likely to add interest to his narrative.

The story is a remarkable one. It is set in those troubled times when the fear of popular disturbances after the fashion of the French Revolution derived plausibility from the acute economic distress and political inefficiency which followed a long and exhausting war. The crisis at once stimulated the creation of a cheap popular Press, a thing hitherto practically unknown, and was rendered more acute by the existence of that Press.

In an atmosphere so unfavourable to the expression of any opinions deviating from political and religious orthodoxy, it did not require much to set on foot prosecutions for criminal libels. Whigs differed but little from Tories in their outlook on the problem, and if help were necessary voluntary societies were ready to back them by supporting the expenses of a prosecution.

The story of unjust oppression, of often savage penalties in the shape of fines, imprisonment and even transportation endured by a number of poor and obscure men, and the constitutional victory which they achieved by their tenacity, is the central topic of Mr Wickwar's book. The hero of the story is Richard Carlile, a Devonshire metal worker, who, as Professor Trevelyan has said, "suffered and achieved more for the liberty of the Press than any other Englishman of the nineteenth century." The story of his energetic devotion to the cause of freeing the Press from the fear of political and religious prosecutions, a devotion almost amounting to religious fanaticism, is one of extraordinary interest.

From a wider point of view the book is a notable contribution to the history of public opinion in the days before the Reform Act of 1832. As Mr Wickwar says, "the reform movement and the struggle for the freedom of the Press were two aspects of a single movement to secure the development of the constitution in accordance with the desires of the people."

Present-day newspaper problems are of a different order, as the recent articles on "The Contemporary British Press" in the *Economist* have shown, but the story of their development may still be read with profit. To the study of this development, as to the study of the development of the constitution, Mr Wickwar has contributed an admirable book, which will be widely drawn upon by future students of the period.

* "The Struggle for the Freedom of the Press, 1819-1832." By William H. Wickwar, M.A. Royal 8vo, pp. 325. Allen and Unwin. 16s.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

Germany Under the Dawes Plan. By Max Sering. (London) P. S. King, Limited, 14 Great Smith street. 10s 6d net.

This very timely examination by a Berlin professor of the working of the Dawes Plan begins with an historical introduction which goes back to the Peace of Versailles and ends with a restrained but forcible discussion of the outlook. Professor Sering's speech before the Agricultural Commission of the World Economic Conference is appended.

Great Western Ports, 1929. (Cardiff) Great Western Railway, Chief Docks Manager's Office.

This handsome handbook, lavishly equipped with photographs, maps and plans, contains full information relating to each port on the Great Western Railway system, including equipment, accommodation, rates and charges, and statistics of imports and exports. There is also a number of interesting trade articles.

The London Post Office Directory for 1929. (London) Kelly's Directories, Limited, 186 Strand. 55s.

This directory is indispensable to any office. It includes private residents', trade, banking and commercial directories, and there are several useful minor features, such as a map of London and a list of parking places.

The Bankers' Magazine. January, 1929. (London) Waterlow and Sons, Limited, London Wall. 2s 6d net.

The current number includes articles on "The Fusion of the Treasury and Bank of England Notes," "Monetary Policy and the Country's Trade," and "Whole-Life or Endowment Assurance."

The Scottish Bankers' Magazine. January, 1929. (London and Edinburgh) William Blackwood and Sons, Limited. 1s 6d net.

Special articles in this issue are: "The Cosmopolitan Banker," "The Development of Bankers' Repositories," and "Stamp Duties on Stock Exchange Securities."

Foreign Affairs. January, 1929. (New York) 25 West 43rd street. $1.25.

Among a number of interesting subjects this issue includes articles on: "The Threat of Anglo-American Rivalry," "Latin America, Europe and the United States," and "The Rhineland Occupation."

The Hibbert Journal. January, 1929. (London) Constable and Co., Limited, Orange street. 2s 6d net.

Articles of economic interest in this issue are: "The Ethics of Leisure," by Dr Jacks; "The Ethics of Investment," by W. S. Hamilton; and "Labour a Manifestation of the Devil. A Reply to Mr Lethaby," by Hugh P. Vowles.

Commercio. Dicembre, 1928. (Rome) Tipografia della Camera dei Deputati. Ditta Carlo Colombo.

In addition to the numerous indices and other regular features this number contains articles on: "Il Commercio nell' Ordinamento Corporativo," "Caratteristiche Regionali della Industria et del Commercio," and "La Proprietà Commerciale della Clientela."

Il Commercio della Sicilia nel 1927. (Palermo) Industrie Riunite Editoriali Siciliane.

A useful collection of statistics relating to Sicily's trade with the rest of the Kingdom and with other countries. There is a brief section dealing with the effect of stabilisation on Sicilian trade.

British Industries Fair, 1929. *February 18th-March 1st.* (London) Department of Overseas Trade, 35 Old Queen street.

This advance copy of the catalogue and guide to the British Industries Fair, February 18 to March, 1929, has been issued in time to enable oversea buyers to receive it before they leave for England. It contains a descriptive list of the exhibits, which are indexed in nine languages.

Capital. December, 13, 1928. Containing special supplement on Indian Industries and Trade. (Calcutta) 1 Commercial buildings, Clive street. 3s.

The special supplement to this issue contains some thirty-four illustrated articles on Indian industries and trade, and constitutes a valuable survey of a very wide field.

The Stock Exchange.

BRITISH INVESTMENT TRUSTS.

ONE of the most significant features of last year's activity in the new issue market was the number of invitations made to shareholders and the public to subscribe new capital for investment trust companies. Our records reveal that offers coming under this category reached the considerable total of £31,450,000, an amount equal to 8½ per cent. of all the money publicly raised during the year, and twice the total of London borrowings of either foreign Governments or British corporations. Another significant fact has been the development of the investment trust company in the United States and Canada, in which English capital has to some extent participated. For example, the London Canadian Investment Corporation was formed last year under the auspices of leading Canadian financiers to provide a channel for British investment, under expert guidance, in Canadian enterprises. The following table shows the investment trust company issues on the London Stock Exchange since 1923:—

INVESTMENT TRUST CAPITAL ISSUES.
(£'000.)

	1923.	1924.	1925.	1926.	1927.	1928.
Ordinary	3,651	8,294	7,808	14,237	12,142	23,276
Preference	17	20	1,669	771	1,014	2,284
Debentures	962	..	1,322	302	1,793	5,890
	4,630	8,314	10,799	15,310	14,949	31,450

Two good reasons may be adduced for the popularity of the investment trust in a period of general "liveliness" on the Stock Exchange. On the one hand the mixed experiences of large numbers of non-professional investors at such a time are the best possible advertisement of the advantages of a policy of pooling and spreading investment risks under skilled management; and, on the other hand, the element of public "trustfulness," which is so marked a feature of every boom, helps to obviate the reluctance of many people to give what is, in fact, a blank cheque to the directors of these companies for the investment of their resources.

A new investment trust company must, of course, stand or fall by its board of directors. Good management is everything, and the "connections" of the directors are the guarantee that the new company will get its share of first-class underwriting business. There is much to be said for, as it were, backing the horses out of the well-known "stables"—that is, investing in the companies only of the well-known "groups" in the investment trust company world. From time to time these "groups" will form new companies and give the investor the opportunity of acquiring stock at or near par. For example, companies with the following managements are deservedly popular in the market—Robert Fleming, Hon. A. O. Crichton, A. H. Wynn, W. S. Poole; and, among the newer companies, those of E. de Stein, Thomson McLintock, and the "Lake View" group. Among the best known Scottish groups are Shepherd and Wedderburn, Martin Currie and Co., Grahams, Rintoul, Hay, Bell and Co., Wallace and Guthrie, and Moores, Carson and Watson, while the Alliance (Dundee), and British Assets, under Mr Ivory's management, stand out as among the most successful of individual companies. There are others about which the investor could be informed by any responsible firm of brokers. Companies coming from such "stables" can, at any rate, be said to possess good connections and management.

Security and earning capacity are very properly the first consideration of trust company directors. Profits made by the sale of appreciated shares are invariably used to strengthen the capital position. Hence depreciation in the market value of securities is only regarded with serious concern if it is held to be due to curtailed earning power rather than to a general depressed tone on the stock exchanges or to market manipulations. The wide distribution of a trust company's capital among different securities—in general practice not more than .1 per cent. of the capital being invested in any one security—makes for the elimination of market risks. The strongest companies pride themselves on the spreading of their investments among different industries, types of security, and parts of the world. One peculiar feature of trust company investments is the cross-holding between trust and trust. In 1928 out of a nominal investment holding of 25 companies of all sizes, which totalled £43.8 *millions*, £2.8 *millions*, or 5.2 per cent., represented nominal holding of shares and stock of other investment trusts.

It is interesting to compare the respective capital and revenue positions of some of the trusts connected with the groups we have mentioned. The following figures are taken from 1928 reports:—

CAPITAL POSITION.

Company.	Year Formed.	Group.	Total Paid-up Capital and Debentures.	Including Ordinary Stock.	Reserves and Carry Forward.	Gross Revenue less Income Tax.
			£	£	£	£

* Including rents, salaries, fees of directors, auditors and trustees, &c.

It must be realised that the "visible reserves" shown here are no measure of a trust company's financial strength. "Hidden reserves" created by writing down the cost of investments out of capital profits are often very considerable. For instance, British Assets reported that a valuation of the assets showed a large surplus over the capital, reserve funds and carry-forward, which had been increased in the last full year by £600,000. This trust has also made the distribution of capital bonuses a feature of its policy, a fact which goes to explain the relatively low yield on its stock. The tables set out the case for a purchase of investment trust securities, since with a continuance of progress dividends should eventually rise to the level of current earnings. The fact that the mere size of the company has no necessary connection with managing expenses is borne out by these figures, which show that the two largest companies had respectively the highest and lowest proportionate expenses.

It is instructive to compare the above companies with the so-called Co-operative Investment Trusts, which have been much criticised for paying high dividends too early in their career, a policy which precludes the building up of large reserves. In its last report, for instance, the largest of them, the First Co-operative, noted a depreciation of its investments below book value of £34,210,

which must be set against total reserves amounting to £65,214 on a paid-up capital of £1,408,720. It will be seen from the following table that the "co-operative" arrangement, whereby the remuneration of the directors is maintained at a fixed percentage of the distributed profits, does not on the whole reduce the cost of management. The six directors, who are the same for all three companies, received between them £14,254 in the course of the year, while £14,436 for other expenses raised the expense ratio to over 1.2 per cent. of the average paid-up capital.

FIRST, SECOND AND THIRD CO-OPERATIVE INVESTMENT TRUSTS.

	Paid-up Capital.	Management Expenses.	Directors' Remuneration.	Total Expenses as Percentage of Capital.	Div. on Ord. Shares % p.a.	Investment Reserves.	Other Reserves and Carry Forward.
	£	£	£				
First Co-operative—							
To Jan. 31, 1928	1,262,845	3,184	4,303	·59	7	35,000	34,008
To July 31, 1928	1,408,720	4,682	4,569	·67	7	35,000	40,214
Second Co-operative—							
To March 31, 1928	907,111	2,190	1,623	·42	7	..	21,063
To Sept. 30, 1928	990,679	3,675	3,280	·80	7	..	25,136
Third Co-operative –							
To April 30, 1928	84,125	397	152	·65	7	..	2,865
To Oct. 31, 1928	106,925	308	327	·59	7	..	4,400

We cannot do more than note in passing that the rapid initial success of these Co-operative Trusts stimulated the efforts of many imitators, and a number of new Trusts have been started on similar lines, and with a similar appeal to the small investor, who would be wise to realise that in the vital respect of the capabilities of the management the merits of these new concerns vary immensely.

Investment trusts are perhaps the most important achievements of insurance against strictly commercial and financial risks. Economic theorists have been wont to regard such risks as uninsurable, in contrast to the more fortuitous and personal risks of accident, fire, shipwreck, and the rest. But this proposition forgets two things: that risk as an economic magnitude has no meaning out of relation to the person bearing it, and that all practicable insurance takes the form either of division of a big risk or of the merging of a number of small risks. The chances of fire are no less because an insurance company bears the loss; the chance of depreciation in a block of shares is no less because they are held by a trust company. But even if they result in a net loss, the fluctuations in a mass of shares cause much less misfortune if they are held in common by a large number of persons than if held by the same persons individually in separate blocks, and, of course, a good trust sees to it that such losses do not occur. Hence the managing expenses of the conservative investment trusts must be regarded as a very cheap kind of insurance premium against loss.

RAILWAY DIVIDEND PROSPECTS.

THE Home Railway traffic figures for the 52 weeks of 1928 have now been issued, and stockholders know the worst. Total goods and passenger receipts, in fact, show a decline of nearly 5 per cent. as compared with those of 1927, the distribution of the falling off among the main heads of revenue being as follows:—

(000's omitted).

Four "Group" Lines.		Passengers, &c.	Merchandise, &c.	Coal and Coke.	Total Goods.	Total Goods and Passengers
		£	£	£	£	£
52 weeks, 1927		80,920	71,347	36,339	107,686	188,606
52 weeks, 1928		79,220	66,987	33,265	100,252	179,472
Decline, 1928 as compared with 1927.	Amount	1,700	4,360	3,074	7,434	9,134
	Per cent.	*2·1*	*6·1*	*8·4*	*7·9*	*4·9*

The figures throw valuable light on a number of questions which have lately vexed the minds of many owners of railway securities. The lion's share of the loss of revenue has fallen, not on the passenger but on the goods side. It has been heaviest in respect of coal and coke, the depressed industrial condition of which is notorious. Further, "heavy" traffic, including steel in its various forms, in fact, accounts for much the largest part of the falling off in "merchandise, &c." In other words, the loss has been least where road transport competition, of which so much has been heard, might have been expected to produce its maximum effect, and greatest where the railway's "monopoly" powers are still most in evidence. Depression in the heavy industries has, therefore, been the main cause of the railway setback in 1928, the whole story enforcing the truth that "hard times" in our great export trades, if sufficiently prolonged, must inevitably have unfavourable reactions even on the so-called "sheltered" industries. It should be remembered, of course, that receipts during the first half of 1927 were swollen by extra traffic consequent upon the "catching-up" of coal-stoppage arrears in the heavy trades. It is instructive to compare the two years' figures quarter by quarter, as has been done in the following table, where the receipts for the London companies are also shown:—

(000's omitted.)

Increase or Decrease as Compared with 1927, in	Group Lines. Great W'st'rn	London and North Eastern	London Midl'nd and Scott'sh	S'uth'rn	Total, 4 Groups	London Lines. Metropolitan	Underground Electric.

Total for year	— 1,387	— 2,752	— 4,300	— 695	— 9,134	+ 88	+ 1193

The London companies, which are predominantly passenger lines, remain a law to themselves, and have continued to gain from the development of Greater London, where road and rail facilities have long been "co-ordinated." In the case of the four trunk companies, the table shows that the second quarter made the worst showing with last year, the subsequent months witnessing a certain slow but tangible progress, though the effect of the post-coal stoppage factor has to be taken into account. The companies actually carried *more* passengers than in 1927, but there was a considerable switching over from the full to the reduced fare classes, partly "automatic," in view of the extensions of cheap facilities, and partly representing the attraction of new traffic in response to the railway's efforts to meet road competition. Some of the earliest effects of the granting of road powers to the railways are seen in the association of the Great Western with the National Omnibus Company in the West of England (announced this week) and the arrangements by which road transport will "feed" the Midland and Scottish at Sheffield. Other features of 1928 have been the increased use of workmen's facilities and the decline in season tickets—events not altogether unconnected.

What are the probable dividend prospects next month? All the lines, except the Great Western, announced substantial economies in costs at the half-year, and it is understood that savings in the last six months have been somewhat greater, apart altogether from the 2½ per cent. "cut" in wages and salaries some weeks ago. In this connection the companies are slowly reaping the fruits of their programme of increased efficiency put into force earlier. In the light of these facts and the known position at the half-year, it may be very tentatively estimated that the Midland and Scottish will face a *net* traffic loss in the neighbourhood of £2 *millions*, and the North-Eastern of £1 to £1¼ millions; while the Southern will be approximately level with last year. The Great Western is an unknown quantity, but its net decrease may, for argument's sake, be put at £¾ million. As there will presumably be no fresh drop in interest receipts, the Midland and Scottish may be in a position to pay a final dividend of 1½, or possibly 1¾, per cent; the Great Western, say, another 2½ per cent. (presuming no considerable falling off has occurred in its South Wales docks' receipts); and the Southern 1½ or 2 per cent. on its deferred. In order to pay 4 per cent. on its second preference and repeat last year's ⅜ per cent. on its preferred, the North-Eastern might have to draw something up to a million from reserves.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
January 8.	January 10.

THOUGH the week was broken by the holiday on Tuesday, and though the end of a three weeks' settlement was drawing near, a good deal of business was done, and that largely of a solid character. The Ford excitement had died down, not many shares being left in English hands. Sharp movements were therefore mainly confined, as usual, to the few stocks that have been in favour with speculators lately. Apart from minor features of the week, two events stood out. One was the £10,000,000 issue on Thursday by the Government of India, described more fully under "Capital Issues." The other was the renewed strength of Five Per Cent. War Loan, which went over 103; considerable foreign buying recently has affected its price, but that by itself is not a sufficient explanation. Various conjectural reasons were heard, but no one claimed to speak with assurance. For Home Railways a slightly less distrustful feeling could be detected in the City, but investors were still hanging back. Sound Industrials continued to be well supported.

A fair investment demand was experienced for most varieties of gilt-edged stock, assisted, as usual, by the New Year disbursement of dividends, and by the relatively small dimensions of the stock on the market. In the money market there was the usual year-end borrowing from the Bank of England, but no sign of pressure exceeding what has come to be regarded as "normal" on such an occasion. Four per Cent. Consols and Three and a-Half per Cent. Conversion both rose 3/16 on Wednesday, the movement, indeed, extending through the list. Chief interest, however, was attracted by the continued strength of Five Per Cent. War Loan, which, it is clear, will be a law to itself for some time to come, until the many conjectures as to the strategy the Treasury means to pursue have been set at rest. India loans suffered a setback owing to the new £10,000,000 Four and a-Half Per Cents being offered at 91 when the existing stock, issued a year ago, stood at 92⅛, exclusive of accrued interest.

The foreign market was quiet, with few price changes. French loans recovered after end-of-the-year dullness, and some slight support was forthcoming for Roumanians. Brazilian issues were firmer, but Peru Corporations were again on offer.

Home Railway stocks retained for a time the firmness of the last week or two, though no large volume of investment buying was reported. The final traffic figures for the year, however, temporarily checked the movement, except in Southern stocks, the market being influenced by last week's returns rather than the prospects of savings in costs over the whole year, which are discussed in a later "Investment Note." By the same token, Metropolitan and Underground Electric showed renewed strength. In a quiet foreign railway market Argentine stocks lost ground slightly, but San Paulo was in request. Canadian Pacific was in demand on American account. An active "inside" movement developed in Beira Railway.

The New Year made an unsensational but not unsatisfactory start in the industrial markets, confident sentiment from Wall Street being tempered by a certain caution as regards the outlook on this side. The former tendency was exemplified by higher prices for Columbias, Mond Nickels, and the new International Nickels, which changed hands at 49½ on Thursday; the latter by the uncertain tone of such groups as breweries and textiles, and the easier conditions prevailing in the market for cable stocks. Interest and dividend payments "in another place" had a part in the demand for solid industrial stocks, such as

Imperial Tobacco and Courtaulds. Margarine issues were in demand, and match shares gained further ground. The Ford excitement did not outlast the old year, but a few British motor shares still had a firm appearance. Buying of National Omnibus was inspired by the latter's arrangement with the Great Western Railway. Ner-Sag showed fresh weakness, but African and Eastern were supported before the shareholders' meeting, at which a committee was appointed. A small amount of selective buying was in progress in the iron and steel group. Insurance shares had a slightly rising tendency, but bank shares became somewhat irregular after a firm opening to the week.

The stronger tone of rubber prices over the week-end gave an upward twist to a few share quotations, but the volume of actual business showed little change. Tea shares opened in undistinguished fashion, but business broadened during the week, prices again strengthening. Little of interest was passing in the oil share market, beyond a cautious inquiry from the Continent and New York. Royal Dutch improved, but Anglo-American continued to suffer from the passing of the interim dividend.

Among mining stocks, Rhodesians continued to claim the liveliest share of speculative attention. Loangwas were in the centre of the picture on Monday, Roan Antelopes (on the receipt of an optimistic cable) on Wednesday, New York taking a hand in the movement. Kaffirs were steady without attracting much new business. Modder East was sold in Johannesburg. The tin share market was unsettled pending the ascertainment of the end of December statistical position of the commodity, but the fresh appreciation in copper values was fully reflected in the share market, Rio Tinto advancing to new "record" levels.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The share market opened with as great a buoyancy as at the close of the past year, paying no heed to the rise of call money to 12 per cent. for several days, the highest figure since 1920. A feeling that dear short-term credit will prove temporary, general good nature stirred by record-breaking holiday trade, confidence in the continuance of prosperity, backed by the re-investment of $1,500 millions distributed in dividends and interest at the end of the year, and a reluctance to take profits coming under the 1928 income-tax—these factors are largely responsible for the continued liveliness. Share prices are now higher than the previous peak recorded at the end of November, and the volume is again exceeding $5 millions daily. Bonds are also more active under a firmer demand for reinvestment. The chief interest was shown in copper shares, thanks to a rise of price of the metal to 16¾ cents a lb, to the full-time working of producing companies, and to the splendid situation of the industry with its prospect of higher dividends. Steels and motors were also good, the latter showing their usual rise in advance of the national show here this week, and the steel industry finishing the year with a record output and starting at a high rate on the basis of better prices in the first quarter. Rails were a little better, but not much business was done in them, though earnings and traffic are on the increase. Tyres and rubbers showed improvement on expectation of an output of close on six million automobiles in 1929. Oils were fair, but the output is increasing again. The best gains have been made by the soundest stocks, endorsing the theory that in the long run investments in well-managed enterprises are bound to appreciate regardless of the immediate outlook.

PARIS.

The Bourse, on the eve of the four days' holiday, felt the effects of the liquidation of some bull accounts, occasioned by fresh political apprehensions. For the time being this uneasiness has disappeared again, and the New Year opened serenely. Following this slight weakening, French stocks regained what they had lost, and once more have an excellent appearance. Copper shares were a centre of great interest; Rio Tinto was in demand on the new rise of the metal, and started briskly on the upward path, encouraging Tharsis and others by its example. The end-of-the-month settlement was effected on favourable terms—6½ per cent. on the Parquet and 8½ per cent. on the Coulisse.

BERLIN.

Except on Monday, which witnessed a moderate reaction, stocks in the last days of the old year were firm. On the Saturday foreign buying had been particularly heavy, embracing Reichsbank, Otavi Mines, and electricity and lignite companies. Purchasing of bank stocks on Dutch account was reported. In the cash market good business reports made brewery stocks firm.

The Bourse was closed on Tuesday, and it reopened in undecided mood, but became firm later on a fall in money rates and a reduction of the private discount rate. There was profit-taking towards the close on Wednesday, and the following day the market was dull and weak.

Rhenish-Westphalian Electricity and Mitteldeutsche Stahlwerke have been added to the list of securities, now numbering 87, which may be dealt in for future settlement—monthly, not fortnightly.

AMSTERDAM.

The past year ended with general activity and a firm tone on the Bourse. Margarine Unie and artificial silk shares were in keen demand. Oils were firm, but sugar shares irregular. The rubber market was neglected, but prices did not tend to weaken. Favourable tobacco reports exercised a good influence. Shipping shares remained steady, and mines showed an improvement.

Monday as well as Tuesday was a holiday. On Wednesday and Thursday the market was very strong, Philips and others coming into great prominence.

The money market was firm, with the private discount rate at 4 7/16 per cent., and 4¾ per cent. for prolongation.

VIENNA.

The Bourse, which does not seem inclined to react to any stimulus whatever, is still stagnant. Even though money has become a little dearer, the dividend declarations of several industrial companies, which on the whole were not unfavourable, might well have exercised a certain influence upon the market, but it remained unmoved. The quiet has again caused local banks and some speculators to withdraw and engage in transactions on foreign bourses, especially Berlin. The demand on the money market at the end of the month was the more pronounced as notice of withdrawal was given for certain short-term foreign credits. In general, however, the close of December was easier this year than last. The greater part of the demand was made on the National Bank. The New Year is not opening under the best of auspices. In view of the increased postage rates and the new social burdens thrust upon industry by several recent laws, resistance to the prospective rise in railway rates is growing more vehement. Certain modifications have been successfully urged, but otherwise the increased tariff remains as it was projected, and is now certain to be put into force early in the coming year.

INVESTMENT NOTES.

The Law as to Company Meetings.—A point of considerable importance to British company shareholders arises out of the reply given by the President of the Board of Trade to a Parliamentary question by Mr Thurtle last month. The latter gentleman asked whether the Board proposed to take action against the Duophone Company, on the ground that no annual meeting had been called within the period of 15 months prescribed by the law. Sir Philip Cunliffe-Lister replied to the effect that the company was bound by law to make its annual return to Somerset House by the end of the year, and until it had done so information as to the holding of the meeting would not be available to the Board of Trade. He went on to say, however, that it had not been the practice of the Board to initiate proceedings unless representations were made by a member of the company concerned. This view of its duties has, in fact, obtained at the Board of Trade for many years past, but its implications should, nevertheless, be clearly realised by shareholders. If a shareholder is dissatisfied owing to a company's failure to hold a meeting (and it should be remembered that Section 64 of the Companies Consolidation Act, 1908, lays down that every director or officer, such as the secretary, who is responsible for the neglect is liable to a penalty of £50), he may either (*a*) write to the Registrar of Joint Stock Companies, Somerset House, Strand, London, drawing his attention to the fact of the irregularity and requesting him to enforce the penalty, or (*b*) institute what is deemed in law a private prosecution—that is, lodge a complaint before the court: if the irregularity occurred in London, before a metropolitan police magistrate; or if the offence occurred in the provinces, before the local Bench of a police court. In any event, in accordance with Section 11 of the Summary Jurisdiction Act of 1848, the complaint must be made to the courts within six months of the alleged irregularity, unless the omission to hold the annual meeting is a continuing one. There is a further method, which is a costly one—to apply to the Chancery Division of the High Court requesting it to make an order compelling the appropriate officers of the company to call an annual meeting in accordance with the Statute. It is not necessary for the Registrar of Companies to wait until the annual statement is filed before moving in the matter, providing his attention is drawn to the fact in the manner described. Whether or not the procedure is entirely satisfactory, in all circumstances, from the shareholders' point of view, the legal position at all events is clear.

Some Factors in the Artificial Silk Position.—The justification for the recent heavy fall in the prices of the shares of a number of the newer artificial silk producers may be traced, writes a correspondent, to conditions clearly forecast on several recent occasions by the chairman of the largest producing company in this country. Speaking in 1926, Mr Courtauld remarked: "The growth of competition must sooner or later result in a lower margin of profit"; in 1927: "As their profits will not suffice to build up reserves they (new producers) will have to pay for any real expansion by raising additional capital. New methods will be chiefly concerned with improvements in quality"; in 1928: "It takes only a small fall in selling prices to offset a very large increase in production. Moreover, every reduction . . . will intensify this discrepancy." The consumption of artificial silk has been expanding at the rate of almost 25 per cent. per annum during the last few years, and every month brings some new sign that there is still immense scope for further development. The world's production in 1925, 1926, and 1927 was 180,000,000, 220,000,000, and 275,000,000 lbs respectively, and the 1928 figures so far available indicate a proportionate increase. Manufacturers' plans for further advances in production capacity are well advanced, and recent announcements of new development schemes by leading producers indicate that no permanent difficulty is expected in finding a market for largely increased quantities of yarn and fabric. And yet it is common knowledge that conditions are very difficult, and are likely to remain so for all but the most firmly established and amply financed companies. The fact is that the term "Artificial Silk" covers a variety of yarns and fabrics so wide that the market conditions and prospects for one section may be, and in fact are, quite inapplicable to other sections. The course of the development of the industry is not incomparable with that of the manufacture of wireless receiving sets. In the latter case technical improvements occurred so rapidly that apparatus frequently became obsolete during the course of manufacture, leaving its owners in possession of an unsaleable article, although the demand for the newer models was greater than the supply. So in the artificial silk industry a steady improvement in the type of yarn and fabric required has always been a marked feature of the demand. During the last two years, however, this movement has been particularly pronounced, and the whole quality basis has undergone a radical upward change. The key to the present situation lies, probably, in the fact that the demand for superfine filament yarns is still, broadly speaking, well up to production capacity, and in certain instances ahead of it. The inferior quality stocks, having been superseded or supplanted by better materials at the same price, are of little or no value save as waste, and lower medium qualities can only be disposed of at prices which represent a loss on the cost of production. To produce the fine filament yarns now demanded, a technique that can only be bought by years of commercial experience is a *sine qua non*, and practically all the plants in this country and abroad that have come into operation during the last two years have been helping to swell the output of the low grades. As a result, heavy stocks of inferior stuffs, and even stuffs of a quality which would have found a ready outlet two years ago, are encumbering the market, and have caused price reductions throughout the whole list, though of less extent in the fine grades. These reductions have been particularly marked in the cellulose acetate yarns (in some cases amounting to over 30 per cent.), though viscose have not by any means escaped. The difficult position of the newer concerns thus becomes apparent. The larger proportion of their capital has been expended in putting up plants unsuitable for the production of a high percentage of the fine filament yarns which alone are now saleable at reasonable prices. Moreover, no amount of pre-planning can guarantee the production of fine filament yarns, and in practically every case the bulk of a new producer's output will be among the lower grades for an extended period. Finally, it is necessary to mention the cross-currents which add considerably to the difficulty of forecasting profits. Artificial silk is not yet a standardised commodity, and yarns that are satisfactory from a technical standpoint may fail to find a ready market owing to variations in sales organisation and policy. There is no doubt, for instance, that many weaving firms and garment manufacturers suffered financial loss as a result of the three consecutive reductions which were applied to the yarns made by a well-known firm in almost as many months.

"Permission to Deal"—New Departure.—For the third time in a few months the Stock Exchange Committee have announced what in effect amounts to a tightening up of their regulations regarding new securities. For the future, the announcement that permission has been given to deal will include not merely the numbers of the shares and the name of the company in question but also particulars as to the amount of the issue allotted for cash, the amount allotted to vendors for other than a cash consideration, or in exchange for cash, and the amount allotted in pursuance of options. A second statement will be appended, showing, as regards any unissued or unquoted shares, the amount allotted to vendors or others for non-cash considerations or in exchange for cash, the amount under option, and the amount reserved for future issue. The new departure is likely to prove more valuable in practice than appears at first sight. It is true that all the particulars enumerated will have previously appeared in the company's prospectus or offer for sale, but, as all those who are in the habit of handling prospectuses know to their cost, many of these telling facts are not infrequently tucked away in small print among a mass of bewildering detail. To drag them into the full blaze of the limelight, at the outset of the Stock Exchange career of the company concerned, is a salutary proceeding which might be superfluous in a world of leisured, cautious and well-informed investors, but undoubtedly has its uses in the present one. The particulars chosen by the Committee have an obvious bearing on such crucial questions as the proportion of "water" injected into the capital of a new concern, and the opportunities insiders are likely to enjoy for "controlling" future markets. The Committee have not always shown themselves ready to go so far as some of their critics have desired in the way of protecting investors from their own weaknesses or the wiles of others, but the present and other recent changes may be taken as evidence that they are not disinclined to admit some element of trusteeship for the general public interest.

"Share-Pushing" in France.—Following the publication of the text of the Government Bill designed to protect investors against fraudulent bankers (writes our Paris correspondent) the Popular Democrat group, who form the Extreme Right of the French Chamber, have submitted a measure for the prohibition of the practice of *démarchage financier*, or house-to-house "share-pushing." The term *démarchage financier* is defined as meaning "the hawking of stocks, shares, or bonds of all descriptions at the residences of private persons, whether the offer be followed by sale or otherwise." Sales, purchases, and every other operation in connection with shares or bonds must henceforth take place, the Bill proposes, only on premises used for banking purposes, to the exclusion of all other commercial dealings. Financial transactions in cafés, restaurants, hotels, wineshops, or other public places are also prohibited by the Bill. Share-pushing in itself, it is proposed, shall constitute a fraudulent proceeding, punishable under the penal code. The Bill is based on the recent British legislation against "share-pushing," and has been introduced owing to the alleged wholesale frauds connected with the *Gazette du Franc* group. Although it comes from the Extreme Right, it is apparently likely to receive a substantial amount of support from all sections of the Chamber.

The Nitrate Situation.—The trend of events during the last few weeks suggests that Chilean nitrate, after passing through something like a crisis, is again holding its own in the world's markets. It is estimated that Chile's share of the world production of pure nitrogen for 1928-9 will amount to 25⅓ per cent. The proportion for 1927-8 was 23¾ per cent., and for the previous 12 months 20½ per cent., the lowest ratio ever recorded. As Messrs Aikman point out in their annual report, the improvement during the last two years is primarily due to the price having come more into line with that of other nitrogenous products. Six months ago Chilean producers, at the request of the Chilean Government, adopted a scheme for centralising sales and fixing prices. In return the Government announced its intention to pay a subsidy of £250,000 to producers based on January-March (1928) production, and the subsidy now promised on sales from July, 1928, to June, 1929, is likely to amount to £1,750,000 or £2,000,000. The new scheme is intended to stabilise prices without necessitating restriction of output. In effect, Europe and Egypt are rationed, and the surplus is held for sales in the U.S.A. and other countries where competition with synthetic products is less acute. This deserves to be greeted as an intelligent effort to face the facts. Two companies, representing between 15 and 16 per cent. of the Chilean industry, have stood aloof from the scheme, and are consequently excluded from the subsidy. Time will show whether their absence is likely to imperil the whole arrangement. Meanwhile, it is possible to agree with Messrs Aikman that the general outlook is more favourable than it has been for some time, though to their view that "the Chilean Government are determined to increase the production and consumption of nitrate by giving whatever help the industry may require to attain "short of reducing the export duty." The competition of synthetic products outside Europe is, of course, likely to be a more formidable quantity in the future, and for that reason the new selling arrangement cannot be regarded as permanently watertight. Meanwhile, it is a sound start, and immediate prospects certainly look brighter. Nitrate company shares have remained largely outside the orbit of the last few months' Stock Exchange activity, and have a considerable way to go before regaining the levels of three or four years ago:—

The outlook will be governed by the degree of success which continues to attend the efforts recently incepted, but the next batch of reports are likely to show a distinct advance on the last.

Duophone and Unbreakable Record.—The long-awaited accounts of the Duophone and Unbreakable Record Company were published last month, and the annual general meeting was held on December 28th. These were the first accounts to be issued since the company's formation in 1926. They present a sorry appearance. Stock on hand and work in progress as at November 30th were only £11,851, while sundry debtors, cash at bank and in hand amounted to only £6,343. Against these items must be set trade creditors, reserves, &c., £45,311, loans unsecured £45,452, and directors' fees £3,704, making a total of £94,467. No profit and loss account is included because the amount of records sold, as the chairman has confessed, would not make a profit and loss account. It is quite plain that the company is desperately in need of cash, and Sir Alan Burgoyne at the general meeting stated that an offer of financial assistance was being accepted, which, we believe, will take the form of debentures. It may be asked what the company has done with its money. Its capital consists of £134,150 in ordinary shares of 10s and £98,561 in 8 per cent. cumulative preference shares of 10s. After providing for the purchase consideration, underwriting commissions, and preliminary expenses on its formation, the company, according to Sir Alan Burgoyne, had only £41,250 working capital, which was used in the purchase of a factory at Feltham. The subsequent history of the company which Sir Alan Burgoyne gave to the shareholders at the meeting appears to have been as follows. The coal strike and non-delivery of machinery prevented the first battery of presses working at the Feltham factory before the end of 1927. The records then produced were so unsatisfactory that they had to be taken back and the management changed. Debentures were then issued, of which the directors now hold nearly 90 per cent., the total in the balance-sheet being £26,124. In December, 1927, the whole of the offices of the company were burnt to the ground with all the company's records. Early in 1928 a factory at New Malden was purchased, the Feltham works were given up entirely, and the old factory at Southall was utilised for the production of the company's own presses and plant. The capacity of the New Malden factory is to be in excess of 20,000,000 records per annum. From the sale of their foreign rights to Duophone (Foreign), Limited, and American and Dominion Unbreakable Records, Limited, the company received £100,000 in cash, 150,000 fully paid shares of 10s, and 410,000 deferred shares of 1s. Then came the attacks on the company and the break in the market, which prevented the company from realising its securities. At this point Sir Alan Burgoyne's history may be checked up from the accounts. The balance-sheet shows a "surplus on realisation of foreign rights" of £170,791, out of which the preference dividends up to June 30, 1928 (£10,020) were paid. The New Malden factory is written up by £42,585, and this surplus together with the surplus on realisation of foreign rights enabled the company to write off goodwill, preliminary expenses, and patents, amounting in all to £131,557. Presumably the cash realised from the sale of foreign rights went into the factory and plant, which together with the land are valued at £164,519. Sir Alan Burgoyne stated that the company now had 74 presses completed and working and 150 ready for installation; that it had the most efficient and up-to-date gramophone works in the country; and that it was now producing 15,000 records a day. If that is so, where are the records to be purchased? If the company can turn out 20,000,000 records a year, what contracts have been placed for the sale of this huge output? For the sake of the shareholders, who have seen the market price of the shares fall since October from 90s to 12s 6d, it is to be hoped the company will receive firm orders to occupy its presses. We fear that until it has obtained new capital its operations will be hampered.

Mount Lyell.—Our mining correspondent writes:—The report of this Australasian enterprise for the year ended September 30th last is the most interesting and satisfactory which the shareholders have received for many a long day. It records the completion of the North Lyell tunnel and of the electrolytic copper refinery. The former "has eliminated the geographical separation of the company's mining from the rest of its local activities," the latter "has made it possible to conduct on the spot every operation from the winning of the ore to the production of marketable copper." The hydro-electric power station is only a few miles distant, and altogether the undertaking embodies an exceptional degree of compactness. Thanks to the treatment of an increased tonnage of ore, last year's copper output amounted to 7,060 tons, as against 5,640 tons in 1926-27 and 6,860 tons in 1925-26. There was also some expansion in the gold and silver, though these metals count for little. Interest and dividends brought in less than before, and the enhanced sum of £36,700 was set aside for depreciation; taxes were naturally higher. But the net profit came out £24,750 up at £200,050. Accordingly the final distribution is raised to 1s 6d per share, making 2s 6d for the year—the best since 1917, for which period 3s 3d was paid. At the date of the balance-sheet the surplus of liquid assets stood at £641,500—a further shrinkage, due presumably to the capital outlay and to the acquisition of a substantial interest in the Australian Fertilisers Proprietary. The results of the first year's trading of a partnership in fertilisers with the farmers of Western Australia are described as satisfactory. The additional benefits which the company will secure from the renewed appreciation in the price of copper have been recognised in a steady advance in the shares, which on last year's distributions yield about 6½ per cent.

Tronoh.—The interim report just issued is of importance by reason of the light it throws upon the position of the subsidiaries, as well as upon that of the company itself. With regard to the Tronoh, it is intimated that during the first five months of the current financial year the two dredges working on the company's old property have recovered 254 tons of tin ore. As to the new property, one of the three dredges has so far won 554 tons; the second started up in November, for which period it turned out 12 tons, and the third is in process of installation. It may be recalled that the company paid 30 per cent. in respect of 1927, and has so far disbursed four quarterly dividends of 5 per cent. each on account of 1928. Referring to the Southern Tronoh, the circular states that the erection of the two dredges is making satisfactory progress, and in regard to the Sungei Besi, there is the important point that power from the hydro-electric scheme will shortly be available. As a result, the output will be doubled, and "it is expected that the sale of surplus power will form a valuable addition to the company's revenue." In the light of these prospects the Tronoh's large holding—practically one-half the capital—is being retained. The Sungei Besi dividend rate has for some time past been 20 per cent. per annum. The Sungei Way is installing a third dredge, and the Ayer Hitam should be producing next summer or autumn.

CAPITAL ISSUES.

THE first loan to be made in the New Year—and the only prospectus issue of the week—is a trustee offer made by the *Government of India*. History repeats itself, India a year ago offering £7,500,000 of the same stock in London, but at a price of 91½ instead of 91. The appearance of this loan has been regarded as probable since the issue of £6,000,000 India sterling bills in August, maturing next February. The loan proceeds will be issued to pay off these bills, to provide funds for the purchase of the Burma Railways, and for further railway capital expenditure. The yield of £4 19s flat, or £5 0s 7d on redemption in 1968, is certainly attractive.

Special Representative

148 Leadenhall St. London, E.C. 3.

Government of India.—Issue of £10,000,000 4½ per cent. loan, 1958-68, at £91. Interest is payable on June 1st and December 1st; a first payment of £1 8s per cent. will be made on June 1, 1929. Subscriptions are payable as follows:—£5 on application, £21 on January 17th, £35 on February 8th, £30 on February 28th. Stock may be inscribed as "transferable in the stock transfer books" or registered as "transferable by deed," or will be convertible on and after May 2, 1929, into stock certificates to bearer. On that date the present issue will be amalgamated with the outstanding £7,500,000 4½ per cent. India stock, 1958-68. The proceeds of the issue will be used to provide funds for capital expenditure on railways in India, for the purchase of the Burma Railways Company, Limited, and to repay £6,000,000 India bills maturing on February 28th.

Particulars of the following have been issued for public information only in connection with Stock Exchange "introductions":—**Bideford Black, Limited,** issued capital 400,000 5s shares; the company acquires mineral black mines and anthracite properties at Bideford, paying a purchase consideration of £50,000 in shares and undertaking to discharge vendors' liabilities amounting to £15,000; £30,000 will be available for working capital. **Embassy Wine and Club Company, Limited,** issued capital 105,000 (out of 120,000) 7½ per cent. £1 cumulative participating preference and 125,000 (out of 140,000) 1s ordinary shares, the former entitled to an additional 5 per cent. after payment of 7½ per cent. on the ordinary; incorporated in 1923 as a private company to acquire control of a club in Bond street, and converted into a public company last November. **Viking Whaling Company, Limited,** issued capital 150,000 £1 7 per cent. cumulative convertible preference shares (issued at 21s), 180,000 (out of 330,000) £1 ordinary shares (also issued at 21s), and 30,000 1s directors' qualification shares; the company was incorporated last May and converted into a public company in December, to carry on whaling in the Antarctic; it is purchasing a floating factory at a price of £275,000, and investing in three established Norwegian whaling companies.

COMPANY MEETINGS, &c.

BRITISH HOSIERY TRUST, LIMITED.

RESULTS "HIGHLY SATISFACTORY."

The first annual general meeting of the British Hosiery Trust, Limited, was held, on the 28th ultimo, at the Grand Hotel, Leicester, Sir Arthur Wheeler, Bt., D.L., J.P. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said: Taking the assets side first, investments in associated companies at cost, £357,220 4s 2d, comprise a controlling interest in A. E. Allen and Co., Limited, makers of high-grade, full-fashioned, real silk stocks and Woodford and Wormleighton, Limited, who produce knitted goods such as jumpers, cardigans, and so forth, and the latter company, in its turn, holds a controlling interest in D. Byford and Co., Limited, who manufacture fancy woollen hose and half-hose, so you will see that your money is invested in a number of branches of the trade. I am satisfied that the value of these investments is greater to-day than when we acquired them.

As to quoted securities, the figure of £113,409 18s 1d is, as we state, under market value; in other words, there is a reserve in this item.

Sundry debtors, £24,054 15s 8d, and cash at bankers, £47,229 4s 8d, call for no comment. Preliminary expenses stand at £19,696 3s 7d, and you will notice that we recommend that the capital reserve of £13,256 13s 4d be utilised in writing this item down to £6,439 10s 3d.

On the left-hand side of the balance-sheet the special reserve of £5,315 13s represents 10 per cent. of the net profit, and is an allocation which is stipulated by our articles of association. The capital reserve is £13,256 13s 4d. This represents the proportion of dividends received which is applicable to periods prior to the date of purchase, and appears in the profit and loss account as a charge against profits.

HIGHLY SATISFACTORY RESULTS.

I think you will agree that the results are highly satisfactory. You must bear in mind that this is the first year of the company, and that progress of a company of this sort must of necessity be gradual. There is not difficulty in acquiring interests in hosiery businesses, but it is only by careful investigation that the right choice is made. Investigation takes time, and so it is that we have during the year had funds at our disposal while awaiting suitable opportunities for investment in the hosiery trade. You will notice in the profit and loss account the item gross profit for the year. This item is made up of dividends received from investments amounting to £49,905 6s, and profits on realisations of £24,390 3s 2d. This last amount is the result of employing our surplus funds. That concludes my comments on the figures, and I now propose to make a few general remarks.

I am satisfied that the formation of this company is amply justified. I say this advisedly, and, though I am speaking from the experience of only one year, it has been by no means a prosperous year. The hosiery trade is passing through a difficult period, but we hope that the depression has reached its lowest point.

ADVANTAGE OF ASSOCIATION.

I will draw your attention to a very practical advantage such a company as this has over an individual manufacturing company. Owing to the late autumn being rather mild this year, one of our subsidiaries which manufactures heavy knitted goods experienced a fall in turnover which was common, I may say without fear of contradiction, to every similar business, whereas at the same time another of our subsidiaries was extending its factory and putting down new plant and machinery, and was increasing the turnover in its particular line almost daily. As I have made a definite reference to the trading of our subsidiaries, I will go a step further and say that the outlook for the branch of the trade in which each subsidiary is engaged has been carefully considered before allocating profits. Reserves have been created where it has been deemed advisable, and the distribution of profits has been made with an eye to the future. Your managing director is chairman of each of the companies in which we have an interest, so that the link between us and our subsidiaries is much stronger than a mere holding of shares.

By spreading our interests we gain one distinct advantage, but that is not our main object; it is too negative. I would like specially to emphasise our success in securing the co-operation of a number of experienced hosiery manufacturers. I could enumerate instances where already, through only the interchange of ideas, these businesses have benefited, and many other instances where, by co-operating in buying, manufacturing and selling, costs have been reduced or business extended.

I am diffident at mentioning the word "competition," for I have no wish to-day to discuss "safeguarding." However, I will say this: We do not fear competition from the home trade; what competition we have met—and in some cases it has proved very severe—has come from Continental rivals, and I am assured that their goods, on analysis of costs, prove that they have been produced at low rates of labour which we should not desire to impose on our employees if we could.

The report and accounts were adopted, and the dividend recommended at the rate of 8 per cent. was approved.

MUTUAL FINANCE, INDEMNITY AND GUARANTEE CORPORATION, LIMITED.

DESIRABLE BUSINESS OFFERING.

The first annual general meeting of the Mutual Finance, Indemnity and Guarantee Corporation, Limited, was held, on the 31st ultimo, at 302-8 Regent street, London, W. 1. Sir Sigismund F. Mendl, K.B.E., chairman of the company, presided.

The Chairman, in moving the adoption of the report and accounts, said: The balance of the working account for the period ending October 31, 1928, plus dividends received from the M.I.G., amounted to £32,141 5s 10d; reserve for interest received in advance absorbs £13,239 19s 11d; reserve for taxation £1,750, and the cumulative dividend on the preference shares at 7½ per cent. per annum paid and accrued to October 31st, less tax, £12,293 2s 9d, leaving a balance of £4,858 3s 2d which the directors have decided to carry forward.

The undistributed profit earned prior to October 1, 1927, has been capitalised, and it will be noticed it has been partly applied to the reduction of the item "preliminary expenses" and partly to the creation of a general reserve fund. All reserves have been made on a conservative basis, and though profits available for distribution would have permitted of a payment to the ordinary shareholders, the directors are convinced that the latter would prefer a waiting policy at this stage of the corporation's development.

I am in the happy position to state that to-day we have the support and confidence of the leading banks and financial houses, and that funds are available for the large amount of business that is now being offered to the corporation. You will recollect that in the prospectus the directors estimated that the credit facilities which would be available on the capital of the corporation would enable it to do business amounting to £1,000,000. I am pleased

DÍA DE LA RAZA!

¶ Under this name—the Feast of the Latin Race—is commemorated, on the 12th of October each year throughout South and Central America, the historic voyage of discovery by Columbus in 1492.

¶ Since then, the development of the vast resources of the New World has been phenomenal.

¶ To-day a great and growing volume of overseas trade is transacted annually by the Latin American Republics, and complete facilities for every description of modern banking business are afforded by

THE ANGLO-SOUTH AMERICAN BANK LTD
117 OLD BROAD ST, LONDON, EC2

to say that this has proved an under-estimate. The credits actually arranged will enable us to exceed £1,000,000 turnover, and we have definite assurances of increased facilities from our present sources.

Taking into account the difficulties with which the new corporation was confronted, the first year's results can be accepted as entirely satisfactory. The main feature has been the continuous expansion of business. Each month, without exception, has shown a steady increase over the corresponding month of the previous year, so that you will agree with me that there can be no cause for anxiety.

I am pleased to say the new financial year has opened extraordinarily well, and a large increase of desirable business is in evidence for next year. I can assure you that your directors feel the utmost confidence in the future. They feel that the policy of caution is advisable, and that the corporation's management is sound, profitable and popular, and that the extensions of the corporation's activities they have in view will materially add to its profits in the forthcoming years.

The accounts as presented were approved and passed, and the retiring directors re-elected. Messrs Hays, Akers and Hays were reappointed auditors of the company, and a vote of thanks to the chairman terminated the proceedings.

NORTH ANANTAPUR GOLD MINES, LIMITED.

THE PROPOSED DISTRIBUTION.

The twenty-first ordinary general meeting of North Anantapur Gold Mines, Limited, was held on Thursday, January 3, at 6 Queen street place, London, E.C.

Mr V. Herbert Smith (the chairman) said that the company was now no longer engaged in active mining work, and the options on shares in Indian Copper Corporation, Limited, having expired, the directors were of opinion that the time was now favourable for placing the company in liquidation. The assets consisted almost entirely of shares in other companies, and the board felt strongly that, should liquidation be decided upon, a definite scheme should be settled for the distribution of the shares by way of return of capital.

In that connection the directors considered the preference shareholders should be asked to sanction certain alterations in their preferential rights, so that the liquidator could make a return of capital to them in shares of other companies instead of in cash. The preference holders were entitled to a cash distribution of 20s in the £ before the ordinary shareholders participated in any return of capital, and to share equally in any surplus after the ordinary shareholders had received £1 per share. The directors in their report had recommended that the preference holders should be given, in full satisfaction of their rights, 10 fully-paid shares of 2s each in Indian Copper Corporation, and that the balance of assets be distributed among the ordinary shareholders.

That recommendation, made on December 19th, had, of course, a relationship to the market quotation for those shares, which was then 2s 3d to 2s 5d. Having regard to the fact that the market price was now 2s 9d to 2s 10d per share, the board thought it would be equitable and right for the preference shareholders to accept a reduced number of Indian Copper Corporation shares in full satisfaction of their rights. The directors recommended that both classes of shareholders should agree that eight Indian Copper Corporation shares be given in respect of each North Anantapur preference share.

The report and accounts were unanimously adopted, and at separate meetings of the preference and ordinary shareholders which were then held the board's amended proposal was informally approved after some discussion. In order, however, to give legal effect thereto, both meetings and also the extraordinary general meeting of the company which had been called were adjourned until the 22nd inst.

* Previously set aside.	

Messrs Samuel Montagu and Co. write as follows on January 2, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £153,783,646 on December 26th last (as compared with £155,210,986 on the previous Wednesday). For the first time since January 4th last, when the amount held was £151,412,225, a slight decrease is shown as compared with the £153,906,315 held on April 29, 1925—when an effective gold standard was resumed. The bar gold from South Africa this week amounted to £530,000, of which about £420,000 was sold privately. There was only a small demand for the remainder, the usual requirements of India and the trade ebing about £56,000, leaving a small balance still to be disposed of. The receipt on December 31st consisted of £63,000 in sovereigns from the Irish Free State and £227 bar gold, and that to-day was in sovereigns released. The withdrawals were :—£500,000 in sovereigns set aside, £40,000 in sovereigns taken for export, and £12,023 in bar gold.

SILVER

The market has continued quiet as New Year holidays have obtained in most centres. Resales on China account were offset by a little inquiry from the Indian bazaars, but business has not been important, prices having moved only 1/32d since our last letter. America remains inactive, but, if anything, has been more inclined to sell. The following were the United Kingdom imports and exports of silver registered from mid-day on the 24th ultimo to mid-day on the 31st ultimo :—Imports.—Germany, £9,850; France, £17,310; U.S.A., £59,774; other countries, £765—£87,699. Exports.—Persia, £90,000; other countries, £2,676—£92,676.

MISCELLANEOUS.

GREYHOUND RACING ASSOCIATION TRUST, LIMITED.—We are informed that the accounts of the Greyhound Racing Association Trust, Limited, will be made up to December 31, 1928, and the first annual general meeting will be held at the Crown Room, Connaught Rooms, Great Queen street, London, W.C. 2, on Friday, January 18, 1929, at 12 o'clock noon.

HENRY GLAVE, LIMITED, AND HERBERT AND MAURICE ORMOND.—We are officially informed that preliminary negotiations have been concluded whereby Messrs Henry Glave, Limited, will acquire a substantial financial interest in the old-established business of Messrs Herbert and Maurice Ormond of 161 High street, Stoke Newington. The business will be converted into a limited company and Sir Herbert J. Ormond will be the chairman.

HOULDER LINE, LIMITED.—The profit and loss account for year 1928 shows income from investments and profits on trading of £200,348, against £218,382. Transfer from sale of securities account amounted to £37,500, against no transfer in preceding year. The sum of £120,000 is transferred to depreciation. Preference dividend absorbed £12,375. The ordinary shareholders again receive 10 per cent. less tax. The carry forward is reduced from £69,134 to £67,279. General reserve stands at £600,000. The insurance fund has been reduced to £100,000 by the transfer of £100,000 utilised for the writing down of book values of the company's vessels, which now stand at a figure substantially less than their estimated market value.

MARCONI INTERNATIONAL MARINE COMMUNICATION COMPANY, LIMITED.—The directors of The Marconi International Marine Communication Company, Limited, announce that the resolution for the alteration of the company's articles of association to ensure that the British control of the company be maintained was duly confirmed as a special resolution at the extraordinary general meeting of shareholders held on Dec. 31, 1928.

PARKINSON AND W. AND B. COWAN, LIMITED.—A meeting is to be held at the offices of the company, Fitzalan street Works, Kennington road, on January 9th at noon, to consider a resolution to change the name to Parkinson and Cowan, Limited.

SIR W. G. ARMSTRONG, WHITWORTH, AND CO., LIMITED.—We are officially informed that plans for the final reconstruction of Sir W. G. Armstrong, Whitworth and Co., Limited, are well advanced, and that in all probability a scheme will be laid before all classes of debenture-holders, note-holders and shareholders in the very near future.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday Evening.

Climatic conditions have not been altogether favourable for field work owing to further rains and low temperatures, but in some districts farmers were able to push ahead with ploughing for spring sowings. Winter crops are making steady progress and present a healthy appearance. There is not much change in the position of native wheat, offerings being adequate for the small demand prevailing, while imported grades were the turn easier. In the floating and forward cargo section business has scarcely opened out following the recent holidays, and tendency of prices favoured buyers. Canadian grades were rather more freely offered, while the premium on new crop La Plata is gradually being reduced. The shipping movement from Argentine ports is now steadily increasing, and quantities afloat are consequently on a larger scale, while a feature was provided by the large bookings to non-European countries, of which the East figures prominently, and this has tended to retard the downward movement for the time being. A steamer comprising No. 3, No. 4 and No. 5 Manitoba Vancouver shipment January sold at 45s, 43s 3d and 39s 6d respectively per 480 lbs c.i.f. terms. Feeding stuffs rather easier owing to lack of buying interest and increased offerings. Wheat quiet. No. 2 Northern Manitoba 49s 3d, No. 3 48s, No. 4 Manitoba 46s, No. 5 42s 3d, No. 6 36s 3d, Rosafe 62½ lbs 44s 6d, Barusso 62½ lbs 44s 6d, all ex-ship per 496 lbs. English 9s 2d to 9s 4d per 112 lbs. Flour dull. London standard grade 36s 6d, town whites 37s 6d, patents 38s 6d to 39s 6d per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported Manitoba patents range from 33s to 36s 6d, Minneapolis 33s 6d to 36s 6d, Australian 34s 6d ex-store per 280 lbs. Maize steady. Plate ex-ship to arrive 41s, ditto landed 42s 3d, December-January 41s 3d, January-February 42s, No. 2 white flat African landed 42s 6d, No. 2 mixed American also yellow ex-ship to arrive 39s 3d per 480 lbs. Yellow maize meal £11 ex-wharf, white African ex-ship to arrive £9 7s 6d. Hominy chop £9 per ton. Barley quiet. Californian ex-store 41s to 56s, Oregon 53s, Chilian brewing 44s to 58s, Australian 50s to 52s, Smyrna 44s to 50s per 448 lbs. Algerian/Tunisian 33s 9d landed, Canadian feed 28s 9d ex-ship, 30s landed, No. 3 Canadian Western 33s 6d ex-ship per 400 lbs. English malting 10s to 16s, feed 9s to 10s per 112 lbs. Oats dull. Plate ex-ship December-January 25s, February-March 24s 3s, black Plate landed 25s 3d, No. 3 white clipped American 36 lbs landed 27s 6d, No. 2 Canadian feed landed 28s, mixed Canadian feed 21s 3d, Chilian white 33s, German new landed 28s 6d, ex-ship to arrive 27s 6d per 320 lbs. English 9s to 9s 8d per 112 lbs. Scotch ex-ship 29s 6d, Irish 28s per 336 lbs.

AMERICAN WHEAT MARKETS.

Easiness prevailed in the markets throughout the early part of the week, weather conditions being favourable and export demand of small dimensions. Later the markets became firmer on indications of an oversold position at Chicago, and covering took place, particularly for distant options, owing to cold weather in the South-West, where there is an absence of sufficient snow covering. Quotations :—

Nearest Future.	Jan. 6, 1927.	Jan. 4, 1928.	Dec. 19, 1928.	Dec. 26, 1928.	Jan 2, 1929
Winnipeg (No. 1 Manitoba)—Cents per 60 lbs	133⅜	137	116⅝	117	122
Chicago (No. 2 Winter)—Cents per 60 lbs	137⅜	130⅜	115⅝	114⅜	116⅜

Visible supplies of wheat in Canada at 70,384,000 bushels show an increase of 5,532,000 bushels as compared with the previous figures. Supplies a year ago stood at 51,618,000 bushels.

COAL.

Our Cardiff correspondent writes :—Quiet conditions have prevailed on the Cardiff coal market since the Christmas holidays. Last week's stoppages were responsible for a reduction in output of about 60 per cent. of the recent normal production, but there has been no pressure of demand, and prices are generally unchanged at the pre-holiday conditions. It is anticipated that work will be resumed next week at the Mountain Ash pits of Nixons Navigation, and it is probable that the extra output of these pits will lead to an easier tendency in the prices of some of the washed small grades. The award of the independent chairman of the South Wales Joint Board continues the minimum wage rate of 28 per cent. on the 1915 standard rates for the whole of the present year, but has reduced the subsistence wage from 8s 0½d per shift to 7s 10½d. The cost to the industry of the allowances made to raise the wages of the lower-paid men to the prescribed subsistence level is less than 5d per ton, and the reduction in that subsistence wage of 2½d per shift will only very slightly relieve the colliery owners. A feeling of uncertainty exists in regard to the future of the price regulating scheme. It is intended that it should be superseded as from January 1st by a scheme for output regulation, but the necessary support for the latter scheme is not yet forthcoming, and business has been impeded pending the determination of its fate. The following are the current approximate prices :—Best Admiralties, 19s 3d to 19s 6d; seconds, 18s 9d to 19s 3d; best drys, 18s 6d to 19s; Black veins, 17s 6d to 18s; Western Valleys, 17s to 17s 6d; Eastern Valleys, 16s 7½d to 17s 3d; best steam smalls, 12s 6d to 12s 9d; cargo smalls, 11s to 12s; coking smalls, 12s 6d to 12s 9d; anthracite best large, 33s to 35s 6d; Red Vein large, 20s 6d to 25s; machine-made cobbles, 40s to 43s 6d; French nuts, 41s to 43s 6d; stove nuts, 40s to 42s 6d; rubbly culm, 9s to 9s 3d; foundry coke, 25s to 36s 6d; patent fuel, 20s to 21s 6d; pitwood, ex ship, 27s to 27s 6d.

Our Sheffield correspondent writes :—Conditions are quiet as regards coal for industrial purposes, and owing to demands for higher prices the renewal of period contracts does not make much progress. Quotations for best Yorkshire and Derbyshire steams are 14s 6d to 15s 6d at pits. The question of the incidence of the railway freight relief is still holding up business. The official price of blast furnace coke is maintained at 14s 6d at ovens, but lower figures are being accepted. There is a fair export demand for coke and a prospect of increased consumption at home.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange: Holiday conditions have existed to a great extent in the iron and steel trades during the past week. This week the Scottish iron and steel trades start their New Year holidays, which last from ten days to a fortnight, and most of the works are hoping that orders will accumulate during that period. Until Christmas, and in Scotland until the New Year, the works were busy completing contracts, but in many cases they will enter the New Year with a fair amount of work upon their books. In addition recent shipyard contracts and others that are expected shortly make the prospects for 1929 rather cheerful, though buying immediately before the holidays was decidedly quiet, and this condition is likely to last until the middle of the month. Nevertheless there is a feeling of confidence in the market. The Continental position is being watched with interest by buyers in this country. There has been little inclination shown, however, to enter into contracts, and as a consequence Continental steel prices developed an easier tendency. Within the past few days, however, a somewhat firmer tone has been noticeable. If trade develops in the way anticipated the position in this market might easily change, and prices again advance.

Our Middlesbro' correspondent writes :—Pig-iron : There was no weekly market owing to the New Year holidays, and no change has been recorded in the pig-iron quotations, which remain at 66s for Cleveland No. 3 and 71s for hematite mixed numbers. With regard to manufactured iron and steel the prospects for the near future are good on account of the recent orders placed with local firms and the promise of more to follow. Meantime prices remain unaltered as follows :—Steel ship plates, £8 7s 6d; steel ship angles, £7 17s 6d; iron bars, £10 5s; steel rails, £8 10s. Iron ore : We have heard of no recent transactions in foreign ore and best Rubio remains firm at 22s 6d per ton c.i.f. Tees. Coke is round about 17s 6d per ton delivered Middlesbro' furnaces.

Our Sheffield correspondent writes :—Confidence is spreading in most sections of the steel trade, but conditions are bad in the light castings section of the iron trade, and although the engineering foundries are improving, they are far from busy. A hopeful feature of the steel trade is the improved position of the heavy basic scrap, for which there is an active overseas demand. Prices have advanced 2s. per ton or more lately. The demand for acid Siemens steel continues poor, but the inquiries coming in suggest an improvement shortly. The British railways are not following their old custom of issuing contracts to cover twelve months supplies of material and stores. Their present intentions appear to be merely to cover immediate needs. The overseas outlook for railway steel is better, and it is believed that coalowners at home will soon give orders for wagons. The wire rope and rope wire manufacturers of this country have now combined to control those industries. The available trade is being pooled, and each member will be restricted to the quota of turnover allotted to him.

Our Glasgow correspondent writes :—A considerable number of works are resuming to-morrow (3rd) after the holidays, and others will be reopened on Monday. During the present week a very considerable amount of repair work is being carried out. On the whole the prospects for 1929 are fairly satisfactory as regards the iron and steel industry in the West of Scotland. Perhaps the least satisfactory branch is the malleable bar iron trade, which

Facilities for Travellers in S. America

Travellers to Latin-American countries can obtain valuable facilities through the Bank of London & South America. With branches and agencies at all strategical points, this Bank issues letters of credit, renders status reports on South American firms, supplies a free Monthly Review of market information, and offers a complete international banking service between Great Britain and South America.

MANCHESTER: 36, Charlotte Street.

BRADFORD: 33, Hustlergate.

Affiliated to Lloyds Bank Limited.

has experienced a very lean year and shows no signs of improvement. The increased number of orders booked by Clyde shipbuilders during the past couple of months augurs well for the present year, and while activity in 1928 was greater than in 1927, although by no means up to capacity, the outlook promises greater activity in the current year. In the closing days of the year a contract reported to be worth about £500,000 was placed with the Fairfield Shipbuilding Company of Govan, Glasgow, for two passenger steamers for the Canadian Pacific Railway Company. Steelworks will benefit by the increased tonnage placed with Clyde yards, where there is a decided tendency to use greater quantities of British steel. Tube makers and sheet makers are starting the year with well-filled order-books and sufficient work on hand to keep plants running at full capacity for many months to come.

Our Cardiff correspondent writes: On the Swansea Metal Exchange on Tuesday it was reported that manufacturers are well contracted for the spring months and that prices were firm at pre-holiday figures. The Continent and the Far East are in the market, and home consumers are buying fairly actively at schedule rates. The quotations for tin have again hardened, but steel bars are unaltered at £6 for local makes and from £5 12s 6d to £5 15s for imported material. Shipments last week totalled 99,299 boxes, compared with 101,565 boxes the preceding week, but stocks have been reduced from 283,803 to 240,734 boxes.

OTHER METALS.

TIN.—The market for tin displayed a weaker tone, being influenced by some pressure to sell and lack of consumptive demand, though Eastern advices were rather firmer. Stocks in London and Liverpool warehouses for week ending December 29th were returned at 7,497 tons, compared with 2,003 tons at corresponding period last year. Standard cash changed hands at £225 15s to £226 10s and £222, three months £227 10s, £225 5s, £226 15s and £222 10s. In the East sales were reported at £230 5s to £229, £230 7s 6d and £227 15s c.i.f.

COPPER continued a firm market and values further improved under a good demand, which was reservedly met. The closing tone was quieter. Standard cash sold £74 2s 6d to £75 and £74 7s 6d, three months £73 5s to £74 and £73 2s 6d. Stocks of rough copper on December 31st totalled 5,842 tons, and ditto refined 959 tons.

LEAD in good demand and with limited offerings a firmer market resulted. Good soft foreign pig January sold £22 to £22 6s 3d, February £22 7s 6d to £22 10s, March £22 5s to £22 11s 3d, and April £22 8s 9d to £22 13s 9d ton. Stocks on December 31st amounted to 7,508 tons.

SPELTER opened steady with moderate sales, but easier since. January sold £26 15s to £26 10s, February £26 15s to £26 8s 9d, and April £26 15s to £27 7s 6d ton. Stocks on December 31st were 1,757 tons.

ALUMINIUM steady. Ingots and bars for home delivery quoted £95 ton.

ANTIMONY dull. English regulus quoted £54 10s to £55, foreign ditto spot £38 10s, January-February £35 10s c.i.f.

WOLFRAM.—Straits quality quoted 20s to 20s 3d per unit c.i.f.

QUICKSILVER steady. Spot quoted £22 5s to £22 15s per bottle.

TINPLATES quiet. I.C. coke prompt and forward 18s to 18s 3d per box. It is being proposed to raise the minimum price to 18s 3d per box basis f.o.b. works port.

THE COTTON TRADE.

MANCHESTER, Jan. 2, 1929.

The market has not yet recovered from the effects of the holidays, but the general inquiry in yarn and piece goods continues more encouraging. Given steadiness in raw material rates there is every probability of increased activity in the near future. In most quarters there is less expectation of lower values. Light fabrics have attracted fair attention for India, but only isolated sales have occurred in grey staples. Healthier advices continue to be received from China, and manufacturers have secured moderate contracts, chiefly in white shirtings. A little more demand has been about for Egypt and the Near East, and a certain amount of buying has taken place in home trade goods. The yarn market has been rather featureless. Some spinners have lost a little ground during the holidays. Demand at the moment continues quieter.

THE WOOL TRADE.

Our Bradford correspondent writes:—The usual seasonal lull is in evidence, but although the turnover has been of small dimensions the general tone of the market has been well maintained. Both before and since the holidays there has been a fair amount of inquiry for tops. At present there are no wool sales in Australasia to act as a guide for users, and the reopening both in the primary markets and in London is awaited with great interest. In some quarters there are hopes of still cheaper wool, but probably the majority of spinners do not expect anything much below the closing rates ruling when the auctions finished before Christmas. Some traders, in fact, rather incline to the view that values of wool may actually harden, just as they did twelve months ago, but they cannot point to any valid reason for dearer wool. Certainly the state of trade in the West Riding does not warrant higher prices, but the determining factor, of course, will be the buying spirit of Continental users, and the indications are that large requirements have still to be met. It may well be, therefore, that the present is a favourable opportunity to cover in tops and yarns for a few months ahead, and it is quite probable that a fairly large buying movement will develop in the course of the next few weeks. Meanwhile topmakers are adopting a firmer attitude in view of the fact that current quotations are below replacement costs.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The new year has opened with creditable conditions in the Colonial wool trade. According to Schwartze, Buchanan and Co., 1928 closed with spinners' wools 12 per cent., tapmaking 8 to 9 per cent. and fine crossbreds about 4 per cent. cheaper than in December, 1927, but medium 8 per cent. and coarse about 5 per cent. higher. Compared with July, 1914, spinners' wools are about 60 per cent. higher, the general run of topmaking wools about 55 per cent., medium and inferior pieces about 50, fine crossbreds 45, and medium and coarse crossbreds about 40 per cent. higher. Other firms agree with these figures, and, all things considered, the past year's operations may be described as fairly creditable, notwithstanding the serious fall at the fifth series of auctions. The most regrettable feature is the reduced quantity of wool that came to the hammer and the decline in home trade takings. Most firms had to struggle with fairly heavy direct imports during six months of most unprofitable trade, and quite a number sent wool back for re-sale in London during July, September and November. Not only was wool returned from Bradford, but also from the Continent and the United States. Stocks are now exceedingly light, and notwithstanding reduced home trade consumption the world's clip has been absorbed. The outlook for Australian, New Zealand and South African wool does not appear to have been seriously impaired by the events of the past twelve months. Without in any way attempting to belittle the extent of the losses incurred, it is a fact that the home trade still possesses no little recuperative power.

It is very doubtful whether the offerings of wool from oversea for the first series of London sales will amount to more than 90,000 to 100,000 bales, and these should be disposed of in a fortnight. The quantity will be less on account of the shipping strike in Australia last November. From the selling point of view there is encouragement in the fact that the carry-over from the last series was exceedingly small, and that 90 per cent. of the forthcoming offerings will be new clip. During the past fortnight there has been an extensive covering movement among spinners, and the impression prevails that current prices for wool will continue.

THE JUTE TRADE.

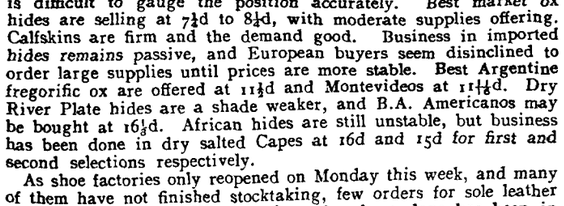
DUNDEE, January 2, 1929.

The jute trade is being interrupted by holidays. There has been very little business transacted in the market during the past fortnight, and manufacturers have been rather anxious to obtain orders, with the result that they are quoting lower prices. For 10½ oz 40 in hessians 4⅝d is now the general quoted limit, or 1/16d less than formerly, with 8 oz obtainable at 3¾d. While inquiry goes on for jute cloth, actual orders have been of limited number for some time back, but it is hoped that buyers will be compelled to purchase on a larger scale once the market has again settled down after the holidays. There are many wants to fulfil and stocks of jute goods are known to be small. If the raw jute market were to become firmer it would probably prove to be the necessary incentive to stimulate buyers into action, and higher rates are expected, as advices from Calcutta all point to a crop of much less proportions than in the previous two seasons, and, indeed, shorter than will meet the world's requirements. The quality of the fibre this season is only moderate, and a fair number of arbitrations are being held. Prices at the moment are very firm at from £36 10s for good first marks, £33 15s to £34 for lightnings, £31 10s for Daisee assortment and £33 15s to £34 for Tossa assortment. Business has been mostly confined to Daisee at the rate mentioned for assortment, *December-January* shipment.

Values of jute yarns are steady at 3s 7d paid for common 8 lb cops for January delivery, and 3s 6½d for January-March, with spools at 1d more in each case. Twist rules from 5⅛d to 5⅜d for 3 ply 8 lb, and Rove has been purchased at less than the quoted rates of £28 for 48 lb and £18 for 200 lb. Sacking yarns have been slow at 4¼d for 24 lb weft and 5⅛d for 8 lb chains. Fine yarns continue firm, following the recent large business done, but carpet qualities are more or less neglected.

Business in jute cloth is confined to the merest trifles at from 4⅜ for 10½ oz 40 in hessians. There is no outstanding feature in the market, and the trade in heavy goods is so slow that several makers intimate their intention to go on short time shortly unless there is an improvement in the number of orders received.

Calcutta goods prices for shipment have been well maintained, though the market has been quiet recently. The spot price of 10 oz 40 ins has lately dropped from 38s to 35s 6d owing to more generous arrivals and slow demand.



HIDE, LEATHER, AND ALLIED TRADES.

Few orders for hides and leather have come to hand since the holidays. Tanners are in rather a pessimistic mood, and many of them are still working in a reduced input of hides, as the demand for sole leather is quiet. Market hides seem inclined to be a shade weaker, but as few auctions have as yet been held, it is difficult to gauge the position accurately. Best market ox hides are selling at 7¾d to 8¼d, with moderate supplies offering. Calfskins are firm and the demand good. Business in imported *hides remains* passive, and European buyers seem disinclined to order large supplies until prices are more stable. Best Argentine fregorific ox are offered at 11¾d and Montevideos at 11⅛d. Dry River Plate hides are a shade weaker, and B.A. Americanos may be bought at 16⅛d. African hides are still unstable, but business has been done in dry salted Capes at 16d and 15d for first and second selections respectively.

As shoe factories only reopened on Monday this week, and many of them have not finished stocktaking, few orders for sole leather have come to hand. What business has been done has been in repairing wet salted bends of medium weights, but there is little demand for dry hide bends, and parcels may be now bought at much lower rates. Offal is rather weaker, and at the moment export business has fallen flat. Curriers report business as quiet in kip leathers, but there is a fair trade passing in black and brown glacé. Willow and box calf leathers are wanted in small parcels, and values in this direction are gradualy firming up.

Shoe manufacturers have not yet got fully into their stride, but as retailers made a good clearance during the Christmas rush orders are confidently expected to flow in. Spring samples are already talked of, and light leather dressers are awaiting with some amount of anxiety the trend of events as far as colours are concerned.

VEGETABLE OILS AND OILSEEDS.

Markets this week have been quiet and little business has been transacted. Linseed oil continues in poor demand from consumers and is slightly easier around £28 5s per ton ex Hull mill naked with £28 2s 6d quoted for January-April and May-August delivery. Cotton oils are steady but slow, crude Egyptian being held for £29 and common edible for £33 spot and January-February. Ground nut oil is steadier and dearer, but other seed oils are about unchanged.

In the oilseed section Plate linseed is inclined to be easier. A large quantity now afloat for Europe has had the effect of diminishing the premium on seed near at hand, current value of seed on passage ranging from £16 10s down to £15 12s 6d. Little business has so far been done in the new crop Plate, which is now being harvested in splendid condition and giving promise of a record outturn. For January shipment to Hull £15 7s 6d is quoted, with February at a small discount. The quantity of linseed now afloat for Europe is 137,900 tons, or 19,000 tons more than a week before. Cottonseed is quiet, and black Egyptian held by shippers for £9 17s 6d afloat and January loading. The demand for oilcakes is good and prices firm.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—A featureless market continues, as trade buyers merely operate in order to fill up certain gaps at lower prices. There is a good deal of T.L. granulated circulating at 22s 6d from refineries, and which meets competition from home-grown varieties. The latter range from 22s 9d to 23s 6d, with Cupar quoted 23s 9d, all ex factories, ready delivery. Imported descriptions are a dead-letter at the moment, and this applies to all parcels for shipment. White Java more reservedly held, and January-March to Calcutta quoted 12s 6d, c. and f terms. Foreign 96 per cent. centrifugal, January-February, quoted 9s 9d, c i f., U.K., and in the case of Cuba, where grinding operations have just commenced, this figure must cause disappointment to producers. Terminal sections quiet. Raws: January, sold, 9s 0¾d; March, 9s; August, 9s 6d; white, March, 12s 3d; May, quoted, 12s 3¾d; August, 12s 6¾d cwt. Cuban receipts last week cabled 26,285 tons, against 10,200 last year; exports, 52,235, against 56,313; stocks, 124,403, against 218,383. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending December 29th amounted to 100,886 tons, compared with 74,995 at corresponding period last year.

COFFEE.—Only small spot sales, but prices show no alteration.

COCOA.—A quiet tone pervaded this market. Accra, F/F, January-March, quoted 41s, f.o.b. Terminal, January, sold, 46s 3d; March, 46s 4½d; May, 46s 10½d; July, 47s 6d; September, sold, 48s 6d to 48s per cwt.

TEA.—Private contract market fully steady, and there is quite a fair demand, chiefly for the lower qualities.

RICE.—Market idle and featureless as far as Europe is concerned.

BEANS.—Only retail sales in progress. Madagascar butters: Spot, 32s to 36s, as to sample; afloat, 33s 6d to 36s, as to position; November-December, 33s 6d; December-January, 33s 3d; January-February, 33s. Rangoon haricots, April, 18s 6d; Ohtenashi, January-February, 36s per cwt, c.i.f.

PEAS.—Market dearer, more demand, Japanese, spot, old crop, 18s 6d; new, 20s; December-January, steamers, sold, 18s 9d to 19s 3d; January-February, also February-March, 19s per cwt., *c.i.f. London*. Dutch marrowfat, 18s 6d cwt, f.o.b.

SPICE.—Pepper dealt in to a moderate extent, but general tone quiet. Lampong, October-December, sold, 1s 4⅝d; January-March, 1s 4d; Muntok, white, October-December, 1s 11½d; January-March, 1s 11¼d to 1s 11⅝d per lb. London landings, 94 tons; deliveries, 37; stocks, 1,548, for which black accounted for 1,286 and white 262, being an increase of 57 tons on the week. Pimento, forward, 11/7½ per cwt, c.i.f., London. Zanzibar cloves, spot, 1s 3¾d; December-February, 1s 3½d per lb. Sago flour quiet, and January-February to the U.K. quoted 12s, c i.f. Dutch farina January, quoted 12s, f.o.b. Tapioca flour nominally unaltered. Tapioca steady though quiet, both with reward to Singapore and Java qualities.

FRUIT (Dried).—Market steady, but business somewhat restricted. Of currants, good Pyrgos quoted at 47s; Patras, 49s 6d to 51s, and Vostizza, 57s 6d to 63s. Valencia raisins in fair request, quarter boxes 50s to 65s. Capes and Australians dull. Sultanas quiet with fair supplies available. Smyrna, common to medium, 38s to 55s, and finer 56s to 60s. Other kinds unaltered. Figs move off slowly. Genuine spot, 30s to 34s; layers, 60s to 70s; pulled, 70s to 100s. Dates quiet of sale. Evaporated fruits without material change, and business has scarely been resumed.

CANNED GOODS.

CANNED FRUITS, FISH AND MEATS.—Quotations show no material alteration owing to holiday interruptions, but the market in all departments continues very steady and values of some articles likely to harden when normal trading is resumed.

BARCLAYS BANK
LIMITED
Head Office: 54, Lombard St., LONDON, E.C.3
And over 1,950 Branches in England and Wales.
CHIEF FOREIGN BRANCH:
168, Fenchurch Street, London, E.C.3.

AGENTS AND CORRESPONDENTS IN ALL THE PRINCIPAL TOWNS THROUGHOUT THE WORLD

CONDENSED MILK AND MILK POWDERS.—Market quiet, and occasionaly the turn easier. Full cream, sweetened English, spot, 45s; Dutch ditto, 39s; January-March, 39s. Machine-skimmed, sweetened, English, spot, 27s; Dutch ditto, 24s 6d; January-March, 21s 6d, all in 5 cwt barrels. Powders: Spray, F.C., 26 per cent., 2 by 56 lb tins, crated, prompt, 98s; M.S. (1 cwt cases) prompt, 42s 6d. Roller process, F.C., 26 per cent., prompt, 81s; M.S., ditto 36s, all net, duty paid, ex-wharf London On the grocery side F.C.S., 21s; M.S.S., 10s 9d basis per case usual packing.

HONEY.—Market quiet, but firm, and pale grades reservedly offered. Amber set Jamaica quoted, 47s 6d to 50s; manufacturing, 44s. New Zealand ranges from 52s 6d to 87s 6d, as to quality, per cwt.

RUBBER.

A quiet but steady market, and manufacturers at the moment are not inclined to exceed pressing requirements. Standard sheet, spot and January, sold, 8⅝d; February, 8 11/16d; March, 8 13/16d to 8⅞d; January-March, 8⅞d. April-June, 9d; July September 9 1/16d to 9 3/16d; October-December, 9 5/16d to 9⅜d per lb. London landings last week, 1,699 tons; deliveries, 793; stocks, 19 72, against 63,207 at same period last year, being an increase of 905 tons on the week, Liverpool stocks increased by 843 tons, at 2,854.

GENERAL

JUTE.—With spinners in all directions busily engaged in stock-taking, a steady but idle market resulted. Firsts, December-January, Continent, quoted, £32; January-February, £32 5s; February-March, £32 15s per ton.

HEMP.—Business still quiet while under holiday influence, but trend of prices firm with offers still reservedly made from the Philippines J 2 February-April quoted, £40; K, ditto, £38 10s; L 2, £30 10s; M 1, £32 10s; M 2, £28 10s. African sisal, No. 1, f.a.q., January-March quoted £31 5s; No. 2 £39 10s ton, c.i.f. Mexican firm, unaltered. Manila receipts for past week totalled 37,000 bales, against 24,000 at same time last year, and 13,000 in 1926; estimate for next week, 23,000, and following week, 9,000.

SHELLAC.—Market fully steady. T.N., spot, 200s; March, 194s; May 192s cwt.

COPRA.—Market dull, and quotations in many instances quite nominal. Straits, S.D., January-February, to Rotterdam, quoted £25; Dutch E.I., ditto, £24 15s; Ceylon, £26 2s 6d. Others call for no comment. Palm kernels, January-February, to Hamburg, £20 2s 6d ton.

MISCELLANEOUS.—Coconuts quoted 18s to 24s per 100. Coir yarn, Ceylon, £19 to £40 10s; Cochin, £22 10s to £40; £18 10 to £24 10s; cinnamon leaf oil, 4½d; citronella, Ceylon, 1s 9d; Java, 2s.

THE MONEY MARKET.

CONTRARY to anticipations, money was relatively easy this week, and the Bank was finally repaid on Wednesday with comparative ease. Short loans commanded 3½ per cent. for new money on Monday, while by Wednesday morning the rate had stiffened to 4 per cent., easing a trifle later in the day. When it is recalled that ten days ago the market was wondering whether it could escape

from the Bank without re-borrowing, it will be seen that events have turned out much more fortunately than was expected. At the same time, discount rates have risen to 4 5/16-3/8 per cent. for three months' Bank bills, so that the Bank has achieved its reputed aim of forcing market rate up to that level.

* * * *

The reason for this unexpected ease was a very simple one. On February 1st next are due the following maturities of Government short-term debt:—5 per cent. National War bonds, £95,160,661, 4 per cent. National War bonds, £4,799,065, and 4½ per cent. Treasury bonds, £72,833,528, making a total of £172,793,254. There are also £30,637,387 of 5½ per cent. Treasury bonds, maturing on April 1st next. Against these maturities, the Government hold the proceeds of the Conversion loan issued last month. These amount to £103,000,000 in conversion applications in respect of the above maturing bonds, and £4,600,000 in cash, representing the 10 per cent. call payable on application by those who subscribed for £46,000,000 of the new bonds in cash. This leaves outstanding a total of £54,430,000 to be found by the Treasury from other sources. All of this has to be found by the end of March, and the bulk of it during the current month.

* * * *

With the opening of the last quarter of the financial year revenue is beginning to flow in freely, with the result that the Treasury is becoming amply supplied with funds. This has enabled the Treasury to deal at once with the problem of the February maturities. Early this week the Government broker began to offer to buy up the bonds maturing at the end of the month at a discount of 4 per cent. per annum on their redemption price, and late Wednesday night this policy was placed on a more formal basis by an official announcement by the Bank of England that until further notice it would buy these bonds on these terms up to a daily limit of £2,000,000.

* * * *

Now practically all these bonds are held by the money market, for during the last few months of their life they become virtually equivalent to Treasury bills. Again, the money paid for their purchase comes out of the Government's deposits at the Bank of England, and goes to swell market resources. This is the explanation of the present easy conditions. It only remains to add that this action of the Treasury suits everybody concerned. The Treasury is satisfied both because it makes a profit on its purchases equivalent to the rate of discount offered, and also because it is able to spread the repayment of the £173 millions of February maturities over three weeks instead of having to find the money all at once. The market is satisfied because it receives an unexpected supply of funds just when it was faced with stringency. The Bank is satisfied because it is relieved from having to deal with an artificial week of stringency which might have disturbed the continuity of its policy.

	Jan. 10, 1929.	Jan. 3, 1929.	Dec. 27, 1928.	Dec. 20, 1928.	Previous Rate and Date Changed.

The Bank return is noteworthy for an increase of £1,149,747 in the Bank's gold stocks, this being the first since the Bank of Spain's shipment of £2,000,000 in early November. A further £8,776,696 of notes have returned from circulation, so that the banking department's reserve has expanded by £9,926,443, thus returning to the level ruling immediately before the Christmas note withdrawals. The decline of £16,524,795 in Bankers' Deposits brings this item, too, back to its level of early December, and simply reflects the return of bankers' cash to its normal, as opposed to its balance-sheet dimensions. Public deposits have fallen by £11,341,778, as a result of the purchases of maturing bonds described above. It is these changes that have enabled the market to escape from the Bank, which it has done by paying off Discounts and Advances to the extent of £33,058,805. The Bank has even been able to stiffen conditions a little on its own account, as is suggested by the decline of £4,844,166 in Government Securities. The Bank's proportion has recovered by 14 11/16 per cent. to 38⅞ per cent., and its reserve ratio by 1¾ per cent. to 31⅛ per cent., or to much the same figures as a month ago. In short, the current Bank return closely resembles that of December 12th, and so shows that the Christmas and New Year disturbances have now been overcome.

NEW YORK MARKETS.

Our New York correspondent cables:—The Federal Reserve statement reveals the usual return of funds at this time of year; it shows a gain of $65,000,000 in reserves, a drop of $84,000,000 in circulation, and a drop of $275,000,000 in discounts. The ratio is up 4.4 per cent. Local Bank changes are even more striking, with discounts $214,000,000 up, and the ratio 12.9 per cent. up. The authorities seem disposed to maintain the existing discount rate while continuing the experiment of allowing the bill rate to rise to a more natural and attractive level, thus ending ten years' strong support of that market. It is anticipated that the new bill market policy will gradually have a firming effect on money rates generally. Meanwhile another $30,000,000 of gold earmarked for France is partly offset by the import of $23,000,000 of Canadian gold. Business reports remain good. The steel industry, after a record December, is expanding further and operating at approximately 85 per cent. of capacity.

THE STOCK MARKETS.

The stock markets were firm in tone, a steady volume of investment coinciding with fair speculative activity in issues with a market on both sides of the Atlantic. Gilt-edged securities were only slightly affected by a large New Zealand issue, but a recovery in home rails was checked by disappointing traffic returns. Business in industrials was markedly selective. An upward turn in rubber prices induced an unwonted activity in the share market; tea stocks were again firm, but business in oils remained largely professional. Wide fluctuations again occurred in the Rhodesian market, the international character of the movement being a conspicuous feature, while Kaffirs were firmer in sympathy.

THE COMMODITY MARKETS.

The prevailing tone is quiet hope. The coal trade shows little change, though some of the recently closed South Wales pits are restarting. Increased activity in the steel trade continues, and the future of pig-iron is thought in some districts to be more hopeful. Lead and tin are irregular. There is an increasing demand for Manchester goods, and the tone of the Bradford market is better. The prospects for the Colonial wool sales are good. Hides continue to be weak, but there is a slightly improved demand for upper leathers and for shoes. Vegetable oils and oilseeds are in better demand. Wheat recovered after a temporary fall.

FOREIGN EXCHANGES.

More activity was noticeable during the past week. Sterling on New York continued steady around 4.85 5-32, until Wednesday last, when a sharp fall occurred to 4.84 15/16. Sterling later recovered to 4.85⅛. Forwards were ⅜ cents discount for one month, and ⅞ for three. Canada moved in sympathy with New York, touching 4.85¾, as against 4.86¼ a week ago. Paris funds were in demand, owing to the Stock Exchange settlement, and 124.02 was quoted on Tuesday last. The close was higher at 124.07, with forwards at 2 centimes discount for one month, and 4 for three months. Brussels depreciated to 34.90½, with forwards about par. The Dutch exchange, after touching 120.7⅝, rose to 120.81½, while Milan, despite the rise in the Italian bank rate, was offered at 92.73, as against 92.65 a week ago. Owing to lower money rates and to rumours of an impending reduction in the German bank rate, Reichsmarks were offered insistently from German bourses, and closed at 20.40½. Forwards were in better demand. Spain was steady at 29.72. Buenos Aires was firmer at 47⅜d, but Rio depreciated to 5⅞d. Japan was offered at the close at 1s 10 9/16d. Shanghai was 2s 7⅝d, and Hong Kong 2s 0 9/16d. Silver remained steady, closing slightly better at 26⅜d for spot and 26 7/16d for forward delivery.

STATESMANSHIP AND INDUSTRY.

The speech which the Prime Minister addressed to his constituents at Worcester last Saturday marks the opening of the political campaign of 1929, which will be waged with unceasing and growing energy until the day of the General Election. We may properly expect this speech, then, to strike the keynote to which Conservative campaigners will attune their appeals to the country; and looking at it from this point of view, it is of no small interest to find that the Worcester pronouncement was notable chiefly for the negative character of the grounds on which Mr Baldwin chose to base his claims to the continued support of the electorate. Counselling agriculturists "not to put their trust in politics," but to remember that the troubles of the mining industry began "on the day when the Miners' Federation of Great Britain and the mining industry generally began to play that part in politics with which we are now so familiar," Mr Baldwin referred with satisfaction and with what a distinguished contemporary describes as "a justifiable note of pride" to the fact that "industry itself is beginning to overhaul the trade of the country, to examine its shortcomings, and to set its house in order," and that industrial problems are thus being "taken directly out of the hands of the politicians, who have never been fit to handle them." From such phrases it is tempting to deduce a belief on the part of Mr Baldwin that consciousness of incapacity to solve the problems of any industry is a politician's highest merit.

Party politics, as such, are not our concern, nor do we propose to discuss the question whether the Prime Minister is correct in supposing, as he appears to do, that references to the gratifying growth of "self-help" in industry will suffice to render attractive to the electorate a doctrine of *laissez faire* in a period of crucial industrial difficulties. It is because we share to a great extent Mr Baldwin's desire to restrict within definite limits the intervention of the State in industry that we consider it important that those limits should be well thought out and defined, and that the question should not be begged, as in the Prime Minister's speech, by the naïve assumption that Parliament either can or ought to divest itself of all responsibility for the conduct and conditions of industry as a whole, or even of particular industries.

The corner-stone of the Labour Party's policy—however anxious its leaders may be to gloss over matters by professions of safe, "gradualist" moderation—is still the determination to bring the maximum of productive and commercial activity under one form or another of State control. It would be unfortunate if opposition to meddlesome and ill-considered schemes of interference with private enterprise, as such, were to find expression only in pronouncements of unqualified individualism. Apart from the fact that during the last hundred years Parliament has built up by a long series of Factory Acts, Merchant Shipping Acts, Trade Boards, Mines Regulation, and Unemployment Insurance Acts an elaborate fabric of laws restricting individual liberty in industry—a fabric which no sane person would now think of attempting to destroy—it must be realised that, given present-day "large-scale business" and the increasing interdependence of highly organised trades, the actions and fortunes of individual industries, even of particular firms, are necessarily in some degree and in certain circumstances a matter of concern to the whole community. It is neither good statesmanship nor good sense to suggest that Parliament should remain inactive, watching the ruin of a staple industry through domestic dissension, or passively observing the establishment by a combine of an oppressive monopoly. Nor can a State which has rightly undertaken the burden of Unemployment Insurance be wholly indifferent to the affairs of concerns whose failure would involve large additions to the army of the workless.

Balanced recognition of the impossibility of divorcing industry utterly from the State, as well as of the dangers of industry "playing a part in politics," is to be found in the letter, issued this week for publication, which the Iron and Steel Trades Confederation sent on December 31st to the Prime Minister, requesting the Government to appoint a Royal Commission, or other competent Committee, to inquire into the circumstances of the iron and steel industry and the possibility of ameliorative action either by Parliament or by the industry itself. In the course of the letter, which emphasises the continued severity of unemployment in the iron and steel trades, the Confederation Executive Council express their concern "that recent developments tend in the direction of treating the industry as a subject of political controversy rather than from the standpoint of its economic position"; at the same time they submit "that no Government, whatever its political complexion, can justifiably ignore conditions which bear upon the welfare and stability of a great basic industry." This submission we feel bound to endorse, and, although the initiation of a new inquiry is hardly practical politics until the final report of the Balfour Committee has been issued, the appointment of a Royal Commission on the industry, with wide terms of reference, to ascertain the facts, would at least be a preferable alternative to continuance of agitation and "lobbying" to induce the Government to extend "safeguarding" to iron and steel—the "recent development" to which the Confederation evidently refers, and which is highly germane to our original point. For by a quaint paradox of politics those who deprecate most strongly certain forms of State encroachment upon "liberty" in industry are sometimes the readiest to demand that the State should assist particular industries by rasiing tariff barriers at the expense of the whole community's true interests.

If there be one direction in which it is the paramount duty of the politician to serve industry by refraining from interference, it is in the sphere of fiscal policy. The test of statesmanship here is wholly negative—the absence of every impediment to the free flow of commerce. In other directions we conceive the functions of the statesman in relation to industry to be in part negative, in part positive. On the one hand his task is—not to hinder. The State's expenditure should be so controlled that industry is not crippled by an excessive burden of rates and taxes; the great contributions to the common weal made by individual enterprise and management must not be jeopardised or impaired by meddlesome legislation in restriction of initiative, or by officious regulation where freedom hurts none. On the other hand, the task of statesmanship now and in the future must embrace—to a degree far greater than in earlier stages of our industrial development—problems of a directly economic, as distinct from strictly political, character. Increased State ownership, or bureaucratic management, of undertakings is a policy to which we are fundamentally opposed, but while we agree with Mr Baldwin that for the most part industrialists are best fitted to set the house of industry in order, there are a number of vital spheres, such as electricity supply, the development of roads and transport co-ordination, and the encouragement of scientific research, in which the State alone has the power to meet adequately the need of co-ordinated national effort. In these directions statesmanship implies continuous constructive activity, and when Mr Baldwin claims that the country's salvation lies in his Government's economic impassivity, and its willingness to wash its hands of industrial problems, he runs grave danger, in our opinion, lest an unimpressed electorate return to power a party whose readiness to enlarge the scope of political interference with industry is so extensive as to be fraught with serious risks to the economic welfare of the nation.

NEW EMPIRES AND OLD PROBLEMS.*

Every human society is apt to think of itself to some extent as a chosen people. Perhaps that is an illusion inseparable from social consciousness. At any rate, it is an illusion which is common not only to mobile civilisations like that of the modern West and stationary civilisations like that of China the day before yesterday, but also to primitive communities—who likewise regard the rest of mankind as outsiders, oblivious of the estimation in which they themselves are held by the rest of mankind.

* "Slavery in the Roman Empire," R. H. Barrow (Methuen, 1928, 15s). "Freedmen in the Early Roman Empire," A. M. Duff (Clarendon Press, 1928, 12s 6d). "Last Words on the Roman Municipalities," W. E. Heitland (Cambridge University Press, 1928, 4s). "The Roman Legions," H. M. D. Parker (Clarendon Press, 1928, 15s).

In mobile civilisations like ours, however, this infirmity of mankind is carried one degree farther. We are not merely conscious, as a tribe, of being "not as other men are," but each generation of the tribe is conscious of being different from and superior to its fathers and grandfathers. This further infirmity is characteristic of an age of rapid external and material change. Each new generation sees the superficial appearance of the world transformed, and proceeds to make two assumptions: first, that this superficial transformation is the outward and visible sign of some corresponding inward change; and, secondly, that this change is a change for the better. In fact, to use the words of the Catechism, we are apt to regard our "material progress" as "the outward and visible sign of an inward and spiritual grace"; and our self-complacency has become so hard-baked that it is almost shell-proof even when our affairs go gravely wrong. Our slums are "the vastest slums in history," our Armageddon "the most terrific war there has ever been." Such a "die-hard" self-complacency as this is perhaps the most dangerous frame of mind in which it is possible for a society to become set, for a generation which really feels itself unique draws the inference that it is somehow miraculously privileged to enjoy an immunity from the common lot of mankind. Thus "material progress" is apt to lure a generation which experiences it into a superstitious confidence that may cause this particular piece of progress to be "nasty, brutish, and short."

How can such pharisaical illusions be exposed and corrected? Only by putting the dogma of our uniqueness to the test, or, in other words, by the comparative study of human history. A thorough and honest study of history, from the comparative point of view, is a sovereign means of bringing ourselves to a soberer and safer frame of mind, for the moral of history is "Memento Mori." And happily this means of salvation is well within our reach, for in our generation archæology has added to the number of civilisations whose life and death are within our ken, and it has also deepened our knowledge of civilisations with which we were acquainted already. For example, the discovery, publication, and study of inscriptions has increased our acquaintance with the civilisation of the Greeks and Romans, which may be described metaphorically as the parent of our civilisation. The four books cited in the footnote are all worthy examples of the work of contemporary historical scholarship in the Græco-Roman field, and we have singled out these particular four for notice because they happen to deal with an age whose points of resemblance to our own times are unmistakeable. This age is the first couple of centuries of the Roman Empire, from its organisation by Augustus during the last generation before Christ down to the visible disintegration which set in about the time of Marcus Aurelius, and which has been named by Gibbon "the Decline and Fall." It is impossible to study these two centuries without realising that our own experiences and problems, so far from being unique, have been anticipated in the history of at least one great civilisation before. The simplest way to bring this truth home is to formulate the outstanding problems of Ancient Society under the early Roman Empire, as those problems emerge from a study of these four books. They may be defined as the problems of International Peace, of Urbanism, of the Birth Rate, of the Proletariat, and of the Mingling of Nations—a problem dealt with by Mr Barrow, and which in the ancient world was the counterpart of our current problems of Migration and racial Minorities.

In the matter of International Peace—to take that first—the generation of Augustus were philosophically not our contemporaries, but actually our successors, in the sense that they already had behind them, in their history, experiences which for us are still to be or not to be, according to our fortune and our behaviour. Anyone who wants to know how the Pax Romana was organised will find a lucid and exact account of it in Mr Parker's book on the Roman Legions; and at first glance the brilliant success of it takes one's breath away. A Europe in which there were no troops between Rome and the Rhine except a detachment of about 600 men at Lyons. A civilised society in which there were no troops at all for the purpose of waging internecine war between one civilised community and another. A world in which, instead of many armies, there was a single police force, and, instead of many frontiers between state and state, a single frontier dividing civilisation from barbarism like light from darkness. Here we seem to see realised almost all the ideals of security and disarmament for which men of goodwill have been struggling in our world against such heavy odds. And that is quite true: the Roman world did, during those two centuries, enjoy a degree of security and disarmament which to us seems almost Utopian. But, in order to discern the true moral of this fact, we must examine not only what the Pax Romana was but how it came about. It came about through two centuries of crime and suffering such as it has seldom been the lot of human beings to endure—an age of horror which began with the outbreak of the war between Hannibal and the Romans in 218 B.C., and closed with that last round of the Roman Civil Wars which sent Antony and Cleopatra to destruction and left Augustus sole master of a stricken world. If we can imagine a succession of half a dozen wars each equivalent, *mutatis mutandis*, in intensity to our own Great War and half a dozen social revolutions comparable to the Bolshevik Revolution, if we can imagine one great Power after another being dealt "the knockout blow" until one alone is left in the field, one community after another torn up by the roots until almost a majority of mankind are either refugees or transported slaves, and then the governing class of the victorious state tearing itself to pieces in a frenzy produced by the awful experiences through which it had attained to a plenitude of irresponsible power—then we shall begin to have some idea of what the historical background to the Pax Romana was. The moral for us seems to be that mere international peace does not bring salvation, that indeed an era of international peace is an inevitable ultimate consequence of a succession of international wars carried to the point of exhaustion. The problem for us is to secure and establish international peace while we have still the life left in us to benefit by it instead of waiting, as the Ancients did, until our civilisation is so far gone that Peace can no longer avert its decline and fall but can merely retard them.

The problem of *urbanism* is the subject of Mr Heitland's book, and here, in the Roman Empire as in our Modern World, we are shown the city eating up the countryside. At first the process seems to mark an indisputable economic advance, bringing a fuller social life in the train of a more intricate organisation of work and pleasure. And then we see a disconcerting example of the law of diminishing returns. The urban superstructure goes on growing in complexity and weight, while the agrarian foundations remain what they were, until, in the third century, the whole edifice falls with a crash. In our world, where "the new countries" overseas are now becoming urbanised after the likeness of Europe, somewhat as Gaul and Spain became urbanised after the likeness of Italy and Greece, the Ancient World's experience of urbanism is well worth consideration.

The Problems of the Birth Rate, the Proletariat, and the *Mingling* of the Nations may be studied together in Mr Barrow's book on Slavery and Mr Duff's on Freedmen—books which partly cover the same ground, inasmuch as the freedman is simply the slave gone up one place higher. In order to perceive the bearing of these problems on our own modern situation, the reader must follow the author's advice not to let himself be obsessed by the juridical status of slavery; *for it is as erroneous as it is easy* to ride away on the comfortable assumption that slavery rules out of court any comparison between the proletarian underworlds of the Roman Empire and of modern Western Society. An unprejudiced study of these two books will show that, far from this, there is a remarkable parallel between the influx of Greek and Oriental immigrants into Roman Italy as slaves and their subsequent rise as freedmen, and the influx of European immigrants into the United States. In both cases the tearing up of old roots, the striking of new roots, and the mingling of nations that ensued can be seen to have produced the same broad psychological and social effects. The original creators, sustainers and destroyers of Græco-Roman civilisation—the Greek intellectuals and the Roman governing class—tend to die out, notwithstanding drastic and all-pervasive imperial legislation to penalise childlessness and reward the parents of large families. And as the numbers of the old upper class decline, the more successful elements of the new cosmopolitan proletariat rise to fill the vacuum, until at last the tradition of culture is broken and society goes into dissolution in order to re-form, centuries afterwards, on new lines. This happened once, and what is to prevent it happening again? For the Modern West has annexed to its proletariat not merely Greece and Syria and Egypt, but all the alien races and civilisations of the contemporary world.

MR PARKER GILBERT'S REPORT.

When last week we reviewed the Report of the Commissioner of the Reichsbank and looked forward to dealing with Mr Parker Gilbert's latest analysis in a subsequent issue, we certainly did not anticipate that a situation of some gravity would almost immediately arise in connection with its publication. The vigorous Press campaign in Paris and Berlin, which has not been without its echoes on this side of the Channel, could in the nature of things have been based only upon the most superficial examination of the lengthy and complicated document which the Agent-General has now made public. In their anxiety to score points in favour of their divergent views on the subject of Germany's ability to pay, the combatants appear to us not only to have done injustice to the Agent-General, but to have acted upon public opinion in their respective countries in a most unfortunate way, in view of the meeting of the International Conference on the subject of Reparations in a relatively short time. The meeting of the Experts has already been prejudiced by the somewhat obscure diplomatic negotiations which have now been going on since September, and which have only recently been concluded. A Press campaign designed to show that Germany can pay what France demands, or that the world should at once adopt the view taken by German public opinion as to Germany's capacity to pay, is entirely out of place at this stage—not because it will in any way, let us hope, affect the minds or the actions of the various expert delegations, but because it creates an atmosphere in which the views of the Conference, whatever they may turn out to be, will not receive the dispassionate study and consideration for which they call. We think, therefore, that we shall best serve the needs of our readers if on this occasion we deal with the Agent-General's Report in a very broad manner, reserving consideration of any points of detail for a later occasion.

At the end of the four years preliminary to the second stage of the Dawes Plan, in which the annuity rises to a standard figure of 2,500 million marks, but before the application of the Index of Prosperity, which will, if the scheme stands unrevised, begin in the sixth annuity year, it was natural that the Report should review the progress which has been achieved by Germany since the *débâcle* of the mark in 1923. It is the view of the Agent-General that, "fundamentally, confidence has been restored, and Germany has been re-established as a going concern on a relatively high level of economic activity." But it is also the view of the Agent-General that, "great as the progress of Germany has been during the last four years, it is not to be supposed that she has yet made up for the values destroyed in the war or for the values which would have been produced had there been no war." It is, of course, the case that "present dislocations and difficulties are not confined to Germany," but that the problem of Germany is part of the wider problem of European reconstruction. Possibly the only phrase of the Report in connection with this aspect of the situation which might lead to misconception is the remark that "since 1924, when stabilisation was achieved and the execution of the Experts' Plan began, Germany's reconstruction has at least kept pace with the reconstruction of Europe as a whole, and it has played an essential part in the general process of European reconstruction," since it might be objected that this implies that the absolute level of prosperity in Germany to-day compares favourably with that of Europe outside Germany. This proposition might invite controversy, whereas the inference, which the passage quoted above might also be considered to convey—that the *rate of recovery* in Germany can bear comparison with that of the rest of Europe—seems to us to be unquestionable, and, further, to be consistent with a lower absolute standard, simply in consequence of the low level from which recovery began.

To judge from such German comments as have appeared in the Press in the last few days, it would appear that whilst the fact of some progress having taken place is not denied by German commentators, they are inclined to attribute such progress as has taken place entirely to the flow of capital to Germany, the inference presumably being that the cessation of such loans would at once check Germany's further progress, whilst imperilling at the same time the smooth working of the transfer of reparations. Reference to the Agent-General's Report will show that he is by no means inclined to underrate the important part played by these foreign loans in the reconstruction period, whether as a means of reviving German economic life or as a factor in the total balance of payments. "It is clear enough," he remarks, "that foreign credits as a whole have greatly accelerated the process of German reconstruction. The proceeds of foreign loans, upon entering into the German economy, have provided the essential material out of which German labour and enterprise could create new and larger domestic values. Considering conditions at the start and the funds then available, there have taken place in the last few years a growth of trade and an extension and renovation of plant such as have not been equalled in any previous period of equal length."

Foreign loans, then, have been an essential element in stimulating the increase of productivity to be noted during the period. This does not dispose of the contention that, even without foreign loans, an export surplus might have developed, though it is clear that without such loans the export surplus could only have been attained at the expense of the future productivity of Germany, since demonstrably it would have implied a definite and possibly dangerous weakening of German resources. The Agent-General, in addition to emphasising the positive contribution made to Germany's productive equipment by the inflow of capital, allows it to be seen how important these loans have been in the adjustment of the balance of payments. It is not, of course, the case, as is sometimes imagined, that all that has happened is that the volume of foreign currency available has simply been retransferred; for the tax resources by means of which the German Government has bought foreign balances have been secured in large

measure from compulsory savings by the German people, enforced by taxing the wealth whose creation was assisted by external borrowing. Currency transfers on Reparation account were one, but only one, element in a complicated situation, though as the Report includes currency transfers on Reparations account among the debit items offset, *inter alia*, by invisible shipping earnings and foreign loans, it would be unjust to charge the Agent-General with overlooking the significance of foreign loans in relation to the offsetting of Germany's total foreign obligations.

As regards the trade balance, an important trend is manifesting itself, due to the steady growth of exports. "Heretofore there has been a wide margin between the volume of exports and a volume of imports consistent with the requirements of active business. It is not out of the question that this margin will widen again from time to time as internal activity rises and the export trade falls, but the progress heretofore made in increasing exports gives ground for supposing that adverse balances will diminish, and that the dependence on foreign funds for the purchase of foreign goods and materials will be measurably relieved."

It is, however, the evidence, supposed to be given by the Report, of Mr Gilbert's adherence to the view that "Germany can pay" which has aroused most attention. There appears to us to be not the slightest indication in the Report that Mr Gilbert has shifted his ground in this respect, as compared, for instance, with the standpoint which he took up in 1927. In the autumn of 1927 he felt it his duty to insist upon the obligation of the German Government not to pursue a financial policy which directly weakened its control over its own financial resources, and which, indirectly, strengthened the expansive tendencies then in progress in German economic and credit conditions. Whilst a moral and indirect legal responsibility thus lay upon the Government, "the payment of the stipulated annuities to the Agent-General for Reparation Payments at the Reichsbank contributes, it is true, 'the definitive act of the German Government in meeting its financial obligations under the Plan,' and the payment of these sums is amply secured by the assigned revenues and other specific securities" (Report, 1927, p. 204). On the present occasion, again drawing attention to the "great productivity of the Revenues," and the attainment of "something like budgetary equilibrium for the present," though the tendency is for expenditure to go on increasing, and though the relations between the Reich and the States and Communes are such that the Reich is deprived of a growing percentage of the increase in the elastic tax revenues, he finishes up by saying that, "From the standpoint of the execution of the Experts' Plan, it is satisfactory to note that, in spite of tax reductions, the increase in revenues in the last three years is more than double the increase in Reparation payments during the same period, and that the assigned revenues are yielding more than double the amount of the standard budgetary contribution for which they serve as security. In fact, the whole development of the Budget since the last Report only serves to reinforce the conclusion then expressed "that no question can fairly arise of the ability of the Budget of the Reich to provide the full amount of its standard contribution under the Plan." (Report, 1928, p. 53; *vide* also p. 3 for an almost identical statement of the case). The attitude of Mr Gilbert has then been perfectly consistent, nor does it, in our opinion, indicate that he believes that the transfer difficulties can be readily solved, assuming a cessation of all foreign lending. That the growth of German productivity under the stimulus of capital accumulation increases the possibilities of transfer seems to us to admit of no question. That capital accumulation and improving revenues have been due in part to the influx of foreign loans is also true. But German critics would seem consistently to underrate the influence of the stabilisation of the currency, as such, in the reconstruction of Germany. The influx of capital is often given a measure of significance which it does not wholly deserve. In any case, the Agent-General cannot be charged with importing a new and dangerous doctrine into the discussion of the Reparations question, however much opinions may differ as to the correctness of his estimate of the degree of German recovery, financial and economic, and the causes to which it is due. We hope that opportunities for fuller study of this long and intricate Report will be used by the Press, not only in France and Germany, but in this country also, to modify the unfortunate impression, initially and hastily conveyed, that new or sensational elements have been imported into old controversies.

Mr Parker Gilbert has not prejudged, or attempted to prejudge, the eventual limits of Germany's capacity to pay. What he has done is to provide the forthcoming Conference with valuable and extensive data bearing upon the problems which the Experts will have to consider.

ANOTHER YEAR OF WHEAT SURPLUS.

(BY A CORRESPONDENT.)

THE crop year 1923-24 was noteworthy for its wheat surplus. Yields per acre averaged exceptionally high, and at the consequent depressed wheat prices Europe imported heavily, in spite of good crops and restricted purchasing power, while extra-European countries took unprecedented amounts. Though consumption and international trade reached record proportions, the outward carryover was substantially increased. The year 1924-25 stood out in sharp contrast as a year of wheat shortage and high prices. Following this came three years of at least adequate supplies, even considering the normal growth of demand and some measure of recovery of purchasing power in Europe. Amid numerous fluctuations, wheat prices tended downward from the peak reached early in 1925, but until recently they had not approached the low level of 1923-24.

The present crop year is again one of wheat surplus. World wheat acreage, continuing its post-war upward trend, reached a new high level. Nature gave a high average yield. The result is a record output, perhaps the first to exceed the bumper crop of 1915. The world crop of 1928, outside Russia, amounted to about 467 million quarters, as compared with 434 in 1923 and 446 in 1927. Wheat prices have run, in recent months, not far above their levels in the corresponding period of 1923. Outward carryovers next July will probably exceed the large stocks carried into the present crop year.

The harvests of 1928 belied early forecasts. In February-April, 1928, the outlook for winter wheat crops in the United States was increasingly gloomy, and European crops did not promise well. In consequence there occurred a substantial advance in prices, which was most pronounced in the United States. From May 1st onward, however, conditions generally improved, except in the soft winter wheat belt of the United States and the export regions of Russia, where short crops were actually harvested. Spring-sown crops also developed favourably. The reversal in crop prospects, coupled with heavy stocks of wheat on hand and the emergence of unexpectedly large supplies in Argentina, caused a notable decline in wheat prices, which began on May 1st and continued into August.

The United States crop, now estimated at 113 million quarters, is the largest since 1919; hard winter, hard spring, durum, and Pacific wheats are all in unusually large supply. The quality of the hard spring wheat is good, that of durum rather poor, that of the winter wheats a little above average. The Canadian crop, officially estimated at 62½ million quarters, but probably nearer 69, is of record dimensions. Frosts in late August seriously reduced the grade and damaged the quality, so that the higher grades are unusually scarce; but little of the crop is absolutely unmillable, and a good deal of the lower grades is being exported as wheat or flour. The combined crop of Argentina and Australia probably exceeds 50 million quarters, so that these four major exporters seem to have harvested well over 225 million quarters for the first time in history. The Danubian exporting countries all had the best wheat crops since the war, in all some 45 million quarters or more. Export surpluses are therefore unusually large, even though India's harvest last spring was too small to cover domestic requirements, and Russia's large crop (officially estimated at 107 million quarters) was so poor in the exporting regions that net exports are improbable.

Europe's wheat crop, outside Russia and the Danubian countries, was about 125 million quarters. This figure

was equalled in 1921, nearly equalled in 1923, and exceeded in 1925. The 1928 wheat crop is not much larger than that of 1927, but it contains much less grain that is either unmillable or of low quality, and the average weight and quality are much higher. Drought reduced yields in Spain and Portugal. Elsewhere, generally dry summer weather made possible a good recovery after an unfavourable winter and a cold late spring. Germany, Czecho-Slovakia, and several small producers harvested the largest crops since the war. The British crop was the smallest since the war, on account of small acreage rather than low yields, and its quality is fairly good.

The European rye crop was also good—larger and better than that of 1927, and the best since the war except that of 1925. The potato crop was distinctly large, and the barley crop was the largest since the war. The oats crop was also good, but the maize crop suffered severely from the dry weather and was the smallest since the war. Feed-grains as a whole are therefore less ample than the crops of bread-grains and potatoes, especially in view of the growth of livestock population; but it is mainly in such maize-producing countries as Roumania and Italy that the demand for wheat is likely to be increased by this fact.

At the price levels which prevailed in 1927-28 Europe and the Levant would probably import about as much wheat this year; for growth in population and per capita consumption will presumably offset the effective increase in crops. Importing countries outside Europe would probably take considerably more, even at the same price levels, by reason of a smaller wheat crop in Egypt, a poor quality wheat crop in Japan, a poorer rice crop in China, and the general upward trend of consumption. But the great increase in export *surpluses in* North America, Argentina, and Australia has depressed prices so far that the international movement of wheat has already been heavy, and bids fair to continue so. Thanks to *the relative importance* of extra-European trade and to high prices for millfeed in North America, international trade in flour is likely to be larger than in any year since 1924-25.

Net imports of European importing countries in the current crop year promise to be the largest on record, but they will probably be obtained at prices which will make the total cost only about £190 millions. Comparisons with five preceding years, using British Customs prices *as a rough measure* of import prices, are given below :—

IMPORTS of WHEAT and WHEAT-FLOUR by EUROPEAN IMPORTING COUNTRIES.

August-July.	Net Imports (Million Bls.)	U.K. Price (Shillings per Bl.)	Cost (£'000,000.)
1923-24	575	5·02	144
1924-25	640	7·28	233
1925-26	510	7·00	178
1926-27	655	6·75	221
1927-28	645	6·38	206
1928-29	670*	5·56*	186*

* Forecasts.

Canada will certainly furnish the lion's share of the exports, probably well over 50 million quarters; her net exports in the period August-November were over 23 millions. Net exports from the United States have so far been light, considering the size of the crop, and they seem unlikely to reach 20 million quarters for the year. Argentina and Australia, which by the end of 1928 had already shipped more old-crop wheat than was thought to be available there, may reasonably be counted upon to export 32 million quarters. The Danubian countries, in spite of the short maize crop, will probably export 6 or 8 million quarters, and other minor exporters perhaps 2 more. Total net exports, which are the best single measure of international trade, thus seem likely to reach or exceed 112 million quarters.

The carryover into the current crop year was large, notably so in Canada and the other great exporting countries. Heavy marketings from large crops have raised visible supplies in North America and in the world at large to unprecedented heights. Seasonal declines from recent peaks will, of course, occur; but even assuming heavier absorption than heretofore, the reasonable prospect is that year-end carryovers will be exceptionally large, especially in the United States. At the end of the calendar year the Canadian visible supplies totalled 70,384,000 bushels, compared with 51,618,000 bushels twelve months back, and they are still on the increase.

Since mid-August wheat prices have generally been low, for reasons already apparent. They have also fluctuated within narrower limits than is usual in this period of the crop year, since subsequent developments tended on the whole to confirm midsummer expectations and no major disturbing factor has appeared. Mark Lane prices for Northern Manitoba No. 2 averaged 49s 4d in December, against 57s 11d in the same month of 1927 and 46s 3d in December, 1923. There is no reason for believing that within the next few weeks prices will move far from their present levels. The appearance of Russia as an importer and the pressure of Southern Hemisphere exports now seem to be the leading bullish and bearish possibilities. When new crop prospects begin to exert their influence in the late winter and in the spring larger movements can be anticipated, but in which direction it is premature to predict.

Travel and Money

The far too common method—or lack of method—of carrying cash in bulk when abroad, is wholly unsatisfactory. Travellers are invited to consider the arguments of two leaflets issued by the Westminster Bank, *Points before Travelling*, and *Safeguards for the Traveller*, which will be gladly sent by the Secretary of the Bank on application.

WESTMINSTER BANK

INVESTMENT TRUSTS AND OUR CAPITAL OVERSEAS.

AN article in the last issue of the *Economist* gave evidence of the popularity of the investment trust company, and showed, moreover, how well that popularity is deserved. It might be wondered why, whereas the investment trust has flourished in this country for forty or fifty years, it has only recently sprung up in the United States and Canada, and has never really been adopted on the Continent of Europe. But countries which are rapidly developing offer many more attractive opportunities than occur under an old-established industrial system for personally supervised investment in enterprises yielding a high rate of return; while, on the other hand, of the two chief Continental countries in which the investment trust might be expected to flourish, France is noted for the contentment of such of her investors as are looking for a safe return on their capital with the low yield of *rentes* and other public loans, while in Germany it is customary for the banks to undertake the financing of industry to an extent which would be shocking to our more conservative bankers, and hence partly to take the place of our investment trusts.

But a still more general reason for the concentration of this form of finance in Great Britain is that the offices of the investment trust are most particularly called for by investment overseas, and that up to the Great War we were easily the world's greatest exporter of capital. The directorate of an investment trust can obtain information about foreign enterprises beyond the reach of the individual investor of moderate means, while the greater risk involved, even in fixed interest-bearing securities, especially demands a wide spreading of the risk over a large number of different investments.

Unfortunately only a few companies make known the geographical distribution of their holdings. On the basis of the material available, however, comprising some 25 companies, the following table has been drawn up :—

GEOGRAPHICAL DISTRIBUTION of INVESTMENT TRUST COMPANY INVESTMENTS.

	1923.	1924.	1925.	1926.	1927.	1928.
	%	%	%	%	%	%
Great Britain	34·5	35·3	34·9	34·0	32·4	34·4
British Empire	10·5	11·3	10·6	11·4	11·6	10·7
U.S.A.	17·7	14·1	13·4	12·8	12·8	10·5
Argentine	12·4	12·2	11·5	11·0	11·1	10·1
Other parts of S. America	11·2	12·1	12·2	12·4	10·7	10·9
Mexico and Central America	5·1	4·8	4·5	3·9	3·5	3·4
Europe	4·5	5·3	7·9	9·6	13·2	15·8
Asia and Africa	4·1	4·9	5·0	4·9	4·7	4·2
	100·0	100·0	100·0	100·0	100·0	100·0

It is regrettable that the companies concerned cannot be taken as a fair sample with regard to any single year. Other evidence to hand, for instance, while otherwise confirming the general lines of the distribution shown above, makes it certain that the proportion in the United States is here somewhat exaggerated. Nevertheless, our table does indicate fairly accurately the changes which have taken place from year to year in the distribution not only of the instruments of these trusts but also probably of all our investments overseas. Within a reasonable margin of error, it will be observed, the main features of the distribution, and in particular the division between home and abroad, have remained almost constant, with two notable exceptions, namely, the decline of the American share and the astonishing growth of the proportion invested in Europe. The process of repurchase by the United States of the claims on her capital held by Europeans, which was so immensely stimulated by the war, has been considerably checked since 1922, but it is clear that at any rate the less speculative of British investors have been making no headway in that direction, and that the capital expansion of the United States has been a successful competitor in Central and South America.

The very great increase in the European proportion is accounted for not only by the big reconstruction loans, many of them under the auspices of the League of Nations, but also by big investments in certain Continental industries, notably artificial silk, matches and margarine. Many trust companies hold large blocks of the New York and other foreign issues of the big international loans, often in excess of their subscription to the London issues, so that the figure recently given in these pages of £39½ millions for the British participation in League loans is probably well below the true mark.

One naturally goes on to ask, how much of our investment overseas is made in this way? The following table, showing the total book value of the investments of investment trust companies, illustrates adequately their recent growth. The dates refer to the years in which the accounts of the several companies were drawn up. It must be emphasised that the building up of "hidden reserves" by the writing down of investments places these figures well below the market value, and likewise below the cost of the shares and securities held.

INVESTMENTS of INVESTMENT TRUST COMPANIES.

(Book Values. Million £.)

1923.	1924.	1925.	1926.	1927.	1928.
148	159	177	194	219	239

Applying to these figures the percentages of home and foreign investment given in the earlier table, it appears that investment trusts accounted for some £100 millions of our capital overseas in 1923, and for some £160 millions in 1928. The total of our capital abroad has probably not increased by more than 20 per cent. over the same period, so that the proportion held through investment trusts has been raised considerably. No accurate figures of our oversea investments exist, but £160 millions probably represents about 4 per cent. of the total, while the holdings of foreign and colonial securities by banks and insurance companies and the investments of specialised trusts would probably raise the proportion of our capital abroad, which is held by houses whose interest is primarily financial, to around 10 per cent.

THE NEWSPRINT INDUSTRY IN CANADA.

(BY OUR OTTAWA CORRESPONDENT.)

THE newsprint situation in Canada is to-day the source of widespread discussion. No Canadian industry has made such rapid strides since the beginning of the present century, and it has gradually come to be one of the recognised buttresses of the national economy. Not only has it created a large volume of new wealth, but it has brought a variation of employment and new prosperity to many backward communities, and its contribution to the export trade has been increasing steadily each year. The following table shows the progress of the newsprint industry in the last decade :—

PRODUCTION of NEWSPRINT.

Year.	Quantity. Tons.	Value. $
1917	689,847	38,868,084
1918	734,783	46,230,814
1919	794,567	54,427,879
1920	875,696	80,865,271
1921	805,114	78,784,598
1922	1,081,364	75,971,327
1923	1,251,541	93,213,340
1924	1,388,081	100,276,903
1925	1,536,523	106,268,641
1926	1,889,208	121,064,946
1927	2,082,830	134,286,729

Newsprint, moreover, accounted for 84.4 per cent. of the total reported tonnage of paper manufactured in 1927. The quantity exported was valued at $129,637,687, of which the United States took no less than $123,222,094.

During the war years, when the price of newsprint mounted to very high levels, the industry enjoyed marked prosperity, but the coming of peace brought a period of comparative depression and faced it with a period of readjustment. But about 1923, thanks mainly to the fact that the newsprint demands of the United States began to forge rapidly ahead of the supply available from its own mills, it experienced a notable revival, and for the last three years it has been experiencing what might be classified as "boom" conditions. The market was steadily expanding and prices were being maintained at a highly profitable level. The natural consequence was that a great deal of new capital was attracted to the industry, and not only did old mills increase their capacity, but many new mills were established. The province of Quebec was the scene of the chief expansion of the industry, and the Taschereau Government, which has guided its destinies for more than a decade, is now the target of severe criticism because it was recklessly generous in granting pulpwood concessions and encouraging the building of fresh mills. Nor was the Government of Ontario guiltless in the same regard.

The result was that the daily capacity of the newsprint mills of Canada grew rapidly each year, and at the beginning of 1928 it had attained the figure of 8,240 tons, which represented an advance of 2,129 tons, or more than 30 per cent. over the figure of 6,291 tons estimated at the beginning of 1927. It is this tremendous expansion of the industry during 1927 that is mainly responsible for the present situation. Far-seeing leaders of the industry had realised the impending perils, and had been taking steps to provide against them by various methods. There took place a succession of mergers of newsprint companies, and the result of this process is that to-day four organisations—the International Paper Company, the Abitibi Pulp and Paper Company, the Canada Power and Paper Company, and the group of mills controlled by the Dominion Securities Corporation—virtually dominate the newsprint industry of the Dominion; outside these groups are important concerns like Price Bros., the Brompton Pulp and Paper Company, and others, but between them they contribute less than a quarter of the total output. Furthermore, the leading companies, including some of the "outsiders," co-operated in the formation of a common selling agency called the Canada Newsprint Company, which became responsible for the marketing of their product.

These arrangements were for a time successful in giving the industry at least a surface appearance of stability, and there were no dark clouds directly visible on its horizon when the present year began. But before many months a vista of serious troubles began to unfold itself. Apparently the *fons et origo* of these troubles was the American newspaper magnate, William Randolph Hearst, whose ownership of a huge string of papers made him the largest consumer of newsprint on the North American continent. It happened that the newsprint and pulp mills of Sweden had available, owing to the exigencies of a serious strike, a large supply of pulp and newsprint for disposal, and Mr Hearst was able to use the threat of resorting to this source as a lever to bring the Canadian mills to a reconsideration of their prices. It was obvious that if competition from Sweden were allowed to assume serious dimensions, the American market for Canadian newsprint would undergo a curtailment which must have immediately disastrous effects. So the International Paper Company, which is controlled by American capital, and some minor companies met the terms offered by the Hearst papers and entered into contracts for supplying them with newsprint at a price which, although not accurately known, is believed to be $52 per ton, or even less.

It was the conclusion of these contracts with the Hearst interests which upset the Canada Newsprint Company. Several companies had to free their hands by withdrawing from it, and the surviving partners in it found that newspapers competing with the Hearst publications disliked the idea of paying a higher price for their raw material. Accordingly, the organisation of the Canadian Newsprint Company crumbled away, and there ensued a wild scramble for a market which seemed to be rapidly evaporating. The price fixed by the Hearst contracts became accepted as a general basis, and the companies took at it whatever contracts they could secure. Now this figure represents a decline of about 20 per cent. from the price which was prevalent a year ago, and, whereas newsprint at $65 a ton yielded fairly satisfactory profits, they cannot be hoped for from a price of $52 a ton. Authoritative experts estimate that the average cost of production at the newsprint mills, after making allowance for depreciation and depletion, but not for fixed charges, can be placed at about $45 per ton. There would, therefore, be left some $7 per ton applicable to both bond interest and dividends on preferred and common stocks. If the average newsprint company was capitalised at a figure of $100 capital for every ton of its productive capacity, the margin of $7 would suffice to earn bond interest and preferred dividend requirements. But examination reveals that practically all the companies have a bonded indebtedness and preferred share capitalisation well in excess of the $100 limit, and the inevitable conclusion is that with newsprint at $52 a ton the companies will be able to earn no more than the fixed charges on their senior securities and will have nothing left as dividends for their common stockholders.

Knowledge of these grim facts has been responsible for the swift slump in recent months of the prices of pulp and paper stocks, which has brought some of them down to half the peak figure attained early this year. Further consequences have been inevitable. The newsprint companies have found themselves compelled to make drastic economies, and these have taken the form of lowering wages to their employees in the mills and cutting down the price paid for pulpwood. Hundreds of small farmers in Quebec and Ontario were in the habit of adding to their income each year by selling a few carloads of pulpwood, and the fall in its price has naturally affected the amount of money put in circulation in many communities, with adverse effects upon local business. Premier Ferguson of Ontario, once he became apprised of the situation, addressed a severely worded letter to the executives of 15 pulp and paper companies operating in his province.

Coincident with the publication of his minatory letter the executives of the leading newsprint companies were holding a prolonged conference in Montreal to discuss the situation. Following this conference some of the newsprint magnates had an interview with Mr Taschereau, the Premier of Quebec, and as a consequence on November 23rd the Governments of Ontario and Quebec convened at Montreal a wider conference to discuss the situation. The two Governments were represented by their Premiers, Mr Ferguson and Mr Taschereau, as well as by other Ministers and departmental officials, and practically all the leading figures in the newsprint industry were in attendance. At the conclusion of the conference an official statement was issued to the effect that the whole pulp and paper situation had been reviewed and discussed, and that the Ministers had been informed of the terms of a satisfactory tentative agreement which the newsprint manufacturers had themselves arrived at after prolonged conferences for the stabilisation of the industry.

In the background there exists a real apprehension that the present situation has been deliberately engineered for the purpose of allowing American interests to acquire dominating control of the newsprint industry of Canada. There are undoubtedly able American entrepreneurs not lacking in Canadian allies, who cherish the ambitious project of a gigantic newsprint combination as the model of the U.S. Steel corporation. It would undoubtedly suit the interests of these daring spirits to have newsprint prices fall temporarily to a level which would bring the stocks of the producing companies tumbling down and facilitate their acquisition on bargain counter terms. Such an outcome can probably only be avoided by resolute action on the part of such leaders of the newsprint industry as are determined that its control shall not pass completely into American hands.

For the interests who are trying to retrieve the situation and avert American domination of the industry, the statistics of production for October have some encouraging features. During that month the mills of North America produced no less than 360,744 tons of newsprint, which easily beats the previous record of 351,000 recorded in May, 1928. Yet stocks on hand in the newsprint mills of Canada were lower at the end of October than they had been at any time since March. Moreover, the average scale of operations in the Canadian mills, placed at 81.1 per cent., was higher than it had been since April, and has since been increased. During the month the newsprint mills of the United States only showed a fractionally higher scale of operation, namely, 81.2 per cent., but owing to the closing down of a number of American mills the output for the Republic for the first ten months of 1928 actually showed a decline of 6 per cent., compared with the figure for the parallel period of 1927. In the same period the output of the Canadian mills has shown a gain of 14 per cent., and the supremacy of Canada as a producer of newsprint is now more definitely established than ever and is unlikely ever to be lost.

THE LEAGUE'S NINTH BIRTHDAY.

(BY A CORRESPONDENT.)

JANUARY 10TH was the ninth birthday of the League of Nations—an appropriate moment to consider what developments have taken place during the year, what influence the League has wielded, and what influences have had effect on the League. It is not very profitable to make nice distinctions between what is actually done by the League and what is done outside the League, for whichever way anything is done or left undone it leaves its mark on the ordered development of international relations. At the same time, the League is a touchstone to a very large degree, and what is happening to it matters fundamentally. It is as easy to exaggerate its signs of progress as it is to say despairingly that we are heading straight for another war. But taking the rough with the smooth, there is certainly ground for at least moderate optimism. The attitude of mind towards international relations is slowly but clearly changing for the better, and there is a definite conscience growing up and consolidating against resort to war.

It is evident that the League Council has felt increasing confidence in its influence on the prevention of war. There was no uncertain tone in its insistence on peace, and even on a return to more normal conditions between Lithuania and Poland. It was emphatic in its warnings to Bolivia and Paraguay, yet people are inclined to lose sight of the strength of such warnings because the language of diplomacy differs from parliamentary language; some of them seem, in fact, to expect unparliamentary language. In these and other ways the League Council

has gained marked confidence in being able to say with recognised authority to States on the point of war, "No, not that." But because the settlement of the points at issue is not rushed, and in its stead a gradual but incessant pressure is wisely brought to bear on efforts at solution, the wits and the sceptics declare glibly that the League touches nothing it does not adjourn, as if adjournment were not in itself a valuable technique that has proved its worth time after time; adjournment does not mean that there is nothing being done. The practice of the Council has been to check any tendency to resort to arms and to treat the actual controversy as relatively a matter for leisured attention.

It may be that the League is at present more of a peace-preserving machine than a justice-providing machine, but the Kellogg Pact manifestation is, in the better sense of the phrase, a "peace at any price" development to which international opinion has rallied. The League machinery provides for justice to follow, and if the Kellogg Pact is to be real that machinery in some form or other must be used. The significance of the Pact with regard to the League is that it is a great moral support to the Covenant, and gives the League an additional argument to any who may be disposed to break faith. But one of the essential demonstrations this year, and, indeed, in other years, has been that of the necessity of constituted world authority and of ordered constitutional world development, as against loose, undefined or incomplete obligations. There must be a co-ordinated forward movement, and it is in that direction that the League in its valuable work in the establishment and promotion of the International Court of Justice, in its arbitration and conciliation work, and in all that it is doing in economic, financial and other fields, has compelled attention as the only focussing point. The Bolivian-Paraguayan affair is a good illustration of the importance of organised authority. The Council, and the Council only, was constitutionally able to remind the two States of specific articles by which they were solemnly bound, the Monroe doctrine notwithstanding. (This incidentally, simple though it seems, was a gesture of confidence that would probably have been lacking a year or two ago.) The Pan-American Conference had no such pull; it was the Council (to which only the two States were contractually bound), and not the Pan-American Conference, which drove them to arbitration and away from war. Despite pleas of self-defence and the rest of the befogging phrases, it is becoming clearer that it is not so difficult as is sometimes imagined to control these vagaries, and it is not so easy to ignore—even with public opinion excited—a central and watchful authority speaking within hearing of the world at large. Nobody raised against the Council any question of the Monroe doctrine, and there was no reason why anyone should. The fact is that nobody now has the face to say "Hands off" to a mediator for peace, and if the League can exert such influence on two distant States against an excited public opinion, such as it was, it is possible to consider hopefully what its influence might be in States where public opinion has a large and increasing element which condemns war.

These are the encouraging things—these and the Kellogg Pact, the refusal of American opinion to permit the gigantic navy programme, and the refusal of British opinion to look at the Anglo-French compromise. There is, of course, the other side of the picture—the almost complete failure with regard to the reduction of armaments, the rises of political temperatures, the disputes that drag on interminably, the sense of injustice in different quarters of the globe. Much obviously depends upon how these matters are ultimately dealt with, but the broad tendencies are not unfavourable, and the stabilising element which is necessary is provided by the League, without whose constitution and gradual growth there might be less reason for optimism. It requires a little imagination to form a proper assessment of what the League is achieving, actually and psychologically, even by a certain almost automatic momentum given by the permanence of the organisation. Nobody, however, supposed it could finish its work in nine years, and it is characteristic that those who rail most at it for not doing so are those who never agreed that it could do anything.

Notes of the Week.

Another European Dictator.—Last Saturday, January 5th, King Alexander of Jugoslavia set aside the parliamentary constitution of 1921, known as the Vidovdan Constitution on account of its date, June 28th, and substituted for it a *régime* conferring autocratic powers on the Crown. In his proclamation of the 6th the King announces that he has determined and decided that the Constitution is no longer in force, and in the decree introducing the new autocratic régime there is no suggestion of a time limit. Thus Jugoslavia joins the company of dictatorially governed countries, and this in itself is a matter for keen regret, since every fresh recruit to this camp strikes a blow at the general cause of responsible parliamentary government. But, having said this much, we must in fairness take note of the situation which led King Alexander to decide upon this momentous and perilous step, for in two ways his *coup d'état* has better justification than that of Italy's *Duce*. In the first place, parliamentarianism has been more demonstrably bankrupt in Jugoslavia during this past year than it was in Italy during the year preceding the March on Rome. Secondly, whereas Signor Mussolini overthrew Parliament in order to bring into power a minority ruling by force, King Alexander has overthrown Parliament with the object—whether or not he will succeed in attaining it—of terminating a minority domination which really depended on force, though it was camouflaged by a parliamentary façade. The fact is that the equal union of three kindred peoples which "the Serb-Croat-Slovene State" was intended to achieve has never got further than the official name. The reality during this first decade of Jugoslavia's existence has been an ascendancy of the Serbs over the Croats and to a lesser extent over the Slovenes; and this subjection has been more irksome to the Croats than that which they endured before the break-up of the Hapsburg Monarchy. The growing exasperation of the Croats has been brought to a head by the "shooting incident" in the Jugoslav Parliament at Belgrade, which resulted in the death of several Croat deputies, including the beloved national leader, Radich. The recent clashes at Zagreb have added fuel to the flames, and it is no exaggeration to say that at the moment when King Alexander set aside the parliamentary constitution of the Jugoslav State, Jugoslavia was very near the brink of disruption. The King did not execute his *coup* until he had done his best to bring the Serb and Croat party leaders to a compromise. The task which the King has now set himself is to accomplish by way of dictatorship what it has proved impossible to accomplish by constitutional means: that is, to substitute a genuine free and equal partnership of Serbs, Croats and Slovenes for the domination of the Serbs—or, rather, of a clique of Serb politicians—over the other citizens of the Triune Kingdom. It remains to be seen whether he will succeed, for, apart from the general drawbacks of the autocratic short cut, he will have to reckon with the national character of the Serbs; and the Serbs have shown themselves to be a rather headstrong and even reckless people. We shall watch the fortunes of his enterprise with interest, for much turns upon it. If it fails, and if Jugoslavia then breaks up, the whole of South-Eastern Europe may go into the melting-pot, with the danger of Italy, France and Russia being drawn into conflict round the witches' cauldron. If the *coup* succeeds, and if parliamentary government is then restored on a better basis, then we may hope for a more stable Jugoslavia, and it will be one of those rare cases where the end has justified the means. But for that justification we must watch and wait.

The Peace Pact in the Senate.—The Peace Pact did, after all, receive priority over the Cruiser Bill in the American Senate. The debate began on Thursday, January 3rd, and, as we go to press, all the indications are that the Pact is going through, and going through without reservations. This result is partly due to the Parliamentary abilities of Senator Borah, partly to the tactical error of the supporters of the Cruiser Bill in identifying their cause with an unfriendly attitude towards the Pact. But the principal reason for the comparatively smooth progress of the Pact through the Senate is perhaps to be found in the imponderable but potent force of American public opinion, to which even the most provocatively intransigent senators have to bow. Senator Borah's explanations might seem almost to explain the Pact away; but the point of the Pact is not, and was never intended to be, to make an addition to the concrete juridical barriers against war. Acceptance of the Pact is rather a symbolic—one might almost venture to say religious—act; and Senator Borah's studiously moderate description of it in the Senate as "a rather important step in the direction of good feeling" hits the mark. We may add that, if it really turns out to be this, it is likely to be one of the most famous pacts in history. The Cruiser Bill's passage through the Senate, too, seems almost certain. The only question is whether the opponents of the Pact will draw out the debate on it so long that the Cruiser Bill and other business now before the Senate will have to be postponed to a special session.

Penny Postage.—The decision of the Chambers of Commerce to join with the Federation of British Industries, the committees of Lloyds, the Stock Exchange, and other representative bodies of business men in once again pressing the Government to sanction a return to the penny letter rate of postage indicates that industry and commerce still consider the present cost of postal communication to be a handicap to the progress of trade. It is urged that for the current financial year the estimated surplus on the postal services is £8 millions; that the cost of reverting to a penny rate would, at the worst, not exceed £6 millions, so that the Post Office would still be a paying concern after the reform; and that to obtain revenue for the State by means of postal rates in excess of the cost of the service is a bad form of taxation. With the argument, thus stated, we find ourselves in general agreement. Given reasonable assurance of postal surpluses adequate to cover depreciation of assets and to provide amply for developments, the primary object of the State monopoly in postage should be to secure the maximum cheapening of communication. Moreover, Canada has now decided to restore Imperial penny postage, already enjoyed for some time by New Zealand, and it is obviously desirable that a uniform rate throughout the Empire should be established as soon as practicable. In an issue of the *Economist* in January, 1844, we find reference made to the "pertinacious resistance" of the Post Office to Rowland Hill's scheme. "Whether it be in the Post Office or in the Custom-house, it seems to be a standing rule (of Government Departments) that the public is a *pigeon*, the plucking of which is merely a matter of ingenuity and taste." As applied to the present Postmaster-General we hasten to disclaim our 85-year-old comment, but though the Treasury is entitled to point out that an increase of 50 per cent. in the inland rate is not disproportionate to the general rise in the price level as a whole since the war, there can be no doubt that the reversion to a penny would be a popular step not without psychological value. Its material benefit to industry would perhaps be less than the signatories to the present petition suggest. "Cost of correspondence" is an unimportant factor in the total selling costs of many of our staple trades, and there is such a thing as wasteful use of circularisation and postage, irrespective of the rate per letter. At the same time, the "Penny Post" is a symbol of post-war recovery from which so many would take encouragement that its establishment is probably worth the sacrifice, from the Exchequer point of view, which it would entail.

The Transference of Miners.—The space occupied in the Press recently by developments in the various schemes for the relief of distress in the mining areas has temporarily distracted public attention from the more constructive work of transference. We welcome, therefore, the account which Sir John Cadman has given, in a recent speech, of the progress made in finding employment for ex-miners. It appears that the employment exchanges are now moving nearly 700 men, boys and girls from the coalfields each week, while a further 300 or 400 are moving on their own initiative, and the total transfers, through the exchanges, since last August, amount to nearly 10,000. Most of these workers have settled down in their new districts, and the list of occupations in which they are now earning a living is in its diversity a great testimonial to the resourcefulness and adaptability of the miners. They are working as bricklayers, motor mechanics, carpenters, navvies, waiters, chauffeurs, grooms, ships' stewards, omnibus conductors, general labourers, artificial silk makers, gramophone record makers, and electricians. That there was no technical impossibility in this, anybody conversant with labour conditions in the United States, where ex-miners are to be found in almost every conceivable occupation, could have prophesied; but that a large body of men, cast by heredity and environment alike into an exceptionally conservative mould, should so quickly have adapted themselves to an entirely different way of living and working in unfamiliar surroundings is indeed an achievement. The agents of this transformation are various series of employment centres. The centres for boys from 14 to 18 are so numerous as to be within easy reach of every boy. These are very popular, and nearly 2,000 boys have been trained and found employment by them during the past year. For young men the Ministry of Labour maintains five training centres which turn out nearly 5,000 men a year, 90 per cent. of whom are immediately placed. Centres for girls give training for domestic service, and there are three large farms which prepare intending emigrants for work on the land. While these schemes do not solve the problem of the married men, they represent the soundest immediate means of preventing the discouragement and incapacity of the younger generation through prolonged unemployment. Even if it be true—and we are far from agreeing with that allegation—that they do not diminish the aggregate of unemployment throughout the country, that aggregate will certainly be less demoralising when it is more thinly spread. According to Sir John Cadman, the machinery and the funds for transfer are there, and the results so far are encouraging. It rests with employers to maintain and increase its effectiveness.

Cotton Mill Amalgamation.—It can now be definitely stated (writes our Manchester correspondent) that the principal difficulties relating to the formation of the cotton mill amalgamation in Lancashire have been removed. The promoters and the banks have reached an agreement, and arrangements have also been made for the finding of a substantial sum of money for the purpose of working capital. The officials of the combine, which is to be called the Lancashire Textile Corporation, have been busy this week in compiling the articles of association, and owing to certain amendments being necessary there has been some delay in completing the document. It is anticipated, however, that early next week everything will be ready for registration, and it is understood that an official announcement will be made as to the terms on which individual mills will be absorbed and details as to the working of the amalgamation. The process of taking over spinning companies will be gradual, and it will probably be some months before the corporation will be working effectively. It is believed, however, that a sound plan has been arranged, and that ultimately the scheme of co-operation between the mills will result in more economical working and a reduction of overhead charges. Meanwhile, there has been considerable interest in Lancashire cotton trade circles this week in the report that the Fine Cotton Spinners' and Doublers' Association, Limited, has bought the Victor Mill, Limited, Stalybridge. The latter firm controls the Victor, Ray and Premier Mills, the concern having 165,000 ring spindles and over 1,000 looms. So far the price paid has not been made known. The Victor Mill, Limited, was one of the Belgrave group of mills, and was involved in the difficulties of that group two or three years ago. Last October the debenture-holders appointed a receiver and the mills were put up for auction as a going concern. Owing to no bid being made the property was withdrawn. It was announced at the auction sale that the mortgagee, the Pall Mall Trust, Limited, was willing to leave £200,000 on mortgage at 5 per cent. The mills at Stalybridge are modern and in good condition. A feature of interest in connection with this deal is that the mills bought have been on American cotton, whereas in the past the Fine Cotton Spinners'

Association has limited its operations to goods produced from Egyptian and finer cottons. The purchase indicates that the Fine Spinners' combine has decided to carry out a progressive policy and extend their ramifications. In July last year the association bought four mills belonging to the Stockport Doubling Company. The feeling is growing in Lancashire that the time is an opportune one for purchasing mills. Owing to the trade depression it is possible to secure valuable properties at low figures, and some leading authorities are confident that the industry is about to experience a more remunerative state of trade.

Agricultural Credits.—The Agricultural Mortgage Corporation, which was formed under the provisions of Part I. of the Agricultural Credits Act, 1928, and will commence business on Monday next, has now made public the terms on which long-period credits will be granted to farmers and landowners. Loans on mortgages of agricultural land, not exceeding two-thirds of the land's value, will be granted for periods up to 60 years, and will be repayable by equal half-yearly instalments covering interest and repayment of principal. For a 60-year loan the rate of half-yearly repayment will be £2 15s per £100 for the full period of the loan. Loans for improvement of land will be granted to landowners, subject to the Minister of Agriculture's approval, for periods up to 40 years, £100 being repayable by 80 half-yearly instalments of £3 each to include principal, interest, and all charges other than those made by the Ministry of Agriculture. The shareholders in the Corporation, whose chairman is Sir H. Goschen, are the Bank of England, and all the leading joint-stock banks, with the exception of the Midland. Applications for loans must be made through one of the shareholding banks, a procedure which will have the advantage that applicants will in most instances be dealing with local bank managers familiar with their individual circumstances and needs. The measure of success which has attended the working of land mortgage banks on the Continent justifies the establishment of the Corporation as an interesting experiment, whose effects, at worst, cannot be harmful. It is doubtful, however, whether the mere provision of long-term credits on the basis announced can be regarded as likely to assist British agriculture appreciably to recover from its present ills. Some farmers, now indebted to the banks, may find it of advantage—always provided their security of tenure is adequate—to obtain a long-period loan in replacement of a more precarious overdraft. On the other hand, it cannot be said that the Corporation's terms represent particularly "cheap" capital for agricultural development. (On 40-year "improvement" loans the annual rate of interest, excluding repayment of principal, works out at 5¾ per cent.) Moreover, the manifold difficulties and shortcomings of the industry, which may be summed up in the phrase: "lack of scientific co-operation," are too great to be readily overcome by the establishment of facilities for borrowing "long" at rates not strikingly lower than those charged on ordinary bankers' loans. To reverse the process of "farming at a loss," other measures must be taken by the farming community before "credits" can have a fair chance to prove their value.

Trade Unions in 1927.—A statistical summary just issued by the Chief Registrar of Friendly Societies shows a slight diminution during 1927 in the membership of trade unions. At the end of 1926 there were 485 unions, having 4,147,653 members; at the end of 1927, 485 unions, with a membership of 3,903,048. Employers' associations during the same period diminished from 92 to 91, and their membership from 44,319 to 44,144. The income of trade unions fell from £13,820,734 to £10,071,639, but this is largely due to the abnormal contributions in 1926 from outside sources, and from the Ministry of Labour on account of unemployment insurance during the coal dispute. Income from members has risen from £7,011,774 to £7,354,042. The income from members of employers' associations has risen from £108,073 to £110,646, and that from outside sources has fallen from £15,194 to £14,108. Trade union expenditure during the two years compares as follows:—

Benefit—	1926. £		1927. £
Unemployment, travelling and emigration	6,376,730	....	3,131,002
Dispute	5,616,732	....	187,399
Sick and accident	803,397	....	768,283
Funeral	316,009	....	336,983
Other benefits (including superannuation)	1,130,955	....	1,125,919
Political fund	108,050	....	134,415
Grants to federations, &c.	451,871	....	239,554
Management expenses	3,125,539	....	2,907,157

The aggregate funds at the end of 1927, at £9,709,538, showed an advance on the position at the end of 1926, when they stood at £8,478,371, but were still well below their level at the beginning of 1926, £12,586,920. In view of the intense financial strain to which trade unions and their members were subjected by the coal stoppage, it is perhaps surprising that there was no greater decline in membership, for periods of industrial strife in which labour has been unable to claim success have usually been followed by numerical weakening of unions.

The Health of the Child.—Every year some 750,000 children pass out of school in England and Wales and enter the ranks of the nation's workers—or the nation's unemployed. What sort of young men and women they are, sound or ailing, whole or defective, is of tremendous importance. The report for 1927 of the Chief Medical Officer of the Board of Education, just published, happily gives encouragement as well as interest, for it reports an increase since 1926, slight though it be, of school medical service and good harvest from the seed sown in earlier years. The physical characteristics of the school child have steadily improved since 1921, and health becomes better as the child grows up under the care of the school medical officer. In 1927, 2,685,739 children underwent medical inspection, and of this total 20.6 per cent. were found to be in need of medical treatment (apart from dental cases). By far the most frequent physical defect was faulty vision, with an incidence of 90.3 per thousand, itself sufficient witness to the value of the service, since eye trouble goes from bad to worse unless corrected early on, and correction would certainly not be given in the great majority of cases were there no medical officer to point out the need. Omitting this class of trouble, the incidence of all other physical defects was 19.5 per cent. in the entrant group, in the intermediate about 12 per cent., and in the group of those shortly leaving school about 11 per cent. The second most frequent defect was enlarged tonsils and adenoids, which occurred in 60.9 cases per thousand; then comes a long drop to skin diseases with an incidence of 13.3 per thousand. Next on the list is malnutrition, reminding one how directly disease is connected with poverty. For to nutritional shortcomings from the antenatal period onward have probably to be ascribed, writes Sir George Newman, many of the subsequent adenoidal and tonsilitic troubles, which reduce the child's general health and render him much more liable to rickets and dental disease, each with its train of other ailments. Since 1908, education authorities have been allowed by statute to provide free meals in order that no child should be prevented by lack of food from taking full advantage of the education provided. The average cost of these meals is around 3d and 4d per head. Naturally, the extent to which such provision is made varies enormously from year to year; since the war there have been two high peaks, each corresponding to years of industrial depression and unrest, namely, in 1921-22 and 1926-27, when the total number of meals provided was 70,045,498; in 1927-28 it had fallen to 15,875,340. This year will certainly show another peak, but there is plainly room for an extension of the service as well as for greater co-operation between the school authorities and the medical officer. Even in 1927 malnutrition was much more frequent in the coal-mining districts than elsewhere, the incidence rising as high as 8.04 per cent. in the West Riding. Thus Sir George Newman's report shows the need for an extension of medical work in schools as well as the success of what has already been done. Only 54.1 per cent. of those attending public elementary schools are medically inspected, and some authorities lag far behind. At 14 or 15, moreover, when the child leaves school, practically no public care is taken for his health till he becomes an insured worker. These gaps demand the consideration of all those interested in the health of the working population.

The International Agricultural Institute.—The foundation, nearly a century ago, of the International Agricultural Institute was a romantic episode in economic history. When David Lubin came to London and expounded, with volcanic volubility, his scheme for an agricultural information bureau which all the nations should support, and to which they should subscribe, he met with a courteous but cool reception. He was regarded as a visionary. He found none in this country to share his optimism or believe that his ideas were practicable. He proceeded to Italy and there with the assurance of an American prophet he presented himself to the King and persuaded him to take up his project. In less than three years the organisation was complete, some 70 nations had formally adhered to the Institute, signed the constitution, and appointed delegates to form collectively the permanent governing body. A large staff was collected and organised in four divisions, of which that concerned with statistics was the chief. Gradually the systematic supply of information as to the area and yield of crops and other particulars from the various adhering countries was arranged, and the figures published in a monthly return. A year-book is compiled from time to time, the latest issued relating to 1927-8, which contains a mass of well-arranged tables giving for each country all the information about its agriculture which is capable of statistical expression. For purposes of reference these publications are invaluable to economists and statisticians. The Institute also published a periodical *Review of Agricultural Economics*, which contained important articles on the agricultural development, as well as on the agrarian legislation, of various countries. Recently the *Economic Review* and the statistical bulletin were amalgamated, and the *International Review of Agriculture* is now the official organ of the Institute. It includes the statistical data as well as a certain, though reduced, amount of economic information. David Lubin visualised the Institute as an organ for the direct guidance of farmers throughout the world. He aimed at putting the individual farmer in as favourable a position as the individual merchant in the possession of the materials for forming a judgment of the trend of prices and the relation of supply to demand in the immediate future. The Institute, in spite of its assiduous collection of facts and its special facilities for obtaining them, has never approached the realisation of this ideal. It would be interesting to know how many farmers throughout the world have been influenced or helped in the conduct of their business by information supplied by the Institute. Its publications, unfortunately, do not easily reach the farms. They are procurable by English farmers either direct from Rome, from the Ministry of Agriculture, or from P. S. King and Son. The average farmer would regard either procedure as a formidable undertaking, and when he realised that the cost would amount to over £2 per annum his desire for this kind of knowledge would weaken. When the International Agricultural Institute was established the League of Nations was undreamt of. The Economic Section of the League acquires more power and influence every year, and has earned the confidence of the nations. Why should not the Agricultural Institute be linked up and ultimately incorporated? There is still too much overlapping of "international" organisations, which tends to waste of energy, money and efficiency.

Shipping Freight Index Number.—Our Index Number of whole-cargo shipping freights shows a further rise for December of approximately 2 per cent., as compared with an increase of 6.7 per cent. a month ago. The current figure of the average for all routes, 131.7, contrasts with 119.0 a year ago, 121.8 at the end of 1925, and 129.4 in December, 1924. The recent movements of the various groups in the Index are summarised below:—

AVERAGE, 1898-1913 = 100.

	Average, 1913.	Dec., 1927.	Oct., 1928.	Nov., 1928.	Dec., 1928.
European Waters	110·0	105·6	116·9	121·9	122·1
North America	113·1	116·2	120·0	133·0	131·3
South America	123·4	113·6	115·4	123·5	125·6
India	106·3	114·2	106·9	117·8	126·8
Far East and Pacific	117·4	124·5	121·2	125·1	127·4
Australia	127·9	139·8	145·1	153·1	156·7
Total	116·3	119·0	120·9	129·1	131·7

The month's changes in the Index of each group and sub-group are shown in the following table, the figure 100 representing in each case the average rate during the basic period 1898-1913:—

	Index Number.	Inc. or Dec. Points.		Index Number.	Inc. or Dec. Points.
Home trade	99·56	+ 0·28	South America—		
Bay–Outwards	137·62	— 7·33	Outwards	97·43	— 6·25
Bay–Homewards	137·09	..	South America—		
Mediterranean—			Homewards	153·82	+ 10·52
Outwards	147·04	+ 1·06	India—Outwards	126·2	+ 8·43
Mediterranean—			India—Homewards	127·35	+ 9·60
Homewards	111·59	+ 6·84	Far East, &c.	127·41	+ 2·30
North America	131·34	— 1·63	Australia	156·68	+ 3·56

Outward coal freights to Mediterranean ports were firm, but weakened for South American discharge in view of the increase in homeward rates from that market. Grain chartering was moderately active throughout the month, particularly from the Plate, while demand on the part of Eastern and Australian shippers also expanded. Expressed as a percentage of the average for 1913, the total figure of our Index Number for December works out at 113.17, as compared with 102.3 a year ago. Similarly calculated, the mean for 1928 is 98.8, against 109.6 for 1927, 102.2 for 1925, and 113.4 for 1924. Despite the (largely seasonal) improvement in freights which has occurred during the past six months, the average level for last year, as measured by our Index Number, is the lowest since 1911.

Steady Co-operative Trade.—A correspondent writes:—Although the trading returns of the Co-operative Wholesale Society for the past few years suggest that the current of progress is now running southwards, note should be made of the fact that the recent big development in London and the Home Counties has to be compared with a movement that has been strongly entrenched in the North for a couple of generations. For the three months ended October 13th—the summarised returns of which are now available—the sales of the C.W.S. were £20,853,258, an increase of £877,129. Of this £10,508,996 was credited to the Manchester section, while £6,688,009 were done through the London branch, Newcastle-on-Tyne being responsible for the remainder. The increases at Manchester and London were £309,083 and £571,287 respectively. The export business of the society is steadily advancing, being £96,923 in the three months under review, as compared with £64,263 in the corresponding quarter of 1927. Four-fifths of the total turnover of the C.W.S. was for grocery, provisions, and foodstuffs—a section of business in which it is increasing the productive capacity of its flour mills, biscuit, preserves, lard, margarine, and kindred works. The supplies of flour were £2,399,944, these being used in the bakeries of the local distributive societies throughout England and Wales. Equally notable is the advance in the tea trade of the co-operative movement, which has lately taken a large proportion of the increased import for home consumption. The supplies were 14,432,601 lbs in the 13 weeks, the increase taken by societies in the London area being 436,109 lbs, raising their consumption to 5,381,171 lbs, as compared with 7,852,127 lbs in the Manchester (Lancashire and Yorkshire) regions. Since the opening of branches of the C.W.S. Bank in Westminster and central London the current accounts of trade unions have risen to 8,577, while 698 workmen's clubs and 5,123 other mutual organisations are now doing their banking operations, mainly through the agencies of the local co-operative societies, with the C.W.S. Recently the directors of

the society have made small purchases of land and buildings at Manchester, Newcastle, Crewe, and Bridlington to help extensions of local works; they are also adapting premises in East London for a tailoring factory and acquiring land at Liverpool and Leicester for use as sports grounds for the employees in those districts. Supplementing donations of £1,000 in cash and £1,000 in goods towards relief of distress in the mining areas, a further grant of £2,500 is being made. Altogether the quarterly report of the C.W.S., which will be presented to the delegates at the eight divisional meetings on the 19th inst., is suggestive of the continuity of the progress recorded in the earlier part of the year—although the returns for the complete year will not quite reach the turnover of £100,000,000, which was anticipated at the beginning.

U.S.A. Soap Production.—A correspondent writes:—The total production of all classes of soap in the U.S.A. in 1927 was about 1,335,000 tons, according to the preliminary figures of the biennial census of manufactures just published by the Department of Commerce; and the total value was £48,000,000, or, including the value of miscellaneous products, such as glycerine, perfumery, &c., the total value was £57,000,000. Both weight and value show a slight increase over 1925, but though the grand total of soap produced shows little change, there have been appreciable changes in the figures for the different classes of soap. For example, the output of toilet soaps has increased from about 148,000 tons in 1925 to 198,000 tons in 1927, white laundry soap declined from 337,500 tons to 326,000 tons, and yellow laundry soap from 274,000 to 265,000 tons. Foots soap increased from 5,830 to 8,640 tons, soap chips—in packages or bulk—from 145,000 to 166,000 tons, granulated and powdered soap from 63,600 to 77,000 tons, but the other kinds of miscellaneous hard soaps dropped from 30,000 to 17,000 tons. The total of the hard soap category was just over a million tons. Among the non-hard soaps, by far the most important item is soap powder and various kinds of cleansing or detergent powders, accounting for 222,000 tons in 1927 as compared with 245,000 tons in 1925; liquid soap dropped from 9,800 to 6,500 tons, soft soap from 27,000 to 19,000 tons, and paste soap from 13,500 to 9,000 tons. On the other hand special soap articles increased from 10,000 to 15,000 tons. It will be noted that soap powders and granulated and powdered soap account for about 300,000 tons, whilst soap chips, including flaked soap, account for another 165,000 tons. These are large figures, and show to what extent this class of soap has grown in popularity in recent years, as compared with the ordinary bar soap. They are not only more effective and more convenient in many ways, but are also cheaper as a rule. At the moment there is important patent litigation pending between two of the largest soap-makers in the States, namely, between Proctor and Gamble on the one hand, and the Colgate-Palmolive-Peet combine on the other, in which Colgates charge Proctor and Gamble with infringement of Colgate's soap flake process, whilst Proctor and Gamble counterclaim against Colgate also for infringement and for invalidity of the patents used by Colgate. The question of the validity or non-validity of these particular patents is an important one for the American soap flake industry. Numerous small soap companies are continually being formed in the U.S.A. At the same time important mergers occur from time to time, such as the Colgate merger noted above; and another big combine is that of the Gold Dust Corporation, a soap company which has recently acquired large interests in other companies and contemplates further acquisitions. Of the total number of soap-making concerns, 256 in 1927 (272 in 1925), the greater number are located in New York, Pennsylvania, California, Illinois, Massachusetts, Ohio, and New Jersey. The 1927 soap production figures are preliminary, and subject to revision.

Central American Budgets.—A correspondent writes:—A marked feature of the expiring year has been the increased revenue collections, accompanied by advancing expenditures, of the Central American Republics. The great economic prosperity which had been enjoyed by most of the States for the period 1921-27 has been maintained with occasional interruptions during the present year. This applies especially to the large producers of coffee—El Salvador, Nicaragua, Guatemala and Costa Rica. Unfortunately, however, the propensity for borrowing abroad has imposed—and is imposing—a heavy responsibility, which can be met only by greater and greater development of these countries' natural resources and construction of costly reproductive public works, in which already considerable capital has been sunk. If these expenditures, especially upon waterworks, irrigation canals and highways, are taken into consideration, ordinary administrative expenditures would be considerably reduced. There must, however, remain always differences of opinion concerning what should be properly attributed to "capital expenditure," and that which could be included legitimately in the "ordinary budget." Unlike some of the South American Republics, the Central States occasionally allow their budget expenditures to exceed the total estimated income, and their Legislatures are permitted to make increases in any of the items of expenditure as submitted or to include additional items, with the consent of the Executive. The prosperity of all the States alike is reflected in the increase of their fiscal revenues, especially as regards import and export duties, liquor taxes and stamp taxes. Three-fourths of the Government's income in several of these States is derived from two main items—Customs and internal revenues. In Costa Rica, during the last financial year, import duties accounted for 51.9 per cent., and liquor taxes 18.2 per cent. of the total revenues; Guatemala received in import and export and liquor duties 43.43, 18.03 and 19.52 per cent. respectively of the total revenues; Honduras calculated, in the 1928 budget, to receive from import and export duties 3,249,000 pesos out of a total revenue of 3,727,000 pesos; while Nicaragua's customs revenues were calculated to bring in in 1926-27 52.37 per cent., plus 5.99 per cent. from import surcharges, making 58.36 per cent. of the whole. Panama's customs duties realised 36.2 per cent., and El Salvador's import (52.9 per cent.), export (11.9 per cent.), and liquor taxes (18.5 per cent.) made 83.30 per cent. of the country's total revenues in the fiscal year 1926-27.

UNITED STATES. — MONEY—SHARE MARKET—BUSINESS CONDITIONS.

(FROM OUR CORRESPONDENT.)

NEW YORK, December 28.

ATTENTION during the present week has been divided between the holiday, the money market and the share market. Everyone expected a tight money market during the last week of the year, prophecies of 15 and 20 per cent. money having been heard in many quarters. As things turned out the 12 per cent. top for call money that has developed with one day more of the old year to be heard from seems to have been pretty well discounted. Call money has been scarce this week, a circumstance that is readily understandable in view of the large amount of corporate money that has been in this market, and of the necessity of withdrawing a considerable part of it in order to pay year-end dividends. Other tightening factors are the large holiday demands for currency and window-dressing by the banks. But while call money was scarce the demand for it also remained light, so that, although any considerable expansion of demand might have brought further sharp run-ups, a sufficient supply of funds has been available to keep the rate down to 12—a figure that was touched early in the month. As for the share market, it held quietly firm in anticipation of the higher rates, sold off mildly on small volume on their appearance, and then rallied smartly on increased volume after 12 per cent. money materialised. Altogether the market gave the appearance of having been rather well sold out and of again becoming speculative. At the close to-day industrial shares had about made good all the loss that they sustained (on the average) during the recent break. One of the well-known averages of industrial shares made, in fact, a new record high. It is noticeable, however, that not all the old leaders have made good their losses. Steel Common still has recovered less than half its fall from the year's high, and General Motors and the motors generally are well below their old highs. On the other hand, coppers, helped by a new high price for the metal, have been very strong, as have store shares, public utilities and certain of the high-priced issues such as General Electrics.

One assisting factor in to-day's strong market was an unexpected decrease in brokers' loans reported last night. The decline, which amounted to $19,000,000, brought the reduction accomplished during the past three weeks, or since the recession set in, up to a little more than $300,000,000. On the basis of the recent strength in the market it had been thought that this week's figures would show an advance. The Federal Reserve statements, on the other hand, were not particularly bullish. They revealed a large decrease in reserves—probably accounted for by the holiday demands for currency, which were reflected in a substantial increase in circulation—and a heavy increase in discounts. Holdings of Government securities acquired otherwise than by discounts had fallen sharply; but this change clearly was due to elimination of the Government's overdraft in connection with the tax date. As a matter of fact, the Reserve authorities aided the money market by buying bills rather liberally. Taking the system as a whole, the reserve ratio was down to 61.6 per cent., which compares with 66.8 per cent. a year ago. As to the future of the money market, the general expectation is that some of the usual early January ease will develop. Passage of the year-end always brings a large return flow of funds from the interior, and something of the sort is fairly certain to develop on this occasion. However, it is argued in some quarters that the relaxation will be less than normal. In part this view is based on the understanding that large quantities of bills held by the Reserve banks will mature shortly, in part to observation of the high rates obtained for short-time loans, and in part to belief that France is likely to earmark additional gold. During the past week $5,700,000 of gold was earmarked for the account of a foreign correspondent, but it is thought that this gold was required for certain special year-end circumstances.

Bullish sentiment at the moment seems to be predicated on the likelihood of satisfactory business news overcoming the effects of relatively high money. Industrial reports indicate a continuance of the 1928 upswing through the first quarter of 1929. The steel industry is maintaining itself excellently. The year-end shut-downs have been lighter than usual, and production and prices are holding well. The national automobile shows begin in another week, and the makers are preparing for a record trade with a multitude of new models and with large production schedules. Extremely optimistic estimates of tyre output are heard, and rubber shares have been very strong in anticipation of high 1929 earnings. The latest railway car loading reports show gains over the corresponding periods of 1927 and 1926. Altogether it seems probable that the business upswing that began a year ago will continue into the spring. In that event the share market might continue to do well during January, and then meet with difficulties when the spring demand for money for commercial purposes develops in the latter part of February. Such a development would resemble that of the early part of 1926. At that time the share market made progress against a rising money market until the spring demand for money strengthened, whereupon there developed the well-remembered March break. However, analogies are dangerous, and the present situation contains a number of unknown variables such as gold earmarking and exports.

FRANCE. — POLITICS —REPARATIONS — AGRICULTURAL DEPRESSION—COAL OUTPUT.

(FROM OUR CORRESPONDENT.)

PARIS, January 9.

FROM a superficial point of view the fate of the Government is again trembling in the balance. It is admitted by all parties that, even were the Government to be defeated, M. Poincaré's successor could only be M. Poincaré himself, in view of the authority which he is held to have as the only statesman who could effectively act as the mouthpiece of France in the coming discussion of the settlement of the reparations and debt questions. The Radical Socialist Party's objective is not the head of the Government, however, but the composition of the Ministry. As matters stand, the Ministry can apparently rely upon securing a clear majority, independent of a single Radical Socialist vote, which suggests that, in the absence of accidents, the Government will emerge victorious.

The question which now dominates all others is the combined one of reparations and foreign debts, the solution of which constitutes the outstanding task for 1929. So far as French opinion in general is concerned, any discussion as to whether the occupied portion of Germany shall be evacuated before the expiration of the due date under the Versailles Treaty is out of the question. Rightly or wrongly, Mr Parker Gilbert's report is regarded by all parties here as demonstrating that Germany is perfectly capable of meeting the annuities laid down by the Dawes Plan. In any case, the French may be expected to insist, whatever modifications of the Plan the new experts may recommend, that the amount to be paid by Germany shall be sufficient to enable France to pay the annuities on her British and American debts, plus 1,000,000,000f (say, £8,000,000) towards Budget charges arising from German aggression, and a further annual sum sufficient to meet the cost of extinguishing the loans which this country had to raise for the restoration of the devastated regions.

The annuity payable under the Dawes Plan, which in September last attained its full yield of 2,500,000,000 gold marks, should give about 7,800,000,000f (say, £62,400,000) as the French share. Of this sum 3,642,000,000f is earmarked for special expenditure (the cost of the Rhineland occupation, payments to *sinistrés*, and the service of war debts). The complexity of the question, so far as this country is concerned, is well set forth in a remarkable report which M. Charles Dumont, a former Finance Minister, and now Budget *Rapporteur* in the Upper House, has just presented to the Senate. In this he distinguishes sharply between the various categories of receipts under the Dawes plan. These comprise, firstly, those payments which involve no loss to the French Treasury (such as requisitions effected in the occupied area, money received through the Transfer Agent, and the French share of the 25 per cent. tax on German exports), and are estimated at 2,250,000,000f for 1929. Then there is the category of "ordinary payments in kind" (coal, sugar, timber, chemical manures, machinery, &c.), which involve the Treasury in a loss of from 4 to 15 per cent., representing the differences between the amounts with which Germany is credited and the sums paid to the French Treasury by the purchasers of the goods. These ordinary payments in kind are estimated to yield the Treasury 2,300,000,000f during 1929 (which M. Dumont estimates as the maximum of this kind of payment which France can at present absorb). Finally, Germany should pay something like 3,300,000,000f this year in the form of supplies and labour in connection with the improvement of the national economic equipment (ports, canals, roads, colonial equipment and provision of factories, &c., for essential industries). In this connection Germany would be credited with the entire cost value, whereas the French Treasury—for the time being, at any rate—would receive only a trifling sum of 162,000,000f or so, as payments in kind made in this form would be in the nature of public works. M. Dumont argues that consequently, when the question comes to be discussed, the French thesis must be that the annuity required by this country must be furnished in the form of payments solely of the kind of the first two mentioned categories; in other words, as the limit of "ordinary" payments in kind is

held to have been reached, Germany must be called on to pay, so far as the French share is concerned, nearly twice as much cash as she is at present contributing to this country.

Agricultural depression, which appears rapidly to be approaching a critical stage, remains the black spot on the French economic horizon. There is increasing evidence that this country, like others, is developing her industrial activity at the expense of her food-producing interests. The area under wheat, which in 1913 totalled 16,250,000 acres, was in 1927 only 12,750,000 acres, or over 20 per cent. less, and last year's acreage was still lower. For this the drift into the towns, owing to the dullness of rural life and the higher pay ruling in other industries, is principally responsible. Except in districts endowed with first-class soil, wheat growing has become unprofitable in France, and the acreage of abandoned farms is growing steadily. Figures from expert sources quoted in the Senate show that a yield of less than eight quintals of wheat per acre will not cover cost of production. Government statistics reveal that the average yield per acre throughout France is well under six quintals. Agriculturists complain that while wheat has recently fallen from 170f to 150f per hectolitre, and meat from 600f to 400f per 100 kilos, the price of chemical manures, general production costs and taxation are constantly rising. Succession duties, for instance, in two generations, are equivalent to 50 per cent. of the value of agricultural property passing from father to son. Hopes are placed on the remedial effects which it is expected will result from the scheme now being steadily carried out for the electrification of the rural districts, for the purpose of furnishing both light and power for agriculture. At the end of 1927, 21,234 out of 37,981 communes in France (representing 80 per cent. of the total population) had been furnished with electrical installations, as compared with 7,000 communes at the end of the war. The local undertaking organisations have been subsidised by the Government with irredeemable loans, at a low rate of interest, to a total which now amounts to 700,000,000f. The new Finance Act provides for an import tax of 0.10 per cent. *ad valorem* to be levied henceforth on all wool and sheepskins entering France, with a view to fostering the development of sheep-breeding in France, Algeria and the colonies and protectorates.

Coal production figures for November indicate a total output of 4,477,044 tons for 25 working days, against 4,701,381 tons in October. The figures disclose that the average daily output per head of the labour of all categories engaged, which worked out at .677 tons in 1913, is now only a trifle over .605 tons per head. The pits within the pre-war frontiers are now producing 22,923 tons per day more than in 1913. The yield from the Lorraine pits in October averaged 20,011 tons a day. The coke plants at the collieries produced in November 379,701 tons of metallurgical coke, as against an average monthly output of 140,000 tons in 1913.

ITALY. — STOCK EXCHANGE — BANK RATE — FOREIGN TRADE—INDUSTRIAL ACTIVITY—SUGAR IMPORT DUTY.

(FROM OUR CORRESPONDENT.)

TURIN, January 6.

THE November boomlet was short-lived. The general average of variable dividend securities was at the end of December 88.29 (basis 100, December, 1925), which is higher than the 73.15 level of the end of December, 1927, but lower than the maxima of 90.56 and 90.43 reached at the end of May and November, 1928.

During the first week of the New Year there was a lively market in Fiat shares, which, having closed the year at 590 lire, shot up to 700 lire on favourable news of rising New York quotations; but at the week-end fell to 650. Bank of Italy shares went badly, losing about 180 lire per share, notwithstanding the free distribution of one share to every three old ones. It appears that a special technical reason for the fall of the leading Italian security was the prohibition of future dealings in it. Only cash dealings can be made henceforth in Bank of Italy shares, with day-to-day prolongations and no end of month settlements. The prohibition of futures aims at excluding speculation from the market of a security which is issued by a public body; but it took the market by surprise, and forced sales. Reviewers are searching for explanations of the Bourse depression. The rise of the official rate of discount from 5½ per cent. (June 25, 1928) to 6 per cent., which was announced this morning, can be dismissed as a real cause of the depression, as the Bourse market is financed quite independently of the Bank of Italy, and the sums needed for prolongations are to-day truly paltry.

The rise of the rate of discount appears to have causes deeper than the purely financial ones. In my last letter, while noting the increase in the cash gold reserves of the Bank of Italy from 4,547.1 million lire at January 10, 1927, to 5,051.9 million lire at November 10th, I stated that other gold reserves (gold foreign credits and foreign States bills) had decreased between the same dates from 7,558.8 to 6,038.4 million lire. A month later, at December 10, 1928, while the gold reserve was stationary, the foreign credits and bills reserve had further decreased to 5,944.2 million lire. The Bank of Italy is therefore acting very wisely in raising the rate of discount to counteract the outward movement of its gold reserve.

The easiest explanation of the decrease in the reserves is the foreign trade balance. The excess of imports over exports, which was 4,392.5 million lire in the first eleven months of 1927, increased to 6,789.6 million lire in the same period of 1928. A great part of the gap was presumably filled by the usual invisible items of credit: travellers' expenses, freights and, though diminishing, emigrants' remittances. The balance must be made up by opening of foreign short credits, a few long-term issues, some sales of Italian securities (Fiat, Snia, Pirelli, Isotta Fraschini, Montecatini, &c., shares); and, lastly, sales of gold credits and bills of the Bank of Italy reserves.

There are, however, reasons for believing that the big excess of imports over exports will in due time bear some good effects. In part the excess is due to the bad 1927 harvest, which forced exceptional imports of wheat and other foodstuffs in 1928; this should not be repeated in 1929, as the 1928 wheat harvest was better. Partly, however, the excess is due to the increased imports of raw materials and half-manufactured products. In the first ten months of the year imports of raw jute increased from 42,104 tons in 1927 to 47,973 tons in 1928 (131.7 to 144.1 million lire), of raw cotton from 173,411 to 189,932 tons (1,419.7 to 1,797 million lire), of raw wool from 30,881 to 38,895 tons (484.4 to 617.3 million lire), of dried cocoons from 1,042 to 2,023 tons (from 45.3 to 79.7 million lire), of broken iron, pig-iron and steel from 599,181 to 720,060 tons (244.4 to 240.2 million lire), of copper and broken copper from 48,947 to 65,200 tons (303.7 to 391 million lire), of cellulose from 94,075 to 141,158 tons (138.1 to 173.2 million lire). Industrialists, who during the revaluation process of the lira in 1927 had bought less and less raw material (the excess of imports, which was 870.6 million lire in January, 1927, sank to 144.0 in August), but had drawn on their stocks without replenishing them, began to take courage in past spring, when the stabilisation was some months old and the monetary situation once more seemed stable. The replenishing of stocks, with the consequent accelerated imports of raw materials, has inevitably put a pressure on the Bank of Italy reserves; but if the above analysis is correct, and no unknown factors are at work, exports should in their turn increase in 1929 and change the direction of the gold currents.

Reports from the industrial sections indicate an increase of activity. The employment percentage (number of men working in September, 1926 = 100), which was 94.7 per cent. at the end of August, increased to 95.6 at the end of September and to 96.3 at the end of October. Almost all industries report progress except silk spinning, shipbuilding and cement. Unemployment, after decreasing from the maximum of 439,211 at the end of January, 1928, to 234,210 at the end of July, increased again to 283,379 at the end of October, but is lower than at the end of October, 1927, when the figure was 332,240.

The wheat import duty was increased last September from 75 to 110 gold lire per ton, and the duty on sugar is now also raised from 24.75 to 36 gold lire. The duty

was 28.85 gold lire before the war, was suspended during the war, abolished in 1923, put at 9 lire in 1925, and afterwards steadily increased. These increases will surely aid the extension and better culture of wheat and sugar-beet lands. But the crucial question is whether they will also aid the lowering of the cost of living, and therefore the cost of those agricultural and industrial goods which we must increasingly export in a competitive world if we are to pay for the increasing imports needed by our expanding population.

THE MERCANTILE BANK OF INDIA, Ltd.

Head Office: 15, Gracechurch Street, London, E.C.3.

Capital Authorised	£3,000,000
Subscribed Capital	1,800,000
Paid-up Capital	1,050,000
Reserve Fund and Undivided Profits	1,584,846

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and conducts every description of Banking Business in Connection with the East.

Fixed Deposit Rates will be quoted on application.

On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.

Trusteeships and Executorships Undertaken.

JAMES STEUART, *Chief Manager.*

HOLLAND.—CAPITAL ISSUES—FOREIGN TRADE—NETHERLANDS BANK—ACCEPTANCE MARKET—PRICES.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, January 5.

THE month of December has proved a record for the Amsterdam issue market, a total of 120.7 million guilders of new stock having been issued. This brought the total for stock placed on the market during 1928 up to nearly 870 million guilders, a figure which had not been reached since 1920. The year 1927, which was already a record year, was surpassed to the extent of no fewer than 167 million guilders.

This year Dutch loans accounted for 360 millions and foreign loans for 309 millions. The proportion of Dutch loans and foreign loans has undergone a great change this past year. Last year the amount of foreign loans was 67.7 per cent., compared with 32.3 per cent. Dutch loans; now the percentage is 53.8 Dutch and 46.2 foreign. The figures below show how Dutch and foreign loans have compared of late years:—

(In Millions of Guilders.)

	1924.	1925.	1926.	1927.	1928.
Dutch	354	154	176	162	360
Foreign....	49	143	283	340	309
	403	297	459	502	669

There was little change in the total value of the conversion loans, approximately 36 million guilders being offered compared with 38 millions last year. The lion's share was, as usual, accounted for by Dutch municipal loans, including Amsterdam and Rotterdam. The increase in the number of shares issued may be taken as a proof that the public is optimistic and that in industrial circles the time is considered favourable for extensions or the founding of new concerns.

The trend of the Dutch trade balance in 1928 has not been so favourable. The import balance showed a further considerable rise, thereby interrupting the favourable run of business which began in 1923. Since that year there has been a steady upward tendency both as regards imports and exports. The figures given below will show the state of trade during the past six years:—

DUTCH TRADE BALANCE, 1923-28.

	Imports.		Exports.		Import Balance.	
	In Mil. Guild.	% of 1923	In Mil. Guild.	% of 1923.	In Mil. Guild.	% of 1923.
1923	2,009	100	1,303	100	706	100
1924	2,363	117·6	1,661	127·4	702	99·4
1925	2,455	122·2	1,808	138·7	647	91·6
1926	2,441	121·5	1,749	134·2	692	98·0
1927	2,549	126·7	1,900	145·8	649	91·9
1928	2.695	134·1	1,977	151·7	718	101·7

From this list it will be seen that the trend of trade during the past years may be called favourable. If we assume that the figures for December, 1928, will be identical with those for December, 1927, and make a comparison on this basis, it will be seen that the import balance has increased only 1.7 per cent. compared with 1923, whilst the imports compared with those of 1923 show an increase of 34.1 per cent. Dutch exports have increased more rapidly than the imports. An increase in the value of exports (from 1,303 million to 1,977 million guilders, or a little more than 50 per cent. in a period of five years) evidences a firm trend and gives satisfaction when one considers the many obstacles which exporters had to overcome.

Compared with 1927, however, the results of the past year are far from satisfactory. Against an increase of 77 million guilders (last year 151 millions) in the value of exports, there is an increase of not less than 146 millions (last year 108) in the value of the imports, thereby causing a rise of about 69 millions (last year a fall of 43 million guilders) in the import balance. Manufactured articles are to a great extent responsible for the increase in the exports. The increase in the export of manufactured articles to the extent of 88 million has surpassed the increase in total exports during the first 11 months of this year, which amounted to only 84 million guilders. The export of metal filament lamps and wireless sets has played an important part in this increase, while the export of art silk yarns also increased during this period to the extent of nearly three millions.

The Netherlands Bank experienced no difficulties during the past year. Changes in the official discount rates were unnecessary. It was easy to remain master of the situation in the money and bills market. There was no considerable export of gold, and by gently pursuing the gold exchange policy it was possible to keep the Amsterdam bills market in the right course. The weekly returns of the Netherlands Bank during 1928 testify to the smooth trend of Dutch finance and economy. The great fluctuations in the amount of foreign bills held must, according to *De Telegraaf*, be ascribed to the fact that the Netherlands Bank is actively pushing its bills policy still further. The Bank not only buys and sells bills when exchange rates approach the import or export gold point, but is regularly active in the bills market. The Bank even does future transactions in bills at the gold value in addition to buying and selling for immediate settlement. It sometimes most unexpectedly takes action in the bills market, and thereby immediately influences exchange rates. Many are also clamouring for the Netherlands Banks to take action in the discount market. The Bank might influence the money market by retaining Dutch bank acceptances.

The volume of business on the Amsterdam acceptance market remained practically unchanged throughout 1928. According to *De Telegraaf* a slight decline is noticeable in some banks, but in other cases there has been a further increase, so that on the whole the extent of the business remained practically unchanged at about 360 million guilders odd.

During the past year Paris has attracted some important business in view of its amply supplied money market, but there is no fear of serious competition in the future from that quarter. A decline in the Amsterdam acceptance market is therefore out of the question, and one might even say that it is favourably developing, although perhaps at a slower rate than formerly. Here it must not be forgotten that this slight advance came about under less favourable conditions than some years ago, when the Amsterdam discount rate remained more than 1 per cent. below the London level. The advance made by the Amsterdam discount market during last year is chiefly due to the greater variety of lenders. This has rendered the private discount rate much more stable than formerly. The gold position of the Netherlands Bank was strengthened in 1928, as the following figures show:—

(In Millions of Guilders.)

	Dec. 27, 1926.	Dec. 27, 1927.	Dec. 24, 1928.
Foreign bills and various accounts..	251	244	257
Supply of gold	413	400	435
	664	644	692

The number of foreign bills held shows a practically uninterrupted rise as a result of the operations of the Central Bank on the bills market. In connection with this there was also a considerable increase in the circulation of banknotes. It is, however, remarkable that, despite this increase in the circulation of banknotes, the index figure for wholesale prices has, in contrast to that of 1927, shown a decline this year—namely, from 153 in January to 148 in November last.

RUSSIA.—POLITICS—AGRICULTURE—CREDIT—INDUSTRY—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

THE situation in Soviet-Russia has not improved just recently. The official Press reports that the new "Right" Opposition is increasing. M. Stalin declares not very convincingly that the movement presents no dangers because it consists only of criticism, and thereby favourably differs from the Trotsky "counter-revolution," which had a formal organisation. In November the Executive Committee of the Communist party passed a resolution describing both the economic and the political position very blackly, emphasising those unsatisfactory developments in agriculture, industry, and foreign trade which jeopardise "the socialistic industrialisation" of the Union, and complaining of growing opposition by the "capitalistic elements." M. Stalin seems to hold that mere political attacks upon capitalism promise no success; if Socialism is to win a final victory the capitalistic countries, he declares, must be technically and economically outdistanced. Of such outdistancing there is no prospect. The highest hope, as M. Bucharin's organ points out, is that the Union, by using its foreign trade monopoly, will keep itself independent of success in "technical and economic" competition with the outside world. The meaning is that Russia, as long as she remains "hermit Republic" may exist, and even progress though remaining behind the more advanced countries of the world.

The Government seems to be afraid to put into force thoroughly its policies in the peasant question. The recent weakening in measures against the rich farmer "kulaks" seems to be less due to the resistance, not stopping short of assassination by that class, than to the bad food conditions in the towns. There is a shortage of bread, and there has been locally a shortage of meat. If the crops estimate is correct, the grain buying-up campaign has so far not been very successful. Grain bought up in July-November were 4,782,500 tons, which is more than the 4,129,500 tons of the same months of 1927, but less than the 5,898,900 tons of 1926. The quantity of wheat bought up is less than last year, of rye very much less. The best crops are in remote districts, with poor communications. The official Press complains that the local authorities in their zeal to apply the special taxation measures against the "kulaks," who constitute some 2 per cent. of all the peasantry, have been despoiling also the "sredniaki," or moderately well-to-do peasants, and that in some provinces one-fifth of all the peasants have been victims of punitive fiscal measures.

Before the Central Executive Committee is a Bill prescribing measures for increase of the agricultural yield. The principle of land nationalisation is adhered to, in that there is a prohibition against selling and mortgaging land. While the inspectorate found that the yield per unit of area of "Soviet" farms averages 20 per cent. higher than that of individual farms, the Moscow *Ekonomitcheskava Zhizn* reports that most "Soviet" farms are operated at a loss—a result of "want of skilled management, lack of a production programme," and so on. The "collective" farms do not fulfil their agreements to allot stated areas to industrial crops.

The currency circulation is still increasing. In October, the first month of the new business year, short-term credits declined, and circulation grew by only 51 million roubles, bringing the total on November 1st to 2,023 million roubles. November witnessed a further increase to 2,095½ million roubles. The State Bank's return for December 1st shows:—

	Tchervontsi (of 10r).
Gold	17,819,293
Other precious metals	4,507,208
Foreign bank notes	7,909,961
,, cheques	273,161
Discounts	82,216,390
Note circulation	112,130,455

The Finance Commissariat's circulation on December 1st was 974,316,584 roubles, whereof 763,930,750 roubles were treasury notes, the remainder coins. Since the beginning of the business year 1927-28 circulation (including coins) has risen by 336 million m. According to the Finance Commissariat "the supplementary currency emissions are not out of proportion to the expansion of production and trade." Prices, however, are still rising. In the first month of the new business year the wholesale index (1,000 in 1913) advanced from 1,732 to 1,764. Retail prices also rise, though slowly, the last index showing 213 (100 in 1913). The index number for State and co-operative retail trade is given as 1.87, for private retail trade 2.66. The 1928-29 Budget total given in the *Economist* of November 17th has been twice raised, and as now fixed by the Central Executive Committee is 7,731,523,000 roubles. The estimate of yield from loans has been increased from 740 to 800 million roubles. The Committee declares, almost in the same words used a year ago, that the new Budget involves a serious strain, revenue and expenditure being at the highest possible figures.

The last reports indicate that the light industries have been developing rather better than the heavy. Production of coal in October was 3,133,000 tons; oil, 1,104,000 tons; iron ore, 573,000 tons; pig-iron, 290,100 tons; steel, 383,300 tons. In October, 1928, coal output was 102 per cent. of that of October, 1927; pig-iron, 111 per cent.; steel, 116½ per cent.; oil, 119 per cent.; leather, 148 per cent.; cotton yarn, 119 per cent.; woollen yarn, 126 per cent.; linen yarn, only 92 per cent. The agricultural machinery output of 1927-28 is returned as of value 141 million roubles, as against 99 million roubles in 1926-27. By "rationalisation" measures the number of works in this branch has been reduced from 350 to 40.

According to a revised plan, the Dnieper hydro-electric station is to have 800,000 h.p., as against 650,000 h.p. originally planned. The result will be to delay opening until December, 1932. In the vicinity of the station are to be founded works which will produce annually 650,000 tons of iron, 100,000 tons of ferro-alloys, 100,000 tons of electro-steel, and 15,000 tons of aluminium. A serious home shortage of wood in 1929 is predicted. There is a lack of all sorts of equipment, and work this winter began later than usual.

The first month of the new business year began with an active foreign-trade balance. The attainment of the active balance promised for the whole year will depend upon whether the official plan to increase exports by 18 per cent. is realised, and upon whether heavy food importing can be avoided. In 1927-28 food imports greatly increased, and constituted 8.5 per cent. of all imports, as against 4.8 per cent. in 1926-27. Total imports over the European frontiers in October were 56,659,000 roubles, of which 52,189,000 roubles were for purposes of production, 21,277,000 roubles being industrial plant and 23,401,000 roubles raw materials. Exports totalled 67,045,000 roubles, consisting of 32,086,000 roubles agricultural produce and 34,959,000 roubles industrial raw materials and wares. In 1927-28 Germany led both as exporter and importer. The large increase in Russian purchases from Germany is connected with the German 300,000,000 marks credit.

(Millions of Roubles.)

Imports from—	1926-27.	1927-28.	Exports to—	1926-27.	1927-28.
Germany	157·7	242·0		167·3	185·4
U.S.A.	143·4	181·5		17·3	22·1
Great Britain	97·1	45·4		197·5	147·7

The figures relate to trade over the European frontiers.

In connection with the 1928-29 "control figures," the State Planning Board has published the results of an inquiry into the national income, which is returned at 25,900 million roubles in 1927-28, as against 16,950 million roubles in 1924-25. The Socialised share of the national income is estimated at 52½ per cent., as against 39 per cent. in 1924-25.

FINLAND. — THE MONEY MARKET — FOREIGN TRADE—AN ECONOMIC COMMISSION—THE STATE BUDGET FOR 1929.

(FROM OUR OWN CORRESPONDENT.)

HELSINKI.

THE state of the money market was marked throughout 1928 by an almost uninterrupted movement from a comparatively easy tone at the end of 1927 towards a growing stringency. As a result, the Bank of Finland found it necessary to raise the official bank rate on August 7th from 6 per cent. to 6½ per cent., and, as the tendency still persisted in the same direction, to 7 per cent. on November 15th. The joint stock banks and other financial institutions have gradually raised their rates on credits, and in some cases also their rates on deposits.

The great demand for credit is seen clearly in the fact that the credits granted by the joint stock banks increased from month to month up to the end of October. During that time the increase amounted to about 1,700 million marks, as compared with barely 900 millions in 1927. However, the figures for November indicate that a change has set in at last, for credits fell off by 165 million marks. This reduction is partly a consequence of some credits for building purposes having been transferred to the Municipal Mortgage Bank, which received the proceeds of a foreign loan at the end of October, but may possibly be interpreted as a sign that the highest point has been passed. During the first half of the year deposits in the banks grew so much that, as several of the banks had increased their own capital, they could satisfy the demands for credit without much trouble. But since July deposits have displayed a tendency to fall, so that the banks were obliged to resort to the help of the Bank of Finland, and to introduce strict discrimination in credits granted. Month by month the rediscounting of bills at the Bank of Finland increased in consequence until, on December 15th, it amounted to 612 million marks, as against only 39 millions at the same date in 1927.

The changes in the balance-sheets of the Bank of Finland naturally reflect the same stringency. The ordinary cover, *i.e.*, the total of the gold reserve and the undisputed balances with foreign correspondents, which represented at the end of 1927 78 per cent. of all the Bank's liabilities payable on demand, dropped to its lowest point of 50.3 per cent. on October 23rd, to rise subsequently to 53.4 per cent. on December 15th.

Even though a slight tendency towards a change in the direction of a somewhat easier tone of the money market may be discernible, no rapid recovery can be expected. The chief cause of the money shortage, building operations, has, indeed, declined to some extent, but as it is, nevertheless, essential to complete construction work that has already been begun, the demands for credit from this source are still large. Besides, the season is approaching during which exports are comparatively small and credit requirements are on the increase. The uncommonly heavy imports, which are also an important cause of the stringency of the money market, continued throughout the autumn. This is partly a natural consequence of the poor harvest, and shows itself in greater imports of grain, but imports have also been heavier than in 1927 in the case of most other classes of goods. For instance, there have been unusually large imports of building materials, machinery and means of transport, and also of Colonial produce, textiles, hides, &c. Altogether the value of imports in October amounted to 884 million marks, and in November to 735 millions, compared with 609 and 617 millions in the same months in 1927. Exports also were quite lively during the autumn. Their value amounted to 740 million marks and 625 millions respectively in October and November, as against 675 and 550 million marks in 1927. The most striking fact is that exports of plywood and cellulose during these months show fresh record figures, so that the total exports of plywood for January-November were about 52 per cent. and of cellulose about 31 per cent. larger than in 1927. Exports of mechanical pulp, paper and cardboard have also considerably exceeded the results of 1927. On the other hand, exports of sawn timber, which were heavier in 1927 than ever before, dropped off slightly owing to less favourable selling conditions. For the eleven completed months of 1928 the total value of imports was 7,426 million marks, compared with 5,822 millions for the same period in 1927, while the value of exports amounted to 5,748 million marks, compared with 5,935 millions in 1927. The resultant surplus of imports amounting to 1,678 million marks must inevitably prove burdensome for the money market.

In view of the economic position, the Government appointed an Economic Commission at the beginning of December, consisting of prominent representatives of various sides of economic and social life, for the task of making impartial, thorough investigations into economic conditions and of marking out the guiding lines for the future economic policy of the Republic. This Commission, the tasks and organisation of which are at present rather vague and uncertain, represents the first step towards future unpolitical representation for the economic world.

The State Budget for 1929 is now ready. It is based on the same principles as the Budgets for the preceding years, and differs very little from them. The final figures show a slight rise above the Budget for 1928. The total expenditure is estimated at 4,253 million marks, compared with 4,233 millions for 1928, while the total figures for revenue are estimated at 4,223 million marks as against 4,072 millions last year.

Letters to the Editor.

ATLAS ASSURANCE COMPANY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—On page 17 of your issue of January 5th the following paragraph appears under the heading of "Atlas Assurance Company, Limited":—

"Apart from doubts which inevitably arise as to the ability to maintain these very high bonuses, there is room for the view that their existence is in itself a confession of a serious anomaly now existing in the conduct of life assurance, namely, that premiums which are capable of producing very high bonuses might be regarded as excessive in regard to the protection afforded."

If the doubts referred to relate specifically to the "Atlas," and if the suggestion that the scale of premiums may be regarded as excessive, applies specially to the "Atlas" premiums, then I think we are entitled to take exception to the paragraph with which your reference to this company terminates. On the other hand, the paragraph is probably intended to be merely of general applicability, in which event the undersigned is in cordial agreement with your contributor. But the paragraph is headed "Atlas Assurance Company, Limited," and I fear that the ordinary reader of your journal may very well regard the article as a reflection on the "Atlas."

As a matter of fact, although your contributor does not comment on this aspect of the case, the "Atlas" is the outstanding example of a company which has taken steps in its practice to emphasise the possibly ephemeral nature of the present high scale of bonuses. Whilst taking every possible precaution to safeguard for an indefinite period the current high rate of bonus, the "Atlas," in its recent declaration, has divided its bonus into an ordinary bonus and a special bonus, it has declared an interim bonus for the current year at a rate substantially less than that declared for the previous triennium, and it is refusing to give illustrations based upon an indefinite continuation of the current rate of interim bonus. This, notwithstanding the fact that our recent distribution of 60s absorbed less than 70 per cent. of the total profits earned,

and that the current rate of interim bonus probably will be found to absorb less than 60 per cent. of the current rate of profit, without bringing into account appreciation in the book value of securities.

Comparisons are odious, but there are very few companies in an equally strong position which are dealing with the future on so conservative a basis. It is for that reason that I think it particularly unfortunate these general reflections, however appropriate, should have appeared under the heading of the "Atlas Assurance Company, Limited,"—I am, dear Sir, yours faithfully,

WM. PENMAN.
Actuary and Life Manager.

Atlas Assurance Company, Limited, 92 Cheapside, London, E.C.2, January 10th, 1929.

[The passage which Mr. Penman quotes, and with which, we are glad to see, he agrees, was, of course, written as a general comment on certain important tendencies in the insurance world and was in no way intended as a reflection upon the Atlas Company, to a discussion of whose excellent figures the main body of the Note in question was devoted.—ED., *Econ.*]

PARTICIPATION IN LEAGUE LOANS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Please allow me to thank you for publishing in your issue of December 22nd a table showing that British capital has participated in the League of Nations' reconstruction loans to the extent of 48.3 per cent. The table—compiled, I believe, for the first time—should be exceptionally useful to all students of international affairs. It should also prove instructive to those who can see no redeeming features in "Capitalism."

Commenting on this valuable table, you point out that "nearly half the burden has fallen upon Great Britain," and emphasise the extent to which we have done our "duty" in the work of European reconstruction. I hope you will not think me captious if I suggest that when we talk about the "burden" and the "duty," it is advisable at the same time to admit quite frankly that we have done extraordinarily well out of these League loans; otherwise we not only invite the accusation of hypocritical self-righteousness, but also miss an excellent opportunity of encouraging other countries to follow and to profit by our example.

To illustrate what I mean, it is sufficient to recall that the British *tranche* of the Austrian League loan—£14,000,000 was issued to the public at 80 and to-day is quoted, with interest, at 102. The Hungarian League loan—British *tranche* of £7,902,700—was issued at 88, and to-day is quoted, with interest, at 103½. These two participations constitute over 50 per cent. of the total British share in League loans. At a glance it will be seen that on an investment of about £18,240,000 the British investor has already obtained in capital appreciation a sum of approximately £3,600,000, in addition to an annual interest yield of between 8 and 9 per cent on the investment. It is also probably correct to say that part of the American *tranche* of the Austrian loan was bought by London at a discount shortly after its issue and was subsequently sold back to the American market at a good profit. If one adds up these and other earnings, one realises that the path of "duty" was by no means unprofitable.

On the other hand, there is not the slightest ground for saying that these profits, in the circumstances, are extortionate. As one who took part in the preliminary pourparlers with the bankers regarding both the Austrian and the Hungarian loans—before the League was officially called in by either country—I can testify to the intense reluctance on the part of the leading houses both in New York and London to accept the risk of issuing either of these loans on any terms whatever. It should be remembered that both these loans went to a discount after issue, the Hungarian loan being quoted as low as 86½. It is easy to be wise after the event and when both loans are at par, but I am convinced that at the time of issue no better terms could have been obtained either by Austria or Hungary and no loan at all without the intervention of the League.

I like to think that our large share in what, at the time, was considered in certain quarters to be a highly speculative investment was due primarily to the faith of the City of London in the sanity of the Treasury and the leadership of the Bank of England, and, secondly, to the survival of the "merchant adventurer" spirit which, in its finest conception, is inherited by our bankers. We need not be ashamed of making legitimate profit, and I have ventured, not to correct, but to amplify the valuable statement in your issue of December 22nd, lest in other less adventurous countries we may be accused of deliberately overlooking facts and clothing ourselves in a white sheet of "duty."

Just one other point. Several well-known members of Parliament in 1923 were anxious that the British Government should give a part guarantee for the Austrian League loan only if the sum guaranteed were "earmarked" for expenditure in this country. I then pointed out that such a policy would defeat the reconstructive purpose of the loan and, in the long run, would be of little or no use to British trade. In drawing attention, through the courtesy of your columns, to the financial profits which have accrued to this country through participation in the Austrian and Hungarian League loans, I hope to have also provided at least one material argument against universal "earmarking." Quite apart from the financial aspect of the case, British commerce has, naturally, profited by the return of Austria and Hungary to financial and economic stability. Those markets would be non-existent to-day except for the League loans and their expenditure on sound economic principles.—I am, Sir, etc.,

WILLIAM GOODE.

49, Westbourne gardens, London, S.W.2, January 8th, 1929.

POTTERY AND SAFEGUARDING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr. T. B. Johnston's letter on Safeguarding of Pottery and your reply to it raise issues wider than the point immediately under discussion.

Mr. Johnston quotes certain very dubious figures from the Board of Trade returns, and contends that these "prove conclusively the fallacy of the free trade theory that if you protect your home trade your export trade must suffer." You reply by an examination of his statistics and a contention, not that they are irrelevant, but that they do not prove his case.

Now, I have no quarrel with the *minutiæ* of your statistical argument. Academic economists who depend so much upon your columns for the raw material of their analysis must always be grateful when anything induces you to expound the inner significance of official statistics. But I do feel that it was the wrong weapon to employ in such controversy, and I do feel that it is symptomatic of a tendency, prevalent in modern apologies for the policy of Free Trade, which bids fair to weaken the force of the main case for that policy.

Mr. Johnston's contention was that the view that if you protect your home trade your export trade must suffer is fallacious. He attempted to prove this by examining the export statistics of a protected trade. Now, no doubt, as you point out, his interpretation of the statistics was misleading. No doubt it was right to correct this interpretation. But, surely, the correct reply to his main contention is to point out that the Free Trade theory with regard to the relation of imports and exports is not concerned with the relation between imports and exports of *particular classes of commodities*, but is concerned essentially with the relation between imports and exports *as a whole*, and that, therefore, his statistics, even if correct, were completely irrelevant. It may be true, in some cases, that the protection of the home market leads the producers concerned to neglect foreign markets, but it is no part of the main case for Free Trade to urge that this must be so. Indeed, it would be easy to imagine cases where *a priori* considerations pointed in the other direction. To argue closely about statistics as you do, and to omit the main objection to the relevance of such statistics is surely to abandon the contest on a field where victory is almost certain, and to resume it on a field where, if the argument does go in your favour, it does so as much by chance as by reason of the essential correctness of your position.

No doubt almost any argument is good enough to meet a contention so grotesque as your correspondent's, but I do submit that, even in cases such as this, much more is lost than is gained by the use of inferior weapons, and in controversy about Free Trade the appeal to statistics is necessarily inferior. So long as modern Free Traders spend time attempting to exhibit particular cases where protection does not benefit the protected, so long do they place themselves on the same plane of fallacious particularism as their opponents and jeopardise the whole cause they are defending. No doubt, in certain cases where the statistics are suitable, the temptation to reinforce the broad argument with regard to industry in general by appeal to the facts of particular industries must be very great. But from the theoretical point of view such appeals are always open to suspicion, and from the point of view of mere propaganda I doubt whether they are sound. Once the plain man gets it into his head that you attach importance to such arguments, then he will come to think that the main case for Free Trade stands or falls with their validity—or, worse still, that the case for Free Trade is only valid when the statistics of the trades concerned behave in a certain manner, and that, therefore, the "open-minded man, not fanatically committed to one doctrine or the other," will be content to accept the ruling of "expert committees"—surely a disastrous consummation to Free Trade propaganda! Is it not high time that we passed a self-denying ordinance in regard to the use of such arguments?—Yours faithfully,

LIONEL ROBBINS.

New College, Oxford, January 6th, 1929.

[We do not quarrel in the main with our correspondent's criticisms. Since, however, the campaign for a further dose of protection is being based so much on the alleged benefits of recent experiments, we have thought it necessary to examine the facts relating to them and to guide our readers towards a true judgment of the claims that are being put forward.—ED., *Econ.*]

WAGES AND THE STANDARD OF LIVING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Last week Sir Herbert Samuel broadcast a lucid exposition of the factors which control the prosperity of this country. A politician, however, labours under a grave disadvantage on such occasions. He may, as did Sir Herbert, avoid controversial questions, but in the interests of his party he seeks to steer clear of offending the susceptibilities of any important section of his hearers. Hence Sir Herbert omitted to touch upon a strong reason for our inability to regain our foreign trade—so vital to the national welfare—that powerful portions of the community comprised by the sheltered trades, the transport companies, and the staffs of the civil service and municipal bodies, &c., have, notwithstanding that they enjoy far more security of tenure than others, greatly improved their position in recent years. No economist is averse from raising the standard of living provided that the masses can find the wherewithal to secure it. Such has not been the case. The better wages paid to those fortunate enough to hold the power to insist upon a larger share of the amenities of life has not been accompanied with like benefits for the public. On the contrary, the aggravated cost of transport touches the pocket of the poor; the rise in rates and taxation lies at the root of the housing difficulties, already burdened with the increased wages now ensured to the building trade. More serious still is the effect upon our foreign trade, in which such items as the cost of transport form often the decisive factor in our estimates for abroad.

Were this country self-supporting the fact that certain classes of the community were privileged might not endanger the public good. As it is, this fact is clogging the wheels and retarding that return to a favourable balance of foreign trade—which alone can bring employment to the million or more now out of work. The services rendered by the privileged classes are indeed valuable to the public, and those of the railwaymen especially have received but tardy recognition; but the fact remains that such wages to the extent that they are uneconomic are paid to the detriment of the public. It is surely wrong that an estimable young fellow, a wireless operator on a merchant vessel during the war, should only obtain 45s a week, whilst a corporation sweeper should enjoy 30 per cent. more.

The whole atmosphere would be invigorated if the cost of transport were reduced. At present, owing to its heavy charges, the country is split up into isolated bodies of people, who are unable to benefit by the abundance of which other bodies are unable to dispose, and even those happy enough to be at work fail to get full advantage from the income they possess.

In a word, a lower cost of living is of more importance to a manufacturing country like ours than high wages and a relatively higher cost of living.

We have to face the competition of a changed world. The great peoples of the Eastern Hemisphere are entering upon a manufacturing career, and we must cease to live in the fool's paradise that we can improve our standard of living without the means to pay for it. Necessity is a hard master. The miners, alas! whose hard lot we all deplore, are even now learning the lesson that economic law must always prevail in the end. Since the above was written Mr Ernest Bevin, addressing a meeting at Bristol recently, at which a resolution was carried approving the amalgamation of the Transport and General Workers' Union and the Workers' Union, said "that trade unions were now unifying their forces for a wage move which would raise the *standard of living* in the next year or two." This movement will not better foreign trade or reduce unemployment or lower the cost of living for the public.—Yours faithfully,

BENJAMAN WHITE.

The Holt, Rustwick, Tunbridge Wells, December, 1928.

Books and Publications.

THE PROBLEM OF MOTOR TRANSPORT.*

AFTER the mass of contradictory, biassed or uninformed opinion which has recently been published on this subject, it is with genuine relief that we welcome the first serious work on motor transport. The author states in his introduction that for every 20 works dealing with railway economics there is only one on road transport. He understates the position. This book stands alone, and may remain for many years the standard work on the subject.

Mr Brunner is equipped for his task, being an economist by training, and having enjoyed practical experience both on railways and in the road transport world. It is therefore not surprising that his matter is not historical, visionary, or partisan, but an economic analysis based on the most recent and authoritative statistics, which are invariably interpreted with sound judgment. It is a tribute to his method that within so small a compass, so comprehensive a survey should have been achieved. His chapters on the growth, functions, and prospects of the various classes of motor vehicles leave no important considerations out of account. And although he laments the inadequacy of the data available, it is unlikely that were more information to appear it would be necessary to modify many of his conclusions.

This portion of his work should at least dispel once for all the attitude still all too prevalent that motor transport is a "luxury," an attitude reflected in the expression "pleasure car," and responsible for the division of a portion of motor-tax revenue to the general exchequer, a proceeding justified as being a luxury tax rather than a tax on transport.

Of greatest interest to the general public will be the chapters on road and rail transport and road costs in relation to motor taxation. From the railway point of view these chapters contain some hard sayings. The potential developments of the motor industry and the principal limiting factors are sanely described, and should be of value to the motor manufacturer, while an admirable discussion of the main features of road transport costing deserves the close attention of all commercial motor users.

In summing up the prospects of motor transport in his final paragraph, Mr Brunner lays bare both its strength and its weakness. The impetus of its development is yet by no means exhausted. But the lack of co-ordination and unity of purpose between its various sections militates against its proper organisation, and prevents it attaining its full importance in the nation's life.

* "The Problem of Motor Transport." By C. T. Brunner, M.A. Ernest Benn, Limited. Pp. 188. Price 12s 6d.

AN ECONOMIC ROMANCE.*

ONE hardly knows which to admire most in this remarkable book—the contents or the spirit which prompted their publication. A large and very successful experiment in office re-organisation was carried out in the face of all the expected difficulties, and also many unexpected ones. A faithful and illuminating record is here presented in full detail.

To an old-fashioned business man it will seem almost indecent that any firm should so shamelessly bare all its secrets to the public gaze, and a shock will come with the reading of the first paragraph of the book proper, in which the output of the firm whose sales organisation was overhauled—Rowntree's, of York—is as frankly stated as though it were of no consequence who knew it. This primary unbaring is followed by a frank discussion of the inefficiency which resulted from attempting to carry on a 20th-century business with 18th and even 19th century office methods and equipment. Those who have 17th-century equipment, and there are still many, will do well not to see this book at all, for its whole conception will be to them sheer heresy, and it will perhaps be less distressing for them to suffer and die in the decencies of the faith in which they were born, and have contrived, somehow or other, to muddle through. What is of great value in the book is the fact that the theorists responsible for the re-organisation record their own mistakes quite frankly, so that all setbacks and the way in which they were countered form an integral part of the story, which is as clever a piece of economic romance as has ever been published. The surprising results may be briefly summarised. In the first half of 1923, before the Rowntree offices were re-organised, it cost 15.6 pence in salary costs to deal with each order received by the firm. In the second half of 1926, after re-organisation was completed, the cost was 7.7 pence per order.

The total cost of re-organisation, which included certain alterations to buildings and furniture, and embraced the large item of £5,700 for new office machinery, was £9,432. The saving in salaries alone on the first full

* "Organising a Sales Office." By L. Urwick. Gollancz. 7s 6d net.

year of operation after re-organisation was £9,523, which means that the capital expenditure was actually recovered in one year under the new system.

There were, of course, many other results of importance, and the story must be read to discover them. It is well worth while, since adverse balances are unpleasant things, and if the whole secret of their elimination is not to be found here, a good deal more than half of it is.

There was a certain displacement of staff, but all were fairly dealt with, and one of the most pleasing features of the whole operation was that the re-organisation was carried out with the concurrence and help of the trade union concerned—the National Union of Clerks.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

Economic History of Europe. Part II. In Modern Times. By M. M. Knight, H. E. Barnes and F. Flugel. (London) George Allen and Unwin, Limited, 40 Museum street. 15s net.

Necessarily an outline, this book nevertheless performs a useful function in attempting to present separately the economic aspects of modern European development. Great Britain, France, and Germany, are the countries most fully considered.

The New World. By Isaiah Bowman. (London) George G. Harrap and Co., Limited, 39-41 Parker street, Kingsway. **21s net.**

This fourth edition of an important book, first published in 1921, has been brought thoroughly up to date and completely revised. It discusses an extraordinarily wide range of problems, primarily economic, in their bearing on present-day international relations.

Migration Laws and Treaties. Vol. II. (London) P. S. King and Son, Limited, 14 Great Smith street. 7s 6d.

This volume deals fully with immigration legislation in general, and in particular with restrictions on immigration; immigration services; recruiting, protection, arrival, transport, and repatriation of immigrants; and the treatment of immigrants by the authorities of the immigration country. There is a list of the most important legislative texts.

The Trade of the Indian Ocean. By V. Anstey. (London) Longmans, Green and Co., Limited, 39 Paternoster row. 8s 6d.

An account of the present-day commerce and commercial problems of an area which, economically though not politically, may in some sense be regarded as a unit.

Commerce Year-Book, 1928. Vol. II. Foreign Countries. (Washington) Government Printing Office. $1.25.

This is an invaluable collection of statistics, compiled by the Bureau of Foreign and Domestic Commerce of the U.S. Department of Commerce. Part I. contains miscellaneous information, of a year-book character, about each of some sixty countries; Part II. consists of comparative world statistics of population, production, trade, transport, currency, foreign exchange, and prices. There are several maps.

The Human Factor. By Alfred Hook. (London) P. S. King and Son, Limited, 14 Great Smith street. 8s 6d net.

An analysis of the part which used to be played by the Church in influencing human actions and relations, and an appeal to the Churches to resume their rôle.

The Tribunal for the Interpretation of the Dawes Plan. By Sir John Fischer Williams.

This is a reprint from the American Journal of International Law, Vol. XXII., No. IV. It contains an authoritative account, by a member of the Reparation Commission, of the constitution and work of the tribunal.

The American Negro. By Melville J. Herskovits. (London) Alfred Knopf, 37 Bedford square. 6s net.

An examination of the extent and effects of crossing between negroes and other races.

Konjunktur-Verschlechterung Durch Lohnerhöhungen? Von Rudolf Wedemeyer. (Essen and Leipzig) Verlag Von Dr A. Kerksiech and Co. Rm. 7.30.

A valuable German contribution to the question of wage policy. The author examines the effect of rising wages and salaries in various combinations of circumstances, and draws conclusions both generally and as to the wage policy appropriate to Germany.

Central Banks. By Sir Ernest Harvey. With an introduction by Sir George Paish. Second impression. (London) London General Press, 8 Bouverie street. 2s.

Readers who failed to obtain copies of this important discussion, by the Comptroller of the Bank of England, of the functions of central banks will now find a second impression available.

An Introduction to the Music of R. Vaughan Williams. By A. E. F. Dickinson. (London) Oxford University Press, Warwick square. 1s 6d net.

An intensely interesting handbook.

Canned Food and Health. By Sir W. Arbuthnot Lane. (London) New Health Society, 39 Bedford square. 3d net.

A pamphlet intended to dissipate the popular prejudice against tinned foods. Sir William Arbuthnot Lane assures his readers that the vitamin content is in most cases little diminished, and sometimes even enhanced, by the process of canning.

The Economic History Review. January, 1929. (London) A. and C. Black, Limited 4, 5 and 6 Soho square. 10s 6d net.

Articles in this issue are: "Economic Theory and Economic History," by Professor Werner Sombart"; "The Place of the Netherlands in the Economic History of Mediæval Europe," by Professor Henri Pirenne; "Jethro Tull and the New Husbandry," by T. H. Marshall; "The Place of Bronterre O'Brien in the Working-class Movement," by Alfred Plummer; and "Agriculture in Japanese History," by K. Asakawa.

Journal of the Institute of Bankers. Vol. I. January, 1929. (London) Blades, East and Blades, Limited, 17 Abchurch lane. 1s 6d net.

Interesting features of this issue are a lecture on "The Financial Machinery of the City of London," an article on "The Companies Act, 1928, from a Banker's Point of View," and the conclusion of Mr R. W. Jones's "Registrations and Researches Under the New Property Statutes."

Ready Reckoner and Sugar Accounts Calculator. Compiled and published by J. D. Khandhadia and S. B. Tamboli. With a foreword by Dei Kang Tjwan. (Bombay) J. D. Khandhadia, Janmastami House, Khetwadi main road. Rs 5.

Makes possible the rapid calculation of the price, c.i.f. or f.b.h., in sterling or rupees, of any quantity of sugar within the widest possible range of prices.

East Indian Cotton. A Review of the Season 1927-28. (Bombay) Chunilal Mehta and Co., 50 Marwari Bazar.

Contains a number of useful statistical tables.

Handbook for Investors for 1929. (London) Fredc. C. Mathieson and Sons, 16 Copthall avenue. 5s net.

This is a record of the prices and dividends for the past ten years of certain selected securities.

OFFICIAL PUBLICATIONS RECEIVED.

The following may be obtained from H.M. Stationery Office, Adastral House, Kingsway, W.C. 2:—

Annual Statement of the Trade of the United Kingdom with Foreign Countries and British Counties, 1927. Vol. IV. (London) H. M. Stationery Office, Adastral House, Kingsway, W.C. 2. £1 5s net.

This last volume of detailed official statistics of our foreign trade in 1927 deals with trade at ports; trade in principal articles by countries; transhipments under bond; and stocks in, and free delivery from bonded warehouses.

Public Social Services: Return showing, so far as particulars are available, the total expenditure (other than out of loans for capital purposes) in England and Wales under certain Acts of Parliament during the years ended March 31, 1891, 1901, 1911, 1921, 1927, and 1928 respectively. No. 16. 3d net.

British Solomon Islands Protectorate: Report of Commissioner appointed by the Secretary of State for the Colonies to inquire into the circumstances in which murderous attacks took place in 1927 on Government Officials on Guadalcanal and Malaita. Cmd. 3248. 6d net.

International Labour Conference, Geneva, May 30 to June 16, 1928: Report by the British Government Delegates to the Minister of Labour. Cmd. 3226. 6d net.

The Stock Exchange.

OIL COMPANIES.

It is useful from time to time to remind the investor that the oil share market in London deals with companies differing as greatly in type as an ironmongery store and Vickers-Armstrong. There are, firstly, the purely producing concerns such as V.O.C. Holding, Lobitos, Apex (Trinidad) Anglo-Ecuadorian, and British Controlled Oilfields; secondly, there are the purely shipping and marketing concerns such as Anglo-American Oil and Canadian Eagle; thirdly, there are the localised producing, refining and marketing companies such as Shell Union, Trinidad Leaseholds, Mexican Eagle, Anglo-Egyptian Oilfields, Phœnix Oil; fourthly, there are the international (but not world-wide) producing, refining, shipping and marketing companies such as the Anglo-Persian, with Burmah Oil, now emerging from the third to the fourth group; and fifthly, there are the holding companies such as Shell Transport and Royal Dutch, whose subsidiaries are engaged in every branch of the oil industry throughout the world. Generally speaking, the risks common to this most speculative of industries are greatest in the first and second groups, are spread in the third group according to the size of the company and the sphere of its operations; are fairly well covered in the fourth, and are most nearly eliminated in the fifth group of holding companies.

In a period of falling prices the producing and marketing companies are, of course, severely hit. For example, the American mid-continent crude oil prices fell sharply in the first three months of 1927 from $1.90 per barrel to $1.28, taking the representative grade of 36° Beaumé, and remained depressed until July, 1928, when a slight recovery was made from $1.28 to $1.36 per barrel. This slump in prices explains the sharp fall in the profits of Lobitos Oilfields from £247,037 in 1926 to £69,524 in 1927, seeing that the contract basis of the selling prices of the Peruvian crude oil produced by Lobitos is the Mid-Continent crude oil price in the United States. Nor can an appreciable recovery be expected in 1928, since Mid-Continent crude oil prices were advanced only by 8 to 16 cents a barrel in July, 1928. Much the same consideration applies to Anglo-Ecuadorian Oilfields. Apex (Trinidad) stands in a less exposed position, seeing that the prices at which it sells its crude oil to the Trinidad Leaseholds vary according to the refinery profits, but the fall in refined oil products has, of course, affected its profits, which for the year to September 30, 1928, fell from £404,356 to £246,429. This contrasts with a rise in the profits of Trinidad Leaseholds for the year ending June, 1928, from £336,040 to £415,322, this company, in its position of a complete unit in the oil industry, being able to offset lower market prices by buying a portion of its supplies more cheaply from other companies. The position of V.O.C. Holding is rather more complicated. The selling prices of its crude oil have been the subject of arbitration, the terms of which will probably be announced at the general meeting in February. It is said that the arbitrator's decision is favourable to the V.O.C.; that the crude oil will be sold in future according to a sliding scale based on the world market prices of refined oils. But the V.O.C. cannot escape from the fact that both crude and refined oil prices were depressed in 1927. Incidentally, the arbitrator's award applies as from July 1, 1927, to the first 20,000,000 barrels a year, the surplus being sold to the Shell group on the basis of world market prices. The output of the V.O.C. in 1927 was about 20,000,000 barrels, as compared with about 12,000,000 barrels in 1926, and in 1928 it is estimated at 34,000,000 barrels. The V.O.C. has, therefore, the advantage of a steadily increasing output to offset the decline in oil prices.

It may be argued that the outlook for the producing companies is somewhat brighter to-day than it was at the beginning of 1927. To some extent that is true. Last year, as a result of the measures of restriction which were enforced in certain fields in Oklahoma, West Texas and California, the production of crude oil in the United States was kept within manageable limits. Moreover, the over-production of crude oil was centred in the heavy oil fields, and when a shortage of gasoline developed in the summer an increase was permitted in the prices of light mid-Continent crude oils. Unfortunately this led to a breakdown of restriction in Oklahoma. Then came the development of the deep sands in the Santa Fé Springs field in California, which, being in the hands of small operators, could not be restricted. The production of crude oil in the United States has therefore risen from a daily average of 2,491,000 barrels for the week ending November 17th to 2,581,000 barrels for the week ending December 29th. The shortage of gasoline has been met partly by the increased output of light oil and partly by an increase in the "cracking" of fuel oil. There is, therefore, no immediate prospect of a rise in crude oil or gasoline prices. As long as restriction is in force the crude oil situation cannot be regarded as other than artificial. A breakdown of restriction in West Texas would let loose a flood of oil greater than the present output of the whole of the United States. The active co-operation of the big oil groups is, however, some guarantee that the restriction will continue.

As an example of the purely shipping and marketing companies, we may consider the position of the Anglo-American Oil Company. The oil share market was apparently surprised at the decision of the Anglo-American to pass its interim dividend in respect of the year ending December 31, 1928. But it should have been obvious that the Anglo-American, which is the marketing subsidiary in Great Britain of the Standard Oil Company of New Jersey, was placed in an exceptionally unfavourable position in 1928. The price of petrol in Great Britain last year had not risen at all, whereas the export price of gasoline in America, whence the company draws its supplies, had risen from 6⅞ cents a gallon at the end of January to 10¼ cents by August before reacting to 8¼ cents by December 31. In these circumstances, how could the Anglo-American be expected to recover from the depression of 1927?

The fortunes of what we have called the "localised" producing, refining, shipping and marketing companies depend, of course, on the conditions prevailing in their theatre of operations. Burmah Oil, for example, was adversely affected by the kerosene price-cutting war which broke out in India between the Royal Dutch-Shell group and the Standard Oil group in the autumn of 1927, and was not settled until June, 1928. This, in addition to the decline in world oil prices, brought down the profits of the Burmah Oil in 1927 to £1,914,773, as compared with £2,250,818 in the previous year. The results for the year ending December, 1928, should show some improvement in view of the recovery in kerosene prices. In contrast with Burmah Oil, the Shell Union, in the United States, has had the full benefit of the rise in American refined oil prices in 1928. Its net profits for the nine months of 1928 showed an increase of more than 35 per cent. over those of the corresponding period of 1927, and for the whole year the corporation should earn over $2 per share, as against $1.09 per share in 1927. The results of the Anglo-Egyptian Oilfields for the year ended December, 1928, are not yet known, but this com-

pany should meet the fall in world prices by having a larger production of crude oil. Incidentally, the local conditions for the Anglo-Egyptian have been improved by the recent agreement of the Royal Dutch-Shell group and the Anglo-Persian to pool their marketing organisations in the East. This agreement applies in Egypt only to the trade surplus to the requirements of the Anglo-Egyptian. In other words, the menace of increasing competition from the Anglo-Persian has been removed from the Anglo-Egyptian theatre.

As regards international companies, the Anglo-Persian Oil Company is still to be regarded as a beginner. It is so far producing only in Persia, and marketing only on the Continent and in the East. In its last trading year ending March, 1928, it had to bear the full force of the slump in refined oil prices. The consequences were to some extent offset by economies and an increased turnover, but unlike the Royal Dutch-Shell group the Anglo-Persian cannot meet lower selling prices by buying its supplies more cheaply. Its net profits for the year ending March, 1928, were only £3,112,529, as against £4,635,443 in the previous year. On the other hand, the 1927 accounts of the Royal Dutch and Shell Transport showed that holding companies whose subsidiaries were engaged in every branch of the oil industry throughout the world were able to emerge unscathed from the depression in the oil industry. The net income of Royal Dutch and Shell represents the interest earned from investments and dividends paid by their subsidiary companies. The dividends drawn from these subsidiaries do not absorb the whole of the profits earned; in fact, to avoid multiple taxation the dividends drawn are usually no more than are required to pay dividends to the Royal Dutch and Shell shareholders. The next table shows the earning and dividend position of the international companies, including, for this purpose, Burmah Oil :—

	Year Ending.	% Earned.	% Paid.	Price.	Yield. %
Burmah Oil	Dec., 1927	26	20	4¾	4·21
Anglo-Persian	Mar., 1928	16·6	7·5	4⅞	1·54
Royal Dutch.....	Dec., 1927	24·4	24	33⅜	5·94
Shell	„ „	25·03	25*	5 5/32	5·02*

* Free of tax.

In the case of Shell Transport, the price of the ordinary shares still includes the bonus of one new share at par for every five, and the yield assumes that the same dividend will be maintained on the increased capital. It is well to bear in mind that the practice of the Royal Dutch-Shell group, when increases of capital are made, is to give their shareholders the opportunity of acquiring new shares at par. In an industry which is as greedy of capital as the oil industry this is a privilege worth having. It will be found that since 1926 the Royal Dutch-Shell group has actually raised £44,000,000 of new money. In 1928 the Shell sold 833,333 shares to the Burmah Oil Company at £5 1/16, and is now increasing its capital by 20 per cent. by offering shares to holders at par. The Royal Dutch also increased its capital by 20 per cent. by a similar offer to shareholders, and recently sold 1,800,000 fl of its ordinary shares to a Swiss bank group. Finally the Shell Union is increasing its capital by 3 million shares, issued to shareholders at $10. When it is appreciated that the consumption of oil increases by about 10 per cent. every year and that this extra consumption can only be handled by opening up new oilfields and building more pipe-lines, ships, tanks, and other marketing facilities, shareholders need feel no surprise at the capital demands of a progressive international oil group such as Royal Dutch-Shell.

Space forbids us to mention the number of small oil producers, and the many pitfalls that beset the indiscriminate investor. We have, however, said enough perhaps to indicate to the investor who may be approaching the idea of investment in oil without special knowledge of this market, that the securities of which the oil share market gives him a choice range in type from the highly speculative counter to the sound industrial investment; and it is from this great range that he must, with his eyes open, choose according to his requirements and proclivities.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket. January 22.	Account. January 24.

The tone of the London Stock Exchange was confident, though the volume of business fluctuated from day to day. Investment kept the even tenor of its way, while speculation largely took its cue from America, the main centres of attraction being Rhodesia and Lord Melchett. Gilt-edged stocks showed gratifying steadiness in the face of the issue of a large New Zealand loan, and some talk—not altogether irresponsible—of a possible early rise in the New York Federal Reserve rate. The Bank of England, for the first time for some weeks, announced a net addition to its gold stock. Five per Cent. War Loan remained firm, market estimates being far from unanimous as to the proportion of this stock now held abroad. The possibility was canvassed of Four per Cent. Consols rising so as to make conversion into them worth while on the part of holders of Five per Cent. Treasury bonds. The new India Loan was dealt in at ⅛ discount, the comparative success of the issue imparting a firm tone to others in the group. Only a moderate business was done in Colonial stocks, apart from a small amount of investment buying of South African Five per Cents.

Further support was given in the Foreign market to Brazilian bonds, and, among Europeans, some inquiry was received for Greek Loans. Peru Corporations gained ground on American buying, Chinese Loans were quiet, but Japanese were more active than of late.

Second thoughts on last year's railway returns proved more favourable than first impressions. North-Eastern Second Preference was particularly strong on Monday, though all the "group" stocks showed gains. As usual, the issue of fresh traffic figures checked the movement, all the companies, except the North-Eastern, showing small declines in receipts in the first days of January, as compared with a year ago. Foreign railways came in for enhanced attention, Argentine stocks showing a fresh rise, despite a setback early in the week. Leopoldina was bought with some freedom, and United of Havana shared in the general movement. Canadian Pacific, however, was heavy in the absence of sustained American interest.

The industrial markets opened with an appearance of activity recalling the busiest days of last year, and though the pace was not subsequently maintained, in the face of profit-taking and a partial reaction in New York, a moderately optimistic tone remained in evidence. Further buying of Mond Nickel was an outstanding feature, Imperial Chemicals sharing in the movement. The favourable reception of the Radio-Victor merger terms strengthened the hands of the bull interest in the Gramophone Company, the shares rising £2 in three days. Dunlops improved on the announcement of an Australian "deal" (discussed in another column), but receded on profit-taking. Cable stocks and Marconi improved on the appointment of Sir Basil Blackett, referred to elsewhere. General Electric received a check, but the electrical group was firm, Ever Readys being in demand on the bonus issue. Tobacco shares continue to be absorbed on investment account, and selective purchases of brewery shares were in evidence. Dennis Brothers were in demand in the motor group. Among textiles, Fine Cotton Spinners were harder on the company's new mill acquisitions. Despite the absence of dividend changes in the announcements of the "Big Five" banks (which are dealt with in an "Investment Note" on another page), a steady demand was received for the shares, and movements in the insurance group were similarly in an upward direction.

At the end of last week the rubber share market showed signs of shaking off its habitual lethargy, and a decided hardening of prices for the commodity this week was immediately reflected in share values. The market having largely been taken by surprise, little stock was available at first, but as the movement gained impetus margins narrowed down, and a by no means negligible business was put through. Tin—the commodity—again brought higher prices at the sales, and the upward trend of share

quotations was maintained. Dealings in oil shares were again mainly professional, the Continent being a seller on balance. A rise of 25 cents in Pennsylvania crude had no marked effect on sentiment.

New York, London and Paris combined to force the pace in the Rhodesian base metal market, where the favourites scored further substantial gains. The movement is discussed in a later article in this issue. Kaffirs were firm in sympathy, the Paris Bourse being a notable buyer of finance stocks.

Tin shares moved within narrow limits, without much gain on balance, despite the better tone in the commodity market. Rio Tinto dealings lacked the driving force of recent weeks, and quotations were irregular. A large turnover took place in Burma Corporation, following the listing of the shares in New York.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The share market, after attaining fresh high levels, felt the effect of realising, partly on account of unjustified fears about the advance of the official discount rate. However, the tone remained steady, though the volume of business diminished. It is felt that while the market has been growing more speculative and liable to scares about the rate, the near-term outlook is good, but that with industry active, money tightness may bring considerable readjustment before the spring. Meanwhile, this week's bank statements and the reduction in brokers' loans are bullish influences. Group movements have been less apparent, but rubbers are good and tobaccos show signs of interest.

PARIS.

Political uncertainties, occasioned by the opening of the new session of the Chamber, caused the volume of business to shrink, and helped to make French stocks irregular. The majority of Bank and Industrial shares weakened fractionally. On the other hand, international stocks were very firm, and among others Crédit Foncier Egyptien and Norvégienne de l'Azote registered appreciable gains. All arbitrages with London were keenly sought after. Copper shares maintained their recent rises, and other mining shares advanced, notably Tin and Lead. The outstanding feature of the last few days was the reawakening of the Rubber section, where all shares enjoyed a considerable rise.

securities, business on Monday was dull. Buying of coal and iron stocks by a Berlin "D" bank was reported, but the market was affected by contradictory reports of impending loans by Prussia and other public authorities, the effect of which on the money market was feared. Buying by leading banks was reported also on Tuesday, when electrical, coal, and oil stocks were favoured, though the close was weakish. Wednesday was a more active day, partly in hopes of a reduction in the Reichsbank discount rate, but after a firm opening on Thursday a general decline followed, in which the two chief artificial silk stocks were the principal sufferers.

AMSTERDAM.

A week ago the stock market was thoroughly cheerful, with large buying orders in nearly all sections, but at the beginning of the current week the atmosphere was quite different. Margarine Unie, after having risen to 375 on support from London, dropped on Tuesday to 342. Philips, which had reached a new high record, reacted also. Artificial silk shares were lower, but oils were fairly well maintained, and shipping remained steady. Sugars recovered after a period of irregularity, rubbers were in good demand, and tobaccos hardened. Activity continued on Thursday, with Philips recovering somewhat, rubbers strong, and Margarine Unie firm.

The money market was easy; the private discount rate was $4\frac{5}{16}$-$4\frac{3}{8}$ per cent. and prolongation $4\frac{3}{4}$ per cent.

VIENNA.

There was no undue tension on the money market at the change of the year, but this fact had not the slightest effect on the Stock Exchange. The market remained as quiet as ever, and the slight changes in quotations which were occasionally noted were the outcome of very minor transactions. During the first days of the month money has become cheaper again, and the private discount rate now ranges between $6\frac{3}{16}$ and $6\frac{1}{4}$ per cent. The repayment of a 50 million schilling debt by the State to the National Bank had an important effect on the Bank's end-of-the-year position.

INVESTMENT NOTES.

Bank Profits and Dividends.—The earnings of the great English banks are among the most stable phenomena in the experience of the Stock Exchange and the investor. The figures for 1928 are no exception to the rule. Of the "Big Five" institutions, Lloyds' net profits show a rise of 2.2 per cent., the Midland's of 4.1 per cent., and the National Provincial's and the Westminster's of 0.8 per cent. each, while Barclays' profits show the small decline of 0.2 per cent., a rise in expenses having offset an increase of £190,000 in gross earnings. Dividends were maintained at last year's level in all cases, as is shown in the following table of results for the last three years, to which have been added the corresponding figures for three further joint stock institutions, whose headquarters are in the provinces:—

	1926. Profits.	1926. Div.	1927. Profits.	1927. Div.	1928. Profits.	1928. Div.
	£	%	£	%	£	%
Barclays	2,427,162	A 10 B C 14	2,306,329	A 10 B C 14	2,301,985	A 10 B C 14
Lloyds	2,523,582	A 16⅔ B 5	2,475,674	A 16⅔ B 5	2,528,143	A 16⅔ B 5
Midland	2,535,730	18	2,554,650	18	2,656,554	18
National Provincial	2,115,654	18	2,093,452	18	2,108,664	18
Westminster	2,157,233	20	2,132,815	20	2,148,408	20*

Manch. and County	186,116	16	188,860	16	188,681	16
District	450,139	16⅔	452,581	16⅔	455,132	16⅔

* On £20 shares and £1 shares respectively.

The increased profit shown by Martin's Bank reflects the absorption of the Lancashire and Yorkshire Bank as from the beginning of last year. General working conditions were probably rather more favourable to the banks as a whole than in 1927. Short-loan rates in the London money market were slightly lower, averaging £3 12s 6d per cent., as compared with £3 15s in 1927, but the margin between this rate and that paid by the banks on their deposits subject to interest was £1 2s 6d, against £1 2s. The depression of the "heavy" trades was doubtless an adverse factor, but the monthly Clearing Bank figures showed a considerable rise during the year in such profitable items as deposits, advances, and discounts. The large amount of business accruing, directly and indirectly, from the activity of the Stock Exchange should also have brought in additional revenue, while no allocations are likely to have been necessary for depreciation of security values. The following table shows the distribution of profits in the last two years:—

		Profits.	Dividend.	Reserve	Premises.	Staff Funds.	Inc. or Dec. in Carry Forward.
		£	£	£	£	£	£
Barclays	1927	2,306,329	1,666,349	500,000	100,000		+ 39,980

* Voted to general manager.

The process of annual enhancement of reserves, "visible" and "internal," has clearly been continued. It will be seen that Barclays distributed only 72½ per cent. of the year's earnings, Lloyds 78 per cent., the Midland 72½ per cent., the National Provincial 81 per cent., and the Westminster 63 per cent. The District Bank is celebrating its centenary by issuing a bonus of one fully-paid £1 share, carrying a maximum dividend of 10 per cent., for every two existing shares. The further rise in bank share values last year has reduced their yield to a level approximating to that on British Government stock, even in the case of some of the shares which are not fully paid. The stability of earnings and dividends and the rock-like financial strength of the leading institutions are factors in the undoubted appeal made by the shares to the most conservative of British investors.

Discount Company Dividends.—By all appearances the slightly higher level of profits of the English banks in 1928 was paralleled in the experience of the discount companies. The National Discount Company is paying a further dividend and bonus, making altogether 23 per cent., on its "B" shares (in addition to the usual 10 per cent. on the "A"), while Alexanders' total payment for the year, on a capital increased in November, 1927, is at the rate of 15 per cent., plus a bonus of 5 per cent., free of tax, and the Union Discount's 15 per cent., with a 5 per cent. tax-free bonus, also on a larger capital. In all cases the distribution is at the same rate as a year ago. The National Discount Company is increasing its carry forward by £10,243, and allocating £10,000 to pension fund and £15,000 to reserve. A year ago the appropriation was £50,000, but the latter sum included certain items falling outside the year's earnings. Alexanders' carry forward is raised by £11,773. The Union Discount is placing £20,000 to premises account and £10,000 to provident fund and increasing its carry forward by £18,000, but nothing on this occasion is placed to reserve, against £50,000 last year. Conditions during 1928 were on the whole favourable to discount company operations. The margin between Bank rate and the three months' bill rate in the market was only 7s per cent., as against 8s 2d per cent. in 1927—last year's margin, indeed, being the narrowest for some years past. The second half of the year, when, on the resumption of "control" by the Bank of England, market rate averaged £4 5s per cent. against £4 1s in the first half, was also noteworthy for an augmentation in the volume of bills handled, especially on Continental account. The bill turnover of the Union Discount, for instance, rose over the whole year by 30 per cent., though account should be taken of the effect of the company's increased resources as a result of its issue of £125,000 new shares, at a premium of £225,000. The "A" shares of the National Discount Company of £2 10s fully paid stand at £4 13/16 and yield £5 3s 9d per cent., while the £7 10s "B" shares (£2 10s paid) at £10⅜ yield £5 10s 9d per cent. Alexanders' £2 ordinary, £1 paid, can be bought at £3 11/16 to yield £5 8s 6d per cent., and the Union Discount's £5 shares, £2 10s paid, at £9⅞, to yield £5 1s per cent. The market has learned with much regret of the death of Mr Robert Ernest Alexander, one of its oldest members, who became a partner in Alexanders some 47 years ago, and only recently relinquished his active part in its operations.

Railway Dividend Prospects.—In an "Investment Note" under the above heading last week we examined the year's traffic figures of the "Group" and the "London" railway companies, and discussed the dimensions of the probable distributions to be made in a few weeks' time. It is understood that the North-Eastern dividend will be declared on January 22nd next, those of the other three groups on February 13th, of the Metropolitan on January 31st, and of the Underground Electric on February 7th. Dealing with the Great Western Railway in our last week's "Note," we suggested that a final dividend of 2½ per cent. might be paid, presuming that no considerable falling off had occurred in the company's South Wales dock receipts. We have since received from the headquarters of the line a copy of *The Great Western Railway Magazine*, showing that the dock receipts in the first 48 weeks of 1928 were £2,701,000, as compared with £3,015,000 in the same period of 1927—a decline of £314,000. No information has been made public of the extent of possible economies in working expenditure on the Great Western, either as regards passenger, goods, or dock receipts. If these, however, are approximately on the lines of those announced some months ago by the other companies, it would seem that the Great Western would conceivably be in a position to distribute a total of 5 per cent. for the year, without an unduly heavy draft on sources other than the year's earnings.

Cable-Wireless Communications Company.—Certain prevalent rumours have been set at rest by the announcement on Thursday that the chairmanship of the Communications Company set up under the Cable-Wireless Merger has been offered to Sir Basil Blackett. The announcement is one that will be welcomed both by the public, to whom the management of this great combine is a matter of close interest, and also to the investor, to whom Sir Basil's deep experience in finance and highly successful record as a financial administrator, first at the *British Treasury* and then as Finance Member of the Viceroy's Council in India, affords a certainty that the direction of the company will be in capable and experienced hands. This is the first, but we hope not the only avenue of public service to which the talents and experience of Sir Basil will be directed.

Dunlop Rubber Company's Acquisitions.—The Dunlop Rubber Company continues to pursue its policy of consolidation and expansion overseas. It will be recalled that in July last it made an offer to purchase all the ordinary shares of the Tyre Investment Trust, Limited, at 7s 3d per share, an offer accepted in respect of approximately 95 per cent. of the ordinary share capital of that company. In November last an agreement was entered into with the latter's investments in the Dunlop Rubber Company (Far East), Limited, Dunlop Rubber (China), Limited, Dunlop Rubber (Straits Settlements) and the Dunlop Tyre and Rubber Goods Company of Canada. The price payable was £195,000 in cash and the allotment to the Tyre Investment Trust, Limited, of 850,000 ordinary shares in the Dunlop Company, as well as the right to receive in June, 1929, either a further 350,000 shares or their value in cash at the market price ruling on May 31, 1929, with a minimum price of 26s per share, together with a sum equivalent to half of any dividends to which the shares would have been entitled in respect of 1928. One of the terms of the agreement was that for a period of five years the shares to be acquired should not be sold without the consent of the Dunlop Company. This acquisition showed the intention of the Dunlop Rubber Company to take back the overseas companies which had left the Dunlop fold—a policy which is evidently expected to benefit both the parent concern and the companies it is absorbing. It was announced this week that the Dunlop Rubber Company of Australasia, which was merged with the Perdriau Rubber Company last April, is amalgamating with the Barnet Glass and Rubber Company of Sydney. The aggregate paid-up capital of these companies is £4,414,000, consisting of Dunlop of Australasia £2,471,000, Perdriau Rubber £1,206,000 and Barnet Glass £737,000. The Dunlop Rubber Company holds 500,000 ordinary shares in the Dunlop Company of Australasia with an option on a further 500,000 at a premium of 10s. Practically the whole of the remaining capital of the Australasian Company is held in Australia. The report of the Dunlop Rubber Company for the year ending December, 1928, should be issued early in April, when no doubt Sir Eric Geddes will give further details of the overseas expansion of the company. To what extent the profits of the Dunlop Company have been affected by the cuts in tyre prices is not known, but the recent trend of quotations for the company's shares suggests that the majority of market observers expect that the company will be able to maintain its dividend of 25 per cent.

Liebig's Extract of Meat.—The popularity of meat extracts does not appear to be waning, for Liebig's profits increased last year by 6 per cent. and reached a fresh "record." The preference dividend was covered nearly seven times, and for the fifth year in succession 16 per cent., tax free, is being paid on the ordinary shares:—

		Years Ended August 31.		
		1926.	1927.	1928.
		£	£	£
Profit		319,918	325,086	344,863
Preference dividend		50,000	50,000	50,000
Ordinary, after tax	Earned	17·9%	18·3%	19·6%
	Paid	16%	16%	16%
	Amount	240,000	240,000	240,000
To reserve		50,000	25,000	50,000
Increase or decrease in carry-forward		— 20,082	+ 10,086	+ 4,863

It will be seen from the summary of the balance-sheet, which we publish on a later page, that the first item on the assets side ("land, manufactories, buildings, machinery, plant, &c., including investments in subsidiary land companies") has been increased from £965,633 to £1,302,773. The excess of floating assets over liabilities, which amounted to £2,387,181 in 1927, has shrunk to £1,999,949, but the position remains liquid. Last October the 100,000 unissued ordinary £5 shares were issued to shareholders at £7 10s, and in the following month the £525,000 5½ per cent. redeemable notes outstanding were thereby paid off. As these transactions were carried out after the date of the balance-sheet, their effect is not shown. The premiums received, together with the £50,000 to be allocated from profits, will bring the reserve fund up to £1,650,000. The financial strength of the company appears solidly established. The £5 ordinary shares are quoted at 17, yielding £4 14s, free of tax.

Victor Talking-Radio Corporation Merger.—After protracted negotiations the directors of Radio Corporation and of the Victor Talking Machine Company have agreed upon terms for a merger. Radio Corporation proposes to split its common stock on the basis of five shares for one, and to create 813,000 shares of $5 cumulative preferred stock of no par value (callable at 100), and to offer Victor stockholders one share of new Radio common stock, one share of new Radio $5 preferred stock, and $5 cash for each share of Victor common stock. The present capitalisation of the two companies is as follows:—

Radio.	$	Victor.	$
7% Prefd. ($50)	19,779,870	7% Prefd. ($100)	20,143,680
	Shares.		Shares.
Common (no par)	1,155,400	$6 Conv. Pref. (no par)	121,139
		Common (no par)....	571,087

The activities of Radio Corporation and Victor Talking Machine are well known to investors in this country, particularly as the latter controls the Gramophone Company (H.M.V.) of Great Britain. The vice-president of the Radio Corporation describes the merger as an alliance for "greater service to a single art—electrical entertainment," which includes wireless, gramophones, and talking films. It is difficult to state precisely the new capital of the Radio Corporation, seeing that the $6 convertible preferred shares of Victor Talking are convertible into common at the rate of two common for one preferred. Assuming that all the $6 convertible preferred shares have now been converted the number of Victor Talking common shares would be 813,365. On this basis the Radio Corporation would have 6,590,365 new common shares (of which 5,777,000 shares would be issued to Radio stockholders and 813,365 to Victor stockholders), 813,365 shares (of no par value) of $5 cumulative preferred stock, and $19,779,870 of 7 per cent. preferred stock of $50 par value. As regards earnings, for the nine months ending September 30, 1928, the Victor Talking has returned net profits of $4,646,616, and Radio Corporation $9,745,924, making a total of $14,392,540. Assuming that these earnings are maintained, the net earnings for the twelve months for 1928 will be approximately $19,190,053. The net profits of the Victor Talking for the nine months ending September 30th included only the interim dividend of 10 per cent. paid by H.M.V. in May, 1928. Allowance must be made for a final dividend of 45 per cent. on, say, 850,000 H.M.V. ordinary shares, now 16s paid. This would mean an addition of £306,000, making the estimated 12 months' earnings $20,674,153. Deducting preferred dividends, we arrive at a figure of $15,222,737, or $2.3 per new common share of Radio Corporation. It must, however, be pointed out that when the H.M.V. shares were fully paid, these earnings would be increased by $362,780, making $2.36 per new common share of Radio. The market in both Radio Corporation and Victor Talking shares has recently been very active, Radio touching 420 at one time and Victor 154. At the time of writing Radio new split shares are at 72, a figure which allows a yield of only 3.2 per cent. on last year's estimated earnings.

Rhodesian Copper.—The mineral resources of South Africa have been the inspiration of many spectacular share movements ever since their richness and extent began to be appreciated. The investing public, however, have frequently tended to participate in the spectacular falls rather than in the preceding rises, and on balance heavy losses have sometimes been sustained. The present activity in Rhodesian copper shares coincides with the time when many of the development companies require additional funds, as has happened on earlier occasions. Lately, several opportunities of taking an interest in the Northern Rhodesia base metal deposits have been made available to the general public, but, as will be seen from the following examples, not on "ground-floor" terms. Permission to deal was recently given in 5,000,000 Rhodesian Anglo-American Corporation 10s shares, subscribed for privately in December, 1928, at an average price of 12s 10d, which are now widely dealt in round 27s 6d. Rhodesian Selection Trust 5s shares, also introduced to the Stock Exchange in December, are now dealt in round 62s 6d. Inclusive of an issue in course of being made at par there are 3,000,000 shares outstanding, of which the general public hold only a small but increasing proportion. Permission to deal in the 3,400,000 5s shares of the Roan Antelope Company was obtained in July, 1928, and these also are now finding favour with a wider circle of investors, the present price being about 45s. Of these shares 2,440,000 were issued privately at an average price of about 11s 6d. Again, the immediate capital requirements of the Bwana M'Kubwa Company will probably be satisfied as the result of the renewed interest now being taken in its shares, which are now quoted at 17s 6d, as compared with only 7s 6d in October. This company has an issued capital of 6,746,156 5s shares and options outstanding on no less than 6,499,906 shares at prices ranging from par to 15s. To draw attention to these features of the finance of the Rhodesian Copper propositions is not to belittle the valuable pioneer work that is being undertaken in opening up the wonderful mineral deposits that have been proved to exist. There is a periodical tendency, however, to underestimate the difficulties that have to be overcome in reaching the production stage, and also the amount of capital and length of time involved in the process. For example, the Bwana M'Kubwa Co., which originally commenced operations as long ago as 1910, and was reconstructed in 1922, produced only 5,140 tons of copper in 1927-28, and still has an immense amount of work to accomplish before a really satisfactory return on the capital can be shown. Even this concern, however, is in a very advanced condition when compared with Roan Antelope, N'Changa, Rhodesia Congo Border, and other properties in which the Rhodesian holding companies are interested. During the long period that must necessarily elapse before many Rhodesian copper enterprises become paying propositions it will not be surprising if the share market has again to pass through more than one period of inactivity and lower prices. Too much account must not be taken of the present high quotations for the metal, since all manner of influences, including the Rhodesian output itself, may operate to disturb premature profit estimates.

Rand Selection.—Our mining correspondent writes:—The accounts for the year to September 30th show a net profit of £245,200, or £155,000 less than for the preceding period, in respect of which dividends totalling 2s 6d per share, or 50 per cent., were paid. Actually, last year's earnings would almost have provided 30 per cent., whereas only 15 per cent. was disbursed, and that as an interim payment. It will be recollected that the absence of any final distribution on account of 1927-28 occasioned considerable disappointment, and a severe fall in the price of the shares resulted. Taxation absorbed £18,650, and £100,000 was transferred to reserve, to which is added the £250,000 previously standing to dividend equalisation fund. By the calling of 600,000 out of the 700,000 shares under option at 17s 6d, the issued capital has been raised from £750,000 to £900,000, the premiums figuring in the balance-sheet for £350,000. Shares and interest now stand at £1,301,850, as against £1,159,900, while loans have jumped from £67,900 to £431,200. The list of principal holdings now includes Bwana M'Kubwa, Loangwa, and Rhodesian Selection Trust, and it is on the strength of these interests that the price of the shares has lately recovered.

CAPITAL ISSUES.

CAPITAL issues by public prospectus represented this week a total in "new" money of £7,228,125, exclusive of a conversion offer to a maximum of £12,510,000 by the New Zealand Government. Particulars were also made known of issues totalling £1,559,980 by existing companies to their shareholders. New securities made available by Stock Exchange "introduction" since the beginning of the year account for a further £392,187 on the basis of the opening price in each case. Last week's issue of £10,000,000 at 91 by the Government of India (of which 23 per cent. was left with the underwriters) has been quickly followed by another Imperial borrowing operation, on a large scale, the *New Zealand Government* offering £19,510,000 of 4½ per cent. inscribed stock at 95. £12,510,000 of this issue is offered to holders of £12,000,000 New Zealand 4 per cent. consolidated stock due November 1, 1929, the terms, having regard to interest provisions, being equivalent to those on the cash portion of the loan. The latter gives a running yield to the investor of £4 14s 9d, and a yield, including profit on redemption at the latest date (1958) of £4 16s 5d. The issue is of trustee status, and New Zealand's credit stands relatively high among Imperial borrowers, but the loan certainly appears to be fully priced. The first of the year's speculative industrial offers have duly appeared this week. *Moviecolor* has been capitalised in "straight" 5s shares to exploit a process to "enable kinematograph and still pictures to be taken in natural colours with a degree of realism considered to be far in advance of all systems now in use." Films and pictures are already being marketed in the United States, and a motion-picture producing house has undertaken to purchase certain minimum quantities in the next five years; but the ultimate commercial value of the company's process, and the extent of its immunity from future competition, have still to be proved. *Anglo-Continental Grape Products* is a £1 preference-cum-shilling-ordinary proposition with a somewhat unusual provision for an "option" to preference subscribers to purchase ordinary shares at a substantial premium in two years' time. For the present, however, the public must subscribe £2 in preference to obtain one 1s ordinary share. The company has still to be regarded as in the experimental stage of an industry—the making of wines from imported juice—in which competition is steadily increasing.

Comments on the new issues, summarised below, will be found at the head of this section.

New Zealand Government Four and a-Half per cent. Inscribed Stock, 1948-58.—Issue of £7,000,000 stock at £95, payable as to £5 in cash, £20 on January 23, £35 on March 1, and £35 on April 2; and offer of £12,510,000 stock in exchange for holdings of Four per cent. Consolidated Stock, 1929, at the rate of £104 5s. for each £100 stock surrendered. Interest will be paid on March 1 and September 1, and holders who exchange will receive on March 1, 1929, four months' interest on the holdings surrendered. The proceeds of the cash issue will be used entirely for productive purposes, including railways, hydro-electric works, telephone and telegraph extensions.

Moviecolor, Limited.—Issue at par of 1,800,000 (out of 2,000,000) 5s ordinary shares. The company will exploit colour cinematography, acquiring one-fifth of the capital of an existing company (market value in Paris, approximately £295,000) and a licence to exploit machines, processes, and accessories. The purchase consideration is £295,000 for the shares and £50,000

for an undertaking to procure the grant of the licence, under which a royalty will be payable.

Anglo-Continental Grape Products, Limited.—Issue at par of 125,000 8 per cent. £1 cumulative preference and 62,500 (out of 1,500,000) 1s ordinary shares, each of the former conferring the right to subscribe for four ordinary shares at 4s per share on December 31, 1930. The company acquires an existing business of wine manufacturers, valued at £19,175, for a purchase consideration of £52,500, including £30,000 in cash and £22,500 in shares; £20,325 is allocated to goodwill and £13,000 to stocks, benefit of contracts, and secret processes. Working capital is estimated at £80,000.

Southend-on-Sea and District Gas Company invites tenders for £30,000 new ordinary stock (*minimum* price, par) and £10,000 5 per cent. perpetual debenture stock (minimum price, 98). An interim dividend at the rate of 6⅝ per cent. per annum was paid on the former class of stock for the year ended June 30, 1928. Net revenue for 1927 was £35,455; after deducting interest on loan capital and preference stock, £21,480 was available for dividend. Dividends at the above rate on the original consolidated and the new ordinary stocks, including the present issue, and at 6¼ per cent. on the new ordinary "B" stock, amount to £17,630.

Particulars of the following have been issued for public information only in connection with Stock Exchange "introductions":—**Société des Mines de Matracal, S.A.**, issued capital 2c,000,000f. in 200,000f. shares, and 240,000 profit shares of no par value, the former entitled to a 7 per cent. dividend and one-fifth of the remaining surplus, if distributed, after a payment to the directors; the company was formed in 1912 under the Laws of France, and owns gold mines in Mexico.

Holders of **Five per cent. Treasury Bonds, 1933-5,** are reminded that they have the option of converting their holdings, in whole or in part, during the period January 16-31, 1929, inclusive, into £114 10s 4 per cent. Consolidated Loan for each £100 nominal surrendered. Interest on the Bonds converted will cease on February 1, 1929, and 6 months' interest on the Consolidated Loan will be paid on August 1, 1929.

Railway Traffic Figures, Short Notices on Company Reports, &c., will be found on later pages of this issue.

OIL OUTPUTS.

ANGLO-ECUADORIAN OILFIELDS, LIMITED.—The production for December is cabled as 13,679 tons.

APEX (TRINIDAD) OILFIELDS, LIMITED.—The results for the month of December were as follows:—Production of oil, 31,950 tons; deliveries, 31,630 tons.

ATTOCK OIL COMPANY, LIMITED.—Production for December, 47,315 barrels.

BRITISH BURMAH PETROLEUM COMPANY, LIMITED.—The production of crude oil by this company for the month of December amounted to 40,338 barrels.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for week ended January 2nd:—Venezuela, 35,958 barrels; Trinidad, £19,494 barrels; total, 55,452 barrels.

HAMILTON'S OIL CONCESSIONS (ROUMANIA), LIMITED.—Production for month of December, 1928, 5,210 tons = 36,470 barrels.

LOBITOS OILFIELDS, LIMITED.—The production of the Peruvian company for December is 25,722 tons.

SERVICE PETROLEUM.—Production from the company's oil wells at Gura Ocnitzei and Septura for the last three weeks is as follows:—Week ending December 23rd, 3,195 tons, 22,365 barrels; week ending December 30th, 2,397 tons; 16,779 barrels; week ending January 6th, 2,435 tons, 17,045 barrels.

STEAUA ROMANA (BRITISH), LIMITED.—The production of the Steaua Romana Company, Bucharest, for the month of December was 64,430 tons.

TRINIDAD LEASEHOLDS, LIMITED.—Oil produced during December, 35,150 tons; oil purchased during December from other companies, 35,600 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Production for week ending January 2, 1929, amounted to 853 tons.

VENEZUELAN CONSOLIDATED OILFIELDS, LIMITED.—Production for week ended January 5th, 3,269 barrels (467 tons).

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended January 5th was 122,548 metric tons (previous week ended December 29th, 119,170 metric tons).

COMPANY MEETINGS, &c.

BANK OF NEW SOUTH WALES.

SATISFACTORY RESULTS OF THE YEAR.

CHAIRMAN'S CRITICISMS OF GOVERNMENT'S FINANCIAL POLICY.

The ordinary general meeting of the Bank of New South Wales was held at the head office, Sydney, on Tuesday, November 27, 1928.

The Chairman, Mr Thomas Buckland, president of the bank, in moving the adoption of the report, said:—

Gentlemen,—I have now the pleasure to place before you the annual report and balance-sheet of this bank, and before moving its adoption I will give you a comparison with the figures of last year.

Our note circulation has decreased by £40,000, which is a normal fluctuation of our note issue in New Zealand.

Deposits are higher by £2,960,000, which represents an increase throughout Australia and New Zealand, of our general commercial business. The Government deposits remain very much the same as last year.

Bills payable, &c., are lower by £1,650,000.

CAPITAL AND RESERVE FUND.

Capital has increased by £76,560 by collection of balance of our last new issue, which is now fully paid, and with the appropriation to reserve fund recommended this year, our figures will stand as follows:—

	£
Capital	7,500,000
Reserve fund	5,900,000
	13,400,000

which with the reserve liability of shareholders (£7,500,000) makes a grand total of £20,900,000.

YEAR'S PROFIT—DIVIDEND AND BONUS.

Profit as per balance-sheet shows £41,000 lower than twelve months ago. This variation is more than accounted for by advances being £2,055,000 less, and deposits, as mentioned before, being higher by £2,960,000, or, in other words, last year our total advances stood 86.76 per cent. to our total deposits, whereas at the present time they stand 79.60 per cent. and for a portion of the year were running lower still than that.

In addition to our usual dividend of 10 per cent., we are adding a bonus of 10s per share, but this bonus is only in recognition of a good year, and is not to be regarded as of a permanent nature.

ASSETS.

On the assets side:—

Liquid assets have increased by £4,488,640.

There is an increase in coin, notes, and cash balances of £990,000; in Treasury bills of £1,500,000; and in Government securities £2,730,000. On the other hand, bills receivable in London and remittances in transit are £967,000 less; money at short call £500,000 less, and due by other banks £235,000 less.

ADVANCES.

Advances, as before mentioned, are £2,055,000 less than this time last year, and I would state, gentlemen, that this is not brought about by any restrictive policy on our part, but is a normal fluctuation in our very large business.

PREMISES.

Premises show an increase of £125,000. During the year we have erected, and have in course of erection, 25 new branch premises extending throughout Australia and New Zealand, and we are also, as you are probably aware, engaged in an extensive new building for our head office in Sydney, and also a new chief office for Queensland in Brisbane.

LOSS OF THREE PROMINENT BANK PERSONALITIES.

In our report you will have noticed the reference to the deaths of three prominent persons connected with the bank; I refer to the Hon. Robert J. Lynn, M.L.C., who was a director of the Western Australian Bank, and assumed office on our local board at Perth after the amalgamation; the Hon. Reginald James Black, M.L.C., and Mr Alfred George Milson. The last two gentlemen represented very long family connections with the bank. Mr Black's father was at one time the chief executive officer, and our late director had been connected with the bank the greater part of his long life, first as an officer and for many years as a director. To know Mr Black was to appreciate his sound judgment and universally sympathetic feeling towards his large circle of friends and acquaintances. The Milsons were also amongst the bank's very old family connections. The father, Mr James Milson, being at one time a director, and the son, Mr A. G. Milson, started life as an officer of the bank, and was afterwards for many years one of our auditors.

We shall greatly miss these old personalities from our midst.

GOOD CONDITIONS IN NEW ZEALAND.

Earlier in the speech I referred to a slight falling off in our note circulation in New Zealand, which, as mentioned, is a small normal fluctuation in the ordinary course of business.

Our business in the Dominion is well balanced and fully maintained.

The primary production in this favoured country continues to grow, and although its public debt, like our own, is very large, its exports, which reasonably balance its imports, are on the increase.

AUSTRALIA—EXCELLENT SEASONAL PROSPECTS.

The season in Australia, on the whole, may be regarded as fairly normal. A variety of conditions is inseparable from a continent of such magnitude and variation of climate as Australia, and although it may be droughty in parts, we usually find compensating good conditions in other parts, as is the case this year. Altogether the prospects of this country should be excellent, but I wish I could harmonise more with the financial policy of our Governments.

CRITICISM OF GOVERNMENT FINANCIAL POLICY.

At a gathering of prominent citizens recently we were told by an eminent Cabinet Minister that if we are to achieve the prosperity of which this country is capable we must spend money. I quite agree with that, always provided the legitimate revenues of the country make such expenditure justifiable, but I do not hold that our Governments are justified in exceeding their incomes or in keeping up their revenues by excessive taxation.

An examination of our public finances, both Federal and State, clearly reveals that our indebtedness has been increasing out of proportion to our production, and unless such a condition is checked it must lead to disaster.

From time to time great wastage is shown in the expenditure on Government undertakings, and if better value were obtained by the various Government Departments while spending the taxpayers' funds the necessity for this ever-increasing load of taxation would disappear.

PROGRESS HAMPERED BY PRESENT POLICY.

If people were flocking into the country in millions, as was the case at one time with the United States of America, and those millions were being absorbed and utilised in general production as theirs were, then I would agree to some justification of our present policy, as our liability would be extending over a rapidly-increasing population with its attendant production. Our population, however, is not increasing as it should, and the chief factors opposing that progress are our increasing burden of taxation, excessive cost of production, and our strikes, which are becoming notorious throughout the world.

In giving vent to my feelings in this way I trust I shall not be misunderstood and create the impression that I am pessimistic in regard to the future of Australia; nothing could be more foreign to my thoughts, as must be so with any thinking person having a knowledge of the great possibilities of this country, under proper management.

Permanent success, however, is never going to be achieved by discouragement of the two great essentials of national progress. I refer to the confidence and individual enterprise of its people, which the actions of some of our Governments would appear to discourage rather than encourage through the application of overbearing taxation, greatly intensified by the maintenance of industrial and/or constructional undertakings from which neither the State nor country as a whole is receiving adequate benefit.

BRITISH OIL LIGHTING AND HEATING, LIMITED.

SATISFACTORY PROGRESS—GOOD PROSPECTS.

The statutory meeting of British Oil Lighting and Heating, Limited, was held, on the 9th instant, at Caxton Hall, Westminster, London, Mr J. E. V. Jobson (the chairman) presiding.

The Chairman said: It has become the custom to inform shareholders at statutory meetings as to the progress that has been made in the business of the company during the period between incorporation and the holding of the statutory meeting. In our case, the licence under which the company acquired the right to use certain patents for automatic vacuum oil lamps has been duly executed, and the patent has now been granted for the Neu-Flame burner, and will be transferred to this company in the course of the next few days.

Before this company was formed certain orders for lamps and stoves had been put in hand with manufacturers. Deliveries under these orders have not yet been received, and consequently it has not been possible actively to place our products on the market. We know that the manufacturers are now making rapid headway, having overcome all the initial trouble in getting under way. We have also placed further and continuing orders for supplies of our lamps and stoves, and it is anticipated that after the end of this month supplies will be available and we can begin marketing operations.

We have for some months been in touch with various wholesale and retail establishments, so that the claims we make for our goods are fairly well known. As you have learned from the prospectus, the whole of the Northern Territory and Ireland are in the hands of agents, who are merely awaiting the receipt of supplies to make active progress in selling.

It was necessary for the company to acquire suitable premises for the assembly, testing, and despatch of their products. This involved a good deal of work, but ultimately suitable premises were obtained, and we expect to be in possession of these to-morrow. This factory is on the Thames, and is very well situated for both rail and water despatch. Arrangements are in hand for equipping and rendering it suitable for our occupation, and the building is of such a capacity as will provide for considerable extension should the progress of the company's business so require.

As many of you have already seen, our goods have been exhibited at various exhibitions. We have received substantial inquiries, and have every encouragement to believe that when these goods are freely available on the market they will find a ready sale.

We are continuing the negotiations in connection with the formation of an Indian company and an Australian company, it being the intention of your directors to do the business in these countries through local companies interested in the distribution of the goods, and who will probably, at a later date, also manufacture.

On the technical side of the business I am able to tell you that considerable advance is being made in the very excellent laboratories which have been orgahised, and which carry on the research and preliminary work in connection with our products. You will see, therefore, that we are making provision for the further application of the patents to various models both of lamps and stoves.

Companies to work the patents in Canada and America have been established, and within the next year, or at latest within two years, the names of Automatic Vacuum Oil Lamps and Neu-Flame Burners should be well known throughout the world. While our company has no financial interest in such American and Canadian companies, it must afford considerable satisfaction to the shareholders of this company to learn that the articles we are making and selling are also being made and sold throughout the world, and the names thus becoming very generally known.

In connection with the sole agency which will be established in Nigeria, we are merely awaiting the receipt of adequate supplies before we can actively proceed with this matter.

EAST AFRICAN SISAL PLANTATIONS, LIMITED.

SATISFACTORY PROGRESS—GOOD FORWARD SALES.

The statutory meeting of East African Sisal Plantations, Limited, was held, on the 8th instant, at 3 Lombard street, London, the chairman, Mr Lawrence Noel Leefe, presiding.

The Chairman said that the property belonging to the company comprised two estates. The Ngerengere estate was the nearer to the port of Dar-es-Salaam, some 90 miles distant and accessible by the Tanganyika Central Railway. This estate consisted of about 7,300 acres, of which, when the company took over the property, some 3,458 acres was planted with sisal. It was estimated that this estate would produce in the current financial year—that is, in the year ending June 30th next—some 900 tons of sisal, and there was no reason to suppose that estimate would not be reached. As soon as the company was in a position to do so instructions were given to plant a further 300 acres, which was the utmost that could be accomplished this year, and that planting was now being carried out.

The larger estate—Kilosa—was situated some further 60 miles inland on the same railway system, and had an area of about 19,600 acres. Of these 4,444 were planted with sisal when the company was formed, and the estimated production from Kilosa for the current year was some 1,200 tons. They had every reason for expecting the fulfilment of this forecast. There, also, instructions had been given to plant a further 300 acres, which was all that could be accomplished this planting season.

The practice at Kilosa, where the company had a ginnery, had been to interplant the young sisal with cotton, and it was hoped that the sale of this cotton would materially assist in reducing the cost of planting the sisal.

Transport facilities had been augmented by the addition of some six miles of light railway track with the necessary rolling stock.

The Chairman had left till last all reference to the marketing of sisal—the chief use of which was in the manufacture of binder twine. Demand had steadily increased, and maintenance of this could be expected in a year of good world harvests.

The commercial agents were instructed to sell a thousand tons on the basis of £36 10s per ton. The estimates for the formation of the company were based on a lower price. A further 500 tons of sisal had been sold recently on the basis of £42 per ton—though the whole of this latter sale would not be for the account of the current year's operation. The quality of the fibre from the company's estates was first class, and no difficulty was anticipated in maintaining the high reputation it had attained.

TRANSVAAL AND DELAGOA BAY INVESTMENT COMPANY, LIMITED.

(INCORPORATED IN THE UNION OF SOUTH AFRICA.)

GOOD RESULTS AND EXCELLENT PROSPECTS.

The ordinary annual general meeting of shareholders was held in Johannesburg on Tuesday, December 4, 1928.

The Chairman, Mr S. C. Black, said: The realised net profit, after making ample provision for depreciation and provision for Government and other taxes, amounts to £81,272 3s 11d. We brought forward last year £96,662 6s 3d; together, £177,934 10s 2d. We paid on June 7th last an interim dividend of 1s 6d per share, £20,812 10s; which leaves a balance of £157,122 0s 2d to the credit of profit and loss account. We recommend payment of a final dividend of 3s 6d per share, which, with the interim dividend mentioned, brings the dividend for the financial year to 5s per share = 25 per cent., free of Union of South Africa ordinary income-tax. The present distribution will absorb £48,562 10s and leave £108,559 10s 2d to be carried forward.

Although the profit is £7,000 lower than the previous year, your directors are well satisfied with the result, which not only justifies the distribution of the same dividend, but enables us to increase the balance standing to the credit of profit and loss account by about £12,000.

Our financial position is as sound as ever. Cash and equivalent assets, less sundry creditors, amount to £229,266 17s, as against £234,145 12s 6d in the previous year. This decrease is more than made up by additions to property account, which exceed £10,000.

Shareholdings aggregate £93,035 9s 1d, an increase of £5,511 12s 9d as compared with last year. They are valued, as usual, at or under cost, and in no case above the prices ruling on August 31, 1928.

Our investments of £110,000 in Union of South Africa Government loans remain unchanged.

Sundry debtors, £33,377 18s 11d, are perfectly safe; in fact, since the close of the accounts £26,000 hereof have been paid.

Turning now to our two producing collieries—the Transvaal and Delagoa Bay Collieries and the Douglas Colliery, Limited—you will see from the report that their joint production was 855,099 tons, which is 69,071 tons below the previous year's. This is due to a general depression in the overseas coal trade, as in South Africa itself the demand for coal was slightly better. The Douglas Colliery's cash assets on June 30th aggregated £77,258 13s 2d, after providing £18,375 for payment of dividend No. 6 of 3s 6d per share. A balance of £37,790 14s 8d was brought forward to the credit of profit and loss account. Machinery and plant are kept in a state of high efficiency, and some important renewals and replacements carried out during the year were charged to working costs. In these circumstances the provision made for depreciation is considered ample. The width of the seam in both collieries and the superior quality of our product are well maintained. Last year I referred to the threatened shortage in our water supply. I am pleased to tell you that so far our present arrangements for storage proved sufficient for all requirements, notwithstanding the severe drought from which the whole country suffered. Thanks to the Witwatersrand Native Labour Association, our native labour requirements were met fully and promptly.

Our farm properties show an increase of 18,902 acres compared with the 1927 schedule. We bought in September, 1927, a freehold of 1,756 acres of good coal-bearing land in the Middelburg district, and we acquired recently a freehold farm in the Prieska district, Cape Colony, 15,990 acres in extent. The latter is partly fenced and equipped with wells, dams, boreholes, buildings, &c., but the important feature is that it carries asbestos, which we believe to be of a commercial standard. The lodes run for over 5½ miles on the surface, and we are now opening them out.

Reference is made in the report to our participation in a discovery of phosphates in the Northern Transvaal, within seven miles of the main line of railway. Development is proceeding as speedily as possible. The deepest point of the lode at present is 180 feet on the incline, and some 46,000 tons of phosphate rock are now in sight. It is generally admitted that the agricultural soils of this country are lacking in phosphates so necessary for successful farming, and this discovery, the only one of value made in the Union, is therefore of the utmost importance, particularly to the Transvaal and Rhodesia, which are the chief countries we hope to supply in due course.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the five days ended January 5, 1929:—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	6,940	From Revenue	14,891
Interest, &c., on Debt	7,013	Increase in Debt	163
Sinking Fund	753	Decreases in Balances	178
Sundries	466		
	15,232		15,232

The ordinary Revenue for the five days amounted to £14,891,700, as compared with £18,053,200 in the corresponding week last year. Property and Income-tax was lower at £3,665,000, against £5,401,000, and Super Tax at £2,610,000, against £3,600,000. Customs and Excise brought in £2,242,000 and £823,000, against £2,311,000 and £756,000 respectively. Ordinary Receipts amounted to £104,500 as compared with £339,900, while Special Receipts were higher at £1,650,000, against £1,012,000. The National Debt was increased by £163,100, as shown below:—

(000's omitted.)

	£		£
Public Department Advances	— 2,100	Bank of England Advances	+ 5,750
Treasury Bills	— 3,745	National Savings Certificates	+ 250
		Sundries	+ 8
	— 5,845		+ 6,008

The floating debt was reduced by £135,000 to £816,190,000.

FINANCIAL YEAR, 1928-29, April 1 to Jan. 5, 1929.

INDIA COUNCIL REMITTANCES.

The total remittances from the Government of India to the Secretary of State for India in Council from April 1, 1928, to January 5, 1929, amounted to £21,745,000 by means of purchases of sterling in India. Of this amount £750,000 was remitted on account of the Paper Currency Reserve.

BULLION.

The following statistics of imports and exports of gold for week ended January 10, 1929, are issued by the Statistical Department of H.M. Customs and Excise:—

Imported into Great Britain and Northern Ireland.	£	Exported from Great Britain and Northern Ireland	£
From—		To—	
France	1,788	Poland	6,614
U.S. of America	2,578	Germany	41,639
British West Africa	22,359	Netherlands	13,036
British South Africa	8,775	France	502,200
		Switzerland	29,440
		Austria	4,250
		Hungary	100
		Egypt	2,000
		Gibraltar	34,265
		Bombay via other ports	8,496
		Straits Settlements	
Total declared value of imports	35,500	Total declared value of exports	684,670

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follow:—

1929	Arrivals.	£	1929.	Withdrawals.	£
Jan. 4	—Sovs released	250,000	Jan. 4	—Sovs	15,000
„ 5	—Sovs released from abroad	1,000,000	„ 5		nil
„ 7	—Bars	1,665	„ 7		nil
„ 8	—Bars	nil	„ 8	—Bars	65,345
„ 9	—Bars	nil		—Sovs	4,000
„ 10	—Bars	nil	„ 9	—Bars	5,130
			„ 10	—Bars	11,958
				—Sovs	3,000
Total		1,251,665	Total		104,404

Net arrivals, £1,147,261.

Messrs. Samuel Montagu and Co. write on January 9, 1929, as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £153,123,339 on the 2nd instant (as compared with £153,783,646 on the previous Wednesday), and represents a decrease of £782,976 since April 29, 1925—when an effective gold standard was resumed. Only £40,000 of gold was available in the open market this week, and the additional requirements of India and the trade were met by withdrawals from the Bank of England. There was a net influx of £1,157,054 of gold during the week under review. The receipts consisted of £1,250,000 in sovereigns "released" and £1,665 in bar gold, and the withdrawals of £19,000 in sovereigns and £75,611 in bar gold.

SILVER.

Movements in silver continue within narrow limits. Sellers have proved hesitant, and the market responded to some inquiry from China, but both buying and selling orders have been mostly limited as to price, business consequently being restricted. The present level of prices has little attraction for the Indian bazaars, and American operators have been interested only at prices slightly outside those current. The tone of the market remains steady, and this condition is likely to continue should the present reluctance on the part of sellers be maintained. The following were the United Kingdom imports and exports of silver registered from midday on December 31st to midday on the 7th instant:—Imports.—France, £19,681; U.S.A., £66,100; Mexico, £11,900; other countries, £22,910—£120,591. Exports.—Egypt, £60,580; China, £97,280; British India, £144,896; other countries, £25,570—£328,326.

Reports and Notices.

The Trade Indemnity Company, Limited, announce that Sir Joseph Burn, K.B.E., F.I.A., general manager of the Prudential Assurance Company, has been elected to a seat on the board.

Mr Harold Ernest Peirce and Mr Harry Valentine Hall have joined the board of Hall and Co., Limited.

Sir Percy Graham Mackinnon has joined the board of the Scottish Australian Investment Company, Limited.

It is officially announced that the West Gloucestershire Power Company, Limited, has acquired the ownership of the Chepstow Electric Lighting and Power Company, Limited, by the purchase of *over 98 per cent. of the shares of the latter company.*

The registered offices of the Amalgamated Tobacco Trust, Limited, have been moved to the offices of Messrs Ball, Baker, Ash, and Co., chartered accountants, Finsbury court, Finsbury pavement, London, E.C. 2.

GOVERNMENT STOCKS, &c.

EXTERNAL DEBT OF PARAGUAY.—Tenders of Bonds of the Loans of 1886, 1896, and 1915, and of the arrear coupon certificates issued *in respect of the 1886 and 1896* bonds for amortisation were opened to-day at the offices of the Council of Foreign Bondholders. Tenders were accepted as under:—Bonds of 1886 and 1896.—Tenders at and under £49 7s 6d per cent. were accepted. Bonds of 1915.—Tenders under £49 5s per cent. were accepted in full, and those at that price to the extent of 60 per cent. Arrear Coup. Certs.—Tenders at and under £86 10s per cent. were accepted.

5 PER CENT. TREASURY BONDS, 1933-1935.—Under the terms of the prospectus of December 22, 1927, holders of these bonds have the option of converting their *holdings in whole or in part during* the period January 16th to January 31, 1929, both days inclusive, into £114 10s 4 per cent. Consolidated Loan for each £100 nominal 5 per cent. Treasury bonds surrendered. Interest on the Treasury bonds converted will cease on February 1, 1929, and six months' interest on the 4 per cent. Consolidated Loan will be paid on August 1, 1929. A commission of 5s per £100 nominal Treasury bonds will be paid to bankers and stockbrokers in respect of accepted conversion *applications bearing their stamp.*

BANKS.

BANK OF NEW SOUTH WALES.—The net profit for year ended September 30, 1928, amounted to £1,184,943, against £1,226,247 for preceding year. The dividend for year is 10 per cent. and in addition a bonus of 10s per share is paid. This dividend and bonus is the same as for preceding year. The sum of £250,000 is put to reserve against an allocation of £340,760 in preceding year. The carry forward is reduced from £170,616 to £168,654. The balance-sheet is fully summarised on another page.

BANKERS TRUST COMPANY.—The Statement of Condition of Bankers Trust Company as of December 31, 1928, shows total assets of $773,268,866, an increase of $38,843,462 over the corresponding figure on July 2, 1928, of $734,425,404. With capital $25,000,000, surplus $50,000,000, and undivided profits $27,387,182 the capital structure totals $102,387,182. Deposits and outstanding managers' cheques on December 31, 1928, are shown at $584,088,640, as against $552,401,755 six months previous, an increase of $31,686,884. During the same period time and demand loans expanded from $346,256,953 to $432,804,456, an increase of $86,547,503.

COMMERCIAL NATIONAL BANK AND TRUST COMPANY OF NEW YORK.—The Commercial National Bank and Trust Company of New York opened on January 9th at 56 Wall street, New York. This bank, the origination of which was first made public in August last, is commencing business with a paid-in capital and surplus of $14,000,000. Mr H. P. Howell is the president. The bank, being a member of the Federal Reserve System and the New York Clearing House Association, is equipped to render complete banking and trust services. The Commercial National Corporation, which is attached to the bank, is organised to transact a general securities business. Major P. C. Anderson, who has been appointed European representative of the bank, has recently returned to England from the United States, and has established his office at 25-27 Bishopsgate, London, E.C. 2.

IONIAN BANK, LIMITED.—The profits for year ended August 31, 1928, amounted to £53,680, against £61,079 for preceding year. The dividend and bonus amount to 8 per cent., free of income-tax, as before. Nothing is put to reserve, against a transfer of £15,000 a year ago, but the carry forward is increased from £13,331 to £19,012. The investments of the bank stand on the books at figures below the actual market value. A summary of the balance-sheet appears on another page. The directors decided to discontinue working in Turkey, in view of the difficulties encountered in that country, and they came to an arrangement with the Deutsche Bank to take over the Constantinople branch. This was accomplished on November 9th, and the business of the branch is under liquidation.

RAILWAYS.

HOME RAILWAYS.—Dates on which dividends are likely to be declared are announced as follows:—

† Pref. Ord. Dividend.

MISCELLANEOUS

ADELAIDE ELECTRIC SUPPLY COMPANY, LIMITED.—The report for the year ended August 31, 1928, shows that net revenue amounted to £411,946, against £412,616 in preceding year. The directors have allocated £66,737 to reserve, making general reserve £180,000. The dividend on the ordinary shares is 12 per cent. The carry-forward is increased from £24,709 to £31,902. Total reserves amount to £512,602. Cash is at £176,954 against £186,227.

BRITISH ENKA ARTIFICIAL SILK COMPANY, LIMITED. — In connection with the issue to shareholders of 250,000 ordinary shares of £1 each, at 26s per share, renunciation letters with nominations may be obtained on application at the company's office at Pinners Hall, Austin Friars, London, E.C. 2.

CITY OF SANTOS IMPROVEMENTS COMPANY, LIMITED. — With reference to the chairman's circular letter dated December 18th last to the holders of ordinary shares, giving particulars of the Brazilian Traction, Light and Power Company's offer to purchase all the ordinary shares of the company at the price of £2 17s 6d per share, provided that holders of not less than 750,000 shares accepted this offer, we are informed that acceptances have already been received in excess of this figure. The directors strongly recommend all holders who have not accepted the offer to complete the form of acceptance and return it immediately, as the Brazilian Traction offer must be accepted not later than January 15th.

DUOPHONE AND UNBREAKABLE RECORD COMPANY, LIMITED.—A petition for the winding-up of the company has been lodged with the High Court by Stuart Advertising Agency, Limited, of Kingsway House, Kingsway, W.C., and the petition is directed to be heard at the courts on January 14th. A similar petition has been lodged against British Brunswick, Limited.

HOME AND COLONIAL STORES, LIMITED. — At a meeting of the board of directors held on January 4th the various statements recently appearing in a section of the Press were under consideration, and with regard to the suggested absorption of this company by other interests the board beg to state that there is no truth in such rumours, and no proposal of this nature has come before the board in any shape or form. Moreover, no statement has been made by the directors or management which would account for the recent rise in the market price of the ordinary shares

SAMUEL ALLSOPP AND SONS, LIMITED.—At an extraordinary general meeting of Samuel Allsopp and Sons, Limited, at the Cannon Street Hotel, E.C., Sir William B. Peat (the chairman) presiding, the resolution providing for the reorganisation of the capital of the company which was passed at the extraordinary general meeting held on December 20th last was duly confirmed, on the motion of the chairman, seconded by Mr. James Davenport.

SCOTTISH STOCKHOLDERS INVESTMENT TRUST, LIMITED.—At an extraordinary general meeting of the Scottish and Southern Counties Investment Trust, Limited, which was held on January 7th, the resolution altering the name to the Scottish Stockholders Investment Trust, Limited, was unanimously confirmed.

STYLE AND WINCH, LIMITED. — The Chairman writes on January 8, 1929:—"The attention of the board has been called to certain paragraphs in the daily papers relative to this company. It is true that certain negotiations are taking place. In the opinion of the board, the present high value placed on the ordinary shares by the Stock Exchange does not coincide with the terms of these negotiations, should they eventually be completed."

BROKEN HILL SOUTH, LIMITED.—For the four weeks ended December 29, 1928, 18,640 tons of crude ore were treated, and produced 3,895 tons of lead concentrates, assaying 67 per cent. lead and 30 ounces silver per ton; also 3,918 tons of zinc concentrates, assaying 50 per cent. zinc

BURMA CORPORATION, LIMITED (incorporated in India).—During the month of December 36,700 tons of ore were mined, including 2,904 tons of high grade ore. 27,600 tons of ore were milled in the treatment plant, producing 10,574 tons of leady concentrates. 11,031 tons of lead-bearing materials, including 3,579 tons of high grade ore, were smelted in the blast furnaces, producing 7,128 tons of hard lead for treatment in the refinery. Refinery products were 6,546 tons refined lead and 60,781 ozs refined silver. Of silver production 65,200 ozs were recovered from the treatment of copper matte. Zinc plant produced 5,500 tons zinc concentrates, assaying 51 ozs silver, 6·5 per cent. lead, and 50·4 per cent. zinc. In addition to the above, 750 tons copper matte were produced from the treatment of accumulated smelter by-products and 5,458 tons copper ore. 90 tons of refined antimonial lead were also produced. Included in the tonnage of refined lead is 483 tons recovered from the smelting of copper ore.

SAN FRANCISCO MINES OF MEXICO, LIMITED.—Operations for December:—Ore treated, 26,000 tons; lead concentrates produced, 3,538 tons; zinc concentrates produced, 3,80 tons. Estimated net smelter returns, $307,555. Operating expenses, $139,436. Estimated operating profit, $168,119.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday Evening.

Agricultural operations in the United Kingdom are making normal progress, and ploughing for spring cereals is well forward. The recent spell of cold and frosty weather has loosened the heavier soils, while tending to check premature development of winter crops. Larger supplies of native wheat were available at the principal Statute market, but trade marked no expansion and the general position remained unaltered. Foreign sorts, however, experienced rather more inquiry, and tended firmer in sympathy with a moderate improvement in forward quotations. Floating and forward wheat cargoes were less freely offered in face of a better demand, chiefly on Continental account and higher first-hand offers. They were also influenced by recent large purchases by non-European countries. China has bought freely of Australian and low-grade Canadian, while India is stated to require further supplies up to August shipment. Sales include steamers of No. 3 Northern Manitoba afloat at 44s 10½d, No. 4 ditto 43s 6d, and Australian afloat to Adriatic at 46s 10½d, all per 480 lbs., c.i.f. terms. Feeding stuffs generally firmer, the demand being stimulated by cold weather. Sellers showed more reserve. Wheat firmer. No. 2 Northern Manitoba 49s 6d, No. 3 47s 6d, No. 4 Manitoba 45s 9d, No. 5 42s, No. 6 36s 6d, No. 2 mixed Durum 41s 6d, Rosafe 62½ lbs 44s 6d, Barusso 62½ lbs 44s 6d, Australian 47s, all ex-ship, per 496 lbs. English 9s 1d to 9s 3d per 112 lbs. Flour steady. London standard grade 36s 6d, town whites 37s 6d, patents 38s 6d to 39s 6d per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 33s to 36s 6d, Minneapolis 33s 6d to 36s 6d, Australian 34s 6d ex-store per 280 lbs. Maize again dearer. Plate ex-ship to arrive 42s, ditto landed 43s 6d, January-February 42s 9d, February-March 43s 3d, March-April 39s 9d, new April-May 37s 9d, May-June 37s 3d, No. 2 white flat African landed 42s 3d, No. 2 mixed American ex-ship to arrive 39s 9d per 480 lbs. Yellow maize meal £11 5s ex-wharf, white African ex-ship to arrive £9 7s 6d, Hominy chop £9 per ton. Barley firmer. Californian ex-ship 42s to 52s, Chilian Chevalier 48s to 58s, Australian 46s to 52s, Smyrna 44s to 50s per 448 lbs. Algerian/Tunisian 34s 9d landed, Canadian feed 30s ex-ship to arrive, 31s landed, No. 3 Canadian Western 34s ex-ship, per 400 lbs. English malting 10s to 15s, feed 9s to 10s per 112 lbs. Oats firmer Plate ex-ship December-January 35s 3d, February-March 24s 6d, black Plate landed 25s 6d. No. 3 white clipped American 36 lbs landed 27s 6d, mixed Canadian feed 21s 3d, Chilian white 33s 3d, German landed 28s 6d, ex-ship to arrive 27s 6d per 320 lbs. English 9s to 10s per 112 lbs. Scotch ex-ship 29s 6d, Irish black 26s 6d landed, per 336 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928-29, 1927-28, 1926-27, 1925-26:—

	1928-1929.	1927-1928.	1926-1927.	1925-1926

AMERICAN WHEAT MARKETS.

The week opened with prices falling owing to favourable weather conditions, poor cash demand, and absence of export inquiries. Firmness developed later, cold weather in Europe and the American South-West, a better milling demand and light country offerings stimulating professional support. Private advices report no damage in Missouri. Quotations:—

Nearest Future.	Jan. 4, 1928.	Jan. 11, 1928.	Dec 26 1928.	Jan 2, 1929	Jan. 9, 1929.
Winnipeg (No. 1 Manitoba)—Cents per 60 lbs	137	135¾	117	122	122½
Chicago (No. 2 ... per 60 lbs	130⅜	128¼	114⅜	116⅜	116½

Visible supplies of wheat in Canada at 76,331,000 bushels show an increase of 5,647,000 bushels as compared with the previous figures. Supplies a year ago stood at 56,092,000 bushels.

COAL.

Our Cardiff correspondent writes:—During the past week the supply of tonnage at the South Wales ports has been more abundant than in the previous week, and collieries, therefore, have been working fairly regularly, while prices in some cases have further hardened. Moreover, there has been a steady volume of new inquiry, and fixtures have been heavier than for some time past. On some days this week all the coaling tips have been fully employed at the principal docks, at some of which also vessels have been waiting their turns for loading. Admiralty collieries are, on the whole, well stemmed, while the position of the drier steam coal pits and also of the Monmouthshire collieries is reacting favourably on quotations. Work has already been resumed at the Nixon Collieries, and an agreement has also been reached for restarting the Bedwas Colliery. A meeting of the Executive Committee of the Marketing Association is to be held next week to consider the position in regard to the proposed output regulation scheme, but it is feared that the necessary support will not be forthcoming to authorise the introduction of that scheme this month. Differences continue to exist concerning the recent reduction in railway rates under the Government de-rating scheme, but at a meeting of the Commercial Committee of the Owners' Association, on Tuesday, it was decided that it was essential that there should be unanimity among the owners in the policy of retaining for the mining industry the whole of the benefit of the relief. The matter is to be further considered next week The following are the current approximate prices:—Best Admiralties, 19s 3d to 19s 6d; seconds, 18s 9d to 19s 3d; best drys, 18s 6d to 19s; Black Veins, 17s 6d to 18s; Western Valleys, 17s to 17s 6d; Eastern Valleys, 16s 7½d to 17s; best small steams, 12s 9d to 13s; cargo smalls, 11s to 12s; coking smalls, 12s 9d to 13s; anthracite best large, 33s to 35s 6d; Red Vein large, 20s 6d to 25s; machine-made cobbles, 40s to 43s 6d; French nuts, 41s to 43s 6d; stove nuts, 40s to 42s 6d; rubbly culm, 9s to 9s 3d; foundry coke, 25s to 36s 6d; patent fuel, 20s to 21s 6d; pitwood, ex ship, 26s 6d to 26s 9d.

Our Glasgow corrspondent writes:—Not much business has been arranged since the holidays, and meantime the market posi-

$50,000,000

tion is not very clearly defined. There does not seem to be any important change in prices from those ruling at the end of the year. Doubles are a strong spot at the moment, but trebles have eased in price. Other classes of nuts are about steady, and the same may be said of most qualities of round coal. Shipping prices are approximately as follows f.o.b. district ports:—Lanarkshire: ell best, 16s; splint best, 12s; splint second, 16s 6d; navigation, 17s; navigation second, 15s; steam, 14s; hartley, 16s 6d; trebles, 14s 6d-15s; doubles, 13s 3d-13s 6d; singles, 13s; pearls, 11s 9d-12s; dross, 10s 6d. Fife: screened navigation, 18s; first-class steam, 13s 6d; third-class steam, 12s 9d; trebles, 15s-15s 6d; doubles, 13s 9d-14s; singles, 12s 9d; pearls, 11s 6d-11s 9d. Lothians: prime steam, 13s 6d-14s; secondary steam, 13s 3d; trebles, 15s-15s 3d; doubles, 13s 9d-14s; singles, 12s 9d; pearls, 11s 9d. Ayrshire: unscreened navigation, 16s 6d; jewel, 16s 6d; steam, 13s 6d; trebles, 16s; doubles, 13s 9d; singles, 12s 9d; pearls, 11s-11s 3d; dross, 10s.

Our Sheffield correspondent writes:—Though it is not yet settled which branch of industry is to receive the concession on railway freights, a number of contracts for fuel and raw materials have been fixed up. Users of industrial coal are showing no hurry to cover their requirements. In most cases the prices asked are a shilling higher than the old contracts, but there have been a number of renewals at the earlier rates as before. Higher figures are also being demanded on gas coal contracts. Mr Benton Jones, one of the leading spirits of the five counties marketing scheme, stated recently that, while the arrangement, as a machine, had proved successful, and operated smoothly, it had done things which were not anticipated or intended, and left undone things which it ought to have done. Experience in manipulation might overcome these defects, but if not, they could be removed without radical alteration in design.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The iron and steel markets are becoming somewhat active. In Scotland many of the works are still closed down, but in England the market has resumed its normal appearance after the holidays, and there seems a prospect that the opening weeks of the year will realise the anticipations of good trading which were held before Christmas. The Continental market has already become busy, and new business has come forward in sufficient volume to enable the steel makers to advance their prices from the lower levels to which they dropped at the end of 1928. There has been a fair amount of buying by several of the export markets, and a fair proportion of this business has gone to Continental manufactuerrs. The Continental home markets also are providing a considerable volume of work. The British steel works are now beginning to reap the benefit of the orders placed for new ships, and at the same time they are securing a share of the demand which is making itself felt from overseas. The pig-iron department of the market, however, still appears depressed, in spite of the fact that there are now practically no importations of Continental iron. The demand is restricted to small quantities, but it is understood that the foundry trade has revived somewhat of late and this should be reflected later on in a demand for pig-iron. Some good orders have been placed for semi-finished material, and the volume of inquiry seems to be increasing.

Our Middlesbro' correspondent writes:—The first market of the year was held here on Tuesday, and was fairly well attended. There was a quiet feeling of optimism. Whilst the Cleveland pig-iron market is not so active as could be desired, a small business is being transacted from day to day, and with the present limited number of furnaces producing, as the bulk of the make is required in the manufacturers' own steelworks, producers are well able to maintain their price of 66s per ton for No. 3 G.M.B. East Coast hematite is still very scarce. Messrs Gjers' mills have during the past week-end put into blast two furnaces, one on hematite and one on ferro silicon. Business in hematite is based on 71s per ton for mixed numbers, and is being transacted both with home and Continental consumers. Ore is firmly maintained on the basis of 22s 6d per ton, c.i.f. Tees, for best Rubio, but consumers are not anxious to increase their commitments. Blast furnace coke is, if anything, in slightly better demand, the quotation being 17s 6d per ton, delivered Middlesbrough. The steelworks are generally in a better position. The recent shipbuilding orders have had a good effect and specifications are now coming through more freely, so that works are able to arrange their rolling programme some time ahead. It is understood that one or two big inquiries have been received in this district, and it is hoped that business will mature. Prices meantime are maintained as follows—Steel ship plates, £8 7s 6d; steel ship angles, £7 17s 6d; iron bars, £10 5s; steel rails, £8 10s.

Our Sheffield correspondent writes:—Local steel conditions are not yet free from the holiday influence, and a large proportion of the men who were suspended at Christmas remain without employment. It is evident from this that the amount of work on hand at the New Year was limited. All the railway companies have now invited tenders for 12 months' supplies of steel material and stores, as they have done in past years. The quantities are large, but it remains to be seen whether the specifications against the contracts will be in excess of last year. Steelmakers consider that the depletion of their stocks will compel the companies to take larger deliveries than last year, when they reached the lowest tonnage and value recorded for a very long period. Buying and selling has not been resumed sufficiently to test the soundness of the prevailing optimism. The undertone of the various markets, however, is strong.

Our Glasgow correspondent writes:—A good start has been made after the New Year holidays. There is still no expansion in the pig-iron or malleable iron trades, but there is more activity at the steel works. The increased volume of work recently placed with Clyde shipbuilders is beginning to have its effect at the steelmaking plants, where fair tonnages of shipbuilding material are being booked. Recent orders booked in the West of Scotland include a steamer of about 9,000 tons deadweight carrying capacity to be built by Messrs Barclay, Curle, and Co., Limited, and two steamers of similar capacity to be built by Messrs Chas. Connell and Co., Limited. The Fairfield Company have received a further order within the last few days, having been entrusted with the conversion of the Blue Star liner "Arandora" into a luxury cruiser. Messrs Beardmore, Dalmuir have received contract from the Indian State Railways for 41 large locomotives, said to be worth about £350,000. Tubemakers and sheetmakers keep busy. Prices all round show no change.

Our Cardiff correspondent writes:—There has been no material change this week in the position in the tinplate industry, but the steelmakers are anticipating an improved demand for bars, and Baldwins, Limited, are contemplating the immediate resumption of work at three of their furnaces at Port Talbot. Tinplate prices are steady at between 18s and 18s 3d, but there has been a revival on the Swansea Metal Exchange of a report of a probable increase in the minimum quotation. Galvanised sheets are unchanged at from £13 10s to £13 12s 6d. There has been no alteration in tinplate bar prices, but tin has been a shade dearer. Exports last week from Swansea totalled 117,986 boxes, compared with 99,299 boxes the previous week, and stocks have been reduced to 224,293 boxes.

OTHER METALS.

TIN.—The market exhibited a good deal of irregularity, but values steadily moved in an upward direction and sellers were more reserved in face of improved inquiries, also stimulating Eastern advices. Stocks in London and Liverpool warehouses for week ending January 5th amounted to 7,667 tons, compared with 2,199 tons at corresponding period last year. Dealings were recorded in standard cash at £221 7s 6d, £225 10s, £224 5s, £226 7s 6d, and £223 10s, with three months £221 10s, £226, and £223 5s. In the East, business was reported at £224 15s to £229 2s 6d per ton, c.i.f. terms.

COPPER.—Quieter conditions prevailed on the standard market, and with less encouraging advices from America values were inclined to sag at opening, but improved later on better buying orders. Standard cash sold £74 10s to £75 5s, three months £73 2s 6d, £73 7s 6d, £72 18s 9d, and £73 10s.

LEAD in fair support, but values slightly irregular on liberal offerings. Good soft foreign pig, January, sold £22 1s 3d, £22 3s 9d, and £22 2s 6d, February £22 6s 3d to £22 5s, March £22 10s to £22 8s 9d, April £22 12s 6d to £22 10s, May £22 12s 6d.

SPELTER in demand and market firmer. January sold £26 1s 3d to £26 8s 9d, £26 7s 6d, February £26 2s 6d to £26 10s, to £26 8s 9d, March £26 5s to £26 10s, April £26 2s 6d to £26 15s, and £26 11s 3d.

ANTIMONY quiet. English regulus £54 to £54 10s, foreign ditto, spot, £38 5s, January-February £35 5s ton, c.i.f.

ALUMINIUM steady. Ingots and bars for home delivery £95 ton.

WOLFRAM maintained. Straits, also Chinese, 20s 6d to 20s 9d per unit, c.i.f.

QUICKSILVER steady. Spot £22 5s per bottle.

TIN PLATES steadier. I.C. coke, prompt and forward, 18s to 18s 3d per box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, Jan. 9, 1929.

Spot sales for the week 3rd to 9th (inclusive) are 31,000 bales, of which 20,390 bales are American, 350 Brazilian, 850 Argentine, 5,000 Peruvian, 1,700 Egyptian, 620 African, 1,680 East Indian, and 410 sundries. Imports for the same period are 105,900 bales, of which 82,313 are American, 6,806 Brazil, 2,045 Argentine, 4,866 Peru, 8,276 Egyptian, 109 African, 1,315 East Indian, and 170 sundries. Quotations to-day are: American middling, 10.49; Egyptian sakel, 18.90; Egyptian uppers, 12.15; Brazil fair, 10.79; Peru G.F. mod.-rough, 12.75; Peru G.F. smooth, 11.54; West African mid., 10.54; East African G.F., 12.65.

MANCHESTER, Jan. 9, 1929.

Although business in the market has not developed very rapidly there has been a tendency for demand to increase, and spinners and manufacturers anticipate a larger turnover in the near future. The fluctuations in raw material rates and the easier movement of certain days have had a rather disturbing influence; but, on the whole, there is not much expectation of decidedly lower prices. Cloth inquiry has been of considerable volume. Operations in light fabrics for India have been more active, dealers on the other side wanting quick delivery. Bids in grey shirtings, however, remain disappointing. The improvement in the China situation is being maintained, and some very fair lines have been booked in grey and white staples and fancies. Printing and finishing styles have been in steady request for South America and the Continent, and certain standard makes have been bought for Egypt. Moderate orders have been mentioned in home trade fabrics. There is a tendency for weaving production to expand in some districts. American yarns have been steady in quotation, and without many contracts of weight being booked a fair turnover has been experienced. Buying in Egyptian counts has been irregular and unimportant.

Comparative Statement of the Cotton Trade.

THE WOOL TRADE.

Our Bradford correspondent writes:—The general tone of the market is good, and although there is no large volume of business, inquiries are numerous and a fair turnover is being done in both wool and tops. There seems to be a growing belief that wool values are not likely to drop much below the current level, and there is reason to think that if the raw material holds firm during the remainder of the season it will have the effect of giving confidence to spinners and manufacturers. At present tops and yarns are obtainable at prices below replacement costs, and if the raw wool position continues to exercise a dominating influence on the market both topmakers and spinners will endeavour to improve their margins. Meanwhile, topmakers are acting largely on the defensive, and the low offers which were considered a few weeks ago are now definitely rejected as being unworkable. Sellers realise that with the second half of the selling season in full swing they will have to think seriously about supplies to carry them over till the next clip is available, and for this reason they are less inclined to risk selling forward for a fall in wool values. Spinners are still experiencing difficulty in obtaining new business on quoted rates, but inquiries are fairly numerous, and it is known that most manufacturers are not carrying large stocks. The price factor at the moment is very important, and in standard counts where stocks tend to accumulate in spinners' hands concessions can generally be obtained, especially for business with particulars. The piece-goods trade is moving steadily, with no pronounced feature. Some of the export markets are sending better orders, and employment is steady.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The first series of sales of Australian and other Colonial and foreign wool will begin next Tuesday, and naturally there is already some speculation as to how prices will move. The Associated London Selling Wool Brokers' Committee have announced that approximately 103,200 bales will be offered, arrangements having been made for an 11 days' series. There does not appear to be anything very exceptional about the arrivals, though the quantity included in the catalogues is less than for the corresponding series of a number of years past. The quantity available in January, 1928, was 108,500 bales; in 1927, 131,300 bales; and in 1926, 189,000 bales.

Yorkshire firms have done very little buying in South America, prices there having been too high. This has resulted in more buying orders being place in New Zealand, but does not provide for immediate requirements. The operations in crossbreds in London will be largely against present machinery requirements, and as there is a scarcity of greasy crossbreds there is every prospect of these selling well. The prospect for merinos is good. Prices are likely to be firm on last sales' basis. There is less disparity between the price of wool and tops in this description than in crossbreds, though no doubt even a cost of 4s for good 64's tops is quite as much as topmakers and spinners can stand with the present rate of demand and consumption. It has been seen, however, that the Australian sales have opened very encouragingly. Prices for merinos are firm, and with a continuance of healthy consumption will remain so. At the same time, there is nothing to justify higher values in either home or overseas selling centres.

HIDE, LEATHER, AND ALLIED TRADES.

Conditions in the hide market remain unsettled, and at most of the London and provincial sales prices fell by ⅛d to ¼d per lb owing to the slack demand from tanners. Calfskins also dropped more definitely, as shippers have few orders on hand on export account. Oversea hides are also very quiet, and values generally still inclined to weaken. Fregorific hides, however, under the influence of American buying, remain steady, and business has been done on a basis of 11⅞d for best Argentine ox. In saladeros, the only item of importance has been the sale of 11,000 Liebig Colon ox at Liverpool on the 8th inst. The result was poor, as only 500 heavy hides found buyers at 10½d to 10⅝d ex store. Cape hides are quiet, with best and second drysalted nominally quoted at 15¾d to 14¾d respectively. Latest cables from Chicago report the market as weak, with falls of a cent on most classes, best heavy packer steers now offering at 21 cents as against 22 cents last week.

Neither merchants nor shoe manufacturers seem in the humour for speculative purchases of sole leather, and the few orders coming along are for small sampling lots. Heavy stocks of dry hide bends are still in warehouses, and have dropped considerably in value. The best selling lines are wet salted bends of 10 to 12 lbs, and 12 to 14 lbs average, which are wanted for repairers' use. Values are difficult to ascertain, but it seems clear that any offer for a bulk parcel would be accepted at below recent current quotations. Offal is fairly firm, but tanners seem anxious to reduce stocks.

In upper leathers box and willow calf are quiet with prices firm. Glacé kid in black and dark brown is selling fairly well, whilst sampling lots of colours for the spring trade are being sent out. Curriers of kip leathers are a shade busier, but few of them are even now working full time. Shoe manufacturers report a slight improvement in trade, as orders for boots and shoes have come along since the Christmas holidays owing to retailers' sales.

VEGETABLE OILS AND OILSEEDS.

Markets have developed a good measure of activity, and a better feeling prevails all round. The low level of prices at which linseed oil has been of late induced consumers to buy freely. Prices are steadier around £28 10s per ton naked ex Hull mill for spot and January and £28 7s 6d February-April, and £28 10s May-August. Cotton oils also have commanded more interest, and are steady with crude Egyptians at £29 5s and common ditto at £32 10s ex Hull spot and January-February.

In the oilseed section Plate linseed has been steadier at the decline, and there has been a good inquiry for seed near at hand which is still at a premium over shipment. The more distant position of Plate afloat is quoted £15 12s 6d, while £15 11s 3d has been accepted for mid-January to Hull, with £15 10s quoted for later. The quantity of linseed now on passage to Europe is 168,700 tons, which is over 30,000 tons more than a week ago.

Cottonseed is in fair demand, and for black Egyptian January to March £10 2s 6d to £10 5s has been freely paid. Some trade in soya beans to Hull January shipment has been done at £11 8s 9d. Oilcakes are in moderate request, and prices are firmly held.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—There was no new marked development to note in this market. Prices were advanced 3d for spot goods with a moderate offtake of British refined, also home-grown granulated. The latter ranges from 23s to 23s 9d, ex factories for ready parcels. There is some inquiry for white Mauritius, spot, London, at 21s 6d to 22s 3d as to sample. Further sales in new crop white Java are recorded by the Trust, and so far about 8-900,000 tons have been disposed of out of a crop which may pan out to 3.300,000 tons. Continental parcels for shipment nominally unaltered. Foreign 96 per cent centrifugal, January-February, quoted 9s 7½d, c i f., U.K., and continental beet, basis 88 per c nt., 9s 5½d, f.o b. Terminal sections slightly easier, with moderate dealings. Raw: March delivery, sold, 9s 1½d to 9s 0⅝d; May, 9s 2½d; August, 9s 5½d; white, March, done 12s 4⅝d; May, 12s 4⅝d; August, 12s 7⅛d; December, 12s 9d cwt. Cuban receipts last week 16,260 tons, against 22,270 same time last year; exports, 37.770, against 48,330; stocks, 102,820, against 186 250. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending January 5th amounted to 105,430 tons, against 86,407.

COCOA.—The general tone of this market remains quiet, with ample quantities in sight. Consumption over a prolonged period has remained stationary both in the chief countries of Europe and also the U.S.A., while production in the meantime has forged ahead. In auction, fine Grenada, sold, 56s to 59s; St Lucia, 56s to 57s; fair ditto, 54s. Samoa, fine, 98s; fair, 88s to 90s. Accra, F/F, February-April, sold, 41s 6d to 41s, f.o.b. Terminal quiet and easier. March delivery, sold, 46s; May, 47s 3d to 46s 10½d; September, 48s 4½d to 47s 10½d; December, 47s 9d.

TEA.—Auctions were resumed this week, and quantity os Indian brought forward amounted to 62,987 packages. A keen demand was evidenced, and a clearance soon resulted at prices showing an advance of ½d to a 1d per lb. Ceylon sales of 27,121 packages met with fairly good competition, the chief feature being support accorded common and low medium teas, which ruled firm to ½d dearer. Finest kinds without material change, but others irregular, and occasionally easier. Java and Sumatra auctions firm for the l wer grades.

COFFEE.—Bu iness on the spot proceeds rather quietly, but prices remained steady. London landings last week, 3.127 tons: deliveries, 901. Stocks increas d by 2,226 tons on the week at 21.953. compared with 64,160 at corresponding period last year. Liverpool stocks increased by 99 tons.

RICE.—Market inactive and featureless.

BEANS.—In quiet support. Madagascar butters: afloat, sellers, 33s 9d to 34s 6d; November-December, 33s 9d; December-January, 33s 3d; January-February, 33s. Rangoon haricots, March-April, 18s; April-May, 17s 3d cwt, c.i.f.

PEAS.—Steady quiet. Japanese, afloat, 20s to 20s 6d nominal position, December-January, 19s 6d; January-February, 18s 9d cwt., c.i.f., London.

SPICE.—Pepper steady, moderate business forward positions. Lampong, October-December, sold, 1s 3⅝d; January-March, 1s 3⅛d; Muntok, white, 1s 10⅜d and 1s 11d respectively. London stocks reduced by 6 tons on the week. Cloves firm. Zanzibar, January-March, 1s 3⅞d lb. Pimento firm quiet. Tapioca dull and declining. Singapore flake, January-February to Havre, sellers, 19s 9d; Penang seed, to Hamburg, 17s, c.i.f. Sago flour, January-February, 12s 1½d; February-March, 12s 3d cwt., c i.f., U.K. Ginger dull of sale.

FRUIT (Dried).—Currants: Market quiet, but firm. Pyrgos quoted 46s 9d; Patras, 49s to 51s; choice up to 54s; **Amalias**, 47s 6d to 48s; Gulf, 52s to 55s; Vostizza, 54s to 60s. **Sultanas** move off slowly. Medium to good Smyrna, spot, 41s to 60s; **Cretan**, 50s to 70s; Greek, 36s to 73s; Australian ranges from 40s to 55s; Californian, soda bleached, 36s to 40s; unbleached, 32s; Cape unbleached, 36s to 40s; bleached, 45s to 50s. Raisins fully steady. Valencia, quarter boxes, 50s to 55s; Australian, 35s to 46s; Capes in demand at 33s to 36s. Figs dull. Genuine new, spot, 0s to 32s; layers, 60s to 65s; pulled 60s to 70s. Dates quiet. Hallowie new, spot, 30s, S ar, 16s 6d; Khedrowie, 23s. Evaporated fruits: Business has scarcely opened out, but inquiries are now becoming more numerous, and a steady tone prevailed. Plums firm, both spot and forward, with a good demand for all counts, available supplies being mostly in second hands. Pears move off freely, but apple rings experienced a slow sale.

COMMERCIAL TIMES—WEEKLY PRICE CURRENT.

THE MONEY MARKET.

UNTIL Thursday money was not very easy, 4 per cent. being the ruling rate for short loans in the early part of the week. The causes of this relative stringency are partly the progress of tax collection and possibly, though less certainly, the action of the Bank itself. As regards the first factor, Public Deposits at the Bank show an increase on the week of £4,153,752, in spite both of the fact that

Treasury Bill maturities exceed sales by £5,000,000 for the week and also of the response to the Government offer to purchase the War and Treasury Bonds maturing at the end of the month. It has been stated that the market has not been able to take full advantage of this offer, and there is no doubt that the floating supply of these bonds has now dried up. It seems difficult to believe that many of these bonds are still held outside the market, but otherwise it is not easy to reconcile these statements.

* * * *

This week's Bank Return throws some suggestive light upon the Bank's present policy. Gold stocks show an insignificant decrease of £73,195, but a further £8,835,251 of notes have returned from circulation, so that the banking department's reserve is £8,762,056 higher on the week. The Bank has used this increase in its reserves as the occasion to continue its neutralisation policy, for in addition to a further shrinkage of £1,628,028 in Discounts and Advances, representing credit granted on the market's initiative, the Bank has reduced Government Securities by £2,569,309 and other securities by £428,688. Both these last figures presumably relate to the Bank's open-market policy, so that the Bank has "neutralised" an increase of £8,762,056 in its Reserve by reductions of £4,626,025 in its earning assets. This leaves a net increase of just over £4,000,000 in the total assets of the Banking Department, which is almost exactly balanced by the increase in Public Deposits. Bankers' and other Deposits have, in fact, fallen by a net £88,932 during the week.

* * * *

It is an open secret that the Bank wished to see market rate back at 4⅝ per cent., and so far it has succeeded in its object. It is equally clear from this week's return how it has done so. So far as the bill market is concerned, the Continent are replacing maturities, but they are not buying bills beyond this point, and this partly accounts for the maintenance of the rate. The Bank, however, has apparently thought that this factor might by itself prove insufficient, and so it has resorted to the open-market operations described above. By so doing it has strengthened its own position, and it is the market's knowledge of this strength that may have accounted for the fall in loan rates on Thursday. If so, the situation is an interesting one.

	Jan. 17, 1929.	Jan. 10, 1929.	Jan. 3, 1929.	Dec. 27, 1928.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	4½	4½	4½	4½	5 (Apl. 21,'27)
Banks' Deposit Rate	2½	2½	2½	2½	3 (Apl. 21,'27)
Discount { Call	2½	2½	2½	2½	3 (Apl. 21,'27)
Houses { Notice	2⅝	2⅝	2⅝	2⅝	3½ (Apl. 21,'27)
Market rate (3 months' bills)	4 5/16	4 5/16–⅜	4 5/16	4 7/16	..

In one respect it seems unfortunate that the Bank should have had to stiffen up conditions, just when the reduction in the Reichsbank's rate should have put an end to all fears of further gold losses to Germany, and when stringency is already likely to arise from tax collection. Still, it must be conceded that the Bank has simultaneously succeeded in maintaining market resources and Bankers' Deposits upon an even keel, and has so preserved stability. It must also be remembered that this is the time of year in which we ought to be beginning to replenish our autumn gold losses. Till we are doing so there seems little justification for a further expansion in the basis of credit, especially as money to-day cannot be called unduly stringent.

NEW YORK MARKETS.

Our New York correspondent cables:—The Federal Reserve statements reveal a continuance of the normal January contraction, with discounts $55,000,000 lower, the decline in the last two weeks being $330,000,000. Meanwhile, the total volume of credit has fallen by $338,000,000—a satisfactory feature which indicates the lack of necessity for a higher discount rate, particularly in view of the experiment of allowing the bill rate to rise to more natural and attractive levels. Another $5,000,000 of gold has come from Canada, but $20,000,000 has been ear-marked for France. Business news remains good, with steel operations maintaining their high level. The American names on the Experts Committee meet with high approval. The reports that the American experts are opposed to a Reparations Loan should probably be interpreted as meaning that they realise the wisdom of a moderate American issue with a substantial flotation in Europe itself.

THE STOCK MARKETS.

A noteworthy falling-off in activity was the main feature in the Stock Markets, coinciding with the withdrawal of American support in various directions. The gilt-edged market was affected by the issue of another large Australian loan, and Home Railways were irregular. Apart from a few sound features, such as Kreuger and Toll, industrials were heavy, with profit-taking in evidence, accentuated by the Ner-Sag debâcle. Rubber shares became less active on a setback to the rise in price of the commodity, tea shares were marked down slightly, and the tone in oil shares was reactionary. Kaffirs attracted little public interest, and American buying was much less in evidence in the market for Rhodesian companies.

THE COMMODITY MARKETS.

Markets continue for the most part to show a hopeful tone. Improvement is maintained in the South Wales and Glasgow coal markets. Demand for pig-iron is showing signs of reviving, and the better conditions recently reported in the steel trades are maintained, and have now extended to certain Sheffield specialities. Markets for the minor metals show some weakness. There is greater activity in Liverpool cotton, and Manchester reports increased demand from her Eastern outlets, especially China, but no improvement in the home piece goods market. Bradford has little hope of more favourable prices. There is some scarcity of raw jute, owing to an increase in world requirements. Vegetable oils and oil seeds have been a more active market. Wheat prices are stronger.

FOREIGN EXCHANGES.

The Foreign Exchange market was quiet this week, but several currencies fluctuated a good deal in spite of the lack of business. Sterling weakened against the dollar from 4.85⅛ to 4.85, and at one time touched 4.84 15/16. Montreal went from 4.85⅞ to 4.86 3/16. Paris lost three points at 124.00 after touching 124.18, and Milan gained the same amount at 92.70. Lisbon lost a point at 110. Amsterdam moved markedly in our favour from 12.08½ to 12.09¾. Berlin was unchanged on balance at 20.40½, but intervening movements were irregular, 20.41⅜ being touched on the reduction of the Bank rate on Friday of last week. Geneva fell away from 25.20½ to 25.22. Buenos Ayres recovered 1-32d at 47 17-32d, and Montevideo lost ⅛d at 50¾d. In the Far East the yen lost ⅛d on balance at 1s 10 7/16d. Among the forward quotations Paris went from discounts of 2 and 4 centimes to par for both periods, and Amsterdam from discounts of 3/16 cent and 7/16 cent to a premium of ¼ cent for one month and par for three months respectively. The silver market was quiet. Spot declined 3/16d to 26¼d, and forward ⅛d to 26⅜d, China being the principal operator in a restricted market. The Chinese silver exchanges lost a little in sympathy, Hongkong declining by 1/16d to 2s 0½d, and Shanghai by ⅜d to 2s 7¼d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Barclays Bank, Barclays Bank (Dominion, Colonial and Overseas), Leethems (Twilfit), British American Tobacco, Apex (Trinidad) Oilfields, Liebig's Extract of Meat, Michael Nairn and Greenwich, Rio de Janeiro Flour Mills and Granaries, and Transvaal Estates and Development. We deal with Mr F. C. Goodenough's speech at the Barclays Bank meeting in a "Note of the Week." Sir Hugo Cunliffe-Owen dealt with the accounts of the British American Tobacco Company, and its policy in directorial appointments. The chairman of Leethems (Twilfit) referred to the opening by President Cosgrave of the company's Irish factory, and to the outlook for British trade in general.

FREE TRADE AND THE MOBILITY OF CAPITAL.

PARLIAMENT is about to start on the final lap of its five-year course, and as every passing week brings the dissolution nearer, the thoughts of the country will become more and more concentrated upon the decision which must be taken at the polls before the summer is over. Between now and then party policies will be framed, platforms set up, and a thousand irrelevancies introduced into partisan arguments on a dozen important issues. Amid this medley of controversy and hubbub of disputation which will rise in a *crescendo* within the next few months, it will be our endeavour to keep before our readers' minds the fact that the question of the fiscal policy of this country—however hard the Government strive to conceal the fact—is the most important individual issue that will be at stake.

In the past few months we have devoted much space to the examination of the results of the experiments in protection in which the present Government have indulged and, if returned to power, propose to extend. For this we have been taken to task on the ground that detailed controversy over the figures of minor industries is of infinitesimal importance compared with the broad question of whether or not the fiscal policy under which this country waxed great has ceased to be the one most suited to her changed needs. With this criticism we have more than a little sympathy, but since the campaign for extended Protection is being based so largely on deductions, largely fallacious, drawn from particular experiments, it is in our view impossible to leave this phase of the Protectionist campaign unanswered. We do not, however, propose to allow this necessity to rob us of opportunities to examine the broader and really vital aspects of the Free Trade case in the realm both of theory and of practice.

In the main we may surely assume that the general theory of Free Trade is well known to all who are acquainted with the elements of economics. But the question which is put by the trade restrictionists is whether physical facts have not so far changed as to render that theory no longer applicable. A new argument which is being vigorously used on the Protectionist side in this year of grace is that one new factor in this changing world of ours, namely, the mobility of capital, has knocked the bottom out of the case for Free Trade. As an illustration of the way in which this argument is handled we cannot, perhaps, do better than take a letter from a correspondent which appeared in the *Economist* of November 3rd. This gentleman starts by quoting from Bagehot and Mill passages in which they mentioned the reluctance of capital to migrate as part of their defence of the Free Trade system. He then falls into the elementary fallacy of supposing that because one of the reasons why the pioneers of the Free Trade case believed in their cause has ceased to be true, that, therefore, the case itself has ceased to be tenable. Free traders, he says, in fact are living on an old theory, and they have no new theory. The old theory "has been smashed all to pieces long ago, without its destruction ever being noticed, by the mere fact that capital has long attained almost complete international mobility."

Such is the triumphant dance executed on the corpse of Free Trade theory. But is not the triumph a little premature. Is it a corpse? And is the dancer really dancing in tune? Let us pause and try to find out the reason why it is so confidently assumed that the evolution of capital from comparative immobility to mobility has proved the case for Protection, as applied to this island of ours. For our correspondent, who returns to the attack this week, makes clear his belief that it is only in the narrower national sense that the Free Trade theory has been exploded. He suggests that "the international mobility now attained by capital has a profoundly modifying effect on the theory of Free Trade as applied to a *nation*"—the italics are his—"while leaving the theory unaffected if the entire world is to be considered as an economic unit." This concession is useful. The validity of the theory of universal Free Trade is conceded, and the arena of argument is narrowed and defined. It is with respect to the national unit, and in particular, to the unit called Great Britain, that we are asked to believe the Free Trade theory has been destroyed.

With every wish to be fair we find it not a little difficult to summarise the reasoning by which this contention is supported; and rather than risk accusations of unfairness by attempting a brief summary of the Protectionist case, we will proceed by asking one or two pertinent questions. Is it assumed by our critics that Free Trade encourages capital exports, and that capital exported is from the national point of view wasted, because it is used to employ the foreigner and not the Briton? Is it the idea that Protection should go hand in hand with the greater concentration of capital at home in producing goods which we now buy from abroad? Is the aim to make Britain as self-sufficing as possible? Do our Protectionists wish Great Britain to have a favourable balance of international payments? Do they conjure up a picture of "the City"—financiers and merchants—battening on a system which profits no one but them? Do they deny that our capital exports have, by financing the development of new countries, increased our supplies of food and raw materials, and enabled these countries to buy increased quantities of our manufactures? It is not for us to give categorical answers to these questions. We can only judge from the general tenor of contemporary protectionist literature that the predominant thought is "British goods for British markets," and ask ourselves what place in the advocacy of this policy is taken by the new factor of mobility of capital.

The theory of Free Trade as applied to our own national unit—we accept for the moment the ground chosen by our correspondent—is built around the fact that no fiscal system could ever enable this crowded island to produce for itself much of the essential food and raw materials which its people and its industries require for their existence, let alone for the comparatively high standard of living which under Free Trade (whether because of, or in spite of it) the people of this country have secured. We are compelled, therefore, to import on a large scale, and we cannot import unless we export goods and services to pay for the goods imported. Export being essential, the obvious policy is to specialise on the production of those goods which our natural resources and the skill of our workers can produce better than other countries. These specialised export industries are the lifeblood of the nation. They at all costs must be maintained. This fact, coupled with the belief that protective duties, by raising home costs and intensifying competition abroad, would hamper the competitive power of these industries in world markets has been the main reason why the protectionist case has time and again been rejected. Has the mobility of capital changed this position? And if so, how?

Although the new argument derived from it has only just been added to the protectionist armoury, Britain's position as an exporter of capital is very far from being a new one. If it is true to-day that the Free Trade case has been knocked out by this factor, it is still more true that it was knocked out before the war, when, as everyone knows, our exports of capital were much higher than they are now in actual figures, and still more in real values. The feature of the London market for new capital in recent years, as all readers of the *Economist* are aware, has been the high proportion of the total new money raised that has been devoted to the purposes of home trade and industry. We can see no evidence in the figures of new capital issues since the war that in any way supports the plea that British industry is starved. The only way in which the mobility of capital could weaken the Free Trade case would be if money really needed for productive employment in Great Britain could not be obtained because it was flowing too freely into foreign channels. If this were the case would Protection help? Furthermore, in this matter it is necessary to take a long view. Is it really true that the export of capital in the long run weakens the resources of the country? We suggest that all the evidence is the other way, and in particular, the story of how the greatest Free Trade country of the world financed the lion's share of the Allied cause of the Great War. We are all only too familiar with the argument that if a duty is put on a particular class of goods those goods will be

made at home and employ British instead of foreign workpeople; that if the tariff wall is sufficiently high foreign capital will come in and set up a factory here and there to employ British labour and sell in British markets. It is on particular and selected grounds such as these that the protectionist argues. The Free Trade theory takes into review not particular instances which may be misleading, but a broad view of the sum total of the advantages or disadvantages likely to be enjoyed or suffered by the nation as a whole, and it has never been more difficult than it is to-day, when the great masses of our unemployed exist in those very industries which live predominantly by export, to see how the final national advantage could be advanced by making it more than ever difficult for these industries to compete in the markets of the world. It is equally difficult to see how this position is destroyed by the effect of a mobility of capital, which is no new feature, and is, in fact, less marked than in the years of prosperity before the war. Incidentally in one way capital is now less mobile, because, except in the case of Government loans, it meets with the comparatively new barrier of double taxation.

If protectionists delight in the entertaining, if unprofitable, game of setting up old Free Trade champions and bowling them out, we may be allowed perhaps one quotation ourselves. John Stuart Mill, in his "Principles of Political Economy," said:—"The exportation of capital is an agent of great efficacy in extending the field of employment for that which remains: and it may be said truly that, up to a certain point, the more capital we send away, the more we shall possess and be able to retain at home." So, perhaps, our correspondent has found a mare's nest after all.

DICTATORS.

In the space of ten days a king in Jugoslavia has become a dictator and a dictator in Afghanistan has ceased to be a king. Thus the number of dictators in the world remains the same. Yet, thanks to these alarums and excursions at Belgrade and at Kabul, our understanding of this post-war phenomenon of dictatorship has appreciably increased since ten days ago. For the foreign student of politics, at any rate, King Alexander has not made his coup nor King Amanullah his abdication in vain.

At first sight, it seems a far cry from South-Eastern Europe to Central Asia, and the common name of dictator might seem like a mere label arbitrarily applied to two quite different things. On a closer view, however, we believe that genuine and important points of likeness reveal themselves between all the post-war dictatorships wherever they happen to have arisen—whether we are dealing with King Amanullah in Afghanistan or Riza Shah in Persia or President Mustafa Kemal in Turkey or Marshal Pilsudski in Poland or Professor Voldemaras in Lithuania or King Alexander in Jugoslavia or King Zogu in Albania or Signor Mussolini in Italy or General Primo de Rivera Marquess de Estella in Spain or President Plutarco Calles in Mexico. No doubt the superficial dissimilarities between the several stars in this remarkable galaxy leap to the eye. Your post-war dictator may be a man of any race, nationality, language or religion; he may arise in Asia or Europe, in the Old World or in the New. He may be a plebeian or a bourgeois or an aristocrat or the reigning representative of an established dynasty. He may have come at his dictatorship by a variety of roads; for though most of our heroes have been soldiers (as every schoolboy would expect), two of the most valiant of them (Professor Voldemaras and President Calles) served their apprenticeship in the mild and blameless profession of pedagogy, while the arch-dictator of them all made his début in public life in the supremely incongruous role of an editor of a socialist newspaper. What, then, are the common features which this superficial variety masks? They must be features that are formed by some ubiquitous and all-pervasive force in the contemporary world; for nothing short of such a force could account for unity beneath so great a multiplicity of region and circumstance. We suggest, in the first place, that all these dictatorships coincide in being attempts at political "short-cuts"; and in the second place, that the purpose of all these "short-cuts" is to catch up with the vanguard of Western Society in its march, or gallop, towards a goal which is hidden from the eyes of Western Society itself.

Let us first apply the formula of "the short cut" to the cases that we have cited and see how it works, proceeding from the simpler cases to those of greater complexity. Spain is, perhaps, the simplest case of all. Here is a Western country which, until about two hundred years ago, was one of the great Powers of the Western World, but which has since fallen behind in the race. While other Western countries have educated themselves or industrialised themselves, or both, Spain has remained much what she was, and therefore has come relatively to count for less in the world. The Spanish dictatorship is a panacea for making good two centuries' arrears of progress in, let us say, two decades. Then there is Italy, who, after falling from a still higher estate still longer ago, did just succeed in recovering the status of a "great Power" in her nineteenth century "Risorgimento"—but only just, so that she fell short of achieving complete self-assurance. The War of 1914-18 put Italy to a test under which she faltered, and this precipitated a psychological crisis. The Fascist dictatorship is a "short cut" for "tuning up" Italy in the various activities of national life to that pitch which France, Germany, Great Britain and the United States have reached by a gradual and natural process of development. As for Poland, she has come to life again as a sovereign independent state, after a century and a-half in the tomb, to find that, in the interval, the international environment has been transformed. The Polish dictatorship is a "short cut" from the 18th century to the 20th without any transitional 19th century to mitigate the shock; and the Lithuanian dictatorship can be explained in the same terms, for though Lithuania has come out of the tomb as a very different entity from Poland, the two countries had been one and indivisible for more than two centuries before they were dismembered by the partitions of 1772-1795.

When we come to Jugoslavia we find ourselves in a post-war State which is half inside the Western World and half outside it; and from this angle of vision we may describe King Alexander's dictatorship as a "short cut" for making a synthetic nation out of populations which have inherited three separate civilisations, and have never been united politically before. Is it possible to manufacture a synthetic nationality out of nothing but a common language, without being able to draw on a common culture or a common social heritage? That is the question which is being investigated experimentally in Jugoslavia—and, we may add, in Greater Roumania—since the war; and King Alexander's dictatorship is really an effort to fuse the recalcitrant elements called Serb, Croat and Slovene into a true chemical compound instead of the present uneasy mixture, by the application of a portentous electric spark. This dictator is one of your adventurous alchemists whose method is "kill or cure." His electrocuting method may do the trick, but it may also possibly produce an explosion which will scatter the component elements of the Serb-Croat-Slovene State to the four winds of heaven. Short cuts sometimes lead to unexpected goals—and what is true of King Alexander's dictatorship applies to King Zogu's; for Albania, like Jugoslavia, is an experiment in a synthetic national state, which cannot endure unless Albanian Catholics, orthodox Christians and Muslims can be made more conscious of their community of language than of the diversity of their inherited social traditions.

The Jugoslav and Albanian dictatorships are a kind of middle term between the Western dictatorships and those of Mexico and the Islamic World, in which the goal to which a "short cut" is sought is not the blending of Western and non-Western populations into one entity, but the "Westernisation" of populations which have no part or lot in the Western social heritage. In Mexico (as perhaps in Russia) we see a people which has been submerged for several centuries under a top dressing of Western civilisation forcibly imposed from above, and which is now breaking through the crust and seeking once again to see the sun and breathe the air. The Mexicans (and perhaps the Russians), like the Poles and Lithuanians, are peoples issuing from the tomb, but the case is more extreme, for the Poles merely suffered a political eclipse without losing the Western social heritage which had been theirs all along; so that they had simply to reconstruct their political institutions without having to acquire an entirely new mental outlook, whereas the Mexicans, after four centuries of spiritual as well as material helotage, are now taking their first opportunity to make Western civilisation their own by adapting it to their native circumstances.

The three Islamic peoples which have been experimenting in dictatorships have been more fortunate than Mexico, for by the skin of their teeth they have all of them just escaped the unpleasant experience of external subjugation at the hands of Western Powers. They have realised that their only chance of standing up against the tremendous impact of Western civilisation is to come on to the Westerners' ground and fight them with their own weapons. They have seen that the choice lies between ceasing to exist or getting themselves initiated into the life of the Western World, and that the soft option of vegetating on as "peculiar peoples" is not open to them at all. They have also seen that they have no time to lose, and the dictatorship is their "short cut" for travelling in the twinkling of an eye from the picturesque City of Destruction to the city of skyscrapers, motor-cars, sewing machines, machine guns, and all the other clockwork with which the West has dominated the world. On this wave the Turkish, Persian and Afghan dictators have ridden into power—but surf-riders have to reckon with the nature of the shore. Mustafa Kemal has seen a clear channel ahead of him and has gone at full tilt; Riza Paplani has seen rocks ahead and has prudently reduced his speed in time; Amanullah has ignored the rocks and has crashed on them—his abdication is just announced as these lines are being written. It remains to be seen whether, sooner or later, his fellow-dictators will share his fate, for "short cuts" usually have to be paid for dearly in the end.

Here it is that Democracy, much abused and ridiculed and belittled as she is by all dictators, may conceivably take her revenge. When you recite the virtues of Democracy to your dictator he tells you rather testily that it is inefficient or out of date, or that, at any rate, it grinds out its results so slowly that he really cannot afford to wait. Since the war this attack on Democracy has been made with some effect; and, believing as we do that the democratic type of government, whatever its shortcomings, is very much the best that has yet been worked out for a community on the scale of the modern national state, we are bound to feel that every blow struck against it is a blow to the progress and indeed to the stability of the international comity of peoples. The truth is that dictatorships are like bayonets. You can do everything with them except sit on them—and when your dictator replies that he has never dreamt of making his regime permanent but has only embarked on it as a "short cut" for getting certain urgent and indispensable things done, it is sufficient to refer him to the lessons of history, which show that it is infinitely harder to lay a dictatorship down than to take it up. Thus our comment on King Alexander's coup d'état, as on Signor Mussolini's or the Marquess de Estella's, is *respice finem*. And poor King Amanullah—the first death's-head at the dictatorial feast—rather aptly points the moral.

The New York Trust Company

Capital, Surplus & Undivided Profits - $34,000,000

BANKING FACILITIES

100 Broadway New York City

INDUSTRIAL PROFITS.

A CONTINUED upward tendency, though less marked in degree than that noted at the end of the third quarter of the year, is shown by our analysis of the profits of 412 joint-stock enterprises whose accounts have been examined during the past three months. The net profits of these companies, after payment of debenture interest, amounted in the aggregate to £36,120,801, an increase of £1,084,360, or 3.1 per cent., in comparison with the net profits earned by the same companies in their previous financial year. From the table below it will be seen that an increase has been recorded in each quarter of 1928, the rate of increase shown by the aggregate figures for the year being 7.2 per cent:—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.)

	Number of Companies.	Reports Published in 1927.	Reports Published in 1928.	Increase. £	Increase. %
First quarter	504	£ 53,646,330	£ 61,822,534	8,176,204	15·2
Second quarter	556	57,729,860	58,477,637	747,777	1·3
Third quarter	237	21,170,777	23,221,775	2,050,998	9·7
Fourth quarter	412	35,036,441	36,120,801	1,084,360	3·1
	1,709	167,582,408	179,642,747	12,060,339	7·2

The quarterly figures, it should be appreciated, do not represent the net earnings of identical periods in all cases, since the interval between the close of a company's financial year and the issue of its accounts varies considerably in practice. In most instances, however, the accounts published during the past three months relate to years ended June 30, or September 30, 1928, so that the previous working periods with which comparison is made covered some portion of the coal stoppage. The next table gives the quarterly fluctuations in net earnings during the past seven years:—

	1922. %	1923. %	1924. %	1925. %	1926. %	1927. %	1928. %
First quarter	—43·4	+41·4	+ 8·7	+ 9·1	+ 7·6	— 4·0	+15·2
Second quarter	—33·7	+22·1	+ 3·0	+12·1	+ 8·3	— 5·7	+ 1·3
Third quarter	—23·5	+65·2	+ 2·3	+ 4·8	+ 2·8	+ 2·4	+ 9·7
Fourth quarter	+ 3·9	+11·4	+13·3	+ 6·4	+ 3·8	+ 0·3	+ 3·1
Year	—29·0	+30·6	+ 8·6	+ 8·7	+ 6·3	— 3·0	+ 7·2

It will be observed that, in the aggregate for 1928, the decline of 3 per cent. recorded a year ago, as the result of the industrial troubles of 1926, has been more than made

good. The total figures, however, obscure to some extent both the industrial set-back caused by the coal stoppage and the subsequent recovery, since the profits of rubber-producing concerns rose very substantially in 1926, whereas this year a striking decline in this group, and also in the oil group, has been shown. The following table, which classifies under 16 heads the 412 companies analysed during the quarter, illustrates the position clearly :—

NET PROFITS (after PAYMENT of DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Quarter Ended December 31. 1927.	1928.	Increase.	%	Decrease.	%
		£	£	£		£

Total	412	35,036,441	36,120,801	1,084,360	3·1	..	..

(a) Cannot be expressed as an arithmetic percentage.

Excluding from the above list the 119 nitrate, oil, rubber, and tea companies whose accounts were published during the past quarter, we find that the aggregate net earnings of the remaining 293 concerns show an increase of nearly 16 per cent. On balance, the iron, coal, and steel group recorded a substantial improvement, though seven out of the 32 companies examined made a loss in their financial year. The increase in the case of land, mortgage, and trust companies' profits is worthy of note, and it is satisfactory to observe a continued rise in the profits of the miscellaneous group, in which the great majority of the 108 concerns analysed did well. The large rise in the profits of shops and stores was occasioned almost entirely by the improved results of Harrods (B.A.) and its subsidiary, South American Stores. Brewery profits again increased, but the "catering" group, largely owing to the fall in A.B.C. profits, made a less favourable showing, while the heavy decline in the case of motor and cycle profits is an indication of the keenness of competition in the motor-car producing industry.

In the next table we set out the distribution of profits during each of the past four quarters :—

DISTRIBUTION of PROFITS.

1928.	Net Profits.	Ordinary Dividend.	%	Preference Dividend.	%	To Reserve, &c.	%
	£	£		£		£	
First quarter	61,822,534	36,557,829	59·1	11,093,596	17·9	14,171,199	23·0
Second quarter	58,477,637	33,960,930	58·1	13,115,605	22·4	11,401,102	19·5
Third quarter	23,221,775	13,207,015	56·8	3,917,390	16·9	6,097,370	26·3
Fourth quarter	36,120,801	22,176,868	61·4	5,548,214	15·4	8,395,719	23·2
	179,642,747	105,898,242	58·9	33,679,115	18·8	40,065,390	22·3

The last column includes the net increase in balances carried forward, as well as specific allocations to reserve. In each quarter of 1928 the proportion of profits retained in industry was substantially larger than a year ago. The average for the past year works out at the relatively satisfactory figure of 22.3 per cent., in comparison with 17.2 per cent. in 1927.

Similar figures for each group are set out below :—

	Net Profits.	Ordinary Dividend.	%	Preference Dividend.	%	To Reserve, &c.	%
	£	£		£		£	
Breweries	4,071,546	2,249,603	55·3	732,819	18·0	1,089,124	26·7
Hotels, resta'r'nts, &c.	506,969	294,323	58·1	165,083	32·6	87,563	17·3
Iron, coal, and steel	619,646	409,178	66·0	176,158	28·4	34,310	5·6
Land, mortgage, &c.	2,376,298	1,755,513	74·0	315,116	13·3	305,669	12·7
Motor and cycle	569,269	539,512	94·6	84,568	14·9	*Dr 54,911*	..
Nitrate	13,960	20,508	147·0	..	..	*Dr 6,548*	..
Oil	4,472,397	2,154,694	48·0	875,000	19·6	1,442,703	32·4
Rubber, &c.	971,973	589,479	60·6	26,644	2·7	355,850	36·7
Shipping	1,639,531	760,774	46·4	390,260	23·8	488,497	29·8
Shops and stores	1,222,028	657,466	53·8	310,100	25·4	254,462	20·8
Tea	240,931	208,746	86·6	11,620	4·8	20,571	8·6
Telegraphs, &c.	74,739	15,444	20·7	10,952	14·6	48,343	64·7
Textiles	261,840	102,753	39·2	105,358	40·2	53,729	20·6
Tramways	138,231	68,421	49·5	nil	..	69,810	50·5
Trust companies	1,989,249	1,122,224	56·5	424,259	21·3	442,766	22·2
Miscellaneous	16,952,194	11,268,236	66·5	1,920,177	11·3	3,763,781	22·2
Total	36,120,801	22,176,868	61·4	5,548,214	15·4	8,395,719	23·2

In the matter of reserve appropriation, the best showing is made by telegraphs and tramways—followed by oil, rubber, and shipping concerns. Profits were also distributed conservatively by the brewery, trust, and miscellaneous groups. The motor and cycle companies in the aggregate come out badly, while the allocations to reserve made by the iron, coal and steel group, though small in themselves, contrast favourably with the position a year ago, when heavy withdrawals were made.

In the next table we give the ratios of net profits and of the amounts reserved to total ordinary and preference capital :—

1928.	Total Ord. and Pref. Capital.	Net Profits.	%	Carried to Reserve, &c.	%
	£	£		£	
First quarter	530,963,258	61,822,534	11·6	14,171,199	2·7
Second quarter	558,893,092	58,477,637	10·5	11,401,102	2·0
Third quarter	195,502,736	23,221,775	11·9	6,097,370	3·1
Fourth quarter	328,226,005	36,120,801	11·0	8,395,719	2·5
	1,613,585,091	179,642,747	11·1	40,065,390	2·5

Taking the annual average of the quarterly figures, the ratio of net profits to capital in 1928 works out at 11.1 per cent. in comparison with 10.5 per cent. in 1927, and 11.8 per cent. in 1926. The ratio of amounts reserved, 2.5 per cent., contrasts with 1.8 per cent. in 1927 and 2.8 per cent. two years ago. The average rates paid on the nominal value of debenture, preference, and ordinary capital in each quarter of the past four years are summarised below :—

AVERAGE RATES PAID.

	On Debenture Capital. 1925.	1926.	1927	1928.	On Preference Capital. 1925.	1926.	1927	1928.	On Ordinary Capital. 1925.	1926.	1927	1928.
	%	%	%	%	%	%	%	%	%	%	%	%
1st quarter	4·63	4·65	4·80	4·78	5·3	5·4	5·1	5·3	10·5	10·9	10·4	11·3
2nd "	5·40	5·14	5·30	5·43	5·8	5·8	5·9	6·0	9·9	11·7	11·8	10·9
3rd "	4·96	5·02	4·98	4·90	5·0	4·8	5·2	5·4	9·9	10·5	10·2	10·7
4th "	5·30	5·05	5·19	5·04	5·6	5·4	4·9	4·9	11·0	10·8	10·1	10·3
Year	5·11	4·96	5·08	5·02	5·5	5·4	5·3	5·4	10·3	11·1	10·8	10·6

The average rate of dividend paid on ordinary capital in the past quarter is higher than a year ago, but the average for the past 12 months is below that for 1927 and 1926.

The concluding table gives the average rates paid in the past quarter, analysed by groups, together with the average rate on ordinary capital shown in our analysis for the corresponding period of 1927 :—

	Debenture Capital.	Rate of Interest.	Preference Capital.	Rate of Interest.	Ordinary Capital.	Rate of Dividend.	Rate of Div. a Year Ago.
	£	%	£	%	£	%	%
Breweries	19,459,124	4·8	11,880,223	6·2	15,198,653	14·8	12·4
Hotels, restaurants, &c.	2,463,184	4·2	2,813,303	5·9	3,019,622	8·4	10·6
Iron, coal, and steel	17,088,721	5·6	16,858,746	4·0	34,455,246	1·2	0·9
Land, mortgage, &c.	10,744,628	4·3	7,362,614	4·3	15,666,079	11·2	10·7
Motor and cycle	175,938	8·2	1,763,992	4·8	3,333,340	16·2	8·1
Nitrate	75,000	5·0	nil	..	2,089,000	0·9	0·6
Oil	8,829,826	5·5	10,500,000	8·3	24,757,846	8·7	11·1
Rubber, &c.	1,271,893	6·5	1,040,625	2·6	13,884,272	4·3	13·8
Shipping	11,160,310	4·9	7,224,260	5·4	8,151,913	9·3	9·3
Shops and stores	2,042,800	5·8	3,530,000	8·8	5,738,437	11·5	8·5
Tea	87,000	5·1	197,000	5·9	921,222	22·6	29·1
Telegraphs, &c.	254,200	5·7	136,975	8·0	636,975	2·4	9·1
Textiles	1,716,807	6·4	1,894,939	5·5	2,041,149	5·0	6·4
Tramways	248,554	5·8	nil	..	1,636,609	4·2	7·6
Trusts	10,408,191	4·4	13,317,034	3·2	15,455,841	7·3	8·9
Miscellaneous	12,211,796	5·2	33,789,826	5·7	68,910,164	16·3	14·6
Total	98,218,072	5·0	112,329,637	4·9	215,896,368	10·3	10·1

As compared with a year ago, a reduction in the average rate of ordinary dividend is shown by the hotel, pil, rubber, tea, telegraph, tramways, and trust company groups. On the other hand, the average rate of 16.3 per cent. paid by the large miscellaneous group compares with 14.6 per cent. a year ago and 12.6 per cent. in the last quarter of 1926. The apparently high rate of ordinary dividend disclosed in the case of the motor and cycle group is due to the fact that one concern, which has repaid to shareholders most of the original capital, and whose dividend works out at a very high nominal rate, somewhat overweighted this group.

THE BRITISH ELECTRICAL INDUSTRY.

(BY A CORRESPONDENT.)

FROM the general industrial point of view the past year was disappointing. During the first three months production had increased quite considerably compared even with 1927, a year of great activity, and there were prospects that this rising curve would increase in amplitude during the remaining nine months of the year. From the end of March onwards, however, a very definite decline set in and increased in intensity throughout the remainder of the year, so that, on balance, industrial activity was rather less in 1928 than in either 1927 or 1925.

Under normal conditions such a development in industry generally would have affected electrical manufacturing, since it is dependent to an unusual degree for the great part of its output on the state of economic prosperity ruling in practically every industry. Certain factors, however, intervened to raise the industry out of the depression ruling in the country. In the first place the higher level of profits earned by the majority of industrial concerns during the year 1927 made it possible for them to finance more extensive re-equipment and reorganisation schemes, while a number of contracts of a very special nature intervened to make good any decline that might have occurred in the heavy industries. Thus the industrial demand for generating plant in 1928 was almost exactly the same as that of the previous record year, 1920.

The industries contributing chiefly to such an expansion were, first of all, chemicals, the large extension schemes initiated by the Imperial Chemical Industries at Billingham proving as valuable to the industry as the total of all the contracts placed by the Central Electricity Board this year. This activity in the chemical industry had quite a considerable influence on other industries, which placed in turn orders for electric motors and other driving equipment. Other industries which were important from the electrical point of view were paper, chiefly owing to extensions carried out by two very large firms operating in the South of England, and artificial silk, where two important firms again, operating at Derby and Burton-on-Trent, were carrying out schemes for increasing very rapidly their production. The cement industry was also active, although in this case one small order was lost owing to foreign competition. In the coal-mining, iron and steel industries the depression ruling in them and the very narrow margin of profit earned during the last few years combined to reduce their demand to a minimum. In shipbuilding activity above the usual ruled, a number of motor-ships being electrically equipped during the past year.

On the whole, therefore, the industrial demand during 1928 was distinctly better than the average, even although the basic industries contributed little to that result. It is difficult, however, to prophesy that in 1929 this state of affairs will be paralleled, since the general depression ruling last year will affect the electrical industry then. On a long view, therefore, the industrial demand may possibly be rather less than in 1928, but the operation of the Government's de-rating schemes in 1929 may bring increased activity in the following year, especially from the coal-mining, iron and steel industries.

The production of electricity, which reached a new record of almost exactly 10,000 million units for the year ending March 31, 1928, was affected by the trade depression during the last nine months, although there has been a very rapid increase in the domestic and commercial loads. The result has been that, on balance, the rate of increase during 1928 is possibly not much more than 8 per cent. At that, however, it is not markedly less than the average ruling during the last seven years, but it does not compare with developments in other countries. It has been generally assumed that, electrically, Great Britain has definitely lost ground in the post-war decade, and one of the principal motives inspiring the re-organisation of national production, as laid down in the Electricity Supply Act of 1926, was that of bringing this country as rapidly as possible into line with the other exporting countries competing with us in the markets of the world.

When, however, the statistics for these countries are examined, we find that, in the United States, with all its high standard of development, an increase of more than 9 per cent. was recorded in 1928 over 1927; in Germany, 17 per cent.; in Italy, 12 per cent.; in Canada, 16 per cent.; and in Switzerland slightly less than 10 per cent. On balance, therefore, the leeway has, if anything, increased, and the explanation can be found in the fact that, in all these countries, more active trade has been experienced this year than in Great Britain. The very fact that we have been able to maintain an increase of 8 per cent. is sufficient tribute to the enterprise and success of those who are responsible for the production and distribution of electricity in this country.

The Central Electricity Board, which began its operations in the spring of 1927, has now approved four important schemes, covering South-East England, Central England, North-West England and North Wales, and Central Scotland, while the scheme dealing with the North-East Midlands and Yorkshire will be published this month. These schemes altogether cover slightly more than 75 per cent. of the entire electricity production of the country, the only area of outstanding importance omitted being the North-East Coast, supplied by the Newcastle Electric Supply Company, which is already highly organised.

Developments in the public production of electricity and in the allocation of contracts for generating equipment have been dominated by the schemes surveyed by the Central Board. Orders were placed for overhead transmission lines, transformers and switchgear for Central Scotland, for cables, overhead transmission lines and switchgear for South-East England, while tenders for the supply of transformers for the same scheme have been received. The total value of the orders placed by the Central Board during the past year has been almost exactly two and three-quarter million pounds.

The national power scheme has proved beneficial to the manufacturing industry in more ways than this. Largely owing to the initiative of the Electricity Commissioner and the Central Electricity Board, the extensions of selected stations and the building of new super-power stations, especially in South-East England, were accelerated. Such direct acceleration brought to the industry orders for 150,000 kilowatts of new plant which it might not have had before 1929. Among such important orders must be classified two units of 67,200 kilowatts for the new Battersea power station of the London Power Company, 30,000 kilowatts for Hackney Corporation, 32,000 kilowatts for Battersea Corporation, 30,000 kilowatts for West Ham, 15,000 kilowatts for Poplar Council, and 15,000 kilowatts for Southampton. In other areas, Bristol placed 51,000 kilowatts, Bradford 30,000 kilowatts, Leeds 50,000 kilowatts, Leicester 25,000 kilowatts, the Clyde Valley Company 20,000 kilowatts, and Bury 10,000 kilowatts, while other undertakings operating in Scotland and the North of England were also in the market for generating plant.

The greater part of the contracts secured for South-East England were placed during December, and this month brought the annual total up to what must be considered a new record for generating equipment for public undertakings during the post-war decade. It is difficult to tell what proportion of this high total has been due to the increased consumption of electricity, and what proportion to direct or indirecet acceleration of orders in connection with the national scheme. We have already given an estimate of 150,000 kilowatts, but this must err on the conservative side.

In other sections of the industry, such as industrial motors, 1928 cannot be regarded as even a normally active year, although it showed signs of recovery towards the end, while in transformers and small apparatus, competition has been exceptionally fierce, with the result that many firms report a record turnover, with an abnormally low margin of profit resulting therefrom. Taking the home market in every possible branch, one should regard 1928 as a very good year, the Central Electricity Board and Imperial Chemical Industries being responsible for the improvement recorded.

In exports, however, the position has not been so satisfactory, largely owing to uncertain and even depressed trade conditions in the Dominions and Colonies.

This observation applies especially to Australia, New Zealand and South Africa, the clearest indication of unfavourable conditions electrically being shown in the value of new capital raised by the Dominions and Colonies in London during the year. In the majority of cases a fairly high percentage of such new capital has been required for extensions of public works, including electric power supply. The new capital raised in London during 1928 amounted to £76,000,000, compared with £96,000,000 in 1927, the decline being most notable in the case of New South Wales, South Africa, and the State of Victoria, Australia. All these areas form exceedingly important markets for the British electrical manufacturer, and all of them placed very few contracts during 1928. On the other hand, less important parts of the Empire, such as Palestine, the Malay States and Ceylon, were unusually active, while India, especially towards the end of the year, showed a greatly improved rate of demand.

The most important markets outside the Empire are to be found in Europe, South America and the Far East. Large power schemes in Hungary, Holland and Greece, with isolated orders from Finland, Norway, Roumania, Portugal and Spain, brought the European market, for the first time in seven years, into prominence, while satisfactory orders were obtained in China.

Export shipments, as such, were almost exactly the same as during 1927, and will probably show a considerable increase during 1929, but this stationary condition has coincided with very considerable increases recorded in other exporting countries—Germany recording 24 per cent., the United States about 14 per cent., Switzerland 15 per cent., and France 18 per cent.—so that, on balance, the world competitive position of Britain was worse in 1928 than in the previous year. Reparations have undoubtedly been a factor causing the improvement in the German total, and they may be expected to be even more effective in the future. One can assume, however, that the disadvantage under which Britain has laboured in the competitive field through high costs and high overhead charges, due to taxation and other elements beyond its control, will be less in operation during 1929, and the volume of orders already received, coupled with the improvement in Australian and South African conditions, may lead to the beginning of a new upward cycle in exports.

On the whole, therefore, both on home and export account, the electrical industry showed a slight improvement in actual production over 1927, and may increase its output very considerably during 1929. The prospects are certainly more favourable than would have been considered possible in the middle of 1928. The national scheme is coming into operation much more widely and much more fully, and the orders due from it will increase in importance during the next three years. The waiting time is definitely over, and a considerable increase in employment in the industry may be expected.

A YEAR'S OVERSEAS TRADE.

THE December trade figures all show slight declines below those for November, but these are fully accounted for by the Christmas holidays. In one important respect the December returns are actually better than those for the preceding month. Raw material imports were valued at £30.9 millions, as against £29.9 millions for November, and a monthly average of £27.9 millions for the year. The significance of the increase, however, is somewhat discounted by the fact that it was confined solely to imports of raw cotton. The total figures for December imports, exports and re-exports, together with the usual comparisons, are given below :—

MONTH of DECEMBER.

	1928.	Increase or Decrease on December, 1927.		Increase or Decrease on December, 1925.	
	£	£	%	£	%
Imports	101,451,890	— 3,956,240	— 3·7	— 32,821,013	— 24·4
British exports	60,394,329	+ 1,560,405	+ 2·6	— 5,374,332	— 8·2
Re-exports	9,079,318	— 1,230,485	— 11·7	— 5,565,149	— 38·4
Total exports	69,473,647	+ 329,920	+ 0·5	— 10,939,481	— 13·5
Excess of imports over total exports	31,978,243	— 4,267,686	— 11·7	— 21,884,532	— 40·8

The decline in the adverse trade balance, especially when compared with 1925, is very marked.

The 1928 figures are given below. In comparing them with those of previous years, three important facts must be borne in mind. The first is that the early months of 1927 were governed by the abnormal conditions which were the aftermath of the coal stoppage. Imports of coal and iron in particular were unusually heavy. The next is that prices generally were lower in 1928 than in 1925, to an extent which probably more than accounts for the percentage decline in imports and exports between the two years. The third is that one cause of this year's fall in the value of re-exports is the collapse of rubber prices that occurred last spring :—

CALENDAR YEAR.

	1928.	Inc. or Dec. on 1927.		Inc. or Dec. on 1925.	
	£	£	%	£	%
Imports	1196940364	— 21,400,796	— 17 6	—123,774,836	— 9·4
British exports	723,427,455	+ 14,346,192	+ 2·0	— 49,953,247	— 6·5
Re-exports	120,352,491	— 2,600,348	— 2·1	— 33,684,308	— 21·8
Total exports	843,779,946	+ 11,745,844	+ 1·4	— 83,637,555	— 9·0
Excess of imports over total exports	353,160,408	— 33,146,640	— 8·6	— 40,137,281	— 10·2

If due regard be paid to these factors, the 1928 figures compare quite favourably with those of preceding years. The improvement is not sensational, but there is distinct evidence of its existence. In particular, as the following table shows, the adverse balance was not only less than that in 1927 for the first four months of each year, when 1927 was subject to abnormal conditions, but also for the last eight months, when no distorting influence was at work. This table also illustrates both the unfortunate setback which occurred in the summer of 1928 and the extent to which the ground so lost was recovered in the autumn :—

MOVEMENTS of MERCHANDISE TRADE BALANCE.

	Imports in 1928.	Total Exports in 1928	Excess of Imports in 1928.	Excess of Imports in 1927.	Excess of Imports in 1925.
	Million £	Million £	Million £	Million £	Million £
January	100·4	70·0	30·4	48·3	46·6
February	98·8	68·9	29·9	30·2	27·0
March	110·5	76·2	34·3	40·6	29·7
April	96·8	66·2	30·6	36·3	37·1
First four months	406·5	281·3	125·2	155·3	140·4
May	99·4	70·4	29·0	20·8	25·6
June	99·4	71·0	28·4	32·7	41·5
July	95·4	69·3	26·1	27·6	22·5
August	97·7	71·0	26·7	21·9	17·2
September	87·7	63·5	24·2	32·7	26·7
October	102·6	73·2	29·4	34·4	28·4
November	106·8	74·6	32·2	26·2	40·1
December	101·4	69·5	31·9	36·3	53·9
Last eight months	790·4	562·5	227·9	232·6	255·9
Full year	1,196·9	843·8	353·1	387·9	396·3

To consider the 1928 returns in greater detail, the next table shows them distributed into the three main categories of foodstuffs, raw materials, and finished goods. The decline in foodstuffs is probably a matter of price. Raw material imports are discussed later. Trade in finished articles is on the whole reassuring. Comparing the 1927 and 1928 exports, we have recovered at least an appreciable part of our lost ground :—

	1925.		1927.		1928.	
	Retained Imp'rts.	Exports.	Retained Imp'rts.	Exports.	Retained Imp'rts.	Exports.
	Mln. £	Mln. £	Mln. £	Mln. £	Mln. £	Mln. £
Food, drink, and tobacco	538·0	55·0	512·8	52·3	504·4	54·3
Raw materials and articles mainly manufactured	334·5	84·4	280·8	76·4	268·3	70·2
Articles wholly or mainly manufactured	288·1	616·6	297·3	564·0	292·0	578·6

These views are reinforced by the following table. This illustrates the falling-off in our coal exports, and also places in its proper perspective the present agitation for the safeguarding of iron and steel. Since 1927, imports have fallen from £33·7 to £23·9 millions, which is hardly evidence that "abnormal" foreign competition exists

to-day. In contrast to the imports, exports are moderately well maintained :—

	1925.		1927.		1928.	
	Retained Imports.	Exports.	Retained Imports.	Exports.	Retained Imports.	Exports.
	Mln. £.	Mln. £.	Mln. £.	Mln. £.	Mln. £.	Mln. £.
Coal	0·02	50·5	6·6	45·5	0·04	39·1
Iron and steel and manufactures thereof	23·7	67·9	33·7	69·4	23·9	66·8

Finally come two tables showing in detail imports and exports of some leading commodities. Taking imports first, 1928 does not perhaps compare very favourably with the previous years, though possibly if the 1927 returns were corrected for the abnormalities of the first four months of that year, the comparison would be more reassuring :—

SOME FOODSTUFFS and RAW MATERIAL IMPORTS.

	Quantity.			Value per Unit.		
	1925.	1927.	1928.	1925.	1927.	1928.

Exports are more satisfactory. Our coal shipments are little below the 1925 level, and iron and steel exports are the best since 1923, the year of the Ruhr occupation. The same applies to textile machinery, while machinery in general has in 1928 outstripped every year given in the table. The weak spot is textiles, all of which are relatively bad :—

So much for our merchandise trade. Next come imports and exports of bullion and specie, which it may be mentioned do not necessarily agree with gold losses and gains by the Bank of England. As regards gold, we imported £47.8 millions and exported £60.5 millions—a net loss of £12.7 millions, whereas the Bank alone showed a gain of just over one million. The explanation lies partly in dealings in the gold market outside the purview of the Bank, and possibly also in "earmarkings" by the Bank :—

MOVEMENTS of BULLION and SPECIE.

	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
	£	£	£	£
1922	34,542,157	44,838,292	10,099,890	13,235,269
1923	43,986,655	57,434,355	9,611,855	11,687,714
1924	35,791,664	49,419,607	13,931,746	12,422,661
1925	41,460,892	49,674,766	10,612,558	12,161,255
1926	30,547,498	27,188,223	11,198,113	10,957,801
1927	32,404,512	29,060,010	7,173,051	7,145,577
1928	47,808,055	60,523,701	10,200,223	9,188,769

Imports of silver exceeded exports by just over £1,000,000, the turnover being commensurate with that of previous years.

The final point of interest is our real balance of trade. For this we must await the Board of Trade estimate, which should be available in a fortnight's or three weeks' time. Meanwhile, it is possible to make a provisional estimate. Taking imports and exports of merchandise, bullion and specie, the adverse balance for 1928 was only £341 millions, as against £389 millions in the preceding year. As regards "invisible" items, last year Government net receipts from abroad were shown as exactly balancing Government payments. This year, receipts on Reparation and war debts account are some £4 millions higher, while in addition our expenditure on the Shanghai Defence Force has been less. As a rough estimate, Government net receipts may be put this year at £5 millions. Shipping earnings last year were £140 millions. This year the *Economist* freight index is about 97 as against 109.6 in 1927. Assuming the volume of traffic remains about the same, it may be wise to scale down this item to £130 millions. Interest on overseas investments last year was given as £270 millions. This year the figure is undoubtedly higher, and may well be as much as £285 millions. Commission, short interest, &c., were £63 millions in 1927. This year we have had a bigger volume of acceptance business, and much greater activity on the Stock Exchange. There seems no reason why this item should not be raised to £70 millions. If last year's receipts from "other services" be kept unchanged at £15 millions, this raises our tentative estimate of "invisible exports" to a total of £505 millions, or £17 millions more than a year ago. Combining this with our adverse visible balance for 1928 of £341 millions, this leaves a net surplus of £164 millions, against £99 millions for 1927. The 1928 surplus will, if this rough estimate should prove even approximately correct, be the highest recorded since 1922.

AMERICO-CANADIAN PROBLEMS.

(BY OUR OTTAWA CORRESPONDENT.)

THE relations, political, economic, and social, of the two great communities which exist between the Rio Grande River and the Arctic Ocean are always of necessity closely intertwined, and it happens that at the present moment their complexities are giving rise to a variety of interesting problems, which are providing material for discussion and controversy on both sides of the international frontier. The general trend of the Republican campaign and the high Protectionist attitude taken by Mr Hoover had prepared the majority of Canadians for the news recently forthcoming from Washington that the existing Congress, which has now begun its last session, would deal with a measure of tariff revision which would impose higher duties on Canadian farm produce as a means of pacifying the discontented farmers of the American Middle-West. It is highly doubtful, however, whether a tariff measure can be passed before the term of the present Congress expires next March, and it is quite certain that puissant industrial and financial interests will exert themselves to prevent any drastic measure which would provoke resentment in Canada and create a demand for fiscal reprisals. At present Canada ranks as the best customer of the United States; according to the latest trade figures available from the Dominion Bureau of Statistics, which cover the twelvemonth period ending October 31, 1928, the United States during that time exported to Canada goods valued at $805,482,777, while she only imported from Canada goods worth $492,582,966. These figures are used by Protectionist interests and Conservative politicians in Canada to argue that the situation demands immediate remedy through the imposition of higher Canadian duties on imports from the United States. The Tariff Advisory Board at Ottawa, moreover, last autumn dealt with a series of applications for upward tariff changes, which are mostly designed to curtail American imports. Moreover, Mr Hoover must realise that a fiscal policy which would cut down Canadian exports to the United States and impair the prosperity of important Canadian industries would not produce an atmosphere in the Dominion favourable to cordial co-operation in the completion of the St. Lawrence Waterway project to which both the President-elect and the Republican party are deeply committed. Mr. Hoover, indeed, has for some years past been one of its most earnest advocates, and during the late campaign he repeatedly pledged himself to promote its early construction. But, obviously, he cannot expect to compass simultaneously a high tariff policy which will

hurt Canada, and the consummation of the waterway project for which Canada's co-operation is imperatively required.

For the moment the waterway project remains in a state of suspended animation. The Supreme Court of Canada has heard the argument in the great constitutional reference about the respective jurisdictions of the Federal and provincial authorities over water powers on navigable rivers, and its members are at present engaged in the task of preparing their judgments upon the immensely complicated question which is involved. But even if, as is highly doubtful, a unanimous verdict is forthcoming, the general anticipation is that on so vital an issue the final word must lie with the Privy Council, whose decisions are not usually secured with great celerity. Meanwhile, Ottawa is to-day the scene of a desperate battle conducted by two extensive corps of lobbyists between the supporters and opponents of the plan sponsored by a corporation known as the Beauharnois Light Heat and Power Co. It contemplates the canalisation of the section of the River St. Lawrence between Lake St. Francis and Lake St. Louis, beginning some 25 miles west of Montreal, and the development of a large volume of hydro-electric energy from the canal works. The promoters of the scheme propose to hand over to the Federal Government a completed navigable channel for this particular section in return for the right to dispose of the power which has been developed. But the project has aroused the keen hostility of the two great power corporations of the Montreal region, the Montreal Light Heat and Power Co, and the Shawinigan Co, and they are exerting all their influence to thwart it. The Government at Ottawa, faced with these contending interests, finds itself in a difficult dilemma, and it has agreed to arrange for a public hearing, at which each side will have an opportunity of stating its case.

It must, however, certainly await the decision of the Supreme Court before it gives any verdict upon the application of the Beauharnois Co., and even then it must give consideration to possible international complications which may arise with the United States. They have their origin in the Treaty of Washington concluded in 1871, under which navigation rights were given to the United States over the natural channel of the St Lawrence River, but were withheld in the case of canals constructed on Canadian territory.

Legal authorities of high standing believe that the terms of the Washington Treaty leave the United States in a position to raise serious objections to the project on the ground that it will shift navigation from the river proper, where American rights are perpetually guaranteed, to a canal where those rights are not safeguarded to the same extent. In the light of these facts it is altogether likely that the Canadian Government will take the matter up with Washington through the proper diplomatic channels and be guided by the result. Furthermore, strong hostility to the Beauharnois scheme is being manifested by steamship companies which operate on the St Lawrence and enjoy during the summer months a profitable tourist traffic. Accordingly, for the moment the prospects of the Beauharnois enterprise are considerably dimmer than they were a few months ago.

The illicit liquor traffic which, despite all efforts to suppress it, still flourishes in huge volume across the international boundary is also once more occupying public attention on both sides of the line. During the recent Presidential campaign the Republican party pledged itself to more effective enforcement of the prohibition laws, and prohibition officials have been lamenting the continued influx of liquor from Canada. So a report has been circulated from American sources that the Coolidge Administration intends to ask the King Government to review the whole situation and consent to a drastic amendment of the existing anti-smuggling treaty of such a character that it would make possible the extradition of officials of Canadian brewery and distillery companies whose products cross the border to slake the thirst of American non-conformists to the Volstead Act. Now, Canada contains a large body of ardent "drys," who would, naturally, be sympathetic to any American efforts calculated to make prohibition a success, but there will be scant sympathy in the Dominion for any attempt to enlist the resources of its Government as an agent for the enforcement of the Volstead Act upon Canadian territory. However, despite these rumours, the only known move which has been made so far in this connection is an arrangement for an informal conference in Ottawa early in January at which the international liquor situation will be discussed.

Considerable comment of a critical character has also been aroused in Canada by a recent report of the U.S. Shipping Board, which recommended retaliatory fiscal measures in shape of an extra 10 per cent. surtax on American imports entering *viâ* Canadian ports by way of reprisal for the provision in the Canadian Customs tariff which gives an additional rebate of 10 per cent. of the normal British preferential duty on British goods imported direct through Canadian ports and denies it when they enter through American ports. Admittedly, this provision has diverted a certain amount of traffic in the winter months from ports like Portland, Maine, and New York, but the total volume is not large. However, the consequences of such a retaliatory measure are being examined at Ottawa, and the conclusion is that its consequences on the Eastern seaboard would be negligible, as few American imports enter *viâ* Canada's eastern ports, but that it would probably divert a substantial quantity of traffic in imports of tea and silks from the Orient from Vancouver to American ports like Seattle and San Francisco, and thereby affect adversely the revenues of Canadian railways.

Notes of the Week.

The First Bank Meeting.—As is their usual custom, Barclays Bank are this year the first to hold their annual meeting, which took place on Thursday of this week. Mr Goodenough used the opportunity of his annual address to his shareholders to cover a wide field. On home industrial conditions he spoke with restrained optimism, and when he came to the reorganisation proposals of the Lancashire cotton industry, he made a very concise and timely statement on the banker's side of the case. "Speaking generally," he said, "the banks would find it difficult to exercise compulsion upon customers to enter into the scheme in the case of live concerns, but they would certainly wish to help in the promotion of any sound scheme which would be of advantage to the cotton industry and which their customers would themselves wish to adopt as being calculated to benefit them." Provided that this statement represents the views of other banks as well of that which Mr Goodenough so ably represents, it should help to clear away a lot of the misconception that exists in Lancashire to-day. His summation of the general industrial position was that "except in the coal areas, the South is comparatively prosperous, whilst the North is still suffering from trade depression." He called attention to the need for "sound schemes for amalgamation and reorganisation," a point he had already emphasised when rejecting by implication safeguarding and similar nostrums, he said "steps must be taken to reorganise upon more economical and efficient lines many of our industries which are specially subject to foreign competition." As regards monetary matters, he made an interesting examination of the year's gold movements, many of which he ascribed to special causes. He pleaded for the maintenance of a stable price level, and called attention to the investigation now being made by the Financial Committee of the League into the purchasing power of gold. He discussed the position in New York, and then returning to London noted with approval the increase in the volume of bills that last year appeared in the London market. The final portion of his speech dealt with ways of improving the price of Government securities so as to expedite funding and conversion operations. This perhaps is the only controversial part of his speech. His plea is that every British investor should ear-mark some of his savings for the purchase of Government stock, and that if this were done prices in the gilt-edged market would automatically rise. Every wise investor does so to-day, and the present strength of Government stocks is a silent witness to this. But apart from this, his suggestion raises a host of questions concerning the best use in the broadest national interests of the annual increment in the nation's savings, which might properly form the subject of a lengthy thesis.

Five Bye-Elections.—The succession of Viscount Curzon to the Peerage adds one more to the number of bye-elections now imminent, raising the total to five. These vacant seats are Londonderry, North Midlothian, Wansbeck, Bishop Auckland, and now South Battersea. In two of them, namely, Londonderry and Wansbeck, the result is a foregone conclusion. The Conservatives will almost beyond question hold Derry, and, in any case, a Northern Ireland election is hardly a test of the reaction of public opinion to the record and policy of the three political parties. Wansbeck, too, is a Northumberland mining division which is not likely to swerve from its Labour allegiance. The neighbouring constituency of Bishop Auckland is perhaps a more open question. This, too, is a mining seat with a consistent Labour record; but it is an open secret that, even before the late member's death, there was some local difference of opinion as to the proper candidate to succeed him. Ultimately Mr Dalton was selected to stand at the General Election, but the bye-election has further complicated the position, for Mr Dalton is already in the House representing another division. The Labour party have therefore adopted Mrs Dalton as their candidate, following the precedent set by Mrs Runciman, who won St Ives for the Liberals last year. To set against these Labour complexities, in 1924 the late Mr Spoor won in a straight fight against the Liberal, who presumably received some Conservative support; this time the fight is a three-cornered one, which should favour Labour's chances. North Midlothian has a varied record. The late member won the seat as a Conservative in 1924, but Labour held it in the previous Parliament, and may possibly recover it this time. Apart from the uncertainty of the result, this election is noteworthy for the irruption of a "Scottish Nationalist" candidate, though he cannot hope to do more than complicate the already obscure issue. Finally comes South Battersea. This is a London seat, composed as to the smaller part of a working-class population who may or may not share in the Communist proclivities of their northern neighbours, and as to the larger part of the typical South London middle-class element. In 1924 Viscount Curzon won easily in a straight fight with Labour, and, indeed, the seat has continuous Conservative traditions. This time the Liberal Party have a candidate in the field, and the outcome may be less certain. It will be seen that in several cases a straight fight in 1924 is being followed by a three-cornered fight at the bye-election. This will make it very difficult to deduce from the results anything as to the trend of popular opinion, and, indeed, it is likely that the chief lesson of these elections will be the old one of the inequities of our present electoral system.

The Melchett-Turner Conference.—As time goes by it is natural that uneasiness should increase over the delay on the part of the representative employers' organisations in endorsing the actions of Lord Melchett and his group and promising co-operation with the work of the Conference. In fairness to the employers, however, the difficulties of reaching a quick decision should be clearly recognised. On the labour side the decision to sanction participation in the Conference was comparatively simple, for all that was required was a vote of the Trade Union Congress. On the employers' side no such body of comparable centralised authority exists, and to obtain authoritative sanction for the acts even of so representative a body as Lord Melchett's group undoubtedly is, is of necessity a long and tedious process. Nor can we conceive that the ultimate decision will be adverse. But in view of the multiplication of the difficulties to the trade union leaders which delay inevitably brings, it is to be hoped that the decision will be speeded up as much as circumstances allow. Meanwhile, we are glad to know that the practical work of the Conference continues, especially in the study of the unemployment problem and an exploitation of possible remedies.

The Kellogg Pact Goes Through.—This Tuesday, January 15th, "the Kellogg Pact" was approved in the Senate at Washington by 85 votes to 1. This victory for the supporters of the Pact was not obtained without paying a price, for a 12-days' debate had convinced Senator Borah that he would hardly be able to get the Treaty passed, as he had proposed, without any qualification whatsoever, and accordingly he consented to introduce into the Senate not only the Treaty itself, but the Report of the Foreign Relations Committee of the Senate, in which the Treaty was interpreted as being not incompatible with the Monroe Doctrine. He made it clear, however, that the Report was to be regarded solely as a record of interpretation and "not in any sense" as "for the purpose or with the design of modifying or changing the Treaty or in any way effecting a reservation or reservations to the same." It is not at all surprising that Senator Borah found it necessary to concede this much when the British Government had previously put on record a corresponding interpretation of the Treaty in respect of "a British Monroe Doctrine" regarding certain parts of the Old World. Indeed, we may well be glad that the reaction in Washington to the precedent thus created in London has not been more violent. For our part, we believe that the essential thing was for the Treaty to go through, with or without "interpretations," in Washington, London, Paris, Berlin, Rome, Moscow, and Tokio, and this essential thing has now been achieved. It remains to be seen how the interpretation of the Treaty in the Senate at Washington will affect its fortunes in certain Latin-American countries, whose Governments and public opinions have made up their minds to reject "the Kellogg Pact" rather than seem to take a step which might be construed as an indirect recognition of the Monroe Doctrine as at present formulated in the United States. If these Latin-American countries now hold aloof, that will, of course, be unfortunate, but the misfortune will be a minor one. The great thing is that the traditional right to resort to war as an instrument of national policy has now been renounced, solemnly and publicly, by all the surviving Great Powers.

A Success for Monsieur Poincaré.—On Friday, January 11th, Monsieur Poincaré took a firm seat in the saddle again. After he had addressed the Chamber on his programme a Radical-Socialist interpellation was defeated by a vote of 317 against 253, and thereafter a positive motion of confidence was passed by a vote of 325 against 251. Monsieur Poincaré has certain signal qualities as a man and a statesman—first and foremost, courage courage and honesty, and, third, intellectual precision. The first two of these qualities are virtues in which there can be no such thing as excess, least of all when they are happily exercised by the responsible head of a great State. In the third quality of intellectual precision, however, the degree makes all the difference, and here, in the present as in the past, there is room for strong differences of opinion between Monsieur Poincaré's supporters and opponents in France, and between Frenchmen and their foreign neighbours, as to whether this quality, as displayed by Monsieur Poincaré, remains within the limits of the golden mean or passes over into the dangerous and barren extremes of formalism and rigidity. Liberal-minded observers in this country, knowing the French national penchant towards logic for its own sake, and remembering how this national idiosyncrasy was almost caricatured by Monsieur Poincaré in 1922-1924, cannot help feeling a certain anxiety on this score now that they see him in power again at the opening of another chapter in the long and melancholy history of the Reparation question. It would be the very opposite of liberal-mindedness, however, to condemn Monsieur Poincaré out of hand on his past record without waiting to see what he is actually going to do in circumstances so different from those of half a dozen years ago. And, unless or until he himself proves the contrary, we prefer to believe that Monsieur Poincaré, like most other people in Europe, has moved at least relatively with the times. If he has done so, the qualities which on past occasions have often been employed with such devastating effect for negative

and even destructive ends may now equally well be employed with similar effectiveness in achieving a long deferred piece of international constructive work; and when Monsieur Poincaré intimates, as he did on the 11th, his intention of seeking a final settlement of the Reparations question, we may expect him with all sincerity to throw his powers and energies into this new task. So far so good; yet a certain uneasiness still haunts our minds. Even supposing that Monsieur Poincaré's deliberate policy on certain clearly formulated financial issues, on which he has been returned to power, turns out to be everything that we could wish, there are possibilities of grave damage being done by his incidental and, as it were, instinctive acts. While Monsieur Poincaré's right hand is busied with the franc and Reparations and inter-Ally debts, what turn will his left hand be giving to crucial matters like French national armaments or the régime in Alsace? On the 13th there were two by-elections in Alsace to fill the places of two home-rule deputies. The result has been a fresh and much more decided vote in favour of home rule. Thus, even if Reparations were happily to be removed from the field of contentious issues, armaments and Alsace would still give the parties of the Left the matter for a positive programme of first-class importance. We may note that, in the debate in the Chamber on the 11th, Monsieur Deladier formally declared war on Monsieur Poincaré, and that all but six of the Radical-Socialist deputies followed the leader of their party. In retrospect this may prove to have been a more important event in the sitting of the 11th than the vote of confidence in Monsieur Poincaré.

Statesmanship versus Militarism in the Far East.—In the Far East the great question of the moment is whether militarism, rampant there for so many years, is at last to be brought under control. There is no doubt that peace is the mute desire of the great mass of the Chinese people, and probably most Japanese have the same desire, too; but there is not much comfort in that, for in the Far East, as in Europe, militarists have repeatedly ridden roughshod over the will of the peoples. The issues are really three: first, will it be possible to avoid further clashes between Chinese Nationalist troops and Japanese troops on Chinese soil, like the deplorable affair last year at Tsinanfu? Second, will it be possible to avoid a clash between the coalition of generals paying allegiance to the Kuomintang Central Government at Nanking and the inheritors of Chang Tso-lin's power in the three Manchurian provinces? And, third, will it be possible for the civilian statesmen of the Kuomintang to secure, first the withdrawal of the Japanese troops from Shantung, and, secondly, the progressive and proportional disbandment of the various Chinese armies both in Manchuria and in the Eighteen Provinces? As regards Sino-Japanese relations, it is unfortunate that, before the present tendency towards peace and stability had had time to declare itself in China, a conciliatory policy was replaced by a relatively intransigent policy on the Japanese side. Japan is now the only power with important interests in China which has not come to at least a provisional understanding with Nanking; and this is contrary to the best interests of Japan and China alike. Nevertheless, Sino-Japanese relations are at present in an impasse. The Nanking Government will not apologise for the attack of the Kuomintang troops upon the Japanese in Tsinanfu last year until after the Japanese troops have been evacuated from Shantung; Baron Tanaka will not evacuate until after he has received his apology. We feel that if Baron Shidehava had still been in power in Tokyo this impasse would somehow have been avoided, and we do not believe that the Chinese, who are an acute and sensitive people, would have made the mistake of taking a conciliatory and generous policy as a sign of weakness on the Japanese side. As for the relations of the local Chinese Government at Mukden, in Manchuria, with Nanking on the one side and with Japan on the other, we take it that Chang Hsueh-liang's sudden and successful coup in putting to death two of his father, Chang Tso-lin's, leading generals on January 10th represents a diplomatic victory for Nanking and a diplomatic setback to Japan. At any rate, the tendency at Mukden towards a rapprochement with Nanking—a tendency which has been gradually growing stronger since the death of Chang Tso-lin—is reputed to be the work of the late Manchurian War Lord's son himself; so that presumably Chang Hsueh-liang's enemies in his own household were going on the opposite tack, or, in other words, were setting their caps at Baron Tanaka. Finally, at Nanking, the Minister of Finance, Mr T. V. Soong, has presented a memorandum which is almost an ultimatum to the comanders of the various forces that fly the Kuomintang flag. He has told them, in effect, that disbandment must be drastic and swift if the Nanking Government is not to break down; and its break-down is a contingency that the generals will hardly care to face—partly because the civilian central Government is the sole bulwark against a recrudescence of civil war, and partly because if it broke down through the generals' fault, the generals might have to reckon with the imponderable but formidable force of Chinese public opinion. We sincerely hope that, with this card in his hand, Mr Soong will win his difficult game.

The Experts Committee.—With the publication of the names of the American representatives the new Reparations Committee is now complete, and all that remains to be done is for the formal invitations to be issued and for the Committee to meet. The Committee is unquestionably strong, as is shown by the fact that of its members Mr Owen J. Young (U.S.A.), Sir Josiah Stamp (Great Britain), M. Parmentier (France), Signor Pirelli (Italy), and M. Francqui (Belgium) were also members of the Dawes Committee. The remaining members of the present Committee are Mr J. P. Morgan (U.S.A.) of the famous house bearing his name; Lord Revelstoke (Great Britain), the head of Barings; M. Moreau (France), the Governor of the Banque de France; Signor Luvichi (Italy), Under-Secretary for Finance; M. Gutt (Belgium), assistant delegate to the Reparations Commission; MM. Mori and Aoki (Japan) of whom the former was Financial Attaché in London and the latter is Sub-Governor of the Imperial Bank of Japan; and finally, and in some ways most important of all, Dr Schacht, President of the Reichsbank, and Dr Voegeler, from Germany. Nor is the list of deputies less imposing. Great Britain has appointed Sir Charles Addis and Sir Basil Blackett. The American Government is suggesting Mr Thomas N. Perkins, formerly American observer on the Reparations Commission. France has already appointed MM. Rist and Allix, the latter of whom served on the Dawes Committee. Germany has nominated Dr Melchior, the Hamburg banker, and Herr Geheimrat Kastl, managing director of the Federation of German Industries. The Committee is thus clearly worthy of the arduous and complex task that lies before it. The next thing for it to do is to get to work, and we hope that that will not be long delayed. If we might add a further hope, it is that it will not have its task made unnecessarily complicated, or be expected to cross too many bridges at once. To mention but one point. Every Finance Minister realises the intimacy of the connection between Reparations receipts and war debt payments. Nevertheless, we suggest that pending the completion of the Committee's task, this is a connection which should not receive an undue amount of public emphasis. Germany's capacity to pay is to-day, as in 1924, the question that must receive the main attention.

German Economic Conditions.—A section of the German Press has seized with some eagerness upon the December report on conditions in Germany cabled to Washington by the American Commercial Attaché. It is pointed out that this report, though primarily relating to December, covers in many matters the whole of 1928, and tells a very different story from the Report of the Agent-General for Reparations Payments. This is only another example of the ease with which the Devil can quote statistics for his own purposes. There is no disagreement between the statistics given, but whereas Mr Parker Gilbert had occasion and space to make illuminating comments on his figures, Mr Allport was merely called upon to state bare facts, and that within the limits of a Transatlantic cable. It was, therefore, easy to make out a good debating case

against believers in Germany's prosperity by pointing out that, according to Mr Allport's figures, there has been diminished economic activity in Germany in the last six months; that there is a more than merely seasonal increase in the unemployment figures; that coal exports and car-loadings have declined as compared with the corresponding figures in 1927; that the cost of living has risen and that bankruptcies have increased. These things are all true, and their bare statement in one of a series of monthly reports from a Commercial Attaché contains nothing misleading. But to take them by themselves to refute the much more far-reaching conclusions of a comprehensive report like that of the Agent-General is absurd. Most of the gloomy symptoms mentioned were noted in his report, and in many cases it was shown that the bare figures were likely to prove misleading. The increase in bankruptcies, for example, was partly only nominal, as a result of a change in the law; the increased unemployment figures were accompanied by a practically stationary figure of persons employed, the balance being accounted for by increased population; the increased cost of living has been accompanied by a rise in real wages, and the general recession in trade has been no more than a reasonable reaction from an unhealthy degree of trade expansion earlier in the year. It does not appear that any material is to be found in this report which can legitimately be used to refute the Agent-General's conclusions.

The German-South African Trade Treaty.—Opposition to the treaty, recently signed, but not yet ratified, between Germany and South Africa is steadily growing, both within and outside the Union. As far as can be ascertained from the obscure and sometimes conflicting accounts available, the treaty involves the extension by South Africa of most-favoured-nation treatment to German imports, with the exception of those articles in respect of which preference is already granted to Empire products. On products of certain Empire countries any extension to other Empire countries of existing preferences is also to include Germany. Thus for the two-year duration of the treaty any extension of imperial preference by South Africa appears to be impossible, and some contraction is conceivable. Southern Rhodesia, which, by the terms of her existing Customs agreement with the Union, becomes involved in this new departure without her own consent, is expressing considerable disapproval. The London Chamber of Commerce and the Federation of British Industries, while fully recognising South Africa's right to enter into whatever tariff agreements she pleases, have emphatically protested, on the ground that the treaty imperils the whole structure of imperial preference. They also point out that preference is a very small price to pay for the financial and other benefits which South Africa receives from Great Britain, but this point had already been strongly brought out by the South African Party. Indeed, the abundance of ammunition which the proposed treaty is furnishing to the Opposition has caused many, even of the Nationalists themselves, to revile Mr Beyers for provoking such an issue on the eve of a General Election. The fruit-growers, in particular, whatever their political complexion, are indignant at a measure calculated to impair a system which, they say, has given them in the British market an outlet for 90 per cent. of their output. This feeling is shared by the maize and wool-growers, and there is no doubt that the treaty was an important contributory cause of the loss of a seat by the Labour Party in the recent Langlaagte bye-election. The only capital the Nationalists can hope to make out of it is from the threatened withdrawal of Rhodesia from the Customs Agreement. It is felt, particularly in farmer circles, that Rhodesia profits too much by the Agreement, and the competition of her tobacco and cattle in Union markets is increasingly unpopular, so that a termination of the Agreement might be welcomed. An attempt by one of the treaty's supporters to cite in its defence the Anglo-German Treaty of 1924 is irrelevant, since that agreement excluded not only existing but future preferences. It seems that the Pact Government has allowed a laudable zeal for the most-favoured-nation principle to overrun its political discretion, and the consequences are likely to be disconcerting.

Cotton Mill Combines.—Our Manchester correspondent writes:—It is expected that before the end of this week the company which has been formed to work the amalgamation scheme of the Cotton Yarn Association will have been registered, and it is understood that the promoters will then explain in detail the proposals and the means which are to be adopted to absorb mills. In the meantime another syndicate of Lancashire spinning employers have floated another scheme of amalgamation. A company has been registered with the title of Combined (American) Spinners, Limited. This is the project of a number of Oldham gentlemen who are being led by a Lancashire Member of Parliament and a well-known chartered accountant. It is understood that the mills to be dealt with contain about 7,000,000 spindles. A central holding company has been formed, and the shareholders of each of the combining companies will transfer their shares to the holding company. In exchange the holding company will issue shares to which are attached exactly the same rights and responsibilities as the shares in the original company. The holding company will then set out to organise and run all the individual mills. Many economies are promised, and a definite regulation of production secured. It is proposed to give financial support to those mills under the scheme which are stopped, from the proceeds of a levy on those mills which continue to run. It is reported that the sanction of the courts will be obtained to a moratorium for five years on the debts due to the banks, loanholders and other creditors. During this period half-yearly trading accounts will be taken by each company. In the third or any subsequent half-year, if the accounts of any company fail to show a trading surplus, the creditors may terminate the agreement relating to any such company. There is some doubt in trade circles as to what success will be met with by this scheme. It is understood that certain directors of Lancashire mills are objecting to the scheme of the Cotton Yarn Association being worked by people who are in other branches of the trade, but many months ago the Yarn Association decided that it would be to the advantage of all concerned if the support was obtained of leading cotton men who are connected with the weaving and merchanting sections, and undoubtedly help obtained from these quarters has been of considerable benefit in the negotiations which have recently taken place with financial interests.

Cotton Company Reports in 1928.—Mr Frederick W. Tattersall, of Manchester, has this week published his analysis of the stocktaking reports of Lancashire cotton companies for 1928. Particulars are given of 310 companies, the average divided on ordinary share capital being 2.10 per cent., against 2.72 per cent. in 1927. So many as 231 companies declared no dividend whatever in 1928. The remaining 79 companies made payments to shareholders amounting to £785,574, equal to 1.46 per cent. on the total ordinary share capital of £53,752,205 of the 310 companies. As is well known, a large number of cotton companies in Lancashire do not issue balance-sheets, but particulars have been obtained of the profits and losses of 208 companies. Of these, 65 made profits totalling £808,333, and 143 companies reported losses of £1,238,704. At the end of December last, according to particulars available relating to 228 companies, 67 had credit balances amounting to £1,566,968, whilst the remaining 161 companies had debit balances of £8,573,558.

Coal Mining—Costs and Proceeds.—The statistical summary, issued this week by the Mines Department, giving the costs of production and the proceeds of the coal industry for the three months ended September 30, 1928, shows that the total loss for the quarter in all districts was £3,319,571, in comparison with £3,593,646 in the previous quarter, and £3,150,890 in the third quarter of 1927. The total loss on balance since the beginning of 1927, up to the end of last September, had amounted to £14¼ millions. The quantity of coal disposable commercially during the quarter was the smallest for any quarter since the 1926 stoppage, but, by means of a further contraction from 891,000 to 859,000 in the numbers of miners employed, output per man-shift was maintained at a slightly better level than in the March

quarter. The following table summarises the course of working results during recent quarters :—

Period.	Tonnage Disposable (Milns).	Costs per Ton. Wages.	Costs per Ton. Total, Net.	Proceeds per Ton.	Loss per Ton.	Output per Man-shift.
1927—		s d	s d	s d	s d	Cwts.
3rd Quarter ..	54·0	10 4½	15 3	14 1	1 2	20.47
4th Quarter ..	55·4	10 1	14 10	13 10	1 0	20·82
1928—						
1st Quarter ..	56·8	9 8	14 2½	13 5	0 9½	21·24
2nd Quarter ..	50·7	9 7	14 6	13 1	1 5	20·98
3rd Quarter ..	49·5	9 6	14 4	13 0	1 4	21·13

It is possible to derive at least some meagre satisfaction from the fact that, in a normally slack quarter of the year, the latest return shows the smallest fall recorded during the past 18 months in the average proceeds per ton. Turning to individual districts, it is of interest to note that the chief changes in comparison with the results of the previous quarter were an increase of over 5d per ton in the Durham loss—a reflection of lower output and selling prices combined—whereas the losses per ton in the Yorkshire-Derby Notts-Warwickshire area were appreciably reduced. In South Wales the average loss per ton commercially disposable remained, as in the previous quarter, in the neighbourhood of 1s 8d, as compared with 1s 4d in Yorkshire and Northumberland, and 1s 1d in Durham and Scotland. It remains to be seen how far these serious gaps between costs and proceeds can be bridged druing the more active seasonal winter demand of 1928-29.

A Quarter's Shipbuilding.—Recent reports of greater shipyard activity are fully confirmed by the returns issued this week by Lloyd's Register for the quarter ended December 31, 1928. Whereas the figure of launchings from British yards fell to 246,000 tons—in comparison with 386,000 tons in the September quarter and 499,000 tons a year ago—the new work commenced totalled 432,000 tons, an increase of 187,000 tons on the total for the previous quarter, and representing the highest quarterly figure since the first quarter of 1927. Work in hand in this country at the end of December amounted to 1,242,794 tons, an increase of 153,000 tons on the corresponding figure at the end of last September. In a future article we propose to deal more fully with the position and prospects of the shipbuilding industry both in this country and abroad. It may be said at once, however, that welcome as is the evidence of expansion in the volume of British shipbuilding contracts begun during the past three months, there is still a wide margin unfilled between work in hand and capacity. Despite the present increase, tonnage under construction in Great Britain and Ireland is 21 per cent. below the figure of a year ago, and is only 20,000 tons above the average for the past six years.

Local Government Bill Concessions.—The "final" alterations to be made by Mr Neville Chamberlain in the Local Government Bill for England and Wales on the basis of representation made to him by the various associations of local authorities, and now set forth in a White Paper (Cmd. 3255), were summarised in our issue of December 22nd, and need not be repeated. The Association of Municipal Corporations has now accepted the amendments, but not their finality, for its special committee is still asking for some provision to be made in respect of commitments which do not figure in the expenditure of the standard year, but which were undertaken on the understanding that the Government would bear half the cost, and for a seven-year guarantee against rate increases to non-county boroughs. Apart from the institution of a quinquennial census, the alterations are financial concessions, and, not excluding the census, involve cost to the Treasury. No estimate of that cost appears in the White Paper. It is, as a matter of fact, impossible to calculate in advance the cost of perpetuating the "shilling a head" guarantee, or of the second guaranteed minimum designed to ensure that every county or county borough, whatever its circumstances, will receive a share of any extra Exchequer money provided, but the postponement of the decrease in the Supplementary Grants, which adjust losses within the counties, is calculable on the basis of official figures. The grant of £1,725,000 will continue to be paid until 1934-35, instead of falling to £1,265,000; from then until 1944-45 it will remain £460,000 more than was originally calculated, and will not be extinguished till 1949-50. For Scotland the sum corresponding to this £460,000 is £45,600. The cost of the 1921 census was (for Great Britain) somewhere between £400,000 and £500,000, but the 1931 census will probably show a decrease on that figure. More interesting to the general observer is the renunciation by the Secretary for Scotland of the sweeping centralisation provided by his Bill. Within the counties district councils, largely elective, are to be set up to deal with such matters as parish buildings, recreation grounds, public libraries, and allotments. This concession to the principle of local self-government, in view of the tenor of the Government's policy, is not to be despised.

Iron and Steel Production. — According to the statistics issued by the National Federation of Iron and Steel Manufacturers the production of pig-iron in December amounted to 540,400 tons, compared with 544,400 tons in the previous month and 559,100 tons in December, 1927. Steel production amounted to 683,100 tons, compared with 762,500 tons in the previous month and 604,900 tons in December, 1927. The most encouraging feature of the figures is the increase of 80,000 tons in steel production in December, as compared with December, 1927. If the last quarter of 1928 is compared with the similar period of 1927 it will be seen that there is an increase of 199,000 tons. The December production of pig-iron brings the total for the year to 6,611,300 tons, or some 9 per cent. less than in 1927 and 36 per cent. less than in 1913. The total production of steel in 1928 amounted to 8,525,100 tons, or 6 per cent. less than the previous year, and since production in 1927 was relatively high as the result of accumulated demand owing to the coal stoppage of 1926, production was probably as high as was expected. Imports of iron and steel in December amounted to 183,600 tons—the lowest figure of the year—and nearly 100,000 tons lower than in the previous December. The reduction in imports between the first and last quarters of the year amounted to 165,000 tons. The total imports for the year amounted to 2,896,000 tons, or 35 per cent. less than in the previous year, when they were unduly high owing to the coal stoppage of 1926. Of this total only 93,700 tons were pig-iron, imports of which steadily declined throughout the year from 15,200 tons per month in the first quarter to 3,000 tons per month in the last. Exports of iron and steel in December amounted to 358,700 tons, and brought the total for the year to 4,261,200 tons, or slightly more than in the previous year. Of this total, 396,700 tons were pig-iron, the exports of which increased from 30,000 tons a month in the first quarter to 38,500 tons per month in the last quarter. Exports of pig-iron in 1928 were less than half the exports in 1913.

Gas Industry Legislation Foreshadowed.—For some time the gas industry has been pressing its claims for legislation to remove restrictions declared to be obsolete and obstructive of development. There was little expectation that reforms, though overdue, would be taken in hand within the lifetime of the present Parliament. Shortly before the House of Commons separated for Christmas, however, the Prime Minister stated, in reply to a question, that the Board of Trade was in communication with representatives of the gas industry with a view to ascertaining whether a non-controversial Bill could be drafted for introduction this session. Now, during the recess there has been issued a White Paper (Cmd. 3252) containing a report by the National Fuel and Power Committee (of which Lord Melchett is chairman) dealing with proposals put forward by the National Gas Council and by the Board of Trade for amending existing legislation relating to gas. This favours the claim that the gas industry should be freed at the earliest possible moment from irksome restrictions, and urges the taking without delay of steps to promote legislation giving effect to the recommendations contained in the report. These cover the whole ground, and to what extent the "non-controversial" Bill foreshadowed by the Prime Minister will embody the plan put forward by the Fuel and Power Committee will not be clear until Parliament has reassembled and the Bill has become available. That the matter has already been considered departmentally may perhaps be assumed from the fact that the report which has just been issued is in the form of a letter from the Chairman of the Committee to the President of the Board of Trade, dated November 27th, covering and fully endorsing the report of a sub-committee dated August 11th. The sub-committee's report mentions that the National Gas Council represents 90 per cent. of the gas sold by statutory and non-statutory undertakings. Its proposals for amendment of the law, made in 1926, along with further proposals by the Board of Trade, are both appended to the report, and are the basis of the recommendations the carrying out of which will not, it is considered, prejudice the interests of consumers and others. The keynote is given in the opening words of the National Gas Council's memorandum to the effect that "the principal legislation under which the gas industry operates to-day dates back to the years 1847, 1859, and 1871." A number of modifications rendered urgently necessary by economic changes consequent on the war were made pursuant to the Gas Regulation Act, 1920, but further and more complete revision is called for, and the problem is one which cannot be put aside, having regard to the facts that over £160,000,000 is invested in the gas industry, and that its annual distribution of wages exceeds £15,000,000. It is, moreover, linked with a long series of other carbonising and chemical industries. Joint working with allied industries is one of the directions in which gas undertakings have desired greater freedom. This and many other matters are covered by the report now issued. The present procedure, under which statutory gas undertakers are required to apply to Parliament or to the Board of Trade when further powers are wanted, is referred to as unnecessarily costly and cumbersome. Modifications are recommended with regard to the amount of capital which may be raised, the method of obtaining it, extent of borrowing powers, minimum dividend in connection with sliding scale, methods of charge, and many other points, which all concerned must study in the report itself.

Cost of Living.—There was a reduction in the cost of living during December. At January 1st the index number of the Ministry of Labour stood at 67 per cent. above the level of July, 1914, as compared with 68 per cent. at December 1st and a year ago. For food alone the index at 59 per cent. showed a reduction of 1 per cent. as compared with a month ago, and of 3 per cent. as compared with January 1, 1928. The following table shows the monthly movements of the index figure over a number of years :—

AVERAGE PERCENTAGE INCREASE over JULY, 1914.—All items. (Food, Rent, Clothing, Fuel, and Light, &c.)

1st Day of	1918.	1921.	1924.	1925.	1926.	1927.	1928.	1929.
	%	%	%	%	%	%	%	%

Sept....	110	120	72	74	72	65	65	..
Oct.....	115-120	110	76	76	74	67	66	..
Nov. ...	120-125	103	80	76	79	69	67	..
Dec.....	120	99	81	77	79	69	68	..

The decrease in the cost of living during the month was chiefly due to reductions in the prices of eggs, which were partly offset by increases in the cost of butter.

Employment in December.—Owing to the approach of Christmas, employment during the first three weeks of December showed a marked improvement. By the end of the month, however, came the usual seasonal reaction. There was a considerable increase in the numbers unemployed, largely due to an increase in extended short-time working, and the position as compared with the end of November was unfavourable. According to the *Ministry of Labour Gazette*, among the 11.9 million workpeople insured under the Unemployment Insurance Acts of Great Britain and Northern Ireland, the percentage unemployed (wholly and partially) at December 17th was 11.2. This compares with 12.2 per cent. at November 26th, and 9.8 per cent. at December 19, 1927. The total number of registered unemployed at December 17th was approximately 1,312,000, as compared with 1,439,000 at November 26th and 1,127,000 a year ago. By the end of December the number registered had risen to 1,565,000, as compared with 1,368,000 at January 2, 1928. This table gives the monthly movements in the unemployment percentage for some years past :—

PERCENTAGE UNEMPLOYED AMONG INSURED WORKPEOPLE IN GREAT BRITAIN AND NORTHERN IRELAND.

* Excluding workpeople in the coal-mining industry who were disqualified for unemployment benefit owing to the dispute.

The improvement recorded in the early part of December occurred mainly in the coal-mining industry, where the numbers temporarily without employment were considerably reduced. The position also improved in the manufacture of artificial stone and cement, in the iron and steel, tinplate, motor vehicle, shipbuilding and ship repairing, general and marine engineering, cotton, woollen and worsted, linen, carpet, tailoring, and hat and cap industries, and in the river, dock and harbour services. There was, however, a falling off in employment in the fishing, pottery, pig-iron, hosiery, cocoa and chocolate, and building industries.

New Life Assurance Business.—Further announcements of new business transacted during 1928 strengthen the belief induced by the earlier returns that the increased business was not the work of a few companies, but was rather the general experience of all. The following additional figures of net business are now available :—

	1927. £		1928. £
British Equitable	386,812	..	466,164
Commercial Union	3,959,942	..	4,105,082
Liverpool and London and Globe..	1,575,645	..	1,700,000
London and Scottish	830,196	..	946,049
Refuge	5,844,338	..	6,377,442
Royal Exchange	2,223,524	..	2,497,676
Scottish Amicable	1,339,669	..	1,267,528
Scottish Life	1,118,496	..	1,241.384
Scottish Provident	2,460,787	..	2,789,885
Scottish Widows'	2,664,189	..	3,173,000
United Kingdom Provident	3,041,119	..	3,109,870

Thus of this further batch of offices one only—the Scottish Amicable—reports a decrease in business. Two other Scottish companies in the list, the Scottish Provident and Scottish Widows both indicate satisfactory increases, assisted in both cases, no doubt, by the impending quinquennial distribution of profits as at the end of last year.

Scottish Automobile and General Insurance Company, Limited.—The first insurance report of the year comes from Scotland, from Glasgow, where this small company transacts on non-tariff lines a very select motor-insurance business. The company is a successful one, but its favourable results are by no means an index to those that may be expected from the large composite companies drawing their business from all over the country. This company succeeded in increasing its premium income last year by some £27,000 to almost £200,000, and on that amount earned an underwriting profit of £9,381, equal to 4.7 per cent., compared with 5.2 per cent. in 1927. Profit from realisation of investments produced £4,841, and after taking this and other items into account, a total net sur-

plus of £11,178 emerges for the year The net interest income has grown to £7,548, and this is more than sufficient to meet the dividend costing £5,250 (increased from £4,875). The company's paid-up capital amounts to £37,500, against which there is now a general reserve of £55,000.

Transvaal Output in 1928.—The output of gold from the mines of the Transvaal during December amounted to 859,761 ozs, as compared with 872,484 ozs in November and 851,225 ozs in December, 1927. The following table shows the monthly output since the beginning of 1922 :—

	1922.	1923.	1924.	1925.	1926.	1927.	1928.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January..	639,728	764,469	796,768	823,692	796,270	839,782	843,857

October ..	778,159	793,842	827,583	812,832	853,296	855,743	897, 20
November	764,476	780,639	809,313	787,633	840,276	848 059	872,484
December	790,712	778,849	825,273	791,455	836,157	851,225	859,761
Total	7,020,110	9,133,060	9,597,634	9,599,702	9,962,852	10,130,630	10,358,596

It will be noted that gold production in the Transvaal has increased year by year since 1922. Each month of 1928 showed an increase in production as compared with 1927. The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows :—

	May, 1928.	June, 1928.	July, 1928.	Aug., 1928.	Sept., 1928.	Oct., 1928.	Nov., 1928.	Dec., 1928.
Gold mines	198,461	197,186	194,584	194,788	194,936	193,147	190,870	187,970
Coal mines	16,695	16,533	16,724	16,767	16,803	16,506	16,241	16,059
Diamond mines	5,189	4,839	4,535	4,807	4,889	4,762	4,481	4,444
	220,345	218,578	215,843	216,362	216,628	214,415	211,592	208,473

The total number of natives employed in all branches again shows a decline as compared with the previous month.

THE Gilbart Banking Lectures for this year are being delivered by Mr A. F. Topham, K.C., at King's College, University of London, the subject being "The Companies' Act, 1928, in Relation to Banking." The first lecture was delivered on Monday of this week, and the second, third, and fourth lectures will be delivered on the three succeeding Mondays. The *Financial News* is publishing full summaries of the lectures on Friday of each week.

Oversea Correspondence.

UNITED STATES.—SHARE MARKET—MONEY—EXPERTS COMMITTEE.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 4.

ANTICIPATIONS that the share market might sell off sharply, after the turn of the year, on profit taking that had been postponed in order to escape 1928 taxation have proved groundless. Such selling might have been expected to make its appearance in sales in the regular manner on the last day of the year, such sales being settled on the following business day. As a matter of fact, the December 31st market failed to be heavy, and the only noticeable tax selling was that for cash to register losses on long stocks that had declined below 1928 purchase prices. With the advent of the new year the market showed considerable buoyancy on an increased turnover (which rose to about five and a half million shares a day), and achieved new high average levels for both industrials and rails. On this movement it was apparent that the market was becoming more speculative in character, and that pool operations were being conducted actively. This emphasis on the speculative factor is permissible without minimising the magnitude of the early January reinvestment demand. Accordingly it was expected that the weekly report on brokers' loans of the local reporting member banks would show an increase; the actual increase of $283,000,000, however, very considerably exceeded expectations, and set, in fact, a new high record for a weekly increment. It nearly wiped out the reduction of $303,000,000 that had been achieved in the three preceding weeks. In addition, the monthly statement by the Stock Exchange with regard to the loans of its members revealed an increase of $48,000,000 during December. This increase was not as surprising as it would have been without the large weekly increase shown by the Federal Reserve Bank's tabulation. In any event, the share market reacted to these figures by opening off rather sharply—losses of 2 and 3 points being common—and then rallying strongly. Before the close a number of new highs had been recorded. Part of this manifestation of confidence may have been due to the market's disinclination to reverse itself sharply; another part probably was due to the belief that the end-of-the-year settlements may have had something to do with the magnitude of the increase in loans.

However, and allowing for the fact that the week's bank statements probably still are confused by year-end transactions, it is clear that there is nothing very bullish, from the share market standpoint, in the banking position. Brokers' loans are back at practically the peak for all time, and the Federal Reserve system is extending the largest volume of credit since the completion of the post-war deflation. In addition, the latest reserve statement is notable for its disclosure of the earmarking of an additional $25,000,000 of gold, presumably for the account of the Bank of France. There is a feeling that this movement may attain considerable proportions—that perhaps as much as $200,000,000 worth more of the metal may be taken. If this gold is to go, a logical time for its taking would be the early part of the year, when there is a large return flow of funds to New York, when commercial demands are smaller, and when rates normally are lower. In the long run, however, the effect of this earmarking will be a hardening one on the money market. For the rest, the week's bank statements show a relatively small reduction in discounts; a large drop in circulation and a good gain in reserves; and minor changes in securities purchased in the open market. The ratio of the system was slightly higher on the week, but that of the local bank dropped sharply to 54.1 per cent., this figure comparing with 68.9 a year ago. The local bank lost gold rather heavily, while its members increased their discounts on a large scale. The bank statements of the next few weeks will, however, be much more valuable as revealing trends.

Events in the bill market have been quite interesting and may mark an important change in policy. Some time ago the Reserve authorities intimated to the market that it had been leaning too heavily on the Reserve banks, although this condition was lacking in novelty, the Reserve institutions having "carried" the bill market as a general thing. The Reserve authorities pointed out that they had been forced to put $100,000,000 more credit into the money market than was seasonally demanded this autumn, in order to support the bill market. Their feeling was that the banks that orginate the acceptances should carry a greater proportion of them. The other side of the picture has been that the rates obtained from bankers' bills have been relatively unattractive to the banks. During the past week conferences were held at which the holding of more acceptances by member banks was urged. To-day it was announced that the Reserve Bank's buying rate on bills had been advanced ¼ of 1 per cent., and that bill dealers had made corresponding advances, so that 60 and 90 day bills were quoted on a 4¾ to 5 per cent. basis, with longer maturities ⅛ to ¼ of a per cent. higher. These changes coincided with a reduction in the cost of time loans on securities from 8 per cent. (and a recent high of 8½ per cent.) to 7½ to 7¾; and a drop in Stock Exchange call money from 8 (and a recent high of 12) to 6 per cent. It would appear that the advance in bill rates is more in the nature of a readjustment of the basis of the bill market than a precursor of an increase in the official discount rate as formerly has been the case. Whether the higher rate on bills will be sufficient to secure a wider market for them, and whether the banks can be induced to keep materially

larger quantities for long, remain to be seen. As for the discount rate, it is felt that much will depend on the nature of the banking changes that occur during the next few weeks and on the nature of activity in the share market.

Meanwhile business reports remain good, with the steel industry maintaining a surprisingly high rate of about 85 per cent. of capacity for this season of the year. Present signs indicate a continuance of active business and firm money into the spring season.

Interest in the identity of the two American members of the experts committee on Reparations has been increased by the return from abroad of Mr S. Parker Gilbert. It is thought that Mr Owen D. Young will accept if illness in his family does not take a serious turn. The fact that Mr Gilbert spent his first night ashore at the home of Mr Dwight W. Morrow, ambassador to Mexico, strengthened the impression that Mr Morrow's services are desired on the committee. However, it is known that Mr Morrow wishes to return rather promptly to his task in Mexico.

FRANCE. — POLITICS — PRICES — INDUSTRY—RAILWAYS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, January 16.

M. POINCARE'S victory in the Chamber, which was foreshadowed here last week, has demonstrated even more clearly than had been expected that the last general elections endowed him with sufficient support to enable him to dispense entirely with any portion of the Radical-Socialist party as a section of his majority. This possibility has always been denied by the followers of MM. Herriot, Caillaux, and Malvy; and that the party, as a whole, was perfectly sincere in this belief must be taken as the only thinkable reason for the extraordinary policy adopted by the Angers Congress, that resulted in the advent of the new Ministry on November 11. The solid majority of 74 which the Premier received last week-end is hailed by many experts as indicating that the Radical-Socialists may now have to undergo the unwonted experience of "a three-years' cure in Opposition," as the result of having, deliberately and by their own act, renounced the sweets of power in consequence of their fatal non-realisation of the real nature of the new Chamber. Last week's interpellation of the Government on its general policy by the Opposition has undoubtedly clarified the whole political situation, and there is every prospect that the Chamber will now settle down steadily to clear off the huge accumulated amount of legislation in arrears, largely free from the sterile party political strife that has recently absorbed so much of its time. With the French political situation definitely cleared up the Allied Powers may now regard the way as open for the final settlement of the Reparations and inter-Allied debt problems, on the solution of which the economic restoration of Europe depends. The reports that Mr J. P. Morgan may possibly preside over the new Commission of Experts have been received here with distinct satisfaction, and have strengthened the feeling of optimism that now prevails in regard to the prospects of an equitable settlement of the twin problem.

The index figure for wholesale prices at the end of December is returned by the Statistique Générale as 637, as compared with 639 in November, 630 in October, 637 last July, 620 in January (which was the lowest in the year), and 600 in October, 1927. The detailed figures (based on 100 as representing wholesale prices in July, 1914) are as follows :—

	Articles.	End of Months of Oct.	Nov.	Dec.
General index figure	45	637	639	630
French products.....	29	631	631	624
Imported products.....	16	646	653	642
Foodstuffs (general figure) ..	20	589	595	583
Vegetable foods	8	590	601	597
Meats	8	579	580	550
Sugar, coffee, cacao	4	607	614	625
Raw materials (general figure)	25	679	678	672
Minerals and metals	7	609	613	596
Textiles.....	6	762	761	749
Various	12	673	668	672

The appreciable rise during the last three months in the figures for both French and imported products suggests that prices have not yet reached anything more than a comparatively stable level. The Belgian wholesale figure is returned at the end of November as 847 (stabilisation at 175), against 835 in October and 130 in September, while the Italian figure for November was 466 (stabilisation at 92.46), against 463 in October and 458 in September. The figure for retail prices in Paris—calculated on the basis of 100 as representing the corresponding prices in 1914, and comprising selling prices of 13 articles of prime necessity—is returned for the end of December as 596. For the whole of France (250 towns) the retail figure at the end of November is returned as 562. The Belgian retail figure at the end of December was fixed at 852, and that for Italian retail prices (at Milan) at the end of November, at 527. The figure representing the cost of living for a Paris working-class family of four persons (food, heating and lighting, rent, clothing and sundries) in the last quarter of 1928 is returned by the local committee at 531 (based on 100 in 1914).

The general index figure for production at the end of November is returned by the Statistique Générale as 132, a further rise of one point on the month, two since August, and of 16 since January, 1928. Based on 100 as representing industrial production in 1913, this figure indicates a general rise of 16 per cent. since the war. The greatest developments of industry since the war are shown by the figure representing motor-car output, which in November was 599, after having touched 687 in July—as usual, the best month of the year—and the output of rubber products, which in November was put up to 637 (a rise of 8 points on the month), against 555 last January. The textile industry, which had a figure of 100 at the beginning of the year, and afterwards moved up to 105 in March, dropped to 93 in September, but managed to get back to its pre-war level in November. The machine industry now stands at 143, metallurgy at 130, and extractive industries at 122. The weak spot remains with the building trade, whose figure, after reaching 116 in September, dropped in November to 98 (or two points below its pre-war figure), although this still shows an improvement of nearly 50 per cent. on the situation last

National Bank of Commerce
in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up $25,000,000
Surplus $40,000,000
Undivided Profits $5,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world, bringing them into contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
2 and 3, Crosby Square
Bishopsgate, E. C. 3

NATIONAL BANK OF COMMERCE IN NEW YORK 1839

January, when the figure returned was only 68. Iron, steel and coal production continue satisfactory, as shown by the November figures already given. To that month's output of 4,477,000 tons by the French collieries should be added a further 1,085,000 tons from the Saar area. Iron ore output for November was 4,217,000 tons, against 4,509,000 tons in October. Potash production totalled 37,400 tons, against 39,900 tons in October and 31,300 tons in January.

Railway receipts are still on the upgrade. The total gross receipts for the year, down to November 17th, were 1,267,000,000f (or 10.96 per cent.) more than during the corresponding period of 1927, while those for the last six weeks of the year were from 16 to 22.64 per cent. higher on the various systems. All the companies, without exception, showed an improvement, the increase varying from 9.80 per cent. for the Est to 13.04 per cent. for the P.L.M. The net earnings of the various lines are still unknown, but it is doubtful whether any of them, in spite of these greatly improved traffics, will realise any appreciably large surplus, in view of the enormous percentage still absorbed by taxation.

The index number representing Bourse quotations of 52 French issues returning fixed dividends works out for December (based on 100 as representing quotations in 1913) at 84.1, against 80.4 in January last, 72 as the average figure during 1927, and 57 during 1926. The figure for 288 French issues of variable yield, which averaged 233 in 1926, 287 in 1927, and 345 last January, is returned for December as 483 (bank shares, 361; insurance companies, 963; Northern collieries, 439; iron and steel concerns, 267; chemical companies, 516; construction material undertakings, 516; textiles, 1,045; railways, 124; electrical undertakings, 606; shipping companies, 376). The figure for foreign issues with variable yield, based on 17 descriptions quoted on the Paris Bourse, is returned as 684 (against 644 last January, an average of 596 in 1927, and one of 663 in 1926, the franc's worst year).

Public issues during December totalled 1,470,900,000f (£11,767,000), of which only 84,300,000f were shares in new companies, the rest being issues of additional capital (569,700f shares and 816,900,000f bonds). The average yield of the new issues of bonds offered during the month was 6.05 per cent. (as against 6.25 in November, 1928, and 7.40 in November, 1927).

Trade continues fair, and there is a plethora of money awaiting investment, but no appreciable appeals for capital are likely until the whole Reparation-cum-Allied debts problem is given a practical solution. Another important conversion and consolidation loan is held up indefinitely for the same reason.

GERMANY.—REPARATIONS—REICHSBANK DISCOUNT RATE—CAPITAL—PRICES—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, January 15.

THE financial experts and the Press continue to attack the Agent-General's conclusions and implications. The matter in which Germany is immediately interested is the amount of the coming annuity; and the contents of the Report, as Germans without exception sum it up, is that the present conditions and prospects of Germany place beyond doubt her capacity to pay the present standard annuity of 2,500 million marks. The German critics treat this opinion as something unexpected and revolutionary, and thereby forget the history of the Dawes Plan and the assumptions upon which it was based. The Dawes Committee of Experts based its annuities upon certain expectations, optimistically expressed, as to Germany's future development; and it is not asserted even by Germans that the development has been less satisfactory than was anticipated. In his earlier Reports the Agent never expressed the view that the Plan would break down as soon as the maximum and standard annuity was reached. It was expected that the operation of the Plan would be continued for longer than four or five years, and had the initiative for a final settlement not been taken last September it may be assumed that the present German protests, which have no meaning except that the 2,500 million marks cannot be paid, would not have been heard of. Before the initiative, authoritative Germans were very chary of predicting a breakdown as a result of the alleged excessiveness of the standard annuity, and, as the initiative cannot affect Germany's capacity, the present universally expressed German opinion that the 2,500 million marks is impracticable is hardly reasonable. It is becoming plain that the German members of the conference will appear less as experts commissioned to collaborate with international experts than as bargainers for the best possible terms for Germany.

The Reichsbank, on Januay 12th, reduced its discount rate from 7 to 6½ per cent., its rate for advances from 8 to 7½ per cent. The 7 per cent. discount rate had been in force since October 4, 1927. The bank expresses the view that the rate reduction will not send up prices, its expected effect being less an increase in circulation than a change in the dimensions of the reserve. The reduction must be considered a natural result of the decline in trade activity. When the rate was last put up the industrial and home-trade boom of 1927 was at about its highest point, and there were signs of undue credit and currency expansion. The present reduction is hardly likely to retard the trade decline; but the bank's communiqué hints at a further reduction if currency and reserve developments are favourable. The commercial banks have duly reduced by ½ per cent. their rate for credits.

The discount rate reduction will probably lead to heavy repayments of foreign funds. Already this process was under way some days before the Reichsbank's decision, and the foreign exchanges, in particular the dollar, rose considerably. Since December 31st the dollar in Berlin has moved from 4.1995 to 4.2075, sterling from 20.381 to 20.403. It is reported, nevertheless, that foreign money is still being offered. The money market last week was even more fluid than is customary in early January. A further cheapening of money this week was expected, and except in day loans very little business was done, but rates rose a little on January 15th to day loans 3½-6 per cent.; month loans, 7½-8½ per cent. The private discount rate was yesterday reduced to 5¾ per cent. The Reichsbank rate reduction having been foreseen, had very little effect on the money market. Savings deposits in savings banks on November 30th totalled 6,728 million marks, against 4,543 million marks a year earlier. The increase in the whole calendar year 1928 will be over 2,200 million marks, as against increases of 1,600 million marks in 1927 and 1,000 million marks in 1925. Savings deposits with co-operative associations also show rapid increase. The total of policies with private insurance companies for September-October, 1928, is returned at 11,050 million marks, against 8,910 million marks in November-December, 1927. The *Frankfurter Zeitung* estimates national savings in 1928 at £450,000,000, which is the same as its estimate for 1927.

The official cost-of-living index number for December is 152.7, as against 151.3 for December, 1927. The index groups are: Food, 159.6; housing, 125.9; heating and lighting, 150.8; clothing, 172.6; other needs, 191. The cost of food and housing changed little in 1928, whereas the cost of clothing rose considerably. The wholesale prices index number for January 9th is 138.9. In the second half of December the number of persons drawing unemployment insurance pay rose from 1,300,000 to 1,702,000, against 1,188,000 at the end of 1927. The first complete year's return for unemployment insurance, ending September 30, 1928, shows the average number of insured at 15,896,001, premiums paid 797,849,197 marks, or an average of 4.17 marks per month; expenditure on insurance 725,672,291 marks, expenditure on measures for preventing unemployment 36,447,245 marks; total expenditure, including cost of administration, 842,722,993 marks. The average monthly number of beneficiaries was 777,072. The average monthly expenditure *per head* of the beneficiaries was 82.53 marks. It seems that the premiums, limited by law to 3 per cent. of wages, will not be sufficient and that the Republic which contributes nothing, will be called on, according to law, to advance considerable sums.

The industrial situation is fairly good. Of late the decline in manufacturing of goods for consumption has been slower than the decline in output of means of production. The plan to advance steel prices seems to have been abandoned. Pig-iron production in December

was still affected by the November lock-out, and totalled only 882,959 tons, as against 1,149,680 tons in December, 1927. If the deficit resulting from the lock-out is allowed for, production in all 1928 at 11.8 metric tons was little below that of 1927 at 13.1 metric tons.

The steel export market has improved and prices have risen. An agreement has been come to for export of German scrap-iron to Poland and for admission of Polish steel. The home steel market is quiet, but an improvement is expected as a result of new shipbuilding programmes and already a number of orders have been given for plates. The Hamburg-America Company is to build eight 10,000 15-knot turbine steamers, and its four 21,000-ton vessels of the Albert Ballin class are to be equipped with new turbines, boilers, and propellers, with the effect of reducing the Transatlantic voyage from ten to seven days. Further measures of amalgamation in the locomotive construction industry are announced. The Railways Corporation's plants for 1929 promise an increase of orders for permanent way materials, the estimated expenditure on which is to be 283,300,000 marks, as against 246,700,000 marks in 1928. Exports of machinery in January-November, 1928, totalled 486,501 tons, the average per month being 44,200 tons, as against 38,200 tons in 1927. The Vereinigte Stahlwerke (Western Steel Trust) reports for the business year 1927-28 gross profits of 289 million marks, as against 280 million marks in 1926-27, net 52½ million marks against 53 million marks, dividend unchanged at 6 per cent. The Friedrich Krupp A.G. again passes its dividend.

A report issued by the I.G.Farbenindustrie upon conditions in 1928 is, on the whole, favourable. Sales of dyes to the Far East increased, and the tendency was to buy better quality dyes; there was a large demand for light metals and for solvents, and the demand for photographic materials rose so much that production capacity has to be increased. Sales of artificial silk products increased, and the new mixed fertilisers proved popular. The coal-liquefaction process developed satisfactorily. Reports of the paper industry are favourable; of the paper products branch still better. Judging by unemployment statistics, the paper industries are about the best occupied among the more important branches.

BELGIUM.—THE CONGO—ANTWERP—PUBLIC EXPENDITURE—RAILWAY DIVIDEND.

(FROM OUR CORRESPONDENT.)

LOUVAIN, January 12.

THE Congo is gradually becoming a more important factor in Belgium's economy. Statistics dating from the beginning of 1928 show us that out of a total population of 21,000 whites, Belgians number 14,000. In 1913 these numbers were respectively 6,000 and 3,500. Up to the beginning of last year the Congo has required an expenditure of some £80 millions, 32 before the war, 8 during, and 40 millions after the war. These estimates include all expenses whatever—colonisation expenses, public works, commercial companies, interests, cash, the most important being:—

	£
Colonisation and general public works.....	16,500,000
Railways.....	21,600,000
Commercial and industrial companies	30,000,000

To the above-mentioned expenses must be added the investments for the year 1928. New capital issues of firms operating in the Congo amount to some £10 millions for the last twelve months. But the Brussels Stock Exchange value of these assets is much higher than their nominal value, speculation having, especially in 1927, occasioned a big rise of colonial shares. According to last summer's levels the Stock Exchange value of investments in the Belgian Congo may be estimated between 45 and 50,000 million francs, or a corresponding £250 to £285 millions. The Stock Exchange valuation is probably too optimistic. Dividends distributed by colonial enterprises are not in proportion to the Stock Exchange value of the shares, being only £1,800,000 in 1927, so that the yield of the shares is only 0.7 per cent. It may therefore be said that the Stock Exchange capitalises mainly the hopes of speculation. Belgium's profits from the Congo, however, exceed the amount of the dividends, mainly by the return of the savings of Belgians living in the colony. The total profit can be estimated at £3 millions.

According to official statistics the Congo's balance of trade is unfavourable, the value of imports amounting in 1927 to 1,500 million francs, while exports did not exceed 1,050 millions. Another official statement declares that the part of Belgium in this trade amounts to 50 per cent. Neither of these statements is trustworthy. Official statistics greatly underestimate the value of exported goods and investigations have led to the conclusion that both in 1926 and in 1927 the value of exports in reality exceeded the value of imports, so that the Congo's balance of trade is favourable, a remarkable achievement for such a young country. On the other hand, investigations prove also that Belgium's percentage of the trade of the Congo is much less than was stated; it only represents in 1927 33 per cent. of the imports and 28 per cent. of the exports. At all events, the colony is already contributing to relieve Belgium's economic dependence on foreign countries, and is directly, or by means of exchange, relieving her lack of raw materials. The Belgian Congo is becoming an active element in Belgian economy, and the recent rise of copper can but accentuate her prosperity. This fact is satisfactory, not only to Belgians, but also to those foreigners, of whom many are Englishmen, who have invested capital there.

The economical and financial situation of Belgium remains entirely satisfactory. Stock Exchange prices are, however, still depressed, although the industrial outlook is improving. This fact is explained by the abuse of new capital issues. Their total for 1928 amounts to no less than 12 or 13,000 million francs, or £70 millions, a sum which the country is incapable of furnishing.

Antwerp harbour registered for 1928 23,605,000 tons; this constitutes a progress of 115,000 tons on last year, in spite of a strike in June and July, 1928, which involved a loss of nearly a million tons, and a fall in French and German transit traffic. Recent agreements will probably result in a new transit traffic in German coal.

At the beginning of last year new conditions of labour came into force. They provide for daily wages on a 60 to 90 franc basis, or from about 6s 10d to 10s. 3d. This is a high wage for Belgium. Public opinion has recently been offended by an end-of-year bonus distributed to public officials and amounting to an ordinary month's salary. The rise of the cost of living does not justify this measure, which was presumably taken with an eye to the general election next May. This new expense, that according to first statements would not amount to more than 100 million francs, will in fact come to 350 to 450 millions. The consequence is that the reduction of the fiscal burden expected for the end of 1929 is now already partially threatened. A similar measure has been adopted by the railways, and interests shareholders of the State Railways Company. It is nearly certain that the dividend of the Belgian railways to be paid in June will amount to 2 per cent., bringing the total remuneration to 8 per cent. The raising of the staff's wages makes it difficult to expect that the profits will allow the distribution of such a dividend next year.

SWITZERLAND.—BUDGET—DEBT REDEMPTION—FOREIGN TRADE—INDUSTRIES.

(FROM OUR CORRESPONDENT.)

GENEVA, January 12.

THE Swiss Federal Budget for 1929, which has just been passed by Parliament, opens a new era in the history of Swiss State finance, as it is the first since 1898 that shows a surplus. Expenditure is estimated at £14,032,000 and receipts at £14,112,000, thus leaving an estimated surplus of £80,000. It was possible to balance the accounts by curtailing all unnecessary expenditure and by increasing the yield of some receipts such as taxes on motor-cars and Customs duties on certain articles. The service of debt interest will necessitate in 1929 an expenditure of £4,535,000, that is £25,200 more than in 1928.

The instalment for the progressive redemption of the debt—as provided for by the redemption plan adopted in 1926—will be £1,200,000, or £57,200 more than last year, and it is expected that, at the end of 1929, the public debt will be reduced by roughly £1,200,000, so that its total will be brought down to £57,425,000, compared with £62,665,000 at the end of 1926. According to the redemption plan which has been enforced as from 1927, the debt is to be completely repaid by 1964, partly by means of a yearly instalment of about £800,000 included in the Budget, partly by means of the sums saved each year, through redemption, on the interest to be paid on the debt. In the absence of unforeseen events, the outlook is bright, and a succession of surpluses in the Federal accounts may be expected that will hasten the restoration of the Federal finances and make possible the redemption of the debt within a shorter period than had been anticipated. The Swiss taxpayer, moreover, hopes that the improvement in the Federal finances will result in a reduction of the high burden of taxation under which individuals as well as industries are now labouring.

Swiss foreign trade returns for November, 1928, show that the general improvement in the economic situation is continuing. During that month imports reached a value of £9,725,568, compared with £9,384,820 in November, 1927, while exports totalled £7,983,503, as against £7,141,719 during the corresponding period of 1927. Imports of raw materials are still on the increase, a sign of activity in industry. An important rise was recorded in the export of fruit, livestock; iron, copper, and aluminium articles; machines, watches, chemicals, and dyes, while there was a drop in the export of cotton and wool goods. Imports from Great Britain totalled £650,200, compared with £673,700 in November, 1927, and exports to her aggregated £1,072,200, as against £1,061,200 last year. The results of foreign trade during the first eleven months of 1928 are very satisfactory indeed, as, for that period, the value of imports exceeds by £7,280,000 the 1927 figures, and the value of exports is by £4,024,000 higher than during the corresponding period of last year.

Few people realise that Switzerland is an industrial and not an agricultural country. The last census shows that 44 per cent. of the population is earning its living in industry, while the 26 per cent. lives on agriculture and the 11 per cent. on commerce. In 1927, 64,696 workers were employed in the machine and instruments industry, 42,520 in watchmaking and jewellery, 37,565 in the cotton industry, 37,052 in the clothing, 27,300 in the metal, and 25,452 in the silk industry. While the watchmaking industry is second in respect of the number of hands employed, it ranks first in respect of the value of exports. The exports—in millions of pounds—of the three chief exporting industries were as follows during the past five years :—

	1924.	1925.	1926.	1927.	1928.*
Watchmaking	10·9 ..	12·0 ..	10·3 ..	10·9 ..	10·4
Machines.....	6·6 ..	7·4 ..	6·6 ..	7·2 ..	8·4
Silk	10·9 ..	15·0 ..	7·9 ..	8·5 ..	7·4

* 11 months.

The watchmaking industry exports 95 per cent. of its production, and therefore entirely depends on export trade. Before the war its best clients were Germany and Great Britain, while they are now the U.S.A., Germany, and Great Britain. That industry passed through a very serious crisis during the war and post-war years, but it is steadily recovering since 1923, and prospects for 1929 are said to be very good. Despite the fact that all raw materials—coal and metals—have to be imported, the Swiss machine industry is competing in quality with foreign industry. This industry also passed through a serious crisis, but its position has much improved since 1923; it is now doing well, and it is expected to make further progress during 1929, as orders are numerous and important enough to keep it busy for some time to come. The manufacture of artificial silk, which was started in 1906, is steadily developing; its exports rose from 250,000 lbs in 1906 to 5,828,000 lbs in 1926, 6,600,000 lbs in 1927, and they are expected to be well over seven million lbs in 1928. The hotel industry occupies about 65,000 persons, and therefore ranks first among the chief Swiss industries; it realises a yearly profit of nearly £8,000,000. Last year was a good year for that industry, it was even above the normal, and the present winter season is so far very satisfactory. The industry has been completely reorganised and its financial position is sound.

CANADA.—BUSINESS — BEAUHARNOIS APPLICATION — SHIPPING GRIEVANCES — SMUGGLING CONFERENCE — GRAIN ACT — STOCK MARKETS—IMMIGRATION.

OTTAWA, January 2.

THE New Year in Eastern Canada has been ushered in by a cold snap accompanied by a heavy snowstorm. The volume of the Christmas trade was the heaviest on record, and the public everywhere seemed to have an abundance of money to spend. The advent of colder weather is helping the sales of warm clothing, but generally speaking, business is experiencing a period of quietude after the holiday rush. The outlook for the first quarter of 1929 is regarded as very propitious, although country merchants in areas where the crop results were disappointing are meeting with some difficulty in financing their winter commitments. The carloading figure for the week ending December 22nd was 62,084 cars, which was less by 8,732 cars than the previous week's figure, and for the first time for several months showed a fall (2,795 cars) from the total recorded for the corresponding week of 1927. The King Ministry separated for the Christmas recess without reaching any decision about the application of the Beauharnois Light, Heat and Power Company, which had produced such a fierce battle between rival power interests, and it is now credited with the intention of turning over the problem to the mercies of a special Parliamentary Committee as soon as the session begins.

American shipping interests are aggrieved at the intrusion of British competition into the New York-Havana trade, but their own tactics on the Great Lakes are at present the subject of bitter criticism by Canadian shippers, who are complaining that American boats which loaded at Canadian ports cargoes of grain for the avowed purpose of winter storage have repeatedly transported it to other Canadian ports in direct contravention of the terms of the Canadian Shipping Act. Accordingly strong demands are being made to the King Government that it should stop this evasion of the law and safeguard the rights and privileges of Canadian shipping companies.

January 7th has been fixed as the date of a conference at Ottawa between officials of the American and Canadian Governments which will discuss the problem of liquor smuggling across the frontier, and the Department of National Revenue here is already busy with the preparation of data to be ready for the event. Meanwhile there are well-defined rumours abroad that the American delegates will go so far as to suggest that Canada should refuse to give clearances to any vessels whatsoever which have loaded liquor cargoes. It is, however, predicted that a reply will be made to the effect that the Department of National Revenue and other Canadian authorities are doing everything possible to help the prohibition officials of the United States, and that they can assume no further responsibility. Such forecasts have moved the *Montreal Gazette*, the leading Conservative paper in Canada, to publish an editorial headed "On Minding One's Own Business," in which it observes :

> The American proposal is that Canada shall impose a restriction which will conform to an American law, while being wholly at variance with the theory and practice of Canadian legislation..... Certainly it can be no part of the Canadian Government's duty to regulate Canadian commerce in the interests of the United States and to spend the money of the Canadian taxpayer in so doing. Neighbourly co-operation is one thing, but this proposed suggestion of Canadian policy is quite another, and no consideration whatever ought to be given to it.

Other important papers have taken a similar line, and only among strict prohibitionist organs has there been any sympathy with the suggestion that American demands of such a drastic character should be met. If the American delegates report the atmosphere unpropitious, Washington will probably modify its eventual requests to a point where they can be met.

Forecasts are appearing to the effect that the Department of Trade and Commerce is preparing for submission to Parliament legislation which will embody comprehensive amendments of the Canada Grain Act, designed to remedy certain serious flaws which have been revealed in its workings. The representations of the Liverpool Corn Exchange about the unreliability of the present grading methods have been reinforced by a stream of complaints about the system which a series of farmer witnesses made to the Saskatchewan Grain Commission, now investigating the problems of the grain trade. One serious source of trouble is the multiplicity of the types of wheat which are now being grown on the prairies. Mr L. H. Newman, the chief cerealist of the Federal Government, recently declared in a public statement that, if Canadian farmers, instead of growing as they do to-day 35 different kinds of wheat, would concentrate upon half a dozen grades whose excellence and general suitability had been thoroughly proven, the reputation of Canadian wheat would soon be improved. It is surmised that in any legislation which it submits the Government will try to encourage such concentration.

The Canadian Government has not yet disposed of the problem connected with alien enemy property which was sequestrated during the war years. It is still holding in a special account an amount of some twelve million dollars, of which about ten millions is credited to Germany's account and the balance to Austria, Hungary, and Bulgaria; approximately about seven million dollars has already been paid out in satisfaction of Canadian claims, the largest sum being $1,800,000 awarded to the Massey-Harris Company. Public opinion is on the whole not unsympathetic to the idea of handing back the amount now held in trust by the Secretary of State to the owners of the confiscated properties after all legitimate Canadian claims have been satisfied.

Save for a few lively stocks like International Nickel the stock markets were very dull during the past half of December. The new year, however, has opened with a feverish burst of speculative activity in the mining market, which had been very dull for the last three months. The phenomenal reports from the nickel mines at Sudbury, a recovery of confidence in the Kirkland Lake goldfield as the result of the discovery of fresh ore bodies, and higher prices for copper are the chief factors which are luring the public back to the mining market.

According to the Bureau of Statistics, the employment situation is very satisfactory, the seasonal contraction for December being on a smaller scale than on the same date in most of the last nine years; on December 1st the Bureau's employment index stood at 116.7 as compared with 119.1 on November 1st and 106.8 and 101.1 on December 1, 1927 and 1926 respectively. The latest immigration returns, covering the eleven months ending November 30th, do not give much comfort to people who are interested in building up a Canadian citizenship out of British stock or material which can be easily assimilated. They show that in the eleven months Canada admitted 54,372 immigrants from Britain, as compared with 52,003 in the parallel period of 1927. But the former figure includes the 8,500 miner harvesters, of whom all but some 1,500 are admitted to have gone home, and accordingly the net British immigration is smaller than a year ago. Again the immigrants from the "preferred" countries of Northern Europe fell in numbers from 34,225 to 29,743, but immigrants from non-preferred countries, who are less welcome, increased from 45,556 to 48,763.

Letters to the Editor.

POTTERY AND SAFEGUARDING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I should like to express my cordial agreement with the general tenor of Mr Lionel Robbins' letter in your issue of January 12th. As long ago as November 3rd last I myself protested, in a letter published in the *Economist* of that date, against the almost exclusively statistical methods by which the problem of Safeguarding is attacked; and I drew attention to Sir Robert Giffen's well-known essay, "On the Use of Import and Export Statistics." In this he dwells with no little emphasis on the very point referred to by Mr Robbins—the *irrelevance* of statistics in general as applied to this particular problem; and, as president of the Royal Statistical Society, he was surely qualified to give an opinion. Space forbids much quotation, save perhaps this: "We are entitled, as a scientific body" (the R.S.S.), "to point out that the call which protection makes on statistics is one which cannot be answered. The Protectionist seeks an affirmative answer which statistics cannot answer either affirmatively or negatively." This was written about 1882, and I am sure that Mr Robbins will agree that to-day it applies quite as much to the Free Trader as it then did to the Protectionists, or "Fair Traders," as they were then. Why is it that abstract reasoning is so intensely unpopular? The business man in particular appears to loathe and distrust it. Well, the business men have been trying to settle this problem by "facts and figures" for about 100 years, and we seem to be pretty much where we were; and, whatever the result of the election now pending, so we shall continue until the whole subject is reopened and its premises re-examined in the light of modern conditions, not by statisticians or politicians with a taste for simple arithmetic, but by economists. I throw out the suggestion here for Mr Robbins' consideration, that the international mobility now attained by capital has a profoundly modifying effect on the theory of Free Trade *as applied to a nation*, while leaving the theory unaffected if the entire world is to be considered as one economic unit. Mr Robbins may gather that I am a Protectionist.

In conclusion, I should like to comment on one sentence in Mr Robbins' letter: "The Free Trade theory is not concerned with the relation between imports and exports of particular classes of commodities, but is concerned essentially with the relation between imports and exports as a whole." It is very important to have a clear understanding of what is meant by the words "imports" and "exports" in this connection, since what we are concerned with is not any sort of balance of trade in goods alone—which simply does not exist—but with the balance of international indebtedness *on all counts*, both visible and invisible, and the words in this use must be taken to cover both. It is, for instance, perfectly possible—and it is constantly happening—for imports and exports of goods alone (the ordinary usage of the words) to rise or fall quite independently one of another, and a decline in imported goods (absolute or relative) can quite well be accompanied by an increase in exported goods. The rate of exchange, the only really controlling influence, is not affected by movements of goods alone, but by the general condition of indebtedness on all counts. The familiar catch-word, "exports pay for imports," has been responsible for an enormous amount of wholly fallacious reasoning and argument, simply owing to the use of the words "exports" and "imports" in their narrow sense (meaning goods) alone, whereas the phrase is only true in the widest possible sense of the words.—Faithfully yours,

DOUGLAS GRAHAM.

Books and Publications.

FORESTRY IN GREAT BRITAIN.*

So much erroneous matter on forests and forestry matters has appeared of late in the lay Press, and been expressed on the public platform, that it is a positive treat to peruse this book, produced by one who really knows what he is writing about. Professor Stebbing is Professor of Forestry at the University of Edinburgh, where he has been engaged some 19 years, before which he was head of the Forest Research Institute at Dehra Dun, India, established by the late Lord Curzon in 1906. The book, divided into two parts—the Case for the Public and the Case for the Forester—is written in such style as to be clearly understood by the lay mind. The Professor says that 80 per cent. of the wood used in Great Britain consists of what are known as soft woods, that the only portion of the Empire which contains extensive forests of this type is Canada, and that more than 80 per cent. of Canada's exports are absorbed by the United States, while only about 8 per cent. comes to England. Economic facts render it inevitable that the greater part of Canada's exports of softwoods will be taken by the United States.

The British Empire can never be self-supporting in its

* "The Forestry Question in Great Britain." By E. P. Stebbing, M.A., F.L.S., F.R.S.E., Professor of Forestry, Edinburgh University. (London) John Lane The Bodley Head, Limited. 7s 6d.

timber requirements—at least, in so far as great Britain and certain other portions of the Empire are concerned—and Professor Stebbing thinks, therefore, that at the present time it is not only misleading, but very far from the existing position, well known to the timber merchant, to say so. He gives the reader a general idea of the large softwood forest resources of Europe, and refers to "that oft brought-up bogy" of a world's timber famine. Professor Stebbing places before the public, "who will pay the piper," his views of some of the advantages which the introduction of forestry into Great Britain may be expected to bring about—woodlands to prevent flooding, useful employment in forestry proper, as well as side occupations that more trees will encourage.

Professor Stebbing is of opinion, and he is not alone, that the Forestry Commission is placing too much importance on the growth of softwoods (conifers) in their programme, to the neglect of the hardwood varieties (broad-leaved trees), *i.e.*, oak, ash, elm, beech, walnut, sweet chestnut, and sycamore, the remnants of which we have still with us, giving us some idea of what the countryside was like in olden times; and, whilst in agreement with the planting of new areas, he emphasises the fact that scrub areas not producing merchantable timber should be made to do so. The difference between afforestation and forestry is wide—very wide. The planting costs of the Forestry Commission, in the opinion of Professor Stebbing, are very high, and he suggests sowing in place of planting, citing cases of the former in France at a mere fraction of our costs.

The book is of interest to all who desire to know more about the forestry conditions of Great Britain, and prospects for the future. We would especially recommend it to landowners, large and small; for from it they can derive much useful knowledge concerning mutual co-operation in forestry work with the Commission, as well as practical hints that will be helpful.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

Some Economic Factors in Modern Life. By Sir Josiah Stamp. (London) P. S. King, Orchard House, Westminster. 10s 6d net.

In this, as in other work of Sir Josiah Stamp, the approach to economic theory is individual and stimulating. The author sets out to try to determine the influence on economic life of æsthetics, inheritance, invention, industrial co-operation, amalgamations, and stimulus. These are all reprints of addresses and lectures given by the author; two statistical lectures are also reproduced.

Sir Edmund Hornby. An Autobiography. With an introduction by D. L. Murray. (London) Constable and Co., Limited, Orange street. 18s net.

An altogether delightful book. The student of nineteenth century history will find these excursions behind the scenes of great value, but no historical knowledge is required to enable the general reader to enjoy such gaily written reminiscences.

The British in Tropical Africa. By I. L. Evans. (London) Cambridge University Press, Fetter lane. 12s 6d net.

A history of British penetration in East and West Africa and the Anglo-Egyptian Sudan.

Hospitals and the State. By R. Westland Chalmers. (London) John Bale, Sons and Danielson, Limited, 83-91 Great Titchfield street. 6s.

This is at once a history of hospitals in England and a reasoned plea for the recognition of collective public responsibility for the sick.

The Romance of Trade. By A. W. Kirkaldy. New edition. (London) Kegan Paul, Trench, Trubner and Co., Limited, 68-74 Carter lane. 6s net.

A treatise on elementary economics which aims at making the study simple, easy, and attractive.

Human Nature in Politics. By Graham Wallas. (London) Constable and Co., 10-12 Orange street. 3s 6d net.

One of the most widely-read books on political psychology is now rendered available in pocket form at a very low price. There are no textual changes since the 1920 edition.

I Primi Principii dell' Economia Finanziaria. By A. de Viti de Marco. (Rome) Attilio Sampaolesi.

A treatise in Italian on public finance.

Storia della Circolazione Cartacea in Italia (dal 1860 al 1928). By Camillo Supino. (Milan) Società Editrice Libraria, via Ausonio 22.

A history of paper money in Italy.

Typhœus, or the Future of Socialism. By Arthur Shadwell. (London) Kegan Paul, Trench, Trubner and Co., Limited, 68-74 Carter lane. 2s 6d net.

An account of the recent development of Socialism in Russia, Germany, and other countries is used as the basis for an attempt to forecast the future of the movement.

Kapitalbildung und Besteuerung. By Walther Lotz. (Munich and Leipzig) Verlag von Duncker and Humbolt.

A series of theoretical, historical, and statistical studies in public finance, with special reference to Austria and Germany.

Prospettive Economiche. By Giorgio Montara. (Milan) Università Bocconi. 40 lire.

These two volumes deal respectively with corn, wine and oil, and silk and artificial silk. Figures are given of world production and trade, and, in more detail, of the Italian production, consumption, prices and exports of each commodity. An attempt is then made to forecast the prospects of each industry. The text is in Italian.

Raw Materials of Commerce. Part I. (London) Sir Isaac Pitman and Sons, Limited, Parker street, Kingsway. 1s 3d net.

This is the first of a series of illustrated publications which is to appear in about 24 fortnightly parts. Part. I. deals with cotton, flax, and jute.

Les Codes de la Russie Sovietique. Translated by Jules Patouillet. (Paris) Marcel Giard, 16 Rue Soufflot. 30f.

This third volume contains the modifications, additions, and annexes to the Russian civil code, together with the new family code. The text is in French.

World Economic Policy. "The Opposite Direction." (London) National Association of Merchants and Manufacturers, 14 Mincing lane. 1s net.

A timely pamphlet, which reproduces the more important resolutions and petitions in favour of Free Trade, from that of the merchants of the City of London in 1820 to the resolution of the meeting of business men at the Mansion House last November.

La Nacion. (Buenos Aires) Anglo-Argentine Trade Supplement.

Extending to thirty pages and copiously illustrated, the number is prefaced by a series of messages from Mr Baldwin and other members of the British Cabinet. Contributors of informative articles on leading British industries include Lord Kylsant on shipping, Mr R. J. Hose, chairman of the Anglo-South American Bank, on international banking, and Major H. O. D. Segrave on the British motor industry.

Verses for Various Occasions. By Hubert Phillips. (London) Liberal Publication Department, 42 Parliament street. 6d.

This is a mixture of pointed political satire and charming children's verse, *genre* A. A. Milne. Mr Phillips shows more than ordinary gifts in both fields, and his technique is masterly. Our readers are not often given the chance of so much enjoyment for sixpence.

Annual Report of the Smithsonian Institution, 1927. (Washington) Government Printing Office.

To the general reader the interest of this annual report lies in its appendix, which consists of papers on various scientific subjects from "Is the Earth Growing Old?" or "The Mind of an Insect," on the one hand, to "The Coming of the New Coal Age" and "The Lengthening of Human Life" on the other. There are some excellent illustrations.

OFFICIAL PUBLICATIONS RECEIVED.

The Stock Exchange.

"PARENT" FINANCE.

APOCRYPHAL history relates how certain wise men endeavoured to imprison the cuckoo by building a wall of record dimensions. The bird having flown, it was decided to raise the wall several feet in the following year, with better hopes of success. It would be ungracious to trace a parallel between this unlikely fable and the efforts of the British Law, in its sovereign dignity, to circumvent the astute company promoter, but no one in close touch with the recent history of the new issue market is likely to dispute the proposition that, with the help of modern publicity and the prevalent desire to get rich quickly, the speculative financier's ingenuity has so far eluded all the controlling efforts both of Westminster and Capel Court. We have recently discussed in our columns many of the abuses to which a favourite form of "promoting" finance—the shilling deferred share—all too readily lends itself. In the following article we are concerned with an extended development of this method, which has come into prominence during recent months—the practice, that is, of floating speculative concerns, formed in many cases to exploit entirely novel and untried mechanical devices, and almost immediately disposing of their "rights" in this, that, or the other territory, to a swarm of new companies, which in turn appeal to the investor's largesse.

No objection can, of course, be taken to the general principle that a successful public concern is at liberty to create subsidiaries to conduct its business overseas. Many old-established British houses have followed such a policy, but in almost every case the parent concern has been well founded, the subsidiary has been largely financed, at the outset, from the accumulated resources of the parent, and the possibilities of the new territory have been carefully pioneered. The state of affairs, however, is very different when an entirely new concern rushes repeatedly into the market to dispose of its resources without waiting to prove that those resources possess any profit-earning value whatsoever. We have collected in the next column particulars of a number of recent examples of "parent and offspring" finance. The list might have been considerably extended, and even as regards some of the "families" cited, one can be by no means sure that the enumeration is complete, so rapid has been the process of multiplication. Reference is made later in the text to further recent additions to the Photomaton group.

Reference to the table reveals that in every case the groups concerned have been formed to exploit certain exclusive "rights," either with regard to oil distribution as in the case of the Blue Bird companies, or to "patents" in connection with the photographic, gramophone or household trades, as instanced by the other companies in the list. In other words, the very nature of the business carried on ensures the presence of the *speculative* element at its maximum in every case. The average interval between the issue to the public of the shares of a parent in the table, and of those of its offspring is sixteen months, which is far too short a period to allow of reliable ascertainment of the true value of the rights acquired (*i.e.*, of their permanent earning-power), in view of the novelty of the ideas which are to be exploited. Altogether, the public has subscribed £3,580,585 of new capital in cash to finance these unproved "rights" (and our list, we repeat, covers only a part of the total field), while inside interests have obtained shares to a value of £2,425,485, carrying, on the whole, much more valuable "equity" and voting rights, largely for considerations other than cash. The above computation assumes that the capital of Photomaton Parent, issued by way of a Stock Exchange introduction, is now shared equally by the public and "insiders,"

Company.	Date of Public Issue.	Amount of Original Issue. To Public (Cash).	Amount of Original Issue. To "Inside" Interests (Cash & "Considerations.")	Main Assets Taken Over.	Purchase Price.

* Stock Exchange "Introduction." † Plus payment of certain debts of companies taken over. *a* Date of incorporation; 1,200,000 shilling shares allotted, but no public issue. *b* Further £44,000 issued for cash in December, 1927. *c* Present market value of 1,600,000 no-par shares retained.

and takes no account of any share premiums paid by the public, or of subsequent issues of capital to shareholders only.

Very slight consideration is necessary to show that, apart from the risks inherent in the sale and re-sale of largely unknown propositions, "parent" finance tends frequently to place the companies concerned in a highly invidious position. In effect, the parent concern, having originally come before the public as a trading proposition, barters away large portions of its capital rights—in other words, goes in on a large scale for *finance* business. What happens to the money received? The parent concern, having presumably less rather than more need for capital than before, since its area of operations has been reduced, may have more funds than it can find a use for. If so, the public has been called on for a larger total subscription than it ought to have been asked to find. If the money is invested in gilt-edged or other securities, the parent becomes a partly operative and partly "trust" concern, a hybrid which the original investor had no idea he was financing. Moreover, where the parent takes a large block of shares, in lieu of cash, in a subsidiary, the basis of valuation of its own shares is largely at the mercy of any slump which may occur in the market values of the subsidiary. The position of Photomaton Parent affords an example of this feature. In addition to the three subsidiaries given in our list, the parent concern has a numerous foreign offspring, including Société Continentale Photomaton (in France,

Germany, &c.), Photomaton Italiana, Photomaton (S.A.) (in South Africa), an "Australian group," and Photomaton Inc. (in America). The company's latest statement puts a value on its receipts from all these subsidiaries—in cash and shares—of £4,070,000, a figure equal to 87 per cent. of its assets (£4,671,000) at the present time. The present market quotation of 14s 7½d for Photomaton Parent 5s shares is largely based on this valuation. Closer examination of the statement reveals, however, that the figure of £4,070,000 assumes the successful sale, at a high figure, of large parent company holdings of Société Continentale and Photomaton Inc. stock. Should a slump occur on the French and American Stock Exchanges, so that the eventual price realised was, say, 50 per cent. lower than the directors anticipate, the total assets of the parent concern would fall to £2,871,000, or no more than 61½ per cent. of their present valuation.

The difficulty of ascertaining the real position of a company which has resorted to this form of finance is increased, rather than diminished, when its annual accounts are published. When trained accountants have failed, how is the outside investor to succeed in appraising the real earning power of a company which, like Ner-Sag, reports a net profit of £104,166 from a factory with plant and machinery valued at £1,750, furniture and fittings at £750, and stock-in-trade at £1,416—an amount only slightly exceeding the valuation put on the company's stationery? Strictly speaking, amounts received for the sale of "rights" are *capital* receipts, and ought not to find their way into current revenue, either directly or indirectly, so long as the various parent concerns are to be regarded primarily as trading bodies. If, on the other hand, they are to be classed as *finance* companies, those in charge may be able to make out a case for dividing "profits" in connection with the flotation of their offspring, but this branch of their business is obviously not a continuing one, and the investor must reconcile himself to a marked fall in "profits"—and in the value of his shareholding—when there are no more "rights" left to dispose of. The distinction between a trading and a finance concern is thus, in the present case, more than academic. We do not accuse any company of deliberate resort to the practices we have mentioned. Our point is simply that it would seem imperative for all these concerns clearly to say into which group they regard themselves as falling.

Again, the investor may be inclined to ask for fuller information regarding the basis on which "trading" profits are assessed. What, for instance, is put to revenue account when a patent machine is sold to a subsidiary which proposes to operate it? In the case of products made for consumption by the purchasing public, but sold by a "parent" to its other self—its subsidiary—is a full trading profit shown in the "parent's" accounts *immediately*, or only when the subsidiary has disposed of the goods to an outside customer? The accounts of all holding concerns are notoriously difficult to interpret, but the task becomes peculiarly intricate when the associated businesses are not separate entities which have been absorbed by a dominant company, but small portions of the latter's own "body and flesh" on which a separate legal existence has been conferred.

Once the process of creating new companies has been extensively resorted to, it becomes well-nigh impossible to discover what has actually been paid to the vendors of the original "rights," what are the real assets of any one concern, or how far a setback to any single organisation would affect the credit of the whole group. Five generations of the "Blue Bird" family, for example, have come into being during the last four and a-half years. The earliest company had a motor garage business, and sold its wholesale petrol trade to a second concern, which sold its retail petrol business to a third. The last-named disposed of its foreign "rights" to a fourth, and a fifth was organised last December to acquire holdings in the other four. The accounts of only one company are available—to May 30, 1925—but the initial asset on which the group's fortunes have been founded was, apparently, a contract for the purchase of petrol, regarding which no comprehensive particulars have been furnished to the public.

The conclusion suggested by this review of contemporary "parent" finance would seem to be that while there is nothing inherently indefensible in the division among a number of related companies of rights having a sound potential business value, the process is apt to lend itself to abuse and to involve in serious difficulties the investor who is anxious to put a true valuation on the securities offered to him. The dangers of over-capitalisation and other evils are conspicuously enhanced when the "rights" in question cover novel processes which have received no extended commercial "trying-out." Companies to which these conditions apply would do well to consider, at least, the possibility of disclosing the maximum amount of information as to their bed-rock financial position, if they desire that their shares should appear attractive to the permanent investor and not merely to the in-and-out speculator.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket.	Account.
January 22.	January 24.

The confident tone of last week's dealings, due in part to year-end dividends and the cheerfulness of Wall street, was replaced this week by a much more cautious spirit, the volume of business showing a noteworthy shrinkage. America was uneasy as to the credit position, while at home another large Australian loan weighed somewhat heavily on the gilt-edged market, and the Ner-Sag *debâcle* was one among numerous factors checking speculative exuberance in Industrials. The steady undercurrent of investment demand, however, showed no signs of a serious check, and this was possibly the week's most reassuring feature.

Quieter conditions obtained for gilt-edged stocks, though little selling occurred. The money market was appreciably tighter than last week, "window-dressing" requirements coinciding with large new issue calls and increasing pressure from the tax-gatherer. The New York Exchange was erratic, with a declining tendency, but the week's gold movements were of comparatively small extent. Five per cent. War Loan registered the first check in its prolonged advance, and Four per cent. Consolidated Stock suffered a slight setback, Four and a Half per cent. Conversion Loan, on the other hand, being noticeably firm. India loans met with a fair inquiry, but the new Four and a Half per cent. scrip remained at a discount. The early closing and full subscription of the cash portion of the New Zealand loan, despite the large amount offered, was welcome, if unexpected, but on Tuesday the underwriting of the £8,000,000 Australian 5 per cent. stock brought about a contraction of business.

A limited business was done in the Foreign market. French loans were supported. Turkish Unified reacted after early strength. A further improvement occurred in Brazilian bonds, but other South American descriptions excited little interest, and Far-Eastern stocks were dull.

Home railways tended to sag early in the week in the absence of public interest. Expectations of an unfavourable showing by the traffic figures, however, proved to have over-discounted the true state of affairs, the returns showing a decline in revenue on all four "group" lines, as compared with a year ago, but one of modest dimensions. Midland and Scottish, and, later, North-Eastern stocks were weaker, but the net loss of ground was less than might have been feared. Foreign rails were dull and irregular. Argentine stocks were an uncertain quantity, despite moderately favourable traffic figures. Leopoldina fell sharply, and Canadian Pacific relapsed after early activity.

The unsettled tone of the industrial markets was preceded by the non-materialisation of the expected flood of

week-end orders, confirmed by unfavourable tendencies in Wall Street, and emphasised by the Ner-Sag announcement (dealt with in a later "Investment Note")—a psychological factor of an importance, in the circumstances, exceeding any which the company, in itself, ever possessed on the Stock Exchange. The leading gramophone shares showed a reactionary tendency on American selling. Mond Nickel were active but erratic, profit-taking occurring at times, and Imperial Chemicals obtained little lasting benefit from the introduction of a new line of shares in New York. Selling by tired holders produced a sharp decline in Imperial Tobacco on Tuesday. A rally in Margarine Union, on the proposal to issue new shares on bonus terms, was not maintained. Cable stocks were dull, and electrical manufacturing shares irregular. Motors generally maintained their position, on reports of satisfactory manufacturing conditions, but textiles were heavy, J. and P. Coats being subjected to profit-taking, while the drop in earnings shown by Listers affected other concerns in the silk and rayon group. Kreuger and Toll, supported by New York, were a good feature. National Property Trust hardened on the announcement of the fusion with Associated London Properties. Imperial Continental Gas rose sharply on sustained buying pressure.

The rubber share market opened in strong fashion, but a setback to the rise in quotations for the commodity speedily produced a quieter tendency, with a subsequent recovery. The rubber outlook forms the subject of an "Investment Note" on another page. The tea share market was quieter than of late, and a certain marking down of quotations occurred. Oil share dealings lacked animation, in view of the high production in the United States, the uncertain policy of American operators, and the absence of sustained support from the Continent. Shells showed slight change after being quoted at 4⅞ ex rights valued at about 14s 6d.

The Rhodesian boom suffered a set-back this week, when American buying—which had been providing the chief impetus for some time previously—fell off to a degree. Efforts to "bang" the market, however, met with little success, shares being well absorbed at the lower levels. Kaffirs were irregular, realisations, following the death of a large French holder, exerting a dampening influence on Monday, while lack of public interest, at home, in Paris, or in South Africa, was responsible for the later quietude. Base metal shares trended downwards, in sympathy with commodity values. Some liquidation took place of tin shares, and Rio Tinto fell sharply on the death, referred to above, of the leading member of a "bull" syndicate.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The share market has been hesitating, considerable concern being shown in speculative circles regarding the outlook for money, partly as a result of misunderstanding of the nature of current Federal Reserve policy. The market, however, has resisted this tendency, and shown a marked disposition to rally, particularly on the relaxation of call money rates, which again brought recent favourite stocks into prominence. Meanwhile, it is apparent that the French are continuing to earmark gold, the $20,000,000 taken this week making the aggregate taken since the end of last year $75,000,000. The decline of $338,000,000 in the total volume of credit extended by the Federal Reserve system indicates the lack of necessity for a higher discount rate, particularly in view of the experiment of allowing the bill rate to rise to more natural and attractive levels. Business news remains good, with steel operations maintaining a high level.

LONDON ACTIVE SECURITIES.

The following tables show the movements of the week in the more active securities of the various markets:—

British and Colonial Government Securities.

PARIS.

Following the improvement in the political situation, and the apparent certainty that the Ministry would remain in power, all securities rose notably. Important foreign purchases were reported. At the mid-month settlement delivery of great quantities of shares was taken on foreign account, and the contango rate eased to 5 per cent. Rentes were in good request, on the report that Sinking Fund purchases in the market would begin. The most favoured securities were banks, led by the Banque de France, coal shares, and public utilities, with electricity specially prominent. Rubbers increased their gains, but at the end of the week could not maintain the whole of them.

BERLIN.

The reduction of the Reichsbank's discount rate had hardly any effect on the Bourse. Heavy bear attacks were made at the end of last week on Polyphon and the chief artificial silk securities, but were checked by intervention purchases, and considerable foreign buying took place. Markets opened irregularly on Monday, but became firmer on the reduction of the private discount rate to 5¾ per cent. and on stories of a new cut coming in the official discount rate. However, the concerted bear attacks continued, and ceased only on Tuesday. The choice of Mr Morgan as one of the American experts produced a favourable impression. Mannesmann, Deutsche Erdoel, and Siemens und Halske were bought, but in general business was dull, and the cash market, as distinguished from the futures market, was weakish. On Wednesday a general decline of quotations was followed by some recovery, steel stocks remaining relatively firm. Thursday was firmer but dull. Selling of artificial silks continued, and motor-car stocks were weak.

AMSTERDAM.

Rubber was the feature of the past week. Very large transactions took place, the sharpness of the advance in prices being partly due to covering purchases. Later the market reacted on account of lower prices for the commodity. Tobaccos also received good attention, but artificial silk shares were very quiet and weak. Sugar shares were firm, on the large sales of the V.I.S.P. out of the 1929 Java sugar crop. In shipping there were no fluctuations. Oils weakened. As the week went on the Bourse as a whole developed firmness and activity. The money market was easy, with the private discount rate 4-4 1/16 per cent., and 4¼-4½ per cent. for prolongation.

VIENNA.

Though a number of industrial concerns will pay higher dividends this year, no animation of business on the Bourse has so far set in. There was a temporary inquiry for Credit-Anstalt, and also a call for building and brewery shares. The banks, desiring to reanimate business, are disposed to supply the market more freely with monetary instruments for covering purposes on rather less collateral than the 120 to 150 per cent. demanded hitherto, a percentage which certainly appears high in view of the low and stable prices prevailing.

INVESTMENT NOTES.

Imperial Borrowing in London.—The question of the use made by the Governments of the Dominions and Colonies of the British Empire of their special facilities for borrowing in the London market is of special interest in view of the fact that since the beginning of 1929, three Governments—India, New Zealand and Australia—have made issues of capital representing a £23,590,000 cash subscription. The subject is the more important inasmuch as it is understood that the recent volume of overseas borrowing, including that of the Empire, has been a subject of attention in the higher financial quarters of the City. A circular issued by a well-known Stock Exchange house discusses the question of Imperial finance with particular reference to the effects of the Colonial Stock Act of 1900, which brought the loans of Colonial Governments into the "magic circle" of the list of trustee securities, and questions whether, in view of the need for new capital at home as a result of the reorganisation of industry and the "shifting of the balance of power from the heavy export industries to the new domestic industries, transport and public utility undertakings," it may not be advisable to consider whether the present pace of Empire issues can be maintained. The report of the British Economic Mission to Australia, dealt with below, comes opportunely from this point of view. The subject of Imperial borrowing, however, has many facets, and if it be taken up in high quarters is likely to involve considerable and prolonged future discussion.

Australian Finance.—The summary cabled from Australia of the report of the British Economic Mission is of particular interest in view of the loan for £8,000,000 offered in London this week on behalf of the Commonwealth and States. The members of the Mission—Sir Arthur Duckham, Sir Hugo Hirst, Sir Ernest Clark and Mr Dougal Malcolm—conclude that the present financial position of Australia is sound—in the sense that the national income and the sources of public revenue are amply sufficient to pay for Government services and provide for the service and repayment of the public debt—but are critical of past borrowing and advise moderation in the future. Australia in past years, in their opinion, has spent too much unprofitably on developmental schemes which have been undertaken either without sufficient regard to the probable financial and economic results, or without adequate preliminary investigation; she has, they infer, been mortgaging the future too deeply and would do well to restrict expenditure of borrowed money for development, and to leave the field more widely open to private enterprise. The Mission also voice the common complaint of a vicious circle of increased prices due to the high import tariff, and of increased costs of labour due to arbitration awards. They criticise the giving of excessive or prolonged assistance to infant industries and the protecting of inefficient trades. They recommend that a full scientific inquiry and investigation should be instituted by the Commonwealth Government into the whole question of the economic effect of the tariff and the incidence of the duties. These questions were recently discussed in these columns (December 15, 1928, p. 1114), and we do not think that the British Economic Mission has erred on the side of severity in its criticisms. One of the detailed matters which the Mission raised was the position of the Australian railways. An examination of the figures showed that the capital employed earned in the last five years an average of only 3½ per cent., and could not, therefore, be considered worth its nominal amount as an income-earning asset. The Mission strongly advises that the State railways should be made to pay, even at the cost of drastic economies or increased rates, and that having regard to the possibilities of motor transport, no further construction of State railways should be undertaken except after a full investigation by an independent authority. Another detail of the Report is worth mentioning. It is pointed out that a proportion of overseas loan moneys accrues to the Commonwealth as revenue as a result of the taxing by the Customs of the proceeds of loans which are "imported" in the form of merchandise. This is an interesting point, seeing that Australia is borrowing overseas at the rate of about £40,000,000 a year. The members of the Mission expect much from the establishment of the Australian Loan Council. Everything depends, indeed, on the success of the Loan Council in restraining the future borrowing proclivities of the States.

Insurance Share Values.—The insurance share market, after a setback in September and October, continued on an upward course and finished the year strongly, though at a rather lower level than three months earlier. None the less, the rise of our index during the year has again been large, and in some individual cases very substantial. The table which appears below sets out the history of an investment in 1913 of £1,000 in the ordinary shares of each of 25 leading companies, and an index also of the total. Columns have been added to show the values as at December 31, 1927, and December 31, 1928. The figures are based on the mean of the highest and lowest prices in each year, except in the case of the last two columns, which relate to the middle market prices on the dates specified.

* Caledonian, 1923.—£25 shares split into £5 shares, one new £5 share at 6 premium for each £5 share. † Commercial Union, 1927.—New shares of £2 10s. offered proportion of one share for each five held, at £16 per share. ‡ Guardian, 1927.—£10 shares split into two £5 shares and one £4 pref. share each. § Royal Exchange, 1927.—New shares £1, offered in proportion of one share for each £5 stock held, at £6 10s per share.

The figures in the last two columns show that the shares of only two companies, the "Gresham Fire" and the "Royal Exchange," failed to advance during 1928. The "Gresham Fire" has suffered heavily from the enforced liquidation of its Canadian subsidiary, and the consequent complete loss of the investment, while the "Royal Exchange" had to deal again with large marine losses in the 1927 accounts. This question of marine losses is unfortunately all too likely to figure largely in the reports shortly to be issued for 1928. Two purely life companies have proved outstandingly favourable for share investors in 1928, the "Equity and Law" and the "Legal and General." The shares of these very strong companies have previously been commented on in our columns.

Share Values in Amsterdam.—Readers who have been following our weekly cables on the Amsterdam Bourse may be interested in a brief numerical review, which is now available, of the course of stock values in that centre over the whole of last year. The following table of index numbers, which is compiled from figures prepared by the Central Bureau of Statistics, gives a quarterly summary of prices in the most important share groups :—

	Average of 1921-5 = 100. Dec., 1927.	March, 1928.	June, 1928.	Sept., 1928.	Dec., 1928.
Industrials	109	116	111	115	115
Banks	106	112	109	112	113
Shipping	108	106	92	94	96
Dutch Colonial..	158	155	148	143	143
Oil	97	95	108	121	128
Miscellaneous	88	93	89	90	96
All stocks	116	119	114	116	118

Throughout the year the movement has been generally upward, but a break occurred in the month of June, and a somewhat slighter one in October. The remarkable strength of the oil market has been offset by the effect of the rubber slump on Dutch Colonial securities and the depressing influence of low freight rates on shipping shares.

Duophone Developments.—The *Duophone* company continues its chequered career. Last week petitions were made by creditors for the liquidation of both Duophone and British Brunswick, but these were dismissed on the payment of their debts in full by the two companies. Simultaneously it was announced that a syndicate had been formed to purchase from the Duophone Company its gramophone factory at New Malden. The new company, called the Malden Holding Company, takes over the whole of the land, plant, buildings and equipment at New Malden, with the exception of a few machines used in the

manufacture of the unbreakable type of record, together with the Duophone interests in the recording studios in the Chenil Galleries. The new company will have different directors from the old, but Mr J. H. Balfour (an ex-manager of H.M.V.) has been released from his obligation as managing director of the Duophone Company and will become the managing director of the new company. Under the contract the new company will manufacture a certain quantity of records for the Duophone Company for a term of years. We presume that the purpose of these transactions is to enable money to be raised for the Duophone business. In view of the unsatisfactory report and accounts which were presented at the last general meeting it would be too much to expect the public to subscribe fresh capital for the old Duophone Company. The obvious way out was for a new company to take over the assets and start afresh, and we understand that an offer of shares by the new company will be made within the next two months. Whether the existing Duophone shareholders are likely to welcome this latest development is another matter.

Ner-Sag.—An official announcement, issued by the secretary of the company and posted in the Stock Exchange on Wednesday, stated that the new directors, Sir John Biles and Mr Hackett, had failed to obtain satisfactory answers from Mr C. A. Brandreth, the late chairman, to questions of vital importance, and that no other conclusion could be drawn than that the recently published accounts could not be relied on; that efforts to trace the whereabouts of Mr and Mrs Brandreth had failed, and that, having regard to the present financial position of the company, it was not considered proper to proceed with the recommendations for the payment of the final dividend nor with the scheme of capitalisation and distribution of bonus shares. For 24 hours before the announcement doubts were being felt about the payment of the dividend, for Ner-Sag shares, which started the week at 3, had weakened to under 2⅛ at the close on Tuesday. The official news precipitated a headlong fall, and on Wednesday afternoon the price was 1¼. It is stated that further information will be available at the adjourned meeting on January 24th, which will be awaited with some interest. A circular has been issued by two directors of Ner-Sag (Overseas) stating that while Mr Brandreth's estimates of profit and sales will not be reached, the company has "substantial assets." A fuller report is promised later.

Greyhound Racing Association Trust.—The prospectus of this company, in December, 1927, made the following inspiriting forecast:—"It is anticipated that after all necessary provisions for amortisation of constructional and other initial expenditure at the tracks by the Greyhound Racing Association, this company will receive dividends which will enable it not only to pay the fixed dividend, but also a further dividend on the participating preference shares, and a substantial dividend to ordinary shareholders." Some six weeks before the appearance of the issue in question we had found it necessary to warn our readers that our own view of the future of greyhound racing was anything but optimistic, and the present report of the Trust does much to confirm our conclusion that even in the case of a well-financed, well-conducted company, an investment in this new sport was fraught with a degree of risk which should make the small investor hang back. The Trust holds 98.4 per cent. of the share capital of the Greyhound Racing Association, which owns tracks at the White City, Harringay, Edinburgh, Birmingham, and Leeds. The shares stand in the balance-sheet at £587,142, or £6 17s 9d per share of 1s nominal value. The Trust has also advanced to the G.R.A. £297,976 at 6 per cent., secured by a first charge. The interest on this loan and two interim dividends of 6s per share declared by the G.R.A., the second of which is not actually payable till January 31, apparently supply the bulk of the £68,809 which the Trust shows as revenue from the date of incorporation to December 31, 1928, a period of 13 months. Payment of 8 per cent. on the preference capital requires £64,354, some £1,188 is set aside for income-tax, and £3,267 carried forward. The "substantial dividend" promised to the ordinary shareholders is not forthcoming. The balance-sheet continues to carry preliminary expenses and underwriting commission at £57,112 as an asset, while the Trust's investment in and loan to the G.R.A. (which are the subject of a qualification in the auditors' report) represent 92 per cent. of the total "live" assets. In view of current reports that the popularity of greyhound racing is waning, it would be interesting to know whether the earnings of the G.R.A. itself are on the up or the down grade. On that matter the report of the Trust throws no light. The £1 preference shares of the Trust are now quoted at 3s 4½d and the 1s ordinary, which have been up to 5s 3d, at about 3d.

Michael Nairn and Greenwich.—The profits of this linoleum holding company have been gradually growing since its formation in 1922, and though the total increase for the last two years amounts only to £851, it seems at any rate that the linoleum trade is soundly placed. The capital of the company, which controls Greenwich Inlaid Linoleum (Frederick Walton's Patents) Company and Michael Nairn and Company, consists entirely of ordinary shares, and after the first year of its existence, when 10 per cent. was paid, the dividend has been steadily kept at 12½ per cent., less tax.

	Years Ended December 31. — 1926.	1927.	1928.
	£	£	£
Profits	225,967	226,365	226,818
Dividends (Earned	12 15/16 %	12 11/16 %	12 11/16 %
Dividends (Paid, less tax	12 5/16 %	12 1/16 %	12 1/16 %
Dividends (Amount	219,773	219,829	219,829
Increase in carry-forward	+ 6,194	+ 6,536	+ 6,989

Changes in the balance-sheet, which will be found summarised on a later page, are small. "Investments, &c., at cost," stand at £2,457,486, an increase of £6,073. "Cash" is down from £7,944 to £1,919, but "sundry debtors" are up by £6,852. Unfortunately a consolidated balance-sheet is not published. That the reports and accounts were available so soon after the close of the financial year argues expeditious accounting, even in the case of a holding company. At the market price of 2 11-32 the £1 shares yield £5 8s 6d, less tax.

Trading Company of Amsterdam.—Among the larger commercial concerns whose stocks are quoted on European stock exchanges interest attaches to the Trading Company of Amsterdam, the largest Dutch sugar manufacturing concern, which has just celebrated its jubilee. The company owns 36 estates in all in Java and Sumatra, its sugar plantations alone covering about 10,800 acres, from which about 3½ million quintals of sugar are produced annually (1 quintal = 220.4 lbs). The total capacity of the mills of the sugar factories may be put at 245,000 quintals per day. The estates and factories employ about 1,050 Europeans and over 150,000 Asiatics. Working expenses amount to about 55 million guilders per annum. The balance-sheet valuation of assets reflects the conservative policy followed by the board. Though 210 million guilders have been spent in the last 50 years on estates and buildings, these stand in the accounts at a nominal value of one guilder. The present paid-up capital is 40 million guilders, with a statutory reserve of 10 millions and a special reserve of another 10 millions. Various issues of bonds have been made, the total outstanding on December 31, 1928, being about 20,700,000 guilders. A further issue was made this week of 9,800,000 guilders of 4½ per cent. bonds at 99. The high and low points for the company's shares last year were 822 in February and 612 in October, the present quotation being 655. A dividend of 30 per cent. is being distributed on the ordinary shares for 1928, an interim of 15 per cent. having already been paid.

The Rubber Position.—The recent rise in rubber prices took the market by surprise. From the time that the removal of restriction was announced in 1928 until the end of last year the view obtained that in January, 1929, there would be a heavy surplus of rubber. Consequently a low price prevailed and stocks in all centres were reduced, though more heavily in London than elsewhere. Early this month the London stocks stood at under 20,000 tons, and were firmly held against commitments, since heavy arrivals were expected and the market took a bearish view. The Malayan shipment figures which were announced on January 3rd, however, showed that no more than 8,164 tons had been shipped to London during December. Dealers thereupon took immediate steps to procure spot rubber for their early commitments, their efforts bringing about a rise in the price from 8⅞d to 9⅜d. Estates had by that time sold anything which they had left over from their previous heavy forward sales, so the position was very strong. At this point speculators came in and removed any doubts as to the prevailing tendency. It then became known that rubber which had been bought from a certain quarter was unlikely to be delivered—market gossip stating that an operator had been "caught short" of as much as 3,000 tons—and the quotation was forced up to 11¼d by more covering. That the trouble was local and probably temporary is proved by the way in which New York prices lagged behind London, and by the early subsidence of Monday's excitement. The present position is that there is too much rubber being produced and shipped to allow a continued squeeze. Estates are likely to sell at about 10d, and manufacturers will buy more freely now that the market seems to have turned, but they are not likely to follow prices much higher at present. As regards the share position, before the recent rise practically all shares were high on the basis of yield, and on few shares are earnings likely to reach 8 per cent. with rubber at 10d. That buying is not always of a reasoned character is exemplified by a 50 per cent. rise, during the last few days, in the value of the shares of a company which had already contracted to deliver its whole output for 1929 at a fixed price. There are certain "acid tests" which the investor would do well to apply to any rubber share in which he may be inclined to take an interest at the present moment:—(1) Cost of production; (2) Reserves—are there ample cash resources to enable the company to pay dividends if profits are earned or must debentures first be paid off? (3) Is the company's policy progressive, and does it own a reasonable proportion of *young* rubber? (4) How many pounds of rubber does the company produce per pound sterling of its par capital? This question is most important, and is much more relevant to the investor's purpose than the old method of working out capitalisation per acre. Some estates which produce to-day only 250 lbs per acre are obviously in a very different position from estates producing 500 lbs per acre. The necessary data are now readily obtainable for practically all companies. The investor who has thus satisfied himself as to the ultimate soundness of a given dividend must still be prepared, in a number of cases, for the receipt of little or no dividend in respect of 1928.

Tin Selection Trust, Limited.—The Tin Selection Trust is one of the holding companies of the Anglo-Oriental group. Its revenue is derived from dealings in shares, from dividends on share holdings, and from fees, commission, and underwriting profits. The trading results for the year ended December 31, 1928, compare with those of previous years as follows:—

	1925.	1926.	1927.	1928.
	£	£	£	£
Issued capital	200,000	950,000	1,000,000	1,000,000
Gross profit	34,722	142,833	267,740	189,926
Ratio to capital	17.38%	15·03%	26·77%	18·99%
Net profit	31,560	138,981	252,145	149,767
Dividends (Amount	15,876	54,000	130,000	120,000
Dividends (Rate	10%	12½%	16¼%	15%
To reserve and written off	12,602	150,790	119,914	52,793
Carried forward	3,082	73,862	99,714	79,481

The revenue in 1927 was swollen by profits derived from the realisation of investments, of which £80,000 was set aside for transfer to general reserve account. The revenue in 1928 suffered chiefly because profits from dealings in shares fell by nearly 70 per cent. With the falling price of the metal it was obviously impossible to make money out of the tin share market last year except on the "bear" account. If we assume that the total fall in profits from £252,145 to £149,767 is due to the fall in profits on share dealings, it would appear that the trust made a profit of £146,254 out of share dealings in 1927 and of £43,876 in 1928. The schedule of investments which accompanies the report shows that, exclusive of a holding of £100,154 in British Government securities and shares in London Tin Syndicate costing £338,936, the trust has investments spread over 57 tin-mining companies (at an average cost of £16,194 each), of which 65 per cent. are in Eastern properties. During last year the trust's investment in London Tin Syndicate was increased by £57,292, but its remaining investments decreased by £58,791, due to realisations in the Eastern and Cornish groups, part of which were transferred to the London Tin Syndicate. The important developments in the year were the formation of the London Malayan Tin Trust in collaboration with the London Tin Syndicate and the expansion of the trust's allied activities in Nigeria. As regards Nigeria, the programme of the group, according to the trust's report, is:—(1) To bring the major output of Nigeria under one central system of technical control. (2) To supplement the inadequate labour force by modern mechanical plant, and (3) to impound an increasing proportion of the rainfall which at present runs to waste, and to harness the waterfalls in order to provide cheap electrical power throughout the alluvial tin fields of the Bauchi plateau. For the purpose of providing funds for the hydro-electrification of the Bauchi plateau the trust is proposing to increase its authorised capital from £1,000,000 to £2,000,000. Presumably the amount and terms of issue will be disclosed at the general meeting on January 29th. The trust deserves congratulation on the presentation of its accounts, which are among the most informative presented by any holding company.

Premier Diamond.—Operations having been in progress for only ten months of the financial year—they were, of course, suspended about the middle of 1927 owing to the position of the diamond trade—the report to October 31st naturally shows a decline in output; it also shows an increase in costs. There was also a falling off in average yield from .183 to .172 carats per load. The revenue is swollen by the transfer of £73,300 special suspense account, and so is not much below that of the preceding year (£951,400), but compares unfavourably with £1,456,700 in 1925-26. Expenditure being £148,900 higher at £594,600, last year's net profit figures at only £356,800, or £149,600 less than in 1926-27. Of this amount the Union Government takes £294,100, and the shareholders £142,700, or 40 per cent. As the preference dividend absorbed £100,000, no distribution could be made upon the deferred, which for 1926-27 received 250 per cent. These shares are practically all in the hands of the De Beers Company. The quantity of blue ground in sight above the 610 feet level is estimated to be sufficient to maintain the present output for five years, irrespective of some six million loads at present inaccessible because they support the main haulage. While the competition of the Lichtenburg alluvial fields has lately diminished in intensity, a new factor has arisen in the extraordinarily rich discoveries in Namaqualand, so rigidly controlled by the State. Altogether the outlook for diamond mining enterprises appears none too settled.

Fanti Consols.—Surplus on investments realised is responsible for the expansion in the 1928 profits, the amount figuring at nearly £54,000, as against less than £10,000 in the previous year; interest, dividends, and the like at £55,700 are almost the same. The directors are content to raise the dividend by 3d per share to 1s; for the preceding eight years the rate has ruled at a steady 9d; £30,000 are transferred to reserve. At £584,100 the investments and interests show an increase of £84,700. These assets are stated to show a very substantial surplus over the amount at which they stand in the balance-sheet. The holding of Treasury Bonds has been reduced by about

one-half to £50,600. As regards the portfolio the most notable change is the doubling of the number of Bwana M'Kubwas, 100,000 of these shares now being held. Other interests which embody more importance at present than they did a year ago are the 50,000 British South Africa and the 30,000 Union Corporation shares. On the basis of the latest dividend the yield is approximately 8 per cent.

Anglo-Foreign Newspapers, Limited.—In a recent discussion of the investment qualities of the British investment trust (see *The Economist*, January 5, 1929, p. 25), we insisted on the supreme importance of good management and good "connections," and suggested that something was to be said for the practical policy of backing the horses out of well-known stables—in other words, of investing in the companies of the well-known "groups" in the investment company world. The offer for sale made this week, however, by the Carmelite Trust of 3,000,000 5s ordinary shares at 6s 6d and 375,000 1s deferred shares at par in Anglo-Foreign Newspapers, Limited, would seem to subject this general principle to a rather severe strain. Anglo-Foreign Newspapers has been formed under the auspices of two companies of the Horne group, Mr H. S. Horne being its chairman, but the only information on which to base a judgment as to its position and prospects is contained in the statements that "after a thorough examination of the newspaper and allied industries in certain Continental Capitals, the directors.....are convinced that.....they can secure the advantageous employment of this company's funds," and that "negotiations are nearing completion for the acquisition of important interests which will provide the company with a nucleus of business." What are these interests, where are they situated, and why has the present issue been made *before* the decisive negotiations have been completed? We suggest that by asking the public to subscribe, on such a meagre basis of fact, for ordinary shares at a premium of 30 per cent., the sponsors for the issue are making an unduly extensive use of the "goodwill" attached to their name, position, and experience. It should be pointed out that the safeguards for the investor contained in the constitution of an ordinary investment trust—the limitation of the amount of capital which may be invested in any one concern, and the "spreading" of risks over a large number of interests—do not apply to the present issue. Newspaper administration, as we endeavoured to show in a recent series of articles, must be numbered among the more speculative of modern industries, and though the board of this company includes various well-known names, much more detailed information is required as to the scope and nature of future operations before any view can be expressed as to the company's prospects of success.

CAPITAL ISSUES.

THE total prospectus issues for the week, excluding conversions, came to £10,971,000, as compared with £7,162,500 last year, making a total for the year of £30,386,605. Issues to shareholders totalling £1,177,500 were also announced, and new securities that came on the market during the week, after gaining introduction through notices "for public information," accounted for a further £188,500 on the basis of the opening price. The most important issue was the £8,000,000 5 per cent. loan 1945-1957 raised by the *Commonwealth of Australia* on behalf of itself and the States, and issued at 98 per cent. The proceeds of the loans are to be used for development work in Australia and for making loans to the States for settlement of migrants from Great Britain. The recent report of the British Economic Mission to Australia on the state of Australian finance is referred to in an Investment Note. As the price of issue was only about ½ per cent. below the market quotations of the existing 5 per cent. loans, the terms of issue were not regarded as cheap, although they were identical with the terms offered for the two Commonwealth loans last year. The other trustee issue of the week was £750,000 4½ per cent. loan raised by *Wakefield Corporation*. As the price of issue of 96 only allowed a running yield of £4 13s 9d per cent., it is obvious that competition among the issuing houses is still responsible for making Home Corporation loans definitely dear. Another investment trust company issue appeared last week with the issue of 100,000 shares of £10 each by the *Winterbottom Trust, Limited*, of which only half was made available for the general public, the balance being subscribed by the Winterbottom Book Cloth Company, an old-established Manchester business which has surplus funds for investment. The company will carry on the usual business of an investment trust proper, and its board of directors includes Sir William McLintock and Mr Lancelot Hugh Smith, who are directors of the Grange Trust and Ailsa Investment Trust. Under these auspices the issue can be recommended to the investor. Of the commercial issues, the most remarkable was that of 3,000,000 ordinary shares of 5s at the price of 6s 6d and 375,000 deferred shares of 1s at par of the *Anglo-Foreign Newspapers*, a new company launched by companies of the Horne group—the Carmelite Trust and Associated Anglo-Atlantic. The prospectus, which was remarkable for its lack of information, caused some comment in the City, and is discussed in the previous column. The issue of participating preference shares and ordinary by *Radcliffe's Edible Products, Limited*, marks the public flotation of an old-established business which has specialised in edible oils and fats. Profits have fluctuated widely in recent years, and when an old business expands and makes a public issue the speculative risk must not be disregarded. Another established concern floated as a public company was that of *Sangers, Limited*, which made an issue of preference shares at par and ordinary shares of 5s at 2s premium. This is a business of wholeale druggists and sundriesmen. The purchase consideration of £579,558 in cash includes £275,000 for goodwill. The working capital is to be increased by only £25,000 as a result of the issue. Although the issue is necessarily speculative, the preference shares are at any rate covered by tangible assets. The inevitable patent issues were provided by *Einstein's Electro Chemical Process, Limited*, and *British Carbocite Smokeless Fuel, Limited*. The first company acquires world rights to patent processes which enable materials of any shape or contour to be metallised by electro-chemical action. Everything will depend on Mr Einstein, who receives £40,000 in cash and 850,000 ordinary shares, and will act as managing director. The second company manufactures a smokeless fuel from coal dust and small particles of coal under a process which is in commercial use in France and the United States. Being a commercial speculation the issue appropriately takes the form of ordinary shares of 2s.

ISSUES OF THE WEEK—

By Prospectus or Offer of Sale.

Amount previously recorded, £18,138,105.
Including conversion amount previously recorded, £30,648,105.
National Savings Certificates.
Net sales week ended January 12, 1929, £100,000.
Total receipts April 1, 1928, to January 12, 1929, Dr. £1,500,000.

Total cash involved in introductions to date, 1929, £580,687.

Government of the Commonwealth of Australia Five per Cent. Loan, 1945-75.—Issue of £8,000,000 registered stock at £98, with the approval of the Australian Loan Council. The proceeds will be used for developmental works and for loans to the States for the settlement of migrants from Great Britain. All Commonwealth loans carry a ½ per cent. per annum sinking fund, and the Treasurer has authority to apply surplus revenue to the redemption of debt. In the financial year ended June 30, 1928, the National Debt Commission repurchased over £600,000 Commonwealth securities on the London market.

Wakefield Corporation.—Issue at £96 of £750,000 4½ per cent. redeemable stock, 1949-59, of which £400,000 will be available to holders of 3 per cent. stock, 1929, who have the option to convert. The stock is a trustee security. Outstanding debt is £2,657,377, of which 86 per cent. represents productive debt. Population is estimated at 55,045, and a 1d rate will produce £1,367. The total rates for 1928-9 are 16s 6d, and the assets are valued at £3,721,841. The present issue is required for extending the waterworks undertaking.

Winterbottom Trust, Limited.—Issue at par of 100,000 £10 shares, which will be converted when fully paid up into £6 of 5 per cent. preference stock and £4 of ordinary stock. Additional 5 per cent. cumulative preference stock or shares may be issued provided that the total nominal amount of preference stock and shares shall not exceed 60 per cent. of the total nominal issued share capital. The company has been formed to carry on the usual business of an investment trust company.

Anglo-Foreign Newspapers, Limited.—Offer for sale of 3,000,000 (out of 12,000,000) 5s ordinary shares at 6s 6d, and 375,000 (out of 3,000,000) 1s deferred shares at par, the former entitled to a non-cumulative 10 per cent. dividend and three-fifths of the remaining distributed profits. The company will acquire, found, and develop newspaper and allied undertakings at home and abroad.

Einstein's Electro Chemical Process, Limited.—Issue of 250,000 8 per cent. £1 participating preference shares and 250,000 (out of 1,250,000) 4s ordinary shares, the former entitled to one-fifth of the surplus distributed profits after payment of 8 per cent. on the ordinary. The company acquires world rights in certain patents, patent applications, and secret processes for metallising many kinds of materials to any desired thickness. The purchase consideration is £210,000, including £40,000 in cash and 850,000 ordinary shares, in addition to a royalty and a percentage of net profits. Working capital is estimated at £210,000.

Sangers, Limited.—Issue of 250,000 7½ per cent. £1 cumulative preference shares at par and 125,000 (out of 1,000,000) 5s ordinary shares at 7s. The company acquires as from March 31, 1928, an old-established business of wholesale druggists and sundriesmen, with net assets (excluding goodwill) valued at £266,892, for a purchase consideration of £579,558 in cash, £275,000 of which is allocated to goodwill. The promoters of the sale undertake to subscribe for the remaining 875,000 ordinary shares at 2s premium. Net profits have been (to March 31st):—1924, £73,039; 1925, £71,170; 1926, £69,241; 1927, £70,312; 1928, £69,172. Working capital will be increased by approximately £25,000 from the proceeds of this issue.

British Carbocite Smokeless Fuel, Limited.—Issue at par of 1,050,000 (out of 1,500,000) 2s ordinary shares. The company takes over the British patents and rights relating to a smokeless fuel, which it will manufacture and sell; it also acquires the assignment of a lease of a factory site, the benefit of a two years' contract, and an option to purchase Dominion and Indian rights. The purchase consideration is £50,000, including £5,000 cash and 450,000 shares. Working capital, after erection of plant and purchase of freehold, is estimated at £33,350.

Radcliffe's Edible Products, Limited.—Issue at par of 150,000 10s 8 per cent. cumulative participating preference and 150,000 (out of 500,000) 1s ordinary shares, the former entitled to an additional non-cumulative dividend not exceeding 2 per cent., after payment of 15 per cent. on the ordinary capital. The company acquires a business, founded in 1852, of edible oil and fat blenders and manufacturers, with assets valued at £56,903 9s, including £25,958 11s 1d for goodwill and trademarks. The purchase price is £56,903 in cash, the vendors subscribing in cash for 40,000 preference and 40,000 ordinary shares, which will be allotted on the terms of the prospectus. Profits, before certain deductions, have been (to May 31):—1924, £8,641; 1925, £7,162; 1926, £10,341; 1927, £4,966; 1928, £13,096; period to November 17, 1928, £6,020. Working capital will exceed £40,000.

Aldershot Gas, Water and District Lighting Company.—Offer for sale by tender of £110,000 4 per cent. preference stock, at a minimum price of 70.

Hemel Hempstead District Gas Company.—Offer for sale by tender of £6,000 6 per cent. redeemable debenture stock, 1938, and £6,000 "C" ordinary stock, ranking for 7 per cent. dividend subject to a sliding scale equally with the existing "C" ordinary stock; each at a minimum price of par. Issued stock capital £61,500, loan capital £20,500.

Particulars of the following have been issued for public information only in connection with Stock Exchange "introductions":—**Morgan Film Service (1928), Limited**, issued capital 600,000 (out of 750,000) 2s shares; the company acquires a business producing and distributing films for national advertisers, for a purchase consideration of £45,000 in cash. **General Automatic Company, Limited**, issued capital 440,000 (out of 800,000) 1s shares, which were issued at a premium of 1d; the company was formed in July, 1928, and has acquired for a consideration of £600 the sole right under patent of a coin automatic machine for the sale of goods other than tobacco and tobacco products; 200,000 shares are under option till July, 1930. **Auto-Dore, Limited**, capital £25,000 in 5s shares, which have been issued at 5s premium; the company acquires the world rights in two automatic machines, for the sum of £25,000 in cash and a 25 per cent. royalty on gross receipts. **Trans-Oceanic Trust, Limited**, issued capital £600,000 5 per cent. cumulative preference stock and £400,000 ordinary stock; issue of £500,000 5 per cent. first debenture stock, 1969-79, at 95½, a first floating charge on the undertaking and all property and assets, present and future. **N.C. Metal Company, Limited**, issued capital 200,000 (out of 230,000) £1 "A" ordinary shares and 20,000 £1 "B" ordinary shares, the "B" shares having special voting rights; the company was incorporated in 1926 to acquire certain British and foreign rights in an invention for the extraction of metals from their ores, and was converted into a public company in December, 1928; outstanding unsecured loans amount to £55,375. **Lyceal, Limited**, issued capital 380,000 (out of 500,000) 5s shares, of which 240,000 are 2s 6d paid; the company acquires world rights for a mattress support, with the benefit of patent applications and the business of the vendors; purchase consideration is £50,000, including £15,000 in cash and £35,000 in shares.

COMPANY MEETINGS, &c.

BARCLAYS BANK, LIMITED.

TURNOVER SHOWS A FURTHER CONSIDERABLE INCREASE.
POSITION OF HOME INDUSTRIES: A HOPEFUL VIEW.
GERMAN REPARATIONS AND THE CREDITOR POWERS.
COMMERCIAL AND FINANCIAL PRESTIGE OF LONDON.
MR F. C. GOODENOUGH ON THE MONETARY POSITION.

The 34th ordinary general meeting of the shareholders of Barclays Bank, Limited, was held, on the 17th instant, at the Cannon street Hotel, London, E.C. 4.

Mr Frederick Craufurd Goodenough (the chairman) presided.

The Chairman, who was received with applause, said:

My lords, ladies, and gentlemen,—I wish to preface my remarks by a reference to the great national anxiety on account of the grave illness of His Majesty the King, and to express the earnest hope of all those present for His Majesty's speedy recovery. We are all glad to have better news. I will call upon the secretary to read the notice of meeting and the certificate of the auditors which appears at the foot of the balance-sheet and profit and loss account that have been submitted to you.

The secretary (Mr W. N. Seeley) then read the formal notice convening the meeting and the report of Messrs Price, Waterhouse, and Co., and Messrs Kemp, Chatteris, Nichols, Sendell, and Co.

The Chairman: My lords, ladies, and gentlemen,—Is it your pleasure that the report and accounts be taken as read?

CHANGES ON THE BOARD.

Before inviting your attention to the balance-sheet and profit and loss account of the bank, I propose, with your permission, to refer, with very deep regret, to the death, which took place in July last, of Mr Edmund H. Parker, LL.D., whose retirement from the board and appointment as an advisory director were reported last year. His death is a very great loss to the bank and to his colleagues. Mr Henry Birkbeck, who joined the board on the incorporation of the bank in 1896, has retired from the board, owing to advancing years, and has been appointed an advisory director, besides continuing to serve as a local director in Norfolk, where his knowledge and experience are most valuable. Sir Hallewell Rogers also has found it necessary to tender his resignation. The state of Sir Hallewell's health has made it inadvisable for him to continue the frequent journeys to London which his duties as a member of the board would entail. He therefore has decided to resign his seat on the board, but he will continue as a member of our local board in Birmingham, where we shall be glad to have the benefit of his experience in connection with our business in the Birmingham district.

The directors have had much pleasure in electing Mr Henry Anthony Birkbeck and Mr Follett Holt to be members of the board, and a resolution to confirm these appointments will be submitted to you later in the course of this meeting.

The directors also have appointed Sir Enoch Hill to be an advisory director of the bank.

INCREASE IN DEPOSITS.

Referring to the balance-sheet, you will see that the total of the current and deposit accounts with the bank on December 31st last amounted to the sum of £335,081,222 12s 2d, which compares with the total of £318,373,471 17s 6d on December 31, 1927, and represents, therefore, a substantial and satisfactory increase

The increase is due chiefly to the large number of new accounts opened with the bank during the past year at almost all our branches, but more especially at branches in the London and Metropolitan areas, in which the continued growth, both of population and business generally, constitutes one of the features of the present day. This increase in the number of accounts shows that the proportion of the total population making use of banking facilities is steadily growing, and this is due both to the higher level of wages in certain directions since the war and to the general spread of wealth throughout the country, with the result that there are more people than formerly who are in a position to open banking accounts. This must be for the benefit of the community as a whole, especially at the present time, when all the resources of the country are needed for financial and industrial developments.

ANOTHER RECORD BANK TURNOVER.

The turnover of the bank, as calculated by the total debits passed to accounts of customers, shows an appreciable increase over the figure of the previous year, which, to that time, was itself a record.

A large amount of new business, including many new accounts, has come to us through our Dominion and Colonial Bank and our other overseas subsidiaries. Those institutions have also derived similar benefits through the business which we have been able to direct to them. We have drawn much more closely together the organisation of our overseas banking subsidiaries, with the object of providing the most efficient service for customers, especially those engaged in the export and import trades. Our activities in this respect have been attended by very satisfactory results.

CANADIAN SUBSIDIARY TO BE ESTABLISHED.

We have decided lately to apply for a charter for the establishment of a subsidiary in Canada, with an office in Montreal and possibly in one or two other centres in the Dominion. This step should be of special importance to our Dominion and Colonial Bank, as it would link up their West Indian business more directly with Canada. The trade between Canada and the West Indies, which is already large and increasing, should derive great benefit from the commercial treaty between the Dominion and the British West Indies, as well as from the inauguration of the new direct steamship service between them. The new bank in Canada would also provide facilities for Canadian trade with Great Britain and other places abroad where we are established, besides assisting in developments in the Dominion, which are likely to show great activity in the near future.

During the year our Dominion and Colonial Bank has made substantial and satisfactory progress, and is becoming an increasingly important financial institution.

THE PROFIT AND LOSS ACCOUNT.

Returning to the balance-sheet, our profits for the year ended December 31st last, after making provision for losses which may be incurred in connection with advances to customers owing to the serious and prolonged state of depression in many of the chief industries of the country, amount to the sum of £2,301,285 9s 5d, which is approximately the same as for the preceding year, although the actual amount of funds in the hands of the bank for employment has been larger during the past year. On the other hand, rates of discount and for short loans in the market, as well as for certain other advances, have been lower than in the preceding year, and the Bank rate has remained at £4 10s per cent. throughout the year, as compared with an average rate of £4 13s per cent. during the preceding year.

The appropriations out of profits are set out in the report and the board recommend the payment of dividends at the same rate as in previous years, which they think should be considered as being both satisfactory and prudent, having regard to the existing conditions.

INDUSTRIAL CONDITIONS.

At the date of our annual general meeting last year there were distinct signs of industrial improvement and of a more hopeful outlook. Unfortunately, a change has since taken place and expectations were not realised, although, quite lately, the iron and steel industries and certain allied trades have shown some improvement. The coal industry, however, continues to be in a very bad state and so also are sections of the Lancashire cotton industry. On the other hand, what are commonly known as the finishing sections in certain industries and those engaged with the production of articles of luxury, as well as certain of the newer industries, such as artificial silk, etc., are in a much more satisfactory condition, and some are doing very well. This means that the British workman continues to maintain his old-time ability for skilled manufacture. It should be borne in mind that this country has not as yet, save only with a very few exceptions, proved itself to be entirely suited for mass production on a great scale, chiefly because of the comparatively limited home market, owing to the smaller population, as compared, for instance, with America. In the case of world markets, the variety in the needs and tastes of customers has also proved a limiting factor. On the other hand, we have always been foremost in the production of high-grade goods. There have been large profits made in the past by the basic industries of the country and there seems to be no reason why, with better organisation and the cheapening of costs of production, the same results should not be possible in the future. The Board of Trade returns relating to our foreign trade show that the total exports of British manufactured goods during the past year have increased as compared with the previous year, but notwithstanding these favourable features, which should not be ignored, the depression in the heavy industries is so serious as to create a general feeling that our industrial organisation is not as it should be. There is also much distress in the coalfields and elsewhere owing to unemployment.

THE OUTLOOK.

Looking, however, to the future, there is, in my opinion, ample ground for a confident and hopeful feeling, as great efforts are being made to place the depressed industries on a more satisfactory footing, both as regards economy and efficiency, through the great combinations of interests which are taking place, some of which have already been publicly announced, while others will shortly follow.

Much is also being done to develop new outlets for trade and to improve the marketing of our goods on more scientific lines. On the other hand, there are no signs of a reduction in the tariff barriers if taken as a whole. These barriers tend substantially to reduce international trade and it seems that if we are to regain our full pre-War volume of foreign trade, steps must be taken to reorganise upon more economical and efficient lines many of our industries which are specially subject to foreign competition.

AGRICULTURE.

There is a somewhat better feeling with regard to agriculture, largely owing, no doubt, to the good harvest in many parts and the opportunity afforded by weather conditions to get the land into better order. At the same time, prices have been somewhat disappointing, especially in the case of corn, but there seems to be a general expectation that they should improve, particularly in the case of live stock, owing to the growing shortage of meat supplies in certain directions. This may lead to a wider market for exported meat from the Argentine and other producing countries, which might have the effect of reducing the amount available for this market and lead to higher prices here. The Government scheme for long-term credit is now in operation and should be of substantial benefit to many farmers who have found difficulty during the bad times where farms have been mortgaged. Provided mortgage accommodation can be found under the new scheme at suitable rates, the farmer should be able to look forward to being in a position to retain in his family the land which he has acquired, and there is no greater encouragement to the farming industry than security of tenure, which is the best means of securing the expert knowledge and skill that are required to carry on the difficult business of farming. With the reduction in rating, and if we are fortunate in having another good season and somewhat improved prices, the farmer should be in a better position than during the last few years.

THE LANCASHIRE COTTON INDUSTRY.

Turning to the Lancashire cotton industry, a scheme has lately been discussed for the formation of a new institution to acquire a great number of mills which are chiefly engaged in the Far Eastern trade. The object of the scheme is that of regaining the trade which is being lost, by enabling these mills to buy their raw material more cheaply and to organise their productions, through the various mills working in combination upon the most up-to-date and economic lines, as well as to market their cotton goods by means of the most favourable selling organisation for the purpose. Such a scheme would certainly receive the greatest amount of encouragement from the banks, provided it is approved by those who would be principally concerned and who are most able to judge of its merits. But it seems as though there might be some difficulty in reconciling the interests of all parties, including the management and others engaged in the trade. Speaking generally, the banks would find it difficult to exercise compulsion upon customers to enter into the scheme in the case of live concerns, but they would certainly wish to help in the promotion of any sound scheme which would be of advantage to the cotton industry and which their customers would themselves wish to adopt as being calculated to benefit them.

In connection with amalgamations generally it should be recognised very clearly that their success depends upon economy and efficiency in management. I understand that so far as the scheme proposed in connection with the Lancashire cotton industry is concerned, the important point in regard to management is fully appreciated and will be assured.

To sum up the industrial position at home, it may be said, speaking broadly, that, except in the coal areas, the South is comparatively prosperous, whilst the North is still suffering from trade depression. Sound schemes for amalgamation and reorganisation should help to solve the difficulties in the depressed industries, but if these industries are unable through these means to absorb their existing unemployed, there is ample opportunity for affording relief in other parts of the country, both through new and expanding industries located in the South and in works of a more or less public character, such as levelling, road-making, planting, and drainage in many areas. Much requires to be done in work of such a description, both of a productive as well as of an unproductive character.

GERMAN REPARATIONS.

International trade must be affected to a considerable extent by the decisions that may be reached in regard to Germany's Reparation payments. It will be of great benefit, not only to the Allied creditors, but also to the world as a whole, if the committee which is about to consider the question of Reparation payments in the light of the experience already gained, can put forward a plan which will definitely fix the amount which Germany is to be called upon to pay by instalments within a given period of years, thus removing the uncertainties which exist. It will be of great importance that the amount to be fixed should be not only acceptable to the Allies, but such as will obviate, as far as possible, forcing Germany into excessive industrial competition with the rest of the world through compelling her people to accept too low a standard of living.

At the present time Germany is required to pay over to the Agent-General for Reparation Payments the instalments in German marks, it being left to the Transfer Committee to convert them into foreign currencies for the Allied creditors. Provision is made in the scheme that if the requisite foreign exchange is not available the payments by Germany may be varied under certain conditions. It would be a great step forward if some finality could now be reached, so that the creditor Powers may know what annual amounts they may certainly expect to receive, and that Germany may know what she really has to pay. At the same time, it is of the first importance that the value of the German currency should not be jeopardised.

Germany should provide an exportable surplus from her industrial and commercial undertakings sufficient to pay for her imports and for interest and redemption of her Reparation obligations, but up till now, there has been no margin for Reparations. She therefore has had recourse to foreign loans for her municipal and industrial undertakings, and in this way has borrowed a sum in excess of her Reparation liabilities; any available surplus has been taken in gold, with which she has broadened her internal credit structure for further working capital in the hands of the banks.

A COMPLICATED PROBLEM.

It will be essential for Germany to be in a position to build up a larger exportable surplus in the future. In the alternative, she must raise further loans, should she be able to do so. Her facilities for borrowing, however, may diminish or be withdrawn, and in that case Germany would have to re-export gold. Should she be able to increase her exportable surplus, further borrowings might be reduced or become unnecessary, whilst if she should succeed in maintaining a surplus beyond the amount of her imports and of her Reparation payments, she then might begin to accumulate permanent capital, whilst her liability for Reparations could be gradually reduced.

Much will depend upon the amount that may be fixed for her to pay for Reparations, but this presents another difficulty, owing to the fact that it is rightly claimed by the Allies that her industries must be charged with at least equal burdens to those borne by the industries of other countries, Germany having avoided the greater part of those burdens by the demonetisation of the mark. It is a very complicated problem, but it certainly seems that it will pay the Allied creditors in the long run to assess Germany at what would appear to be a moderate figure for Reparations. The general position of this country has been made quite clear by the Balfour Note.

SUGGESTION FOR SIMPLIFYING THE PROBLEM.

By placing on the investment markets of the world some of the Reparation bonds at present held on account of the creditor Powers, a step could be taken towards simplifying the problem, and in order to facilitate the marketing of the bonds, it might be found convenient, in some cases, for the Governments individually to endorse some of their holdings, prior to the issue, and so improve the price at which they could be sold. Germany would have to provide for the interest and amortisation of the bonds, although the Government selling the bonds would be liable, under its endorsement, in case of default by Germany, and the fact of Germany having definitely and finally accepted the obligations represented by the bonds, and of the bonds having passed into the hands of private investors throughout the world, would emphasise Germany's responsibility and reduce the likelihood of default, as that would irreparably injure her credit for the future. Moreover, the question of Reparations would be still further removed from the region of politics, while the Allied Governments would be enabled to reduce the direct load of their National Debts.

Should Germany eventually succeed in attaining to a real export surplus over and above the amount of her imports and of her Reparation payments, these bonds would be available as exchange for purchase and cancellation by her, to the extent of her export surplus, and she thus would be able gradually to reduce her Reparation debts.

I feel sure that such a method as I have indicated of spreading the obligations of Germany in the hands of investors all over the world could not be otherwise than a factor for peace, and would certainly impel Germany to make every effort to pay in the interests of her credit in the future.

CURRENCY DEVELOPMENTS.

Another important factor affecting industry and trade has been the stabilisation of currencies in terms of gold by certain countries, and especially France, during the year. It may now be said that for all practical purposes the stabilisation of world currencies on a gold basis has been virtually completed, and this should prove a factor in the stabilisation of price levels as between one country and another.

In our own case the final step has been taken of transferring to the Bank of England the former Treasury note issue, the limit for the total fiduciary issue having been fixed at £260,000,000, as compared with £18,450,000 before the war. The Bank of England may also issue notes beyond the fiduciary limit, if fully covered by gold. It is provided by the Currency and Bank Notes Act, 1928, that the Bank of England and the Treasury, acting in agreement, may reduce the fiduciary limit as and when they may think fit, while provision is also made for an expansion in the fiduciary limit should the circumstances warrant. The power to reduce the fiduciary circulation would probably be utilised if, after a period, it appeared that the currency was permanently in excess of the country's needs, as, for example, might prove to be the case in the event of an appreciable and permanent fall in price levels. On the other hand, the provision for expansion might be of great advantage in the future, should the existing limit prove insufficient for the genuine needs of trade and industry. The question as to whether an increase or reduction in the fiduciary limit should be made would be, in any case, a matter requiring expert knowledge, and it is satisfactory to know that the control of the amount of the fiduciary issue is now placed in the hands of the Bank of England, in conjunction with the Treasury, rather than that it should be subject to political influences and pressure from time to time.

MAINTENANCE OF PRICE AND WAGES LEVEL.

At present, when our national liabilities are very heavy, it is of great importance that prices in this country should be maintained as far as possible at the level at which they now stand, and that there should not be any appreciable reductions in the general level of prices or in wages; a reduction in prices would have the effect of increasing the real burden of our National Debt. On the other hand, I think it is generally understood that it is essential in the interest of industry and trade that the price levels prevailing here from time to time should not be higher than those in other countries.

The League of Nations is now studying the important question of preventing undue fluctuations in the purchasing power of gold, or, in other words, the general level of prices of commodities, but uncertainties as to the future level of gold production and differences of opinion as to the relationship which gold should bear to currency and credit may present serious difficulties, but great benefit should result to world trade, supposing approximate stabilisation of the value of gold should be found to be possible.

MONETARY CONDITIONS.

Turning to the financial situation, the outstanding feature during the year has been the fluctuation in interest rates in America caused by speculation in stock and shares and the ebb and flow of accommodation required, according to the increase and decrease in the volume of speculation from time to time.

During the early part of the year, when speculation in America was less active, rates for money in New York were lower than in London, which led to balances being transferred here for more remunerative employment. There was also a considerable amount of investment of American money in the purchase of British securities. In the latter half of the year speculation in America increased very greatly and rates for loans on the stock markets in New York reached an abnormal figure, and eventually a sharp break in the stock markets took place. During that time, however, notwithstanding the higher rates for money, which caused some return of balances to New York, rates in London remained comparatively steady and supplies were reasonably plentiful here.

It is important to note that during the period of the speculative activity in connection with stocks and shares in America commercial activity there has been normal on the whole, which is emphasised to some extent by the fact that price levels of commodities in America have shown no great change.

While the great demand in America for money at high rates was due very considerably to Stock Exchange speculation, no doubt the boom tendency was accentuated to some extent by an increase of real wealth in America. High rates paid in New York in connection with the speculative activity there serve to emphasise the difference between our monetary system and that of America. In our case, even when speculation is active, the rates paid for loans in London to finance the operations in the stock markets would bear some definite relationship to the Bank of England rate for the discount of commercial bills. On the other hand, in New York the rates charged for money lent on the stock markets under conditions of great speculative activity would appear to have no relation to the rediscount rate of the Federal Reserve Bank there, but to be a matter of competition between one borrower and another who desires to obtain the accommodation that he requires.

GOLD MOVEMENTS.

In addition to the transfers of balances, heavy gold movements have also taken place during the year between the various international centres. These, however, have been due chiefly to special causes connected with the stabilisation of foreign currencies and international financial adjustments, rather than to the settlement of trade differences in the usual way.

In the early part of the year an appreciation took place in the sterling-dollar exchange as the result of the transfers of balances to London, and gold was then shipped to London from New York, but these shipments may have been due to some special operations rather than as the result of exchange transactions, as they did not appear, on the whole, to have been in the nature of profitable operations after due allowance had been made for the usual interest and charges. Inasmuch, however, as they were among the first shipments of gold from America to this country since the war which could be regarded as being associated with the level of the exchange, they were, on that account, of special interest and importance.

According to the weekly returns, the stock of gold held by the issue department of the Bank of England was increased to the sum of £173,907,475 by September 12th, which was a figure never previously reached in the returns, and exceeded by £20,000,000 the highest amount held by the Bank in the preceding year. Much of the additional gold acquired by the Bank has been since re-exported, and the return at the end of last year showed that the holding of gold exceeded only by £2,000,000 the amount held at the close of 1927, but it is satisfactory to note that, although the Bank did not retain all the gold acquired in the earlier part of the year, yet London, as a leading international centre is now fulfilling its proper function, and affords a free gold market through which international gold movements are taking place.

GOLD IN FRANCE.

Gold has also been withdrawn during the year by France, both from New York and from London, in connection with the stabilisation of the French currency. It is possible that the speculation in the franc at one time, largely on the part of foreign operators, resulted in France being able to draw gold from various centres. In addition, owing to the fact that price levels in France are still below those of many other countries, her export trade has greatly expanded, and if invisible items be taken into account it is probable that her exports largely exceed her imports, France being, to a very considerable extent, self-supporting. The economic situation in France, therefore, is, at the present time, very favourable, which also has placed her in the position of being able to draw gold.

GERMANY.

Considerable quantities of gold have been shipped to Germany, both from America and from this country, chiefly as the result of large long-term loans made to Germany by New York and London (but principally by New York), for financing German municipal and other undertakings, in addition to the growing amount of banking accommodation granted to Germany by British and other banking institutions during the year.

The outstanding feature in connection with the heavy gold movements which have taken place between the various centres is that they have been due mainly, as I have already indicated, to causes other than international trade and price-level conditions (except possibly, to some extent, in the case of France), differences in interest rates between certain of the chief centres being largely responsible. For that reason there has been justification for retaining the Bank rate at the existing level of 4½ per cent. throughout the year, as there has been no necessity to raise the rate, as might have been the case if it had been found that an adjustment of price levels was needed in the interests of our foreign trade.

By being able to retain the rate, industry has gained a distinct advantage, whilst, at the same time, the prestige of London as a financial centre has been thereby greatly increased.

THE FUTURE.

Looking to the future, it is impossible to foresee what is likely to be the tendency in respect to movements of gold, as so many factors are involved. Germany's trading position has shown an unfavourable trend of late, largely owing to the labour dispute and to stoppage of work in the iron and steel industry, which took place there towards the end of the year. Unemployment has increased and is substantially higher than it was a year ago. In spite, however, of the decline in trade activity in Germany, the country, as a whole, has made considerable progress during the past year, but whether she will continue to take gold from us or from America or will be in a position to retain the gold she already holds must be a matter of great uncertainty. The position will be influenced, to a very considerable extent, by any resettlement that may take place of the Reparation payments to be made by her, to which I have already referred.

It is also difficult to foresee whether renewed speculation or other causes affecting money rates in America will lead to a transfer of balances or gold from London to New York, and what, therefore, may be the demands upon our gold reserves. These reserves should be regarded, to a very considerable extent, like a banker's cash, and should be capable, therefore, of being used freely to meet the demands that may arise in the ordinary course of business, as well as of being replenished and maintained at a safe figure out of ordinary receipts or through the realisation of liquid assets or securities.

COMMERCIAL BILLS.

It is to be noted in this connection that during the period of relatively cheaper money which has prevailed in London during the later part of the year, large numbers of commercial bills have found their way to London as the cheapest market for a time. London also has, for the same reason, and through her growing influence as a chief monetary centre, increased her acceptance credits, which has led to a larger number of bills being negotiated in the London market.

As these and other bills which may come here owing to the same causes in the future mature for payment, they serve to offset the demands that may be made against us and to strengthen the monetary position here.

These bills represent debts due as the result of commercial transactions spread all over the world, and enable this country, as the holder, to discharge the debts owing by us without our being called upon to maintain a large amount of gold as a reserve over and above the amount required for our actual currency purposes.

It is interesting to recall how, in the past, the position of London as a commercial and financial centre was built up, safeguarded, and maintained through being, during the greater part of the year, the cheapest money market, and this fact enabled her to acquire and hold a larger proportion of commercial bills than other monetary centres.

I think that this factor is of very great importance, and one that should not be lost sight of as a guide for the future.

Our overseas subsidiaries are rendering a substantial service through their purchases of foreign commercial bills in competition with other foreign banks, and the importance to London of a large and active bill market should be fully recognised.

The increase which has taken place during the year in the holdings by the banks of commercial bills is an indication of the increased assistance which the banks have afforded to trade and industry both at home and abroad.

It is often suggested that the financing of trade between countries outside Great Britain is prejudicial to our own industrial interests, but that is not really the case. Such transactions earn profits for this country from abroad and serve to increase the total of our invisible exports, upon which we depend to adjust our visible adverse balance of trade.

GOVERNMENT FINANCE.

Further improvement has taken place during the year in regard to the National Debt through reductions effected by the Sinking Fund. In his last Budget, the Chancellor of the Exchequer inaugurated a new system in connection with the service of the National Debt, and it is intended in future to devote an annual sum amounting to £355 millions to cover both interest and Sinking Fund. Whether this arrangement will in practice result in an increase in the Sinking Fund or not, must, of course, depend upon the amount of annual interest to be paid on the National Debt, which includes the Floating Debt. While the scheme relieves the Exchequer from the strain of being tied to a fixed Sinking Fund for capital redemption, it leaves the amount to be applied annually to debt redemption the subject of considerable uncertainty.

It has already been pointed out elsewhere, but is not sufficiently widely appreciated, how each individual investor could help the Government at the present time if he were to appropriate some definite actual sum out of his own money available for investment for the purchase of British Government securities. It would raise the price of the securities in the market, and would therefore be particularly helpful to the Government in connection with their Funding and Conversion operations, thus helping to reduce the annual charge for interest on the National Debt by assisting the Government to float fresh loans on the finest terms. This, sooner or later, would place the Government in a position to reduce taxation, opportunities for which in the near future are otherwise extremely circumscribed. It would be well for an investor to turn his attention to the purchase of British Government securities rather than to invest his money in many of the issues of a more or less hazardous character, which have lately been offered to the public, some of which must almost inevitably result in a loss. If the Government could be helped in this way into a position of making a reduction in taxation, the benefit to the country as a whole, and especially to our industrial interests, would be very great indeed.

EASING THE TAXATION BURDEN.

I think that, speaking generally, there is a strong spirit of appreciation throughout the country of the value of co-operation and a desire to work for one common end. If that is the case, people should realise to what a great extent it lies with ourselves to throw off the excessive burden of taxation which is retarding recovery in industry. By following up the suggestion that every investor should buy and hold some Government stock, each according to his means, the task of the Chancellor of the Exchequer in lifting the burden of taxation would be greatly simplified. Such a benefit cannot be obtained by artificial means, such as inflation, but only by devoting some portion of the results of labour towards relieving this great national burden.

PAST YEAR'S FRESH CAPITAL.

It is to be noted that during the year fresh capital to the extent of £360 millions, excluding Conversion operations, has been issued on the London market for a variety of objects, which is an increase of about £50 millions over the previous year. Many of the issues have been for the Dominions and Colonies and for other countries overseas, but the larger proportion of the increase has been for home purposes. The money raised by overseas borrowers, besides producing good interest, which helps us to pay for our imports, generally leads, either directly or indirectly, to industrial orders, and it must, therefore, be realised that industry and finance are working together for the common good.

My lords, ladies and gentlemen, I beg to move "That the report of the directors produced, together with the annexed statement of the company's accounts as at December 31, 1928, duly audited, be received, approved, and adopted, and that a final dividend at the rate of 10 per cent. per annum on the "A" shares, and 14 per cent. per annum on the "B" and "C" shares, less income-tax, making, with the interim dividend paid on August 1st last, 10 per cent. for the year on the "A" shares and 14 per cent. for the year on the "B" and "C" shares, be declared, payable on the 1st proximo, to the shareholders registered in the books of the company on December 31st last."

SIR HERBERT HAMBLING'S SPEECH,

Sir Herbert Hambling, Bart. (deputy chairman): My lords, ladies and gentlemen, in rising to second this resolution I am sure it is your wish that I should pay a tribute to the masterly and comprehensive address given by our chairman.

He has not only given you a full account of the activities of the bank during the past year—an account which I think you will agree is in every way satisfactory—and shown that the position and strength of the bank is unassailable, but he has also given you a general survey of the financial events of the year. He has again, with great clearness, demonstrated that London still maintains her position as the great financial centre, and I would especially draw your attention to his concluding remarks.

You cannot go far wrong by investing your savings in British Government securities, but you can easily go wrong if you are tempted to put your money in many of the speculative investments that are constantly being dangled before your eyes. "Safey first" is a good motto.

To be quite frank, the past year has proved a disappointment to me, as I had hoped that some of our industries, more particularly cotton, coal, steel and iron, would have made more progress. These are undoubtedly dark spots, accompanied as they are by a formidable number of unemployed, but, on the other hand, our home trade has been quite good, and undoubtedly has been steadily going ahead, while the export of British manufactured articles is on the up grade.

AFTER-EFFECTS OF THE WAR.

There is no doubt that most of our troubles emanate from the war. Prior to 1914 we probably had the biggest international trade in the world. The war came along, and we had to concentrate on war material instead of trade products. Instead of making goods for export, we manufactured articles of war. We extended our works in all directions, we produced enormous quantities of war material, and we had one customer, the British Government, who would buy all our goods at almost any price.

The end of the war came, our good customer disappeared, and we had to get back to normal conditions. Much of our trade had passed into the hands of other nations. Industries in which we were pre-eminent for many years sprang up in other countries, and became our formidable competitors, so that we were no longer able to step back into the place we occupied before the war. We had lost a considerable portion of our trade, and we had redundant factories and works all over the country.

The "boom" of 1919-1920, with its amalgamations and big flotations, really added to our difficulties.

Looking backward we now realise that in this period many people lost their heads. They often contracted liabilities indiscriminately, and there was an orgy of spending. No doubt it was extremely difficult, at that time, to form a sound judgment. Moreover, business was, at that time, arranged without any certain knowledge, or any possibility of obtaining certain knowledge, of a sound basis for valuation.

EVIDENCE OF BETTER POLICY.

The war and its aftermath, the boom and its blunders, are largely responsible for our present-day troubles. During the past year, however, the country has got nearer to the facts, and there is evidence in a dozen different directions that a better policy is being pursued.

In the first place, there is, without doubt, a far better feeling between Capital and Labour, and there are developments along the lines known as "rationalisation." I do not know if there is any accepted definition of what is meant by "rationalisation," but my understanding of one aspect of the process is that it covers the amalgamation of a number of factories all producing the same commodity, carried out with the idea of scrapping that which is inefficient, closing that which is redundant, and so concentrating and arranging output, thus making it possible to reduce prices, to make a reasonable profit, and, ultimately, because of reduced prices, to sell an increased output and to employ more hands. Rationalisation should bring into being great concerns which can devote a whole factory to the manufacture of one grade of a commodity, and which, because of their consumptive capacity, can buy better, and because of their productive capacity can sell better. If this broad idea of the meaning of "rationalisation" is correct, then it is far better than the quack doctrine of tampering with our credit and currency system.

We have the best skilled labour in the world; from the lowest to the highest grades it is unequalled. Geographically, our trading position is second to none, and I feel convinced that the brains and intelligence of the British nation, properly applied, *can* win through.

I read with considerable interest a long letter from Lord Weir that appeared in the *Times* quite recently, and fully agree with his conclusions regarding our ability to compete. Moreover, I feel confident that, even allowing for the "black spots," our position has, nevertheless, been steadily improving during the past year.

If we can have a period of industrial peace, and if the rationalisation of industry, as it is called, is properly and intelligently carried out, I have no fear but that we shall see a constant, if slow, improvement in trading conditions during the current year. I am still optimistic as regards the future.

SHAREHOLDERS' VIEWS.

Mr E. T. Hargreaves said he was sure it was a matter of pleasure to all the shareholders that the Bank was in such an excellent position, and he hoped that during the year upon which they had now entered they would enjoy even greater prosperity. He called attention to certain anomalies in regard to bankers' drafts on demand, and to the desirability of restoring the 1d post. He also urged upon the directors the advisability of extending banking hours to 4 o'clock, as they were before the war. The development of banking would be further helped if a return could be made to the 1d stamp duty on cheques.

Mr G. A. Christian also spoke in favour of an extension of banking facilities.

Mr J. G. Colmer, C.M.G., said he would like to express appreciation of the admirable speech which had been delivered by the Chairman, and of the very satisfactory position of the Bank, having regard to the difficult year, from a general industrial and banking point of view through which they had passed. He regarded the action of the directors in applying for a Charter for a new Bank in Canada as a very practical step in the direction of the development of the Empire and of Imperial trade and commerce. He noticed that the proposal had been very well received in Canada, and if the Charter were granted he believed that the new institution would receive a cordial welcome in banking and general circles in the Dominion.

Mr Fredk. Tomkinson also expressed appreciation of the Chairman's address, and of the general progress of the Bank's business.

Sir Enoch Hill said that as a country shareholder he would like to compliment the directors upon the satisfactory position of the Bank, and on the gratifying statement of the past year's results. He wished also to take the opportunity, as one who had been a customer of the Bank in various parts of the country for many years, of testifying to the courtesy, efficiency, attention and loyalty of the officials and staff. (Hear, hear.)

CHAIRMAN'S REPLY.

The Chairman said that Sir Enoch Hill's remarks with regard to the staff were particularly welcome, and it was also very encouraging to hear from Mr Colmer how strongly he approved of their new venture in applying for a Charter in Canada. He had no doubt that it would grow into a very valuable subsidiary to their great institution, and that it would prove to be of substantial value not only to their own Bank, but also to Barclays Bank (Dominion, Colonial and Overseas). With regard to the remarks of Mr Hargreaves, he was entirely in agreement with that gentleman on the question of 1d cheques. If Mr Hargreaves could persuade the Chancellor of the Exchequer to make the reduction he would be rendering a great public service. (Hear, hear.) The question of banking hours was primarily one for the public, but any change could only be effected by common consent on the part of all concerned. There was no doubt that the Banks in this country were always prepared to comply with anything for which there was a real need, if it were reasonable.

The resolution was carried unanimously.

Sir J. Fortescue Flannery, Bt., then moved:—"That the Rt. Hon. Lord Bethell, Messrs Henry Anthony Birkbeck, M.C., Charles Henry Dent, Peter Forrester, Frederick Crauford Goodenough, Sir Herbert Hambling, Bt., Mr Follett Holt, Sir Frederick William Lewis, Bt., Messrs Claud Edward Pease, Herbert Leslie Melville Tritton and William Favill Tuke, the retiring directors, be re-elected directors of the company.

The resolution was seconded by Mr H. E. Seebohm and unanimously adopted.

On the proposition of Mr E. T. Hargreaves, seconded by Mr F. Tomkinson, Messrs Price, Waterhouse and Co., and Messrs Kemp, Chatteris, Nichols, Sendell and Co., chartered accountants, were reappointed auditors.

VOTES OF THANKS.

Mr Cosmo Bevan said he had great pleasure in proposing that the cordial appreciation and thanks of the shareholders be given to the general managers and the whole of the staff for the manner in which they had carried out their duties during the past year. Nobody was more aware than the directors of the excellent work, goodwill and loyalty of the staff. A few years ago they showed their appreciation to some extent by issuing a certain class of shares called "C" shares, for which the staff were allowed to subscribe, and this had proved a great success. This year they had taken another step, having placed £50,000 to the credit of the staff widows' fund. He had no doubt that this would meet with the approval of the shareholders. (Hear, hear.)

Mr James Tuke seconded the vote, which was unanimously accorded.

Mr Edwin Fisher, one of the general managers, said that the remarks which had been made with regard to the staff were most encouraging. The donation so generously granted by the directors to the staff widows' fund would be much appreciated. He wished to express the gratitude of the staff to the shareholders present for the generous way in which they had adopted the resolution. There was no need for him to emphasise how much these expressions of confidence really meant to the staff, who recognised that a high standard of efficiency was expected of them, and who did their utmost to maintain that standard. It was therefore most heartening to them to learn that the work which they had done during the past year had met with the approval of the directors and shareholders. (Applause.)

Major-Gen. Sir Richard H. Luce, K.C.M.G., M.P., proposed a hearty vote of thanks to the chairman and his colleagues on the board, which was seconded by Mr J. Spencer and carried amid applause.

The Chairman briefly acknowledged the compliment, and the proceedings terminated.

BARCLAYS BANK (DOMINION, COLONIAL AND OVERSEAS).

GOOD RESULTS—INCREASED PROFIT.

REVIEW OF CONDITIONS OVERSEAS.

The third ordinary general meeting of Barclays Bank (Dominion, Colonial and Overseas) was held, on the 17th instant, at the Cannon Street Hotel, London, Mr Frederick Craufurd Goodenough presiding.

The Chairman, in moving the adoption of the report and accounts, said:—Certain outstanding questions between the Inland Revenue authorities and the Bank with regard to Dominion Income Tax have at length been disposed of, with the result that the dividends which this meeting will be asked to approve will be subject to income tax at reduced rates, the difference between such rates and the standard rate representing the refunded tax being passed on to the shareholders.

BALANCE-SHEET.

Turning to the balance-sheet and profit and loss account for the year ended September 30, 1928, the board have much satisfaction in reporting a steady increase in the total figures, which now exceed £70,000,000.

Current, deposit and other accounts increased during the year by nearly £8,000,000, and reached a total of £59,675,656 on September 30th last. The bills rediscounted, amounting to £1,625,515, have now all been paid.

There has been a corresponding increase in assets, and cash in hand and at bankers, and gold bullion amounted to £10,771,837, that is to say, 18 per cent. of the deposits. Bills discounted have increased to £17,415,119, representing more than 29 per cent. of the deposits, whilst investments at £9,249,647 represent 15½ per cent. Advances to customers have also increased.

PROFIT AND LOSS ACCOUNT.

The net profit for the year ended September 30, 1928, after making full provision for bad and doubtful debts, amounted to the sum of £494,822, which compares with £482,045 last year. An interim dividend on the "A" and "B" shares at the rate of 3½ per cent. per annum was paid in July last, and it is now proposed to pay a final dividend on these shares at the rate of 4½ per cent. per annum, making 4 per cent. for the year, against 3½ per cent. for the previous year. The reserve fund has again been increased by £150,000, bringing it up to £1,400,000, whilst the carry forward is increased from £122,478 to £130,709.

SUMMARY OF CONDITIONS—SOUTH AFRICA.

Agricultural conditions generally were satisfactory and, with the exception of a few areas, farmers had a good year. The decline in wool values was disappointing to producers, but was not entirely unexpected. The December wool sales proceeded briskly with steady demand, and prices remained firm, though generally lower than twelve months ago. The prospects for the 1928-29 season are promising. The Department of Agriculture estimated the total number of woolled sheep in the Union on June 30, 1928, at 36 million, compared with 34.4 million on June 30, 1927, and non-woolled sheep at 4.7 million, compared with 5.1 million. It is estimated that 2 million sheep were lost through drought and other causes, in spite of which flocks have increased.

The export of maize and maize products from South African ports from June 1st to end of December was 7¼ million bags. If a normal rainfall should occur during the next two or three months, a satisfactory maize crop will be assured.

Wheat.—At the present time the prospects point to a better yield than last year, and about 2,200,000 bags are expected.

Fruit.—As a result of the drought during the growing period, the citrus crop was disappointing, the quantity exported during the 1928 season showing a decrease of 134,780 boxes as compared with 1927. The total quantity of deciduous fruit exported during the 1928 season constituted a record figure, amounting to 1,920,175 boxes, as compared with 1,523,526 boxes for 1927. There was a very substantial increase in the export of pears, of which fruit 649,000 more boxes were exported. A feature of the season was the consistently good condition of the fruit on arrival in the United Kingdom.

It is estimated that the sugar crop for 1928-29 will amount to 290,000 "short" tons, being an increase of 26,000 on the previous season.

The estimated value of the output of gold from the mines of the Transvaal during 1928 was £44,000,000, a record figure, which exceeded the previous year by £1,000,000.

The phenomenal discoveries of alluvial diamonds, which have occurred in Namaqualand, have resulted in certain legislative restrictions designed to safeguard the industry from the harmful effects of too rapid realisation of the stones from the new areas. The hand-picking in these fields is stated to be practically finished.

Trading conditions in retail and wholesale circles have been, and still remain, satisfactory, and an indication of the industrial progress of the Union may be obtained by a comparison of the figures of the gross industrial output. In 1911 this was £17¼ millions, in 1926-27 it had grown to £98 millions, and in the year ended June last the total amount is believed to have exceeded £100 millions. These figures do not, of course, include the agricultural or mineral output.

In South-West Africa steady improvement in trading conditions continues. Land values have remained firm, and the Administrator, in his Budget speech, stated that agriculture was rapidly taking the place of mining as the chief source of income of the country.

SOUTHERN RHODESIA.

Trading conditions were good during the past year. Both the 1927 and 1928 tobacco crops each exceeded 19,000,000 lbs., being a large increase over the 1926 crop of 5,000,000 lbs. Although the improved quality of Rhodesian tobacco and the wider publicity given to it have resulted in a marked increase in its consumption, the market has not yet been able to adjust itself fully to so large a production from this new quarter. Nevertheless, as the planted acreage has now been considerably reduced, a healthier condition is expected to prevail.

Our bank recently issued in London a loan of £2,000,000 on behalf of the Southern Rhodesian Government.

NORTHERN RHODESIA.

Railway and mining developments of importance are proceeding actively, and Northern Rhodesia promises to become one of the prominent areas of base metal production.

The proposal to construct a bridge across the Zambesi is a prominent topic of interest in Nyassaland at the moment, and hopes are entertained locally that early construction will be decided upon. Tobacco is still the major crop of the country, but the tea industry is being gradually established in certain districts. Trading conditions are expected to improve during the coming year owing to the better cotton crop now being harvested.

EAST AFRICA.

Your board realise the important part which this bank may take in affording suitable financial facilities in East Africa, and accordingly branches have been, or will shortly be, opened at various points in these areas.

The Kenya Legislature has approved a development programme for the current year, which will involve an expenditure of about £1½ million, and which will include provision for the third, fourth, and fifth deep-water berths of Kilindini Harbour.

In Uganda the cotton prospects are favourable, and a record crop is expected. The area planted substantially exceeds the acreage last year.

Considerable attention is being directed to Tanganyika, where railway developments are proceeding. The central line has been extended from Tabora to Mwanza, and the Tanga-Moshi line is expected to reach Arusha at an early date.

EGYPT.

Cotton.—Trade gradually improved with the advent of the cotton season and remunerative prices for this staple product. The new cotton crop, which started at low prices but gradually improved, was on this occasion placed early on the market in order that producers might get the benefit of current prices.

The value of the Egyptian cotton exports for the year—from September 1, 1927, to August 31, 1928—was £42,585,716, the official estimate of the crop being 6,100,000 cantars. It is expected that the crop now being harvested will reach 7,500,000 cantars.

Conditions have been further helped by a good maize crop, which left an exportable surplus.

The total exports for eleven months to November 30, 1928, amounted to £50,136,320, the imports for the same period totalling £47,159,413.

SUDAN.

The general conditions of the country show a decided improvement. The cotton yield in the Gezireh, though not so satisfactory as the previous year, was disposed of at remunerative prices. Growers are improving their standard of living, and better general trade conditions are expected.

Gold Coast.—On the Gold Coast the present cocoa season opened rather later than usual, and whilst this crop is expected to equal or to exceed last year's crop in quantity, prices are much lower than a year ago.

An interesting feature of trade in the Gold Coast is the continuous growth in the value of diamonds exported, which in 1927 exceeded £500,000.

Sir Herbert Hambling, Bt., seconded the resolution, which was carried unanimously.

LEETHEMS (TWILFIT), LIMITED.

"A VERY REASONABLE PURCHASE PRICE."
VALUE OF THE NEW IRISH FACTORY.
INTERIM DIVIDEND FORESHADOWED.

The statutory general meeting of Leethems (Twilfit), Limited, was held, on the 15th instant, at Winchester House, Old Broad street, London, Mr J. T. P. Rowland, J.P. (the chairman), presiding.

The Chairman said: Gentlemen,—Before I begin my remarks to you this afternoon, I feel certain that I shall be only voicing your wishes and your thoughts when I say how glad we are to hear another favourable bulletin of His Majesty. I am sure you will all join with me in wishing him as speedy a recovery as can be hoped for. Our sympathy with the Queen and other members of the Royal family is combined with an admiration of the loyal devotion she has displayed. The universal sympathy and anxiety that have been shown have reminded us how close is the bond between the Sovereign and the community.

REVIEW OF ECONOMIC CONDITIONS.

It would not, I think, be out of place if I began what I have to say to you with a brief review of the economic condition of this country, and of the more important of the many other countries in which your company has trading interests. The year 1928 was, on the whole, disappointing for traders in Britain. The disappointment was partly due to the very high hopes of returning prosperity which were widely entertained at the beginning of the year. For a time these high hopes appeared to be justified, for the early months saw a substantial improvement in trade. But, as in the previous year, the early improvement died away after three months, and from Easter to September trade generally was somewhat stagnant. In September another upward movement set in, and was hailed with optimism in the great industrial centres; but once again in the development proved to have no staying power, and the hopes that had been raised were again unrealised.

With the total of registered unemployed pretty consistently over 1,300,000, it is natural that the purchasing power of the masses should fall even lower than it had done in previous years. There is evidence, however, that would suggest that the worst has been seen, and we may hope that 1929 will, at the worst, be less depressing than was 1928.

One of the more reassuring factors is the increase in the exports of British produce and manufactures. This is evidence that the competitive power of Britain's export industries in foreign markets is regaining its old strength. The difficulties of the coal trade and the Lancashire cotton industry should not blind us to the existence of definite prosperity in many branches, especially in the newer lines of production. But it is also indicative that the restoration of sound currencies is resulting in sounder trade conditions in many of the countries that were most affected by the war. Britain's customers are regaining their ability to purchase our products, and the steady increase which can be expected in the prosperity of many countries will benefit all our exporters. Your company will, of course, benefit directly as an exporter itself, and indirectly through the benefits of increased foreign trade to British industry as a whole.

Attention has been drawn to the prosperity of France by a recent report of the Department of Overseas Trade, but Europe as a whole has made considerable progress in the past year. The prosperity of the United States is well known, and its effects on the New York Stock Exchange have had their reactions in this country. That prosperity, it is sufficient to say, shows little signs of diminution. In the newer countries, such as latin-America and the British Dominions, prosperity depends largely on harvests, but these have for the most part been good this year. While, as a result of variations in climatic conditions, considerable fluctuations are inevitable in such countries, there must be a tendency to advance with the gradual exploitation of their undeveloped resources.

OUR PROSPECTUS.

I now turn to affairs a little nearer home, and it may not be out of place if I first take this opportunity to say a few words to you concerning our prospectus. No doubt this is a document which you have all perused very carefully. I should like, however, to go through it with you and examine a few points, so that when we next meet and our first balance-sheet is in your hands we shall feel like one large family party discussing our affairs.

You will observe that in the prospectus profits show a steady and progressive increase apart from the year ending in June, 1927, which was the year most affected by the great strike. You will observe that these profits have been set out year by year so that you can see these facts for yourselves. Some prospectuses merely state the average of profits over a number of years. Moreover, profits are not swollen in any one year by "windfalls" of business. These figures represent a steady increase in business done.

OUR ASSETS.

You, as shareholders, may be thinking, "What assets have we obtained in exchange for £350,000 cash payment?" We obtain in tangible assets £273,692, and in intangible assets £76,308. Intangible assets are, of course, goodwill, trade marks, registered designs, and patents. Our trade mark "Twilfit" is, of course, well known to all of you, or at any rate to your wives, but in addition we own a number of other trade marks, and the goods bearing these marks command a ready sale. In view of the fact that the company has been trading for 45 years and running at a profit, I do not think it unreasonable to value goodwill, &c., at one and a-half year's purchase. Many undertakings which had been running for 45 years at a profit would consider the figure of three years' profits as a very reasonable purchase price, and I may tell you that we had, in fact, received offers for the business offering at least three years' profits for the goodwill.

The next point you may ask yourselves is, "How are these tangible assets valued; how do we know we are getting good value for our money?" Well, in the first place, all our freehold factories, fixed and loose plant, &c., have been valued by one of the most famous firms of valuers in the country. It is an independent valuation. It would be very difficult to get an independent valuation of other items in your assets. Indeed, it is far better, from your point of view, that the onus of your valuation of stock-in-trade, debts and trade investments should be thrown upon your directors. They are responsible to you, and you can hold them to account should results from these items not fulfil your expectations. Indeed, if independent valuers were called in concerning these items, in the long run they would be forced to consult your directors as to the value.

With regard to the stock-in-trade, I should point out that this is turned over many times in the course of a year, which in itself is bound to ensure a clean stock. It is valued on a conservative basis, viz., cost price or market value, whichever is the lower.

STRONG CASH POSITION.

And now a few words about our cash position and liquid resources. We took over from the old company £19,938 in cash. At the end of December, although we have adhered to our custom of paying weekly for our raw material and thereby taking advantage of full possible discounts, we had approximately £56,000 at our bankers in hand.

This must indicate that the book debts and stocks have been kept liquid, and points to the profits being maintained.

OUR IRISH SUBSIDIARY.

In valuing our investment in Leethem's (Ireland), our Irish subsidiary, we have taken the usual course of fixing the figure of our actual expenditure. We could have made it a larger sum had we liked, but we preferred to follow a conservative policy At this juncture it would be opportune to direct your attention to our new "Twilfit" corset factory at Dublin, which was opened in December last by Mr Cosgrave, President of the Irish Free State. This new factory will enable us to treble our output, and we anticipate that the next twelve months will see a substantial improvement in our trade.

In the course of his remarks made at the opening of this factory, President Cosgrave, after referring to the very creditable record of the firm, stated that Leethem's (Ireland), Limited, commenced manufacturing in the Irish Free State in January, 1926, with a completely unskilled staff. At the conclusion of the first six months the output had practically trebled, and the acquisition of new premises became essential. An important feature of the new venture, President Cosgrave proceeded, was that, quite apart from the question of employment, the same article as that produced in England would be manufactured in Ireland and sold at exactly the same price. President Cosgrave concluded his remarks by a reference to the fact that all the materials for the manufacture of the "Twilfit" corset at the Dublin factory were cut in Ireland, that the labour was Irish, and that the finishing processes were carried out in Ireland. The only other thing required, he said, was a public sufficiently interested in Irish manufactures to give the firm the necessary support.

These encouraging remarks by the President were supplemented by an equally auspicious speech by Mr Blythe, Vice-President of the Executive Council, who remarked: "I am sure that the enterprise of the firm will be rewarded and that it will increasingly take trade from those who had not the enterprise to come in. We may not be able," he added, "to do everything that we are asked to do to assist the development of the firm, but anything that we can reasonably do to help Messrs Leethems and other firms that have come in to give employment and to train workers we shall certainly do."

From these statements of the leading officials of the Irish Free State, I need hardly say, you will be able to draw your own conclusions as to the value of our Irish ventures, and I may say that, in the opinion of your directors, the Irish subsidiary company is one of the bright spots in our industry.

TRADE INVESTMENTS.

Our "trade investments" represent an interest taken in firms with which we are intimately connected. The risk involved in these investments is negligible, and I am myself prepared to guarantee the company against any loss which may arise therefrom.

PRELIMINARY EXPENSES.

I now come to preliminary expenses. Your directors followed a very economical policy regarding preliminary expenses. These we estimated originally at £20,000, which, for an issue of £375,000, must surely be regarded as very moderate; and it may interest you to know that we have actually saved money on this estimate, our preliminary expenses being now estimated not to exceed £18,000. It will not, therefore, be very difficult for us to clear off this item out of profits at a very early date. As a matter of curiosity, I have glanced at the prospectuses of some recent issues. I find that an issue of but £140,000 cost £18,500, while another of £225,000 cost £18,950. Yet another, in which only £200,000 was involved, cost the company concerned no less than £27,000, or half as much again as your company spent in connection with an issue of nearly twice the size.

We might have materially increased the expense by having the issue underwritten. We had no wish, however, to waste our money by giving it to strangers. We could even have underwritten the issue ourselves, and obtained an additional profit from the company, but we were more concerned with the welfare of our undertaking.

SUBSCRIPTIONS FROM CUSTOMERS.

We were very anxious that the distributors of our products should become interested in the undertaking, and I am very pleased to inform you that the wholesale and retail customers, and these, I would remind you, are people who know our business and understand the quality of and the demand for our goods, showed their opinion of our undertaking by applying for more than the present share capital, so that, of course, we were unable to allot to them the full amount applied for. This, from your point of view, is a very favourable point for consideration. For if those who have been customers of the business for so many years think it worth while to take an interest, those who are not so well posted in the affairs of our undertaking are in good company. Moreover, and this may surprise even financial experts, the directors applied for, and have been allotted, the largest number of shares allowed by the Stock Exchange if a public quotation is to be obtained.

CONCENTRATION OF PRODUCTION.

There is another point to which I would like to draw your attention, and that is, the policy which your directors have consistently followed in concentrating production in two or three main factories built on land which we have acquired freehold. In pursuance of this policy we have from time to time purchased property adjoining our factories, so that we shall be in a position to build extensions to our factories as the business increases and develops. I may also point out that the company is placed in a very independent and self-contained position from the fact that we ourselves manufacture all boxes used for the packing of our product, and, moreover, we have the advantage of our own printing works for the production of pamphlets, catalogues, &c.

PROFIT-SHARING SCHEME.

I have always believed that a business could not continue to prosper without an efficient and contented staff. It is good business, I have contended, to ensure that your employees will continue in your service, and will be encouraged to give of their best by welfare schemes, and by some system which ensures their participation in the company's prosperity. Every employee on your company's pay-roll receives a yearly bonus based on profits. This is, of course, charged as an expense before arriving at the figure of net profits shown in the prospectus. He or she, therefore, shares to the full in the prosperity of the company. We welcome suggestions by the staff for any improvements that may be possible, and invariably give such suggestions our most careful consideration. To enable these suggestions and any questions of working conditions to be brought before us, your employees select their own delegates, who forward reports or meet together whichever is needed. These delegates meet in the company's time without loss of pay.

PROSPECTS FOR 1929.

Now you may expect me to say a few words about the future. As I said before, the present industrial situation in this country contains reassuring factors, and I am hopeful that at least 1929 will prove a better year than 1928. One of these hopeful features is the absence of industrial disputes for some time past. The saner trade union leaders have realised that the interests of workmen, as of their employers, lie in increased production, which makes possible such decreases in overhead costs that goods can be sold in competitive markets. Representative trade union leaders are now officially co-operating with employers to lay surer foundations for peace and efficiency. Another hopeful feature is the extent to which it is being realised that in the basic industries of this country rationalisation, that is, co-operation between like concerns with a view to effecting economies in production and in distribution, is essential. This lesson has taken a long time to sink in, but it appears now to have been learnt. Once again the world has been blest with good harvests, which means that the purchasing power of large communities of British customers abroad will be improved. We may, therefore, hope that the increase in our exports which has recently been visible will be maintained. All these are factors which lead one to hope that, if a revival of trade should now be apparent, British industry will be in a stronger condition to take advantage of it than was the case a year ago. I believe that that revival cannot now be long delayed. Already it is visible in the great shipbuilding industry. Such a revival, meaning increased employment, will benefit all traders. In these circumstances, I see no reason to doubt that the increases which have been seen in the profits of an old-established concern like the company whose business you have bought will continue to be seen in the future.

IMMEDIATE PROSPECTS—INTERIM DIVIDEND POSSIBILITIES.

With regard to our immediate prospects, I am very pleased to say that, notwithstanding general bad conditions of trade, our sales for the six months ending December 31st have been fully maintained. The spring outlook seems bright, for our order books are more than usually full, and our export trade shows progress. "Twilfit" products are a household word for, you must remember, we were the originators of flexible corsetry.

In conclusion, given no unforeseen setback in the trade of the country, the directors feel confident that they will be in a position to declare an interim dividend on the ordinary shares, possibly in April.

The Chairman: The next item on the agenda is "Any questions?"

Mr Evling: Gentlemen, I say "gentlemen" because I notice there are no ladies present. I take it, Mr Chairman, there are lady shareholders.

The Chairman: I hope so.

Mr Evling: I feel it is a bounden duty, and certainly we have a duty to perform. I have been listening to the chairman's report at this statutory meeting, and I beg to propose to him and to the other directors a hearty vote of thanks. This is, of course, just a small duty one feels one should do. We feel as shareholders that our interests are in their hands, and I, for one, feel quite sure they are in very earnest, sincere and good hands. I have very great pleasure in wishing our company all the success I am sure it deserves, and in proposing a hearty vote of thanks to the chairman and the other directors in your name. Will some gentleman please second that?

Mr Ponder: I have very much pleasure in seconding that. It was a most interesting speech from the chair for a statutory meeting. What we were all looking forward to was what he was going to say as to the immediate future and the present. That was hopeful, so he is sending us away happy.

Mr Evling: I will put that to the meeting. It was proposed by myself and seconded by my friend here. Those in favour: that is carried. Mr Chairman, we are pleased to congratulate you and to pass you a hearty vote of thanks, you and your directors.

The Chairman: Well, gentlemen, on behalf of my directors I thank you very sincerely for your vote of thanks to us. I personally feel very confident of the future success of Leethems (Twilfit), and I feel sure that as time goes on you will be grateful that you took an interest in the initial stages of this company. That is all the business. I thank you for your attendance.

BRITISH AMERICAN TOBACCO COMPANY, LIMITED.

GOOD RESULTS OF YEAR'S BUSINESS.

SUBSTANTIAL INCREASE IN PROFIT.

The twenty-sixth annual general meeting of British-American Tobacco Company, Limited, was held, on the 14th instant, at the offices of the company, Westminster House, 7 Millbank, London, Sir Hugo Cunliffe-Owen, Bart. (the chairman), presiding.

The secretary (Mr A. M. Rickards, F.C.I.S.), having read the certificate of Sir William Plender, of Messrs Deloitte, Plender, Griffiths and Co., chartered accountants, appended to the accounts,

The Chairman, in moving the adoption of the report and accounts, said:—As you are aware, it is usual at our annual meeting to go through the various items of the balance-sheet and make some comments thereon.

BALANCE-SHEET ITEMS.

Taking the assets side of the balance-sheet, first, you will observe that the item of real estate and buildings at cost, less provision for amortisation of leaseholds, £569,059, shows an increase of £38,370 as compared with last year. This is accounted for by the purchase of some leasehold property and by additional factory buildings which we are erecting.

Plant, machinery, furniture and fittings, at cost or under, £777,247, shows an increase of £159,887. This increase is made up of items of additional machinery required in your factories.

Goodwill, trade marks, and patents remain at the same figure as last year—namely, £200,000—and, in view of the great value of the company's trade marks, the directors remain of the opinion that this item should appear on the balance-sheet, even if only at the nominal value of £200,000.

Loans to and current accounts with your associated companies, £5,434,405, show a small increase of £43,774.

Investments in British Government securities and other investments at market price, £275,228, show an increase of £226,195 on September 30th last. This increase is chiefly due to a temporary investment.

INVESTMENTS IN ASSOCIATED COMPANIES

Investments in associated companies show an increase from £20,135,601 to £20,931,081. This is the largest item on the assets side, and shows an increase this year of £795,480. This is accounted for by the increase of your investments in associated companies and in the purchase of new businesses. As I mentioned last year, the actual value of your proportion of the net tangible assets of these associated companies considerably exceeds the figure at which the investments are carried in the books of your company.

Stocks of leaf, manufactured goods, and materials at cost or under, now stand at £6,269,490, or an increase of £616,597. This is chiefly due to the increase in the purchase of leaf tobacco to meet increasing business. The stocks of leaf, manufactured goods and materials have been carried at cost or under, as in previous years.

Sundry debtors, less provision for doubtful debts, short-term deposits (£2,250,000) and debit balances now stand at £4,352,575, an increase of £540,370. Short term deposits show an increase of £239,000, trade debts show an increase of over £80,000, and loans against security show an increase of over £200,000.

Cash at bankers, in transit, and at call, £2,756,821, shows a small decrease of £32,609.

Turning to the liabilities side of the balance-sheet, the issued capital of 4,500,000 preference shares remains the same, but the issue of ordinary shares is increased from 23,499,606 to 23,540,236, an addition of 40,630 shares. This is due to shares allotted to shareholders under a resolution passed at the general meeting held on June 21, 1926, and to the issue of shares to certain directors under another resolution passed at the same meeting.

Creditors and credit balances, £5,724,366, represents an increase of £1,640,908 on the figure at which it stood last year. The greater portion of these balances consists of provision for payment of taxation due to British Dominion and foreign Governments and moneys deposited by your associated companies.

The item of reserves for buildings and machinery now stands at £525,000, an increase of £25,000.

Premium on ordinary shares issued stands at £559,658, an increase of £20,000. This increase is due to the premium received on the shares issued to directors previously mentioned.

Provision for redemption of coupons now stands at £58,963, a decrease of £27.

Special reserve has increased from £1,718,665 to £1,921,511, an increase of £202,846. As your chairmen have stated in speeches in previous years, this account was created in which to carry profits of a capital nature.

PROFIT AND LOSS ACCOUNT.

This brings me to the last item—namely, profit and loss account. The accounts show a net profit for the year, after deducting all charges and expenses and providing for income-tax, of £6,563,559, an increase of £209,464 over the previous year, which the directors trust you will consider satisfactory.

Last year we carried forward a balance of £4,277,468, out of which we paid a final dividend of 1s 8d per share, free of income-tax, amounting to £1,958,353, which left us with a disposable balance of £2,319,115.

During the year, as previously mentioned, some additional coupons have been deposited with us in respect of the shares issuable in pursuance of the extra-ordinary resolution of the shareholders of June 21, 1926, and we have allotted to shareholders 630 ordinary shares of £1 each, and a sum of £630 has to be deducted from the balance, leaving £2,318,485. To this must be added the profits for the year as previously mentioned. £6,563,559, less the preference dividend, amounting to £225,000, and the four interim dividends paid on the ordinary shares for the year, amounting to £3,920,872, leaving a disposable balance of £4,736,173, out of which the directors recommend the distribution on January 24th next of a final dividend, free of British income-tax, on the issued ordinary shares of 1s 8d per share, amounting to £1,961,686, leaving £2,774,486 to be carried forward, all of which is required in the operations of the company.

Let me draw your attention to the fact that the figures which we are now discussing refer to the company's business as of September 30th last year.

Since that time we have issued to shareholders shares in the Tobacco Securities Trust Company, Limited; therefore the changes in our balance-sheet—which this proceeding renders necessary—do not appear in the accounts now before you, and will not appear until you have before you the accounts for the current year.

SIR GILBERT WILLS JOINS THE BOARD.

I am sure you will all share the regret that my co-directors and I feel at the death of our co-director, the late Sir George Wills, who was an outstanding figure in the tobacco business, and whose name is a household word to all of us.

We have been fortunate in that Sir Gilbert Wills, chairman of that great undertaking the Imperial Tobacco Company (of Great Britain and Ireland), Limited, has joined our board, and I am sure that you will welcome his appointment.

It has been for many years past our policy to appoint on our board only directors who are active in the tobacco business. What I mean by this is—practical people who have spent their lives in the business which they are now called upon to take a part in directing.

We therefore endeavour as far as may be to fill vacancies on our board by taking the best available men from our staff and those of our subsidiary companies, and in pursuance of this policy, and in order to meet the growing needs of our business, we have appointed—since I had the pleasure of addressing you last year—three new directors, Messrs Morris, Anderson and Gillon.

Each of these gentlemen has been in the employ of your company or its associated companies for over 25 years, and were occupying at the date of their appointments very responsible positions in three of your more important subsidiary companies. They, therefore, bring to the directorate that knowledge and experience which we consider essential, and I feel sure that you will allow me to add that I consider the success which has attended our efforts to be in no small measure due to the fact that your company is directed by men who thoroughly know the business of which they are directors.

Results for the year under review in nearly all parts of the world were, I am glad to say, very satisfactory.

This is greatly due to the good management and efficiency of the boards of directors of the associated companies and the loyalty of their respective staffs, and I am sure that you will join with me in congratulating them on the successful results they have achieved.

CURRENT YEAR'S PROSPECTS.

I am very pleased to be able to tell you that your business for the first three months of the current year continues to be satisfactory.

I now formally beg to move the adoption of the report and balance-sheet for the year ended September 30, 1928, including payment on January 24th instant of a final dividend of 1s 8d per share upon the issued ordinary shares, free of British income-tax.

I may also mention that the directors have declared for the year 1928-29 an interim dividend of 10d per share, free of British income-tax, also payable on January 24th, so that the shareholders will receive on that date 2s 6d per share.

Mr. S. J. Gillchrest seconded the resolution, which was carried unanimously.

LIEBIG'S EXTRACT OF MEAT COMPANY, LIMITED.

YEAR'S RECORD PROFIT.

The 64th annual general meeting of Liebig's Extract of Meat Company, Limited, was held, on the 17th instant, at the Cannon street Hotel, London.

Mr C. E. Gunther (chairman and managing director) said that the directors were again able to submit a satisfactory report, the results showing the highest figure of profit attained in the company's 64 years of trading. The changes in the balance-sheet figures were all such as normally arose in the course of the development of the business and its operations. The capital remained unchanged, but since August 31st they had issued to shareholders on favourable terms the remaining authorised 100,000 ordinary shares, so that the issued ordinary capital would figure next year at £2,000,000, and the item of redeemable notes would disappear, these having been discharged. The reserve fund, with the appropriation now recommended, would be brought up to £1,400,000, in addition to which there would be the premium on the new shares, amounting to £250,000. The total reserve was thus equal to over 80 per cent. of the ordinary capital.

The volume of the company's trade, both at home and abroad, continued to show satisfactory expansion, and it was especially gratifying to report that the recovery in the Continental countries, heralded last year under the return of more stable conditions of currency, had made further substantial progress. During the last year or two they had undertaken in stages the extension and modified layout of their Antwerp factory. The programme was now approaching completion, and the additional accommodation provided, as well as affording a better routine for the manufacture, would ensure much-needed space for storage purposes. The Continental subsidiaries had made good progress, and a good impression was made of their activity and efficiency.

The fine new building of Thames Side Properties, Limited, near Blackfriars Bridge, on the south side of the river would shortly be ready for occupation. The extensive and up-to-date warehousing accommodation this building would provide, and its strategic position for the reception of produce shipped from overseas to the Port of London, would be of considerable value

The River Plate factories had successfully carried through their appointed programmes.

SALES WELL MAINTAINED AT HOME AND ABROAD.

The sale of the company's various manufactured articles had been well maintained both at home and abroad. A most interesting feature of their activities was the supply of therapeutic preparations made from the endocrine glands of the ox. They received daily from the medical profession confirmation of the excellence of their products, which were sold under the proprietary name of "Oxoid Glandular Preparations." The total number of their gland preparations was very considerable, but he might specially mention thyroid gland, standardised to contain an exceptionally high percentage of iodine, pitoxylin, manufactured from the pituitary gland under licence from the Ministry of Health, and widely used in obstetrics; also a combination of parathyroid gland and calcium, which was of proved value in maintaining the proper balance of calcium in the blood, and was of great efficiency in treatment of various affections of the skin caused by calcium deficiency. Their latest production, "Liveroid," a palatable juice prepared from ox liver—had proved its value in the cure of that most deadly disease, pernicious anæmia. It is also giving good results in the treatment of general anæmia.

This company was the pioneer of the meat extract industry, and it would be seen that they were still in the forefront in developing the latest discoveries. They would continue to concentrate their attention on the greatest possible development of this branch, and it would be realised that the proved activity and reliability of the company's therapeutic preparations served to confirm the confidence of the medical profession in their well-known articles, Oxo, Lemco, &c.

PROSPECTS OF COMPANY'S RANCHING INTERESTS.

Taken in the aggregate, their estancias had in the past year brought an improved contribution to the company's results. As regarded the present season, prospects in the Argentine had rarely looked better; weather conditions were favourable, and stock were reported to be in advance of their usual state at this time of the year. This presented a hopeful outlook for their ranching interests generally, and for their slaughter season, which had just commenced, although as regarded the latter there was a strong tendency to higher cattle prices. Their herds and flocks were reported to be in good condition, and continued to be improved by the introduction of pedigree blood. Their farms in both Rhodesia and South-West Africa showed an increased turnover, with improved trading results.

As regarded the sale of by-products, hides, tallow, fertilisers, &c., the period under review was characterised by favourable conditions, the outputs meeting with a ready reception at satisfactory prices from a wide clientèle of buyers.

The report and accounts were unanimously adopted.

MICHAEL NAIRN AND GREENWICH, LIMITED.

CONTINUED PROSPERITY OF ASSOCIATED COMPANIES.

The seventh annual general meeting of Michael Nairn and Greenwich, Limited, was held, on the 17th instant, at Winchester House, Old Broad street, London.

Sir Michael Nairn, Bt. (the chairman), said that they all greatly regretted the loss which their company had sustained by the death in March last of Mr John Nairn. It was well known that the old firm of Michael Nairn and Co., Limited, was largely a family business. The business had been built up and attained its first position of prominence in the trade under the management of his late father and his brother, the late Mr John Nairn. It was also under that combination that he (the chairman) and most of the present directors received their initial training in the industry, and he thought it was only those of them who were fortunate enough to have had the advantage of that training who could appreciate to the full extent the loss which his death had meant to the company. Mr John Nairn started his business life in the year 1872, and became chairman of Michael Nairn and Co., Limited, in 1915, on the death of the late Sir Michael. On the formation of their company he was the first chairman, and only resigned his position owing to failing health in 1924, though he continued to remain a director until the day of his death.

DIVIDEND.

The results for the past year enabled them once more to declare a final dividend of 7½ per cent., making 12½ per cent., less income-tax, for the year, and to carry forward £44,729, as against £37,740 last year. The figures presented might be taken as an indication of the continued prosperity of their associated companies. He was closely in touch with both the Nairn and the Greenwich companies, and, broadly speaking, there were three main departments in both concerns—manufacture, administration, distribution—and it was the constant aim of the directors so to co-ordinate the activities of each of those departments as to ensure the maximum of efficiency in the general conduct of the business.

At the recent meeting of the Greenwich company it was stated that every effort was being made by the increase of plant and equipment to meet the growing demand for Greenwich inlaid linoleum, and the Nairn company were pursuing a similar policy in regard to their own productions. One of the most recent developments at Kirkcaldy was the installation of a power station, which he claimed to be second to none in this country. It had taken a considerable time to erect, had cost a very large amount of money, had rendered obsolete old furnaces, and, although not yet in full working order, had already been the means of effecting important economies in the cost of manufacture. The machinery and plant at both works under the supervision of expert staffs were kept thoroughly up-to-date, and the constant endeavour in every manufacturing department was not only to maintain, but to raise higher the standard of quality always associated with Nairn and Greenwich goods.

The importance of a modern system of administration in commercial business could not be exaggerated, and in both companies the latest methods of accountancy and costing had been introduced, and those gave to the directors the most effective and complete control over the whole of the business operations. The distribution of the goods manufactured by the associated companies was in the hands of a competent and experienced selling staff, who were continually in touch with buyers in every country in the world, and it was their business not only to sell linoleum, but to keep the directors constantly informed regarding the individual requirements of various markets.

AUSTRALIAN COMPANY.

At the annual meeting last year he had referred to the formation of a new company in Australia, called Michael Nairn and Co. (Australia), Limited. The new company was now manufacturing goods, and he had every reason to believe that the step taken to conserve the Nairn interests in Australia would prove in the best interests of the shareholders. There was another point of considerable importance to which he desired to refer. It had always been the object of the directors to create an atmosphere of goodwill between the respective boards and the workpeople, and there had been for many years a growing spirit of co-operation which made for smooth working and willing service.

In conclusion he would like to say that both the Nairn and Greenwich companies had had a most satisfactory year, both in profit and sales. During a period when there had been so much depression in various sections of industry, it was gratifying that such results had been achieved. He would like to add that in both companies ample provision had been made for depreciation and adequate additions had been placed to reserve accounts.

The report and accounts were unanimously adopted and a final dividend of 7½ per cent., making 12½ per cent. for the year, was declared.

APEX (TRINIDAD) OILFIELDS, LIMITED.

RECORD OUTPUT FIGURES.

The ninth ordinary general meeting of the Apex (Trinidad) Oilfields, Limited, was held on the 17th instant, at Winchester House, London.

Mr Walter Maclachlan (chairman and one of the managing directors), who presided, said, in the course of his speech: The net profit for the year amounts to £246,420, which, added to the balance of £102,045 brought forward from the preceding year, makes a total of £348,474.

The directors propose the payment of a final dividend of 20 per cent., less tax, making 35 per cent. for the year; as income-tax is deducted from our dividends at the rate of about 2s in the £, the gross return for the year represents the equivalent of approximately 39 per cent., less full tax at 4s in the £. The final dividend, with the directors' percentage thereon, will require £105,000, leaving £119,374 of undivided profit to be brought forward into the profit and loss account for the current year.

Although, in common with all oil-producing undertakings, we have been seriously affected by the prevailing world-wide depression in prices consequent upon the over-production of oil, there is good reason for satisfaction with the results which, in spite of these adverse conditions, have attended the operations for last year. These results suffer only from comparison with those of the previous year, and as indicating the definite cause of the fall in our profits, I may point out that had the prices ruling during the preceding year been maintained, the net profit for the year now under review would have been greater by approximately 50 per cent.

OIL PRODUCTION AND DELIVERIES.

The production of oil during the year was 294,775 tons, as against 281,181 tons for the preceding year. This production, which constitutes a record year's output from our oilfield, was obtained from 96 wells. The production for October, November, and December of the current financial year has been 94,631 tons, an average monthly output of 31,544 tons, as compared with the monthly average of 24,656 tons for the whole of 1927-1928. The total production from our property up to December 31, 1928, has amounted to 1,380,000 tons, and it is interesting to note that we produce about 30 per cent. of the entire annual oil production of Trinidad.

The oil delivered to Trinidad Leaseholds and that used in our own operations during the year amounted to 292,750 tons. As has already been stated, the average price realised from the sale of our output was considerably under that for the preceding year, but I am glad to be able to inform you that during the current year we are realising somewhat better prices than those for the year now under review.

AREA AND PROPERTY.

Further purchases of property, comprising both surface and oil-rights, have been made, and the oil rights controlled at September 30th last amounted to 3,324 acres. This includes the area of approximately 2,000 acres of Crown Lands, situated immediately south of our oilfield, previously held under an exploration licence from the Trinidad Government. Of this area, about 245 acres are now held under a prospecting licence, and the remainder of this area will also be held under a prospecting licence, which it has been agreed will be granted by the Government. Applications have also been filed with the Government for further blocks of land immediately adjacent to our oilfield.

In continuance of our drilling programme, 33,488 feet were drilled during the year, making a total of 169,781 feet drilled on the property. During the year four wells which had been previously commenced were drilled to completion, thirteen new wells were completed, and other wells in progress at the end of the year.

The amortisation plan under which our wells are written off in three years has been continued, in pursuance of which £92,362 has been written off in respect of last year.

PROSPECTS.

The continuance of general over-production renders these somewhat difficult times in which to deal with the outlook for the current financial year, but you will be glad to know that our Oilfield is responding to development operations in a most satisfactory manner, and shows every promise that the production will considerably exceed that of last year and that another record output will be established. As regards the realisation of our production, prices for our light products have risen materially, but the price of fuel oil has declined, and there does not appear to be much probability of an early recovery of any great extent. We are, however, deriving benefit from the new agreement for the sale of our production which came into operation last August, and are now realising somewhat better prices than those for last year. On the whole, therefore, we have good reason to consider that the position and outlook are satisfactory, and that the results for this year will show an appreciable improvement over those for the year under review.

The report and accounts were unanimously adopted.

RIO DE JANEIRO FLOUR MILLS AND GRANARIES, LIMITED.

RESULTS OF A DIFFICULT YEAR.

The ordinary general meeting of the Rio de Janeiro Flour Mills and Granaries, Limited, was held, on the 15th instant, at the Institute of Chartered Accountants, London, Mr Richard Foster presiding.

The Chairman, in moving the adoption of the report and accounts, said that the company had been passing through a very trying time, but, considering the state of commerce in Brazil during the past three or four years he could only feel surprised that they had not felt the effects of it sooner. The balance carried to the balance-sheet was £30,000 less. The directors were in the position of being able to pay the usual final dividend of 1s 9d per share and bonus of 1s per share, both free of income-tax, carrying forward £88,557. That result, in view of all the circumstances connected with the trade of Brazil for the last few years, was, he considered, satisfactory. Shareholders who knew Brazil would not be surprised that they were at length feeling the effects of the severe commercial depression in that country

There had been other factors which had affected them. There had been the extraordinary "tightness" of money, particularly in the interior, caused partly by the failure of the cereal crops and partly by the restriction of coffee entries, not only into the Port of Santos, but also into the other ports. That meant a lack of funds to buy the necessities of life, among which was flour. It also restricted the power to purchase the finer count cotton goods of the native factories, which had, therefore, been driven to manufacture the coarser counts, which were the particular products of their own cotton mills. With a view to alleviating the depression in the Brazilian textile industry an emergency project, increasing the import duties on cotton yarns, piece goods, &c., had recently been passed by Congress to beocme effective three months after its sanction. For the greater part of the year they had had a steadily declining wheat market. Another difficulty was that the Central Railway increased the freights on flour to Sao Paulo, and the local shipping companies followed suit.

Mr S. C. Sheppard (managing director) said that on Saturday the following cheering cabled news was received:—"General situation showing signs of some improvement, inquiries for cotton goods improving at remunerative prices, flour trade fairly satisfactory, macaroni and biscuit factories working full time, with the demand at present exceeding the production."

The report was unanimously adopted.

TRANSVAAL ESTATES AND DEVELOPMENT COMPANY, LIMITED.

SALE OF ASSETS APPROVED.

A meeting of the Transvaal Estates and Development Company, Limited, was held, on the 16th instant, at Winchester House, London, to consider a resolution approving the sale of the company's assets to the African and European Investment Company, Limited.

Mr C. F. Rowsell, who presided, said that they had received proxies in favour of the scheme from 1,298 individual shareholders representing 344,749 shares. The proxies received against the scheme were from two shareholders representing 300 shares. The board had had to consider the scheme from two points of view—the market position and the intrinsic value of the shares. At the time when the proposals were first discussed their shares stood at between 9s and 10s and the Investment Company's shares at about £1. On the basis of three shares of the Investment Company for five shares of this company—the proposed basis of sale—that worked out their shares at 12s per share, or, with the proposed 2½ per cent. dividend, at 12s 6d per share. On the then market price of the Transvaal company's shares that meant an improvement of over 30 per cent.

As to the intrinsic value of the two shares he had always been of opinion that in course of years the land holdings of the Transvaal company would eventually realise a sum which, with their cash assets, would represent nearly £1 per share, but the process of realising land in South Africa was very slow, and he thought it would be fair to estimate the present intrinsic value of the shares at about 17s 6d to 18s. A careful valuation of the position of the Investment Company showed that they had surplus assets—in other words, unrealised profits—equal to nearly £750,000. That, on their share capital, meant practically 10s in the £, so that a fair estimate of the intrinsic value of their assets at the present time would be about 30s to 35s.

A valuation of the quoted securities held by the Investment Company amounted to approximately £1,054,000, which showed a profit of £308,000 over the price at which they stood in the books. The profits of the Investment Company for the year to December 31st last were not definitely ascertainable at the present time, but he understood that they would enable a satisfactory dividend to be declared for the year. There was every prospect that the very satisfactory results which that company had obtained for the past two years would be continued and, he hoped, improved upon.

The resolution for approving the scheme having been lost on a show of hands, the Chairman demanded a poll, which resulted in the resolution, as amended, being carried.

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for week ended January 9th: Venezuela, 36,479 barrels; Trinidad, 16,797 barrels; total, 53,276 barrels. Production for December: Venezuela, 159,760 barrels; Trinidad, 75,268 barrels; total, 235,028 barrels. Deliveries for December: Venezuela, 139,342 barrels; Trinidad, 74,910 barrels; total, 214,252 barrels.

KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during the month of December amounted to 144,080 barrels, or approximately 20,583 tons.

MEXICAN EAGLE OIL.—The production for the week ended January 5, 1929, was 142,000 barrels.

SERVICE PETROLEUM.—Output from the company's oil wells at Gura Ocnitzei and Ceptura for the week ending January 13th was 2,567 tons (17,969 barrels).

In respect of which the royalty due to Tampico Oil, Limited, amounted to 2,278 barrels.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended January 12, 1929 :—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	5,170	From Revenue	23,399
Interest, &c., on Debt	1,476		
Sinking Fund	620		
Sundries	281		
Decrease in Debt	15,436		
Increases in Balances	416		
	23,399		23,399

The total Ordinary Revenue for the week amounted to £23,399,400, as compared with £22,424,200 in the corresponding week last year. Property and Income-tax brought in £11,306,000, against £11,251,000, and Super-tax £2,930,000, against £2,400,000. Customs were higher at £1,828,000, against £1,510,000, but Excise was lower at £1,172,000, against £1,573,000. Ordinary Receipts amounted to £209,900, as compared with £210,200, while Special Receipts brought in only £800, as compared with £175,000. The National Debt was reduced by £15,436,000, as shown below :—

(000's omitted.)

	£		£
Bank of England Advances	— 5,750	National Savings Certificates	+ 100

SIDNEY TURNER, Accountant-General.

India Office, S.W.1, January 11, 1929.

Messrs Samuel Montagu and Co. write on January 16, 1929, as follows :—

GOLD.

The Bank of England gold reserve against notes amounted to £154,284,469 on the 9th instant (as compared with £153,123,339 on the previous Wednesday), and represents an increase of £378,154 since April 29, 1925—when an effective gold standard was resumed. About £60,000 bar gold was available in the open market this week, and was absorbed by the requirements of India and the trade. There was a net efflux of gold of £114,308 during the week.

SILVER.

The quiet tone of the market persists. China has both bought and sold, and some inquiry has been received from the Indian bazaars, but restriction of prices tends to keep the market narrow. In the week under review there was scarcely any movement until yesterday, when prices fell ¼d, there being little demand to offset offers of silver made by China operators desiring to close bull contracts. Silver has been forthcoming from the Continent, but America is asking higher prices, the tendency in the latter quarter being at the moment towards lending support. The tone is perhaps a little uncertain, as the condition of the market at present is such as to render it easily responsive to small pressure in either direction. After remaining at a discount of 1/16d since December 22nd last, cash silver was to-day fixed at ⅜d discount as compared with the quotation for two months' delivery. The following were the United Kingdom imports and exports of silver registered from mid-day on the 7th instant to mid-day on the 14th instant :—Imports.—France, £21,564; other countries, £10,211—£31,775. Exports.—Egypt, £29,360; British India, £106,300; Irish Free State, £15,334; other countries, £10,799—£161,993.

INDIAN CURRENCY RETURNS (In Lacs of Rupees.)

Reports and Notices.

Dr Edward Frankland Armstrong, F.R.S., D.Sc., Ph.D., LL.D., F.I.C., J.P., has been appointed a director of the South Metropolitan Gas Co. in place of Mr Edward Honoratus Lloyd, K.C.

The Rt. Hon. Lord Glenconner has joined the board of the National Mortgage and Agency Company of New Zealand.

At a recent meeting of the board of directors of Messrs Lewis's, Limited, the departmental stores in Liverpool, Manchester, and Birmingham, Mr Frederick James Marquis, M.A., B.Sc., was appointed joint managing director in association with Mr Harold L. Cohen, J.P., chairman and joint managing director since 1892, in succession to the late Mr Rex. B. Cohen.

It is announced by Messrs John Barker and Co., Limited, that Mr F. E. Thomas, who has been associated with the business for many years, has been appointed a director of the company.

Mr John McManus, of Kilkenny, Irish Free State, has been elected as an individual member of the Joint East African Board.

The Right Hon. Baron Glenavy, of Milltown, Co. Dublin, has been co-opted a director of the Parent Trust and Finance.

Mr J. H. Wadsworth has been appointed to the board and the executive committee of the Imperial Chemical Industries, Limited.

Mr P. C. Dickens has been appointed secretary of the company.

Mr Gordon Cosmo Touche has been elected a director of the Anglo-Argentine Tramways Company, Limited.

Mr A. A. Jamieson, of Messrs H. S. Lefevre and Co., has joined the board of the Union Discount Company of London, Limited.

Brigadier-General F. D. Hammond, C.B.E., D.S.O., has joined the boards of the Rhodesia Railways, Limited, and the Mashonaland Railway Company, Limited.

The address of the Bank of Roumania is now 73 to 76 King William street, E.C. 4. Telegraphic address, "Bancheri, Cannon, London." Telephone, Royal 9011-3.

The death is announced of Major Graham Airdrie Bell, Deputy-Minister of Railways and Canals and vice-president of the Canadian National Railways.

LEETHEMS (TWILFIT), LIMITED.—The statutory report shows that the total number of shares alloted is 187,500 7½ per cent. cumulative preference shares of £1 each and 187,500 ordinary shares of £1 each, all of which have been issued for cash. The total amount of cash received by the company in respect of shares issued wholly for cash is £374,935. The statement of receipts and payments up to, and including December 31, 1928, shows receipts—excess of receipts over payments on general account of £34,078; bank balances and cash in hand acquired from Leethems, Ltd., £19,938. With regard to payments, preliminary expenses stand at £16,555. Balances at banks £55,891. Cash £159.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday Evening.

A spell of cold and frosty weather over the United Kingdom has interrupted field work for the time being, but spring ploughing is well forward, and falls of snow will have a beneficial effect upon heavy soils. Offerings of native wheat were on a smaller scale, farmers apparently being reluctant to offer readily at current prices, which, however, have lately shown a hardening tendency on the chief country markets. Imported descriptions experienced a better inquiry, and the general tone continued firm. In the floating and forward cargo section values marked some irregularity, but importers showed more disposition to operate, and sellers generally maintained a firm attitude, while influenced by higher American and Argentine advices. Shipments continue of liberal extent, and floating supplies also show a substantial increase. An interesting feature was the commencement of spring chartering from Montreal, while grain rates from Australia were reduced by 7s 6d per ton. Steamers of Rosafe, 63 lbs, old crop afloat sold at 42s 9d, ditto new 62½ lbs loading 42s 6d, and last half-January shipment (64 lbs) 43s 6d per 480 lbs c.i.f. terms. Feeding stuffs firmer, and new crop Plate maize advanced sharply on dry weather in Argentina, but easier conditions now prevail on reports of rains. Wheat irregular. No. 2 Northern Manitoba 50s, No. 3 48s 6d, No. 4 Manitoba 47s, No. 5 43s 6d, No. 6 37s 6d, No. 2 mixed Durum 42s 9d, Rosafe 62½ lbs, 44s 9d, Barusso, 62½ lbs, 44s 9d, Australian 40s, all ex ship per 496 lbs. English 9s 2d to 9s 4d per 112 lbs. Flour quiet. London standard grade 37s 6d, town whites 38s 6d, patents 39s 6d to 40s 6d per sack, delivered in the Home Counties, with 6d to 1s per sack less for

deliveries in the London districts. Of imported, Manitoba patents range from 33s 6d to 37s. Minneapolis 34s to 37s, Australian 35s 6d, ex store, per 280 lbs. Maize strong, following the recent advance in forward quotations. Plate, ex ship to arrive, 43s 6d, ditto landed 45s, January-February 43s 6d, February-March 44s, March-April 41s, new April-May 39s, May-June 38s 6d. No. 2 white flat African, landed, 44s, No. 2 mixed American, ex ship to arrive, 42s 3d per 480 lbs. Yellow maize meal £11 5s, ex wharf, white African, ex ship to arrive, £9 7s 6d, Hominy chop £9 per ton. Barley firmer, especially for feeding kinds. Californian, ex ship, 42s to 52s, Chilian Chevalier 48s to 58s, Australian 46s to 52s, Smyrna 44s to 50s per 448 lbs. Algerian/Tunisian 34s 9d landed, Canadian feed 30s 6d ex ship to arrive, 32s landed. No. 3 Canadian Western 34s 9d, ex ship to arrive, per 400 lbs. English malting 10s to 15s, feed 9s to 10s per 112 lbs. Oats quietly steady. Plate, ex ship, December-January to February-March, 25s black Plate, landed, 25s 6d, No. 3 white clipped American, 36 lbs, landed, 27s 6d, mixed Canadian feed 22s, Chilian white 33s 3d, German landed 28s 6d, ex ship to arrive 27s 6d per 320 lbs. English 9s to 10s per 112 lbs. Scotch landed 29s 9d. Irish black 26s 6d per 336 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928-29, 1927-28, 1926-27, 1925-26:—

	1928-1929.	1927-1928.	1926-1927.	1925-1926.

AMERICAN WHEAT MARKETS.

Subject to slight fluctuations, prices have improved throughout the week. Cold weather conditions have continued in the winter wheat belt. Cash business has been of fair dimensions, rumours of export buying have been numerous, whilst country marketings have been small. Quotations:—

Nearest Future.	Jan. 4, 1928.	Jan. 18, 1928.	Jan. 2, 1929.	Jan. 9, 1929.	Jan. 16, 1929.
Winnipeg (No. 1 Manitoba)—Cents per 60 lbs	137	136½	122	122½	125
Chicago (No. 2 Winter)—Cents per 60 lbs	130⅜	129½	116⅜	116½	119⅜

Visible supplies of wheat in Canada at 78,538,000 bushels show an increase of 2,207,000 bushels as compared with the previous figures. Supplies a year ago stood at 61,040,000 bushels.

COAL.

Our Cardiff correspondent writes:—The recent improvement on the South Wales coal market has been firmly maintained this week and except for some of the best Admiralty large descriptions the tone has been quite buoyant. The collieries are well sold under contracts, but there is a steady flow of current inquiry, and assisted by a good supply of tonnage, the collieries are fairly regularly employed. Prices also are showing an improving tendency, and in some cases ruling quotations are in excess of the minimum schedule. Nothing further has transpired concerning the position of the output control scheme, and if prevailing conditions continue there will be a more or less general indisposition to proceed further with schemes of regulation. In any case, the Coalowners' Association has not been able to secure the 85 per cent. support necessary to bring the output control scheme into operation. The result of the tendering for the Egyptian State Railways contract is expected in the course of the next few days, and it is feared that at least a part of it will be diverted to Poland.

The following are the current approximate prices:—Best Admiralties, 19s 3d to 19s 6d; seconds, 18s 9d to 19s 3d; best drys, 18s 6d to 19s; Black Veins, 17s 9d to 18s; Eastern Valleys, 16s 7½d to 17s; Western Valleys, 17s 6d to 17s 9d; best steam smalls, 12s 9d to 13s; cargo smalls, 11s 6d to 12s; coking smalls, 12s 9d to 13s; anthracite, best large, 33s to 35s; Red Vein, large, 21s to 25s 6d; machine-made cobbles, 40s to 43s; French nuts, 41s to 43s 6d; stove nuts, 40s to 42s 6d; rubbly culm, 9s to 9s 3d; foundry coke, 25s to 36s 6d; patent fuel, 20s to 21s 6d; pitwood, ex-ship, 25s 6d to 26s.

Our Glasgow correspondent writes:—The export market is firm in tone, but this condition arises principally from the activity in the home market, which is, meantime, on such a scale as to leave only a small part of the restricted output available for shipping requirements. The strength of Lanarkshire prime splint has been accentuated by a reduction in supplies owing to the collapse of a shaft at one of the collieries. Shipment prices (f.o.b. district ports) are as follows:—Lanarkshire.—Ell best, 16s; splint best, 17s 6d; splint second, 16s 9d; navigation, 17s; navigation second, 15s; steam, 14s; Hartley, 16s 6d; trebles, 14s 6d to 15s; doubles, 13s 3d to 13s 6d; singles, 13s; pearls, 11s 9d to 12s; dross, 10s 6d. Fife.—Screened navigation, 18s; first-class steam, 13s 6d; third-class steam, 12s 9d; trebles, 14s 9d to 15s 3d; doubles, 14s; singles, 12s 9d to 13s; pearls, 11s 6d to 11s 9d. Lothians.—Prime steam, 13s 6d to 14s; secondary steam, 13s 3d; trebles, 14s 9d to 15s; doubles, 13s 9d to 14s; singles, 12s 9d to 13s; pearls, 11s 9d.

Our Sheffield correspondent writes: The coal position is the reverse of satisfactory, especially as regards industrial demand. Consumption at the works, although holding promise of expansion, is poor at the moment. A number of contracts have been resumed some at an advance of sixpence and others on the old terms. Local merchants have advanced the price of house coal a shilling per ton. There is a steady sale of blast furnace coke, best brands of which can be bought at 13s and 13s 6d per ton, although the official minimum is 1s or 1s 6d more.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—The brighter conditions which have been noticeable in the steel market of late have been maintained, and there is a general belief that a period of good trading is in sight. The prevailing note has been one of confidence. A considerable volume of business has been done for export to the Far East and other overseas destinations, and although a good deal of this has gone to the Continental works, British manufacturers also have benefited to a certain extent. It is as a consequence of this buying that the Continental steel makers have been able to advance their prices to the extent of 1s 6d, and in some cases 2s per ton, on some finished steel products. In other departments of the market activity has not been so pronounced. A slight improvement is noticeable in the demand for pig-iron and some of the British furnaces have been able to strengthen their prices somewhat. In the semi-finished steel department most of the Continental steelworks, in addition to having advanced their quotations, are offering only small quantities to the British market, and as a consequence the British steel works, which are able to

COMMERCIAL SERVICE
The Bank has over 350 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade between South and East Africa, the United States of America and the Continent of Europe.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South and East African matters of Trade and Commercial Interest.

give prompt delivery, are securing a fair amount of business. The British home market also is becoming more active, and there has been a fair volume of orders for the replenishment of stocks. Buying by structural engineering firms in the North of England is reported to have improved somewhat.

Our Middlesbrough correspondent writes:—Pig-iron: The outlook in the iron market continues to be favourable. Stocks of Cleveland and pig-iron are low, and although the bulk of the iron is used by the makers themselves, the surplus for the market is easily disposed of. The price, therefore, remains firm on the basis of 66s for No. 3 G.M.B. No. 1 quality is 68s 6d; No. 4 foundry 65s, No. 4 forge 64s 6d. There is more inquiry for hematite, both for home and export. The output in the district is so small that stocks are exhausted, and iron for prompt delivery is difficult to get. A fair amount of forward business has been done, and the position is better. The price is firm at 71s for mixed numbers. With regard to manufactured iron and steel, there is a steady demand, and works are busier than for some time past. Further good orders have been secured, which makes the outlook for the next two or three months much better. The steel works, though not working to full capacity, are much busier than they were. Prices remain unchanged on the following basis:—Steel ship plates, £8 7s 6d; steel ship angles, £7 17s 6d; iron bars, £10 5s; steel rails, £8 10s. Ore is very firm, with consumers holding off and not inclined to pay the prices asked. Best rubio is still at 22s 6d c.i.f. Tees, but little business is being done. Durham blast furnace coke still remains round about 17s 6d to 17s 9d, delivered furnaces.

Our Sheffield correspondent writes:—The local steel industry is making a good recovery from the effects of holidays and stock-taking. A considerable number of suspended men have resumed work this week. Demand is increasing for alloy steels of various descriptions required in modern engineering work on which Sheffield specialises, and the outlook for these special materials is highly promising. Railway orders are mainly for hand-to-mouth quantities. The output of open-hearth steel tends to increase, although the call for best acid steels continues poor. In the pig-iron market conditions are much the same as during the closing months of last year, and the deadness of the light castings trade is responsible for restricted consumption. The falling off here is compensated for to some extent by increased activity at some of the engineering foundries. For Derbyshire foundry pig-iron 60s appears to be the bottom figure. The year has opened fairly well in some sections of the hand and small tools industry.

Our Glasgow correspondent writes:—In the pig-iron market there is a slight improvement in demand noticeable this week, although in most cases it is only for small lots for early delivery. In the iron and steel trades generally there is more activity at the works. Makers of shipbuilding material and structural steel section are finding business easier, and several very considerable contracts have been placed within the past few days with local firms for steel buildings and for crane equipment. In the sheet trade the position remains highly satisfactory, makers having well filled order-books, and there is no slacking off in the number of inquiries for forward delivery. Tube makers also continue to be well employed, but the malleable iron market is still depressed. Prices remain at recent levels.

Our Cardiff correspondent writes:—The position in the tinplate trade is unchanged. The tone on the Swansea Metal Exchange on Tuesday was quiet, but there was a fair volume of business in negotiation, and prices are steady at from 18s to 18s 3d per basis box. Galvanised sheets, however, are firmer at from £13 12s 6d to £13 15s, compared with £13 10s to £13 12s 6d the previous week. Welsh tinplate bars are still quoted round about £6 per ton, with foreign bars ruling between £5 10s to £5 12s 6d. There was an increase last week in the deliveries of boxes from works to dock warehouses, and as shipments were slightly less, the stocks have increased to 238,478, compared with 224,293 boxes.

OTHER METALS.

TIN.—Quieter conditions prevailed in the standard market, and prices exhibited irregularity and weakness, sellers being more in evidence following lower Eastern advices and lack of demand both on home and Continental account. Stocks in London and Liverpool warehouses for week ending January 12th were returned at 7,388 tons, compared with 2,199 tons at corresponding period last year. Standard cash changed hands at £223 to £222 10s and £223, three months £223 to £221 10s and £222 10s. Sales in the East were reported at £226 10s to £224 7s 6d and £225 per ton c.i.f. terms.

COPPER.—Demand proved disappointing and prices gave way under selling pressure. Standard cash sold at £74 15s to £74 16s 3d, and three months £72 5s to £72 16s 3d and £72 17s 6d.

LEAD opened easier on liberal offerings, but since improved, with buyers more in evidence. Good soft foreign pig January sold £21 18s 9d to £21 15s and £22 1s 3d. February £22, March £21 18s 9d, April £22 7s 6d to £22 and £22 2s 9d, May £22 1s 3d to £22 5s.

SPELTER.—Market dull and prices eased on liberal offerings. January sold £26 to £25 17s 6d and £26, February £26 5s to £25 18s 9d and £26, March £26 2s 6d to £26 1s 3d, April £26 to £26 2s 6d and £26 1s 3d, May £26 2s 6d to £26 1s 3d and £26 2s 6d ton.

THE COTTON TRADE.

LIVERPOOL, Jan. 16, 1929.

There has been considerably more business during the past week. Manchester continues to do a large business. The futures market has been quiet, "long" liquidation and hedge selling being absorbed by trade demand. Speculators also seem more inclined to enter into the market. The American consumption figures for December were published on Monday, and proved to be 534,000 bales, the average daily rate of consumption being the same as for November. Spot sales for the week 10th to 16th (inclusive) are 39,000 bales, of which 24,450 are American, 1,050 Argentine, 250 Brazil, 8,500 Peru, 1,550 Egyptian, 1,600 African, 1,200 East Indian, and 400 sundries. Imports for the same period are 140,465 bales, of which 117,515 are American, 1,534 Brazil, 3,095 Peru, 15,828 Egyptian, 773 African, 1,334 East Indian, and 386 sundries. Quotations to-day are American middling, 10.69, mod.-rough 12.75, F.G.F. smooth 11.74, West African middling 10.74, and East African G.F. 12.25.

MANCHESTER, Jan. 16, 1929.

The market during the past week has been under the influences of hardening rates for the raw material, and partly owing to the diminished probability of more favourable opportunities of purchasing, demand for yarn and piece-goods has been more active. In the cloth section there has been further expansion in the trade

passing for China. An increased inquiry has been met with in a variety of goods, and encouraging sales have taken place in grey and white shirtings and fancies. Advices from Shanghai with regard to the auction sales remain healthy. Rather more business has also been done for India in light goods and fancies, but bids in grey staples lag behind. Cloths suitable for printing and dyeing have moved off fairly well for several minor outlets East and West. There has not been very much activity in home trade fabrics. There are further indications of manufacturers quietly improving their position. Inquiry in American and Egyptian yarns has been rather more encouraging, and the turnover shows an improvement, but prices remain poor.

THE WOOL TRADE.

Our Bradford correspondent writes:—Continued competition from Continental buyers in Australia and South Africa, and active buying on the part of United States operators in South America, seem to preclude the possibility of any material decline in wool values in the near future. Although there is still a big weight of wool to come on to the market, the indications are that stocks abroad in the chief consuming centres are small and, with considerable machinery requirements to cover, foreign buyers show no sign of calling a halt. Yorkshire importers will also have to purchase considerable quantities between now and the close of the season if they are to be supplied in anything like normal manner. That users are strongly opposed to current prices is obvious from the restricted purchases in tops and yarns, which, as a rule, are only sufficient for current needs, but it remains to be seen whether they will be able to hold out in face of the general demand for wool. The constant complaint is that tops, yarns and piece-goods cannot be sold at prices based on the cost of production, yet it is the world demand for the raw material that fixes the price of wool and not, apparently, the demand for semi and manufactured goods. This anomaly has been in evidence for several years, and can only be explained on the ground that production costs—due to a lower standard of living—are much lower on the Continent and in Japan than they are in this country. There is a fair amount of inquiry for tops, and quotations remain steady, but yarn prices are very irregular on account of the keen competition among spinners for orders to keep machinery employed.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

At the opening of the first series of sales of Colonial wool for this year in Coleman street last Tuesday, there was a large attendance of home and continental buyers. There was practically no change in merinos, but the few greasy crossbreds catalogued moved slightly in sellers' favour. There was no apparent change in slipes. The best feature of all was the good general competition, and it is quite reasonable to expect that this will continue to the close. It is quite a long time since there was such a feeling of reasonable confidence as obtains among buyers at the present time. The price of crossbred tops presents a serious problem owing to the extreme difficulty in getting these on to a level which corresponds with the cost of wool. The position of crossbred raw material appears to be fairly well assured, though there is certainly nothing to show why values for this description should go any higher. There are some quite attractive offerings in both merinos and crossbreds. Supplies of New Zealand clip greasy fleece were not large, but this at least ensures forthcoming supplies being absorbed as they become available, and there will be some good clips among them. American interests are represented, and we may expect the usual weight of wool to be bought for that destination. There is still ample room for expansion in the United States textile industry.

Encouraging news is being received from the selling centres in Australia. Important sales have taken place this week at Sydney and Perth, whilst good markets are reported from New Zealand and South Africa. In every selling centre, there is a distinct evidence of confidence without any unwarranted speculation.

THE JUTE TRADE.

DUNDEE, January 16, 1929.

Sellers are reserved, and there seems to be little hope of cheaper fibre during the remainder of the season. Calcutta is all out for higher prices, emphasising the fact that supplies are decreasing and imports into Calcutta beginning to fall off. For the six months of the season from July 1st to December 31st the crop yielded 7,500,000 bales, and the forecast figures for the whole season were 9,916,000 bales. The Calcutta mills have large stocks, but endeavours will be made to maintain these in order to be ready for any emergency, should anything occur to jeopardise their position in the future. On July 1st of this year they will be working an extra six hours per week, adding to their consumption of raw material about 700,000 bales during a season. In addition to this quantity, there is the steadily increasing need of the Continent, where new mills and extensions have been of notable account in recent years. Indeed, this was one of the principal factors in bringing about the decision of the Calcutta mills to increase their production of jute goods. It will be seen, therefore, that the supply of raw material is promising to become an even more important consideration, and that an average crop of ten million bales will be insufficient to meet the requirements of the world. The past two crops have yielded a plentiful supply, of which the Calcutta mills have taken full advantage by increasing their stocks, but the acreage for the present season was reduced by 240,000 acres compared with the previous season.

Prices of raw jute rule on much the same level as those which have prevailed for several weeks past. First marks and lightnings are mostly nominal in the absence of interest from spinners in this class of jute at £36 and £33 10s respectively January-March shipment. Daisee assortment is quoted at £31 15s, threes at £30 15s, and fours at £27 10s to £28, while Tossa assortment is named at £33 15s, threes at £32 15s, and fours at £30 10s, January-February. Spinners have done little buying during the past fortnight.

Jute yarns are quiet, with some qualities obtainable at less money. The hessian descriptions are steady at 3s 6d for common 8-lb cops and at 3s 7d for 8-lb spools for January-March delivery. Sacking yarns have been dull, and are now being sold at 3 15/16d for 24-lb weft and at 5 1/8d for 8-lb chains. Rove is at £27 10s for 48 lbs and £17 10s lowest for 200 lbs, while twist is from 5 1/16d to 5 3/4d for 3-ply 8 lbs.

Inquiry is made for jute cloth, but business has generally been confined to small lots. Altogether, however, the total has amounted to a fair quantity, most of which has been purchased at lower rates. For 10¾-oz 40-in hessians 4¼d has been accepted and 3 3/8d for 8-oz, but manufacturers are not now inclined to repeat these terms.

HIDE, LEATHER, AND ALLIED TRADES.

The demand for hides is slow owing to the quiet trade in leather. Prices are not yet stable, and many—notably oversea hides—continue to fall. British market hides, however, have of late shown little alteration, although at recent provincial auctions slight advances of ¼d to ½d per lb have been noted. At Bermondsey auctions prices have remained steady, with the exception of calf-skins, which are weaker. The international position of foreign hides remains weak, and sellers are accepting reductions. Of late, however, American, Russian, and German buyers have shown some interest in South American hides, and quite a fair-sized turnover has been done in fregorific ox at 10 1/16d. Saladeros, of Liebig origin, have sold at Liverpool at 9⅜d for heavies, and the first shipment of Bovril ox have sold at 10½d, partly on Russian account. Dry hides are weaker, and B.A. Americanos are quoted at 15½d. Cables from Chicago report the market as still weak, with best heavy packers selling at 21½ cents.

Whilst there is a little more doing in sole leather, trade is not yet up to expectations. Stocks now show some accumulation, and tanners are accepting bids for bends and offal at less money.

Business in upper stock is quiet all round, and orders are on the small side for box and willow calf, with prices difficult to quote. Black and brown glacé kid is the best selling line, and a little sampling in colours is going on for the spring trade. Patent is slow, and the market has been rather dislocated by a cut of pence per foot on a German brand of patent which sells

freely on this market. The shoe section is slightly improving, but it is significant that a large Northampton firm has discharged about 60 of its operatives owing to quiet conditions.

VEGETABLE OILS AND OILSEEDS.

Markets have shown rather more activity. Consumers of linseed oil have again bought freely and crushers are reported to have sold large quantities at current figures. Prices have fluctuated somewhat, but are little changed on balance and are firmer in sympathy with seed. Present value is around £28 5s per ton naked ex Hull mill spot and forward to August, later positions being at a small premium. Cotton oil is quiet in the face of the competition of Russian oil, but values are maintained, crude Egyptian being held for £29 5s and common edible for £32 10s spot and January-February ex Hull.

In the oilseed section Plate linseed is steadier on good buying of new crops here and on the Continent, and reports that America is also a purchaser. Plate on spot continues at a dwindling premium, and increased shipments have reduced the advantage held by seed on passage which to Hull has been done at £15 11s 3d. For January-February shipment £15 12s 6d is now wanted. The quantity of linseed afloat for Europe is 190,600 tons or 22,000 tons more than a week ago. A small trade in black Egyptian cottonseed to Hull for February loading has been done at £10 2s 6d, but more money is now asked by shippers, and £10 6s 3d has been paid for "on passage." Demand for oilcakes is fair and prices firm.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Market developed depression, due to Cuban interests having vetoed the proposition to form a selling agency, or in other words, a trust, as obtains in Java and Mauritius, so that producers will now market their sugar quite independent of one another. Sentiment upon this point was sufficient to cause a dip in prices, but later on affairs should become better balanced between prices ruling for Cuban sugars to the U.S.A. and Europe, as unexpected dumping to latter destinations witnessed under the Export Corporation led to prices being lower than to American refiners. As far as the United Kingdom market is concerned, consumers are favoured regarding prices, owing to fierceness of competition now existing between British refined and home-grown granulated, also the output of some of the latter factories, who turn their attention to working up imported raws. There seems to be too much strife between producers, particularly in the cane countries, to stress a gradual but yet marked increase in consumption of the commodity. Messrs. Tate and Lyle reduced quotations 6d and forward granulated by 3d. Imported descriptions quite neglected at the moment. Tate and Lyle's cubes now 26s to 26s 6d; granulated, No. 2, also London and T.L., 23s 4½d; month forward 23s 6d; yellow crystals, spot, 21s 10½d; T.L., from second-hands, 22s 7½d. Home-grown ranges from 22s 10½d to 23s 7½d, as to factory. Imported kinds, also continental granulated for shipment, call for no comment. Same prices obtain in local Java markets, but signs are not wanting that sellers are prepared to grant a price concession, in order to negotiate a line of business, but buyers are still very shy. Foreign 96 per cent. centrifugal, January-February, quoted, 9s 8½d, c.i.f. and small parcels Peruvian afloat to the U.K., 9s 6d, c.i.f. terms. Terminal sections easier, though liberal sales occurred in the December position of raws. March, raw, quoted 9s; May, 9s 1½d paid; August, 9s 6d to 9s 5¾d; December, 9s 8½d to 9s 7½d; white, March, quoted 12s 5½d; May, sold, 12s 6d to 12s 5¾d; August, 12s 9d to 12s 9½d cwt. The Java trust has disposed of about 1,000,000 tons of new crop whites, the total crop being estimated at 3,300,000 tons. Imports into the United Kingdom during last month totalled 172,752 tons, against 155,996 for same period in 1927, consumption being 115,374, against 115,204; stocks, 200,200, against 214,000; stocks of home-grown, 66,700, against 48,800; consumption, in the U.S.A. during last year is returned at 5,543,000 tons, against 5,297,000 in 1927, or, in other words, nearly a quarter of a million tons increase. Total shipments from Java last month reach 291,250 tons, against 182,200 for December, 1927. To India, 131,000 tons, against 94,000; China, 71,000, against 19,000; Japan, 36,000. against 50,000; Port Said, 32,000, against 4,000. Stocks in Poland are about 117,000 tons above last year, despite increased consumption and exports, but production has forged ahead. Cuban receipts last week 109,990 tons; exports, 22 000; stocks, 119,300, against 107,200 last year. Stocks of raw sugar in the three principal warehouses of the United Kingdom for week ending January 12th amounted to 146,609 tons, as against 90,222 last year.

COFFEE.—A good steady market continues, with a fair off-take of suitable parcels from the spot. New crop Costa Rica slightly dearer on the week. East African kinds sell readily, mostly for blending.

COCOA.—Only a quiet movement on the spot at previous rates. Accra F/F, February-April, sold, 40s 9d to 40s 6d, c.i.f. terms. Terminal section slow. March, sold, 46s 3d to 46s; and September, 48s 1½d to 47s 7½d.

TEA.—The market travelled on more steady lines during the week, price changes in most directions being unimportant, while supplies auctioned were well disposed of; 61,614 packages Indian were offered, and opening tone, though quiet, soon improved, and on balance no material alteration observable. Really fine tippy teas were in marked request and commanded firm prices. 25,339 packages Ceylon were catalogued, and all teas to 1s 5d met a good demand, but above this figure, and probably due to a falling off in quality, the market proved irregular and occasionally easier. Java and Sumatra auctions met with fair attention, commoner 1d to 2d down. New season's China in fair request at full recent rates. Some Ningchows sold 10½d to 11d; finer Keemuns, 1s 11d to 2s. Siftings, 9d to 9½d lb in bond.

NATIONAL PROVIDENT INSTITUTION
48 GRACECHURCH STREET, E.C.3.

SAFEGUARDING
UNDER THE SEARCHLIGHT
An enquiry into the origin and results of the safeguarding duties separately examined.
FOREWORD BY RT. HON. WALTER RUNCIMAN, M.P.
¶ This book forms the first complete survey of the methods and results of the "Safeguarding of Industries," and is indispensable to everyone who wishes to be well informed on the subject.
Price 1/- (Postage 2d.).
BRITISH PERIODICALS, LTD., 19, Cursitor St., London, E.C.4.

RICE.—Interest in new crop Buram, as far as Europe is concerned, remains unprecedently slow, with general position nominal. About 300 tons Californian rice grown from Japan seed, for January-February shipment, sold to the U.K. at 19s, c.i.f.. with sellers now asking 19s 3d. Spanish oiled, spot, London, held for 20s 3d cwt.

BEANS.—No change to note in any position, and trade conducted quietly.

PEAS.—Market steady, with sales in Japanese, December-January, shipment at 19s 1½d cwt., c.i.f. terms, London.

SPICE. — Pepper market presented quiet features. Lampong, October-December, sold, 1s 4d; January-March, 1s 4d; Muntok, white, October-December, quoted 1s 11⅜d. London stocks reduced 49 tons on the week for black and 4 for white. Jan -March, sold, 1s 11⅛d lb. Cloves further advanced. Zanzibar, spot, London, sold, 1s 5⅜d to 1s 5½d; December-February, also January-March, 1s 5½d. Madagascar, spot, sold, 1s 5⅛d lb. Tapioca dull and trend of values easier for both Singapore and Java descriptions. Sago flour, January-March, to the U.K., 11s 9d, c i.f. African ginger, spot, London, sold, 52s, and February-April, sellers, 42s 6d cwt, c.i.f.

FRUIT (Dried). — Currants: Market steady, but trade quiet. Pyrgos quoted 46s 9d; Patras, 48s; choice up to 53s; Amalias, 47s 6d to 48s; Gulf, 49s to 53s; Vostizza, 52s to 58s. Sultanas in quiet demand. Medium to good Smyrna, spot, 41s to 55s; Cretan, 45s to 70s; Greek, 34s to 65s; Australian in large supply, and range from 34s to 54s; Californian, soda bleached, 36s to 40s; unbleached, 32s; Cape unbleached, 33s to 37s; bleached, 45s to 50s. Raisins: Valencias slow of sale, but Australian move off fairly well. Valencia quarter boxes, 50s to 54s; Australian, 35s to 42s; Capes dull at 33s to 36s. Figs steady. Genuine new, spot, 30s to 32s; layers, 60s to 65s; pulled, 60s to 70s. Dates steady. Hallowie new, spot, 30s; Siar, 17s. Evaporated fruits: The market maintains a steady tone, but business is slow to expand. Californian plums held for full rates with fair inquiries for the larger counts. Californian apricots reservedly offered and prices firm. Pears also strong on limited offerings, while Australian offer good value at current prices. Peaches and apple-rings unaltered. Californian plums 20-30's, 64s to 66s; 30-40's, 58s to 59s; 60-70's, 45s to 46s. Australian pears range from 65s to 75s, as to quality; Californian, 62s to 64s. Apricots, Royal, 72s 6d to 115s; Cape, 65s to 77s 6d; Californian, new, 90s to 117s 6d. Peaches, Californian, choice, 50s; extra choice, 55s; fancy, 60s. Apples, Californian, spot, sliced, extra choice, 65s to 67s 6d. Almonds met a steady demand at full rates. Mazagan, 145s; Mogador, 142s 6d; Marjorcas, 152s 6d to 170s; bitter, Jordan, 175s to 210s cwt.

CANNED GOODS.

CANNED FRUITS.—Market remains firm, but trading still restricted as adequate supplies of most kinds were available. Pears and apricots offer reservedly for shipment. The position of Singapore pines remains unaltered on spot, but full to firmer prices are asked for shipment. South African in small supply, but the new pack will shortly be in circulation. Tomatoes firmly held.

CANNED FISH.—Normal conditions are now becoming restored, but trade still lacks activity, although values remain steady for all descriptions. Sardines move off quietly, with only a limited selection available. Portuguese clubs quoted 5s per dozen tins. Lobsters maintained. Best halves, 140s to 145s; and quarters, 77s 6d to 82s 6d. Salmon steady on spot, with shipment parcels tending dearer. Halves in short supply, and realise 78s to 79s 6d. Pink quiet. Talls, spot, 26s to 27s; halves, 30s to 32s 6d. Japanese crab in fair demand for finest quality at 92s 6d to 95s.

CANNED MEATS move off slowly at late rates, but cooked boneless hams in good request at full rates.

CONDENSED MILK AND MILK POWDERS.—Market quiet and occasionally easier. Full cream sweetened, English, spot, 45s; Dutch, ditto, 38s 6d; January-March, 38s 6d. Machine-skimmed sweetened, English, spot, 27s; Dutch, ditto, 24s; January-March, 23s 6d, all in 5 cwt. barrels. Powders: Spray F.C., 26 per cent., 2 by 56 lb tins, crated, prompt, 96s; M.S. (1 cwt cases) prompt, 41s. Roller process, F.C., 26 per cent., prompt, 80s; M.S., ditto, 32s 6d, all net, duty paid, ex-wharf London. On the grocery side F.C.S., 21s; M.S.S., 10s 6d, basis per case, usual packing.

HONEY.—Market continues firm with a steady demand. Jamaica, quoted, 44s to 55s; New Zealand, dark amber, 50s to 55s; medium, 55s to 65s; light, 65s to 85s; whites and water whites, 65s to 87s 6d per cwt.

RUBBER.

Market showed marked fluctuations, with a fair business in force, but financial complications lead to an obscure outlook. Standard sheet, spot and January, also February, sold, 9⅞d to 10⅛d; March, 10d to 10⅛d; April-June, 10⅛d to 11d and 10⅞d; July-September, 10⅜d to 11⅛d; October-December, 10⅞d to 11⅛d; and January-March, 1930, at 11⅛d lb. London stocks increased by 1,063 tons on the week at 23,016, compared with 64,450 at corresponding period last year. Landings, 2,887; deliveries, 1,824. Liverpool stocks 567 tons higher at 3,250.

GENERAL.

JUTE.—A firmer market, with steady absorption of afloat parcels by Continental spinners and certain buying orders to hand from Calcutta. Firsts, January-February, Continent, quoted £33 2s 6d; February-March, £33 10s; March-April, £33 15s; and Lightnings, January-February, £31 5s ton. Calcutta-made Hessians firmly held but quiet.

HEMP.—A quiet tone pervaded the market for Manila descriptions, but prices were without material change. Spinners in the meantime are scarcely in the market. J 2, February-April, quoted £40; K, £38; L 1, £37 5s; M 1, £32 10s; M 2, £29. African sisal firm, and No. 1, good marks, January-March, sellers, £44; No. 2, £41 10s. Mexican, G W., quoted £37; reds, £35 10s; brushed, £40 10s ton, c.i.f., first-class ports Europe. Manila receipts for past week totalled 35,000 bales, against 22,000 at same time last year; estimate for next week, 24,000, and following week, 32,000.

SHELLAC.—A dull market resulted. Fair T.N., spot, 187s 6d; March, sold, 179s to 180s; May, 177s 6d to 175s cwt.

COPRA.—Market largely nominal, and business reduced to a minimum. Straits, S.D., February-March, Rotterdam, quoted £24 15s; March-April, £24 18s 9d. Others not worthy of mention. Palm kernels, January-February, Hamburg, quoted £19 16s 3d.

MISCELLANEOUS.—Coconuts quoted 18s to 23s per 100. Coir yarn, Ceylon, £19 to £40 10s; Cochin, £22 10s to £40; Ceylon bristle, £18 10 to £24, 10s; cinnamon leaf oil, 5d; citronella, Ceylon, 1s 9d; Java, 2s.

METROPOLITAN CATTLE.—January 16.

THE MONEY MARKET.

RATES this week have been very firm, and 4½ per cent. was paid for short money on Wednesday and Thursday. Apart from the neutralisation policy of the Bank, discussed below, one explanation of the present stringency is that the clearing banks are known this week to have made large transfers of tax money to the Treasury, and this money automatically disappears into the Bank to swell Public Deposits. Another cause of stringency is that the banks

bought bills readily at the beginning of the month, so much so that at present they are buying none at all. Hence the market rate on three months' bank bills is firm at 4¼ to 4 5/16 per cent.

* * * *

Apart from these factors, which are of a rather technical character, there has this week developed a more serious cause of stringency. This is the renewal of heavy gold shipments to the United States. Up till a week ago the Bank had this year preserved its gold stocks intact, and had even increased them slightly on balance. The result of this was the gradual fostering of the hope that the prolonged drain of gold had come to an end, and that with the advent of spring the time might even be coming when the Bank could replenish its autumn losses. Last Wednesday this belief was shaken by the news that just over £1,000,000 of gold had been sold by the Bank, presumably for shipment to the United States. This news caused a further hardening of the position.

* * * *

This gold loss has come at an unfortunate moment, for the market was already feeling nervous as to the future. Proof of this is found in the fact that the Bank's offer to buy in the Government bonds maturing on February 1st has only met with a partial response. As the offer is at the rate of 4 per cent. discount on the redemption price of the bonds, and as three months' bills can now be bought at around 4 5/16 per cent., *it follows that a broker who accepted the Government's offer and bought bills with the proceeds would obtain a turn of* 5/16 per cent. *over the rest of this month. The* reason why many brokers *are not taking* this turn is simply that they are unwilling to take up long bills so long as the outlook remains as uncertain as it is to-day.

* * * *

On the whole such fears are probably exaggerated. The Governor of the Bank has lately sailed for America, and unless a grave emergency arises it is thought unlikely that any change in Bank rate will be made in his absence. By the time he is due back in London, the present unfavourable circumstances should have passed. For these reasons there seems little ground for modifying the view expressed, even at the height of last autumn's strain, that no increase in Bank rate is likely.

	Jan. 24, 1928.	Jan 17, 1929.	Jan. 10, 1929.	Jan. 3, 1929.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	4½	4½	4½	4½	5 (Apl. 21,'27)
Banks' Deposit Rate	2½	2½	2½	2½	3 (Apl. 21,'27)
Discount { Call	2½	2½	2½	2½	3 (Apl. 21,'27)
Discount { Houses Notice	2⅝	2⅝	2⅝	2⅝	3½ (Apl. 21,'27)
Market rate (3 months' bills)	4 5/16	4 5/16	4 5/16–⅜	4 5/16	..

The Bank return shows that the Bank has continued, and even intensified, its neutralisation policy of reducing its securities to balance the increase in the banking department's reserve. Gold stocks have fallen by £1,063,123, but a further £5,376,130 of notes have returned from circulation, so that the Reserve is £4,253,007 higher. Against this, Government Securities have fallen by £5,635,000, and Discounts and Advances by £2,294,759, so that allowing for a fall of £479,073 in Other Securities, the banking department's assets have contracted by a net £4,155,825. As Public Deposits have risen by £1,702,135, and Other Deposits by £815,934, the full brunt of this contraction has fallen upon Bankers' Deposits, which are lower by £6,708,107. These movements both show that the Bank is maintaining a firm control of the situation, and illustrate the way in which stringency has developed through the depletion of Bankers' Deposits.

NEW YORK MARKETS.

Our New York correspondent cables:—Federal Reserve statements show a substantial gain in reserves and considerable reductions in discounts, bills, Government securities, and circulation. Total credits of the Reserve system are $104 million lower, and the reserve ratio has risen by 2.3. This contraction is due to the New York bank, where total credit is only 20 millions above the level of a year ago, and the ratio is 80, as against 80.8 this time last year. Reports of industrial conditions for the last year now being published make excellent showing, and current business news remains good. The steel industry is maintaining its fast pace.

THE STOCK MARKETS.

A confident tone obtained in the stock markets. The less favourable turn of events in the money market reduced the volume of gilt-edged stocks without affecting prices. Recent trustee issues continued to be well absorbed. Home railway stocks failed to attract much interest, though the traffic returns were moderately satisfactory. Activity in industrials was encouraged by extensive American operations, and by the unexpected announcement of a share bonus by Imperial Tobacco. Interest in rubber shares tended to evaporate, tea shares were easier in tone, and oil shares irregular, but considerable excitement accompanied heavy international dealing in Rhodesian company securities.

THE COMMODITY MARKETS.

The recent qualified improvement in trade is well maintained. Coal prices are tending to harden; in South Wales the improvement is attributed to a broadening of the foreign demand. The increased activity in most classes of steel works continues, and the prospects for pig-iron are slightly better. Tin-plates are steady, and the provisions of the output restriction scheme are to continue in force for another quarter. Tin and lead have been irregular, copper is firmer, and other minor metals easy. The Liverpool cotton market is quiet. Manchester again reports encouraging advices from China and from minor outlets, but the Indian trade remains disappointing. Bradford trade is still hampered by the high cost of raw material which is resulting from the keen foreign competition. The position of the timber market is satisfactory. Tanners and leather users alike remain cautious. Vegetable oils and oil seeds are in improved demand. Wheat is dearer.

FOREIGN EXCHANGES.

The foreign exchange market was inactive this week. Substantial transfers of gold to New York left the rate unaffected at around 4.84 15/16 to 4.85 1/16. Montreal improved with New York to 4.86. On the Continent, Paris gained two points at 124.08; Brussels was unchanged at 34.90½ after 34.91; Milan was slightly stronger at 92.68; and Madrid gained also at 29.68½. Amsterdam was firm at 12.09¾, Berlin unchanged on balance at 20.40¼ after being over 20.41, whilst Geneva improved from 25.22 to 25.21⅜. Vienna moved for the first time for many months, and was more on offer at 34.53, as against 34.50. The South American currencies were unchanged. In the Far East, the rupee remained firm at 1s 6 1/16d, but the yen was hesitating and uncertain, although it closed 1-32d better on balance at 1s 10 15-32d. Batavia fell away two points to 12.13. Silver fell ⅛d for both spot and forward, the former standing at 26⅛ and the latter at 26 3/16d. The Chinese silver exchanges reacted differently in the face of these movements, Hongkong remaining unchanged at 2s 0½d, whilst Shanghai lost ⅜d at 2s 7⅛d.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Midland Bank, Provincial Bank of Ireland, Ionian Bank, Alexanders Discount, National Discount, Union Discount Company of London, Midland Railway of Western Australia, Metropolitan Trust, Fanti Consolidated Investment, Burma Corporation, and International Vacuum Power. Mr McKenna's Midland Bank speech is dealt with on a later page. Colonel Peel, at the National Discount meeting, dealt with the growing competition for deposits, while the chairman of Alexanders surveyed contemporary developments in discount business.

MONTHLY TRADE SUPPLEMENT.

We publish this week our Monthly Supplement, in which will be found an appreciation of the trade situation at home and abroad, together with statistical information on the foreign trade, price movements, currency, and production of the leading commercial countries of the world. Its contents include an index of electricity production, and a series of indices of British trade activity.

PROBLEMS OF THE SESSION.

On Tuesday afternoon the curtain was unobtrusively raised on the last act of the current Parliamentary drama. Uncomfortably aware that the *entr'acte* was rudely disturbed by clamour from a section of the "groundlings" in the shape of the National Farmers' Union, and conscious, one may believe, that the audience as a whole shows few signs of enthusiasm towards the performance up to date, the Government may well feel, like Marlowe's Dr Faustus, that between them and the unknown there are bitterly few "little drops of time." For partisan supporters of Mr Baldwin it is becoming a matter for anxious speculation how successfully the closing scenes of the piece can be made, in theatrical parlance, to "get across." All things considered, the chances of a spectacular *dénouement*, fraught with popular appeal, between now and June seem remote. The Chancellor of the Exchequer, it is true, has still to make his entry, Budget-bag in hand. Mr Churchill will doubtless be pressed by the "management" to do his utmost to please—whether it be the tea and sugar consumers in the pit, or the income-tax paying stalls—but the de-rating scheme has so far mortgaged the future that we are inclined to doubt the feasibility of a Budget sufficiently attractive to form the main basis for a General Election appeal. On the whole, the Conservative Party appears to be committed now to the unmelodramatic course of asking for the confidence of the electorate, firstly, as "safe" men, secondly, as authors of the Local Government Bill, whose passage through the Commons, even with the ruthless use of the guillotine, will absorb nearly all the time—apart from that allocated to the Estimates and Financial Resolutions—which the House commands before the dissolution.

We have already expressed our regret that a measure so complicated as this Bill, and charged with such far-reaching consequences in respect to every side of local government, should have been launched in the last months of a jaded Parliament. On the desirability of lightening the burden of local taxation, as an encouragement to agriculture and manufactures, there is general agreement; and, given "de-rating" as the chosen means, the Government had an answer to the criticisms levelled by certain Conservative, as well as Opposition, speakers at Clause 55 on Tuesday night. Stimulation of the drink and tobacco trades cannot, it is true, be described as an essential part of "encouragement to productive industry," and it is at least arguable that, from the point of view of unemployment, concentration of all relief on the depressed areas might have been a more immediately effective policy than remission of rates in all "productive" industries; but the administrative difficulties in distinguishing between grades of prosperity or of moral desert for the purpose of apportioning direct rating relief, in the terms of the present Bill, appear to us to be insurmountable. The essential objection we have to the whole measure is rather that in coupling the special issue of encouraging industry in this manner with a last-minute general revision of the whole system of local government, the Cabinet has attempted to acquire merit by pretending to have solved problems which it has not genuinely faced, and whose character and gravity are in danger of being obscured. In particular, we refer to that old enemy, the poor law. The local government system which the Bill seeks to reform is derived from the structure of poor law administration; poor relief is the nucleus of that snowball burden borne by industries in the depressed areas which de-rating seeks to lighten. For these reasons, and because the essence of the problem is in danger of being obscured by administrative detail, it is worth while reviewing the history of a principle which has divided political theorists as much as politicians.

The typical nineteenth-century view that the State had a duty to provide relief to the destitute without, however, endowing its subjects with a right to that support, sat precariously on the fence between the vehement opposers of any poor law—like Dr Chalmers or Parson Malthus, kind-hearted men indeed—and the school of thought represented by the valiant Cobbett, who denounced "Lawyer" Scarlett's Bill of 1821 in these round terms:—"In *all times* the really poor had a *right* to relief out of the *produce of the land.* Blackstone says that the poor laws are founded in the *very principles of civil society.* And certainly this is the case; for.....as misfortune, weakness of body, derangement of mind, orphancy, infancy, old age, and helplessness are naturally incident to man, the *good of the whole* could never contemplate a state of things in which a man in good health should be exposed to starvation, and in which help was not always to be at hand to relieve persons truly helpless."

Cobbett, however, wrote at that one stage in the history of the English Poor Law in which it was really a law for the poor and not only a law for the destitute. The famous statute of the 43rd Elizabeth, on which our poor law system is founded, was never meant to engender subsidies to the labouring poor. But post-war problems, not unlike those experienced a century later, gave rise to the pernicious system of "rate in aid of wages," and the preamble to Scarlett's Bill, which failed to reach the statute book—("Seldom," wrote Cobbett, "has earthly pilgrimage been more short, and never less pleasant") —stated an argument which is often to be heard to-day: "the too great facility of obtaining relief by those who are able to work is calculated to encourage idleness, extravagance, and imprudence—the sure fore-runners of misery and vice."

The Act of 1834, which brought that period of poor law history to an end, remains the key to modern principle and practice. Poor relief thenceforward was to be a last faggot between the wolf of starvation and the door of poverty, and in order that destitution might not be accepted as a preferable alternative to work, it was laid down that no relief should be given to able-bodied persons unless they entered the workhouse under conditions less desirable than the lot of the meanest labourer. That provision was not rigidly carried out, for in the industrial areas, every time trade slumped, out-relief to the able-bodied became the only alternative to acquiescence in starvation. But in spite of exceptions the principle of "less eligibility" governed poor law through the nineteenth century, and governs it to-day.

That is what is meant by our "deterrent" poor law; it will only step in when the beneficiary has sunk to the lowest depth of destitution which contemporary public feeling can tolerate. But in this century a school of thinkers, led by Mr and Mrs Webb and inspired by Charles Booth's researches, have pressed for the prevention rather than the mere relief of destitution. To Mr Lloyd George goes the honour of making the most decisive inroad into the old system with National Health Insurance and Old Age Pensions. To these must be added Maternity and Child Welfare Acts, Widows' Pensions, parts of Education Acts which give education authorities power to feed and medically tend their school children, Blind Persons, Infectious Diseases, Tuberculosis and Mental Deficiency Acts, and a number of supplementary measures enabling local authorities to provide help in certain cases unsavoured with the taint of the poor law.

But the opportunity provided by the Local Government Bill of pushing the process further looks like being wasted. The poor law is now to be transferred to the same authorities as are responsible for the administration of most of the foregoing Acts (the councils of counties and county boroughs), but so long as the application of the latter remains optional, injustice is certain to arise between county and county, and some authorities will be certain to fail in their duty. Mr Chamberlain is considering the point, and before the third reading debate let us hope that his timidity will be overcome, and that he will remember the few thousand children still directly dependent on the poor law and living in workhouses, for the branding of these innocents as paupers and the division of responsibility between the education authorities and the guardians are both sad anachronisms.

Progress should achieve the removal from the embraces of the poor law of indigent mothers, distressed widows, children, the aged, the sick, the infirm, and the mentally deficient. There would then remain only two

main groups, "casuals," whose problem, because many of them are men in search of employment, is essentially a subordinate one, and able-bodied men and self-supporting women out of work, to whom the application of the poor law has always been difficult and is certainly inept. In unemployment insurance we have found the proper method of bearing seasonal fluctuations and temporary disturbances, but "extended benefit" is beyond the scope of insurance and has involved the scheme in bankruptcy. That is to disappear under the Blanesburgh Act in April, but the effect will be only to transfer the beneficiaries to the poor law, which is scarcely more fitting. We adhere to the view that the State should take over from local authorities the whole administration of out-relief to the able-bodied poor, which could thus be co-ordinated with the present unemployment insurance machinery. This policy, we consider, would lead to a more rational and better distributed reduction of the rate burden on industry than is provided by the present "de-rating" proposals.

THE FUTURE OF EAST AFRICA.

THE Report of the Commission on Closer Union of the Dependencies in Eastern and Central Africa, which has just been published,* has been awaited for some time, since the Commission returned to this country last May and took their last evidence in London last July. On examining their work we find that their time has not been spent in vain. To begin with, although the subject of their investigation is one of the most controversial political problems in the British Empire—indeed, one might almost say, in the world—the four members of the Commission have achieved substantial unanimity, except on two matters in which the chairman, Sir E. Hilton Young, is in a minority of one, with the other three members unanimous in taking a different view. Considering that these three are men with the experience of Sir Reginald Mant, Sir George Schuster, and Mr J. H. Oldham, we do not feel that the unanimity of the Report is substantially impaired by the chairman's partial and rather tentative dissent. We may say that, in both cases, the effect of the chairman's dissenting proposals would be to give a very small minority of white settlers a greater power over the destinies of the native majority than the three other commissioners consider right or wise.

Confining our attention to the far larger part of the Report, in which all the members of the Commission speak with one voice, we are struck by its breadth of view, by the friendly and judicial way in which it seeks to promote the best interests of both the native and the immigrant population, without being drawn into anything remotely approaching partisanship in a very controversial issue, and finally by the elasticity and resourcefulness which it shows in discovering novel constructive suggestions for dealing with an unprecedented situation.

The breadth of view is shown in the constant presentation of local problems against the background of the whole of Black Africa, and in the constant suggestion of immense vistas of time behind and ahead of the situation of the moment. In these perspectives, many facts and problems which in their local setting appear obscure and insoluble receive welcome illumination; and, still more important, the existing differences in degree of civilisation between the immigrant and native communities appear temporary and relative rather than absolute and eternal. The Report repeatedly underlines the fact that the ultimate capacity of the native peoples for civilisation is an unknown quantity; that the impact of alien cultures upon these primitive African societies is a very recent event; that already this impact has set up a process of rapid social change; and that it is impossible yet to forecast how far this process may go before the effects of the impact have worked themselves out.

The absence of partisanship and the genuine concern for the welfare of both natives and immigrants appear in the humane and impartial tone in which the Report is written throughout. It is pointed out that, owing to certain limiting geographical factors, the immigrant population of European origin cannot ever increase numerically very much beyond its present strength, and it is also noted that the capacity of Europeans to acclimatise themselves, even at high altitudes, on the Equator is still an unknown quantity (like the capacity of Africans to adapt themselves to European civilisation). It is further remarked that, economically, the immigrants must always be dependent on co-operation with a native majority. At the same time, the Commissioners recognise that the economic, social, and political importance of the immigrants is out of proportion to their numbers—one of their most important functions being to act, by their mere presence, as a powerful social stimulus upon the natives (whether for good or for evil). They therefore conclude that East Africa is bound to be a "mixed State," while leaving it to time to settle what the eventual relation of natives and immigrants is to be.

This conclusion has the important corollary—affirmed without qualification by three out of the four members of the Commission—that, as far ahead as can be seen, the grant of "Dominion self-Government" to Kenya Colony may be ruled out of practical account. The arguments seem decisive. If "Dominion self-Government" were granted in any near future, that would mean handing over a large and still politically and economically helpless majority to be governed by an immigrant minority; while in a more remote future, when the natives had advanced in economic and political capacity to a point at which their overwhelming numerical superiority began to count, the very same constitution might come to produce the opposite effect of placing the immigrant minority in the native majority's hands. The Commissioners point out in a very reasonable and conciliatory way that they are not casting any aspersion on the character of the immigrants, or suggesting that they are morally of a lower calibre than the parent communities from which they spring. They are merely applying the well-proven maxim that no man ought to be judge in his own cause—the point being that the immigrants and the natives are both interested parties in the great questions with which government in East Africa is concerned.

It is in their constructive proposals for dealing with the problem of two intermingled communities differing greatly in numerical strength, as well as in type and degree of civilisation, that the Commissioners show imagination and resourcefulness. And here we may perhaps pause to congratulate ourselves that the British Empire, after having invented the new institution of Dominion Self-Government to meet the new circumstances of Canada, Australia, New Zealand, and South Africa, is now apparently experimenting on fresh lines in order to deal with the quite different and much more complex problems which African and other tropical dependencies present for solution. Several months ago we commented on this in reviewing the report of the Commission on Ceylon. The present report contains other fertile ideas which may also have their application beyond the limits of East Africa in many parts of the tropical Empire.

Briefly, the East African Commission propose that the Government shall so conduct its policy of land distribution as to segregate immigrants and natives into more or less separate local communities—though they clearly recognise that, for economic reasons, segregation can never be carried to extremes. They look forward, however, to building up a number of sufficiently compact and homogeneous local communities, some of immigrants, the majority of natives, to make it possible to develop vigorous institutions of local self-government, suited to the genius and to the degree of civilisation of the several elements concerned. In Kenya Colony, as a whole, the Commission propose to put an end to the present official majority in the Legislature by increasing the number of nominated unofficial members. The majority of the Commission propose that, to begin with, the number be raised from one to five, and that all five shall represent the natives—pending the time when the natives shall become capable of producing effective representatives from among their own number. They propose that the eventual proportions and methods of selection of the several component elements of the Legislature shall be left an open question, since it is impossible at present to foresee to what extent, and how soon, the natives will become capable of sharing in the task of government on this scale and on these lines. Finally, they propose to provide for unity by placing Kenya, Uganda, and Tanganyika, at any rate, under the supervision of a single High Commissioner, and later on a Governor-General, to whom the Secretary of State at Whitehall would delegate his functions as far as possible. Incidentally, they believe, this arrangement would meet, not only the need for unity, but the objection which the immigrants feel to being controlled by a distant authority overseas which has to make its decisions without the first-hand knowledge and experience that can only be acquired on the spot.

This last proposal raises the question how far unification can be carried consistently with the terms of the Mandate for Tanganyika, which provides that:—"The Mandatory shall be authorised to constitute the territory into a customs, fiscal and administrative union or federation with the adjacent territories under his own sovereignty or control, provided always that the measures adopted to that end do not infringe the provisions of this Mandate."

The Commissioners examined the difficulties of this in detail, and came to the conclusion that they are not insuperable. Indeed, if, for certain purposes, the three territories were unified with scrupulous and sincere regard for the obligation just cited, the ultimate effect might be to bring Kenya and Uganda up to the admittedly high standard of civilised administration that has been attained in Tanganyika under the mandatory *régime*. And the attainment of this standard in the administration of East Africa as a whole is a consummation devoutly to be desired.

* Cmd. 3234 [? of 1928, though the year of publication is printed as 1929].

THE BANK BALANCE-SHEETS.

THE reports and accounts of the principal banks have now been issued, and these are summarised below. Comparing the end of 1928 with the end of the preceding year, the chief changes on the liabilities side of the balance-sheets are an increase of £58 millions, or 3 per cent. in deposits, and another of £95 millions, or 73 per cent. in acceptances and endorsements. This last movement is particularly striking, and while it may be partly due to fortuitous circumstances, it is sufficient to drive home the fact that last year London recovered from New York much of the acceptance business that had been lost in previous years:—

(Million £'s.)

	Capital and Reserves.		Acceptances and Endorsements.		Deposits (including Undivided Profits, &c.)		Total Liabilities.	
	1927.	1928.	1927.	1928.	1927.	1928.	1927.	1928.

On the assets side cash has expanded from £318 to £323 millions, or by 1.6 per cent. As this expansion is proportionately less than that of deposits, it would appear that there has been a tendency during the year for cash ratios to fall. Unfortunately two of the banks included in the table do not separate cash from call money in their published accounts, and so it is not possible to determine this point in so far as the aggregate figures are concerned. It is to be hoped that the two banks in question will soon bring their accounts into line with modern practice in this important particular:—

	Cash in Hand and at Bank of England & Cheques in Course of Collection.		Investments.		Discounts, Advances, and Money at Call.		Cover for Acceptances, Premises, and Sundries.

* Includes money at call.

This year the bank balance-sheets have been reinforced by the wealth of detail regarding the Midland Bank's figures given by Mr McKenna in his annual address to his shareholders. The flood of light thus thrown upon banking statistics is extremely timely, and the whole financial world is grateful to Mr McKenna for his revelations. In fact, our only complaint is that similar information is not to be made available by all the banks at regular intervals. It is legitimate to press this complaint still further. Surely it is time that all the banks agreed upon a uniform and more comprehensive form of balance-sheet. At present some banks are adding to the amount of information given in their annual accounts; others refuse to depart from their old practice. This is not as it should be, and it is time that the latter came into line.

To return to Mr McKenna. His first revelation is the division of "deposits" into demand deposits and time deposits. His division only takes the form of a percentage, possibly because absolute figures would reveal the size of his bank's hidden reserves, nor does he say whether this last item is excluded from his percentages, or if not, which of the two it is allowed to swell. Moreover, his figures for 1919-21 relate to abnormal years, and so should not receive too much stress. Still, the remaining percentages in themselves are extremely striking, indicating, as they do, the gradual decline in demand deposits from 60 per cent. of all deposits in 1922 to 55·3 per cent. last year. It would be interesting to know how far these percentages are representative of British banks in general.

Mr McKenna attempts to connect this decline with the stagnation of trade, on the ground that demand deposits represent ready money kept in hand for trade purposes, while time deposits consist of money awaiting investment, or for which no immediate employment is available. His suggestion is an ingenious one, and clearly possesses broad elements of truth. An assertion of his that is more open to question is the one in which he tries to show that a causal relationship exists between the distribution of a bank's assets and that of its deposits. The reason for this, to quote Mr McKenna's actual words, is that "the deposit created by a bank loan which is to be used immediately in trade must almost of necessity fall into the category of money actively at work, and must therefore increase the proportion of demand deposits. On the other hand, a new deposit created by a bank purchase of securities probably comes under the heading of money awaiting investment, and thus tends to increase the proportion of time deposits. If the new deposit be created by a short-term loan to the money market or by the purchase of bills, the immediate and ultimate consequences have to be distinguished. The first result is an addition to the volume of demand deposits, but some portion of the new deposit will inevitably come to be held by foreign banks, partly on current and partly on deposit account. The division of this new deposit between the two groups cannot be foreseen, but neither part of it will add to the volume of money actively at work in British trade."

As a broad generalisation we do not quarrel with the definition; but we venture to suggest that it is like all such generalisations subject to possibly serious qualifications. Suppose a bank buys a block of war loan. It may buy it from all sorts of people. It is quite conceivable

that it buys it from an investor who is rearranging his list of securities, and that this investor may place the money on time deposit pending a purchase of some other stock. But there is no reason why he should invariably do so, while it is equally conceivable that the seller to the bank may not be this type of person at all. The seller might be a trading or producing company, which had at least got some more orders, for the execution of which it needed additional liquid cash. He might even be selling sound gilt-edged stock in order to indulge in a flutter in greyhounds or gramophones.

The real point at issue is, of course, one which Mr McKenna himself made later in his speech, namely, that when a bank decides how to employ its resources it is governed by considerations totally different to those discussed above. Security and liquidity are the main qualities of bank assets, and, as Mr McKenna says, the lower the cash ratio upon which a bank works, the greater the degree of liquidity required in its earning assets. Nor must a bank neglect the legitimate demands for accommodation by the trading community and the general public. How the Midland Bank meets these was brought out very clearly in another and most interesting portion of Mr McKenna's speech. In this he gave the detailed distribution of the Midland Bank's advances between various classes of borrowers, and this portion is summarised in the following table. The totals are our own :—

Class of Borrower.	Distribution of Bank's Advances. %
Textile industries	12¼
Building and land	11½
Wholesale and retail traders	11¼
Heavy industries (except coal)	7¾
Agriculture	6½
Food, drink, and tobacco	6
Leathe , rubber, chemicals	4
Miscellaneous trades	4
Shipping and transport	3½
Coal and other mining	2½
Total, trade and industry	69
Professional and private	6½
Municipalities and public utilities	3½
Societies, &c.	2½
Internal debit balances	1¾
Insurance and finance houses, &c.	8
"Stocks and shares"	8¾
Grand total	100

According to the Midland Bank's figures, trade and industry takes 69 per cent. of the bank's advances, while loans on stocks and shares only absorb 8¾ per cent., to which must be added "short money" lent to the Stock Exchange. Mr McKenna, therefore, makes the claim that loans are not being diverted from trade to financing Stock Exchange speculation. This claim is on the whole legitimate, but it carries with it one slight reservation. That is, that the bank can hardly know that some part of the money borrowed by professional and private customers is not used by them for speculative purposes. In these days, when many speculators actually take up stocks which they "pawn" with their banks, there is a possibility that this is the case. Still, even so, Mr McKenna's main argument is hardly affected, and we agree that, in addition to proving his case, he has provided students of monetary affairs with a wealth of new information.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

ANOTHER year of depression, which is the eighth in succession, has to be recorded in cotton spinning and manufacturing in Lancashire. Throughout 1928 the demand for yarn and piece-goods was not sufficient to meet the requirements of producers, and a substantial part of the machinery had to stand idle. As is always the case when production is not at full stretch, sellers were anxious for orders, and prepared to accept cut prices. The internal competition was more severe than ever, and in the circumstances matters relating to finance commanded increased attention.

Speaking generally, traders were not hampered by violent changes in raw material prices, although on certain occasions much uncertainty prevailed and ups and downs in rates took place. During the twelve months the average price of American cotton in Liverpool was 10.90d per lb, against 9.52d per lb in 1927. The highest quotation, 12.53d, was registered on July 6, the lowest figure, 9.72d, being on September 15. The year opened with the quotation at 11.08d and closed at 10.59d.

The American cotton crop for the current season has had a rather chequered career. Traders throughout the world took more than usual interest in the preparations for the growth in the United States last spring. At that period, however, growers were hampered by heavy rains and too much moisture, and planting preparations were delayed, with the result that this has been a late crop. It was anticipated that farmers would be prepared to increase the area under cultivation, but some surprise was expressed at the beginning of July, when the Government estimated the acreage at 46,695,000 acres, an increase of over 11 per cent. on the previous year. In the circumstances there were expectations of a substantial output, but later it was realised that the ber the Government estimated the yield at 14,373,000 baies, the production per acre being 151.8 lbs. The carry-over last July was estimated at 5,100,000 bales, so supplies for the twelve months will be approximately 19,500,000 bales. It is expected that world consumption will be about 15 million bales, so supplies in hand will have to be called upon to meet the deficiency, and it is likely that the carry-over next July will be about 4,500,000 bales, or 600,000 bales less than a year earlier.

With regard to Egyptian cotton, the average price in Liverpool during 1928 for Fully Good Fair Sakellaridis on the spot was 19.20d, against 16.82d in the previous year. The highest price in 1928, 21.95d, was registered on April 16th, and the lowest figure, 16.60d, on February 2nd. The year opened at 17.90d and closed at 19.45d. The cotton crop in Egypt for last season did not come up to expectations. The total of 6,091,000 cantars compared with 8,680,000 cantars in the previous year. The latest Government estimate for this season is 7,195,845 cantars.

It was a very disappointing period for manufacturers of piece-goods. Export demand failed to develop, and foreign trade was on a smaller scale than in 1927. Buying for India was very irregular. Dealers in Calcutta attempted to regulate supplies by prohibiting imports of certain cloths during particular months, and the total shipments were considerably less than the previous year. On the other hand, the takings of Bombay improved. A favourable development during the year was the better advices from China, and owing to more settled conditions in the Far East trade broadened and the shipments show an appreciable increase on 1927. There were indications of an increasing consumption of Lancashire goods in South America and the West Coast of Africa, but the markets of Egypt and the Near East did not give healthy support. Production in Lancashire towns varied a good deal from month to month, the output being between 70 and 80 per cent. of full production.

The following is a comparative table of cloth shipments from the United Kingdom for the last three years and for the pre-war year of 1913 :—

	Yards.	£
1913	7,075,252,000	97,775,855
	Square Yards.	
1926	3,834,482,200	116,052,953
1927	4,117,683,000	109,995,715
1928	3,866,592,900	107,300,045

The following is a list of comparative prices of four standard cloths during the year :—

1928.	32 in. Printers', 116 yds. 16 by 16. 32's & 50's.	36 in. Shirtings, 76 yds. 19 by 19. 32's & 40's.	38 in. Shirtings, 38 yds. 18 by 16. 10 lb.	39 in. Shirtings, 37½ yds. 16 by 15. 8½ lb.
	s d	s d	s d	s d
January 6	26 3	28 3	15 1½	14 3
February 3	25 0	27 0	14 9	13 6
March 2	25 6	27 9	15 0	13 10½
April 5	26 0	28 6	15 3	14 3
May 4	26 9	29 6	15 7½	14 6
June 8	26 9	29 3	15 3	14 4½
July 6	27 0	30 6	16 3	14 9
August 3	25 7½	29 0	15 6	14 3
September 7	24 4½	28 3	15 0	13 10½
October 5	24 9	27 9	16 0	13 9
November 2	25 6	28 6	15 0	13 9
December 7	26 3	28 9	15 6	14 0
December 28	26 0	28 6	15 6	14 0

The difficulties of spinners of yarn from American cotton were most pronounced. Towards the end of the summer demand broadened, and owing to increased trade there was an expansion in the amount of machinery running from about 65 per cent. to nearly 80 per cent. of full capacity, but progress in the way of improving prices was exceedingly slow. Although ups and downs occurred in the position of Egyptian spinners, that branch did much better than the American section, and throughout the year there was very little idle machinery in Bolton and district. It was not a satisfactory twelve months for producers of yarns suitable for export purposes. India bought fairly freely from time to time, and there was a steady demand for the Continent, but the shipments were smaller than in 1927.

The following is a table of exports of cotton yarn from the United Kingdom for the last three years and for the pre-war year of 1913 :—

	Lbs.	£
1913	210,099,000	15,006,291
1926	168,526,800	21,781,178
1927	200,502,200	23,593,592
1928	169,211,600	22,566,493

The following is a list of comparative yarn prices during the year :—

1928.	Cotton. Middling American.	American Yarns. 32's Twist.	40's Weft.	50's We t.	Cotton. F.G. Fair Sakellaridis. Egyptian.	Egypt'n Yarn. 60's Twist.

Dec. 28	10·64	15¾	16¾	18¾	19·35	28½

During the year considerable attention was centred on the financial situation in the American spinning branch of the industry. Three schemes of mill amalgamations were talked about. Latterly much progress has been made with the proposals of the Cotton Yarn Association, Limited. One of the chief obstacles to the scheme was the attitude of the London banks, but these difficulties have been removed, and the registration of the company, details of which will be found in another column, is just announced. It is recognised in all quarters that it will not be an easy matter to arrange a combine of mills whose liabilities are larger than the assets, and a combination of interests cannot be arranged without sacrifices in some quarters. Another scheme put forward by the Master Spinners' Federation has also received attention, and a third set of proposals has been put forward from private sources, this movement being led by a well-known accountant and a leading Lancashire Member of Parliament. One of the most interesting developments during the year was the scheme of merchants, manufacturers, bleachers, and dyers for consigning goods under their joint auspices to markets abroad. In this connection China is the only outlet so far attacked, but a few weeks ago this movement was put into definite shape by the formation of the Eastern Textile Association, Limited. The experiments so far carried out by this organisation have been eminently successful, and the promoters are now convinced that if Lancashire is to regain her lost trade it will have to be done by joint efforts of spinners, manufacturers, merchants, and those engaged in the finishing processes. Towards the end of the year important discussions took place between Burnley manufacturers and representatives of the operatives with regard to some relaxation of the rules relating to working conditions in the weaving sheds, so as to enable the employers to make experiments in the use of automatic looms, the running of machinery at a slower rate so as to enable operatives to take charge of eight looms instead of four, and the working of two shifts a day. If the experiments now being made are successful, the changes may mean a revolution in cloth production in Lancashire.

Owing to many disappointments during the last few years there must be a certain amount of hesitation in any expression of opinion as to the future which can be termed optimistic. Yet there are encouraging features in the situation. Undoubtedly during the past year a large amount of valuable work has been done in Lancashire in preparing for the reorganisation of the production and distribution of goods. Big efforts have been made to cut down the cost of production and overhead charges, and much attention has been centred on the improvement of selling methods. It is reasonable to expect that these efforts will bear fruit before very long.

Raw cotton supplies during the next twelve months will be adequate to meet the needs of world users, and it is probable that prices will remain on a reasonable level. Although world consumption of cotton is now on a big scale, there are possibilities of still larger crops in the United States, and the various projects in different parts of the British Empire are making progress. There is ground for believing that manufacturers of cloth in 1929 will have the best year since 1920. If the improvement expected in this branch is sufficiently strong, the increased consumption of yarn should result in much more favourable conditions existing in the spinning section towards the end of 1929.

FOREIGN EXCHANGES IN 1928.

THE tendencies of 1927 were continued during 1928 and, while speculation still further decreased, more currencies were officially stabilised, and others, although still inconvertible, attained a degree of steadiness which was remarkable as compared with former years. It may be claimed, then, that the adventurous period, and with it the interest in the study of foreign exchanges, has passed; but this by no means implies a return to normal pre-war conditions. Seasonal factors, for instance, are now far less calculable than before the war, whilst abnormal pressure is exercised by unprecedented money rates, with their accompanying gold shipments.

On the whole the year was not spectacular; it was marked by the early weakness and subsequent recovery of New York, the firmness of Berlin, and the official stabilisation of various currencies, of which the most important is the franc. The year opened with the stabilisation of the lira, followed shortly afterwards by the introduction in Estonia of a new currency on a gold basis. Luxemburg stabilised on the Belgian model in February; in April Siam and Norway reverted to the gold standard; and in May a new parity was fixed for the Greek drachma. On June 2nd France revalorised the franc and fixed its gold content at 65.5 milligrammes of gold, nine-tenths fine, which gives the currency a parity of 124.21f to the £ and 25.52f to the dollar. In November Bulgaria followed suit by fixing the new parity of the leva at 673.58. Of the other European currencies which are still unstabilised, Jugoslavia has not yet completed negotiations, which have been in progress for some time, for a stabili-

sation loan, but the dinar, in effect, is to all intents and purposes stable, although inconvertible. Roumania also has for a long time past occupied herself with stabilisation schemes, and the negotiations for a foreign loan for this purpose were well advanced when they were interrupted by a political crisis of the first magnitude and the fall of the Cabinet. The new Government, however, cannot burke necessity and is pursuing negotiations. Portugal early in the year discussed a similar loan, and received the approval of the League of Nations, but in the end the Portuguese Government refused to accept the conditions laid down, with disastrous effects to the escudo.

To turn to individual exchanges, sterling opened the year well against New York at 4.88¾, but gradually weakened during the next six months to about 4.87, a sharper decline being only prevented by the United States buying of British War Loan and Funding Loan on the New York market, where they were quoted for the first time. After that the combination of high money rates in New York with the withdrawal of British and foreign funds from London, together with heavy movements in connection with seasonal requirements, was too strong for sterling, and the £ declined rapidly to under 4.85, but recovered at the end of the year to 4.85¼, or about the same level as at the opening of 1927. Towards the close of the year forward dollars, which had been at a premium since the war, went for the first time to a discount, and the New York spot rate remained over a long period about the gold export point. Montreal followed the dollar, but is chiefly worthy of mention because of the abnormal discrepancies which arose late in the year between the spot and forward rates, due, it is said, to the manipulation of their foreign currency holdings by the native banks: Paris was almost throughout at a premium on sterling, but the rate never actually reached gold export point. Berlin, in spite of heavy external indebtedness and Reparation payments on a large scale, was very steady against us, largely as a result of heavy short-term borrowing in New York. It was also evidently the policy of the Reichsbank to attract gold and to maintain the rather exaggerated level of the currency, as an examination of the returns shows that a large proportion of its foreign exchange holdings was disposed of. Later, high money rates in New York caused Berlin to transfer its borrowings to London and Paris, and Paris also withdrew funds from London to lend them in Berlin, with resulting pressure on the exchange. The gold withdrawals for Berlin from London, from October onwards, were very large. Early in the New Year the peseta remained one of the few currencies open to the attentions of the speculator. As a result abnormal fluctuations were experienced during the first half of the year, and the rate rose rapidly, in spite of large credits in London and New York. The crash of a foreign financial house holding a bull position in this currency exaggerated the decline, and energetic counter measures were at once instituted. Some £2,000,000 gold was sold in London, grain credits for pesos 50,000,000 were obtained in the Argentine, and an Official Exchange Commission of control was set up. After this there was gradual, though slow, improvement, and the rate was very firm at the close. It is believed in many quarters that it is the Government's intention gradually to bring the rate towards par before embarking upon stabilisation.

Bucharest experienced a sharp break in the last quarter with the political crisis, but soon regained relative stability when the elections passed off quietly. The escudo rate rose from 99 to 130 under the conditions we have outlined, but recovered later to 110-115 after wide and persistent fluctuations. It was steadier at the close at about 109. The Russian chervonetz is unquotable in London, but it is understood to have suffered a sharp decline as a result of the crop failure. Other European currencies were mainly stable, and the changes registered may be traced to the influence of the fluctuations of sterling and the dollar. For instance, the widest variation between highest and lowest of the Continental gold exchanges on balance during 1928 was never as much as 1 per cent. The South American exchanges were steady on the whole, some weakness being shown towards the close by Buenos Aires and Rio. In the Far East the rupee was very firm almost throughout, but the yen experienced a certain amount of fluctuation, being exposed, as always, to the influences of Shanghai, where speculators in silver hedge in the yen and vice versâ. The undertone, however, was sound. The Chinese exchanges were singularly unaffected by the political chaos and the march of military events, and they responded in the main, although not always, to the movements in the price of silver. In the silver market the range of prices, between 28⅞d highest and 26 1/16d lowest, was considerably less than in 1927, which in turn was the smallest since 1911. China, as always, was the predominant factor, and the feature of the year was the enormous absorption of silver by that country. Gold imports during 1928 totalled some £47,510,000, exports during the same period amounting to £60,252,000, of which France took £19,933,000, Germany £20,819,000, and the United States £6,603,000, against which must be set off, £6,685,000 sent to Great Britain by that country.

CRABBED AGE AND YOUTH.

"TELL me something to say; I have to make a speech." This cry of a human soul in anguish is as old as that inexplicable practice which leads human beings to flock together in order to endure probable discomfort in listening to the words brought forth with almost certain suffering by one of their number. But seldom can that poignant appeal have met with a more effective response than when Mr Dunwoody, Secretary of the Association of British Chambers of Commerce, addressed it to the Financial Secretary to the Treasury. The audience was to be composed of young business men, and the response to Mr Dunwoody's wail was an immediate burgeoning of the fine flower of Mr Samuel's business experience in a message to youth which he wished his friend to "put across" for him. This ultimately bore fruit in a collection of similar opinions, expressed by eminent British industrialists in answer to a questionnaire which asked for their views as to the necessary training and qualities, and the probable opportunities in Britain and her Dominions for young men entering business to-day. Never, in the history of platitude, was such an opportunity offered for saying, with portentous verbosity, just nothing whatever and only a Press meteorologist on the eve of Bank Holiday could sit on the fence with more perfect poise than this:—

> "Speaking generally, it is desirable that the young man should have as good an education as time and circumstances allow, and should acquire beforehand, as far as possible, general knowledge, technical or otherwise, likely to be useful in the particular business he enters. What the training should be must depend on the nature of the business and the age at which the young man enters it. In many businesses a training in foreign methods would be helpful. Having entered the business, the young man should endeavour to obtain, by any means in his power, any knowledge or training which is calculated to render him more efficient."

Those who have tried to solve problems in analytical geometry and arrived through painful travail at the illuminating result, a=a, will recognise a kindred spirit in the author of this advice.

Those contributors who define their general standard usually mention matriculation as the minimum level, though there are not wanting those who advocate a "broad cultural basis," involving a university degree in, say, moral sciences. A new note, to which particular interest attaches in these days of overspecialisation, is struck by the Prime Minister, who says:—

> "I think it is of the greatest importance that you should train your young men from the earliest possible moment to take an interest not only in their particular job, but in the general policy of the business, and, in a wider area still, the general commercial and industrial life of their cities and of their country."

It would be interesting to hear Mr Henry Ford's comment on this.

When they turn to the personal qualities necessary for success, these representative business men become representative also of humanity through the ages. Any honest adult will admit that "naughtiness" in a child is only susceptible of definition as "anything which is inconvenient to grown-ups." The same ineradicable bias in human nature leads the great employer, when he is asked to enumerate the qualities which lead to success, to ask himself, quite reasonably: "What sort of fellow would I choose for promotion?" Hence, insensibly: "What sort of young fellow do I like to have working under me?" The inevitable upshot is that emphasis is laid, throughout, on the convenience of the employer, the young man of whose dreams would make a poor trade unionist and an unreliable and depressing companion in his social relations.

Imagine a synthetic youth having the qualities regarded as absolutely indispensable by a majority of the business men consulted. Above all he must be a worker. Not merely the sort of worker who works during business hours, and is willing to take his share of overtime given reasonable warning, but one who "is willing to subordinate personal tastes and inclinations," "does not mind work even of a very humble character, if necessary," "does not mind occasional discomfort," and "is always willing to cancel a personal engagement." Admirable qualities these, under an equally admirable employer, but what a field for exploitation they offer to the less scrupulous; and exploitation sometimes is an alternative to promotion. Our ideal young man is urged to keep himself fit by regular exercise, but an interest in sport is looked on with suspicion by many of the contributors as detrimental to interest in business. They cater for this dilemma in the United States, where business men rise before 6.30 in order to perform their "daily dozen" to the broadcast voice of a sergeant-major, but we have not heard of any such solution by the B.B.C.

The remaining qualities of our synthetic youngster, however, would endear him to the heroine of any best-seller. Personality, with or without the further desideratum of charm, and usually accompanied by a good personal appearance, is ranked high by a large proportion of the business men consulted; our model could stand a film close-up without flinching. He is strong, too, and very, very silent, while perseverance and courage are among his leading attributes. In fact, what with his education, his power of holding his tongue, and his steam-roller qualities of persistence, he seems to bear a remarkable likeness to the "strong, silent Englishman" so familiar in fiction.

But everybody knows that this country's finest manufacturing efforts are directed to her export trade, and so it is only natural that when our leading industrialists are asked what the prospects are for this pattern youth whom they have manufactured, they reply almost unanimously: "Export him." A few, here and there, speak warmly of the opportunities on this island, but the majority urge upon the young the great future awaiting them in the Dominions. One even bursts the confines of the questionnaire and puts in a plea for South America and the Pacific Coast. This is not the same embittered gentleman who observes that a young man "should remember that the experience of older heads does sometimes, even to-day, count for something"; or one might begin to wonder if crabbed age and youth had reached the point where they could no longer live in the same hemisphere. No, the fact is that this advice, like most of that offered by the elder to the younger generation, is a hopeless endeavour to stereotype in words the essentially personal knowledge won by living; and if the section on character reads like the "copy-book maxims" which so many of the contributors guiltily deprecate, it only goes to show that the qualities which make for success have always been, and probably will always remain, elusive and impalpable.

Notes of the Week.

The King's Progress.—The nine weeks' public anxiety over the King's illness was substantially allayed this week by a long bulletin in which his doctors were able to give news of progress so marked as to foreshadow an early visit to the seaside for convalescence. The extent of the relief afforded by this most welcome statement can only be fully appreciated by those who have witnessed day by day the intense anxiety and unfeigned solicitude with which the course of His Majesty's long and stubborn affliction has been watched, not merely by the whole British people, irrespective of class, party, or creed, but also by the world at large, including especially the great democracies of America, France, and Germany. Although it is too early to assume that all danger is yet passed, there is now every reason for confident hope that His Majesty will be restored to the service of his people. Clearly, however, a prolonged period of tedious convalescence and absence from public duties lies ahead, in which the King will continue to need the same measure of public sympathy as has been so universally lavished upon him throughout the months of acute illness. This the nation will give him in full measure and with thankfulness.

New Bank of England Directors.—Two interesting appointments have been announced to fill the vacancies on the Court of Directors of the Bank of England created

by the retirement of Sir Henry Cosmo Bonsor and Mr G. W. Henderson. The new directors are Sir Basil Blackett and Sir Andrew Rae Duncan, both of whom will bring to the Court a large measure of important modern financial and industrial experience. Sir Basil, after notable services in the realm of finance during the war, became Controller of Finance at the Treasury in 1919, a post which he held for three years before entering upon his distinguished and successful work as Finance Member of the Legislative Council in India. Since his recent return to England Sir Basil has been nominated, as we recently noted, to preside over the Communications Company, which will represent the final form of the great cables and wireless merger. Sir Andrew Duncan, who was Coal Controller in 1919 and 1920, has since 1927 been chairman of the Central Electricity Board. These two appointments mark another stage in the strengthening of the Bank's administration. Recent changes in Threadneedle Street have surely been sufficiently notable and rapid to satisfy those critics who complained that the Bank's management was out of date and out of touch with modern movements. The Court of Directors has in a comparatively short space been reinforced by the addition of Sir Josiah Stamp and Sir Ernest Harvey, and now by the two new directors whom we have mentioned. At the same time the staff has been strengthened by the recruitment of Sir Otto Niemeyer from the Treasury, of Dr Stewart, formerly of the Federal Reserve Board at Washington, and of Mr Siepman, whose work in India and Hungary renders him obviously fitted for his post. In short, the Bank has shown, and is showing, itself eager to take every possible opportunity of enlisting in its service wide and modern experience.

Fiscal Points of the Week.—The current issue of the *Review* of the Westminster Bank emphasises the importance of the rôle played by commerce in the economic life of Great Britain. Commenting on the estimate made by Mr A. W. Flux, the Board of Trade statistician, in a recent paper on the Census of Production, that out of an aggregate British national income in 1924 of £3,975 millions, commercial services were responsible for £1,035 millions, or 26 per cent., the bank points out that commerce may rightly claim to rank among the "great industries" of the country. Commerce, it is argued, can be regarded as productive in the truest sense, since by carrying goods, in time as well as in space, and in insuring their availability when and where desired, it adds to their real value from the point of view of the consumer, while by assuming the duty of forecasting probable demand and giving firm orders to manufacturers, the representatives of commerce take over a considerable share of the risks inseparable from modern economic life. We note with satisfaction the prominence given, by an authority whose views must necessarily have considerable weight, to this aspect of the national life, which is frequently in danger of being overlooked as a result of our present pre-occupation with the difficulties of our manufacturing industries. Those who advocate a policy of trade restriction in the supposed interests of home industries would do well to remember that measures tending to limit the volume of goods in trade within or without the frontiers of this country must inevitably have far-reaching repercussions on the prosperity of commerce. Was this idea, we wonder, in the mind of the Chancellor of the Exchequer when he said to the Manchester Chamber of Commerce on Monday:—"It is the duty of every British Government to make it their constant care and study, and assist the producer in every way that can be done without creating further evils or new complications unforeseen in their ultimate effects." In the same speech Mr Churchill made one of his periodic professions that he was still a free trader, and drew a sharp distinction between protection and "safeguarding." What the distinction is he did not tell us, and we humbly implore him to enlighten us on this mysterious matter. Another phase of the fiscal controversy has been brought into prominence this week in a letter which Mr A. J. T. Taylor, a director of Sir W. G. Armstrong, Whitworth and Co., has addressed to the Prime Minister. Mr Taylor's main theme is industrial efficiency, and he says: "My profound conviction is that necessary replacements and improvements of machinery are being held up by the industrialists merely because the lure of the safeguarding duty is being dangled before their eyes." So important a statement from a director of one of our leading industrial concerns cannot be disregarded.

The Tunnel.—The Channel Tunnel has been for so many years a controversy *bombinans in vacuo*—furious prejudice matched with nebulous enthusiasm—that the Prime Minister's decision to have a comprehensive re-examination not only of the military but of the economic aspects of the matter will be generally welcomed. From the point of view of national defence common sense leads to the conclusion that under modern conditions of war the Tunnel would be useless as a line of communication either for an army invading this country or, conversely, for a British expeditionary force operating on the Continent. No commander would dream of relying on a bottle-neck with egresses so vulnerable to aircraft and long-range gunfire, even if means were not taken to destroy the tunnel on the outbreak of hostilities. It is the economic considerations which require, in our opinion, to be carefully investigated and weighed. At present, vague estimates of the initial cost are quoted ranging from twenty-five to sixty millions sterling. At a dinner given on Wednesday night to members of Parliament interested in the scheme the chairman of the Channel Tunnel Company suggested that working expenses should not exceed £1,000,000 annually, and that on the basis of four million passengers per year, taking the fare at 16s per passenger, and allowing £800,000 for revenue from luggage, mails and perishable merchandise, gross receipts should reach £4,000,000 per annum. If this estimate be accepted, a capital cost as high as £40 millions would appear *prima facie* to be within the range of commercial feasibility, but, before the public can be in a position to pronounce upon the whole merits of the project, an authoritative statement on these and cognate points is wanted. Of the value of the Tunnel as an addition to "civilisation" in the broad sense there can be no doubt. We would remind those who are inclined to regard the scheme as visionary that in the not distant past "Summer Time"—now an accepted integral part of our lives—used to share with the Tunnel the honour of figuring as a standing "silly season" topic for our popular Press. Sufficiently wide and influential support for the Tunnel in business circles has now been mobilised to ensure, we hope, that the project at least receives serious reconsideration, and is not obstructed by prejudice, unreason or foolish timidity.

The Campaign in Afghanistan.—The situation in Afghanistan changes almost from hour to hour, and, though there are still two rival rulers in that distracted country, they are not both the same persons as they were last week. Last week the Water-Carrier was at the gates of Kabul; Inayatullah, Amanullah's brother, was king in the citadel; and Amanullah himself had abdicated and was out of the picture. This week the Water-Carrier is in Kabul—citadel and all; Inayatullah has abdicated and been evacuated to Peshawar by air in a British aeroplane by arrangement between the Water-Carrier and the Government of India; and Amanullah, having turned up at Kandahar, has "dis-abdicated" (if the expression may be allowed) and set up his standard there, whither his brother the ex-king Inayatullah has gone to join him. Poor Inayatullah is evidently a quiet man (if he were not Amanullah would hardly have suffered him to live after Amanullah himself had come to the throne), and after landing safe and sound on Indian soil he seems to have wondered rather wistfully whether the lot of an Afghan Sirdar in exile was not, after all, more desirable than that of a prince risking his life to replace a brother on the throne. Apparently, however, he was given no choice, but was bundled across the frontier again *en route* to Kandahar, after having had it explained to him what fun it would be and what an opportunity he was in danger of missing. Thus, for the moment, the situation resolves itself into one familiar in countries governed after the manner of Afghanistan—a struggle between the representatives of an old dynasty and the would-be founder of a new line. We still know little about the Water-Carrier, but he has given one striking proof of statesmanship in arranging to have Inayatullah evacuated instead of allowing himself to be placed under the embarrassing necessity of putting a rival to death when that rival had ceased to be dangerous. This reminds us of the Whig's attitude towards James II.—and a statesman who shows that kind of tact in Afghanistan may go far. But whatever the outcome of the personal and dynastic struggle, we have little doubt about the outcome of the "Westernisation" movement, out of which the trouble arose. If Amanullah returns, motor-cars and sewing-machines and girls' schools and felt hats will return with him, while if the Water-Carrier prevails, he will be a mighty man indeed if he proves a match for Mr Singer and Mr Ford. If the Water-Carrier reigns, we wager that he will live to drive his own car and will soon be sending his daughters to college at Girton or Bryn Mawr. "The march of civilisation" is irresistible.

Sino-British Relations in Canton.—Our Hong Kong correspondent writes:—After an absence of three months Marshal Li Chai Sum returned to Canton and resumed office as head of the provincial administration. His original intention was to clear up his affairs in Canton in order to leave himself free to participate in the councils of Nanking, and with this in view he nominated General Chen Ming Shu to succeed him as chairman of the Kwangtung Provincial Council. The appointment has not been received with enthusiam either by General Chen, who immediately fell sick, or by General Wong, the ruler of the neighbouring province of Kwangsi, and it is considered probable that Marshal Li will remain in Canton for some time to come. In the course of a newspaper interview the Marshal was interrogated as to the Nationalist Government's decision to abolish provincial councils, and, while appearing to concur with Nanking, he made it quite clear that the Kwangtung Council would continue to function for the present. Evidently Marshal Li does not intend to relax his control of the two Kwang provinces, and it is significant that he brought back with him Dr Chu Chao Hsin, whose experience of Western diplomacy is of great value in a centre such as Canton. Relations between the Canton administration and the British Consular authorities are extremely cordial, and reflect the harmony which prevails between the Nanking Government and British interests in Shanghai, both official and commercial. In this connection there was a noteworthy function a few days ago when the British Chamber of Commerce of Shanghai entertained at dinner two Ministers of the Nanking Government, viz., Dr C. T. Wang and Dr H. H. Kung. The occasion was described by Dr Wang as "a happy augury for the success of the new era of a readjusted and equitable relationship between China and Britain," but the speeches were by no means confined to lofty sentiments and honeyed phrases. The chairman did not gloss over the desperate plight of internal trade due to unchecked taxation, and, on the other hand, Dr Wang gave a pretty broad hint that British support of any adventurous policy on the part of Japan would incur the gravest displeasure of the Nationalist Government. But underlying these frank expressions of opinion there certainly seems to have been a genuine desire to bury past misunderstandings and to face the situation in which China finds herself to-day. Coming at a time when Dr Wang is engaged in negotiating a Commercial Treaty with the British Minister, this exchange of views in the atmosphere of a social gathering means a good deal, and will, no doubt, help to smooth over the rough patches which the inauguration of tariff autonomy is bound to cause. The publication of the new Tariff Schedule, which is practically identical with the tariff agreed to at the Peking Conference of 1926, has justified the calmness with which it has been awaited here.

American Cotton Crop.—On Wednesday last the Census Bureau of the United States Government at Washington published a further ginning report on the cotton crop for 1928-29. It was stated that so far this season 13,892,000 bales had been ginned, the amount compared with a month earlier being increased by 744,000 bales. The total exceeded the expectations of traders and operators, and prices in New York and Liverpool gave way. At the decline, however, there was some buying by speculators. As the ginning figure was larger than anticipated, there seems to be a probability of the crop being more extensive than the Government estimate of 14,373,000 bales. The final figures will not be published until the end of March. By that time interest in the growth will not be very great, as all attention will be centred on the prospects for the new crop.

Cotton Industry Reorganisation.—As we go to press we learn that the formation of the Lancashire Cotton Corporation, Limited, is now an accomplished fact. The corporation has been registered with a nominal capital of £100, to be increased as mills are absorbed. As part of the purchase consideration 5½ per cent. convertible income debenture stock (instead of debenture stock, as proposed by the Yarn Association) is to be offered, thus freeing the corporation from all fixed interest charges in respect of the indebtedness of the companies absorbed. The corporation will later raise fresh capital by the issue of first debentures. Meantime the Bank of England, whose help has contributed greatly towards the formation of the corporation, will provide temporary finance. Many of the spinners' largest creditors have already agreed to accept the income debentures and shares of the corporation on the agreed basis, and the corporation, whose chairman will be Sir K. Stewart, hopes to have acquired at least seven million spindles and a considerable number of loans by the end of 1929. From the point of view of Lancashire this news is of the highest importance.

The Artificial Silk Exhibition.—The fourth annual Exhibition of British Artificial Silk Goods was opened at Olympia, London, on Monday, and attracted a large gathering of trade members from all parts of the country. A visit to the exhibition, writes a correspondent—especially when this follows visits to the previous shows held in the Holland Park Hall in 1926-7-8—reveals the extraordinary progress made in the utilisation of the fibre. The exhibition is not one primarily concerned with yarns, it is an exhibition of fabrics and made-up garments. The centre of the hall is occupied by a large mannequin stage, upon which are paraded the latest styles and fabrics as produced by the exhibitors. The industry is now settling down into more or less regular grooves, and is rapidly becoming farther removed from the novelty stage. Originally it was felt that artificial silk was to be a cheap imitation of the real silk fabric. To-day the fibre stands in a category of its own, and this is emphasised very strongly by the decision of Courtaulds, Limited, to market their goods under the distinctive name of "Rayon." Perhaps the most striking feature of the exhibition is the development of the all-rayon fabric. It is a natural result of the improvement in the quality of the yarn and of the increased knowledge of its properties and of its processing. A year ago the all-rayon fabric was being shown, but not in either the quantity or quality of to-day, and now almost all the standard weaves are being exhibited in fabrics made purely of rayon. The next element of interest is the further development of mixtures of silk and rayon. Here, again, lie distinct possibilities of development. Wool and rayon mixtures also are being shown in most attractive forms, and both Lancashire and York-

THE MERCANTILE BANK OF INDIA, Ltd.

Head Office: 15, Gracechurch Street, London, E.C.3.

Capital Authorised	£3,000,000
Subscribed Capital	1,800,000
Paid-up Capital	1,050,000
Reserve Fund and Undivided Profits	1,584,846

Branches and Agencies:

INDIA, BURMAH, SIAM, CEYLON, STRAITS SETTLEMENTS, CHINA, PORT LOUIS, MAURITIUS and DUTCH EAST INDIES.

The Bank buys and sells Bills of Exchange, issues Letters of Credit and Circular Notes, and conducts every description of Banking Business in connection with the East.

Fixed Deposit Rates will be quoted on application.

On CURRENT ACCOUNTS interest is allowed at 2 per cent. per annum on daily balances, provided interest for the half-year amounts to £1.

Trusteeships and Executorships Undertaken.

JAMES STEUART, *Chief Manager.*

shire firms have contributed extensively to this section of the exhibition. The popularity of cotton and rayon mixtures remains unchallenged. A year ago the possibility of the use of rayon in the lighter type of fabrics—viz., ninons and voiles—was being tried out by a few firms. Upon this occasion, however, they are met with on many stands, and here, again, quite a new avenue has been opened up. The question is always being asked, "Where is the next opening for rayon?" and the answer is usually given in "men's wear." Beginning with ties and socks, and extending into all classes of underwear, and later to outerwear, there is no doubt that the rayon manufacturer is exploiting this line with success. The improvements in the yarn and the finer grades generally have all combined to assist in the presentation of what is a most successful exhibition. Improvements in elasticity, combined with improved methods of processing, have resulted in the production of so-called "creaseless" cloths, thus marking another important forward step. Dyeing of all types of rayon, and on the most difficult fabrics, has been vastly improved, and is now guaranteed fast to light and washing. The much-desired permanent dull lustre effect has been attained. These and other more technical improvements serve to show that the industry is progressing, and—by maintaining a very high standard of quality combined with intensive research—is continually opening up new avenues, the number of which is not even yet in any way exhausted. Figures published in the current number of the *Board of Trade Journal* show that British production of artificial silk yarn and waste in 1928 was 35 per cent. greater than in 1927, and no less than 114 per cent. above the 1924 level—a striking record of expansion.

Rail Rebate and Steel Industry.—Sharp differences have arisen in South Wales over the application of the anticipatory relief given to the coal and iron and steel industries as from December 1st last. The White Paper issued by the Ministry of Transport in November provided that the railway rate on coal either exported or delivered to iron and steel works should be reduced by 1½d per ton, and by a further 25 per cent. of the remainder of the carriage charges, and that there should be a decrease of 10 per cent. on specified raw materials supplied to the coal-mining and iron and steel industries. The representatives of iron and steel industry have been claiming the whole of the benefit of the rebates on coal supplied to them. By most colliery owners these claims have been resisted, but in isolated cases some or all of the rebate has been passed on to the consumer. In these circumstances, a special meeting of the South Wales Coalowners' Association recently adopted a resolution urging on all its members to retain the whole of the rebate on coal for iron and steel works, and to take the necessary measures for this purpose. This action is founded on the view that the Government allocated a definite sum for the relief of the mining industry, and that the industry would not receive that allocation if any of the rebate on coal supplied to the iron and steel industry were passed on. On the other hand, the ironmasters base their case on a statement by the Minister of Transport in the House of Commons on November 22nd last, that the relief was intended to be divided between "iron and steel and coal sold in competitive markets," although admittedly the direct rebate is made to whichever party pays the freight. It is argued that this remark cannot have referred only to the rebate on ores and similar raw materials, because the Government could never have meant the relief to be confined to this item, which is comparatively insignificant. At present both parties are adopting an intransigent attitude, but a decisive statement by the Government would probably be accepted without question.

New Official Statistics.—It is with great pleasure that we welcome the publication in this week's *Board of Trade Journal* of a comprehensive series of statistics designed to show the trend of the economic position in the United Kingdom. Particulars relating to the general situation of trade and the current activity of individual industries have been grouped in tables (to be issued in future at monthly intervals), which should prove to be of real use to the public in that they present the available data concisely in a readily comparable form. We hope that, as time goes on, the Statistical Department of the Board of Trade will find it possible to extend the range of the statistics and to fill in some of the many gaps still existing in our knowledge of industrial activity. Even in their present scope, however, the new tables of economic statistics should be of particular interest to readers of the *Economist*, since they partly supplement, and may usefully be studied in conjunction with the index numbers of Business Activity published in our monthly *Supplements*. The Board of Trade has both the duty and the opportunity to educate public opinion in the use of statistical records of the progress of commerce and industry, and its new venture is warmly to be commended.

The International Institute of Agriculture.—Our attention has been called to an error in the note which we published last week under this heading. It was implied that the International Institute of Agriculture was not yet linked up with the Economic Section of the League of Nations, whereas we are now informed that a Mixed Agricultural Committee, composed of representatives of the I.L.O. governing body and the higher officials of the Institute of Agriculture in Rome, was set up in 1923, and meets alternately in Geneva and Rome to consider points in which both organisations are interested. This eliminates overlapping. The International Labour Office carries out all work connected with agricultural labour, the Institute deals with agricultural methods. An example of the usefulness of this "mixed committee" in connection with one of the most terrible industrial diseases may be given:—The International Labour Organisation has been engaged in work for the safeguarding of workers from this disease over a number of years, with the active assistance of the British Government. The office can only deal with anthrax where it touches industry; at the first of the mixed committees it was decided that the Institute should conduct an inquiry with the object of the elimination of the disease at its source—*i.e.*, in flocks. A body of international experts meets at the same time as each mixed committee and holds separate meetings to consider each subject on the agenda as well as participating in the general deliberations. There is thus a much greater measure of co-ordination in international agricultural activities than has been generally realised.

Agriculture in Northern Ireland.—Our Belfast correspondent writes:—A report upon the inquiries made in 1925 in connection with the Census of Production has been issued by the Ministry of Agriculture for Northern Ireland. The total value of the output of agricultural produce in the Census year is estimated at £15,073,000, of which £11,824,000, or over 78 per cent., represents the value of live stock and live stock products. The predominant place occupied by the live stock industry in the agriculture of the Six Counties is thus apparent, and it is noteworthy that each of the principal groups of the live stock industry —live stock, eggs and poultry, and milk and dairy produce—exceed the total value of the output of farm crops. The value of the net output of the agricultural industry —after deducting the value of manufactured and imported animal feeding stuffs, manures and seeds purchased by Northern Ireland farmers—is estimated at £11,185,000. The preliminary results of the industrial census in the Six Counties have already been published, and show a total net output of £24,237,000. To this sum has to be added the estimated value of the net output of the flax scutching trade (£100,852), which was dealt with under the agricultural census. The total value of the industrial and agricultural output of the province in 1924-25 was thus just over £35,500,000. Agriculture is shown to be the greatest single industry of the province, and is followed by the linen trade with a net output of £9,201,000.

The Forestry Fund.—Under the Forestry Act, 1919, a total of £3,500,000 was to be paid into the Forestry Fund between then and March 31, 1929. It is estimated that by the end of the 1929 season 140,000 acres will have been planted during that ten-year period. An additional 65,000 acres have already been planted by private individuals and local authorities with the aid of grants from the Forestry Commission, and it is hoped that the ten-year total may reach 75,000. Meanwhile, the time for determining future policy is drawing near, and it is understood that the Government has decided to ask Parliament to vote a sum of £5,500,000 to the Forestry Fund on annual instalments for the next ten years. As the Commission is likely to be deriving about £1,400,000 in revenue from forest products during that time, bringing its total annual income up to nearly £700,000, it should be able to increase its ten-year planting programme from 140,000 to 225,000 acres, and to allow its other activities to expand proportionately. The Industrial Transference Board last June recommended the creation of sufficient forest holdings for at least 1,000 families from the depressed areas during the next three years. These holdings cost about £625 each, and since 1924, when they were first started, well over 500 have been completed. We hope that the decision to increase the Forestry Commission's resources will enable Lord Clinton and his colleagues to carry out in full the wish of the Transference Board.

Fire Losses in the United States and Canada.—The American figures for December fire losses are now available, and enable a complete comparison to be made between the losses for the whole of 1928 and those of previous years. The figures which follow have been extracted from the records compiled and published by *The Journal of Commerce*, New York. The losses during the month of December, 1928, aggregated $31,204,000, compared with $31,935,400 in December, 1927, and $43,757,600 in December, 1926. The December total is therefore evidently a favourable one, especially when it is remembered that losses at that time of the year are generally more severe than usual. The record of losses for the entire year 1928 brings out a total of $301,267,560, compared with $320,595,600 in the preceding year. The 1928 total therefore shows a reduction of about 6 per cent. on that for 1927.

Eagle, Star, and British Dominions (Star Life Fund).—When reviewing the 1927 accounts of this company, we ventured on the prediction that as a result of the valuations of the "Star" and the "Sceptre" closed funds, due to be made at the end of last year, the shareholders of the Eagle, Star—the parent company—might expect to get over £100,000. In fact, the valuation of the Star fund alone has produced £145,000. The detailed results of the valuation compared with those of the preceding one five years ago are as follows:—

	1919-1923.	1924-1928.
	£	£
Surplus earning during quinquennium	863,996	.. 1,096,980
Capital profits taken credit for.....	116,026	.. 351,576
Amount brought forward	59,551	.. 170,652
	1,039,573	.. 1,619,208
Allocations—		
To bonuses to policyholders	782,029	.. 1,308,538
„ shareholders	86,892	.. 145,393
„ carry forward	170,652	.. 165,277
	1,039,573	.. 1,619,208

The very large increase in the amount divided among policyholders has permitted the declaration of a reversionary bonus at the unprecedently high rate of £7 per cent. per annum compound for the five years. This compares with a varying rate of bonus in the previous quinquennium approximately equal to £3 per cent. per annum compound. Lest it be thought that this splendid bonus is merely the result of closing the fund, the report emphasises the exceptional character of the profits, and explains that they have been "swollen not only by substantial investment profits, but also by the satisfactory liquidation of liabilities in foreign countries." Indeed, this rate of distribution has only been made possible by drawing substantially upon capital profits, and the actuary in his recommendation has therefore split the total of £7 per cent. bonus into two portions, an "ordinary" bonus of £4 per cent. and a "special" bonus of £3 per cent. Moreover, the interim bonus has been fixed at what is evidently regarded as a more normal—though still gratifyingly high—rate of £3 per cent. per annum compound. This munificent distribution completely removes the reproach upon the "Star" for its poor pre-war bonus record, and the with-profit policy-holders may now feel for the first time that their average rate of bonus over the past twenty or thirty years compares favourably with those of other offices. The shareholders of the Eagle, Star, and British Dominions, with their appetite whetted by this tempting morsel, will now eagerly await the results of the valuation of the old "Sceptre."

BANK ESTABLISHED IN 1864.
SKANDINAVISKA KREDITAKTIEBOLAGET
GOTHENBURG, STOCKHOLM, MALMÖ.
Branches in all parts of Sweden.
Paid-up Capital and Reserves - - Kr.182,000,000
Telegraphic Address: "Kreditbolaget."
THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

Treaty Reinsurances Limited.—Having had from the very start the advantage of close association with, and support from, a powerful group of composite companies, this reinsurance concern now finds itself nine years after its foundation in an unusually strong position. The shares are held jointly by the London and Scottish, the Phœnix, and the Century, and these companies also guarantee the contracts. The financial year ends on June 30th, and the results for 1927-28 show a distinct falling off from those of 1926-27. One current underwriting account only is published—labelled fire and general—and a slight increase in the premium income, which now amounts to £610,549, has been accompanied by a marked rise in the claims ratio from 54.8 per cent. to 61.1 per cent. The consequence is that the underwriting profit has fallen from £43,400, equal to 7.4 per cent., to £10,487, equal to 1.7 per cent. of the premiums. In addition to this account, there is a rapidly vanishing closed marine fund now amounting to £7,386. After allowing for profit and loss items, the total net surplus of the year works out at £8,149, compared with £39,767 in the year 1926-27. Net interest earnings are higher at £16,985, and the dividend of 25 per cent., tax free (the same as before), costs only £7,500. The balance-sheet includes a general reserve fund of £150,000, and a profit and loss credit balance of £46,191, against a capital of only £30,000.

National Mutual Life Assurance Society.—The first thing that calls for comment in the 1928 report of this society—again the earliest report among the life offices—is the new business. The amount, £1,007,339, is a record, and tops the million mark for the first time. It is, moreover, some 22 per cent. in excess of the 1927 total. It is true that the 1928 figures have been swollen by one or two large sinking fund policies, namely, three policies for sums assured of £101,250, compared with three policies for only £17,500 in 1927, but there is no real reason for any differentiation between life assurance business and sinking fund business. It is interesting to trace the change in the society's new business since the year before the war. In 1913 657 policies were issued for net sums assured of £369,127, i.e., an average sum assured of £562 per policy. The corresponding figures for 1928 were 682 policies for £906,089, an average sum assured per policy of £1,329. Thus the number of policies remains about the same, though, by appealing more to the wealthier members of the community, the volume of business is two and a-half times greater. Inquiry of the reference books shows that this has been accomplished in spite of an actual contraction in the business-getting organisation—from nine branches to five branches. This result is a tribute to the society's efficiency. For the rest the net rate of interest shows a small increase from £4 14s 3d per cent. to £4 14s 10d per cent. (and, incidentally, this important item has shown a steady advance every year since 1923), while the expense ratio at 12.9

per cent. is lower by reason of a number of single premium policies issued last year. The balance-sheet discloses a further reduction in British Government securities (which still, however, account for 27 per cent. of the total assets), and, more interesting, though it were hard to know its significance, a reduction in ordinary shares from £947,346 to £729,792. The annual report is accompanied as usual by the actuary's report on the annual valuation. The results are as follows :—

	1927. £		1928. £
Trading profit earned during the year	140,416	..	131,890
Profit on securities realised and revalued	84,363	..	117,555
Brought forward from previous year.....	640,206	..	751,246
	864,985	..	1,000,691
Allocations :—			
To bonuses to policyholders	112,239	..	121,667
„ Expenses of valuation	1,500	..	1,500
„ Carry forward to next year	751,246	..	877,524
	864,985	..	1,000,691

As already announced, the reversionary bonus is to be at the same rate as before, namely, 45s per cent. compound for endowment assurances, and 51s per cent. compound for whole life assurances. The society enters upon its centenary year in 1929 with free resources equal to 20.7 per cent. of its liabilities—a position of great strength.

Oversea Correspondence.

UNITED STATES.—SHARE MARKET—DISCOUNT RATES—BUSINESS PROSPECTS.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 12.

MOVEMENTS in the money market and security markets for the week conform closely to the standard for this time of year. A sharp contraction has taken place in credit outstanding and in the demand for it, and the resultant easy money has helped the speculative side of the security market, notwithstanding some hesitation over the possibility of an increase in the Federal Reserve Bank's discount rate. The placing in the stock market of new money received by investors as dividend and interest payments is for the moment at least proving to be a more powerful influence than the professional buying and selling. Moreover, while bearishness over the outlook beyond the next few weeks has been increasing, the feeling is general that the position is too sound to admit of a long-continued bear market.

Almost daily banking houses and powerful groups of capitalists announce the formation of new investment trusts. For the most part these trusts are following the popular trend in investment here, which is to increase the proportion of common shares held, if not to hold them to the exclusion of bonds and preferred stocks. While buying for the trusts and for the individual investor is supporting the January share market, the bond market has been rather disappointing. Government tax-exempt issues and the bonds which by their scarcity and nature occupy favoured positions have worked higher, but interest in general is small. The scarcity of new issues indicates the changing taste of the investing public. In the past week, for instance, less than $18,000,000 in new bonds were offered in this market, against a total of $123,000,000 a year ago. New capital share issues, however, are active. On the Stock Exchange more than two dozen well-known companies are represented by rights to subscribe to new shares offered to attract additional capital to the enterprises. Therein lies the explanation of much of the great rise in brokers' loans during the year, since a great deal of money is necessarily tied up in new stock offerings.

No surprise was felt in well-informed quarters this week at the decision of the Federal Reserve Bank directors to maintain the 5 per cent. discount rate. Even the speculative element in Wall Street had become reassured on the subject before the regular weekly meeting day of the board. Apart from the share market, there appear to be more cogent reasons for leaving the rate as it is than for advancing it, and it is doubtful if the Reserve authorities are becoming very much agitated over the persistent high level of the share market. If the rise were to go so far as to increase the credit burden on the Federal Reserve system, it would be a different matter.

As a matter of fact, at the time of writing the local bank's total credit outstanding is $232,000,000 below the peak at the beginning of the year, and is only $116,000,000 higher than a year ago. With the return of currency and gold from circulation and the contraction of credit outstanding, the reserve ratio this week jumped from 12.9 to 67 per cent. Meanwhile member bank borrowings for the entire system are down to $876,547,000, and it is believed that if the January reduction had brought the total down no lower than $1,000,000,000, the position would have been regarded as satisfactory.

An unexpectedly large consignment of gold was received from Canada in the week, amounting to $23,000,000. The effect of these shipments on the money market was nullified, however, by the earmarking at the Reserve Bank of $30,000,000 for the account of the Bank of France. Since last autumn French earmarkings have amounted to nearly $100,000,000, and there would be no surprise if as much again were taken. The French probably will make their withdrawals at times when our money market can best stand it, and mid-January is ordinarily a period of ease in money. Actual shipment of the metal may begin shortly.

Keen interest is shown here in the gold position of the Bank of England, for it is felt that an advance in your rate would increase the likelihood of a higher reserve rate. So far as our bill market is concerned, the higher rates recently put into effect do not bear their old relationship to discount rates. After nursing the bill market for the past ten years, the Reserve authorities are anxious that the burden be taken over by the commercial banks. Old rates were too low to attract bank investment, particularly with short-term money so dear. The bill rate is now about on a level with the Reserve Bank's discount rate, and next week it probably will go higher. Under the old policy of the Reserve that would undoubtedly have meant a higher discount rate, but now more time is desired to see how the higher bill rates will work out. If rates are made attractive, the commercial banks will buy bills, but they are unlikely to do so at current levels.

The financial community became somewhat satiated with observations on the business and money position made by bankers, business men, and economists in the annual financial reviews of the Press appearing last week. However, it read with interest the remarks of the presidents and chairmen of the leading city banks at the annual meetings of stockholders held this week. All the bank executives were able to report substantial increases in earnings during the past year. Not only was the demand for bank credit sufficient to absorb a larger proportion of the available supply than usual, but the high level of rates added to profits.

A feature of the banking year here has been the steady absorption of the smaller institutions by the larger banks, extension of branch banking, and more particularly the large additions to capital through the sale of stock. Clearly the banks are preparing for further expansion, and while the small independent bank in this country probably never will disappear, the trend of developments in the larger cities is toward fewer and stronger banks with numerous branches, after the system on your side of the water. In addition to reporting good profits, the bankers told their stockholders that they anticipated a high rate of industrial activity during the coming year. Most of them sounded a note of caution, however, on the absorption of credit in the stock market. Mr Charles E. Mitchell, president of the National City Bank, epitomised the situation as follows :—

"With no inflation in commodity prices, with industry making progress along safe and sound lines and within the limits of proven consumption, with no excess of investments by the banks of the country, and a Federal Reserve structure that up to this time is not seriously inflated, there is firm ground for the belief that business should continue in the coming months with substantial volume and reasonable profit. The danger, if there be one, must lie in the possible credit strain. Experience teaches that the danger to every period of prosperity lies in the development of over-confidence, and a consequent tendency to unwise use of credit. If this present period of prosperity is halted, it will be by the same old cause, and we are bound to guard against it."

FRANCE. — SOCIAL PROGRAMME — BUDGET DEBT EXTINCTION—BANK STATEMENT.

(FROM OUR CORRESPONDENT.)

PARIS, January 23.

THE new Government's economic and social programme, as set forth by M. Loucheur, Minister of Labour, in the debate raised by interpellations from various parties in the Chamber, is far reaching, and has been favourably accepted by public opinion. M. Loucheur, who can speak with authority on the subject, set forth both a doctrine and a programme. The doctrine was that of rationalisation of production as the basis of a programme of economic and social modernism, founded on the solidarity of capital and labour. Hitherto, M. Loucheur pointed out, the French employer has fought against increasing wages. "For the American employer, on the contrary, the main question is to create a huge mass of consumers with a maximum purchasing power, with the result that he has been able largely to increase wages and at the same time reduce production costs." Rationalisation M. Loucheur defined as "the suppression of useless efforts, the reduction of the number of standard types and models, the closing of factories working under bad conditions." He insisted that the co-operation between capital and labour, which must follow rationalisation, cannot be arrived at merely by participation in profits—firstly, because that would not admit the workers to take part in the direction of industry, and secondly because the proportion of profits distributed to capital is already too small to admit of further diminution. The Minister also condemned the system of factory committees, which had been tried in Germany, but had yielded nothing, except when they took the form of sanitary and safety committees. M. Loucheur's preference is for the development of the system of special issues of shares to employees. He announced that the Government proposed to modify the existing law on this point with a view to enabling trade unions to become shareholders. He also foreshadowed extensions of trade-union law for the purpose of rendering obligatory negotiations between employers and employed in all cases of dispute. The Government's majority of 85 confirmed the feasibility of the Minister's proposals so far as legislative effort is concerned.

Complete revenue returns for the past year show that the total yield from all budgetary sources during 1928 was 43,687,035,800f, of which 42,890,669,200f (or 2,699,000,000f more than in 1927) was derived from "normal and permanent resources." These totals do not include the revenue received by the Postal Department or that from the tobacco monopoly and the special taxation now allocated to the Caisse d'Amortissement. Fifty-eight per cent. (or 1,574 millions) of the increased yield during 1928 was derived from taxes on consumption, the increase in the yield from turnover tax alone being 760,000,000f. Direct taxation produced 732,582,100f less than in 1927, largely through delays in payment towards the end of the year, but "taxes on fortune" (registrations, stamp duties and taxes on Bourse operations) yielded 1,280,000,000f more than in the previous year. The revenue of the Caisse d'Amortissement in 1928 totalled 6,829,977,389f, of which 3,984,971,000f came from the tobacco monopoly, 2,179,487,000f from death and succession duties, and 665,518,000f from the 7 per cent. tax on property transfers. From this total of nearly 6,830 millions, however, must be deducted the working expenditure of the tobacco undertaking, after which a substantial portion of the remainder must be utilised for interest payments on the large mass of Defence Bonds still outstanding, so that the amount available for direct debt extinction is likely to be comparatively small. The Caisse's revenue was 723,958,479f more than in 1927, the yield from each of its three sources being over 200,000,000f more. The fact that the yield from the 7 per cent. special tax on property transfers was 203,000,000f (or nearly 50 per cent.) more than in 1927 suggests that the property market has now recovered from the shock which kept it in a state of semi-stagnation during the first 18 months after this tax was brought into existence.

The past financial year resulted in a realised surplus of 3,268 millions over Budget Estimates, which foreshadowed a purely nominal balance to the good. Theoretically, this surplus should be passed to the Caisse d'Amortissement for debt extinction purposes, but it is improbable that more than a fraction of the amount will be so utilised. Most of it, probably, will be absorbed for liquidating supplementary credits, as was the case in the previous year.

The new maximum limit for the circulation of Defence Bonds, which stood at 38,268 millions in 1928 (or 40,564 millions, if the "tolerance" of 6 per cent. extra be taken into account), has been fixed for 1929 at 35,487 millions (or, with the legal extra margin, 37,616,000,000f).

The extension of the powers of the Caisse d'Amortissement, which is now authorised to buy in Rentes on the open market for extinction purposes has already given an appreciable stimulus to quotations. It is understood that its choice has fixed on practically inconvertible issues, such as the 3 per cent. Perpetual Rente, which may be regarded as the leading scrip of its class by reason of its wide market. This stock, which stood at 65 in December (after having touched 76 in July), is quoted to-night at 69.70, a gain of 20c on the day. The Caisse, it is held, might without danger devote one-half of its available 6,000 millions to purchases of this stock. The adoption of such a policy would prepare the way for the issue of a loan, for the consolidation of Defence Bonds and the conversion of Caisse d'Amortissement Obligations, at a much lower rate of long-term interest than has latterly prevailed, and for which the market is apparently now prepared.

The Bank of France statement, which brings the situation down to January 11th, reveals further purchases of gold amounting to 1,030¼ million francs (following an increase of 702 millions in the previous week), bringing its total stock of the precious metal up to 33,709,295,194f, as against 30,852,000,000f in the middle of November, and 28,935,000,000f at the date of legal stabilisation. The Bank has now reconstituted its pre-war reserve, as it existed prior to its heavy sales of gold in 1915, 1916, and 1917, for the purpose of supporting the franc and furnishing means to continue the war. The last weekly statement also reveals a reduction in the note issue of 1,029,386,000f, which, with the increase in the metallic reserve, brought the cover for the Bank's sight engagements up to 41.27 per cent. (against the legal minimum of 35 per cent.), which is the highest recorded since stabilisation.

It is reported here that the Swedish Match Trust (which made a loan of $75,000,000 to the French Government a year or so ago, utilised to pay off a previous loan in the United States) has offered to furnish a further $412,000,000, in exchange for German reparation bonds, to enable the Government to liquidate the American commercial debt, due next August, which the Washington Government has refused to renew. Negotiations are unofficially reported to be proceeding here between M. Ivar Kreuger and the Ministry of Finance.

GERMANY.—BUDGET FOR 1929-1930—REICHSBANK AND MONEY MARKET—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, January 22.

THE Finance Minister, Dr Hilferding, has published the main features of his Budget proposals for 1929-30. The opposition to all the plans of additional taxation so far discussed in public has been very strong, and there is conflict between the *Conservative parties, which in particular* oppose further direct taxation, and the Left, which objects to new taxes on consumption. Dr Hilferding's plan seeks to propitiate all groups, and so has not pleased any. The "Great Coalition" parties, under the arrangement come to when the Cabinet was created, are not bound to give parliamentary support to any Government measure.

The Budget will balance at about 9,900 million marks. Gross new expenditure totals 528 million marks, of which 312½ million marks is accounted for by the Reparation contribution. The rest of the increased contribution fell to the current year. The total of 528 million is reduced to 358 million marks by expenditure reductions of 170 million marks in other departments, in particular Defence, which costs 23 million marks less, Food Ministry 46 million marks less, Pensions 30 million marks less, and debt service 50 million marks less. The net expenditure increase is, therefore, only some 45½ million marks more than the addition to the Reparation contribution. On the revenue side, however, as compared with 1928-29 there is a loss of 125 million marks from coinage profits, and further, the surplus from the preceding year, which amounted to 175 million marks in 1928-29, is no longer available. The falling-off of revenue from both these sources is 300 million marks, which brings the total new revenue needed (though it is not so stated by the Minister) to 658 million marks.

The deficit is to be made good as follows:—From existing taxation (mainly sugar and tobacco) is expected 90 million marks above the estimated yield of 1928-29. Posts will contribute 136½ million marks, instead of as now 100 million marks, an additional 3½ million marks is expected from various administration receipts, and 120 million marks will be deducted from the federal subvention to states and municipalities. The sum obtained from the above four sources will be 250 million marks. The sum raisable by new taxation is only 379 million marks, which is to be obtained by increasing the beer tax by 165 million marks, the spirits tax by 90 million marks, the inheritance tax by 20 million marks, and the property tax by 104 million marks. The inheritance tax at present yields only £5,000,000, which is a very small fraction of the yield of the British estate duties. For this anomaly the usual explanation is that the cumulative effect of an annual property tax, which does not exist in Great Britain, is to reduce fortunes rapidly enough. The present property tax varies from 0.1 to 0.75 per cent. a year on total capital wealth. It will be increased all round by one-fifth. The total additional revenue appears to be 629 million marks, which would not entirely cover the deficit; and the Finance Minister has promised a 5 per cent. reduction of income-tax on incomes below 25,000 marks, the loss from which is not stated. Dr Hilferding complained of the unsatisfactory cash condition of the Treasury. A working fund, which is absolutely necessary, does not exist; it is impossible in the present state of the home capital market to float the loans already sanctioned for covering the extraordinary Budget deficits from former years; and the Government, in addition to using its Budget power to raise 400 million marks on Treasury bills, has been obliged to borrow from the Railways Corporation, the Posts, the Unemployment Insurance Fund, and the Preussenkasse.

The Reichsbank's reduction of its discount rate has not restored contact with the money market. In spite of enormous repayments of credits in the second week of January, money continued plentiful, and market rates are below the Reichsbank rate. The Reichsbank's return for the 15th shows a decline in discounts of 444 million marks and in circulation of 404 million marks. In the first two weeks of January discounts totalling 1,021 million marks were repaid, which constitutes a record, and the discount portfolio at 1,657 million marks is the lowest shown in a mid-month return since March, 1927. The gold cover ratio has risen to 66.9 per cent., combined gold and exchange cover to 70.7 per cent., day loans to-day were 3½-5½ per cent., month loans 7-8 per cent., private discount rate 5⅝ per cent. The fluidity of the money market is to some extent a seasonal phenomenon. The Reichsbank's view that the discount rate cut of January 12th would not make for a circulation increase has been so far justified. Circulation (combined Reichsbank and Rentenbank notes), which increased last year, is now down to 4,560 million marks, or 100 million marks below the figure of a year ago.

The Commerz und Privat Bank has absorbed the Braunschweigische Bank und Kreditanstalt, and the Deutsche Bank has acquired a majority interest in the Osnabrück Bank. The official wholesale-price index number for January 16th is 138.7. Unemployed members of the trade unions on December 31st were 16.7 per cent., against 9.4 per cent. a month before; partly unemployed 7 per cent., against 7.1 per cent. In eight trades connected with building 46.8 per cent. of union members were fully unemployed, in textiles 8.4 per cent., clothing 20.3 per cent., bootmaking 23.7 per cent. Ruhr coal output in 1928 totalled 114,577,050 metric tons, against 117,994,111 tons in 1927. Total sales by the Ruhr Syndicate (including coke and briquets reduced to coal value) were 111,104,811 tons, against 116,804,945 tons. The Syndicate's decision of November, carried by the mixed coal and iron works, as to the price to be credited to member firms, is being disputed before the Courts. Ingot steel production in December was 1,090,630 tons, against 1,371,518 tons in December, 1927. Comparative figures for the whole year were:—

	Metric Tons.
1913 (present area)	11,885,600
1919	7,847,356
1927	16,310,682
1928	14,517,165

The Pig-Iron Syndicate announces unchanged prices for February. Prices for export are firm, particularly for billets, bars, bands and certain kinds of sheets. The market for tinplates is quiet. The *Frankfurter Zeitung* expresses the view that an Anglo-German tinplate agreement is hardly possible in view of the great disparity between the two countries' outputs. German home prices are a little higher than British, and as there is no import duty any raising of them would lead to increased import. The receipts of the German works are unsatisfactory owing to the fact that a considerable part of production is exported at less than home prices. The General Electricity Company (A.E.G.) reports for 1927-28 net profits of 16,023,683 marks, as against 11,886,000 marks in 1926-27. The dividend is unchanged at 8 per cent., but is paid on 150 million marks capital, as against 120 million marks last year. The turnover, including that of controlled companies, was 500 million marks; orders on books at the end of the business year 385 million marks.

The price question in the artificial silk industry has been up for discussion. The securities of the leading companies were last week sold heavily owing to unfavourable rumours about impending home competition. In general, as in other countries, the Bourse quotations have declined. Vereinigte Glanzstoffe, which in May, 1928, sold at 880, now quotes at around 480. It is officially denied that the viscose artificial silk convention has been denounced, but it is added that the member concerns are for the present free from any price obligations, so that they may protect themselves against foreign competition, mainly from Italy.

DENMARK. — AGRICULTURE — PRICES — INDUSTRY—FOREIGN TRADE—FREIGHTS.

(FROM OUR CORRESPONDENT.)

COPENHAGEN, January 16.

PUBLIC statements made at the New Year were generally optimistic, and have to some extent supported the faith in continued progress. Most importance was attached to the progress of agriculture during the latter part of 1928, thanks to the good crops and the more advantageous export prices. The crop returns were very much in excess of expectations at an earlier date. Compared with the crops of 1927, which was actually a poor year, the cereal crops showed an increase of 30 per cent., while turnips, &c., were 20 per cent. better, the actual 1928 figures being 35,200,000 hectokilos and 225,300,000 hectokilos respectively. For the greater part of 1928 the butter quotation was higher than last year. The final average was Kr. 3.13, against Kr. 3.01 in 1927. For the first few months the quotation was below 1927 figures, but then an improvement set in and carried the average beyond last year's level. The same was the case with bacon prices, but the average was only Kr. 0.02 above last year's figure (Kr. 1.37 per kilo, against Kr. 1.35 in 1927). The rise during the last two months of the year sufficed to make the average a trifle higher than that for 1927. For eggs the level of prices in 1928 and 1927 was about equal.

The official estimate of the value of exports of agricultural produce in 1928 is about Kr. 1,160,000,000, or about Kr. 60,000,000 more than in 1927. This progress is partly due to an increase of the quantities of butter and bacon exported, partly to the fact that, while the wholesale price index for 1928 showed a figure of 147 for import goods, or the same average as in 1927, the index for export goods showed a rise from 136 to 139. The index for home-market goods declined from 166 to 163, while the entire wholesale price index showed an unchanged figure of 153. This change is decidedly in favour of agriculture as an export trade, though the difference is not very great; but the improvement is shown more clearly by comparing the figures for the first and last six months of 1928, as will appear from the following summary:—

	Jan.-June.	July-Dec.
Import goods	149	145
Export goods	131	146
Home market goods	165	161
The entire index	154	152

This shows the pronounced rise of the export group, and the Statistical Department comments this in its New Year review in the following manner:—

"This means an advantage, through increased profit for the community as a whole on the foreign trade, as well as by enabling the agricultural trade to purchase increased labour and more goods from artisans, manufacturers, &c. This change in the level of prices, in connection with the good crop returns, has therefore contributed towards the improvement of the industrial situation. This was first traced towards the end of 1927, and was to be ascribed to increased adaptation of the manufacturing trades to the new level of prices, to less effective competition from abroad, and to some extent to improved conditions, as, for instance, rising prices of textiles, and particularly of boots and shoes."

Owing to the depression which still affects a number of industrial lines, the number of unemployed is still considerable. According to the most recent computation the number was 75,862, but this is after all a considerable improvement as compared with last year at the same time, when the number was as high as 88,700. It is pointed out from various sources that the manufacturing trades have made progress in foreign markets, which will no doubt be traced in the statistics as increased industrial exports. How much the progress will amount to is not easy to estimate, but that the industrial exports are not without importance is shown by the 1927 figure, which was about Kr. 260,000,000.

In the course of the year foreign trade has increased. According to recent statistics, the value of imports in the period January-November was Kr. 1,591,000,000, against Kr. 1,497,000,000 during the corresponding period of last year. At the same time, exports have shown a practically corresponding increase, i.e., from Kr. 1,413,000,000 to Kr. 1,510,000,000, the excess of imports for each of the two periods being thus just over Kr. 80,000,000. In the circumstances this deficit is not considerable, and in view of the plentiful supply of capital from abroad it has not exercised any appreciable influence on the balance of payments. Apart from this, the gross earnings of the mercantile marine in foreign trade will presumably have amounted to Kr. 180,000,000 or Kr. 185,000,000, against just over Kr. 198,000,000 in 1927.

The Danish freight index figure showed a rise from 96.5 in May, 1928, to 114.6 in November, and will presumably be about 104 for the entire year, against about 112 for 1927. Freights were higher in the early part of the year than in the corresponding period of 1927, while at the end of 1928 the figure was likewise better than a year ago (114.6 for November, 1928, against 107.5 for November, 1927), and at the New Year it was the unanimous opinion that the state of affairs was satisfactory.

ARGENTINA. — CROPS — MONEY — AMERICAN PENETRATION—EXCHANGES—FREIGHTS.

(FROM OUR CORRESPONDENT.)

BUENOS AIRES, January 3.

CROPS are turning out even larger than the first highly favourable estimates, owing to increased use of pedigree seed, and yields of 8,000,000 tons wheat and 2,500,000 tons linseed are now certain. This means exportable surpluses of 6,500,000 tons and 2,300,000 tons respectively, figures never previously attained. It is a harvest that will tax Argentine transport facilities to the uttermost, and as the maize, down to the time of writing, has never been in better condition, or sown over a wider area, the 1929 prospect is bright for all crops. This promises general prosperity in all branches of trade, as arable farming has a much wider influence on business movement throughout the country than cattle-raising. Whereas a rise or fall in the price of steers may affect the number of animals bred to the requirements of the meat trade, and increase or diminish individual wealth in a limited number of instances, such changes make no difference to the material position of the small number of labourers that cattle breeding requires. The numerical superiority of the cereal-growing population, and the reaction of its growth upon the trade and general activities of the provincial townships, becomes daily more manifest; and is even more important, commercially and financially, than one would suppose from the relative export figures giving values of cereal and pastoral products, which for the first eleven months of 1928 were $311,622,957 gold and $606,855,065 gold respectively. Quotations, though easier, may be considered fully remunerative to the grower. Wheat, spot, is $9.30 paper per 100 kilos, with $9.60 for February. Linseed $15.15 spot and $15 for February. Maize $8.95 spot, and $9 February, with new season's May delivery quoted at $7.60.

The satisfactory harvest conditions occur conjointly with unusual ease in the money market, rates for discount and advances being barely sustained at 5½ to 6 per cent. Local bankers have indeed been offering the Government money on terms below these figures; it is said at 4½ per cent. for six months, at which price the two German banks were willing to employ $30,000,000 paper. This has not been officially confirmed, since the Argentine Government declined to discuss any of the offers, as it is not at present in need of funds. Revenue receipts are higher all round, as the result of a marked increase in imports, those of the Buenos Aires Customs House at December 26th totalling $352,626,126 paper, as against $318,085,988 paper in 1927. General business movement is quieter than this satisfactory state of production would lead one to expect. Nevertheless, the year ends much better than it began, and widespread and profitable movement in every field seems assured for 1929. The railway outlook is distinctly good. Relations with the new Government are now on a sound and friendly footing, new construction and greatly improved services have been recognised to be mutually beneficial, and personal interviews between H.E. President Irigoyen and various visiting directors are manifestly contributory to a good understanding.

International interest in the Argentine market, both as a field for investment and as a purchaser of manufactured goods, is stronger than ever. Mr Hoover's visit, unofficial and uncommercial though it was declared to be, has done much to strengthen Argentine friendship with the United States, on the official side. His personality may be said to have turned what was first regarded as a mere duty reception into a sincere welcome, and the sound-

ness and sobriety of the views expressed on Latin American, on commercial, and on financial affairs were fully appreciated by the Argentine public. There can, however, be no two opinions regarding the powerful penetration of American business interests in Argentina, based on possession of ample means, excellent organisation, and expressed readiness to look rather to the future than to the immediate present for their material benefit. Absorption of the River Plate Telephone Company, though not actually completed at the moment of writing, together with various recent electrical investments, will strengthen the American financial and commercial position to an extent that is not realised in London. For American business is pursuing a policy similar to that of Germany in Italy between 1900-1913, namely, insisting on complete control by American interests of every operation from first to last, regardless of old connections or the wishes of individuals. To assume, therefore, that the sale of foreign enterprises to American interests does not necessarily mean a change in the sources whence goods are supplied is to be blind to facts. American interest in Argentina to-day is wholly for account of the export, shipping, banking, insurance, and distributing services of the United States; nor does she seek to disguise it, though she is quite willing to allow others to credit her with altruistic motives if they wish to do so.

Conditions in the exchange market have changed but little during December. For the first fortnight rates moved against Argentina, and trifling gold shipments, $3,750,000 U.S., were made, though it is reasonable to suppose that of this sum the shipment of $3,000,000 U.S. to the Bank of France responded rather to the private requirements of the shippers, a Continental bank, than to the profit derivable from such an operation. Exchange closes at 47 9-32 cable and 104.55 cable N.Y., with heavy demands by remitters, and as yet comparatively little export paper coming forward. Freights are firmer at 25s 6d for January loading on the San Lorenzo range to U.K./Continent, but February/March quotations are uncertain, and fixtures have been made at 22s 6d Buenos Aires to Antwerp/Rotterdam, as it is held that the certainty of heavy crops will lead to an excessive influx of tramp tonnage, thereby allowing shippers to charter at their own convenience as regards rates.

SOUTH AFRICA.—POLITICS—GOLD OUTPUT—FINANCE.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, December 31.

ON December 5th General Smuts opened the ninth Union Congress of the South African Party at Bloemfontein. As it is not unreasonable to hope for General Smuts' early return to power, his speeches attract even more than usual notice. The position of the Pact is very weak, owing to the dissensions in the Labour ranks—if "ranks" is still an appropriate word—the general differences between the Labour and Nationalist parties, and a still thinly disguised sectionalism amongst the Nationalists. General Smuts said that his party's native policy would be to deal with immediate social and economic aspects of the problem, and not to embark on experimental amendments to the Cape native franchise or similarly debatable political issues. Further features of the programme would be the stimulation of immigration and a measure for the enfranchisement of women, the latter being especially promised an early place. General Smuts also referred to "steps to prolong the life of the gold mines and to open up new fields." One or two comments on the statement suggest themselves: The average S.A.P. supporter is less negrophobe than his opponents, but the general attitude throughout the country is not favourable to an enlightened or impartial programme in native questions; almost the same comment might be made *mutatis mutandis* in regard to immigration; as regards the mining industry, probably the most important long-run assistance would be a drastic revision of the tariff and railway rate policies—and drastic revision is unlikely.

In his speech at the quarterly meeting of the Chamber of Mines, Mr A. W. Rogers, the president, pointed out that the November output brought the officially recorded Rand output to a total exceeding £1,000 millions. This includes the "premium" of approximately £32 millions in the years 1919 to 1925. As an important section of financial opinion fears a return to the currency difficulties of 35 years ago owing to shortage of gold, South African domestic policy (where it specially affects the gold mines) appears likely to possess considerable general importance in the future.

The dividends declared by the Rand gold-mining companies making returns to the Chamber of Mines amount to £4,085,471 for the second half of the year, making £7,980,095 for the year. This is about £7,000 short of last year's figure, but if the Sub-Nigel be regarded as a Rand company (the Government records always treat it as "Outside") the increase in that company's returns more than maintains last year's figure. Of the total of £7,980,000, £6,926,000 was declared by companies east of Kleinfontein.

The Auditor-General has published his Report on the accounts of the Union Government for the year ended March 31, 1928. During the year the debt of the Union increased by £7,450,117, the total debt at the end of the year being £238,926,064. The interest payable is £10,035,163, an average of 4.2 per cent; 60 per cent. is payable in London and 40 in South Africa. The Union revenue during the year was £30,094,004, and the expenditure £28,303,608. The Auditor-General is of the opinion that the method of presenting certain historical information obscures the growth of interest on public debt.

Letters to the Editor

COMPANY SHARES AND REAL CAPITAL.

SIR,—It has lately been suggested in responsible quarters that such intangible assets as goodwill, patents, and the like, the values of which depend entirely on future hopes and expectations, are not in any circumstances assets suitable to be included in a balance-sheet. There is much to be said for this view, and especially as it applies to the balance-sheet of a joint-stock company.

The amount of the issued capital of a joint-stock company is fixed and irredeemable, and is required by law to be maintained. This means, of course, that the amount of the assets at appropriate values, less the liabilities, should never fall below the amount of the issued capital.

But in modern financial practice this legal requirement is honoured more in the breach than in the observance. This happens through its having become customary to issue joint-stock company capital to an amount in excess of the real capital represented by actually existing things, such as land, buildings, plant, machinery, raw materials, manufactured stock, book debts and cash over liabilities. Thus, share capital issued often includes the present value of rights to receive future benefits expected to arise from patents and from goodwill.

The difference between the two classes of capital is that one exists and the other does not exist; and while the appropriate values at any time of all things which exist can be ascertained without much room for serious differences of opinion by the aid of logical and well-known accounting rules, there are no accounting or any other rules possible to measure the value of mere rights; hence it is said that the computed present value of such assets as patents and goodwill should not be included in the amount of the fixed and irredeemable capital of a joint-stock company, but should always be represented by shares either of "no par value," or of merely nominal amount, such as one penny each. If this sound and simple rule had been followed in recent years many financial disasters, including the tragedy of the Lancashire cotton industry, would have been to a large extent avoided.

In order to illustrate the difference between the present practice, which has the highest sanction, and that which is suggested, the case may be taken of a recent very successful industrial issue, made on the London market. The public issue referred to was subscribed for many times over, and the demand for the shares is so great that they are quoted on the market at a very large premium. The capital is £7,000,000, divided into 7,000,000 ordinary shares of £1 each, of which 4,200,000 were issued to the vendors as fully-paid-up. This

£4,200,000 included patents and goodwill, valued at £1,200,000. The issue was thus made up as under:—

	£	£
Vendors, who contributed land, plant, machinery, stock, and book debts over creditors, in addition to patents and goodwill—		
Real capital	3,000,000	
Patents and goodwill	1,200,000	
		4,200,000
New subscribers, who contributed cash for 2,800,000 shares of £1 each		2,800,000
		7,000,000

It will be observed that the actually existing capital in this undertaking amounted to £5,800,000 only, because £1,200,000 of the £7,000,000 was represented by patents and goodwill. The point is that whereas, with the aid of well-known accounting rules, the actually existing assets of such an undertaking can, and should, be maintained in the future at an amount of not less than £5,800,000; the value of purchased goodwill, consisting in this case of both patents and goodwill, cannot be so maintained. The cost of purchased goodwill—apart altogether from the question of whether in future years the then current goodwill is increasing or decreasing in value—is always a wasting asset comparable to a terminating annuity. This is owing to the inevitable effect of interest on the purchase price of estimated future receipts of super-profit when discounted at an adequate rate of interest which can rarely be less than 10 per cent. per annum. Thus time is the controlling factor, and nearly the whole of the cost of purchased goodwill automatically expires within a period not exceeding about twenty years.

A sound alternative plan for an issue of share capital in a similar case would be to limit the fixed share capital to the amount of the real or actually existing assets, plus the necessary working capital. The fixed capital would then consist of 5,800,000 ordinary shares of £1 each, supplemented by an issue of perhaps 580,000 deferred or equity shares, which must be of one penny each—amounting therefore to £2,416, because shares "no par value" are not at present permitted in this country. The question of allocating these equity shares of one penny each between the vendors and the new subscribers would arise, and also the question of the rate of priority dividend and any further profits participation payable on the ordinary shares. Let it be assumed that the 5,800,000 ordinary shares will be entitled to a fixed priority cumulative dividend at the rate of 8 per cent. per annum with a further participation in profits equal to 40 per cent. of the balance of distributable profits earned in any year after providing the priority dividend, and that the deferred shares of one penny each will take the remaining 60 per cent. of such balance of profits.

The capital issue would then stand as under:—

	£
5,800,000 8% cumulative ordinary shares of £1 each, *i.e.*, vendors 3,000,000 and new subscribers 2,800,000	5,800,000
580,000 deferred shares of one penny each	2,416
	5,802,416

As a further inducement to the new subscribers for the 2,800,000 ordinary shares, it might be arranged that they shall be entitled to apply for one deferred share in respect of each twenty ordinary shares applied for, and this would result in the deferred shares being allocated as to 140,000 to the subscribers and as to the balance 440,000 to the vendors.

With annual profits in the future equal to, say, 15 per cent. on £7,000,000, amounting to £1,050,000, these would then be distributable between the holders for the time being of the vendors' shares, and of the subscribers' shares in much the same proportions as under the first-mentioned scheme, thus:—

	£	
Vendors' shares—		
8% on 3,000,000 shares of £1 each	240,000	
30/58ths of £234,400, being 40% of balance of distributable profits after paying the priority dividend	121,241	
44/58ths of £351,600, being 60% of balance of distributable profits	266,731	
		627,972
Note.—Under the first-mentioned scheme 15% on 4,200,000 shares of £1 each amounts to £630,000 and would go to vendors' shares.		
New subscribers' shares—		
8% on 2,800,000 shares of £1 each	224,000	
28/58ths of £234,400, being 40% of balance of distributable profits after paying the priority dividend	113,159	
14/58ths of £351,600, being 60% of balance of distributable profits	84,869	
		422,028
Note.—Under the first-mentioned scheme 15% on 2,800,000 shares of £1 each amounts to £420,000 and would go to new subscribers' shares.		
		1,050,000

With less annual profits the new subscribers would receive a larger fraction of the whole amount than under the first-mentioned scheme, and with more profits they would receive a smaller fraction; and this is surely an equitable tendency.

The issue of deferred or equity shares of the nominal value of one penny each leaves market dealings in the equity as free and unfettered as before. This method has long been adopted in Canada, the United States of America and other countries. It does not interfere in any way with the fullest scope for infinite variety in the arrangement of company finance; while it safeguards the sound principle that the amount of company-share capital should never exceed the amount, at appropriate values, of real and actually existing capital.

In modern practice, it now sometimes happens that more than half the issued capital of a joint-stock company is represented by nothing but value in the nature of goodwill. The trouble is that shareholders in a company naturally expect their capital to earn not less than a reasonable rate of profit per cent. on the amount of the registered value of their shares, just as the operating staff of a company expect to receive not less than a reasonable salary or wage per person employed. Hence this form of capital inflation must tend to increase the amount of profit required to make the carrying on of an undertaking worth while; and it must also react upon prices, causing them to be maintained at an uneconomically high level to the detriment of trade.—Yours faithfully, P. D. LEAKE.

FREE TRADE AND THE MOBILITY OF CAPITAL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your leading article of January 19th you comment very fully and very fairly on a letter of mine which appeared in your issue of November 3rd, and on my subsequent letter in your present issue, the subject being the international mobility of capital in relation to Free Trade as a national system, and you refer to this as "a new argument which is being vigorously used by the Protectionist side." As to its newness I shall have something to say presently, but as to its use—if it is used, for we have many Gallios where political economy is concerned!—the responsibility appears to be largely mine, since I emphasised the point very strongly in my book, "The Truth at Last," and have since continued to do so in numerous letters to the Press all over the country. My whole difficulty now is to compress what should occupy an average length article into the space even of a long letter, but I will try.

You say that, after quoting Mill and Bagehot, I fall "into the elementary fallacy of supposing that because one of the reasons why the pioneers of the Free Trade case believed in their cause has ceased to be true, that, therefore, the case itself has ceased to be tenable." My answer to this is that the non-mobility of capital (as regards transfer to other countries) cannot be described as a "reason" for believing in Free Trade at all: it is a *condition*—the essential condition, in fact—which alone makes Free Trade tenable as a theory of national application. To substantiate this, however, necessitates quotation; and thereby I shall also be able to show that here is no question of "pioneers," whose theory and reasoning or this point has been improved upon or even superseded by modern economists, but that, and of late years in total disregard of flagrant facts, there has been continuity throughout.

In 1776, when "The Wealth of Nations" was published, foreign investment as we know it did not exist; there was not even the Stock Exchange until 1801, and foreign investment, in our sense, did not begin until some twenty to thirty years after that. Nevertheless, Adam Smith was careful to lay down, in the very forefront of his argument, this all-important premise: "Every individual endeavours to employ his capital as near home as he can." This forms the basis of his subsequent argument, which arrives at the conclusion that, "Though a great number of people should, by thus restoring the freedom of trade, be thrown all at once out of their ordinary employment . . . it would by no means follow that they would lose their employment. . . . The stock (capital) which employed them in a particular manufacture before will still remain in the country to employ an equal number of people in some other way. *The capital of the country remaining the same*, the demand for labour will be the same, or very nearly the same, though it may be exerted in different places and for different occupations" (my italics). I need hardly point out the alternative, if the capital does *not* remain in the country—it is obvious—but, to show the continuity of reasoning on this subject, let me give a quotation from Professor Marshall—scarcely a "pioneer"!—which is, in fact, a mere paraphrase of the above passage from Adam Smith: "A chief corner-stone of our present fiscal system is the great truth that the importation of goods which can be produced at home does not in general displace labour, but only changes the direction of employment." Why? Because "the stock which employed them will still remain in the country!"

The converse case, so to speak, that of industries, not destroyed by Free Trade, but established by Protection, is, in my opinion, most clearly dealt with by Mill. I quoted the

relevant passage in my letter of November 3rd. Summarised, his argument is that any capital, which, by the action of Protection, is drawn to a protected industry, "must have been withdrawn or withheld from some other" (*sc.* home industry), "in which it gave, or would have given, employment to probably about the same quantity of labour." It will be observed that the possibility of the capital in question being "withdrawn or withheld" from any source or destination *outside* the country simply is not contemplated, still less the entry of foreign-owned capital. Should this occur, however—as, in fact, it has—there would be an *addition* to the amount of capital in the country, and, to quote Mill again, "Any increase of capital gives, or is capable of giving, additional employment of labour, and this without assignable limit." How Mill reconciled his position regarding Protection with his acceptance and knowledge of foreign investment (this was in 1848) is a complete mystery; it is, in fact, irrational.

So much for the "pioneers"; though my previous quotation from Bagehot was, I submit, valuable, as evidence of the mere fact that (about 1880—were they still "pioneering" then?) English political economy in general took the position that, while capital fluctuated from trade to trade within a nation, it did not, as a rule, migrate beyond that nation. But I will turn to the (comparatively) Moderns. Professor Marshall (already quoted), in the 3rd edition of his "Principles of Political Economy" (1895) says: "Mill is clearly right in saying that, in general, the capital that is supplied to support and aid labour in any new industry created by such" (protective) "duties 'must have been withdrawn or withheld from some other.'" On the contrary, I say Mill is clearly wrong, and there is no "must" about it, nor need our reverence for great economists blind us to the fact; they are not, after all, Holy Writ; and even that, I believe, is subject to criticism. Lest, however, it be thought that criticism from so obscure a mortal as myself is of little value—the *argumentum ad hominem*!—let me quote Professor J. Shield Nicholson ("A Project of Empire," 1909): "Recent estimates show" (those of Sir George Paish) "that we have already three thousand millions invested abroad. . . . Under these conditions, then, it cannot be said that the amount of capital available for home industry is limited, and that the artificial expansion of one industry (by means of protection) can only mean the abstraction of capital from some other home industry; it may come from what would otherwise have been exported." (Or it may be foreign owned.) Again: "It is clear that Adam Smith's argument in favour of free imports can only be reconciled with his position on the relative advantage of the home employment of capital and labour, if it is proved in fact (not merely as an assumption) that the capital and labour displaced by the foreign import will find employment at home. If the result were that capital would be sent abroad, and if labour was unemployed or forced to emigrate, the effect on the total of home industry would in general be advantageous . . . from the national standpoint."

One more "Modern," and then I have done with quotations. Professor Bastable (who headed the list of 14 economists who signed the 1903 Memorandum against Mr Joseph Chamberlain's proposals) writes, in his "Theory of International Trade" (4th revised edition, 1903): "We now have before us the elementary facts to which the doctrine" (Free Trade) "has to be applied, viz., the various groups" (nations) "which exchange commodities, *but between which the industrial agents do not pass.*" The "industrial agents" are, of course, capital and labour; comment really seems superfluous. The italics are mine.

I think, Sir, I have given enough evidence—though I could give more—to show that the non-mobility of capital cannot possibly be regarded merely as one of a number of reasons, to be discarded at will, and without disturbing the theory, for believing in Free Trade as a national system. On the contrary, it is surely evident that, from first to last, it has been and still is—at any rate, in the opinion of the economists themselves—a condition essential to the maintenance of the theory; it is, indeed, the very key-stone of the whole arch. *Why*, inherently, this is and must be so, I hope to show later.

But my letter is too long already. On a future occasion I hope also to be permitted to reply to the various interesting questions you raise. Now, I can only touch on your own quotation from Mill. This must be taken in conjunction with the whole chapter ("On the Tendency of Profits to a Minimum") in which it occurs, and it refers to a condition in which the country is, so to speak, *saturated* with capital, and with no unemployment. Then, in those conditions, Mill (rightly) justifies the *over-flow* of capital; such conditions, however, are very far from those existing in this country to-day.

—Yours faithfully, DOUGLAS GRAHAM.

16, Girdlers road, London, W.14, 22nd January, 1929.

[The process of culling quotations from their contexts in the works of classic economists is, as we showed last week, unprofitable and irrelevant. For the rest Mr Graham meets no single point in our article, and adduces no constructive argument to support his theory.—ED., *Econ.*]

Books and Publications.

FASCIST FINANCE.*

THE Fascist Government has been second only to the Bolshevik in the passions and prejudices it has aroused. It has consequently become almost as difficult to get an objective impression of affairs in Italy as in Russia. This work is therefore timely and welcome.

M. Perroux, in his account of the financial and economic vicissitudes of Italy during the nine years following the Armistice, points out that the pre-Fascist period (of four years) is marked by two fairly distinct phases: disequilibrium lasting about three years, followed by a definite tendency towards recovery, beginning about the end of 1921 and continuing during 1922. Like every other country, Italy suffered from the economic *malaise* of the post-Armistice period, and from the crisis of 1920 in particular. The general results were the same in Italy as elsewhere, but they were more dangerous, because Italy was relatively poor and lacked the political maturity of the other great democracies. Nevertheless, on the economic side, nobody doubted that the country was on the road to recovery some months before the Fascist march on Rome. This convalescence was admitted by all Italian experts, and is clearly indicated by the official statistics, but it was not enough to save the political system from overthrow. Opinions as to the merits and demerits of that system will depend largely on the personal prejudices of the critic, but it is indisputable that the democratic governments showed initiative and resource in combating their financial difficulties. The reform of the income-tax in 1919 was an important and successful work. The tax on war fortunes was a failure, and a further attempt to increase the revenue was made by stiffening the succession duties. But most interesting of all to us, in view of the controversy about a similar project here, was the capital levy. This was maintained in force by the Fascists, when they came into office, with only minor modifications. On the whole it seems to have worked well, and without causing the disastrous repercussions foretold by its opponents, but many individual cases of hardship occurred. The two principal innovations made by the Fascists in the system of taxation have been the abolition of the succession duties and the extension of the income-tax to farmers' profits, officials' salaries, and workers' wages.

The Fascists' claim to originality must rest rather on their adaptation of syndicalist ideas in their organisation of the Corporative State, than on anything they have done in the realm of finance. Both as regards this and the other matters dealt with in this book, such as the stabilisation of the lira, the funding of the internal debt and the debt settlements with Great Britain and the U.S.A., it is as yet too early to form final judgments. M. Perroux recognises this, and has confined himself to a dispassionate account of the chain of events and of the theories and arguments of the contending partisans. Thus in time the facts may come to be more or less disentangled from the propaganda.

THE PRESERVATION OF ENGLAND'S BEAUTY.

THE National Trust was fortunate indeed when, in addition to the services of a photographer who is an artist, it secured so persuasive a pen as that of Professor G. M. Trevelyan to voice its plea* to the nation. This account of its work should move every reader who has any sense either of beauty or of patriotism, to do what he can to help. The essence of the position is that as the State refuses to hold land in perpetuity for the purpose of conserving its amenities, whether they consist of natural beauty or of historic buildings, the National Trust is the only body to which land and buildings can be given with the certainty that they will be preserved for ever. But the trust is severely hampered in its work by lack of

* "Must England's Beauty Perish?" By G. M. Trevelyan. (London) Faber and Gwyer, Limited, 24, Russell square.

necessary funds. Two immediate implications of this should appeal particularly to economists: in the first place it means that many precious buildings or tracts of country which are offered to the Trust as gifts have to be refused if the offer is unaccompanied by an endowment for their upkeep, and so are lost to the nation and fall a prey to the speculative builder, to be pulled down or built over with bungalows. In the second place it means that the foresight of the Trust, which often divines that a stretch of woodland or down which could now be bought quite cheaply will in ten years or so be commanding a prohibitive price, is rendered nugatory by the absence of means to step in and purchase while the terms are favourable. If the country-loving and history-loving public would contribute according to their means, the work of the Trust could be extended in this way out of all proportion to the increase in expenditure, and such pathetic compromises as the acquisition of Ashridge denuded of part of its timber could be avoided.

Professor Trevelyan makes it clear that the National Trust carries self-help as far as it possibly can. It holds agricultural land and other remunerative properties with the purpose of using their rents as an endowment for the upkeep of less remunerative property, and it is meditating a campaign to secure exemption from death duties. This seems a very obviously needed reform, and it is to be hoped that strong public support will avert the necessity of an expensive fight.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

The Road to Plenty. By William T. Foster and Waddel Catchings. Sir Isaac Pitman and Sons, Limited. (London) Parker street, Kingsway, W.C. 2. 3s 6d net.

This is the fourth volume in the courageous series in which the authors attack the problem of the existence of unemployment and idle machinery concurrently with unsatisfied needs. The authors claim to propose "a simple, feasible, and immediate way of .....enabling the people as a whole to gain greater and more durable satisfaction out of the marvellous machinery of modern business." We do not promise that any reader will agree with it all, but our advice is "read it."

Managerial Profit Sharing. By C. Canby Balderston. (New York) John Wiley and Sons, 440 Fourth avenue.

It is here argued that a system of profit-sharing applicable to the managing staff improves the quality and quantity of their work. The argument is illustrated and developed by an analysis of existing schemes.

Economic Nationalism of the Danubian States. By Leo Pasvolsky. (New York) The Macmillan Company. $3.00.

This well-documented publication fills a gap which has been increasingly felt of late years.

Distribution of Securities Through the Stock Market. By J. E. Meeker. (New York) New York Stock Exchange, 11 Wall street.

A discussion, within the compass of 31 pages and illustrated by admirable charts, of the economics of the New York Stock Exchange.

The Co-operative Movement in India. By J. L. Raina. (Bombay) D. B. Taraporevala, Sons and Co., "Kitab Mahal," Hornby road. Rs. 2.

A surprising variety in the forms taken by co-operative enterprise in India is revealed by this little book.

Shiva, or the Future of India. By R. J. Minney. (London) Kegan Paul, Trench, Trubner and Co., Limited, 68-74 Carter lane. 2s 6d net.

A vigorous little book whose thesis is that India has a great future before her, but cannot attain it without determined British help.

The Politics of a Socialist Employer. By Percival Davies. (Skipton-in-Craven) Maurice Webb, 25 Neville street. 7d.

A statement of Labour Party policy which derives interest and convincingness from its non-Labour origin.

Moody's Manual of Investments. Government Securities. 1929. (London) Moody's Investor Service, Limited, 35 King William street.

Contains, as usual, full information relating not only to the securities but to the Municipalities and States issuing them. In addition to this the special system of rating securities provides such guidance for the investor as he can find nowhere else.

1929 *Financial Notes.* A cumulative alphabetical financial summary. By subscription, £1 1s. *Mid-Monthly Supplementary List of Unquoted Securities in which dealings are marked on the Stock Exchange.* By subscription, 42s per annum. *Monthly and Yearly Highest and Lowest Prices, with a Diary of Principal Events in* 1928. Price 2s 6d.

The foregoing publications are all issued by Messrs F. C. Mathieson and Sons, 16 Copthall avenue, E.C. 2, and can be recommended to all interested in the prices and movements of Stock Exchange securities. The valuable information contained therein is difficult to obtain elsewhere.

The Oxford Preservation Trust. Annual Report. 1927-28. (Oxford) The Convener, Oxford Preservation Trust.

A record of a fruitful year's work for which the public has reason to be grateful.

Bulletin of the Institution of Mining and Metallurgy, January, 1929. (London) Institution of Mining and Metallurgy, 225 City road.

In addition to the usual official notices there are *inter alia* papers and discussions on: "The Possibilities of Reviving Non-ferrous Metallurgy in Great Britain," "The Importance of Recovered or Secondary Tin," "The Inefficient Use of Compressed Air in Mining."

The Economic Record. November, 1928. (London) Macmillan and Co., Limited, St Martin's street. 5s net.

Contains a number of articles on matters of economic importance in Australia and New Zealand. Subjects dealt with include coal, labour, railway maintenance expenditure, industrial arbitration, rural credits, and loan expenditure.

World Trade. January, 1929. (Paris) Journal of the International Chamber of Commerce, 38 Cours Albert 1er. 1s.

An interesting number, including articles on "The Most Favoured Nation Clause"; "International Industrial Statistics"; "Uniform Nomenclature in Customs Tariffs and in Railway Tariffs"; "Double Taxation"; "Progress of the International Silk Federation."

International Labour Review. January, 1929. (London) George Allen and Unwin, 40 Museum street. 2s 6d.

This interesting number contains the following articles:—Migration Problems and the Havana Conference of 1928; An Inquiry into the Conditions of Work and Life of Journalists; Seasonal Unemployment in the Building Industry in Certain European Countries; Soviet Legislation in China under the Nationalist Government.

Die Wirtschaft des Auslandes, 1900-1927. (Berlin) Verlag von Reimar Hobbing. 28 Rhmks.

This monumental volume contains a wealth of information, officially compiled in Germany, on the economic conditions of almost every country in the world. There is a wealth of statistical matter dating back, where possible, to 1900, and as special pains have been taken to secure comparability between the figures for different countries, the book should be an invaluable work of reference for people who can read German.

Das Problem der Berufsauslese für die Industrie. Von Dr. Rudolf Schindler (Jena) Verlag von Gustav Fischer. 1.50 marks.

A discussion, in German, of that side of rationalisation which consists in fitting the right worker into the right job.

Belastungsprobe. By Erich Welter. (Frankfurt-on-Main) Frankfurter Societäts-Druckerei G.M.B.H., Abteilung Buchverlag.

This reprint from the *Frankfurter Zeitung* is of considerable topical interest, in view of the present position of the Reparations question. Dr Welter finds that the past year brought some setback in Germany's economic development, and adduces a number of figures in support of his argument. Whether they prove his case is for the reader to judge.

Archiv für Eisenbahnwesen. (Berlin) Verlag von Julius Springer.

Among the railways which are discussed in this number are those of Belgium, Jugo-Slavia, the United States, and Holland. There is an article on railway development in China.

The Stock Exchange.

SOUTH AFRICAN FINANCE HOUSES.

THE shares of the South African finance houses cannot escape being affected by sentiment in the "Kaffir" market, seeing that their revenue for the most part is derived from investments in South African gold, diamond, and platinum mining companies under their control. At the present time the "Kaffir" market is neglected. That is, perhaps, not so remarkable if we consider that so many "bull" points are conspicuous by their absence. The reports of the gold-mining companies, for example, while they have been satisfactory, have lacked anything spectacular. Since the conclusion in September last of the agreement between the Union and the Portuguese Governments regarding the introduction of native labour from Mozambique, labour difficulties have not been pressing, but there is still the possibility that the companies may have to ask the Government to relax the restrictions which are at present imposed on the introduction of natives from certain areas. As regards the diamond situation, it is true that Mr S. B. Joel, at the general meeting of Johannesburg Consolidated ("Johnnies") on December 4th last, took a more hopeful view. The Diamond Syndicate, which is composed of the big producing companies and the two finance houses chiefly interested in diamonds, undoubtedly saved the situation at the expense of accumulating at the end of 1927 a stock of diamonds to the value of £8,000,000. The Precious Stones Act has now enabled the South African Government to restrict production of the Lichtenburg alluvial fields, whose output in 1927 was no less than £5,224,265, as against £1,869,410 in 1926, while in the new Namaqualand alluvial fields, where State diggings have been instituted, the Government has refused to throw open further areas. The policy of the Diamond Syndicate in restricting supplies to meet the requirements of the trade has successfully maintained diamond prices. On the other hand, the potential output of diamonds must still cause concern to shareholders of the diamond-producing companies. Finally, the platinum mining industry is still depressed. The companies are now engaged in developing a satisfactory extraction process, but the fact remains that the price of platinum is now about £14¼ per ounce as against £24 per ounce when the platinum boom was in full swing. Such is the general situation which has affected the market in South African shares.

If the accounts of holding companies were more informative, perhaps the investor would better appreciate the security behind the South African finance shares. Whatever the situation may be on the Rand, the big South African finance companies, with one possible exception, are now firmly established on their own financial legs. Some have trading and mining interests outside South Africa, and even in South Africa most have spread their investments so widely that they can withstand individual blows of fortune in the mining fields. It is true that their mining investments are wasting assets, but the prudent finance house creates out of its profits its own redemption funds. The security behind the different finance shares varies, of course, greatly according to the settled nature and distribution of the respective revenues. Unfortunately, the accounts of these financial houses are generally silent upon the main point at issue—the proportions in which their income is derived from the different mining industries and from their finance operations. The following table giving the present market prices of the five leading groups, together with their respective yields, shows that the market discriminates carefully between the type of security offered:—

	Price.	Dividends.	Yield %.
"Johnnies," £1	49/6	15% tax free	£6 1/3 tax free = £7/.1/6 gross
Union Corporation, 12/6	4 11/16	int. 16 & final say 26 = 42%	£5,17/6 gross
Central Mining, £8	19¼	12½% tax free	£5/3/11 tax free = £6,9/11 gross
Anglo-American, £1	2 3/16	12½%	£5/14/4 gross
General Mining, £1	1⅜	int. 5% final say, 5%	£7/ /6 gross

"Johnnies," which was registered in 1889, and has had Mr Solly Joel as chairman for not quite so long, has perhaps a more settled income and larger reserves than the other financial houses—since 1889 it has distributed in dividends no less a sum than £9,379,336, equal to 47s a share on its present capital—but it has not yet troubled to go outside South Africa for its investments. It is still predominantly gold, diamonds, platinum and real estate, with Rhodesian copper added now that it has participated with the Anglo-American in the Rhodesian-Anglo-American Corporation. Its principal gold-mining holdings are in Government Areas, Van Ryn Deep, New State, and Langlaagte. Substantial interests in the De Beers, Angola, and Jagersfontein Companies represent its chief diamond holdings. It has a controlling interest in Potgietersrust Platinums, Limited, and is partly financing the Chemical and Metallurgical Corporation, which is developing a platinum ore extraction process.

The Anglo-American Corporation, which has Sir Ernest Oppenheimer as chairman, was registered only in 1917, but has already built up an extremely strong financial position. It is perhaps more heavily interested in the diamond industry than "Johnnies," and has taken a leading part in the operations of the Diamond Syndicate. There is some talk that the Consolidated Diamond Mines of South-West Africa, which it controls, will amalgamate with De Beers. Its gold-mining companies include Brakpan, Springs, and West Springs, which are all profitable mines with a good life. The corporation also has a controlling interest in the Northern Platinum Exploration Co. and the Rhodesian Broken Hill lead and zinc mine, and is now largely interested in the development of the Rhodesian copper fields through the Rhodesian Anglo-American Corporation. The Rand Selection and the Consolidated Mines Selection Corporations and the New Era Consolidated, Limited, are subsidiary holding companies of the corporation. The passing of the final 1928 dividend by the Rand Selection Corporation, as a result chiefly of the diamond depression, was no doubt responsible for the reaction in the price of Anglo-American shares

The Central Mining Corporation, whose chairman is Sir R. Sothern Holland, has apparently no interest in diamonds, but controls, in conjunction with Rand Mines, what is known as the "Corner House" group, consisting of many of the most important dividend-paying mines on the Rand, including New Modder, Crown Mines, and Modder B. The corporation has interests outside South Africa in Trinidad Leaseholds and the Anglo-Spanish Construction Company. It is also connected with the banking house of Bernhard Scholle. Its oil investment has been particularly profitable in view of the steady dividends of the Trinidad Leaseholds. During last year the corporation brought out the Tocuyo Oilfields in order to develop some promising areas in Venezuela.

Union Corporation is a much smaller concern than the other three, but is very conservatively managed under the chairmanship of Sir Henry Strakosch. It controls some profitable Rand mines, such as Modder Deep and Geduld Proprietary (the latter rated at a very long life), while its East Geduld is a new mine in course of development which is so far giving highly satisfactory results. It has also a controlling interest in San Francisco Mines of Mexico, a prosperous lead, silver, and zinc-producing company. Union Corporation has industrial as well as mining interests. It is interested in the British Enka Artificial Silk Company, an investment which is not yet earning dividends, but which has good prospects, and recently acquired an interest in the Polyphonwerke A.G., one of the largest German manufacturers of gramophones and records.

General Mining Corporation has had varied fortunes, and, as the market price indicates, offers less security from the mining point of view than the other finance houses. A large proportion of its profits is derived from finance operations, which are subject, of course, to wide fluctuations. As regards its mines, Meyer and Charlton is nearing exhaustion, Van Ryn Gold is a dividend payer, but somewhat disappointing, Cinderella, having been amalgamated with East Rand Proprietary, is in course of being reopened, while West Rand Consolidated is in the development stage and promises well. Apart from its mines, the Corporation acquired an interest in the Phœnix Oil Company, which is dividend-paying, but has not yet proved a very profitable investment.

The following tables give (1) the present capital, with dividends and earnings of these five finance houses over a period of the last three years, (2) an analysis of the last balance-sheets, showing the surplus of current assets over current liabilities and the book value per share:—

	Capital.	Earnings and Dividends Shown Subject to Tax Except where Stated.					
		1925.		1926.		1927.	
		% Earned.	% Paid.	% Earned.	% Paid.	% Earned.	% Paid.
	£						
*"Johnnies"	3,950,000	†18·8	†15	†20·1	†15	†17·5	†15

Central Mining	3,400,000	†18·4	†12½	†15·8	†12½	†16·9	†12½
Union Corp.	8 5,000	40·4	36	43·9	40	4·-1	40
General Mining	1,264,575	23·7	15	33·8	17½	25·7	15

* For years ending June 30, 1926-1927-1928. † Not subject to tax.

	"Johnnies"	Anglo-American.	Central Mining.	Union Corporation.	General Mining.
	£	£	£	£	£
Current assets	1,198,718	4,842,358	7,380,582	1,913,071	1,295,667
Current liabilities	972,164	2,601,909	6,123,876	1,861,145	376,448
Surplus of current assets	226,554	2,240,449	1,256,766	51,926	919,219
Stocks and shares	4,452,882	3,620,478	3,964,645	1,585,559	774,490
Properties, &c	451,361	22,821	..	52,242	73,360
Book Value per share	5,130,797 £1/6/0	4,883,748 £1/11/8	5,221,411 £12/5/10	1,689,727 £1/4/2	1,767,069 £1/7/10

It will be seen that the margin between earnings and dividends is widest in the case of the Anglo-American. "Johnnies," Central Mining, and Union Corporation, with their more settled revenues, are paying out a larger proportion of their earnings, these three having no doubt considerable hidden reserves in their balance-sheets, apart from the visible reserves. Union Corporation has increased its interim dividend from 14 per cent. to 16 per cent. in respect of 1928. General Mining shares have a book value approximately equal to their market value. In this case a wide margin between earnings and dividends was shown in the last report, but a large proportion of the income was derived from financial deals which may or may not be recurrent. Next year's report will show a less favourable position, its interim dividend in respect of 1928 having been reduced from 7½ per cent. to 5 per cent. On the whole, if we may judge from the different yields obtainable as set out in our first table, the market seems to have gauged pretty accurately the varying security offered by these South African finance shares.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET.	ACCOUNT.
February 5.	February 7.

A DECIDEDLY more cheerful tone obtained on the Stock Exchange at the opening of business for the new Account. Apart from American buying of international securities, the Imperial Tobacco bonus came as a stimulant to the industrial markets, while the presence of fair supplies of money for investment purposes was indicated by the steadiness of gilt-edged stocks and the substantial

LONDON ACTIVE SECURITIES.

progress made in the absorption of the large percentage of the Commonwealth Loan which had been left with the underwriters. For the first time this year the Bank of England announced a heavy efflux of gold, which, with the continued weakness of the New York exchange, and other factors making for restriction of credit, created a certain uneasiness as to the money market outlook. That these unfavourable developments served merely to restrict the volume of business in the gilt-edged market, without affecting the tone to other than a moderate extent, says much for the stability of the underlying position. Three and-a-Half Per Cent. Conversion Loan was in demand and Four Per Cent. "Consols" reached a profitable level for market conversions. An easier tendency was in evidence, however, on Thursday. India Loans were firmer, the Four and-a-Half Per Cent. Scrip rising to from $\frac{3}{8}$ to $\frac{1}{8}$ discount. Other trustee stocks issued this year—Australia Fives and New Zealand Four and-a-Half Per Cents.—were taken off the market's hands at a satisfactory rate, the former reaching par.

The foreign market failed to maintain its opening activity. Satisfactory coffee export figures were one of various features making for firmness in Brazilian loans, but selling was in evidence of Peru Corporations, and Mexican issues were heavy. Some slight supeculative buying of Turkish Unified was recorded, but Roumanian stocks were out of favour. One or two Chinese loans gained a little ground, but the Far Eastern group as a whole attracted slight interest.

Apart from the noteworthy strength of Underground Electrics in mid-week, home railways were generally a quiet market. The week's traffic figures were reassuring as compared with some of their predecessors, the Great Western and Southern receipts showing slight increases over last year's figures. Buying of Argentine stocks, which, among other things, put Buenos Ayres and Pacific above 100 for the first time, on Tuesday, was checked in the middle of the week. Antofagasta improved, but Leopoldina further weakened on a disappointing traffic return. American buying was chiefly responsible for the strength in Canadian Pacific.

The outstanding event in the industrial markets was the dividend and bonus declaration of Imperial Tobacco, which, having caught the market unawares, produced a sharp rise in the shares, though profit-taking supervened. The announcement is discussed in an "Investment Note" on a later page. Other tobacco issues were firm in sympathy. Gramophone shares were not particularly sought after, apart from Columbias, which were bought on American account. Favourable rumours were in circulation regarding Courtaulds' final figures, influential buying raising the shares to a new high level of over £5. Nickel shares were again a cynosure of market interest. Bargains in Mond Nickels ceased on the opening of dealings in International Nickel letters of settlement for the late-February account. An official progress report, in guardedly optimistic terms, provided an incentive for renewed bull purchases. Cable stocks improved, shipping stocks met a steady investment demand, and newspaper shares claimed increased attention. Informed buying produced a further upward movement in Thornycroft. Ner-Sag showed some tendency to recover in the first half of the week, but the "revelations" forthcoming at Thursday's meeting (described on a later page) abruptly reversed the movement. Match issues were inactive, and textiles dull, despite the reference by Mr Churchill to the Bank of England's interest in the proposed cotton-spinning combine. Bank shares were steady, Westminster rising slightly on the proposed splitting of the £20 shares (£5 paid) into five £4 shares (£1 paid).

After being easier over the week-end, rubber—the commodity—showed a harder tendency, but the share market failed adequately to respond. The undertone remained moderately firm, but it was much more difficult than last week to find buyers at prevailing levels, and prices tended to shade off. Sustained buying of tea shares has come to an end for the time being, an easier tendency showing itself in values in a very quiet market. Oil shares were again irregular, Anglo-Persian and Burmah were supported, but interest in Royal Dutch fell away on continued increase in the American crude output.

Rhodesian copper shares again monopolised attention in the mining section. Following the announcement of arrangements for a fresh accession of capital, extensive and excited dealings were recorded in Bwana M'Kubwa, with others of the group, including Chartered, forming a strong rearguard. In the Kaffir market the Anglo-American Corporation, with its large interest in Bwana, obtained some benefit from the movement, though less than had been expected. Diamond shares were better, fusion rumours being again in the air. Base metal shares generally were overshadowed by the spectacular happenings in Rhodesians, price changes being few and unimportant, despite the continued strength of copper and a sharp jump in the price of electrolytic on Wednesday.

FOREIGN STOCK EXCHANGES.

NEW YORK.

After achieving new high averages on somewhat spotty and spectacular pool activity the share market has shown the effect of some nervous realising. This was inspired by fears of the position of brokers' loans and of the money market, but so far the selling movement has failed to gain momentum, and while brokers' loans are now at a high level, Federal Reserve statements show that contraction is continuing at a satisfactory rate, and the bill market is still being allowed to seek its natural level. In the circumstances it is felt that there is no pressing reason for a higher discount rate here, and the authorities are likely to follow developments on your side. The past week brought net gold imports of $8 millions, mostly from Canada.

PARIS.

Liquidation of bull accounts in preparation for the end-of-the-month settlement weakened several groups. Further, the Coulisse market was disturbed by the difficulties of a certain firm. The general price level was sustained. French Rentes, Banque de France, Crédit Foncier de France, and Suez made further gains. Santa Fé Railways rose in lively fashion. Coal, electricity, chemical products, and certain bank shares suffered fractional losses. The Banque Transatlantique has increased its capital from 250 to 300 millions, and Kuhlmann from 250 to 300 millions. Mexican Eagle are now quoted under a second heading, ex Canadian Eagle rights.

BERLIN.

After a firm period under the influence of a satisfactory tion in the discount rate, a sharp reaction occurred on the Bourse a week ago, with drops of 8 to 12 points for high-priced stocks. The reaction continued on Monday, with apparently organised attacks by short sellers, to support which stories of Cabinet differences over the Budget plan were circulated. The following day certain stocks made recoveries and foreign buying was reported, but later a weak tendency reappeared. Prices were firmer on Wednesday and Thursday on foreign buying. Reichsbank rose eight points on Thursday, while electrotechnical shares showed considerable improvements.

AMSTERDAM.

The market was irregular but active, with a sharp advance in Margarine Unie as the leading feature. Artificial silk shares were dull. Higher New York sugar prices caused an improvement in sugar share values, but oils weakened and rubbers felt the influence of profit-taking. Tobaccos were neglected, and shipping shares likewise. The money market was easy.

VIENNA.

On the Bourse some interest was shown in pre-war rentes. Certificates of gold rentes belonging to Austrians rose from 5 to 7½ schillings within a few days, and there was a call for various silver preferentials. The German holders of Austrian obligations are vigorously endeavouring to procure a partial valorisation of the silver rentes, and so it is hoped that if these efforts are successful gold rentes in the hands of Austrians will also obtain better treatment.

INVESTMENT NOTES.

Profits on Stock Exchange "Introductions."—In view of the considerable resort made to-day to the method of flotation of new capital by way of a "public statement," followed by a Stock Exchange "introduction" rather than by way of a prospectus offer, it is desirable to call attention to the wide margin shown, in the case of some recent issues of this character, between the price at which the securities were originally issued and the price at which they were "introduced" to the public. We give below a representative list of issues made in this way since the beginning of the present year, for which particulars of the opening Stock Exchange price were available at the time of writing :—

Name of Company and Description of Shares.	Amount of Capital Introduced.	Price at Which Orginally Issued.	Price at Which Dealings Began.
Embassy Wine and Club, 125,000 Ord., 1s	£ 6,250	*95,000 at 2/	6/3

It will be seen that while in some instances the difference between the original price and the level at which the public was allowed to participate was comparatively moderate, in other cases the margin represented gross profits to the issuing interests of the order of 45 per cent., 60 per cent., 180 per cent., 212 per cent, 331 per cent., and 428 per cent. respectively. In some cases the total profits, in terms of pounds, shillings, and pence, presuming that all the shares were eventually disposed of at the opening price, may be calculated at £20,187 on an "outlay" of £9,500, £98,083 on £22,917, £657,500 on £205,000, and £628,752 on £631,248. It may be admitted that the process of making a market involves taking considerable risks and that the "underwriters" are entitled to take varying profits according to the nature of the risks involved. There are also various expenses to be incurred. There must therefore always be a margin between the price at which the issue is placed and the price at which dealings commence on the market. If the latter is very much higher than the former, then the "underwriters" have either miscalculated the risk or have made a very good bargain with the company. In either case the flotation by way of a Stock Exchange introduction must be written down (from the company's point of view) as a costly method of public issue. If the market price on commencement of dealings slumps, the evidence is that the "underwriters" have been deliberately greedy, and the company may not have done badly after all. We suggest that the Stock Exchange Committee, which has recently enlarged the scope of the financial particulars appearing with its "permission to deal" announcements, might consider ways and means of giving the fullest possible publicity to the relevant particulars in these cases.

Blue Bird Finance.—The story of the old woman who lived in a shoe and had so many children that she did not know what to do, especially when they became unruly, seems almost applicable to the Blue Bird family. Five generations of the Blue Bird family have come into being during the last four and a half years. The parent was a garage company, Blue Bird Motor Company, which sold its business to Blue Bird Motors (1924), Limited. The wholesale petrol trade of this company was sold to Blue Bird Oil Importers, Limited. In October, 1928, Blue Bird Petrol, Limited, was formed to retail Blue Bird petrol in this country and on the Continent, and then sold its foreign "rights" to Blue Bird Petrol (Foreign). Finally, in December, 1928, Blue Bird Holdings Company was floated to acquire holdings in the other four, in particular not less than 51 per cent. of the shares in Blue Bird Motors (1924) and Blue Bird Oil Importers, which, according to the prospectus, would "necessitate an outlay of £469,455." Trouble has now arisen among the children of this family. It may be recalled that in October last over 75 per cent. of the shareholders of Blue Bird Motors (1924) and Blue Bird Oil Importers accepted an offer from an unnamed group to purchase their shares at 22s per preference share of £1 and 10s 6d per ordinary share of 1s in the case of Blue Bird Motors (1924), and at 32s per ordinary share of £1 and 10s 6d per deferred share of 1s in the case of Blue Bird Oil Importers. On October 31st it was officially announced that an unavoidable delay had occurred in the completion of this purchase "owing to unexpected formalities required

by the French Minister of Finance," that the directors had agreed to a postponement of the purchase until not later than December 17th, and that if the required sanction were refused by the French Minister of Finance or the deal be not completed by December 17th, one-half of the £40,000 and £60,000 deposited as guarantees of the respective offers would be forfeited and a holding company in London formed to complete the purchase. On December 17th the public issue of 1,500,000 ordinary shares of 10s by Blue Bird Holdings, Limited, was made. Later a circular was issued to shareholders stating that scrip could be presented on or after January 10th for exchange into Blue Bird Holdings scrip or for cash. But still the shareholders of Blue Bird Motors (1924) and Blue Bird Oil Importers, who accepted the purchase offer, have received no money. Last week they attended almost daily at the offices of the companies in Moorgate to demand payment. The chairman, Mr Lorang, was summoned from Paris and attended on Friday, January 18th. Before a noisy and congested meeting (there were about 80 shareholders in a small room and more outside) he explained the difficulties which had arisen. Mr. Lorang stated that the French group had made the first payment and that the second payment was due on January 31st. He confessed that he had been unaware of the French Ministry's embargo on the export of capital for the purchase of shares to be placed on the Paris market. He added that he had been in Paris trying to get the money from the French group so as to pay out the shareholders. He had got over £300,000, and actually received the cheque for £250,000 due on January 31st, but in view of the shareholders' agitation and the petition which had been presented for the liquidation of Blue Bird Oil Importers, the French group had held up payment of the second cheque pending further negotiations. These explanations do not altogether lighten the shareholders' darkness. It was stated in the prospectus of Blue Bird Holdings that 800,000 shares (£400,000) had been applied for and would be allotted to the group (presumably the French group) interested in obtaining control of Blue Bird Motors (1924) and Blue Bird Oil Importers. We know that the French group are unable to take up these shares until they have the permission of the French Minister of Finance for dealings in Paris. What it appears is that the French group have formed the Holdings Company to acquire for £469,455 5s per cent. of the capital of Blue Bird Motors (1924) and Blue Bird Oil Importers, which they (the group) have undertaken to acquire direct from shareholders at the prices mentioned for £344,335. Presumably when this transaction is completed the shares in the Blue Bird Holdings Company which the French group are to take up will be unloaded on the French market. If and when the shareholders of Blue Bird Motors (1924) and Blue Bird Oil Importers get their money, they will certainly have less objection to the French group making such a handsome profit.

Company Registrations in 1928.—The returns compiled by Jordan and Sons, Limited, the well-known agents, show, as might be expected, that 1928 was a year of considerable activity in the formation of new companies, 9,012 concerns, with a nominal capital of £220,506,126, being registered at Somerset House, against 8,399, with a capital of £173,162,271, in the previous year. The figures have been exceeded only on three occasions in the last 60 years—namely, in 1919 and 1920, years of inflated "boom" values, and in 1899, when the capital duty payable to the State was only one-tenth of its present amount. The numerical majority of the companies registered at Somerset House are comparatively small private affairs, 8,174 of the latter having an average capitalisation last year of no more than £8,300 each, while 838 public concerns were nominally capitalised at an average of £182,300. These figures are not, of course, a complete record of new British registrations—they do not include, for example, new Scottish concerns registered at Edinburgh—nor do they bear any fixed relation to the total capital actually *subscribed*, publicly or privately. British companies usually obtain authorisation for a larger capital than they intend immediately to issue, while, on the other hand, important concerns occasionally start their career with a purely nominal Somerset House registration. The English Steel Corporation, for instance, which was formed to take over a large share of the business of Vickers-Armstrongs and Cammell Laird, was actually registered with a capital of no more than £100; while the Tobacco Securities Trust, formed by the British-American Tobacco Company, had no more than £5,000 registered at the outset, an amount subsequently increased to £5,000,000. Four industrial groups—trust companies, textiles, motors and mines—accounted for 32.6 per cent. of the total capital last year, while the gramophone "boom" was reflected in an increase from £787,000 in 1927 to £7,742,000 in 1928 in the "music" group, and the vogue of "automatic" photography in an equally remarkable jump in this group's figures from under £500,000 to nearly £5,000,000. The passing of an earlier craze, however, was exemplified by the virtual disappearance of greyhound-racing and dirt-track ventures from the list of new companies.

Imperial Tobacco Dividend and Bonus.—True to its dual reputation for sound earning-power and directorial inscrutability, the Imperial Tobacco Company has announced an enhanced final dividend and a share bonus of 25 per cent., exactly a week after selling by certain tired holders had provoked a noteworthy reaction in the ordinary shares. After endless canvassing of bonus possibilities, the market had decided against the occurrence of that event, and the announcement was followed by a rise in quotations for the £1 ordinary from 128s to 136s 6d. The following table sets out the year's earnings and their distribution, as compared with those of the two previous periods, so far as can be ascertained from the directors' preliminary statement:—

	Years Ended October 31.		
	1926.	1927.	1928.
	£	£	£
Net earnings	8,968,355	9,227,797	*9,599,650
Preference dividends ("A" 5½% cum.)	272,759	272,759	272,759
("B" 6% non-cum.)	315,628	315,628	315,628
("C" 10% non-cum.)	263,822	263,822	263,822
Ord. Earned per share, after tax	27·1%	28%	*29·2%
Ord. Paid (inc. bonus), after tax	24%	25%	†26%
Amount of dividend	£ 7,188,407	£ 7,487,924	£ 7,787,441
Pensions	250,000	250,000	250,000
General reserve	500,000	500,000	500,000
Inc. or dec. in carry forward	+ 177,740	+ 137,664	+ 210,000

* Estimated from information in dividend statement. † Plus 25% bonus on ordinary shares.

The bonus issue of one new ordinary share in four will call for £7,487,924, of which £4,000,000 will be taken from leaf fluctuation account and other provisions, and the remainder from general reserve. Earlier bonus issues (apart from cash issues on bonus terms) were made in 1916, 1918, and 1923. While shareholders will be loth to criticise the proverbial gift horse, the method adopted throws light on the difficulty of estimating the real strength of the company's financial position from the figures given in the balance-sheet. A year ago the company included in one huge item on the liabilities side: creditors, provision for taxation and customers' bonus, liability under dividend guarantees, provision for fluctuations in value of leaf tobacco stocks, and for employers' liability, marine and other funds. This heterogeneous item proves to be a species of secret repository for the company's internal reserves, in which connection the reduction of £1,423,000 in the valuation put a year ago on stock-in-trade, after twelve months of enhanced trading activity and earnings, would seem to have had a certain significance. In view of the undeniably sound position of the company's finances, we suggest that the directors might modify their attitude of benevolent obscurantism so far as to separate this "creditors, &c.," item into its main components. Last year's rise in ordinary share earnings from 28 per cent. to 29.2 per cent., despite heavier tobacco taxation, is a creditable achievement. Valuing the rights at 26s 9d per share, and deducting the dividend, the yield at a price, *ex* all, of 106s 3d would be £4 18s per cent., free of tax, if future dividends were maintained at 26 per cent.

Debenture Corporation.—This trust company, which up to three years ago was directed by its original founder of 1885, enjoyed stable receipts last year, the total profit to December 31, after deducting debenture stock and other interest, being £186,213, against £185,152. Total dividends of 10 per cent. are again paid on the ordinary stock, and £23,000 (against £35,000) is transferred to reserve, which now stands at £585,000, against an issued capital of £2,000,000 and £1,250,000 of debenture stock. The corporation appears to be cautiously feeling its way towards an enhanced holding of ordinary shares. Comparison of the present accounts with those published two years ago shows that 15 per cent. of an investment total of £3,759,758 is now held in this form of security, against 13.1 per cent. out of a total of £3,700,276 on December 31, 1926. The proportion of preference stocks was almost identical at the two periods, but the percentage of bonds, mortgages, and debentures has fallen from 76.5 to 74.4. The geographical distribution of the corporation's investments shows several interesting deviations from the "average" figures (based on an examination of the returns of some 25 companies) given in a recent article in the *Economist* (January 12, 1925, p. 51), a much larger proportion of the whole being held in Great Britain, and a much smaller proportion in North and South America, as the following statistics show:—

GEOGRAPHICAL DISTRIBUTION OF INVESTMENTS, 1928.

	Debenture Corporation.	25 Investment Trust Companies.
	%	%
Great Britain	60·4	34·4
British Empire	12·2	10·7
Europe	15·6	15·8
Argentine	5·7	10·1
Other S. and Central American countries		14·3
United States	6·1	10·5
Other countries		4·2
Total	100·0	100·0

Over half the corporation's total investments are in commercial and industrial enterprises, rather less than one-fourth in Government and municipal securities, and less than 7 per cent. in railways.

Inveresk Paper.—Though the dividend is reduced again to the 1926 rate, the accounts for the year 1928 reveal considerable expansion. In the report it is stated that the directors consider the results satisfactory, "especially as the company has not yet benefited to any material extent by the recent acquisitions and large extensions to buildings and plant at the works of several of its associated companies." A year ago it was said in the same place that benefits would begin to accrue from these extensions after May, 1928. The history of the last three years is shown below:—

	Periods Ended. Nov. 30, 1926.	Dec. 24, 1927.	Dec. 29, 1928.
	£	£	£
Gross profit	116,405	375.634	493,950
Net earnings	76,139	257,762	407,452
Preference dividends	14,464	30,030	87,663
Ordinary dividends	43,699 (25%)	171,495 (35%)	201,027 (25%)
Provision for taxation	..	..	90,000
Increase in carry forward	+ 17,976	+156,237	+ 28,761

The rearrangement of the capital last autumn has caused £149,500 debenture stock to disappear from the balance-sheet, which will be found summarised elsewhere. The issued preference capital is increased from £1,199,135 a year ago to £2,843,789, and the ordinary capital from £999,523 to £1,292,643. Investments at cost have grown from £3,684,390 to £5,439,032. The last of the important extensions is now approaching completion, and repayment of a large temporary loan made by the company in connection with those works is expected during the coming year. Loans to associated companies, which a year ago amounted to £111,687, now stand at £578,156, and on the other side special loans from bankers have risen from £394,360 to £609,440. The £1 ordinary shares are quoted at 3.

Freeman, Hardy and Willis, and J. Sears and Co.—The profits of Freeman, Hardy and Willis, over 99 per per cent. of whose ordinary capital has been acquired by J. Sears and Co. (True Form Boot Co.), amounted for the year ended December 31st last to £240,624, after charging debenture interest. The report points out that before arriving at that figure provision has been made on a similar basis to previous years for the payment of a bonus to employees and for additional pension benefits, which in recent years have amounted to £35,000, and have been shown as deductions from profits. Last year's trading appears therefore to compare favourably with that of 1927 and 1926 (when profits were given as £235,519 and £225,442 respectively) than the figures suggest at first glance. The balance-sheet is distinguished from its predecessor by the inclusion of the deferred ordinary shares issued as a bonus last February. The value of freehold and leasehold properties is £71,010 up at £1,155,125, and stocks are increased from £580,259 to £636,796. The recent progress of the purchasers, J. Sears and Co., is shown in the following table:—

	Years ended December 31. 1926.	1927.	1928.
	£	£	£
Profits	201,511	205,051	216,003
7% preference dividend	21,000	21,000	21,000
12½% preference dividend	27,519	27,519	42,005
Ordinary dividend (22½%, tax free)	119,531	119,531	119,531
Dividend on "A" shares (22½%, tax free)	5,625	5,625	5,625
To reserves	25,000	25,000	25,000
Increase in carry forward	+ 2,836	+ 6,376	+ 2,842

The increase in the 12½ preference dividend is accounted for by the addition of £278,125 bonus shares issued in the proportion of one for every two "A" or ordinary shares, on which five months' dividend falls to be paid. To finance the new purchase, for which a bank loan is meanwhile needed, permission to increase the capital to £3,361,250 is being sought, which will involve the issue of 2,000,000 7 per cent. cumulative "A" £1 preference shares, ranking after the old preference shares and before the bonus issue, so that the rights of the real preference shareholders will not be affected. It is also proposed to raise £1,750,000 by an offer of first debentures. The amount made available by these arrangements will still fall short by £336,000 of the sum required, £4,086,053, but the general position appears sufficiently liquid to meet that difference comfortably. At 1 7-32 the 7 per cent. £1 cumulative preference shares yield £5 14s 10d.

United Serdang (Sumatra) Rubber Plantations.—The United Serdang accounts for the year ended August 31, 1928, are now available, and include the results from the new properties acquired in December, 1927. In their report the directors state that they are well satisfied with the benefits of the amalgamation. Considering the general rubber position over the period of these accounts, they do not make as unfavourable a showing as might have been feared. The average net sale price of rubber was 1s 2.28d per lb, as compared with 1s 9.74d per lb in the previous year. The crop to be harvested in the current year is estimated at 7,000,000 lbs. Owing to the amalgamation, the issued share capital has been almost doubled, and only 10 per cent. is paid on the increased amount:—

	Years ended August 31. 1926.	1927.	1928.
	£	£	£
Net profit	365,301	183,185	163,547
Dividends	313,909 (40%)	176,574 (22½%)	126,365 (10%)
To reserve	22,000	..	20,000
Remuneration to directors	1,500	1,500	..
Increase in carry forward	+ 27,892	+ 5,111	+17,182

The balance-sheet, which is presented in admirably clear form, is summarised in another column. The value of leasehold property has risen from £625,979 to £998,519, and that of buildings, machinery and plant from £73,444 to £134,797. Cash and investments in British Government securities have grown from £386,378 to £512,581. The increase in sundry liabilities is balanced by a similar one in sundry debtors. The present price of the 2s shares is 4s 10½d.

British Controlled Oilfields.—An oil company producing under 400,000 tons of crude oil a year cannot hope to earn an adequate profit on £9,000,000 of paper capital. In view of the fact that in the year ending July, 1928, British Controlled Oilfields had a smaller production to trade and lower prices to take, it did not do so badly. On account of the fall in oil prices the receipts from oil were £147,559 smaller, but economies in working expenditure were effected to a total of £80,000. The profit and loss account shows a gross profit for the year of £405,280, from which has been written off the whole of the development expenses of the El Mene field, £126,445, exploratory boring outside El Mene £20,665, and depreciation on machinery and plant £88,699, leaving a net profit of £169,472, as compared with £186,399 in the previous year. This profit is equal to 1.8 per cent. on the total issued capital of £9,000,000, or 3.8 per cent. on the preferred capital of £4,487,000. The balance is added to the credit of profit and loss account, which now stands at £1,003,560. In the field the position is that the company's production from the El Mene field is declining, and that from its Trinidad fields is increasing, as the following table will show:—

	1927. Barrels.		1928. Barrels.
Venezuela	2,477,669	....	2,141,266
Trinidad	59,349	....	210,168
	2,537,018	....	2,351,434

Fifteen test wells outside El Mene were drilled during the year, but without meeting with commercial production. A promising area south of El Mene is being tested, and geophysical examination is to be made in the eastern area of the Buchivacoa concession and in the Orinoco Delta properties. In the central area of Buchivacoa a small production is being purchased from the Anglo-Venezuelan Oil Trust, in which the company has an interest. The field management in Venezuela appears to be in excellent hands, but so far the results are frankly disappointing. In Trinidad, however, the development of the Palo Seco field has been remarkably successful. In the first four months of the current year production has amounted to 178,988 barrels, against 210,168 barrels in the previous 12 months. South of the Palo Seco field a high-pressure well has been brought in which should lead to another increase in production. A contract has been made with the Anglo-Persian Oil Company for the sale of the Palo Seco output and with the United British Oilfields of Trinidad for the sale of oil surplus to the Anglo-Persian contract. The balance-sheet of British Controlled shows some improvement, with cash, Government securities, and stocks of oil at £690,175, against £679,132 a year before, the surplus of current assets over current liabilities being £390,479.

Ashanti Goldfields. — Our mining correspondent writes:—Satisfactory progress in several directions was scored last year by this, the doyen of West African gold undertakings. The treatment of a larger tonnage was accompanied by an increase in average yield, and although owing to the use of coal instead of wood for the steam plant costs rose 2s 1d per ton to 48s 5d, the net profit came out £22,000 higher at £163,440. The final dividend of 30 per cent. makes a total of 55 per cent. for the period, the sum absorbed being £137,500. A further £50,000 is transferred to reserve, bringing the total up to £250,000, and leaving £59,200 to be carried forward, as against £83,200 brought in. For 1926-27, it may be recalled, 50 per cent. was paid and £45,000 placed to reserve. Thanks to the developments which attracted so much attention last year, the ore reserves display a fresh expansion. The tonnage of 549,400 compares with 419,700 on September 30, 1927, the value of 24.2 dwts being the same as before. In September, 1925, the reserves stood at no more than 247,600 tons. At one time last year the results underground again lent colour to the theory that what was known as the "new make of quartz" was a junction in depth with the original Obuasi chute, giving an enormous ore-body. Actually, where the two deposits met the ground became disturbed and values erratic; indeed, the latter were unpayable for stretches. Latest cables have indicated values of about 19 dwts—fairly good, although below the average of the reserves. On the basis of the 1927-28 dividend rate the return is 10 per cent.

Duophone.—We have received a letter from Messrs E. R. Lewis and Co., under whose auspices the Malden Holding Company is being formed, pointing out that the buyers of the New Malden Factory have no interest directly or indirectly in the Duophone Company, and that the purpose of the transaction is in no way "to enable money to be raised for the Duophone business"; that, apart from the condition that the buyers should produce certain quantities of records for the vendors for a term of years, there will be no other association between the two companies, and that emphatically "this is not a Duophone relief fund." We gladly afford publicity to the points made in this letter, which has an obvious bearing on the outlook for the new company, and renders perfectly clear several matters regarding which the earlier announcements may have left room for misapprehension in the minds of some readers. The "Investment Note" to which our correspondents refer was, of course, concerned with the point of view of the existing Duophone shareholders. While the new company doubtless regards the new transaction solely as a means of acquiring a potentially profit-earning property, its immediate result, so far as the Duophone Company is concerned, must be to provide the latter with certain funds. The disposition of these funds, as Messrs Lewis rightly make clear, is no affair of the new company—which, apart from its contract to supply records, has no connection with the Duophone Company—but it is undoubtedly a matter of direct interest to Duophone shareholders.

Ner-Sag.—At the resumed ordinary meeting on Thursday Mr. H. Hackett, who took the chair in the absence through illness of Sir John Biles, stated that at the last board meeting which Mr Brandreth attended he evaded the questions raised, and that the board had no knowledge of his present whereabouts. There was a trading loss for the three months to December 31st last of £11,184, but though the directors were anxious to put before the shareholders the position of the company so far as it was known at that date, the unsatisfactory method of carrying on business, the imperfect state of the books, and the absence of really authentic information made it impossible to say that the accounts were correct. After mentioning that the company had presented a petition in bankruptcy against Mr Brandreth, Mr Hackett laid two courses before the meeting, either to strengthen the board by the addition of two directors of practical experience and to make every endeavour to expand the company's business, or, having regard to all the circumstances, to decide that it was desirable to cease business and to wind up the company voluntarily. It was proposed, and unanimously carried, that the original accounts be not adopted, and that two directors should be recommended for appointment to the board.

CAPITAL ISSUES.

THE total prospectus issues for the week came to £2,917,500, as compared with £3,330,000 last year, making a total for the year of £39,553,741, excluding conversions. Issues to shareholders totalling £6,049,636 were also announced, and new securities coming on the market, after gaining introduction through notices "for public information," accounted for a further £2,410,000 on the basis of the opening price. For the first time since the year opened no trustee issue figured in the week's list. Some 84 per

DISCOUNT CORPORATION OF NEW YORK

This Corporation discounts and resells Bankers Acceptances and approved Bank endorsed Trade Acceptances, deals in United States Treasury Certificates of Indebtedness, Treasury Notes and other Short Term Government Obligations, and receives funds repayable on demand or at fixed maturity against the security of Bankers Acceptances, or Government Obligations.

Forward rates and special offerings on request.

cent. of last week's Commonwealth Loan was left with the underwriters, but the course of market dealings suggests that recent additions to the total of trustee securities are likely to find firm buyers in the near future. Last year's "boom" in new gramophone and photography concerns is being succeeded by market activity in other parts of the "patent" field. Apart from numerous issues of this character by way of Stock Exchange introduction, two automatic machine concerns have made prospectus offers this week. *Western Automatic Machines* takes over three applications for patents, and has made arrangements to supply pennyworths of the products of two confectionery firms through a machine which "is one of the smallest" in the market, "in proportion to the size of the packet it dispenses." *Automat Sales* will obtain automatic machines from another company, and will dispense therefrom "Val" sweets and other specialities. It acquires an existing business, of which it will pay the liabilities, the vendor "warranting that they do not exceed the value of the assets."

Both enterprises are speculative, in view of the nature of their business and the number of concerns already engaged in their limited market, and are appropriately capitalised in "straight" shilling shares. *Atlas Artificial Silk Processes* will produce, at a Lancashire works, viscose artificial silk of fine denier, of which approximately 90 per cent. is to be "Grade A" quality, at a figure which, it is claimed, will effect a saving of 50 per cent. in labour costs over present methods. This production, apparently, will be demonstrational, with the object of securing the use by others, on a royalty basis, of the rights in the company's process. The company has good technical backing, but is entering a highly competitive trade. *Sodax* (1929) is a "patent" concern of unusual character, which is exploiting a semi-automatic soda-water-making device. Until evidence is available of the taking up of the machine by the public on the very large scale necessary to ensure its being a permanently paying proposition, the shares will make no firm appeal to the investor. *Glare-Visor* (*Parent*) will exploit (*a*) an anti-dazzle screen for motor-cars, (*b*) a dipping headlight, and (*c*) power units for motor-cars, garages, charging stations, &c. Credit should be given the promoters for their conservatism in erecting one company, and not three, on the foundation of these rights, but the prospectus does not mention any firm contracts from leading car manufacturers, at home or abroad, for the "standard" installation of the head lights or power units. *Vorarlberger Illwerke Aktiengesellschaft* is a company incorporated in Austria for the production of electric power. The 6 per cent. sterling bonds give a running yield at 92, of £6 10s 5d per cent., and will be a reasonably well-secured foreign utility offer on the completion of the construction and supply programme of the company.

Total cash involved in introductions to date, 1929, £2,990,687.

Sodax (1929), Limited.—Issue at par of 440,000 (out of 600,000) 5s shares. The company acquires a British patent for a soda-water manufacturing apparatus, together with patents for certain other countries, and the goodwill, trade marks, and all other assets of an existing private company except cash due as at January 14, 1929. The purchase consideration for the patent and other rights is £42,000 and for the stock of machines is £3,000, payable as to £22,500 in cash and £22,500 in shares. Working capital is estimated at £69,000.

Atlas Artificial Silk Processes, Limited.—Issue of 2,650,000 (out of 4,000,000) 5s shares. The company acquires the exclusive rights, subject to a reservation, in certain processes and patents for the British Empire (except Canada) and a 50 per cent. interest in them for many other countries. Lands, buildings, and plant valued at £127,146 (or £124,476) are acquired for £80,000, and the purchase consideration for the rights is £150,000, payable as to £25,000 in cash and £125,000 in shares. Approximately £250,000 should remain available for working capital and preliminary expenses. Options on 850,000 shares at par have also been granted.

Western Automatic Machines, Limited.—Issue at par of 2,000,000 (out of 3,000,000) 1s shares. The company carries on business in automatic vending machines, and acquires the benefit of certain contracts and patent applications for the sum of £25,000 in shares, the vendors also receiving an option at par on the remaining unissued shares. Working capital is estimated at £76,500.

Vorarlberger Illwerke Aktiengesellschaft, a limited liability company incorporated in Austria for the production of electric power. Share capital consists of 20,000 1,000 schilling shares (at par of exchange 34-58½ Austrian schilling = £1); increase of the share capital to 35,000,000 schilling is to be effected. Offer at £92 of £2,000,000 6 per cent. 30-year sterling bonds to bearer, redeemable by an accumulative sinking fund calculated to retire the whole issue by 1959 and operating by purchase or drawings at par. The company reserves the right to redeem the whole of the bonds at 102 between 1934 and 1938, or at 101 after 1938. The proceeds of this issue will be applied towards the completion of two electric power stations for exploiting water power.

Grace National Bank
Hanover Square, New York, U. S. A.

A thoroughly organized international bank, giving special attention to the requirements of European banking correspondents.

Special Representative

148 Leadenhall St. London, E. C. 3.

Glare-Visor (Parent) Company, Limited.—Issue at par of 1,250,000 (out of 2,500,000) 2s shares. The company acquires rights for an anti-dazzle screen, and dipping and swivelling headlight system, and a range of power units. The purchase price is £86,000, payable as to £40,000 in cash and £46,000 in shares, and there will remain approximately £60,000 working capital.

Automat Sales, Limited.—Issue at par of 1,600,000 (out of 2,500,000) 1s shares. The company acquires rights throughout the British Empire for Val peppermints, trade names, and an existing business, with the benefit of contracts, and will sell and distribute automatic machines. The purchase consideration is £55,000, payable as to £15,000 in cash and £40,000 in shares, and approximately £46,000 will remain for working capital.

Particulars of the following have been issued for public information only in connection with Stock Exchange "introductions":—**Gramophone Cabinets, Limited,** issued capital 600,000 (out of 750,000) 2s ordinary shares; the company acquires a business of gramophone cabinet manufacturers for a consideration of £40,500 in cash; the remaining 150,000 shares are under option at par. **City and Foreign Investment Trust, Limited,** issued capital £240,000 5 per cent. cumulative preference stock and £160,000 ordinary stock; the company was incorporated last July to carry on the business of an investment trust company in all its branches. **Linley Engineering Company, Limited,** issued capital 12,500 7½ per cent. £1 preference and 150,000 5s ordinary shares; the company takes over a business specialising in the manufacture of carriage fittings, railway signals, train lamps, &c.; 12,500 preference and 130,000 ordinary shares have been credited as fully paid to the vendors. **Associated Automatic Machines Corporation, Limited,** issued capital 2,000,000 5s ordinary shares; the company was incorporated to acquire and hold securities of companies interested in automatic machines and to manufacture and deal in such machines; it acquired certain patents, premises, shares, and benefits of agreements for £297,990 in cash and an option (since exercised) on 400,000 shares at 5s, and the whole share capital of another business for £50,000 in cash and £50,000 in shares. **Kieselbach Steam Accumulators, Limited,** issued capital 158,000 (out of 210,000) "A" £1 ordinary and 10,000 "B" £1 ordinary shares, the latter to receive 10 per cent. of the net distributed profits; the company acquires certain rights and British and American patents for thermal storage plants, for the sum of £93,000 in cash; the unissued shares are under option at 25s. **Central Public Service Corporation,** incorporated in 1923 under the laws of the State of Maryland, U.S.A.; issued capital 200,000 shares common stock, 232,860 shares class A stock, 79,745 shares ($7 dividend series) and 26,000 shares ($6 dividend series) cumulative preferred stock, all of no par value, together with $1,500,000 6½ per cent. gold debentures (1941), 288,000 6 per cent. gold notes (1930), and 8,289,000 series A 6 per cent. collateral trust gold bonds (1940); a holding company, which also has power to carry on public utility undertakings. **Auto-Made Sales, Limited,** issued capital 2,050,000 (out of 2,500,000) 1s shares; the company manufactures machines, particularly automatic vending machines. **Eastern Oil Industries, Limited,** issued capital 500,000 £1 ordinary shares; the company was incorporated in 1919 under a different name to manufacture and trade in vegetable and other oils and their bye-products, and has recently acquired controlling interests in certain oil and soap factories and allied undertakings. **Romac Motor Accessories, Limited,** issued capital £70,000 in 5s ordinary shares; the company was incorporated in 1924 to acquire a trade mark and carry on business as traders in motor accessories (wholesale and export), mechanical engineers, &c., and was converted into a public company last July; profits for six months ended September 30th were £8,360, and net assets at that date, when share capital was £30,000, were valued at £37,704.

OIL OUTPUTS.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for the week ended January 16th:—Venezuela, 36,404 barrels; Trinidad, 17,051 barrels; total, 53,455 barrels.

MEXICAN EAGLE OIL COMPANY, LIMITED.—The production for the week ended January 12, 1929, was 135,000 barrels.

TAMPICO OIL, LIMITED.—The total production on the company's properties in Mexico during December was 30,378 barrels, in

TRINIDAD CENTRAL OILFIELDS, LIMITED.—Production for December quarter: Tabaquite, 7,080 barrels; Guapo, 2,891 barrels.

UNITED BRITISH OILFIELD OF TRINIDAD, LIMITED.—Production for the week ending Wednesday, January 16, 1929, amounted to 1,127 tons. Crude oil received from other producers during the three months October-December approximately 14,450 tons.

VENEZUELAN CONSOLIDATED OILFIELDS, LIMITED.—Total production week ended January 12th, 3,192 barrels (456 tons); for week ended January 19th, 2,807 barrels (401 tons).

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended January 12th was 124,666 metric tons (previous week ended January 5th, 122,548 metric tons).

Chinese Engineering	75,000	Sold during week ended Jan. 12th.
Wankie	72,545	Coal sales; 8,182 tons coke sales.
Witbank	72,605	..
Miscellaneous.		
Electrolytic Zinc	3,802	Tons of zinc; silver-lead product for shipment to Port Pirie for realisation, containing 540 tons lead and 56,000 ozs silver.
European & North African	807	Iron ore and 88 tons lead concentrates.
Tetuhe	1,247	Zinc concentrates assaying 46·3%; 426 tons lead concentrates, assaying 72·2% lead, 49 ozs silver.

MOUNT LYELL MINING AND RAILWAY COMPANY, LIMITED.—During the fourweekly period ended January 2nd the mill treated 8,414 tons of ore, producing 1,948 tons of concentrates.

NORTH BROKEN HILL.—December:—27,102 tons of crude ore were treated, assaying 13·7 per cent. lead, 7·7 ozs silver per ton and 9·9 per cent. zinc, producing 5,270 tons lead concentrates, assaying 65·5 per cent. lead, 33.3 ozs of silver per ton and 7·5 per cent. zinc, also 4,170 tons zinc concentrates, assaying 49·3 per cent. zinc, 3·1 per cent. lead and 4·1 ozs silver per ton. 4,914 tons dump slimes were treated, assaying 10·7 per cent. lead, 8 ozs silver per ton and 15·5 per cent. zinc, producing 710 tons lead concentrates, assaying 58·7 per cent. lead, 41·5 ozs silver per ton and 10·6 per cent. zinc, also 1,460 tons zinc concentrates, assaying 45·6 per cent. zinc, 4·6 per cent. lead and 5 ozs silver per ton. Decreased production due to closing down for holidays.

SULPHIDE CORPORATION, LIMITED.—During the six weeks ended Dec. 29, 1928, 13,612 ton of Central Mine ore, together with 2,404 tons of slimes, were milled at the Central Mine, producing 2,572 tons of leady concentrates (including 81 tons from the deleading plant), which assayed 55 ozs silver, 66 per cent. lead, together with 3,900 tons of zinc concentrates, assaying 7 ozs silver, 4 per cent. lead, and 50 per cent. zinc per ton, and 291 tons special slimes, assaying 9 ozs silver, 13 per cent. lead, and 6 per cent zinc per ton.

WORKING PROFIT, TRANSVAAL.—The total estimated working profit of the gold mines of the Transvaal for the month of Dec., 1928, amounted to:—Witwatersrand, £1,024,654; outside districts, £50,700; total, £1,075,354. The estimated working profit in Nov., 1928, was:—Witwatersrand, £1,041,713; outside districts £51,441; total, £1,093,154.

ANALYSIS OF ADVANCES.

UNSHAKEN CONFIDENCE IN THE FUTURE.

MR McKENNA ON THE OUTLOOK AT HOME AND ABROAD.

The ordinary general meeting of the shareholders of the Midland Bank, Limited, was held at the Cannon street Hotel, London, E.C. 4, on Tuesday, January 22, 1929, for the purpose of receiving the report and balance-sheet, declaring a dividend, electing directors, appointing auditors, and transacting other ordinary business.

The Chairman (the Right Hon. R. McKenna) who was received with applause, said: My Lords, Ladies and Gentlemen,—Before proceeding with the business of the meeting I am sure you would wish me to invite you to join in an expression of profound sorrow at the loss we sustained last year by the death of four members of our board, Lord Carnock, Sir David Yule, Mr A. H. Goschen, and Mr W. T. Brand. They had all been associated with the bank for many years, and had rendered most able and unstinted service to our institution. Speaking for myself and the other members of the board, we have felt the personal loss very deeply, and we could not allow this occasion to pass without recording the high esteem and affection in which we hold their memory.

It was customary for my predecessor, in his annual addresses to the shareholders of the bank, to begin with a discussion of some financial topic of general interest, and to conclude with an account of the progress of our own business. Hitherto I have followed his example, but to-day I am varying the procedure, and propose to confine my observations to matters arising directly from a consideration of the bank figures.

PAID-UP CAPITAL AND RESERVE FUND.

If you look at a copy of the balance-sheet for December 31st last, which has been sent to every shareholder with the annual report, you will see that our paid-up capital and reserve fund both amount to £13,432,968. These two items hardly call for further comment. Each shows an increase over the year of about £767,000, due to the issue of £1 fully paid shares at £1 premium to the shareholders and the staff. The issue to the staff, about 139,000 shares in all, was made in accordance with our previous practice on similar occasions, but in this instance the staffs of our affiliated banks in Scotland and Northern Ireland also participated. Our capital is now held by about 71,000 shareholders.

CURRENT, DEPOSIT, AND OTHER ACCOUNTS.

The item current, deposit and other accounts, which stands at £394,591,227, cannot be so quickly passed over. The figure itself is the highest in the history of the bank, and exceeds that of a year ago by £20 millions. The balance-sheets of all the other clearing banks are not yet available, but those so far published show that a substantial growth has taken place in the deposits of the banks as a whole. This expansion in the volume of money is in itself a satisfactory feature, and would ordinarily be regarded as an accompaniment of expanding trade. In truth, however, it cannot be said that the business of the country, generally speaking, has shown any great improvement during the past year over 1927, and there is consequently a seeming discordance between monetary and trade conditions which needs explanation. We might expect at first sight to find the answer to the problem in an upward movement of the price level, but, so far from rising, the price level has actually fallen during the year. Failing this explanation we should next look to a decline in the velocity of circulation, which probably in fact gives us a partial solution. A full understanding of the problem, however, is only obtainable on an examination of bank figures not ordinarily published.

MONEY EXPANSION AND TRADE STAGNATION.

To clear the ground I must remind you that deposits, as shown in a bank balance-sheet, describe under a single head two kinds of liability of the bank to its customers. They include on the one hand money held on current account, which is immediately withdrawable by cheque and often distinguished by the name "demand deposits," and on the other hand money, conveniently described as "time deposits," which is lodged with the bank either for a definite period or on the condition that notice must be given of withdrawal. No doubt part of what is included in demand deposits is really not different in essence from a time deposit and *vice versâ*, but the exceptions in each category are probably not large in relation to the whole and may be neglected without risk of serious error. The figures of current and deposit accounts may consequently be taken as a fairly accurate measure of true demand and true time deposits.

As might be supposed, the proportion of current accounts to total deposits is by no means constant. I have had our figures taken out for a series of ten years, showing the proportion for each year. Beginning with the boom year 1919 we find that the proportion was exceptionally high, 71.4 per cent. During 1920 the boom was rapidly passing away, and the percentage fell to 66.2. By the spring of 1921 a definite trade depression had set in, and in that year the current accounts dropped to 60.3 per cent. From that time onwards there has been a slow but constant decline, the successive percentages being 60.0 in 1922, 59.8 in 1923, 58.5 in 1924, 57.3 in 1925, 56.3 in 1926, 55.7 in 1927, and 55.3 in 1928.

The significance of the figures becomes apparent when we remember that demand deposits are essentially money in active use in business of all kinds, while time deposits have more of the character of money awaiting investment and money for which no trading use can be found at the moment. We should naturally expect the proportion of demand deposits to rise or fall according as trade is good or bad. How close the correspondence is we shall see better if we look at the fluctuations over short periods. I have had a chart prepared showing month by month for the past two years the variations in the proportion of demand to total deposits, and the curve presents a striking parallelism with those of employment and other indices of trade activity. From a low point early in 1927 the curve mounted rapidly and remained at a high level throughout the second half of the year. It will be remembered that at that time trade was comparatively good, and that a year ago, when I last addressed you, the outlook was distinctly encouraging. In the first part of 1928, however, the curve of current accounts showed a clear downward trend, and despite a substantial rise in the early summer, when trade was temporarily better, it sustained on balance a severe fall, and remained at a low level in the later months of the year.

BUSINESS CONDITIONS AND CURRENT ACCOUNTS.

It seems evident, therefore, that close agreement exists between business conditions and the proportion of current accounts to total deposits, and it is impossible to avoid associating the gradual transfer from current to deposit accounts, which our figures show to have been proceeding at varying rates ever since 1920, with the continued trade depression. The seeming discordance between monetary and trade conditions may therefore be attributed in part at least to the fact that although there has been an increase in the total volume of money there has not been a corresponding increase in the amount actively engaged in trade.

It may be objected that I am drawing my conclusion from the returns of one bank only, and that the figures are not sufficiently representative for the purpose. The defect has not escaped me, but I think it fair to suppose that our figures are typical of those of the banks as a whole, and if this be so it would appear that they can be accepted as a useful index of trade activity and depression. In recognition of this fact we are considering whether we should make these statistics of current accounts available at intervals in the future, though the indication which they give of business conditions would be more certain and reliable if they were combined with similar figures of the other banks.

INFLUENCE OF BANKING POLICY.

The subject of banking offers many difficult and complex problems, one of which, arising out of the matters just discussed, is well worth examination. It may be put in this way: Is the distribution between demand and time deposits due in part or in whole to something done by the banks, or does it result from entirely extraneous influences unrelated to banking policy? I think it can be shown, speaking of the banks as a whole, that some causal relationship exists between the disposition of their resources among the various groups of earning assets and the division of their deposits between current and deposit accounts, and that consequently the proportion of demand deposits is not determined wholly independently of the action of the banks. Let us suppose that the banks, by reason of a surplus of bank cash, are able to expand deposits by new loans or by purchases of additional bills or securities. It is obvious that the deposit created by a bank loan which is to be used immediately in trade must almost of necessity fall into the category of money actively at work, and must therefore increase the proportion of demand deposits. On the other hand, a new deposit created by a bank purchase of securities probably comes under the heading of money awaiting investment, and thus tends to increase the proportion of time deposits. If the new deposit be created by a short-term loan to the money market or by the purchase of bills, the immediate and ultimate consequences have to be distinguished. The first result is an addition to the volume of demand deposits, but some portion of the new deposit will inevitably come to be held by foreign banks, partly on current and partly on deposit account. The division of this new deposit between the two groups cannot be foreseen, but neither part of it will add to the volume of money actively at work in British trade.

EARNING ASSETS.

In view of these facts it may perhaps be suggested, since trade is depressed, that the banks should arrange their earning assets in such a way as to promote the greatest possible increase in demand deposits, or actively circulating money. In considering this suggestion it must always be remembered that banks are not wholly independent agents in the distribution and employment of their resources. They are bound to consider the varying degrees of liquidity of their assets. Apart from cash and balances with other banks, their most liquid assets are money at call and short notice, Treasury bills and bank bills, and if they work with a lower cash ratio a higher proportion of these must be maintained. It follows from this that a growth in the volume of deposits not arising from a growth in cash reserves is likely to be accompanied by a more than proportionate increase in short loans or bills or both, and for this reason will probably be accompanied by a less than proportionate expansion in the volume of money at work in trade. Thus we see that the cause of an increase in deposits exerts a strong influence on the nature of the deposits created, and that the banks are not entirely free to pursue a policy designed to raise the proportion of actively circulating money.

The question then remains to be answered: How has the increase in bank deposits over the past year come about? As you know, the total volume of bank deposits is dependent on two factors; first the quantity of bank cash, and secondly the ratio of cash to deposits which the banks together maintain. This general ratio is determined by the policy of the several banks, which, though working to ratios differing among themselves, ordinarily adhere to comparatively stable individual figures. It happens, however, that during the last two years our own bank has reduced its cash ratio to a proportion more nearly approaching those maintained by the other banks. I need not dwell upon the reasons for this modification of policy; my purpose in calling attention to it is simply to show that the increase in deposits is due to a variation in the aggregate cash ratio of the clearing banks, and not to an increase in bank cash, which actually was slightly less during last year than in 1927. These two facts, coupled with the necessity of maintaining a prudent degree of liquidity, required a redistribution of bank resources among the various groups of assets, and the direction of the redistribution was such as to tend inevitably towards a decline in the proportion of demand deposits.

OTHER BALANCE-SHEET ITEMS.

Returning now to our balance-sheet, there remain among our liabilities to the public two items which are balanced by a contra entry among our assets. I refer to acceptances and confirmed credits on account of customers and engagements on account of customers. The first of these has risen by £4¾ millions to £24,942,269, largely owing to the relatively low money rates ruling in London as compared with other financial centres, in particular New York. The second has shown the very marked increase of £32¼ millions to the high figure of £49,498,865, due mainly to special transactions of a non-recurrent nature. The increase does not imply any commensurate expansion in the general volume of business in forward exchange, guarantees and similar operations conducted in London, though some expansion has undoubtedly taken place. The figures show that the operations of our overseas branch are continuing to develop to a gratifying extent.

ASSETS.

Coming now to the assets side of the balance-sheet, our coin, gold bullion, bank notes and balances with the Bank of England stand at £45,440,918. As a result of the cash ratio policy I have already mentioned, the figure is £4¼ millions lower than a year ago. In view of frequent comments on the practice of window-dressing it is interesting to find that both the absolute amount of our cash and its ratio to deposits on December 31st were below the averages for the month. Balances with, and cheques in course of collection on other banks in Great Britain and Ireland, at £20,247,083, are £1½ millions higher. Money at call and short notice shows a slight increase, bringing the figure to £27,681,297.

Before passing on I should like to draw your attention to the relatively small amount of this country's banking resources which is employed in financing day-to-day business on the Stock Exchange. Taking the November, 1928, averages, we find that all the London clearing banks together, out of total earning assets of £1,637 millions, had only £148 millions lent at call or short notice. It is impossible to say how much of this amount consisted of loans for financing Stock Exchange business, but, as far as our own bank is concerned, not more than half our short money is lent for this purpose.

NEW YORK STOCK MARKET.

When we set these facts side by side with the enormous quantity of bank money lent in the New York stock market we find a most striking comparison. According to figures published by the Federal Reserve Bank of New York, the loans to brokers and dealers in securities made by reporting member banks in New York City for their own account and for that of out-of-town banks amounted, on the average of the November weekly returns, to $2,850 millions, or four times the total money at call and short notice of all the London clearing banks, whether lent in the stock market or the money market or elsewhere. The British figures, though not strictly comparable with the American, are clearly indicative of the comparatively small amount of borrowing from banks which is involved in this part of the nation's business.

Our investments have risen by £1½ millions to £36,868,698. Bills discounted show the large increase of £14 millions to £63,347,503, of which Treasury bills account for £14¾ millions. The balance consists partly of commercial, but mainly of bank bills, and all are of the finest quality and early maturity. Our bill holding is so arranged as to ensure a constant and substantial inflow, day by day, of ready cash resources.

RATIOS OF ASSETS TO DEPOSIT LIABILITIES.

The ratios of these various assets to our deposit liabilities are significant in the light of what I have already said regarding the relations between the disposition of bank assets and the proportions of time and demand deposits. Concurrently with the reduction in our cash ratio from 13.3 to 11.5 per cent. over the year, we have increased our bill holding from 13.2 to 16.1 per cent. of our deposits. Cash and bills, together with balances and cheques in transit and money at call and short notice, aggregate 39.7 per cent. of our deposits, as compared with 38.8 per cent. at the end of 1927. Thus, while allowing our cash ratio to fall in order to provide the basis for credit expansion, we have felt compelled to increase the proportions of our more liquid earning assets.

ADVANCES TO CUSTOMERS AND OTHER ACCOUNTS.

We now come to the item which is by far the largest among our assets, advances to customers and other accounts. These, after making full allowance for all bad and doubtful debts, stand at £214,050,972. They amount to 54.2 per cent. of our deposits, a proportion which compares with 54.7 per cent. at the end of 1926, a year of great industrial disturbances, and 55.1 per cent. twelve months later. So far as these percentages are in themselves significant, I do not think it can be doubted that we have endeavoured to provide industry and trade with as much accommodation as can prudently be granted having regard to the necessity of preserving unquestioned stability and safety for our depositors.

ANALYSIS OF ADVANCES.

The total of advances does not, however, furnish a precise measure of the accommodation given to trade and industry. It is necessary for this purpose to know how they are distributed among the various industrial, trading, and other groups. Some critics of the joint-stock banks have suggested that too large a proportion of advances is allocated to customers who borrow for the purpose of carrying stocks and shares, and that trade and industry are correspondingly deprived of their full measure of bank accommodation. It would require detailed information regarding the items which make up the total of bank advances in order to decide whether this criticism is justified or not, but the figures of our own bank may be of some guidance, and I therefore propose to give you the proportions of our advances which were outstanding to the various groups of borrowers on June 30th last. The analysis takes too long to permit of my giving the figures for a later date, though it may safely be assumed that no marked change in distribution has occurred during the last six months.

TEXTILE INDUSTRIES.

The figures disclose the interesting fact that our largest borrower is the group of undertakings engaged in the textile industries. This group, which includes brokers, merchants, spinners, and manufacturers, accounts for 12¼ per cent. or close on one-eighth, of our total advances. Almost the whole of this amount is lent to the cotton and wool industries in roughly equal proportions, silk and other textiles accounting for only a very small part. As you are aware, the cotton and wool trades have been passing through a prolonged period of difficulty and depression. The cotton industry in particular has suffered from the loss of a considerable part of its export trade, but we think there are grounds for the hope that we shall see better conditions in the future.

BUILDING AND LAND.

The next largest group falls under the general heading of building and land. Loans in this section amount to no less than 11¼ per cent. of the total. In view of the marked activity in the building trade all over the country in recent years and of the fact that very heavy and prolonged expenditure is often involved, particularly in large-scale development schemes, it is hardly surprising that the figure is high. It includes temporary advances for investment in houses and land and for the purchase or construction of houses for the buyers' own occupation, but the larger part of the money has been lent direct to builders, contractors, brick-makers, and others. A loan for building purposes is almost invariably repaid on the fulfilment of the contract or sale of the building, while a temporary advance for investment in houses and land is usually granted pending the arrangement of a mortgage. As a result a high degree of liquidity is a characteristic of the group.

WHOLESALE AND RETAIL TRADERS.

Equal to the last-named figure is that made up of loans to wholesale and retail traders, the percentage again being 11¼. More than two-fifths of this strikingly large total is lent to retailers with a single place of business. We have 31,000 loans of this particular character, the average amount being only £330. These figures are remarkable as showing the wide extension of credit given for the distribution of all kinds of goods to the ultimate consumer. Probably a large part of the accommodation extended by the Bank to wholesalers and retailers has the effect of enabling them to give regular credit to their customers, and if this be so we have in these advances an indirect form of consumers' credit, which has recently been a subject of some discussion.

The next largest group includes the heavy industries, iron and steel and other metal manufacturers, engineers, machinists, shipbuilders, and so on. These take 7¾ per cent. of our loans. Conditions in the different branches vary widely; some sections show marked prosperity. while others are in a state of extreme depression. It is therefore reassuring from all points of view to find that our loans to these industries are well distributed over the whole field.

AGRICULTURE.

Agriculture takes 6½ per cent. of our advances. Some of the money is lent to assist in the purchase of farms, but the larger part is made up of temporary advances for ordinary farming operations. These show a clear seasonal movement, reaching their peak in the late summer and tending to decline towards the winter, but the figure for June 30th is probably fairly close to the average for the year. Our loans for financing current agricultural requirements number nearly 15,000, the average amount being less than £500.

Under the next heading, food. drink and tobacco, I have grouped together a number of trades, no one of which absorbs any large amount of credit, but which in the aggregate take 6 per cent. of our advances. Then come a variety of undertakings, including importers as well as manufacturers, dealing with leather, rubber and chemicals. The total advances to this group amount to 4 per cent. A further proportion of 4 per cent. consists of loans extended to a number of miscellaneous trades, including newspaper undertakings and paper manufacturers. Shipping and transport absorb 3½ per cent. of the total.

MINING GROUP.

I have as yet made no mention of the coal trade, which is undergoing protracted depression accompanied by grave suffering throughout the coalfields. It so happens that our advances to the mining group, which includes, in addition to collieries and coal merchants, all kinds of mining and quarrying undertakings, are less than those to any of the others so far enumerated, and amount to only 2½ per cent. of the total. This is the last of my groups of loans which are made directly and specifically to finance the production and distribution of commodities, but the list by no means exhausts the full amount of advances which in fact are used for purposes of trade and industry.

Our professional and private advances, together with loans on trust accounts, aggregate 6½ per cent. We know that the great majority of these loans are used in the borrower's business or profession, but it is obviously impossible to be certain that a part of them may not be applied to other purposes.

LOCAL AUTHORITIES, GAS, ELECTRICITY, ETC.

The next group comprises local authorities and gas, electricity, water and other public utility companies, which together take 3¾ per cent. The greater part of the loans to local authorities consists of temporary advances in connection with public undertakings. Next, advances to entertainment companies, clubs, societies and associations, churches, hospitals and schools amount altogether to 2¼ per cent., and these constitute another group in which the use made of the loans is predominantly for trade purposes. A word of explanation is required at this point regarding a small group of items which are not advances, strictly speaking, but are included under that heading for bookkeeping purposes. These are the debit balances on certain impersonal accounts, together amounting to 1¾ per cent.

INSURANCE, FINANCE HOUSES, ETC.

We now come to a group, accounting for 8 per cent. of the total, which comprises loans to insurance companies and brokers, finance houses, trust companies and foreign banks, and miscellaneous finance loans. The last item is composed in the main of loans to directors of trading companies for re-lending to their own undertakings. Borrowing by finance houses and trust companies is generally for very short periods only. Loans to foreign banks are many times exceeded by deposits placed with us by those institutions, and are largely for the purpose of financing international trade. Here I may interpose another interesting point. Only an insignificant proportion, in fact less than ¼ per cent. of our total advances is extended to undertakings operating abroad. In other words, practically the whole are for home purposes of one kind or another.

MONEY FOR INVESTMENT IN STOCKS AND SHARES.

The remaining 8¾ per cent. of our advances may be described broadly as money lent for investment in stocks and shares. This description, however, is liable to be misunderstood unless some explanation is given. When stocks and shares are deposited as security for a loan it is usually impossible for us to determine with certainty that the advance has not been required for a speculative purpose. We discourage loans which are clearly for that object. On the other hand, it would be difficult to refuse a temporary advance to a customer which enables him to take advantage of a favourable opportunity for investment by tiding over the period required for the realisation of other securities. In some cases, moreover, the capital requirements of private industrial companies are met by the issue of shares to directors or principal officials, who seek the assistance of the bank to take them up. Such transactions are not speculative in any true sense of the word; they permit the spreading, in point of time, of payments for investments, and indirectly aid in the provision of fixed capital for a variety of industries.

It is therefore clear that if on a strict analysis we could add together all those loans, without exception, which represent part of the necessary equipment of production and trade we should arrive at a very high proportion of the total. How high the proportion is it is impossible to say with exactitude, but I am sure we shall be on the safe side if we assert that nine-tenths of our advances to customers are of this character. Finally, it is of interest that on the date of this analysis our loans and advances were extended to more than 180,000 borrowers, the average amount outstanding being about £1,200.

REMAINING BANK FIGURES.

The remaining items in the balance-sheet call for only brief mention. Bank premises appear at £8,725,101, about £1 million higher than a year ago. The amount includes a sum in respect of the completed portion of our new head office, the construction of which is proceeding satisfactorily. We have now about 800 of our staff at work in the building, another section of which should be ready for occupation before the end of this year. During 1928 we opened 49 new branches, bringing the total number of our offices in England and Wales to over 2,000. About six months ago we introduced into this country the night safe, which for some time past has been in successful operation at a number of banks in the United States. So far the apparatus has been installed at about 65 of our branches in London and the provinces, and the number is being steadily increased. This additional service is widely appreciated, and is being utilised to a rapidly growing extent by customers for whom it is especially intended.

INVESTMENTS IN AFFILIATED INSTITUTIONS.

Investments in affiliated institutions together stand at £6,911,328. Part of the increase of £250,000 on the 1927 figure is due to the calling up of 10s a share in cash on the capital of the North of Scotland Bank, the call making the shares, which are of £20 denomination, £7 paid. Once again we are glad to be able to congratulate those responsible for the management of our three affiliated banks—the Belfast, the Clydesdale, and the North of Scotland—on solid and substantial progress. The business of the Midland Bank Executor and Trustee Co., Limited, is also expanding satisfactorily.

PROFIT AND LOSS ACCOUNT.

This completes the various items in the balance-sheet, and there remains only the profit and loss account. Our net profit for the year amounts to £2,656,554, about £102,000 more than in 1927. Together with the sum of £835,797 brought forward we have a total of £3,492,351 for allocation. We propose to make the same appropriations as a year ago, namely, £500,000 to bank premises redemption fund and £220,000 to officers' pension fund. The amount allocated to writing down premises may seem large, but it must be realised that our premises should stand in the balance-sheet, not at their cost, nor even at their value as banking offices, but at a figure which is certainly no higher than they would realise in the event of sale. These allocations, together with the interim and final dividends, both at the rate of 18 per cent. per annum, less income-tax, absorb £2,643,788, leaving a balance of £848,563 to be carried forward. Perhaps I should remind you that our dividend payments amount to a larger sum than formerly on account of the issue of new shares made during the year.

CHAIRMAN'S TRIBUTE TO STAFF.

I have now to perform a duty which I regard as one of the pleasantest that fall to my lot as chairman of this bank. Year by year I enjoy the privilege of paying, on your behalf as well as my own, a tribute of thanks to our staff, so ably led in the performance of their duties by our joint managing directors, supported by the general managers. Twelve months ago, in referring to the inestimable value of the services rendered to the bank by Mr Hyde and Mr Woolley, I mentioned the signal honour conferred upon Mr Hyde by his election to the presidency of the Institute of Bankers. This year I have again to congratulate him upon the further honour he has received in his re-election for a particularly auspicious term, the fiftieth year of activity of that most valuable organisation. With regard to the staff, I need only say that, although each year I express the same appreciation of their enthusiasm and efficiency, my words lose nothing in sincerity by annual repetition. During the past year we have inaugurated at a number of important branches a system of mechanical ledger posting. This is a step which has involved considerable readjustment in the staff, and, for a short period, additional effort, and I should like to place on record our recognition of the loyalty and skill with which all those concerned have co-operated in effecting this important innovation.

THE OUTLOOK AT HOME AND ABROAD.

My review of the progress of the bank is ended, but before moving the adoption of the report and statement of accounts I should like to make one final remark on the wider outlook. Ten years have passed since the conclusion of the most recent, and we devoutly hope the last, great war in the world's history. They have constituted a decade of grave difficulties, involving problems of exceptional magnitude and complexity. Disappointments have been frequent; many setbacks have been suffered. But I do not think it will be denied that considerable progress has been made towards a more ordered and prosperous world. Perhaps the most solid contributions to this final result have been made during the past year. The steady advance towards the ultimate elimination of the risk of war and the efforts now being undertaken to reach a final settlement of the Reparation problem are noteworthy movements in the field of international affairs. At home much has been achieved in improving the relations between employers and employed, and the need for industrial reorganisation has become more widely recognised and accepted. It may be said with truth that the prospects of peace, both international and industrial, have brightened. Peace between nations and within nations is a primary condition of our welfare, and whatever the temporary state of trade, however slow we are in solving the financial and industrial problems which confront us, we still look forward with unshaken confidence to the time when the better relationships now established shall become the foundation of general and permanent well-being.

The report was adopted, other ordinary business was transacted, and the proceedings terminated with a vote of thanks to the chairman.

IONIAN BANK, LIMITED.

ECONOMIC FUTURE OF GREECE.

The annual general meeting of the Ionian Bank, Limited, was held, on the 23rd instant, at the offices of the company, 25-31 Moorgate, London, Sir John Stavridi (the chairman) presiding.

Mr R. H. Fry (the secretary) read the notice convening the meeting and the auditors' report.

The Chairman said that the past year had been one of the most eventful for Greece, both financially and politically.

Since he last addressed the shareholders the new bank of issue had been created and was functioning, and the whole of the note circulation had been concentrated in its hands. The gold value of the notes had been stabilised at 375 drachmæ to the £, the rate of exchange on the day when stabilisation was decreed, without any attempt being made at revaluation, which would have been fatal to the industrial development of the country. All existing restrictions upon dealing in foreign exchange had been withdrawn, and the new bank had made provisions for buying and selling gold exchange, which were amply sufficient to maintain the convertibility of its note issue. The official bank rate was reduced in December from 10 to 9 per cent., and again on the 5th of this month to 8 per cent. A clearing house had been formed, composed of the seven most important banks. Their institution was a member, and this might materially facilitate business in the future.

As regarded State finances, the administrative system was being reformed, and for this year the budgetary equilibrium had been maintained. It was to be hoped that as the public realised the security which reliance on the League of Nations could bring to the country the expenditure on armaments might be reduced, and the amount thus saved devoted to the development of education and the lightening of the heavy burdens so patiently borne during these past years.

He felt confident that the new Government would inquire into and, where necessary, revise the methods of taxation which, as applied by the Treasury officials, appeared at times to savour of the arbitrary, and injuriously to affect foreign as compared with local interests.

From the loan successfully floated in January last year the Government had been able to repay to the Bank of Greece a large portion of the State debt.

TWO GREEK LOANS.

In 1928 two Greek loans were issued on the London market: the one he had just mentioned, the Six per Cent. Second Refugee Loan for £6,500,000 at 91, which was covered many times over, and the other a Six per Cent. Public Works Loan in December last for £4,000,000 at 89, which did not appeal to the public, and three-quarters of which was left with the underwriters. This latter was the first loan issued since 1898 which was not to come under the management of the International Financial Commission, and although it was secured many times over by the surplus of the revenues pledged to the International Financial Commission for the service of the other loans, it was based on the credit of the Government and was to be managed by the new Bank of Greece. He felt convinced that, as the investing public realised the favourable yield of this loan, and how ample was the margin of security, it would readily take its place with the other Greek loans and stand on the same footing as they did.

He thought that after the poof that had been given during all these years—years of terrible strain and difficulties through which the country had passed—of the determination and ability of Greece to meet in their entirety its international financial obligations, due recognition would be accorded her, and it would be realised that she could be trusted to discharge them without the intervention of a foreign body.

From the political point of view the improvement was no less great. The elections which took place in July last brought back to power, by an overwhelming majority, M. Venizelos, the great statesman to whom Greece owed its rejuvenation, thus putting an end to a period of continuous political unrest and eliminating the risk of the repetition of the dangerous experiments of militaristic rule. As he had said many times, what Greece required above all was peace and a stable Government to enable her to carry out reforms and reconstruction. She now had both, and he was convinced that, under the able and enlightened guidance of its present Prime Minister, whose moral authority was recognised the world over, the country, with its vast and still hardly developed resources and its industrious and patriotic population, could look forward to important developments and a greatly improved economic future.

The report was unanimously adopted, and the Chairman, in response to a cordial vote of thanks, said that provided there were no unforeseen contingencies during the current year, their next report and accounts should be materially better than those for the period under review.

PROVINCIAL BANK OF IRELAND, LIMITED.

GOOD RESULTS—INCREASED PROFIT.

CONDITIONS IN FREE STATE AND NORTHERN IRELAND.

FAVOURABLE TRADE FACTORS.

The annual general meeting of the shareholders of the Provincial Bank of Ireland, Limited, was held on Wednesday, January 23, 1929, at the office of the company, No. 8 Throgmorton avenue, London, E.C.

Mr Richard Durant Trotter (the chairman) presided, and the other directors present were Mr Walter Spencer M. Burns, Mr John Denton Carlisle, Mr Robert John FitzGerald, Hon. Sir William H. Goschen, K.B.E., Mr Henry Samuel Howard Guinness, and Mr Alexander Broderick Leslie-Melville.

The Secretary (Mr Hume Robertson) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, I have to refer with much regret to the death, in August last, of Mr William T. Brand, who was a member of the board for over 50 years, and was well known to those who attend these meetings. You will remember he had retired from the directorate about a year before his death.

The report and accounts have been in your hands for some days, and you will, I hope, as usual, kindly take them as read.

You will notice that the figures for the half-year, when compared with those for the corresponding period 12 months ago, show considerable fluctuation in certain items of our business. I will deal with the position briefly in detail.

With the additions made during the year, our reserve at £620,000 is increased by £20,000, and exceeds our paid-up capital by £80,000. Deposit receipts at £14,733,354 show no noteworthy change, but our circulation at £1,046,363 marks a decline for the year of £571,929.

NOTE ISSUE.

At our meeting in July last I explained the new conditions which will govern our note issues in the Free State and in Northern Ireland, and in preparation for the new arrangements which will regulate our procedure when the Currency Act, 1927, of the Irish Free State, and the Northern Ireland Bank Notes Act, 1928, are brought into operation. Meantime, we have steadily withdrawn the notes outstanding under the older issues, with the result that at the present time our liability for notes in circulation approximates very closely to our authorised issue of £927,667. The Free State Government legal tender notes have been in circulation since September 10th last, but the issue of consolidated bank notes is still in abeyance. It will probably be made within the next few weeks, and thereupon adjustment of the note issues of this bank and of the other banks of issue in the Free State will immediately follow. As stated at our last meeting, the limit for consolidated bank notes to be issued to this bank is £649,000, and our fiduciary issue in Northern Ireland will be £220,000. We expect that these limits will come into force during the course of the current half-year. I have already mentioned to you that these changes will be accompanied by increased taxation, and by other additions to our working expenses in the Free State, and I fear they may have an adverse effect upon our future profits, if we are to afford our customers the same facilities as hitherto through our branches.

The new silver and bronze coinage of the Free State has been available since 12th ult., and circulates at the present time in the Saorstat, with the British coin, no order for withdrawal of the latter having yet been made, but you will have seen from announcements in the Press, which appear to be circumstantial, that an agreement has been reached within the last few days between H.M. Treasury and the Minister for Finance in the Irish Free State as to the lines on which the British silver coin will be redeemed.

ASSETS.

Dealing with the other side of the balance-sheet, it will be noticed that investments are higher by £434,000, and the fluctuations in cash and Treasury bills have resulted in a fall of about £1,000,105 in these figures. You will see, however, that our total of cash, money at call, British Treasury bills and investments, taken together, exceed ten millions sterling, and thus equals 68.3 per cent. of the bank's liability to its depositors.

PROFIT AND ALLOCATIONS.

The net profit for the half-year gives a total of £62,000, which compares with £61,699 for the corresponding period of 1927. We pay the usual dividend of 14½ per cent., making allocations of £10,000 to each of the reserve and contingency funds, and applying £10,000 to write down bank premises account. Full provision has been made for bad and doubtful debts, and the value of the bank's investments continues to be in excess of the book cost appearing in the balance-sheet. The balance carried forward at £37,122 is slightly larger than the figures brought in from June last.

TRADE CONDITIONS—LINEN.

While we receive on the whole fairly hopeful reports from our branches, I regret that at the moment I cannot point to any marked improvement in trade conditions, either in the Free State or in Northern Ireland. No permanent improvement has yet been recorded in the linen trade, which still needs for its revival a more abundant and cheaper supply of flax, as well as the opening up of new markets. Although the aggregate production of linen has diminished, there have been periods of activity in the trade, and the industry continues to provide a large amount of employment.

BELFAST SHIPBUILDING.

It is gratifying to refer to the brighter conditions which have developed during the past year in the shipbuilding industry in Belfast, and it is to be hoped the more prosperous conditions now prevailing will be maintained.

CATTLE TRADE.

With freedom from disease, the cattle trade gives promise of renewed activity, though it has encountered difficulties during the year now closed. There are indications of improved prices for cattle within the next few months. A substantial increase in the number of milch cows and of livestock generally is an important feature in the agricultural returns from North and South alike, and promotes an encouraging outlook for the present year.

AGRICULTURE.

The average yields of the various crops in both areas have proved satisfactory, notwithstanding difficulties consequent upon weather conditions; but prices realised, though for some commodities better than in 1927, have, on the whole, been disappointing. Agriculture in the Free State and in Northern Ireland has had to meet the continued trouble of increased costs of production, combined with the problem of falling prices for livestock and produce. The extent to which advantage will be obtained by agriculture through the Government De-Rating Scheme in Northern Ireland cannot be seen for some time, but what is outlined has brought hope to agriculturists which we may anticipate will be justified when the effects can be measured. I have referred before to the relief which is being made available for the farming interests in the Free State through the agency of the Agricultural Credit Corporation, which is in a position to grant accommodation on terms not usual with the joint stock banks. We are glad to observe that the corporation is now fully in operation, and has already advanced a large amount to farmers, in accordance with the objects for which the corporation was founded.

SAORSTAT—HIGH STANDARD OF CREDIT.

The revenue and expenditure accounts of the Irish Free State show that the Minister for Finance may have a difficult problem to solve in his next Budget; but meantime it is pleasant to note the high standard of credit enjoyed by the Saorstat, as reflected in the prices of existing loans, the quotations for the 5 per cent. national stock being steadily maintained at par. The adverse trade balance has been reduced by about 6½ millions sterling since 1926, and appears now to be about 12 millions sterling.

At the present time there are no other features in connection with the bank's business upon which it is necessary for me to comment. The depreciation in the value of land has been heavy, but obligations continue to be fairly met, and though the position of farmers and graziers has not been materially strengthened by the results of the past harvest, it is gratifying to note that the bank's business has been well maintained, and it is believed the new year opens with improved prospects for trade and agriculture.

FAVOURABLE TRADE FACTORS.

The Bank rate here and in Ireland has remained unchanged throughout the half-year. Competent observers point to evidence of slow recovery and expansion of British trade; and, should this make further progress, it would doubtless soon be reflected in improved conditions in Ireland. A favourable factor has been the absence of any important interruption of industrial peace during the past year, and a recent event of special interest has been the unification of the note issues on this side by the absorption of currency notes by the Bank of England.

I would add that we have followed with sympathetic interest the prolonged illness of His Majesty the King, and we would hope that, following the improved reports which have come forward in the last few days, His Majesty's progress towards a happy and complete recovery will be steadily maintained.

TRIBUTE TO STAFF.

I desire again to express our cordial appreciation of the zeal and loyalty of the staff. We are mindful of the fact that the successful conduct and administration of the bank's business would not be possible without intelligent and efficient co-operation of our officials.

There are, no doubt, many difficult problems to be faced in the immediate future in connection with business arrangements in the Free State, but we feel assured that we can rely upon continuance of the loyalty and energy of our staff to extend and safeguard the fine business of the bank.

I now propose: "That the report of the directors and the relative balance-sheet of the affairs of the bank as at December 31, 1928, already in the hands of the proprietors, be adopted," and I will ask Sir William Goschen to second the resolution.

The Hon. Sir William H. Goschen, K.B.E., seconded the resolution, which, in the absence of questions, was put to the meeting and carried unanimously.

RE-ELECTION OF DIRECTORS.

The Chairman: The directors retiring by rotation at this meeting are Mr Alexander B. Leslie-Melville, who has been our valued colleague for many years, and Mr Robert John FitzGerald, who is very well known in the county of Kerry end in other parts of Ireland. Both those gentlemen are eligible for re-election, and I have much pleasure in proposing that they be re-elected.

Mr Walter Spencer M. Burns seconded the motion, which was unanimously approved.

On the proposition of Professor Stokes, seconded by Mr Wm. H. Corker, Mr Stuart R. Cooper, F.C.A., and Mr G. Brock, F.C.A., were reappointed auditors.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS, AND STAFF.

Mr Alfred J. Waley said he had great pleasure in proposing a hearty vote of thanks to the chairman, directors, and the staff for their zeal and attention to the bank's affairs and for the satisfactory report they had presented. He trusted that the favourable factors which the chairman had mentioned in his speech would be realised, and that, under the able guidance of the directors, the shareholders might again look forward to another year of increased prosperity.

Mr Corker, in seconding the vote, said he thought the board had done remarkably well in holding their ground as they had done, having regard to the troubles through which the Irish Free State had passed. He particularly wished to include in the vote of thanks the staff of the bank, who were one of the most courteous and efficient staffs in the kingdom.

The Chairman having briefly acknowledged the compliment, the proceedings terminated.

FANTI CONSOLIDATED NVESTMENT COMPANY LIMITED

INCREASED PROFIT—INTERIM DIVIDENDS TO BE PAID.

The ordinary general meeting of Fanti Consolidated Investment Company, Limited, was held, on the 23rd instant, at the Cannon street Hotel, London, Sir Edmund Davis (chairman and a managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, and referring to the profit and loss account, said: We have, in the first instance, brought in the balance of £65,896 as at December 31, 1927. We have deducted the dividend paid on February 11, 1928, £50,625, and the directors' percentage of profit, £4,556, leaving £10,715. To this we have added the balance of profit and loss for the year ended December 31, 1928, £103,306, which shows an increase of £44,367 when compared with the profit for the previous year. This left an available balance of £114,022. We have deemed it prudent in such a successful year to transfer £30,000 to a reserve account. Out of the remaining amount, £84,022, we recommend the payment of a dividend for the year ended December 31, 1928, of 9d per share—which has been the amount of the annual dividend for the previous seven years—and to pay, in addition, a bonus of 3d per share, making in all 1s per share, or 12½ per cent., less income-tax. This will absorb £67,500, and will leave a balance of £16,522 to be carried forward, subject to the directors' percentage of profit.

Now that the position of the company is so firmly established, and that future profits should be satisfactory, we have decided to pay interim half-yearly dividends, though, at the same time, we particularly wish the shareholders to understand that they should in no way estimate what the total dividends may be for the year by the rate of the interim which may be paid.

The Chairman, having dealt with the other balance-sheet items, continued:—At our last meeting reference was made to our interest in the Rhodesia Broken Hill Development Company, and to the fact that there had not been a single hitch in reaching the producing stage since the whole of the plant was erected. This is still the position, the delay in increasing the output of zinc and the production of rich vanadium concentrates being due to the fact that the whole of the acid plant is not yet erected. We have in no way altered our opinion as expressed at our last ordinary general meeting, when I stated that the Bwana M'Kubwa Copper Mining Company might eventually prove to be the largest copper producer in Northern Rhodesia, unless it is to add that the Northern Rhodesia copper field may, in course of time—and probably at no distant date—prove to be one of the largest known, and certainly able to meet our country's demands.

The report and accounts were unanimously adopted.

INTERNATIONAL VACUUM POWER, LIMITED.

A "SCIENTIFIC TRIUMPH."

SALE OF CANADIAN RIGHTS.

The statutory meeting of International Vacuum Power, Limited, was held, on the 22nd instant, at Caxton Hall, Westminster, London, Mr R. E. Heard (chairman of the company) presiding.

The secretary (Mr J. S. Robertson) having read the notice convening the meeting,

The Chairman said: Gentlemen,—Since the formation of the company the vendors have duly executed a transfer of the rights this company was formed to acquire. Our policy does not relate to manufacturing, but rather to the disposal of the company's assets for cash and shares, or in any way in the best interests of the company. The assets of the company are represented by patents, improvements, &c., covering the invention brought out by Messrs C. and E. Scott-Snell under the title of "Thermally Actuated Motive Devices." Our patents are world-wide, and it may be interesting to hear the report of Messrs Marks and Clerk, the company's patent agents.

Mr. M. Atkinson Adam reports:—"I have carefully considered the specification of Patent No. 283,681, and have made a study of the prior specifications disclosed by a 50 years' search made by my firm, Messrs Marks and Clerk, as to the novelty of this patent, and have further studied the prior specifications disclosed by the official searches in Great Britain, United States of America, Germany, and Sweden.

"I am satisfied that the claims of patent No. 283681 in its amended form adequately protect the new type of thermally actuated pump and lamp, and this subject matter is not in any way anticipated by the prior knowledge before me."

The head of our laboratories, Major E. Scott-Snell, had the honour of reading a paper on this invention at a meeting called for the purpose by the Society of Engineers at Burlington House, before a large and interested audience. It was pointed out in the paper and acknowledged that inventors all the world over had been trying for 30 years to solve the problem known as "thermally actuated motive devices," and this was the first time the difficulty had been conquered. The president of the society described the invention as a "scientific triumph."

Up to the present the patent has been applied only to the lighting proposition as represented by the automatic vacuum oil lamp, but in the opinion of the technical staff it is also capable of being developed for certain classes of commercial pumping.

Active negotiations are now proceeding in connection with the rights for the following countries:—Germany, Belgium, France, Egypt, Spain, United States of America, South American States, and Canada.

With regard to Canada, we are selling for a large sum in cash, and we will also hold a share interest in a company to be formed there. The capital of this company will be $1,000,000, in 40,000 7 per cent. preference shares of $25 each, redeemable in two years, or at any time thereafter at $27.50, and 40,000 shares of common stock of no par value. It is hoped at a later stage to obtain a portion of the preference shares for the London market and to give our shareholders an opportunity of acquiring a portion of such shares should they so wish.

A factory has been secured in the city of Dundas, one of the leading manufacturing cities of Canada, with a floor space of 94,000 square feet and with 4½ acres of land. Labour is plentiful and electric power very cheap. It would appear, therefore, that this factory will be in a position to handle the business of the South American countries, as well as other parts of the world.

Our representative in Canada has already entered into arrangements with two large distributing companies in Canada for handling exclusively goods manufactured by the factory, and the amount to be sold by them is fixed at the value of $500,000 per annum. Our managing director is sailing for New York to-morrow for the purpose of consulting with the directors of the Canadian company, so that manufacturing may be pushed forward quickly, and also for the purpose of consolidating arrangements with regard to the formation of companies in the United States of America for dealing with South American territory. The result of these negotiations is likely to prove of the greatest advantage to your company.

A vote of thanks to the chairman terminated the proceedings.

ALEXANDERS DISCOUNT COMPANY LIMITED.

SATISFACTORY RESULTS OF THE YEAR.

INCREASED PROFITS—MARKET CONDITIONS.

The 61st ordinary general meeting of shareholders of Alexanders Discount Co., Limited, was held on Wednesday, January 23, 1929, at the offices of the company, 24 Lombard street, London, E.C., Mr Colin Frederick Campbell (the chairman of the company) presiding.

The secretary (Mr A. K. Bruce) read the notice convening the meeting and the auditors' report.

The Chairman: I assume that you will take the report as read, as usual.

TRIBUTE TO LATE MR ERNEST ALEXANDER.

Before dealing with the accounts submitted to you, I would like to refer to the loss the company has sustained in the death of Mr Ernest Alexander in the early days of this month. Mr Alexander entered the business in 1878, when he was quite a young man, and took an active part in its management for many years as a partner. Then when the business was converted into a company he showed the same keen interest as a director, and continued to do so till he fell ill last month. His general knowledge of the discount market was very great, so that we deplore his loss, and his colleagues on the board in particular will miss his presence among us very much.

I am glad to think that the family connection with the business will be well maintained through our colleague on the board, Mr George Alexander, whose intimate knowledge of the discount market is of great value to the company.

MR NEWCOMB TO JOIN BOARD.

To fill the vacancy on the board that has been created, the directors have invited Mr Newcomb to join them. There is no one with so great a knowledge of the business as Mr Newcomb, who has managed the affairs of the company so successfully for 18 years—in fact, since August, 1910. We are very glad that this opportunity has arisen of recognising Mr Newcomb's great services to the company, and of showing him how much they have been appreciated.

AMALGAMATION OF TREASURY NOTES AND BANK NOTES.

Turning now to the events of the past year, we have witnessed the final step required to establish the currency on a gold basis, as the amalgamation of the Treasury notes with the bank notes took place on November 22nd last. This was effected without the smallest inconvenience to anyone, and advantage was taken of the occasion to make some slight alteration in the form in which the weekly bank return is published. We welcome the revised form, as it is simpler and therefore more easily understood.

In pre-war days this return was the principal guide to the discount market as to the probable course of money in the immediate future, and the Bank rate was governed to a large extent by the reserve of gold disclosed. In fact, a 5 per cent. or a 4 per cent. Bank rate usually indicated a certain quantity of gold held. Looking back, we can truthfully say that the problems before the management of a discount company in those days were less perplexing than those before us to-day.

NEW FACTORS.

We still have the Bank return and the reserve of gold as in the past, but now there are other factors which occur continually, and sometimes most unexpectedly, which tend to upset our calculations. For instance, when the position looks fairly clear a sudden demand for gold from Germany sets in, about which we know very little; or, again, we may be asked to help in keeping up the discount rate when an unexpected demand for bills, other than Treasury bills, arises from abroad, so that the rate is forced down and our margin of profit disappears; or, again, the volume of money at the disposal of the discount market is so small that we frequently find ourselves short of funds through causes over which we have no control and about which we have little information.

I am not mentioning these matters by way of complaint in any degree. Conditions which are difficult for us to gauge are equally difficult for bankers and others working in different spheres. My point is that an ever-increasing degree of efficiency and information is required in a discount business, as in all branches of finance and commerce, if we are to hold our own and to produce satisfactory results.

INCREASED CAPITAL FULLY EMPLOYED.

The increased capital placed at our disposal a year ago has been fully employed and has been of benefit to us throughout the year, as it has enabled us to take greater advantage of the opportunities that occur from time to time for operating profitably.

I referred last year to the stabilisation of the Italian lire and the Belgian franc on a gold basis. France has now taken the same step by fixing her franc at 124.21 to the £; it may be said, therefore, that all the important currencies in Europe are now established on a gold basis.

BILL OPERATIONS.

In our bill operations we have once again been obliged to rely on Treasury bills to a very great extent, owing to the deplorable condition of many trades in the country. The hope expressed a year ago that a revival would take place in our basic industries has not been realised, and even now the outlook is not very cheerful.

It is true that the figures of the Clearing House show a record, but this is due to greater financial Stock Exchange activities, rather than to trade developments.

BANK RATE.

The Bank rate has continued at 4½ per cent. throughout the year, and we may be thankful that the authorities were wise enough not to be tempted to reduce the rate in the summer when gold was flowing into the Bank freely. Had they done so, we should have seen a sharp rise in the autumn almost certainly, which would have been very inconvenient to the discount market. As it is, the stock of gold in the Bank remains about the same as a year ago, owing to the amount received into the Bank during the first half of the year being nearly the same as that withdrawn during the autumn.

Our working margin of profit between money and bills was slightly less than in 1927, namely, 8s, against 9s 9d.

The figures in the balance-sheet and profit and loss account call for no particular comment.

The total balance-sheet figures at £29,753,448 1s 5d show an increase of about £3,000,000 over those of last year. Our holdings of short-dated Government securities have expanded by £1,772,000, as we were of opinion that this would be advantageous for the company, owing to the good rates of interest obtainable.

"BILLS DISCOUNTED."

The account "Bills discounted" in the balance-sheet shows an increase of about £1,800,000 as compared with last year. A strong demand for commercial bills was in evidence practically the whole year; this was mainly on Continental account, and, as you will see from the increase in our rediscount figure, we have as far as possible taken advantage of it. It would seem that, as London has for some time been one of the cheapest centres in which to borrow, increasing use has been made by foreign countries of acceptance credit facilities offered by London houses, and towards the latter part of the year, certainly, we saw a distinct increase in the amount of prime London acceptances offering from abroad.

YEAR'S PROFITS.

The gross profits show an increase of £58,000 over those of last year, and after providing for dividend and bonus, on the increased capital, at the same rate as last year—namely, 15 per cent., less tax, by way of dividend, and 5 per cent., free of tax, as bonus—we are able to carry forward £47,988, as against £36,215 brought in. Our net profits have shown an increase of about £32,000, of which £21,000 is absorbed by dividend and bonus on the increased capital, the remaining £11,000 going to increase the carry-forward.

We are again greatly indebted to Mr Newcomb and his staff for their skilful management of our affairs throughout the year.

THE RESOLUTION.

The resolution which I have to propose is this: "That the report and accounts be received, adopted, and entered on the minutes, and that dividends for the half-year ended December 31st last be declared at the rate of 6 per cent. per annum on the £200,000 preference capital, and at the rate of 15 per cent. per annum on the £575,000 ordinary capital, both less income-tax, and a bonus of 1s per share on the ordinary shares, free of tax, payable on and after the 24th instant, and that the balance of £47,988 18s 4d be carried forward to next account." I shall ask Sir Austin Harris to second that, but before I put it to the meeting if anyone has any questions to ask I shall be pleased to do my best to answer.

Sir Austin E. Harris, K.B.E.: I have great pleasure in seconding that.

RE-ELECTION OF DIRECTOR.

The Chairman: If there are no questions, I shall put the resolution. Those in favour will please hold up their hands; on the contrary; that is carried unanimously. The next business is the re-election of Mr Eric Gore Browne as a director. He offers himself for re-election, and I have very much pleasure in proposing that and in asking Mr George Alexander to second it.

Mr George C. Alexander: I have great pleasure in seconding that.

The Chairman: Those in favour please hold up their hands; on the contrary; that is carried unanimously. The next resolution is for the reappointment of the auditors.

Sir Philip J. C. Henriques, K.B.E.: Before that is put, as a matter of interest, it seems to me that, according to the Companies Act, the confirmation of Mr Newcomb's co-option to the board ought to be put to the meeting. I have not a copy of the Act before me, but I have had a certain amount of experience of it, and I was under the impression that after the co-option of a director it has to be confirmed at the next general meeting.

The Chairman: That is so, but Mr Newcomb is not yet a director; he is not yet qualified. I have simply told you that the directors have invited Mr Newcomb to be a director, and when he has secured his qualification he will be put on the board, and in the ordinary course of events will come up for confirmation next year. As the books of the company are closed, it is impossible to pass any transfers until to-morrow. Will someone now propose the auditors?

RE-APPOINTMENT OF AUDITORS.

Sir Philip Henriques: I propose the reappointment of the auditors, Messrs Price, Waterhouse and Co., and I am sure we could not have better auditors than they if we searched the City of London through. I propose that they be reappointed at the same remuneration as before.

Mr Hugh R. Clark: I have much pleasure in seconding that.

The Chairman: That has been duly proposed and seconded. Those in favour will please hold up their hands; on the contrary; that is carried unanimously. That, ladies and gentlemen, completes the business.

VOTE OF THANKS TO CHAIRMAN, DIRECTORS, AND STAFF.

Mr Herbert Alexander: I should like to propose a vote of thanks to our chairman for the way in which he has conducted the business of the meeting, and also to the directors and staff for the way in which they have worked for the benefit of us all. I am sure you will all feel the same as I do.

Mr David A. Horner: I have much pleasure in seconding that.

The Chairman: On behalf of my colleagues and myself and also on behalf of the manager and staff, I am extremely obliged to the shareholders for the kind way in which they have received this motion. I hope we may have a good account to give you a year hence.

The proceedings then terminated.

NATIONAL DISCOUNT COMPANY, LIMITED.

A SATISFACTORY YEAR.

HIGH DEGREE OF SECURITY AND LIQUIDITY.

The ordinary annual general meeting of the National Discount Company, Limited, was held, on the 23rd instant, at Cannon street Hotel, London, Colonel the Hon. Sidney Peel, D.S.O., presiding.

The Secretary (Mr Charles H. Gough) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: I will begin by putting before you the results of the year. Those results are, in brief, that we propose to pay the same dividend as last year, we put £15,000 to reserve fund, £10,000 to the pension fund trustees account, which leaves us with a surplus of about £11,000 to add to the carry forward. The dividend and the pension fund contribution are the same as last year. I may mention that the pension fund now amounts to £85,923, and, as you know, is held by trustees outside the company's own funds. The contribution to reserve fund is £35,000 less than last year, deducting the £11,000 added to carry forward, the total profits appear to be £24,000 less than last year. But last year we took £22,000 from the carry forward and added it to reserve. We also had the benefit, as mentioned by the chairman in his speech at our last annual meeting, of some profits previously unallocated, which were not wholly due to the operations of that particular year. If, then, we make allowance for these contributions, we find that the profits of the year under review reveal a considerably more favourable result. We have, in fact, had a satisfactory year.

The conditions during 1928 were favourable to what I may describe as normal profits. There were no startling changes in rates, such as lead to great fluctuations of profit or loss. The Bank of England rate remained unchanged during the whole year, and has not been changed since April, 1927. The discount rate for fine bills averaged £4 3s 1d for the year, and except in the month of June, when there were some expectations of a reduction in Bank rate, did not fall appreciably below 4 per cent., leaving a reliable, but not very large, margin over the average rate of interest on deposits.

The profit and loss account is, of course, only a part of the accounts which we present to you. There is also the balance-sheet. The profit and loss account gives the result of the year's operations, the balance-sheet shows the state of the company's financial position on a particular day, viz., December 31st. Both should be of great interest to shareholders, who, however, perhaps feel more acutely about the profit and loss account.

STRONG BALANCE-SHEET.

The balance-sheet is of more interest to the depositors, that is, to those who lend their money to the company. There are two principal objects in a company of this kind: first, security, and only secondly, profits. It is true that if security is established profits will not fail to come. The reason why I say the balance-sheet is of most interest to the depositors is because, whilst it certainly gives a useful light on the operations of the company, its main object is to give information as to security. The amount of information thus given varies with the kind of commodity in which a company deals. In the case, for instance, of a manufacturing or industrial company, you need a good deal more information beyond the actual figures of the balance-sheet; the figures themselves will not tell you whether the plant and machinery, stock in hand, &c., are in proper condition or correctly valued. But in the case of a company like ours, dealing almost wholly in high-class easily marketable securities, the vast majority of which automatically liquidate themselves, that is to say, turn into cash, day after day, a balance-sheet will tell you at a glance what degree of security may be anticipated for those who have deposited their money with the company.

If you examine our balance-sheet from the point of view of a depositor, you will see at once, after taking into account the valuation of our assets compared with the total of our liabilities, that a very high degree of security is attained. With a knowledge of the nature of the bills and securities we hold, I can go farther than this, and say that, supposing we were suddenly required to pay off the whole of our liabilities in a single day, we should be able to do so. I should like to add that I am not claiming this high degree of liquidity solely for our own company. I believe it to be characteristic of all our principal colleagues and competitors in the market. It is for this reason that the reputation of our discount market stands so high in the world, and thereby makes a large contribution to those invisible exports which make the import of their raw material cheaper for our industrial friends, a contribution which some of them are inclined to ignore.

At this point I will frankly admit that I have been particularly led to the subject of balance-sheets by two facts connected with our own. These are, first, that of late years figures of our balance-

sheet have considerably increased in volume, and, second, that this year they have diminished. If a man increases in weight for some time, and then loses a few pounds, these may be good or bad signs, but they require investigation. I have examined the first point, and I find, as I have said, very complete security. The increase has been met, partly by increase of capital and growth of reserves, and partly by the character of the bills and other instruments which we hold. I come then to the second point on which the balance-sheet gives indications, that is, the course of profits.

REASON FOR DECREASE IN DEPOSITS.

You will, first of all, see that the total of our reserves and carry forward continues to expand. From the point of view of future profits you cannot have too large reserves. Our position is satisfactory, but I hope to see further improvement in this respect in course of time. Next I come to the deposits. These show a considerable decrease compared with last year. You cannot argue from this that the profits will be less.

There is not available an unlimited supply of money at a rate which will enable you to carry bills at a profit. Beyond a certain point it becomes a question whether it is worth while to increase your deposits. At certain times of the year there is a great deal of competition. The consequence is that on the dearer part of your deposits you make only a very small profit, or even a loss. It is generally possible to increase your deposits if you like to pay the high rate, but your profits will not increase in proportion. On the other hand, the risk you take of loss is increased in a greater degree.

Towards the end of last year there was eager competition for money, both from Berlin and New York. In view of this and of the usual end-of-the-year stringency, we took a cautious view, and did not bid for the more expensive money. I do not think our profits will be at all diminished during the coming year. The point is that a considerable fluctuation in deposits, at a particular date, does not indicate a falling off in the volume of profitable business during the course of the year.

I can conclude my review of the accounts presented to you by expressing my conviction that your company is in a thoroughly sound position, from the point of both security and profits.

I have already alluded to some of the features of the past year; from our point of view the maintenance of the Bank of England rate at 4½ per cent. is the most important. But I should like briefly to allude to an event which will make 1928 a landmark of post-war financial history—namely, the amalgamation of the Bank of England and Treasury note issues under the control of the Bank of England. It is a great safeguard for the future. In this connection we heartily welcome the modifications in the Bank of England weekly return, which will facilitate our endeavours to read the signs of the times.

Sir Sigismund F. Mendl, K.B.E., seconded the motion, and it was carried unanimously.

THE UNION DISCOUNT COMPANY OF LONDON, LIMITED.

SUCCESSFUL RESULTS—INCREASED PROFITS.

TOTAL ASSETS OVER £65,000,000.

The seventy-first ordinary general meeting of the shareholders of the Union Discount Company of London, Limited, was held at Cannon street Hotel, London, on Thursday, January 24th, Mr Robert Holland-Martin, C.B., presiding.

The secretary (Mr W. B. Hobbs) having read the notice convening the meeting and also the auditors' report,

The Chairman said: Ladies and Gentlemen,—Speaking as an Englishman to English men and women, I cannot proceed with the formal business of this meeting without referring to the serious illness from which His Majesty the King is now most happily recovering. It gave his subjects both at home and in the Empire cause for great anxiety; yet that anxiety was greatly tempered by the very real sympathy which all peoples and nations displayed to our King, to his family, and to his subjects. Such sympathy goes far to bind the nations of the earth together, and is a tribute to the universal affection and esteem that our King has justly earned.

TRIBUTE TO LATE MR WILLIAM T. BRAND.

I assume, ladies and gentlemen, that, as usual, it is your pleasure that the report and accounts be taken as read. (Agreed.) Before commencing my remarks on the balance-sheet and profit and loss account of the company I must refer to the great loss that the company sustained this year by the death of Mr William T. Brand.

Mr Brand was the father of the company, for, apart from having joined the board at its inception in 1885, he had previously been connected with the General Credit and Discount Company, from whose amalgamation with the United Discount Corporation resulted the creation of the Union Discount Company.

From the earliest days he always took the greatest interest in the progress of his child, and the continuous success and growth of the company was greatly due to his care and supervision.

In his place we have been fortunate enough to secure the services of Mr Archibald A. Jamieson, of Messrs H. S. Lefevre and Co., whose election comes up for confirmation by you to-day.

BALANCE-SHEET ITEMS.

Turning to the balance-sheet, you will note that our capital has been increased to £1,250,000 by the payment up of the £2 10s per share called in respect of capital on the 50,000 new shares offered last June to the shareholders, and that our reserve fund has also increased by £225,000, the amount of the premium of £4 10s per share at which the new shares were issued; so that our total capital and reserves, including the carry forward—I am supposing that you will approve of our apportionment of the profits to our shareholders and the carry-forward to our new account of £241,607—now amount to no less than £3,241,607, as against £2,873,321 last year, an increase of £368,386.

LOANS AND DEPOSITS.

Our loans and deposits, including our provision for contingencies, amount to £45,875,810, and bills rediscounted to £15,634,655 —a total of £61,510,465, as against £55,356,231.

The rebate on bills discounted is £585,004 this year, as compared with £786,228 last year, a smaller amount because the term of the bills is considerably shorter this year.

PROVIDENT FUND.

The provident fund, no longer a separate item since 1927, is contained in the item "Loans and deposits." It amounts, with the £10,000 we are asking you to vote, to £226,635. I am sure you will all agree that it is only right that a business of our standing should have an adequate pension fund to provide pensions for those who have spent their lives in its service.

PROFIT AND LOSS ACCOUNT.

The balance at the credit of the profit and loss account is £468,586, and, if you will turn to the account, you will see that we brought forward from the previous year £223,221, a sum we wish you to increase this year, and that our gross profits were £909,203. To arrive at our net profits we must deduct the cost of current expenses, which includes salaries, rent and taxes, and directors' fees, £78,834, and rebate of interest £585,004—a total of £663,838. This leaves us with a net profit of £245,365, comparable with £232,816, in 1928.

DIVIDEND AND ALLOCATIONS.

Deducting from this the £10,000, which we ask you to allocate to provident fund, and the £20,000 to write down our premises account, we are left with £215,365. Of this we suggest that you should, having paid a dividend of 15 per cent. on the old shares for the first six months, pay a dividend at the rate of 15 per cent. for the second half-year too, in which dividend the new shares, of course, only participate for the three months in which they were fully paid, though interest at 5 per cent., as stated in the prospectus, is paid on the first instalment to September 30th last, and a bonus at the rate of 2s 6d per share for twelve months on the old capital, and for three months on the new. This means a further £57,812, making a total paid in dividend of £196,979, as against £191,250. This is £18,386—short of the balance of our profits for the year, and we propose that that should be added to the carry forward, making it £241,607.

I think that you will all agree that this shows we have done by no means badly during the past year, and that the result reflects the great skill and assiduity with which Mr Wyse, his assistants, and, indeed, our whole staff, have conducted our business during the past year, which has not been at all an easy one.

ASSETS.

Now let us turn to the credit side of the balance-sheet on December 31st:—

	£
We had in cash with our bankers	1,339,129
As compared with last year	1,328,062
In British Government securities, Indian Government, and other securities, all of the highest class	8,963,231
We had lent on securities at call and short notice and other accounts	123,231
We had discounted bills to the amount of	54,842,540
Compared with	48,908,889
We had owing to us	98,425

And our freehold and leasehold premises, which stood at £178,531 ten years ago, after writing off £20,000 this year, notwithstanding their having been enlarged and greatly improved since we occupied them, now stand at the nominal amount of £100,000. I would add that the leasehold portion is only a slender strip on the west of the building, about the width of the door.

Our total assets, therefore, on December 31st last, amount to £65,466,556, compared with £59,139,431 in 1927, and are the largest figures we have yet shown.

MONEY RATES DURING PAST YEAR.

The steady holding of the rate at 4½ per cent. for the whole year was due to the wise prescience of the Governor of the Bank of England, who proceeded to sell securities, rightly estimating that the circumstances were somewhat artificial, and that the effect of that gold would be dissipated if this country, influenced by the increasing stock of gold, was to continue to make loans to Berlin and New York. The resultant effect was that rates in London remained constant throughout the year, at a medium rate that could not harm trade, and, incidentally, for the first time since the war fell considerably below that of New York. Thus the position of London as the financial centre of the world was well maintained, with the result that the bill on London became greatly sought after—witness the very large increase in acceptances shown by the banks and accepting houses. At the same time, London was enabled to take a very large share in the financing of the world; indeed, it has been estimated that more money was lent abroad by London than by New York.

The report and accounts were unanimously adopted.

MIDLAND RAILWAY COMPANY OF WESTERN AUSTRALIA, LIMITED.

STEADY PROGRESS CONTINUED.

The ordinary general meeting of the Midland Railway Company of Western Australia, Limited, was held, on the 24th instant, at Winchester House, London.

Sir George A. Touche, Bt. (the chairman), said that the record of steady progress which had been a feature of the directors' reports for some years past was continued in the one now submitted. The gross traffic receipts of £216,126 and the net traffic receipts of £126,688 were again the highest in the history of the company, comparing with £206,466 and £122,344 a year ago. Looking back over seven years, they found an increase in gross and net traffic receipts of £85,805 and £86,029 respectively.

The results for the past year would have been even better but for an ill-conceived strike, which lasted for 12 days, in the month of April. The tonnage of goods and live-stock carried was 154,935, as compared with 151,596 in the previous year. As was usual, the general goods traffic was the main factor in the year's operations. Wheat again held pride of place, and represented 42 per cent. of the total goods tonnage. Passenger earnings showed a decrease of £1,266 due to the strike. The percentage of working expenses to gross traffic receipts was 41.38, compared with 40.74 for the previous year.

The revenue amounted to £128,546, comparing with £127,844 in the previous year and £106,926 in 1926. In the past seven years there had been an increase in net revenue of £73,090, or 131.79 per cent. This was not due to some lucky accident and isolated cause. It was the product of steady and continuous growth, and was ripe with the promise of greater growth in times to come. They had transferred £30,000 to depreciation and renewals account, and after provision for taxation and debenture stock interest they had added £25,000 to the general reserve, bringing it up to £75,000, and recommended a dividend of 3 per cent. on the unified ordinary stock (as compared with 2½ per cent. a year ago), which carried with it a proportionate payment of £3,559 in respect of the reversionary certificates, the amount of which outstanding at June 30th was £785,976. Of the first mortgage debenture stock £59,959 was redeemed and cancelled during the year, and the amount outstanding was now £191,620 out of a total issue of £655,000.

The sales of land for the year totalled 70,686 acres, and the amount remaining unsold at the close of the financial year was 742,541 acres, out of an original concession of 3,319,464 acres. The board's policy was to encourage the sale and development of the lands for the benefit alike of the State and the railway.

The report was unanimously adopted.

METROPOLITAN TRUST COMPANY, LIMITED.

INCREASED DIVIDEND AND VALUATION.

MR ROBERT FLEMING'S ANNUAL ADDRESS.

The 31st ordinary general meeting of the Metropolitan Trust Company, Limited, was held, on the 24th instant, at the company's offices, Gresham House, 24 Old Broad street, London E.C., Mr Robert Fleming (the chairman) presiding.

The Secretary (Mr H. Carlisle) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen, some, but no great, progress has been made in the re-establishment of our industrial position during the year. Our heavy industries are still struggling to keep going. In matters purely financial there has been some rise in prices, with boom figures in various speculative lines. On the Continent, Germany is now face to face with the question of Reparations. America, with ample funds except for inflated Stock Exchange purposes, continues prosperous.

HUGE TRANSATLANTIC INVESTMENT TRUST FIGURES.

The year has witnessed a considerable number of new issues of investment trusts. The transatlantic issues have, however, been in much greater volume; no less than a capital approaching £300,000,000 in the shape of investment trusts has been issued in the United States during the past 10 years. This compares with a total issue during the past 50 or 60 years of round £200,000,000 on this side. These enormous figures would seem to indicate that the investment trust has come as a permanent part of the financial fabric not in this country alone.

Our accounts are very simple and they have been in your hands for some time, so that I need not detain you by going over them in detail.

Last year I said that it would be difficult for trust companies to maintain the rate of progress in revenue that they had hitherto enjoyed. It is satisfactory, therefore, to find that we have maintained last year's very good figures and indeed somewhat increased them. Last year our surplus revenue, after paying expenses and the dividend on the preferred stock, was 23.10 per cent. on the ordinary capital stock. This year it is 23.48 per cent., and, as we do not anticipate any reaction from this figure in the year on which we have now entered, we have increased the dividend from 19 per cent. to 19½ per cent.

EFFECT OF REDEMPTIONS.

Last year we had £85,000 of our high interest bearing securities paid off. This year the amount is £81,000. This implies some small reduction in our revenue, as the things we buy do not bear so high a rate as those we have redeemed. The largest items in the redemption list are £21,500 of a debenture issue which we bought at 97⅞, and which were paid off at 105, and £10,000 of another debenture issue which we bought at 89½, and which we have had repaid at par. So that the redemption record is not an unmitigated evil.

The question of the Stock Exchange value of the trust funds—a constantly fluctuating quantity—is not so important to the shareholder as the income they produce, but it is satisfactory to see this also well maintained.

The excess over book cost last year was £675,000; this year, 1928, it is £900,000, being an average increase of 7 per cent. on the whole capital fund.

We have now for seven consecutive years been able to report an increase in the Stock Exchange value of our funds over that of the preceding year. It may easily be that we have reached a point where the trend of value may run in an opposite direction. If this should be the case, we are well buttressed with our reserve fund and carry-forward.

With these few remarks I now beg to move:—

"That the report and accounts, as presented, be and they are hereby received, approved and adopted, and that dividends of £2 5s per cent., less income-tax, on the preferred stock, making with the interim dividend £4 10s per cent. for the year, and £12 10s per cent., less income-tax, on the ordinary stock, making, with the interim dividend, £19 10s per cent. for the year, be and the same are hereby declared."

Mr Harry A. Vernet seconded the resolution, which was carried unanimously.

The retiring director (The Rt. Hon. Viscount St. Davids) was re-elected, and the auditors (Messrs Deloitte, Plender, Griffiths and Co.) having been reappointed for the current year, a vote of thanks to the chairman and directors terminated the proceedings.

BURMA CORPORATION, LIMITED.

SUCCESSFUL YEAR—INCREASED DIVIDEND.

RECORD PRODUCTION FIGURES—STRONG FINANCIAL POSITION.

The annual general meeting of the Burma Corporation, Limited, was held on Monday, December 31st, at 11 o'clock, in the offices of the company in Strand road, Rangoon. Mr P. E. Marmion presided, and was supported by Mr Wm. S. Robinson, Mr M L. Burnet, Mr F. B. Hartnoll, and Mr Henry Ponsford (secretary).

After the secretary had read the notice convening the meeting and the auditors' report to the shareholders,

The Chairman said: My first duty in addressing you to-day is to convey to you the regrets and apologies of your Chairman, Sir Robert Horne, for his unavoidable absence from this meeting.

As you are aware, a very important General Election falls to take place in England in the near future, and in these circumstances you will readily appreciate that Sir Robert found himself in a difficult position, and only deprived himself of the pleasure of addressing you to-day and of visiting the centre of your company's activities at Namtu, because of the impossibility of absenting himself from the United Kingdom at such a time for any considerable period.

My second duty is to ask your indulgence for my shortcomings in the unusual position in which I find myself as a consequence of his absence.

You have no doubt all received the report of the directors and statement of accounts, which we were able to circulate in good time, enabling ample opportunity for study, in which case I presume you will agree to take them as read.

Reviewing the statistics, you will have noted the very difficult times we have had to face and the progress that has again been made in all departments.

THE MINE.

The tonnage extracted from the mine was 429,845, an increase of 17,959 tons over the previous year, coincident with which was a considerable improvement in grade. The assay value of the ore extracted during the year improved from an average of 18.7 ounces silver, 20.8 per cent. lead, and 12.4 per cent. zinc to 21.5 ounces silver, 23.5 per cent. lead, and 14.9 per cent. zinc, which, having regard to the record tonnage mined, I feel sure you will regard with pleasure.

In addressing you last December your Chairman referred to the large amount of repair work that had been carried out and was still in progress in the areas affected by the unfortunate mine fires, and expressed the hope that the mine would be fully restored to a normal working condition by the end of the current year.

I am pleased to state that during the year under review and at the present time ore was, and is, being extracted from all levels in the affected areas, and although there remains a small section of ground at No. 2 level which it is considered judicious to keep sealed for the present, it is not anticipated that there will be any difficulty in gradually making it accessible and available for stoping, as has been done with the rest of the areas.

From the general manager's report you will observe that a remnant of fire was encountered in some old timber buried in ground which had caved—no doubt during the period of the fires—but the arrangements that had been made for an adequate supply of water to all sections of the mine in anticipation of such an occurrence enabled it to be dealt with quickly and effectively without any interruption to the continuity of operations.

After having inspected the whole of the underground workings during the course of the last two weeks, and carefully examined the sections affected by the fire, I am pleased to state that they are now in a thoroughly satisfactory operating condition, and that good ventilation has been re-established everywhere.

Naturally, the ore in some sections is more difficult and costly to extract than it would have been had there been no fires, but, notwithstanding this adverse factor, it will be reassuring to you to know that the cost of extracting ore from the mine during the year under review was actually less by half a rupee per ton than it was in 1924, the last complete year before the fires.

PRODUCTION FIGURES.

The production of refined lead was 72,388 tons, compared with 56,791 tons the previous year, representing the very substantial increase of 15,597 tons, or 27.5 per cent.; and the production of refined silver was 6,954,665 ounces, against 5,108,103, an increase of 1,846,562 ounces, or 36.1 per cent. This production of silver represents almost 3 per cent. of the world's output for the year, and makes your mine easily the largest individual producer.

These highly satisfactory results were due partly to an increase both in tonnage and grade of lead ores treated, and partly to improvements in metallurgical efficiency at the mill and smelter.

Our production for the time being is governed more by the position of the metal markets than by the extent and value of our reserves. Until the position of the former improves, and subject to the continuance of good will and co-operation among the world's leading producers, we do not contemplate any expansion in our output.

The tonnage of zinc concentrates produced increased from 54,287 to 62,195, an improvement of 7,917 tons, or 14.6 per cent. Of the production for 1928, 3,973 tons resulted from the treatment of accumulated tailings, against 9,249 tons from a similar source in 1927. The increase in production from the treatment of current ore during the year was, therefore, greater than the total figure indicates.

The percentage recovery of zinc from current ore improved from 49.06 per cent. to 54.79 per cent., and we look forward in the not distant future to further improvements as a result of some very interesting research work on which our experimental staff has been engaged for a considerable period.

The production of copper matte increased from 12,141 to 12,388 tons through the treatment of 68,385 tons of copper ore of somewhat lower grade than the previous year.

Following the outbreak of the mine fires in 1925, the production of copper matte was increased rather more than the copper ore reserves justified, because the sections of the mine in which copper ore predominates were not affected. Now that the whole of the mine is accessible and ample supplies of lead ore are again available, it is probable that the output of copper matte will be gradually reduced to a tonnage commensurate with the reserve and grade of copper ore in the mine.

During the year under review we were able, by improvements in our smelting practice, to turn out a marketable product of copper nickel speiss, from which a revenue was obtained for the first time, and we look forward to a gradually increasing return from this source in the future.

The number of our marketable products was thus extended, and now comprises refined lead, antimonial lead, silver, zinc concentrates, copper matte, and copper nickel speiss, which will enable you to appreciate that your property in every sense justifies its classification as a mixed-metal mine.

Before finishing with the subject of increased production we would like to express our appreciation of the services rendered by the Burma Railways in providing the facilities necessary for the transport of our largely increased tonnages.

METAL PRICES.

I do not think there is anything further I can usefully add regarding production, and will now pass on to the very important matter of metal prices, with which, in common with other producers, our experience last year was not very pleasant.

A study of the table of metal prices in the directors' report shows very clearly that for our principal product, refined lead, the average price for the year declined from £28 15s 7d per ton to £21 9s 6d per ton, with the result that, notwithstanding an increased production of 27.5 per cent., the revenue from its sale shows only the small increase of 1.4 per cent.

The average price of spelter for the year also declined by £5 10s 8d per ton, since when it temporarily receded still further, but happily has again recovered to above £26 per ton—about the same figure as it averaged for the year under review.

Notwithstanding the decline in the price of spelter, the revenue from sales of zinc concentrates increased by £93,500, due to larger tonnage and the higher grade of concentrate produced—namely, 50 per cent. zinc, as against 46 per cent. the previous year.

Fortunately, the prices for silver and copper remained fairly steady throughout the year, and, as a consequence of the large increase in production, the revenue from the sales of silver exceeded that of the previous year by over £211,000.

REVENUE.

The total revenue from sales of all products exceeded that of the previous year by £255,000, a result due entirely to increased production following the improvement in the grade of ore and greater tonnage mined and the attainment of increased efficiency in the treatment plants.

The effect of the decline in metal prices is, I think, best illustrated by the fact that upon the output for the year under review it represents a loss of revenue, when compared with the average metal prices ruling for the previous year, amounting to no less than £695,000. Translated into profit, this loss of revenue, over which we have absolutely no control, represents a sum equal to nearly 11 annas per share in dividends.

The achievement of the year, whereby the financial results before you surpass those of last year, is really a remarkable one when the great fall in lead and spelter prices is taken into account. I feel sure that you will agree with the board in considering that the greatest credit is due to your general manager, Mr Hogan Taylor, and to all associated with him, for such a satisfactory result obtained under very difficult conditions.

I have endeavoured to show how this increased production was obtained, and I am sure it will interest you to know the proportions in which our revenue was derived from the sale of the various products recovered. For the year under review the proportions expressed in percentage of total revenue were:—

	Per cent.
Refined and antimonial lead	47
Silver	25
Zinc concentrates	17
Copper matte	10
Nickel speiss	1
	100

PROFIT AND LOSS ACCOUNT.

If you will refer to the profit and loss account you will observe that operating expenditure shows an increase of £220,000 over the figure for the previous year. This is practically all accounted for under the headings "Treatment," which shows an increase of £104,000, and "Freight and realisation charges," which exceed those for 1927 by £92,000. In both cases the increase follows upon the extra cost entailed in producing, transporting and realising the greater tonnage of products resulting from the larger tonnage and improved grade of ore mined and treated.

As a result of increased operating profit, the trading account shows a gross profit of £1,248,510, an increase of £44,129 over the previous year

After providing for loss on exchange, depreciation, income-tax and super-tax, the net profit remaining to be carried to the appropriation account is £788,291, against £775,707 for 1927.

Of this amount, dividends Nos. 10 and 11 absorbed £761,720, leaving a balance to be carried forward of £164,000, or £26,571 in excess of the amount brought forward.

DIVIDEND.

In conclusion, the Chairman said: I will now pass on to a matter which, I am sure, is of the greatest interest—that is, the rate of the dividend declared this month by the board.

I have previously called attention to the great strength of the corporation's financial position, and the board, after considering all the circumstances, came to the conclusion that it was now possible to utilise for the benefit of shareholders certain profits hitherto retained in reserve.

If you will turn to the balance-sheet, you will observe that reserve funds and profit and loss appropriation account together amount to Rs.53 lakhs, or about £400,000, representing profits earned but undistributed.

I am sure that your own experience in the fluctuating fortunes of base-metal mines will cause you to realise that it is not possible to foretell accurately what proportion of this sum ultimately will be available for distribution, but after due consideration your board decided that the position to-day warranted part of it being used in the shape of a bonus of one anna per share to supplement the 6 annas dividend declared from profits earned for the half-year ending to-day, making the total distribution 7 annas per share.

This bonus will absorb about Rs.8¾ lakhs, or £65,000, which leaves a considerable sum still available, and I feel sure that the board's decision to utilise these accumulated profits at their discretion for the purpose of equalising or possibly augmenting future dividends, as in the present instance, will commend itself to shareholders.

At what time these funds may be so utilised, and the extent to which it might be prudent to do so, I must ask you to leave to the discretion of the board when they are considering all the circumstances relevant to the declaration of dividends.

In the meanwhile, we believe it will be of considerable advantage to shareholders to know that these funds are available when circumstances permit to reinforce the corporation's ability to pay regular and satisfactory dividends.

I believe I am correct in stating that we alone among all the lead-silver-zinc mines of the world have been able to maintain our rate of dividend from the profits earned during the very depressing year through which we have passed, and I feel sure this highly satisfactory result will be appreciated by shareholders, and that they, like ourselves, will desire to extend their thanks to the general manager and all those associated with him for the great success which has attended their efforts.

I have now much pleasure in moving:—

"That the directors' report and statement of accounts for the year ended June 30, 1928, as submitted at this meeting, be received and adopted, and will call upon Mr Robinson to second the resolution."

Mr Robinson seconded the resolution, which was carried unanimously.

WEEKLY TRAFFIC RETURNS.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended January 19, 1929:—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	8,300	From Revenue	18,098
Interest, &c., on Debt	905	Decreases in Balances	32
Sinking Fund	505		
Sundries	50		
Decrease in Debt	8,370		
	18,130		18,130

The Ordinary revenue for the week amounted to £18,098,000, as compared with £24,854,700 in the corresponding week last year. Property and income-tax was lower at £8,921,000, against £9,478,000, but Super-tax was higher at £2,240,000, against £2,080,000. Customs and Excise brought in £1,310,000 and £7,186,000, against £1,813,000 and £8,030,000 respectively. Ordinary receipts amounted to £91,000, as compared with £4,637,400, while Special receipts were nil against £300. The National Debt was reduced by £8,370,000, as shown below:—

(000's omitted.)

	Sovs	29,000
Total		£1,326,291

Net withdrawals, £1,119,291

Messrs Samuel Montagu and Co. write on January 23rd as follows:—

GOLD.

The Bank of England gold reserve against notes amounted to £154,171,272 on the 16th instant (as compared with £154,284,469 on the previous Wednesday), and represents an increase of £264,957 since April 29, 1925—when an effective gold standard was resumed. The feature of the week has been the resumption of shipments of gold to the United States, although the rate of exchange appears to show little, if any, margin.

About £787,000 bar gold was available in the open market this week and was disposed of as follows:—£359,000 for a destination undisclosed, £298,000 for the United States, £85,000 for India, and £45,000 for the trade.

There was a net efflux of gold of £1,078,579 during the week under review.

The announcement by the Bank of England of a purchase of bar gold was somewhat of a surprise to the market.

The following was the composition of the Indian gold standard reserve on December 31, 1928:—In India, nil; in England: Cash at the Bank of England, £8; gold, £2,152,334; in British Treasury Bills—value as on December 31, 1928, £5,862,737; other British and Dominion Government securities—value as on December 31, 1928, £31,984,921—total, £40,000,000.

SILVER.

The market has been rather more active during the past week. Reselling on China account has been consistent, but buying by the Indian Bazaars was sufficient at first to offset these sales and keep the market steady. With a slackening of the Indian demand, however, and America showing more disposition to offer silver, an easier tone developed and prices again drooped. The quotations fixed to-day, viz., 26 1/16d and 26 1/16d for cash and two months' delivery respectively, are the lowest recorded since September 17, 1928.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 14th instant to mid-day on the 21st instant:—Imports—Netherlands, £11,000; France, £26,063; Canada, £23,868; Mexico, £110,211; other countries, £13,840; total, £184,982. Exports—Germany, £38,300; Egypt, £25,960; China, £16,450; British India, £79,028; other countries, £9,725; total, £169,463.

NOTICES.

Mr W. S. Draper, who has been one of the joint general managers of Lloyds Bank, Limited, since 1918, is retiring at the end of January after 48 years' banking service. Mr F. A. Beane and Mr G. F. Abell, formerly joint general managers, have been appointed chief general managers.

The Midland Bank announces that the night safe service which it introduced into this country some months ago, and has since extended to a considerable number of London and country branches, has been brought into operation at the following additional offices since the beginning of this year:—154 High street, Clapham, London, S.W.4; Drayton Park (153 Holloway road, London, N.7); 118 and 120 High street North, East Ham, London, E.6; Cross Roads, Golders Green, London, N.W.11; 52 Hamilton street, Birkenhead; 18 and 19 Lammas street, Carmarthen; 38 and 40 High street, Dartford; 1 High street, Doncaster; 100 Terminus road, Eastbourne; Union street, Oldham; and 19-25 Minster street, Salisbury.

Westminster Bank, Limited, announce the opening of a new branch at Green lanes, Winchmore Hill.

The Ottoman Bank has opened a branch at Nice, 13 Place Masséna, for the transaction of all classes of banking business.

The National Bank of Australia, Limited, has opened a branch at Tamworth, New South Wales, a sub-branch of Moree branch, New South Wales, at Mungindi, and a Receiving Office at Nembudding, in connection with Wyalkatchem branch, Western Australia; also that the Town Hall Fremantle Agency, of Fremantle branch, Western Australia, has been converted into a sub-branch of Fremantle branch.

The Royal Bank of Canada announce that Mr G. B. Irvine has been appointed assistant manager at the city office, Princes street, London, E.C.

Reports and Notices.

A memorandum dealing at some length with the position and future prospects of American railroads, and giving particulars of earnings, dividends, &c., has been prepared by Harvey, Fisk and Sons, of New York. Copies may be obtained from the London office, 64 Bishopsgate, E.C. 2.

The Marquess of Linlithgow, K.T., has joined the boards of directors of the Bank of Scotland, the Scottish Widows' Fund and Life Assurance Society, and Scottish Agricultural Industries.

Mr. Walter S. Draper, who has held the office of joint general manager of Lloyds Bank, Limited, since 1919, is retiring from that position, to the regret of the directors of the bank, on February 1, 1929, and will join the board of the Charterhouse Investment Trust, Limited, as from that date

Mr Edward C. Grenfell, M.P., has resigned his seat on the board of Indemnity Mutual Marine Assurance Company, Limited.

Mr James Alfred Goudge, C.B.E., has been elected an auditor of the Clerical, Medical, and General Life Assurance Society on behalf of the proprietors.

The directors of the Rio Tinto Company have appointed Mr. G. W. Gray, late chief of the technical staff, and Mr J. G. Macleod, late secretary of the company, to a seat on the board.

The Banca Commerciale Italiana announces the formation of a new American affiliation, the Banca Commerciale Italiana Trust Company of Boston, which opened for business in Boston (Mass) on the 15th inst. The controlling interest in the new institution is held by the "Bancomit Corporation" of New York, which was created some time ago by the Banca Commerciale Italiana of Milan.

Mr J. A. Jefferson, F.I.A. (chairman and general manager of Britannic Assurance Company), and Mr George Aylwen (Messrs J. and A. Scrimgeour) have joined the board of the Midland Trust, Limited, and Mr J. A. Jefferson has been appointed chairman.

At a general meeting of the Life Offices Association held on January 21, 1929, Mr W. A. Workman, general manager of the Legal and General Assurance Society, Limited, was elected chairman, and Mr W. Penman, actuary and life manager of the Atlas Assurance Company, Limited, was elected deputy-chairman.

Arrangements have been completed whereby Messrs Wood, Gundy and Co., Limited, will in future act as the Canadian representatives of the Investment Corporation of Canada, Limited.

Sir Lionel Fletcher, C.B.E., has joined the London board of the Scottish Union and National Insurance Company.

Mr A. T. Wreford has retired from the board of directors of Goode, Durrant, and Co., Limited, as from January 19, 1929.

Sir Walter Lawrence, late chairman of Beeby's Brick Company, Limited, and Mr R. Fell Clark, late of Robt. Ingham Clark and Co., Limited, have joined the board of the British Cement Products and Finance Company, Limited.

GOVERNMENT STOCKS, &c.

ECUADOR 4 PER CENT. SALT BONDS.—The fifteenth amortisation of the above bonds at the offices of the Council of Foreign Bondholders by public tender resulted in the amount to be applied being £6,530 6s 9d. Tenders amounted to £24,858, ranging from £70 9s 9d to £85 per cent. Tenders under £72 7s 6d per cent. were accepted in full, and at that price to about 24 per cent.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek debt from January 1 to November 30, 1928, compared with those for the same period of 1927.

	* Monopolies, Tobacco, Stamps, and Stamped Paper.	Piræus Customs.
	Drachmæ.	Drachmæ.
Gross receipts, November, 1928 ..	17,543,726 00	80,259,892.20
Do do do 1927 ..	24,361,287.30	88,594,029.80
Estimated receipts for eleven months (Law of Control)....	26,491,666.67*	9,808,333.34
Actual receipts for eleven months, 1928	212,465,248.65	807,965,034.00
Actual receipts for eleven months, 1927	184,075 630.80	733,992.820.55

NOTE.—Of the surplus over the estimated receipts from the monopolies, tobacco, stamps and stamped paper, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the external gold loans of 1881 to 1893.

OTTOMAN PUBLIC DEBT.—The Council of Foreign Bondholders are informed that the measures necessary to give effect to the recent Debt Agreement were taken at a joint meeting of the Council of the Ottoman Public Debt and of the Hors Décret Bondholders' Council, held in Paris on January 14th. Funds for payment of the first coupon are available, but the Agreement requires the Turkish Government to issue the necessary instructions before such payment can be made. It was decided to urge the Turkish Government to issue these instructions without further delay.

POLAND.—According to the monthly letter of the Financial Adviser to the Polish Government, imports during November reached the relatively low level of 261.1 million zlotys, while exports rose to 255.1 million zlotys. The deficit of six millions is the smallest since the beginning of the adverse trade balance in April, 1927. During November the Bank of Poland increased its reserves by 21 million zlotys.

BANKS.

BANCO ITALIANO, LIMA.—The Banco Italiano, Lima, is increasing its capital from Peruvian pounds 600,000 to £.P.800.000. The new issue has been underwritten by a syndicate of Peruvian capitalists, with the participation of the Banca Commerciale Italiana, which already holds a controlling interest in the bank. The new shares (nominal £.P.10) are being offered to the present shareholders at the rate of one new share for three old ones, and at the price of £.P.18, the premium of £.P.8 to be passed to the reserve fund, which already amounts to £.P.885,000.

BANK OF ITALY NATIONAL TRUST AND SAVINGS ASSOCIATION.—The statement of the Bank of Italy National Trust and Savings Association of San Francisco, California, at December 31, 1928, shows assets totalling $847,523,509, comprising cash on hand and due from banks, $97,866,375; United States Government bonds and notes, $209,909,949; other bonds and securities, $60,124,111; stock in Federal Reserve bank, $2,850,000; interest accrued and receivable, $4,511,612; loans and discounts, $410,276,641; banking premises and other real estate, $28,075,999; acceptances, $33,575,117; other assets, $333,702. On the liabilities side appears capital, $50,000,000; surplus and undivided profits, $55,756,632; deposits, $698,048,811; dividends unpaid, $4,022,899; circulation, $5,773,250; acceptances, $33,921,915—total, $847,523,509.

BANK OF MONTREAL.—The Bank will issue 59,834 new shares of $100 each of its capital stock at the price of $200 per share to shareholders at record February 9, 1929, in the proportion of one new share for every five shares held, also a further allotment will be made of 999 shares, being the amount necessary to bring the capital of the Bank of Montreal up to $36,000,000. This allotment will be on the same terms, but in the proportion of one new share for every 300 shares held as on February 9, 1929. Fractions accruing to holders will be disposed of under the terms of the Canadian Bank Act, and proceeds remitted to shareholders.

CENTRAL UNION TRUST COMPANY OF NEW YORK.—The condensed statement of condition of the Central Union Trust Company of New York as at December 31, 1928, shows:—

	Dec. 31, 1927.		Dec. 31, 1928.
	$		$
Capital	12,500,000	..	12,500,000
Surplus.....	30,000,000	..	37,500,000
Undivided profits ..	7,645,964·22	..	5,162,371·91
Deposits	311,403,007·46	..	297,398,068·52
Acceptances.....	37,250,319·83	..	46,041,413·09
Total assets.....	402,268,247·33	..	402,084,541·93

The Central Union Trust Company of New York stock is now quoted $1820-1840, as against $1370-1380 at the same time last year.

GOTEBORGS BANK.—After deduction of taxes and applying to writing down on claims the sum of Kr 2,034,605.19, the Aktiebolaget Göteborgs Bank, Gothenburg, report for the year 1928 net profits of Kr 4,488,596.54. Upon adding to the net profits a sum of Kr 2,837,833.99, brought forward from 1927, there is a total sum available of Kr 7,326,430.53, which is placed at the disposal of the shareholders. Proposed that a dividend of Kr 25 per share be declared, or 10 per cent., requiring a sum of Kr 4,375,000, which leaves Kr 2,951,430.53 to be carried forward.

RUBBER OUTPUTS.

In the table below we give the outputs for last five complete years, and monthly outputs for last six months separately of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

MINES.

BRITISH COLUMBIA POWER CORPORATION, LIMITED. — The control of the management of this Canadian public utility company has been transferred from London to Montreal. For the month of November last the total gross earnings reached $1,162,171, as against $1,139,745 for November, 1927, an increase of $22,426, but working expenses dropped from $793,339 to $742,146, a decrease in costs, notwithstanding the higher revenue, of $51,193. Figures for the eleven months to November 30, 1928, show an increase in aggregate net earnings of $43,214.

BWANA M'KUBWA COPPER MINING COMPANY, LIMITED.—A circular issued by the directors dated January 22, 1929, states that, "in view of the very satisfactory development of the N'Kana Mine and the large indicated tonnages of sulphide ore, and also considering the large interest in the N'Kana Concession for which purpose funds would be required to assist in the prospecting, development and eventual equipment of other properties, the board has decided to raise all the necessary funds, and are pleased to be in a position to inform the shareholders of the completion of satisfactory arrangements with Rhodesian Anglo American, Limited. The Rhodesian Anglo American, Limited, is: (*a*) To exercise immediately 935,530 options at 10s, notwithstanding that they only mature on February 28, 1930. (*b*) To exercise immediately the 935,530 options at 15s, arising from (*a*) above, although these do not mature until February 28, 1931. (*c*) To advance to the company up to an amount of £1,250,000 at 1 per cent. over Bank rate with a minimum of 6 per cent., as and when required, for the period ending December 31, 1934, and in consideration of the foregoing the company to grant to Rhodesian Anglo American, Limited, the right, until December 31, 1932, to call the unissued capital not required in respect of the exercise of options or the conversion of debentures. Such call price to be 20s per share (equivalent to a premium of 15s per share). Adequate financing having been provided, and having also completed arrangements for the construction of a railway from N'Dola to N'Kana, the directors are now able to take steps for the bringing of the N'Kana property to the producing stage at the earliest possible date."

DOME MINING CORPORATION, LIMITED.—At an extraordinary general meeting held on Tuesday, special resolutions were passed confirming the reduction of the existing shares from 5s to 2s, and creating an additional 600,000 new shares of 2s each.

HAMPDEN CLONCURRY COPPER MINES, LIMITED.—The liquidator notifies that he has decided to make a second distribution on account of the liquidation of 2s per share upon the whole of the issued capital of the company, payable on Friday, February 8, 1929. A final payment of a few pence per share will be made when the final adjustment of accounts has been completed.

MISCELLANEOUS.

BRAZILIAN TRACTION, LIGHT, AND POWER. — The Board announce that in view of the arrangements for the purchase by the company of the ordinary shares of the City of Santos Improvements Company, Limited, which will involve an expenditure of approximately $14,000,000, and also in view of other essential capital outlay of considerable amount which is required in the near future for the expansion of the businesses of the operating subsidiary companies in Brazil, it has been decided to make an offer to the ordinary shareholders of additional ordinary shares of no par value, being a part of the authorised unissued capital of the company on the basis of one new share for each seven shares held at the price of $40 per share, payable in convenient instalments. This should produce approximately $31,000,000. Holders of preference shares desiring to convert their holdings into ordinary shares in order to take advantage of the right to subscribe will have the opportunity to do so.

COMPANHIA DE MOCAMBIQUE.—The London committee state that the customs receipts for the port of Beira during the month of November, 1928, amounted to £21,937, as compared with £20,707 for the corresponding period of 1927.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday Evening.

Wintry conditions have continued over the United Kingdom during the past week, but a drier spell of late enabled spring work to be resumed, and the ground was in good condition after recent severe frosts. The general outlook appears favourable, and winter crops present a healthy appearance. Offerings of native wheat continue on a small scale, and prices further advanced in sympathy with the general situation. Imported descriptions are also firmer, and in the floating and forward cargo section the course of prices was influenced by higher markets in countries of production. Although offerings were of fair extent, there is no pressure to sell, while evidence of a good business was furnished by the chartering during the week of over 45 vessels from the River Plate to Europe. Australian wheat was also moving more freely both on home and Eastern account, so that the market presents an appearance of stability for the time being. Shipments continue large, with a further increase in floating supplies, especially to non-European destinations. Steamers of Australian shipping or shipped sold 47s 3d, ditto to Calcutta May 43s 9d, February shipment to Karachi 43s 9d, and March to Bombay at 44s, with Rosafe 64 lbs loading 44s 3d to the U.K. Feeding stuffs generally firm, though La Plata maize was

REPORT OF THE AUDITORS.

WE REPORT TO THE SHAREHOLDERS that we have examined the Accounts and verified the Cash in hand and Cheques on other Banks at the Head Office, the London Office and at the principal Branch Offices, the Balances with the Bank of England, Money at Call and Short Notice, and Bills Discounted. We have also verified the Investments of the Bank, and have compared the Balance Sheet in detail with the books at the Head Office, and with the Certified Returns from Branches, and have obtained all the information and explanations we have required. In our opinion, the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company according to the best of our information and the explanations given to us, and as shown by the Books of the Company.

ASHWORTH, MOSLEY & CO., Chartered Accountants, AUDITORS.

MANCHESTER, 10th *January*, 1929.

inclined to sag in view of more favourable Argentine weather reports. A steamer 6,000 tons La Plata June sold at 38s 9d per 480 lbs, c.i.f. terms. Wheat again dearer. No. 2 Northern Manitoba 51s, No. 3 50s, No. 4 Manitoba 48s 6d, No. 5 45s, No. 6 39s, No. 2 mixed Durum 44s 6d, Rosafe 62½ lbs 46s, Barusso 62½ lbs 46s, Australian 49s, all ex-ship, per 496 lbs. English 9s 4d to 9s 8d per 112 lbs. Flour maintained. London standard grade 37s 6d, town whites 38s 6d, patents 39s 6d to 40s 6d per sack delivered in the Home Counties, with 6d to 1s per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 34s to 37s, Minneapolis 34s 6d to 37s, Australian 35s 6d ex-store, per 280 lbs. Maize quiet, but held for steady rates. Plate ex-ship to arrive 43s 9d, ditto landed 45s 3d, January-February 44s, February-March 45s, March-April 42s, new April-May 40s, May-June 39s, No. 2 white flat African landed 44s 6d, No. 2 mixed American ex-ship to arrive 42s 9d per 480 lbs. Yellow maize meal £12 ex-wharf, Hominy chop £9 per ton. Barley firm. Californian ex-ship 42s to 52s, Chilian Chevalier 48s to 58s, Australian 46s to 52s, Smyrna 44s to 50s per 448 lbs. Algerian/Tunisian 34s 9d landed, Canadian feed 32s 3d ex-ship to arrive, 33s 6d landed, No. 3 Canadian Western 36s 3d, No. 2 Federal American 32s ex-ship to arrive, per 400 lbs. English malting 10s to 15s, feed 9s to 10s, per 112 lbs. Oats steady. Plate ex-ship to arrive 25s, January 25s 3d, February 25s 9d, March 26s, black Plate landed 25s 6d, No. 3 white clipped American 36 lbs landed 27s 6d, mixed Canadian feed 22s, Chilian white 33s 3d, German landed 28s 6d, ex-ship to arrive 27s 6d per 320 lbs. English 9s to 10s per 112 lbs. Scotch landed 29s. 9d, Irish black 26s 6d per 336 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928-29 1927-28, 1926-27, 1925-26:—

	1928-1929.	1927-1928.	1926-1927.	1925-1926.

AMERICAN WHEAT MARKETS.

Market conditions have been fairly firm throughout the week, and prices show an improvement. Cold weather persists, and country offerings are on a small scale. Export interest has been variable. Quotations:—

Nearest Future.	Jan. 4, 1928.	Jan. 25, 1928.	Jan 2, 1929.	Jan. 16, 1929.	Jan. 23, 1929.
Winnipeg (No. 1 Manitoba)—Cents per 60 lbs	137	135½	122	125	128½
Chicago (No. 2 Winter)—Cents per 60 lbs	130⅜	129⅝	116⅜	119⅞	124⅜

Visible supplies of wheat in Canada at 79,588,000 bushels show an increase of 1,050,000 bushels as compared with the previous figures. Supplies a year ago stood at 66,346,000 bushels.

COAL.

Our Cardiff correspondent writes:—Except possibly during the few weeks after the resumption of work in 1926, there has not been a period since 1923 when the Cardiff coal market has shown greater strength than it has this week. Contract commitments and extending current inquiries have combined with a plentiful supply of tonnage to provide the collieries with an immediate outlet for their outputs, and for several descriptions of coal there has been an actual shortage of supply for prompt shipment. In these circumstances, market quotations have been increased for nearly all grades of large coal, and therefore, for the time being, the minimum schedule has ceased to have any operative effect. The average increase in price is probably between 3d and 4½d per ton, but for Eastern Valley large coals there has been an improvement of between 6d and 9d per ton, and there has been a similar advance in the quotation for unwashed dry duff coals. The resumption of work at the Nixon's collieries and washeries has eased slightly the market for nuts, peas, and beans, and best Admiralty large coals are unchanged at between 19s 3d and 19s 6d. The improvement is attributed to a general broadening of the foreign demand for South Wales coals. The lowest price tendered for the Egyptian State Railways contract for the supply of 200,000 tons, to be delivered between February and May, is 28s 5¾d, c.i.f. Alexandria, and represents an advance of 1s 4¾d on the price at which the last contract was placed by the Egyptian Railways in the autumn of 1928. The following are the current approximate quotations:—Best Admiralties, 19s 3d to 19s 6d; seconds, 19s to 19s 3d; best drys, 18s 6d to 19s; Western Valleys, 17s 9d to 18s; Black Veins, 18s to 18s 3d; Eastern Valleys, 17s 3d to 17s 9d; best small steams, 13s to 13s 6d; cargo smalls, 11s 9d to 12s 6d; coking smalls, 13s to 13s 6d; best anthracite large, 33s to 35s; Red Vein large, 21s to 25s 6d; machine-made cobbles, 40s to 43s; French nuts, 41s to 43s 6d; stove nuts, 40s to 42s 6d; rubbly culm, 9s to 9s 3d; foundry coke, 25s to 37s; patent fuel, 20s to 21s 6d; pitwood, ex ship, 27s to 27s 6d

Our Glasgow correspondent writes:—The home market maintains considerable activity, so that with outputs restricted very little coal is available for export for about a fortnight ahead. Shipment prices are therefore largely nominal, though they are firm for both round coal and nuts. Lanarkshire prime splints are strong at 17s 6d, owing to scarcity as a result of shaft derangements at several pits. Shipment prices (f.o.b. district ports):—Lanarkshire: Ell best, 16s 6d; splint best, 17s 6d; splint second, 17s; navigation, 17s 6d; navigation second, 15s; steam, 14s; Hartley, 17s; trebles, 15s; doubles, 13s 6d-13s 9d; singles, 13s; pearls, 11s 9d-12s; dross, 10s 6d. Fife: Screened navigation, 18s; first-class steam, 14s; third-class steam, 12s 9d; trebles, 14s 9d-15s 3d; doubles, 14s; singles, 12s 9d-13s; pearls, 11s 6d-11s 9d. Lothians: Prime steam, 13s 6d-14s; secondary steam, 13s 6d; trebles, 15s-15s 6d; doubles, 13s 9d-14s; singles, 12s 9d-13s; pearls, 11s 9d.

Our Sheffield correspondent writes:—A number of contracts for industrial fuels have been settled this week, most of them at an advance of 6d per ton. The quantity of such coal going into consumption, however, is unsatisfactory. Some of the large works are short of orders. Exports absorb the output quotas. The f.o.b. price of best steams remains at about 16s 6d per ton. There is a considerable demand for furnace coke for central heating, which has replaced to some extent gas coke, the production of which is less than formerly. Blast furnace coke is fairly firm at from 13s to 14s 6d at ovens.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Moderately active conditions still rule in the iron and steel markets. A fair proportion of the business which has passed lately has gone to the British works. In the pig-iron department there has been practically no Continental competition, and although the demand for British pig-iron has been of a rather desultory character, some of the foundries report an improvement in business. As it is, the demand has increased sufficiently to enable the producers' prices to become slightly firmer. In the semi-finished department the British works are still taking a considerable share of the orders that come on the market, although Continental material is still bought in fair quantities by users. For the most part, however, the long period for delivery required by Continental works, as well as the comparatively high prices, acts as a handicap to this business. Compared with the situation which existed a few months ago, the business in semi-finished steel which now goes to the Continent from this country has contracted very considerably. In the finished steel department buying by overseas customers has been rather irregular. Prices generally have been maintained, and at the moment there seems little likelihood of any reduction. In the home market the British manufacturers report a fair amount of buying, and although for the most part the orders placed have been on the small side, in the aggregate they have reached a considerable tonnage.

Our Middlesbrough correspondent writes:—There is no change in the position of the pig-iron market. Cleveland iron, however, is getting scarce, and stocks are low, the present make being easily absorbed. The price still remains on the basis of 66s per ton for No. 3 G.M.B., which is firm. No. 1 quality is 68s 6d, No. 4 Foundry 65s, and No. 4 Forge 64s 6d. The Hematite market is rather better, and there has been a further improvement in sales and inquiries. The price still remains at 71s for Mixed Numbers, with stocks practically nil. The recent improvement in steel is being maintained, and local works are better off for orders than they have been for some time. The recent rise in Continental prices is making it very difficult for them to compete, with the result that orders are being placed with home manufacturers. Shipbuilding is more active and practically all materials have been bought in the home market, the local works getting their share. The market is at the moment very firm, and so far no alteration has been made in the standard prices, which are as follows:—Steel ship plates £8 7s 6d, iron ship plates £7 17s 6d, steel rails £8 10s, iron bars £10 5s.—Ore—Best Rubio is firm at 22s 6d, to 17s 9d per ton, delivered furnaces.

Our Sheffield correspondent writes:—There are symptoms of improving trade, but disappointment is felt at the poor amount of work being booked in some of the heavy steel branches. Trade is consequently very patchy, and optimism is not universal. The lack of orders for railway wagons and the extremely restricted buying by the railway companies and the collieries, are responsible for a good deal of slackness. Demand for steel from engineering certainly expands, but progress is extremely slow. The outlook for shipbuilding steel is considerably brighter. The improved conditions in other iron and steel centres will react on Sheffield later, and there is confidence in a steady expansion of work over the coming months of the year. One ground for optimism is the bareness of stocks in the hands of consumers of steel. Demand for special steels is being maintained at a high level.

Good trade is being done in steel for automobiles, cold worked steels, wire rods, and drop stamping. Makers of best tool steels report demand as moderate, and a greater turnover than last year is anticipated. Basic steel scrap is a strong market, but the call for other descriptions of scrap is poor. Bookings of orders for pig-iron continue on the small side. There is severe depression at the light iron foundries and the building trade is generally quiet. Demand for bar iron is better than it was a year ago.

Our Glasgow correspondent writes:—In the pig-iron market there is a little more activity this week, although parcels are still confined to comparatively small lots. At the steel works business continues to improve, and fair orders for shipbuilding material are being booked. There is still only a small demand for bar iron, but makers of re-rolled steel bars are better employed, and are finding the competition from the Continent less keen, as the margin between home and continental prices is now very narrow. Tube makers are fully employed. Galvanised sheet makers, although at the moment not booking quite so many orders as at the end of the year, have well-filled order books, and are assured of continuous work for some months to come. Black sheet makers report an increased demand, and these plants also are running at utmost capacity with plenty of work on hand. Prices remain firm in all branches and in some cases have slightly advanced.

Our Cardiff correspondent writes:—Steady conditions are reported in the tinplate market. There has been no variation in prices, but there is increased activity in the local steel works. It has been decided to continue the application of the provisions of the tinplate output restriction scheme for the quarter beginning February 24th next. Shipments of tinplates last week were lower than in the previous week, and stocks have consequently increased from 238,478 boxes to 269,969 boxes, which compares with 197,352 boxes in the corresponding week last year.

OTHER METALS.

Tin.—The market for tin displayed a good deal of irregularity in sympathy with fluctuating Eastern advices and a slow trade demand. Lately, however, sellers were more reserved, and initial declines were mostly recovered. Stocks in London and Liverpool warehouses for week ending January 19th amounted to 7,486 tons, compared with 2,240 tons at corresponding period last year. Standard cash changed hands at £222 10s, £223 and £221 17s 6d, three months £222 to £221 5s and £221 17s 6d. Sales in the East were reported at £225 5s to £224 5s per ton, c.i.f. terms.

Copper market firmer, and a good inquiry was reservedly met. Standard cash sold £75 7s 6d to £76 6s 3d, three months £73 12s 6d to £74 5s and £74 7s 6d.

Lead irregular, with dealings on a fair scale, offerings being adequate for requirements. Good soft foreign pig, January, sold £22 3s 9d to £22 1s 3d and £22 3s 9d, March £22 3s 9d to £22 6s 3d and £22 3s 9d, April £22 5s to £22 8s 9d and £22 6s 3d, May £22 6s 3d to £22 7s 6d.

Spelter easier on freer offers, closing firmer, however. January sold £25 15s, February £26 1s 3d to £25 13s 9d, March £26 to £25 15s and £26 1s 3d, April £26 1s 3d to £25 13s 9d and £26 3s 9d, May £26 1s 3d to £25 13s 9d and £26 2s 6d.

Antimony quiet. English regulus £54 to £55, foreign ditto, spot, £37 10s, shipment £33 10s, c.i.f. terms

Aluminium steady. Ingots and bars for home delivery £95 ton.

Wolfram quiet. Straits also Chinese 19s 6d to 20s per unit, c.i.f.

Quicksilver.—Spot quoted £22 5s to £22 10s per bottle.

Tin Plates steady. I.C. coke, prompt and forward, 18s to 18s 3d per box, f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, Jan. 23, 1929.

Spot sales for the week 17th to 23rd (inclusive) are 31,000 bales, of which 18,000 bales are American, 250 Brazil, 1,200 Argentine, 7,000 Peru, 2,800 Egyptian, 1,150 African, 380 East Indian, and 220 sundries. Imports for the same period are 101,078 bales, of which 68,697 are American, 5,167 Brazil, 1,889 Argentine, 2,195 Peru, 14,450 Egyptian, 8,391 East Indian, and 289 sundries. Quotations to-day are:—American middling, 10.54; Egyptian Sakel, 19.15; Uppers, 12.37; Brazil fair, 10.89; Peru G.F. mod.-rough, 12.75; G.F. smooth, 11.64; West African middling, 10.64; and East African G.F., 12.10. The market continues quiet. The ginning figures to January 15th were published to-day, and proved to be 13,892,000, slightly larger than generally expected, with a resultant decline of some 10 points.

MANCHESTER, Jan. 23, 1929.

Prices in the market during the past week have shown practically no change. There is rather remarkable steadiness in raw material rates, and trading in futures is decidedly narrow. The conditions, therefore, are favourable for business in manufactured goods. The feature of interest in the cloth section has been the continuance of the more active demand for China. Encouraging advices have again been received relating to clearances in Shanghai and replacement buying on this side, especially in white shirtings, has been on a freer scale. According to cables from India, dealers in Calcutta have extended the embargo upon the imports of white goods to the months of September and October. Offers generally for India remain disappointing. A useful trade has been done for several minor outlets, especially South America. There has been only limited activity in the yarn market. Home users and exporters are still inclined to purchase from hand to mouth.

THE WOOL TRADE.

Our Bradford correspondent, writing on Wednesday, says:—The market generally presents no new feature, and although the tone remains good there is an absence of real activity. In the raw material section the feature continues to be the spirited foreign competition, and cabled reports from Sydney this week refer to the activity of Japanese buyers, who, it is stated, are completely dominating the market for merino fleece. In New Zealand, Bradford, Continental, and American buyers are operating freely, while in South Africa German competition is very strong. It would seem, therefore, that prices are likely to be maintained, notwithstanding the poor state of trade in the West Riding. No doubt continued firmness in the raw material markets will influence spinners and manufacturers, though at present few show any disposition to do more than cover current requirements in tops and yarns. Their main difficulty is that they cannot make anything like replacement costs based on to-day's price of wool, and in the keen competition to obtain orders to keep machinery employed prices are cut almost regardless of the cost of production. Topmakers, taking their cue from the raw material position, are unwilling to make further concessions in quotations; indeed, the majority are adopting a firmer attitude in discussing new business, as they cannot see much possibility of wool being materially cheaper in the near future. Yarn quotations, however, remain irregular and in buyers' favour, especially in cases where particulars can be given. The home demand for piece-goods is still very restricted, and at the moment the export markets appear to offer most scope for development, though here, also, the price question is very important in booking bulk business.

COLONIAL WOOL.

(from a correspondent.)

The revision in values which has taken place since the opening of the sales was not widely anticipated. Both home and Continental buyers are unitedly of opinion that if any real good is to be done with the wool purchased during the rest of the current season it will have to be at reasonable prices, and they are recognising that there is not likely to be any shortage. At the same time, values are still on a quite healthy basis, though only the finest qualities of greasy merino wool are selling on a parity with the December sales. Generally speaking, there is a depreciation of 1d per lb clean scoured. This means that a fair amount of wool is being picked up on a basis of 4s for warp 64's tops. This is quite as much as can be realised in Bradford. In merinos speculators' lots have not sold very well, the strongest and broadest competition being for the direct offerings. Though there has been Bradford competition for greasy crossbreds, the bulk of the finer offerings of this description have been taken by the Continent. The arrival of direct imports from New Zealand has naturally helped to steady prices in Coleman Street, though even at the present prices Bradford is not prepared to force the pace. Crossbred wool is still costing more than can be realised in the top. Cable information from Australia and New Zealand indicates firm values, and though manufacturing conditions in Bradford do not encourage local users very much, it is obvious that they will be compelled very largely to follow the pace set by their competitors.

THE TIMBER TRADE.

(from our own correspondent.)

After a decline last year of 1,420,900 loads (of 50 cubic feet) of sawn timber for building and general purposes, compared with the large imports in 1927, the timber market started this year with only moderate stocks. Consumption has been more active this month after dull December trade, and this activity is likely to become more pronounced week by week. The building trade also is showing more life, both as regards housing and general business work, so that timber merchants are not threatened with such anxious times as at this time last year when stocks were so depressingly heavy. Planed and dressed woods are in large supply at present rates of call, but as winter ends the brighter weather will give encouragement for the speeding-up of housing, in which floorings and shelvings form no small part of the woodwork.

Whilst the spot market is proceeding steadily and hopefully, forward business is quiet, importers and others interested awaiting the publication of the stock lists, and especially the prices of the

Russian f.o.w. and early after shipments. The Russian cut for the United Kingdom, as is now generally well known, has been acquired by a syndicate of United Kingdom importing firms, all of whom are of high repute. The deal, involving from £9 to £10 millions sterling, is for some 500,000 standards (of 165 cubic feet) of red and white wood, its object being to prevent wide price fluctuations during the course of the year, which in the past have been a source of danger to the trade. The 1929 shipments will be offered on equal terms to all importers, whether in the syndicate or not, at prices which are moderate compared with those of the exports of other countries. Another significant item of deep interest to soft timber merchants and consumers here is that the Polish-German timber agreement, by which Germany will purchase Polish timber to the value of £500,000, has been renewed. This means that our timber imports from Poland this year will be somewhere near those of last, 270,000 loads instead of, as in 1927, 804,200 loads. This should relieve our spot market, which is usually favoured with too much imported wood, rather than too little, in these times of European over-production of timber.

The hardwood trade is proceeding quietly but progressively. The hard and fancy woods, timber "luxuries" for the cabinet and decorative trades, are in only moderate supply, and spot prices are firm, although with mahogany c.i.f. values are not up to shippers' ideas. In the popular woods from America, although trade is usually described as slow, the fact that 652,000 more cubic feet were imported from the States last year compared with 1927, and that stocks cannot be much, if at all, larger than at this time last year, gives the impression that, in spite of the greater use of plywood to-day, good business is being done in States lumber. Probably the quietness generally is due to the increasing number of hands in the trade. At least one company of timber merchants in the States is giving at present no small attention and publicity to the good qualities of some British Empire woods—notably African bubinga and Australian lacewood, for veneers—which shows that good, serviceable timbers have no nationality, even in the country that produces the largest quantities for domestic and export consumption.

HIDE, LEATHER, AND ALLIED TRADES.

Trading conditions remain quiet all round, and little improvement can be expected until prices of raw material and leather become more stabilised. Tanners are still reducing input of hides, in view of the poor demand for leather, but seem unable to prevent a decline in value of their productions. Fractional declines have been again reported in most home hide markets, and best ox hides are now selling from 7¾d to 8d per lb—a severe fall as compared with a year ago. Calfskins are also weaker, and sheepskins inclined to sell at less money. There has been a further pronounced drop in the oversea hide market, and all classes share the decline. Argentine ox in spite of their good condition are quoted lower, and fregorific ox are offering at 10¾d, with few buyers interested even at this low figure. One satisfactory sign was the sale last week of 16,695 Leibig Paraguay ox at Antwerp. Prices ruled low, 9¾d being accepted for heavy ox, but as the entire lot was bought, taniers must have some faith in the future. All other classes of dry hides are relatively weaker, with tanners abstaining from buying as far as possible. Latest cables from Chicago report a steady position, best heavy packed steers still selling at 19 cents, with other classes mostly a half cent down.

As above stated, the demand for sole leather is quiet, and tanners are perforce accepting lower prices for all classes of bends and offal. Repairing bends are still the best sellers, light dry hide bends still hanging fire, even at the lower prices now quoted. Little business has been transacted at Manchester Shoe and Leather Exhibition this week, as buyers seem to have no confidence in the market position.

Trade remains slow for most classes of upper leather, although in some directions there is a slight improvement. The demand for kip upper leather is poor owing to industrial depression, but box and willow calf are wanted in the medium and cheap goods for spring footwear. Patent is slow, and a Continental cut in price has rather upset the market. Glacé in black and brown continues to sell, whilst there is a spasmodic demand for lighter shades for women's summer shoes.

VEGETABLE OILS AND OILSEEDS.

Markets have continued fairly active, and a moderate volume of business has been done. Linseed oil has been in fair demand by consumers, and is steady around £28 5s per ton naked ex mill for prompt and January-April delivery. Cotton oils are quiet and somewhat easier, crude Egyptian offering at £28 10s and common edible at £32 prompt and January-February. Other seed oils are in fair demand, but values are unchanged except for rape oil, which is a shade dearer.

In the oilseed section, Plate linseed in near positions has been in some demand by crushers, and £16 2s 6d has been paid for seed on passage to Hull and £16 for January clearance. As the scarcity near at hand is now relieved by the large quantity on passage, the premium over shipment is gradually disappearing, and easier prices are looked for. The quantity afloat for Europe has now increased to 219,000 tons, or 28,400 tons more than last week, comparing with 197,600 tons a year ago. Cottonseed has been active, and for black Egyptian on passage to Hull £10 12s 6d has been conceded, with £10 8s 9d paid for February and March loading. Sova beans are in some demand, and £11 11s 3d has been accepted for January shipment. Oilcakes are in improved demand, and in some instances are dearer.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—There is no material change in the general situation, a moderate demand being dealt with for spot goods at previous rates. Continental granulated slow of sale. Dutch "J," prompt, 12s; November-December, 12s 1½d, f.o.b., Rotterdam; Czecho, January-March, 12s; April-August, 12s 1½d; November-December, 12s, f.o.b., Hamburg. Foreign centrifugals, 96 per cent., January-February, quoted 9s 7½d, c.i.f., U.K. Terminals steady, with a moderate trade passing. Of raws, February sold at 9s 0¾d; March, 9s 0¾d; also May, sold 12s 5½d; August, 12s 7½d, sellers; December quoted 12s 9¾d per cwt. Cuban receipts for past week 193,583 tons, against 30,026 at corresponding period last year; exports, 64,390, against 28,140; stocks, 287,606, against 132,382. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending January 19th amounted to 147,413 tons, as against 94,071 last year.

TEA.—Quantity of Indian offered during the week amounted to 60,500 packages. General tone of the room was by no means robust, in fact, medium and commoner teas were only saleable at a reduction disclosed slight irregularity, but showed no essential change on balance with some attractive invoices from the Dooars district, possessing cold weather flavour fetching firm rates while eagerly competed for. Ceylon auctions totalled 21,530 packages, which came to a more active market than obtained last week. Finest descriptions and where quality was maintained, fetched steady rates. Medium kinds were in comparatively liberal supply, and manifested slight irregular, while palin liquoring brokens, also unattractive with fair competition, and market generally steady.

COCOA.—Spot quiet. Accra F/F, afloat, sold, 39s 6d; January-March, 39s to 40s; February-April, sellers, 41s, and March-May, 41s 6d, f.o.b. Terminal showed fair animation. February, sold, to 47s 3d; July, 47s 6d to 47s 10½d; September, 48s to 48s 3d and 48s 4½d; December, 47s 9d.

COFFEE.—There is a good steady spot demand at full rates, while East Indian qualities are distinctly in sellers favour. Good bold, sold, 149s 6d. Kenya, ditto, 146s; Costa Rican, 150s.

RICE dull, and quite featureless. Beans: Madagascar quiet and tendency easier, especially for distant positions Steamers afloat, sellers, 33s 6d; December-January, 33s 6d; January-March, 33s. Peas quiet, but steadily held. Japanese, afloat, 19s 6d to 20s 6d, as to position; December-January, 19s 3d; January-February, 18s 10½d; February-March, 18s 7½d, paid and buyers, per cwt.

"Achievement is but another milestone along the highway of progress—the end of the journey lies ever beyond."

THE CHATWOOD TRADITION.

CONTENTMENT

Development does not admit of Contentment.

Contentment with the success of yesterday will develop failure to-morrow.

The Chatwood Security is the result of the development of ideas and a persistent refusal to acknowledge contentment.

The tradition of the firm indicates its policy and the confidence of the banker to whom it renders service is reflected in the great growth of the firm.

THE CHATWOOD SECURITY

THE CHATWOOD SAFE Co., Ltd., Bankers' Engineers. SHREWSBURY, ENGLAND.

SPICE.—Pepper market irregular. Black Lampong, spot, 1s 5¾d; October-December, 1s 4⅝d; January-March, 1s 4½d; white Muntok, 2s 3d; October-December, 2s 3¼d to 2s 3d; January-March, 2s 1⅝d; March-May, 2s 2⅝d to 2s 1⅞d per lb. London stocks reduced 49 tons on the week. Tellicherry, January-March, sellers, 147s; Aleppy, ditto, 145s cwt. Zanzibar cloves steady. Spot, 1s 5¾d; December-February, 1s 5¾d lb. Tapioca steady, quiet. Singapore flake, to Havre, January-February, sellers, 20s. Sago flour dull. Sarawak to U.K., January-March, sellers, 11s 9d; April-May, 12s per cwt.

FRUIT (Dried).— Currants: Market remained steady but quiet. Pyrgos quoted 46s 9d; Patras, 48s; choice up to 53s; Amalias, 47s 6d to 48s; Gulf, 50s to 54s; Vostizza, 52s to 60s. Sultanas maintained. Medium to good Smyrna, spot, 41s to 55s; Cretan, 45s to 70s; Greek, 34s to 65s; Australian in large supply, and range from 31s to 50s; Californian, soda bleached, 35s to 47s; unbleached, 29s; Cape unbleached, 33s to 37s; bleached, 45s to 50s. Raisins: Slow of sale. Valencia quarter boxes, 50s to 55s; Australian, 32s to 36s; Capes dull at 33s to 36s. Figs steady. Genuine new, spot, 30s to 32s; layers, 60s to 65s; pulled, 60s to 70s. Dates in fair demand. The quality of recent arrivals is not maintained. Hallowie, new, spot, 28s to 30s; Khadrowie, 23s; Siar, 15s to 17s. Evaporated fruits: The general position is unaltered and spot trade continues disappointing, while pears and apple-rings are difficult to vend. Californian plums 20-30's, 65s; 30-40's, 57s; 60-70's, 45s 6d. Australian pears range from 60s to 70s, as to quality. Apricots, Royal, 72s 6d to 115s; Cape, 65s to 77s 6d; Californian, new, 90s to 117s 6d. Peaches, Californian, choice, 50s; extra choice, 55s; fancy, 60s. Apples, Californian, spot, sliced, extra choice, 67s 6d. Almonds met a steady demand at full rates. Mazagan, 145s; Mogador, 142s 6d; Majorcas, 152s 6d to 167s 6d; bitter, Jordan, 175s to 210s cwt.

CANNED GOODS.

CANNED FRUITS.—The market shows rather more activity, and a fair business resulted in most descriptions at fully steady prices. The forward position remains firm, and packers adopt a reserved attitude, with peaches showing a tendency to harden. Australian fruits are being steadily absorbed and stocks considerably reduced.

CANNED FISH.—Sardines steady, but business somewhat restricted by small offerings of best grades. Portuguese clubs quoted 5s per dozen tins. Lobsters slow. Best halves, 140s to 145s; and quarters, 77s 6d to 82s 6d. Salmon in better demand on spot, and forward position strong. Halves scarce, and realise 78s to 82s 6d; pink also met an improved demand. Talls, spot, 26s to 27s; halves, 30s to 32s 6d. Japanese crab steady for finest quality at 92s 6d to 95s.

CANNED MEATS move off slowly, but tongues firm, and cooked boneless hams also realise full rates.

CONDENSED MILK AND MILK POWDERS. — Market remained quiet. Full cream sweetened, English, spot, 45s; Dutch, ditto, 38s 6d; January-March, 38s 6d. Machine-skimmed sweetened, English, spot, 27s; Dutch, ditto, 23s 6d; January-March, 23s 6d, all in 5 cwt barrels. Powders: Spray F.C., 26 per cent., 2 by 56 lb tins, crated, prompt, 96s; M.S. (1 cwt cases) prompt, 41s. Roller process, F.C., 26 per cent., prompt, 79s; M.S., ditto, 31s 6d, all net, duty paid, ex-wharf London. On the grocery side F.C.S., 21s; M.S.S., 10s 3d, basis per case, usual packing.

For Life Assurance.

AMP

The Australian Mutual Provident Society is mutual. That is to say, all divisible Surplus, without deduction, belongs to the Policy-holders themselves and is distributed yearly. Moreover, the Society, established in 1849, has been for many years the largest and most prosperous British Mutual Life Office. Why is this? Because it offers to Assurers the Acme of Security and Profit, and because its satisfied members are its best advertisement. Why are policies with the A.M.P. Society so profitable? Because while its premium rates are below the average, it possesses in a unique degree the combination of a low expense rate, a high interest return and a favourable mortality experience. The A.M.P. Society should be covering you. You will be sent full particulars on application.

EVERY YEAR A BONUS YEAR.

Assets: £70,000,000. Annual Income: £10,000,000

New Business for 1927: £15,397,528.

Cash Surplus for One Year (1927): £2,895,454.

ROBERT THODEY, F.I.A., Manager for the United Kingdom.

AUSTRALIAN MUTUAL PROVIDENT SOCIETY

Established in Australia, 1849.

LONDON OFFICE: 73-76, King William St., E.C.4.

HONEY.—Market continues firm but quiet. New Zealand, dark amber, 50s to 55s; medium, 55s to 65s; light, 65s to 85s; whites and water whites, 65s to 87s 6d; Jamaica, 42s 6d to 55s; San Domingo, 42s 6d to 48s 6d; pale set Siberian, 41s 6d per cwt.

RUBBER.

Market firmer with a fair demand. Plantation standard sheet, spot to February, sold, 10⅞d; March, 10⅞d; April-June, 11d to 11⅛d; July-September, 11¼d; October-December, 11¼d per lb. London stocks increased by 531 tons on the week at 23,547, against 64,450 last year. Landings, 2,039; deliveries, 1,508. Liverpool stocks reduced 15 tons at 3,505.

GENERAL.

JUTE.—Market firmer. Firsts to Continent, January-February, sellers, £34 12s 6d; February-March, sold, £35 2s 6d; March-April, quoted, £35 10s; lightnings, February-March, buyers, £33 per ton. Hessians and twills unaltered.

HEMP.—Manila dull, but steady. J 2, February-April, sellers, £39; K, March-May, sold, £37; L 1, February-April, £36 10s; L 2, £31; M 1, £31 10s; M 2, £28 5s. African sisal No. 1, good marks, January-March, sellers, £44; ditto No. 2, £41 10s per ton. Manila receipts last week totalled 26,000 bales, against 32,000 at same time last week; estimate for next week, 32,000, and following week, 32,000.

SHELLAC.—Firmer. Fair T.N., spot, 192s 6d; March, buyers, 186s; May, 185s per cwt.

COPRA.—Dull and featureless. Straits, S.D., February-March, to Rotterdam, sellers, £24 17s 6d; March-April, £25; Ceylon, February-March, £25 15s. Palm kernels steady. January-February, to Hamburg, quoted £20 1s 3d per ton.

MISCELLANEOUS.—Coconuts quoted 18s to 24s per 100. Coir yarn, Ceylon, £18 5s to £39 10s; Cochin, £23 to £40 10s; Ceylon bristle, £19 to £25; cinnamon leaf oil, 5¼d; citronella, Ceylon, 1s 9d; Java, 2s.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE MIDLAND BANK LIMITED

In accordance with the provisions of Sub-section 2 of Section 113 of the Companies (Consolidation) Act, 1908, we report as follows:—

We have examined the above Balance Sheet in detail with the Books at Head Office and with the certified Returns from the Branches. We have satisfied ourselves as to the correctness of the Coin, Gold Bullion, Bank Notes and Balances with the Bank of England, Balances with, and Cheques in course of Collection on other Banks in Great Britain and Ireland and Bills Discounted, and have verified the correctness of the Money at Call and Short Notice. We have also verified the Securities representing the Investments of the Bank, and having obtained all the information and explanations we have required, we are of opinion that such Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs according to the best of our information and the explanations given to us and as shown by the books of the Company.

BRITISH CONTROLLED OILFIELDS, LIMITED

(Incorporated under the Laws of the Dominion of Canada.)

ANNUAL REPORT OF THE DIRECTORS which was submitted at the Special General Meeting held in Montreal, at 12 noon on Wednesday, 23rd January, 1929.

To the Shareholders of British Controlled Oilfields, Ltd.

The Directors beg to submit the Balance Sheet as at 31st July, 1928, and Profit and Loss Account for the year ending on that date.

The Profit and Loss Account shows a gross profit for the year of £405,280, from which has been written off £126,445, the whole of the development expenses on the El Mene field, £20,665 expended during the year in exploratory boring outside El Mene, and £88,699 depreciation on Machinery and Plant, leaving a net profit of £169,472.

VENEZUELA.—WESTERN AREA—BUCHIVACOA.

The production was 2,141,266 barrels of oil. The oil from El Mene continues to be of the uniform high quality to which reference was made in the last Annual Report.

The production was sold under contracts made in 1923 and 1924, at prices dependent upon the world price of oil. On more than one occasion Shareholders have been reminded that a continuance of the low prices for petroleum and its products due to over-production must affect this Company in common with all other producers. The Accounts now submitted show that our receipts from the sale of oil have fallen during the year to the extent of £147,000. On the other hand, the policy of economical working and the improved methods of production, upon which the Board had based its programme, have effected a reduction of £80,000 in expenditure.

This reduction in working costs has been brought about despite the fact that an intensive campaign of geological investigation has been in progress, while a considerable amount of exploratory boring has been undertaken, necessitating, in addition to the expense of drilling, the construction of roads in difficult country.

Modern Production Methods at El Mene.—The plans for production at El Mene other than from flowing wells include the provision of an absorption plant for the recovery of light products from the gas and the utilisation of the stripped gas for "gas lift" and the repressuring of the oil sands. The completion of the whole scheme has been delayed to some extent by an unusually wet season, but the plant is of such a type that advantages are obtained from each unit as installed. The adoption of "gas lift" has already considerably increased the output from old pumping wells and at the present time 40 per cent. of El Mene production is being obtained by this means. The increased revenue arising from the recovery of light products will be a considerable factor in the receipts for the coming year.

Deep Drilling at El Mene.—With a view to the better selection of sites for deep wells at El Mene, it was considered desirable to correlate the geological knowledge derived from the work hitherto done and such new wells as have been drilled on the field have been "cored" for practically their whole depth in order to supplement this information. The irregularity of the strata, however, is such that little guidance seems to be obtainable from a correlation of the results secured at shallow depths.

One deep well is now being bored at El Mene and at the present time has reached a depth of 2,350 feet. The formation through which the well is passing is very difficult to drill and only slow progress can be made, but some favourable indications have been found in strata older than any previously worked on this field.

Sites have been selected for two other deep tests and special drilling plant provided. It is intended to carry these wells to the maximum depth that mechanical conditions will permit.

Exploratory Wells in Outside Districts.—As indicated in Progress Reports Nos. 2 and 3, exploration work is being vigorously carried on in the Western Area of the Buchivacoa Concession outside the limits of the El Mene field. Fifteen outside test wells have been or are being drilled. Although many shows of oil have been met with in the course of this work, commercial production has not so far been obtained in any of the completed wells.

The geological staff concentrated in one direction upon tracing the connection between the oil-bearing field of El Mene and the Hombre Pintado producing zone of the Central Area, ten miles to the east. Favourable geological indications were reinforced by the discovery of two distinct oil seepages. Six wells have been commenced in this district during the year. In three work has been stopped and drilling is proceeding in the others. The examination of this region, which is of considerable extent, is still in progress and will be supplemented by further test drilling.

Three exploratory wells have been sunk to the north-east of El Mene. Heavy gas was encountered in two of them, and this gas is being utilised, but, although oil was found, it was not in commercial quantities.

Six other wells in outlying districts were begun during the year, one of which is now upwards of 5,000 feet in depth and drilling continues.

An area considered by the geologists to be of great interest has been located to the south of El Mene. This tract of country is 37 kilometres from the El Mene field, and considerable time and expense have been involved in constructing a road to it. Drilling will commence shortly on two locations in this district.

The so-called Northern Plains, 200 square miles in extent, lying between the El Mene field and the sea, are now being examined.

Investigation of a possible extension of the El Mene field both westward and eastward is being continued, and will be followed by test drilling. Some success has already been met with.

Geophysical Methods.—Considerable advance has been made of late in the utilisation of geophysical methods as an adjunct to those of geological research in the quest for petroleum. In districts covered with alluvium, such as the Northern Plains above mentioned and the Orinoco Delta, geophysical methods are peculiarly suitable. The Directors, fully realising the importance of this branch of geological practice, have decided to build up a geophysical staff. In the meantime, Mr. J. G. Templeton, with experts and a number of our own men, is engaged in a survey by torsion balance of the Northern Plains and will subsequently commence a survey of the Orinoco Delta.

CENTRAL AREA—BUCHIVACOA.

During the year the Company's interest in this part of the Buchivacoa Concession has been increased by the purchase upon favourable terms of shares in the Anglo-Venezuelan Oil Trust, Ltd., the undertaking controlling the Central Area Exploitation Co. (Venezuela) Ltd. This operating company has drilled five wells during the year and the production now obtained is being sold to British Controlled Oilfields Ltd. which has laid a pipeline for its reception.

EASTERN AREA—BUCHIVACOA.

Active operations have been continued during the past year. Examinations have been conducted by geological and geophysical staffs and drilling is proceeding in accordance with the royalty agreement referred to in the last Annual Report.

ORINOCO DELTA.

The plans for the exploration of the Company's concessions in the Orinoco Delta have been modified in consequence of the formation of the geophysical staff mentioned above. On completion of the examination of the Northern Plains of Buchivacoa, the geophysical staff will be transferred to the Delta, where arrangements for housing and transport are now being made.

TRINIDAD.

During the year ending July 31st, 1928, the production from our Trinidad properties (including those of the Trinidad Petroleum Development Co. Ltd.) amounted to 210,168 barrels, compared with 59,349 barrels in the previous twelve months.

The output since July 31st has been even more satisfactory, and is as follows:—

August	30,934 barrels.	October	51,682 barrels.
September	21,812 ,,	November	74,560 ,,

Throughout the year steady progress has been made with the opening up of the Company's Palo Seco field, which continues to produce in increasing quantity petroleum of the highest grade. Since the close of the financial year, a gratifying development has taken place on one of our Government plots somewhat to the south of the Palo Seco district proper, where on October 15th, a high pressure well was brought in which, after a large initial production, is now flowing at the rate of 1,000 barrels per day. The petroleum is of a somewhat heavier type than the product of the older field, but the source would seem to be very prolific and, when adequate arrangements have been made for storage and transport and for the construction of roads and drilling of wells in the new area, the recent discovery should mean a large increase in the Company's production.

Freehold lands to the extent of 1,503 acres have been purchased to round off the Company's holdings at Palo Seco, which now have an aggregate of 5,774 acres. Arrangements have been entered into with Venezuelan Consolidated Oilfields, Ltd., a company owning 817 acres of promising land in the district, under which we purchase half the oil to be produced from this area.

Sale of Oil.—During the year a contract was made with the Anglo-Persian Oil Co. for the purchase of our Palo Seco production, at prices proportionate to the high quality of the oil.

Arrangements have now been made with the United British Oilfields of Trinidad, Ltd., for the sale and purchase for a term of years of all our Trinidad production not required for the purposes of the Anglo-Persian contract.

In summarising the results of the year's working, the Directors are glad to be able to state that, although the continued fall in the world prices for petroleum and petroleum products has caused a falling off in the Company's gross receipts, the economies in working expenditure due to the introduction of modern methods and machinery have been almost sufficient to offset the reduction in revenue, and the balance at credit of Profit and Loss has been further increased to £1,003,560, while Cash and Government securities, together with stocks of Oil at realised value, stand in the Balance Sheet at £690,175 as against £679,132 a year before.

During the year in Venezuela £156,843 has been expended on additions to Machinery and Plant and £13,436 in the purchase of additional lands, while £37,559 has been invested in the shares of the Anglo-Venezuelan Oil Trust, Ltd.

Advances to the Company's subsidiary, Trinidad Petroleum Development Co. Ltd., for equipment and general development amounted to £231,740 including £79,677 for the purchase of additional lands.

By Order of the Board,
J. W. CREASSER, *Secretary and Treasurer.*

THE MONEY MARKET.

MONEY was fairly easy this week, with short loan rates round about 4¼ per cent. until Thursday, when rates became even easier. The reason was that this week being virtually the fifth week in the month, the clearing banks were not calling so heavily as usual, as they had already completed their quota of four making-up days in the month. But for this factor, stringent conditions

could have been anticipated, as further large sums were transferred to the Government's account at the Bank of England in connection with tax payments. Public deposits, in fact, are £2,379,061 higher on the week, and the whole of this increase has come out of bankers' deposits, which have fallen by £2,631,091. The only other changes of importance in the Bank return are a fall of £1,106,343 in Discounts and Advances and a rise of £1,015,173 in Government securities. This last movement suggests that for the moment the Bank is disposed to make conditions a trifle easier.

* * * *

Despite the week's gold shipments to America the Banks gold stocks have only fallen by £364,836, but the market is still nervous as to the outlook. By way of reassurance one point may be mentioned. This is that call money in New York is now around only 7 per cent Now a London house lending money for short periods in New York naturally has to cover itself against an adverse movement in the exchange by a forward sale of dollars at the time it makes the loan. The difference between the spot and forward rate is equivalent to about 1½ per cent. interest per annum, and this makes a call rate of 7 per cent. equal to only a net 5½ per cent. to the London lender. The result is that if call rate fell by no more than one point New York would lose much of its present attractions to European lenders. In fact, once this happens, the present flow of money from London to New York may easily be reversed.

* * * *

Little change has occurred in the bill market, and the market rate on three months' bank bills remains at 4 5/16 per cent.

	Jan. 31, 1929.	Jan. 24, 1929.	Jan. 17, 1929.	Jan. 10, 1929.	Previous Rate and Date Changed.
	%	%	%	%	%
Bank Rate	4½	4½	4½	4½	5 (Apl. 21,'27)
Banks' Deposit Rate	2½	2½	2½	2½	3 (Apl. 21,'27)
Discount { Call	2½	2½	2½	2½	3 (Apl. 21,'27)
Houses { Notice	2⅝	2⅝	2⅝	2⅝	3½ (Apl. 21,'27)
Market rate (3 months' bills)	4 5/16	4 5/16	4 5/16	4 5/16–⅜	..

The monthly statement and weekly balances of the nine British members of the London Clearing House for December reveals a general expansion in all items. The most noteworthy increase is in acceptances.

	Aug., 1928.	Sept., 1928.	Oct., 1928.	Nov., 1928.	Dec., 1928.
Capital and reserves	130·5	130·8	130·8	130·8	130·8
Acceptances	173·9	177·8	182·2	200·5	217·3
Deposits (incl. undiv. profits, &c.)	1,731·6	1,732·2	1,752·9	1,751·8	1,806·3
Total liabilities	2,036·0	2,040·8	2,065·9	2,083·1	2,154·4
Coin, notes, balance at bank, and cheques in course of collection	244·3	244·6	251·9	250·4	268·9
Money at call	135·6	140·7	142·7	141·8	159·9
Investments	261·2	258·3	267·4	265·4	269·0
Discounts	254·1	244·1	248·1	248·4	258·7
Loans and advances	931·3	929·8	937·9	940·8	944·5
Cover for accept., premises, &c.	209·3	213·3	217·9	236·3	253·4
Total assets	2,036·0	2,040·8	2,065·9	2,083·1	2,154·5

The fact that all items, including discounts and call money, have increased disproves any suggestion that the December averages were inflated by making-up operations in preparation for the annual balance-sheets relating to the last day of the month.

* * * *

The change in the Bank of England's weekly return throws some light upon the average cash holdings of these nine banks for December. According to the monthly statement, the item "coin, bank-notes, and balances with the Bank of England" amounted to £204 millions. For the same month "bankers' deposits" at the Bank—which include deposits by all British banks, and not only those by the nine clearing banks—averaged about £69 millions. It is possible that some £50 or £60 millions of these belong to the nine clearing banks. This means that about £150 millions of their "cash" was represented by subsidiary coins and by notes. Now, the average note circulation for December was £380 millions, and, taking all the figures previously cited into account, it seems a fair assumption that one-third of the total circulation was held by the nine clearing banks alone, and this in the month of the Christmas holidays, when the public are accustomed to carry more notes than usual. This suggests that the banks' requirements of till-money absorb a far larger proportion of the nation's supply of currency than is generally realised.

NEW YORK MARKETS.

Our New York correspondent cables:—Federal Reserve statements reveal a moderate increase in discounts, a movement which is to be expected at the end of the month. There is a further decrease in circulation, a reduction of $19 millions in bills, and another gain in reserves. No change in the discount rate is indicated. Gold imports last week totalled 10 millions, of which none was earmarked, and a further inflow of gold is expected. Industrial activity, particularly in the case of steel, continues at a high level, but there has been some weakening in iron prices. The spring business outlook is still considered bright.

THE STOCK MARKETS.

Stock market activity showed an appreciable falling off, with a cautious tendency present in all markets. Gilt-edged stocks lost ground slightly on monetary uncertainties, but became firmer in connection with the repayment, on Friday, of maturing Government obligations. Home railways were dull in the absence of public interest. Industrial shares reflected the uncertainty of American sentiment, a general limitation of commitments, and a tendency towards profit-taking. Rubber shares were inactive on lower prices for the commodity, and tea shares irregular. Heavy American production handicapped the oil share market, and in the mining section a distinct reaction was registered in Rhodesian copper descriptions.

THE COMMODITY MARKETS.

The most encouraging news this week is the improvement in the coal industries of South Wales and South Yorkshire. The very gradual increase in activity has been maintained in the chief iron and steel centres. The tinplate market is unchanged. Copper was firmer, and other metals quiet. Demand for Manchester piece-goods has been hesitant, and spinners have experienced difficulty in selling. Bradford reports a fair business in piece-goods, but trade is still hampered by uncertainty as to raw material prices. Jute has advanced, as a result of a probable deficiency in the crop. The position in the leather trades remains difficult, and vegetable oils and oilseeds are easier. Wheat is practically unchanged.

FOREIGN EXCHANGES.

This week there was a little more movement and political events in Spain caused selling of the peseta towards the close. End-of-the-month requirements also caused some fluctuations, in francs and lira especially. Sterling was weaker at 4.84 7/16 on Thursday, after 4.84 31-32 on Tuesday, when heavy gold shipments were made to New York. Paris was weaker at 124.10, after 124.03, as was Milan at 92.65, after 92.62. Brussels gained ¾ of a point at 34.89½. The peseta collapsed from 29.68½ to 30.53, and shows no immediate signs of recovery. In the Far East the rupee remained firm at 1s 6 1/16d, but the yen again showed uncertainty and was weaker on Thursday at 1s 10 13-32d. The silver market reacted from the early easiness as a result of steady support from the Indian bazaars, and prices rose in consequence by ¼d to 26¼d for spot and 26 5/16d for forward. The China silver exchanges remained unaffected.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—National Provincial Bank, Westminster Bank, District Bank, Martins Bank, Williams Deacon's Bank, Canadian Bank of Commerce, Hungarian Commercial Bank of Pest, the National Bank, National Mutual Life Assurance Society, Mortgage Company of the River Plate, Inveresk Paper, Sedenak Rubber Estates, Tin Selection Trust, George Hodsman and Sons (1928), Continuous Gramophones, Kerr, Stuart and Co., H. Yager (London), and Ashanti Goldfields. The bank chairmen's speeches are dealt with in a leading article, while reference to the Tin Selection Trust meeting will be found in an "Investment Note."

THE "ECONOMIST."

In the *Economist* of July 14th last year we gave particulars of a change in the ownership of this journal. It was there explained that the ownership of the *Economist* was to be transferred from the Wilson Trust, in whose hands it had been since 1860. We also stated that in the new company which was to be formed half the voting shares were to be held by Financial Newspaper Proprietors, Limited, and half by an influential group of individual shareholders. This new company has now been registered, and from certain notices in the Press it appears that the registration has given rise to misinterpretation. In one prominent journal it has been suggested that the *Economist* has changed hands for a second time. This is entirely erroneous. The company which has just been registered is that to which we referred in July.

We would take this opportunity of repeating that, in accordance with the wish of both groups of shareholders to maintain the traditional character of the *Economist*, the continuance of its editorial independence has been provided for by the appointment of a board of independent trustees having the following functions:—

(*a*) They will have the right to veto the appointment or dismissal of any Editor of the *Economist*, the Editor to have sole responsibility for the policy of the paper so long as he retains his office;

(*b*) They will have the right to veto the transfer of voting shares in the new company.

By these and other provisions, which are to a considerable extent modelled on the articles of the "Times" Holding Company, the independence of the *Economist* is amply safeguarded.

THE VIEWS OF THE BANKERS.

There is even more than usual reason this year to be grateful to the late Sir Edward Holden for imbuing the chairmen of our banks with the habit of reviewing, at the annual meetings of their shareholders, the leading economic and financial problems of the day. The times are such that the guidance of the men who have their finger upon the pulse of the country's economic life is unusually valuable in the formation of public opinion and the establishment of a balanced and sober perspective; and, as if responding to the need, the bankers have this year given us a series of addresses that is of more than average variety, interest, and importance.

The first thing to strike the reader of this year's speeches is an air of quiet confidence in the country's industrial future. Mr Tennant concluded his address to the Westminster Bank shareholders by claiming that "amid all the changing facets of world life, Britain has two assets at least which have not changed in value. The first is the inherited skill and vigour of our workers by hand and brain; the other, not less important, is the physical advantage of our geographical position." Mr McKenna at the Midland Bank's meeting coupled a vigorous plea for peace with a statement that "considerable progress has been made towards a more ordered and prosperous world. Perhaps the most solid contributions to the final result have been made during the past year." Other chairmen spoke in the same confident but sober strain. There was no unreasoned optimism, no suggestion that trade was going to experience a striking improvement during the coming year. Instead there was an insistence on the need for taking the long view, and for realising that while recovery was certain, it would be a slow process, demanding in increasing degree the constructive thought and the intensive labour of the nation.

Another tendency which stands out clearly in the speeches is that they were inclined this year to approach the wider problems which they reviewed from the special standpoint of banking practice. Perhaps the most striking example of this tendency was afforded by Mr McKenna, who deliberately "confined his observations to matters arising directly from a consideration of the bank figures." The wealth of information which resulted from his "observations," particularly on the distribution of bankers' advances, has already been discussed in the *Economist*, and it only remains to add that Mr Beaumont Pease gave similar figures, though upon a different basis, for Lloyds Bank. Mr Goodenough, too, at Barclays meeting devoted a large proportion of his speech to monetary matters, discussing gold movements and also the way in which London has regained her former position as the world's principal bill market.

Several bank chairmen were at special pains to welcome the investigation into the purchasing power of gold now being conducted by the Financial Committee of the League of Nations. So far as England itself was concerned, the bank chairmen were significantly emphatic both in their insistence on the need of a stable price-level and in their unqualified support of the Bank of England's policy. Mr Beaumont Pease at Lloyds meeting condemned in severe tones the recent attacks upon the Bank. "I do not wish to say anything further than to register my regret that, at a moment when it was highly desirable that nothing should have been done to disturb the atmosphere which was undoubtedly favourable to an improvement in our trade, attempts should have been made to create doubts in the minds of the uninformed that there was something radically wrong with our whole monetary system.....The partially concealed motive behind all these suggestions and intrigues is the desire to see some form of inflation. I had hoped that a final verdict had already been given on these doctrines and quack remedies." Mr Holland Martin at Martins Bank meeting paid a tribute to the "great wisdom" of the Bank, Sir Harry Goschen at the National Provincial Bank meeting spoke in similar terms, while Mr Tennant devoted a portion of his address to an exposition of the duties of the banks towards the public. His exposition, though in an explanatory form, amounted to an equally definite support of the Bank.

Although bank chairmen this year gave more attention to monetary questions, they did not omit their usual surveys of the industrial field. None of the chairmen shirked the question of the depressed basic industries. Of these, it was only natural that, in view of recent discussions and developments, the cotton trade should receive the most attention. The Lancashire banks, such as Martin's, Williams Deacon's, and the District Bank, naturally have the most intimate connection with the industry, and the comments of both Mr Holland Martin and Sir Christopher Needham were this year unusually interesting. The former welcomed the new treaty with China, but warned Lancashire that "its once-vaunted safeguards of climate and skill are no longer invulnerable." Sir Christopher Needham, who was incidentally celebrating the centenary of the District Bank, called attention to "the difficult problem of dealing with the mills whose financial circumstances have caused them to be 'weak sellers.'" Emphatically and significantly both these Lancashire bankers and also several of the "big five" chairmen went out of their way to say a word of encouragement to those engaged in the arduous task of forming the new Lancashire Cotton Corporation. Mr Holland Martin went so far as to say:—"It represents the most determined effort which has yet been made to meet present-day difficulties."

Side by side with this testimony may also be cited the veiled warning contained in a passage of Sir Harry Goschen's address. He said: "We must recognise that great changes have taken place in the last five years in the national sentiment of the Chinese people. They wish to negotiate with European firms direct without the intervention of agents and compradors—a great change, and one which will necessitate a radical rearrangement in the methods and practice of our great merchant firms in that country. They are, of course, better able than I to weigh the risks and advantages involved in such a change, but if we do not show ourselves ready to meet our prospective customers it is certain someone else will. It seems to me that if our manufacturers and merchants

are still imbued with the spirit of enterprise and energy which enabled their forefathers to lay the foundation of our vast trade with the Far East, they will seriously consider the position, for, in spite of the great changes and possible risks involved, in spite of the difficulties even of conducting business with the Chinese in their own language, there seems to me to be a great opportunity of extending all sections of our trade with that great country which, if neglected, may not recur."

So far as Lancashire is concerned, the warning is clear. It is not enough to reorganise the cotton trade at home if steps are not taken to regain markets abroad. It is therefore cheering to read Mr Dewhurst's allusion, at Williams Deacon's meeting, to the formation of the Eastern Textile Association, "a vertical combine of those interested in manufacturing, bleaching, dyeing, and shipping of certain standard makes of piece-goods destined for the Far East." This suggests that the Lancashire end of the marketing problem is being looked after, although Sir Harry Goschen, of course, had the Chinese end in mind. But Sir Harry's words strike a wider note, and one that was re-echoed by other bankers. It is this: we are no longer the paramount manufacturers and traders in the world, but to-day we have to meet our competitors on equal terms. That we can do so successfully is certain, if only we make the effort; but the effort involves the recognition of the fact that British goods no longer sell themselves. Mr Tennant well said that "Great Britain is at last bringing herself up to concert pitch." But our ultimate recovery is only assured if efforts to promote efficiency both in production and in marketing are progressive and continuous.

THE END OF THE ROMAN QUESTION?

DURING the past week or two there have been sudden, but persistent and circumstantial, rumours that the Italian Government and the Vatican are in negotiation for a comprehensive and definitive settlement of "the Roman question," and are on the point of coming to terms. The essence of the settlement would be that each party would recognise the other as the Government of a sovereign independent territorial state, and that the frontiers between the kingdom of Italy and the Papal State would be established by mutual agreement. At present neither party recognises the other. The Pope claims still to be juridical sovereign over a dominion extending right across the Italian Peninsula from the Mediterranean to the Adriatic as far north as Bologna, inclusive—though the Ranagua fell away in 1859 and the rest of the ancient Papal State was occupied by the Italian Government in two stages: the Marches and Umbria in 1860 and the Patrimony of St. Peter, including Rome itself, in 1870. Since 1870 the Italian Government has claimed sovereignty over the whole of the former Papal territories and has conceded three enclaves—the Vatican with St. Peter's, the Lateran, and Castel Gandolfo—to the Pope as private property, but not as territory exempt from the sovereignty of the Italian State. The Vatican, however, has never taken cognisance of the Italian "Law of Guarantees," and has never drawn the allowance from the revenues of the Italian State which that law assigns to it. Moreover, it has never recognised the kingdom of Italy which came into existence *de facto* in 1861, and has since then been one of the Great Powers! This anomalous situation has lasted for nearly 70 years.

According to current reports, the first point in the settlement which is now under negotiation would be the recognition of the Pope by the Italian Government as the territorial sovereign of a State comprising the properties conceded to him under the Law of Guarantees, together with a slight addition of territory on the Janiculum. In return, the Pope would recognise the Italian Government as the territorial sovereign of the former Papal territories outside these limits. There is also talk of the Italian Government further conceding to the Pope the proprietorship (though not the sovereignty) over a private road running from the Vatican to some point on the Mediterranean coast, so that the Pope might have direct and unhampered means of communication with Catholics outside Italy and with Governments other than that of Italy. In addition, the inhabitants of the Papal State (for the most part employees of the Vatican) would be Papal subjects, the chanceries of the foreign diplomatic missions accredited to the Vatican would be installed in the ceded territory on the Janiculum, and Italy would pay the Holy See an indemnity.

If a settlement on these lines is really concluded, it will be a notable diplomatic achievement on the Italian Government's part; for though the irreconcilability of the Vatican has never caused Italy serious international embarrassment (it did not do so, for instance, even during the Great War), it may be prophesied that a reconciliation with the Vatican on such terms would notably strengthen the position of Italy as a Great Power in international affairs. As it is, the Papacy itself, and a majority of the offices whose holders, between them, control the policy of the Vatican, have long been reserved, by an unwritten convention, for Catholics of Italian nationality; and probably nothing but the conflict of political interests between the Vatican and the Kingdom of Italy has prevented this tradition from causing the Vatican to become Italian not only in nationality but in politics as well. At the price of ceding Italian territory up to about the extent of a second San Marino, Signor Mussolini seems likely to transform into an Italian institution the immense international force which the Vatican represents abroad. The bargain would be amazingly advantageous from the standpoint of Italy; and we must pay a tribute to Signor Mussolini's statesmanship, for, although the price is small, it does consist in a cession of territory; and the reluctance of statesmen and peoples to cede the smallest fraction of territory, even in exchange for the most valuable considerations, is so great that only an open-minded Government and a strong Government could enter into such a bargain at all.

Whether the bargain is so good from the Vatican's standpoint is quite another question. At first sight it looks as though the Papal statesmen (as, indeed, might have been expected) have allowed themselves to be engrossed by the past to the extent of sacrificing the future. It is true that they will have gained the point of territorial sovereignty for which they have been standing out during all these years. But is territorial sovereignty really a desirable asset, in the conditions of the contemporary world, for an international organisation like the Catholic Church? Will not the re-establishment of a Papal State have the effect of transferring the Catholic Church from the category of those forces like Islam or the League of Nations, or the Postal Union, or Standard Oil, whose status as "World Powers" is signalised by the very fact that they have no local sovereignty, to the category of San Marino and Monaco and Danzig and Andorra? The League of Nations and Standard Oil both prefer to have their central offices in somebody else's territory rather than to have them in diminutive territories of their own; and it is noteworthy that the Islamic world has just abandoned the principle of the temporal power of the Caliphate, to which it still clung until after the close of the Great War. Did not the Pope have a stronger hold upon the affection and loyalty of Catholics all over the world when he had the rôle of a master "who had not where to lay his head" than he can hope to have as Prince of Monte Vaticano? And may he not find his relations with the Catholics of France, the Ticino, the South Tirol, Croatia, and Albania (not to speak of countries further afield) less easy to manage in future than they were when he was politically estranged from the Great Power in whose territory his new principality will be an enclave?

If the suggested settlement goes through, we prophesy that the Vatican will lose politically as much as Italy stands to gain. Indeed, this might be the beginning of a transformation in the nature of Catholicism as an international force. At present the Catholic Church is a hybrid between an international organ of public opinion, and a kind of international political organisation with its central government in the Vatican; but this latter aspect of Catholicism is surely an anachronism in a world in which political power has otherwise passed to the Governments of national States and to associations of Governments such as the League of Nations. It may be that the reconstitution of the Papal State, by making this anachronism conspicuous, will render its perpetuation impossible; and we may live to see something like a divorce between the Catholic Church and the Holy See—the Holy See becoming little more than a miniature territorial state, and the Catholic Church becoming nothing less than a ubiquitous international force?

UNEMPLOYMENT AND PROTECTION.

THE persistence of large-scale unemployment is the outstanding social problem of our day, and the desire to alleviate it cannot fail to be the starting point of constructive policy among all parties in the nation. But, as always, the prevalence of economic disease, which claims the attention of the doctors, also attracts the minds of the quacks; and, as Mr Tennant put it to the shareholders of the Westminster Bank on Wednesday, there are three main schools of quacks—nationalisers, inflationists, and protectionists—who profess to have one specific cure for troubles whose origins are multifarious. Of these three schools, the protectionist—or, as he prefers to call himself, the supporter of extended safeguarding—is the most vocal, and in the view of the approaching General Election, the most dangerous. Let us look, then, at the present position of unemployment and see what possibility there is that Protection could provide the cure.

As a necessary starting point for our examination, we have analysed the latest unemployment returns and endeavoured to ascertain the relation between the numbers of unemployed in occupations to which Protection could conceivably be applied and the foreign trade balance in the same industries. On December 17, 1928, the number of persons, aged 16 to 64 inclusive, recorded as unemployed in all industries other than fishing (a category scarcely germane to this inquiry) was 1,329,135. From this total we may first proceed to deduct the number out of work in occupations palpably "unprotectable." By this term we mean industries (*a*) in which there is no "import problem," *e.g.*, mining and shipbuilding; or (*b*) in which labour is essentially "sheltered," *e.g.*, building and internal transport; or (*c*) in which case "safeguarding" would on any grounds be self-evidently useless as a stimulus to employment, *e.g.*, shipping and distribution. In the following table we show the numbers unemployed on December 17th in these industries, among which we have included the food, drink, and tobacco trades as occupations for whose benefit a tariff is quite unlikely to be advocated or desired:—

INDUSTRIES TO WHICH PROTECTION CANNOT be APPLIED.

	Number Unemployed, Dec. 17, 1928.		Percentage of Total Unemployment.
1. Mining and by-products	230,867	....	17·3
2. Building, public works, and constructional engineering	165,844	....	12·5
3. Distribution and commerce	99,719	....	7·5
4. Internal transport	93,080	....	7·0
5. Hotel, entertainment and various services	76,636	....	5·8
6. Shipbuilding and marine engineering	69,773	....	5·2
7. Food, drink and tobacco	39,751	....	3·0
8. Government	34,655	....	2·6
9. Shipping	26,180	....	2·0
10. Printing and publishing	10,336	....	0·8
11. Gas, water, and electric supply	10,016	....	0·8
Total of above	856,857	....	64·5

We are at once confronted with the fact that there is an enormous mass of unemployment, nearly two-thirds of the total, concentrated in these 11 industries and occupations clearly debarred by their character from encouragement by import duties. There remain, then, the balance of 472,278 persons unemployed in manufacturing occupations to which it is technically possible to apply the expedient of protection:—

INDUSTRIES in which PROTECTION is TECHNICALLY POSSIBLE.

	Number Unemployed, Dec. 17, 1928.		Percentage of Total Unemployment.
1. Metal industries	157,826	....	11·9
2. Textiles	153,852	....	11·5
3. Apparel	63,205	....	4·7
4. Bricks, pottery, earthenware, glass	27,882	....	2·1
5. Vehicles	23,395	....	1·8
6. Woodwork	14,412	....	1·2
7. Chemicals, oils, &c.	12,791	....	1·0
8. Leather	6,198	....	0·5
9. Rubber	4,572	....	0·3
10. Paper	4,527	....	0·3
11. Miscellaneous	3,618	....	0·3
Total of above	472,278	....	35·5

Observing at once that the number out of work in the first two categories represents two-thirds of the total unemployment in this group, and that the aggregate unemployment in categories 3—11 represents only 12 per cent. of the total unemployment in the country, we may now turn to an examination of our manufactured imports and exports.

In 1928 the total value of our retained imports of articles described in the Board of Trade Returns as "wholly or mainly manufactured" amounted to £292 millions, against corresponding exports totalling £579 millions. From the import side of the account we may start by deducting £65 millions, the value of unfabricated non-ferrous metals, mineral oil, plywood, and undressed hides and skins (all essentially raw materials rather than manufactures), leaving retained "manufactured" imports at £227 millions. The export total requires also

to be reduced for purposes of comparison by the omission of £26 millions made up of unfabricated non-ferrous metals, coke, and ships—the two last commodities being the product of labour already excluded from our schedule of industries to which protection can possibly be applied. Adjusted thus, the total import and export figures can be analysed as under :—

	Retained Imports. £ Mill.	Exports. £ Mill.
1. Textiles	51·3	234·1
2. Metal industries	57·9	151·2
3. Chemicals, oils, &c.	18·0	34·4
4. Vehicles	8·7	31·4
5. Apparel	18·2	26·2
6. Earthenware, pottery, glass	10·7	13·1
7. Leather	8·5	9·4
8. Paper	17·0	9·3
9. Rubber	3·2	3·4
10. Woodwork	5·8	2·5
11. Miscellaneous	27·7	38·0
Total	227·0	553·0

The surplus of exports over retained imports, it will be noted, amounted in the aggregate to £326 millions. It now remains to see what relation exists between these trade figures and the percentages of unemployment which we have found to exist in "technically safeguardable" occupations. In our concluding table we show for the eleven manufacturing groups—in which we have arranged our sets of figures so as to obtain as accurate a basis for comparison as possible—firstly, the percentage of the total "manufactured exports"; secondly, the percentage of the surplus of exports over retained imports; and, thirdly, the proportion of the total unemployment in these industries (35·5 per cent. of the national aggregate) attributable to each group :—

FOREIGN TRADE AND UNEMPLOYMENT.

	Percentage of "Manufactured" Exports.	Percentage of "Export Surplus."	Percentage of Total Unemployment in these Industries.
1. Textiles	42·4	56·1	32·6
2. Metal industries	27·3	28·6	33·2
3. Chemicals, oils, &c.	6·2	5·0	2·7
4. Vehicles	5·7	7·0	5·1
5. Apparel	4·7	2·5	13·4
6. Earthenware, pottery, glass	2·4	0·7	5·9
7. Leather	1·7	0·3	1·3
8. Paper	1·7	—2·4	1·0
9. Rubber	0·6	0·1	1·0
10. Woodwork	0·4	—1·1	3·0
11. Miscellaneous	6·9	3·2	0·8
Total of above	100	100	100

The foregoing figures suggest of themselves conclusions so unmistakable as to require little further comment. With the minor qualification that differences of classification render the percentages in group 11 not precisely comparable, it will be seen that 92·9 per cent. of unemployment in industries where protective duties are a possibility lies in groups 1—6, which in turn account for 88·7 per cent. of our total "manufactured exports" and 99·9 per cent. of the net "manufactured export surplus." In other words, "safeguarding," if confined to industries not predominantly "exporting," would affect only 11·3 per cent. of the unemployment in the whole of these groups of trades, a figure which represents about one-fortieth part of the country's aggregate unemployment. Hence it follows that when "safeguarders" claim to have a remedy for unemployment, they are *ipso facto* either claiming that "exporting" industries can be stimulated by a tariff (a *reductio ad absurdum*), or, alternatively, are propounding a nostrum inapplicable, as we have shown, to 39-40ths of the disease it professes (illogically, at that) to cure.

If, however, Protection could reduce the unemployment of the country even by one-fortieth, its extension would have to be seriously considered. But the position is that if we indulged in the experiment we should be risking immeasurable damage to our export trade and our whole economic structure which might entail great increases of unemployment on the off-chance that a tiny fraction of unemployment might be removed in certain areas; and even this off-chance cannot seem a brilliant one to those who have studied the review of the results of the present Government's experiments in Protection which appeared in the *Economist* in October and November. The upshot of the matter is that we should be staking a very great deal for the possibility—and a very poor possibility—of a very meagre return.

THE NORTH-WEST AND MID-EAST ENGLAND POWER SCHEMES.

(BY A CORRESPONDENT.)

THE publication of the Mid-East England scheme, which is the fifth to be surveyed by the Electricity Commission, makes it possible to examine proposed developments in the two great textile areas of Britain. Lancashire and North Wales were covered by the scheme which was published in June of last year, and the new scheme covers the West Riding, as well as the great iron and steel centre of Sheffield. Together they cover the greater part of the industrial area of Britain, and they have the characteristic in common that the organisation of electricity supply has already been so highly developed in them that the Electricity Commission has only had to recognise the *status quo* and arrange for the construction of main transmission lines to link up generating stations and to complete the scheme of inter-connection as part of the national system.

The North-West England scheme comprised the counties of Lancashire, Cumberland and Westmoreland, the six North Wales counties, and parts of the counties of Chester, Cardigan, Derby, and Salop, with a small extension into the West Riding. The Mid-East England scheme covers the East and West Ridings of Yorkshire and a small portion of the North Riding outside the distribution area of the Newcastle Electric Supply Company, the counties of Lincoln and Rutland, and parts of the counties of Nottingham and Derby. The total area served by the schemes is 16,720 square miles, 9,082 in North-West England, while the total population housed in the area is given as 11,647,425, of which 6,980,925 are in the North-West England zone. They support, therefore, more than one-fourth of the total population of Britain, while their contribution to the national wealth is probably even greater.

The number of generating stations already operating has been given as 110, of which 70 are located in North-West England, while under the new arrangement it is proposed to cut down this total to 29 in North-West England and 18 in Mid-East England, 15 stations taking the base load. These stations are, in North-West England, Agecroft (Salford Corporation), Barton and Carrington (Manchester Corporation), Clarence Dock (Liverpool Corporation), Kearsley and Padiham (the Lancashire Electric Power Company), Ribble (Preston Corporation), Willowholme (Carlisle), and Chadderton (Oldham); and, in Mid-East England, Ferrybridge and Thornhill stations (the Yorkshire Power Company), Kirkstall (Leeds Corporation), Blackburn Meadows (Sheffield Corporation), and the Prince of Wales station (Rotherham Corporation). Of these 15 stations seven may be regarded as entirely new, while two, at Clarence Dock and Carrington, have still to be built, and the remaining stations belong to the post-war period.

The position is shown in tabular form below :—

GENERATING STATIONS.

	North-West England (KW).	Mid-East England (KW).	Total (KW).
Capacity of plant installed or sanctioned 1928	1,227,974	804,585	2,032,559
Extensions (1928–1941)	586,000	382,000	968,000
Withdrawals "	322,849	207,585	530,434
New stations	500,000	..	500,000
Plant capacity in 1941	1,991,125	979,000	2,970,125

By the end of 1941 there will be housed and operating in these two super-power zones almost 3,000,000 kw. of generating plant, while 530,000 kw., representing inefficient or old plant which does not reach the high standard required under the national scheme, will have been closed down.

The size of the main undertakings active in the two zones is shown below :—

PRINCIPAL UNDERTAKINGS.

I. North-West England and North Wales Scheme.

Undertaking.	Capacity of Generating Plant (KW). †1928.	1941.	Output of Electricity (Millions of Units). 1927.	*1928.	1934–5
Manchester Corporation	229,250	370,000	442	466	1,508·0
Liverpool Corporation	120,000	400,000	260	285	265·0
Lancashire Power Co.	162,000	295,625	154	182	619·1

Bradford Corporation	105,000	85,500	104	105	120
Rotherham Corporation	62,000	144,000	72	81	100
Halifax Corporation	43,700	30,500	35	38	60
Hull Corporation	54,000	49,000	83	90	41
Total	644,200	869,000	‡660	§699	1,892

* Provisional. † Including extensions on order or sanctioned. ‡ Excluding Yorkshire Power Co. Including latter, it can be estimated at 800,000,000 units. § Excluding Yorkshire Power Co. Including latter, it can be estimated at 850,000,000 units.

The 10 North-West England undertakings had in 1928 64 per cent. of all the plant installed or sanctioned in the area as surveyed, and by 1941 their percentage will have risen to 74 per cent., while their output of electricity, which in 1928 was equivalent to 66 per cent., has been increasing at the rate of about 8.5 per cent. per annum. In 1934-35 they are expected to deal with 80 per cent., the greater part of the production being concentrated in Manchester Corporation and the Lancashire Power Company, with Preston Corporation supplying in addition 421,000,000 units. In Mid-East England the seven undertakings listed had 80 per cent. of all the plant installed or sanctioned in 1928, while in 1941 this would increase to 89 per cent. They produced in 1928 78 per cent. of all the energy generated in the area, and by 1935-36 will account for 98 per cent. By 1934-35, therefore, 17 undertakings will account for 4,655,000,000 units, almost half of the total generated in Great Britain at the present time by slightly less than 600 undertakings. That in itself is sufficient evidence of the very significant changes that have taken place.

For 1927-28 the output of electricity in both areas has been given as 2,828,000,000 units, 1,804,000,000 units being supplied by North-West England. By 1940-41 this total will have risen to 8,530,000,000 units, equivalent to 735 units per head of population, the North-West England average being 830 units and the Mid-East England 580 units. It is difficult to explain why there should be such a discrepancy, since both areas are highly industrialised. One possible explanation, however, may be found in the fact that there has been a more severe depression in the heavy industries in Mid-East England than in those in North-West England, with the result that the estimates of the Electricity Commission have erred on the conservative side in the one case, while they have been too optimistic in the other.

The work of reorganisation, which includes the erection of main transmission lines operating at 132,000 volts with subsidiary equipment as well as extensions of generating stations, may represent a total capital expenditure in generation and transmission alone of more than £25,000,000 before 1941. The details are given below, where capital expenditure on extensions up to 1941 have been estimated :—

CAPITAL EXPENDITURE.

	North-West England.	Mid-East England.	Total.
	£	£	£
Central Board	5,234,218	2,907,156	8,141,374
Extensions to generating stations	*4,297,620	‡1,709,594	6,007,214
Extensions to generating stations up to 1940–41	†7,900,000	†3,500,000	†11,400,000
Total	17,431,838	8,116,750	25,548,588

* 1934–35. ‡ 1935–36. † Estimated.

As a result of interconnection and reorganisation the Commissioners estimate that in the first four and a-half years of the schemes a total saving of £3,865,000 will be made, equivalent, roughly, to £830,000 per annum, while the price of electricity as sold by the Central Board to authorised undertakers will fall in the case of North-West England from .421d per unit in 1931-32 to .377d in 1934-35; while in Mid-East England the fall will be rather less marked, being from .428d in 1931-32 to .400d in 1934-35. In these two great industrial areas the cost of electricity as supplied by the Central Board will be lower than in South-East England, Central England, or Central Scotland, and this should be a factor making for more effective modernisation and re-equipment of industries which have hitherto been seriously depressed.

NEW LIFE ASSURANCE BUSINESS IN 1928.

FROM the returns already published of new business transacted during 1928, it is clear that last year has again been a favourable one for new life assurance business. There are now available the figures relating to 28 British offices and 4 colonial offices, and it is therefore interesting to make a somewhat closer comparison of the results than has been possible up till now. The following table shows the amount of new sums assured for 1928, together with the corresponding figures for 1926 and 1927 :—

Office.	1926.	1927.	1928.
Atlas	2,851,715	2,946,816	3,400,000
Britannic	1,530,858	2,162,554	2,500,000
British Equitable	379,377	386,812	466,164
British General	291,361	310,088	405,616
Caledonian	1,100,995	1,319,455	1,345,492
Clerical, Medical, and General	1,703,424	1,920,356	2,000,000
Commercial Union	3,364,539	3,959,942	4,105,092
Equitable	827,749	818,323	1,000,000
Equity and Law	1,037,285	1,177,461	1,880,539
Friends' Provident	1,192,781	1,439,651	1,555,000
General	1,360,907	1,378,562	1,757,538
Law Union and Rock	1,442,762	1,632,510	1,977,388
Legal and General	5,243,824	6,649,164	7,613,000
Liverpool & London & Globe	1,479,181	1,575,645	1,700,000
London Life	1,767,587	2,206,567	2,502,912
London and Scottish	759,616	830,196	946,049
National Mutual	759,806	807,203	906,039
National Provident	1,160,089	1,190,497	1,511,000
Pearl	9,157,904	10,215,579	11,924,979
Phœnix	2,720,654	2,881,330	3,004,000
Prudential	14,924,208	16,941,000	17,400,000
Refuge	4,594,793	5,844,338	6,377,442
Royal Exchange	1,997,396	2,223,524	2,497,676
Scottish Amicable	1,205,012	1,339,669	1,267,528
Scottish Life	916,212	1,118,496	1,241,384
Scottish Provident	2,290,706	2,460,787	2,789,885
Scottish Widows	2,445,222	2,664,189	3,173,000
United Kingdom Provident	3,254,216	3,041,119	3,109,870
	71,760,179	81,441,833	90,357,833

The above figures represent in every case the net sums assured after deduction of re-assurances, and include life assurance business only. It should be realised that many of the companies in our table transact, in addition to what is regarded as life assurance business, a considerable volume of annuity business, and of sinking fund assurances.

As regards 1928 business, the most remarkable result is that of the Equity and Law, which represents an increase over 1927 of as much as 60 per cent. Incidentally, a

curious feature of the Equity and Law business is the very large amount reassured with other offices, viz., £834,000 out of a total gross business of £2,714,539. The fact suggests that the company handled last year some unusually large policies, probably of the single-premium, super-tax saving variety.

The next largest increase, viz., 30 per cent., is shown by the British General. The British General is now controlled by the Commercial Union. Its life department is of small dimensions, having been established since the beginning of the present century. The London Life and the Legal and General are again in the forefront with substantial increases of 13 per cent. and 15 per cent. respectively. It may not be generally realised that a large part of the business of the London Life is transacted on a without-profits basis, the proportion last year being as high as 40 per cent. Another point of interest in the case of this company is the fact that nearly the whole of the increase in the 1928 business has arisen from policies effected under the society's distinctive system, whereby the bonuses are declared in the form of reductions of premium. The Equitable reports an increase equivalent to nearly 25 per cent., and the National Mutual figure is some 13 per cent. higher than in the previous year.

The four large ordinary-cum-industrial offices, viz., the Britannic, Pearl, Prudential and Refuge, all show increases, although on this occasion the increase in the case of the Prudential is a comparatively small one. Nevertheless, the recently announced advances in reversionary bonuses declared for 1928 should give a distinct fillip to new business. It is a fact that these offices are increasing their business at a more rapid rate than the ordinary offices, and their general financial strength enables them to compete on favourable terms with their older-established rivals.

The new business transacted by the four Colonial offices which have so far published their returns is as follows :—

Office.	1926.	1927.	1928.
A.M.P.	13,863,763	15,075,928	16,083,671
Manufacturers' Life	14,513,000	15,940,000	17,840,000
N.M. of Australasia	7,763,910	8,234,713	9,807,845
Confederation	9,262,351	10,454,000	11,770,000

These figures are inserted for the sake of completeness, but they are of no particular value for present purposes, since they include also the business transacted abroad, which represents the bulk of the total in every case. The Colonial offices are probably more enterprising in their propaganda than the home offices, and are certainly more vocal; but to preserve a proper proportion it should be realised that the volume of their business in the United Kingdom is still not only a very small proportion of the total, but is also a minor part of the business of the offices concerned. For instance, in 1926 (the last year for which the figures are available) the new business transacted by all the Colonial offices together in the United Kingdom amounted to £10,464,362. The total business transacted in the United Kingdom by the home offices amounted to £116,664,663, so that the Colonial offices were responsible for less than 10 per cent. of the total. Again, the total new business transacted by all the Colonial offices combined amounted to over £134 millions in 1926, towards which the United Kingdom business contributed only the above-mentioned sum of £10,464,362.

Reverting again to the 1928 figures relating to British offices, it will be seen that the combined total of all the offices in the table amounts to £90,357,633, compared with £81,441,833 for 1927, an increase of 11 per cent., compared with an increase of 13½ per cent. in 1927 over the corresponding total of 1926. Most of the important offices have now published their new business returns, and it is safe to assume that these figures will be found eventually to be a representative sample of the whole. Applying the above percentages to the official returns published by the Board of Trade, it is interesting to trace the course of new life business during the past ten years since the War, as follows :—

Year.	New Life Assurance Business Transacted by all Offices. £	Inc. (+) or Dec. (—) per Cent. each Year over the Previous Year. %
1919	131,454,363	+ 79·2
1920	146,627,474	+ 11·5
1921	109,243,943	— 25·5
1922	106,302,251	— 2·7
1923	111,750,559	+ 5·1
1924	123,661,009	+ 10·7
1925	130,196,611	+ 5·3
1926	128,915,643	— 1·0
1927	*146,319,000	*+ 13·5
1928	*162,414,000	*+ 11·0

* Approximate.

The large volume of business transacted in the two years immediately succeeding the War, 1919-1920, was, of course, due to the special circumstances connected with the demobilisation of the Forces and the artificial boom conditions then prevailing. The subsequent industrial depression had inevitably a marked effect on life assurance business, and it will be seen that, notwithstanding the steady increase of recent years, the volume of business has only now reached again the dimensions of the 1920 figure. In fact, it must be recognised that ever since the War life assurance has had to combat in one part of the country or another trade depression to a greater or less extent. The increases of the last two years have been achieved not because of any trade revival, but rather in spite of trade conditions, and the fact encourages the belief that any marked general revival in trade would quickly be accompanied by a largely increased new life business. The need for life assurance has undoubtedly received much more general attention recently than ever before. The average taxpayer has been made to feel that he really is a greatly under-insured person, and that so long as he remains in that position he has failed to meet his family responsibilities. Life assurance propaganda has directed attention rather away from the capital aspect of life policies in the direction of showing the income which their proceeds may be expected to produce. This is a very sound line of argument, for the most sceptical will quickly be convinced of the absurdity of regarding a policy for, say, £1,000, as adequate provision, when, in fact, the proceeds are equivalent only to a meagre income of £1 per week for dependants.

THE WOOL TEXTILE INQUIRY.

Apart from general questions of fiscal policy, we have never disguised our objection to the Safeguarding procedure as a peculiarly objectionable method of introducing a tariff piece-meal. The danger involved in dealing with the claims of particular industries in virtual isolation was never more clearly illustrated than in the matter of the Wool Textile Safeguarding Inquiry which is to open next Monday. This is the only instance in which a Safeguarding Committee has been entrusted with the destinies of one of our prime industries. After coal, cotton, shipbuilding, and iron and steel, we come to wool textiles as the fifth in order of our major manufactures. In particular, it is one of our principal exporting industries. For this reason, therefore, special caution is required when contemplating any form of State interference.

A prominent Yorkshire woollen manufacturer in a letter to the *Times* has registered a grave warning as to the reactions which a Safeguarding duty on imported wool textiles would be likely to produce in our export markets. He instanced Canada, which is the largest single market at the moment for Yorkshire wool products. London merchants who are in closest touch with the Continent anticipate even speedier reactions to the detriment of Yorkshire goods in those Continental markets which have been specially hospitable to our exports during the last two or three years. With nearly every European country Great Britain has been substantially improving her sales of woollen and worsted cloths at a time when she has been experiencing a serious setback in other parts of the world—notably, in Australia. For example, it is true that we spent £2,000,000 last year in the purchase of cloths from Germany (hence the present Protectionist agitation), but Germany spent substantially more than this amount in the purchase of cloths from Great Britain, and we are far from convinced that our interests can be served by disturbing this balance of trade.

The application to be considered next week is submitted by the Yorkshire manufacturers, who weave cloths mainly for the women's trade. Their principal competitor is France, but French imports have substantially declined since 1925 (partly owing to a falling off in the demand for reps), and there would have been no second Safeguarding inquiry but for the increased imports from Germany, which are, in fact, almost entirely woollen piece-goods. The Bradford applicants claim to be damaged by these German imports because the latter are sold chiefly in the women's trades for making mantles and costumes (though partly also for men's light overcoatings). This is why we find worsted manufacturers asking for a duty on woollen as well as on worsted tissues. Their point of view is intelligible. At the same time, it would be most unfortunate if the tribunal were on this account to be drawn into a consideration of the state of the applicant industry in any kind of isolation from the general considerations of the wool textile industry taken as a whole, the facts as to which are broadly as follows :—

In the years immediately before the war British production of woollen and worsted tissues seems to have been about 550 million square yards, of which we were exporting about 225 million square yards, thus retaining for sale in the home market about 325 million square yards. At the same time, we were importing for home consumption approximately 70 million square yards of foreign cloth. In 1924 (the year of our last home census) British production was 442 million square yards, half of which was exported. Exports, therefore, were approximately on a pre-war level; but home consumption had shrunk by about 100 million square yards. Imports were abnormally low, being only about 21 million square yards. Unemployment in the British industry was not abnormally high. Since that time, however, there has been a very serious decline in our export trade amounting to about 50 million square yards, and the major part of the decline has been in worsteds. This no doubt is the principal cause of the increased unemployment in the Bradford area. At the same time, there has been an increase in retained imports of some 15 million square yards, and although a large part of these increased imports consist of woollen fabrics, they are peculiarly a "thorn in the side" of the Bradford district, because, although the Bradford manufacturers do not produce these cloths and similar fabrics, which constitute the major part of the German imports, nevertheless the fashion demand for such cloths is detrimental to Bradford trade. From these main factors the present safeguarding application is constructed, and at first sight it may appear a strong case.

On the other hand, the following facts must be kept in view :—

(1) Unemployment in the industry is due mainly to a falling off in our exports, especially of worsted tissues. One of the currents of fashion has been running strongly in favour of face-cloths and velours. The Yorkshire worsted industry does not produce these goods; consequently buyers have turned elsewhere for them, notably to Germany—not only buyers in this country, but in overseas markets also.

(2) The Yorkshire manufacturers themselves wrote last week to the Trade Unions in the following terms :—"Your executive committee appear to ignore the fact that any advantage to be derived from a safeguarding order cannot in any way assist in that recovery of export trade which is essential for any important improvement in the state of the industry."

(3) The best authorities state that even if 80 per cent. of the 1928 imports were shut out by a duty, and even assuming that a corresponding extra yardage of cloth were manufactured in Yorkshire, less than 5 per cent. of the present idle looms would be set in motion—the actual estimate is 4.86 per cent.—and there is, of course, not the slightest ground for supposing that a duty even of 33⅓ per cent. would exclude anything like 80 per cent. of the imports (especially in view of the present fashion demand for face-cloths and certain crêpe-de-Chine fabrics).

(4) However severely the "safeguarder" in controversy may discount the risk of reactions and retaliation, it is obvious that at least some allowance must be made for detriment to Yorkshire trade in export markets arising from the imposition of a safeguarding duty. Such repercussions would no doubt be felt rather in Huddersfield and Batley than in Bradford, but that does not affect the main calculation.

(5) Little has been heard so far of the making-up trades, to whom these cloths are raw material. The extension of a duty to the cloth content of imported apparel would involve formidable administrative difficulties; and even in the unlikely event of this extension being carried out, would merely give an advantage to the Continental maker-up, on account of the margin of wastage of cloth involved in the process of the garment manufacture. On the other hand, the British maker of mantles and costumes and clothing would be handicapped gravely in export trade, owing to the proved difficulties of securing "draw-back" of safeguarding duties. (The silk and artificial silk duties rest on a different basis.)

In the aggregate it is clear that the Board of Trade Committee has a very serious responsibility imposed upon it.

LIBEL.

The law is an exacting mistress to her followers and a fiery furnace to her victims, but to the disinterested amateur she is a bright and entertaining study. In other words, the most readable matter in the daily papers is usually found in the law reports, and the wise reader of the *Times*, whatever else he skips, will always make time to glance through the day's law cases in search of interest and amusement. And in doing so he must have noticed—unless he be very unobservant—the increase of recent years in the number of libel suits, the growing tenderness of certain sections of the public to the most trivial stain on the pure white of their reputation, and the growing sympathy of juries with the injured party. Under modern conditions water never seems to run off a duck's back, but remains to leave a dirty mark that can be washed off only by generous pecuniary compensation. What is the reason for this change? Is it that our generation is more delicate-minded than its predecessor and infinitely more jealous for its good name? Not necessarily. The reason often is that we know a good thing when we see it better than our fathers did.

The old theory of libel—the theory that satisfied our forefathers, and is still the accepted theory of the courts—is very simple :—There is living in Finchley or Surbiton a Mr X (when one is dealing with libel, it is as well not to experiment with proper names), who is looked up to by his neighbours, takes up the collection Sunday by Sunday, and is thought to be a likely man for a seat on the Borough Council. One morning he leaves his house as usual and finds himself cut by his next-door neighbour, scowled at by the ticket-collector, and shunned by his fellow-travellers on the 9.15. The vicar requests him not to take up the collection next Sunday. His business rapidly declines. His character is gone. And all because the local paper has published a paragraph accusing him of converting to his own use the money placed by the worshippers in the collection plate.

That, in tabloid form, is the theory of libel, and it corresponds well enough not only to the old-fashioned practice, but to such present-day libel cases as are based on genuine and undoubted defamation of character. But modern ingenuity has also produced a new type of libel action which sometimes appears in the courts and receives the same sympathetic consideration from counsel, judge, and jury, but does not spring from the same infliction of injury and pain. The libel itself is often detected first by some expert who includes among his duties a careful study of the newspapers, the discovery in them of libels, which but for his energies might pass unnoticed, and the calling of the libellee's attention to the damage

that his reputation has suffered. This gentleman is the moral counterpart of the ambulance-chaser, and as the ambulance-chaser from his point of vantage spies the street accident, follows the wounded pedestrian to his bedside, and supports his weakness with promises of "damages, gentlemen, heavy damages," so the libel detector tracks down the spirit that has been all unknowingly crushed by unfair charge or innuendo, and tells him in the same breath of the wound and the balm. He comes not as the bearer of ill-tidings, but rather as the harbinger of fortune in the shape of solid, substantial damages; for in his view an actionable libel is the luckiest thing that can happen to any man, and his principle is "blessed are ye when men shall revile you and shall say all manner of evil against you falsely." His activity is constantly on the increase; he prefers a libel to be circulated by an agency and so appear in a number of papers at the same time, and he believes in taking the papers one by one instead of consolidating the lot in a single action. He has made libel a serious study and a much more serious risk for the papers than it was before he came on to the stage.

With this ever-increasing danger of libel actions hanging over their head, how is it that the papers who are conscious enough of their danger drift into it so often? The answer is that libels come about in several different ways. First, there is the deliberate attack which, for reasons of policy or public interest, the proprietor decides must be made—an attack on a patent medicine or a quack or a financial shark. When, for example, the British Medical Association come to the conclusion that some quack remedy is doing a lot of harm and ought at all costs to be stopped, they may launch such an attack on it in the *B.M.J.* that the proprietor of the remedy, with his back to the wall, must either start an action or go under. It is an expensive thing to do, because (however certain you may be of winning) the costs are enormous, and by the time the action is over your opponent in many cases may have no funds, and the judge's order for costs is practically valueless. This kind of attack and the consequent libel action are often of great value in the public interest, but they are best left to papers which have a big financial reserve to draw on and can afford to spend it.

Next there is the libel action that arises from a mistake in a piece of news, or from a piece of news distorted between the reporter and the news room. This is a prolific source of libel to which the telephone often contributes. Some few years back, for example, a reporter telephoned a message from the local court that Mr So-and-So had been "sued for a debt," but the man at the other end of the telephone took the words down as "sued for a bet," and so it appeared in print. The debtor complained on the ground that all his customers were deacons of a neighbouring chapel, and all of them had moved their business elsewhere rather than buy what they wanted from a man who backed horses. Whatever injury the man may have suffered, it was certainly a libel, and he got damages from the paper. This kind of trouble is almost impossible to avoid, for in the hurry of getting in the news and going to press mistakes occasionally are bound to creep in to the most-carefully edited paper.

Then there is the straightforward misprint—a form of libel particularly galling to a paper. The local paper that spoke of a wedding as a "suspicious" occasion when it meant "auspicious" was clearly out of court, but a more subtle case was that of a paper that mixed up a food adulteration case in the police courts with an inquest on a man who had committed suicide in a gas oven, and finished up the adulteration case with a verdict of "death from gas-poisoning." The libellee in this case was able to secure from the paper as damages for the libel enough money to pay the fine imposed on him for selling adulterated food—an example of what economists call triangular exchange.

The result of this growing popularity of libel actions is to make the papers extraordinary, almost morbidly, cautious; and while caution is an excellent thing it may go beyond the point at which it serves the public interest. Already the caution of newspapers has, we think, got beyond that point, and many things that cry aloud for domestic comment are passed over in silence because of the libel danger. The root of the trouble lies in the cost of litigation, and in the mental attitude of juries, and it is at least worth considering whether the procedure of the courts should be altered, and the Chancery practice introduced into the King's Bench—the practice by which, after judgment has been given the amount of damage is referred to a master and argued before him. This method would at least make it less likely that outrageously high damages will be given by a jury in a moment of sympathetic enthusiasm, and would remove the temptation of a litigant to gamble on the jury's sympathy. The extent of the damage should, as far as is possible, be proved, not guessed at.

Notes of the Week.

Mr Baldwin and Protection.—With two set speeches, copiously relayed, Mr Baldwin has opened the Conservative campaign in Scotland and the North-East of England. Both speeches were studied defences of the Government's record, and at Dundee as well as Newcastle the benefits of de-rating were strongly emphasised. At the latter place the Prime Minister dealt with fiscal policy, on which he delivered some notable passages. In one devoted to rescuing Mr Churchill from his critics, he attempted to draw a distinction between Protection and "Safeguarding," and supported the Chancellor's amazing statement that Free Traders could support the latter. What is the Prime Minister's distinction? The actual words are worth quoting:—

> Protection, as we use the term in politics, is a different thing. Protection is made applicable to everything; safeguarding is made applicable to the things that need it and can prove that they need it.

It is nothing short of astounding that anyone in this year of grace, let alone a Prime Minister, should think, as Mr Baldwin apparently does, that a country is not protectionist unless protective duties are imposed wholesale on everything that comes in. If Mr Baldwin's definition holds good, there has never yet been a protectionist country and never will be. Every protective tariff is selective. Our own protective tariff—which Mr Baldwin prefers to call "safeguarding"—is selective; but its selection is haphazard and its protectionism high. If we read the Government's somewhat nebulous plans aright, all that will happen if they are returned to power at the General Election is that the field of haphazard selection, without any comprehensive study of broad considerations of the balance of national advantage, will be indefinitely widened, and we shall have more indiscriminating and unscientific Protection. But even the passage quoted is not the most remarkable part of Mr Baldwin's Newcastle speech. In praising the effects of Imperial Preference, he used these words:—

> "..... and we know that, so far as the sales of Dominions stuff could be increased in these islands at the cost of the foreigner, so shall we in return have a larger and increased demand for the goods we send out to them.

Mr Baldwin admits that the more we import from a country the more we shall export to that country—but only if that country is in the British Commonwealth of Nations. It is a new idea that economic law in trade will only operate between certain countries, and we venture to suggest to the Prime Minister that he should explain why exports do not go to pay for imports in the case of trade, for instance, between Great Britain and our natural Continental markets. While we await that explanation we may note in passing that the President of the Board of Trade, in a speech on Monday at Bingley, repeated those sweeping claims for the recent experiments in Protection with which we are familiar ("increased exports," "decreased imports," and "more employment"), and which by detailed analysis in a series of articles in the *Economist* in October and November we showed to be altogether misleading. We hope that before the President speaks again on the subject he will study our researches into this matter.

Engineers and the Melchett-Turner Conference.—In a recent issue of the *Economist* we examined sympathetically the substantial difficulties which employers' organisations were facing in arriving at a definition of their attitude to the Melchett-Turner Conference and its proposals. But we confess frankly that we have no sympathy whatever with the *exposé* in which the British Engineers' Association explains its refusal to co-operate. The least vulnerable portion of the document is that which sets out the Association's objections to the composition of the proposed National Industrial Council, and there are, presumably, many who will share the timidity which leads it to find the programme of the Conference too ambitious. But the rest of the document is unfortunate in the extreme. It gratuitously introduces acute political controversy; it denies the representative character of the Trade Union Congress; it practically demands, as a condition of co-operation, a revision—or, at least, the abjuration by the T.U.C.—of Labour's political programme, which is not drawn up by the T.U.C. at all; perhaps, worst of all, it bases refusal on its fear of publicity as to industrial facts and figures; finally, it says, in effect, that the policies of employers and Labour are so diametrically opposed that it is no use sitting round a table in the effort to co-operate. For a responsible employers' association to reveal so antediluvian a mentality, and to meet an invitation to co-operate in a promising attempt to promote industrial peace and efficiency by purely destructive criticism of the narrowest kind is utterly deplorable. If the Engineers' Association's *exposé* were representative of the viewpoint of the modern British employer, it would be necessary to discard right away any hope of progress towards peace and co-operation between the partners in industry. Fortunately, the contributions of Lord Melchett and his distinguished colleagues to the work of the Conference have clearly proved that such an attitude is essentially unrepresentative. There is, happily, ground for believing that even such a stab in the back as that which the Engineers' Association has delivered cannot destroy the work and the influence of the Conference. Men who matter on both sides of industry have for months sat round a table hammering out together means of co-operative self-help for industrial troubles; a new atmosphere and a new mentality has been fostered. Whatever the final evolution of the Conference proposals for future organisation, these are gains which will not lose their importance as time goes on. Meanwhile, we hope to see a speedy repudiation of the Engineers' Association's firmat by individual employers in that important industry, many of whom, we are sure, will be quick to realise the disastrous nature of the arguments which have been issued in their name.

The Real Issue in the Naval Controversy.—Having approved the Kellogg Peace Pact, the Senate at Washington has proceeded, according to plan, to consider the Cruiser Bill; and on Thursday afternoon, January 24th, the chairman of the Foreign Relations Committee, Senator Borah, who played the leading part in securing the passage of the Peace Pact, made an important move in the naval business. He introduced an amendment to the Bill, in which a recodification and restatement of sea law was called for—to be negotiated before the next Naval Disarmament Conference, which is due to take place in 1931 on the eve of the expiry of the Washington Treaty. In submitting his amendment, he pointed out that no progress had been made towards an agreed definition of sea law since the termination of the war of 1914-18; and he suggested that this was the real cause of the naval friction between the United States and Great Britain. He took a grave view of that friction, comparing the respective attitudes of Great Britain and the United States now to the attitudes of Great Britain and Germany before the war; and he declared that if a revision of sea law producing "freedom of the seas" proved unattainable, competitive building between the United States and Great Britain was inevitable. In the course of the debate next day (Friday, January 25th) he further declared that if Great Britain did prove obdurate over sea law the United States would require not 15 cruisers, but 50. In this connection, he defined the "freedom of the seas" (and this, we take it, is the American national view) as unrestricted freedom for the use of the seas in war-time by neutral commerce, except in visiting ports under a real (not a paper) blockade, and in carrying munitions or contraband. He added that during the late war the British had extended the definition of contraband to cover everything that is used by human beings—his implication being that the meaning of the term ought to be brought back to something like its traditional limits. Without, for the moment, expressing an opinion on Senator Borah's indication of what he conceives that the "freedom of the seas" ought to be, we may at once state our agreement with his contention that this question in itself is the crux of the Anglo-American conflict, and that the controversy over parity is only a superficial symptom of that deeper cause of disturbance in Anglo-American relations. But, apart from that, if one of the two parties to the controversy were to form the opinion that sea law rather than comparative strength of armaments was the heart of the matter, and were to ask that this should be probed by international discussion, it would be highly discourteous for the other party to ignore that view, and highly impolitic for it to refuse discussion on such lines, if and when a formal invitation were issued by the other party. On this account we have been startled by the text of a speech which was delivered at Birmingham last Saturday, January 26th, by Sir Austen Chamberlain in the presence of the American Ambassador. "If," he said, "you look at what is really at stake in all the discussion which has been going on lately, there is at bottom but one difference that we have had with the American Government.....a difference as to how we shall apply the limitation of naval armaments..... Observe, and it is important to observe.....that the difference between us even then was not a difference of principle.....Seen in its true proportion as a purely practical problem, how to apply an agreed principle in circumstances which are so different, it is reduced to its proper proportions....." Is it conceivable that, on Saturday evening, the British Secretary of State for Foreign Affairs was unaware of what had been said by Senator Borah on Thursday and Friday afternoons, though the Senator's declarations had been considered so important by the British daily Press that they had been cabled over and had been published in the newspapers of this country on Friday and Saturday mornings? Or are we driven to draw the less improbable inference that Sir Austen Chamberlain's words on Saturday were spoken, not in ignorance of Senator Borah's contention, but in deliberate disregard of it? Is it, in fact, the settled policy of his Majesty's present Government in Great Britain to refuse to discuss sea law with the United States Government? If that is the fact, as Sir Austen's speech, on the face of it, implies, then this is a major issue for the General Election. The matter must be probed further.

France and Alsace.—The history of the relations between France and her "dis-annexed departments" during the past ten years is one of the ironies of the peace settlement, for the unhappy relationship which had existed for half a century between Germany and the Reichsland has gradually reproduced itself, feature by feature, in the relations between France and her lost tribes, whom she "redeemed" in 1918 from "German domination." The misunderstanding has deepened from mutual irritation, through mutual recrimination, to repression on the one side and disaffection on the other; and thus history repeats itself as though with expess intention to discredit the fine phrases with which we all adorned our respective "war-aims" from 1914 to 1918. Fortunately, there is a portent of better things in the debate on Alsace which has just been taking place in the French Chamber. Alsatian deputies of many shades of opinion, short of separatism, have been given an opportunity of stating their case; and the French Press and public seem at last to have awakened to the fact that Alsatian expressions of discontent with the present régime are not the work of a handful of hypothetical German agents, but are the genuine manifestation of a popular feeling which is by no means inimical to France if France can be induced to satisfy Alsatian desiderata within the framework of the French Republic. The root of the trouble seems to be that the French feel like a kind of corporate sovereign towards the "dis-annexed depart-

ments," instead of thinking of the inhabitants of those long-suffering territories as fellow-citizens, whose interests and aspirations have just as good a claim to consideration as those of Frenchmen West of the Vosges. "My provinces were taken from me unlawfully in 1871; my provinces have been rightfully restored to me in 1918; it is for me to decide, at my sovereign pleasure, on what conditions I shall reincorporate these provinces in the main body of my estates. And anyone who opposes my will in this matter is a law-breaker." So we seem to hear King Leviathan of France speaking in the twentieth century, for all the world as though he were King Louis speaking in the eighteenth or the seventeenth century, and naturally the Alsatians resent it, for the time is past when populations can be bought and sold, stolen and recovered, as though they were chattels. Especially is the time past for this in Western Europe, and in the case of a population who have been told that they have been liberated from an intolerable foreign yoke. The truth is that the French will never settle the Alsatian problem so long as they subordinate it to the dogma of "the Republic One and Indivisible." Instead of thinking: "The Alsatians are rejecting the fundamental article of our national faith, and that means that they are disloyal to France, and that is a scandal," the French ought to be thinking: "Here are we and here are the Alsatians, who have had entirely different experiences and different histories during the past half-century. What are the compromises which we have to make with one another now in order to live together again as citizens of the same State." If once the French approach the problem from this angle, we prophesy that the Alsatians will respond.

Rumblings in Spain.—The dictatorships are a kind of political volcano. This week the Spanish volcano has rumbled but not erupted. An artillery unit came out in revolt on Tuesday, January 29th, at a garrison town called Cuidad Real—the mid-point between Madrid, Seville and Valencia; but other forces which remained loyal to the Directory, arrived and the artillerymen went back to barracks. The only other overt incident has been the arrest, on Wednesday, at Valencia, of the last Conservative Prime Minister, Señor Guerra, and his son as they were disembarking in fancied incognito from a French steamer. It seems to be admitted, however, that these incidents are symptoms of a much more widespread plot, which has miscarried; and it would be interesting to know how many of the numerous but heterogeneous discontented elements in Spain were concerned in it. The last revolt of the Artillery (a more serious affair than this one) was in 1926. The Artillery have a special grievance in the abolition, by the Marques de Estella, of their former privilege of being promoted exclusively by seniority, which they had enjoyed for fifty years. In its day, the privilege had been an improvement on promotion by favouritism; the Marques de Estella has scrapped an honest but deadening system in favour of the equally honest but less inefficient principle of promotion by merit; and it seems that the artillery officers have not forgiven him. Their contention is that "merit" is favouritism under a new name; but whatever the other objections to the present *régime* in Spain may be, corruption does not seem to be one of its conspicuous sins. Anyway, the other arms are at present supporting the Directory, and it is probable that jealousy between one arm and another will prevent the Army from uniting to put the Directory down. Nor is this to be regretted, for Spain would not stand to gain by the violent replacement of an old military dictatorship by a new one. It may be added that she has little reason to desire the return to power of the old "rotativist" politicians. The real question is: What is being thought and done by the small but sincere elements of enlightened opposition which the present *régime* remorselessly suppresses? What of the Castilian Liberals, the Biscayan Radicals and Socialists, and Catalan Nationalists? The real case against the Marques de Estella's dictatorship is not that he has sat on the heads of the rotativists and the gunners, but that he has driven out of public life just the people who might have been capable of creating a new and better *régime* after a clean sweep had been made of the old. Spain is a house swept and garnished—and the Parable warns us of the risks.

Jugoslavia and Her Neighbours.—Last Sunday, January 27th, the Italo-Jugoslav treaty of friendship of 1924 ran out without having been renewed. Last Monday, the 28th, King Alexander signed the Kellogg Peace Pact—a step which, in present circumstances, constitutes the ratification of the pact on the part of Jugoslavia. It is to be hoped that the new barrier to a conflict between Jugoslavia and Italy which is provided by the Kellogg Pact more than compensates for the lapse of the bipartite treaty by which the relations of the two countries have nominally been governed during the past five years. The effects of the bipartite pact of 1924 have, of course, been disappointing. At the time of its signature it was hailed as a sign that the nine years' controversy over the Adriatic had been settled; and for the next two years or so there really was a marked improvement in Italo-Jugoslav relations. The relapse came in 1926, after Signor Mussolini had rejected a suggestion that the pact should be widened to include France; and thereafter Italy concluded her treaty of Tirana with Albania, while Jugoslavia and France, after waiting many months in the hope that Italy might accept the idea of a tripartite pact on second thoughts, eventually concluded a bipartite treaty with each other. Thus, in an atmosphere of increasing tension, the old friction between Italy and Jugoslavia has tended to develop into something more serious: a rivalry between France and Italy for hegemony in South-Eastern Europe, with the Little Entente following the lead of France, and Albania, Hungary, and possibly Greece, Bulgaria, and Turkey, gravitating towards Italy. The situation is now not so tense as it was about a year ago, for France has shown statesmanship and self-restraint, while Signor Mussolini, as often, has proved less unconciliatory in act than in word. Moreover, the local situation in the Adriatic has been eased by the ratification, on Jugoslavia's part, of the Nettuno Conventions—a series of technical corollaries of the Italo-Jugoslav Pact of 1924, which regulate the rather complicated position in Dalmatia. At the moment the foreign policy of Jugoslavia under the new dictatorship is the uncertain factor. The Jugoslavs have been inclined to believe during the past two or three years that the Italians are seeking to "encircle" them, and the first effect of this alarm was to make Jugoslav policy towards Hungary, Greece, and Bulgaria more accommodating than it had been. Latterly, however, this tendency has been reversed as far as Bulgaria is concerned; and we can scarcely hope for a fresh change for the better in Jugoslav-Bulgarian relations under a *régime* in Jugoslavia which is controlled by Serbian military circles, and which shows no sign of making concessions to local national aspirations within the triune kingdom. If Croats and Slovenes are not to obtain any measure of local autonomy in Jugoslavia, there is no hope of any such concession to the Macedonian Bulgars, and therefore no hope of a real reconciliation between Bulgaria and Jugoslavia. Here, at the moment, is the crux.

The Viceroy's Speech.—Lord Irwin's address delivered on Monday at the opening of the Budget session of the Indian Legislative Assembly was an important and statesmanlike pronouncement. Its breadth of vision and judicious blending of firmness with conciliation merit, and appear to have won, a generally favourable reception by public opinion both in India and this country. Having announced the appointment of a Royal Commission, under the chairmanship of Mr Whitley, "to explore all aspects of the labour problem" in India—an announcement which is warmly welcomed by all political parties in London—the Viceroy gave the Assembly a solemn assurance that the people of Great Britain stand and will stand for fulfilment of the declaration of 1917, as a pledge "to do all that can be done by one people to assist another to attain full national political stature." However deeply suspicion of British motives may be implanted in some sections of "politically-minded" Indian society, Lord Irwin, who stated that for his personal honour he would not be in India to-day if he felt that British pledges would be broken, was fully justified in reminding India that settlement of her constitutional problems demands a positive contribution from her own political leaders as well as from the Imperial Parliament. Without friendly collaboration the road to "what all people must desire—a solution reached by mutual agreement between Great Britain and India"—is beset with difficulties. Those who have the best interests of the Indian peoples at heart will find no cause to dissent from the Viceroy's warning as to the dangers inherent in the attitude represented by the Christmas week resolution of the Indian National Congress. The threat to organise *satyagraha*, or "civil disobedience," unless the Nehru Constitution—"one which important sections of opinion in India have not accepted"—is passed unaltered by Parliament this year, is a counsel of despair. Assured, as we are, that British sentiment towards the legitimate aspirations of India is one of sincere friendliness, goodwill, and desire to cooperate, we hope that the more impatient elements in the Congress will weigh well the Viceroy's reminder that to raise out of distrust and hostility purely destructive forces is to risk an anarchy which no Government, whatever its status, British or Indian, could tolerate.

The Goddard Case.—Divorced from newspaper sensationalism and viewed in its proper perspective, the "night-club problem," exemplified by the flagrant career of Mrs Meyrick and her associates—a career deservedly terminated by the Central Criminal Court on Tuesday—is not a large or essentially important feature of our national life. At the same time, public opinion has been so disagreeably impressed by this disclosure of long-continued and immensely profitable law-breaking under salaried police protection that the issues raised by this unsavoury case become a matter of general interest. In itself the evidence on which ex-Sergeant Goddard was convicted prompts the reflection that the administration at Scotland Yard showed itself singularly insensible to the temptations likely to be offered to a subordinate official entrusted—on a salary of £6 per week—with a virtually free hand in controlling establishments which were known to thousands of Londoners to be both highly remunerative and notoriously defiant towards the law. The higher authorities in the Force cannot be acquitted of blame for an administrative arrangement whose results have proved so deplorable; and while it would be wholly unjustifiable to infer that Goddard's conduct reflects the general standard of "C" Division—still less of the Metropolitan Police as a body—the public will be the more inclined to hope that the report of the Royal Commission on Police Powers and Procedure will contain an assurance that the new régime at Scotland Yard is alive to dangers of the nature which this case has revealed. On the other aspect of the question—the anomalous position under the law of more or less ill-conducted and illicit drinking dens, masquerading as "clubs"—we feel that the only way to suppress this form of law-breaking without the devious and distasteful mechanism of spies, *agents provocateurs* and "raids," is for the law to give the police the duty of imposing on every club the same direct supervision as is now imposed on the hotels with whose "supper dances" the entertainment offered by the well-conducted "night-club" to its members is strictly comparable.

Lancashire Cotton Corporation.—Our Manchester correspondent writes:—The registration of the Lancashire Cotton Corporation, Limited, at the end of last week, after many delays, created great interest throughout cotton trade circles. The scheme for the amalgamation of mills spinning American cotton is on the lines of the proposals put forward last March by the Cotton Yarn Association, Limited. When the scheme was first announced the directors of spinning companies were asked to supply the Cotton Yarn Association with copies of their latest accounts, and particulars were then forwarded of the terms on which each company could be absorbed by the proposed amalgamation. Now the corporation has been registered it will be necessary for individual concerns to apply to be absorbed on the conditions previously announced. It has been stated by the Corporation that they hope to take over nearly 100 mills, representing about 8,000,000 spindles, before the end of this year, and it is understood that a number of firms with spindles and looms will apply for membership. The flotation of this corporation has been generally well received in Lancashire. It is recognised, however, that a great deal will depend upon the control and management. The five directors, whose names have been announced, are likely to inspire confidence, but it is noteworthy that so far there is not on the board an Oldham man, whereas most of the mills affected will be in the Oldham district. The corporation is expected to effect economies by large-scale buying of raw cotton. It is understood that when the combine is in working order individual mills will centre their production on a limited number of counts of yarn according to the kind of machinery. It is not unlikely that eventually there will be a working arrangement with manufacturers and merchants so as to market the finished goods in the mass. From the point of view of finance Lancashire has been much impressed by the success of the promoters in securing the assistance of the Bank of England. It is realised that if 100 mills can be amalgamated under this scheme the position of such concerns will be extremely favourable, especially in relation to overhead charges and costings. In the circumstances there is some anxiety among the owners of mills that are now doing fairly well, but have to meet rather heavy charges for private loans and bank overdrafts. If the amalgamation is to obtain a material reduction in the cost of producing yarn there will have to be a very tight hand on all expenses, and it will be necessary for the board to secure the very best men available in the different departments so as to prevent any waste. The corporation is undoubtedly beginning its work with the very best wishes of Lancashire people. Whatever may be done in other directions to regain lost trade, it is admitted that amalgamation in production is absolutely necessary.

Cotton Trade Dispute.—Our Manchester correspondent writes:—A dispute has arisen in the Lancashire cotton industry which may result in serious developments next week. About a year ago the employers, both spinning and weaving, put forward a programme of reduced wages, longer hours, and a modification of the agreement relating to oiling and cleaning in the spinning mills. Ultimately the demand relating to wages and hours was abandoned, but during the last few months joint conferences have taken place between the Master Spinners' Federation and the Operative Spinners' Amalgamation for the purpose of considering certain alterations in the agreement relating to oiling and cleaning machinery. Progress being unsatisfactory, the employers a few weeks ago decided to terminate the present agreement by giving one month's notice, and this period expires this Saturday, February 2nd. Under the agreement the allowance for cleaning varies from 2¾ hours to 3½ per week, according to the different districts. It is contended by the employers that an effort should be made to bring about a full productive week of 48 hours, instead of 44 to 45¼ as at present. The Master Spinners' Federation has requested the District Associations to put into operation a system of oiling and cleaning which provides that instead of both spinning mules being stopped for cleaning, one mule should be run while the other is being cleaned, and that as soon as a spinner has completed his cleaning the mule should be immediately restarted for spinning. It is also held

THE BRITISH LINEN BANK.
Incorporated by Royal Charter, 1746.
Capital and Reserve Funds. £3,300,000.
EXECUTOR and TRUSTEE DEPARTMENT.
Head Office: 38, St. Andrew Square, Edinburgh.
The Bank is prepared to undertake the duties of Executor or Trustee, and to act as Trustee for Debenture Stockholders, Public Institutions, etc.
LONDON OFFICE: 38, Threadneedle St., E.C.2
Every description of Banking Business transacted.

that the half-hour between 11.30 a.m. and 12 noon on Saturday should be fully utilised either for spinning, cleaning, or strap and band piercing, and that oiling should be performed before the engine starts. The trade union officials have suggested as an alternative that special cleaning gangs should be introduced, and that the extra money earned by the operatives by the longer running of the machinery should be used towards the cost of employing these workers. The Masters' Federation are agreeable to this proposal, but difficulties may arise at mills where cleaning gangs are not a practicable proposition. On Saturday last, at a delegate meeting of the Operative Spinners' Amalgamation, it was decided that district officials should be instructed to resist all attempts to introduce the changes proposed, and that if notice is given that such alterations are to be enforced the workpeople shall tender strike notices. There is a certain amount of nervousness in Lancashire as to what will happen next week, but it is of interest that in Bolton a joint committee of employers and operatives has been appointed to draw up regulations. There is no danger at present of this dispute resulting in a general strike or lock-out, but there is a possibility of trouble at individual mills. The aim of the Masters' Federation in pressing for a revised agreement is to bring about a bigger output of yarn, and thus reduce overhead charges.

Economic Activities of the League.—Our League correspondent writes:—The recent session of the League of Nations Economic Committee was concerned chiefly with the coal and sugar problems, the most-favoured-nation clause, and collective action with a view to the reduction of customs tariffs. With regard to coal there has already been a consultation with experts from eleven countries. The experts entered upon a very wide field, and while certain experts from producing countries thought that co-operation on an international scale would contribute to a solution of the crisis, others apparently accepted this idea only with reservations. The Economic Committee is continuing its consultation by calling together Labour experts on February 27th. On the subject of sugar, the memoranda already before the Committee reveal that the present situation is essentially due to lack of equilibrium between production and consumption. The Committee, while accepting the fact that it would be contrary to the rôle of the League to take any active part with the object of interfering with the natural development of production, believes that it would be useful to study the artificial measures which have influenced production and consumption with the object, if possible, of adjusting this lack of balance. A preliminary consultation is therefore to take place during April with experts from producing and consuming countries. At a later date experts specially qualified to deal with beet production will be consulted. The Committee has also given close study to the scope of the most-favoured-nation clause, its fundamental principles, the extent to which it should be applied in certain special fields such as temporary exports and finishing trades, and the types of goods to which it should be applied. The Committee has drafted a standard clause which they consider adaptable to meet special circumstances, and sufficiently explicit to reduce differences of interpretation to a minimum. More detailed information will be available when the Committee's report is issued. Meanwhile the Committee proposes that the Council should communicate to different countries, whether members of the League or not, the results of its work with the expression of the hope that they will follow the principles there laid down in their commercial policies and in their negotiation of bilateral treaties. Finally, in continuance of its study on collective action with a view to reducing customs duties, the Committee has decided, in the light of information received on the situation of the industry in the countries principally concerned, to continue its study on aluminium. The Committee also hopes that by its next session it will have obtained information about possible action leading to the reduction of tariffs on half-finished steel products, wood pulp and papers, copper, fruits and fresh vegetables.

The Post Office Accounts.—Advocates of the penny post have drawn much satisfaction from the Post Office commercial accounts for 1927-8, just issued. The result of the year's working is a credit balance of £7,570,348, an increase of £1,782,750 on the profit made in 1926-27, and the highest credit balance since the war. This sum, it is argued, amply covers accepted estimates of the cost of reducing the three-halfpenny rate to a penny, though it should not be forgotten that from the point of view of the Exchequer a reduction in the Post Office surplus would have to be made good by equivalent fresh revenue from taxation. Turning to the details of the accounts, income from postal business is up by £2,736,413, that from telegraph business by £18,011, and that from telephone business by £1,367,592. Operating expenditure is up by £2,062,478, mainly coming under the heads of salaries and wages, conveyance of mails, and depreciation of telegraph and telephone plant, but operating income shows an increase of £4,252,094. Interest on capital rose by £420,259. It will be seen that telegraph business, though on the increase, has not kept step with the rest, and, in fact, the income from that source is an appreciably smaller percentage of the total income than in 1926-27. The special account shows an operating loss of £1,059,870 on the telegraph service (against £1,029,678 the previous year), and a net deficit of £1,380,829 (against £1,349,112). This increase of loss, however, is accounted for almost twice over by the drop in revenue from wireless licences, due to the commencement of a new allocation to the Post Office from receipts on licences for expenses of management, and not to any decline in the total receipts from that quarter, which, in fact, show an increase of about 9 per cent. to £1,234,898. Of that sum the B.B.C. receive £824,237 and the Exchequer £254,872. Apart from that item, the telegraph service is a little better off, but its critics are not altogether satisfied with the position disclosed. The wireless telegraph business is in a happier state, for a deficit of £104,468 has been reduced to £28,447, and the operating account actually shows a profit. In the interval the wireless telegraph business was more than doubled. On the other hand, the Imperial Cable Service shows an operating loss where in 1926-27 there was a slight profit, and the total income declined by over 25 per cent. The operating profit on the telephone service has increased by £159,080, but thanks to heavier interest charges the net surplus is down by £175,984. The Continental telephone service also shows a diminished profit on a larger turnover.

Proposed New Taxation in Germany.—Our Berlin correspondent writes:—The struggle against Dr Hilferding's taxation plans has become very sharp. In the Reichsrat the States will protest against the plan to reserve for the Republic 120 million marks of the State and municipal subventions, but it is not likely that they will be able to suggest an alternative. The central associations of banking, industry and trade protest that the loss of revenue and the increase in Reparation payments ought to be met by saving, but they have not suggested where saving could be effected. In the Reichstag no party favours all Dr Hilferding's new taxes. The Socialists do not approve of the increase in the beer and spirits taxes, the People's Party is against the one-fifth increase in the property tax, the Centre's main objection is to the increase in the inheritance tax, and the Bavarian People's Party stands against the increase in the beer tax. The Socialists, it seems, would favour restoration of the wine tax, but the Centre opposes. The proposed new beer tax is 9 marks per hectolitre on the first 1,000 hectolitres brewed, instead of 6 marks at present, rising progressively to 12.20 marks instead of 8.15 marks on over 125,000 hectolitres. The tax exemption of domestic brewing is abolished. The project for reduction of the income-tax fixes the following rates:—

	Marks.		Per Cent. of Tax.
On first	8,000		
" next	2,000	or part	10
" "	2,000	"	11
" "	4,000	"	12½
" "	4,000	"	14
" "	8,000	"	19
" "	18,000	"	24
" "	34,000	"	30
Thereafter		"	35
			40

The family abatements are unchanged. The increment of Property Tax Law, which has never been put into force, is retained, but its application is to be postponed until a new valuation of property in accord with the pending taxation uniformity law can be made. The chief figures of the Budget for 1929-30 (which is not yet available in detail) are:—

	Marks.
Total	10,047,688,000
As against 1928-1929	9,709,626 000
Thereof ordinary	9,922,665,000
" extraordinary	125,022,000
Ordinary Expenditure Items—	
Subventions to States & municipalities	3,275,888,000
Domestic war burdens	227,113,000
External war burdens	1,540,000,000
Other recurring expenditure	4,631,695,000
Non-recurring expenditure	247,968,000

The estimated yield of direct taxes is 6,378 million marks, or 343 million marks more than in 1928-9, of Customs and Excise 3,117 million marks, or 315 million marks more. The extraordinary Budget practically all consists of expenditure (121 million marks) of the Ministry of Labour.

Canadian Railway Rivalry.—Our Ottawa correspondent writes:—The Canadian Pacific Railway has just announced one of the most ambitious programmes of new construction in its history, having filed applications at Ottawa for charters covering about 1,200 miles of new branch lines, chiefly in the prairie provinces. The construction work, which will be spread over five years, will involve the expenditure of at least 50 million dollars, and most of the projected branches are in the northern part of Saskatchewan. Hitherto there has been comparatively little agricultural settlement beyond the North Saskatchewan River, but recent surveys and explorations have proved that this territory contains a large area of fine farming land and a variety of other resources. The region known as the Meadow Lake country, lying north of the town of North Battleford, has for some years past been attracting settlers, some of whom have taken up land 100 miles from the nearest railway. The C.P.R. now proposes to tap this country, firstly by a line running north from its Willingdon branch through North Battleford, and, secondly, by a line running in a north-westerly direction from Prince Albert to Grande Biche on the Alberta and Great Waterways line. It also proposes to extend one of its branches into the richly mineralised region which contains the promising Flin-Flon and Sherritt-Gordon mines, and to which the Canadian National has just completed a branch line. Now the Canadian National has always regarded the northern part of Saskatchewan as its special preserve, and when the C.P.R. programme was announced, Sir H. Thornton, the president of the C.N.R., publicly protested that certain of the C.P.R.'s projected branches were an unwarranted invasion of C.N.R. territory, and he proposes to apply for charters over several of the same routes. Mr Beatty, of the C.P.R., has replied that he does not acknowledge the right of the C.N.R. to claim any part of Canada as its special preserve, and he intends to go ahead with his programme. So when the rival applications for charters come before the Railway Committee of Parliament, a stiff battle is predicted, and both sides are already mustering their forces for the fray.

Sun Life Office.—Once again the annual report of this office discloses a very considerable all-round advance over that of the previous year, and once again it will be found that this expansion has been due very largely to the volume of single-premium insurances transacted. It is of interest, therefore, to set out side by side the total new business of the last few years compared with the amount received each year in the form of single premiums for new policies included in the total:—

Year.	Total New Business. £		Single Premiums Received. £
1924	6,853,323	....	254,662
1925	7,899,226	....	856,645
1926	8,979,070	....	1,716,283
1927	13,382,494	....	4,649,131
1928	15,274,880	....	5,018,980

Assuming that the single premiums amounted on the average to, say, 80 per cent. of the corresponding sums assured, it will be seen that in each of the last two years more than 40 per cent. of the total business transacted was in respect of these special single-premium contracts. It is known, moreover, that in the case of the Sun Office these special policies take, in most cases, the form of pure endowment policies for a term of five years only, in respect of which more than 90 per cent. of the single premium is paid for by means of a loan on the policy at the outset. Thus the policy is not really a life policy at all; and although it can be proved, when taken as a whole, to be profitable both from the point of view of the office and the policyholder, the transaction of this type of policy makes little contribution to the solution of the problem of under-insurance. Dealing now only with the 1928 new figures, the sums assured corresponding to the single premiums received may be estimated at approximately £6,000,000. The remainder of the total consists of sums assured of £9,000,000 in respect of some 19,000 policies. These figures show that the average policy issued was for a sum assured of approximately £500, and indicates that apart from the single-premium business, which, of course, consists wholly of large policies, the company's business is made up for the most part of policies for comparatively small sums. In view of the large increase in business, it is not surprising to find that the life insurance fund shows an increase on the year of £6¾ millions, and now amounts to over £32 millions. The balance-sheet shows some changes of interest. The loans on the company's own life policies show an increase of nearly £5 millions on the year, being due, of course, to the new single-premium policies issued. The holding in British Government securities has been reduced from £6,219,000, equal to 22.9 per cent. of the total assets, to £3,410,000, equal to 10 per cent. of the total assets. The funds thus released have been employed mostly in increasing the holdings of foreign Government securities and debenture stocks. The effect of these changes on the rate of interest has been to increase the net rate from £4 12s 8d per cent. to £4 15s 10d per cent., the adverse effect of increasing the policy loans earning only 5 per cent. gross being apparently more than offset by the higher rate of interest yielded by foreign Government securities and debentures as compared with British Government securities.

Bank Balance-sheets.—The tables summarising the position of the leading British banks at the end of 1927 and 1928, which were published in the *Economist* of January 26th, contain one or two errors in respect of the figures for the former year. The 1927 investments of the District Bank were given as £7.6 millions, whereas the correct figure was £14.8 millions, or the same as in the succeeding year. The totals for 1927 also included the figures for the Lancashire and Yorkshire Bank, though this was omitted from the banks for which separate figures were given, owing to the fact that it is no longer a separate undertaking. To remove any misconception, the following table is given, showing the effect of excluding this bank:—

	1927 (a).	1927 (b).	1928.
	£ Mill.	£ Mill.	£ Mill.
Capital and reserves	136·1	133·7	138·7
Acceptances	129·9	129·8	224·5
Deposits	1,872·8	1,848·8	1,931·3
Total liabilities	2,138·8	2,112·3	2,294·5
Cash	319·4	314·2	323·3
Investments	286·9	279·3	297·2
Discounts, advances, and money at call	1,361·4	1,348·2	1,494·4
Cover for acceptances, premises, & sundries	171·1	170·6	269·6

(a) Including Lancashire and Yorkshire Bank.
(b) Excluding Lancashire and Yorkshire Bank.

Minor corrections have also been made in the 1927 totals, corresponding to the reallocation of one or two small items shown separately in the accounts of Lloyds Bank.

Free Trade and the Mobility of Capital.—In his letter printed in our last week's issue Mr Douglas Graham used the following quotation from Professor Nicholson:

"If the result were that capital would be sent abroad, and if labour were unemployed or forced to emigrate, the effect on the total of home industry would in general be *advantageous*." Mr Graham writes to point out that the last word should have read "disadvantageous."

THE University of London announces that the Newmarch lectures in statistics will be given on Mondays at 5.30 p.m., beginning February 11th. The subject will be "Demography in the XVIIth and XVIIIth Centuries," and the lecturer is Mr James Bonar.

Oversea Correspondence.

UNITED STATES.—MONEY—PRICES—REPARATIONS.

(FROM OUR CORRESPONDENT.)

NEW YORK, January 18.

WITH the share market showing hesitation and a disposition to await developments, attention has remained centred on the money position. With an increase of $72,000,000 during the past week in brokers' borrowings the total for the latter is within $10,000,000 of the peak for all time, which was recorded last December. This quick recovery in brokers' loans has evidently given the market a bad conscience and helped to father suggestions that the official discount rate may be raised. In addition, the new policy of allowing the bill market to seek a more natural level, with a consequent advance in rates, has re-enforced fears of a higher discount rate. Under the old official policy of subsidising the bill market heavily, an advance in the bill rate to about the level of the discount rate presaged an advance in the latter. To-day, another advance of ½ to ¼ in the bill rate brought 60 and 90 days' bills up to a 5 and 5⅛ per cent. basis, or to slightly above the discount rate. However, as has been pointed out in these letters recently, the present advance in bill rates, reflecting the new policy of letting the bill market stand more on its own feet, does not mean what it would have *meant under the old system*. The fears of a higher discount rate have therefore been groundless so far, and seem likely to remain so for a week or two more at least. Nevertheless, it is apparent that the policy followed in the bill market is making the money market in general firmer. Part of the Reserve banks' cheap money is taken out of the market on the one hand, while the higher rate also tends to reduce the volume of bills outstanding on the other. This latter tendency already has become apparent. There also seem to be grounds for believing that the new bill-market policy is transferring some of this kind of business to London, and in that way adding somewhat to the burden on sterling exchange.

At the same time that the operations in the bill market are making for firmer money and brokers' borrowings are showing no diminishing tendency, the earmarking of gold, presumably for French account, is proceeding apace and helping to lay the foundations for higher money later on. During the past week an additional $20,000,000 worth of the metal was earmarked, this bringing the total since the beginning of the year up to $75,000,000. Informed observers here would not be surprised if the movement went ahead until $200,000,000 were taken. So far the early January returns of funds, which has reduced discounts at the Reserve banks by $332,000,000 and the total volume of Reserve bank credit by $338,000,000, has permitted this earmarking to go on without disturbing the money market. In fact, after a January 15th run-up in call money to 9 per cent., the rate for that kind of borrowing has dropped back to 6 per cent. But it seems likely that as the January return flow of funds dries up, continued earmarking will have more effect on rates. Then, if business continues active, the early spring demands for funds for commercial purposes, which generally begin to manifest themselves during the latter part of February, could easily precipitate a squeeze in the money market that might be embarrassing to the share market. Whether the arrival of such a squeeze will be hastened or intensified by a higher official discount rate remains to be seen. All that can be said now is that for the present the Reserve authorities appear to be satisfied to continue their operation in the bill market without being unduly exercised over the discount rate. Possibly much will depend on the action of the share market itself.

Business news remains good, and the Bureau of Labour Statistics index of wholesale prices for December showed no change in comparison with November. However, it is noted that during the past week or so cotton has advanced $4 a bale, wheat 10 cents a bushel, corn 12 cents a bushel, and rubber 2 cents a pound, advances which *indicate considerable activity* in the commodity markets. Generally speaking, estimates of spring business remain optimistic.

Widespread satisfaction is expressed over the selection of Mr Owen D. Young and Mr J. P. Morgan as the American members of the Experts Committee on Reparations. Mr T. N. Perkins will act as Mr Young's deputy, and Mr Thomas W. Lamont as the deputy of his partner, Mr Morgan. It is thought that the American delegation ranks exceptionally high in ability and character, and that its composition should make for smoothness and speed in the operations of the Committee. Something has been made of the likelihood that the American members will be opposed to a bond issue, but there has been considerable misunderstanding in this connection. What is likely is that, bearing in mind the rather quiet condition of the American bond market and the domestic objections to having American investors take over the whole funding operation, the American experts will emphasise the need for a moderate American participation in a loan that is substantially subscribed to in Europe.

FRANCE. — CAISSE D'AMORTISSEMENT — FOREIGN TRADE—COMMERCIAL TREATIES.

(BY OUR CORRESPONDENT.)

PARIS, January 30.

As a natural development of the work of financial restoration already accomplished, the Caisse d'Amortissement announces the issue during the second half of February of a further large conversion and consolidation loan, which it is expected will amount to anything between 5,000 and 7,000 million francs. The issue will have for its primary object the conversion of the whole of the outstanding balance (amounting to 2,400,000,000f) of the 3,013,000,000f 5oof "Tobacco" bonds issued by the Caisse immediately after its organisation in 1926, plus a further substantial proportion of the two-year Defence Bonds (4 per cent.), of which there are still 35,500,000,000f in existence. The first-named bonds were issued with a minimum guarantee of 7 per cent., secured on the profits of the tobacco monopoly. The gross receipts of the industry having increased by *something like* 1,000,000,000f during the past year, the yield from the bonds now represents over 8 per cent., taking the scrip at par. According to the terms of issue, the Caisse has the right to pay off, at any time, the whole of the bonds remaining in existence, at the rate of 6oof per 5oof bond. The bonds were quoted last Saturday at 627, in view of the pending half-year dividend of 2of 25c.

The new issue will take the form of 1,0oof bonds, with a fixed dividend of 4½ per cent., redeemable in 40 years by half-yearly drawings or by purchases in the open market, and exempt from all taxation on securities. The issue price will be below par, in which case the actual yield will be somewhere in the near neighbourhood of 5 per cent. Holders of Tobacco bonds will receive one new 1,0oof bond in exchange for two of the old 5oof issue, plus the 1oof premium. The success of the new issue is recognised as assured in advance. The most striking feature of the pending issue is the evidence it affords of the complete revival of public confidence since the *débâcle* of the franc *in 1926*. In May, 1927, when the first consolidation loan was offered by the State, the rate offered was 6 per cent., with a premium of 50 per cent. on redemption. The Rentes issued in 1928 had a nominal yield of 5 per cent., and were issued at 91. Public companies found it difficult in 1927 to borrow for long-term purposes at 7.65 per cent., and in January, 1928, the average yield offered was 7.25, in December last the rate had come back to only 6.05 per cent.; whereas short-term money could be had in abundance at 3¾ per cent. Industry has received the announcement of the new loan with fervent approval.

Senator François Milan, president of the Finance Committee of the Caisse d'Amortissement, in an article in *Le Capital*, sums up the situation of the Caisse at the beginning of 1929 as compared with that in August, 1926, when it began operations. The total amount of floating debt bonds in circulation is now 35,500,000,000f (solely in two-year Defence Bonds), as compared with 49,000,000,000f in 1926; the Caisse now possesses 6,500,000,000f of available liquid cash resources, as against "a few hundred millions"; the average monthly maturities of floating debt has been reduced from between 7,000 and 8,000 million francs to 1,800,000,000f; the rate of interest has been brought down from 6 per cent. to 4 per cent.; while the revenue from the tobacco monopoly has been enormously increased, and is still increasing. The programme of the Caisse will "continue to consist in securing more and more mastery over the floating debt by means of consolidation loans and 'contingenting' the issue of bonds, and in developing extinction by buying in on the Bourse of Rentes, Treasury Bonds and Obligations and Crédit National Bonds, and thus, little by little, come to the help of the General Budget."

The foreign trade returns for December show that for the tenth month since the beginning of 1928 French trade with the rest of the world, resulted in an unfavourable balance. Imports during the month had a value of 5,212,912,000f, while exports were 4,733,095,000f, or a deficit of nearly 480,000,000f. The total excess of imports over exports during the past twelve months was thus brought to 2,101,466,000f, against a favourable balance of 1,874,881,000f in 1927. The detailed figures for the year are as follows:—

(000's omitted.)

	Totals for the Year.		Differences in 1928.
	1927.	1928.	
	Francs.	Francs.	Francs.
Imports—			
Foodstuffs	13,892,693	12,549,775	— 1,342,918
Raw materials	33,370,167	32,899,027	— 381,140
Manufactured goods	5,787,018	7,909,463	— 2,122,445
Totals	53,049,878	53,448,265	— 398,387
Exports—			
Foodstuffs	5,398,679	6,240,247	— 841.668
Raw materials	16,852,533	13,077,023	— 3,775,510
Manufactured goods	32,673,647	32,029,529	— 644,118
Totals	54,924,859	51,346,799	— 3,577,960

The tonnage returns for the twelve months indicate that exports, notwithstanding a drop of 6½ per cent. in value, were over 3,086,000 tons (or nearly 8 per cent.) greater in volume. Imports, on the other hand, although less than 1 per cent. greater in value than in 1927, were 1½ per cent. less in tonnage. French foreign trade showed in December a continuance of the increased activity, in both imports and exports, that began in August, but in neither case did the totals for December quite reach the level of those for December, 1927.

The new commercial treaty between France and Serbia, which was signed this morning at the Quai d'Orsay, accords to both countries the benefit of most-favoured-nation treatment, and gives France reductions of the Serbian tariff for "specifically French goods, such as brandies, champagnes, sparkling wines, candles, soaps, medicaments, perfumery, cotton and silk yarns and piece goods, leather, tools, machinery and motor-cars." Serbia receives no modifications of the French tariff, except those attaching to the most-favoured-nation clause.

Although no official information is obtainable, it appears to be clear that the situation in regard to the pending new Franco-American tariff agreement has reached a complete deadlock, owing to the inflexible attitude assumed by the Washington Government. The Americans, while claiming the right to the French minimum tariff, not only refuse to act reciprocally, but persist in arbitrarily raising still higher their tariff against French goods. When the French revised their tariff in 1927 to a general level more consistent with the new value of the franc, the United States Government protested against the raising of the general tariff, which affected certain of their goods, but agreed to meet American wishes half-way. Since then President Coolidge, by simple decree, has raised the duties imposed on various French exports, and there have been lawsuits under the Sherman Act which have resulted disastrously for certain French products, such as potash. The American attitude in tariff matters, taken in connection with the extent to which European industries, particularly in Germany, are being brought under American control, is attracting increasing attention here.

GERMANY. — FOREIGN TRADE — FINANCES — CREDIT—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, January 29.

THE foreign trade return for December shows a considerable improvement over that of November, and the return for all 1928 a very great improvement over that of 1927. In December, imports, without gold and silver, totalled 1,100,870,000 marks, as against 1,173,329,000 marks in November; exports, 978,360,000 marks, against 939,786,000 marks. Owing to the October change in the system of returns, the November export figure is below the correct level. The adverse balance of all 1928 was little more than half that of 1927; if Reparation deliveries in kind are counted, less than half. Accompanying the formal return for 1928 is an official correction of the returns of the last four years. As the amount of error is

National Bank of Commerce in New York

Chairman of the Board
JAMES S. ALEXANDER

President
STEVENSON E. WARD

Capital Paid up	$25,000,000
Surplus	$40,000,000
Undivided Profits	$5,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of its customers throughout the world, bringing them into contact with all phases of commerce and industry in the United States.

LONDON REPRESENTATIVE
2 and 3, Crosby Square
Bishopsgate, E. C. 3

NATIONAL BANK OF COMMERCE IN NEW YORK 1839

not known, the corrected totals do not claim to be exact, but they are officially presented as nearer the truth than the formal returns. Trade tables, which include Reparations in kind, are also published, so that an approximately correct trade balance is at last available. It is shown that after all corrections are made, and after the deliveries in kind are added to the ordinary exports, the import surplus of the past four calendar years is less than half the figure usually given.

The formal and uncorrected returns of 1927 and 1928 are :—

	Millions of Marks. 1927.		1928.
IMPORTS.			
Total	14,143	....	14,045
Whereof:			
Foodstuffs	4,350	....	4,195
Materials	7,149	....	7,246
Manufactures	2,467	....	2,458
EXPORTS.			
Total	10,219	....	11,395
Whereof:			
Foodstuffs	419	....	608
Materials	2,239	....	2,269
Manufactures	7,549	....	8,500

The import surplus shown in 1928 is 2,650 million marks. Corrections made for certain of the errors, however, put the surplus at only 2,355 millions, as against 3,924 millions shown for 1927. The improvement is mainly due to greatly increased export of manufactured goods, but also the net import of foodstuffs declined, being 3,587 millions, against 3,931 millions in 1927. The total imports and exports of materials, raw and half-manufactured, are nearly the same in both years. Import of textile raw materials declined considerably. This decline, and also a very big increase in the net export of heavy iron and steel, reflected the trade decline and the reduced home consumption. Import of manufactured wares declined a little, but export increased by over 12 per cent., the monthly average figure being 708 million marks, as against 629 millions in 1927 and 581 millions in 1926. Exports of finished textiles, iron wares, machinery, and electro-technical products show large increases. Reparation deliveries in kind totalled 658 million marks, against 577 million marks in 1927.

The corrected tables are very instructive. By taking the uncorrected totals, by omitting Reparation exports, and by including the large gold imports, German writers usually present the total passive balance of 1925 to 1928 at about 13,000 million marks. In the present discussion of Reparations and of transfer possibilities nearly all Germans, followed by many foreign authorities, give this vast total. The following are the new official tables :—

	Millions of Marks. 1925.		1926.	
Imports	11,744·0	..	9,701·5	
Paid-for exports	8,930·5	..	9,929·9	
Passive balance	2,813·5	..	228·4	
Deliveries in kind	520·4	..	630·8	
Passive balance including deliveries in kind	2,293,1	..	859,2	(act. bal.)
	1927.		1928.	
Imports	13,801·3	..	13.643·7	
Paid-for exports	10,375·7	..	11,785·7	
Passive balance	3,425·6	..	1,858·0	
Deliveries in kind	577·6	..	658·3	
Passive balance including deliveries in kind	2,848·0	..	1,199·7	

The passive balance for the four years here is only 5,481·6 million marks.

Money last week continued very plentiful, day loans being nominally 3½-5½ per cent., but business was done at lower rates, and the private discount rate was twice reduced, to 5½ per cent., the lowest figure of recent years. With 1 per cent. disparity between private and Reichsbank rates there was more talk of a new Reichsbank rate reduction in February. This, in view of the uncertainty about London and New York, is doubtful; and it appears that funds have been returning to abroad. The dimensions of the outflow are unknown, but the dollar exchange last week rose very sharply, declining, however, again yesterday. The banks seem to be glad of the opportunity presented by very cheap money for the repayment of foreign credits. This week day-money rates rose in view of the impending month-end, and to-day were 4-6½ per cent., and the private discount rate was put up to 5⅝. The Reichsbank's return for the third week of January shows a further decline of discounts, advances, and circulation. Discounts at 1,548 million marks are back to the level of April, 1927, and the ratio of reserve (both gold and foreign exchange) rose to 75·9 per cent., also a record figure for the last two years. While the circulation of trade bills, as shown by the stamp duty returns, was higher in 1928 than in 1927, it remained relatively stable during the year. With the aim of restoring the international use of Reichsmark bills, the stamp duty for bills drawn in marks on abroad and payable abroad is to be reduced to half.

The wholesale-prices index number for January 23rd is 139.0, against 138.7 on the 16th. Vegetable foodstuffs show a sharp rise. The trade position is unchanged. The Prussian Trade Minister, Dr Schreiber, plainly aiming at the confutation of the Agent for Reparations' last Report, has made a detailed pessimistic statement about the condition of industry and trade. The main trouble, he alleges, is the insufficient creation of capital, and he rejects a semi-official bank's estimate of national savings in 1928 at 7,600 million marks, although Dr Welter, of the *Frankfurter Zeitung*, estimates 9,000 million marks. Dr Schreiber predicts that Germany in future will not be able to pay Reparations out of her own resources. Nearly all new writers on Reparations continue to declare that the "transfers protection" must not be surrendered unless the annuity is reduced very much—to half or one-third of the present, and some writers show a new desire to retain the whole-control system, which, it is held, also constitutes a kind of protection for Germany. The Railway Corporation's report for December shows a very heavy decline in car-loadings, which is partly an after-effect of the Ruhr lock-out of November. Operating receipts in December were 413 million marks; operating expenditure, 352 million marks; total expenditure, including service of Reparation bonds and allocations to reserve, 422 million marks. Coal output in 1928 was 150,875,814 metric tons, as against 153,595,413 tons in 1927; lignite, 166,224,159 tons, against 150,852,085 tons; coke, 33,863,178 tons, against 32,266,203 tons. Output of the rolling mills was 11,562,590 tons, against 12,866,773 tons. As a result of the lock-out, Germany's steel production in the fourth quarter of 1928 was 405,000 tons below her quarterly quota of 3,161,000 tons in the International Cartel; and for this, according to the Cartel agreement, she will receive a premium of $632,000 ($2 per ton on the deficit in fulfilling the quota, but not more than on 10 per cent. of the quarterly quota). France, Belgium, and Luxemburg exceeded their quotas, and will have to pay penalties.

AUSTRIA.—HOUSING—INVESTMENT—TRADE AGREEMENTS—CAPITAL—UNEMPLOYMENT.

(FROM OUR CORRESPONDENT.)

VIENNA, January 26.

AT present a Parliamentary Commission is trying, on the basis of a Government Bill, to foster private enterprise in housebuilding to the extent of creating an understanding through which the present lack of yield from real estate would be remedied. The Ministry of Finance is willing to assume the guaranty for interest and repayment service on a housing loan from which 60 per cent. of the capital for building purposes would be advanced as loans. The remainder of the capital would have to be furnished by the builders themselves, or raised as first mortgages. In financial circles, however, there is considerable doubt entertained in regard to the provision of the Government Bill, whereby the banks and savings banks are to be compelled to invest 20 per cent. of the savings deposited with them in certificates of the new housing loan.

One of the most important problems of Austrian economy is that of once more interesting the domestic and foreign public in the acquisition of investment values bearing fixed rates of interest. It is true that within recent months several mortgage institutes have been able to report better sales in their obligations; but former losses on pre-war rentes, and the fear of not being able in case of necessity to realise on these obligations without loss has so far checked the resuscitation of the investment market. Apart from the issue of mortgages, during the past year only two small loans have been issued on the domestic market, and even of these a considerable quota found its way abroad. This is in spite of the circumstance that depositors with the banks and savings banks get only 4½ per cent. on their money, while first-class gold mortgages bear more than 7 per cent.

As is usual at this time of the year, industry reports slow sales. Exports of iron are significant in regard to only a few countries, and prices for fine steel have suffered depression, especially in trade with Germany. Some fair orders have come in from Russia. The textile industry shows a decline, and several cotton mills have reduced output, in view of unsatisfactory prices. The turnover in the electricity and brewing industries continues good. A certain disquietude has been caused by the difficulties in economic relations with Poland, but it is believed that an understanding will be arrived at. Economic negotiations have been taken up by representatives of the Austrian and German machine industries, and an understanding has been reached. It is assumed that the official trade treaty negotiations, which had to be suddenly broken off several months ago, will shortly be recommenced. Business with Russia still falls short of expectations. The repayment of short-term credits continues, and since the middle of December the Austrian National Bank shows a reduction amounting to 60 million schillings in its holdings of foreign values. The National Bank discounts bills freely at 6½ per cent., and money is available at home out of savings deposits. In view of the fact that out of the remainder of the proceeds of the last League of Nations loan foreign values amounting to 50 million schillings were passed to the National Bank, the recent payments in foreign values are of very little significance. Within the last few days National Bank shares have been in demand, and a considerable increase in value has resulted, although unofficial warnings have been given against such speculation, as no increase in dividend is anticipated for the near future.

Railway rates and fares are likely to be increased very shortly. The original plan has been modified under pressure from economic circles. The new management of the State railways contemplates a further reduction of staffs. It also proposes to promote foreign tourist traffic by the erection of new hotels. Other larger investments which are necessary will be possible only after the investment loan has been concluded. It has been resolved to increase the charges of the post and telephone service. The increase of revenue is destined to cover the adjustment of salaries granted to the post office workers, but this means thrusting on to the Budget a further burden of about 7 million schillings. On the Stock Exchange business is still stagnant. The banks nearly all take the view that many shares are now quoted below their real value, and as a large number yield 7 to 8 per cent. there is a possibility of a general rise. There has been an increase of unemployment; in the first half of January alone 9,085 more have claimed benefit. The unemployed in Vienna now total 85,567, and in the whole of Austria 263,000 (4,000 more than an January, 1928).

POLAND.—BALANCE OF TRADE AND BALANCE OF PAYMENT—SAVINGS—COAL EXPORTS—NEW CAPITAL ISSUES.

(FROM OUR CORRESPONDENT.)

WARSAW, January 22.

IN summer and autumn the unfavourable trade balance was viewed with great disquietude and drastic measures against imports were demanded. The events of the last months have allayed the alarms, showing that the fears were unfounded. The excess of imports has steadily decreased since June (97.7 million zlotys). In November it fell to 6 million zlotys, in December it amounted to 29.2 millions. These figures are the lowest registered during the year, and are much below the level of the corresponding figures of 1927 (November 31.7, December 59 million zlotys). The improvement is in the first instance due to increased exports; imports remained nearly stationary.

Figures relating to Poland's balance of payment in 1927 show that the invisible exports are greater by 352.5 million zlotys than invisible imports. This may be seen from the table below :—

	Million Zlotys.		Million Zlotys.
Expenditure of Polish tourists abroad	122·7	Expenditure of foreign tourists in Poland	113·0
Expenditure of emigrants	78·6	Emigrants' remittances	156·7
Different services	56·0	Receipts from railways (transit)	86·0
Payment of dividends, interest on foreign loans, &c.	204·7	Other services	43·5
Import of gold	244·4	Interest and provisions	18·0
Balance	352·5	Government and municipal loans after deduction of amortisation	491·2
		Other loans	150·5
	1,058·9		1,058·9

The circulating capital of the country is slowly being rebuilt. The deposits in the credit institutions, which at the end of December, 1925, amounted to only 595 million zlotys, increased to 2,450 millions at the end of September, 1928. Deposits in joint-stock banks amounted to 810.0 millions, while 653 millions were deposited in credit institutions belonging to the Government (Bank of National Economy 324.6, State Agrarian Bank 64.2, Postal Saving Bank 264.7). This shows how great is the importance which the State plays in Poland's economic life. This problem is now in the foreground of public discussion. Many question whether the Government has not gone too far in the development of State undertakings. It is estimated that during the last 2½ years the Polish Government has obtained a budgetary surplus of 1 million zlotys, and has invested it. Many economists are of the opinion that this sum would have been used more rationally by private undertakings.

It is probable that the relatively slow increase of savings in Poland is due to the fact that a great part of the accumulated national income is appropriated by the Government. Poland has so far built up no more than 9 per cent. of its pre-war savings. The sums deposited in the Savings Banks of the whole present Polish territory amounted in 1913 to 2,485 million gold francs, which corresponds to 4,274 million zlotys. It may be confidently asserted that in other countries which suffered like Poland from inflation the reconstruction of the annihilated savings proceeded at a much more rapid rate.

During recent months the export of coal has decreased. It amounted to 1,310,000 tons in October, 1,202,000 in November, and 1,104,000 in December. In comparison with the previous year, however, exports for the last months show better results. In November, 1927, the exports amounted to 986,000 tons, in December to 1,026,000 tons. The exports to the principal northern markets (Sweden, Denmark, Finland, Norway) were greater in 1928 than during the corresponding months of 1927.

On the capital market there is a slow revival. The capital of newly created joint-stock companies amounted in 1926 to 21.2 million zlotys, in 1927 to 41.6, in 1928 to 93.9 million zlotys. The capital of existing joint-stock companies has been increased in 1926 by 51.2 million zlotys, in 1927 by 186.9, in 1928 by 183.9 millions. The total sum of new capital issues in 1928 reached 277 million zlotys.

ROUMANIA.—THE BUDGET—TAXATION AND TRADE—THE MINING LAW—THE FOREIGN LOAN.

(FROM OUR CORRESPONDENT.)

BUCHAREST, January 21.

THE Budget brought in during the last days of 1928 is dictated by the circumstances which confronted the new Cabinet when it took office, and embodies measures which were probably cut and dried when the late Government fell. The present Government can, therefore, not be blamed for taxes which will press heavily on the already

sorely tried taxpayer, and interfere with business in general.

The Budget estimates for 1928 amounted to 38,350 million lei. The receipts to the end of November, however, reached only 28,600 million, including 315 million from petroleum royalties, and the receipts for the remaining month, plus those during the period to June 30, 1929, cashed for account of the past year, are estimated at 5,250 million lei. The probable deficit for 1928 amounts, therefore, to almost 4,500 million lei, which the deficit in the railway administration of about 500 million raises to 5,000 million lei. It is intended to cover this amount by the cancellation of 700 million lei of unused credits opened in 1928, by discounting the 75·5 million goldmarks payable by Germany under the recent arrangement, and by Treasury operations under the stabilisation plan to be liquidated by means of the coming loan. The 700 million unused credits include 100 million war indemnities and 300 million debts outstanding from former years, which will both remain unprovided for in the current year also.

The Budget estimates for 1929 amount to 38,300 million lei, a reduction of only 50 million as against last year, but the conventions concluded in the course of the year for the settlement of foreign war debts and of liabilities that had remained outstanding throw an additional charge of some 600 million lei on the Treasury for this year. It is evident from this that certain economies have been effected in the estimates, but these economies fall so far short of requirements that new devices had to be found in order to provide for the gap caused by the dwindling of the revenue. Thus the tax on the business turnover in certain articles, namely, chassis and carriages of automobiles as well as on complete automobiles, has been increased from 2 per cent. to 10 per cent., and from 5 per cent. to 15 per cent., according to the class to which they belong. The taxes on the use of automobiles, except of those for commercial, industrial, and sanitary purposes, are substantially raised. The tax on production instituted by the Mining Law of 1924 is raised from 2 per cent. to 3 per cent. Stamp duties are raised by 20 per cent. The direct taxes on incomes derived from securities and those on total incomes are increased by 10 per cent. The taxes on the consumption of alcohol are also increased.

The Budget of the railways has been reduced by the Parliamentary Commission to 12,921 million. The reduction is effected by economy in fuel, in material, and in repairs. The plan mapped out with the assistance of foreign experts for the reorganisation, reconstruction and improvement of the railway system involves the expense of 7,500 million lei during the next three years.

The introduction of certain laws now under consideration may result in still further taxation. All this must of necessity result in a fresh increase in the cost of living, and, combined with the already seriously-impaired purchasing power of the population, exercise a depressing effect on trade. It is a remarkable fact, though, that in spite of the general crisis the automobile business has remained very active. There is, indeed, a vast field still open for the sale of all kinds of automobiles, but for the moment there is no money in the country, the foreign trade balance is unfavourable, and the new taxes, as well as those that may yet be imposed, must necessarily raise the price of the article and render its use more expensive. In view of the extensive credit system on which this trade is in a large measure built up, importers would be well advised if they took these circumstances into consideration when establishing their spring campaign.

An important declaration has been made by the Minister of Industry on the modifications necessary in the Mining Law of 1924. He points to the lack of a proper system of land registration and the consequent extensive frauds in the petroleum concessions. He expresses the wish that the exploration of as yet unknown districts should be encouraged. He lays stress on the aggressively nationalist character of the Mining Law, and insists that in the distribution of concessions the Law should be equal in its effect on all applicants, and not favour one company to the detriment of others. His utterance has made a very favourable impression, as it furnishes one further guarantee of the Government's intention of removing the bars which have so long prevented foreign capital from taking an active interest in the petroleum industry.

Now that the principal financial questions with Germany resulting from the war have been settled, it may be expected that German interests will endeavour to recapture their former predominance in the commerce and industry of Roumania. Germany is well acquainted with the Roumanian market, and is in a favourable situation for meeting its demands.

The reports concerning the foreign loan are contradictory. It is possible that for the moment a loan will be contracted for purposes of stabilisation only. In many quarters the view prevails that the loan which is now being negotiated in Paris should be obtained at any cost. Others, however, incline to the belief that if the conditions prove too onerous it would be preferable to commence negotiations with another group, as, according to the declarations of the Government, offers appear not to be lacking. In any case, the opinion gains ground that Roumania might do worse than apply to the League of Nations for assistance, and that it is regrettable that the former Government did not adopt this course before.

Books and Publications.

"THE RAILWAY POLICY OF SOUTH AFRICA."*

This analysis of the effects of railway rates, finance and management on the economic development of the Union of South Africa is a welcome addition to the literature of railway economics.

The main portion of Mr Frankel's work is divided into four chapters, the first of which is comparatively short, and is entitled the "Provisions of the South Africa Act." From it one obtains an indication of the intentions, concerning railway management and its relation with the State, which were invisaged by its framers. The book's main argument revolves around the provisions of this Act, which aimed at ensuring the freedom of railway management from political pressure. In practice Mr Frankel maintains that this has not been obtained.

The second chapter may be regarded as the most important because within it may be found the severe charges which are brought against the Railway Administration. In certain quarters this book has been looked upon as an attack on inefficient railway operation and management, but a closer study of the author's argument shows that in reality his attack, which is expressed in no unmeasured terms, is directed against unwarranted interference by the Minister of Railways, in the policy and management of the railway system.

Chapter III., dealing with "Railway Rates," contrasts the present unfortunate system, which has apparently been in force for many years, with what might have been if the rates had been based in accordance with sound economic and business principles. Few economists will disagree with the author's strictures upon political pressure in rate-making which are included in this section of the book. In Chapter IV., entitled "The Effect of the Existing Rate Policy on the Industries of the Union," Mr Frankel is on less firm ground. He argues that the gold mining industry of the Witwatersrand has suffered grievously from the political orientation which has throughout been given to the whole rate structure. He shows how agricultural products for export have been nursed and pampered unjustly, whilst rates have been

* An Analysis of the Effects of Railway Rates, Finance and Management on the Economic Development of the Union. By S. Herbert Frankel, M.A., Ph.D. Hortors, Limited.

kept artificially high upon imported manufactures and raw materials for the mines, notably coal. His table showing that imports at the five principal ports of the Union increased in tonnage by only 2.9 per cent. between 1913 and 1927, while exports increased by over 62.5 per cent. bears out his contention forcibly. This table might well be studied by home exporters. That agricultural rates should be greatly increased, and rates on stores and raw materials for the mines correspondingly decreased, suggests some ulterior motive, and this may be found in the author's own preface, where he states that "The study presented in the following pages is the outcome of a request to me by the Gold Producers' Committee of the Transvaal Chamber of Mines." This sentence is really the key to the book, and leads one inevitably to the consideration as to whether there is not another side to the whole question. After all, it is the duty of a University lecturer in Economics to present both sides of a problem of this nature in a disinterested manner, and then to sum up his conclusions. In this case the book must, therefore, be regarded as unbalanced.

Probably the most valuable feature of Mr Frankel's study is his confirmation of the impossibility of reconciling State railway ownership and operation with the adoption of a rate structure which is not employed as a protective tariff. The book, which is well indexed, and contains several interesting appendices, suffers from continued reiteration, and commences with a numbered summary of all its main conclusions, leaving the reader to discover later the evidence on which they are based. A valuable contribution to railway economic literature, it may be commended to all interested in the welfare of South Africa, or in the pros and cons of railway nationalisation.

THE AMERICAN NEGRO.

Facts well known but often ignored in the United States are not glossed over in the volume on the American negro which the American Academy of Political and Social Science has recently issued.* The Academy publishes bi-monthly a volume in which is collected a number of separate contributions on a given topic. The issue devoted to the negro runs to over 350 pages, and contains papers by some 40 different writers dealing with all aspects of the subject, racial, sociological, legal, economic, cultural, and so forth. Fifteen years have passed since a previous survey was published, and in that time many changes have occurred. Both this volume and a work on the same subject by Professor Herskovits† dwell on the much larger proportion of white ancestry among American "negroes" than was formerly ascribed to them. Those thus classed now number over 10 millions, and are a tenth of the total population of the United States. Though the Academy compendium is on a scientific basis, it includes a number of strong pleas for fairer treatment for negroes in the States. Professor Herskovits, on the other hand, limits himself to presenting the results of an extended investigation into the physical form of the American negro. His work, the sub-title of which is "a study in racial crossing," is original and interesting. He regards the American negro as a homogeneous population group, more or less consciously consolidating and stabilising the type of which he has commenced the foundation. Professor Herskovits' work may necessitate revision of some theories, but he does not himself enter into the broader questions which are dealt with in the other volume, and must be studied in order to reach an understanding with reference to the negro.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

Primitive Economics of the New Zealand Maori. By Raymond Firth. With a Preface by R. H. Tawney. (London) George Routledge and Sons, Limited, 68-74 Carter lane. 25s net.

This is not only a very fascinating book, but an important contribution in a field where authoritative research is badly needed. There is no longer any excuse for the fictitious paragraphs on the primitive savage with which every other elementary textbook or course of lectures on economics has hitherto opened.

Le Problème de la Population en France. By Leon Rabinowicz. (Paris) Marcel Rivière, 31 Rue Jacobs and 1 Rue Saint-Benoît.

Part I. of this comprehensive study discusses the history of the subject, from "l'époque sauvage" to the present day. Part II. deals with the French population question. There is an abundance of statistics and the documentation is good.

The Range of Social Theory. By Floyd N. House. (New York) Henry Holt and Co., 1 Park avenue. $3.60.
