Foreign Borrowing Morality.—To a disinterested reader (if any there be) of the annual reports of the Corporation of Foreign Bondholders, comparison is inevitably suggested with the bankruptcy returns of the "London Gazette." Both are highly necessary and salutary public documents, but both induce sombre philosophic reflection by their concentration within so few printed pages of so large a store of evidence of human nature's "seamy side." The fifty-fifth report of the Corporation*, covering the year 1928, however (the price of which it has been necessary to raise to meet a considerably enlarged cost of production), has a rather more cheerful story to tell than many of its predecessors. Such Latin-American republics as Colombia, Costa Rica, Honduras, Nicaragua, Paraguay, Salvador, Uruguay and Venezuela have continued to carry out their various engagements to their foreign creditors "with exactitude." Ecuador has completed the redemption of certain bonds, paid arrear coupons on others, and brought up-to-date the interest on her Salt Bonds. The Bulgarian agreement of 1927 is working smoothly, tangible progress has been made as regards the Hungarian "Iron Gates" Loan, and though several Chinese issues remain in default, the outlook has become more hopeful with the establishment of a central Government of some apparent stability. The report suggests, indeed, that "I will not" is a much more formidable enemy of the investor than "I cannot," so far as foreign Government obligations are concerned. The whole history of the Corporation of Foreign Bondholders shows that the securities of a State which has got into difficulties can be made remunerative to their holders, sooner or later, given goodwill on one side and tactful handling on the other. The most costly shipwrecks occur when the vessel is deliberately steered for the rocks—in other words, when borrowers default "from malice aforethought," and, whatever their circumstances, have no intention of meeting their engagements. Here the analogy with the Bankruptcy Court breaks down, since no method has yet been discovered of putting brokers' men into Russia, or certain Southern States of the American Union, which continue flatly to repudiate their debts, or of distraining on the Government of Mexico, which continues to retain the profits of the Mexican National Packing Company, flatly ignoring the claims of the bondholders. That moral suasion, however, has wider powers than the sceptical are wont to admit is evidenced by the case of Turkey, which at one time seemed likely permanently to be numbered among the deliberate defaulters. After years of negotiation and a series of last-moment hitches, an agreement has now been ratified, a first payment made (subsequent to the completion of this year's report), and the "state of uncertainty for the bondholders," on which the report dwells, brought to an end.

Railway Rates and Charges.—The railways of Great Britain have intimated to the Railway Rates Tribunal that it is not their intention to put forward any proposals for a general increase of charges at the present time.

* Obtainable from the Corporation's Offices at 17, Moorgate, London, E.C.2. Price 7s. 6d., by post 8s.

They expressly state that this decision is based purely on considerations of expediency. They are doubtful whether an increase would result in any material improvement of their financial position, but they are not to be regarded as being in any way precluded from bringing forward proposals for increases whenever circumstances, in their view, justify such a course. It may be recalled that, under Section 59 of the Railways Act of 1921, the Rates Tribunal was required to meet next month, and that any adjustments in charges which it regarded as necessary to produce the " standard revenue " on each system would ordinarily have come into force next July. Only the Southern Railway came within sight of earning its standard revenue last year, the actual revenue of the North-Eastern being 23.7 per cent., of the Midland and Scottish 20.0 per cent., and of the Great Western 15.1 per cent. below the datum level. The fact that the basic conception of the 1921 Railways Act has thus broken down, for the time being at least, after a single year's trial, confirms the view of numerous economists that, railway charges being necessarily calculated by reference to " what the traffic can bear," the standard revenue machinery is, by its nature, likely to be a more powerful instrument when charges are to be lowered than when it is desired to raise them. For the present, therefore, the railways are required to work out their own salvation, and in view of the state of public opinion and the keen and continuing competition of other transport agencies, their decision is a wise one. In the meantime, the proceedings of the Rates Tribunal will be watched with interest, since the making of adjustments to produce the standard revenue is, under the strict provisions of the Act, not merely permissive but a *duty* (subject to certain qualifications) definitely laid upon the Tribunal.

General Electric Issue Abandoned.—The City received with general satisfaction the announcement from Sir Hugo Hirst that it had been decided not to proceed with the issue of General Electric ordinary shares on bonus terms to British shareholders only. This is the happy result of the negotiations between Sir Hugo Hirst and Messrs Thomas L. Chadbourne and Herbert Bayard Swope, the representatives of the Protective Committee for American stockholders. These gentlemen remark: " the plan was tried and found wanting in the forum of British public opinion." The compromise suggested by Sir Hugo Hirst of issuing the new shares on bonus terms to all stockholders, but requiring foreign stockholders to sell their rights, equally failed to meet the main objection, which was that the proposed issue would deprive a certain class of stockholders of a valuable property right. In the circular which the American representatives have issued there is, however, the suggestion that this property right was the right of all stockholders to retain their proportionate interest in the company. No such right, of course, exists. Any company can issue shares to other than its own shareholders, either for the purpose of acquiring new businesses or for the purpose of raising new money. There is no divine right of shareholders in this respect. Some observers have even professed to read into this statement an indication that the American interests, after all, had somewhere at the back of their minds, when they purchased the shares, the possibility of effecting a merger between the General Electric and the American General Electric combine. Sir Hugo Hirst in his statement excuses his abandonment of the scheme on grounds of public policy. His proposal, he said, had become " the subject of an acute controversy on a stage much wider than that of the company itself." As he felt that the question of maintaining British control of British companies must receive consideration from eminent financial and economic authorities, he withdrew the proposed issue of General Electric shares to British shareholders, to enable that study " to take place in a clear and calm atmosphere." Sir Hugo is to be congratulated on his good sense and the British, Foreign and Colonial Corporation on their wisdom in allowing the General Electric to break the contract which they had made for the issue.

United Steel Scheme.—The directors' circular regarding the offer of the Austin Friars Trust to purchase the debenture and share capital of the United Steel Companies, confirms the terms discussed in these columns last week (see the *Economist*, April 20, 1929, page 862), but does little to simplify the task of individual debenture and shareholders, who must make their choice, one way or the other, before the end of this month. They may find it advisable to disentangle the broad issues involved in the proposals from the mass of perplexing detail which tends to obscure them. In the first place, the security holders concerned are offered hard cash, here and now, for rights which, in the ordinary course, can be expected to become remunerative only at some uncertain future date. They are aware, further, that the price offered exceeds that which any single holder would obtain by selling his rights on the Stock Exchange, and greatly exceeds that obtainable if *all* holders endeavoured simultaneously to adopt such an expedient. On the other hand, they labour, one and all, from the holder of " A " debentures to the ordinary shareholder, under the indubitable disadvantage of not knowing, even approximately, the real value of the rights they are parting with—in other words, the future earning power of the company. They are, in fact, in the position of a motor car owner without specialised engineering knowledge, in receipt of a cash offer from a dealer for a machine which has steadily refused to function, but is doubtless capable of useful service once necessary repairs have been effected. They know that the company, in its last complete financial year, failed by £147,430 to earn the total required for the service of its debentures and obligations and the guarantee on the United Strip preference shares; that £938,597 has been withdrawn from reserves in three years; that arrears of dividend on the 6 per cent. cumulative preference shares amount to £553,357; that at the date of the last balance sheet (June 30, 1928) there were mortgages and secured loans of £362,501, a bank overdraft of £548,838, and an amount payable out of future net earnings, under a scheme of arrangement, of £144,611; that depreciation has fallen into arrears; that the company had last year contingent liabilities for the uncalled capital of associated companies, and for indemnities, of £1,185,966; and that various assets have been pawned with the company's bankers. Debenture and shareholders do not know, however, the separate financial position of each and every subsidiary, the extent to which reserves set aside in past years against the losses of subsidiaries have been adequate, the total indebtedness of the whole United Steel combine (including both parent and subsidiary companies), the actual earnings of the combine during the last ten months, the degree to which the new policy adopted last year of securing closer co-ordination between the company's branches may bear fruit in the future rather than the present, the intrinsic earning potentialities of the company freed from the deadweight of its debts and thoroughly " rationalised," or the identity of

the interests into which control of the company's fortunes will pass (i.e., the " others," who are associated with the Austin Friars Trust in its present offer). In the circumstances, security holders must perforce rely on the indirect evidence afforded, firstly, by the intention of the directors (who presumably have all the relevant and up-to-date facts at their disposal), to accept the offer as regards the whole of their very large holding; secondly, by the recommendations for acceptance made by the trustees for the " A " debentures and the " B " and " C " debenture stocks; and, thirdly, by the endorsement of these views by an unofficial committee of holders of " A " debentures and United Strip preference shares, who had an opportunity, some time ago, of going fully into the position of the company and have subsequently been kept fully informed. Whether present holders, having accepted the offer, decide to exercise the 30-day option given them of reinvesting in shares, at par, of the new or reconstructed company, will largely depend on individual judgments of the prospects of the company and the iron and steel trades generally. Were all to follow such a course, the respective shares of present holders in the equity of the new company (presuming the £8,000,000 ordinary share capitalisation forecast in the chairman's letter of April 16th) would be: Holders of " A " debentures, 1.56 per cent. of total profits (plus £60 cash per £100 nominal now held); of " B " debenture stock, 1.87 per cent. of profits (plus £65 cash per £100 nominal); of " C " debenture stock, 0.62 per cent. (and £87 10s. cash); of obligations, 6.35 per cent.; of 6 per cent. cumulative preference shares, 5.49 per cent.; of ordinary shares, 20.02 per cent.; and of United Strip preference, 7.03 per cent. Existing share and debenture holders would thus own £3,435,992, or 42.95 per cent. of the issued capital of the new company, the balance—together with the control of the company's affairs—being, presumably, held by the interests making the present offer.

Baldwins.—Seeing that the scheme of arrangement, though applying as from January 1, 1928, was not actually sanctioned until last July, the accounts of Baldwins for the year ended December 31st last cannot be taken as wholly representative of conditions under the new régime. The expenses of reorganisation and of the £1,000,000 debenture issue last autumn (which amounted to £57,277) have been written off partly out of profits of subsidiary companies merged and partly from the profit on realisation of investments and other credit balances, but the various transactions affecting the status of subsidiary companies cannot have been carried through till near the end of the last financial year. The economies and advantages that it was hoped to gain will not, consequently, become apparent until the current year.

	Year ended June 30, 1927.	Six months ended Dec. 31, 1927.	Year ended Dec. 31, 1928.
	£	£	£
Profit	120,009	121,278	220,107
Depreciation	nil	nil	79,131
Special expenditure at works and mines	24,873	3,908	12,251
Income tax	...	...	9,160
Directors' fees	*	*	3,828
Debenture and loan interest	225,107†	124,847†	112,338
To general reserve	56,221	...	...
Increase or decrease in carry-forward	—186192	— 7,477	+ 3,399

* Not separately stated. † Including sinking fund payments.

The balance sheet embodies the results of the scheme of arrangement, by which, it will be remembered, at least £4,273,852 fell to be written off the book values of assets, a figure set off to the extent of £684,820 by reserves. On a later page we print summaries of both the old and the new balance sheets. The latter, which is lucidly drawn up on the lines laid down in the 1928 Companies Act, shows that apart from an " intangible asset " of £34,968, representing discount on the recent debenture issue, gross assets total £6,646,820, a reduction of £3,629,966. Fixed assets are £3,487,864, including only £179,311 for investments in subsidiaries, and floating assets £3,208,456, including £666,161 in cash and Government securities and £752,401 in other investments and loans. Thanks to the raising of new money which the reconstruction made possible, there appears at last to be abundance of working capital. Unlike other reconstructed companies, Baldwins has not come out with a lightened load of debentures. Of a total share and loan capital of £6,022,574, debenture stock accounts for as much as 36¾ per cent., income debenture stock and income notes for 26¾ per cent., and shares (preference and ordinary) for only 36¼ per cent. The service of the mortgage and " A " debenture stock will require some £138,000 in a full year, increased to £160,000 after 1932 by the commencement of sinking funds. An annual sum of £114,651 has to be set aside, when available, for the income debenture holders, and interest on the income notes, which were issued in part satisfaction of bank loans and are redeemable over a period of 10 years commencing in 1933, will take over £22,000. Before the preference shareholders can receive anything, therefore, Baldwins must be earning some £275,000 a year, a figure for which, after 1932, £337,000 must be substituted. As £115,000 was earned in 1928 before deduction of interest charges, the gap is not too large for a progressive company to bridge, given the possibility of reasonably remunerative operating conditions for British collieries and steelworks in the future. It is significant that the 6 per cent. debenture stock, issued six months ago at 96½ and oversubscribed, is now being dealt in at 99½.

Union Bank of Scotland.—For the seventh year in succession the Union Bank of Scotland is distributing an 18 per cent. dividend on its paid-up capital. Its profit for the year ended the 2nd of this month showed an increase of 2 per cent. over that of the previous year, which was itself a high record. The " rest " account stands at £1,500,000, or half as much again as the paid-up capital, and over £100,000 is carried forward.

(Years ending April 2).	1927.	1928.	1929
	£	£	£
Profit	317,750	329,505	336,239
Bank offices	35,000	35,000	35,000
Heritable property yielding rent	35,000	35,000	35,000
Rest account	50,000	50,000	50,000
Earned per share	31/9	32/11	33/7
Paid per share, less tax	18/-	18/-	18/-
Amount of dividend	180,000	180,000	180,000
Pensions and allowances fund	25,000	25,000	25,000
Increase or decrease in carry-forward	— 7,250	+ 4,505	+11,239

The balance sheet discloses moderate but general expansion, suggestive of gradually improving business conditions. Advances have risen from £8,452,119 to £10,098,247, and though deposits have also increased, the ratio of advances to deposits is greater. Acceptances have nearly doubled—£1,221,092 against £685,863. A contraction in the holding of British Government securities from £7,301,131 to £6,079,754 obviously reflects a higher Bank rate, and is balanced by a large increase in money at call and short notice and lesser falls in discounts and short-period loans on securities. The total of gross assets has risen from £31,945,166 to £33,802,970. The present Glasgow price of the shares (£5, £1 paid) is 84, yielding £4 14s. 9d. per cent., allowing for accrued dividend.

Dunlop Rubber Set-back.—A year ago Sir Eric Geddes stated at the general meeting that he welcomed the abolition of the rubber restriction scheme, and hoped that it would never be resuscitated, but protested against its abolition at short notice. The Dunlop report for 1928 is a commentary on this pronouncement. It refers to the losses suffered by the company in the following terms:— " The abrupt removal of restriction caused an immediate drop in the price of crude rubber, which affected your plantation profits and necessitated writing down the value of stocks. Further, the selling prices of finished goods were reduced in sympathy with the market price of the commodity before the actual price paid by manufacturers

had reached a similar level." The directors regard the circumstances as exceptional enough to justify their crediting the trading account with £1,500,000 from general reserve—a sum less, however, than the actual losses incurred. During the period of restriction considerable sums had been placed out of profits to reserve to meet such a contingency. The reserve account, before allocating £1,500,000, stood at £4,529,711, made up of £2,181,738 appropriations of profits and £2,347,973 premiums on issues; it now stands at £3,029,711. The losses suffered in 1928 are shown in the following table, with figures for earlier years:—

	1926 £	1927 £	1928 £
Issued ordinary capital	6,779,653	6,817,412	7,784,348
Profits	2,808,919	2,953,424	1,359,894
Dividend on Dunlop Cotton Mills (Ord.) Dunlop Rubber (India)	97,500	159,473	309,750

dded to reserve	500,000	386,971	...
Carry forward	665,456	578,580	801,278

*Excluding transfer from reserve.

Discussion will inevitably centre not so much on the directors' decision to use up £1,500,000 of the reserve fund for the purpose for which it was partly created, as on the decision to pay out dividends of 20 per cent. when, in fact, only 3.38 per cent. was earned. The directors may have been influenced by the fact that in May last year the company issued new 6s. 8d. ordinary shares to shareholders at 25s.—a premium of 18s. 4d.—in the proportion of one new share for every ten existing. The only justification for their present generosity is the assurance that the company in 1929 will show greatly increased profits. On this point the directors' report provides some encouragement. The volume of business at home and abroad is said to be maintained satisfactorily. To meet the rapidly growing demand for giant pneumatic tyres considerable additional plant is being provided, and greater use is being made of the Macintosh group of factories. The rubber plantations have been maintained in the highest state of efficiency. There is reason to think that the American company will be profitable in 1929, and, finally, the acquisition of the interests of the Tyre Investment Trust, Limited, in the Dunlop Rubber Company (Far East), Limited, and its subsidiary companies, and in the Dunlop Tire and Rubber Goods Company, Limited, Canada, is regarded by the board as a most important step. Final judgment of the wisdom of the directors' dividend policy may be deferred until Sir Eric Geddes' speech on May 3rd, but it is satisfactory to know that the balance sheet shows considerable strength. The current assets less current liabilities amount to £5,145,795, of which £2,649,352 is in cash.

Holland-America Line.—The report for 1928 of this important Dutch shipping concern is disappointing, largely owing to the effects of the freight-war, which lasted from January to October, on the American routes. Negotiations are in progress with the Hamburg and Bremen lines for a pool agreement in the North Atlantic trade, but no definite result has yet been achieved. Recent results are set out below:—

(In thousand guilders.)

	1926.	1927.	1928.
Operating profit	7,151	6,723	4,360
Gross profits	7,463	6,760	4,411
Depreciation	5,390	4,871	4,820
Interest	1,841	1,276	1,453
Net profit	118	614	— 1,984*

* Net loss.

No dividend is being paid in respect of 1928. The capital of the company is 25 million guilders, and the reserve 26 million guilders. The company owns 32 ships, originally costing 117,161,000 guilders, from which depreciation amounting to 69,571,000 guilders has been written off. The report induced a reaction on the Bourse, the shares, which touched 89¾ last year, standing at 65¼ to-day.

Pennsylvania Railroad.—The Pennsylvania Railroad Co. may be congratulated on having more than offset a fall of $14,300,000 in operating revenues by a reduction of $30,500,000, or practically 6 per cent., in operating expenses. The operating ratio, in fact, has been steadily cut down from 87.6 per cent. in 1921 to 73.8 per cent. Net income in 1928 was, therefore, some $14,347,317 greater than in 1927, and established a new high "record."

Years ended December 31.	1926. $	1927. $	1928. $
Total operating revenues	709,817,449	664,851,023	650,567,316

Net income	67,567,959	68,160,296	82,507,613
On capital stock { earned	13·53%	13·65%	14·69%
On capital stock { paid	6½%	7%	7%
Credited to profit and loss account	30,270,966	28,046,355	38,950,928

During the past year funded debt and other fixed obligations were retired to the amount of $33,358,984, and approximately $46,000,000 was expended on track improvements and equipment, apart from expenditure by leased and affiliated lines. A combined 48-hour rail-air route is to be opened this summer between New York and Pacific Coast cities. As for the co-ordination of rail and bus lines, a development of special interest in its bearing on our own transport problems is the inauguration of a Pennsylvania service at less than ordinary car-load freight through the use of portable steel containers carried on either specially equipped railroad cars or on motor trucks. Last year $62,500,000 of capital stock was issued to holders at $50 per share, and a further $17,500,000 to employees on the same terms. The price of $50 Pennsylvania shares in New York has advanced sharply to 81, as a result of a rise in the quarterly dividend from 75c. to $1, the passing of a resolution to increase the authorised capital stock by $100,000,000 to $700,000,000, and a proposal to offer 5,800,000 out of 10,000,000 no par common shares in a new holding company to stockholders at $15 per share, in the ratio of one share for two.

Margarine Union.—The report of Margarine Union for the first financial period of the company's existence, from November 14, 1927, to December 31, 1928, not only shows the soundness of the results which the great margarine combine has been able to achieve, but is a pattern of lucid exposition. The association by agreement between Margarine Union and the Rotterdam company, Margarine Unie, being so close that shareholders in either are equally interested in the affairs of both, the report deals with the combined position of the two, and includes the two separate balance sheets, which will be found summarised on page 954, as well as a consolidated one. Out of the combined profits, amounting to £1,666,849, the whole of the preliminary expenses of both companies are being written off, £62,335 is transferred to the general reserve of the Dutch company, and a 10 per cent. dividend is paid on the ordinary shares of both.

	Margarine Union. £	Margarine Unie. £	Total. (Two Co's.) £
Net profits, after tax	378,898	1,287,951	1,666,849

Written off preliminary expenses	103,545	375,585	479,130
To general reserve	...	62,335	62,335
Carry-forward	26,887	52,413	79,300

An explanation for each item in the balance sheet is supplied wherever necessary. Indebtedness to creditors, for instance, amounting in the consolidated balance sheet to £3,502,740, has arisen principally through the financing of raw materials for associated companies, but it is stated to have been reduced since the end of the year by the recent issue of £3,455,022 ordinary share capital to shareholders in both companies at 50 per cent. premium. Whether the issue was made entirely for this purpose is not yet clear. Subsequent to the date of the accounts, therefore, the combined issued capital has been increased to £14,851,753, and the combined general reserves raised to £4,147,043 by the premiums received. The nucleus of these reserves was the difference between the nominal value of those ordinary shares which were issued during 1928 in exchange for the remainder, not till then acquired, of the ordinary shares of Van den Berghs, Jurgens, and Van den Berghs Fabrieken, and the value at which they were taken for the exchange, which was their approximate market value at the time. The investments in associated companies are now principally composed of holdings to the nominal value of £187,148 in Van den Berghs, of fl. 41,765,160 in Jurgens, and of fl. 20,991,400 in Van den Berghs Fabrieken. The whole item stands in the consolidated balance sheet at £13,828,180 (of which £7,767,013 is described as "acquired by purchase" and £6,061,167 as "acquired in exchange"), out of a total of £17,957,108 for gross assets. Selling by those who expected the report to be even better than it was, and who were shaken by certain observations on the general situation in the reports of the controlled companies, caused Margarine Union shares to drop 2s. 9d. to 81s. 9d., and Margarine Unie 2s. 6d. to 82s. 9d.

Polyphone A.G.—The Polyphone A.G., of Leipzig, a block of whose shares was introduced on the London Stock Exchange last year, has raised its dividend from 14 to 20 per cent., in accordance with anticipation. The new dividend is payable on 12½ million marks of capital, as compared with 10 million marks in 1927. The remainder of the new capital, 4½ million marks, will carry a dividend in respect of 1929. Gross profits last year were 6,502,000 marks, as against 4,644,000 marks in 1927. Administration expenses and taxes rose from 2.4 to 3.14 million marks; and 226,000 marks was written off, a small increase upon the preceding year.

(Millions of marks.)

	1926.	1927.	1928.
Net profit	0·797	2·046	3·176
Dividend	9%	14%	20%
Amount of dividend	0·72	1·4	2·5

The balance sheet shows greatly increased liquidity. The bank credit balance, mainly as outcome of the capital increases, is 12,075,000 marks, against 180,000 marks in the preceding year. Debtors have risen from 6.2 million marks to 11.03 million, but, whilst in the former case 5.08 million marks represented debts due by subsidiary companies, mainly for wares supplies, in the new account only 4.69 million marks (a much smaller proportion of the debts due to the company) comes under this category. On the liabilities side, creditors declined slightly, from 3.857 to 3.748 million marks. The reserve fund is 9.64 million marks. No figures of turnover are given, but it is clear that the company's operations showed considerable expansion. A further growth of business is anticipated this year.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following meetings:—Union Bank of Scotland, London Assurance, Law Union and Rock Insurance, General Accident, Fire and Life Insurance, Legal and General Assurance Society, Army and Navy Co-operative Society, London County Freehold and Leasehold Properties, Consolidated Water Works of Rosario, Anglo-Foreign Newspapers, Apollinaris and Johannis, Rembau Jelei Rubber, Indo-European Telegraph, Hope Brothers, National Mining Corporation, Ooregum Gold Mining of India, Nundydroog Mines, Balaghat Gold Mines, and Rio Tinto. The chairman of the Union Bank of Scotland surveyed the progress of Scottish industry during recent months. The policy to be followed by Anglo-Foreign Newspapers, as regards the acquisition of interests in press undertakings, was outlined by Mr Henry S. Horne. Pessimistic rumours regarding the future of the Ooregum Gold Mining Company were refuted by the chairman.

MINING NOTES.

City Deep.—Our mining correspondent writes:—The experience of investors in this enterprise—whose capital exceeds a million and a quarter—helps to explain the present attitude of the public towards Kaffirs. For a period of fifteen successive years ending 1926 dividends ranging from 12½ per cent. to 50 per cent. were paid. In respect of 1927 the rate dropped to 5 per cent., and last year's operations resulted in a substantial loss. This change in fortune reflects a progressive deterioration in the developments. During 1922 the ore opened up totalled 1,286,100 tons, value 7.8 dwts., nearly 83 per cent. of the tonnage being payable. Last year the payable tonnage developed amounted to only 479,800 tons, value 5.7 dwts., the percentage of payability averaging barely 38 per cent. This, of course, is nobody's fault; it simply represents the risk attaching to mining, even on the Rand. Last year's deficit on working, together with capital expenditure, turned the company's financial position from a surplus of £139,650 into a deficit of £144,900. The progress of events has compelled the company to have recourse to its backers, the Central Mining Corporation and the Rand Mines. On December 31st "loan account" stood at £214,900, and arrangements have been made for further advances up to a total of £350,000, additional capital outlay to the tune of £70,000 being envisaged during the next twelve months or so. For various reasons, too lengthy and too technical for discussion here, the consulting engineers look for better results. Nevertheless, "regular profits cannot be anticipated, whatever the results of new development, before the early part of next year."

St. John del Rey.—*This Brazilian undertaking enjoys* the distinction of being not only one of the oldest—possibly the oldest—gold operating mine in the world, but also one of the deepest. Thanks to improvement in the grade of the ore treated, combined with reduction in cost, last year's earnings increased to an extent which permitted the dividend on the ordinary shares to be raised by 2½ per cent. to 10 per cent. But the most interesting point in the position relates to the new developments, the importance of which was pointed out at the recently held annual meeting. In April, 1928, at horizon 25—the lowest in the mine—an ore body was encountered differing in characteristics from the main lode, large in size but of inferior quality. Further explorations resulted in the discovery of a further ore body resembling the main lode both in appearance and value; this deposit has been laid open for a length of 350 feet. Furthermore, at horizon 22, a high-grade ore body was encountered 6 to 7 feet wide and about 300 feet in length. There is the possibility that either or both of these new discoveries may be found to extend for several levels above the one at which they were intersected. In such event, the del Rey would possess what might, with no great exaggeration, be described as a new mine. Pending additional information, including a geological report, the directors are postponing submission of the scheme which will be necessary for the exploitation of the mine at still greater depth. Meantime the existing ore reserves represent some six years' supply for the mill. The company has investments worth over £200,000.

Consolidated Diamond.—The effects of the large production of alluvial diamonds in the Union continued to be felt last year, though the Consolidated Diamond Mines of South-West Africa suffered in a lesser degree than some other concerns. The dividend was maintained at the reduced level of 10 per cent. paid for 1927, though the net profit came out at £284,000 (after providing £50,000 for diamond tax) in place of £373,800 (after £122,000 tax). The former amount just covers a 10 per cent. distribution; the surplus from the latter was added to the carry-forward. Last year's diamond sales

totalled £1,216,100, or £218,500 less than in the preceding period. By further redemptions the 6½ per cent. debenture issue has been reduced to £1,223,200. Investments at cost, £979,500, show no change. The cash position remains strong. An agreeable feature of operations in 1928 was the location of a "diamondiferous marine terrace" north of the Drange River, similar to those which were discovered south of the river near Alexander Bay early in 1927. The directors observe that these finds "constitute a very valuable addition to the already known diamond deposits of the company." There is reason to believe that substantial returns have been obtained this year to date.

Anglo-French Exploration.—A set-back in more respects than one was experienced last year. The revenue in the shape of dividends as well as the profits on sales of shares declined, the net surplus coming out at £76,300 in place of £115,800. Accordingly the dividend is cut by 2½ per cent. to 10 per cent., the same rate as paid in respect of 1926. Depreciation absorbs the somewhat increased sum of £13,000, leaving £71,900 to be carried forward, as against £66,400 twelve months ago. The directors' frank valuation of the assets gives £827,400, or £207,900 less than on the previous occasion. Presumably the bulk of the difference is accounted for by the depreciation in the company's holdings of Apex Trinidad Oil and Anglo-Burma Tin shares. Even now, however, the market price of the shares works out at some 5s. below their "breaking-up" value.

General Mining.—Those who have followed the progress of events in connection with this company's chief interests will not be surprised at the absence of any final dividend for 1928. In respect of 1926 a total of 17½ per cent was disbursed; 1927, 15 per cent.; and on account of 1928, 5 per cent. interim in December last. Both in 1926 and 1927 the shares were dealt in up to about 2½: indeed, during the latter year a new issue was made at 2. Current price is now below par (£1). This strikingly illustrates the danger of valuing Kaffir finance shares on the basis of one or two prosperous sessions. Last year's profit of £90,300 compares with £325,200 in the preceding period: of the former sum the interim dividend absorbed £63,200. The reduction in earnings was attributable to the adverse conditions which prevailed in the share market, especially during the second half of 1928—conditions which not only entailed the writing-down of certain holdings, but restricted dealings. The balance sheet displays a fairly strong financial position. Cash figures at £293,900 and Government securities £158,500; advances against securities £111,800, advances to mining and other companies £393,100. To what extent the latter can be regarded as "good" is perhaps open to question. Investments stand at £1,049,300. As a whole the assets are stated to represent a surplus of £520,300 over all liabilities, irrespective of the difference between the market and the balance sheet valuations of the shareholdings. In this connection it is, however, necessary to remember that, in the meantime, the quotations of several of the principal interests have fallen sharply. For example, West Rands are now 8s. as against 13s., and Phœnix Oil 13s. 6d. in place of 16s. Prospects can scarcely be viewed in a very cheerful light.

Amalgamated Mining.—The results of this company for the past year offer a striking contrast to those of General Mining. At £196,400 the profit more than doubles that of 1927, and a corresponding advance has been made in the distributions, the final of 2s., with bonus of 1s., making a total of 4s. in place of 2s. Investments, standing in the books at £544,200, are stated to show a further unrealised profit. The company, of course, belongs to the Gold Fields group and has much the same interests as its associates. One of last year's transactions consisted in the realisation "on satisfactory terms" of the American Potash stock formerly held. On the basis of a 20 per cent. dividend total, allowing for the 5s. included in the price, the shares show the exceptionally high yield of 14 per cent.

Anglo-American Corporation Group.—The annual statements of four important Rand subsidiaries are just to hand. In the case of the Brakpan, the treatment of an increased tonnage was counterbalanced by decline in grade; during the concluding portion of the year the company suffered from shortage of native labour. As a result the profits fell off slightly. Some reduction in the ore reserve tonnage, with advance in value, is accounted for by the narrower stoping width upon which the calculations are based. With the Springs Mines, on the other hand, expansion in tonnage was accompanied by a substantial gain in average value, the working profit coming out at £853,850 in place of £727,600. The ore reserve estimate shows the same features as that of the Brakpan. The West Springs crushed an increased tonnage, but a sharp fall in grade brought the working profit down by £83,300 to £260,600, entailing a moderate cut in the dividend rate. A small increase in tonnage and decline in value is indicated by the ore reserves. The consulting engineers intimate that the profits of the current year should approximate to those of 1928. Daggafontein developments were sufficiently encouraging to lead to the decision to start the sinking on an independent shaft. We propose to refer to the results of the different companies more fully next week.

CAPITAL ISSUES.

THE new issue market has shown greater activity this week, the total amount being £3,748,750, making a total for the year to date of £121,812,297, excluding conversions. There was one foreign issue—£1,200,000 6½ per cent. mortgage bonds of the *Agricultural Mortgage Bank of Colombia*, which were offered for sale by Lazard Brothers at 95 per cent., the bonds being repayable at par by 1959. This is a type of security which is deservedly popular in the market. Of commercial issues *Brocklehurst-Whiston Amalgamated* issued 400,000 7 per cent. cumulative preference shares of £1 at par under the auspices of the Industrial Finance and Investment Corporation. The company is an amalgamation of five established businesses engaged in the silk spinning, dyeing and allied trades. Of the purchase price of £876,798, of which £500,000 is payable in ordinary shares, £69,205 represents goodwill. On the average net profits of the last three years the preference dividends are apparently covered about three times. *Olympia, Limited*, issued 400,000 7 per cent. cumulative preference shares of £1 and 400,000 ordinary shares of 5s. at par. The company takes over for £1,000,000, payable half in cash, half being left on mortgage, the well-known exhibition land and buildings in West Kensington, and if the profits of last year of £90,760 be maintained, or exceeded, the dividend on the preference shares, after payment of mortgage interest, will be covered about or over 2½ times. The ordinary shares, though not without attraction, are speculative. Of the ordinary share speculations, *Zinc Manufacturing Company* appealed pre-eminently to the stags. This was an issue of 1,275,000 "A" ordinary shares of 10s. at par, of which 1,000,000 shares have been taken firm. The company is formed under the auspices of the N.C. Metal Company and Stewarts and Lloyds to exploit a new method of extracting zinc by the Coley process. The "A" shares are entitled to 75 per cent. of the profits *Chemical and Wood Industries* issued 725,000 ordinary shares of £1 at par to the public, the vendor receiving 275,000 ordinary shares in full satisfaction of the purchase price. The company acquires a controlling interest of more than 77 per cent. in a wood distillation undertaking and timber concessions in Bosnia, Yugoslavia. No past earnings could be given, but the future profits are liberally estimated at 19 per cent. on the ordinary shares. *National Flying Services* made an issue of £150,000 7 per cent. mortgage debenture stock at 97½ and 2,000,000 ordinary shares of 2s. at par. The board of directors includes Captain F. E. Guest, M.P., the Master of Semphill and Sir Alan Cobham. The company is formed to organise flying clubs and services and provide landing grounds and instruction in flying. The Government will give assistance up to a maximum of £97,000 spread over a period of ten years. The profits can only be guessed, but the Company's activities are worthy of support.

Agricultural Mortgage Bank of Colombia.—Issue at 95 of £1,200,000 6½ per cent. guaranteed mortgage bonds, guaranteed by the Republic of Colombia in respect of principal, sinking fund and interest. A cumulative sinking fund, calculated to redeem the whole of the bonds by 1959, will be applied half-yearly in purchase or drawings at par. After 1939 the bank may redeem the whole or part of the bonds at par, or may accelerate the sinking fund. The bonds will be a first charge on all present and future mortgage loans arranged by the Bank, which are granted on freehold urban property and agricultural estates only. Issued capital amounts to £938,340, together with £3,496,500 mortgage bonds.

Special Representative

148 Leadenhall St. London, E. C. 3.

Chemical and Wood Industries, Limited.—Issue at par of 725,000 (out of 1,000,000) £1 ordinary shares. The company acquires a controlling interest in a wood distillation company established in 1921, and will finance that concern and thus develop and exploit its chemical works and timber concessions in Bosnia, Yugoslavia. The purchase price is £275,000 in shares. About £300,000 will be advanced to the controlled company for repaying bank loans, £230,000 will be set aside for the erection of an artificial silk factory, and, after allowing for the modernising of the sawmill and all other expenses, £77,000 will remain for working capital.

Zinc Manufacturing Company, Limited.—Issue at par of 1,275,000 (out of 1,800,000) 10s. "A" ordinary shares, entitled to three-quarters of the distributed profits, the remainder belonging to 200,000 10s. "B" ordinary shares, which are being allotted to vendors. The company acquires rights to manufacture zinc, zinc oxide, and other zinc products by a patent process, and to sell the same throughout the British Isles and throughout France, Spain, Portugal and their dependencies. The purchase price is £462,500, payable as to £100,000 in cash, £262,500 in "A" shares, and £100,000 in "B" shares. Working capital is stated to be sufficient.

Olympia, Limited.—Issue at par of 400,000 (out of 1,000,000) £1 7 per cent. cumulative preference and 400,000 (out of 2,000,000) 5s. ordinary shares. The company acquires as from January 1, 1929, Olympia and adjoining premises in West Kensington and all the other assets of the present owners, valued (exclusive of goodwill) at £1,634,585, less a £500,000 mortgage. The total purchase price is £1,084,700 (£684,700 in cash and £500,000 left on mortgage as above), together with interest till the date of completion and a payment of £56,675 in cash to the promoter to cover expenses. Profits have been:—1923, £70,816; 1924, £57,285; 1925, £77,830; 1926, £67,007; 1927, £81,940; 1928, £90,760. The promoter subscribes for an additional 400,000 ordinary shares, and receives an option at par on one ordinary share for every further preference share issued within three years. Working capital is stated to be ample.

Brocklehurst-Whiston Amalgamated, Limited.—Issue at par of £400,000 £1 7 per cent. cumulative preference shares. Out of 600,000 £1 ordinary shares, 500,000 are allotted to vendors and 9,993 to the promoter, and 90,000 are being privately subscribed at a premium. The company acquires five businesses of spinners, throwsters, manufacturers, dyers, printers, finishers, and merchants of silk, artificial silk products, and other textiles. Aggregate net value of assets acquired is £886,595. The purchase consideration, including £69,205 for goodwill, is £876,798, to be satisfied by payment of £320,856 in cash and allotment of 500,000 ordinary shares. Profits, before certain charges, have been (to March 31st):—1926, £116,734; 1927, £101,497; 1928, £137,549. Working capital is estimated at £111,000.

National Flying Services, Limited.—Issue of £150,000 7 per cent. first mortgage debenture stock at 97½ and 2,000,000 (out of 3,500,000) 2s. ordinary shares at par. The debenture stock will be secured by a first specific mortgage on all the fixed assets; a sinking fund sufficient to redeem the whole by 1954 will operate from 1934 by purchase or drawings at 102, or the company may redeem after 1934 at 103. The company will organise flying clubs, track flying, provide local and other air services, and meet a demand for flying facilities at aerodromes. A freehold estate in Middlesex, valued at £135,000, is acquired as an air park for the sum of £120,000 in cash. Working capital is estimated at over £175,000. The Government has agreed to grant financial assistance to the company to a maximum of £97,500 spread over 10 years.

Guildford Gas Light and Coke Company.—Offer for sale by tender of £21,500 5 per cent. perpetual debenture stock (minimum price of issue, 91). Issued stock capital amounts to £167,108, and loan capital to £34,300. Net revenue for 1928 was £13,284; interest on the debenture stock, including present issue, will require £2,868. Reserves amount to £26,190. Sales of gas last year exceeded 345 million cubic feet.

Agricultural Credit Corporation, Limited.—Issued capital, 500,000 £1 shares (10s. paid). Issue at par of £250,000 5 per cent. State-guaranteed mortgage bonds (first series), 1944, secured by mortgages on holdings of agricultural land in the Irish Free State, and guaranteed by the Government of Saorstat Eireann.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introductions: **Cow and Gate, Limited**; issued capital, 200,000 £1 7½ per cent. cumulative participating preference and 1,500,000 1s. ordinary shares, the former entitled to a further ½ per cent. for every 2½

per cent. above 10 per cent. paid on the latter, to a maximum of a further 2½ per cent.; incorporated in 1909 as dairymen, provision dealers and manufacturers. **Leeds and Wakefield Breweries, Limited;** issued capital 75,000 £1 6 per cent. cumulative preference, 125,000 £1 8 per cent. preferred ordinary, and 200,000 £1 ordinary shares, together with £300,000 6 per cent. first mortgage debenture stock, £107,613 4 per cent. debenture stock and £33,000 mortgages outstanding; the new first mortgage debenture stock is redeemable at 101½, 1940-65, and a sinking fund will operate by purchase or drawings from 1931; the stock is covered 3½ times by assets, and the interest and sinking fund more than three times by 1928 profits. **Abbots Investment Trust, Limited;** issue of £250,000 4½ per cent. debenture stock, 1979, at 84½, less ½ per cent. brokerage; issued share capital, £500,000 in £1 ordinary shares. **Oil Shares, Incorporated;** issued capital, 181,000 $50 shares of 6 per cent. cumulative preferred stock and 181,000 common shares of no par value; incorporated in 1928 under the laws of the State of Maryland, U.S.A., as an investment company of the management type, to invest in the securities of companies related to the oil industry; net assets at December 31st were $10,600,264, and net earnings to that date were over $1·25 per share of common stock. **Handicrafts, Limited;** issued capital, 600,000 2s. shares, together with 6 per cent. first mortgage registered debentures to secure £25,000, convertible into shares at 2s. premium within 5 years: founded in 1910; suppliers of tools, materials, and accessories for amateur workers in wood, &c. **Beira Works, Limited;** issued capital, 600,000 £1 shares; issue of £1,250,000 7 per cent. registered debentures, 1938-57; incorporated in 1926 to construct and administer docks, harbours, canals, railways, roads, &c., at Beira, Africa. **Kleenglas (1929), Limited;** issued capital, 400,000 5s. ordinary shares; acquires a business, manufacturing a patent machine for cleaning tumblers, at a purchase price of £75,000, including £55,000 in shares; working capital is estimated at £25,000.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Production for the week ending Wednesday, April 17, 1929, amounted to 1,080 tons.

VENEZUELAN OIL CONCESSIONS, LIMITED.—Production for the week ended April 20th was 132,039 metric tons (previous week ended April 13th 129,373 metric tons).

SERVICE PETROLEUM COMPANY.—Production from the company's oil wells at Gura-Oonitzei and Ceptura for the week ending April 21st was 1,567 tons (10,969 barrels).

COMPANY MEETINGS, &c.

LAW UNION AND ROCK INSURANCE COMPANY, LIMITED

"VERY SATISFACTORY" REPORT
BRIGHT BONUS PROSPECTS

The annual general meeting of the Law Union and Rock Insurance Co., Limited, was held on Thursday, the 25th instant, at the offices, Chancery Lane, London, E.C.

Mr Charles G. Hamilton, the chairman of the company, presided.

The secretary (Mr James Stirling) having read the notice convening the meeting and the report of the auditors,

The chairman said: Gentlemen,—The report which the directors have to submit to-day is a very satisfactory one. Dealing first with the fire account, the premium income amounts to £548,502. For several years our fire premium income has shown a steady yearly increase and that this increase has not been earned by underwriting more hazardous risks is proved by the fact that our loss ratio remains fairly constant. In the last six years it has only varied between 39·72 and 43·21 per cent. Concurrently the expense ratio has varied between 38·55 and 41·85 per cent., and this year is 40·4 per cent.

The fire reserves have been increased to £569,400 and £113,172 carried to the profit and loss account.

The "Law Union and Rock" are now issuing new "comprehensive" policies on private dwellings, and the cover provided protects house owners against loss or damage from such additional perils as storm or tempest, burst water pipes, &c.

I feel sure that these new policies will prove attractive and meet a genuine demand on the part of the public. I strongly advise all policyholders to take advantage of the up-to-date cover now offered.

The income of the accident and general account increased by over £40,000 to £258,013. The outgoings amounted to £200,893, and after providing the necessary increase of reserves the sum of £25,600 has been carried to the profit and loss account.

PROFIT AND LOSS ACCOUNT.

The profit and loss account maintains its healthy character. After payment of the dividend, which was increased two years ago, interest on the debenture stock, the transfer of £10,000 to the staff pension fund and £50,000 to the general reserve fund, the balance at the end of the year was £524,931.

The directors recommend the payment of a dividend for the year now current of 12s. per share, less income tax, payable by half-yearly instalments on May 31st and November 30th.

LIFE DEPARTMENT.

Coming now to the life department, the gross amount of new life business completed last year was £3,216,021 and the net amount £1,977,388, as against £2,260,507 and £1,632,510 in the previous year. This is a very substantial increase and is a record for the company both in gross and in net business.

The expense ratio at 14·52 shows a small decrease, which is very satisfactory, especially as in the year an unusually large amount of new business was transacted, for new business in its first year costs a very substantial amount of the first premiums. This remark does not apply to new single premium policies where you receive all the premiums in one year.

The average net rate of interest earned on the life funds was £4 13s. 8d. per cent., an increase of 2s. 9d. per cent.

The life premium income was £809,669.

The claims by death amounted to £461,589, practically the same as in the preceding year on a larger business and lives a year older. The amount expected according to the mortality tables was largely in excess of this sum.

Our total assets now exceed £13,500,000 and our income £2,200,000.

Two years ago I referred to the reduction of our non-profit rates of premium, justified by the general improvement in the rate of mortality. It is only by a reduction of rates that persons effecting non-profit policies can share in benefit resulting from improved mortality.

The holder of a with-profit policy, however, automatically reaps the benefit of improved mortality in the larger bonuses which he receives.

Prospective proposers who are desirous of effecting profit policies at less than the full profit rate of premium are provided for by the minimum premium scheme. Under that scheme a portion of bonus has been discounted and applied to reduce the premiums.

The premiums have been reduced by the surrender, in anticipation, of a bonus of £1 per cent. The resulting premiums are very little more than non-profit premiums and the policies carry the right to share in the profits declared in excess of £1 per cent., a valuable benefit.

A policy of this class should appeal very strongly to those to whom it is important to get the largest possible sum assured for the premium they can afford to pay and still retain bonus rights.

QUINQUENNIUM.

The current year is the final year of the quinquennium, which means that at the end of the year we shall make proper actuarial calculations with a view to ascertaining the amount of profit earned by the life department during the last five years, and apportioning that profit.

During the currency of the present quinquennium, our practice has been to make interim investigations for our own information and guidance. The results of these investigations have been in every respect satisfactory. They reveal throughout

a growing business,
a mortality substantially below the expectation,
a net rate of interest earned of over £4 12s. 0d. per cent.,
while our calculations are based on earning only 3 per cent. net,
an expense ratio which is quite reasonable,
and a large surplus without taking into account a very substantial unrealised appreciation in our investments.

With the latest figures before me, I can confidently say that the prospect of the policyholder receiving a good bonus was never brighter than it is to-day, and a policy in this company is so increasingly attractive that it can be strongly recommended to all prospective assurers.

As regards life current business there are no adverse features.

I have now to move the adoption of the report and accounts.

Mr F. W. Pascoe Rutter seconded the resolution, which was unanimously adopted.

DIVIDEND RESOLUTION.

Mr The Chairman moved: "That in accordance with the recommendation of the directors in their report now adopted, a dividend of 12s. per share, less income tax, be paid to the shareholders for the financial year ending December 31, 1929, the dividend to be payable as usual by half-yearly instalments on May 31st and on the 30th day of November next."

The Rt. Hon. the Earl of Midleton, K.P., seconded the resolution, which was carried unanimously.

The Chairman moved the re-election of the retiring directors, Mr Busick E. Pemberton and Mr F. J. Coverdale.

The Rt. Hon. the Earl of Strafford seconded the motion, which was unanimously approved.

On the motion of Mr F. W. Mills, seconded by Col. A. G. Lucas, C.B., M.V.O., the auditors, Messrs Peat, Marwick, Mitchell and Co., were re-appointed for the current year.

VOTE OF THANKS TO STAFF AND AGENTS.

Mr F. W. Pascoe Rutter, in proposing a vote of thanks to the staff and agents, said: It is my duty, and my very agreeable duty, to propose a vote of thanks to the officials and staff of this company for their work during the past year, and, if I put in the forefront Mr Stirling and Mr Brown, who are obviously mainly responsible for the report and accounts you have had submitted to you by our chairman to-day, they, I know, would wish that they should not be singled out, but would desire that proper recognition—the fullest recognition—should be given to those officials who support them and to the staff who assisted them in their work, because they know perfectly well that whatever efforts they may put forward, those efforts would be in vain without the loyal and earnest co-operation of all the members of the staff.

This is an opportunity for me to say, not only to the officials, but also to the staff, that their work and value is not only dependent

upon the skill and the knowledge which they devote to their different duties, but it is, above all, necessary that those qualities should be assisted by that grit and determination, that loyalty, that whole-heartedness towards the company, which have in the past contributed so much to the success of the company, and which will help them to climb the steps of that difficult ladder which I know so well.

Mr. Philip E. B. Fooks seconded the resolution, which was carried unanimously, and the proceedings terminated with a vote of thanks to the chairman.

THE LONDON ASSURANCE.

PARTICULARLY GOOD LIFE ACCOUNT.

FAVOURABLE QUINQUENNIAL BONUS PROSPECTS.

The annual general court of the London Assurance was held, on the 24th instant, at the office, 1, King William Street, London.

Mr. Colin Frederick Campbell (the Governor), in the course of his speech, said: The accounts do not present any outstanding features; in fact, I might almost say that they indicate a year of quiet and steady work—which, considering the general condition of trade in the country, is in keeping with the prevailing state of affairs. It should be remembered that marine insurance is an important and integral part of our business, so that when this is passing through a difficult period we cannot expect those additions to our reserve funds to which we become accustomed when every branch of our business is producing large profits. I do think, however, that we may be fairly satisfied with the improvement in our marine account.

LIFE ACCOUNT—BONUS PROSPECTS.

The life account submitted is a particularly good one. The fund has increased by £429,000, following on an increase of £352,000 a year ago. The premium income is higher by £115,000, and the rate of interest earned is £5 9s. 8d. per cent. The expenses of management were about the same as a year ago, while the commission paid was rather higher.

The mortality experience continues to be extremely satisfactory, the number of deaths last year being only 63 per cent. of that expected. Three years of the present quinquennial period have now passed, and each one has proved satisfactory, so that the bonus prospects for the end of the current quinquennium are encouraging. There is a noticeable preference now for "with profit" policies owing to these prospects, and for this reason, I think, we have found no great increase in our "without profit" business, in spite of our having reduced the rates two years ago. We are now issuing policies payable by monthly premiums, and it remains to be seen whether any great demand for them will develop. We have also issued a pamphlet on group insurance, a form of insurance which has become increasingly popular in this country, and which, I believe, in the United States has assumed very large proportions.

FIRE DEPARTMENT.

The profit in the fire account is not as large as we have experienced in recent years. This is mainly due to a decline in the income without any corresponding decline in losses; in fact, the latter were about £60,000 higher. The greater part of this increase arose from the home business. The aggregate losses in the United Kingdom in 1928 are reported to have been about £1,500,000 in excess of the total for 1927, and our loss ratio for England and Scotland was the worst for several years. This experience ran side by side with intensified competition and a downward tendency in rates, especially for every form of insurance not governed by tariff.

Business in the United States was similarly affected, and the outlook there is not encouraging. There was a decline in the total wastage by fire, but the average rate of premium is steadily going down and there is a marked increase in competition. In Canada the position is much the same. In the face of such conditions, both in the United States and Canada, expansion is difficult if proper care is exercised in underwriting.

We are so accustomed to good results from the fire department that any reduction in the profit is disappointing, but we have an extensive organisation at home and abroad, and, with any favourable movement in trade, coupled with some lightening of the loss ratio, we should be able to return to the satisfactory average of results obtained in recent years.

The fund remains at £1,650,000 and the additional reserve is increased by about £22,000. We have transferred £117,688 to profit and loss account.

MARINE ACCOUNT.

Turning now to the marine account, it is a matter of considerable satisfaction that no further support has been found necessary by transfer from profit and loss account and that we have been able to maintain the marine fund at £1,000,000. I warned you a year ago not to expect any rapid change for the better in marine business, and I repeat that warning to-day, but, at the same time, I am able to tell you that our 1927 account worked out better than that of 1926, and that our account for 1928, so far as it has gone, is better than that of 1927.

Meetings of the chairmen and general managers of the companies transacting marine insurance business have been held regularly throughout the year, and the underwriters have also met for the purpose of reviewing the field of their operations generally. These meetings have done good without a doubt, though it has not been found possible to formulate any agreements or tariffs of a far-reaching character. I doubt, indeed, if salvation is to be looked for in this direction; nor do I look for it in the curtailment of the facilities afforded to the public.

My belief is that we should give the public the utmost facilities in our power, but at adequate rates, and that we should resolutely refuse to extend the terms of our covers so as to include all sorts of outside risks without increased premiums.

We are ready at all times to collaborate with our neighbours, and we will join with them in maintaining and, when necessary, increasing rates whenever we see there is a chance of such agreements being acceptable to the market as a whole and being loyally adhered to; but, when all is said and done, I rely far more on our underwriter using his own experience and knowledge, and on his refusing to place risks on his books which do not offer the prospect of a fair margin of profit.

The hull agreement has continued to operate throughout the year, but the attempt to obtain a uniform minimum increase of 10 per cent. on everything was found, in practice, to be unworkable.

Our New York account, so ably managed by Messrs. Chubb and Son, has again produced a profitable result, and we congratulate them most heartily on their success.

ACCIDENT BUSINESS.

The accident business, which embraces so many kinds of risks, including employers' liability, burglary and motor insurance, continues to expand. There cannot be much profit in employers' liability insurance, as this business is worked subject to an arrangement made by the tariff offices with the Government. Burglary insurance has shown better results, due to a closer sifting of risks, but recoveries of stolen goods continue to be disappointingly small. The insurance of motor-cars has also produced better results, due largely to a revision of rates on the lighter kinds of cars.

Our Colonial and foreign business has increased, and the results generally were satisfactory.

The profit and loss account and balance sheet require no special explanations. The amounts paid in dividends remain the same, and the balance carried forward is £238,874. The securities held by the corporation continue to be of the same high class as in the past, and their present market value is considerably higher than that at which they stand in the balance sheet.

The report was unanimously adopted and a dividend of 11s. 3d. per share, less income tax, was declared, 5s. 5d. being payable on May 1st and 5s. 10d. on November 1st, 1929.

A further resolution was passed, and will be submitted for confirmation at an extraordinary general Court to be held on the 15th proximo, altering the regulations of the corporation with a view to the payment of interim dividends instead of the dividend payable, as at present, in two instalments.

KANSALLIS-OSAKE-PANKKI
(National Joint Stock Bank)

HEAD OFFICE: HELSINKI (HELSINGFORS), FINLAND
Established 1889.

THE UNION BANK OF SCOTLAND, LIMITED.

SATISFACTORY YEAR—INCREASED PROFITS.

The annual meeting of shareholders was held, on the 24th instant, in Glasgow, Sir Ludovic J. Grant, Bart., LL.D., chairman for the time being of the board of directors, in the chair.

The Chairman, in submitting the directors' report, having dealt at some length with international affairs, said:—From reports received from all over the country it seems clear that, on the whole, there has been some progress during the past 12 months. Agriculture has rather more than held its own, as crops were good last year and sheep farming has continued to be successful. There is an improvement in dairy farming and the Milk Pool has proved distinctly helpful.

Of fishing, one can say that, although it was a long way behind the good years of pre-war days, 1928 was better than 1927.

The iron and steel trades are still depressed, although there have undoubtedly been more orders and a closer approximation to Continental prices.

Coal mining was greatly assisted by the severe winter at home and on the Continent, and the arrangements made between coal masters, and further economies in working, have helped to improve the financial position. If left alone and free from political interference, no doubt this great and important industry will work out its own salvation.

Textiles have done better, particularly the jute and woollen sections, but, owing to the erratic movement in the price of the raw material, the linen trade is still hard hit.

As regards shipbuilding, much good work has been done on the Clyde, but the margin of profit is still far from satisfactory.

We welcome the Government De-rating scheme, which should be of great assistance to agriculture and the heavy industries.

PROFITS AND ALLOCATIONS.

Turning to our report, you will see that we have had a satisfactory year and that our profits, after making full provision for bad and in any way doubtful debts and for contingencies, show an increase of £6,733. We have again placed £50,000 to reserves, raising the figure to £1,500,000, or £500,000 more than our paid-up capital, and we have once more applied £35,000 in reduction of Bank Offices and a like sum to our other properties. It is very desirable that property designed for the peculiar needs of banking should be written down to a conservative figure and we feel sure you will approve of these allocations.

We recommend that a dividend of 18 per cent. should be paid, the same as last year, and that the usual provision of £25,000 should be made towards the bank's liability for pensions. The balance carried forward to next year has been increased to £100,000.

BALANCE SHEET ITEMS.

Regarding our balance sheet, you will realise the figures vary from week to week, but, at the date of our balance, deposits, which have been well maintained, show at 27¼ millions, an increase of over £1,300,000. Acceptances are also up by £535,000, a sign of the increased demand for London acceptances which has been a notable feature for the past 12 months. On the assets side, cash and money at call or readily available are higher by £442,000, and the combined total of these items shows the satisfactory percentage to deposits of 24 per cent.—a very liquid position. The most striking feature, however, is a further proportionately large increase, following that of the past few years, of over £1,900,000 in our advances, which now amount to a record figure for this bank of fully £13,500,000. This, I think, is clear evidence of the freedom with which we have assisted trade in this country, our foreign advances being entirely negligible. Bills discounted at £2,650,000 are almost identical with last year and, as they include £1,305,000 of British Government Treasury Bills, you will see that, unlike international trade, there is little evidence of a revival in the use of the bill as a medium of settling commercial transactions inside this country.

To provide for additional facilities granted by us, investments have been realised during the year and you will observe that these are down by nearly £1,000,000.

The property belonging to the bank, including London office, now stands in the balance sheet at under £600,000, which we believe to be a conservative figure.

I am pleased to say that the business of the bank continues to expand, and we are glad that, in times when, I think unfortunately and rather unnecessarily, so much of the control of business has gone to London, we remain a Scottish institution predominantly owned by an ever-increasing number of Scottish shareholders.

The report and accounts were adopted.

GENERAL ACCIDENT FIRE AND LIFE ASSURANCE CORPORATION, LIMITED.

PROGRESS IN ALL DEPARTMENTS.

The 39th annual meeting of this Corporation was held on the 24th instant, in Perth.

Dr William Low, of Blebo (the Chairman), in moving the adoption of the report, described it as the best that the company had ever issued. The experience of past years, he said, had led the shareholders to expect an annual report of a substantial increase in business, together with a considerable increase in profits, and an occasional increase in the rate of dividend. This year he was in the happy position of being able to report a substantial increase under all these heads. The income of £8,323,000 showed an increase of £375,000, and the profits of £387,500 showed an increase of £38,000, while the proposed dividend of 12s. per share for the year was an increase of 2s. per share. After setting aside ample sums for underwriting reserves, applying £150,000 to the general reserve and £20,000 to the staff pension fund, and making payment of the proposed increased dividend, the carry-forward was £314,277, which was approximately equivalent to two years' dividend on this year's basis. The shareholders had reason to be very well satisfied with these results, which reflected immense credit on the General Manager, Mr. Norie-Miller, and all who worked under his able direction.

OUTLOOK.

As to the future, with their organisation so efficient as he knew it to be, and with the prospects of business as good as they believed them to be, they saw no reason why 1929 should not prove another record year. The year 1928 was a good year for insurance business in all departments in most parts of the world. This company shared in that prosperity because they were in a position to take advantage of it; in fact, to-day they were completely equipped to take full advantage of any flow of good trade that might arise in any part of the world. The increase in income had not been in one but in all departments of the business, showing the sound basis upon which these departments had been established. They had to congratulate the Life Officials upon the splendid increase shown in the new business.

SUBSTANTIAL RESERVES.

Notwithstanding the substantial increases in the dividend, it was less by £65,624 than the free interest earnings, so that they continued to have the whole of their trading profits available to place to reserves, and he would point out that the general reserve and balance carried forward were now in excess of £1,000,000. Their interest earnings last year, but for the reduction necessitated by the stabilisation of the franc of £28,906, would have shown that much increase over the previous year so that there was by true comparison an increase of over £30,000, and the general manager anticipated that in the current year the earnings would increase by about £40,000, as a result of the accumulation of reserves, and the investment of these, so that there would be a large margin of free interest earnings to be dealt with as might best seem desirable.

Their company was now in the very front rank, and he was confident that it would remain so. They had a wonderful organisation and a very fine executive, who were capable of carrying on the business, and who would take care that they had under them younger men to whom they were able to hand over the reins of office when the time came, and thus continue the beneficent work of this great institution, which had become not only an institution of which they could all be proud, but also an institution which was a credit to the Empire.

LOW EXPENSE RATIO.

Mr. F. Norie-Miller (director and general manager), in seconding the motion, said that their free interest earnings, which amounted to the magnificent sum of £234,600, were £65,000 in excess of the amount they were paying in dividend and were really £29,000 in excess of the previous year. He had no doubt that by the end of this year they would show a substantial increase over last year's total. Their combined commission and expense ratio was 32·78 per cent., as compared with 33·13 per cent. last year. They were practically working at the lowest expense ratio of any of the leading British companies. The combined loss ratio was 59·55 per cent., as against 61·11 per cent. last year, showing that they were returning to their policy-holders a fair proportion of their premiums. In the fire department they had a very fine account, the gross premiums being £1,140,000 and the net—after reinsurance—£641,000. Active steps were being taken for the increase of the fire account, and he thought that in the course of a year or two they would have what he had long desired—a net income of a million. In conclusion, Mr Norie-Miller said that it was impossible to exaggerate the potentialities of the great company they had built up.

The resolution was carried unanimously.

ARMY AND NAVY CO-OPERATIVE SOCIETY, LIMITED.
INCREASED TURNOVER AT HOME AND IN INDIA.

The annual general meeting of the Army and Navy Co-operative Society, Limited, was held, on the 24th instant, in London.

The Right Hon. Lord Ebury, D.S.O., M.C. (the chairman), said: I have pleasure in being in a position to report that our turnover both at home and in India has increased considerably. The London sales have improved unquestionably as a direct result of the additional space which became available in Victoria Street, and I am glad to say we have more than recovered the leeway of 1926 and 1927 resulting from the industrial troubles that occurred, and have secured, too, a further advance in our turnover upon previous records—a proof of the benefits that trade has derived from the better relations that have been established in industry. Our trading profit and miscellaneous revenue shows an increase of £15,734. On the other hand, working expenses, including interest charges and depreciations, are more by £13,885, chiefly due to our increased wages bill, and we have a net profit for the year of £243,520, or an increase of £1,849, which, added to the increased amount brought forward from last year—namely, £21,542—leaves us with an available profit of £307,885, or £23,391 more than in the previous year. The proposed allocation of this amount includes a transfer of £30,000 to a reserve for developments and improvements, a subsidy of £9,592 to pensions redemption fund, and a final dividend of 1s. 10½d. per share, amounting to £153,750, making, with the interim dividend paid in October last, a total of 2s. 6d. per share, or 25 per cent. for the year, and leaving £114,543 to be carried forward.

THE DIVIDEND.

For various reasons I think it desirable to point out certain facts which are not always understood or borne in mind in regard to the dividend of 25 per cent. which we pay upon our nominal capital. Not the least of my reasons for so doing is that my attention has been drawn to statements in various quarters regarding the "growth of powerful trusts and combines in the distributive trade and the magnitude of the profits earned and distributed to the shareholders," and so on and so forth—a form of utterance quite likely to lead to gross misapprehension in the minds of the unenlightened. The fact that we can pay a dividend "at the rate of 25 per cent. on our nominal capital" is due to its relatively small proportion to our turnover, admitting of this dividend being provided by the small margin of approximately 5 per cent. net profit.

SMALL MARGIN OF PROFIT.

There is yet another fact which I would like to put clearly before you, and it is that the interests of the consumer are not sacrificed to those of the shareholders. The Society's small margin of net profit is a proof that the policy for which it was established is being rigidly adhered to, in other words, that the quality and good value it dispenses are strictly maintained.

I have on previous occasions at a different stage in these proceedings referred to the elaborately organised steps we take to compare our goods and the prices we charge with those of our competitors. The results of comparisons recently made—covering a wide range of articles of everyday use—show that prices are higher at other establishments by an average percentage of 12½ per cent. In other words, the approximate saving to the customer works out at about 2s. in the pound. An exhibit has been arranged of these recent purchases, and if any shareholder wishes to inspect them the management would be only too pleased to facilitate this.

I want here to draw your attention to yet another fact—namely, that the majority of our shareholders are more interested as customers in the value they obtain than in the dividends that are paid. Those who hold shares to the nominal value of £50 and over represent only 9 per cent. of the total number of shareholders, whereas there are 91 per cent. whose average holding is of only £8 nominal value—equivalent to four-fifths of an original £1 share in the Society. These latter and the numerous clientèle of members, which outnumber the shareholders by about five to one, are the main constituents of our body corporate, whose interests must always be our first consideration, as upon their goodwill as customers the prosperity of the Society has been built up and depends.

With regard to the accounts, I should like to explain the allocation of £30,000 this year to a reserve for developments and improvements. You will see that the amount of our investments, in consequence of realisations to provide for capital expenditure, is now only £48,290 in excess of our general reserve fund, and, as we have still a good deal of expenditure to face, we feel it is desirable to supplement our resources for that purpose. Our trading profit increased by £21,246. The percentage, however, was slightly less than for the previous year, and was materially affected by the fact that the Society's prices were not increased to cover fully the increased duties placed on wines in 1927.

The report was unanimously adopted.

LEGAL AND GENERAL ASSURANCE SOCIETY, LIMITED.
YEAR OF STEADY PROGRESS.

The annual general meeting of the Legal and General Assurance Society, Limited, was held, on the 23rd instant, at 10 Fleet Street, London, E.C., Mr Romer Williams D.L., J.P. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the year 1928 was the second year of the quinquennium, and had been a year of steady development and progress. In several directions there had been expansion into new fields, which, it was hoped, would bring further prosperity in its train. The figures for net new business again constituted a record for the society. The net sums assured amounted to £7,646,900, and the deferred annuities to £90,581 per annum for 1928, as against £6,649,164 and £43,865 respectively in the previous year. Combining the life assurance account and the sinking fund account, there was an increase of 1,384 policies issued and £1,430,095 in net sums assured. The net new premiums in the combined account were £573,021, as against £544,518.

The total expenses and commissions in the life assurance fund amounted to 16.99 per cent. of the net premium income, as against 17.02 per cent. in 1927. Every economy consistent with efficiency and progress was exercised as far as was reasonably possible. The net life claims during the year were £1,290,406, including sums paid under matured endowment assurances. Their mortality experience had again been favourable, the actual claims representing 72.5 per cent. of the expectation. In the fire, accident and miscellaneous business, he was pleased to report further steady progress. During the present year they had taken steps to commence operations abroad in various classes of business.

The total premium income for the year was £2,177,087, and the total annual revenue was £2,998,067. The funds had increased during the year by £822,200, and amounted on December 31, 1928, to £20,546,304. The total assets at that date were £20,921,111. The average net rate of interest earned on the funds, excluding the sums invested in the purchase of reversionary interests, was £4 11s. 6d. per cent., as against £4 11s. 11d. per cent. An interim dividend of 3s. per share, free of tax, had been paid, and it was proposed to pay a final dividend of 4s. per share, also free of tax.

The report and accounts were unanimously adopted.

REMBAU JELEI RUBBER, LIMITED.
EXCELLENT RESULTS.

The fifth annual general meeting of Rembau Jelei Rubber, Limited, was held on the 22nd, at 2-4 Idol Lane, London.

Mr L. Church (the chairman), in moving the adoption of the report and accounts, said:—It is with much gratification that we are able to report, in spite of the difficulties of the year behind us, that profit amounted to £55,372, against £58,161 for 1927. Shareholders, I am sure, will share the board's satisfaction at this comparatively excellent result.

Following the removal of restriction, the estates were gradually worked up to full production, and the main efforts of the managers during the year were concentrated on securing and organising tapping labour. Recent reports on the properties are favourable, and indicate that the estates are in sound conditions. As was to be expected, labour is now more difficult to obtain than a year ago, and, naturally, there is a tendency for rates of pay to go up.

The outlook appearing clearer in regard to the price of the commodity, the directors feel justified in authorising a continuance of the development which was curtailed two years ago. It was intended to plant up a minimum of 1,000 acres, but only 558 acres were dealt with. These plantings are in excellent order, and, according to our visiting agent, appear to be very promising clearings, well laid out in terraces on modern lines, while 200 acres of the area have been bud-grafted with an unusually high degree of success, upon which the manager is to be congratulated. In these circumstances we feel there are no obstacles or objections to continuing our programme, and it is, therefore, proposed to make arrangement to plant up a further 250 acres.

From the profit of £55,372 we are recommending a dividend of 10 per cent. (less tax), which leaves us with £20,506 to carry forward after having placed £10,000 to general reserve and allowed £7,035 for depreciation. It is pleasing to note from the balance sheet that our general reserve now stands at £74,000, while liquid funds total over £135,000. There are fewer rubber companies, I think, which can claim to have built up such a strong position in five years of existence as Rembau Jelei, particularly when the widely varying fortunes of the industry during the period are borne in mind.

The report and accounts were adopted.

LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES, LIMITED.
GOOD RESULTS—INCREASE OF CAPITAL APPROVED.

The nineteenth annual general meeting of the London County Freehold and Leasehold Properties, Limited, was held on the 19th instant, Mr A. C. Bourner, F.C.A. (the chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The accounts disclose a state of affairs which should give you confidence that expansion has produced satisfactory revenue results, though the full capital of £900,000 was available for less than nine months.

The accounts for fifteen months show a net revenue of £133,489, with the carry-forward at January 1, 1928, £37,506, making available £170,995. Interim dividends have been paid, absorbing £74,250, leaving £96,745, out of which a final dividend of 2½ per cent. is recommended, absorbing £22,500. Transfers to reserves: Debenture stock redemption account, £5,000; amortisation of leaseholds account, £6,000; maintenance of properties account, £6,000; and contingencies account, £10,000, come to £27,000, leaving to carry-forward £47,245, an increase of £9,739.

The directors have exercised caution in recommending a final dividend of 2½ per cent., making 12 per cent. for the fifteen months, realising the desirability of further strengthening what is considered to be already a sound position. The directors will pay an interim dividend for the current financial year on November 1, 1929. The balance sheet shows that our assets are £2,966,684, and our loan capital, creditors and share capital £900,000, amount to £2,637,126, leaving a surplus of £329,558, which is represented by properties and liquid assets free of specific encumbrance.

We have taken counsel as to the real value of our properties and, on a fair and reasonable basis, are of opinion that £3,039,000 would more accurately represent the £2,810,172 in the balance sheet, in which case £228,828 could be added to the surplus and reserves and undivided profits of £329,558, shown by the accounts, making the reserves £558,386, which gives an assets value to each share of 32s. 6d.

We own no less than 228 separate blocks of property, each capable of being dealt with as a distinct unit. The situation of our properties is of importance. We have flats in every district of any residential pretensions of a wide range of rent, and the greater number are under £200 per annum; yet all are in desirable and popular residential districts, and we have no service flats.

COST OF BUILDING.

The demand for all classes of flats continues. Our tenants number 2,888, of whom no fewer than 2,607 pay rent less than £300 per annum, including rates. Statutory tenants number 1,194. During the year 1928 there were many changes of tenancy in respect of which an aggregate increase of rental was obtained. At the present time we have very few of our flats available for reletting. They do not number to-day more than 20 out of 2,888.

Although several erections of flat premises are now taking place in London, and we have carefully considered how we may be affected, we have come to the conclusion that we are able to offer equal accommodation and can accept a lower rent and thus face competition with confidence. Where new flats in the same district require a rent of £450, we can let similar flats at £300. The majority of new flat erections do not provide for the great number of tenants who are limited to a rental not exceeding £300 per annum.

We pursue a prudent policy in acquiring properties, and only make those purchases which satisfy us that our average income is likely to be improved. We have purchased property since our last meeting and utilised almost the whole of our resources; consequently, we may have to allow suitable opportunities to pass unless further funds are available. We have now before us opportunities for investments which we believe, if acquired, will be as lucrative as any we own to-day.

We are asking you at the extra-ordinary meeting to follow to authorise the capital to be increased by 500,000 shares of £1 each, as set out in the notice convening the meeting, and hope that the recommendation will be approved. It is intended to offer to the members on the register on the 19th instant a *pro rata* allotment of the number of shares we may decide to issue. Summing up the situation, we maintain that our assets are not over-stated; our liabilities—other than to shareholders—are only 58½ per cent. of our assets; our revenue augments annually, and is a proof of the improving value of our investments, and our record is one of expansion and progress.

Sir William Burton (vice-chairman) seconded the resolution, and it was passed unanimously.

At the extra-ordinary general meeting, the resolution to increase the capital to £1,500,000 was carried unanimously.

ANGLO-FOREIGN NEWSPAPERS, LIMITED.
SUBSTANTIAL PROGRESS—GOOD PROSPECTS.

The statutory meeting of members of the Anglo-Foreign Newspapers, Limited, was held, on the 19th instant, at Winchester House, Old Broad Street, London, Mr Henry S. Horne (chairman of company) presiding.

The Secretary (Mr L. T. Newell, A.S.A.A.) having read the notice convening the meeting and the certificate of the auditors,

The Chairman said:—This undertaking was formed as a result of a carefully-conceived plan for the purpose of acquiring, founding and developing newspaper and allied undertakings at home, in the Dominions and abroad.

In certain quarters it was suggested that the particulars published in the offer for sale of 3,000,000 ordinary shares and 375,000 deferred shares were not sufficiently informative, but the reasons for this, I think, are evident if you will appreciate the fact that the acquisition of newspaper interests is a matter which perhaps requires more delicate and careful handling than any form of business.

ENORMOUS OVER-APPLICATIONS.

However, despite the unavoidable meagreness of detail, the response from the public was such that the offer was enormously over-applied for, and if, as certain of our critics asserted, we asked for a blank cheque, the result abundantly indicated the greatest confidence in the board of the new company, and an appreciation of the great possibilities available for the activities of an undertaking of this nature. I would add that such reliance is even more fully justified to-day.

Although it is but such a short time since this company was formed, we have done a great deal. We already possess, or have settled terms for acquiring, properties which should give to your corporation a return in the first year of at least £100,000. This is on the present profit basis, but we are confident that, with the assistance of the technical personnel we have been able to obtain, we shall enlarge upon this figure.

One of our aims has been to acquire a participation in, or control of, undertakings which occupy specialist or pivotal positions, and while intending to make no spectacular or revolutionary changes in the interests we have acquired, we have satisfied ourselves that these publications are capable of considerable improvement and expansion.

In addition to the figure I have just given you, we may anticipate further profits from the co-ordination of certain of our properties has been brought to a stage which permits of their treatment as a separate entity.

As a result of our comprehensive survey, we have discovered many instances of valuable properties where obsolete methods still remain, and enterprises which yield a profit quite satisfactory to private ownership, but which are capable of infinitely greater expansion. It is part of our policy to take over and develop such properties.

I have informed you that we are on a definite income-earning basis, and have assured you that, without being over-sanguine, we believe that, with other acquisitions likely to be effected in the near future, we shall receive an income capable of providing substantial dividends.

DEVELOPMENTS OVERSEAS.

Turning to our developments abroad, we have purchased, on a satisfactory basis, a substantial interest in a highly profitable newspaper on the Continent. We are in negotiation with regard to another very important Continental undertaking, and, if certain conditions we have laid down are accepted, this business will result in the establishment of a wider European connection.

We have not been less active in the British Empire overseas, and Sir Robert Donald sails for Canada to-day to continue investigations which have shown that there exist opportunities for the profitable employment of our funds. We have already taken steps to inaugurate a holding company which will be domiciled in Canada, and in which your company will hold a substantial interest. This may, we hope, lead to the formation of an Imperial newspaper organisation, which, you will agree, holds out great possibilities for work of a useful nature in relation to British Empire interests.

We may also become, as a result of a proposition now under consideration, identified with most powerful interests in another part of the British Empire.

In conclusion, the Chairman said:—At the earliest opportunity after our projects have further matured and our schemes of co-ordination and consolidation have been carried out—the danger of premature disclosure thus no longer existing—you may rest assured your board will then give you the fullest possible information as to the company's interests.

The proceedings then terminated.

NATIONAL MINING CORPORATION, LIMITED.

REVIEW OF COMPANY'S INTERESTS.

The ninth annual ordinary general meeting of the National Mining Corporation, Limited, of 428, Salisbury House, London Wall, E.C.2, was held on the 25th instant, at River Plate House, London.

Mr Herbert Guedalla (the chairman) said that the profit and loss account showed that the company realised profits to the amount of £194,131, as compared with £145,514 in the previous year. They carried down to appropriation account £159,197, and had written off investments £90,470, while they had made provision for income tax of £10,000 and had paid a dividend No. 3 amounting to £59,140, leaving £64,952 to be carried to the balance sheet, as against £65,365 in the previous year.

SOCIETATE "SOSPIRO."

By far their largest investment was their interest in the Roumanian Oil Company entitled the Societate "Sospiro," which held the oil rights over about 50,000 acres situated in the midst of the Roumanian oilfields. During the year under review the Societate "Sospiro" had continued the exploration of these lands, and an extensive drilling programme had been carried on at several different points of this large territory for the purpose of testing and proving the productive value of the oil-bearing structures which the geological survey had shown to exist. This survey, due to the extensive area of the property, was as yet incomplete,and in addition to the oil structures which had already been located, there remained to be examined several further interesting areas which, judging from operations in their vicinity by other oil companies, might prove to be of great importance. The board were confident that the development of the great potential values of this most important property would not only be greatly accelerated, but would also be attended at an early date with definite and satisfactory results.

With regard to the Amalgamated Oil Lands of Roumania, Limited, he was glad to say that a distinct improvement had taken place during the year and quite a valuable production of oil was now being obtained from certain wells.

They still had their important holding in the Chemical and Metallurgical Corporation, Limited. They had no reason to doubt the great value of this process, and a considerable part of the large plant at Runcorn was now in operation.

The Chairman proceeded to deal with the company's interests in Camp Bird, Limited, and the Santa Gertrudis Company, Limited, and through them, in the Mexican Corporation. The recent revolution in Mexico, which he thought could now be regarded as finished, had had an unfortunate effect on the market value of these particular securities. As a matter of fact, production had been continuing as usual, and the only inconvenience had been some delay in the shipment of products. The position of the Mexican Corporation was a very interesting one. Through its subsidiary in Mexico, this Corporation had a 50 per cent. interest in the well-known Fresnillo lead, zinc, silver property. This property was to-day earning profits at a rate exceeding £300,000 per annum.

Coming nearer home, Moler Products, Limited, was fast establishing itself in the building world, and the merits of its particular products were becoming more and more appreciated.

For the past two years the Mill Close property had passed through a lean period of poor development and low lead prices. After great trouble in dealing with the large volumes of water encountered, development had now been carried below the previous bottom level, and had exposed ore of unusual richness, the full extent of which had not yet been determined.

VENEZUELAN INTERESTS.

As to their various interests in Venezuela, the geophysical examination of the South American Copper Company's property was being continued with promising results. During the year they acquired an interest in the Bolivar Venezuela Gold Mines, Limited. The management had opened up a stockwork formation on the property, and this had proved to be of such importance that the directors had decided to concentrate on developing this deposit and were making arrangements to start with a 200-ton mill unit.

During the year they accepted participation in conjunction with the Consolidated Mines Selection Company and the Anglo-American Corporation in the Mawchi tin and wolfram mine in Burma.

On the Lagares Tin Mines Limited, which was situated in Portugal he was glad to state that developments during the past 15 months had quite come up to, if not exceeded, their expectations. It might be taken that at present the ore reserves were certainly more than 200,000 tons of highly payable ore, taking tin at a price of £200 per ton.

They had smaller interests in such companies as Lake View and Star, Limited.

The report and accounts were unanimously adopted.

General Manager & Secretary: Hugh Lewis

OOREGUM GOLD MINING COMPANY OF INDIA, LIMITED.

OVER £3,700,000 PAID IN DIVIDENDS.

The ordinary general meeting of this company was held, on the 23rd instant, at the Cannon Street Hotel, London. The Hon. Lionel Holland (the chairman) presided.

The Chairman said that the gold returns last year, as compared with 1927, were lower by over 8,000 oz. of fine gold. This shrinage, however, was due rather to a reduction in the grade of the milling ore than to any reduction in the tonnage put through the mill, which varied little from the previous year's figure. Altogether the total production of fine gold during the year under review was 90,830 oz.

With the amount brought forward there was a total of £117,787 available, and the directors recommended a final dividend of 1s. on both the preference and ordinary shares, making a total distribution for the year of 27½ per cent. on the preference and 17½ per cent. on the ordinary shares. It was disappointing that the rate of dividend had had to be reduced from the 32½ per cent. on the preference and 22½ per cent. on the ordinary shares distributed in the previous year; but they must face the altered conditions squarely—the rather sudden decline in the average grade of ore now being stoped, and the concurrent call for increased development footage in order to maintain the ore reserves—and be prepared for a period of lower profits until the mine developments once more showed improvement and the new reserves opened up justified an increased production.

Since the Ooregum Co. started operations it had won over 3,000,000 ozs. of gold from its property and paid over £3,700,000 to its shareholders in dividends; and, although the accounts presented might show some check to the prosperous advance of recent years, there was no kind of reason to infer that the riches of the mine were approaching exhaustion. In addition to the balance remaining of their holding in the Indian Copper Corporation, they had an interest in Canadian mining through their holding of Anglo-Canadian Explorers and Central Manitoba Mines shares. The financial position of the company, with a surplus of liquid assets over current liabilities of more than £126,000, could not be regarded as other than substantial. The immediate task before them, however, might involve some tax upon their resources.

For the second year in succession the reserves of milling ore had suffered diminution. For more than two years until recently development work had been held back or delayed by the efforts to strengthen the levels and stoping areas with solid supports, but this policy had been fully justified by results, and he was confident that the mine, which had already reached a vertical depth of nearly 6,500 feet, could be carried down to much deeper levels. The mine had been conspicuously successful in the discovery of a large tonnage of rich ore at depth, after passing through a barren zone which reached down to the 58th level, where the re-make of rich ore started. Between the 59th and 70th levels there had been little variation in values and widths; but now, although he hoped only temporarily, and although the width of lode was maintained, the values tended to decline in the levels recently opened up. Their programme of development work for the current year was one of increased activity—to complete driving the 71st level, to drive the 72nd level, and to sink down to and start work on the 73rd level.

Mr Henry C. Taylor seconded the resolution, which was carried unanimously, and, the formal business having been transacted, a vote of thanks to the chairman, directors and staff terminated the proceedings.

HOPE BROTHERS, LIMITED.

THOUSANDS MORE CUSTOMERS.

The twenty-ninth annual general meeting of Hope Brothers, Limited, was held, on the 25th instant, at the Cannon Street Hotel, London.

Mr T. Edward Goodyear (the chairman) said that the past year had not been without its difficulties, but, on the whole, conditions had been favourable to the company, and the directors were able to present a satisfactory report. They had served many thousands more customers than in the previous year—indeed, the number of transactions constituted a record in their history—and this was eloquent testimony to the success of their policy of supplying articles of good quality at a reasonable price for cash. They had again found, however, that the average amount of each transaction was slightly less than in the previous year—an experience which had been continuous since 1921, when values were at their highest. There was little doubt that not only had values declined but that, owing to unemployment and heavy taxation, the spending power of their customers was reduced. At Hull they had opened larger and in every way better premises, which showed every prospect of proving profitable, while at Manchester and Richmond they had incurred considerable expenditure in structural repairs and improvements.

The balance sheet showed a very healthy position. In spite of the increase in trade, the company had been able to carry a smaller stock, and at the date of the balance sheet this showed a reduction of £18,500 on the previous year's figure. This reduction was reflected in an improvement in cash balance. Last year the cash in hand was £13,800, but they had a loan from their bankers of £5,000. This year they had a cash balance of £35,600 and no overdraft, so that the cash position showed an improvement of £26,800.

The available balance was £7,284 in excess of the previous year's figure, and the directors recommended the usual dividend, making 10 per cent. for the year, this being the seventh consecutive year in which they had been able to pay this dividend. In 1922, owing to the fall in prices, they were only able to pay 6 per cent., but for the past 11 years their average annual dividend had been 10 per cent. They were writing off a further £10,000 from goodwill account, reducing it to £160,000, as compared with its original figure of £276,000, and in addition to this substantial reduction of the goodwill item they had accumulated a reserve of £100,000, while they were carrying forward £37,096—a sum more than equal to two years' dividend on their preference capital.

The report and accounts were unanimously adopted.

CONSOLIDATED WATER WORKS COMPANY OF ROSARIO, LIMITED.

The thirty-fourth ordinary general meeting of the Consolidated Water Works Company of Rosario, Limited, was held, on the 23rd instant, at 52, Moorgate, London.

Mr. James Anderson (the Chairman) said that the report and accounts showed a continuation of the steady progress which had been the company's experience for many years past. The services on December 31st last numbered 47,452, an increase of 3,208 over those in operation at the close of the year preceding. The rate of expansion in the number of services for some years past had been very even.

During the last three years the population, which now exceeded 400,000, had increased at the rate of 30,000 per annum, and that extraordinary rate of expansion as yet showed no signs of diminishing. It was obvious that they had to be continually adding to their plant, in order to meet the wants of so rapidly increasing a population.

The gross revenue for the past year amounted to £271,458, which was the highest point yet touched in the history of the company, and was £16,922 over last year's figure. The working expenses, however, absorbed most of the improvement in income, but that was largely due to some non-recurring items, including a heavy payment for legal expenses and the increased annual charge for the sinking fund. The results of the year's working might be summarised as follows:—After providing for all charges, including debenture interest, and making provision for the preference dividend and the usual dividend of 8 per cent., tax free, on the ordinary shares, they were able to place £15,000 to the reserve fund, £10,000 to the depreciation fund, and add £9,906 to the amount carried forward to next account.

The report was adopted, and Mr. J. Percy Clarke, C.B.E., in proposing a vote of appreciation to Mr. Anderson, on his retirement, said that the present sound position of the company was due to his ability and care

NUNDYDROOG MINES, LIMITED.

INCREASED PROFIT AND DIVIDEND.

The eighth ordinary general meeting of the Nundydroog Mines, Limited, was held, on the 24th instant, at Cannon Street Hotel, London.

Mr V. Herbert Smith (the chairman), in moving the adoption of the report, said that the total production of fine gold was 75,196 oz., or 5,791 oz. better than in 1927. The gold won was sold for £321,790, or £25,277 greater than the production of the preceding 12 months. The profit on the year's operations was £93,167, as against £80,751 in 1927—an improvement of £12,416. The aggregate costs were higher, which to a great extent was due to extra expenditure on the ventilation of the mines.

The dividends for 1928 amounted to 2s. per share, or 20 per cent. on the capital of the company, as compared with 1s. 9d. per share, or 17½ per cent. for the preceding 12 months. In that connection it was interesting to note that the total amount paid in dividends from the commencement of operations at the Nundydroog mines to date was £2,854,054, or rather more than ten times the present nominal capital of the company. The dividend distributions for the last 16 months had averaged 21 per cent. per annum. That was a gratifying record, and shareholders should feel additional satisfaction in the present good position and prospects of the company. The liquid assets amounted to £133,028, and the liabilities to £36,473, leaving a balance of assets of £96,555. In addition to this there were materials and stores at the mines amounting to £64,975, and machinery and goods in transit £1,646. During the year £31,952 was expended on additional plant, machinery, and buildings, of which £25,000 was charged to profit and loss account.

The underground exploratory work measured 10,873 ft., or 1,448 ft. less than in 1927. Although a smaller footage was driven, the reserves of ore had increased by 25,303 tons to 246,464 tons at the end of the year. The directors considered that the year's work had improved the position at the mines, and the outlook continued to be satisfactory.

The report was unanimously adopted.

RIO TINTO COMPANY, LIMITED.

PROPOSED CAPITAL INCREASE.

The 56th ordinary general meeting of the Rio Tinto Company, Limited, was held, on the 24th instant, at the Cannon Street Hotel, London.

The Rt. Hon. Sir Auckland Geddes, G.C.M.G. (the Chairman), said that the company had to meet large demands for arrears of taxes in Spain, which amounted to £438,422. The revenue account showed "Arrears of Spanish taxes on produce, &c., paid £365,956," a difference of £72,465. That £72,000 they had to pay on the profits tax for 1922, and was an arrear which had to be paid quite unexpectedly, and quite apart from the arrears of export tax payments. The profits taxes for the years 1923-1925 were also still awaiting final settlement. That was no fault of the company's, but resulted from the procedure followed by the Spanish "Taxes Jury," who, under the laws now in force in Spain, had the right in their own time to re-assess taxes which had already been paid. The company had appealed against that procedure, which made accounting astonishingly difficult. Their appeal did not lie to the Courts, but to the Minister of Finance. In the meantime they had had to pay.

The arrears of taxes on produce, £365,956, were in a different category. They referred to the years 1922-25. There was no doubt that in those years the returns rendered to the Spanish Government showing the copper content of some of the pyrites exported from Spain had been understatements, and, when on investigation the Board had ascertained that that was so, it had had no alternative but to make the additional payments legally demanded. As a result of the under-payment of export taxes, the profits shown in the balance sheet for the years in question were greater than they should have been, and the distribution of dividend had also been greater than it should have been. In the appropriations now before the shareholders, the directors suggested carrying the sum of £200,000 to an Emergency Account to enable them to meet arrears in contingent taxes, which were determined by the amount of the export taxes, such as Transport Tax, Harbour Dues, and Anchorage Tax. Since the end of the year the amount owing on some of those contingent taxes had been agreed with the Spanish authorities, and payment was now proceeding.

In conclusion, the Chairman said that they had further developments in view outside Spain, and had decided to increase the capital, and proposed to call the necessary meeting to get the shareholders' permission to issue another 50,000 Ordinary shares.

The report was adopted.

THE INDO-EUROPEAN TELEGRAPH COMPANY, LIMITED.
DIVIDEND AND BONUS MAINTAINED.

The 62nd ordinary general meeting of the Indo-European Telegraph Co., Limited, was held, on the 25th instant, at the company's offices, 18, Old Broad Street, London, E.C.

Mr H. L. M. Tritton (the chairman), said: I should like first to refer to the death on March 6th, 1929, of Sir John Denison-Pender, G.B.E., K.C.M.G., who had been associated with telegraphs for about 50 years. His was a life of devotion to the great interests which absorbed his attention—the wonderful network of world-wide communications which he controlled; and the splendid record of his life's work entitled him to the lasting gratitude of the Empire. Our company may join with his own companies in lamenting his loss, for he was a great friend to us at all times, and especially during the difficult period in our history which occurred during and after the war.

Our relations with the various Governments through whose territory our line passes continue to be satisfactory.

The company's lines worked efficiently during the year. There was, however, one exceptional interruption during the month of February in the Crimea owing to the worst blizzard experienced in those parts for many years, but I am glad to say that working was, after a short interval, resumed over wires kindly placed at the company's disposal by the Soviet Government.

Communication over the Black Sea cable was maintained throughout the year. Unfortunately, owing to ice floes near Odessa causing ships to drag their anchors, the cable was broken in the middle of February of the current year. It has since been restored and is working satisfactorily.

The average times of transmission between Karachi and London, as well as on the company's other main circuits between London, the Continent and Persia and India, were satisfactory, and our record, always an exceptionally good one, for accuracy has been maintained. During the year under review arrangements were made in co-operation with our friends and partners, the Indo-European Telegraph Department, for the installation of regenerators at various points on the line. At this moment the system is actually in operation on one line, in both directions, between London and Karachi, and has produced a very material increase in speed. *Steps have been taken to still further improve the service between the Continent and Persia and India, for which purpose, as share-holders are aware, there exists a special line from Berlin.*

I asked shareholders last year to bear in mind that the company's revenue during the year under review would be bound to show a diminution by reason of the Beam wireless competition. The falling off in revenue, whether owing to this competition, or whether to the reduced rate, *would have been still more apparent but for* a certain expansion of traffic following on the reductions, and an increase in the company's subsidiary traffics. Shareholders will appreciate that the full measure of prosperity enjoyed in recent years may not be so easy of realisation in the future.

As you are aware from my remarks last year, this company is not included in the merger, but shareholders may rest assured that their interests are protected under the terms of the Joint Purse Agreements.

The directors recommend the maintenance of the dividend at 7 per cent., and the payment of the same bonus as last year of 15s. per share, free of tax, equal to 3 per cent., making a total distribution for the year from all sources of 10 per cent., free of tax.

To maintain the company's line between London and Teheran in a high state of efficiency, which I claim it to be, requires constant and unremitting attention and care, and the satisfactory results attained are the outcome of the hearty co-operation of all concerned.

The report and accounts were unanimously adopted, and the dividend and bonus as recommended were approved.

BALAGHAT GOLD MINES, LIMITED.
REDUCED WORKING COSTS—INCREASED ORE RESERVES.

The ninth ordinary general meeting of the Balaghat Gold Mines Limited, was held yesterday at 6, Queen Street Place, London

Lt.-Col. Sir Donald Robertson, K.C.S.I., presided and, in moving the adoption of the report and accounts, said that during the year 47,950 tons of ore were crushed from which were extracted 29,978 ozs. of fine gold, the average yield being 12 dwts. 12 grains per ton. The gold realised £127,979, or £4,522 less than in 1927. The revenue account showed total receipts amounting to £122,600, and expenditure £98,446, which left a profit of £24,154. The working costs, including development expenditure, showed a further decrease of 1s. 9d. per ton. A dividend of 1s. per share on the Preference shares was paid on October 2nd last, and the final distribution for the year was 6d. per share on both classes of shares. Referring to the financial position of the Company, the balance sheet showed liquid assets aggregating £89,170, and liabilities £17,543, leaving a balance of assets of £71,627. The underground exploratory work of the year measured 4,772 feet, and the reserves of ore at December 31st last were estimated at 74,131 tons, an increase of 3,337 tons over the total at the end of 1927. The ore body in the Southern section of the property had been further developed, and had opened up a considerable quantity of quartz of excellent grade.

Mr Kenneth B. Taylor, who recently returned from the mine, said that the limits of the valuable ore shoot which had been developed during the past two years seemed now to have been defined, but the prospects of opening up further bodies of ore on the pitch line of this enriched zone as the workings were deepened were distinctly promising. Development work this year would therefore be directed to making as quick an advance as they could to greater depth. This would of necessity entail a certain amount of dead work this year in preparation for the speedy exploration of the lode at lower horizons.

The report and accounts were unanimously adopted.

APOLLINARIS AND JOHANNIS, LIMITED.
CONTINUED PROGRESS.

The thirty-second ordinary general meeting of the shareholders of Apollinaris and Johannis, Limited, was held, on the 22nd instant, at the Holborn Restaurant, London, Mr Alfred R. Holland (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the profits for the nine months to December 31, 1928, amounted to £65,225, or an average exceeding £7,000 per month. A comparison of nine months with the previous 12 months was difficult, but as the amount carried forward was £90,681, after reduction of the amounts as set out in the report, it was evident that the company was making steady progress. As the report showed, when the business was restarted after the war there was a heavy loss of £13,238 in the year ending March 31, 1919. Since then there had been steady expansion, only slightly interrupted in the year which covered the period of the General Strike. Owing to the congestion in the neighbourhood of their wharf at Southwark, it had been found necessary to obtain more suitable premises for the growing trade of the company, and the lease of a commodious wharf and storage premises at Rotherhithe had been purchased a few months ago. These new premises, in addition to many other advantages, had ample accommodation for the motor lorries, which previously had been garaged some distance away. The company now owned a large fleet of lorries in order to carry out their policy of extending the motor delivery radius both from London and from their numerous provincial depôts. The Presta Aerated Waters continued to enjoy a growing popularity, due to their excellent quality, and where introduced repeat orders had always followed. Although three years was hardly sufficient to establish such a business, it was already responsible for a part of the increased profit, and he was full of hope for the future of Presta.

In conclusion, the Chairman made sympathetic reference to the great loss the company had sustained by the death of Mr A. Martin Taylor.

Mr Francis J. Schilling (vice-chairman and managing director), in seconding the motion, referred to his recent visit to New York, and remarked that he felt hopeful of a further improvement in their sales in the United States and Canada.

The report and accounts were unanimously adopted, and the dividend as recommended was approved.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 20th, 1929:—

(000's omitted.)

Expenditure	£	Receipts	£
Supply Services	5,200	From Revenue	16,160
Interest, &c., on Debt	6,562		
Sinking Fund	1,710		
Decrease in Balances	478		
Decrease in Debt	2,210		
	16,160		16,160

The total Ordinary Revenue for the week amounted to £16,160,000, as compared with £12,307,000 in the corresponding week last year, Property and Income Tax amounted to £1,931,000, and Super-Tax to £810,000, against £1,716,000 and £720,000 respectively. Customs were lower at £1,726,000, against £2,215,000, but Excise was slightly higher at £6,748,000, against £6,624,000. Ordinary Receipts brought in £610,000, against £528,000, whilst Special Receipts were nil, against £100,000 a year ago.

The National Debt was reduced by £2,210,000, as shown below:—

(000's omitted.)

Treasury Bonds	– 185	Treasury Bills	+ 1,964
National Savings Certificates	– 150		
Public Department Advances	– 1,950		
Depreciation Fund	– 1,870		
Sundries	– 19		
	– 4,174		+ 1,964

The floating debt was increased by £10,000 to £745,420,000.

FINANCIAL YEAR, 1929–30, APRIL 1 TO APRIL 20.

MOSCOW QUOTATIONS FOR TCHERVONETZ.

According to advices received in London, the following are the Moscow quotations for tchervonetz :—

£1,000 sterling equals 942·00–944·00 tchervontzi.

1 tchervonetz = 10 gold roubles. £1 sterling = 2·46 gold roubles.

BULLION.

The following statistics of imports and exports of gold for week ended April 25, 1929, are issued by the Statistical Department of H.M. Customs and Excise :—

Imported into Great Britain and Northern Ireland. From—	£
Germany	2,000
Argentine Republic	200,000
British West Africa	35,387
British South Africa	179,963
Other Countries	2,376
Total declared value of imports	419,726

Exported from Great Britain and Northern Ireland. To—	£
Poland (includ. Danzig)	1,707
Germany	58,870
Netherlands	2,000
Denmark	275
Austria	13,650
Morocco	3,000
Java	1,390
Kenya	2,120
British India	11,628
Other Countries	537
Total declared value of exports	95,377

GOLD MOVEMENTS.

The arrivals and withdrawals of gold during the past week, as announced by the Bank of England, have been as follow :—

1929.	ARRIVALS.	£	1929.	WITHDRAWALS.	£
Apr. 19	Bars bought	23,218	Apr. 19		Nil
" 20		Nil	" 20	Bars sold	6,659

" 23	Bars bought	699	" 22	Sovs. for export	5,000
" 24	Bars bought	5,112	" 23		Nil
" 25	Bars bought	26	" 24	Bars sold	5,049
			" 25		Nil
	Total	229,055		Total	25,908

Net arrivals, £203,147

Messrs. Samuel Montagu and Co. write as follows on April 24, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £155,836,622 on the 17th instant (as compared with £155,042,703 on the previous Wednesday), and represents an increase of £1,930,307 since April 29, 1925—when an effective gold standard was resumed.

There was only £180,000 bar gold from South Africa available in the open market this week, and this was absorbed by the requirements of India (£30,000), the Home Trade (£50,000), and the Continental Trade (£100,000). There was a net influx of gold of £203,121 during the week.

SILVER.

Following weaker advices from the East, silver prices receded slightly until the 22nd instant when 25 1/16d. was fixed for both cash and two months' delivery. The market, however, has continued quiet and the variation in quotations during the week has been only ⅛d. China has made further re-sales of silver, but America, besides offering to sell, has been also disposed to give support on occasion. The following were the United Kingdom imports and exports of silver registered from mid-day, on the 15th instant, to mid-day on the 22nd instant :—

IMPORTS.	£	EXPORTS.	£
Germany	15,338	Germany	13,090
Netherlands	9,700	British India	157,012
France	7,490	Other countries	8,264
Irish Free State	14,800		
Other countries	3,836		
	£51,164		£178,366

Indian Currency Returns (in lacs of rupees).

	Apr. 15.	Apr. 7.	Mar. 31.
Notes in circulation	18,579	18,598	18,803
Silver coin and bullion in India	9,952	9.985	9,989
Silver coin and bullion out of India	...	...	...
Gold coin and bullion in India	3,222	3,222	3,222
Gold coin and bullion out of India	...	...	...
Securities (Indian Government)	4,323	4,323	4,323
Securities (British Government)	882	1,068	1,069
Bills of exchange	200	...	200

The stock in Shanghai on the 20th instant consisted of about 78,500,000 ounces in sycee, 125,000,000 dollars and 11,000 silver bars, as compared with 80,100,000 ounces in sycee, 130,000,000 dollars and 10,500 silver bars on the 13th instant.

Reports and Notices.

Mr J. L. Simpson, of the J. Henry Schroeder Banking Corporation of New York, U.S.A., has been appointed to a seat on the board of the United Railways of the Havana and Regla Warehouses, Limited.

Mr Ernest Weston has been appointed manager of the Manchester branch of the Alliance Assurance Company in place of the late Mr W. H. Hoyle.

Governor Alfred E. Smith, who recently contested for the American Presidency with Mr. Hoover, has become a member of the board of Metropolitan Life Insurance Company, of New York.

Sir James Devonshire, K.B.E., has been appointed chairman of Edmundson's Electricity Corporation.

It is officially announced that Captain Evan Cadogan Eric Smith, M.C., has been appointed a director of the National Provincial Bank, Limited.

BANKS.

BANCO NACIONAL ULTRAMARINO.—The net profit for the year 1928, after deduction of Esc. 6,920,897 for contribution to the Portuguese State and Esc. 40,917 interest on bonds amounts to Esc. 13,950,506, against Esc. 15,230,138 for 1927. To reserve funds (bringing amount up to Esc. 50,800,000), Esc. 1,800,000$00; participating (working) shares of staff and pension fund, Esc. 452,957$04; dividend, 22 per cent. (including interim dividend of 9 per cent., viz.: Esc. 4,500,000 already distributed), Esc. 11,000,000$00, subject to Portuguese taxes; carried forward to new year, Esc. 697,549$824.

BANQUE NATIONALE DE CREDIT (PARIS).—Report for year 1928 shows net profits for 1928 amounted to frcs. 39,490,568.08 and a dividend of 13 per cent., viz. frcs. 65.– per share, was paid, against 11 per cent. or frcs. 55.– per share for 1927. The deposits have increased by 12 per cent. and now stand at frcs. 4,630,762,452.17 against frcs. 4,121,470,391.38 at the end of 1927.

MISCELLANEOUS.

ODHAMS PRESS, LIMITED.—The ninth annual report for 1928 shows a net trading profit, after providing for debenture and other interest, of £176,784. For preceding years the profits were: 1923, £8,689; 1294, £102,923; 1925, £118,114; 1926, £116,872; 1927, £151,753. After payment of the dividends on the 6 per cent. and 7½ per cent. preference shares, absorbing £48,217 18s. 4d., writing off new issue expenses, premiums and interest in lieu of notice on debentures and secured notes redeemed and providing for all charges, the balance standing to the credit of the profit and loss account is £110,477, which sum the directors recommend should be appropriated as under: 15 per cent. on the ordinary shares of the company, against 12½ per cent. for 1927, £61,500; to general reserve, £15,000, making it £100,000; carrying forward to 1929, £33,977. The directors are pleased to report that the progress of the business has been well maintained.

EVER READY COMPANY (GREAT BRITAIN).—The directors recommend the payment of the following final dividends for the year ended March 31, 1929:—On the preference shares, 5 per cent., making the maximum of 10 per cent. for the year; on the old ordinary shares, 25 per cent., making 35 per cent. for the year

SECURITY FIRST
ROYAL
INSURANCE COMPANY, LIMITED
HEAD OFFICES: LIVERPOOL AND LONDON.

(*Continued from page* 955.)

(same); and on 296,000 ordinary shares issued, fully paid, as bonus in January, 1929, 25 per cent.; payable May 31st. Accounts will be issued on or about May 7th, and show, subject to completion of audit, net profit £210,167, compared with £187,963 last year. Reserves, general (including share premiums), £350,000; contingencies, £70,000; dividend equalisation, £50,000; carry forward, £30,696.

THE BIRMINGHAM SMALL ARMS COMPANY, LIMITED.—The balance to credit of profit and loss account is £201,357, against £202,063; add amount brought forward from last account, £336,822, making £538,179. Interest for year to date, less income tax, on 6½ per cent. 12-year notes, and on 6 per cent. first mortgage debenture stock, absorbed £110,839; preference dividends absorbed, £24,954. Transferred to general reserve (which will then amount to £500,000), £200,000; carry forward, £202,385, against £336,822. In future the company's year is to end on July 31st.

RUBBER PLANTATIONS INVESTMENT TRUST, LIMITED.—Net profits for 1928 amounted to £310,564, comparing with £352,953 for 1927. By drawing £50,000 upon the dividend equalisation reserve it has been possible to maintain the dividend at the previous year's level of 15 per cent., the final payment now recommended being 10 per cent. A sum of £67,580 (against £34,000) is reserved for taxation, and after writing £11,900 off properties for amortisation of mature areas, an appropriation that is similar to last year, there remains £63,382 to be carried forward, as compared with £60,736. The value of the company's investments (apart from its properties) amounted on December 31st last to £2,856,004, against the sum of £2,504,639, at which such investments stood in the balance sheet. On December 31, 1927, investments stood in balance sheet at £2,472,374, valued at £3,898,314.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

The continued spell of dry, cold weather is adversely affecting the agricultural outlook, both standing crops and spring sowings being in need of warm copious rains in order to stimulate growth and germination. Supplies of native wheat at the statute markets were in small compass, while held for full rates despite the sharp fall in imported prices. The floating and forward cargo section was depressed on liberal offers of Canadian, which resulted in a downward movement generally. Buyers, however, were slow to respond pending further developments in the situation, as immediate wants are covered by recent large arrivals at the principal European ports. Shipments were well maintained, but floating supplies show a further reduction. Feeding stuffs also weaker in sympathy, and pressing offers of La Plata maize met with little response from consumers. Spain has purchased 130,000 tons of wheat, comprising 60,000 tons Plate, and balance from North America for May-June shipment. A steamer of Australian afloat sold at 44s. 3d., and part cargoes of ditto near at hand 44s. 6d. to 44s. 9d.; Rosafe, 64 lb. afloat, at about 44s. 3d.; white Pacific, loading, 44s. 3d., all per 480 lb. c.i.f. terms.

Wheat again easier. No. 2 Northern Manitoba, ex ship, 48s. 3d.; No. 3, ditto, 47s.; No. 4 Manitoba, 46s.; No. 5, 43s.; No. 6, 37s.; Rosafe, 64 lb., 44s. 6d.; Barusso, 63½ lb., for shipment, 44s. 6d.; Australian, 46s., ex ship, per 496 lb. English, 9s. 6d.-9s. 8d. per 112 lb.

Flour dull. London standard grade, 37s. 6d.; town whites, 38s. 6d.; patents, 39s. 6d.-40s. 6d. per sack, delivered in the Home Counties, with 6d.-1s. per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 34s.-36s. 6d.; Minneapolis, 34s. 6d.-37s.; Australian, 34s. 6d.-35s., ex store, per 280 lb.

Maize again easier. Plate, landed, 41s.; ex ship, to arrive, 40s.; March-April, 38s.; new April-May, 37s. 6d.; May-June, also June-July and July-August, 37s. 3d.; No. 2 American, mixed, landed, 40s. per 480 lb. Yellow maize meal, £11 per ton landed.

Barley quiet and the turn easier. Californian, ex ship, 45s.-52s.; Chilian Chevalier, 48s.-58s.; Australian, 43s.-48s.; Smyrna, 44s.-47s. per 448 lb. Algerian/Tunisian, ex ship, 34s. 6d.; Canadian feed, 29s. 6d.; No. 3 Canadian Western, ex ship, 33s. 3d.; No. 2 Federal American, ex ship, to arrive, 29s. 3d.; landed, 30s. 9d. per 400 lb. English malting, 10s.-12s.; feed, 9s. 3d.-10s. per 112 lb.

Oats quietly steady. Plate, landed, 26s. 3d.; ex ship, to arrive, 25s. 6d.-24s. 9d., as to position; black Plate, ex ship, 24s.; mixed Canadian feed, ex ship, to arrive, 19s. 9d.; landed, 21s. 3d.; Chilian white, 31s. 6d. landed; German, landed, 29s. 3d.; ex ship, to arrive, 28s. per 320 lb.; English, 9s. 4d.-10s. per 112 lb.; Scotch, landed, 30s. 6d. per 336 lb.; Irish, black, 27s. 6d. per 320 lb.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928-29, 1927-28, 1926-27, 1925-26:—

	1928-1929.	1927-1928.	1926-1927.	1925-1926.
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to April 20	148,778	272,937	160,033	227,619
28 weeks to April 20	8,385,455	8,418,874	10,008,242	11,413,581
Average price of English wheat per cwt.	s. d. 9 10	s. d. 10 3	s. d. 11 6	s. d. 12 4

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1925 to 1928:—

Weeks ended.	Quantities Sold. Wheat.	Barley.	Oats.	Average Price per Cwt. Wheat.	Barley.	Oats.
1929.	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
Apr. 13	119,087	38,329	32,877	9 10	10 3	9 9
Apr. 20	148,778	37,531	32,874	9 10	10 2	9 9
Apr. 18, 1925...	136,741	62,431	37,440	12 2	10 4	9 6
Apr. 24, 1926...	227,619	77,540	46,194	12 4	9 3	9 2
Apr. 23, 1927...	160,033	38,435	51,513	11 6	10 9	8 4
Apr. 21, 1928...	272,937	41,720	29,419	10 3	10 9	11 9

AMERICAN WHEAT MARKETS.

Favourable weather and bear selling caused a decline in the early part of the week. Rallies induced by demand on Russian account, and encouraged by the official opening of navigation, were subsequently counteracted by further good weather reports and by rumours of dissension in the wheat port. An active export demand strengthened the close. Quotations:—

Nearest Future.	Jan. 4, 1928.	Apr. 25, 1928.	Jan. 2, 1929.	Apr. 10, 1929.	Apr. 17, 1929.	Apr. 24, 1929.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.)	137	154⅛	122	124⅞	125⅜	121⅛
Chicago (No. Winter)— Cents per 60 lb.....	130⅜	159½	116⅜	120½	120⅜	114⅛

Visible supplies of wheat in Canada at 83,475,000 bushels show a decrease of 7,905,000 bushels as compared with the previous figure. Supplies a year ago stood at 76,773,000.

THE COAL TRADE.

Our Sheffield correspondent says:—Activity in the coal market continues to wane, especially as regards forward buying for export, and it is questionable whether many of the pits will be able to maintain present output much longer. Forward prices are also lower. The home demand for steam coal keeps good, but for small fuels it is weak. There is still a strong market for coke, although less of this fuel is being bought for export and for domestic heating. Business is poor in foundry coke for home consumption.

Our Glasgow correspondent writes:—Prices in general have fallen away further this week, and practically every quality is now at the lowest level touched this year. Fife trebles are the only steady spot. The downward trend of the market is still checking business, which continues to be more or less a matter of bargaining so far as prices are concerned. It is impossible to give effective rates, but the following are about the quotations named in most quarters:—Lanarkshire.—Ell best, 15s.; splint best, 16s. 6d. splint second, 16s.; navigation, 17s. 6d.; navigation second, 15s. 6d.; steam, 13s. 6d.; Hartley, 18s.; trebles, 13s. 6d.; doubles, 12s. 9d.; singles, 11s. 9d.; pearls, 10s. 9d.; dross, 10s. Fife.—Screened navigation, 17s. 6d.; first-class steam, 13s. 6d.; third-class steam, 12s.; trebles, 13s. 6d.-14s.; doubles, 12s. 6d.; singles, 11s. 9d.; pearls, 11s. Lothians.—Prime steam, 13s.; secondary steam, 13s.; trebles, 13s. 6d.; doubles, 12s. 6d.; singles, 11s. 6d.; pearls, 11s. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 14s. 6d.; trebles, 13s. 6d.; doubles, 13s.; singles, 12s.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes:—The undertone of the Cardiff coal market this week has shown a slightly easier tendency, particularly for prompt positions. On the whole the collieries are very well stemmed, and there is a fair supply of tonnage available, but current inquiries are less active than they were a few weeks ago, largely in consequence of the restoration of normal conditions in the export trades of Germany and Poland. Though the prices tendered for the supply of 180,000 tons to the Egyptian State Railways between June and August involve f.o.b. offers at less than the current market quotations, they have not yet been accepted, and it is considered as not at all improbable that in view of the changing market conditions fresh tenders will be invited. Meanwhile, shipments are heavy, and the returns of the Great Western Company for last week give a total quantity of 626,790 tons, compared with 604,355 tons in the preceding week and with 557,344 tons in the corresponding week last year.

The following are the current approximate quotations:—Best Admiralties, 20s. 9d. to 21s. 3d.; seconds, 20s. 3d. to 20s. 9d.; best drys, 20s. to 21s.; Black Veins, 20s. 3d. to 20s. 6d.; Western Valleys, 20s. 3d. to 20s. 6d.; Eastern Valleys, 19s. 9d. to 20s. 3d.;

best small steams, 14s. to 14s. 3d.; cargo smalls, 13s. 3d. to 13s. 6d.; coking smalls, 14s. to 14s. 3d.; anthracite, best large, 33s. to 36s.; Red Vein, large, 25s. to 27s.; machine-made cobbles, 40s. to 43s. 6d.; French nuts, 42s. to 44s.; stove nuts, 40s. to 42s. 6d.; rubbly culm, 9s. 9d. to 10s. 3d.; foundry coke, 27s. 6d. to 36s. 6d.; patent fuel, 20s. to 22s.; pitwood, ex ship, 26s. 9d. to 27s.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—Trading in iron and steel opened somewhat more quietly this week, but nevertheless there is a confident tone in the market. The position of the British works seems to be gradually improving, and in most cases they can report an increase in business compared with the corresponding month of last year. In the pig iron section of the market fresh blast furnaces are being re-started, and although there is still some scarcity of coke, the position in this respect is improving. The demand for North-East Coast pig iron exceeds the supply, and as a consequence premiums are being paid upon the official prices for forward deliveries. In the Midlands also the demand is slowly increasing, and the market seems to have adjusted itself to the new zone scheme of prices. The demand for semi-finished steel continues good, and in the case of some descriptions the British manufacturers have advanced their prices. Whilst a certain amount of business is still being transacted with Continental works, the high prices demanded have severely limited this trade. Reports from the Continent indicate that the steel-makers there are completing orders much faster than new business is coming forward. A rather better inquiry has developed for finished steel descriptions, but the overseas demand continues irregular. The principal support of the British works is still the shipyards, which are taking a considerable tonnage, and which have recently placed some fairly substantial orders.

Our Middlesbrough correspondent writes:—The position here is very steady, though possibly somewhat more quiet than of late. This is no doubt due to the very strong position the pig-iron manufacturers find themselves in, as the output available for the market has mostly been disposed of up to the end of June. Cleveland iron is very scarce and fresh orders cannot be taken for anything like reasonably early delivery. The prices of the various grades of Cleveland remain very firm on the following basis:—No. 1, 71s.; No. 3 G.M.B., 68s. 6d.; No. 4 Foundry 67s. 6d.; No. 4 Forge, 67s. Shipments from the district continue to improve. One more hematite furnace is being blown in shortly. The price of mixed numbers still remains at 74s., but this might possibly be shaded for a substantial order. The steel trade still continues on a satisfactory basis and prices are all firm. There is very little foreign competition and the export demand for finished steel is improving. The ruling prices, subject to the usual rebates, are as follows:—Steel ship plates, £8 7s. 6d.; steel ship angles, £7 17s. 6d.; iron bars, £10 15s.; steel rails, £8 10s. The coke position is somewhat easier with supplies rather more plentiful. The price has accordingly been affected and good blast furnace quality delivered furnaces can now be obtained at 19s. per ton. The ore position is still very firm, and although the majority of works have covered their requirements for foreign ore for some time ahead, best rubio still remains firm at 23s.

Our Sheffield correspondent writes:—The fact that a considerable number of unemployed steel workers have been taken from the ranks of the unemployed this week indicates some revival of business. There is still, however, slackness at the rolling mills and in the railway steel departments and the general position at the moment continues unsatisfactory. An encouraging feature is the pressure for supplies of basic steel scrap. Depression at the iron foundries continues. Valuable orders are on hand for steel forgings and castings of a special character. The uneven distribution of local trade is a feature. Prices of foundry iron are firm, despite the restricted business and even higher figures are being forecast. Local consumption of hematite pig iron and acid steel is small owing to the poor demand for such material. Steel makers have decided that it would be inopportune to advance prices generally notwithstanding that their costs have gone up. The tool trade is moderately active, but there is rather acute depression in cutlery and plate. Producers of builders' ironwork report severe cutting of prices.

Our Glasgow correspondent writes:—Plate makers who have just recently not been so well employed as rollers of sections are looking forward to a considerable improvement in their own particular industry shortly, on account of the large amount of new work which has been placed with Clyde yards within the past fortnight. Clyde shipbuilders have for some time been ordering the bulk of their heavy plates from Home suppliers. Business in the Malleable Iron market remains dull and unprofitable. As is usual at this season, builders of galvanised corrugated steel hay sheds are busy, and local manufacturers of these structures are finding an increasing demand for same. There is some expansion in the sheet trade, but not to any marked extent. Prices are unaltered.

Our Cardiff correspondent writes:—The position in the South Wales metal trades continues, on the whole, satisfactory. Increased blast furnace activity is leading to expanding ore imports, and the tinplate industry is absorbing a larger quantity of steel bars, the demand both in the export and inland trades being fairly active. On the Swansea Metal Exchange on Tuesday quotations for tinplates were ruling firmly at from 18s. 4½d. to 18s. 9d., and a further increase is considered probable in view of the higher cost of production. Shipments of tinplates last week totalled 167,038 boxes, compared with 147,940 boxes the previous week, and stocks have been reduced from 264,026 to 222,023 boxes.

OTHER METALS.

TIN.—The standard market commenced the week with a quiet and easier tone, but values subsequently improved under increased buying orders combined with better Eastern advices, and a firm tone prevailed, with holders showing decidedly more reserve. The close was quieter, however, and top points were not maintained. Stocks in London and Liverpool warehouses for week ending 20th inst. were returned at 8,142 tons, compared with 1,948 tons at same period last year. Dealings marked a good deal of irregularity and comprised cash at £199 5s., £198 and £203 7s. 6d., £201 15s., with three months £200 to £198 10s. and £205 5s., £203. In the East, sales were reported at £201 15s. to £206 5s. per ton c.i.f.

COPPER.—Market still unsettled, and general tone weak. Standard cash sold £77 to £78 and £77 15s.; three months £75, £74 5s., £74 13s. 9d. and £74 5s., business being chiefly in the latter position.

LEAD.—Slightly irregular and easier on balance, with dealings on a lighter scale. Good soft foreign pig, April, sold at £24 17s. 6d. to £24 8s. 9d.; May, £24 12s. 6d. to £24 6s. 3d.; June, £24 8s. 9d. to £24 10s. and £24 5s.; July, £24 7s. 6d. to £24 3s. 9d. and £24 ton.

SPELTER.—Market quiet and easier, on liberal offerings. April sold £26 12s. 6d. to £26 15s. and £26 11s. 3d.; May, £26 10s. to £25 16s. 3d.; June, £26 7s. 6d., £25 16s. 3d.; July, £26 10s. to £25 15s. 9d.; August, £26 7s. 6d. ton.

ANTIMONY dull. English regulus, £54 10s. to £55; foreign spot, £38 per ton.

WOLFRAM firm. Chinese forward quoted 30s. per unit c.i.f.

ALUMINIUM quiet. Ingots and bars for home delivery, £95 per ton.

QUICKSILVER maintained. Spot, £22 5s. to £22 10s. per bottle.

TIN PLATES tend firmer. I.C. coke, prompt and forward, 18s. 6d. to 18s. 9d. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, April 24.

During the week there was further considerable selling both by "longs" and "shorts" on improved weather news. Recent conditions have enabled the plant to make up considerable leeway. The last two days have seen considerable trade calling, and after the May position in New York is adjusted to-morrow the market is likely to respond very quickly to any adverse weather news. Spot sales for the week 18th to 24th (inclusive) are 31,000 bales, of which 20,490 are American, 600 Brazil, 300 Argentine, 1,850 Peruvian, 4,960 Egyptian, 800 African, 750 East African, and 1,250 sundries. Imports for the same period are 61,973 bales, of which 31,178 are American, 1,710 Brazil, 1,484 Peru, 22,404 Egyptian, 346 African, 1,310 East Indian, and 3,541 sundries. Quotations to-day are: American Middling, 10.51; Egyptian F.G.F. Sakel, 18.10; Egyptian F.G.F. Uppers, 12.08; Brazil Fair, 10.71; Peru G.F. Mod-Rough, 12.50; Peru G.F. Smooth, 11.46; West African Mid, 10.56; East African G.F., 11.95.

MANCHESTER, April 24.

Inquiry in the market has shown some expansion, but business continues to be disorganised by the further fall in raw material rates and the wider fluctuations in New York and Liverpool. Private advices relating to the outlook for the new crop in America are very favourable. Shippers of cloth to India have reported rather more cables making bids, but not more than a miscellaneous business has been done, chiefly for Calcutta and the up-country markets. Fancies have been sold for China in fair quantities, but at the auction sales in Shanghai this week prices have fallen, chiefly owing to the lifting of the Japanese boycott and increased competition. There are fears of losses on recent consignments from Manchester. Very little has been done for Egypt and the Near East, but demand keeps up fairly well for South America. Some useful lines have been booked in home-trade fabrics. Quotations in American and Egyptian yarns have been irregular when tested, and the trade done has not been of any weight. The labour situation causes a little anxiety, but there is every expectation of an amicable settlement of the dispute at Oldham.

THE WOOL TRADE.

Our Bradford correspondent writes:—Demand in all sections is still very much restricted and there seems to be an entire absence of confidence in values. The fact that wool continues to sell well in the primary markets, although at the tail end of the season, does not appear to influence users in the slightest degree. They are quite content to cover immediate requirements and leave the future to take care of itself, and it begins to look as if their tactics will pay. There is a good deal of talk about the Colonial wool sales which open in Coleman Street next Tuesday, and it is significant that most people look for a decline in values, more particularly in merinos. Quotations for merino tops are unsettled, and 3s. 6d. has been taken for average 64's tops during the last week or so. Merino yarn is also irregular. Crossbred tops and yarn are steady. There is a good seasonal demand for men's wear fabrics, but dress goods are still slow. On the whole, however, manufacturers are doing better, and at to-day's prices for yarn should be in a position to show a small profit.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

Attention is already beginning to be directed towards the next series of sales which will commence in London next Tuesday, and though the interval since the close of the March series has in many respects been unsatisfactory, the outlook for the auctions is fairly good. The total quantity available is about 127,000 bales, including 54,300 bales New Zealands and 26,500 bales South American. At the third series of 1928 the quantity available was 109,200 bales, including 33,000 bales of New Zealands and 21,000 bales South American. The quantity now available is therefore about 18,000 bales more than a year ago, but cannot be regarded as excessive, for in 1926 there were 142,500 bales, and there should be sufficient competition forthcoming to prevent any serious decline in values. The state of affairs on the Continent, as well as in the West Riding of Yorkshire has been definitely against any enhancement of raw material values. At the same time, aggregate consumption has kept up in a fairly encouraging fashion, though values at the last London sales showed some declines. The weight carried over for the next series was not excessive, and so long as wool continues to move steadily out of hand, there is never any real danger of a serious slump in prices. One disappointing feature affecting the wool situation is the decline in the market value of tops during the interval, and the reports of easier prices for merinos in Australia. All the public cables have announced strong competition among home and foreign buyers, and some of the private cables have been in the same tenor. It is well known, however, that fair weights of merino wool of by no means inferior style, have been bought on Bradford account on a very reasonable basis of cost in the top, and it would certainly seem as if values for this class of raw material have reached the limit for the time being. Crossbreds are a rather uncertain proposition. Steady values for most descriptions seem likely, particularly medium and low qualities. A good deal will depend on how Continental competition develops. The home trade alone will certainly be unable to support any advance.

HIDE, LEATHER AND ALLIED TRADES.

Contrary to expectations, the hide position has not reached stability, and both home and overseas hides are again weaker. Home market hides have again fallen from ⅛d. to ¼d. per lb. at most auctions, and further declines are looked for. Tanners are reducing input as far as possible, but the demand for leather is such that supplies are sufficient to meet requirements as they arise. All classes of foreign hides are again weaker, and this week South American fregorifics have sold as low as 8½d., although it must be remembered that the hair condition of this class of hide is bad at this season. At the Leibig inscription, 20,000 saladero hides were sold at 9 1/16d. to 9⅝d. for heavy, and at 8½d. to 8¾d. for lights. Dry hides share the prevailing weakness and B.A. Americanos have changed hands at 11¾d., about a drop of 1d. per lb. on the week. Africans and Australians are also quotably lower, with little business passing. Latest cables from Chicago report the packer hide market as steady, with best steers selling at 15 cents. There is rather a better tone in the leather market, and as shoe manufacturers are getting in orders for summer shoes, they are wanting fair-sized quantities of bends of light averages. Prices, however, are very unsteady, and merchants especially seem willing to cut losses and to sell at low figures. Repairers' bends of medium averages are selling better, and English bends have sold in fair-sized quantities at prices ranging from 22d. to 30d. per lb. Offal is wanted in small quantities, and shoulders which will cut cheap soles are firm in price. Trade in upper stock is better, though prices seem rather fluid. Box calf in the lighter selections, and glacé kid in black and brown are a good sale at firm prices, but patent is slow. Kip curriers are a shade better off for business, but the trade for linings and colours with the United States has dropped off. Light leather dressers are busy on East India skins for motor coats and fancy leathers. Good orders for ladies' shoes have come into manufacturers' hands, and Northampton seems busier on men's footwear, many manufacturers having sufficient orders in hand to keep hands employed until Whitsuntide.

JUTE TRADE.

DUNDEE, April 24.

Great uncertainty surrounds the future course of prices of raw jute, and this has a tendency to restrict purchases of jute yarns and cloth. Buyers of the latter are limiting their operations to the smallest of quantities for delivery as early as possible, and the trade all round is in a dull and unsatisfactory state. Fluctuations are almost daily taking place, without any real change in the level which has ruled for some time back. So far as old crop is concerned, the season is now practically over, and all interest is centred in the new crop. The market is under the influence of weather reports affecting the growing crop, which have recently been very satisfactory, but at the moment there are complaints of too much rain and too little sunshine, which cause sellers to be reserved. Spinners here have done some little buying of the new crop at from £35 to £36 for a short group of First Marks and £33 to £33 10s. for Lightnings, August–September shipment, with Daisee assortment at £31 10s. and £32, October–November. Jute yarns are extremely slow. Spinners are quoting 3s. 6d. for common 8 lb. cops and 3s. 7d. for 8 lb. spools, but buyers are not taking much notice, and are inclined to believe that by holding off they will be able to do better. Indeed, in one or two cases, business has been reported done at under these rates. Spinners are well enough foresold for the next two months, but manufacturers are not sending in specifications owing to the lack of demand for jute cloth, and stocks are accumulating. Twist is obtainable at from 5½d. to 5¾d. for 3-ply 8 lb., and sacking yarns at 3⅞d. for 24 lb. weft and 5½d. for 8 lb. chains, which rates are all lower. Rove has been bought at £17 for 200 lb. and at £27 for 48 lb., which are now very low figures. Fine yarns have been in demand and are firm. Carpet yarns are now at 5¼d. for 1¼ lb. warp. Cloth demand is very poor. All producing centres are suffering from the apathy of buyers, who appear to be allowing their stocks of goods to run to a low level in anticipation of lower prices when the Calcutta mills increase their production by six hours per week from July 1st, but according to all accounts this fact seems to have been already discounted by the fall in prices which has lately taken place. Prices depend largely upon the suitability of orders, and range from 4 7/16d. for 10½ oz. 40-in. hessians and 3 11/16d. for 8 oz., packed. Linoleum hessians are very dull, and heavy goods makers in some cases have resorted to curtailing production by stopping Saturdays and Mondays.

THE TIMBER TRADE.

(BY OUR OWN CORRESPONDENT.)

Imports of building woods, from European shipping ports particularly, showed a very sharp decline last month compared with the corresponding one of 1928, and had the effect of reducing the surplus for the quarter to 39,198 loads (of 50 cubic feet). This surplus was more than the market wanted, as trading in building woods shows little advance on that of last year at this time, whilst stocks on the whole, although smaller than in early spring, 1928, are above the average of those ruling in late April of recent years. In planed and dressed wood also March imports declined in volume, making the surplus this year nearly 17,000 loads—too much, as supplies on the market have been heavy throughout the past winter and spring. With conditions as above-mentioned, the soft timber market in the metropolis is not cheerful, and just yet there seem to be few signs of any considerable improvement in the demand. The building trade was quiet during the past quarter, but, as no official data are yet forthcoming, we can only hope that

it has been much better this month. Judging by the costs of plans for buildings passed recently, building trade prospects are about the same as in 1928 at this time. On the other hand, the advance in the coal and shipbuilding trades must have the effect of inducing a larger demand for general construction woods, which in turn reflects on the metropolitan wood market. The United Kingdom has purchased fairly largely of Finnish and Swedish wood besides acquiring the Russian stocks for this year's shipment to this country, but with the market at present depressed, fresh operations, for a time, are expected to be somewhat limited, as importers are more concerned with getting their purchases placed in merchants' hands. Canadian spruce has been a slow market for weeks past, stocks in London docks being sufficient at present rates of consumption, and the same can be said of pine from the Dominion, for the call for this pine and spruce is smaller than in the spring of recent years. Floated timbers such as American pitch pine, American and British Columbian Douglas fir, and the Baltic softwood logs are in comparatively small request, although on the other hand stocks are smaller compared with recent years. Not so many mahogany logs are coming into the country, and the market is very firm for the better grades. In hardwood logs other than mahogany receipts also are well down, with prices firm; the principal shipping countries, U.S.A., Canada, and British India, in order of importance in hardwood log shipments to the United Kingdom, are sending lesser quantities this year. In the sawn hardwood section American supplies are much lighter, to the relief of the American lumber section of the trade, as stocks have been too heavy compared with the demand for many months past. Canada and British India, on the other hand, are sending more sawn hardwoods this year. For hardwoods generally the market is much more steady than is the case with the softwood (building) varieties, and in some cases, such as in teak and the fancy woods, very firm.

VEGETABLE OILS AND OILSEEDS.

Markets continue quiet, and business is within narrow limits. Linseed oil has very little interest for consumers, and values are barely steady around £28 10s. spot and May–August per ton, naked ex Hull mill. Cotton oils are neglected and quoted slightly lower, crude Egyptian offering at £26 5s. and common edible at £30 10s. ex Hull for prompt and May–August delivery. Other seed oils are quiet. In the oilseed section, except for near positions, which are scarce and firm, linseed is in slow demand, and practically no business for shipment is reported. Plate on spot and near at hand is held for £16 7s. 6d., but for shipment about £15 17s. 6d. is the nominal value. Calcutta linseed to London has been done at £18 April, May and June. The quantity on passage to Europe is 12,000 tons more than a week ago. Trade in cotton-seed has been better at the decline, and transactions in black Egyptian are reported at £9 2s. 6d., April and May loadings. The demand for oilcakes is falling off, and though linseeds are firm, cotton cakes and meals are easier.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Rather more interest in British varieties was apparent on the part of trade buyers. Prices, especially of granulated and yellow crystals, were marked down slightly. On Messrs Tate and Lyle's list granulated reduced 3d., except T.L., 1½d., mineral-water, also yellow crystals 3d. lower. Other brands of refined granulated, also home-grown, marked down 1½d. to 3d. according to factory. There is slight weakness still observable in the situation, due mainly to trade buyers, not only in the United Kingdom, but also the U.S.A., showing no disposition to depart from a hand-to-mouth policy, and this, coinciding with ample offers from producing countries, affords the market no encouragement whatever. Refining sugars moved against sellers. Messrs Willett estimate Cuban production to date at 4,650,000 tons, as compared with 3,850,000 last year. Terminal sections disclose firmness, with fair transactions in both raw and white. Raw, May sold 8s. 3¾d.; August, 8s. 6¾d. to 8s. 9d.; December, 9s. 0¾d. to 9s. 1½d.; March, 9s. 4½d. to 9s. 3¾d. White, May sold 10s. 8½d.; August, 11s. 2½d.; December, 11s. 8½d.; March, 12s. 0¾d. cwt. Cuban receipts last week, 191,524 tons, against 142,366 last year; exports, 138,223, against 107,622; stocks, 1,479,877, against 1,299,484; Central workings, 95, against 53. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending April 20th totalled 139,956 tons, against 140,577 last year.

COFFEE.—Steady absorption takes place with regard to all desirable qualities on spot and firm prices were secured for East African, also foreign cleaned parcels of Costa Rica; but soft colory London cleaned ruled barely steady. Pile sizes of East India, Mysore sold 134s. 6d. to 146s., peas 150s. 6d. to 160s.; Kenya, bold sizes, 122s. to 151s. 6d.; Vera Paz, fancy bold hard colory grey, 205s., peas, 160s. 6d.; Costa Rica, bold, 140s. to 156s.

COCOA.—Market quiet but steady both for spot and forward positions. Accra F/F, October–December, quoted 44s. 9d. f.o.b. terminal.—May sold 46s. to 46s. 3d.; June, 45s. 10½d. to 46s. 7½d.; September, 48s. 3d. to 48s. 9d.; December, 49s. to 49s. 9d.

TEA.—Indian auctions this week amounted to 56,613 packages. Fair competition predominated, but prices on balance disclosed some irregularity. All fine teas, especially those possessing autumnal flavour, met a good market at full rates, useful liquoring kinds being quite steady, but low medium, also common and stalky, ruled ½d. to 1d. per lb. lower. Ceylon sales of 27,041 packages received fair patronage, but a good deal of irregularity was apparent, and prices mostly from ½d. to ¾d. lower, though general run of quality was not up to recent standard. Flavoury Pekoes steady and wanted by exporters. Java and Sumatra sales generally ½d. to 1½d. easier.

RICE.—With only retail support, forthcoming quotations in many instances rendered purely nominal. Cables to hand from Burma and Saigon indicate "Paddy" quite firm, with natives posing as reluctant sellers, white rice being unaltered. New crop, two Stars Burma, spot, London sellers, 13s. 9d. Old crop at 13s. 3d. to 13s. as to quality. Spanish, oiled, prompt quoted 18s. per cwt. c.i.f. London. Burma No. 2 for shipment April-May, 12s. 7½d.; May-June, 12s. 9d. c.i.f. U.K. and Continent shipping weights in singles. Burma No. 3, March-April, 12s. 9d. in doubles to the Levant. April-May, 12s. 9d. in singles c.i.f. U.K. and Continent. Siam Garden No. 1, March-April, 15s. in singles. Special, 15s. 7½d., and Super, 16s. 6d. c.i.f. U.K. or Continent.

Italian.—April-May shipment cleaned 19s. 3d. c.i.f. U.K. in doubles.

Californian.—April-May to London 18s. 6d. c.i.f.

Egyptian.—April-May sellers at 18s. c.i.f.

FEAS.—Market slow but steady. Japanese afloat sellers 18s. 3d. to 19s. 9d., March-April 18s. 7½d., April-May 18s. 4½d. c.i.f. Dutch marrowfats prompt 23s., imperial blues 19s., small 18s. cwt. c.i.f. Maples slow.

BEANS.—Market quiet, steady. Madagascar butters afloat, "Clan Macaulay" sellers 39s. 3d., per "Clan Macbeth" 38s. 6d. Rangoon haricots afloat 19s. 6d. to 20s. 9d. as to position, April 18s., May 17s. cwt. c.i.f.

SPICE.—Pepper market steady on spot, moderate inquiry and firm with regard to forward positions. Lampong, March-May, quoted 1s. 3½d.; May-July, 1s. 3d.; August-October, 1s. 2d.; Muntok, white, March-May, 2s. 1½d.; May-July, 2s. 1d.; August-October, 1s. 11d. lb. London stocks increased 164 tons on the week, chiefly for black. Tellicherry, March-May, 146s. cwt. c.i.f. Cloves quiet on about former terms. Sago flour, May-June, to the U.K. 11s. 6d. c.i.f. Singapore flake tapioca, May-June, to Havre, 17s. 6d.; Penang seed to Hamburg 16s. 9d. African ginger, spot London, 52s.; shipment 49s. cwt. c.i.f.

FRUIT (Dried).—A firm tone prevailed with choice quality in limited supply. Pyrgos, quoted, 45s.–46s.; Amalias, 46s.–46s. 6d.; Zante, 47s.; Vostizza, 51s.–55s.; with smalls selling at 46s.–47s. Sultanas active at full rates. Smyrna, medium to good, ranges from 42s.–55s.; Cretan, 42s.–58s.; Australian new crop shared in the advance with good support accorded at 60s.–70s. as to quality. Raisins remain dull of sale. Valencias, common to good, 45s.–53s.; Lexias, 30s.–34s. Figs quiet, and quality of remaining supplies being rather unattractive with genuine moving off at 27s. 3d.–30s. Dates steady and in moderate request chiefly for Siar at 14s. 6d.–16s. 6d.

EVAPORATED FRUITS.—Market displayed firm features and prices tend dearer both on spot and for shipment, the market being influenced by reported crop damage and reserved offerings. Available supplies of plums and peaches are in small compass, while apricots experienced a good movement, especially Australian, at full rates. Californian plums, 20's–30's, quoted, 65s.–66s.; 30's–40's, 57s.–58s.; 60's–70's, 44s.–45s. Pears, Lake County, 72s. 6d.–100s. Apricots, South African Royal, 57s. 6d.–117s. 6d.; Cape, 72s. 6d.–82s. 6d.; Californian, 85s.–117s. 6d.; 77s. 6d.–85s. Peaches, Californian, choice, 54s.; extra choice, 56s.; fancy, 60s. Apples, Californian spot sliced, extra choice, 75s. Almonds, market firm. Mazagan, 142s. 6d.; Mogador, 140s.; Majorcas, 145s.; Bitter-Jordan, 185s.–210s. cwt.

CANNED GOODS.

CANNED FRUITS.—Market active and firm for Californian fruits, now the chief feature of the trade. Prices have advanced rather sharply on heavy crop damage, especially peaches, and packers offer with considerable reserve. Australian fruits firmer in sympathy and business on a liberal scale. Singapore pines were in slow demand, but forward quotations have recently moved in buyers' favour, and any revival of buying interest would improve the general tone as spot stocks are rather light. Italian tomatoes dull, but fair interest was evinced in the Spanish new pack.

CANNED FISH.—The general tone remained firm with a fair demand, but the trade is rather slow to anticipate requirements pending a spell of warmer weather. Sardines, Portuguese clubs, 5s. per dozen tins. Lobsters scarce, and best halves realise 140s. to 145s. Salmon, red talls, spot, 43s.–45s.; pink ditto, 28s.–27s. Japanese crab in fair demand, with finest quality ruling at 97s. 6d. to 100s.

CANNED MEATS.—Corned beef and tongues move off quietly, but lunch tongues realise firmer rates with sustained forward inquiries. Danish boned hams also dearer.

COMMERCIAL TIMES—WEEKLY PRICE CURRENT.

The prices in the following list are revised with the assistance of an eminent firm in each department.

CONDENSED MILK AND MILK POWDERS.—Market steady. Full cream, sweetened, English, spot, 42s. 6d.; Dutch ditto, 37s. 6d.; May–June, 37s. 6d. Machine skimmed, sweetened, English, spot, 25s.; Dutch ditto, 22s. 9d.; May–June, 23s.; all in 5-cwt, barrels. Powders, Spray process, F.C. 26 per cent., 2 by 56 lb. tins, crated, 80s.; M.S. (1-cwt. cases), 39s. 6d.; roller ditto, F.C. 26 per cent., 72s. 6d.; M.S., 27s. 6d., all net, duty paid ex-wharf London. On the Grocery side: F.C.S., 21s.; M.S.S., 9s. 9d., basis per case, usual packing. Danish cream, evaporated, unsweetened, 48 by 16 oz., 18s. 6d.; 96 by 6 oz., 19s. 6d.; condensed, sweetened, 48 by 14 oz., 20s. per case.

HONEY.—Market firm with a good demand, with available supplies in moderate compass. New crop Jamaican spot amber to good pale, 50s. to 55s.; dark to fair amber, 43s.–49s. New Zealand sells readily, dark amber ranging from 50s.–55s.; medium, 55s.–65s.; light, 65s.–85s.; white and water whites, 65s.–87s. 6d. per cwt.

RUBBER.

RUBBER.—Increased buying orders, partially on covering account, caused sellers to exercise more reserve, and prices moved up slightly, but eased later. Standard sheet spot and May sold 10¼d.; June, 10⅛d. to 10⅜d. and 9¾d.; July–September, 10¼d. to 10⅝d. and 10⅛d.; October-December, 10⅜d. to 10⅝d. and 10⅛d.; January–March, 11⅛d., 10⅜d.; with January–December, 1930, at 11⅛d. lb. London stocks increased by 57 tons on the week, landings being 1,639; deliveries, 1,582; stocks, 30,503, against 56,819 at same time last year. Liverpool stocks 70 tons down, landings being 145; deliveries, 215; stocks, 4,521.

GENERAL.

JUTE.—Met a quiet and easier market. Firsts, April–May, quoted, £30; May–June, Dunkirk, sold £31 12s. 6d.; May–June, Hamburg, £30 12s. 6d.; new crop, August–September, quoted, £31 2s. 6d.; Lightnings, May–June, £29 10s.; September, £29 5s. ton.

HEMP.—No material change to note in the general position of Manila grades. Meantime, consuming demand is quiet, but shippers also adopt certain reserve. J.2, April–June, quoted, £37; K., £32 10s.; L.1, £33; M.1, £30 ton. African sisal, quiet, unaltered. Manila receipts for last week, 35,000 bales, compared with 27,000 at corresponding period last year; estimate for next week, 27,000, and following week, 33,000. Shipments last week to U.K./Continent, 3,000 bales; U.S.A., 12,000; and Japan, 15,000. Local stocks increased 5,000 bales at 213,000.

SHELLAC.—Market quieter. T.N., spot, 190s.; May, 185s.; August, 190s.; October, 193s. cwt.

COPRA.—Proved a quiet, steady market. Straits, S.D., May–June sellers to Rotterdam, £22 7s. 6d.; June, £22 8s. 9d., with buyers at £22 7s. 6d.; Dutch East Indies about 5s. under these figures. Ceylon, May–June, £23 10s. South Sea Islands, May–June, to Marseilles, smoked, quoted £21 6s. 3d.; sun-dried, £21 10s.; plantation, Rabaul, £21 12s. 6d.; hot-air dried, £21 12s. 6d., and mixed, excluding Padang, £21 10s. Palm kernels, May–June, to Hamburg, £17 17s. 6d. ton.

MISCELLANEOUS.—Coconuts quoted 18s. to 25s. per 100. Coir yarn, Ceylon, £19 to £38; Cochin, £22 10s. to £40 10s.; Ceylon bristle, £18 10s. to £25; cinnamon leaf oil, 5½d.; citronelle, Ceylon, 1s. 11½d.; Java, 2s.

ISLAS DEL GUADALQUIVIR S.A.

Shareholders are informed that at the Extraordinary General Meeting convened for the 15th day of April, 1929, the necessary quorum of Shareholders was not present or represented by proxies, and the meeting accordingly stands adjourned to the same time and place on the 6th day of May, 1929. At the adjourned meeting it will be proposed that in lieu of an immediate issue of Ordinary Shares there be created 300,000 7 per cent. Notes of 100 pesetas each, convertible at the holder's option into Ordinary Shares on the basis of one Note of 100 pesetas for one Ordinary Share on two months' notice expiring on the 1st January of any year up to and including the year 1935, and redeemable at par (so far as not converted) over a period from the 31st December, 1939, to the 31st December, 1979.

Subject to the necessary resolutions being passed, it is proposed to issue forthwith 200,000 of the above 7 per cent. Notes at 105 per cent. and to offer such Notes in the first instance to the holders of the Founders Shares on the basis of one Note for each share held.

Holders of Founders Shares who have already deposited their shares and received Letters of Rights and Underwriting Letters in respect of Ordinary Shares should return such Letters of Rights and Underwriting Letters to the Bankers from whom they received the same, when they will receive in exchange Letters of Rights and Underwriting Letters relating to the above issue of 7 per cent. Notes. Holders of Founders Shares who have not already deposited their shares will be allowed to do so at any time on or before the 1st day of May, 1929. Such shares may be deposited with one or other of the undermentioned, viz.:

Banco Internacional de Industria y Comercio, Madrid and Seville.
Banca Marsans, S.A., Barcelona.
S.A. Arnús-Gari, Barcelona.
Banco Comercial de Barcelona, Barcelona.
Midland Bank Limited, London, Threadneedle Street, and Branches.

Founders Shareholders who have not already deposited their shares, but do so within the above-mentioned period, will in addition to Letters of Rights and Underwriting Letters receive a card of admission to the adjourned meeting with proxy form endorsed.

Shareholders are particularly requested to sign and return the form of proxy to the Company's bankers in order to secure the necessary quorum at the adjourned meeting.

J. SOTO REGUERA,
Seville, 23rd April, 1929. *Vice-President.*

THE CASE FOR FREE TRADE

A pamphlet of 56 pages reprinted from "The Economist."

The fundamental arguments against Trade Restriction are set out; and the claims of "Safeguarders" examined.

AND THE INVESTOR

INVESTING readers of the "Evening News" have now the benefit of the services of a new and highly qualified contributor who writes, under the pen-name of "Carmelite," articles advising large and small investors what to do with their money.

"CARMELITE" WILL GUIDE YOU RIGHT

The articles by "Carmelite" appear every day.

"Carmelite" has had an almost incomparable experience in the City. He is acquainted with everything in the Stock Exchange, and has had an important position in the banking world. He is thus able to help "Evening News" readers every day with the sound judgment and knowledge that have come from his long associations in the City.

For many years "Carmelite" has been engaged in guiding investors large and small. But he is a fresh recruit to the highly expert City Staff of "The Evening News."

BRAKPAN MINES, LIMITED. (Incorporated in the Union of South Africa.)

REPORT OF THE DIRECTORS for the Year ended 31st December, 1928.

To be submitted at the Twenty-sixth Ordinary General Meeting of Shareholders, to be held in the Board Room, "Anmercosa House," Johannesburg, on Friday, the 17th May, 1929, at 2.30 p.m.

To the Shareholders, BRAKPAN MINES, LIMITED.

Gentlemen,

Your Directors beg to submit their Report and the audited Financial Statements for the year ended 31st December, 1928, accompanied by the Reports of the Consulting Engineers and the Mine Manager.

CAPITAL.—The capital of the Company is unchanged at £1,020,000 in 1,020,000 shares of £1 each, fully paid and issued.

PROPERTY.—No alterations have taken place during the year in your Company's claim holdings, which remain as follows:—

Mynpacht No. 490/1919, *in extent* 405·754 acres, equal to	276·06	Claims.
Mynpacht No. 543/1906, *in extent* 888·936 acres, equal to	604·80	,,
Claims on Farm Benoni No. 3, with Coal Rights on 73·326 Claims	201·59	,,
Claims on Farm Weltevreden or Brakpan No. 5	68·00	,,
Claims on Farm Weltevreden or Brakpan No. 5—leased from Union Government	1,811·70	,,
Claims on Farm Koolbult or Schapenrust No. 7	424·90	,,
	3,387·05	Claims.

The undermining rights of seven stands and four portions of stands on Farm Benoni No. 3.

Twenty-one freehold stands in Brakpan Township, on which are erected quarters for the Company's employees.

OPERATIONS.—Technical matters are dealt with in the attached Reports of the Consulting Engineers and Mine Manager, to which your attention is directed.

FINANCE.—From the Working Expenditure and Revenue Account it will be seen that the profit amounted to £639,754 16 6

Deduct—Donations 3,971 9 7

£635,783 6 11

Add—Dividends on Shareholdings £750 7 4
Interest, Commission and Exchange..... 7,599 18 9
8,350 6 1

Leaving a Net Balance of Revenue over Expenditure for the year of 644,133 13 0

Add—Balance to Credit of Appropriation Account at 31st December, 1927 ..... 59,340 10 11

Making a total available Credit of 703,474 3 11

Against which the following amounts have been appropriated:—

Government Taxes	£73,290 10 8	
Government Participation in Profits	61,129 10 6	
Capital Funds	3,500 0 0	
Reserve for Liability under Miners' Phthisis Acts	8,767 10 6	
Dividend No. 32	242,250 0 0	
Dividend No. 33	255,000 0 0	
		643,937 11 8

Leaving a Balance unappropriated at 31st December, 1928, of... £59,536 12 3

The Capital Expenditure for the year was £6,460 0s. 3d., made up as follows:—

	£	s.	d.
Shaft Sinking and Equipment, as per Schedule attached to Balance Sheet	6,652	1	10
Less Credit—Shares and interests in other concerns	192	1	7
	£6,460	0	3

The amount payable to the Government for the year under the terms of the Mineral Lease Agreement is estimated at £60,696 17s. 6d. This figure represents 9·423 per cent. of the profits for the year.

The amount charged to working costs for development was £94,426 5s. 7d.

In connection with the annual reserve in respect of the Company's liability under the Miners' Phthisis Act, the amount set aside for 1928 is £8,767 10s. 6d. This, with the previous figure of £16,452 15s. 6d. and interest accrued, gives a total reserve of £25,960 13s. 6d. The Company's ultimate assessment is estimated at £179,587.

DIVIDENDS.

Two Dividends were declared during the year, as follows:—

	Per Cent.	Rate per Share. s. d.	Total Amount. £ s. d.
Dividend No. 32	23¾	4 9	242,250 0 0
Dividend No. 33	25	5 0	255,000 0 0
	48¾	9 9	497,250 0 0

You are asked to confirm the action of Directors in this matter.

DIRECTORATE.

In terms of the Articles of Association, Messrs. L. A. Pollak and W. J. O'Brien retire by rotation, but are eligible and offer themselves for re-election.

AUDITORS.

You are requested to fix the remuneration for the past audit, and to appoint Auditors for the ensuing year. The Auditors, Messrs. A. E. Page and P. Whiteley, retire, but are eligible and offer themselves for re-election.

March 20th, 1929.

SPRINGS MINES, LIMITED.

(Incorporated in the Union of South Africa.)

REPORT OF THE DIRECTORS for the Year ended 31st December, 1928.

To be submitted at the Twentieth Ordinary General Meeting of Shareholders, to be held in the Board Room, "Anmercosa House," Johannesburg, on Friday, the 17th May, 1929, at 12 noon.

To the Shareholders,
SPRINGS MINES, LIMITED.

Gentlemen,

Your Directors beg to submit their Report and the Audited Financial Statements for the year ended the 31st December, 1928, accompanied by the Reports of the Consulting Engineers and the Mine Manager.

CAPITAL.

The Capital of the Company remains unaltered at £1,500,000 in shares of £1 each, all fully paid and issued.

PROPERTY.

The position of your Company's holdings at 31st December, 1928, was as follows:—

Mynpacht No. 637, in extent 1,675·693 acres, equal to...	1,140·09	claims.
Railway Area (leased from the Government).....	20·63	,,
Discoverer's Rights	171·60	,,
Claims on Farm Rietfontein No. 8 (leased from the Government)	2,235·60	,,
	3,567·92	claims.

Sixteen freehold stands in Springs Township are owned by the Company.

OPERATIONS.

Technical matters are dealt with in the attached Reports of the Consulting Engineers and Mine Manager, to which your attention is directed.

FINANCE.

	£	s. d.
From the Working Expenditure and Revenue Accounts it will be seen that the profit from operations for the year amounted to	853,852	9 10
Deduct— Donations	3,814	18 7
	850,037	11 3
Add— Dividends on Shareholdings, Interest, Commission and Exchange, and Sundry Revenue.....	15,185	12 1
Leaving a net balance of Revenue over Expenditure for the year of	865,223	3 4
Add— Balance to credit of Appropriation Account at 31st December, 1927	59,952	9 10
Making a total available credit of	925,175	13 2

Against which the following amounts have been appropriated:—

	£	s. d.	
Government Taxes	79,268	4 11	
Government Participation in Profits ...	190,481	10 4	
Capital Funds.....	94,409	0 0	
Reserve for Liability under Miners' Phthisis Acts	5,546	11 10	
Dividend No. 18.....	243,750	0 0	
Dividend No. 19.....	262,500	0 0	
			875,955 7 1
Leaving a balance unappropriated at 31st December, 1928, of			£49,220 6 1

The Capital Expenditure for the year amounted to £129,845 8s. 5d., made up as follows:—

	£	s. d
Shaft Sinking and Equipment, as per Schedule attached to Balance Sheet	129,209	15 5
Shares and Interests in other concerns	635	13 0
	£129,845	8 5

The Union Government's participation in the profits of the Company, in terms of the Mineral Lease, is estimated at £190,481 10s. 4d. This sum is equivalent to 22·015 per cent. of the total profits of the Company for the year.

Expenditure on development for the year amounted to £94,578 11s. 7d., which has been charged to Working Expenditure and Revenue Account.

In connection with the annual reserve in respect of the Company's liability under the Miners' Phthisis Act, the amount set aside for 1928 is £5,546 11s. 10d. This, with the previous figure of £9,157 11s. 4d and interest accrued, gives a total reserve of £15,116 5s. The Company's ultimate assessment is estimated at £111,394.

DIVIDENDS.

Two dividends were declared during the year, as follows:—

	Per Cent.	Rate per Share.	Total Amount.
Dividend No. 18.....	16¼	3s. 3d.	£243,750 0 0
Dividend No. 19.....	17½	3s. 6d.	262,500 0 0
	33¾	6s. 9d.	£506,250 0 0

You are requested to confirm the action of the Board in this matter.

DIRECTORATE.

You are asked to confirm the appointment of Mr. J. S. Wetzlar as a Director of the Company in place of Mr. E. S. Langerman, resigned.

In terms of the Articles of Association, Messrs. J. S. Wetzlar and A. F. Lyall retire from the Board by rotation, but are eligible and offer themselves for re-election.

AUDITORS.

You are requested to fix the remuneration for the past audit, and to appoint Auditors for the ensuing year. The Auditors, Messrs. A. E. Page and F. W. Diamond, retire, but are eligible and offer themselves for re-election.

THE MONEY MARKET.

Variable conditions prevailed in the money market this week. Over the week-end money was obtainable at 4½ per cent., and the same rate ruled on Monday. This ease was of a somewhat artificial character, for the previous Bank return had shown that money was none too plentiful, and the following day the market was to receive proof

of this fact. Thursday was the last day of the month, and a heavy foreign exchange settlement absorbed all available funds, and had not this been the fifth Tuesday of the month—which meant that none of the clearing banks were making up—the market would very likely have found itself in the Bank. On Wednesday money was a little more comfortable, but 5 per cent. was the ruling rate in the afternoon. On Thursday conditions became easier.

* * *

There has been a fair replacement demand for bills, and discount rates have consequently ruled low, 5⅛ per cent. being a typical rate on Tuesday for three months' bills. On Wednesday the Bank intervened and sold June bills at 4⅞ per cent., but this effort to maintain control was neutralised the following day by one of the clearing banks, who let it be known that it was buying bills at 5 per cent. This action is not viewed with universal favour, as it is felt that the general situation hardly warrants so low a discount rate. The American exchange remains obstinately at only ¼ cent above the lower gold point, whereas by now it should be up to $4.86 or even $4.87, for the margin of protection to be adequate.

* * *

The sudden collapse of the mark on Friday of last week is attributed mainly to a general attack of nervousness caused by the Reparation deadlock and the rise in the Reichsbank's discount rate. The suggestion that Paris banks made a deliberate attack on the mark is scouted, for there is no evidence at all of any large withdrawal of short money from Berlin by either Paris or London houses. What did happen was that there was some calling by weak Paris lenders, and there was a temporary spasm of nervousness in Germany itself. This last is easy to understand, for it is only a few years since the days of inflation, and the memory of that period and all its troubles is deep-rooted. Still, the fact that this week the mark has returned to the level ruling before the rise in the Reichsbank's rate confirms the view that Friday's collapse had no more significance than that hinted at above.

* * *

The gold position is becoming more encouraging, as this week the Bank obtained several windfalls. On Monday, £1,000,000 in sovereigns was rather mysteriously released, while the following day £368,972 of new gold was bought at 84s. 10¾d. in the open market. On Wednesday £100,000 in sovereigns was released, while the Bank also obtained £744,732 of gold bars. The origin of this last gold is again unknown, but it is thought to consist of gold previously sold to an "unknown buyer," and now resold to the Bank. Calculations based upon present expectations are that, with the gold now in sight, the Bank will shortly have gained since the increase in its rate as much as £11,000,000 in gold. If these hopes are realised the Bank should be well on the way towards strengthening its resources sufficiently to meet the autumn drain.

	May 2, 1929.	Apr 25, 1929.	Apr. 18 1929.	Apr. 11, 1929.	Previous Rate and Date Changed.
	%	%	%	%	%

Market rate (3 months' bills)	5 1/16–⅛	5⅛	5 1/16	5 1/16	...

The Bank return duly reveals an increase of £2,224,822 in gold stocks, but a rather surprising increase of £4,093,773 in the note circulation, so that the Reserve has fallen by £1,868,951. Public deposits are substantially lower, but the increase of £2,255,914 in Bankers' deposits suggests that the market now has a little more room in which to move than it had a week ago. The Bank's "earning assets" show little change on balance.

NEW YORK MARKETS.

Our New York correspondent cables:—The Federal Reserve statements reveal increases throughout the system in circulation, discounts and bills purchased, with a decline of 1 per cent. in the ratio; this expansion of activity reflecting month-end requirements. The increase of $29,000,000 in bills is particularly interesting, despite the official claim that it represents no change of policy. Meanwhile, gold imports for the week total $8,000,000, which, with $13,000,000 released from earmarking, make the gain from these sources $70,000,000 in April and $115,000,000 since January 1. These developments are arousing speculation as to whether the Reserve authorities are likely to mitigate their "hard money" policy. The share market has been displaying considerable buoyancy, though operators are still troubled by the monetary position. Dunn's and Bradstreet's commodity price indices show declines of rather more than 1 per cent. during April, due mainly to falls in foodstuffs, clothing and metals.

THE STOCK MARKETS

In a week broken by a Stock Exchange holiday on Wednesday, pre-election dullness continued unabated. The Reparations crisis and the Bank of England's fresh accessions of gold, pulling in opposite ways, left gilt-edged stocks little changed on balance. Home rails attracted no interest, and business in industrials remained decidedly limited, apart from a partial recrudescence of Wall Street activity. Rumours of an amalgamation between the two leading British gramophone companies were not confirmed. Rubber shares sagged in sympathy with the price of the commodity, but tea shares were a shade firmer. The oil share market remained deaf to all bullish rumours, and little occurred to disturb the tranquillity of Kaffirs.

THE COMMODITY MARKETS.

The easier tendency of coal prices persists. The iron and steel trades are maintaining the improvement in their position, and other metals are decidedly firmer. Continued selling of raw cotton has given rise to a further fall in prices, but there are signs of greater steadiness at present. Outlets for Manchester goods are more promising than during the last two or three weeks. Activity in Bradford is only moderate, and there is a possibility of a movement for a general reduction of wages. Colonial wool prices are fairly stable at the lower level reached recently. Hides are again easier in spite of an improving business in leather. The demand for oilseeds and vegetable oils shows no sign of expansion. After a further decline, wheat has almost regained last week's level.

THE FOREIGN EXCHANGES.

Fair activity only was experienced in the Foreign Exchange market, although several currencies again fluctuated a good deal, the mark being of particular interest. New York was quiet, and lost 1/32 at 4.85 11/32, after being down to 4.85¼. Paris improved at one time to 124.12, but returned later to last week's level of 124.18. Brussels weakened to 34.95¼. Lisbon gained ½ a point at 108, and Milan 5 points at 92.62. The peseta was again very erratic, and went from 33.60 to 33.90. Amsterdam and Geneva both moved sharply against London, to 12.07 after being lower, and to 25.19 after 25.18½. Berlin was rather less than 2 points worse at 20.47 after going out to 20.57½ on Friday of last week. This movement is discussed in a previous paragraph. Stockholm, Copenhagen and Oslo all gained ½ at 18.16, 18.20 and 18.19½ respectively. The South American currencies maintained their recent steadiness, and Lima alone changed, the premium for 90 days Lima on London advancing ⅛ to 19⅜ per cent. In the Far East the rupee was weak throughout, and lost 1/16d. at 1s. 5 15/16d., but the yen showed some strength, gaining 1/16d. at 1s. 10 3/16d., after being over 1s. 10½d. Batavia gained ½ at 12.12½. For the forward markets dollars were rather more on offer at slightly wider discounts of 5/32 cent and 11/32 cent for the two periods. Francs improved both for one and three months delivery at enhanced premiums of 3 to 5 centimes for the former and 10 to 15 centimes for the latter. Milan was less in demand, last week's discounts widening from 8 to 12 centessimi for one month and from 27 to 28 centessimi for three. The premium asked for forward Madrid was appreciably higher at 12½ and 37 centimos. Berlin, after considerable fluctuations during which discounts of 4 and 12 pfennigs were quoted for the two periods, settled down decidedly steadier at 2½ and 6 pfennigs. Silver was more active, and prices fell 1/16d. for both spot and forward, with steady sales from China. Hongkong and Shanghai both declined in sympathy, the former losing ¼d. at 1s. 11⅞d., and the latter ⅜d. at 2s. 5⅛d.

THE LABOUR PROGRAMME.

In a General Election, appeals to the electorate tend naturally to be of a dual character. On the one hand, each party will ask for support on the general grounds that it embodies historically or potentially—in performance or promise—a certain more or less clearly recognised attitude and outlook; that it represents a more or less distinctive political "make-up" which, it hopes, the voter will find "sympathetic." On the other hand, since the practical purpose of a General Election is to place a Government in office for a strictly limited term of years, in which only a selection of articles of faith can be translated into works—whereas such clear-cut issues as are outstanding at the time of the Election will obviously require definite decision by the party returned to power—political leaders normally lay before the electorate a specific programme of immediate *ad hoc* policy. That they should do so is right and proper; with the recent vast increase in the size of the electorate, and the growing tendency for the sharp lines of party tradition to be somewhat obscured by the interplay of three rival policies, it becomes of paramount importance that democracy should not be encouraged to roam at large over the fields of vague prejudice or ill-defined aspiration, but should be asked to express its opinion upon statements—as clear, concise and easily understandable as possible—of the constructive policy which it is proposed that the next Parliament shall put into effect.

We are now in a better position to judge how far the leaders of the three contesting parties have fulfilled in this respect what we conceive to be their duty to the electorate. Mr Lloyd George, first in the field, put forward a concrete and detailed set of proposals for dealing with unemployment as his party's essential task if given power, allowing the Yellow Book to stand in more general terms as a *corpus* of present-day Liberal principle. Mr Baldwin followed, a fortnight ago, with a modest "platform," whose economy in planks (apart from the singularly objectionable offer of extended "Safeguarding") is commended to the electorate by Conservatives as being a wise embodiment of the abiding principle of "Safety First." Finally, in Mr MacDonald's Albert Hall speech last Saturday, and in the manifesto published by his party early this week, the nebula of Labour doctrine must be assumed to have taken, for electoral purposes, coherent shape and form. Assumed, we say, because the pronouncements in themselves are of a character calculated less to answer questions than to prompt them.

The general statement of Labour policy published last year under the title of *Labour and the Nation*, was prefaced by a foreword over Mr MacDonald's signature, stating that the "long array of parliamentary and administrative measures" therein mentioned would be the tasks to be undertaken by a Labour Party in power—"the more pressing and important being dealt with first of all." It was reasonable, therefore, to hope that, in launching Labour's electoral campaign, Mr MacDonald would indicate with some precision his party's views as to the relative importance and urgency of these embarrassingly numerous measures, and expound in concrete terms the immediate positive policy of a Labour Cabinet in office. Instead, Mr MacDonald treated his supporters to a discursive speech, distinguished by its remarkable reticencies as much as by its apparent bankruptcy of original constructive thought. "The Labour Party," he said—as if in anticipation of criticism—"was not built up on a programme, but on principles." These principles, as outlined on Saturday night, would seem to lead to much that is common to men of good will in all parties and much that is sadly indeterminate. The pursuance of peace in Europe, a naval agreement with America, resumption of diplomatic relations with Russia, and support for the International Labour Office—these four points represented Mr MacDonald's statement of Labour policy abroad. It is a policy to which little exception can be taken. In home affairs, he repeated the promises made at Buxton three days earlier, but in terms even less precise. Given power, Labour would continue the 1924 programme of subsidised house-building, and cheaper houses by "the direct handling of profiteering"; provision would be made for nursery schools; pensions would be "co-ordinated and revised." For the unemployed there would be "not a programme of relief work, although it is a programme of work that will give relief"—a policy of transport and electricity development which differs from the Liberal proposals only in that, as adumbrated by Mr MacDonald, it appears not yet to have been worked out in any sort of administrative or financial detail. This task, indeed, would seemingly be delegated by a Labour Government to an Economic Committee, whose purview would be no less than "everything relating to the life of this country." That Committee, composed of a nucleus of Cabinet Ministers and *ad hoc* experts, with the Prime Minister as chairman—a conception bearing a remarkable resemblance to the constitution of the Economic General Staff proposed in the Liberal Yellow Book—would be the "brain for thinking and acting for an industrial State." Reference of any and every question to it would be "the special basis of the Labour Party action."

From this summary of Mr MacDonald's address, to which should be added a pledge that a tax on land values would be imposed by a Labour Chancellor, it is plain that either the Leader of the Labour Party is disingenuously veiling from the electorate the inconveniently alarming portions of *Labour and the Nation*, or that the "advanced" Labour rank and file, who have been taught to regard that statement of Labour principle as a promise of definite action, are in danger of grave disillusionment. The second alternative seems the more probable, for the official Labour manifesto, not less than Mr MacDonald's address, suggests that the realisation of "Socialism in Our Time" is regarded by the Labour Party's Parliamentary leaders as dependent on a longevity for which few of us can hope. Despite a formal reference to Labour's belief in "the Socialist and Co-operative Commonwealth," there is little in the manifesto to indicate that the official Labour Party's adherence to Socialist faith is other than a conveniently vague *credo quia impossibile*. Supplementing Mr MacDonald's statement, there is a definite pledge to extend the school-leaving age to 15 (with maintenance grants), the hint of wider use of export credits to stimulate trade, and the promise of a Factories Bill, continuance of rent restrictions, the ratification of the Washington Eight-Hours Convention, and the amendment of the Workmen's Compensation Acts, and the Trade Unions Acts. Nationalisation is mentioned only once. A Labour majority would nationalise the coal mines "as the only condition for satisfactory working"; other industries, such as cotton and iron and steel, must be satisfied with "committees of inquiry into the causes of depression." For the rest, the manifesto vies with the *ipsissima verba* of Mr MacDonald in studied mystification. The miners' vote is wooed by an assurance that a Labour Government will "reorganise the industry from top to bottom and shorten hours of labour." The unemployed are promised "more generous maintenance" and the removal of "those qualifications which deprive them of payments to which they are entitled." The path to "social well-being and a more just distribution of the fruits of labour" is to be paved by death duties on large estates, by "graduating the income tax and surtax with a view to relieving the smaller, while increasing the contribution from the larger, incomes," and by carrying still further the differentiation between "earned" and "unearned" incomes. In detail none of these proposals has a positively revolutionary air or even a distinctly Socialist flavour. The trouble is that no man can say precisely what they mean, and our uncomfortable feeling of doubt is not allayed by the fact that, at the Albert Hall, Mr MacDonald urged his audience to rally to the assault on wealth which "stagnates to-day in the poisoning inanities of a class."

In short, Mr MacDonald and the National Executive of the Labour Party have contrived between them to produce a programme of evasively defined ideals in which patent professions of innocuously moderate "statesmanship" are nicely compounded with latent implications of "class-conscious" discrimination, a programme whose field of "ground common to all progressive minds" has boundaries sufficiently wide and loosely defined to embrace the orbits of Mr Lloyd George at one end of the political scale, and of Mr Maxton at the other. The

condensation for election purposes of *Labour and the Nation* has, in fact, resulted in a number of omissions, but not in clarification of policy. The definite promises made in that brochure that a Labour Government would repeal the Coal Mining Hours Act, " supplement trade union action in fixing standard wages compatible with health and comfort," transfer to public ownership the coal, transport, power, and life insurance industries, and place banking under " stringent control," are not repeated, but are left presumably in the realm of " questions " on which the Economic Committee, foreshadowed by Mr MacDonald , and acclaimed by the *Daily Herald* as a dramatic modification of " the very structure of the Government itself," is to pronounce judgment.

If we suspect that Mr MacDonald, leader actually not of a party but of a congeries of warring factions, regards the Economic Committee as an inspired scheme for damping the embarrassing enthusiasms of his Left wing, our cynicism is likely to be shared by many of Mr MacDonald's supporters. All impartial observers of the political campaign, concerned lest any party should beguile the electorate into acceptance of a policy whose unsound and dangerous elements are veiled by the obscurity of its presentment, must regret that the Labour Party have not defined with greater exactitude and candour the immediate objectives of their by no means unanimous aspirations, and have left it so largely to the discretion of the individual elector to decide whether a vote cast in their favour is a vote for an " alternative brand " of Liberalism, or a vote for an economic revolution disguised by fair-sounding promises of " ordered progress " and national development.

" TRAINED RESERVES."

In the matter of armaments, events are now following one another rapidly. Last week we recorded Mr Gibson's overture of April 22nd on naval reduction and the hearty welcome given to it, on the British Government's behalf, by Lord Cushendun on the spot, and by Sir Austen Chamberlain in the House of Commons on the 24th. Last Saturday the Foreign Secretary repeated and confirmed this welcome in a public speech; Mr Bridgeman followed on Wednesday with the announcement that the Government did not propose to lay down ships of the 1929 programme until towards the end of the financial year; and we may take it that, as between the three Principal Naval Powers —the United States, Great Britain and Japan—there is now a fair prospect of agreement on the naval problem in the near future. Indeed, we may look forward to an agreement not merely for limitation but for reduction, and may expect to see this reduction applied to every category of warship. This not only means that one of the most formidable problems of disarmament now appears to be on the way to solution; it also means, as we suggested last week, a breaking of the deadlock which has gripped and almost paralysed the whole movement for disarmament on sea, on land and in the air. Almost before we have had time to take in the significance of Mr Gibson's overture on naval armaments, he has made another in regard to the vexed question of " Trained reserves " in land armies, with the result that the discussion at Geneva has been extended to this field also. It seems not impossible that, during this present session of the Preparatory Commission, decisions may be taken that will settle the broad lines which the course of disarmament—or armament—will follow as far into the future as we are able to look ahead. For this reason it is important to take stock of the situation now. It is also important not to allow our satisfaction and relief at the naval *détente* between the United States and Great Britain to colour our view of the general situation in rosier hues than are warranted by close and dispassionate examination; and a warning in this sense is provided by the communication from a League correspondent which is printed in a Note of the Week in this issue. We hope and believe that the Anglo-American naval problem is moving forward; and in the backwash of its advance it appears to have loosened the problem of land armaments from the reefs and sandbanks on which this problem, too, had grounded. The danger is that, in this backwash, the problem of land armaments may move in a retrograde direction.

Mr Gibson's overture to the land Powers on April 26th was, in fact, of a very different kind from that which he had made four days earlier. His overture on naval ratios opened the way for a great agreed reduction all round; his overture on " trained reserves " seemed to close a door which American and British diplomacy had been struggling for years to keep open. The United States Government has now done what the British Government did provisionally as part of the abortive " Anglo-French naval compromise." It has consented to waive its insistence upon taking " trained reserves " into account in estimating the strengths of land armies for purposes of comparison. When Mr Gibson announced this at Geneva Lord Cushendun signified his concurrence; and the practical effect of this joint Anglo-American concession is not diminished by reiterations of a preference for long-time voluntary service over short-time service with conscription. Germany and the ex-neutrals have been left alone to fight a losing battle against hopeless odds. It is now virtually certain that the great reserves of man-power which are built up by the conscriptionist Powers will be left out of the reckoning. This clearly renders more difficult, though not perhaps impossible, the limitation of military equipment.

What is the American Government's motive in making this concession? Obviously it hopes for some counter-concession from the military Powers; but a counter-concession might be made in either of two spheres, the naval or the military. In which of these two spheres is the American Government hoping for a response from France and Italy? On the answer to this question our judgment of this American policy will depend.

One suggestion is that President Hoover, in instructing Mr Gibson to make this second overture last week, was thinking solely or mainly of the naval problem. The first overture had opened the way to a naval agreement between the United States, Great Britain and Japan. Well and good. But these three Powers cannot quite settle the naval question between themselves—especially when it is to be a comprehensive settlement, covering not only capital ships but cruisers, destroyers and submarines. Great Britain, at any rate, has two other navies besides the American and the Japanese to consider, namely, the French navy and the Italian, which potentially command certain vital British lines of maritime communication in the Mediterranean and the Channel. Great Britain may agree with the United States and Japan on a ratio; but she can hardly agree to a substantial reduction on the basis of such a ratio unless France and Italy also come into the ratio on some agreed scale. If they do not, then the lower limit of the reduction which Great Britain, the United States and Japan can obtain by agreement among themselves will be fixed—and perhaps fixed at a high figure—by Great Britain's need to take the French and Italian navies into account. Thus the French and Italians could put a spoke into our wheel, as the French actually did at Washington in 1921-22. One interpretation of the American concession on " trained reserves " is this:—Mr Hoover is virtually saying to the French and Italians: " Fall in with the United States, Great Britain and Japan in the matter of naval reduction, and we will fall in with your wishes in the matter of armaments on land."

If this really is the American policy (or, it would be fairer to say, the Anglo-American policy), we can only regard it with misgiving. The argument, of course, would be that the crucial danger to the peace of the world is naval competition between the three principal naval Powers; that any war in which they were involved would be a world-war, whereas land armies are tied to the continents on which they stand and therefore, at the worst, are incapable of involving the whole world in destruction. If a complete solution of the naval problem can only be purchased at the price of abandoning the attempt to reduce land armaments on the continent of Europe, then the price is worth paying. That would be the argument; but we do not find it convincing; for we cannot regard the land armaments of continental Europe as a parochial affair. In China, perhaps, or in Latin-America, land forces might fight over half a continent without placing the peace of the world in jeopardy. But we do not believe that Europe has yet so far lost her position of peculiar importance in world affairs that a first-class land war could occur on the European continent without the whole world being drawn in. Great Britain would be drawn in without a doubt. We believe that the Dominions, the United States and Japan would also be drawn in sooner or later. Therefore, we do not think that a settlement of the naval problem at the price of leaving the continental European problem unsettled would effectively remove the danger of another world-wide catastrophe.

There is, however, a second explanation of the American overture. The expectation may be that, if the land Powers are allowed to have their way about the method of reckoning the strengths of armaments on land, they may be moved, in return, to offer important concessions regarding those strengths themselves. In fact, they may agree to a reduction of land armaments all round, if they are left to settle how it is to be done. Unfortunately, this week at Geneva the omens are not favourable to any such hope; for when the issue of reduction versus limitation of land armaments was raised in the Preparatory Commission on Monday, Chile, Persia and Great Britain joined the ranks of those who insisted that here reduction was impossible.

At the moment, then, there seems little prospect of altering the present situation on the European continent, in which two utterly different systems exist side by side: the system imposed by the four European peace treaties upon the countries defeated in the Great War, and the system maintained by the victors. The victors keep their conscript armies, with unlimited equipment and vast reservoirs of trained reserves. The vanquished have been forced back into the eighteenth-century system of limited voluntary armies, with virtually no equipment and no reserves. This was the doing of the British and American delegations at the Peace Conference; for Great Britain and the United States had kept their own armies on the eighteenth-century footing and, with a leverage in continental Europe, they hoped to bring everybody back to this footing and eventually get rid of conscription in the victorious continental countries as well. The speeches of Mr Gibson and Lord Cushendun at Geneva on Friday were funeral orations signifying that this hope is dead and buried. In the victorious continental countries conscription is going to stay; but this does not mean that the co-existence of the two systems in Europe will go on indefinitely. The two systems are incompatible; and if conscription is not abolished in the victorious countries it will come back again in the vanquished countries sooner or later—and this not by agreement but by force. Here is a formidable danger of future war; and, if we are right, a continental European war of this kind would again involve the whole world. The British Commonwealth and the United States are closely concerned; and, if we are wise, we shall address ourselves to this problem as soon as our own naval problem is solved.

THE POSITION IN AUSTRIA.

(BY A CORRESPONDENT.)

The political crisis has come to an end with a renewal of the coalition, and Dr Ernst Steeruwitz, the new Chancellor Designate, is reported to have formed a Cabinet. Even the most radical politicians in both camps have apparently recognised that economic conditions in Austria can no longer bear the contests of politicians.

Although unemployment diminished by 39,000 to 225,000 in March, and by the middle of April to 210,000, the state of industry in Vienna is very unsatisfactory. The improvement in employment is due exclusively to the resumption of activity in the building trade. Indeed, the textile industry, the metal and metal-working industry, the leather industry, and the wood-working industry, and also a portion of the chemical industry, all complain of slackness. The iron industry is the only one with a satisfactory number of orders on hand. The difficulties in the Austrian automobile industry have also intensified, and, to cap them, a strike has been going on in the industry for some time now, because the workmen demand payment for Bank Holidays. Foreign competition in the automobile industry has so far been checked by high duties and the fixing of a low quota of import permits. But in the year 1930 there will be an increase in these quota figures, and foreign competition will consequently be more keenly felt.

The MERCANTILE BANK *of* INDIA
LIMITED.
Head Office: 15, Gracechurch St., London, E.C.3
Branches and Agencies throughout the East
WORLD-WIDE LETTERS OF CREDIT AND DRAFTS ISSUED.

It must, however, be said that industry in general is better off than commerce, in which liquidations and compositions are being carried out constantly without being made public. In Vienna there are many more registered firms than there were before the war. At that time there were about 6,000 firms registered and liable for a certain minimum assessment. When inflation set in, this number rose to 16,000, and has since gradually fallen back to between 9,000 and 10,000. Naturally, the numerous little firms, which are not registered, are not included in these figures. A large number of firms have lost their capital, and the procuring of fresh resources is by no means an easy matter.

The scarcity of money finds expression in the circumstance that the National Bank is at the moment the only available source of credit that can be taken into consideration. Although bills receivable had dropped at the middle of April by 12 million schillings, they still amounted to 162 millions, and large demands are anticipated for the end of the month. It is felt that American credits are not being offered so profusely as heretofore, because the interest offered is not attractive enough. For this reason the recent decision of the National Bank was in accordance with general expectation. The fact that dollar credits have become dearer is injurious to trade, because big firms have long been used to procure dollar credits through the intermediary of the banks at rates considerably lower than those demanded for schilling credits. Even firms of standing have to pay from 13 per cent. to 13½ per cent. for schilling loans.

The financial difficulties of the big Austrian boot factory, Beka, are being followed with interest. This firm produced on a large scale for export, but for some time now it has been losing ground to the sharper competition from Germany and Czechoslovakia. Greater interest is again being devoted to the development of water power. On the Danube alone two works are projected. The one is to be financed by the Escomptegesellschaft, the Bodencreditanstalt and the American-European Utilities Corporation, the other by the Creditanstalt and the Bankverein. The Styrian Waterpower and Electricity Co. has concluded a loan amounting to 3½ million dollars, chiefly from the Credito Italiano group, the Banca Nationale di Credito and the house of Feltrinelli. Otherwise no loans are being issued in view of the fact that the Vienna market is positively overrun with loans. Yugoslavia, for instance, has been trying vainly to dispose here of 7 per cent. Treasury bonds at par, undertaking to place in Austria considerable orders for rails, iron and locomotives.

The Stock Exchange is completely stagnant, and even the announcement that the Alpine Montangesellschaft (iron trust) intended this year, after an interruption of several years, to resume the payment of dividends, effected but a short-lived movement in the dealings in the shares. However, the control of the concern is no longer in Austrian hands, but in those of German shareholders. Other increases in dividends, such as those of Hutter and Schrantz, Vereinigte Electrische, Felten, Kabelwerk, A.E.G., which have lately been made known, have exercised practically no influence on the quotations of the respective shares. There was some movement in building shares, for people are still counting upon the possibility of a *rapprochement* between the two political parties and a consequent fillip to housing. But even if this took

place, building activity would for a long time be confined to the erection of public buildings and work financed with public means.

The spell of cold weather had an unfavourable influence upon export and passenger business, and the Austrian State Railways, which had hoped to derive benefit this year from their rate increases and to build up their reserves, will, if the present state of affairs continues, hardly be able to show any benefit at all. Merchandise traffic with Germany has fallen off considerably, a fact which is partly due to the decline in business in Germany. In spite of all the efforts of the Municipality of Vienna to promote Austria's export business with Russia by granting credit guarantees, this does not appear to be practicable; the total value of Austria's exports to Russia in the year 1928 was only 40 million schillings, against 42.1 millions in the year 1927. In matters of commercial policy much will depend upon the attitude the new Government takes up. In the farmers' camp it is being more loudly proclaimed that it is a mistake to protect with high tariffs Austrian industry, which is very often seriously split up internally. Industry should specialise more, and then it would be possible to derive advantage from trade with neighbouring States. The influence of the farming interests is once more on the up grade, and they have on previous occasions been able to get their desires satisfied in negotiations with Hungary, Yugoslavia and Poland.

The fear is gaining ground that it will not be possible in the near future to conclude the new investment loan. In view of this, the urgently necessary reduction of taxation proved, at least in the opinion of the retiring Minister of Finance, impracticable. As, in view of the decline in business, revenue from taxation may gradually fall off, the new Minister of Finance will probably be forced to resort to the issue of Treasury Bonds, which he has permission to issue to a value of 75 million schillings. Naturally, these Treasury Bonds could only be disposed of at home, but the banks will hardly be enthusiastic over the matter, for they have enough to do to provide means for the enterprises with which they are connected.

Austria's economic problem at present can be summed up in the statement that the political conflict must be done away with and the parties must give less consideration to politics and more to economic questions. The burden of taxation would then have to be reduced, and the conclusion of the new loan hastened as much as possible. This would pave the way for conditions in which established Austrian industrial companies, which can count upon steady sales, would be enabled to accumulate reserves and distribute bigger dividends. It would then be feasible in the near future to proceed once more with the issue of capital, which is at present out of the question. In this way the banks would be relieved and the debtors would be placed in a position to work under better conditions. In commerce, the collapse of superfluous concerns is hardly avoidable. But general economic disaster would be averted.

WORLD BALANCES OF PAYMENTS.

THE re-opening of the problem of liquidating war indebtedness, and the general interest displayed in the problem of lending abroad, offer a good opportunity for turning over the latest of the bulky volumes in which the Economic and Financial Section of the League of Nations publishes statistics of international trade and international payments.* Though it is more comprehensive than its predecessors, its value would still be greatly enhanced if the statements were all made in the excellent model form drawn up by a League of Nations Committee some years ago; as it is, general comparisons are difficult. The annual estimates of the United States' balance of indebtedness made by the Department of Commerce are, of course, admirable, but this country lags a long way behind. The table drawn up each year by the Board of Trade depends to a far greater extent than is desirable on pure guess-work, and no attempt is made to analyse the movements of capital. Additions to capital overseas are supposed to be represented by the remainder when the balance on other account is struck. Thus, all the errors and omissions are concentrated on that single item instead of themselves being shown as the final net difference.

Such figures as are contained in the 1928 Memorandum may best be grouped according to a useful classification employed by several writers on international balances of trade. Borrowers and lenders are called "mature" or "immature," according as the interest movement in either direction does or does not exceed, generally speaking, the capital movement in the opposite direction. Obviously, if a country goes on lending (or borrowing) long enough the time will come when the interest it receives (or pays) will more than cover the new export (or import) of capital.

The United Kingdom shares with the Netherlands the title of mature lender. In 1928 the Board of Trade estimate put the net receipts of interest and dividends on investment abroad at £285 million (excluding income from short-term loans), and the "balance available for new investment overseas" at only £149 million. For 1927, the latest year included in the League of Nations Memorandum, the figures were even more emphatic; income from previous loans totalled £270 million and were offset by a new capital investment of only £96 million. The British balance of trade was fully discussed in the *Economist* of March 2nd. No figures are available for the Netherlands later than 1923, when her net export of capital amounted to only some 70 per cent. of her import of interest.

It seems strange not to find the United States yet among the mature lenders. As a matter of fact, that country shares with Canada membership of a group mature in borrowing and immature in lending. The relevant figures are set out below:—

$ (000,000's omitted.)

	1926.			1927.		
	Credit.	Debit.	Balance.	Credit.	Debit.	Balance.
U.S.A.:						
Interest and dividends	735	268	+ 467	795	281	+ 514
Capital movement:						
I. Long term	1,327	1,931	− 604	1,686	2,357	− 671
II. Short term.....	409	24	+ 385	183	23	+ 160
Total.....	1,736	1,955	− 219	1,869	2,380	− 511
Canada:						
Interest and dividends.....	66	280	− 214	} Figures not available.		
Capital movement (all known items).....	191	276	− 85			

In 1927, then, the United States lent $2,380 million abroad, against an income from her foreign investments of $795 million, but at the same time she imported $1,869 million of capital and paid $281 million on the amount already invested. Of the $1,686 million of long-term inward capital movements, more than one-half consisted of repayments of capital lent abroad and resales of American foreign investments, leaving $919 million of new investment by foreigners in the United States. For 1926 the comparable figure was $337 million. It would be strictly correct, on the evidence above, to class the U.S.A. as an immature borrower, but she had, of course, reached maturity before the war reversed her position; it should, however, be remembered that if the annual investment of a billion dollars a year by foreigners in the United States continues, before long she will once more be paying as much in interest as she absorbs in new capital. Canada's borrowing and lending position is equally interesting; on balance she is both lending and paying interest abroad, a state of affairs which again it will only take time to alter. Very complete tables of estimated foreign investments in Canada, and Canadian investments abroad, suggest that the gradual penetration of American capital, which is especially obvious in the field of public utilities, is proceeding much more slowly than has been popularly supposed. On the contrary, these figures purport to show that Canadian investment in the United States is more rapid than American investment in Canada.

* Memorandum on International Trade and Balances of Payments, 1913-1927. Vol. I. Review of World Trade and Balances of Payments. Geneva, 1928. 10s.

Other lenders which are also borrowers (though both functions are in a condition of immaturity) are Japan, Italy, Czechoslovakia, Denmark, Norway and Sweden.

$ (000,000's omitted.)

Country.	Outward (−) and Inward (+) movements (net). Capital. 1924.	1925.	1926.	1927.	Interest. 1924.	1925.	1926.	1927.
Japan	+225·7	...	+67·9	...	− 3·1	...	− 4·3	...
Italy	−17·0	−25·7	...	...	− 8·8	− 5·8	...	...

Sweden	+12·7	−32·2	(b) + 7·5	(b) −24·3	+ 1·5	+ 0·8	+ 1·9	+ 5·1

(a) Long-term investments only.
(b) Incomplete figures.

The figures for the three Scandinavian countries are particularly interesting. The position of Sweden with regard to capital movements seems to be a little unstable, since she alternates between lending and borrowing; this is likely to happen whenever short-term indebtedness plays a large part in the balance. On the other hand, Denmark and Norway are apparently on balance among the world's regular borrowers of capital and payers of interest. Czechoslovakia is a considerable lender, though she has still big interest obligations to make up. The large capital import of Japan, contrasted with a small interest payment, suggests that she will shortly be paying out rather more than at present, but as a considerable portion of her borrowing in the two years for which figures were available was on short-term account it is difficult to draw any positive conclusions.

The list of borrowers whose interest payment does not yet exceed their current borrowings consists almost conclusively of the countries of Central Europe and the Baltic. But Dutch Guiana also appears, and as a matter of fact a great many colonial countries would be in the list if it were possible to obtain figures.

IMMATURE BORROWERS.

$ (000,000's omitted).

Country.	Capital Movement Inward. 1924.	1925.	1926.	1927.	Interest Payment Outward. 1924.	1925.	1926.	1927.

Estonia	(a) 0·5	(a) − 0·5	(a) 0·8	(a) 8·3	0·8	0·8	1·2	1·8

(a) Long term investments only.

The figures available for Austria are omitted as the very heavy item of interest on Government debt has not been separated from amortisation payments, and the results are, therefore, misleading. Like Germany, Austria is enabled, on balance, to pay off capital and interest obligations by regular importation of capital.

The final table shows the position of those countries which are now exporting more in interest each year than they import in fresh capital obligations. The group, naturally includes the British Dominions, other than Canada, and the countries of South and Central America, but again only a few representative figures can be given.

Argentine*...	170·6		31·4	134·2	(b) 273·2		(b)142· 0	(b) 169·2

* The years for these countries are 1923-24, 1924-25, 1925-26 and 1926-27. For the Argentine, only figures for the first two years combined are published. (a) Including certain payments on account of services. (b) Including amortisation of the public debt.

Short-term payments have played a large part in India's balance of trade in a period which covered the stabilisation of her currency on a gold basis. There is also a regular movement of repatriation of outside capital invested in India, while inward movements tend to be rather erratic.

All these figures must, of course, be used with care. They are based on many different methods of calculation and are of widely varying statistical merit. But they do give some sort of picture of the mould into which governmental and commercial indebtedness between countries is settling. Immediately after the war, the old lenders were too much concerned with restoring their own depreciated or destroyed capital equipment to have a great deal to spare for lending abroad, while the countries with the greatest need of outside capital for reconstruction were not financially secure enough to attract the investor. For enabling the present advantageous situation to come to pass, wherein the work of world reconstruction is carried out on the whole to the mutual advantage of creditors and debtors, the chief thanks must go to the economic activities of the League of Nations.

BANK ESTABLISHED IN 1864.
SKANDINAVISKA KREDITAKTIEBOLAGET
GOTHENBURG, STOCKHOLM MALMO.
Branches in all parts of Sweden.
Paid-up Capital and Reserves - Kr.182,000,000

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

COAL MINING RESULTS AND DEVELOPMENTS.

THE issue this week by the Mines Department of the summary of costs of production and proceeds of coal mining for the quarter ended December 31, 1928, makes it possible for last year's results as a whole to be compared with those obtained by the industry in 1927 and in the year immediately preceding the troubles of 1926. The following comparative working figures summarise the position:—

	1925.	1927.	1928.
Tons disposable, in millions	214·4	221·8	211·5
	Million £	Million £	Million £
Wages.....	137·1	117·8	100·2
Stores and timber.....	20·2	20·2	17·0
"Other" costs	29·6	29·2	27·4
Total "net costs"*	192·3	172·9	150·0
Proceeds.....	183·1	167·5	140·2
Loss	9·2‡	5·4	9·8
Miners employed†	1,040,000	961,000	881,000
Output per manshift, cwts.†	18·00	20·60	21·29

It will be seen that last year, despite a further reduction of 80,000 in the average number of miners employed and a substantial improvement in the rate of output per shift, the industry's aggregate loss amounted to the formidable sum of nearly £10 million. In comparison with 1927, net costs were down by £22.9 million (a saving of £17.6 million being effected in wages), but the tonnage disposable was 10.3 million tons lower, and proceeds reduced by no less than £27.3 million. These are sombre figures, but a measure of encouragement is to be derived from the fact that, in the December quarter, there were distinct signs of an improvement in the position. The total loss in all districts for that quarter amounted to only £652,795, against £3,319,571 for the three months ended September 30th, and £2,868,952 for the fourth quarter of 1927. A further increase in output per head was achieved, and, as will be seen from the following summary of working results during the past eighteen months, considerable progress was made towards the

* Including royalties, and after deducting proceeds of miner's coal. † Mean of quarterly averages. ‡ Before crediting subvention.

equation of costs with selling prices. The latter, for the first quarter since the beginning of 1927, recorded an upward movement:—

Period.	Tonnage Disposable (Mlns).	Costs per Ton. Wages.	Costs per Ton. Total, Net.	Proceeds per Ton.	Loss per Ton.	Output per Manshift.
1927—		s. d.	s. d.	s. d.	s. d.	Cwts.
3rd Quarter	54·0	10 4½	15 3	14 1	1 2	20·47
4th Quarter	55·4	10 1	14 10	13 10	1 0	20·82
1928—						
1st Quarter	56·8	9 8	14 2½	13 5	0 9½	21·24
2nd Quarter	50·7	9 7	14 6	13 1	1 5	20·98
3rd Quarter	49·5	9 6	14 4	13 0	1 4	21·13
4th Quarter	54·5	9 2	13 9	13 6	0 3	21·80

The exact figure of loss in the fourth quarter of 1928 was 2.87d. per ton. Turning to individual districts, we find that the December quarter brought marked changes in the situation. The predominantly exporting districts—Northumberland, Durham and South Wales—still suffered losses ranging from 6¼d. to 7¾d. per ton (as compared with debits of 1s. 1d. to 1s. 8d. in the previous three months), but Yorkshire's loss was reduced from 1s. 4d. to a little over 2d. per ton, while the Midland districts turned a combined loss of about 9d. per ton into a profit of over 6d. per ton. In Scotland a loss of 1s. 1½d. in the September quarter was reduced to a debit balance of less than 1½d. per ton. Wage costs per ton ranged in the December quarter from 7s. per ton in Northumberland (a district in which earnings per shift were as low as 7s. 3d.) to 11s. 8¼d. in the Lancashire, Cheshire and North Staffordshire area.

Meanwhile, the discussions of the Mining Association of Great Britain over the question of the co-ordination of district coal schemes have apparently for the present been suspended, partly owing to the fact that in some of the coalfields the schemes introduced last year are under reconsideration and partly because of the reported difficulty of convincing Northumberland and Durham of the economic necessity for the adoption of methods of regulation. In Yorkshire and the Midlands a committee is engaged on the task of devising a simpler scheme than that proposed a few months ago with a view to the removal of the grievances caused by the operation of what is known as the Five Counties Scheme. In Scotland there is reason to believe that an agreement is about to be reached over changes in the plan brought into operation in the early part of 1928. In South Wales, on the other hand, the recent improvement in the state both of the inland and the export trades has, at any rate temporarily, led to almost complete inaction in regard to reorganisation. Meanwhile, however, the Scottish, Midland and Yorkshire, and South Wales colliery owners have reached an understanding for the regulation of the prices at which coal shall in future be exported to Ireland. A Joint Co-ordinated Committee is being appointed, consisting of representatives of the Irish Coal Importers' Association and the several associations of British coalowners, to act in a consultative and advisory capacity in regard to all matters affecting the Irish coal trade. Of these matters the most important are those relating to the raising or lowering of the prices of coal, either generally or in regard to any one or more of the districts, and the form which joint action should take to enforce the provisions of the agreement. It is proposed under this scheme that, for prescribed periods, the prices of coal shall be fixed, that increases or decreases of the scheduled prices shall be by way of flat rate additions or reductions operating simultaneously throughout the one or more districts affected, and that discipline shall take the form of a refusal by the importers to deal with offending collieries and of a refusal by the colliery owners to deal with offending importers. Supplies are to be made through existing channels of supply so long as they remain under the control of the parties to the agreement. It is stated that over 97 per cent. of the coal importers in Northern Ireland and the Irish Free State have expressed their readiness to come into the scheme, and that complete unity has been secured among the colliery owners. The consumption of English, Scottish and Welsh coals in Ireland amounts annually to between 4½ and 5 million tons, to which the Lancashire, Midland and Yorkshire coalfields contribute approximately 2¼ million tons, the Scottish ports between 1¾ and 2 million tons, and the Bristol Channel ports between 600,000 and 650,000 tons per annum.

It is reasonable to expect that the better demand for coal which materialised early this year, partly as a temporary result of the abnormally severe weather, will be found to have enabled the great majority of districts to work at a profit in the first quarter of 1929 at least. At the same time, the industry would be ill-advised if it regarded its recent recovery as justification for complacent confidence in the future. As is shown in the League of Nations' report on the problem of the coal industry (referred to in another column) the difficulties which have to be overcome are of a grave and permanent nature, and the need for co-operation, both national and international, is still acute.

BULGARIA.

With a population of under five and a half millions, Bulgaria is the smallest of the Danubian States, but its geographical position gives it considerable importance in the political life of South-Eastern Europe. Moreover, in the solution of some of its more pressing problems, it has received the blessing of the League of Nations, and this fact alone makes its present economic position a matter of some interest to the outside world. In the Supplement, which we publish this week, an attempt has been made to give a general survey of the manner in which this little mountain country is facing the results of a legacy of six years of almost continuous warfare.

It should never be forgotten that Bulgaria did not attain to the rank of even semi-independent statehood until the year 1878. Centuries of Turkish misrule made the country one of the most backward in Europe, but its new leaders set to work with a will and soon laid the most essential foundations of modern State life. Fifty years is but a short period in the history of a nation and, while much has been achieved already, it is not surprising that much should still remain to be accomplished. Roads and railways have been constructed, but more are urgently required. Towns have been modernised, a banking system has been improvised, and education has made rapid strides. But Bulgaria is essentially an agricultural country, and little has been done as yet to raise the standard of cultivation. The needs of the rural population require immediate attention, for it is only by intensifying agricultural production that the country can hope to cope with the rapid increase in its population.

During the past ten years, Bulgaria has been in many ways most unfortunate. The harvests, upon which it depends almost exclusively, have been well below the average, while the earthquake last year caused damage which amounted, according to the most conservative estimate, to two million pounds sterling—a large sum for a small and relatively poor land. Nevertheless, the advent of foreign capital has done much to ease the situation. Thanks to the loan issued under the auspices of the League of Nations in 1926, large numbers of refugees, whose very existence was a menace to the peaceful evolution of the country, have been settled on the land and are now helping to increase the national wealth. The second League loan, issued in 1928, has improved the position of the National Bank still further, and has made possible the stabilisation of the currency. If the Reparations settlement is applied on reasonable lines, and if the responsible leaders of opinion realise the overwhelming importance of a forward policy in agriculture and afforestation, there seems no reason why the organised energy of the peasantry should not overcome the various difficulties with which Bulgaria is still faced.

Notes of the Week.

Inter-Allied Debt Controversy.—Our Paris correspondent writes:—"M Caillaux, in an article published on Wednesday, takes Mr Philip Snowden severely to task, as might be expected, for his recent remarkable expression of opinion in regard to a possible future repudiation by a Socialist Government of agreements made by its predecessors with the Continental debtors of Great Britain. The financial leader of the British Socialist Party (M Caillaux paraphrases) wants Great Britain to exact from its old Allies, and if possible from its former enemies, larger annuities than that which she has undertaken to pay to the United States, so that she might make a profit on the inter-Allied debts until the time comes for the Labour Party's ideal to be realised, and debts of all kinds to be wiped out. When such a day arrives, however, the English Budget, comfortably provided for by the other Allied countries, if the desires of the Labour ex-Chancellor of the Exchequer be realised, would be deprived of a portion of its resources! How is it possible for a man of such standing as Mr Snowden to voice such contradictions? . . . It is extravagant, even monstrous, to claim that a Government is not bound by international engagements regularly signed by its predecessors. Mr Snowden, however, has risked his anarchical theory, and, if he has been obliged to beat a retreat to some extent before the general reprobation he encountered, he has only done so by equivocating. In any case, he specifically stated that he and his friends, if they are returned to power, will regard the agreement concluded with France as null, in view of the fact that it has not been ratified by us." This M Caillaux urges as a reason why the French Chambers should ratify the Washington and London agreements without a moment's delay, in view of the possibility of a Socialist victory at the elections. In retort to the opinion often expressed in France, that the Washington agreement is an onerous one for France, M Caillaux quotes Sir Laming Worthington Evans's statements in the House of Commons to the effect that, if the present value of the debt agreements be taken as the basis of comparison, the French settlement with America calls for the payment of 49 per cent. of the total debt, while the French settlement with Great Britain represents only 47 per cent." On any comparable basis of calculation we are satisfied that the concession made by Britain to France is definitely greater than that made by the United States to France. We also sympathise with M Caillaux's criticism of lack of logic in the position taken by Mr Snowden. But we cannot shut our eyes to the fact that Mr Snowden's comments, however unwise from the point of view of the prestige of a late, and possibly, future, Chancellor of the Exchequer, are at least having the effect of hastening the ratification of the debt agreement with Great Britain—an act which, in view of the generosity of the terms proposed, is long overdue. Though our correspondent does not mention the fact, it is probable that M Caillaux agrees with Mr Snowden's criticisms of the terms of the Anglo-American settlement. For that agreement established a standard, set negotiations going, and made it almost imperative for other debtors to come to terms with America. We hold, however, as we have always held, that the case for settlement, which the Prime Minister put so forcibly in his speech at the Bankers' Dinner on Tuesday, is conclusive. We would add that this settlement has not only had the effect of restoring the prestige of the City of London, but, by the stimulation of commercial activity, transit trade, shipping, etc., has undoubtedly directly contributed an increase to the volume of employment.

Return of the Simon Commission.—We congratulate Sir John Simon and his colleagues on their safe return from their second and larger investigation *in situ* of the fundamental facts of the Indian problem. Rather than dwell upon the obstacles with which the Commission has been faced and the difficulties which it still has to resolve in framing its report, we prefer to call attention to two salient facts. The first is that the Commission is not, as some sections of Indian opinion appear to suppose, entrusted with the task of deciding what the future constitution of India shall be. That responsible decision rests with Parliament. The Commission's laborious task has been, and is, to acquaint itself fully with essential facts and trends of opinion, to chronicle its considered impressions for the benefit of Parliament, and to indicate the conclusions to which its study and experience point. The second fact is that, although nothing like full co-operation of all shades of Indian opinion in the work of enquiry was obtained, the Commission has enjoyed throughout this year's tour the co-operation of the Indian Central Committee, and this Committee is about to visit England to continue its work side by side with the Simon Commission. These were two of the facts emphasised by Sir John in a statement made on his arrival in England. A third feature of this statement was the plea that Indian affairs should be rigidly excluded from political controversy during the British election campaign. This plea he followed up in a speech delivered at the National Liberal Club, on Tuesday, when he said: "India is in cold storage until the election is over." But, if India is in cold storage, Sir John emerges as an active protagonist of British Liberalism, and his first political speech of the present campaign shows that he joins the other Liberal leaders in lining up behind the unemployment programme which Mr Lloyd George has laid before the country.

Irish Free State Budget.—"Broadly speaking, the provisions of the present Budget leave matters as they were." This sentence, writes our Dublin correspondent, strikes the keynote of Mr Blythe's speech in introducing the Free State Budget. With one exception, there are no changes of taxation by way either of increase or of remission. Revenue and expenditure balance to a nicety, and it would appear that the country has reached a position of complete financial equilibrium. Mr Blythe is certainly justified in his claim that his conservative policy during the last five years is now beginning to show its good results, and in striking a note of optimism regarding future prospects. This year is the least sensational and the most satisfactory Budget in the short history of the Free State. The separation of abnormal from normal revenue and expenditure has become the settled practice of the Ministry of Finance. The amount of abnormal expenditure, which is mainly the result of the post-Treaty troubles, has been steadily declining, and is estimated at £1,080,000 for the coming year. The estimated normal expenditure amounts to £23,925,000, a reduction of £374,000. Although this reduction may appear small, it was achieved only as the result of a far-reaching economy campaign. The estimated revenue is £23,939,000, so that with taxation on its existing basis, the Budget will balance with a nominal surplus of £14,000. In view of this result, Mr. Blythe proposes to make no changes in the tax system, with the exception of an additional tax on motor omnibuses, the proceeds of which will benefit, not the Exchequer, but the Road Fund. Earlier in the year it was announced that a mileage tax was to be imposed on these vehicles, but it is now admitted that such a tax would be unduly onerous, and it has been replaced by an increase in the annual tax based on seating capacity. This additional tax should have the result not only of strengthening the Road Fund but also of assisting the much-harassed railways. Considerable emphasis was laid by Mr Blythe on the comparatively light burden of the public debt. When allowance is made for the assets held by the Exchequer against sums advanced, the net amount of the debt is £13,983,000. If to this is added the value of the debt owing to Great Britain, which is being liquidated by annuities of £250,000, the total dead-weight burden of State indebtedness is less than £20,000,000. This represents less than one year's revenue, and less than £7 per head of the population. Another £5,000,000 will be borrowed in the present year, principally to pay for the construction of the Shannon hydro-electric works, which are nearing completion. In view of the fact that the present 5 per cent. National Loan, issued at 95½, now stands at 102, there is every

reason to hope that the new loan will be raised on extremely advantageous terms. It is no small tribute to the financial standing of the Free State that the National Loan stands at a higher price in the New York market than that of any other British dominion. Considerable pressure has been brought to bear on the Government by farmers in favour of some system of de-rating of agricultural land, and Mr Blythe's remarks on this subject were looked forward to with much interest. He explained that the introduction of any scheme analogous to that adopted in England would be quite impossible in the present circumstances of the Free State. Agricultural lands would receive 92 per cent. of the benefit of such a scheme in Ireland, as contrasted with about 20 per cent. in Great Britain. The annual cost of the scheme would be over £2,000,000, or 9 per cent. of the present revenue, whereas in Great Britain the cost is less than 3 per cent. of the revenue. Moreover, the petrol tax, which is relied on to cover most of the cost of the scheme in Great Britain, would meet only *one-fifth of its cost in the Free State*, and seven or eight additional taxes would be necessary. Finally, Mr Blythe pointed out, the responsibility of local authorities would be seriously reduced, and there would be a danger of an " orgy of expenditure " by county councils, who would be relieved of the burden of finding the necessary revenue. The criticism of the Budget by the Opposition parties in the Dail did not bring to light any constructive proposals of importance. The usual pleas were made for expenditure of public money in relieving unemployment, for more protective tariffs, and for a differential income tax on investments outside the Free State. Mr Blythe had very little trouble in disposing of these suggstions. The net result of the Budget has been to strengthen the position of the Government and improve the credit of the country.

The " I'm Alone " Affair Goes to Arbitration.—In the " I'm Alone " affair there were originally two sets of proceedings: the legal action taken by the United States Government against the Captain of the " I'm Alone "; and the diplomatic controversy between the United States Government and the Canadian Government. This controversy was over the question what the exact circumstances were in which the " I'm Alone " was sunk and whether the sinking was justified on the general basis of international law as modified by the treaty of January, 1924. In this treaty certain restrictions upon the customary freedom of the high seas in peace-time were accepted, as a concession to the United States, by the British Empire. The action against the Captain of the " I'm Alone " has been dropped; but the negotiations have failed to produce agreement. Accordingly, the controversy between the two Governments has been transferred, as the treaty itself provides, from the field of diplomacy to that of arbitration. It is now to be examined by a commission of two; and it is reported that the commissioners are likely to be Mr Taft and Mr Anglin, who are chief justices respectively of the United States and Canada. They will have to consider points of fact as well as points of law, and in this case both are intricate. *Primâ facie* it might seem as though the dropping of the action against the Captain of the " I'm Alone " were a tacit admission by the United States that it was in the wrong. But the Americans may argue that the evidence of the Captain's guilt or innocence sank with his vessel, and may suggest that this was the reason why he preferred to see her sunk rather than taken for examination into an American port. The Canadian contention will be that, even if the " I'm Alone " was a rum-runner, and would have been convicted if caught, the United States authorities lacked the right to take the action which they did take. The arbitration procedure may be a lengthy and elaborate business, but it will be conducted in a calm judicial atmosphere from which no disturbance of good relations is at all likely to arise. Indeed, remarkable good temper and good sense have been shown on both sides during the earlier and more thorny stages of the affair which have now been left behind.

The Disarmament Discussions.—A League correspondent writes:—It is scarcely possible to say that the promising developments as between the naval Powers in the Preparatory Disarmament Commission have created any excessive haste on the part of the great military powers to follow suit. On the naval end of affairs the general international repercussions have been favourable. Meanwhile the Commission has been discussing military effectives, air armaments, chemical warfare and conscription. So far there have been no signs of concessions on the part of any of the big military powers, and no response, except promises for the future, to a further blunt appeal from Mr Gibson for concessions to be made and for all the cards to be thrown on the table now. There has been, in fact, a steady duel between Count Bernstorff (Germany) and M Massigli (France), with Italy in the offing. Count Bernstorff makes a proposal, and M Massigli wonders whether he is thinking about the French system. Count Bernstorff replies that he would not think of being so personal, but that, if he were, it would only be a compliment to the greatest military power on earth. Count Bernstoff proposes that bombing from aeroplanes should be abolished as it is a blind attack. M Massigli asks whether a long-range 120 kilometre gun is any less blind. Germany points out that she is prevented by the Peace Treaty from having a system of conscription; France and the other Powers explain that this is the only democratic system, and cannot be changed. So the affair goes on. The most important matter of discussion has been the question of the limitation of trained reserves. Both Lord Cushendun and Mr Gibson, while explaining that they still hold the opinion that trained reserves should be limited, nevertheless declared they would not press their view in face of the difficulty of making progress on that basis. Lord Cushendun pointed out with some force that he did not see how, under the conscription system, such limitation was administratively possible, and as it was clear that states were not ready to relinquish the system they must get ahead as well as they could on other lines. He laconically observed that there would still be plenty to do. This, of course, is a great concession to French opinion, and their return for it is still awaited. Mr Litvinoff argued *that unless such* reserves were to be limited there was no hope of any reduction in land armaments at all. This will be true unless there is some readiness to reduce the annual contingents called up and the periods of service with the colours. The Belgians have to some extent done this, and the French have reduced their periods of service, but the French have not been very clear as to whether they are prepared to reduce their annual contingents. They have hitherto argued that in view of their population difficulty they cannot afford not to have all their men trained, but they may perhaps come to see that this is a short-sighted attitude in view of the fact that the population of Italy is considerably increasing—a fact which may hoist them with their own petard. The Commission, among other things, has decided to include an article in its draft convention in terms which forbid absolutely the use of bacteriological means of warfare, but it was not possible to get agreement that the use of asphyxiating gases should be prohibited absolutely; that is to say, if one belligerent state made use of gas the other belligerents would consider their hands free; but if a belligerent state used bacteriological means of warfare that would not free any of its enemies from their obligations not to use them. The Commission has not accepted the German idea that civil aviation ought not to be considered in relation to air armaments, but has accepted the Russian proposal that there should be no deliberate construction of civil flying machines for adaptability to warfare. There are differences of opinion as to the distance from the homeland at which air forces should be regarded as overseas forces, and in this, as in other things, is an underlying tussle between Italy and France. Mr Litvinoff failed to bring the Commission to a decision to scrap the word " limitation " in its draft convention, and during the course of the discussion, in which it was averred that limitation did not exclude reduction, Lord Cushendun gave as an example of the difficulty of insisting on reduction alone, the great diminution in the size of the British Army, which, he said, could now really be described as a " contemptible little army." That is an argument which, one fears, may be used by other states with less justification.

Our Index Number.—The slight upward tendency evidenced in the course of wholesale prices during February and March was definitely reversed last month, our index number recording, at the end of April, a fall of 2.2 per cent. Recent movements in the indices of each group are summarised below, the figures for April 30, 1928, being added for purposes of comparison:—

AVERAGE, 1927 = 100.

End of	April, 1928.	Jan., 1929.	Feb., 1929.	Mar., 1929.	April, 1929.
Cereals and meat	111·4	96·7	101·2	100·9	99·1
Other foods	95·0	89·4	88·5	87·3	86·5
Textiles.....	109·2	101·3	99·9	100·8	96·7
Minerals	91·8	94·8	96·4	99·7	96·7
Miscellaneous	98·3	91·2	91·4	91·4	90·0
Complete Index	101·4	94·7	95·6	96·1	94·0

The outstanding features of the month were weakness of textile prices and a sharp re-action in metals. The following table gives the percentage of change in the index figure for each group, and in the price of each individual commodity, as compared with a month ago and with the corresponding date last year:—

	Inc. (+) or Dec. (−) per cent. compared with

Among foodstuffs, there were increases in the price of English beef and Danish bacon. Potatoes and imported mutton cheapened, and quotations for Canadian wheat and Plate maize declined. In the textile group the substantial rate of fall was occasioned by lower values of raw cotton, jute, flax, and silk. The chief alterations of price in the minerals group were large falls in the case of copper and tin. Iron and steel quotations were firm. In the miscellaneous group rubber was prominent with a decline of 11 per cent. In comparison with the position a year ago, price changes show a fairly wide divergence, the net result of which, as measured by our index number, is a fall of 7.3 per cent. in the general price-level. The figures of our index number, converted to a percentage of the average for 1913, are given below:—

AVERAGE, 1913 = 100.

Date.	Cereals and Meat.	Other Foods.	Textiles.	Minerals.	Miscellaneous.	Complete Index.
Average, 1924.	168·5	215·8	214·7	149·3	122·6	166·2
,, 1925.	168·4	204·2	194·6	139·8	126·2	160·9
,, 1926.	151·7	195·3	152·6	149·8	120·7	149·4
,, 1927.	147·6	202·2	157·0	125·1	116·1	143·7
,, 1928.	152·9	189·7	165·0	115·2	111·2	140·9
End Apr., 1928.	164·4	192·1	171·4	114·8	114·1	145·7
End Mar., 1929.	148·9	176·5	158·2	124·7	106·1	138·1
End Apr., 1929.	146·2	174·9	151·8	120·9	104·5	135·0

Calculated with 1924 as the base year, our index number at April 30th yields a figure of 81.2, as compared with 83.1 a month ago, and 81.8 at the end of January.

World Coal Problems.—The Economic Committee of the League of Nations has just issued an interim report on the " Problem of the Coal Industry," which it is studying at the request of the Council of the Assembly. This document, while discussing possible remedies, does not make definite recommendations. Yet it is of substantial interest for three reasons. It serves to remind the British public that it is not only Britain where the coal industry is severely depressed; it brings out clearly the causes of the depression besetting all producing countries; and it roundly condemns national measures of protection and artificial State encouragement. In the opening paragraphs the physical scope of the problem is succintly defined. " There are only four important countries of export—the United States of America, the United Kingdom, Germany and Poland. But in normal years the United States sells the great bulk of her surplus coal across her northern frontier to Canada. . . . Her exports, indeed, are relatively small, amounting in normal years to only about 4½ per cent. of her production, and of these exports about four-fifths are consigned to Canada. Her coal industry is thus largely self-contained and only in exceptional years has it any important direct contact with non-contiguous countries. From this it follows that the international problem . . . is mainly confined to Europe." The proviso, of course, has to be made that if and when European coal prices reach a certain level, American coal will be attracted to European markets, and this fact sets a limit to the effective possibility of a price agreement policy among European producers. The most important section of the report is devoted to showing clearly the causes of coal trade depression. As a result of industrial developments—e.g., extended use of oil, hydro-electric power, more economical consumption methods, etc.—the world consumption of coal and lignite has increased by only 4 per cent. between 1913 and 1928, whereas during the same period the production of raw materials and foodstuffs, and the trade of the world has increased by over 20 per cent. Most striking in this connection is the situation in the United States. There almost exactly the same quantity of coal was mined in 1913 and in 1928. The consumption of coal was only 3.3 per cent. higher in the latter year, whereas industrial production in 1925 was between two-thirds and three-quarters greater and since then has risen still further. The crux of the matter is that the past 15 years have only seen a growth in demand equivalent to that which was normal in a single pre-war year. The conclusion is not hopeful:—" Calculations based on recent statistics and experience would thus not suggest that, even if productive capacity were not further increased, and even if there were no other aggravating features, the gap between demand and capacity to which the depression is due could be reduced to normal and innocuous dimensions for some decades." The report is to be discussed at the meeting of the Economic Consultative Committee at Geneva next week.

Cotton Trade Combines.—Although no official announcement has yet been made, it is understood, writes our Manchester correspondent, that the negotiations which have been taking place in Manchester and London during the last few weeks in connection with the proposed combine of Lancashire cotton mills spinning Egyptian yarns have made considerable progress, and a definite statement is expected at an early date. There is a probability of about fifteen companies being amalgamated, the mills affected containing about 2¼ million spindles. The present share capital of these concerns is about £6,000,000, with loans and debentures of £1,500,000. It is rumoured that the representatives of the several firms are trying to arrange a scheme whereby uncalled capital will be cancelled. This movement is receiving the support of London financiers and it is estimated that if the negotiations are successful the mills will be in a better position to meet competition. Since a week ago, the shareholders of three Lancashire mills have had meetings to consider offers from the Lancashire Cotton Corporation, Limited. In connection with the Orme Ring Mill (1920), Limited, Oldham, the proposal of the Corporation was equal to 20s. in the £ to debenture holders in cash and shares, 10s. 8d. in the £ to un-

secured creditors, and 1s. 7d. in the £ to fully paid shareholders in shares of the Corporation. At the meeting of the mill company, however, the directors announced that they were against accepting the offer and the shareholders rejected the proposal. With regard to the Lees Union Mill (1919), Limited, Oldham, the Corporation offered £94,224, the bank to receive 20s. in the £, the creditors 12s. 5d. in the £ and the shareholders 1s. 9d. in the £. It has transpired, however, that the bank has since given the shareholders £10,000 preference and ordinary shares, reducing their amount to 17s. in the £ and increasing the shareholders' amount to about 3s. 6d. in the £. Both the shareholders and creditors decided to accept the offer. The shareholders of the New York Mill (1920), Limited, Heywood, have this week decided to accept the terms put forward by the Cotton Corporation, Limited. The proposal provides for 14s. 2d. in the £ to be paid to debenture holders, 1s. 1d. in the £ to unsecured creditors and 11d. in the £ to shareholders. The Lancashire Cotton Corporation, Limited, has now valued over 150 mills and offers have been made for 40 concerns.

Fall in Cotton Prices.—During the last six weeks, writes our Manchester correspondent, there has been a rather striking decline in prices for raw cotton, the drop in American qualities being over 1d. per lb., with a fall in Egyptian descriptions of about 2d. per lb. On March 16th the spot quotation for middling American in Liverpool was 11.14d. per lb., whereas on Wednesday last the figure was 9.95d. During the same period there has been a reduction in the spot rate in Liverpool for fully good fair Sakellaridis Egyptian from 19.45d. to 17.40d. This movement of values has been very largely due to improved reports relating to the prospects for the new crop in the United States. The weather in the belt during the last few weeks has been very favourable, and although at one time the growth was rather late, good progress has recently been made with farm work and the backwardness has been recovered. The Government estimate of the acreage will not be published until July 8th, but according to private advices there is a probability of an increase in the area under cultivation of nearly 5 per cent., with a possibility of a record acreage of about 50,000,000 acres. It is altogether too early for traders to be sure of a big yield, as the crop has yet to be made, but undoubtedly the outlook at the moment is favourable. The crop for last season was about 14¼ million bales. World consumption at the present time is between 15 and 15¼ million bales. It is therefore necessary that the new growth should be well over 15 million bales. The production per acre varies very widely from season to season, and the ultimate output will be largely determined by the weather in the belt this summer. Prices are now on a more reasonable basis than for a long time back, and wide fluctuations in rates in New York and Liverpool are likely during the next few months according to the weather reports from the United States.

The Cost of Post-War Housing.—Interesting statistics are now available regarding the total cost of post-war housing in Great Britain. Up to the end of the last financial year, March 31, 1929, the total number of houses completed in England and Wales towards which Exchequer contributions were made under the various Housing Acts since 1919 was 790,101, to which 39,186 provided under the Housing (Additional Powers) Act, 1919, fall to be added. The aggregate is, therefore, in round numbers, 830,000. Some 410,000 having been built in the same period without State assistance. The combined Exchequer grant under the large heading and the smaller one up to March 31, 1929, is almost £74 million, to which at least £323,000 should be added in connection with the purchase of huts, premiums paid to the Public Works Loans Board on redemption of loans by public utility societies and other miscellaneous services in connection with housing. On a similar basis in Scotland up to March 31, 1929, the total outlay has been £9,338,377, so that the total for Great Britain provided from national funds approaches £84 million. The much larger part of that total is attributable to housing schemes under the 1919 Addison Act, when the liability of the local authorities was limited to the product of a rate of one penny in the pound. The Ministry of Health estimates for 1929-30 amount to £21,228,664 net, of which housing grants are responsible for £11,150,000, or more than half. The estimated grants under the Wheatley Act is £2,150,000 under the Chamberlain Act £2,200,000, and under the Addison Act £6,790,000, the aggregate of the three showing an increase of £490,000 over 1928-9. The expenditure of the local authorities since the war has also been substantial, but in that case the exact burden is difficult to disentangle, since part of it is expenditure out of loans, another part is not on a loan basis, and it includes outlay which is met by Government grants, rates, rents and other items of receipt. Under loan and non-loan headings substantial sums have been advanced by the local authorities for the acquisition of small dwellings. In that case the sums are repayable to the local authorities by the applicants, who have been enabled to acquire their houses in this way.

Education Policy.—In expounding the Government policy to the nation Mr Baldwin made much of his programme for education, though he left very vague the question of the exact nature of that programme. In presenting the Board of Education estimates for 1929-30 in the House of Commons last week, Lord Eustace Percy did not reveal any programme other than continued slow progress along the lines followed in recent years. The recently published report of the Board of Education for 1928 (H.M. Stationery Office, Cmd. 3307, 4s.) reveals a modest performance. The number of classes containing more than 50 pupils fell during the financial year from 20,201 to 16,686, and 277 schools were removed from the "black list." Plans for 10,000 new secondary school places have been sanctioned during the year. Enquiries have been initiated into the requirements of technical training for salesmanship and for the engineering industries. Indeed, a weak point of the Government's record in this department, fastened upon by the Opposition at an early stage of the debate, is the prevalence of enquiries over concrete action. Enquiries are no doubt an indispensable preliminary to the unification and co-ordination of our educational system which Lord Eustace Percy envisages, but while we have only nursery schools enough to provide for 1,367 children, and a pressure on school accommodation which makes classes unwieldy and provides an excuse for shelving the recommendation of the Consultative Committee to raise the school age to 15, an unusual craving for economy has prevented any substantial increase in the estimates. Of the gross increase of £687,019, £337,800 is attributable to automatic growth in the sum due for pensions to teachers, while £341,173 is required for grants for higher education, called forth by the gradual increase in the expenditure of local authorities. These are partly offset by decreases, mainly in the grants for elementary education, leaving a net increase of £434,071 over the estimate for 1928. The decrease in the grant for elementary education is the result of the transfer of £750,000 of the burden to local authorities, under the Rating and Valuation Act of 1925, operating through the increased assessment on April 1, 1929. According to the Parliamentary Secretary to the Board of Education, this is not being felt by the local authorities as undue pressure. That may be so, but in view of the urgent need for improved accommodation and equipment it seems reasonable to ask why the proceeds could not have gone to the improvement of education instead of to the relief of the National Exchequer. Within the limits of its economy, the Government has shown a respectable record in the matter of education, but the stress laid upon education policy in the Prime Minister's Drury Lane speech was such as to raise the expectation that a more progressive policy than that foreshadowed by Lord Eustace Percy would be forthcoming.

"The Times" and Tariffs.—We have been accustomed to regard the London *Times*, though not perhaps as wholeheartedly protectionist, as a firm supporter of Mr Baldwin's programme of indefinitely extended "Safeguarding." Yet in a recent leading article (April 24th) that great journal complains in such terms against the uncertainty of the tariff policy of a friendly nation that it is scarcely possible to believe that readers were not meant to infer an argument against increasing the uncertainty of our own. The lack of enthusiasm shown by British exhibitors towards the Seville and Barcelona Exhibitions is ascribed to "the tendency of many foreign countries towards tariff changes of so drastic a nature as to make export trade to them an uncertain, if not a profitless undertaking," and in particular to "nervousness about the future tariff policy of Spain." The article goes on to say: "The friendliness of the relation between the two countries is not in question; it is the strictly business aspect of the matter that has led to hesitation . . . The trade between the two nations is so largely complementary, and mutually so beneficial, that it would be most unfortunate if the present uncertainty should check its natural development. It would be welcome news that in the interests of both nations the plans for higher protective duties had been reconsidered." With all this we most cordially agree. But, remembering those words, "strictly business aspect," "mutually beneficial trade," "the interests of both nations," we would reverse the mirror for a moment and set in place of the suspended schemes of the Marquès de Estella and his Council of Economy the election platform of Mr Baldwin and the Conservative party. For there can be no doubt that the tariff changes proposed for this country are drastic enough. Any industry which can stay the course of a safeguarding inquiry is to have protection, and, at the same time, the fences are to be lowered. We have only to envisage safeguarding for the iron and steel industry alone to realise what a revolution in our tariff policy is being set before the electorate. Nor, when we decide to protect, do we do it by halves; the standard safeguarding tariff is 33⅓ per cent.—an extremely high figure. Spain, and every other country with which we trade, have an obvious and an unanswerable retort. "It is the strictly business aspect of the matter which has led to hesitation; the trade between nations is so largely complementary, and mutually so beneficial, that it would be most unfortunate if the present uncertainty should check its natural development. It would be welcome news that in the interests of all nations the plans for higher protective duties had been reconsidered."

The Mohair Clip.—In two or three weeks, writes our Bradford Correspondent, the new Turkey and South African mohair clips will be coming on to the market, and, during the past fortnight, leading brokers from Constantinople and Port Elizabeth have visited Bradford, where the bulk of the hair imported into this country is consumed. During the past twelve months Bradford mohair merchants and spinners have had an unsatisfactory time, and it is now evident that last season the two clips named were bought much too dearly. Last season summer first cost around 24d. to 26d., but it is now doubtful whether more than 20d. would be paid. This reduction in current value is largely due to lessened consumption. It has been very difficult indeed to keep machinery running, and some spinners have lost heavily owing to having to carry large quantities of mohair in the matching stage. Some still have heavy stocks of both Turkey and Cape hair. The Board of Trade returns for March contained figures which showed quite clearly that the industry is not doing too well. When exports of mohair yarn show a decline of over 50 per cent., it is obvious that spinners have suffered a serious loss of business, and this is exactly what occurred in 1928 compared with 1913, though in 1926 the decrease was very much more. There has been a serious decline in export business with Germany, and any increase in exports to other countries has been quite insignificant. In 1913 1,253,700 lb. of mohair yarn was sold to Russia, and it can be taken for granted that Bradford firms are quite alive to any possibility of developing trade with that country, but Russia is still in an impoverished state, and long credit is asked for everything it is desired to purchase. American manufacturers have been credited with leading the way in advertising mohair goods, but Lister and Co., Limited, of Manningham Mills, Bradford, have decided to open showrooms in the West End of London. There has been a great development in the use of mohair fabrics in the United States for upholstering purposes, but the general public in England and on the Continent know only too little about mohair fabrics. Angora goat breeders in the States have had every encouragement to increase their flocks, and this year's clip will be the largest ever shorn. At the same time, the mohair trade even there has not been too good during the past six months, and it is doubtful whether two or three of the big Boston dealers who have been accustomed to taking Cape firsts and kids will operate freely. The weight of stock held by American dealers is not known, but, according to figures recently issued by the United States Board of Agriculture, the mohair in bond is only 1,515,124 lb. If a reasonable demand develops in the United States there will soon be a buying movement in Port Elizabeth. It is understood that the carry-over of Turkey hair is only 12,000 bags of 200 lb. each. The new clip is expected to be about the same size as last—50,000 bags. The consumption of mohair for carpets, rugs and other fabrics in Turkey is quite large, but Stamboul merchants expect Bradford and Boston orders. It is useless to anticipate the same level of prices as last year. The representative of a leading firm of Port Elizabeth selling brokers has stated that, after interviewing merchants and spinners, he is of the opinion that lower prices are inevitable. Selling brokers should be willing to sell at 18d. for good Cape summer firsts—and good summer kids are worth about 34d. to 36d., ex warehouse. The actual movement of prices will depend upon whether the hands of Bradford merchants and spinners are forced by Boston firms. Our own users need to buy the new clip as cheaply as possible, spinners hoping that lower prices will bring out a better demand for yarn. It is understood that business has been done in new clip firsts at 18d. Port Elizabeth, and that 32d. has been taken for short fine kids. This is a big reduction compared with last year, but at such prices as these the hair should appeal to Bradford.

French Vaccination Order.—In a Note of the Week in our issue of April 20th, which appeared at a moment when conflicting reports were current, it was suggested that the vaccination order applied to travellers passing through France as well as to those who propose to stay in France. We are asked by the Swiss Federal Railways to state that, as the order now stands, this is not the case. Passengers travelling through France without breaking the journey are not subject to the order.

Richard Cobden Lectureship.—At the suggestion of President Nicholas Murray Butler, head of the Carnegie Endowment for International Peace, and with the financial assistance of that body, the Dunford House Cobden Memorial Association has established an annual Lecture in memory of Richard Cobden—to be called the Richard Cobden Lecture. The association has invited Sir Charles Mallet to be the first lecturer under this scheme, and he has accepted the invitation. The lecture will be delivered in London this summer. The date, place, and subject of the lecture will be announced later.

INSURANCE NOTES.

Yorkshire Insurance Co., Limited.—The 1928 figures of this company are very good indeed. The report is of special interest, since it includes the results of the quinquennial valuation and distribution of profits in the life department. In certain respects the actuarial basis employed in making the calculations has been strengthened, but, notwithstanding this, the profits earned during the five years ended 1928 are more than double those of the preceding quinquennium, as will be seen from the following table:—

	1919–1923.	1924–1928.
	£	£
Surplus earned during the quinquennium	249,669	522,241
Brought forward from previous quinquennium	57,539	70,208
	307,208	592,449
Allocations:—		
To bonuses to policy-holders	213,300	432,450
,, shareholders	23,700	48,050
,, carried forward to next quinquennium	70,208	111,949
	307,208	592,449

The shareholders' portion of the profits works out at one-ninth of the amount distributed in bonuses to policyholders, and this amount has been more than doubled as compared with the preceding five years. Consequently during the ensuing five years commencing in 1929, the profit and loss account will benefit each year by a contribution from the life department amounting to £9,610, compared with £4,740 in each of the years of the quinquennium just ended. Although, in relation to the profits of the other departments this is a small sum, at any rate it is a stable amount, and is certain to increase as time goes on. The bonus to policyholders takes the form of a reversionary addition to the sum assured calculated at varying rates according to age at entry and duration. It is stated in the report that the average rate of reversionary bonus for the five years just ended works out at 48s. per cent. per annum, compared with 36s. per cent. per annum in the preceding five years. As regards new business in 1928, the company reports a satisfactory increase, both from the United Kingdom and from foreign connections. The total amount transacted in 1928 amounted to £1,730,212, compared with £1,514,993 in 1927. As regards the fire and accident branches, there was a small diminution in fire premium income, but other departments register a steady increase in premiums, and the table below shows that the underwriting results were very satisfactory:—

	1927. Amount of Profit. £	1927. Percentage of Premiums.	1928. Amount of Profit. £	1928. Percentage of Premiums.
Fire	144,144	13·1	148,354	13·9
Accident and General	62,812	5·3	51,772	4·2
Marine	−9,609	−2·0	−10,328	−2·1
Life	4,700	...	4,740	...
Profits from reversions	3,000	...	5,000	...
Excess profits duty recovery	...	...	121,300	...
	205,087	...	320,838	...
Less items debited to profit and loss	93,157	...	85,968	...
Total net trading surplus	111,930	...	234,870	...

Clearly the 1928 figures have been swollen by a "windfall" of what is described in the report as "the amount recovered on the final determination of excess profits duty liability, together with the balance of the special reserve in marine underwriters' profit account, not now required." The dividend has been increased from 90 per cent. to 95 per cent., but the interest earnings have also risen, and at £126,430 are sufficient to cover the cost of the higher dividend amounting to £125,790. As a result of the year's operations the sum of £235,420 has been added to the company's free surplus resources—a figure which is equivalent to very nearly £2 per share. The company gives notice of its intention to carry through a complicated rearrangement of capital, the effect of which appears to be that the shareholders will be offered new shares on bonus terms.

Friends' Provident and Century Life Office.—The year 1928 was the fourth year of the current quinquennial period, and the results augur well for the forthcoming valuation and distribution of profits due to be made at the end of this year. New life assurances have increased by £128,000, and amounted to £1,567,483. An interesting analysis of the new business appears in the report, and from this it seems that last year some 75 per cent. of the total was issued on a with-profit basis and 25 per cent. on a without-profit basis, and that compared with the preceding year, the whole of the increase occurred in the with-profit section, the business in the without-profit section being somewhat less. The expense ratio in 1928 was 17.7 per cent., being the same as in 1927. The net rate of interest earned worked out at £5 1s. 1d. per cent. compared with £5 1s. 7d. As an index to the results that may be expected from the forthcoming quinquennial valuation, it is interesting to notice that the average expense ratio during the last four years works out at 16.7 per cent., and the average net rate of interest earned works out at £5 1s. 6d. per cent. During the quinquennium ended December 31, 1924, the actual average expense ratio was 19.2 per cent., and the average net rate of interest was £4 11s. 5d. per cent. Assuming that these averages are maintained for the last year of the current quinquennium, it will be seen that the extra profit resulting from an expense ratio of 2½ points lower than five years ago, and from a net rate of interest 10s. per cent. higher than five years ago, will be very considerable. This high rate of interest is a tribute to the company's successful investment policy. Perhaps the most potent factor in this situation is that the company's largest investment, viz., £700,000 in the Century Insurance Company, is now yielding 6 per cent. gross. Unlike the accounts of most composite offices, the transactions of the Century's several subsidiary companies are not incorporated in the present company's report. But the chairman in his speech last year stated that in addition to yielding the Century, as parent company, over 5½ per cent., free of tax, on its investments, these subsidiary companies had, in the aggregate, earned substantial profits placed to reserve. He went on to explain that, had the accounts been prepared in an amalgamated form, they would have shown that the total profit accruing to the Friends' Provident in respect of the investment in Century shares for 1927 was equal to 18¾ per cent., free of tax, compared with which the dividend of 6 per cent. seems to be eminently conservative. The trading results of the Century in 1928 show, unfortunately, a set-back, which, however, is made good by a transfer from the sickness fund of £20,000, being the shareholders' profits resulting from the quinquennial valuation at the end of last year.

Northern Assurance Co., Limited.—As foreshadowed in the chairman's speech last year, the 1928 premium income shows a very considerable reduction, particularly in the marine, and, to a lesser degree, in the fire department. In the marine department the 1928 premiums amounted to £956,190, compared with £1,526,565 in 1927, but whereas there was a disastrous loss of £303,519 in the former year, last year resulted in a small loss of only £4,938. More significant, the fund has been strengthened and now amounts to 117 per cent. of the year's premiums, compared with 102 per cent. in 1927. The heavy curtailment in premiums is due to the company having decided to cease writing marine insurance on London brokers' account—a disagreeable decision, but undoubtedly a wise one in the present circumstances. The fire premiums show a shrinkage of nearly £100,000 at £2,599,323; and here, again, this is due to an overhaul of existing business, particularly in the United States. The Northern life department has shown during 1928 signs of increased animation, for the new business has taken an upward turn and the amount, namely, £825,139, compared with £696,458 in 1927. The table below exhibits the details of the last three years' underwriting results:—

	1926. Amount of Profit. £	1926. Percentage of Premiums.	1927. Amount of Profit £	1927. Percentage of Premiums.	1928. Amount of Profit. £	1928. Percentage of Premiums.
Fire	83,095	2·9	203,079	7·5	136,325	5·2
Accident	124,355	8·7	112,219	7·4	120,287	7·8
Marine	4,010	·3	303,519	19·8	4,938	·1
Life	...		87,994		...	
Sinking fund	...		3,000		...	
	203,440		102,773		251,674	
Less items debited to profit and loss account	76,172		56,594		61,543	
Total net trading surplus	127,268		46,179		190,131	

For the ninth year in succession the dividend has been maintained at 85 per cent. Owing, however, to the reduction in premium income the interest earnings have been automatically declining, with the result that the "gap" between interest earnings and cost of dividend has widened to some £60,000. Nevertheless, the year's operations have enabled the company to augment the total surplus resources by £127,780, equal to a further 32 per cent.

London and Scottish Assurance Corporation.—Since 1923 the control of this company has been held by the Northern, which purchased the share capital for a sum of £840,000. Shortly afterwards large marine losses were brought to light, and the purchase has proved up till now an expensive luxury. But strenuous efforts have been made to reorganise the business, and these are now showing signs of coming to fruition. In particular the marine income has been wisely and drastically curtailed, and last year's premiums of £162,087 in this account were less than one-half of the 1927 premiums, which in turn showed a large reduction compared with 1926. Moreover, the underwriting fund has been very greatly strengthened, and at the end of last year stood at 109 per cent. of the premiums, compared with only 64 per cent. twelve months previously. The marine fund is now reasonably strong, being comfortably greater than the accepted minimum of one year's premiums, and in view of the much reduced size of the account should now give no further cause for anxiety. The complete underwriting results of the past three years are set out below:—

	1926. Amount of Profit. £	1926. Percentage of Premiums.	1927. Amount of Profit. £	1927. Percentage of Premiums.	1928. Amount of Profit. £	1928. Percentage of Premiums.
Fire	9,493	2·9	25,286	7·9	27,052	8·1
Accident	25,115	8·8	10,312	3·3	4,280	1·3
Marine	−4,010	−·9	−3,519	−1·0	−4,938	−3·0
Life	...		87,994		...	
Sinking fund	...		3,000		...	
	30,598		123,073		26,394	
Less items debited to profit and loss a/c.	10,226		21,947		19,528	
	20,372		101,126		6,866	
Net interest income	22,516		24,224		29,828	
	42,888		125,350		36,694	

No dividend has been declared for 1928, although net interest earnings alone were sufficient for a distribution at the rate of 25 per cent. net. In 1927 a dividend of 25 per cent. was paid.

Car and General Insurance Corporation, Limited.—Although the bulk of this company's business is motor-car insurance, the chairman stated recently that of the total 1928 premiums of £1,160,870, some £213,000 was derived from fire, employers' liability, and even marine insurance. In view of this multiplicity of interests it is unsatisfactory that the company lumps together the results of the whole of its transactions into one conglomerate account. From the table below it will be seen that in 1927 and 1928 this very large income earned a quite inadequate rate of profit.

	1927. Amount of Profit. £	1927. Percentage of Premiums.	1928. Amount of Profit. £	1928. Percentage of Premiums.
Gross underwriting profit	9,254	·8	21,378	1·8
Less items debited to profit and loss	13,293		11,874	
Net trading surplus	−4,039		9,504	
Net interest earnings	35,491		41,881	
Total amount available	31,452		51,385	
Dividend	29,609	(140%)	29,609	(140%)
Net increase in surplus assets	1,843		21,776	

The explanation of the meagre underwriting profit is the increasing number of motor claims and the greater costliness of third-party claims. A review of the company's motor-car experience over the past six years has been made, and the ratio of claims to premiums has risen about 1½ per cent. to 2 per cent. each year. In the chairman's view the public is now getting its motor-car insurance at cost price. In the course of an interesting speech the chairman referred to the demand that has recently been put forward for compulsory third-party insurance. Sir Edward Manville takes the view that so revolutionary a change is both undesirable and unnecessary, and declared that 90 per cent. of all motor-cars in use are already insured, and that "a very large proportion of the remainder is in the hands of those who are well able to meet their legal obligations."

World Auxiliary Insurance Corporation.—Although it is an independent company, the World Auxiliary is closely associated with the Northern group, since 100,000 shares out of 600,000 issued are held by the World Marine and General, which is a Northern subsidiary. The year 1928 has witnessed a remarkable advance in premium income. All the fire, accident, and general business is lumped together in one account, and the premiums in this account have risen from £198,000 in 1927 to £276,000 last year. The underwriting profits have more than kept pace with this advance, and worked out for 1928 at 3.8 per cent., compared with 3.4 per cent. in 1927. In the marine department the premiums are £10,000 less at £171,000, and the account has once again yielded a profit. The details of the past two years' results are set out below:—

	1927. Amount of Profit. £	1927. Percentage of Premiums.	1928. Amount of Profit. £	1928. Percentage of Premiums.
Fire, Accident and General	6,785	3·4	10,632	3·8
Marine	15,000	8·3	12,500	7·3
	21,785		23,132	
Less items debited to profit and loss account	13,069		3,956	
Total net trading surplus	8,716		19,176	
Net interest earnings	35,559		31,090	
	44,275		50,266	

The dividend has been maintained at 6¼ per cent., free of tax, and cost £18,750. In view of the fact that 10 per cent. could have been paid without trenching on the trading profits at all, the actual distribution is manifestly extremely conservative. The £1 shares with 10s. paid up stand at 27s., and yield £2 18s. per cent. gross.

UNITED STATES.—CREDIT—GOLD MOVEMENTS—STOCK EXCHANGE—BUSINESS PRICES.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 19.

BENEATH the surface there has been little real change in the business or credit position in the past week or so, but superficially things look a little better from the stock market trader's point of view. The better feeling in the security markets may partly reflect optimism among business men, but it will also create more confidence. The share market seems to have been oversold for the time and has been rallying moderately with a plentiful supply of call money at 7½ per cent. and a drop in time money rates from 9 to 8 per cent. Meanwhile, the chill which always comes with the convening of Congress has been shaken off. President Hoover's first message, devoted largely to a discussion of farm relief, but touching also on the tariff, was found to contain nothing unsound from the financial district's point of view, and it is doubtful if any farm relief measure will be passed by Congress and signed by the President which contains seriously objectionable features. Presumably Congress at this special session will scarcely get round to changes in the tariff or the enactment of any legislation of importance aside from farm relief. As was to be expected, discussion of Federal Reserve Board policy and methods was copious, but so long as business is prosperous no Congressional interference is likely. However, while the session lasts, no further public "warnings" are to be expected from Washington banking authorities.

Doubtless it is premature to say that the credit scare has blown over. No return of 20 per cent. call money is looked for, and while the recent ease reflects the seasonal return of funds to this centre and to some extent the gold imports and releases from earmark, there is nothing tangible on which to base a belief that the Reserve Board will be satisfied with the reduction in credit to security holders which has already taken place. With this week's negligible decline of $2 million in brokers' loans a drop of $368 million has taken place in the past four weeks. That, probably, is quite as rapidly as anyone would care to see contraction go forward on the New York Stock Exchange. However, the reduction has resulted in a much smaller decline in member bank borrowing at the Federal Reserve Banks, and the chief cause of the Reserve authorities' complaint is that, while expanding their loans on security collateral, the member banks c

the system are leaning too heavily on the Reserve Banks. This week's statement reflects the mid-month settlements, which included State income tax collections, heavy corporation dividend and interest payments and Government interest disbursements. The money market hardened in anticipation of these payments, but currently it has turned much easier. After being scarce at 10 per cent., call money now seems to be stabilising at between 7 and 8 per cent. Another flurry is likely at the end of the month. Meanwhile commercial borrowing at the banks has passed the peak for the season, and even though no further substantial liquidation of brokers' loans and individual borrowing on securities took place, the position should improve moderately during the next two or three months. Real ease, however, is not in sight. It could only come from a drastic decline in security prices, which is improbable while business shows no more than seasonal slackening, or from a widening of the credit base through gold imports.

An interesting gold operation is being conducted weekly at the Federal Reserve Bank. The Bank of France apparently is willing to reduce its stock of gold held under earmark at the Federal Reserve Bank in return for gold delivered in Paris. Each week brings a release from earmark of some $13 million in gold, presumably from the stock of the Bank of France, all other holdings being insignificant. This gold, it is understood here, is deposited to the account of the Reichsbank and used in settlement of the Bank's obligations, which probably means support of mark exchange. The effect of this operation is, of course, the same as that of gold imports, and some gold is coming in from South America. But it is hardly likely that the Reichsbank will permit gold shipments to continue, and if money rates here continue high an increase in the Reichsbank discount rate is expected.* Altogether Germany has shipped here $16 million in gold and sacrificed another $61 million on the earmark transactions. This week's statement of the Federal Reserve system indicates that another shipment of gold from Germany is coming. It contains an item of $6,115,000 "foreign loans on gold." A similar item a few weeks ago turned out to be an immediate credit allowed the Reichsbank by the Federal Reserve Bank pending the shipment of gold here.

Transactions on the Stock Exchange have been cut down by almost two-thirds recently, and so long as the market remains dull the probability of a higher discount rate is not acute. However, resumption of great activity and rising prices at this time, based on the feeling that money will be easier and that the Reserve authorities will do nothing would require a great deal of boldness. Meanwhile, bond prices are advancing and the market is broadening, which is taken to mean that large investors and financial institutions think the bottom has been touched.

Most of the business barometers point toward maintenance of a high rate of activity. The first quarter was much better than a year ago, as quarterly earning statements of corporations are proving. Enough momentum has been attained to ensure a good second three months, although some signs of slackening are appearing in the steel industry, which is still operating at capacity. Building is less active, but is enjoying a seasonal expansion. Motor output broke all records in the first three months, but dealers now appear to be well stocked and some slowing down will take place. These three industries are the index of our prosperity, but whether the year will turn out to be better than the average will depend largely on the crops and it is too early to make predictions. March employment was 5 per cent. greater than a year ago, and payrolls increased 9 per cent.

Deflationary tactics of the Reserve Banks have not affected commodity prices, for the reason that prices have not been inflated, whatever may have happened in the share market. The Bureau of Labour's index for the first three months of 1928 and 1929 is given below:—

1929.	All 100	% Chge.	Farm Prod.	Food.	Text. Prod.	Hide. L'th'r.	Fuel & Lt.	Mtls. Mtl.	Bldg. Mater.	Chem. & Dr.	House Furn.	Misc.
Jan.	97·2	+0·5	105·9	98·8	96·4	113·6	82·5	103·6	96·6	95·9	96·6	80·5
Feb.	96·7	−0·5	105·4	98·1	96·1	109·0	81·3	104·4	97·5	96·1	96·6	80·4
Mar.	96·0	−0·7	103·5	98·0	96·5	124·0	80·8	98·4	91·0	95·6	93·3	86·8
1928.												
Jan.	96·3	−0·2	106·1	98·5	96·7	121·0	80·8	98·1	90·8	96·3	98·6	89·0
Feb.	96·4	+0·1	104·5	97·7	96·6	124·1	81·1	98·3	91·0	95·8	98·4	87·3

Keen disappointment is felt here over the inability of the parties to the Reparations conference to come to an agreement. At first Wall Street had looked for a speedy settlement. This hope then gave way to pessimism, which was increased by the difficulties developing in the credit situation. More recently optimism returned, and preparations were once more begun for the floating of foreign loans, which had virtually disappeared from this market.

FRANCE.—REPARATIONS—FOREIGN TRADE—PRODUCTION—TEXTILE STRIKE.

(FROM OUR CORRESPONDENT.)

PARIS, May 1.

THERE is as yet no indication of any change in the deadlock that has arisen between Dr Schacht and his fellow experts. Dr Schacht may or may not be a prisoner to certain political elements at home, and he may sincerely believe that his offer represents all that Germany can pay, but it is argued here that he is certainly in error when he insists that she has been able to meet her obligations so far only thanks to the loans that were granted her by her former enemies. Most of that money was undoubtedly expended on productive work, from which Germany is already reaping large profits, and which now constitutes sources from which she has drawn and will continue to draw substantial sums to meet Reparation payments. The Reichsbank itself, whatever Dr Schacht may suggest, is undoubtedly in a strong position, in spite of recent gold losses, and could easily, in case of need, get all the help it wanted from other German banks. The foreign credit situation of the latter is known to be excellent, and even if the Paris Conference proves a fiasco they will have no difficulty in securing sufficient credit to compensate for any flight of capital that might ensue. German exports, it is notorious, are increasing rapidly and practically everywhere, and are the prime cause of the decline from which French foreign trade is suffering in many countries. German exports, which totalled 10,190 million marks in 1913, were 10,220 millions in 1927 and 11,640 millions in 1928. France alone, which bought only 269,600,000 marks of German goods in 1926, absorbed 562,000,000 marks in 1927 and 694,000,000 marks last year. Such pessimism as was felt here a week ago in regard to Reparations now appears to have entirely passed off, and opinion in general is awaiting the outcome with entire confidence.

Foreign trade figures for March indicate an adverse balance for the seventh month in succession and the thirteenth out of the fifteen since the beginning of 1928. Imports totalled 4,934,124,000 francs for the month, and exports 4,180,206,000 francs, or a balance against this country of 754 millions. This brings the adverse balance since the beginning of 1929 to 3,270 millions, whereas the deficit for the whole of last year was only 2,101 millions. The detailed comparative figures for the first quarter of the year are as follows:—

	First three months of 1928.	1929.	Difference in 1929.
Imports.			
Foodstuffs	2,892,786,000f.	3,520,428,000f.	+ 627,642,000f.
Raw materials	8,388,612,000f.	9,533,060,000f.	+1,144,438,000f.
Manufactured goods	1,674,176,000f.	2,216,226,000f.	+ 542,050,000f.
Totals	12,955,574,000f.	15,269,714,000f.	+2,314,130,000f.
Exports.			
Foodstuffs	1,594,025,000f.	1,421,429,000f.	− 172,596,000f.
Raw materials	3,356,302,000f.	3,122,388,000f.	− 233,914,000f.
Manufactured goods	7,810,730,000f.	7,456,302,000f.	− 354,428,000f.
Totals	12,761,057,000f.	12,000,139,000f.	− 761,938,000f.

In official quarters the large adverse balance which has marked the past three months is attributed to the fact that French industry has been buying largely in the foreign markets, since stabilisation last June, for the purpose of replenishing raw material stocks, which for many months were maintained practically at hand-to-

* This increase has, of course, since taken place.—ED., *Econ.*

mouth level, in view of the unsettled exchange. It is also emphasised that the present deficit will be largely compensated for by the enormous mass of invisible exports constituted by tourist traffic. Taking into account the influence exercised by Reparation payments in kind, which must have a direct bearing on the figures recorded, no alarm is felt at the situation, which in any case approximates to a great extent to normal conditions before the war.

Provisional iron and steel production figures for March show a total output of iron of 880,000 tons (as compared with 781,000 tons in February, 904,000 tons in January (the record month), 857,000 tons in March, 1928, and 801,000 tons in March, 1927), and of steel of 803,000 tons (as against 738,000 tons in February, 838,000 tons in January, 806,000 tons in March 1928, and 704,000 tons in March, 1927). The number of blast furnaces in operation at the end of March was 156, as against 149 at the corresponding date in 1928 and 145 in 1927. Although the output of both iron and steel in March compensated largely for the heavy drop in February, the French home market remains limited in activity; nevertheless quotations have been maintained at the same level. There is a slowing down in the international steel market, but French ironmasters have fixed their output tonnage of phosphoric metal for May at the present figure and for hematite at 42,000 tons, against 45,000 tons. An order for 300 carriages for use on the Paris suburban electric lines is to be placed shortly, half with French industry and half with German firms, as part of the system of Reparation payments in kind. A similar distribution is to be made in regard to an order for 100 electric motor tractors.

Further wage increases have been agreed to as the outcome of conferences between coalowners' and miners' delegates in the Northern coal area, as from April 16th, the minimum wage level having been brought up to 38.49 francs per day and premiums on output increased from 10 per cent. to 17 per cent. These increases, it is anticipated, will be largely compensated for by larger output per head and a rise of about 4 francs a ton in selling prices. In any case, the whole of the rise in selling rates, which came into operation on April 1, has been absorbed by the increase in wages, and any further rise in market prices must inevitably be unfavourable to French coal in competing against foreign combustibles.

Contrary to statements published, the new agreements entered into between the German dye trust (I.G. Farben) and French dye producers do not involve the French chemical industry as a whole. The new conventions constitute merely supplementary agreements to the accord in regard to dyes which was concluded in 1928 between the German trust and the French Kuhlmann undertaking. This convention put an end to German competition against the infant French dye industry, and brought about close technical co-operation between the two parties and the creation of common export selling organisations. The Swiss dye industry is now operating under similar conditions with the French and German interests in question.

The collapse of the Communist-promoted and stubbornly-maintained textile strike at Halluin marks the end of a struggle that has been going on seven months. The Communist leaders, after imposing, during some years, conditions which practically took the control of the factories out of their owners' hands, finally made a demand for a universal rise of 50 cents an hour in wages. The employers, when the workers ceased work, announced their intention of keeping their factories closed until they could be reopened under normal conditions of control. After a loss by the 7,200 workers of over 30,000,000 francs in wages and the expenditure of a further twelve millions in strike pay, the workers defied their leaders and went back to their looms on the same terms as before. For the first time for many years in this country the employers have flatly declined to take back workers dismissed because of their participation in the strike, and fresh rules, which have been accepted by the employees, set forth entirely fresh conditions for the conduct of the factories. No worker, for instance, has the obligation to belong to a trade union (although the right of combination continues to be recognised), and any unionist who attempts to exert pressure on non-unionists will be liable to dismissal. Workers are to undertake other classes of work, if there is nothing to do in their own special jobs. Unification of wage rates for piece-workers is abolished, each factory having the right to fix its own rates according to its particular situation. Syndicalist manifestations and all kinds of propaganda inside the factories are prohibited under penalty of dismissal. On individual questions the employers pledge themselves always to meet delegates nominated by the workers, but no interference by workers with the direction, administration or management of the factories will be tolerated. The outcome of the Halluin revolutionary strike has had a marked effect on militant syndicalists throughout France and appears likely to render the average French trade unionist less inclined in future to suffer arbitrary control by revolutionary trade union officials.

THE BRITISH LINEN BANK.

Incorporated by Royal Charter, 1746.

Capital and Reserve Funds, £3,400,000.

EXECUTOR and TRUSTEE DEPARTMENT.

Head Office: 38, St. Andrew Square, Edinburgh

The Bank is prepared to undertake the duties of Executor or Trustee, and to act as Trustee for Debenture Stockholders, Public Institutions, etc.

GERMANY.—CURRENCY—BANKS—FINANCE—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, April 30.

THE Reichsbank, as might have been expected from its sound status and from the careful legislative prescriptions as to its reserves and credits, last week came victorious out of the first really serious attack on the mark that has occurred since the stabilisation. The bank is nevertheless being subjected to criticism, in the first place for reducing its discount rate on January 12th, when the American money market crisis was under way, and when it was foreseen—as has since happened—that several European central banks would soon be obliged to advance their rates; secondly, for not advancing its rate in early April before the drain on the reserves had become very heavy; thirdly, for its passivity last week in the face of bear attacks on the mark in New York, Amsterdam and elsewhere. Since the beginning of February the bank has intervened successfuly at home, by parting with its reserves, to maintain the mark exchange; but it ought also, it is declared, to have made provision for direct intervention in foreign markets with the aim of preventing selling of marks at materially below the parity of the official foreign exchange rates in Berlin. The Reichsbank, however, has the satisfaction of having shown that its reserves are sufficient; and now, with a considerable margin of reserves above the legal minimum, there is a relaxation of the strain.

The Berlin official quotation of the dollar reached on April 27th a maximum of 4.218. The Reichsbank's return for April 23rd showed a record high loss of 251 million marks gold, or, allowing for an increase of 16 million marks in the legal-cover exchange reserve, a net loss from its reserves of 235 million marks. A Reichsbank weekly return can properly only be compared with a return of the corresponding week in a preceding month. Whereas on March 23rd the bank's combined gold and exchange reserve was 67.3 per cent. of its own circulation, on April 23rd the ratio had fallen to 56.6 per cent., almost all in gold (55.6 per cent.). The total shrinkage this year in the reserves, and in the free exchange holding (which is, however, not exactly known) is nearly 1 milliard marks, and therefore much exceeds the large increase in the reserves which took place in 1928. The gold reserve is now

nearly back to the figure of a year ago, being 2,179 million marks against 2,041 million marks on April 23, 1928. The present discount rate of 7½ per cent. is the highest since March, 1926. The lowest post-stabilisation rate was 5 per cent. in the first half of 1927. A new advance in the rate is possible, and almost certain, if New York again advances. The bank, though not required by law to do so, kept to its policy of selling exchange without limit at the official rate, thus carrying out its undertaking given some time after the currency reform. In view of the fact that the bank cannot abandon this policy without repudiating the currency and causing panic mark-selling in the open market, the question arises whether Article 31 of the Bank Law, which requires it to convert (at its option in gold or foreign bills) should not now be put into force. It is an anomay that holders of reichsmark notes should have no legal claim to anything more valuable than their scraps of paper. The putting into force of Article 31 would strengthen confidence. The former currency depreciation resulted from the fact that the legal claim to conversion at gold parity was withdrawn, and the withdrawal was justified, it at all, only by war exigencies which made conversion in practice impossible. To withhold the legal right to-day, when the Reichsbank can convert, seems to be mistaken policy. This view appears to be justified by the fact that in the time of lowest confidence, in 1923, the mere concession of a legal claim to a gold value for the rentenmark (as for the earlier-issued gold bonds which were temporarily used as currency) was accepted as sufficient by the public, although the security behind the issue was hardly realisable in practice.

The commercial banks have advanced their debit and credit rates 1 per cent. The dollar to-day declined to 4.2175, the rate immediately before last week's crisis. The demand for exchange is relatively small. The month-end need for mark currency compelled exchange holders to realise. The settlements have been carried out without difficulty. The day-loan rate of April 30th was 8½-10½ per cent., month loans 8½-9½ per cent., private discount 7⅞, which is little below the new official rate. The demand for money was increased by a treasury bill transaction under which the Republic obtains 170 million marks for three months to replenish its working fund. Owing to two important fusions, the commercial banks' balance sheets for March 31st cannot easily be compared with preceding balances. They show a decline in discounts, which evidently went on to the Reichsbank, and an increase in deposits, but, if allowance is made for fusion changes, the increase, it seems, is not real, and this might be expected to result from the withdrawal of foreign funds.

The Reichstag has increased the Government's authority to borrow by 201 million marks, so that formally the authority to borrow is now 1,109.1 million marks. The real sum required to be covered by loans is about 190 million marks less. The increased demand from unemployment insurance, to which the Republic lends in time of necessity but to which it does not contribute, causes anxiety. The Social-Democrats are willing to have the premium, the legal maximum of which from both employers and employees is 3 per cent. of wages, increased, and they reject the alternative solution of a reduction of benefits.

The wholesale prices index number for April 24th is 136.3, against 136.9 on the 17th. Since December the movement has been:—

	December Month's Average.	April 24.
Agricultural products	134·1	126·8
Colonial goods	124·6	126·4
Raw and half-manufactured materials	134·1	132·2
Manufactured goods	159·5	157·7

Manufactured goods for consumption have fallen to 172.8. The Labour situation continues to improve; the number of publicly supported unemployed has fallen since the seasonal improvement began by about 1,000,000. Coal production in the first quarter of the year was 39,096,137 metric tons, against 40,464,266 tons in the first quarter of 1928. In the Ruhr wages dispute the arbitrator has pronounced for a 2 per cent. rise, which is to be increased to 5.45 per cent. for underground workers and 3.02 per cent. for surface workers by a reduction in the "Knappschaft" social contribution, of which at present the employee pays three-fifths. Measures are being taken for distributing public works in such way as will tend to reduce Labour market fluctuations in times of good and bad trade.

The alleged difficulties of the German cloth-weaving industry caused by increasing import of British goods are again to the fore. A meeting is being held between representatives of the Cloth Convention and of the cloth wholesale and clothing branches. Import of woollen cloth last year rose to 3,280 metric tons against 1,074 tons in 1926. Import from Great Britain has risen relatively more than the total. The *Vossische Zeitung* states that the chief cause is the mildness of British conditions of payment. Total German exports of finished textiles in 1928 were 1,609 million marks as against 1,489 million marks in 1927. Export to Great Britain declined. Export to China, Italy, Finland, Czechoslovakia, Argentina and Switzerland shows large increases. The Reichstag Trade Policy Committee to-day declared for an increase in the boot and shoe import duties.

Home loans in April totalled 17½ million marks; loans from abroad only 1 million marks. In the first four months of the year home loans totalled 154 million marks as against 786 million marks in the same months of 1928; foreign loans 198 million marks as against 445 million marks. Increases in company capitalisation in the four months totalled 160 million marks against 320 million marks.

GREECE.—BANK OF GREECE—MONETARY CONDITIONS—PUBLIC FINANCE—CREDIT.

(FROM OUR CORRESPONDENT.)

ATHENS, April 16.

THE first annual meeting of the shareholders of the Bank of Greece was held on April 6th. The Governor, Mr A. Diomède, in a long and interesting statement, reviewed the business of the bank during its first year of existence, explained why it was decided to create a new bank of issue, justified the adoption of the gold exchange standard, gave a brief account of public finance and credit, and explained the causes of the stagnation of private economy. The chief aim of the administration of the bank was to maintain the stability of the currency. Purchases of foreign exchange amounted during the year to £9,421,997, and sales to £8,742,224, leaving a surplus of £679,773, which increased the cover of circulation. During the whole period under review the foreign exchanges remained at, or slightly below, par. This favourable situation was due to a considerable extent to foreign assistance, obtained as a result of recent borrowing abroad. On the other hand, the proceeds of these loans are employed productively, while redemption of national debt has taken place simultaneously on a rather large scale. Though it is impossible to obtain accurate statistical information as to the balance of the international accounts of Greece, the credit items constitute a most essential factor of the assets of the country, and one whose favourable development may reasonably be expected.

Circulation of bank notes has increased from drs. 5,250 to drs. 5,690 millions. Despite this increase, the cover has risen from 53.67 to 54.24 per cent. of the total sight liabilities of the bank. Of the total cover of £11,308,348, an amount of £1,476,160 only is held in gold, while the balance of £9,832,188 is represented by gold bonds, bank acceptances in gold currencies, deposits with other central banks, and foreign money. The cover did not fall during the year below 50.24 per cent. of total liabilities, though, according to the statutes of the bank, the minimum allowed is 40 per cent. The clearing house department of the bank, established in conformity with the stipulations of the Geneva Protocol, is dealing at present with inland cheques only, but will soon include bills and Stock Exchange securities. Nevertheless, its clearings represent already an average daily sum of 26 million drachmas. The necessary preparatory work is also being done for organising and concentrating the cash transactions of the State. Besides clearness, unity, and fullness in Government accounts, which will thereby ensue, it will be possible also to use productively for the good of the country substantial funds which at present remain idle in the various Treasuries of the State.

While, for a period of six years since 1921, the State Budget closed each time with important deficits, the accounts of 1927-1928 reflected the effort towards financial restoration by leaving a surplus of 550 million drachmas. The Budget of 1928-1929 will close also with a surplus of not less than 100 millions. That of the current financial year, drawn up on conservative estimates, is expected to leave again a surplus. The cash position of the Public Treasury is also satisfactory, with considerable credit balances at the Bank of Greect. The improved financial situation of the country is clearly displayed in the higher prices of Greek stocks in London as compared with previous years. The net rate of interest at which Greece is borrowing abroad has fallen from 10.25 and even 10.40 per cent. to 7.28 per cent.

The *per capita* amount of the National Debt was £16 in 1912, with a population of 2,700,000 souls. To-day it is £20 per head, on a population of 6,200,000. In view of the depreciation of the value of gold, the latter proportion, expressed in pre-war values, comes to £15 approximately. But to-day Greece possesses a much higher productive capacity, due to a better equipment, to fertile soils, and to a wide credit organisation, while her potential productiveness is still higher. An important part of the new indebtedness has been spent on productive purposes. Another point worth mentioning is the policy of a generous redemption of the National Debt followed in the last few years. From 1923 to 1928 Greece contracted internal loans of £25,000,000 and foreign ones of £26,000,000. During the same period no less than £3,340,500 and drs. 1,300 million have been redeemed, not including conversions. In ten years' time it is estimated that drs. 9,500 to 10,000 million will be repaid of the internal, and £20,000,000 of the external debt, that is a total of some £48,000,000.

As the post-war loans, especially the internal ones, have been concluded under unfavourable conditions, and, consequently, on rather onerous terms, a conversion and unification of the National Debt should be envisaged as soon as the general credit of the country has risen to proper levels, and the international monetary conditions are propitious. The present difficult conditions of private economy are attributed by Mr Diomède to the high rate of interest and the feeling of distrust bequeathed by previous years. Though the situation is smoother now and the Bank of Greece has been able to lower its discount rate to 9 per cent., stability of conditions and confidence of capital has not yet been entirely obtained. When these two goals have been reached—and no hesitation is allowed as to the policy indicated to this effect—the offer of capital will be abundant, and, with the assistance of this credit, production will be increased, the prices of commodities will become lower, consumption will be multiplied, and the solid foundations of political and social strength will have been laid.

SWITZERLAND.—RAILWAY TRAFFIC—FOREIGN TRADE—UNEMPLOYMENT—RETAIL TRADE.

(FROM OUR CORRESPONDENT.)

GENEVA, April 21.

LAST winter in Switzerland was the most severe recorded for the past 30 years, and the persistent cold had a great influence on Swiss commercial activities. The winter season was a good one for the hotel industry, though it was not as brilliant as had been expected. The number of foreign visitors who came to enjoy winter sports at the Swiss resorts was generally higher than last year, especially in the Bernese Oberland and the Engadine, which had a record winter season. Germans were fewer this year as conditions in Germany were good for winter sports, and, generally speaking, visitors made shorter stays. The influence of the cold was particularly striking in regard to railway traffic and foreign trade. The Federal Railways transported in January 56,000 passengers and 14,000 tons of goods more than in January, 1928, the net revenue being £2,535,600, as against £2,268,400 in 1928, but the excessive cold in February resulted in a big drop, both in passengers' and goods traffic, the diminution, compared with February, 1928, being 453,000 in the case of passengers and 160,000 tons in the case of goods; receipts were £92,520 lower and the net revenue £88,000 lower than in February, 1928. Conditions improved in March, when the weather was fine and mild, with the result that the net revenue reached £561,000, or about £28,000 more than in March 1928. The net revenue for the first quarter of the year is £1,032,000, compared with £1,060,000 last year.

The abnormal cold had a depressing effect on foreign trade as well as on general economic conditions. During the first quarter of the year, imports reached a value of £25,044,342 as against £27,365,298 during the corresponding period of 1928, or a drop of nearly 8.5 per cent.; exports totalled £19,868,239, compared with £20,716,620 last year, that is a drop of about 4.2 per cent. Imports and exports compared with 1928 were as follows (in millions of pounds):—

	Imports. 1929.	Imports. 1928.	Exports. 1929.	Exports. 1928.
January	8,48	8,78	6,15	6,14
February	7,54	8,91	6,52	6,94
March	9,01	9,76	7,19	7,63

While imports of raw materials practically equalled last year's figures, imports of foodstuffs, especially vegetables and fruit, showed a big decrease, as the frost brought that trade to a standstill for several weeks. There was a diminution in almost every branch of exports, but though the first quarter's returns are rather unsatisfactory, it should be remarked that the value of exports rose by about £690,000 in a single month, from February to March, and that there are signs of renewed activity in the export trade so that it is expected that the first quarter's deficit will be made good during the coming months. While there was a drop in the exports of the silk and cotton industry, those of the watchmaking industry suffered no change and those of the machines industry rose by nearly £300,000 since the beginning of the year.

Trade between Great Britain and Switzerland was similarly affected by the general slump, though it showed an improvement in March. Imports from Great Britain totalled £1,071,000 during the first quarter as against £2,158,000 last year, and exports to her reached £2,764,000, compared with £3,107,000 last year. There was, nevertheless, an improvement since the beginning of the year, as shown by the following returns (in millions of pounds):—

	Imports from Great Britain.	Exports to Great Britain.
January	0.56	0.84
February	0.51	0.93
March	0.62	0.98

There was a reduction in the imports from France, Italy, Great Britain and the U.S.A., while those from Germany showed an increase of nearly £1,500,000 over last year. On the other hand, exports to Germany, Great Britain and the U.S.A. were on the decrease, but there was a rise in exports to France and Italy.

The number of unemployed, which was 16,284 at the end of January, dropped to £15.979 at the end of February, and there was a further slight decline in March. These figures are about 3,000 higher than last year, but this increase is also to be ascribed to the cold, which caused a prolonged stoppage of work in agriculture and the building industry. According to the forecasts of the labour exchanges, the situation will be good when the winter season has come to an end, and there will even be a shortage of labour in many industries.

The first quarter was also a bad one in the retail trade, which was abnormally slack, but despite these unsatisfactory results, prospects for the coming months are very encouraging, and everybody expects rapidly to make good the losses sustained during the winter.

CANADA.—BUSINESS CONDITIONS—TRANSPORT—NEWSPRINT INDUSTRY—BUDGET—TRADE RELATIONS WITH THE U.S.

(FROM OUR CORRESPONDENT.)

OTTAWA, April 15.

THERE have been in Eastern Canada some heavy snowfalls which re-covered the ground, but two successive days of warm weather have obliterated their effects and spring seems really to have begun in earnest. In some areas there have been heavy floods which have inter-

rupted communications and caused considerable property damage. This return of wintry conditions has set back farming operations, and seeding, instead of being abnormally early, as at one time seemed probable, will now fall about the average time. The land is still waterlogged in many places and in others the frost is hardly out of the ground. Cultivation is proceeding in the more favoured localities, but some days of warm weather will be required before it can become general. Business conditions remain very satisfactory and the outlook for the summer months seems auspicious in almost every direction. The value of new building permits taken out during the first quarter of the current year is placed at $97,500,000, which is an increase of 40.7 per cent. over the figure for the first quarter of 1928 and augurs the existence of a general spirit of optimism about Canada's future. The railways, now that they have secured parliamentary authority for their branch lines programme, are proceeding with the work of construction and are not only employing a great deal of extra labour but are placing heavy orders for materials of all kinds. The International Nickel Co. and its allies, the Consolidated Smelting & Mining Co. and the Lindsley mining interests, have practically all their plans completed for the erection of the large copper smelter which they intend to build at Copper Cliff in Ontario, and it will ultimately involve an expenditure of 20 million dollars. There is no abatement of industrial activity and there is evidence of gains in some lines. The iron and steel plants are still busy and the equipment firms have an abundance of orders; the textile mills are also working nearer their full capacity than they were a year ago. The St. Lawrence channel, which is now virtually free from ice, is already being used by small river craft, and the first ocean liners are expected in about a week's time. Montreal anticipates a very busy shipping season and its citizens are pressing the Federal Government for a comprehensive scheme of improvement in its railway transportation facilities. In this respect the Canadian National Railway is sadly deficient and its heads have worked out a scheme for a huge joint terminal in the centre of the city, which would have easy interchanges of communication with the dock area. The Government has definitely pledged its financial backing. Indeed, the Minister of Railways has already introduced a Bill which seeks parliamentary authority for the expenditure of 50 million dollars on new terminals at Montreal and a substantial area of land has already been expropriated by the Government.

The newsprint production of Canadian mills in March amounted to 218,147 tons and shipments to 219,739 tons, the mills operating at about 83.8 of their rated capacity. American production of newsprint in March was only 114,586 tons, and during the first quarter of the year the Canadian output of newsprint showed a gain of 8 per cent. over the figure for the first quarter of 1928, whereas the American output showed a decline of 3 per cent. Every quarter sees Canada forging further ahead of the United States as a producer of newsprint and apparently one effect of the lower prices has been to transfer business to the Canadian mills, which have lower costs of production in most cases. The industry in Canada is not out of its difficulties, but people who take a long view of the situation are optimistic about its future.

The Budget debate occupied three weeks of Parliament's time before divisions were reached on April 11th. The Progressive amendment, which called for an immediate and substantial increase in the British Preference was voted down by 155 to 19, the Liberals and Conservatives combining solidly against it. A Conservative amendment, which regretted the failure of the Budget to provide adequate facilities for the protection of industries and agriculture, experienced the same fate, but by a smaller majority. Its only support came from 65 Conservatives, and the Government majority of 127 included all the Liberal-Progressives, Progressives, Independents and Labourites who were present. On the main Budget vote the Government prevailed by 107 to 88. It had the support of the Liberal Progressives, one Progressive, one Labourite and two Independents, but the rest of the Progressives and the Labourites voted with the Conservatives.

The last week of the debate produced some interesting speeches and was noteworthy for the breaking of the Ministerial silence which had previously been observed with scrupulous care on the subject of trade relations with the United States. Premier King deprecated any premature action which might be interpreted in the United States as provocative and impel Congress to raise the American tariff to a higher level than was now contemplated. He charged the Conservatives with conjuring up an imaginary fiscal warfare between the two countries, and asserted that his government proposed to await developments at Washington instead of anticipating injurious fiscal policies which might never materialise.

The Budget has now reached the committee stage and the Finance Minister at the time of writing is finding considerable difficulty in making progress with it. The Conservatives have been attacking the Tariff Board, whose work they declare is a farce, and the Progressives have been criticising certain protectionist proclivities of the Government, of which they claim to have convincing evidence.

The carloading figure for the week ending April 6th is the most satisfactory of recent weeks. At 63,411 cars it represents gains of 1,959 and 6,995 respectively over the figures of the preceding week and the corresponding week of 1928. Prices remain virtually stationary—and the wholesale index of the Bureau of Statistics for March was 95.7, as compared with 96.1 for February. 86 price quotations were higher, 76 were lower and 340 were unchanged. Of the eight main groups 5 were higher, 2 were lower and 1 was unchanged.

The stock markets have apparently settled down to a period of quiescence, and both the big operators and the general speculative public seem disinclined to come into it again for the moment. Prices, if anything, show a reactionary tendency, and for the week ending April 13th the Bureau of Statistics Investors' Index of industrial common stocks (on the basis of 1926=100) was 256.8, as compared with 259.2. The only exception was the oil stocks, which are traded in chiefly on the curb markets. The Imperial Oil and the International Petroleum Companies, both subsidiaries of the Standard Oil Co. of New Jersey, have announced the splitting of their stocks, the first at the rate of four to one, and the second at two to one, and this development, coupled with the news of fresh wells being "brought in" in the Turner Valley in Alberta, has attracted speculative interest to the oil stocks, some of which have had substantial rises. But sensible people in Alberta still point out that the Turner Valley field has not yet produced any oil of first-rate quality, and that its chief product, naphtha gas, is already almost a drug on the market. The mining market is also submerged in dullness and will require very good news to awaken it to activity.

The Department of National Revenue announces that Canada's total trade for the month of March, 1929, amounted to $253,536,167, as compared with $229,564,777 for March, 1928. Exports of Canadian produce were valued at $115,822,404, and imports of foreign goods totalled $120,418,027. Foreign re-exports were $2,756,825. Exports of automobiles and automobile parts constituted the chief element in the gain, the figures increasing from $2,107,844 to $6,938,703. Grain exports, however, decreased by about one million dollars, in spite of the fact that the quantity of wheat exported had risen from 18,655,258 to 21,207,187 bushels, the values for March, 1928, and March, 1929, being respectively $24,473,654 and $23,474,702.

SOUTH AFRICA.—BUDGET—FOREIGN TRADE—TARIFF—GENERAL ELECTION.

(FROM OUR CORRESPONDENT.)

JOHANNESBURG, April 2.

THE opening meeting of the new Session of the Transvaal Provincial Council was marked by extraordinary behaviour on the part of the newly-appointed administrator, Mr J. S. Smit, who has recently vacated the post of High Commissioner in London. To begin with, Mr Smit replied to the Council's address of welcome in Afrikaans, and refused to translate his remarks. Later in the sitting he refused to take any oath, either of allegiance or of office. In the latter case, it seems that Mr Smit's attitude is in accordance with the literal Constitutional position, but it conflicts with the practice of his predecessors, and was regarded, in conjunction with his whole attitude throughout the sitting, as an intentional affront to the Opposition in the Council.

The Union Budget will be presented in July by the Finance Minister of the next Government. Mr Havenga has introduced an Appropriation for £14,000,000 for Government services to July 31st, and in so doing gave a statement of accounts for the past year, not so detailed as a Budget speech. The surplus for the year is £1,700,000, making, with last year's surplus, a balance in hand of £3,000,000. In addition, the Government has in hand £2,450,000 from the sale of diamonds taken from the State diggings in Namaqualand. There are about £4,000,000 worth of these diamonds in hand, and it is proposed to sell £2,500,000 worth during the current year. The average price realised for the diamonds was £11 10s. per carat. Digging expenses to date had amounted to £105,000. (Such information as one gets from these fields continues to tell of incredible wealth, and it can hardly be said that these official figures refute the rumours.) Mr Havenga's estimates for 1929-30 show a surplus of £1,113,000, including £2,500,000 from the proposed sales of diamonds. It is proposed to surrender revenue, equal to the estimated surplus, by reducing certain customs dues and by extending various income tax rebates. During the year just closed customs receipts, at just over £9,900,000, exceeded estimates by about £1,250,000, income tax exceeded estimates by nearly £500,000, and death duties by £150,000. It is a record to make Mr Churchill envious, and it makes South African Party politicians wish Mr Havenga would cross the floor, or at any rate that they could have a chance to direct their criticism at a Nationalist Government not assisted by Mr Havenga's ability and good fortune. The spending of the £5,500,000 (£3,000,000 realised surpluses and £2,500,000 already realised from diamonds) will amuse the election financiers. Under South African law it is not necessarily applied to debt redemption. Mr Havenga's own suggestion was that £1,000,000 should be applied to debt redemption (the regular payment of £650,000 and £350,000 from the surplus).

Mr Havenga stated that the Public Debt as at March 31, 1929, stood at £243,460,000, the increase during the last year being £4,540,000 and since April 1, 1924, £35,240,000. There are sinking funds amounting to £20,235,000, so that the net debt is £223,225,000. The unproductive debt is £44,000,000; it stood at £58,500,000 in 1924, and is expected to be £38,000,000 at March 31, 1930.

The total Union exports for the year 1928 amounted to £72,600,000, while imports amounted to £75,500,000. The Union Department of Customs and Excise has just published statistics for last year of the trade of the Union, Rhodesia and South West Africa. The proportions of imports from various sources are:—United Kingdom, 45.9 per cent.; other British possessions, 10.8 per cent.; foreign countries, 43.3 per cent.

The Minister of Railways has also introduced a Part Appropriation Bill for four months' supply, asking for £12,000,000. His estimates of the results of working for the year ended March 31, 1929, showed revenue of £30,510,000 and expenditure £30,180,000, thus having a surplus of £330,000. The estimates for the new financial year to end March 31, 1930, allow for a deficit of £105,000. During 1928 the railways carried 82,000,000 passengers. There are to be certain alterations in the tariff, and increases in pay and allowances to certain classes of employees; these concessions will absorb a good proportion of the surplus. The Minister took the opportunity of reviewing the history of his Department since 1924. He inherited a deficit of £770,000, together with the plans of his predecessor, Mr Jagger, for dealing with it; and he now has an accumulated surplus of £330,000. The Sea Point suburban line at Cape Town, quite recently electrified, is still unable to contend with motor buses, and is to be taken up.

The fifth Parliament of the Union will be dissolved on April 30th, and the election will be held on June 12th. The Parliament consisted of 63 Nationalists, 53 South African Party members, and 18 Labour Party members, the latter number having been reduced by one (in favour of the S.A.P.) at a bye-election at Langlaagte. There will be 148 members of the new Parliament against 135 in the present one. To the economist outside South Africa it is probable that the most interesting act of the late Parliament was the resumption of the gold standard in 1925. At a lecture before the Economic Society in Johannesburg, Professor Cannan attributed the taking of the same step by Britain, at least in part, to the example and influence of the world's principal gold producer. Apart from that act, the deeds of the late Parliament are not of great immediate importance. It seems unlikely that its financial policy will always appear to have been so successful as it does at the moment. The Government inherited from its predecessor a financial system devised during wartime trouble and post-war depression. From a variety of causes, an economic recovery set in in 1924, the Government profited by it, and further, it maintained most of the taxes and increased the tariff—hence the £7,000,000 surplus in five years.

The new Parliament will lack (amongst others and for different reasons) the Rt. Hon. Sir Thomas Smartt, Sir Thomas Watt, Sir David Harris, and Mr Jagger (who is, by himself, the really sound portion of the Free Trade Party). Sir Thomas Smartt, Sir Thomas Watt and Mr Jagger were at the National Convention in 1909. All have been in Parliament for many years, and the House will miss not only their familiar faces but the advice of four of the wisest and most experienced members. All except Sir David Harris have been Cabinet Ministers.

JAPAN.—RECENT LEGISLATION—FOREIGN TRADE—COTTON INDUSTRY—MITSUBISHI BANK.

(FROM OUR CORRESPONDENT.)

TOKIO, April 8.

THE annual session of the Imperial Diet came to a close on March 27th. The record of the completed session was fairly good for a minority Government, though such important Government measures as the Local Government Bill, the Small Holdings Bill, and the Fertiliser Control Bill have failed of passage. The Finance Bill, general tariff and luxury duties revision, the livestock insurance scheme, the silk price stabilisation plan, safeguarding of dyestuffs, and many other measures of lesser importance were carried through both Houses almost in their original form. In the Budget estimates for 1929-30 approved by the Diet, estimated expenditure totalled 1,773,567,000 yen, including supplementary estimates of 20,750,000 yen, showing an increase of 64 million yen over the working Budget for the fiscal year just closed. In the revised tariff the duty on timber was raised, while the 100 per cent. *ad valorem* duty on black tea, cocoa, cheese, leather, fur, glasswares, sports goods, and some fourteen other articles out of 120 originally subjected to the "luxury" duties was repealed or substantially reduced. Of the other measures mentioned, the Livestock Insurance Act provides for granting of reinsurance on horses and cattle by the Government up to 85 per cent. of the amount originally accepted by the mutual associations of cattle-breeders; the silk price stabilisation scheme authorises the Treasury to indemnify the banks' loss to the extent of 30 million yen if incurred from advances to silk-reelers; and the dyestuff safeguarding measure extends the existing period of protection and increases the subsidy to manufacturers of synthetic indigo.

The trade returns for March show that, in comparison with the corresponding month of last year, imports and exports fell by 12.4 and 1.7 million yen respectively, the excess of imports over exports being 10.6 millions lower. But the trade figures for the first quarter of the year reveal a fairly large expansion both in imports and exports, imports rising by 72.9 millions and exports by 22.1 millions, the visible adverse balance at 192.9 millions being 50.7 millions higher. A comparison of the value figures for

March and for the first three months of this year and last is set out below :—

MONTH OF MARCH.
(000's omitted.)

	1929.	1928.	Increase (+) or Decrease (−) in 1929.	
	Yen.	Yen.	Yen.	Per cent.
Imports	211,198	223,613	− 12,415	− 5·5
Exports	167,553	169,289	− 1,736	− 1·0
Excess of imports over exports	43,645	54,324	− 10,679	−19·6

THREE MONTHS ENDED MARCH 31ST.
(000's omitted.)

	1929.	1928.	Increase (+) or Decrease (−) in 1929.	
	Yen.	Yen.	Yen.	Per cent.
Imports	689,503	616,606	+ 72,897	+11·8
Exports	496,575	474,455	+ 22,120	+ 4·6
Excess of imports over exports	192,928	142,151	+ 50,777	+35·7

Many Japanese cotton mills have already abolished night work, though the new Factory Act, which provides for the abolition, does not come into operation until July 1st. The mills which ceased to operate at night by April 1st represent in the aggregate 3,562,644 spindles, or 56 per cent. of the total spindlage belonging to the Cotton Spinners' Federation. Simultaneously with the abolition of night work be it noted that organised short time will virtually come to an end, and the effect will obviously be severe in the case of the mills which are in a weak position financially or otherwise, and are unable to make ample preparation for the changing situation. In point of fact the Japanese cotton industry in general is not prosperous, and some sections of the trade are still suffering from the trade prostration experienced immediately after the Armistice. The position of the smaller mills generally has long been difficult, and seventeen spinning companies out of 55 belonging to the Federation passed their dividends for last year, having earned too little or carried on at a loss. Many leaders of the industry are of opinion that not a few spinning companies will come to grief very soon after the coming into force of the new law. To prevent threatening bankruptcy a rationalisation scheme in some form of combine has been suggested in trade circles, and the idea is gaining supporters.

The Mitsubishi Bank, privately owned by the Iwasaki family, announced last week an increase in its capital from 50 million yen to 100 millions, inviting public subscription to the new stock issue. With the change of the capital organisation of the Mitsubishi, private ownership in this country will probably disappear from the banking field. The bank has appreciably strengthened its position since the monetary crisis of 1927, and has now challenged Yasuda, Mitsui and a few other rival institutions with a tremendous increase in its deposits.

Letters to the Editor.

ISLAS DEL GUADALQUIVIR, S.A.

TO THE EDITOR OF THE ECONOMIST.

SIR,—With reference to the paragraph published about my company in your issue of March 30th last, I am directed to inform you that the chairman of the company has received a letter from Dr J. A. Hanley, Principal of the Cirencester Royal Agricultural College, the agricultural expert on the consultative committee, who visited the property of the company several times, copy of which I enclose.—Yours faithfully,

J. M. DE VENGOECHEA.

Islas del Guadalquivir, S.A.

DEAR MR CHAIRMAN,—The *Economist's* correspondent says the river water passing through the estate of the Islas del Guadalquivir, S.A., is tidal, non-drinkable and unfit for irrigation.

The river is tidal, but that does not mean the water is entirely sea-water.

Analyses made by Sir Murdoch Macdonald and Partners showed a salt content of 0.013 per cent. in April and 0.043 per cent. in August, 1926. More recent analyses have shown 0.25 per cent. at high tide in September, 1928, at a point 16 kilometres south of the pumping station, and after an unusually hot summer and a low river.

Sea-water contains more than fifty times this amount of salt.

The river water was drunk by the inhabitants of the Islas before the company bought the property, and is now drunk by the colonists.

The water is suitable for irrigation, and has been used for that purpose both by the company and by previous owners.—Yours faithfully,

(sd.) J. A. HANLEY.
Royal Agricultural College, Cirencester.
April 26, 1929.

Books and Publications.

AN ANALYSIS OF WAGES.*

PROFESSORS HAMILTON and May have produced between them a small but admirably sane and lucid analysis of current wage theory, with special reference to the practical possibilities of applying conscious direction to the various factors which determine the wage equation. Opening with a brief summary of the wage theories of the past (one of the least satisfactory sections of the book), they concentrate on the productivity theory and launch their attack upon the conception of the wage contract as a resultant of immutable economic law. An attempt to disentangle the variable factors which in conjunction determine the real income of the wage earner, leads them to explore three main sources from which an increase of real income can be drawn. The first is an increase of the nominal wage achieved by technical industrial improvement, by greater efficiency of organisation, or by the reduction of the share absorbed by rent and profits. Attempts to tap the third source are likely, in their opinion, soon to encounter definite limits. Technical improvements, especially relating to the physical efficiency and better assignment of labour, offer much wider possibilities. So too does reorganisation of the economic structure. Here a number of more or less drastic remedies are discussed, from the elimination of redundant marketing costs to the assumption of workers' control—which last the authors dismiss as an untried proposition. The second possible source of increase concerns the price level of commodities purchased out of wages. To this they devote little serious attention beyond a plea that the same attempt to disentangle and isolate controllable factors may be applied. The third source is the increase of that "free income" which accrues to the worker in the form of public services. Here, too, the treatment is perfunctory, and the authors' complaint that "the social importance of this free income is not adequately appreciated" might perhaps be turned upon themselves. Perhaps it may be said in extenuation that any attempt at adequate appreciation would land them in large questions concerning the relevancy of an economic wage to varying human needs, which might drag them over the natural frontiers of their thesis.

On the whole, the authors are optimistic concerning the possibilities of such sectional and reasoned action as they advocate. But they are aware that the initiative of taking it at the right moment and from the right angle is likely to make serious demands not only on the bargaining strength but also upon the enlightened leadership of organised labour. For such a task they consider that the American Federation of Labour, with its preponderantly craft basis, is not well equipped. But it may be added that the book deals in very general terms with its subject, and may be read with equal advantage on both sides of the Atlantic. As a summary and restatement of existing theory, reflecting the constructive attitude to the long-range effects of trade union action with which Mr Rowe, of the London School of Economics, has recently familiarised us, it may be specially recommended to members of W.E.A. and tutorial classes.

* "The Control of Wages." By W. Hamilton and S. May. Macmillan Co. of New York. 6s. net.

FRENCH ECONOMIC HISTORY.*

BOOKS on the military and political history of France and the doings of her warriors, priests, and kings are constantly appearing. In this field we probably read and know more about France than about any other country. But knowledge of the conditions of life in France, especially outside Paris, has always been very vague. The spectacular glories of Louis XIV.'s reign accustomed foreigners to associate France in general with the idea of wealth and splendour. The reality was far different, as was shown when the outbreak of the Revolution took the civilised world by surprise.

We may take pride in the fact that it was an English observer, Arthur Young, who realised the truth more clearly than any of the French themselves. He looked in vain in France for anything corresponding to the economic progress achieved in England during the eighteenth century. What interested Young was not to be found in books. "Reading modern history," he wrote, "is generally the most tormenting employment that a man can have; one is plagued with the actions of a detestable set of men called conquerors, heroes and great generals; and we wade through pages loaded with military details; but when you want to know the progress of agriculture, of commerce, and industry . . . all is a blank. Voltaire set an example, but how has it been followed?"

He would be better pleased now. About twenty years ago a group of French scholars, impressed with the need for presenting the social history of their country in a new light, began to publish a series of volumes, each containing a number of monographs based on research among original documents in departmental and communal archives, lawyer's offices, and the records and correspondence files of old industrial and commercial firms. The series has now reached its twelfth volume. The latter includes several monographs by Professor Henri Sée, of which three deal with local fishery industries, one with the textile industry in Bas-Maine during the Empire and restoration, and another with the history of the parcels service in Brittany. Other authors deal with such varying subjects as schemes for the development of the silk industry in Auvergne and Lorraine during the eighteenth century; the history of the Bank of France during the Commune of 1871; and the history of the letter post in Brittany from the fifteenth century to the Revolution.

Each article deals simply and objectively with the details of a particular business in a particular part of France, and the close adherence to contemporary documents makes the past re-live before one's eyes with exceptional clearness.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

The Next Ten Years in British Social and Economic Policy. By G. D. H Cole. (London) Macmillan and Co., St. Martin's Street. 15s. net.

Mr. Cole has, in his own words, "thought things out afresh," and the result is the opportune appearance of this volume, which deals fully, and in a serious and considered manner, with some of the most pressing problems which at present confront the British public.

The Problem of Industrial Relations and Other Lectures. By Henry Clay. (London) Macmillan and Co., Limited, St. Martin's Street. 12s. net.

A contribution, on these lines, to the study of the distribution of wealth was badly needed. Seven chapters are devoted to concrete problems which have come most conspicuously to the fore since the Armistice, there are four theoretical chapters, and a statistical estimate of the distribution of capital in England and Wales.

* "Mémoires et Documents pour servir à l'histoire du Commerce et de l'Industrie en France." Publiés sous la direction de Julien Hayem. Douzième Série. (Paris) Librairie des Sciences Economiques et Sociales, Marcel Rivière, 31 Rue Jacob. Price, 40 francs.

FACTS AND FIGURES

on current economic and social problems are provided in Government Publications as in no other series of books. The following documents will be indispensable to any fruitful discussion of some major questions arising before the General Election.

INDUSTRIAL RECOVERY

The Final Report of the "Balfour" Committee on Industry and Trade surveys Great Britain's industrial and commercial problems with special ref rence to the export trade, discusses various plans, e.g., "Safeguarding," and recommends definite policies to assist recovery and expansion. 5s. 6d. (5s. 11d.)

AGRICULTURAL POLICY

Report on Agricultural Policy. 4d. (5d.)
Report of the Scottish Conference on Agricultural Policy. 1s. 6d. (1s. 7d.)
Report of the Agricultural Tribunal of Investigation. 5s. (5s. 5d.) Probably the most comprehensive survey of the agricultural problem of Great Britain which has yet been published.

UNEMPLOYMENT

Report of the Industrial Transference Board. 1s. 6d. (1s. 8d.)
Report of the Unemployment Insurance Committee. 1s. (1s. 2d.)
Memorandum on use of Unemployment Benefit in aid of Wages in industry and on relief work. 3d. (4d.)
The Ministry of Labour Gazette, Monthly. 7s. a year. Contains much valuable information.

TAXATION

The Report of the "Colwyn" Committee on National Debt and Taxation. 7s. 6d. (8s.) A thorough review of the effects of taxation on trade, industry, employment and credit.
Report of H.M. Commissioners for Inland Revenue, 1928. 2s. (2s. 2d.) Return showing the expenditure on Public Social Services in 1891, 1901, 1911, 1927 and 1928 respectively. 3d. (4d.)

RATING REFORM

The Local Government Act, 1929, contains the text of sweeping changes in the organisation and finance of local government. 3s. (3s. 3d.) An explanatory memorandum on its provisions as passed by the House of Commons. 1s. (1s. 1d.) General Circular on the Act. 3d. (4d.) A review of the major changes which the Act involves.

EDUCATION

The Education of the Adolescent. 2s. (2s. 4d.) Cloth 3s. (3s. 5d.) A far-seeing programme of educational advance by the Consultative Committee of the Board of Education.
The New Prospect in Education. 6d. (8d.) An attempt to give practical shape to some of the Committee's recommendations.

All prices are net. Those in parentheses include postage.

EDINBURGH: 120 George Street. MANCHESTER: York Street.
CARDIFF: 1 St. Andrew's Crescent. BELFAST: 15 Donegall Sq., W.
Or through any Bookseller.

England and the New Gold Standard, 1919-1926. By William Adams Brown, Jr. (London) P. S. King, 14 Great Smith Street. 15s.

An historical and analytical study of England's return to the gold standard. The conflict of opinion which accompanied it is discussed, and emphasis is laid on the difference between the present-day gold standard and that which was in force before the war.

Internationale Preisbewegung und Lage der Landwirtschaft in den aussertropischen Ländern. By Prof. M. Sering. (Berlin) Verlagskuchlandlung Paul Parey, Hedemannstrasse 28 u. 29. 18 Rm.

Readers who are at home in the German language should find this volume useful, especially for reference purposes. It deals with agricultural development and conditions, with special reference to international price movements, in the temperate countries. Two introductory chapters deal with the period 1875-1914, and the rest of the book, which is very well furnished with diagrams and statistical tables, deals fully with post-war conditions.

The Lure of Safeguarding. By A. S. Comyns Carr and D. Rowland Evans. (London) George Allen and Unwin, Limited, Museum Street. 3s. net.

A handy and timely little volume. The first three chapters deal with the theory of Free Trade and the history of the tariff controversy, while the remaining two chapters provide a very lucid refutation of the claims of the Safeguarders and a warning that the proposed "extension of Safeguarding" is nothing less than a threat of general protection.

The French Franc, 1914-1928. By Eleanor Lansing Dulles. (London) Macmillan and Co., Limited., St. Martin's Street. 27s. net.

This is at one and the same time an historical account and an essay in monetary theory.

Histoire des Finances Extérieures de la France pendant la Guerre (1914-1919). By Lucien Petit. Preface by M. Germain-Martin. (Paris) Payot, 106 Boulevard St. Germain. 60fr.

A remarkably full account of the war-time financial operations of France.

Die neue Goldwährung (weltwirtschaftliche Zusammenarbeit). By Arthur Schweitzer. (Basle) Verlag Helbing und Lichtenhahn. Rm. 6.50.

This critical account of the restoration of the currencies of the world lays special stress upon the aspect of international co-operation. The text is in German.

Government Ownership and Operation of Railroads. By Walter M. W. Splavin. (London) Macmillan and Co., St. Martin's Street. 21s. net.

This is an American study, the object of which is to throw light on the possibility of ultimate Government ownership of the railways by an examination of the experience of other countries. It contains useful statistics and a good bibliography.

Leaves from My Life. By H. Osborne O'Hagan. In two volumes. (London) John Lane, The Bodley Head, Limited, Vigo Street. 36s. net.

These reminiscences of a great financier take the reader behind the scenes of a number of famous City transactions. Personal recollections of Horatio Bottomley or the Baring crisis mingle with accounts of courses of treatment for the author's physical indispositions and anecdotes of a purely personal character. The whole is very amusing reading.

Marketing: A Farmer's Problem. By Benjamin F. Goldstein. (London) Macmillan and Co., St. Martin's Street. 15s. net.

This investigation of a pressing agricultural problem was inspired by the revelations of a committee for whom the author served as special counsel. The book, which confines itself to the marketing of grain, treats the question primarily from the legal point of view.

The Grain Trade during the World War. By Frank M. Surface. (London) Macmillan and Co., St. Martin's Street. 25s. net.

A history of the Food Administration Grain Corporation and the United States Grain Corporation.

The Co-operative Pattern in Cotton. By Robert H. Montgomery. (London) Macmillan and Co., St. Martin's Street. 10s. 6d. net.

A critical history of the co-operative marketing of raw cotton.

The Austrian War Government. By Joseph Redlich. (London) Oxford University Press, Warwick Square. 10s. 6d. net.

The War and the Russian Government. The Central Government. The Municipal Government and the All-Russian Union of Towns. By Nicholas J. Astiov. (London) Oxford University Press, Warwick Square. 16s. net.

Two further series in the Economic and Social History of the World War, published for the Carnegie Endowment for International Peace.

Labour and Internationalism. By Lewis L. Lorwin. (New York) The Macmillan Company. $3.

Part I. is historical, and covers the period 1830-1928; Part II. discusses the future of the movement.

Zeitschrift des Instituts für Weltwirtschaft und Seeverkehr an der Universität Kiel. By Dr sc. pol. Bernhard Harms. (Jena) Verlag von Gustav Fischer.

An analysis, in German, of the international gold market before and after the war.

International Labour Office. Hydro-Extractors, Their Safe Construction and Equipment. (London) P. S. King and Son, Limited, 14, Great Smith Street. 4s.

A monograph in the series on industrial accident prevention.

Movimento Economico dell' Italia. (Milan) Banca Commerciale Italiana.

A year book packed with statistics on Italian economic conditions in 1928.

The Intelligent Woman's Guide to Socialism and Capitalism. By Bernard Shaw. (London) Constable and Co., Limited, 10-12 Orange Street. 5s. net.

A popular edition of the work already reviewed in these columns.

The Vilna Question. Consultations of MM A. de Lapradelle, Louis de Sur, and André N. Mandelstaur, Concerning the Binding Force of the Decision of the Conference of Ambassadors of March 15, 1923. (London) Hazell, Watson and Viney, 52 Long Acre.

Conservatism and Wealth. By Oliver Baldwin and Roger Chance. (London) Williams and Norgate, Limited, 38, Great Ormond Street. 1s. 6d. net.

A political tract of radical complexion.

The Liberal Outlook. By Hubert Phillips. With an Introduction by the Right Hon. D. Lloyd George, O.M., M.P. (London) Chapman and Hall, 11 Henrietta Street, Covent Garden. 5s. net.

An exposition of Liberal policy.

National Finance. By F. W. Pethick-Lawrence, M.P. (London) Fabian Society, 11, Dartmouth Street. 2d.

A Fabian tract which propounds briefly certain points in the financial programme of the Labour Party.

Journal des Economistes, April 15, 1929. (Paris) Librairie Félix Alcan, 108, Boulevard St. Germain. 12 fr.

Articles in this number include: "Le Commerce Extérieur des Principaux Pays en 1928," by R. J.-Pierre; "Paris Nouveau," by L. G. Numite; "Les Allocations Familiales," by Georges de Nouvion; and "La Réforme Monétaire en Roumanie."

Documents and Readings in American Government. By John M. Matthews and Clarence A. Berdahl. (London) Macmillan and Co., St. Martin's Street. 14s. net.

A collection of documents for the use of students of American political history.

City of Edmonton, Alberta. Financial Statements and Reports for the year ending December 31, 1928. (Edmonton) J. Hodgson, City Comptroller.

The Realist, May, 1929. (London) Macmillan and Co., St. Martin's Street. 2s. net.

There are several articles of economic interest in this issue, including "Financial Broadcasting," by N. Bantock Reynolds; "Unemployment and Empire," by Archibald Church; and "A Future for British Agriculture," by A. Martin Leake.

The Stock Exchange.

SWEDISH INDUSTRIALS.

The British investor has formed a deservedly high opinion of the respectability and prosperity of the "family" of Swedish industrials. There are four members of this family, and the four businesses by which they make their living are matches, ball bearings, milk separators and household electrical appliances, such as carpet sweepers and refrigerators. The head of the family is Swedish Match, whose financial godparent is Kreuger and Toll. Next come A.B. Svenska Kullagerfabriken (the Swedish Ball Bearing Co., or S.K.F.), A.B. Separator and A.B. Elektrolux. The order given follows the order of the dividend yield obtainable from the ordinary shares, which begins with 4 per cent. in the case of Swedish Match and Kreuger and Toll, goes to over 4½ per cent. in the case of S.K.F., to over 5½ per cent. in the case of Separator and over 6½ per cent. in the case of Elektrolux.

The members of this family are entirely unconnected with one another, but they possess certain characteristics in common. They are all cleverly managed; they all trade internationally, spreading their trading risks in a manner which appeals to the investor; and they all cater for the foreign capitalist by creating an international market for their shares, and by presenting accounts of praiseworthy fullness and lucidity, with reports translated into various languages. Indeed, one of the many lessons which these Swedish companies can teach is the art of successfully attracting foreign capital. Under Swedish law not more than one-fifth of the voting power of a company may be held by foreign interests. This difficulty has been overcome by the issue of "B" shares carrying reduced voting power (one-thousandth of a vote per share, against one vote per share for the Swedish-owned "A" shares). The "B" shares of these companies have been placed on most of the important Stock Exchanges of the world, and generally enjoy a free market. The following table gives the current market prices, dividends and yields of the "B" shares:—

Shares of 100 Kr.*	Price.	Div.	Yield.
		%	%
Swedish Match "B"	20¼	15	4·07
Kreuger & Toll "B" ...	33¾	25	4·05
S.K.F. "B"	14¾	12	4·69
Separator "B"	8¾	8¼	5·56
Elektrolux "B"	8	9	6·61

* 100 Kr. = £5 10s. 2d. at par of exchange.

The differences in yield are accounted for partly by the fact that the Swedish Match group is a much greater and more firmly established "trust" than the others, partly by the fact that S.K.F., Separator and Elektrolux have not long been introduced to London and other foreign Stock Exchanges, and are not therefore so well known to the investor as Swedish Match. Moreover, Swedish Match is pre-eminently a sound industrial equity. It is a holding company, and its world interests outside Sweden are controlled through the International Match Corporation. It is the dominating force in the match industry, with plants in over 35 countries. It has attained its position by quiet unobtrusive buying for control, by patient negotiations for State monopolies—it now holds Government monopolies in Estonia, Lithuania, Poland, Greece, Ecuador and Peru, and partial monopolies in Germany and France—and by entering into market agreements with its competitors. In Great Britain, for example, the Swedish Match Co. made an agreement with Messrs Bryant and May in 1927 and formed the British Match Corporation for joint marketing in Great Britain and the whole of the British Empire, except the Asiatic sections. So complete is the hold of the Swedish Match over world trade in matches that, with the exception of about 50 per cent. of the Belgian exports, there are practically no matches for export which are not sold through the agency of the Swedish Match. Net profits for the past 25 years have averaged over 24 per cent. per annum on the capital stock from time to time outstanding and participating in dividends.

In obtaining Government concessions or monopolies to manufacture and sell matches, large amounts of Government securities are frequently acquired by Swedish Match and International Match in return for advances made by them to the Governments concerned. These securities are generally handed over to Kreuger and Toll, which is the finance company assisting the companies, in which Mr Ivar Kreuger, the managing director, is interested. Kreuger and Toll is the largest stockholder in Swedish Match; it is also largely interested in the Grangesberg (iron ore) Co. and various Swedish industrial and banking companies, and is a large holder of real estate in Sweden and Germany. This year Kreuger and Toll made an issue of $50,000,000 5 per cent. secured debentures, and Kr. 16,250,000 participating debentures for the purpose of taking over from Swedish Match and International Match no less than $78,000,000 (par value) of foreign Government securities.

S.K.F. is not so well known as Swedish Match, but it represents the largest group of manufacturers of ball and roller bearings in the world. Its British subsidiary is the Skefko Ball Bearing Co., whose works are situated at Luton. The combined companies represent a self-contained unit operating from the raw material—iron ore and charcoal—through the various processes of steel manufacture down to the finished product, which is marketed to the consumer through the company's own selling organisations established in practically every country. The products of the group represent approximately 30 per cent. of the world's ball-bearing market, and the sales are well distributed throughout the world. The company's "B" shares were first introduced to the London market by the British, Foreign and Colonial Corporation and Messrs Higginson in January, 1928.

A.B. Separator is not so international in its operations as S.K.F. and Swedish Match, but it is the world's largest manufacturer of milk separators. Indeed, the development of the dairy industry in its present form is in a large measure due to the appliances, known under the trade mark Alfa-Laval, manufactured by A.B. Separator. In recent years the centrifugal separator has been used in a large number of other industries for the purpose of separation and filtration of liquids—a new field for A.B. Separator which is obviously very wide. Outside Sweden, the company's separators are manufactured in Germany and the United States by subsidiary companies. The "B" shares were introduced to the London market in July, 1928, by Messrs J. Henry Schroder.

The products manufactured by Elektrolux are not so firmly established as those of the other three companies, but they are equally international. Elektrolux is the largest manufacturer in the world of electric vacuum cleaners, and in order to broaden its activities it has lately developed the manufacture and sale of electric refrigerators. Other labour-saving household appliances have been added to the list of Elektrolux products. The company owns manufacturing companies in Sweden, France, Germany and England, and selling companies throughout Europe and North and South America. The "B" shares were introduced to the London market in June, 1928, by the British, Foreign and Colonial Corporation and Messrs Higginson.

It is remarkable that while many British industrial companies have been disclosing but moderate results for 1928, those published by this Swedish family of "industrials" have all shown considerable increases in profits, which have significantly exceeded the estimates pub-

ished at the times of the various introductions. The following table shows the net profits and percentages of earnings and dividends for the last three years, net profits being shown after deduction of reserves for taxation, and preference dividends, if any:—

	1926.	1927.	1928.
Swedish Match—			
Ordinary capital ...Kr.	180,000,000	270,000,000	270,000,000
Net profits.....Kr.	32,326,462	40,436,616	48,961,568
Earnings	16·98%	16·32%†	18·13%
Dividends	15%	15%	15%
Kreuger & Toll—			
Ordinary capital*...Kr.	65,000,000	65,000,000	65,000,000
Net profits.....Kr.	7,981,325	12,409,605	21,025,988
Dividends	25%	25%	25%
S.K.F.—			
Ordinary capital ...Kr.	92,000,000	92,000,000	106,000,000
Net profits.....Kr.	8,739,000	11,048,000	17,672,000
Earnings	9·7%	12%	16·67%
Dividends	8%	10%	12%
Separator—			
Ordinary capital ...Kr.	63,000,000	63,000,000	81,700,000
Net profits.....Kr.	6,062,873	6,589,402	7,481,955
Earnings	9·6%	10%	9%
Dividends	8%	8%	8¼%
Elektrolux—			
Ordinary capital ...Kr.	7,000,000	7,000,000	60,000,000
Net profits.....Kr.	1,018,254	1,265,928	7,923,752
Earnings	14·5%	18%	13·2%
Dividends	10%	10%	9%

* Exclusive of participating debentures.

† Calculated on amounts of capital outstanding.

The directors' report for 1928 of Swedish Match has not yet been received, but the profits announced show an increase of 21 per cent. over those of 1927. It must be borne in mind that these profit figures have no precise relation to those actually derived from the manufacture and sale of matches. On account of the double taxation imposed on a holding company, it is the practice of the Swedish Match to take only so much of the profits of its subsidiaries as is required for the payment of its own dividends. As regards Kreuger and Toll, it was estimated by the sponsors of the issue of second debentures and participating debentures this year, that if allowance is made for the additional income to be derived from the issue, the 1929 earnings are likely to amount to 65 per cent. on the total share capital and participating debenture capital.

The 1928 reports of the other three companies disclose a satisfactory state of affairs. The Separator Co. is now amalgamated with its only rivals in Sweden—A.B. Baltic and A.B. Pump Separator. The S.K.F. report discloses the fact that most of its profits are derived from the company's export business, the dividends from its shareholdings showing only a small increase. The large increase in capital of the Elektrolux was made for the purpose of acquiring all its allied companies. The first results of the amalgamation are not unsatisfactory, and the directors refer to the considerable increase in the sale of refrigerators.

Our final table shows the present "market capitalisation" of the companies and the yield thereon on the basis of the 1928 net revenue:—

	Market Capitalisation. £	1928. Net Revenue. Kr.	Yield. %
Swedish Match.....	55,575,000	48,961,568	4·85
Kreuger & Toll.....	47,612,500	77,796,155	9·0
Separator	9,034,460	9,731,954	5·93
S.K.F.	14,945,000	17,671,950	6·51
Elektrolux.....	4,800,000	9,123,751	10·18

It will be seen that in relation to present earnings the market capitalisation is high, except in the case of Elektrolux. The market, in other words, has to a large extent discounted a probable increase in the future earnings of Swedish Match, Separator and S.K.F., a fact which renders the shares of these companies of interest, at the present time, to the long-term investor rather than the seeker after an early and extensive capital profit.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket. May 7.	Account May 9.

Quiet continued to reign over the Stock Exchange throughout the week, and the usual May Day holiday on Wednesday helped the Account to draw to its uninteresting close. The momentary flight from the mark on April 26th had an unsettling influence, drawing the market's attention to the obscurities which are latent in the Continental, as well as in the American, monetary position, and reducing the net effect on gilt-edged stocks of the Bank of England's fresh gold accessions. In the industrial and speculative sections the week was relieved from complete stagnation by a temporary revival of American interest.

Despite the firmness of the New York exchange, and the Bank's gain of gold to the tune of nearly £2 million in the first three days of the week, the gilt-edged market was dull, in the absence of general support. Five per Cent. War Loan was inclined to weaken on Monday, though the lost ground was regained next day. Other British stocks were fractionally lower or unchanged. Last week's declining tendency in India Loans was again in evidence, but Dominion and Colonial stocks, by contrast, were inquired for, and tended to appreciate in value.

The prevailing mood in the Foreign markets was one of liquidation, particularly of German 7 per cents. (with a partial recovery), and of Brazilian bonds, on the less satisfactory coffee position. Eastern European stocks shared in the tendency, but French issues had a harder tone. Far Eastern descriptions were unchanged.

The Home Railway market continued in a state of neglect. The week's traffic figures were not calculated to afford a "lead" either way, the position showing very slight change as compared with a year ago. Though little or no business was done, most of the Group stocks were marked down fractionally, and London stocks shared in the movement. Among Foreign Rails a mild inquiry was received for Argentine stocks, but Brazilians were affected by the weakness of Government bonds, though Leopoldina recovered on the announcement of a dividend making 5 per cent. for last year, against 4½ per cent. for the preceding period. Great Western of Brazil was an exception to the prevailing tendency, the new agreement with the Government being hailed as a bull point.

Though Wall Street gave more support than of recent weeks, the industrial market refused to be shaken out of its pre-election apathy. Some speculative interest centred on Columbia and H.M.V., on sustained talk of an amalgamation (to which New York gave more credence than London), but the movement was half-hearted and collapsed. Rumoured negotiations for a Spanish monopoly were ineffective in preventing a falling away in Swedish Match and Kreuger and Toll. The publication of annual reports sent up the prices of Barcelona Traction and International Holding, but had a reverse effect on Forestal Land, the company (as described in a later "Investment Note") declaring a reduced dividend. The Associated Electric report also induced some selling, the accounts containing no single feature, good or bad, on which the market could fasten. International Nickel was supported from America. The uncertain labour position held up business in textile shares, apart from an isolated, though extensive, rise in Patons and Baldwins. Motor shares were easier and tobacco shares dull, for the same reason—public indifference. Aerated Bread declined on the denial of irresponsible amalgamation rumours. Iron and steel shares showed fractional changes, mostly in a downward direction. Apart from a strengthening of Sun Life, little interest was taken in insurance shares, and bank shares moved within the narrowest of limits.

Business in the rubber share market was left largely to the bargain hunters, with prices, where changed, a shade lower. The commodity was unstable, the psychological effect of heavy Eastern shipments offsetting the steady demand from the trade. The downward trend

of the shares was again in evidence, though the better tone at the auctions caused a slight hardening towards the end of the week. The oil share market, as usual, reflected the apathy of other parts of the "House," reports of a coming reduction in American crude output and of higher petrol prices failing to obviate a decline in some of the leading counters, with Pan American "B" a conspicuous exception.

Springs Mines were a weak point (on an unsatisfactory quarter's development report) in a dreary Kaffir market, the inactivity of which was accentuated by some slight selling from Paris towards the end of the monthly account. Only the undertone of the Rhodesian market was strong, actual business being quiescent, despite the optimistic speech of the chairman at the Roan Antelope meeting. Tanganyika received some attention from Brussels on the increased dividend of Union Minière, in which the company has a large holding. Copper shares enjoyed a mild recovery, but tin shares remained irregular and undecided.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The markets have displayed considerable buoyancy, with individual stocks approaching or passing previous high levels, and a moderate amount of business being done. Operators are still troubled by the money position, but show increasing confidence. The most active sections are aircraft, chemicals and utilities. Mines are reviving, but oil, steel, motor and railroad shares are quiet. Meanwhile the steel industry continues to operate at a "record" level, close to capacity, and the automobile industry also maintains a "record" activity. Gold imports for the week total $8,000,000 and releases from ear-marking $13,000,000. Speculation is being aroused as to whether the authorities are likely to mitigate their "hard money" policy.

PARIS.

The rise in the Berlin bank rate, the severe depression on the German Bourses, and the fear of seeing Germany escape Reparations transfers by appealing to the restrictive clauses of the Dawes Plan had at first a depressing influence on most sections of the market, but later on a better tendency was noticeable. The end-of-the-month settlement disclosed a substantial bear position in face of a light bull account, and the carry-over rates eased to 3⅞ per cent. on the Parquet and 6⅞ on the Coulisse, an easing off with which the return of a portion of the money that had found employment in Berlin appeared to be not un-

connected. The market finds a reason for recovery in the gravity of the recent fall, which, after continuing for several months, has brought French stocks on to levels which are regarded as attractive. Bank, motor-car and mining shares have shown the greatest heaviness lately. Rio Tinto was somewhat affected, influencing Tharsis and Huelva. Selling of rubber shares was in evidence, and prices of the leading arbitrage counters were appreciably lowered.

BERLIN.

A week ago the Bourse was showing some signs of recovery, though the average price of stocks was the lowest reached this year. Home capital seemed nervous, but the banks deny that there was any considerable foreign selling. In spite of dear money, the new week began with a general recovery, due to the improvement in the exchange position; high-priced active stocks gained up to 12 points, while a revival took place in bonds also, particularly in the "new-owned" valorised loan, which two years ago was quoted at 21, and last week was down to 10. Dealing on Tuesday was at first active and firm, but a decline in Polyphon, which temporarily dropped 19 points, led to realisations. The following day, dullness preceded a firm close, and the next morning a general rise occurred, only to be met by a reaction on fears of a new advance in the discount rate.

AMSTERDAM.

The rate for prolongation advancing to 6½ per cent., transactions consequently remained restricted, especially in foreign shares, yet in spite of the slight volume of business the general tone, especially among industrials, was a steady one. Philips shares benefited by the very favourable 1928 report, and Margarine Unie were firm. After a reaction, artificial silks gained strength on the agreement between Enka and Breda Silk. Tobaccos made an improved showing, but rubbers eased and oils reacted. Sugars scarcely moved, but shipping shares were irregular. The new Dutch Ford Motor Company shares, the issue of which was 600 times oversubscribed, are quoted at 220-245. At the time of going to press, the Bourse was still dull.

INVESTMENT NOTES.

British Control of British Companies.—The latest addition to the ranks of British concerns which deem it advisable to take special measures to ensure the permanence of British control is the Rubber Plantations Investment Trust, the 1928 report of which is discussed on a later page. At next Wednesday's meeting, two resolutions will be submitted to the shareholders, the first limiting voting rights to British citizens and corporations, the second providing that no foreigners shall be eligible as directors without the approval of a majority of the board. Thus the Rubber Trust has elected to follow what may not unfairly be cited as the "General Electric" method of allowing foreigners to acquire as many shares in the company as they may see fit, provided they are willing to pay the market price, but divesting those shares, automatically upon their purchase, of all rights of control over the company's policy. The alternative method, of which the Marconi International Marine may be regarded as the leading protagonist, forbears to tamper with the rights of any class of share, but lays down a limit (say, of 25 per cent. of the whole) beyond which foreign shareholders may not go. So soon as the maximum has been reached, the "foreign register" is closed, and while British subjects may, presumably, acquire shares on the "foreign register," non-British subjects may not invade the territory of the "British register." From the point of view of pure expediency, the second method would seem the more advantageous. The company concerned knows just where it stands, at any given moment, as regards its foreign shareholding, and need not fear the contingency that, should non-British holders acquire a very large majority of the total shares, it may prove impossible in practice to deny them all part in the company's affairs. Minority rule is extremely difficult to maintain indefinitely, whatever articles of association may lay down. The whole question of the intrusion of quasi-nationalistic conceptions into British company practice clearly demands systematic consideration. The London Stock Exchange, which has always attached high importance to its position as a free international market, recognises that a fair political case may be made out for the retention of British control over such concerns as Imperial Airways or Marconi International Marine, which were among the first to limit "foreign" rights or participation, but is becoming somewhat uneasy as the list tends to increase, and its scope to widen. It would seem that American interest is likely to spread, in the near future, to other British companies, which offer sound investment possibilities, and in that event the purely empirical treatment which the question has so far received will scarcely be found satisfactory.

Stock versus Shares.—A hardy Stock Exchange annual, the question of stock *versus* shares, has been revived by the decision of Lever Brothers, announced at the annual meeting on April 18, to consolidate their 68,000,000 shares into stock, on the ground that this would save the company something like £50,000 a year in clerical charges. The Stock Exchange generally prefers dealing in shares to dealing in stock, on the ground that the quotation of stock in units of £100, by frightening off small buyers, tends to limit its marketability, and hence to result in lower prices, over a given period of time. In point of fact, stock should be more rather than less "marketable" than shares, since, in theory at any rate, it is possible to deal in broken amounts of stock,—for example, £388 7s. 11d.—whereas only complete shares can be bought and sold in the ordinary way. There is, however, a certain force in the Stock Exchange contention that so far as the "activity" of a particular security is concerned, the important consideration is not so much the actual facts, as the way people habitually regard those facts. The question has another aspect, since, under British company law, shares must carry distinguishing numbers, a necessity which does not arise in the case of stock. The Stock Exchange has officially recorded its view that the numbering of shares is of tangible value for identification purposes, and affords protection both to those who hold securities and those whose business it is to buy and sell them. Company accountants, and the accounting profession generally, are apt to declare, on the other hand, that the actual protection afforded, if not altogether illusory, is insufficient to warrant the very large amount of clerical work involved in entering and checking up the numbers in company records. If, as the chairman of Lever Brothers suggested, present requirements in this respect are regarded as so onerous that certain British companies, with 1,200,000 shareholders and a total capital of nearly £450,000,000, in default of a change in the law as it stands, are seriously considering the conversion of their shares into stock, the matter would seem destined to become much more than an academic question. The alleged drawbacks of the quotation

of stock prices on a £100 basis, can, of course, be readily overcome by the expedient, recently adopted in the case of P. and O. deferred stock, of quoting in terms of "£1 units." Here, however, a difficulty arises, since Stock Exchange commissions are invariably higher as regards share than as regards stock transactions—largely on account of the extra work involved by the numbering of shares. Whether the "House" would face with equanimity the considerable reduction in its gross revenue which would follow conversion on a large scale of existing shares into stock quoted in £1 units, despite the disappearance of "numbering," is another question. It may be recalled that the Home Railway companies have within the last few months categorically refused to consider the adoption of the "£1 unit" system in the case of their outstanding stocks.

Stamp Duty on New Issues.—Proposals have been put forward by representatives of the British Empire Producers' Organisation, the Federation of British Industries and the National Union of Manufacturers for a modification of the stamp duty payable on issues of securities by companies and public bodies in British Dominions and Colonies. The present position is that all issues in the form of bonds and certificates to bearer have to pay a stamp duty of £2 per cent. and transfers of registered securities a duty of £1 per cent. A preference is given to Colonial Governments and municipalities, the stamp duty on bearer securities of which is only 5s. per cent., but no preference is accorded to companies and other bodies intending to operate in the Dominions or Colonies. It is in order to encourage the flow of capital for Empire enterprises that the following suggestions have been put forward: (1) To all local boards established by Act of Parliament and commercial and industrial enterprises in British territory in respect of issues of securities "to bearer," a reduction of stamp duty should be made to the extent of 1 per cent.; (2) On all municipal issues in British Dominions and Colonies a reduction to the extent of 10s. per cent.; (3) In the case of compounding for stamp duty by county councils or companies in British territory a reduction to the extent of 50 per cent. of the amounts now in force. These suggestions will be welcomed generally as being an inducement to enterprise in the new issue market. In a pamphlet* recently issued on the subject of "Imperial Finance" the suggestion was made that the stamp duty on Foreign Government issues "to bearer" should be reduced from £2 per cent. to £1 per cent., and that on Colonial Government issues increased from 5s. per cent. to £1 per cent. This suggestion was apparently designed to whittle away the preferences accorded to Dominion Governments over other borrowers in the London capital market, in view of the heavy borrowing of certain Dominion authorities, but the authors were careful to point out that since the war the amounts raised in the London capital market for general business purposes in the Empire overseas had declined. There is no doubt that the proposed reduction in stamp duties would do something to encourage commercial enterprise in this direction.

Companies Consolidation Bill.—Thanks largely to the Government's decision to treat the Companies Consolidation Bill as a measure to be passed before the dissolution of the present Parliament, the Bill was rescued last week, like a brand from the burning, from the Joint Consolidation Committee, to which it had been referred six weeks earlier, upon its second reading in the House of Lords. After a rapid passage through its intermediate stages, the measure received its third reading in the Commons on Monday, after the Government's representative had thanked the Opposition for their assistance in carrying the Bill through Committee. The measure comprises a complete code of statutory law regarding public companies, consolidating the Acts of 1908, 1913, 1917, and 1928. Its progress has been followed with keen interest mainly because the changes in British company law, made in the Act of 1928, have awaited its passage before coming into operation, apart from certain provisions which have received special treatment under Orders in Council. It now appears that, if no unexpected contingency is encountered, the measure will come into operation not later than November 1st next, though the Government spokesman refused definitely to commit his Department to this or any other date. Among the far-reaching changes in company practice, embodied in the 1928 Act (which have been discussed at length in earlier issues of the *Economist*), the provisions as to the setting-out of balance sheet particulars appear likely to be of definite assistance to investors, the documents drawn up in the new form by such companies as Vickers having been favourably commented on in this respect. The circumstances of the passage of the Consolidation Bill reflect credit on the skill of Parliamentary draughtsmen and the efficiency of the Government's "machine" rather than on the adequacy of the present organisation of the House of Commons, where close examination of crucial but highly technical measures is called for.

* "Imperial Finance," by S. Russell Cooke and E. H. Davenport. (London.) London General Press.

Associated Electrical Industries.—In November last Metropolitan-Vickers acquired controlling interests in British Thomson-Houston, Edison and Swan, and Ferguson Pailin. The prospects for the British electrical industry were discussed at the time in the *Economist* (vol. cvii, page 806). The latest report of Metropolitan-Vickers, under its new style of Associated Electrical Industries, shows the proper additions to the balance sheet, but the trading results presented apply to the original company only, and scarcely differ from those of the previous year. The directors point out that competition was exceptionally severe, but the 1928 output was again a "record," and the inflow of new orders greater than in 1927:—

Years ended December 31.	1926. £	1927. £	1928. £

To general reserve	25,000	25,000	25,000
Increase in carry-forward.....	2,995	1,623	2,174

* Tax deducted.

At the time of the fusion an additional 1,136,950 £1 ordinary shares were offered to shareholders at 25s., and these, with 1,152,084 ordinary issued to British Thomson-Houston and £25,000 of deferred shares converted into a like amount of ordinary, will rank for a full year's dividend in respect of 1929. The acquisitions appear in the balance sheet at cost, £1,152,084 for the B.T.H. shares and £980,031 (which was paid in cash) for Edison Swan and Ferguson Pailin. Gross assets have increased by rather more than the sum of these two, from £5,892,829 to £8,458,294. A temporary loan of £700,000 appears on one side of the balance sheet, and "amounts owing by subsidiary companies, £711,330" on the other. A welcome improvement is the total separation of investments in subsidiary and in other companies. The general reserve now amounts to £575,000, and £101,851 is carried forward. Associated Electrical shares have enjoyed a big rise in the last few weeks, presumably on talk of another amalgamation. Even allowing for the benefits to be anticipated from the fusion, the extent of the rise can scarcely be justified on the score of the earnings of the four companies; from the average profits of the four for the years 1924-7, the amount available for dividends on Associated Electrical ordinary shares would be £293,447 before deducting tax, but the number of those shares ranking for dividend this year is almost trebled, so that a distribution at the 6 per cent. rate will require some £205,000. The profits of B.T.H., according to its report published last week, re-

main unsatisfactory. But Associated Electrical shares, at 32s. 6d. a month ago, now stand at about 51s., their apparent yield being no more than £2 7s. on last year's dividends and £3 14s. on last year's earnings.

Rubber Plantations Investment Trust.—The report for 1928 shows that slightly less than 12½ per cent. was actually earned last year, and that to maintain a distribution of 15 per cent., the dividend equalisation reserve was reduced from £150,000 to £100,000.

Years ended December 31.	1926.	1927.	1928.

Increase or decrease in carry-forward	− 3,148	+ 7,878	+ 2,646

A temporary loan of £125,000 makes a new feature on the liabilities side of the balance sheet, while, opposite, "loans, less loans reserve" are up from £126,333 to £177,644, and "stocks" from £54,921 to £101,676. Securities stand at £2,504,640 against £2,472,374, but the composition of the holding has been significantly altered in the twelve months. Investments in rubber now account for 45 per cent. of the whole instead of 36 per cent., and British Goverment securities for only 18 against 27 per cent. The Trust has apparently sold £250,000 of Consol Fours, £100,000 of 3½ per cent. Conversion Loan, and taken cash for £50,000 of War Bonds redeemed in 1928, in order to buy rubber shares at an attractive level—but not, evidently, at their cheapest, for the market value of the whole portfolio of investments had fallen from £3,898,314 on December 31, 1927, to £2,856,004 twelve months later—a decline of over 26 per cent. In view of the instability of present rubber prices and the possibility that some rubber companies may experience a further shortage of profits this year, for reasons which we discussed in these columns a fortnight ago (page 863), Rubber Trust shareholders will regard with satisfaction the company's possession of £821,179 of reserves. At their present price of 42s. the £1 shares yield £7 2s. 9d. per cent., less tax. The directors' proposal to exclude non-British shareholders from voting rights is discussed in a note above.

Spillers.—For the year ended January 31st last this Cardiff milling combine failed to maintain the substantial improvement shown in the previous twelve months, following a scheme of reorganisation. The increase in the distribution on the ordinary shares (from 5 to 7½ per cent.), however, should be read in the light of the fact that a year ago more than half the earnings were retained in the business; this year's earnings still exceed the dividend by over 1 per cent. The board would seem to be of the opinion that for the time being a sufficiency of reserves has been accumulated.

* Including unstated amount credited from taxation account.

The total of gross assets in the balance sheet is virtually unchanged, but stocks are £368,496 higher at £2,163,375, whereas cash is down from £344,074 to £110,224. As 1s. 6d. per share has been written off the shares of the British Oak Insurance Company, in which Spillers are the principal shareholders, £50,000 has been transferred from contingent reserves to provide for the difference. Since the reorganisation in 1927, Spillers has been mainly a trading company, but holdings in subsidiary and allied companies, of which Spillers Overseas Industries is the chief, still account for some £1,700,000 of its assets. The general position is liquid. During the past year three further businesses were acquired, while the entire capital of the Vancouver Milling and Grain Company passed into the hands of Spillers Overseas Industries. Whereas the share and loan capital amounts to £4,381,924, the reserves and the carry-forward aggregate £3,310,541. There are also contingent reserves of £238,740. At 24s. 9d. the £1 ordinary shares yield £6 1s. 0d. The deferred shares, stimulated from 7s. 3d. to 8s. 3d. by the report, are not eligible for dividend until 15 per cent. has been paid on the ordinary.

Forestal Land.—The new Forestal Land report explains that though 1928 started full of promise, the price of hides fell, and the leather industry found itself overstocked at high prices. Consequently there was a considerable falling-off in the demand for tanning material in general and for the tanning extracts which the company manufactures. "The ultimate recovery to which the board look forward with confidence must be a question of time," and therefore they have certainly acted wisely in not straining to maintain the ordinary dividend at the rate to which it was raised a year ago. In the table below net earnings are shown after charging depreciation, provision for income tax, and all expenses, but though the apparent fall in 1928 is £79,381, the true fall is only £14,303, as a year ago the profits were swollen by a windfall of £65,078 credited from exchange adjustment account. This explains why the allocation to reserve is now only £50,000, against £125,837 a year ago. The actual trading profit in 1928 fell from £851,854 to £837,702, a difference of £14,152.

Years ended December 31.	1926.	1927.	1928.

Changes in individual items of the balance sheet are small, but the general impression is one of increased liquidity. The reserve account now amounts to £1,550,000, and the carry-forward, benefiting by the reduction of dividend, to £253,451. A rise of £260,000 in the item "debtors and debit balances," set off against a reduction of £70,000 in "creditors," is noteworthy. The extent of the slump which the shares suffered on the announcement of the reduced dividend, before the full report was available, was perhaps unwarranted. They are now priced at £1 3/16, with a yield of £6 10s. 0d., allowing for the dividend accrued.

International Holding and Investment Company.—The satisfactory feature of the directors' report of the International Holding and Investment Company for the period ending December 31, 1928, is that the depreciation on the company's holdings, which, in view of the slump in artificial silk, has naturally been heavy, has been more than covered by the reserve and unappropriated surplus. The report deals with the company's operations from its formation in Canada in August, 1927, to take over the assets of the International Holding and Investment Company. These assets consisted mainly of holdings in the artificial silk and public utility industries, and in a statement issued by the advisory committee last year—consisting of the late Captain Alfred Loewenstein, Major Albert Pam, of Messrs. J. Henry Schröder, and Mr Szarvasy, of the British, Colonial and Foreign Corporation—it was reported that the company's investments at market prices at May 26, 1928, were as follows:—In artificial silk companies' shares, $41,664,000; in public utilities' shares, $13,826,000; in U.S.A. railroad shares, $2,860,000; in miscellaneous investments, $6,320,000; making a total of $64,670,000.

During the year 1928 the company participated in the formation of the Société Internationale de la Soie Artificielle ("Fisa"), of Paris, guaranteeing a dividend on the "A" shares of 200,000,000 francs at 6 per cent. per annum for 30 years, and subscribing and holding all the "B" shares of 30,000,000 francs, and the greater part of the 100,000 founders' shares of no par value. The company also acquired a large interest in the Hydro-Electric Securities Corporation of Montreal. The present report gives the following distribution of investments as at December 31, 1928, at cost:—In artificial silk shares, $27,788,722; Fisa "A" and "B" shares, $1,749,805; Hydro-Electric Securities Corporation Preferred and Common shares, $12,982,762; U.S.A. railroad shares, $991,043; U.S. and other chemical shares, $1,496,613; miscellaneous securities, $1,071,848; making a total of $46,080,793. The company's principal investments in artificial silk were in the following enterprises:—Tubize (Belgium, France, U.S.A.), Enka (Holland), Glanzstoff (Germany), Bemberg (Germany), Tomaszow (Poland). On account of the depressed state of the artificial silk industry the artificial silk holdings show a substantial depreciation as at December 31, 1928, as compared with the original cost. The directors have therefore provided $5,000,000 for depreciation from the surplus account, which was sufficient to write down the investments to below the market value or, in the case of securities without a market quotation, to a value less than the directors appraised. Since December 31, 1928, there has been a further shrinkage in the value of some of the company's artificial silk holdings, but the directors state that the unappropriated surplus account is substantially greater than the amount of such depreciation, and that no reference is contained in the accounts to the value of options entitling the company on or before January 1, 1931, to subscribe to 529,756 Hydro-Electric Securities common shares at $25 per share, the present market price being $34. The company's income from its incorporation to December 31, 1928, excluding certain exceptional income, and after allowing for formation expenses, was $6,305,334. In the early part of 1928 the company's preferred stock was retired. On May 29, 1928, the 500,000 shares representing the then authorised common capital stock were subdivided into 5,000,000 shares of no par value, and at December 31, 1928, 4,882,530 shares were oustanding. The company paid the then outstanding preferred stock dividends, which absorbed $37,332, and $2.25 dividend per old common share, equivalent to 22½ cents per present subdivided share. These preferred and common dividends absorbed $888,422. After allowing for a transfer of $275,000 to the syndicate participation account and a transfer of $5,000,000 to the investment reserve account, as a provision for their depreciation as at December 31, 1928, there was a balance of $141,912 in the company's surplus account. In addition to its net income profits of $13,134,610 of an exceptional nature have been realised, of which $6,701,300 has been transferred to capital, the balance, $6,433,310, remaining unappropriated in the surplus account. The total surplus account is therefore $6,575,222, which is an amount sufficient to cover the depreciation since December 31st in the company's artificial silk holdings.

Islas del Guadalquivir, S.A.—The proposal to issue, forthwith, some 200,000 (out of 300,000) ordinary shares of 100 pesetas each, for purposes described in the *Economist* of March 30th last (page 698), has proved abortive owing to the absence of a quorum of shareholders at the extraordinary general meeting convened in Seville for April 15th. The issue has now, apparently, been abandoned, and instead it will be proposed, at the adjourned meeting on Monday next, that 300,000 7 per cent. notes of 100 pesetas be created, convertible at holders' option into ordinary shares, par for par, up to 1935, and redeemable at par between 1939 and 1979. Subject to the passing of the necessary resolutions, 200,000 of these notes will be offered forthwith at 105 to holders of founders' shares on the basis of one note per share. In our earlier discussion of the company's prospects we intimated that a fuller statement would be welcomed as regards the suitability of the river water passing through the company's estates for irrigation and for drinking purposes, in view of the report that the water at that point was of a tidal character. We are, therefore, happy in recommending to our readers a perusal of the letter printed on page 986, in the course of which Dr. J. A. Hanley, Principal of the Cirencester Royal Agricultural College, comments on the results of various analyses, which show that, while the water in question has a certain salt content, the latter is less than one-fiftieth of that of sea-water. Dr. Hanley's definite statement that the water is suitable for irrigation will be reassuring to shareholders who had formerly been far from clear in their minds on this all-important point.

New Capital Issues in April.—In the table below we show the new capital raised in London by issue to the public or shareholders in April; comparative figures for the previous months and for the corresponding months of 1928 are given, together with the monthly averages for preceding years:—

(000's omitted).

Monthly Average.	United Kingdom.		British Possessions.	Foreign Countries.	Total.
	£		£	£	£
1912 and 1913	3,387		6,199	7,388	16,974

April, 1929	*Dr. 150*	25,558	3,686	1,865	30,959

The British Government figures since the beginning of the year are wholly attributable to the difference between sales and encashments of National Savings Certificates. Of the £25,558,000 raised by miscellaneous companies for use primarily in the United Kingdom, offerings by Imperial Chemical Industries to its shareholders accounted for no less than £15,150,000, and a similar offer by United Molasses for another £1,667,000, prospectus issues showing a significant falling off. The largest industrial issue to the public, in fact, that of the Lancashire Electric Light and Power Company, involved a cash subscription of £810,000. In the "British Possessions" section a loan of the Melbourne and Metropolitan Board of Works was the first instance of borrowing by a Dominion Corporation since last October. The month was not altogether a happy one for underwriters, who were left with 84 per cent. of £1,600,000 Agricultural Mortgage Bank of Colombia bonds, 87 per cent. of £175,000 for the London Clinic and Nursing Home, and 93 per cent. of £450,000 for the Nigerian Electricity Supply Corporation, while the fact that dealings started at 6s. 3d. discount in the 725,000 £1 shares of Chemical and Wood In-

SECURITY FIRST

ROYAL

INSURANCE COMPANY, LIMITED

HEAD OFFICES: LIVERPOOL AND LONDON.

dustries, suggests a poor public response. Indeed, full (or over) subscription was publicly announced in respect of only ten out of the twenty-one issues made by prospectus during the month.

An American Banking Manual.—The Banks and Finance section of Moody's Manual*, covering banks, investment trusts, insurance companies, finance, mortgage, and real estate enterprises in America and other countries, was issued for the first time last year, and in the 1929 edition, which has just made its appearance, the contents have been extensively revised and enlarged. The editors draw particular attention to the pages dealing with investment trusts, a relatively new and rapidly growing development in American finance and one, therefore, on which Moody's collected data have a special reference value. This portion of the book has been amplified with extra detail regarding investment restrictions, management participation and compensation, and lists of security holdings, while an alphabetical list of American and Canadian trust companies has been added. Business men and others in England who wish to sharpen their understanding of the structure of American finance will appreciate the section on the Federal Reserve System. Moody's Manuals are compiled primarily for American users, but they contain exhaustive information that is not otherwise available in this country in such handy form.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following meetings:—Institute of Chartered Accountants and Auditors, Bank of Czechoslovak Legions, Wiener Bank-Verein, Atlas Assurance, Eagle Star and British Dominions Insurance, London and Lancashire Insurance, Northern Assurance, Royal London Mutual Insurance Society, Scottish Equitable Life Assurance Society, Scottish Union and National Insurance, Royal Exchange Assurance, Ocean Accident and Guarantee Corporation, Corporation and General Securities, Shropshire, Worcestershire and Staffordshire Electric Power, British Bank of South America, Shanghai Electric Construction, London Trust, J. Mandleberg and Co., New African Co., Henry Glave, Godfrey Phillips, James W. Cook, Odhams Press, and Roan Antelope Copper Mines. The report of the Wiener Bank-Verein describes the progress made towards Austrian economic reconstruction during recent months. The intense competition which still prevails in the marine insurance market was discussed at most of the insurance company meetings. The chairman of Godfrey Phillips revealed that the whole cost of the "Plus Two" cigarette advertising campaign had been charged to revenue.

MINING NOTES.

Brakpan.—Our mining correspondent writes:—Last year's results on the part of this well-known Far Eastern Rand undertaking corresponded so closely with those of 1927 that it is surprising that the directors did not stretch a point and maintain the dividend at the rate which had ruled for the two preceding periods—although the cut was made in respect of the first half of the year, when the returns showed some falling off. Actually, it was the growth in the amount required for taxes which accounted for the difference of 1¼ per cent. Capital outlay continues unimportant. We contrast the results of the past three years:—

		1926.	1927.	1928.

* "Moody's Manual of Investments: Banks and Finance Section." (Moody's Investors' Service, New York, and 33 King William Street, London, E.C. 4.) £5 5s.

At 10,430 ft. the payable footage sampled exceeded the 1927 total by fully 1,000 ft., but the payable percentage declined from 48.3 to 47.7. A slight expansion in the width of the reef being accompanied by maintenance of value, the inch-dwts. work out at 591, as against 577. The variations in the ore reserve figures are accounted for by the calculations being based upon a stoping width of 57.61 in., or 2.73 in. less than before. Thanks to expansion in tonnage crushed, with some reduction in costs, the profits for March last amounted to £60,000, as against £51,000 for January and £52,350 for March, 1928. It would therefore seem reasonable to expect the dividend in respect of the current six months to be at the same rate as for the second half of 1928. On the 50 per cent. basis the gross yield is about 11½ per cent.

Springs.—Improvement in grade, due mainly to the further reduction in the stoping width, was the outstanding factor contributing to last year's enhancement in profits, although the tonnage rose substantially. The absence of any expansion in the dividends is attributable to the nature of the special appropriations. Taxation absorbed £79,300, as against £68,100; the Union Government's participation in the profits was £190,500, compared with £147,600; while capital expenditure swallowed up £94,400 in place of nothing. The current year's outlay on plant, &c., is estimated at £60,000. "As, however, the bulk of this amount has been provided for in the 1928 appropriation account, there remains only a comparatively small sum to be met out of the current year's profits," observe the consulting engineers. Our usual table follows:—

		1926.	1927.	1928.
Ore crushed	tons	817,300	799,000	830,600
Yield per ton		37/8	38/7	41/4
Cost per ton		19/3	20/5	20/9
Profit per ton		18/4	18/2	20/7
Working profit	£	750,070	727,600	853,850
Dividends		506,250	506,250	506,250
Rate per cent.		33⅓	33⅓	33⅓
Carried forward	£	50,310	59,950	49,220
Ore reserves	tons	3,337,510	3,198,420	3,008,640
Value	dwts.	8·46	8·58	9·10

Developments last year proved slightly less favourable than in 1927, the payable percentage being lower at 38⅓ and the inch-dwts. at 584. As a result of the contraction of the stoping width by nearly 5 in. to 52⅓ in., the ore reserve tonnage is down 190,000 tons to 3,008,600 tons, and the value ½ dwt. up at 9.10 dwt.; the inch-dwt. work out at 478 in place of 492. As the monthly profits are being well maintained, and as the above-mentioned capital expenditure will be on a reduced scale, the dividends should at least equal those paid in respect of the past session. On the basis of the distributions of the past two years the yield is 11 per cent. gross.

Waihi.—All things come to an end. This New Zealand enterprise has proved to be one of the most successful gold mining companies on record. In the course of some thirty-five years it has recovered bullion to the value of nearly £16,000,000, and has distributed £6,500,000 in dividends and taxes. Some years ago, in view of the indications of approaching exhaustion of the property, a special geological report was made. This document gave ground for anticipating the existence of the ore bodies at greater depth, but the work since performed has failed to open up any considerable quantity of payable material, although a few good strikes have been reported; and in the report for 1928 the directors announce that no further exploration at depth is to be undertaken. As the outcome of last year's operations the ore in general account has shrunk by 80,100 tons to 215,000 tons, representing about a year's supply; at 193,500 tons the ore in suspense account shows practically no change. How much of this suspense ore can be profitably worked is uncertain. Maintenance of the 1928 dividend rate at the 2s. level entailed a fairly substantial draft upon the carry-forward, leaving the surplus at £18,600. The balance sheet sets out securities (chiefly gilt-edged) at £384,000; investments in mining propositions £12,000; cash and gold £85,000. Allowing for creditors, and for the sum required to cover the final dividend, a surplus of £360,000 remains. Adding to this the £212,500 to be received in September, 1931, from the New Zealand Government in respect of the hydro-electric works, we arrive at a total equal to about 11s. 6d. per 5s. share, now quoted at 13s. 6d., including 1s. tax free dividend. With at least another year's work in prospect, this price is scarcely excessive. Waihi has lately taken a two-thirds interest—the Tronoh having the other third—in a tin mining proposition of about 500 acres in Siam. If and when the tin market assumes a better appearance, this participation may prove a profitable venture.

West Springs.—Last year's further retrogression was due to various factors, including reorganisation work in connection with the expansion of the treatment plant and other measures benefiting the future; but the outstanding influence consisted in the progressively unfavourable tendency of the developments. This is shown by the following contrast:—

	1926.	1927.	1928.
Payable percentage	35·81	31·65	25·43
Inch-dwts.	632	529	497

By the performance of a substantially increased footage in 1928, the quantity of ore opened up slightly exceeded that taken out of the mine, the reserves at the end of the year—2,695,500 tons—showing an increase of 57,300 tions; but, as already indicated, values declined afresh. Appended is a comparison of the results of the past three years:—

		1926.	1927.	1928.
Ore crushed	tons	587,900	587,700	647,300
Yield per ton		31/4	30/11	27/9
Costs per ton		18/8	19/3	19/8
Profit per ton		12/8	11/8	8/1
Total working profit	£	373,030	343,850	260,600
Dividends, amount		179,300	179,300	156,890
Rate per cent.		10	10	8¾
Carried forward		36,720	39,260	67,190
Ore reserves	tons	2,393,280	2,638,220	2,695,520
Value-dwts.		8·22	7·23	6·8

Of last year's earnings, the Government's participation absorbed £27,200, and capital expenditure £28,600, as against £94,800 and £42,000 respectively in 1927. Capital outlay during the current session is expected to be very trifling. The consulting engineers state that the grade of ore mined from the payable reserve this year will more closely approximate the average than it did in 1928, but they anticipate that the reduction in value will be counterbalanced by the treatment of an increased tonnage at a lower cost ratio.

Daggafontein.—This company was reorganised at the end of 1927, arrangements being made to carry out development from the workings of the adjoining Springs Mines. Last year 1,360 ft. of pay reef were opened up, averaging 9.75 dwts. over 24.67 ins. These and subsequent results are considered to warrant the sinking of a new shaft forthwith. From three to three and a-half years will be required to reach the milling stage. As a first step, 309,000 shares are to be issued at 22s. 6d., 259,440 being offered to the shareholders and 49,550 subscribed by the Anglo-American Corporation of South Africa, which will guarantee the issue. The proceeds—£340,300—will, it is estimated, be sufficient to finance the company until the end of 1930, when the shaft should be down to the reef.

Globe and Phoenix.—The apparent anomaly of a decline in profits, with an advance in dividends, is explained by the circumstances—firstly, that last year's earnings were not subject to a repetition of the 1927 appropriation of £15,000 for special development, and, secondly, that the carry-forward has been drawn down from £26,000 to £14,000. Actually, last year's working surplus of £145,300 exceeded the previous year's amount, but taxes absorbed £30,800 in place of £13,000. The dividends, of course, totalled 3s. net per 5s. share as against 2s. 6d. An interim distribution at the reduced rate of 1s. per share has just been declared, reflecting the somewhat erratic nature of the monthly profits during the current year to date. Satisfactory results have been obtained between the 11th and 15th levels, but no payable ore has been discovered at depth; the workings are down to the 29th level. At 86,700 tons, containing 111,700 ozs., the ore reserves fall below the end-1927 estimate; the quantity—even if it were all available—would represent little more than a year's supply for the mill. Fortunately, the cash position is good.

CAPITAL ISSUES.

Six prospectus issues were made during the past week, inviting £2,769,000 in cash subscriptions. The total for the year to date (including offers to shareholders as well as to the public, but excluding conversions) is now £128,436,728, as compared with £190,661,848 for the corresponding period of last year. An issue of £1,600,000 5 per cent. stock on behalf of the *Melbourne and Metropolitan Board of Works*, offering a flat yield of £5 6s. 11d., or £5 9s. 9d. on redemption in 1954, which attracted notice by reason of its being sponsored by a "house" outside the trio usually responsible for such issues, was reported to have been over-subscribed. A 16-year-old trust company, the *London and South American Investment Trust*, which has paid 6¼ per cent. for the last eight years, made an issue of £1 shares at 21s., sufficient to double its share capital. The existing shares, which have fluctuated between 19s. and 25s. in the last 12 months, are now priced at 22s. 6d. ex dividend. The *Third Canadian General Investment Trust*, which is one year old, has an impressive board, including two ex-Prime Ministers of the Dominion. A dividend at the rate of 5 per cent. was paid for the first half-year of operation. The company is trebling its capital by an offer for sale of 500,000 $5 shares at 21s., half of which are being taken by "insiders." The three Canadian trusts in the group are all under the same management, but hitherto only the shares of the first one have been dealt in on the London Stock Exchange. Small issues made up the remainder of the list. *D. M. Davies (Woodwork)* asked for and obtained £100,000 for the conversion of an established private business into a public company. Apart from a loss caused by fire in 1926, the prospectus showed expanding profits and reported abundant contracts on hand, but a woodwork manufacturing business of this type is bound to depend largely on a "luxury" demand. To include an option as part of the purchase consideration is on principle undesirable. Two young gramophone and wireless companies have been amalgamated under the name of *Faradex-Seraphone*. At the present time all ventures in this group and class must be regarded as inherently speculative. *Charterhouse Caterers*, a dance club, whose prospectus enlarged upon past history without revealing financial results, falls into the category of the gamble.

ISSUES OF THE WEEK.

By Prospectus or Offer for Sale.

Net total previously recorded, £121,812,297.
Including conversion total previously recorded, £135,391,517.

National Savings Certificates.
Net sales week ended April 27, 1929, *Dr. £50,000*.
Total receipts April 1, 1929, to April 27, 1929, *Dr. £150,000*.

Melbourne and Metropolitan Board of Works.—Issue of £1,600,000 (out of £2,000,000) 5 per cent. inscribed stock, 1954, at 93½. An annual ¼ per cent. cumulative sinking fund will be applied to purchase at a price not exceeding par and accrued interest. The loan is secured on the Metropolitan General Fund and on all rates and other receipts of the board. Total indebtedness of the board amounts to £21,375,120, renewal fund to £957,064, and accumulated sinking funds to £734,457. Revenue for year ended June 30, 1928, was £1,452,134. The proceeds of this issue are required to redeem a £1,010,100 loan maturing shortly, and for extension of works.

London and South American Investment Trust, Limited.—Issue of 500,000 (additional to 500,000 existing) £1 ordinary shares at 21s. As from October 1st next the whole capital will be split into 500,000 5 per cent. preference and 500,000 ordinary shares of £1 each. The company was formed in 1913 as a financial and investment trust, and in 1924 established a trustee department. In 1927 £250,000 5 per cent. debenture stock was issued at 94. Net profits (to March 31st) have been:—1925, £32,219; 1926, £36,693; 1927, £33,527; 1928, £37,696; 1929, £48,720.

Third Canadian General Investment Trust, Limited.—Offer at 21s. of 500,000 $5 shares (out of 2,000,000 authorised, 250,000 of which are already issued). The company commenced operations in June, 1928; at February 28, 1929, the surplus income and profits amounted to $70,332; out of which a 5 per cent. dividend was paid. For the time being operations will be confined principally to Canadian investments.

D. M. Davies Woodwork, Limited.—Issue at par of 1,000,000 (out of 2,000,000) 2s. shares. The company acquires a business, established in 1910, which manufactures all classes of woodwork, including gramophone and wireless cabinets, motor car bodies, ammunition cases, etc. Net assets, excluding goodwill, are valued at £77,895, to which profits, estimated at £14,000, since July 31st last must be added. The purchase price is £75,000, payable as to £25,000 in cash and £50,000 in shares, together with an option on a further 300,000 shares at par. Profits, before deducting certain charges, have been (to July 31st):—1925, £7,521; 1926, (loss) £641; 1927, £12,190; 1928, £18,699. This issue will provide about £50,200 additional working capital. The remaining 200,000 shares are also under option at par.

Faradex-Seraphone Company, Limited.—Issue at par of 750,000 (out of 1,250,000) 2s. shares. The company acquires two businesses manufacturing wireless and gramophone apparatus, with net assets (including patents, &c.) valued at £55,000. The purchase price is £55,000, payable as to £20,000 in cash and £35,000 in shares.

Charterhouse Caterers, Limited.—Issue at par of 120,000 (out of 160,000) 5s. 10 per cent. participating preference and 360,000 (out of 600,000) 1s. ordinary shares, the former entitled to one-quarter of the surplus distributed profits after payment of 10 per cent. on the ordinary. The company takes over a social and dance club in London, valued at £38,750. The purchase price is £37,500, payable as to £27,500 in cash, £5,000 in preference and £5,000 in ordinary shares. Working capital is stated to be ample. The unissued shares are under option at par.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introductions:—**Melville Trust, Limited**; issued capital, £700,000 in £10 shares, each to be converted into £6 of 5 per cent. preference and £4 of ordinary stock; an investment trust company. **Ulu Klang Tin, Limited**; issued capital, 900,000 $1 shares, incorporated in the Federated Malay States in 1928 as a tin-dredging and mining company; 575 acres of land have been purchased for $400,000 in shares. **Associated Gas and Electric Company**; a holding company incorporated in 1906 under the laws of the State of New York; outstanding, 1,309,241 shares of common stock, 300,000 shares of class "B" and 733,291 shares of class "A" stock; of preferred stock, 105,159 shares of the original series, 46,013 of the $7 dividend series, 200,441 of the $6.50 dividend series, 124,750 of the $6 dividend series, and 5,602 of the $5 dividend series; $17,850,036 of obligations convertible into stock at company's option; $19,459,000 5½ per cent. convertible gold debentures, 1977; $35,009,450 5 per cent. gold debentures bonds, 1968; $49,000 5 per cent. gold debenture bonds, series 1928; $38,748,325 4½ per cent. gold convertible gold debentures, 1948; $92,560 4½ per cent. gold debenture bonds, 1958; consolidated net earnings of the company and its subsidiaries for year ending October 31, 1928, were $16,541,293, before interest, depreciation, dividends, &c.

COMPANY MEETINGS, &c.

BANK OF CZECHOSLOVAK LEGIONS, PRAGUE

DIVIDEND 8 PER CENT. AGAINST 7 PER CENT. IN 1927

The eighth annual general meeting of the shareholders of the Bank of Czechoslovak Legions was held, on April 28th last, in the Lucerna Hall, Prague, Dr Rudolf Rase presiding.

The president, in the course of his remarks, said: The favourable turn in industry and business of the year 1927 continued throughout 1928 and had naturally a beneficent effect on the activity of all banking institutions and also on that of our bank. We stated in the preface of our balance sheet that this year has proved the best economically since the end of the War. The greater prosperity is best proved by our proposal to pay a higher dividend.

THANKS TO THE GENERAL MANAGER AND STAFF.

As in previous years I have the agreeable duty to thank the general manager, Mr Sip, the assistant general manager, Mr Khyn, and all the other managers and the staff of the entire institution for their valuable services during the year, which led to these satisfactory results. I have again to state that the spirit throughout the bank is excellent.

PROFIT, DIVIDEND AND RESERVES.

The general manager, Mr Sip, turned to the balance sheet and gave a detailed explanation of its different items.

The net profit amounts to Kc. 7,703,862·70 and a dividend of 8 per cent., *i.e.*, Kc. 16, per share will be paid against Kc 14, *i.e.*, 7 per cent. for last year. Kc. 5,000,000 are transferred to the pension fund of the staff and Kc. 800,000 to reserves, which reached Kc. 41,700,000—*i.e.*, 59·57 per cent. of the capital.

ELECTION OF DIRECTORS.

The retiring directors, Mr Otakar Trcka, Bohuslav Vaclavik, Mr Ladislav Vana, were elected; Mr. Antonin Pastyrik newly elected. The members of the auditing committee, Mr Josef Jezek and Jaroslav Krysa, were re-elected. The accounts for 1928 were unanimously approved.

The board of directors held a meeting at the close and re-elected Dr R. Rase as president, Dr A. Straka as first vice-president, and Mr Stanislav Zavadilek as second vice-president.

WIENER BANK-VEREIN.

GROWTH OF ASSETS AND DEPOSITS.

The fifty-ninth ordinary general meeting of the Wiener Bank-Verein was held in Vienna on April 16th, Mr Hugo Marcus, the Vice-Chairman of the Company, presiding. The abridged report submitted to the shareholders proceeds as follows:—

THE PAST YEAR.

While the moderate economic revival registered at the close of 1927 continued for some time in 1928, it subsequently came to a standstill ascribable to a large degree to the falling off of the conjuncture in the neighbouring countries, and, in particular, in Germany. The level that had been reached could, however, be maintained, and on the whole further, albeit slow, progress has been made towards Austria's economic reconstruction. The figures of the clearing houses, the railway traffic, and the foreign trade show a rising tendency, and the production of certain important industries has increased. Yet, unemployment has not receded appreciably, and there is still ample room for improvement in many directions.

PUBLIC FINANCES.

While the substantial cash reserves and the excess revenue enabled the Government to carry out uncurtailed their investment programme as previously laid down, the fact that, before assuming new financial obligations, Austria has to go through the cumbersome way of obtaining the individual assent of a number of independent bodies had such a protracting effect that the contemplated Federal Investment Loan could not be concluded in 1928. The international situation having, in the meantime, become more unfavourable with respect to the issue of bonds, the floating of the proposed loan may be still further delayed. As a discontinuation of the investments would be most harmful to the country, the Government will, notwithstanding the satisfactory development of the public revenue, have to postpone the relief so sorely needed by the country's economy in the shape of a remission of taxation. The adverse balance of trade is not giving rise to any serious apprehension, and it is surmised that the balance of payments is being partly improved by sundry invisible exports. The gold and foreign bills held by the National Bank of Austria have, from the close of 1927 to that of 1928, only receded by the trifling amount of 11·5 million Schillings, i.e., 1·2 per cent.

THE BANK'S ACTIVITIES.

Realising that assistance should be extended to the Austrian industries, which have to contend with the most severe foreign competition, the banks decided to reduce their charges; this measure, and the concurrently rising money rates abroad, have decreased the banks' profits which were moreover adversely affected by the stagnation of the Vienna Stock Exchange and the very slack issuing activity. After recalling that the Wiener Bank-Verein's branches in Yugoslavia had been converted into the General Yugoslavian Banking Corporation, Limited, and that this should be kept in mind when comparing the 1928 accounts with those of the preceding year, the report points out that the assets and the deposits have, nevertheless, grown. The gross and the net profits having receded, we consider it consistent with our cautious policy to propose a slight reduction of the dividend. In order that the heavy charges arising from salaries be brought into line with the present conditions, another two hundred assistants were induced to resign at the close of 1928 against adequate compensations. As the number of the bank's assistants still exceeds the corresponding 1914 figures, a further reduction of the staff is being contemplated.

Our permanent participations in our affiliations, to wit the General Banking Corporation of Bohemia, the General Banking Corporation of Poland, the Countrybank of Bosnia and Herzegovina, the Banque Balkanique et Franco-Belge de Bulgarie, and the General Yugoslavian Banking Corporation, appear under a new special heading in our balance-sheet. Our stocks of securities and syndicated shares have been brought forward at the same prices as indicated in last year's balance-sheet, and new purchases were entered at cost price.

The decreased book value of the item real estate is due to the elimination of two buildings at Agram, and to the customary depreciation.

The development of our branches, and in particular that of our sub-branches in Vienna, has been very satisfactory, and their share in the total earnings has further increased. The Bolzano branch, in Italy, having practically lost its *raison d'être*, was closed down, its business being transferred to our Merano branch.

We participated in 1928, jointly with the Oesterreichische Credit-Anstalt für Handel und Gewerbe and the Schweizerische Gesellschaft für elektrische Industrie, Bale, in a syndicate aiming to erect a large water-power plant on the Danube near Ybbs-Persenbeug for generating 145,000 h.p. and with an annual capacity of some 800,000,000 kwh. The scheme implies, moreover, a regulation of the River Danube which would greatly benefit navigation. We took an interest in the Wiener Erdöl A.G. which was formed by American friends with a view to prospecting for oil and gas in the Vienna Basin. We founded jointly with our friends abroad, and with the Allgemeine Oesterreichische Boden-Credit-Anstalt and their friends, the Union Financière Polonaise, with the object of extending financial facilities to the Polish industries. We participated in the merger of the Banque Balkanique with the Banque Franco-Belge de Bulgarie. We also participated in the consolidation of the Bauerei Jedlesee Rudolf Dengler A.G. with the Vereinigten Brauereien Schwechat, St. Marx, Simmering, Hütteldorf-Dreher, Mautner, Meichl A.G.; of the Puchwerke A.G. and the Oesterreichische Flugzeugfabrik A.G. with the Austro-Daimler Werke; of the F. Wertheim and Company, Kassen -und Aufzugsfabrik A.G. with the Marchegger Maschinenfabrik und Eisengiesserei. We formed a syndicate of the big Vienna banks for issuing a 7 per cent. seven million schilling loan of the province of Tirol and we participated in the underwriting of the 7 per cent. Roumanian Stabilisation Loan.

After enumerating participations in other syndicates, the chairman proceeded to survey the numerous companies in which the Wiener Bank-Verein hold a controlling interest; quite a number of these are, in spite of the general economic dullness, able to distribute higher dividends while maintaining their cautious policy of putting substantial amounts to the reserves.

RESERVES.

In addition to the ordinary and extraordinary reserve funds, totalling 26,428,370 schillings, which remain unchanged, it is proposed to bring the ordinary reserve fund "B" created last year from 600,000 schillings to 1,100,000 schillings by the allocation of 500,000 schillings, being roughly 10 per cent. of the year's net profit. The aggregate reserve funds will therefore amount to 27,528,370 schillings.

RESULTS OF THE YEAR.

The results of the year are as follows:—

Assets.

	Schillings.	
Cash		16,940,879·64
Bills		99,558,799·10
Debtors:	Schillings.	
Balances with banks	66,723,076·20	
Other debtors	274,993,434·12	
		341,716,510·32
Permanent interest held in banks		18,353,036·69
Payment on syndicated shares		34,377,389·72
Securities		8,034,725·37
Real estate		7,935,034·03
Total		526,916,374·87

Liabilities.

Pensions	1,882,952·89
Taxes and fees	3,972,522·31
Depreciation on real estate	121,000·—
Net profit	5,145,999·98
Total	29,637,198·19

DISTRIBUTION OF PROFITS.

The chairman proposed, on behalf of the board of directors, to apply 4,125 millions of the net profit to the payment of a 7·5 per cent. dividend (*i.e.*, 1·50 schillings for one share of 20 schillings face value), 0·5 millions to the ordinary reserve fund "B," and, after paying the bonus to the directors, to carry over 210,436·72 schillings.

The resolutions submitted to the meeting were carried by all the shareholders with the exception of one dissentient vote.

M. Emile Francqui, Vice-Governor of the Société Générale de Belgique, who had been a director of the company since 1921, has tendered his resignation as his numerous other important duties have of late prevented him from giving an adequate attention to the company's business. His services in the past were thoroughly and gratefully appreciated, and it is hoped that the company will also in the future have the benefit of his invaluable advice. The co-optation of M. Henry Dewez, managing director of the Banque Belge pour l'Etranger, who filled the vacancy left by M. Francqui's retirement, was unanimously confirmed. A warm tribute was also paid to Baron Oscar v. Klinger who likewise resigned his seat on the board of directors which he had held since 1920. The directors retiring by rotation, to wit, M. Hugo Marcus, M. Alfred Liebieg, M. Kuno Mautner-Markhof, and M. le Chevalier de Wouters D'Oplinter were re-elected.

A vote of thanks to the chairman concluded the meeting.

NORTHERN ASSURANCE COMPANY, LIMITED.

SUMMARY OF CHAIRMAN'S SPEECH.

REVIEW OF DIFFERENT DEPARTMENTS.

The ninety-third annual general meeting of the Northern Assurance Co., Limited, was held, in Aberdeen, on May 1, 1929.

The Chairman (Mr A. Martineau) referred to the death of Mr Alexander Heun Goschen, and to the appointment of the Hon. Eric Brand Butler-Henderson to fill one of the vacancies on the London board.

The income from all sources in 1928 amounted to £6,835,060.

FIRE BUSINESS.

The fire premium income amounted to £2,599,323, the decrease of £90,568 being due partly to the reorganisation of the company's United States business and partly to the increase of competition resulting from the establishment of some forty new companies in that country. The profit for the year was £145,381.

ACCIDENT DEPARTMENT.

The acident department had again produced an excellent profit. The premium income for the year was £1,542,038, an increase of £22,028 over 1927, and the profit of £118,000 represented a ratio of 7.7 per cent. of the premiums.

MARINE DEPARTMENT.

In the marine department the premium income shows a reduction of £570,375 in pursuance of the policy deliberately undertaken by the company. So far as it was possible to estimate, the marine fund was considered adequate to run off the liabilities attaching.

LIFE DEPARTMENT.

1,399 policies for £825,139 had been issued in the life department, the premiums for the year amounting to £439,045, and the net interest to £245,490.

DIVIDEND.

Transfers to profit and loss from the underwriting accounts and sundry credits amounted to £554,213 which, added to the credit balance of £451,387 from the previous year, made a total of £1,005,600. A final dividend of 9s. per share less tax was declared on the ordinary shares of the company and a corresponding payment of 7s. 1.97d. per share less tax on the preference shares, leaving a sum of £586,018 to be carried forward, or nearly £135,000 more than was brought in.

The report and accounts were adopted.

THE BRITISH BANK OF SOUTH AMERICA, LIMITED.

THE FINANCES OF BRAZIL.

NEED FOR STABILISATION.

The sixty-sixth ordinary general meeting of the British Bank of South America, Ltd., was held, on the 2nd instant, at the head office, 117, Old Broad Street, London.

Mr R. J. Hose (chairman of the company) presided.

The secretary (Mr L. G. Bally) having read the notice convening the meeting and the report of the auditors.

The Chairman said, in the course of his speech:—Gentlemen, at our meeting last year, I was able to point to signs of improvement in Brazilian affairs. However, the increased tone of optimism prevalent at the beginning of 1928 has been lessened by the subsequent trend of events, although in this connection it may perhaps be observed that Brazil has for so many years past experienced periods in which crisis has alternated with marked prosperity that the establishment of tranquil conditions—free from any extreme elements in either the political or industrial fields—may have created, by way of contrast, an exaggerated sense of depression.

In any case, the position of the national finances has definitely improved, it having been officially announced that, following upon a succession of previous Budget deficits, the 1927 accounts showed a surplus of 30,851 paper contos, and that, of this sum, 25,000 paper contos was utilised in the incineration of inconvertible notes. Estimates for the 1928 financial year provided for a small surplus of revenue over expenditure, but the actual result has not yet been made known, whilst the Budget for 1929 also anticipates a substantial excess of revenue.

It must be emphasised that financial and commercial circles interested in Brazil would view with great satisfaction an early official statement regarding the definite conversion of the milreis into the new monetary unit, the "cruzeiro," on the terms of the Monetary Reform Decree of December, 1926.

BRAZILIAN COFFEE POSITION.

Despite criticisms of the official policy of control of shipments of Brazilian coffee, it must be remembered that, without the operations of the Coffee Institute, the industry would undoubtedly have been reduced to chaos. It is also well to point out that the defence scheme not only provides for limitation of shipments of coffee, but also for financial aid to planters and propaganda in furthering a large consumption of the commodity. It is, of course, impossible to predict the course of events, but, on the whole, it is believed in coffee circles in Brazil and elsewhere that that country will continue to supply about 65 per cent. of the world's coffee requirements for some time to come, and that any increase in world production will be absorbed by an expansion in consumption.

In view of the large commitments of Brazil in the way of interest and service of foreign indebtedness, the further shrinkage in the visible favourable balance of trade during 1928 is a disappointing factor. This movement emphasises my remarks on previous occasions on the necessity for Brazil to increase and diversify her commodities for export rather than to be so paramountly dependent upon coffee. Such development, however, depend upon increased transport facilities, and these in turn will require the inflow of fresh capital into the country, so that, in brief, the definite adoption of stabilised currency is the whole basis upon which Brazil's future prosperity appears to depend.

From the general banking point of view, there were no pronounced features last year. Money was somewhat tight throughout the period and has become very much more so quite recently, owing to the restriction of facilities by the Bank of Brazil. Here again, the conduct of future business upon normal lines must be dependent upon the adoption of a consistent national monetary policy, coupled with currency stabilisation.

The sugar industry in the Rio de Janeiro district is of importance, seventy sugar mills now working in the State. It is believed that it would be to the advantage of British companies manufacturing sugar machinery not only to appoint local representatives but also to hire showrooms where models could be exhibited.

PROFIT AND DIVIDEND.

In continuance of our policy of consolidation, the business of our Montevideo branch was transferred to the Anglo-South American Bank, as from July 1st, 1928. This, and the transfer of our London Office business to them on January 1st, 1928, more than accounts for the reductions observable in the balance sheet items, whilst, naturally, our profit and loss account also reflects these arrangements and those previously made in regard to Buenos Aires; the slightly increased net profit of £100,718 enables us to recommend the payment of a final dividend for the twelve months of 10s. per share, thus maintaining the total distribution at 10 per cent.

The report and accounts were unanimously adopted.

THE LONDON AND LANCASHIRE INSURANCE COMPANY, LIMITED

"A YEAR TO BE PROUD OF"

SUCCESSIVE DIVIDEND ADVANCES

PREMIUMS, PROFITS, AND RESERVES LARGER

RECORD OF PROSPERITY

The sixty-seventh ordinary general meeting of the London and Lancashire Insurance Co., Limited, was held in London on Wednesday, the 1st instant.

Mr F. W. Pascoe Rutter, governor of the company, presided over a full attendance of shareholders.

Mr Rutter, in moving the adoption of the report and accounts, said :—You will have seen that 1928 turned out to be one of the best years we have ever had—not quite reaching our maxima in those historic years 1919 and 1920—but still good enough for the shareholders of any company, insurance or otherwise, to be proud of. (Hear, hear.)

Our fire premiums in amount were almost exactly the same as in 1927, namely, £3,447,446, a falling off having occurred in the United States and been offset by development elsewhere, but not, I am sorry to say, in our home field, which continues to be stationary.

The profit from the fire department was slightly less than in 1927, namely, £405,619 against £429,110.

The accident department showed some advance by an increase in the premiums of £78,642, which made them for 1928, £2,437,130, and the profit was £119,549, against £102,494.

And so these two departments, which are intermingled and interdependent, yielded a profit almost identical with 1927—actually, about £6,500 less.

GRATIFYING FIGURES.

The marine department came to the front, and produced the largest amount of profit which we have experienced since the fervid years of the war. There was an increase in the business of £93,490, making a premium income of £1,475,945, and the profit was £145,302, against £96,507.

The total premiums, therefore, for the year—excluding, of course, any life business—were £7,360,522, or an increase of £177,928, and there was a realised net profit, after all deductions of taxation, of £670,470, or 9.11 per cent., against £628,111, or 8.75 per cent.

After providing for all liabilities, and for the dividend, our reserve funds have been increased from £9,299,038 to £9,967,048. (Hear, hear.)

1928 had few features of an abnormal character. There was an important hurricane at Porto Rico, which cost the companies will over £500,000, but our total participation was unimportant.

HOME FIRE BUSINESS.

Our home fire business, as you know, has always been the foundation of our success, and the results have been continuously good. In 1928 there was a retrogression in the profit, and I think I may put it down, briefly, to the fact that our home trade, notwithstanding the little fillip which it has experienced here and there, is still far from satisfactory. The consequence of this depression, of which there has been so much evidence since the war, means, in many cases, a reduction in the insurances effected—an obviously short-sighted policy on the part of any insured—in many other cases, a demand for lower rates, which reduces our premiums without reducing our losses; and, thirdly, increased competition amongst the companies to make up for the depletion in their revenue.

These conditions continue, and 1929 has already experienced a special reverse, due entirely to the abnormal frost of February, which caused many burst pipes, and often consequent fires. Burst cylinders in motor cars was another unusual experience, which brought its own penalty. Then followed a period of unusually dry weather, and, whether that was a material factor or not, the loss experience of the first three or four months of this year has been definitely heavier in our own, and in the general experience, than in any period for certainly the last twenty years. Actually, the fire losses in this country to date are more than double the figure for the same period of 1928.

NOTABLE MARINE RESULTS.

You will probably have been surprised, and, I hope, gratified, by the important and satisfactory contribution to our profits from the marine department. (Hear, hear.) For years past, company after company has deplored the state of things in the Marine market. Many meetings have been held, and some good has resulted from these concerted efforts to improve the atmosphere. I believe that definite improvement has been attained in more than one direction, and especially by the realisation of the Spartan principle to ruthlessly eliminate risks, and even classes of business, which underwriters have tolerated for their own companies, but which, if they were on the books of *another* company, they would regard as bad business.

You will bear in mind that, in our case, and in the case of a number of companies, what we report to you is the experience up to date, and is really the reflex of our underwriters' activities during the past three years. When, therefore, under these conditions—because there is still very great room for further improvement—we are able to report to you a gross profit on our marine underwriting of 12.67 per cent., you cannot help but be appreciative. (Hear, hear.)

It is not necessary, nor do I propose, to say more on this subject, as many of you will have already read the reports of the meetings of our two companies—"The Marine" and the "Standard"—and it is fortunate that we have two such excellent underwriters, the one in London and the other in Liverpool, whom you may, even in the most difficult times such as those which we have been going through, expect to extract from the risks which they accept, some profit instead of a loss.

GENERAL FOREIGN BUSINESS.

After our Home district comes, in importance of profit, if not of volume, what we call our General Foreign field, and this scarcely ever fails us. It includes, of course, besides our own Dominions, such countries as China, South America and the Continent of Europe.

In 1928, this field, covering such a large area, was not quite so good in its result as in the previous year; but, taking it all in all, we have little to complain of. The backbone of our foreign business is that of our Dominions overseas, upon which the trading of this Great Britain is so dependent, and it must always be borne in mind that our own success is correspondingly dependent upon those countries abroad, constituting, with ourselves, the British Empire.

There are only two sections which I need specially refer to—one is Canada, which, although good, was not so lucrative as 1927—and Australia, which contributed largely to our profits, especially in the results of the "Colonial Mutual" which we bought a couple of years ago, and which is now getting into its stride under our auspices. But Australia's good contribution was, unfortunately, minimised by New Zealand, where both the fire and accident results were not in accordance with what we expect from the Antipodes.

THE UNITED STATES.

Since I last dealt with the subject, you have heard a good deal about America, and, by America, I mean the United States. At present, America dominates many of the financial transactions of the world. Our Transatlantic friends have done so much, subsequent to, and mainly consequent upon, the happening of the Great War, that their activities are not restricted, as used to be the case, to their own confines, which were, in the old days, sufficiently extensive for all their natural expansion; but their prosperity and enterprise have induced them to extend their speculative propensities to other countries, and particularly our own.

AN AMERICAN JUBILEE.

Incidentally, you will bear in mind that, in order to keep in touch with conditions, and with men, I have myself paid almost numberless visits to the other side, and Mr Hendry, who has for some years been taking up the running, will go over a fortnight hence, in order to put the seal upon, and follow up, the various revisions which have been in contemplation in the administration of our business during the past year or two. Knowing him as I do, you may count upon his exercising to the full his undoubted energy and ability.

His visit happens to synchronise with the jubilee of what was, at the time, for us, a great adventure—the purchase of our first company in the United States, and the establishment of our American organisation. I am sure you would wish to join with me in an expression of gratitude to our American friends, during these 50 years, for what they have done, and—for what they are going to do.

SUPERVISION OF FOREIGN ORGANISATION.

As you know, somebody from this chief administration is very frequently away over-seeing some foreign branch. Four months ago Mr Rogers, hitherto our assistant manager, was in Bombay, a section of India which has, through special circumstances which I need not enter into, been a source of anxiety to the companies operating, certainly for the last 30 years. Now we have made a change in regard to the running of our business in that important Presidency, and, whilst we cannot alter *conditions* which must almost inevitably recur, we naturally hope that, so far as we are concerned, under the revisions which have been made, we can look forward to the Bombay Presidency becoming a real, if not great, contributor to the good results which we have been accustomed to from the rest of India.

Then we had an almost identical situation arising in the Argentine Republic. It may interest you to know that, as far back as 1887, I visited South America, and, consequent upon my recommendations at that time, our branch in Buenos Aires was established. We reaped satisfactory results from that exploitation until the last five years. There, again, it was not entirely a question of *who* was working our business, but rather the *conditions* had become increasingly difficult, due mainly to the large and even excessive increase in the number of new Argentine insurance companies, with two of their groups antagonistic to each other.

GOVERNOR'S VISIT TO SOUTH AFRICA.

But, apart from the general question, there was obviously room for improvement in the administration of *our own* business, and after the head of our foreign department had been sent out to do the spade work and focus the difficulties that had to be dealt with, I myself sailed for Buenos Aires towards the end of January, and, with the ground prepared, was enabled, in the seventeen days which I spent there, to definitely decide upon the revisions which it was expedient should take place.

REDEMPTION OF "LAW UNION AND ROCK" DEBENTURE STOCK.

There is one further important transaction which I will now explain to you, although it does not affect the past year's results, but is only taking place at present.

You will remember that in 1919 we negotiated a successful fusion with the "Law Union and Rock." Notwithstanding some retrogression in the profits of 1928, which we hope will be only temporary, that alliance has been not only satisfactory, but highly satisfactory, in its results and its relationships between the two companies. Part of the purchase consideration was, as you will recollect, the issue of "London and Lancashire" 5 per cent. debentures, falling due in 1929, and redeemable at the rate of 105 for a total amount of £897,562.

During the ten years which have so speedily elapsed we have, when opportunity has offered, purchased these debentures when they came on the market, and these purchases have been cancelled, so that we have remaining on our books only the sum of £673,127 9s. We have now reached the stage of redemption, and on March 1st we gave notice to the outstanding debenture-holders that we proposed to redeem these debentures on June 1st.

Now, that redemption, as I think I have explained to you before, costs the company nothing, because, when we made the original purchase of the company, with all its assets and goodwill, we wrote off the amount of *goodwill* and have since made provision for the requisite 5 per cent. premium and the three months' interest. Consequently, all that happens will be that, in the course of this year, there will disappear from our balance sheet the "Law Union and Rock" debenture *liability* of £673,127 9s., and on the other side of the account there will disappear a corresponding amount of *assets*, practically all British Government securities, which we had been accumulating as particularly suitable, having regard to the date of maturity, to pay for, and thus eliminate this item from our accounts.

DIVIDEND ADVANCES.

You have already learned from the report that the directors have decided to increase the dividend by another 1s. a share. This increase was agreed to after some hesitation, for it means that there will now be, as you can easily ascertain from our accounts, an appreciable draft upon the underwriting; that is to say, that the interest, with a fair allowance for anticipated profits from the life department of the "Law Union," will be considerably less than the dividend. But last year, as you will remember, I indicated that, in the opinion of the directors, the time had come when we might go a little further than we have in the past, and, by this increase of 1s.—payable on the 6th instant—you have the unprecedented experience of an increase of 1s. a share in four consecutive half-years. (Applause.) That is to say, 4s. a share in two years, whereas we cannot, except by a greater draft from underwriting, increase the dividend by even 1s. a share in one year.

Now, we have already increased the interim dividend for this year—paid last November—and, therefore, by paying a still further 1s. for 1928, the indication given to you has been more than fulfilled, and you have thus had the satisfaction of realising illusionment—that is to, dividends—"in our time," without, I hope, doing any injustice to posterity. Consequently, if anybody anticipates any further unusual generosity, I would like him to guard himself against inevitable disappointment. I may, incidentally, point out to those who have been shareholders since the seventies, when our renaissance began, that the annual dividend we are now paying will cost us no less than £561,818 per annum, against £2,874 for 1874—the year after I joined the company. The comparative *percentages* are, as you will readily understand, unfit for publication.

THREE SUBSTANTIAL SECTIONS.

Of course, the main reason for our action is the fact that we are undoubtedly a very different organisation now from what we were at that time, and even 30 years ago, when we transacted only fire business, and when we were liable to a conflagration at any moment which would upset our accounts. We have now three, not only separate, but very substantial sections of business, buttressed up to some extent by the regular profits which we know we shall receive from the life department, so that any exceptional happening, such as San Fancisco in 1906, cannot possibly have the same effect upon our accounts as would then have been the case. I hope you, therefore, realise what has been done in this respect in building up by degrees, not only a larger revenue, but a revenue from so many different sources, that trouble in one direction will very probably be mollified by profit in another. (Hear, hear.)

PROGRESS IN RECENT TIMES.

Most of you present take a constant and intimate interest in our affairs, may make your own calculations. But the large majority of shareholders are generally absent, and I think that periodically they should be reminded of the position.

It is not so much that we have made substantial profits for many years past, but that those profits should have been so extraordinarily regular. Thirty years ago, we should have been pleased with a profit of £100,000. It has been made public that the average net profit, after all deductions and taxation, of all the British companies, taken over a long period, has been about 4½ per cent. And so far as the accounts for 1928 of other companies, even including our own, have been published, they indicate a profit for the past year of actually less than 4 per cent.

Now listen to these figures.

For the six years, beginning with 1917, and ending with 1922, our net profit, after deducting every charge and tax, was £3,356,731, or an average per annum of £559,455. It is true that one or two of those years benefited by the war affiation, but that was largely corrected by the drastic deduction for excess profits duty. And now, during the last six years, 1923 to 1928, the net profit, after all deductions and all taxation, has been £3,394,396, or an average per annum of £565,732.

ASSURED FUTURE.

I might just add, for the information of those who are not our fortunate shareholders, that, during these 12 years which I have quoted, we have paid, or will pay, in taxation, to the British Government alone, from our total trading, a sum of not less than £3,800,000—as our contribution to the upkeep of our country.

We have our difficulties, but we shall *always* have our difficulties, as we have had in the past, and it would be craven to suppose that we are in any respect handicapped more than we used to be. Therefore, in the absence of any historic event upsetting our equilibrium—and reverses, if properly dealt with, generally bring their own recompense—you may fairly look to the future with that placid assurance and trust which has been such a support to the directorate and the management in the past.

I now beg to move: "That the report, accounts and balance sheet be received, adopted and entered on the minutes." (Applause.)

The Deputy-Chairman (Mr Charles G. Hamilton) seconded the motion, which was unanimously carried.

The usual formal business having been disposed of, votes of thanks to the chairman, directors, representatives, and agents of the company terminated the proceedings.

ATLAS ASSURANCE COMPANY, LIMITED.

ANOTHER SUCCESSFUL YEAR.
SOUND FINANCIAL POSITION.

The annual general court of the proprietors of the Atlas Assurance Company, Limited, was held, on the 30th ultimo, at the Cannon Street Hotel, London, Mr F. A. Johnston (chairman of the company) presiding.

The general manager (Mr C. H. Falloon) having read the notice convening the meeting and the report of the auditors,

The chairman, in moving the adoption of the report and accounts, said: Before dealing with the business before us I should like to be allowed to refer to a severe personal loss which this company has suffered. No more distressing duty can, I am sure, fall to a chairman at our annual meetings than that of recording the death of a colleague who was also a dear friend, as I have to do to-day in referring to that of Sir John Denison-Pender, who had been a director of this company for twenty-three years, during which time he gave to it constant and valuable service. His remarkable business ability and wise judgment were of great advantage to this company and were always at its service, and his kind and generous nature endeared him in an exceptional way to all with whom he worked, winning their esteem and confidence and sincere regard.

In presenting to you the accounts of another year, I have again a pleasant duty to perform, and the figures I am about to explain to you are a source of satisfaction to the directors and the management, as I am sure they will be to our numerous fellow shareholders in this old but still progressive company. (Hear, hear.)

ENCOURAGING FIRE RESULTS.

The fire underwriting profit was highly satisfactory and contributed to profit and loss the substantial sum of £221,853, with a profit yield of 9·28 per cent. of the premium income. That result is all the more encouraging, as I am inclined to think that the year which has just passed was not a particularly favourable one for British fire offices as a whole. Those companies, however, which have a preponderating business in the United States should secure better results than they usually do, as in 1928 the United States had one of its rare years of insurance prosperity. On the other hand, fire insurance business at home and in most of the foreign fields has been but moderately good. This company, I may point out, shows, nevertheless, as usual, little variation, as its business is exceptionally well spread, with the result that 1928, although not our best account, is, as I have shown, quite a good one and one which will bear favourable comparison with most of our past accounts.

The increase in fire premium income was £107,000, of which £41,000 was due to the inclusion of a small South American subsidiary company in our figures, the balance being drawn from the general foreign field, excluding, however, the United States, where our business has remained stationary. The loss ratio was 47·4 per cent., which was quite satisfactory, although not down to that of 1927, which was 46·6 per cent. The expense ratio at 41·5 per cent., compared with 41·9 per cent. in 1927, is down slightly you will be glad to remark. Efficiency with economy continues to be our watchword, but in these exacting times it becomes increasingly difficult to reduce our expense ratio.

ACCIDENT FIGURES.

If you will look at the accident figures you will see that they are quite good, and I am glad to report that this department of our business, which is very efficiently and intelligently managed, shows improved results. The premium income is up, you will notice, £41,000, and the profit has grown to £31,835, as compared with £21,381 in the previous year, and I may say that the rise in income is spread generally over all classes of our home and foreign business.

MARINE BUSINESS.

Turning now to our marine figures, you will observe that they continue on modest lines, our underwriters remaining of the opinion that prevailing conditions do not warrant an extension of operations. Intense competition for the best classes of business shows little sign of diminution, and for this reason we are content to carry on an unobtrusive policy. We see, unfortunately, little prospect of improvement in this particular market in the immediate future, as there exists an almost complete absence of cohesion amongst the underwriters. As we view the situation, it is only by a return of mutual confidence and co-operation that this unsatisfactory marine business is, as a whole, likely to be placed again upon an economic and a profitable basis. Under these circumstances it is satisfactory, so far as our own operations are concerned, to reflect that we have now successfully built up a marine fund of £287,782 without any assistance from interest earnings. (Hear, hear.) This fund, I may tell you, contains a quite substantial amount of earned profit, which we prefer to leave where it is rather than transfer it to profit and loss. (Hear, hear.)

LIFE DEPARTMENT'S EXPANSION.

Let me now take you to the life figures, which show their customary healthy expansion, and reflect once more the ability and prudent enterprise with which that important department is managed. The year 1928 was the closing year of a triennial period. I propose, therefore, to deal very briefly with the figures of that particular year, which are fully set out in the report, and more fully with the more interesting figures relating to the triennium and the declaration of the triennial bonus.

The net new life business in 1928 constituted, I am glad to say, a fresh record, being £535,796 greater than that of 1927, our previous best year—(hear, hear)—the net new business being £3,482,611. The premium income, interest revenue, and life assurance and annuity fund all show substantial increases, the life assurance and annuity fund having now reached the large figure of £6,212,218. Death claims in 1928 were fortunately light, and compared favourably with those of 1927. Surrenders, however, were larger, but the increase is explained by one or two surrenders of an exceptional nature.

TRIENNIUM FIGURES.

Coming now to the triennium figures, the profit of that period, including £30,100 brought in, was £620,933. This satisfactory result has been applied as follows, viz.: in strengthening the valuation basis, £122,000; in writing down securities, £63,711; in bonuses on with-profit policies, £365,824; and to the proprietors, £55,454, leaving to be carried forward to the next triennium £13,944.

I must now ask your further patience while I say a few words about the bonus. For the triennium 1920–1922 our bonus was at the rate of 30s. per £100 per annum; for the following triennium, 1923–1925, the rate was 36s. per £100 per annum; but for the three years just closed we have been able to declare a bonus at 42s. per £100 per annum, together with a special bonus of 18s. per £100 per annum, making a total of 60s. per £100 per annum.

RESULT OF YEAR'S OPERATIONS.

Coming now to profit and loss account, which is the really interesting account for you as shareholders, you will see that, including the balance of £308,000 brought in from the previous year, we have a total sum of £729,968 to deal with. Of that, £186,000 has been used in reduction of our uncalled capital; income tax absorbs £60,242, and debenture interest, £2,877. We devote £10,000 to write off furniture and fittings, in consequence of the amount expended under this head during 1928 having been exceptional owing to the transfer of the Essex and Suffolk London office to new premises in King Street, and to the opening of new premises in Manchester, Bristol, and Chicago. We add £75,000 to fire fund, bringing that up to 100 per cent. of the fire premium income, and we continue our policy of building up the recently created pension fund by a transfer of £25,000, bringing that useful and necessary fund up to £175,000. The shareholders received an increased dividend last year; this we maintain at a total cost of £176,000.

After making these provisions we remain with a carry-forward of £189,848—or more than a year's dividend in hand—and the total funds of the company, proprietors and life, will, for the first time in its history, exceed £10,000,000.

"REMARKABLE VITALITY."

Although I live in close touch with the activities of this old company, I have, I assure you, been impressed in preparing my address to you for to-day by the remarkable vitality which is disclosed by the figures of every department, and which, as I have already insisted, reflect great credit on our management and staff at home and abroad. In confirmation of the impression left on my mind by the excellent figures, let me in conclusion emphasise by repeating them the sound financial position in which this company finds itself at the close of another successful year.

In 1928 the proprietors' net interest receipts increased by £5,972 and are now £146,458; the life contribution was £19,681, which, together with the net interest receipts, gives us a total of £166,140 —a sum only short by £9,860 of the amount which is needed to pay our present dividend of £176,000. After debiting our combined fire and accident profit of £253,688 with this small amount of £9,860, we remain with a very substantial surplus for strengthening our business, and, given normal conditions, we may, I feel sure, contemplate this company's future with well-grounded confidence.

Mr G. F. Hotblack (deputy chairman) seconded the resolution, which was carried unanimously.

The formal business having been transacted, a cordial vote of thanks to the chairman, directors and staff terminated the proceedings.

ROYAL EXCHANGE ASSURANCE.

SUCCESSFUL YEAR'S RESULTS.
INCREASED TOTAL PREMIUM INCOME.

The 209th annual general court of Royal Exchange Assurance was held, on the 1st instant, at the head office of the Corporation in the Royal Exchange, London, Mr Vivian Hugh Smith (governor) presiding.

The Governor, in moving the adoption of the report and accounts, said:—

Before dealing with the results of the various departments of your corporation's business, I should like to draw your attention to the statement of combined assets and premium incomes of your corporation and certain of its affiliated companies, which appears at the end of the printed report. You will notice that the total assets have increased by almost exactly £3,000,000 and the premium income by approximately £2,400,000. This is to a considerable extent due to the inclusion of the figures of the Motor Union Insurance Company in this statement, although, apart from that, there has been an increase of over £320,000 in the total premium incomes of the Royal Exchange Assurance and its other affiliated companies.

LIFE BUSINESS.

Dealing now with the accounts of the Royal Exchange only, and turning to the results of the various departments, you will find that the life business continues to show progress, as the net insurances completed during the year increased by some £270,000 to £2,496,000. The average sum assured of the policies written was £750, and I am sure you will consider this a good indication of the class of business secured, particularly if you bear in mind the fact that only a trifling amount of single premium business has been undertaken. You will be glad to notice an increase in the interest earned on the life fund, which stood at the satisfactory figure of £5 13s. 11d. per cent., as against £5 13s. 8d. per cent. in the previous year. The total claims paid and outstanding were £452,000, while the claims arising from death were below the amount expected on the basis of the ordinary mortality tables used. The next quinquennial valuation of the life fund will take place at the end of 1930 and, up to the present time, every indication goes to show that our bonus distribution as at that date should be a satisfactory one.

TRUSTEE DEPARTMENT.

The trustee department shows progressive growth, both in debenture and private trusts. The total of capital in hand and under administration by the department at the end of 1928 stood at over £93,000,000. This is a big figure, and I think that alone shows that the department has passed from its experimental days and has more than justified its formation some 25 years ago, when your corporation was the pioneer amongst the insurance companies and banks to undertake this class of business.

FIRE AND U.S. BUSINESS.

With regard to the fire department, I anticipated at our last general court that, in the ordinary course of business, we could not always expect to achieve such good results as we were fortunate enough to show in this department in 1926 and 1927, and my anticipations have been realised during the past year. All the same, a transfer of £150,600 cannot be considered as anything but satisfactory. In the net premium income there is little change, the comparatively small increase being mainly accounted for by an expansion in our foreign business, although both at home and in the United States the premium income is slightly higher than during the previous 12 months. You will be glad to know that our experience in the latter country shows a considerable improvement—in fact, that territory has given us the best results that we have experienced for many years. After carrying the necessary increase in reserves, the result of the operations of the department shows an underwriting profit of 6¼ per cent., which would be considered a fair average result, did it not follow two such successful years.

MARINE DEPARTMENT.

I think you will have given particular attention to the interests of our marine department. Briefly, the premium income has been reduced by some £67,000, which follows a reduction of £83,000 in the previous year; while the fund stands at nearly £745,000, which is over 125 per cent. of the premium income shown in the accounts. I would not, however, wish you to attach undue importance to the fall in the amount of the fund. The fund in the marine account represents what is left of the various amounts that your directors have put by from time to time in respect of each year's business, so it is natural, on a decreasing premium income, that the balance of the fund should also fall. In other words, because there has been a fall in the fund from £918,264 to £745,000 it does not mean that the corporation has made a loss of £173,000 on the account. It has, as I have mentioned, merely paid away money which has been reserved for the very purpose for which it has been used. As far as one can see at the moment I believe that this figure of £745,000 will be sufficient to run off all the risks of the marine department on business brought into the account to the end of the year.

I referred last year—and many other chairmen have also mentioned it—to the committees which were formed to endeavour to remedy the unhealthy condition of the marine market. These committees are still in being and are holding regular meetings. The task of improving such a highly technical and intricate business as marine insurance must take time, but it is believed that in certain directions some progress has been made and that the market gradually is recovering. So far as Hull business is concerned there has been a distinct increase in the rates charged, but the cargo position is still unsatisfactory and there must be a considerable advance in the premiums before it can be judged to be on a satisfactory basis.

ACCIDENT DEPARTMENT.

In the accident department there has been a slight further increase in the premium income. The principal expansion in the premium income is derived from our foreign business, while the third party risks, which, of course, include motor-cars, showed the largest increase in the various sections of business which the accident department undertakes. The percentage of commission and expenses was slightly less than last year, which is a welcome sign, while the result of the year's working is a transfer of £64,000 to the profit and loss account. A Royal Commission on Transport has recently had under consideration the question of compulsory motor-car insurance. It is felt by the insurance companies that any legislation in this direction would not be wise, partly because such a very small proportion of motor-owners are uninsured, and of these many are in a position to carry their own risks. You will no doubt have noticed that a Bill containing a clause dealing with this subject failed to pass the House of Lords within the past few days.

MOTOR UNION INSURANCE COMPANY.

You will remember that shares in your corporation of the nominal amount of £157,829 were issued in January, 1928, in connection with the purchase of a controlling interest in the Motor Union Insurance Company and that these shares were converted into an equivalent amount of stock as from the 9th May last. Therefore our paid-up capital stock has been increased from £789,148 to £946,977. You will recollect that the shares were issued at a premium of £5 10s., that is, at a price of £6 10s. per £1 share, which provided a premium in cash of £868,059. As this additional stock was created for the specific purpose of financing the purchase of shares in the Motor Union Insurance Company, your directors felt that the benefit of it should be applied in writing down the aggregate value of the holding of shares in affiliated companies. The holdings in affiliated companies have been treated in the same manner as the other investments of the corporation, that is, the dividends which have been declared by the affiliated companies have been included in the figure of "Interest, dividends, and rents," which appears in the profit and loss account; thus you have before you, gentlemen, the exact position of the "Royal Exchange" by itself.

You will be particularly interested in the figures of the Motor Union Insurance Company. Briefly, the results can be summarised by stating that the profits for the year amounted to £103,726, which is subject to payment of £7,680 for the dividend on the preference shares. Owing to the very large place which the Car and General and Motor Union Companies occupy in the world of motor-car insurance, their results are closely affected by that class of business. Any increase which can be shown by the general experience to be necessary in the rates charged should react most favourably on their results.

Our other affiliated companies continue to progress.

Your directors' policy in the case of the companies which have been acquired has been to build up their resources during the early years of our ownership. This policy has been eminently successful, and the companies are increasing in strength year by year. Your directors believe that it is largely by such careful and conservative methods that the best results can be obtained from the acquisitions of these companies.

The report and accounts were unanimously adopted, and the proceedings terminated with a vote of thanks to the governor, sub-governor, directors, and staff for the excellent results presented to the meeting.

EAGLE, STAR AND BRITISH DOMINIONS INSURANCE COMPANY, LIMITED.

"HIGHLY SATISFACTORY RESULTS."

The ordinary general meeting of the Eagle, Star and British Dominions Insurance, Limited, was held, on the 30th ultimo, at the Moorgate offices of the company, 32, Moorgate, London, E.C.

Sir Edward M. Mountain, Bt., J.P. (chairman and managing director), presided.

The Chairman, in moving the adoption of the report and accounts, said that the operations of the company showed highly satisfactory results during the period under review.

LIFE DEPARTMENT.

In the life department new policies numbering 2,125 were issued, assuring sums of £1,961,446, of which £1,801,946 were retained. This compared with a net retention of £1,557,280 in 1927. The total life funds now stood at £15,381,648, being an advance of over £257,000 during the year. The quinquennial valuation of the Star closed fund showed excellent results, the revealed surplus being approximately £1,500,000, which permitted an allocation of high reversionary bonuses and enabled them to transfer to profit and loss £148,393 as the shareholders' proportion of the profits, while a sum of £21,487 in respect of the profits from the Sceptre fund was carried forward to 1929.

FIRE AND ACCIDENT DEPARTMENTS.

The premiums in the fire insurance department amounted to £979,882, which was slightly lower than last year, owing to the relinquishment of some reinsurance agreements which it was not desired to continue. The loss ratio on earned premiums was 47·5 per cent. After providing for a reserve of 40 per cent., the profit from the year transferred to profit and loss account was £82,028.

In the accident department premiums amounted to £56,399, which showed an increase on the previous year, and after providing for all claims paid and outstanding and a reserve of 40 per cent. of the premium income, there remained a profit of £41,639 to be carried to profit and loss account.

EMPLOYERS' LIABILITY AND MARINE DEPARTMENTS.

The employers' liability department showed improved results, whilst in the general department they were enabled, after providing for all claims paid and outstanding and a reserve of 40 per cent. to transfer to profit and loss £46,868, as against £14,264 last year.

In the marine department premiums, less reinsurances outstanding and commissions, amounted to £791,343, claims paid, less recoveries, being £730,600. £100,000 was transferred from profit and loss and the marine fund stood at £627,586, which showed a higher ratio to the premium income than previously. The chairman dealt in great detail with the causes which led to the present unsatisfactory condition of marine business, and the steps which had already been taken and the further efforts which were being made to improve matters.

First of all, I would say that a company transacting various classes of insurance business seldom finds all the sections are profitable at the same time, and I should like to emphasise the fact that this is neither to the disadvantage of the public nor to the shareholders of the company.

During the war and immediately afterwards a large number of new insurance companies were formed. These companies, in order to attract the business outside their own immediate personal connections, had to cut rates and were spoiling all classes of insurance business for the older companies. The great majority of them have now ceased to exist, and most, if not all, "met their Waterloo" in the marine market.

The big slump, therefore, that has arisen in that market during recent years has not been without some benefit.

ALLOCATIONS.

They would see from the profit and loss account that £120,000 had been written off the cost of life business acquired, a further £25,000 had been transferred to the fire additional reserve fund, raising that fund to £50,000, and £50,000 had been transferred to the general reserve fund, bringing that fund up to £1,400,000.

The carry-forward, subject to final dividend, had been increased to £95,462.

The premium income for the year amounted to £4,369,725, whilst their total assets stood at £21,717,403, being an increase of £565,179 during the year.

In conclusion, the chairman said the company had never been so well equipped as at present for transacting every class of business in all desirable parts of the world, and for rendering efficient service to the general public. They could, therefore, look forward with confidence to progressive success as the years went by.

The report and accounts were unanimously adopted, and the proceedings closed with a vote of thanks to the chairman, directors and staff.

OCEAN ACCIDENT AND GUARANTEE CORPORATION, LIMITED.

SATISFACTORY RESULTS FOR YEAR.

The fifty-eighth annual general meeting of the Ocean Accident and Guarantee Corporation, Ltd., was held, on the 30th ultimo, at the offices of the Corporation, 36 to 44 Moorgate, London. Mr E. Roger Owen (the chairman) presiding.

The Chairman, in the course of his speech, said: I have much pleasure in presenting to you the report and the accounts for the year 1928. The assets stand at £9,217,244. The total revenue for the year amounted to £6,554,551. The net premium income after deduction of reinsurance amounted to £6,247,762. Interest, dividends and rents amounted to a net figure of £306,789.

Claims paid, including provision for outstanding losses, amounted to £3,710,178, being 58·5 per cent. of the premiums earned during the year.

After making the necessary provision for unearned premiums, there remained an underwriting profit of £240,090. out of which £100,000 was transferred to profit and loss and the balance of £140,490 was added to the fire and accident funds.

These figures are in respect of the entire business of the Corporation, and I will now proceed to deal with the separate accounts of the fire department and the accident department.

FIRE DEPARTMENT.

The net fire premiums for the year amounted to £347,876. The Department is extending its operations slowly but surely and on the lines of careful selection of business. The directors view with satisfaction the steadily increasing degree to which policyholders in other departments are placing their fire insurances with us. The department is fully equipped in every way, and we look forward with confidence to further extension of its operations in this country and also overseas.

A satisfactory year was experienced in most of our fields of operation, but losses were abnormally high in one or two countries, and the result is that our ratio of profit was rather less than in the two previous years.

The claims paid and outstanding, plus contributions to fire brigades, amounted to £192,033, representing a loss ratio of 55·2 per cent. of the premium income for the year.

Commission and expenses of management amounted to £127,159, being 36·5 per cent. of the premium income. After providing 40 per cent. for unearned premiums, there remained an underwriting profit of £26,048. Of this sum £25,000 was transferred to profit and loss and the balance was added to the departmental fund, which now stands at the substantial sum of £474,034, equalling 136·2 per cent. of the premium income for the year, the percentage being practically unchanged by comparison with the previous year.

ACCIDENT DEPARTMENT.

The net premium income of the accident department was £5,899,886. The figures include those of our American Company, the Columbia Casualty Company.

Claims, including provision for outstanding losses, amounted to £3,518,145. The loss ratio was 58·6 per cent. calculated on the earned premiums of the year.

Commission and expenses of management amounted to £2,264,053, being 38·4 per cent. of the premium income. After making the necessary provision for unearned premiums there remained an underwriting profit in the accident department of £214,442. Of this sum £75,000 was transferred to profit and loss, and the balance was added to the departmental fund, which now stands at £4,287,810 equalling 72·7 per cent. of the premium income for the year.

At the annual meeting a year ago he spoke of their policy being to take advantage of every opportunity of increasing their income in directions where reasonable prospects existed of earning an underwriting profit, and of being prepared equally to reduce their commitments in directions where no such prospect appeared in view. In continuance of the policy so stated, they had further diminished their holdings of certain classes of business, and the consequence had been a reduction in the volume of their premium income in 1928. There would have been no difficulty whatever in adding considerably to the premium income of the accident department had they been desirous of doing so.

The welcome reduction in the loss ratio of the department, falling as it did upon a reduced income, was an indication that the policy which he had previously foreshadowed, and which had since been put into operation, was a sound one. The experience gained would be a valuable guide in the shaping of future policy and plans.

The United States of America, our most important overseas field of operations, remains a difficult market for casualty offices. It is an extensive field with great possibilities for accretion in premium income, but competition is very active and comes from an ever increasing number of companies.

The report and the accounts were unanimously adopted.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.

"EXCELLENT PROGRESS."

MR. R. K. BLAIR ON BOARD'S INVESTMENT POLICY.

The ninety-eighth annual general meeting was held in Edinburgh on April 25th.

Mr R. K. Blair, W.S., the chairman, said:—

It is not unusual in the first year of a quinquennium to find a falling off in the quality of the returns of a life assurance office, but I am glad to be in a position to-day to say that in practically every respect the returns which are given in our present report show excellent progress.

LARGE NEW BUSINESS AND INCREASED FUNDS.

The net amount of new assurances falls only slightly short of one and a half million pounds, and only once in our history has a larger figure been recorded. The premium income shows an increase of 50 per cent. over the corresponding figure of ten years ago. The strength of the investment position is clearly brought out by the fact that while the funds themselves have increased by about 50 per cent. in the last ten years to nearly nine millions, the net interest yield has advanced nearly 70 per cent. in the same period.

CLAIMS BY DEATH.

The claims by death amount to £384,000, a figure in excess of the previous year's total, but still well within the "expected" amount according to the mortality table. The higher claims are doubtless due to the fact that claims for several years have been exceptionally low; in other words, a certain proportion of this year's claims is really suspended mortality of earlier years.

Matured endowment assurance policies at £270,000 are also higher than usual.

ECONOMY IN EXPENSES *v.* UNDULY HIGH INTEREST YIELD.

We are entitled in these days of high costs to take credit for the fact that the ratio of expenses to premium income is, in spite of a greatly increased business, no larger than it was ten years ago, and considerably below that of most life offices. There is a tendency with quite a number of offices at the present time to concentrate upon investment income as a means of securing surplus to provide bonuses, with the result that economy in expenses is sometimes rather overlooked.

In the case of an office with funds of, say, ten millions, and a premium income of £700,000, an increase of 1s. per cent. in earned net interest would mean an addition of about £5,000 per annum to surplus, and a saving of about ·7, or 14s. per cent., in the rate of expenses calculated on the premium income would give about the same result. An office with the above-mentioned amounts of funds and premium income spending 12 per cent. on expenses would therefore require to secure a rate of interest on its funds of some seven or eight shillings less than a similar office spending 17 per cent. in expenses in order to secure the same profit for its policyholders. In other words, the result of spending 5 per cent. more of the premium income would make it necessary for an office otherwise similarly placed to invest all its funds to give a return of about seven or eight shillings per cent. more in order to achieve equal results. This could only be done by seeking investments of a higher yield, and therefore probably of a much more speculative type. It has been pointed out recently by the chairman of another office that a positive danger lurks in an investment policy of this kind should offices strain to maintain some of the abnormally high bonuses now being declared, and this danger is accentuated by the fact that it is not unusual to find a high rate of expense combined with an exceptionally high rate of net interest.

INVESTMENTS.

Your directors have endeavoured to invest your funds in as remunerative a manner as possible, keeping always in view that security is of much greater importance than yield. The return of just over 5½ per cent. gross and £4 13s. 4d. net is very satisfactory, especially when combined with a rate of expenditure of less than 12 per cent. as against 22 per cent. reserved. We may therefore claim that the society is in as good a position as one with similar funds and premium income which is spending the full amount reserved for expenses and securing a rate of interest of well over £5 per cent. net; indeed, we can claim to be in a sounder position, because expenditure is much more under our control than is the rate of interest earned, which is subject to many influences quite beyond our control.

BRITISH GOVERNMENT SECURITIES.

The only item among the assets showing a substantial decrease is our holding of British Government securities. Your Board have considered it desirable to realise at a profit a certain portion of our holding in order to invest the proceeds in securities which generally show a higher yield and secure a wider spread. The amount remaining invested in British Government holdings is still about 25 per cent. of our funds. The items showing the main increases are ordinary shares—our moderate holdings in which now amount to about 3½ per cent. of our funds—and certain of the fixed interest groups. The former investment is either in the shares of investment trusts, which your directors consider a very desirable type of investment for a moderate amount of the funds or in shares of carefully selected industrial corporations of the highest standing.

Considerable discussion has taken place within recent years on the question of the suitability of this class of investment for an insurance company's funds. It may be of interest to members to know that the director's policy is to examine on their merits all possible individual securities whether of the fixed interest or variable dividend type, rather than to be hampered by a fixed rule to exclude even from consideration investments of undoubted security simply because they belong to a class or group which may hitherto have been outside our investment categories.

The Hon. Lord Pitman seconded the adoption of the report.

The Rt. Hon. the Earl of Stair, senior vice-president, was elected president to succeed the retiring president, His Grace the Duke of Argyll.

THE SCOTTISH UNION AND NATIONAL INSURANCE COMPANY.

VITALITY AND PROGRESS.

FRESH RECORDS ESTABLISHED.

Mr William Carnegie, chairman, presided at the 104th annual general meeting of the shareholders of the Scottish Union and National Insurance Company, held at Edinburgh, on May 1, 1929.

In moving the adoption of the report and accounts for the year 1928, he referred to the extremely satisfactory results obtained during that year. Fresh records have been established, the two million mark having been reached in the life department in the net new sums assured. The endowment assurance claims are up by £39,000, but this is due in part to the maturing of special War Bond policies taken out in the closing years of the War. The claims by death, on the other hand, are down by fully £52,000.

FIRE ACCOUNT.

In the fire insurance account the premium income has increased by fully £15,000, while the claims are less than those of the previous year by nearly £9,000. The amount transferred to profit and loss account is over £222,000, and represents the largest sum ever transferred from the fire account in any one year.

The accident, employers' liability and miscellaneous accounts together show an increase of nearly £15,000 in premiums, and there is transferred to the profit and loss account a sum of approximately £25,000 as a result of the year's operations.

PROFITS.

The profits realised and transferred to the profit and loss account exceed £262,000. In comparing these results with those of the previous year, it must be remembered that 1927 marked the close of a quinquennial period in the life department, and as a consequence the profits of that year were increased by £176,000, transferred from the life assurance and annuity and sinking fund accounts. Deducting, therefore, this sum from the total profit of 1927, it will be seen that the profits in the fire and other accounts in 1928 show an increase of nearly £12,000 over the figures for the previous year. An addition of £200,000 is made to the special reserve in the fire insurance account. With this addition, the fire insurance fund at December 31, 1928, is £1,357,000, being over 103 per cent. of the year's premium income. This places the fire account in a very strong position indeed.

The directors recommend the payment of a dividend at the rate of 13s. on the "A" shares and 48s. 9d. on the "B" shares. After deducting income tax at the rate of 4s. in the £, this will absorb £156,000, which, except to the extent of about £3,000, is covered by the interest earned on the funds of the company other than life assurance and annuity and capital redemption funds.

STRONG FINANCIAL POSITION.

The total assets of the company amount to fully £15,000,000, being an increase during 1928 of over £600,000. The valuation of the Stock Exchange securities at December 31st last reveals that the securities are worth considerably more than the figure stated in the balance sheet. The appreciation in values referred to by the chairman a year ago has been more than maintained.

With a view to still further strengthening and developing the company's position in the United States of America, another subsidiary company, called the Central Union Insurance Company, has been established under the charge of the company's United States manager, Mr John Henry Vreeland.

THE ROYAL LONDON MUTUAL INSURANCE SOCIETY, LIMITED.

A YEAR OF CONTINUED PROSPERITY.

TOTAL ASSETS - £20,116,599.

The sixty-eighth annual general meeting of the Royal London Mutual Insurance Society, Limited, was held, on the 30th ultimo, at Winchester House, London.

The Chairman (Mr Alfred Skeggs, F.C.I.I., the managing director), in the course of his speech, said :—In the industrial life branch the premium income for the year ended December 31, 1928, amounted to £3,713,086, an increase of £240,143 over the premiums of 1927.

ORDINARY LIFE BRANCH.

The new assurances for the year reached the total of £4,098,075, with an annual renewal premium of £210,099. Single premiums amounted to £9,737. The new business written exceeded that of the previous year by £485,460, and is a record in the history of the Society, this being the first occasion on which the new business in the ordinary branch has exceeded four million pounds. The premium income for the year totalled £1,027,620, a net increase over 1927 of £122,905. The society's ordinary life branch shows great vitality and promises rapid expansion in the future, and the outlook may be regarded as distinctly favourable. We are now in the fourth year of the current quinquennium. At the end of next year the operations of the period will come to be analysed in the actuarial valuation, and surplus will be available for a further allotment of bonuses.

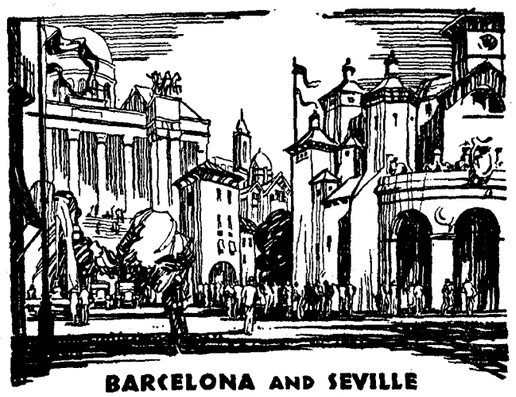
FIRE BRANCH.

The profit for 1928 was quite satisfactory. The total premiums (home and foreign) were £59,892, showing an increase over the year 1927.

In the accident and general departments the premiums amounted to £19,544, an increase over the year 1927.

Summarising the results of the society's operations for 1928, it will be observed that the income from all sources during the year under review amounted to £5,786,701, an increase of £451,607 over the previous year, and the combined premium income was £4,824,094, showing an increase of £368,754, whilst the total assets stand at £20,116,599, being £2,095,944 in excess of the year 1927. The claims paid (including surrenders) for the year amounted to £1,757,608, an increase of £230,145, thus making the total claims paid during the operations of the society £21,963,259.

The report and accounts were unanimously adopted.



BARCELONA AND SEVILLE EXHIBITIONS, 1929.

The Anglo-South American Bank has branches in seven cities in Spain—including Barcelona and Seville—as well as Agents throughout the Peninsula.

It is therefore in a unique position to provide complete financial services to intending visitors to the forthcoming Exhibitions.

THE ANGLO-SOUTH AMERICAN BANK LTD
117 OLD BROAD ST, LONDON, EC2

J. MANDLEBERG AND COMPANY, LIMITED.

FINANCIAL STRENGTH AND CONTINUED PROSPERITY.

VALUE AND UTILITY OF THE VALSTAR WEATHERCOAT.

The fortieth annual general meeting was held in Manchester on Friday, April 26, 1929. Sir Charles Mandelberg (chairman of the company) presided.

The Chairman, in addressing the meeting, said : The report and accounts show a satisfactory advance, and indicate the financial strength and continued prosperity of the company. The net profit is £80,742 12s. 2d., and the amount brought forward £43,230 9s. 6d., giving a total available balance of £123,973 1s. 8d., compared with a profit of £71,325 13s. 7d. and a total of £112,664 17s. for 1927. The preference dividend for the year has been paid, and £3,500 added to the depreciation fund. The directors recommend payment of the dividend of 8 per cent. for the year on the preferred ordinary shares (including the interim dividend at the same rate paid in September last) and a dividend on the ordinary shares of 10 per cent. for the year (including the interim dividend for the half-year at the rate of 8 per cent. per annum paid in September last) and £54,166 10s. 1d. is carried forward.

COMPANY'S NEW PREMISES.

There has been a capital outlay of £25,446 17s. 1d. in new buildings erected on land already owned by the company, adjacent to the existing Seaford Road Works. This will increase the capacity and efficient working of some of the departments, and the new premises are now nearly ready for occupation. The directors expect that in due course this addition will be reflected in increased trading results. Investments in subsidiary and other companies remain practically unaltered. The income from these investments, which include the £60,000 8 per cent. first cumulative participating preference shares of Harben's, Limited, shows a satisfactory return, and, in the opinion of the directors, the value of the company's investments is more than the cost as stated in the balance sheet.

STRONG FINANCIAL POSITION.

The stock-in-trade carried is quite normal, and consists of goods necessary for ordinary trade requirements. The debts due to the company, the cash in hand, bills receivable and stock in hand together amount to £459,999 4s. 11d., and, after deducting the sundry liabilities, which are £107,210 14s. 3d., there remains the substantial balance of £352,788 10s. 8d. as evidence of the strength of the company's financial position. The reserve fund is £100,000 and the depreciation fund £42,000, and there are no debentures.

SUCCESS OF THE VALSTAR WEATHERCOAT.

Continuing, the chairman said that the policy of the company had been to maintain a very high standard of quality. Their rubber proofing and waterproof garments had for many years set a standard of excellence, but he desired to emphasise the fact that their weatherproof cloths and clothing were of an equally high standard, and he wished in this connection to call attention to the success of their latest product, the "Valstar Weathercoat," which, in their opinion, as regards material, rain-resisting qualities and style, represented a marked advance in the manufacture of such garments. This development was due to the company's long experience as weavers, dyers, finishers and rainproofers, and by reason of being able to manufacture large quantities they could produce the "Valstar" at a low cost and offer it to the trade at prices representing remarkable value. The name "Valstar" was registered, and last June a national advertising campaign to the trade and public was opened up. The sales of "Valstar Weathercoats" already indicated that the trade and public appreciated their value and utility.

COMPLETE AND UP-TO-DATE ORGANISATION.

The Chairman said that they could claim a long and exceptional experience in export trade; the company's products were well known and appreciated throughout the world. This trade had been built up under the direct supervision of the directors, who had from time to time personally visited many countries and investigated the requirements and conditions abroad. The manufacturing plant, the commercial, selling and research organisations of the business were very complete and thoroughly up to date. During the year Mr R. J. Sopwith, the sales manager, and Mr T. J. Cragg, the secretary, were appointed directors, and he recommended the confirmation of their election.

FORTY YEARS' RECORD.

The Chairman next referred to their completion of forty years as a public company, and said this entitled them to look back and consider their record. He had had figures prepared covering the whole period, and it had been a pleasure to analyse them and view the working of forty years in perspective. In his opinion, they could be regarded with satisfaction. There had been good years and there had been periods of war and industrial upheaval, but, on the whole, the story told was one of steady development and expansion. There had been available for distribution on the ordinary shares for the whole period the equivalent of nearly 15 per cent. per annum on the paid-up share capital. £180,000 of ordinary shares had been issued free to the shareholders as bonus, and, in addition, an average of nearly 12 per cent. per annum had been paid in cash dividends on the ordinary shares, including dividends on the bonus shares and the additional capital issued in 1920, and, further, out of these profits there remained £196,000, which had been placed to reserve fund, depreciation fund and carry forward. He thought these figures demonstrated, first, the progressive profit-earning capacity of the business, and, secondly, that, given normal conditions, satisfactory returns could reasonably be expected.

BRIGHTER PROSPECTS.

In concluding, the Chairman said that these normal conditions were considerably nearer attainment than had seemed likely at various times during the last few years. "Peace abroad and stability at home, not forgetting the growth of co-operation between employer and employed, have conduced to the revival of confidence. Trade is returning slowly but surely to its old channels. More orders from overseas are causing more activity in most of the basic industries. The prospective relief to industry from de-rating will make itself felt. There exists a feeling of renewed hope and confidence that, given no repetition of the mistakes of 1926, no risky departures from the well-tested principles upon which British trade and industry have been built, and no increase in the burden of taxation, we shall see better trade returns and an increased measure of prosperity, in which the company will share."

The adoption of the report and accounts was then proposed by the Chairman, seconded by Sir Henry Rothband, and approved. The dividends recommended were authorised to be paid; the retiring directors were re-elected, and the auditors reappointed.

THE NEW AFRICAN COMPANY, LIMITED.

AN ENCOURAGING PROSPECT.

The thirty-third ordinary general meeting of the New African Co., Limited, was held, on the 30th ultimo, at the Institute of Chartered Accountants, London.

Mr Berkeley Fairfax Conigrave (the chairman) said that, at the annual meeting in January, 1928, proposals for reorganising the capital were explained and the scheme was duly passed by the shareholders and sanctioned by the Court.

The balance sheet showed a strict and conservative valuation of the assets. The total book value of the investments—industrial, mining, land and sundry shares and debentures—was £78,501. The report dealt fully with the valuation of these investments, and, in the aggregate, the value exceeded the balance-sheet figure. Assuming favourable conditions, they should in the near future see a substantial appreciation in the holdings.

The gross income for the period under review was £11,062. Outgoings, less fees from other companies, were £5,000. A substantial reduction in administration expenses had been effected as from July last. The whole of the expense of the reorganisation of capital (£1,130) had been charged out. From the profit of £4,931 was deducted the difference between the loss shown in the previous balance sheet and the amount of capital written off, viz., £338; and it was proposed to pay a dividend of 5 per cent. (less tax) on the fully-paid preference shares and a proportionate dividend from the date of allotment on the partly-paid shares.

It was agreed that, in the eight months of the management, the present directors had made good use of comparatively modest capital resources. The net revenue was virtually 9½ per cent. on the preference capital, and distinct progress had been made. They hoped to do considerably better, and if, as he believed, they found they could profitably use all or part of the large amount of unissued capital, they would not hesitate to ask for the shareholders' consent to an issue.

Of their considerable holding in East African Sisal Plantations, some had been realised at a satisfactory profit, and they believed the present holding should produce a satisfactory revenue in the current year. An investment of their predecessors which did well in the past was in Taquah and Abosso Mines, Limited. From these mines gold to the value of £6,410,429 had been obtained, and nearly £800,000 paid in dividends. They understood that developments were disclosing encouraging values and continuity of these values at depth. Taking a reasonably hopeful view, therefore, they should be able in future to derive good profits on their substantial holding in this concern.

The report and accounts were unanimously adopted.

SHROPSHIRE, WORCESTERSHIRE AND STAFFORDSHIRE ELECTRIC POWER COMPANY.

COMPANY'S GOOD PROSPECTS.

The ordinary general meeting of the Shropshire, Worcestershire and Staffordshire Electric Power Company was held, on the 30th ultimo, at 88, Kingsway, London.

Mr E. Garcke (the chairman) said that the revenue account showed a total credit of close on £350,000 for 1928, as compared with £322,000 for the preceding year. The debits were £161,000, compared with £146,000. They were proposing to pay a dividend on the "B" ordinary shares of 7½ per cent. for the year 1928, compared with 7 per cent. for 1927, and the capital having been increased during the past year, the total dividend charges amounted to £96,000, or an increase of £16,000 on the preceding year. They carried to the reserve appropriation account the balance of £92,621, to which was added the premium received on shares issued last year, £54,125, and sundry other items, £3,519, or a total at the credit of the appropriation account of £150,265. From that total they wrote off the balance of £18,936, commission and discount paid on previous issues of capital. They placed £50,000 to reserve account, the same amount as in the preceding year, and after adding the charge in respect of the endowment fund of £2,392, there remained a balance to be carried forward to next year of £78,937, compared with £45,628 brought in from the preceding year.

DEVELOPMENT OF THE BUSINESS.

It was natural to expect the general development of their business to cause an increase in their expenses, but he must draw the shareholders' attention to the large increase in the amount paid in rates. In 1928 they had paid £24,156, as against £16,178 in the previous year, and £14,103 the year before. The increase in local rates which the electricity supply industry was called upon to bear was a very serious burden which would not in any way be eased by the Local Government Act, 1929, generally known as the Derating Act, as public utility enterprises were debarred from obtaining any advantage by its provisions.

BALANCE-SHEET ITEMS.

Turning to the balance sheet at December 31st last, the issued share capital appeared at £1,705,000, an increase of £555,000 during the year. Their loan capital and other forms of indebtedness showed a total of £1,590,000, a reduction of £35,000. Their reserve stood at £437,899, being £50,000 more, and they carried forward a further £78,937, together £516,836. The total capital expenditure on works, mains and other equipments was £3,122,000, and on Special Acts of Parliament and Orders £86,000. Investments in subsidiary companies represented £255,000; stores, £142,000; debtors, £144,000; cash and other liquid assets, £120,000. The general financial position was satisfactory, and the prospects were good.

DISTRIBUTION AREA.

Arrangements for interconnection of supply had been made with the city of Birmingham on the east of their area and with the West Gloucester Power Company and Wessex Electricity Company on the south. Negotiations with similar objects were proceeding with the Hereford Corporation on the west, and with the West Midlands Joint Electricity Authority on the north. They were also supplying current in bulk to the Corporation of Cheltenham. Their distribution area covered nearly the whole of the county of Worcestershire, considerable portions of Staffordshire, Shropshire, Gloucestershire, Warwickshire, Herefordshire and Oxfordshire, giving a total area of approximately 1,800 square miles in parts of seven counties. Within that area they had a number of separate electricity undertakings. In addition to those previously reported were Banbury in Oxfordshire, Ledbury in Herefordshire, Stratford-on-Avon in Warwickshire, Shipston-on-Stour in Gloucestershire, and Church Stretton in Shropshire.

ADVANTAGES OF COMPANY'S AREA.

The company's area offered many exceptional features which might claim favourable attention of industrialists, for it was well served by railways, good roads and a network of canals. The company had established an estates department, which was in a position to provide information concerning sites and availability of labour to industrialists in search of the most economic conditions for enterprise, including the supply of cheap electric power. He might add that a company subsidiary to the Imperial Chemical Industries had purchased about 75 acres, part of their surplus estate at Stourport, for the erection of a factory for making all classes of insulators, and had agreed with them for a supply of electricity.

The report and accounts were adopted, and a resolution was passed creating 350,000 new shares of £1 each, to be called six per cent. cumulative preference shares.

CORPORATION AND GENERAL SECURITIES, LIMITED.
EMPIRE INVESTMENT POTENTIALITIES.

The second ordinary general meeting of this company was held, on the 26th ultimo, at Winchester House, London, the Marquis of Winchester (the chairman) presiding.

The Chairman, in the course of his speech, said : Our net profit for the year amounts to £93,981, subject to income tax, which is at the rate of over 13 per cent. on our capital of £700,000. We propose to write £19,000 off goodwill, reducing this item to £35,000, as compared with the original figure of £60,000, at which it appeared in our last balance sheet; to start a general reserve account, to which we propose to allocate £20,000; and to pay a dividend of 7 per cent. per annum on the ordinary shares, which compares with a dividend of 6 per cent. per annum last year.

During the past twelve months corporations have not been quite such active borrowers as in the previous period, but, although the stock issues have been less numerous, they have been for larger amounts, and the sum total is approximately the same. We, however, secured the bulk of the business.

SUCCESSFUL ISSUES.

The success that normally attends the isues for which this company is responsible is the result of work during a period of some three or four years during which we have created a following of investors, large and small, who want the loans of British Corporations as permanent investments. We have reached a stage where we can claim to have nearly a quarter of a million investors on our books. At practically the same time as you receive this report you will see in the papers a stock issue which represents our maiden effort on behalf of the British Dominions. I refer to the issue of £1,600,000 of 5 per cent. stock of Melbourne and Metropolitan Board of Works at 93½ per cent. I obviously am not at liberty to disclose, much as I would like to, the hopes we hold for the future. It is our earnest intention to cultivate the great field of gilt-edged stock issues still open to us with the same intensity as we have applied to the stock issues of British Corporations. I refer to our own Dominions, their great cities and public utility corporations.

INVESTMENT WITHIN THE EMPIRE.

We are at the present time proposing to bring to the notice of the great and ever-increasing number of investors in this country the wisdom of investing their savings in the Empire in the same manner as we claim to have educated them into the merits of the stocks of corporations in the British Isles. The yields obtainable are slightly greater, and, in effect, the security is really exactly similar. In the investment field self-interest—it might almost be said the instinct of self-preservation—demands investment within the Empire.

I can find no word, unless it were perhaps the word "miraculous," to describe the financial record of the Empire. During the last century or so—in fact, ever since public borrowing began—Great Britain, its corporations, the great Dominions and Colonies, and their municipal undertakings, have borrowed money which, expressed in sterling, runs into astronomical figures, literally tens of thousands of millions, and never has there been one occasion, so far as I can trace, on which capital and interest have not been paid at due date. I cannot think how countless must have been the occasions. This is as true of every constituent element of the Empire as it is of Great Britain herself.

AN AMAZING RECORD.

It is an amazing record, and one which is not sufficiently appreciated. When one contrasts such a record with that of foreign countries one realises that, in instilling the wisdom of investment within the Empire, one is only preaching common sense.

I have before me here a list of foreign States and their municipalities which have borrowed in London. The list of defaulters is lamentable. I can only find four countries of Europe which have borrowed in London at one time or another and have not defaulted legally or morally in one or more of these respects. In the great continents of North and South America I can only see four non-British countries who, either themselves or their constituent States, have not defaulted in one way or another, and yet throughout the world hundreds of British borrowers, consisting of States, municipalities and corporate bodies, have been financed from London and never a whisper of any failure to carry out their obligations to the letter and to the minute.

These and other facts we are going to make as well known to the small investor as they should be, and with all the legitimate arguments at our command we shall impress and continue to impress upon the investing public the desirability not only of buying British, but investing British. (*Applause.*)

The report was unanimously adopted, and a vote of thanks to the chairman concluded the proceedings.

HENRY GLAVE, LIMITED.
DIVIDEND ON DEFERRED 20 PER CENT.—THE NEW STORES.

The seventh annual general meeting of Henry Glave, Limited, was held at the company's new store, 80-104 New Oxford Street, London, on the 30th ultimo, Sir Arthur Wheeler, Bart., D.L., J.P. (the chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said : This is the first balance-sheet which covers a complete twelve months since we increased our capital, because a year ago our balance-sheet only showed the result of some eight months' trading on the increased capital.

We are, as you know, for the moment chiefly a holding company, and, to a small extent, a trading company, but when these buildings which we are now occupying are finished, we expect to be a very important trading company.

We own a controlling interest in the United Drapery Stores, Limited, which itself is a holding company and receives its revenue from a number of old-established and prosperous drapery concerns in the greater London area.

Our operations here in New Oxford Street have been seriously hampered during the past twelve months by the rebuilding which is still progressing.

Our profit for the year is £67,087, which, with the £15,000 brought in from last year, makes a total available of £82,088, as compared with £74,540 a year ago. The preference dividend for the year requires only £5.600. The full 10 per cent. on the preferred ordinary takes £30,000, 20 per cent. on the deferred takes £30,000, and we are carrying forward £14,674.

SIX ACRES OF FLOOR SPACE.

Our new stores, when completed, will be a very fine building—one of the finest stores in London. Mr. Hopton, our managing director, has had many years experience in the management of this class of business, and the layout of this new store is being planned by him in conjunction with a gentleman who has taken part in the planning of London's largest and most modern stores.

You will be aware that our property extends from New Oxford Street right back to Great Russell Street, and when our building programme is completed our floor space should amount to approximately 6 acres.

In this business, as you know, we pay cash, and we take the utmost discount from manufacturers and wholesalers. We sell for cash exclusively, and as a result we save considerably in book-keeping and clerical work, and we take no risk of bad debts.

The turnover of our stock has been very much speeded up, and the results disclosed have been secured in spite of adverse factors—the Holborn explosion, for instance.

THE TREND OF WEST END TRADE.

We are living in a time of rapid progress. London is daily becoming more crowded, and this crowding is bringing about a very definite change. The change to which I want to draw your attention is this—that the shopping centre of London, the West End, is expanding—just as sure as the City tends to spread westwards, the shopping centre tends to move our way. Before long New Oxford Street will be to Oxford Street what New Bond Street is to the older part of that very well-known street.

I want you—who are shareholders with me in this company—to realise that not only are we taking advantage of the trade which comes to us to-day, but we are equipping ourselves with every modern improvement so that we may meet the large increase in business which in a short time will be overwhelming; but we shall be ready for it; we shall have (to use a familiar expression) "the best claim in a very rich field."

I would like to add one word about the tendency of fashion of the ladies of to-day—my business, I admit, is finance, but I happen to live in Leicestershire, which as you know provides a large portion of our home-produced knitted wearing apparel—we find that the tendency is for ladies to wear better garments, the coarse gauge machinery is being replaced by finer gauge, and the trend is towards better quality in the finished article. I draw your attention to this point because it affects our policy here very materially—we are improving the tone of our store.

Mr. W. J. Hopton, J.P., the managing director, in seconding the motion, said : "Glave's policy, as you know, is to sell only for cash. Our policy here is to buy cheap and sell at keenest possible prices for cash only. I believe in small stocks and quick turnover. Glave's average stock last year was about £8,000 less than the previous year, yet we served over 100,000 more customers. I have the utmost confidence in the future of Glave's, believing that the store we are now planning will soon take its place in the front rank of London's most successful businesses."

The report and accounts were unanimously adopted.

GODFREY PHILLIPS, LIMITED.
GOOD RESULTS—INCREASED PROFIT.

The twentieth ordinary general meeting of Godfrey Phillips, Limited, was held, on the 30th ultimo, at the Works, Commercial Street, London, Mr Arthur I. Phillips presiding.

The Chairman, in moving the adoption of the report and accounts, said : I am pleased to be able to present what I believe you will agree is a quite satisfactory result of this year's trading, viz., a satisfactory balance sheet and a trading profit of £15,800 more. This larger trading profit is particularly pleasing in view of the fact that the company has had a full year's working of the increased duty, which you will remember was imposed in the 1927 Budget, and which I will remind you cuts into the profits by a great deal more than £100,000 per annum, and also in spite of much increased competition, not only in this market, but in all those in which we trade.

The better results have been mainly brought about by a much increased export trade, and to a lesser degree by certain economies which the acquisition of subsidiaries has made possible. If it had not been for these two factors, I fear we should have presented far less satisfactory figures. I say this because the home market has not contributed its fair quota, even though we have increased its sales. The additional duty to which I have already referred, coupled with your board's unalterable policy of maintaining the quality of its manufactures, and the high cost of advertising to-day, has reduced both gross and net profits to a very unsatisfactory figure.

"PLUS TWO" CIGARETTES.

It is the considered policy of your board to possess a large business, even though the margin of profit allowed us to-day is so very small. The big turnover offers opportunities which a smaller one, catering for that trade which shows a large percentage of profits to sales, can never hope to have. In this connection a very big trade has been secured for "Plus Two" cigarettes, but it must be obvious that in selling 12 full-sized and full quality cigarettes at the price of 10 there is a very small margin of profit left even when all allowances are made for lower all-round costs and cheaper packing. But there is undoubtedly a considerable demand for greater value by the smoker, and we have catered for it in a manner which I feel sure deserves our thanks to both the production and advertising departments, to the latter particularly, for the very original way in which they created a big demand in record time with the slogans, "Are You a Plus Two Man?" and "The Plus Two Man Gets Two More." The whole of the very big advertising bill incurred for the introduction of the "Plus Two" brand has been charged to revenue, of course, even though the introduction was so late in the year. We have also done well with other brands, B.D.V. cigarettes and tobacco having made further strides; this is satisfactory, and evidence that the £50,000 appropriated from the balance forward from the last account has been well spent.

"ABDULLA."

The subsidiaries have contributed their quota towards the success that has attended our efforts last year. You will see from the accounts of Messrs Abdulla (the only public company which this company controls, and the only one to issue a report) that they have increased their profit by some £10,000 odd. The benefit of this is for this company in the early future. I look with every confidence to the not far distant future when Abdulla will be earning considerably more, and as its assets have been so liberally written down, and as its reserves stand so high, a much greater proportion of its profits should accrue to the ordinary shareholders of Godfrey Phillips. I see no reason to contemplate a less satisfactory year this than last year. I, and my colleagues, confidently believe we shall do better. In both the home and export markets we have done better business for the first quarter of the year than for the corresponding period. In ordinary times I should say we should do much better, but the political uncertainties and the ever-changing conditions of this and the world's markets make prophecy hazardous. However, your board will continue to take every opportunity towards the desired end of bigger and bigger earnings without impairing the strength of the balance sheet, with which I should now like to deal.

"The Profit and Loss Account" shows a net trading profit of roughly £16,000 more than last year, and the appropriation of the balance of last account, and the dividends paid in respect of the preference shares, and the final dividends from last account paid in respect of the ordinary shares, and the interim dividend on the ordinary shares paid in 1928. I am well satisfied that all the assets are sound, conservatively valued, and necessary to the carrying on of this very large business.

The resolution was carried unanimously.

It was announced that warrants for the ordinary share dividend would be posted on 17th instant.

ROAN ANTELOPE COPPER MINES, LIMITED.
INCREASE OF CAPITAL APPROVED.

An extraordinary general meeting was held, on April 29th, at River Plate House, Finsbury Circus, London, to consider a resolution increasing the capital of the company to £1,250,000 by the creation of 1,000,000 new shares of 5s. each. Mr A. Chester Beatty (chairman of the company) presided.

The chairman said : The total area of our own property and the Roan Antelope Extension and Muliashi properties extends to about 10,787 acres, and covers a total length of over 10 miles in a north-west south-east direction along the strike of the Roan ore shales. Out of this total length of 10 miles, the ore shales have so far been proved by surface trenching and pitting to be mineralised over a length of about seven miles. The actual proving of the ore shales in depth is, as you know, being done principally by drilling. Beginning at the south-eastern end of the area, *i.e.*, in the Roan Antelope property itself, the basin has been drilled in considerable detail over a distance of about two miles, supplemented by extensive underground work, and has been found to contain 30,000,000 tons of commercial ore, with probabilities that additional drilling in this area will add materially to this tonnage. Beyond these two miles a line of holes has been drilled along the south limb of the basin for a further distance of about 2½ miles, and every drill hole has shown commercial ore.

A series of deeper boreholes is, of course, required to permit calculations of proved ore reserves in this area, but in view of the proved continuity of the ore over this great distance we are confident of being able not only to produce at the rate of 2,000,000 tons of ore per annum for many years to come, but we also feel that there is every probability that our ultimate rate of production will be far in excess of this. There is, therefore, no doubt whatsoever in our minds, or in those of our associates, that the property fully warrants the large expenditure which is being made in equipping it for production on a large scale.

The orders already placed for the permanent equipment amount to over £350,000, of which about 90 per cent. have been placed in this country. A 1,250 K.V.A. turbo-generator set and two 3,000 cubic feet air compressors are now under erection, and the balance of the permanent power plant, comprising two 7,000 kw. turbo-generators, together with condensers, boilers, and auxiliary equipment, are on order.

Warehouses and machine shops are in course of erection, and a start will shortly be made on the foundations of the concentrating plant, for which a part of the equipment, including the crushing plant and grinding mills, is already under order. Good progress is being made in the Townsite construction, and the branch railway to the mine is now in full operation. The opening up of the mine in preparation for production is under way, and this work is expected to make more rapid progress as soon as the 1,250 K.V.A turbo-generator set comes into operation in about two months' time. The site selected for a permanent hoisting shaft has been tested by a borehole, and the sinking of the shaft has actually been started.

DETAILS OF PROPOSED ISSUE.

The authorised capital to-day is £1,000,000, of which £851,150 is issued, and we propose that the authorised capital shall be increased to £1,250,000 by the creation of an additional million shares of 5s. each. We propose to issue forthwith to shareholders 1,139,033 shares, which will, assuming that the options on the Roan Extension and Muliashi properties are exercised, still leave us with 155,867 unissued shares in our treasury. The issue of the 1,139,033 shares just referred to will be made to all shareholders *pro rata* to their holdings, giving them the right to subscribe for one new share for every three shares at present held, fractions of shares being ignored. The proposed price of issue to shareholders is 39s. Provisional allotment letters, accompanied by letters of renunciation for those at who wish to dispose of their rights, will be issued at an early date.

According to a cable received from Rhodesia, Borehole No. 9, Roan Antelope Extension, entered sulphide ore at 560 ft. and preliminary assays indicate :—

From 560·0 ft. to 562·7 ft. ..... 3·20 per cent. copper.
From 562·7 ft. to 569·0 ft. ..... 5·40 per cent. copper.

This shows an average of over 9 ft. of 4·70 per cent. sulphide copper.

The hole continues in ore. This hole is 4,000 ft. north-west along the strike from Borehole No. 1 Roan Antelope Extension, and 5,000 ft. from the Muliashi property. Borehole 28, which is the last hole to the north-west on the Roan Antelope Claims, is about 11,000 ft. south-east along the strike from No. 9 Roan Antelope Extension. This hole indicates the continuity of payable ore over a distance of about six miles, with the probability of further work extending it still further to the west into the Muliashi property.

The resolution was carried unanimously.

LONDON TRUST COMPANY, LIMITED.

STRONG POSITION.

The fortieth ordinary general meeting of the London Trust Co., Limited, was held, on the 29th ultimo, at Winchester House, London. The Hon. Evelyn Hubbard (the chairman) presided.

The Chairman said that this was their fortieth annual general meeting, and it must be as satisfactory to the shareholders as it was to the directors to know that the affairs of the trust were never in a better state than they were to-day.

The directors proposed to recommend a final dividend of 13 per cent., which, with the interim paid in October, would make 20 per cent. The dividend had been increased annually for some years past, and this was the third successive year it had been raised by 2 per cent. He wished the proprietors to recognise that, whilst they had every reason to hope that the present rate could be maintained, it must not be assumed that they would be able to continue raising the dividend with the same monotony as in recent years.

As regards the future, the immediate disturbing element was the forthcoming General Election, the result of which was fraught with great possibilities for good or evil. As that was only a business meeting, he must not indulge in politics, but if the declared policy of Socialism in financial matters were ever carried into effect, he was afraid it would be detrimental and possibly ruinous to the interests of many of the companies in which they were at present shareholders. There appeared to be every reason to think that trade was at last on the up-grade, and better accounts of the coal and iron trades were being received, as well as from the shipbuilding yards, so that in the absence of any serious political upheaval, the situation should improve. As to that, the events of the next few weeks would doubtless enlighten them.

The trust had enjoyed a series of good years in common with most other companies of a similar character. The board had uniformly endeavoured to place the trust in a strong position by a conservative distribution of its earnings, and he thought that, at the same time, the stockholders had been in receipt of very satisfactory dividends for several years. This was a policy he was confident they would wish their board to continue in the future, as by such a course they would be always prepared to meet any reverses that were likely to arise in the ordinary course of its affairs.

The report was unanimously adopted.

ODHAMS PRESS, LIMITED.

SUBSTANTIAL GROWTH IN PROFITS.

The ninth annual general meeting of Odhams Press, Limited, was held, on the 30th ultimo, at the Hotel Cecil, Strand, London. Mr W. J. B. Odhams, the chairman of the company, presided.

The chairman said that the record profit carried to the balance sheet was £176,783, as against £151,753 for 1927 and £116,872 for 1926, which, he thought, would be regarded as satisfactory. The average output of newspapers and periodicals produced by the company averaged more than 4,300,000 copies per week, or nearly 250,000,000 copies per annum. That was, of course, satisfactory from the company's point of view. It also meant that they were providing every year more and more employment for compositors, machine men, warehouse men and all the many other classes of workmen engaged in the production of a newspaper, and their wages bill was continually mounting up. They were, in fact, doing their share towards solving the unemployment problem. It would be wrong in speaking of the growth of the business to pass over in silence the services of Mr Elias, and not to refer to his great efforts in putting upon the market the improved "John Bull." Not the least of the many excellent innovations had been the obtaining of the services of Sir Wyndham Childs, who superintended the Investigation Department. "John Bull" was essentially a watchdog, and was constantly barking to the great advantage of the public, but even the most trustworthy watchdog had been known to bite the wrong person. By the retention of Sir Wyndham Childs and other safeguards the board were taking additional means to ensure that "John Bull" should attain that "impossible" position of being always right. One other important interest of the company which gave a very large printing contract to-day and a promise of handsome return, not only in printing but on their share interest—more than 80 per cent.—was "The People" newspaper. The net circulation of "The People" had, under Mr Elias' direction, increased from 300,000 four years ago to over two million net sales per week to-day. For at least one year more they must not expect to receive dividends, because profits were being used in wiping off development expenditure. In the meantime, the substantial printing profit was with them, and they must be content for a little while longer to reap the benefits with one hand only instead of, as later, they hoped, with both.

The report and accounts were adopted, and the dividend of 15 per cent. on the ordinary shares was confirmed.

SHANGHAI ELECTRIC CONSTRUCTION COMPANY, LIMITED.

SUBSTANTIAL IMPROVEMENT—BONUS PROPOSALS APPROVED.

The twenty-third annual general meeting of the Shanghai Electric Construction Co., Limited, was held, on the 1st instant, at Basildon House, Moorgate, London, Mr J. S. Haskell (the chairman of the company) presided.

The Chairman, in moving the adoption of the report and accounts, said:—

Our operating profit is £167,232. Our profits have accrued from a scale of fares which is probably as low as any in the world. The construction account, which appears in the balance-sheet at £713,235, and our other assets in Shanghai, show that we have expended on our undertaking a sum largely in excess of the issued capital of £500,000, and it is with a view to bringing the capitalisation of the company more nearly into harmony with the value and extent of its undertaking that we are asking you to-day to sanction an increase of the capital and the capitalisation of part of the reserve.

By transferring £25,000 to general reserve, we have raised that account to £135,000, and we propose to continue, as profits permit, the policy of adding to our financial resources from within rather than by raising fresh capital. The addition to the reserve is particularly desirable, in view of the fact that we propose to recommend to the shareholders the capitalisation of part of the reserve by an issue of bonus shares to the amount of £100,000, equivalent to one new share for every five shares now held.

The fact that a large part of our capital is represented by bearer warrants has led in the past to bonus shares being unclaimed and having to be allotted to trustees in whose names they still stand. These unclaimed shares are entitled to dividends which accumulate, and will rank for the bonus now to be declared, and the new bonus shares will rank for future dividends. We have endeavoured to avoid the confusion which would result by providing that any new bonus shares not claimed by October 31st next are to be sold, and that the proceeds are to be placed on deposit for the benefit of the persons ultimately found to be entitled. The increase of the capital to £700,000 will leave 100,000 shares unissued and available for issue if and when required. No further issue is contemplated at present.

The report and accounts were unanimously adopted.

A further resolution was passed authorising an increase of the capital to £700,000 by the creation of 200,000 new shares of £1 each, and the issue by way of capitalisation of profits of 100,000 new shares credited as fully paid to shareholders, in the ratio of one new share for every five at present held.

JAMES W. COOK AND COMPANY, LIMITED.

MR W. J. CLARKE'S STATEMENT.

The thirty-second annual general meeting of James W. Cook and Co., Limited, was held, on the 26th ultimo, at the offices of the company, 130-135 Minories, London, E.

Mr W. J. Clarke (the chairman and managing director) presided.

The Secretary (Mr Alfred E. Pike) read the notice convening the meeting and the report of the auditors.

The Chairman referred in detail to the various activities of the company during the year under review, and paid his annual tribute to the loyalty of the permanent staff, which, he commented, was again beyond reproach. He concluded by moving the adoption of the report and statement of accounts and the payment of a dividend at the rate of 10 per cent. per annum for the half-year on the ordinary shares—payable forthwith—making, with the interim dividend already paid, 7½ per cent. for the year, less income tax.

Mr Ernest G. Devitt seconded the resolution, which was carried unanimously.

The retiring auditors (Messrs Lescher, Stephens and Company) having been reappointed, the proceedings closed with a cordial vote of thanks to the Chairman and his colleagues.

THE CASE FOR FREE TRADE

A pamphlet of 56 pages reprinted from "The Economist."

The fundamental arguments against Trade Restriction are set out; and the claims of "Safeguarders" examined.

INSTITUTE OF CHARTERED ACCOUNTANTS.

INCREASED MEMBERSHIP.

The forty-eighth annual meeting of the Institute of Chartered Accountants in England and Wales was held, on the 1st instant, at the Hall of the Institute, Moorgate Place, London. Sir Nicholas Edwin Waterhouse, K.B.E. (President of the Institute), occupied the chair.

The President, in the course of his address, said: During the year there has been an increase of 565 in the number of our members, and, if we take into account the results of the last final examination, our present total is more than 8,500. During the year no fewer than 834 articled clerks were registered, as compared with 799 the previous year, and it looks as if in a very few years our membership will reach the five-figure mark. With the ever-increasing demand, however, for fully qualified men, not only as assistants in the offices of practising accountants, but also to hold responsible positions in so many branches of commercial and financial activity at home and abroad, I do not share the view that I have sometimes heard expressed lately that our profession is beginning to get overcrowded.

The fifteenth autumnal meeting of the Institute was held in Birmingham last October at the invitation of the Birmingham and District Society, and a full report of the proceedings has been circulated. The meeting was a very successful one, not only socially, but also on account of the publicity it obtained.

The International Accountants' Congress to be held in New York during September promises to be the largest accountancy convention that has yet been promoted. No fewer than 2,000 accountants are expected to be present, and delegates are invited from all representative bodies in all parts of the world. We are most fortunate in having as our own delegates Sir William Plender, Sir Woodburn Kirby, Mr Cash and Mr Colville.

Another great event of more significance to ourselves than the American Congress which will take place during my successor's year of office, is the fiftieth anniversary of the incorporation of our institute by Royal Charter. It is intended that this anniversary shall be celebrated in a manner worthy of the occasion, and we must congratulate ourselves that Sir William Plender has consented to fill the position which I am vacating next month, and to undertake the more than usually onerous duties which will fall on the president for the year 1929–30.

FINANCIAL POSITION.

Passing now to the accounts, I do not think there are any special items to which I should draw your attention. The excess of income over expenditure for the year amounted to £7,330, as against £5,390 last year, which may chiefly be attributed to the increase in fees received owing to the general expansion of our membership. Turning to the balance sheet, it will be seen that our accumulated fund now stands at £136,202, but it must be borne in mind that on the other side of the account our investments stand at cost, and are still some £12,500 in excess of their market values, as compared with about £13,000 last year.

In last year's report reference was made to the proposed supplemental charter, and it was then mentioned that some objections had been raised by certain Dominions, and that it had not yet been found desirable to submit to the Privy Council the petition for the granting of the draft supplemental charter, which was passed by the members of the institute at the general meeting in 1927. The position to-day is very much the same as a year ago, and the council are still in correspondence with the Dominions concerned as to those clauses to which objections have been raised. As things are at present it would not be in the interests of our institute to take further steps in obtaining the Royal Assent, and, indeed, to do so until our overseas friends are quite satisfied as to our intentions might seriously prejudice the position of our members who are practising in those Dominions. I can assure you that the matter is having the most careful attention of the council, and that if ultimately it would appear desirable to make any modifications in the provisions of the supplemental charter you will immediately be consulted.

During my year of office it has been my privilege and pleasure to visit and accept the hospitality of many of the provincial societies, and I have thus had the opportunity of learning something of their good work and of being brought into touch with very many members of the institute throughout the country, with whom otherwise I should never have become acquainted, and of making many new friends in the profession. I also was the guest at the annual banquet in Paris of the English-speaking accountants on the Continent, and I am sure that this very successful gathering, at which there were a number of Frenchmen and Americans present, did much to establish our reputation on the Continent and promote the good feeling in the profession between the nations that were represented there.

Mr Fitch Kemp seconded the motion, which was carried unanimously.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended April 27th, 1929:—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	5,059	From Revenue	9,872
Interest, &c., on Debt	941	Increase in Balances	73
Sinking Fund	500		
Sundries	175		
Decrease in Debt	3,269		
	9,945		9,945

The total Ordinary Revenue for the week amounted to £9,872,400, as compared with £10,916,600 in the corresponding week last year. Property and Income Tax amounted to £1,188,000, and Super-Tax to £670,000, against £1,280,000 and £830,000 respectively. Customs, at £3,150,000, showed an increase of £615,000 as compared with the corresponding week last year, whilst Excise, at £1,211,000, showed a decrease of £601,000. Ordinary Receipts brought in £1,400 against £462,600, while Special Receipts were nil for both weeks.

The National Debt was reduced by £3,269,000, as shown below:—

(000's omitted.)

Treasury Bills	− 3,124	Public Department Advances	+ 500
Treasury Bonds	− 195		
National Savings Certificates	− 50		
Sundries	− 400		
	− 3,769		+ 500

The floating debt was reduced by £2,635,000 to £742,785,000.

FINANCIAL YEAR, 1929–30, APRIL 1 TO APRIL 27.

	£		£
Expenditure	55,925,931	Revenue	53,141,948

Total		2,219,394	Total		91,330

Net arrivals, £2,128,064.

Messrs. Samuel Montagu and Co. write as follows on May 1, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £156,043,567 on the 24th ult. (as compared with £155,836,622 on the previous Wednesday), and represents an increase of £2,137,252 since April 29, 1925—when an effective gold standard was resumed.

There was about £604,000 bar gold from South Africa available in the open market this week. The Bank of England secured about £369,000, as shown in the figures below; the Continental trade, £155,000; the home trade, £51,000, and India, £25,000. There was a net influx of gold of £2,125,861 during the week.

SILVER.

During the week the silver market has shown marked weakness. The exchange with China has declined steadily, and it would seem that the accumulation of stocks in Shanghai is now having effect upon the market. Offerings have been forthcoming from China, the Indian Bazaars, and to some extent from America. The lapse in prices, however, was due in part to the absence of support, as, except for some enquiry from America at the low level reached yesterday, buyers have been little in evidence. With little prospect, as far as can be seen at present, of substantial support, any appreciable recovery in prices is difficult to foresee.

The following were the United Kingdom imports and exports of silver registered from mid-day on the 22nd ult. to mid-day on the 29th ult. :—

Imports.		Exports.	
U.S.A.	£11,567	Egypt	£32,630
Other countries	1,228	Other countries	14,377
	£12,795		£47,007

Reports and Notices.

Mr Harold Peake, of Bawtry Hall, Doncaster, Yorkshire, has been elected a director of Messrs Wm. France, Fenwick and Co., to fill the vacancy caused by the death of the late Mr J. E. Champney.

The Hon. Maurice Fox Pitt Lubbock has accepted a seat on the board of the Australian, Mercantile, Land and Finance Co.

Brigadier-General the Hon. Everard Baring, C.V.O., C.B.E., has joined the board of the London Electric Supply Corporation.

The Tyneside Electrical Development Co., Limited, has changed its title to the Tyneside Investment Trust, Limited.

RAILWAYS.

GREAT WESTERN OF BRAZIL RAILWAY.—The Directors announce that on April 27th the President of the Republic signed a decree amending the Lease Contract under which the line is operated, with the object of reducing the rate of rental payable to a nominal sum and postponing repayments by the company to the Government of the loan of 13,000 contos granted in 1924, and arrears of rental, until after six per cent. has been earned annually on the company's share capital. The decree is subject to registration by the Tribunal da Contas, which is now being sought by this company's representative.

EMU BAY RAILWAY.—The Emu Bay Railway Company has entered into an extending contract with the Electrolytic Zinc Company of Australasia, Limited, for the carriage of large and regular weekly quantities of concentrates. It is expected that everything will be ready for contract to start in about a year.

THE LEOPOLDINA RAILWAY.—After providing for the debenture interest and interim dividends on the preference and ordinary stock, and transferring £48,000 to reserves, the net revenue account for the year made up to December 31, 1928—including the sum of £100,580 brought forward—shows a balance of £387,824, out of which the board propose to pay a balance dividend of 2¾ per cent. for the half-year (less income tax) on the preference stock, making 5½ per cent. for the year, and a balance dividend of 3 per cent. (less income tax) on the ordinary stock, making 5 per cent. for the year, as compared with 4½ per cent. for 1927, leaving £103,457 to be carried forward. The transfer books and register of members of the company will be closed from May 3rd to May 17th, both days inclusive.

MISCELLANEOUS.

JOHNSON AND PHILLIPS, LIMITED.—The following shows results over four years:—

	1925.	1926.	1927.	1928.
Net profits after debenture interest, but before debenture sinking fund .....£	170,808	80,560	77,814	71,049
Per cent. earned on ordinary capital of £600,000.....%	28·47	13·43	12·97	11·84
Per cent. paid in dividends on ordinary capital of £600,000 .....%	17½	12½	10	10
Amount of ordinary dividend.....£	105,000	75,000	60,000	60,000
Applied to reserve and debenture sinking fund* ...£	165,217	15,217	15,217	15,217
Carried forward .....£	92,133	82,475	85,072	80,903

* Includes £106,250 premiums.

The investment in Burndept Wireless 8% Debentures £50,000 disappears from the 1928 balance-sheet, reducing investments from £55,570 to £6,037. Cash is higher at £80,359 against £63,552.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

The long spell of dry weather has been partially relieved by beneficial rains over the United Kingdom, but temperatures were unseasonably low and further moisture followed by sunshine is needed to stimulate growth. Standing crops appear backward, and in many instances fields have had to be re-ploughed, so that the agricultural outlook at present is by no means promising. Supplies of native wheat were on a moderate scale and holders required full recent rates, while the market for imported varieties was rather less depressed. In the floating and forward cargo section, sellers were not quite so prominent as of late, but offerings of both Plate and Canadian varieties were fully adequate for requirements. Buyers are still operating cautiously and awaiting further developments in the international situation, particularly as regards the North American surplus. Some progress has apparently been made with the American Farm Relief Bill, but its effect upon existing supplies is uncertain, and at the moment the policy of sellers is not clearly defined. Meanwhile shipments are well maintained for the time of year, with a seasonal increase anticipated from Canadian ports in the immediate future. Dull conditions prevailed with regard to feeding stuffs, and although Plate maize was freely offered at lower prices, demand was not stimulated thereby, while the substantial premiums recently obtainable on afloat and early shipments have been considerably reduced.

Wheat, dull. No. 2 Northern Manitoba, ex-ship, 48s.; No. 3 ditto, 46s. 9d.; No. 4, Manitoba, 45s. 9d.; No. 5. 42s. 6d.; No. 6 37s.; Rosafe, 64 lbs., 44s. 6d.; Barusso, 63½ lbs., for shipment, 44s. 6d.; Australian, 46s., ex-ship, per 496 lbs. English, 9s. 9d. to 9s. 11d. per 112 lbs.

Flour, slow. London standard grade, 37s. 6d.; town whites, 38s. 6d.; patents, 39s. 6d. to 40s. 6d. per sack, delivered in the Home Counties, with 6d. to 1s. per sack less for deliveries in the London districts. Of imported, Manitoba patents range from 34s. to 36s. 6d.; Minneapolis, 34s. 6d. to 37s.; Australian, 34s. to 35s. ex-store. On c.i.f. terms, Manitoba top patents, May-June, 34s. to 35s.; export ditto, 32s. to 32s. 6d.; Australian, 31s. 3d. to 31s. 9d. per 280 lbs.

Maize, quiet. Plate, landed, 40s. 6d., ex-ship to arrive, 39s. 9d.; March-April, 37s.; new April-May, 36s. 9d.; July-August, 36s. 9d.; No. 2 American mixed, landed, 40s. per 480 lbs. Yellow maize meal, £10 15s. per ton landed.

Barley, weak. Californian ex-ship, 43s. to 48s.; Chilian Chevalier, ex-store, 45s. to 58s.; Australian, 41s. to 44s. 6d.; Smyrna, 44s. to 47s. per 448 lbs. Algerian/Tunisian ex-ship, 32s. 3d.; Canadian feed, 29s. 3d.; No. 3 Canadian Western ex-ship, 32s. 3d.; No. 2 Federal American landed, 30s. 6d. per 400 lbs. English malting, 10s. 6d. to 12s.; feed, 9s. 8d. to 10s. per 112 lbs.

Oats, slow. Plate landed, 26s. 3d.; ex-ship to arrive, 25s. to 24s. 6d. as to position; black Plate ex-ship, 24s.; mixed Canadian feed ex-ship to arrive, 19s. 9d.; landed, 21s. 3d.; Chilian white, 31s. 6d. landed; German landed, 29s. 3d.; ex-ship to arrive, 28s. per 320 lbs.; English, 9s. 9d. to 10s. 4d. per 112 lbs. Scotch landed, 30s. 6d. per 336 lbs. Irish black, 27s. 6d. per 320 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928–29, 1927–28, 1926–27, 1925–26:—

	1928–1929.	1927–1928.	1926–1927.	1925–1926.
Estimated sales of home-grown wheat—				
1 week to April 27	Cwts. 168,682	Cwts. 278,138	Cwts. 131,805.	Cwts. 235,649
30 weeks to April 27	8,554,137	8,697,012	10,140,047	11,649,230
Average price of English wheat per cwt.	s. d. 9 11	s. d. 10 5	s. d. 11 6	s. d. 12 10

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1925 to 1928:—

Weeks ended.	Quantities Sold.			Average Price per Cwt.		
	Wheat.	Barley.	Oats.	Wheat.	Barley.	Oats.
1929.	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.

AMERICAN WHEAT MARKETS.

Demand was inactive and weather favourable in both wheat belts over the week-end. Prices consequently declined. Then reports of unsatisfactory European crop conditions and firmer Liverpool advices came to hand. Offerings were steadily absorbed and price quotations improved, though the level was slightly lower than that recorded a week ago. Quotations :—

Nearest Future.	Jan. 4, 1928.	May 1, 1928.	Jan. 2, 1929.	Apr. 17, 1929.	Apr. 24, 1929.	May 1, 1929.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.)	137	156⅛	122	125⅜	121⅛	121
Chicago (No. Winter)— Cents per 60 lb.....	130⅜	166¼	116⅜	120⅛	114¼	113

Visible supplies of wheat in Canada at 77,112,000 bushels show a decrease of 6,363,000 bushels as compared with the previous figure. Supplies a year ago stood at 76,691,000.

THE COAL TRADE.

Our Sheffield correspondent writes:—Weakness characterises the export department of the market. Shipments are still on a considerable scale, but importers are holding off in the hope of bringing down prices and bookings are consequently light. Prices have dropped a further shilling. Coke is being shipped in fair quantities. In house coal circles it is said that the prices will be advanced 1s. per ton in July to cover next winter's trade. Industrial and domestic demand for fuel is moderate with prices firm.

Our Glasgow correspondent writes:—There has been no improvement in either the land-sale or shipping sections of the market, and the collieries are only maintaining prices at the expense of a good deal of short-time working. There are a goodly number of forward inquiries on the market, but, unfortunately, the prices mentioned do not suggest the likelihood of many of them leading to business. The majority of the collieries are still willing to bargain with buyers having definite orders to place. Prices for shipment are round the following (all f.o.b. district ports):—Lanarkshire.—Ell best, 15s.; splint best, 16s. 6d.; splint second, 16s.; navigation, 17s. 6d.; navigation second, 15s.; steam, 13s. 6d.; Hartley, 17s. 6d.; trebles, 13s. 6d.; doubles, 12s. 9d.; singles, 11s. 9d.; pearls, 10s. 9d.; dross, 10s. Fife.—Screened navigation, 17s. 6d.; first-class steam, 13s. 6d.; third-class steam, 12s.; trebles, 13s. 6d.—14s.; doubles, 12s. 6d.; singles, 11s. 9d.; pearls, 11s. Lothians.—Prime steam, 13s.; secondary steam, 13s.; trebles, 13s. 6d.; doubles, 12s. 6d.; singles, 11s. 6d.; pearls, 11s. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 14s. 6d.; trebles, 13s. 6d.; doubles, 13s.; singles, 12s.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes:—There has been no material change in the position of the Cardiff coal market during the past week. The current volume of business is restricted, and although collieries are very well sold under contracts they are in some cases finding it difficult to market their outputs, and the easier price tendency of the last two or three weeks has persisted, particularly as regards dry and Monmouthshire steam coals. Small descriptions are also weaker, and the supply of tonnage, except at the Barry Docks, is less favourable than it has been for several weeks past. No official information has yet been received concerning the acceptance by the Egyptian State Railways of the lowest of the tenders for the supply of 180,000 tons over the three months ending August. The South Wales colliery companies have joined a national scheme for the co-ordination of the supply of coal to Ireland, and at a meeting of colliery salesmen held this week an agreement was reached in regard to the prices at which South Wales coals shall be supplied to Ireland. The current approximate quotations are as follows:—Best Admiralties, 20s. 9d. to 21s.; seconds, 20s. to 20s. 6d.; best drys, 19s. 6d. to 20s.; Black Veins, 19s. 6d. to 19s. 9d.; Western Valley, 19s. 3d. to 19s. 6d.; Eastern Valley, 18s. 9d. to 19s. 3d.; best small steams, 14s. to 14s. 3d.; cargo smalls, 13s. 3d. to 13s. 6d.; coking smalls, 14s. to 14s. 3d.; anthracite, best large, 33s. to 36s.; Red Vein large, 23s. to 27s.; machine-made cobbles, 40s. to 43s. 6d.; French nuts, 42s. to 44s.; stove nuts, 39s. to 42s.; rubbly culm, 9s. 6d. to 10s. 3d.; foundry coke, 27s. 6d. to 36s. 6d.; patent fuel, 20s. to 21s. 6d.; pitwood, ex-ship, 26s. to 26s. 3d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange:—

Steady trading conditions continue to rule in the iron and steel trades and future prospects are regarded as favourable. The general conditions in the market have not materially altered for several weeks, but latterly there have been indications that Continental producers and manufacturers are more anxious to obtain business than in the earlier part of the year. Nevertheless, prices have been fairly well maintained for most descriptions of Continental steel, and particularly so in the case of semi-finished materials. On the other hand, the prices of some manufactured descriptions of iron and steel have shown a slightly weaker tendency. So far as the British home market is concerned, business has progressed on steady lines and the demand appears to be slowly expanding. The situation in the pig iron department is improving. Practically no Continental iron is being sold in the British market, whilst the exports of British iron have increased. Although the demand from some districts is not altogether satisfactory, in the chief producing districts production is insufficient to meet the requirements of the market, and there seems a likelihood of fresh furnaces being put into blast. In the semi-finished steel department also, owing to the high prices and short supplies of Continental material, the British works have booked most of the business coming on the market. The demand for finished steel is steady and most of the British works are well off for orders for some time to come.

Our Middlesbrough correspondent writes:—The iron and steel position still remains very steady. Notwithstanding the recent increase in the production, Cleveland iron still remains very scarce, with works well sold for forward delivery. Prices, however, have not changed, and remain on the following basis: No. 1, 71s.; No. 3 G.M.B., 68s. 6d.; No. 4 foundry, 67s. 6d.; No. 4 forge, 67s. The output will be still further increased by Messrs, Bolckow Vaughan blowing in another furnace on this make of iron. As regards hematite, the market is probably not so active as it was, but still it is difficult to secure any iron for prompt delivery, the output having been sold forward for some 6 to 8 weeks. The price still remains at about 74s., but this might be shaded for a substantial order. Basic iron is also scarce, and what surplus the works have for the open market is easily disposed of. During April, over 31,000 tons of pig iron were exported, which is the highest monthly figure for 3 years. Orders for steel are coming in rather better than of late, and there would appear to be a slight revival for shipbuilding supplies. A recent order from the South African Railways, obtained by Messrs. Dorman Long for 36,000 tons of rails, has been split up between the various mills in the district. In the absence of any severe competition from the Continent, there is a good demand for semis, while the demand for finished steel for export is improving. Prices remain on the following basis, subject to the usual rebates: Steel ship plates, £8 7s. 6d.; steel ship angles, £7 17s. 6d.; iron bars, £10 15s. 0d.; steel rails, £8 10s. 0d. The ore market still remains very steady with best rubio at about 23s. per ton. Coke is rather easier, with supplies fairly plentiful at about 18s. 6d.

Our Sheffield correspondent writes:—In the iron trade activity is confined to basic pig in the home market, but overseas demand for acid qualities is brisk. Steel makers are finding it difficult to obtain supplies of basic pig. A new furnace at Renishaw, Derbyshire, was recently put in blast on this class of material. Business in foundry pig fails to expand, as slackness at both the light castings and engineering foundries continues. Nevertheless, makers of foundry pig are adopting a very firm attitude as regards prices, and will not even consider concessions. The basic steel plants in Sheffield are busy, but the call for acid steel still tends to contract. No improvement in the demand for railway steel and waggons can be reported, the home companies are buying their material to meet day by day requirements, and waggon building is almost at a standstill. Business is looking up in various kinds of special steels and engineers' cutting tools, and Sheffield is doing a considerable business in magnet steel, permanent magnets and safety razor blades. The cutlery and plate branches are badly depressed.

Our Glasgow correspondent writes:—Conditions in the pig-iron market remain quiet, purchases being confined to small lots. In the steel trade plants are at present well employed. There is less foreign competition in the heavy and semi-finished branches, as, although there is not now the same difficulty as regards deliveries, the Continental prices are not attractive, and the home producers are securing the bulk of the business. During April very considerable tonnages have been booked by Clyde shipbuilders, contracts having been placed with yards at Govan, Paisley, Port Glasgow and Greenock during that period. While the month's booking is fairly satisfactory, the position on the Clyde is not entirely so as the new work placed within the last few months is not equal to the tonnage launched. Sheet makers report a decided improvement in the volume of orders received during the present week, both for galvanised and corrugated and for thin black sheets.

Our Cardiff correspondent writes:—The recent improvement in the output of pig iron and steel ingots in South Wales and Monmouthshire is being well maintained. Imports of iron ore are increasing, and the South Wales dock traffic returns for the 15 weeks ended April 14th last show an increase on the corresponding period in 1928 of 93,000 tons, or over 40 per cent., and of 141,000 tons, or 19 per cent., over those in the first 15 weeks of 1927. These heavy branches of the industry derive the bulk of their support from the tinplate and galvanised sheet trades, both of which continue fairly active. The quotations for tinplates have further hardened to 18s. 6d.–19s. per basis box, while those for galvanised sheets are unchanged at from £13 7s. 6d. to £13 10s. Shipments of tinplates dropped rather heavily last week, and stocks in warehouse consequently increased from 222,000 boxes to 283,000 boxes. The rise in the price of steel scrap seems to have been arrested, quotations on the Swansea Metal Exchange on Tuesday being identical with those of a week ago.

OTHER METALS.

TIN.—The standard market displayed firmer features at the commencement of the week in sympathy with improved Eastern advices and a better inquiry, especially for forward dates. Later dealings, however, were attended by irregularity and weakness in view of the increase in visible supplies, while buyers showed less disposition to operate. Stocks in London and Liverpool warehouses for week ending April 27th were returned at 7,843 tons, compared with 1,948 tons at corresponding period last year. Turnover 2,235 tons. Standard cash sold at £198 10s., £199, and £196 5s.; three months, £200 10s., £201 10s., and £199. In the East, sales were reported at £202 15s., £203 15s., and £201 5s. c.i.f. terms.

COPPER.—Market also presented a much firmer appearance, and with confidence somewhat better restored, sellers adopted a reserved attitude. Total sales, 5,750 tons. Standard cash changed hands at £76 to £78 10s.; three months, £72 7s. 6d. to £76 5s., and £75 5s.

LEAD slightly irregular, as offerings proved adequate for requirements, closing firmer. Sales amounted to 2,650 tons, good soft foreign pig, April, at £24 7s. 6d. to £24 10s.; May, £24 2s. 6d. to £24 10s.; June, £24 5s., £24 7s. 6d.; July, £24 and £24 6s. 3d.; August, £24 2s. 6d.

SPELTER was better supported and tone firm, 1,750 tons sold, May, at £26 12s. 6d. to £26 15s., £26 12s. 6d.; June, £26 10s. to £26 15s., £26 13s. 9d.; July, £26 8s. 9d., £26 16s. 3d., £26 15s.; August, £26 17s. 6d., £26 15s. ton.

ALUMINIUM steady. Ingots and bars for home delivery, £95 ton.

ANTIMONY quiet. English regulus, £54; China ditto, spot, £37; May–June, £32; crude ditto, £23 ton c.i.f.

WOLFRAM firmer. May–June shipment, 35s. per unit, c.i.f.

SHEELITE, May–June, 36s. 6d. per unit, c.i.f. Antimony oxide, 32s., c.i.f.

QUICKSILVER steady. Spot, £22 5s. per bottle.

TIN PLATES firm. I.C. coke, prompt and forward, 18s. 6d. to 18s. 9d. per box, f.o.b., Swansea.

THE COTTON TRADE.

LIVERPOOL, May 1.

Long liquidation and short selling has continued all week owing to continued favourable weather in the cotton belt. Large lines were sold early to-day, but American straddle buying in the afternoon steadied prices. A short interest now seems to exist. Spot sales for the week April 25th to May 1st inclusive are 31,000 bales, of which 19,940 bales are American, 100 Brazil, 400 Argentine, 2,600 Peru, 4,250 Egyptian, 2,500 African, 900 East Indian and 310 sundries. Imports for the same period are 67,312 bales, of which 28,241 are American, 1,447 Argentine, 800 Peru, 17,446 Egyptian, 9,586 African, 9,522 East Indian and 270 sundries. Quotations to-day are: Middling American, 9·95; Egyptian Sakel, 17·40; Uppers, 11·45; Peru G.F. Mod-Rough, 12·50; Smooth, 10·95; Brazil Fair, 10·20; West African Middling, 10·05; and East African G.F., 11·35.

MANCHESTER, May 1.

The market during the past week has been unsettled by the further fall in raw material values. Although bearish sentiment has been pronounced, there are now indications of rather more stability at current rates. Cloth inquiry has increased and buyers have tested manufacturers on a freer scale. Most offers have been unworkable, but in certain quarters a larger turnover has taken place. Rather more activity has shown itself for India, especially Calcutta and the up-country markets in dhooties and similar cloths. Owing to the renewal of the Japanese boycott in China, more favourable advices have been received from Shanghai as regards clearances at the auctions. Rather more new contracts have been arranged in fancies, with occasional transactions in white shirtings. Steady support has come from South America and the West Coast of Africa in printing and finishing styles, but Egypt as a market remains under a cloud. Encouraging reports have been received from the home trade and manufacturers have been able to secure very fair orders. American yarns have been easier in price, with a good deal of irregularity. Here and there operations have been on a rather freer scale. A slight improvement has also shown itself in the turnover in Egyptian counts.

THE WOOL TRADE.

Our Bradford correspondent writes:—The hope is generally expressed that the current series of Colonial wool auctions in London will do something towards restoring confidence in values. In the meantime business in tops and yarns shows no marked expansion. Buying is still restricted more or less to the covering of immediate requirements, and offers of a speculative nature are usually on much too low a basis for orders to materialise. Quotations for merino tops are just about steady, and the same may be said of fine crossbreds, but medium and low crossbreds are in demand for prompt delivery and prices are relatively firm. Botany spinners continue to experience great difficulty in making satisfactory prices, and as stocks tend to accumulate, prices are correspondingly irregular. On the other hand, there is a fair amount of inquiry for crossbred yarns both on home account and for export, and quotations show a firmer tendency. In the piece-goods section of the industry demand for men's wear fabrics is well maintained and, generally speaking, manufacturers are rather better placed for work. Business in dress goods, however, is "spotty," and it is not without interest to note that exactly similar conditions prevail in Roubaix-Tourcoing. Further notices have been posted in the heavy woollen district announcing a reduction in wages, and it seems probable that in the not distant future the whole question of wages in the West Riding industry will come under review.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The commencement of the third series of London sales last Tuesday has removed some of the uncertainty which prevailed regarding the future of wool values. Conditions at the consuming end of the industry have been unsatisfactory, and strong disappointment has been expressed that the more reasonable values, particularly for fine wool, have not resulted in a bigger flow of business. The principal thing preventing any further serious decline has been the fact that aggregate supplies have been no larger than the industry could absorb. In spite of the strong complaints made in Bradford, and the inability of top-makers to realise profitable prices compared with the cost of wool on any given date, a small turnover has been quietly proceeding. This, in addition to the business done in wool with Russia has undoubtedly been an important factor in keeping the price of wool so steady. Another influence operating against any further decline in merinos in Coleman Street is that the total quantity for the series is not large, and the seasonal sales in Australia are practically finished. Though values in Sydney and other centres are now much more reasonable than during the first half of the season, and even within the past month it has been possible to buy more cheaply, there is at present quite a steady tone, Bradford buyers having operated fairly extensively. Importers have, unfortunately, not been very successful this season, for the market price of tops has gone against them, and unless a firm has sold forward, losses are having to be faced. The trend of events in Coleman Street is, therefore, helping to stabilise the position in a fairly encouraging fashion. Some difficulty is admittedly being found in disposing of second-hand offerings, and it is in these where any decline in merinos is mostly seen. Crossbreds are being bought freely by home and Continental buyers, and in spite of the fact that this description forms the major portion of the offerings, greasies are not showing any appreciable decline compared with last series. During the whole time business has been comparatively quiet in merino tops, crossbreds have been selling steadily, and the outlook for this description is fairly good.

HIDE, LEATHER AND ALLIED TRADES.

Tanners are still very cautious buyers of hides all over the world, and in consequence prices are still declining. Best market ox hides are now selling from 7¼d. to 7⅜d., seconds, 6¼d. to 6⅝d., and will in all probability go lower. Calfskins are also weaker, and have fallen ¼d. or more per lb. in many markets. Lambskins are easier, and shorn skins are selling at 2d. to 3d. each lower. All classes of imported hides share the general weakness, and 8d. is now accepted for Argentine fregorific ox, Russia and the United States being large buyers at that figure. In saladeros, the only sale of interest has been 4,000 Armour ox at 7⅝d., mainly on Russian account. Dry River Plates are declining, and B.A. Americanos are now offered at 10⅝d. Africans are lower, with 11¼d. and 10¼d. asked for first and seconds dry-salted Capes respectively. Recent cables from Chicago report the packer market as remaining steady, 15 cents being still the figure for best native steers. Although trade is not normal for the time of the year, yet there is an improving business in sole leather. Cheap dry hide bends have again been wanted by shoe manufacturers in fair-sized quantities, whilst repairers have again come into the market for wet salted bends at firmer prices. Offal is barely steady, and merchants have obtained some good bargains in both bellies and shoulders. Rough leather is selling better, and tanners have cleared parcels of split hides at firm prices to motor-car and upholstery firms. A slight improvement is reported in light leathers, and sellers of box and willow calf have done more business at firm figures. Patent is selling slowly in the cheaper grades, and there is a good demand for glacé kid in black and the various shades of brown, a few fancy shades filling up the bill. Curriers are not yet very busy, and some of them are waiting with a good deal of anxiety the decisions of the American Government in regard to the imposition of a duty on dressed leathers, as quite a good trade has been done of late years in linings and cheap coloured kip sides with the United States.

VEGETABLE OILS AND OILSEEDS.

Markets generally are quiet, and there is no pronounced buying movement in any section. Linseed oil continues in slow demand from consumers, but values remain steady and unchanged at £28 10s. per ton, naked ex mill, for spot and May. Little is in hand for forward delivery. Cotton oils are steadier, but values have lost the improvement registered earlier in the week. Crude Egyptian offers at £26 10s., and common edible at £30 5s. for spot and May–August. Other seed oils for the most part have an easy tone. In the oilseed section demand for linseed does not expand. The scarcity in near positions is being overcome, as the substantial quantities afloat approach. Current value of Plate on passage ranges from £16 7s. 6d. down to £16, according to position, while April–May and May–June shipment to Hull is reported down at £15 15s. Calcutta linseed is easier, and for May–June to London, £17 15s. has been accepted. Cottonseed is steadier, and black Egyptian has been sold at £9 3s. 9d., April and May loadings, and £9 5s. June. Soya beans are quiet, and business done to the Continent at £11 1s. 9d., April and May. The demand for oilcakes and meals continues to decline, and prices are easier, except in the case of linseed cakes.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—The weak tone apparent in this market for some little time past became more intensified, lower prices being quoted in all directions. Messrs. Tate and Lyle reduced quotations 3d. all round, other refined also home-grown being from 1½d. to 3d. lower. Meantime, trade buyers, both in the U.K. and U.S.A., are quite content to confine their operations to wants of pressing necessity, the natural corollary to the world's basin being full to overflowing. Recent revival in raw refining descriptions, however, is maintained, and, according to market gossip, fairly extensive transactions resulted, mainly Cuban, San Domingo, Java muscovadoes, also Natal and British West India preferentials. Mr. F. O. Licht's second estimate of European sowings will be available at the end of present month. Tate and Lyle's cubes, now 25s. 9d. to 26s. 3d. as to quality; fine granulated, 23s. 4½d.; T.L., 22s. 7½d.; month forward, T.L., 22s. 6d.; yellow crystals, spot, 21s. 4½d. White Mauritius, spot, 20s. 3d. to 21s. 3d. Continental parcels for shipment nominally unaltered. About 30,000 tons Cuban and San Domingo, 96 per cent. June, to the U.K., sold 9s.; 10,000 tons B.W.I. and Natal, June, at 12s. 9d.; and business in Java muscovado, reported 20,000 tons, May–June, at 9s. 0½d., all c.i.f. terms. Terminal sections easier. May, raw, sold 8s. 2½d.; August, 8s. 6d.; December, 8s. 10½d.; March, 9s. 2½d. White, May, 10s. 2½d.; August, 10s. 9d.; December, 11s. 2½d. cwt. Cuban receipts last week, 165,500 tons, against 130,090 last year; exports, 135,640 against 109,760; stocks, 1,509,795 against 1,316,618; Central workings, 64 against 32. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending April 27th amounted to 137,378 tons against 132,219 last year.

COFFEE.—Quite a good market continued for all attractive qualities in the cup and of hard roast. These were easily saleable at full prices, but inferior varieties dragged somewhat. Of East India, bold Naidoobatum sold 153s. 6d. to 160s.; Kenya bold, 134s. 6d. to 146s.; fine bold Nicaragua, 139s.

COCOA.—Only a small business during the week in spot lots. Accra, F/F, October–December, sold 44s. f.o.b. Terminal, May sold, 45s. 6d.–45s.; June, 45s. 9d.–45s. 3d.; July, 47s.–46s. 3d.; September, 48s. 1½d.–47s. 4½d.; December, 49s. 1½d.–48s. 6d.

TEA.—47,633 packages Indian were offered in auction. There was a fairly good demand for medium to fine qualities and prices ruled steady, but common and stalky teas proved quiet, while mostly ¼d. to ½d. per lb. easier. There was quite a brisk demand for the 27,041 packages Ceylon catalogued, with very little change on balance regarding prices obtained, and any decline was largely accounted for by a falling off in quality. Fine pekoes and also broken orange wanted. Java and Sumatra sales ruled firmer. Of China, fine Keemuns in request at 2s., and Ningchows sold 8¾d. to 9d.

RICE.—Market very quiet and quotations almost without exception nominally unaltered.

RICE BRAN.—Market firmer on limited offers. Burma, July–August, £7 ex ship; Saigon, May–June, £6 10s. c.i.f.

PEAS.—The market is steady, but quiet. Spot London, Japanese at 21s. 6d., afloat steamers quoted 18s. 6d. to 19s. 6d. according to position; April–May, 18s. 3d.; May–June, 18s. 3d., per cwt. c.i.f. Dutch marrowfats, prompt, 23s. f.o.b. Blues, Imperial, 20s.; small, 18s. 6d. f.o.b. Maples steady, quiet. Tasmanian, April–May, 71s. No. 1 New Zealand, March–April, 61s.; April–May, 60s. 9d. (per 504 lb.) c.i.f. terms.

BEANS.—A quiet market. Madagascar butters, spot, London, 39s. to 41s.; parcels afloat, steamer "Clan Macaulay," sellers, 38s.; the limited quantity per "Clan Macbeth" held for 37s. 6d. Rangoon haricots, spot, London, at 20s. 6d., with parcels per City of Canton due shortly held for 19s. 9d.; April 13th, 19s.; April, 17s.; and May, 16s. per cwt. c.i.f. London.

SPICE.—A quiet market for pepper. Lampong, May–July, sellers, 1s. 2⅞d.; August–October, 1s. 1⅞d. Muntok, white, May–July, 2s. 1⅝d.; August–October, 1s. 10⅜d. Zanzibar cloves, spot, 1s. 5½d.; March–May, 1s. 6¼d.; August–October, 11½d. lb. London stocks 40 tons higher on the week regarding black, but white reduced 28. Pimento, July–August, London, sold, 115s. cwt. c.i.f. Tapioca unaltered. Sago flour, near, 11s. 3d.; distant, 11s. 4½d. cwt. c.i.f. U.K.

FRUIT (Dried).—Currants firm and reservedly offered. Pyrgos quoted 45s.; Amalias, 46s. to 46s. 6d.; Zante, 47s.; Vostizza, 50s. to 55s. Further consignments of Australian have arrived in good condition and sell steadily at 45s. to 55s., with fine up to 60s. Sultanas firm and in request. Smyrna, medium to good, ranges from 42s. to 55s.; Cretan, 50s. to 58s.; Australian new crop, 50s. to 60s., as to quality. Raisins dull. Valencias common to good, 45s. to 52s.; Lexias, 28s. to 30s. Figs quiet. Genuine spot, 30s. to 32s. Dates steady and in fair demand, chiefly for Siar, at 14s. 6d. to 16s. 9d.; first tide, 14s. cwt.

EVAPORATED FRUITS.—Market firmer and a good demand was dealt with, spot stocks being in limited compass. Californian plums, 20's-30's, quoted 66s. to 67s.; 30's-40's, 58s. to 59s.; 60's-70's, 45s. to 46s. Pears, Lake County, 72s. 6d. to 100s.; Apricots, South African Royal, 57s. 6d. to 117s. 6d.; Cape, 72s. 6d. to 82s. 6d.; Australian, 77s. 6d. to 85s. Peaches, Californian choice, 54s.; extra choice, 56s.; fancy, 60s. Apples, Californian spot, sliced, extra choice, 75s. Almonds: market quiet and tendency easier. Mazagan, 140s.; Mogador, 137s. 6d.; Majorcas, 142s. 6d.; Bitter-Jordan, 185s. to 210s. cwt.

CANNED GOODS.

CANNED FRUITS.—The demand has shown considerable improvement for all descriptions of Californian fruits, and with moderate stocks on hand prices ruled firmer, while influenced by crop damage, forward offers being scarce. Singapore pines also attract more attention, but general position without material change. Italian tomatoes met a moderate demand and held for full rates.

CANNED FISH.—Sardines quietly steady. Portuguese clubs, 5s. per dozen tins. Lobsters firm, and best halves realise 140s. to 145s. Salmon steady. Red talls, spot, 43s. to 45s.; pink ditto, 26s. to 27s.; halves, 33s. to 35s. Japanese crabs sell readily, with finest quality ruling at 97s. 6d. to 100s.

(a) Includes 28,292 shares subscribed for but unissued.

(b) Class A shares issued and outstanding:—

January 10, 1929	1,000,000 shares.
October 31, 1928	733,221 shares.

At various dates during the period from 1st November, 1928, to the 10th January, 1929, 266,709 shares of Class A stock were issued. These additional shares were issued:—

1. For conversion of convertible securities of the company in accordance with the terms of the respective issues at the considerations prescribed in the resolutions authorising the issuance of such securities.
2. For cash at the market price less an average commission of approximately $2.50 per share, maximum commission $3.50 per share.
3. For cash to stockholders pro rata at $40 per share; and
4. For exchanges of underlying securities at considerations ranging between $52 and $55 per share.

The cash proceeds were used for retirement of underlying senior securities, advances to controlled companies for construction, and, to some extent, for the purchase of sundry small new properties.

(c) Includes $2,500,000 owned by a subsidiary.

There were outstanding on October 31, 1928, $45,760,500 principal amount of funded debt, $2,064,350 (par or stated value) of preferred stocks and $3,450 (par or stated value) of common stocks of subsidiaries.

The company has power to borrow money for any of the purposes of the company and to secure the same by mortgage of the whole or any part of its property These powers are exercisable by the Directors, subject to such restrictions as may be imposed by the Laws of the State of New York.

The preceding statement sets forth the funded debt of the Company, outstanding on October 31, 1928, incurred through the exercise of its borrowing powers. The Company has no mortgage debt.

The Class A shares are entitled to non-cumulative dividends at the rate of $2 per share per annum, payable, when and as declared by the Board of Directors, quarterly on the first days of February, May, August, and November, in priority to dividends for the same quarterly period on the Class B shares and Common shares. After payment on the Class B shares and Common shares of quarterly dividends together equal to the aggregate quarterly priority dividend on the Class A shares, the Class A shares are also entitled to equal participating rights as a class with the Common shares as a class.

On any liquidation, dissolution or winding up of the Company, voluntary or involuntary, the Class A shares are entitled to $35 per share in priority to any payments on the Class B shares and Common shares. After payment on the Class B shares and Common shares of amounts together equal to the aggregate priority payment on the Class A shares and after the equalization of prior participating dividends on the Class A shares and Common shares, the Class A shares are also entitled to equal participating rights as a Class with the Common shares as a class in any remainder.

The relative preferences of the Class A shares on the one hand, and the Class B and/or the Common shares on the other hand, may not be changed so as to affect the Class A shares adversely without the consent or vote of the holders of a majority of the outstanding Class A shares.

The Class A shares are not redeemable; they carry no vote unless dividends thereon to the extent of $4 per share in the aggregate shall not have been paid or provision for payment made during the next preceding period of twenty-four consecutive calendar months, when they acquire the right to elect two directors and continue to be entitled to such voting rights until $4.00 per share in the aggregate shall have been paid upon or set aside for the Class A shares during a successive twenty-four months period. Each share of Class A stock has equal rights with every other share of Class A stock.

All series of Preferred shares rank *pari passu*, and are entitled to cumulative preferential dividends at the rate respectively of $3.50 per share, $5.00 per share $5.50 per share, $6.00 per share, $6.50 per share, and $7.00 per share per annum payable quarterly on such dates as the Board of Directors shall from time to time determine in priority to any dividends on the Class A shares, Class B shares and Common shares. The Board of Directors may declare additional dividends on the Original Series Preferred shares up to Fifty cents per share per annum.

All series of Preferred shares are redeemable in whole or in part at the option of the company on any quarterly dividend date, on 30 days' notice, at the rate of $60 per share for the Original Series, $102 per share for the $5.00 Dividend Series, $102.50 for the $5.50 Dividend Series and $105 per share for the $6.00 Dividend Series, $6.50 Dividend Series and $7.00 Dividend Series Preferred shares.

On any liquidation, dissolution or winding up of the company, voluntary or involuntary, all series of Preferred shares are entitled to $100 per share except the Original Series Preferred shares, which are entitled to $50 per share and, in each case, all arrears of dividends in priority to any distribution to the holders of the Class A shares, Class B shares or Common shares.

The Preferred share of all series carry no vote unless cumulative dividends thereon are in default and the arrearages equal eight quarterly dividends, in which event the holders of the Preferred shares become entitled to full voting rights on an equality with the holders of the Class B shares, during the continuance of such default.

The number of shares of Associated Gas and Electric Company outstanding at October 31, 1928, and the aggregate considerations, by classes, for the issue thereof are shown below:—

Class of Stock.	Number of Shares Outstanding.	Aggregate Consideration for Issue.
Common Stock	1,309,241 (a)	$8,220,869
Class B Stock	300,000	6,900,000 (b)
Class A Stock	733,291	25,665,185
Preferred Stocks:—		
Original Series	105,159	4,934,270
$7.00 Dividend Series	46,013	4,600,106
$6.50 Dividend Series	200,441	18,422,781
$6.00 Dividend Series	124,750	11,216,287
$5.00 Dividend Series	5,602	521,348

(a) Includes 28,292 shares subscribed for but unissued.

(b) Stated capital for the former Common Stock without par value. In January, 1925, 300,000 shares of Class B Stock without par value were issued in exchange for the former Common Stock. The Common Stock now existing was not created until August, 1925.

Practically all of the Preferred stock has been issued for cash or in exchange for securities of the Company (or its subsidiaries) ranking ahead of the Preferred stock, The maximum commissions paid upon sales (which have extended over a period of years) of Preferred stocks having a liquidation value of $100) is approximately 5 points and on shares having a liquidation value of $50, approximately 2½ points. The Class A stock outstanding as of October 31, 1928, was issued from time to time for cash, stock dividends, in part payment for properties acquired, and in exchange for senior securities. The Class B stock was issued in exchange for the former Common stock having voting rights. Approximately 75% of the Common stock was issued upon a re-classification of the Class B stock; the balance was issued for cash, in exchange for properties, or on conversion of debt securities.

OBJECTS.

Associated Gas and Electric Company was incorporated under the laws of the State of New York, U.S.A., on March 17, 1906. Its objects, as stated in its charter, are those of holding companies generally, with power to acquire and hold stocks and securities of other corporations and to assist, financially or otherwise, the corporations in which it is interested. While it is empowered to invest in securities generally, it is the primary policy and object of the Company to acquire shares representing controlling interests in public utility enterprises, to consolidate the operating companies into larger operating units (to the extent practicable under the laws of the States in which the companies operate), to simplify their corporate and capital structures, to assist in financing their development through the issuance of the company's own securities, and to furnish the operating companies the advantages and economies of group management.

Associated Gas and Electric Company now controls directly, or through subsidiaries, important electric properties in the two leading States of New York and Pennsylvania, and electric or gas properties, or both, in the States of Illinois, Ohio, Indiana, Kentucky, Tennessee, Maryland, Connecticut, and South Dakota, and in the Philippine Islands. It owns, either directly or through subsidiaries, all of the voting stocks of the operating subsidiary companies, except in a few instances where the minority holdings outstanding in the hands of the public aggregate in no important instance more than two per cent. It also owns, with few exceptions, all of the outstanding preferred stocks of the operating subsidiary companies which have not been called for redemption.

Associated Gas and Electric Company is also financially interested in the New England Gas and Electric Association, which controls electric or gas properties, or both, in the States of Massachusetts, Maine and New Hampshire and in the maritime province of Canada. Because of an old Massachusetts statute, it is impractical at the present time for a foreign corporation to acquire ownership or control of the stocks of the Massachusetts subsidiaries of this association, and control is, therefore, vested in affiliated individual interests. The operating subsidiaries of the Associated Gas and Electric Company and those of the New England Gas and Electric Association are under the same management and are together generally known as the Associated Gas and Electric System.

PROPERTIES.

The operating companies within the Associated Gas and Electric System own electric generating stations with a combined installed capacity of 290,500 K.W., of which 46,128 K.W. is hydro-electric; 3,124 miles of high tension transmission lines; gas manufacturing plants of more than 33,000,000 cu. ft. daily capacity and 1,500 miles of gas mains.

EARNINGS.

The consolidated earnings of the company and its subsidiaries for the 12 months ended October 31, 1928, irrespective of dates of acquisition, were as follows:—

Gross earnings and other income		$35,089,219
Operating expenses, maintenance and taxes		18,547,926
Consolidated net earnings before interest, depreciation, dividends, &c.		$16,541,293
Annual interest and dividends on subsidiary companies' and Associated Gas and Electric Company's Indebtedness and Preferred stocks now outstanding (less $493,786 credit for interest during construction)	$10,374,336	
Provision for depreciation	1,787,260	12,161,596
Balance for dividends on Class A, Class B, and Common stocks and surplus		$4,379,697

The balance of $4,379,697, as shown above after depreciation, is more than 2.18 times annual priority dividend reqirements on 1,000,000 shares of Class A stock.

The dividends per share paid during the years ended October 31, 1926, 1927 and 1928, on the issued shares of the Company have been as follows:—

Year Ended 31st October.	Preferred Stocks. $7.00 Dividend Series.	$6.50 Dividend Series	$6.00 Dividend Series.	$5.50 Dividend Series.	$5.00 Dividend Series.	$3.50 Original Series.	Class A Stock.	Class B Stock.	Common Stock
1926	$7.00	$4.875(A)	$6.00	Nil	Nil	$4.00 (C)	$2.00 (D)	1/10 of one share Class A Stock	None
1927	$7.00	$6.50	$6.00	No stock issued	No stock issued	$3.875 (C)	$2.00 (D)	ditto	None
1928	$7.00	$6.50	$6.00	ditto	ditto	$3.50	$2.25 (D)	ditto	None
					None (B)				

(A) First cumulative quarterly dividend was due March 1, 1926.

(B) No stock issued until September, 1928. First cumulative quarterly dividend was due December 15, 1928.

(C) Additional non-cumulative dividend at rate of $0.50 per share per annum was paid quarterly up to and including July 1, 1927, discontinued thereafter.

(D) Declared at the rate of $2.00 per share per annum payable in Class A stock at rate of one-tenth of one share of Class A stock for each share outstanding or at stockholders' option in cash. On February, 1, 1928, an additional dividend of $0.25 per share was paid in cash only.

The holders of 5½% Convertible Gold Debentures due February, 1, 1977, 4½% Convertible Debentures due 1948, and 6% Convertible Debenture Certificates have the option of exchanging their Debentures into Class A stock and or Common stock in accordance with the terms, and during the periods, specified in the respective indentures or resolutions of the Board of Directors. In addition, there are outstanding Common stock purchase warrants which were attached to certain securities at the time of issue carrying the right to purchase Common stock of the Company until September 1, 1930, and in some instances until January 1, 1931, at the rate of $30 per share. Other stock purchase warrants are outstanding which were attached to the 4½% Convertible Debentures due 1948, at the time of issue, carrying the right to purchase Class A stock and Common stock until January 2, 1931, at the rate of $100 for one and six-tenths (1.6) shares of Class A Stock and nine-tenths (.9) of one share of Common Stock. No other shares are under option.

The directors are not required to hold any qualification shares, but most of them either directly or through their firms are large holders of Class A Shares. The directors are entitled to a fee of $40 per meeting.

A copy of the Certificate of Incorporation and Bye-Laws of the Company can be inspected at the office of Linklaters & Paines, 2, Bond Court, Walbrook E.C.4., during business hours on any day prior to the 10th May, 1929.

Dated May 1st, 1929.

CANNED MEATS.—Corned beef and tongues quiet of sale, but lunch tongues realise full rates, with a good forward inquiry. Danish boned hams also firm.

CONDENSED MILK AND MILK POWDERS.—Market firmer for powders. Full-cream, sweetened, English, spot, 42s. 6d.; Dutch ditto, 37s. 3d.; May–June, 37s. 6d. Machine-skimmed, sweetened, English, spot, 25s.; Dutch ditto, 22s. 9d.; May–June, 23s., all in 5-cwt. barrels. Powders, Spray process, F.C., 26 per cent., 2 by 56-lb. tins crated 90s.; M.S. (1-cwt. cases), 41s. 6d. Roller ditto, F.C., 26 per cent., 73s.; M.S., 28s. 6d., all nett, duty paid, ex-wharf London. On the grocery side F.C.S., 20s.; M.S.S., 9s. 9d. basis per case, usual packing. Danish cream, evaporated unsweetened, 48 by 16 oz., 18s. 6d.; 96 by 6 oz., 19s. 6d.; condensed, sweetened, 48 by 14 oz., 20s. per case.

HONEY.—Market firm, with sustained inquiries. New crop Jamaican spot, good amber to pale, 50s. to 55s.; dark to fair amber, 43s. to 49s.; New Zealand dark amber, 50s. to 55s.; medium, 55s. to 65s.; light, 65s. to 85s.; white and water whites, 65s. to 87s. 6d. per cwt.

RUBBER.

A firmer market as sellers adopted certain reserve and a moderate business was effected. The manner in which landings and deliveries proceed, a further rise in London stocks next Monday is indicated. Standard sheet, spot and May sold, 9⅞d., 10⅛d.; June, 10d., 10⅛d.; July–September, 10⅜d.; October–December, 10⅛d.; January–March, 10⅞d. lb. London stocks 710 tons higher on the week, at 31,213 against 53,360 last year; landings, 1,843; deliveries, 1,133. Liverpool stocks, 258 tons up at 4,779; landings, 502; deliveries, 244.

GENERAL.

JUTE.—A steadier market, sellers being reserved, and some reports came to hand from Calcutta that crop prospects were not so favourable. Firsts, May–June, quoted £30 17s. 6d.; August–September, £31 10s. ton.

HEMP.—Manila quite firm on reserved sellers, but business conducted quietly. J2, June–August, quoted, £36 15s.; K, ditto, £33; L1, £33 10s.; M1, £30 15s., and M2, £26 10s. African sisal, No. 1, June–August, £36 10s.; No. 2, £35 10s. ton c.i.f. Manila receipts for the past week, 27,000 bales, compared with 24,000 bales at corresponding period last year; estimate for next week, 34,000, and following week, 26,000. Manila shipments to the U.K. last week, 18,000 bales; U.S.A., 11,000; Japan, 4,000, and other countries, 3,000. Local stocks, 9,000 bales down at 204,000.

SHELLAC.—Dearer, fair demand and reserved sellers. T.N., spot 192s. 6d.; May, sold, 187s., 186s.; August, 192s., 193s.; October, 195s. cwt.

COPRA.—Met with quiet support, but sellers adhered to previous asking prices. Straits S.D., May–June, Rotterdam, sellers, £22 7s. 6d.; Dutch East Indies, £22 2s. 6d. Palm kernels, May–June, Hamburg, sold, £17 15s. ton.

MISCELLANEOUS.—Coconuts quoted 18s. to 25s. per 100. Coir yarn, Ceylon, £19 to £38; Cochin, £22 10s. to £40 10s.; Ceylon bristle, £18 10s. to £25; cinnamon leaf oil, 5½d.; citronelle, Ceylon, 1s. 10½d.; Java, 1s. 11d.

METROPOLITAN CATTLE.—May 1.

THE MONEY MARKET.

Money this week has been fairly tight, and on Tuesday as much as 6½ per cent. was paid for short loans, and the market had a narrow escape from the Bank. The stringency came as a surprise to some, as on Monday and Tuesday the Bank acquired over £2,000,000 of gold, but the cause became apparent when it was discovered that

the Bank had balanced this addition to its resources by large sales of 4½ per cent. Treasury Bonds. The Bank is thus continuing its policy of neutralisation.

* * * *

Discount rates remain weak around 5 1/16-⅛ per cent. for three months' bills. The Continental demand is well maintained, while the election uncertainty on the Stock Exchange is temporarily diverting into the discount market money which *nominally would* be invested in long-term securities. There was *some buying* of bills, too, by London joint-stock banks, who are believed *to be* operating on behalf of some of their large foreign customers. While the Bank might appear content to see the rate run down nearly to 5 per cent., it seems probable that no further latitude will be granted, especially as the dollar exchange was on *Thursday* down to $4.85 5/32. The Bank's sale of Treasury Bonds referred to above shows that a careful watch is being kept on the *situation*, and it is rumoured that it would not be surprising if next week the market will find itself in the Bank.

* * * *

The increase of £2,114,256 of gold shown in the Bank return consists partly of £1,000,000 of gold from Australia—the arrival of which has long been foreshadowed; partly of £813,394 of new gold bought in the market on Tuesday at 84s. 10½d.; and partly of a sum of around £200,000, believed to represent a sale by an "unknown buyer." The *latest return shows that* the Bank's gold stocks are once more over £160,000,000, and are only about a million less than they were a year ago.

* * * *

This position would be *more hopeful* were it not for the weakness of sterling against the dollar. In this connection a disquieting report has lately been received to the effect that it is again becoming possible for foreign houses to lend money on the New York call market. This news, if true, represents a retrograde step. There is little doubt that Wall Street is very short of money, and possibly the banks responsible for *this development may feel that they* must place New York interests ahead of those of other centres. Still, with sterling very little above the lower gold point,—news of this kind is not reassuring.

	May 9, 1929.	May 2, 1929.	Apr 25, 1929.	Apr. 18 1929.	Previous Rate and Date Changed.

Market rate (3 months' bills)	5 1/16-⅛	5 1/16-⅛	5⅛	5 1/16	...

The Bank return shows several wide changes. The expansion in the Bank's gold stocks is partly neutralised by an increase of £1,422,622 in the note circulation, due, it is thought, to Whitsun preparation by the banks. Dividend payments are partly responsible for the declines in public and other deposits, amounting respectively to £2,259,535 and £2,942,246, but the fall in other deposits is also ascribed to special operations, possibly of an international character. Government securities have been reduced by £5,188,403, presumably due largely to the Bank's action as *discussed* above, while the increase of £2,321,388 in discounts and advances suggests that while the market has nominally kept out of the Bank, in fact, some bills have had to be turned in there.

NEW YORK MARKETS.

Our New York correspondent cables:—'Thirteen million dollars gold have been *imported* and a further $11 million released from earmark. This will probably not have much effect on the market, owing to the reserve policy of taking up all slack, and to the large *increase*, to a total of over *$150 million*, in new flotations during the week. These have been a *factor* in raising brokers' loans $19 million in face of lower stock prices. Reserve system credit is restricted by a *further* $48 million, chiefly in bills and member bank discounts, while another gain in reserves and fall in deposits has raised the reserve ratio to 74.3 per cent., compared with 70.1 a year ago. Public utility shares are most active and strong; oils are better, and mining shares show a tendency to improve. Sugars, with the exception of Cuban producers, rallied on the publication of the tariff proposals; rails are sluggish in spite of increasing traffic and earnings. Business activity is as high as ever, with record-breaking steel and motor-car output for April, but there are apprehensions of difficulties in autumn if there is no change in the tight money policy of the Reserve system. Hope is still held of a Reparations settlement.

THE STOCK MARKETS

Though the volume of business was again greatly restricted, the undertone of the stock markets was firmer, with a certain amount of quiet investment buying in evidence. Good and bad news—the Reparations impasse and the gold accessions of the Bank of England—left gilt-edged largely unchanged on balance, but Home Rails were stronger on a small amount of investment buying. The industrial market was an affair of "features" with aviation, commercial motor, gramophone, and—*to a less extent—textile* shares, in the forefront of attention. Rubber shares reflected the improved price of the commodity, and a larger, though mainly professional, business was done in the oil market. Kaffirs were more active, and tin shares improved on the recovery in the price of the metal.

THE COMMODITY MARKETS.

The dullness in the coal trade continues and, in spite of easier prices, stocks are accumulating in some districts. The pig-iron position is irregular, but, on the whole, promising; semi-finished steel manufacturers are active, and the outlook for some branches of finished steel is good. Other metals are firm. The cotton market is at present very sensitive on weather reports, and this is having an unsettling effect on activity in Manchester. Though the wool textile trades are still in a state of suspended animation for which it is increasingly difficult to account, Colonial wool is finding ready buyers. The jute trade is suffering from lack of confidence in raw material values, and there is a similar condition in the leather trades, *though* improved demand from consumers has slightly improved the tone of the market. Linseed and linseed oil have been freely bought, but other vegetable oils and oilseeds show no increased activity.

THE FOREIGN EXCHANGES.

The market was only *moderately* active last week. Sterling remained under the domination of the dollar with high money rates in New York. Montreal made a seasonal recovery, which is rather overdue, and the peseta continued its recent wide fluctuations without showing any prospect of settling down. The New York rate fell ⅜ to 4.85 5/32, while Montreal gained 1/8 at 4.88½. Paris lost two points at 124.20, after being 124.12 and 124.22. Madrid was 34.00 on Thursday, after being decidedly erratic and at one time touching 34.45. Amsterdam was unchanged on balance, while Berlin recovered from 20.47 to 20.46½, after touching 20.48½. The South American exchanges were decidedly firm, Buenos Aires gaining 1/16d. at 47 5/16d. and Montevideo ¼d. at 48d. In the Far East the rupee remained weak at 1s. 5 15/16d., but the yen maintained its recent recovery at 1s. 10 3/16d. Batavia gained ⅜ at 12.11½. In the forward market dollars were rather less offered at slightly wider discounts of ¼ cent and ½ cent. The premium on forward Paris rose to 6 centimes for one and to 13 centimes for three *months*. Brussels went to ½ premium for both periods. Forward Milan was more sought, the discounts falling from 12 to 8 centesimi and from 28 to 27 centisimi respectively. Forward pesetas were weaker at lower premiums of 10 and 31 centinos, as were Dutch florins at wider discounts *of* 1 and 2 cents. Forward reichsmarks quotations were nominal at 3 and 9 pfennigs discount. The silver market was moderately active, China both buying and selling, and prices rose 1/16d. for both spot and forward, chiefly as a result of hedging operations in the yen. The China silver exchanges were, however, unaffected, and remained at last week's levels.

ECONOMIST INTELLIGENCE BRANCH.

In order to meet a demand from many of our readers, we have made arrangements which will enable us to supply statistical or other information from our records, and to answer economic inquiries. A charge will be made (with a minimum of half a-guinea) to cover the cost of any special work involved.

THE DISSOLUTION AND THE ELECTION.

YESTERDAY the curtain fell on the fifth and last Parliamentary Session of Mr. Baldwin's second Administration and rose on the campaign in the country from which the next Administration and the next House of Commons will emerge. Steadily, day by day, since the introduction of the Budget, *the* centre of political interest has been gravitating *from* Westminster to the country, and when the policeman last night echoed through the corridors the time-honoured cry of "Who goes home?" there were few to respond, the majority of members having already transferred their energies to their own constituencies in preparation for securing that the right answer will be given on May 30th to the next question of "Who goes back?"

The Parliament which has just been dissolved is unlikely to rank in history as a particularly distinguished legislature. It will, however, be remembered for a few outstanding events, first and foremost for the fact that, when faced by the first-class constitutional crisis created by the General Strike, the contributions of members of all parties to the critical debates of May, 1926, rose to a high level of statesmanship and restraint. The old saying was again vindicated that Parliament is always at its best when matters of high national concern, as distinguished from party questions, are forced upon it for debate and decision; and the *past five years* has given another illustration in the two occasions on which the new Prayer Book was presented to and rejected by the legislature. For the rest, there are perhaps *only three* achievements which will stand out clearly in the eyes of posterity. One is the restoration of the gold standard, which led Europe in the path of financial reconstruction, the radical overhaul of the inequitable rating system of this country in the interests of productive industry, and the extension of the franchise to place women on the same basis as men.

It is this last measure, the vast extension of the franchise, *which vests* the coming election with unusual perplexities and abnormal interest. When the polling booths are opened on May 30th approximately 27,000,000 citizens will be entitled to record their votes. Of this total about 12,400,000 are men and 14,600,000 women, and it is calculated that the number of new voters added to the Register *since 1924* reaches the huge figure of 6,000,000. Mr Baldwin, in his Drury Lane election programme speech, remarked that Great Britain went into this election for the first time as a "complete democracy." So far as the width of the franchise is concerned the phrase is justified. Unfortunately, however, it is from another point of view wholly unjustified. For although we now have a full manhood and womanhood suffrage, we have not the electoral machinery to assure that the views of the enfranchised masses will be reflected in the personnel of the next House of Commons with any tolerable degree of accuracy. At the last election, in 1924, the Conservatives obtained one seat for every 18,887 votes, the Labour Party one seat for 35,681, and the Liberals one seat for 69,670. The figures for the English county constituencies alone, as quoted by Sir John Simon at Liverpool on Monday, are even more striking. In those constituencies in 1924 it took on the average 326,000 Liberal votes to obtain one seat, whereas Labour had one member per 42,000 votes and the Conservatives one for every 17,000 polled. There seems to be little hope of obtaining this year any more accurate reflection of the votes of the people. On the *contrary, the number of* candidates presenting themselves to the electorate will perhaps reach nearly 1,750 for 615 constituencies. This means that a *constituency* without a three-cornered *contest* will be a rarity, and since, with the exception of a very few, the system of a single vote and a single member obtains, we are in grave danger of seeing the majority of the members of the *next* House of Commons elected by a minority of their constituents. One of the most serious omissions of the Conservative Government has been its failure to include electoral *reform* machinery in the Bill for the extension of the franchise. It will be one of the most pressing duties of the next Government, of whatever complexion it may be, to pass such a measure.

The programmes which the three parties are asking the country to support have already been summarised in these pages, and we shall have occasion to return to them again. But before the flame of partisanship rises to the fierce heat which it will necessarily attain, let us consider a few broad and general points. One which will quickly be lost *sight of* in this country is that to a foreign observer there might appear to be singularly little difference between the programmes of the three parties and nothing in any of them to arouse passion or alarm. There is nothing revolutionary. The Labour Party, which five years ago was threatening to move leftwards, has so far shorn its programme of revolutionary elements as to cause grave dissatisfaction to members of the Left Wing. Whichever of the three parties gains the victory there will be no attack on the foundations of society, and no reorientation of foreign policy is at all likely which would not be in an enlightened and fruitful direction. But the sameness which may strike the foreigner is, in the eyes of British people, broken by one or two very sharp distinctions, and two leading issues.

First and foremost in the public eye is the problem of large-scale unemployment. The Government and the Conservative Party point to their past work and promise to continue and develop it, but deny that spectacular measures would be *helpful*. The Labour Party have a list of plans for works of national development, which, however, they have not explained or, apparently, yet worked out in detail. The Liberal Party has put before the country the arresting promise to reduce unemployment to a normal figure within a short space of time by means of specific plans prepared by expert advisers and published with a great wealth of detail. Over wide areas of the electoral field unemployment is the one predominant issue, and one of the enigmas of the election is the extent to which the inhabitants of these areas will be brought to believe *that Mr Lloyd George* can deliver the attractive goods which he places in his shop window. Less prominent, perhaps, but undeservedly so, is the issue, once again raised, between Free Trade and Protection. The Conservatives, although officially disavowing protectionist intentions, will, if returned to power, be committed to an indefinite extension of "Safeguarding" duties which, as we have frequently shown, will mean a stealthy but inevitable slide down the slippery slope that leads to general Protection. The majority of the Labour Party, perhaps, favour the system of free *imports*, although a proportion of its members are tainted with a predilection for "Safeguarding." The Liberal Party stands out as the wholehearted and uncompromising *opponent of* Protection in any guise or under any euphemism.

Those are the two great issues on which the battle is being joined. It is *generally* assumed that the customary "swing of the pendulum" against the Government, which has been *in power* for 4½ years, will take place, and the Stock Exchange prediction that the Conservative Party will lose over 100 seats finds many supporters. For one thing, the Conservatives will undoubtedly lose the votes of hundreds of thousands of people who allowed themselves in 1924 to be scared on the eve of polling day by the incident of the Zinoviev letter. For another, it is as certain as anything electoral can be under the present *enigmatic* circumstances that the polling will show a *movement in the country* in favour of a more progressive and imaginative handling of *domestic* and international affairs. But any estimate of the extent of this movement is rendered impossible by the existence of so vast an army of new voters, whose presence on the Register greatly swells the numbers of the *apathetic and the indifferent*, of *those not attached* to any party and ready to be swayed by local consideration or last-minute appeals. Still more impossible is it, under our effete electoral system, to predict how far that movement will be reflected in representation at Westminster.

CRITICAL DAYS IN PARIS.

At various stages since the war, international affairs have reached a point at which, if right courses are taken, there can be a great change for the better; but if the situation is mishandled the world slips back once more into stagnation. We are at such a point to-day. The optimists are satisfied that Mr Hoover's gesture in regard to disarmament and the technical discussions which have taken place in Geneva over the American Naval formula will solve what is perhaps the greatest issue of all. The decision of England and America to waive their objection to the exclusion of trained reserves in calculating land armaments—though leaving the door open to the maintenance of great national armies—at least gives the European Powers the chance to offer proof of their goodwill by solving the problem in their own way—*i.e.*, by an agreement to limit the length of service with the colours. Finally, the Committee of Experts on reparations is still sitting. On its success in reaching agreement depend our hopes of witnessing this year the greatest act which would symbolise the return of peace, viz., the evacuation of the Rhineland.

As we write, the prospects of complete and satisfactory settlement being reached by the Experts are not so bright as they were a few days ago, when the intervention of Mr Owen Young with a new set of proposals seemed to warrant hopes that a *via media* between the figures of the Allies and those offered by the German delegation might at last be found. Dr Schacht came back from Berlin at the end of last week to find the American proposition awaiting him. His visit had enabled him to estimate afresh the difficulties which Germany would have to face in the event of a breakdown. The standing of the Reichsbank is very strong and, apart from his own portfolio of foreign securities, Dr Schacht is known to have the call on a very large dollar credit. But if the report of the experts contains no solution, strong action will be required from him to check a renewed "flight" from the mark—and even though he would probably succeed with the help of foreign centres, Germany would be faced with the prospect of returning for some years to the method of paying reparations out of money lent to her—and lent at increasingly stiff rates of interest. Dr Schacht realised keenly the advantages of settling, and the course of private discussions in Paris over the weekend showed that he was ready at least to accept Mr Owen Young's proposal as a basis of negotiation.

Our readers will recall that from the time the new Committee was first proposed the *Economist* was doubtful whether the time was ripe for a revision of the Dawes Plan, in view of the discrepant expectations of the parties concerned. The Experts have, however, proved themselves to be a patient, but determined, set of negotiators, and, even if they should ultimately fail, they have come very much nearer to a solution than at first seemed likely. Before considering the terms and implications (so far as they are known) of the Young Plan, it may be appropriate to summarise a few points on which specific progress has been made.

(1) In the first place, Dr Schacht has succeeded in establishing the proposition that reparations in the sense of a surplus over Allied debt payment to America shall only continue for a generation. On the other hand, he has in effect, if not in so many words, conceded that Germany must cover the payment of her creditors to the United States thereafter for the period of the Allied debt settlements. Thus the inevitable link between the inter-Allied debts and reparations is definitely forged.

(2) It has been agreed that the annuity should be graded and rise to a maximum, but that it should drop after thirty-seven years, as explained in the preceding paragraph. This principle has two important implications. In the immediate future the annuity, instead of rising to the Dawes maximum of £125,000,000, would continue at a much lower figure, and would only approach the old Dawes maximum at the peak of the curve. In other words, Germany's claim that the Dawes maximum is too high for her under present conditions is implicitly admitted. It follows logically that it would be very hard under any circumstances for the Allies to go back on this admission. On the other hand, this arrangement postpones once again the question of what maximum Germany will ultimately be able to pay, and from this point of view it leaves the problem still in the realm of conjecture. At the same time it would be a mistake to confine our attention to the early annuities and to consider the ultimate figures as of no importance; for the future position of the creditors, and, therefore, the possibility of acceptance of any scheme depends on the ultimate position of the various parties under its terms.

(3) It is recognised that a settlement should enable the Transfer Committee to disappear and Germany to resume responsibility for an operation which so closely affects her whole monetary position. But this does not mean that the Experts propose that the total of the annuity should be fixed without possibility of modification if circumstances become difficult. On the other hand, an entirely variable annuity is a poor security on which to "commercialise" the debt. The Experts have, therefore, hit on the compromise of fixing finally a certain proportion only of the annuity and making the rest subject to some financial authority connected with the organisation to be set up for handling Germany's payments.

(4) This leads to the fourth point which, from the political aspect, is perhaps the most important of all. It is contemplated that Allied financial control should be lifted from Germany and the office of the Agent-General removed bag and baggage from Berlin. This control would be replaced by the proposed Bank of International Settlements. Its *rôle* in relation to reparations would be threefold: first, to receive Germany's payments in the capacity of trustee for the creditors and to distribute the proceeds; second, to issue whatever loans are floated; and, thirdly, to be responsible either directly or through some special body associated with it for advising if any suspension of payments be necessary. The scheme of a central financial institution established by the world's chief central banks is one which might have very far-reaching results. It would give concrete form to central banking co-operation and could hardly fail to knit closer together and associate in common objectives the financial policy of the nations. These and many other aspects of this proposal require very careful consideration. It is sufficient to note here that it is by substituting this device that the Experts propose to remove the financial control at present exercised by the Allies in Germany.

We may now turn to the specific proposals made by Mr Owen Young. Our Paris correspondent summarises his plan, which closely follows in form the previous Allied demand, as follows:—

Thirty-seven graded annuities averaging £105,250,000 for inter-Allied debts and reparations.

Twenty further annuities of £85,000,000 each for Inter-Allied debts.

One further annuity of £45,000,000 for inter-Allied debts.

This scheme, which gives an average annuity of approximately £100 million, is lower than the previous demand of the Allies, which, while similar in form, gave an average annuity of £110 million (starting at £92½ million, rising to £122½ million and falling again to £85 million), but is much higher than Dr Schacht's original offer of thirty-seven equal annuities of £82,500,000.

On Monday it was learned that the German delegates had agreed,—subject to certain reservations, whose precise nature has not yet been disclosed,—to accept Mr Owen Young's figures. The outlook appeared to be better than at any previous stage of the inquiry. Forty-eight hours later, however, optimism was dashed by the discovery that the Young Plan, whose terms the British delegation had been at first prepared to endorse, contained the unforeseen proviso that the Spa "distribution" percentages should be altered to the disadvantage exclusively of the British Empire, whose proportion would be reduced from 23 to 19 per cent. Against this proposal,—whose effect would be that British receipts on reparations account, plus sums due from the Allies, would be insufficient to cover the service of our debt to America—the British delegates in Paris are understood to have taken a firm stand. In this attitude they have been supported with remarkable unanimity by the Press of this country, and in the House of Commons on Thursday, Mr Churchhill, referring presumably to the Spa percentages, stated definitely that the Government would "in no circumstances" entertain the American proposals.

Mr Owen Young is reported to have explained that the revised figures of "distribution" percentages, on which his scheme was found to be based, were put forward by him rather as a basis for negotiations than as a definite proposal. Discussions on this aspect of the question are continuing, as we write. At the moment it is idle to try to forecast the result, the more so since the German "reservations," when finally formulated, may raise fresh difficulties. The acceptability of the Young Plan, from the point of view of Germany, it is well to remember, does not merely depend on whether the annuities are considered to be within Germany's capacity to pay or not, but on the scale of grading, the proportion that is fixed or liable to be suspended, the amount that may be "mobilised" and on various other conditions.

If the Experts, whose primary function is not to compose differences among the creditors themselves, can devise a practical scheme of payments within what they believe to be Germany's capacity, leaving political issues to the diplomatists, they will have done a great work. Even though we may feel that the last word cannot yet be said with regard to the vast payments which we contemplate extending over nearly two-thirds of a century, an agreement at Paris on amount and means of payment would be a great step forward. It would give the world another and longer breathing space, and remove one side at least of the Reparations problem still further from the political arena.

THE COLONIAL EMPIRE.

On April 30th there was a debate in the House of Commons on a Colonial Office vote in Committee of Supply which amounted to something like a general review of present conditions and tendencies in the Colonial Empire. And since the British Colonial Empire, like the other parts of the British Commonwealth, is a characteristic sample of a particular class of countries and communities in the modern world, the upshot of this debate is of great general interest. The deepest impression which it leaves on the mind is curiously like the impression made by our current debates on armaments and war: an impression of the unprecedentedly vast material power of our modern civilisation and of the equal facility with which this immense force can be used for good or for evil.

As the great canvas was touched in by one speaker after another, beginning with Mr Amery, the Secretary of State, it seemed as though a coat of many colours was shaping itself into the rudiments of two alternative pictures—one a picture of goodwill among men, rewarded by scientifically organised prosperity for each and all; the other a picture of racial conflict, in which the coat of many colours might be stained with blood. Both alternatives are there—so much we can see already. But we are not yet able to discern which picture it is ultimately to be.

The picture is a portrait: a composite portrait of the "native" in a belt of tropical colonies encircling the globe. We get one picture of him thriving under his contact with Western civilisation. We see him being taught how to obtain greater production and greater profits from the natural wealth of his country; and we learn that his first ambition, when he finds himself with a surplus in hand, is to buy a bicycle, to the mutual advantage of Africa and Coventry. Again we see him, under the pretext of a funeral or a religious festival, raving drunk on imported alcohol. We find Western medicine making the "native" master of his own environment as he never has been before, by helping him to rid it of tropical diseases; and again we find Western colonisation turning the "native" into a landless hewer of wood and drawer of water.

The debate ranged over almost every part of the tropical and sub-tropical world. A considerable part of it was devoted to the two territories mandated to Great Britain under "A" mandates: Palestine (with Transjordania) and Iraq. Our responsibility for these territories involves a number of very present and very contentious political questions; while there are future economic assets there of no small importance: chemicals round the shores of the Dead Sea, oil in the hinterland of Mosul, and, above all, a geographical situation at the key points of new air routes from north-western Europe to south-eastern Asia. All these aspects of the Middle Eastern mandates received attention in the course of the debate. Yet these Middle Eastern territories are a relatively small affair, even when all their economic and geographical possibilities are taken into account. Moreover, they are not integral parts of the British Empire; and, as "A" mandates, they have been destined from the beginning to attain the rank of independent States sooner or later. Our principal concern is with the colonies and protectorates which seem likely to retain a permanent connection of some kind with Great Britain; and the majority of these are tropical countries whose staple production is agricultural.

Turning now to the tropical Colonial Empire, we find that this falls into two fairly clear divisions. There is a galaxy of islands and peninsulas—the West Indies, Ceylon, Malaya—scattered round the world and each hitherto going more or less its own way without paying much heed to the others. This is, on the whole, the older part of the tropical Empire; but side by side with it there has grown up, during the last half-century, a new continental domain in Tropical Africa. At present this younger African Empire is much less developed. There is nothing in it to compare, for example, with the dense population and intensive production of Malaya. But the future of the tropical Empire lies in Africa; for here everything is on so much greater a scale that, when once its riches are developed, it will dwarf all the rest.

Tropical Africa, then, is the future centre of gravity of a British Colonial Empire which we are learning more and more to treat as a unity from the point of view of scientific administration and material development; but within Tropical Africa we have to distinguish again between the West African colonies, which are now in process of rapid economic and social development—on the whole, on satisfactory lines—and East Africa, where all the great questions are still open questions and where all are fraught with great and momentous possibilities of good and evil. Within East Africa, again, the key colony is Kenya; and a sense of this was apparent in the debate. When honourable members were discussing the possibility of pipe-lines and railways across the Syrian Desert, they were like men exchanging ideas on some hobby. When they were discussing the land legislation in Kenya or seeking to elicit the present Government's attitude towards the report of the Hilton Young Commission, they were like men dealing with vital matters in deadly earnest.

There are several reasons why our local policy in Kenya Colony will be " the acid test " of our general policy in developing the Colonial Empire. In Kenya, white men of British nationality and native Africans are living permanently side by side in the same country—both regarding that country as their home. In mere numbers, the Kenya settlers are almost negligible. It is the fact that they are at home, and intend to go on being at home, in Tropical Africa, and are not simply passing through the country as pilgrims and sojourners like the whites in West Africa and in Malaya, that gives them a political importance and influence out of proportion to their numerical strength. It is also this that makes every problem in their relations with the natives so serious. In Kenya, both parties have everything at stake. And as the country is still only partly developed, and its future wealth only partially appropriated, the stakes are large.

Moreover, the problem of Kenya will not work itself out, for good or evil, in isolation, for Kenya is merely a slice carved out of East Africa arbitrarily. Economic forces are making for the consolidation of an East African domain including not only Kenya, but Uganda and Tanganyika—perhaps Nyasaland and Northern Rhodesia as well. But latterly these different territories have been living under very different dispensations; and if and when they care to amalgamate, there will be a struggle between these different *régimes* and different ideals for supremacy in East Africa as a whole. Which will prevail? The ideal of the white settlers in Kenya? Or the ideal of the active and intelligent leaders of the native community in Uganda, who are rapidly learning how to hold their own with the whites in friendly co-operation on both the political and the economic plane? Or the ideal of the Governor of Tanganyika, Sir Donald Cameron, who has been carrying out the terms of the Mandate with loyalty, vision and success in the spirit as well as in the letter? We hope that the united East Africa of the future will draw its inspiration from Uganda and Tanganyika. Indeed, as far as we can see, the only way open to us of consolidating a mandated territory with a colony and a protectorate is to administer the whole *bloc* in accordance with the terms of the Mandate. Be that as it may, it is certain that, if East Africa is consolidated, one or other of the incompatible *régimes* now existing side by side in the several territories will be driven to the wall by the other. And this is a vital question not only for East Africa, but for the whole Colonial Empire. For a United East Africa will be, in the end, the largest, most populous and most productive of all the component parts of which the Colonial Empire is made up; so that what happens here is likely to determine the destinies of the whole.

THE POSITION OF THE MOTOR INDUSTRY.

(BY A CORRESPONDENT.)

THE fortunes of the motor industry during 1928 were adversely affected by a variety of circumstances mostly external to the industry. For some years there has been a steady increase in successive Budgets in the taxation of motor vehicles. In 1928 the burden of taxation was greatly increased by the imposition of the Petrol Tax. For the financial year ending in March, 1929, £26 million was raised in vehicle taxes and £13 million in Petrol tax. The sum of £39 million raised from the taxation of rather less than two million vehicles gives an approximate annual tax of £20 per vehicle per annum, or, excluding motor cycles, £30 per vehicle per annum. Such heavy taxation must in any case have caused a good deal of sales resistance. Its imposition happened to coincide with a general contraction of purchasing power in the home market in the second quarter of 1928. The sales of private cars, which during the first quarter had maintained the normal expansion of recent years, fell away abruptly. The commercial goods vehicle industry was also affected by the depression of its customers throughout the industries of the country and its special vulnerability to the new Petrol Tax burden.

At the same time, the outlet of the most important export market of the British industry was closed by the credit crisis which followed upon serious droughts in Australia. Vigorous efforts in other markets, which were successful in increasing British exports to those countries, did not avail to offset the decline in Australia, which in recent years has absorbed nearly 50 per cent. of all British motor exports. Thus, the exports for 1928 fell below the preceding year's figures for the first time since the war. The effects of the salient factors briefly outlined above on the private car industry are apparent in the following table:—

New Private Cars and Cabs (Number).

	Production.	Exports.	Net Imports.	Home Consumption
1922	58,000	2,441	20,317	75,876
1923	66,000	5,007	24,127	85,120
1924	105,000	12,477	21,648	114,171
1925	121,000	23,233	41,837	139,604
1926	138,500	25,911	16,491	129,080
1927	164,553	27,426	25,650	162,777
1928	165,352	26,306	23,450	162,496

The failure of expansion in demand has naturally made itself felt very widely. The largest firms engaged in mass production have, however, not only been able to weather the storm, but even, in some cases, to improve their position. At the same time, some firms specialising in cars of the highest quality or enjoying distinctive attributes of comfort and speed have had by no means an unsuccessful year. In this connection it should be remembered that the private car industry is one which is subject to the vagaries of fashion. Producers attempting to gain a foothold in the mass-production sphere, but not yet firmly established, have, on the whole, suffered most heavily, and it may be that the trials of the past twelve months may, in the end, not prove an unmixed evil if they lead to some measure of rationalisation, of which this branch of the industry stands in urgent need. As yet no attempt has been made to produce in quantity for the home market the higher-powered model which is essential if the British industry is to capture a larger share of Dominion business. That a certain number of such cars can be sold in this country is evident from the successful importation of considerable numbers of foreign cars of this type every year. It is no less certain that a ready sale awaits a British model of this type in Australia, New Zealand and South Africa. A notable increase in British production is to be expected when this step is taken, for on the basis of the home and export sales immediately available such a car could be mass-produced at a competitive price.

The corresponding figures for the commercial vehicle industry are given below:—

New Commercial Goods and Passenger Vehicles (Number).

	Production.	Exports.	Net Imports.	Home Consumption
1922	15,000	600	2,515	16,815
1923	21,000	1,252	5,699	25,447
1924	26,000	3,119	5,528	28,409
1925	32,000	5,808	7,448	33,640
1926	41,500	6,477	6,401	41,424
1927	47,227	9,063	8,534	46,698
1928	46,525	7,004	10,651	50,172

The year 1928 was in many respects not so bad for the commercial vehicle industry as for the private car industry. The decline in exports has been mostly in agricultural vehicles, and is due, in the main, to the Australian crisis, which, it may be hoped, will pass away. The home market, on the other hand, is still buoyant, though the rate of increase has slowed down. Competition of imports in the lighter class of goods vehicles has become much more severe recently, and is likely to become even more so as the new Ford truck comes on to the market. In the heavier types the British industry remains supreme, and to this fact may be attributed the very successful year enjoyed by the few large firms which specialise in the heavier commercial vehicle. As regards hackney vehicles, leaving aside the small vehicles with a seating capacity of less than eight persons, the improvement has been greater than is indicated by the statistics of the number of vehicles sold. There has been a general tendency to employ genuine commercial chassis with suitably constructed bodies for 'bus and coach work instead of the private car chassis which so often did duty a few years ago. This tendency has been fostered by the regulations which have latterly come into force governing the construction and use of public service vehicles.

The effect of the granting of road powers to the railway companies is already being felt, and the stimulus of such important new customers should ensure even better results during 1929. It is not to be thought that the advent of the railway companies as road hauliers will be entirely at the expense of those already in the business. If, at first, there is some displacement or absorption of existing concerns, in the course of a few years the railway companies will find scope for many new developments of road transport which would not in the past have been possible to road hauliers alone. The development of a road haulage personnel on the railway companies and a few years' experience of what should be an increasingly profitable branch of their business should lead to much improved transport facilities for goods and passengers. A great impetus should be added to road vehicle consumption as soon as the opposition of road transport's most formidable antagonists gives way to collaboration.

It is too much to expect, however, that any such *volte face* can come about in a few months. In the meantime, the principle of the severe taxation of transport has become an integral part of our financial system. Of the £39 million collected in motor taxes last year, only £23 million were devoted to road maintenance and construction, which, if full scope for the development of road transport is to be given, needs not only the allocation of all available revenue, but a forward policy of capital construction.

From the available indices the first quarter of 1929 would seem likely to show a general resumption of the progress of the industry. It can be predicted with confidence that the year 1929 will make better showing than 1928. The sustained progress of the industry, however, depends on the solution of certain difficult problems, which can only yield to a national recognition of the desirability of fostering a vigorous motor industry.

It should be emphasised that the initial cost of the motor vehicle is no longer a substantial barrier to its extended use. The initial cost of new motor vehicles is very low, there is a vast stock of surplus secondhand vehicles, serviceable and mechanically sound, which it is within the capacity of millions to buy. Both for new and secondhand vehicles the extension of hire-purchase facilitates purchase for those to whom the payment of a lump sum presents difficulties. The problems which await solution are, firstly, the absolute reduction, and, secondly, the application of hire-purchase principles to the overhead cost of running motor vehicles.

The question of excessive taxation has already been mentioned; insurance and garaging costs are hardly less important. The cost of insurance depends, to a great extent, on accidents, and these, again, mainly on road facilities. The surface of our roads is, on the whole, good, but they are the most dangerous roads in the world. If the risks of motoring were reduced and insurance were made compulsory, there is no reason why an " all-in " tax on petrol of reasonable dimensions should not cover a reduced quota of taxation and a reduced national insurance premium. The taxes so raised would be sufficient to discharge a fair proportion of road maintenance and to finance sums necessary for capital reconstruction of a kind which would make a safer road system. Attention to providing garage facilities or room for them in new housing plans would also avoid many problems in the future. In short, the vehicle, the road and the incidental costs must all be considered as transportation units, which it should be a national effort constantly to provide at a reduced price. The idea of personal ownership of a luxury must be abandoned if the full benefits o fmotor transport development are to be reaped in this country.

Travel and Money

The far too common method—or lack of method—of carrying cash in bulk when abroad, is wholly unsatisfactory. Travellers are invited to consider the arguments of two leaflets issued by the Westminster Bank, *Points before Travelling*, and *Safeguards for the Traveller*, which will be gladly sent by the Secretary of the Bank on application.

WESTMINSTER BANK

AMERICA AND THE WORLD COURT.

(BY A CORRESPONDENT.)

THERE took place at Geneva in March a Conference of more than ordinary significance. A Committee of Jurists appointed by the Council of the League met to revise the Statute of the Permanent Court of International Justice which was adopted in the year 1921. The revisions proposed are mainly upon matters of detail, but two of them are indicative of the progress of the Court since it opened its doors in 1922. These two take the form of proposals for increasing the number of judges from eleven to fifteen and for longer sessions. The fact is that the Permanent Court has " caught on " and become an essential part of the machinery of international society more rapidly and more effectively than the original architects anticipated, and what was at first envisaged as one long summer sesssion has lengthened until it is becoming virtually a permanent session, with the necessary vacations to enable the judges, who (with one exception) all come to The Hague from foreign countries, to visit their homes.

Up to the end of 1928 the Court had given at least twelve judgments (and three Orders of Court relating to a dispute between Belgium and China regarding the latter's denunciation of a treaty, which has now been withdrawn from the Court) and at least fifteen Advisory Opinions. A Judgment is the conclusion of a piece of litigation between two parties as in an ordinary lawsuit in an English Court; whereas an *Advisory Opinion* is delivered at the request of the Council of the League (the Assembly has never exercised its power to ask for one), and constitutes advice which the Council may or may not (but always does) follow in effecting the conciliation of a dispute between two parties.

Among the Judgments of importance delivered since 1922 we may mention the case of the *Wimbledon*, relating to the international status of the Kiel Canal under the Treaty of Versailles; the *Lotus*, relating to a collision on the high seas and the subject prosecution of a French navigating officer in the Turkish Courts; two disputes between Great Britain and Greece concerning concessions formerly granted by Turkey in what is now the mandated territory of Palestine; and no less than four disputes between Germany and Poland arising from the cession of

German territory to Poland by the Treaty of Versailles and the consequential arrangements.

Among the Advisory Opinions may be mentioned that concerning the nationality decrees issued by France in Tunis and Morocco and involving her in a dispute with Great Britain, the Mosul Frontier dispute between Great Britain and Turkey, a question of the extent of the jurisdiction of the European Danube Commission, and a number of disputes between Poland and Germany, Czechoslovakia and Danzig respectively. In fact, Poland has been one of the Court's best customers.

Many of these questions were, or were capable of becoming, first-class international disputes. Each time one of them goes to the Court it becomes more difficult for the next one not to go. In fact, the existence of the Court is a standing temptation to litigate, and though litigiousness is a tendency to be deprecated, one can tolerate a good deal of it in the present state of international society, when one of the chief needs is the habit of the resort to law instead of the appeal to an uncontrolled national discretion and, in the last resort, to force.

But more important than the revision of the Statute of the Court has been the opportunity—natural and free from sensation—which it has afforded to the United States to make yet another approach towards joining the Court. To understand this desire, almost amounting to a craving, of the United States to join the Court one must recall the fact that that country is the pioneer in the movement of a World Court, and that it is probably true to say that but for the efforts of American statesmen, notably Woodrow Wilson and Elihu Root, there would be no Court to-day. Continually faced with the analogy of the Supreme Court, which has during a century and a half exercised compulsory jurisdiction over a number of originally sovereign and independent States now numbering forty-eight, it is not surprising that practical American thinkers should have made one attempt after another to create a Supreme World Court. At The Hague Peace Conference in 1899 the American Delegation submitted a plan for an international tribunal which, after modification, produced the so-called Permanent Court of Arbitration—so-called because it is truly neither permanent nor a court, but a panel of arbitrators from whom the parties may make their selection; still this Court has done useful work, and will continue to exist side by side with the Permanent Court of International Justice until the United States joins the latter Court. Then in 1907, at the Second Hague Peace Conference, the American Delegation propounded a scheme for a "Permanent Court of Arbitral Justice," a scheme which, however, came to grief owing to the impossibility of satisfying the small Powers as to the method of electing judges. Finally, in 1920, when the Council of the League, in pursuance of Article 14 of the Covenant, appointed a Committee of Jurists to draft the Statute of a World Court,—it was ex-Senator Elihu Root, who, as a member of that Commission, produced, in conjunction with the late Lord Phillimore, the now famous "Root-Phillimore Plan" for the contemporaneous but separate election of judges by the two organs of the League, namely, by the Assembly, where a small Power counts the same as a big one, and by the Council, where five great Powers have permanent seats. This plan surmounted the obstacle of 1907, and has worked excellently. But the irony was that the wave of feeling in the United States which kept them out of the League also kept them out of the World Court which they had done so much to make possible. As a matter of law it has always been open to them as a State mentioned in the Annex to the Covenant to adhere to the Statute of the Court, but a special difficulty stands in the way which calls for explanation.

Article 14 enables the Council of the League to request the Court to give an Advisory Opinion. Feeling in the United States has been deeply suspicious lest that power should result in the political dependence of the Court upon the League and in the Court becoming involved in League politics, though an examination of the Advisory Opinions and the action taken upon them should quickly dispel that feeling. Americans have argued that the Court was the backdoor to the League, and that having once entered by that door they would soon find themselves in the League. Now it is commonly assumed, though it has never been authoritatively decided, that the Council must be unanimous in requesting an Advisory Opinion from the Court. Therefore in 1926, when the United States made a move towards the Court and tabled the conditions upon which they were prepared to join it, their fifth condition required that the Court should not "without the consent of the United States entertain any request for an Advisory Opinion touching any dispute or question in which the United States has *or claims* an interest." This was too much, and the States members of the Court had no course consistent with self-respect but to reject this condition.

Last month, however, ex-Senator Elihu Root, one of the most venerable of the American Elder Statesmen, journeyed to Geneva to confer with the Committee of Jurists there assembled for the revision of the Court's Statute. Eventually that Committee adopted the text, prepared by ex-Senator Root and Sir Cecil Hurst, of a Draft Protocol for the Adhesion of the United States to the Court, which deals with the awkward question of Advisory Opinions as follows: the United States shall be informed whenever a proposal for requesting an Advisory Opinion comes before the Council or the Assembly of the League, and thereupon, if desired, an exchange of views, with the Council or the Assembly, shall take place on the question whether an interest of the United States is affected thereby. If the United States consider themselves to have an interest and wish to object, "there shall be attributed to an objection of the United States the same force and effect as attach to a vote against asking for the opinion by a member of the League of Nations in the Council or in the Assembly"—a provision which is perhaps intentionally obscure because it has never yet been definitely decided whether one member alone of the Council or the Assembly can veto a request for an Advisory Opinion. If, however, it is impossible to overcome the American objections to the request for an Advisory Opinion, the United States may, in accordance with another clause in the Draft Protocol, withdraw from the Court, and the withdrawal will "follow naturally without any imputation of unfriendliness or unwillingness to co-operate generally for peace and goodwill." It is generally anticipated that this concordat will be accepted during the coming summer by the United States and the States members of the Court, and that thereupon the United States will become a member.

THE HOFF CASE.

In December* last Mr Justice Wright, after a seven weeks' trial, delivered a very remarkable judgment in an action brought against an insurance company and certain Lloyds underwriters by a family of Latvian financiers of the name of Hoff. The Hoffs' claim was for £430,000; it was based on the theft of certificates for 43,000 shares; if it was a swindle, it was the biggest swindle ever attempted on any British insurance policy; and it cost a very large sum to resist. Mr Justice Wright decided (*a*) that it was a fraud and (*b*) that even if the loss had been genuine the claim would have failed for non-disclosure of material fact. The Hoffs appealed, and on Monday last lost their case again in the Court of Appeal. The facts are striking and some of the lessons of the case well worth rubbing in. Here are the facts in brief.

In 1925, a firm of Lloyds brokers were asked to take out cover on unnamed shares to be carried from Reval to London, and provisional cover was arranged accordingly. The order was given by an English firm styled the Trading Co. L. & J. Hoff, and shortly after the cover was done the brokers received definite advices from the Trading Co. to prepare a policy on 43,000 shares in the Première Société de Chemins de Fer Russes valued at £430,000. The instructions were followed, and a valued insurance on the basis of £10 per share was completed. After a brief delay the underwriters learned that the shares had been despatched in charge of

* *The Economist* of 22 December, 1928, p. 1157

one of the Hoff brothers, by name Elias—who had taken them with him by a night train to Kovno and been robbed of them while he slept—with a resulting claim for £430,000.

As soon as the underwriters' representatives began to look into this loss they made the most interesting discoveries. They found that the company whose shares had been stolen was not a railway company in the sense that it owned a line or an engine or a truck, but a company that had been formed to press on certain of the new Baltic Governments a claim for an old Russian railway system which had been disintegrated by the war and the revolution. It had no assets of any kind except this claim, which was itself a vapourish and shadowy thing, and of all the Governments on which the claim had been pressed one, and one only, had given any signs of recognising its validity or meeting it in cash. This one Government, the Government of Esthonia, had, after long negotiations, agreed to pay the company for its rights a sum equivalent to about 7s. 6d. per share of its capital. That the Hoffs had hoped to extract more than 7s. 6d. was certain, but when they insured the shares they knew that their hopes had gone awry and that nothing but a telescopic lens of miraculous power could make the value look anything like £10.

It appeared, too, that Elias, who carried the shares, must have been a man of most remarkable carelessness and the thief who stole them from him a man of quite remarkable skill. Elias, taking the certificates with him in a trunk weighing one hundredweight, and being seen off on the midnight train by his brother and an old family lawyer, and being warned by them that he must be very careful, and, above all, not fall asleep, proceeded on his journey, left the door of his compartment unlatched and dropped for a few pregnant moments into an uneasy slumber. The moments, from the known times, must have been very few and the sleep was light; but the thief, happening on him in the one quarter of an hour in which the theft was even conceivably possible, entered the compartment, removed the hundredweight trunk, ransacked the pockets of a coat lying on the seat, and "having done everything but kiss Elias good-night," walked off with his hundredweight of swag; and the shares (except for a bundle or two found on the line) were never seen again—nor on this side of Jordan are they likely to be.

But while inquiries into the claim were in progress a striking piece of evidence was produced to show that the shares were really worth in the market £10 each. One of the Hoffs approached a London firm of bankers with a view to buying a few shares in this company, and recommended them to try Berlin, where the shares were sometimes to be bought or sold. A letter to a firm in Berlin, whose name was kindly given by the London Hoffs, elicited the fact that certain parties in Berlin were a market, and that, by a happy coincidence, a gentleman had approached the Berlin firm with a view to selling a few shares. What was his price? £10 a share. The chain of evidence seemed complete, more especially as the Hoffs said quite frankly that they had no knowledge of the identity of this Berlin investor. But the chain looked a good deal weaker when the Berlin banker who had been asked to find a buyer for the shares went into the box and swore that his clients, who wanted to sell in Berlin, were respectively a brother and an uncle of the Hoffs who wanted to buy in London, so that whether the sale had or had not gone through the £10 a share would have remained in the family. In this court the evidence of the Berlin banker was probably the culminating point of the case. The Hoffs, in their zeal for corroborative detail, had added one detail too many, and the structure grown too heavy, toppled over and collapsed.

So the case was won by underwriters, who got judgment with costs—and the word costs brings us to one of the most interesting things about the whole case. When a foreigner, who lives outside the jurisdiction of an English court, brings an action in an English court the defendant before the trial begins may ask for security for costs, so that the plaintiff, if he loses, shall not disappear and leave the defendant to whistle for his money. Now the Hoffs themselves are not English, but they brought the action in the name of the Trading Company L. and J. Hoff, a firm registered in England and possessing an office in London, so that the plaintiff was technically English and no security for costs in the first court could be obtained. In this fine old English firm there is only one partner, and he is Mr Jacob Hoff, who prefers (and his preference is not likely to weaken) to live in his native Latvia. It is fortunate for him that this choice of residence is open to him, since there is a petition in bankruptcy here against the Trading Co. L. and J. Hoff, of which he is sole partner, and an English bankruptcy petition, which may be disturbing to an English resident, is of little consequence to "Medes, Parthenites, Elamites and dwellers in Mesopotamia." The firm, in fact, has been very useful to Jacob Hoff, and a tribute must be paid to the cleverness with which a company in this condition has been made to serve his turn. Like the late Mrs Pell, who was "highly connected; her mother's brother, gentleman, failed for eight hundred pound as a law stationer," Jacob Hoff may boast of his high and honourable connection with the trading company, and the underwriters, who have nowhere else to look to for their costs, may solace themselves with the thought that they have given the world another expensive, if involuntary, display of the hospitable welcome accorded to foreign plaintiffs in the law courts of our land.

Notes of the Week.

Mr Baldwin and the Electorate.—It has been aptly said that the strength of Conservatism's hold on a large percentage of the electorate lies in its recognition of the fact that modern democracies are composed to a great extent of essentially "non-political" beings, the more inclined to like a Government, the less they learn of its existence. On this political theory Mr Baldwin appears to be relying,—more heavily, perhaps, than the circumstances of the day warrant confidence. In the past week he has issued two "messages." One is by way of a foreword to an official statement of Conservative policy in regard to education,—an issue discussed in these columns last week. The Prime Minister claims that "the vast plan of advance now projected along the whole of the educational front" is a task to which the Conservative Party have bent themselves in pursuance of the ideal of a "fellowship of the mind," regardless of "class prejudice." The policy which is promised for the future, and which contemplates not only the development of nursery schools and smaller classes (in somewhat vague terms), but a four-years' educational course of "higher education" for all children "if their parents so desire . . . until the age of 15," is in itself commendable. The only question is, could Mr. Baldwin find a Conservative Minister of Education ready to pursue this policy with vigour and enthusiasm. The Prime Minister's other pronouncement, described optimistically as a "Message to Britain," is still less a hostage to future fortune. "We Conservatives are not going to make any rash or spectacular promises; we do not talk of a new world to-morrow. All that we ask is that you should give us an opportunity of carrying on and bringing to completion the great work we have so successfully begun." In support of this plea Mr Baldwin is content to argue that trade is, on the whole, better than when his party last took office; that in the improvement of pensions, the abolition of the tea duty, the De-rating Act, and the reorganisation of electricity supply, the Government has served the country well; and that the "fulfilment of our pledges in the past" should be regarded as "a guarantee that once more we shall keep faith." Having regard to Mr Baldwin's equivocal record with reference to the tariff issue, we suggest that the emphasis laid on "pledges" and "keeping faith" is slightly overdone. For the rest, the Prime Minister's appeal is characteristically addressed to the (doubtless numerous) believers in the creed: "Let well alone, and tolerate the less well, lest worse befall." An electorate, stirred (whether to enthusiasm or alarm) by the *Walkürenritt* of Mr Lloyd George, is offered by Mr Baldwin—a *Wiegenlied*. It may be that the upshot will show that

the calculations of the Conservative Party are correct; that the country has no stomach either for the vague Socialism of Mr MacDonald, or for the more practicable but still definitely adventurous policy of Liberalism; and that " Safety First " is politically the most paying proposition. There is one thing, however, of which we are certain. However great the respect and popular esteem which the personality of Mr Baldwin commands, the chances of his party at the polls have been greatly lessened by his failure to give any assurance that, in the event of a Conservative majority being returned, the Cabinet will be drastically remodelled. Considerations of public interest require that loyalty to colleagues should be discriminating.

Views on the Trade Outlook.—Now that he has to render an account of his stewardship, in common with his colleagues in the Cabinet, it is only natural that the President of the Board of Trade should seek to paint the outlook in its rosiest hues. Up to a point, his recital of the facts in the House of Commons on Monday night was justified, and, indeed, may come as a useful tonic to those who allow the bad spots of the economic position of the country to obsess their minds to the exclusion of the good. His mention, too, of the very valuable routine work of his own department was also timely in showing what is being done by the Government in an unobstrusive way to assist British trade. Where Sir Philip Cunliffe-Lister found himself on weaker ground was possibly in his disposition—which is common to all members of the present Government—to lay the blame for all our troubles on the disturbances of 1926. This use of the general strike and coal stoppage is in danger of being over-worked. Worse still was his argument that " safeguarding " and other duties have not adversely affected exports in the trades directly concerned, for he bases his argument upon the total figures of " safeguarded " and " non-safeguarded " goods, a procedure whose underlying fallacy has been exposed again and again. Still these were probably *debating points*, which Sir Philip felt obliged to make in duty to his colleagues and his party. It is his main thesis that trade is steadily improving that will arouse the most interest in unbiased minds. On this point, it is interesting to compare the official Government view with that of traders and manufacturers themselves, and the appearance this week of the Federation of British Industries' Quarterly " Business Barometer " is opportune. The Federation's view, as given in their trade forecast, is much less hopeful than that of the Government, and, in fact, they say that " during the past quarter nothing has occurred to justify any greater measure of optimism." The evidence adduced by the Federation is far less convincing than that of the Board of Trade. The Federation still fears a further rise in Bank rate, though authoritative financial opinion has now for several weeks abandoned that fear in the absence of unforeseen contingencies. If the Government have painted the picture too bright, the colours used by the Federation of British Industries are too sombre. The truth of the matter is that the Federation's " Business Barometer," ever since its inception some seven years ago, has inclined to take as its text the theory that the banks are the villains of the piece, and that trade and industry are the innocent victims. The argument does not become more convincing through its constant reiteration.

The Disarmament Discussions.—A League correspondent writes:—The Preparatory Disarmament Commission has concluded its session, but not its work, and will probably not meet again until after the September Assembly of the League. This is ostensibly to give time to the principal Naval Powers to reach some measure of detailed understanding before public negotiations are entered upon. The subject has not been treated publicly in any but the most general terms, and it is undoubtedly wise to take no risks by precipitating open discussion before the Powers are ready, despite Mr Litvinoff's engaging invitations to them to do so. Big things depend upon it, but the danger which this session has shown is that too much, if not almost everything, may be sacrificed to naval agreement. No one underestimates its vital importance, and it matters far more to Great Britain in many ways than what may happen to land armaments. But as your leading article so justly pointed out, neglect or indifference with regard to land armaments is a very short-sighted policy for Great Britain or any Power, and it is no use pretending that in this respect the work of this session promises well for the first Disarmament Conference. It is just as well to recognise that Europe emphatically has not yet reached a political stage where it it prepared to consider the problem in any liberal spirit. Germany, through Count Bernstorff, has practically washed her hands of responsibility for the preparatory work, and a very damaging summary of what has so far been done—or not done—was given by Mr Litvinoff this morning in support of his contention that a retrograde movement had been inaugurated. All that can be said is that the Commission has at last come down to realities. Noble professions and perorations have been dropped overboard. States are beginning to say what they will not do. We know where we are. They will not take the system imposed upon Germany as one to be followed by the Powers who were allied against her in the war; they will not give up conscription; they will not limit their trained reserves; they will not substitute the word " reduction " for the word " limitation "; and they will not directly limit material. France's " concessions " to loosen her proposal for control and to give up budget limitation of material in favour of publicity were enthusiastically hailed by Mr Gibson as leading the Governments nearer than they have ever been before to the conclusion of a draft convention. The applause is somewhat *naïve*. The former allied Powers are bargaining between themselves under American leadership. As a matter of fact, there has been no sign of the slightest concession worth while on the part of any military Powers capable of offering it. Well might Lord Cushendun say that, after the first step, there will still be plenty to do. At the same time it is not altogether a bad thing that the air should have been cleared. All the promises have been stripped to the bone. There is room for few remaining illusions about disarmament, and the embitterment of Germany will be serious unless, before the Conference meets, a radical change takes place in the attitude of the top dogs in Europe. No report is to be prepared on the session. The records of the proceedings will, of course, be available, and the subject will come before the Assembly in the form of a chapter of the Secretary-General's report on the work of the League during the year. The Naval Powers are to inform the President of the Commission when they have arrived at a sufficient measure of understanding for the Commission to be summoned for its last meeting, and it seems possible that the first general conference, such as it is, will be held some time next year. It is not considered likely that there will be a separate conference of the Naval Powers.

The Nile Waters Agreement.—Last Saturday, May 4th, the British and Egyptian Governments exchanged notes embodying a comprehensive agreement on the use and control of the waters of the Nile and its branches and tributaries. The two contracting parties, between them, possess political suzerainty or dominion over the greater part of this vast river basin; for the catchment area of the Great Lakes, in which the White Nile rises, is almost wholly contained in the British Protectorate of Uganda, the British Colony of Kenya and the British mandated territory of Tanganyika, while the Sudan, which extends between these territories and the southern parts of Egypt, is under an Anglo-Egyptian condominion. Apart from the western watershed of the Albert and the Edward Nyanzas, which lies in the Belgian Congo, the only important part of the Nile Basin which belongs politically to another Power is the region containing the headwaters of the Blue Nile and the Atbara in Abyssinia. This is, indeed, a vital source of water supply. Roughly, it is the source on which the Sudan is to depend—the waters of the White Nile being allocated mainly to Egypt. But an agreement between Great Britain and Egypt themselves is the first step towards a joint agreement between these two parties and Abyssinia. More important, it is the first step towards a fresh attempt at agreement between the British and Egyptian Governments on the political plane—on which they very nearly achieved the conclusion of a treaty last year. The water settlement helps forward the settlement of political questions because it relieves them of an economic complication which has hitherto made them seem more portentous than they really are in themselves. The water question is, indeed, portentous, for upon it hang the existence of Egypt and the prospects of the Sudan; but it is happily distinguished from the political problem in being non-controversial in essentials. It is agreed on all hands that Egypt, as a " going concern," has an absolute priority claim to sufficient supplies of water for the area at present under cultivation below Wady Halfa. It is also agreed that, as a country with a dense and still rapidly increasing agricultural population, she has a further claim to a sufficient margin of water for bringing under cultivation any additional areas, at present waste, in which irrigation is physically possible. As an almost undeveloped and sparsely populated country, the Sudan must come second. But we hasten to add that there is now no reason to regard the interests of the Sudan and of Egypt as being even potentially in conflict; for it now seems clear that, if and when the entire water supply of the Nile Basin is scientifically conserved and distributed, there will be enough water available for almost unlimited irrigation in the Sudan after providing Egypt with the maximum amount that she can use. When that point is reached the problem will pass from the hydrographical into the demographical domain. Shall we then witness a vast migration of peasantry from a congested Egypt into an empty Sudan?—like that other great migration which, at this moment, is peopling empty Manchuria from crowded Shantung. The Sudan may be the Egyptian Manchuria —with Great Britain there playing the economic political *rôle* of Japan. In that case, the political question will eventually settle itself, for the nation which colonises a country possesses it in the long run. These considerations indicate that the present water agreement will be a very important landmark in Anglo-Egyptian relations.

M Theunis on Tariffs.—Rarely, writes a League correspondent, has there been such straight speaking by a responsible delegate at any League meeting as in the opening speech this morning of M Theunis, former Belgian Prime Minister, as Chairman of the Economic Consultative Committee of the League, whose duty it is to supervise the execution of the resolutions of the Economic Conference in 1927. The events of the past year, he said, had shown a slowing down in the progress achieved since the last meeting. The unilateral or bilateral action of the governments had given less satisfactory results; no important net reduction had been made in customs duties by the governments either by autonomous action or by bilateral conventions, and the main results had been achieved by the plurilateral action provoked by the intervention of the Economic Committee of the League which had gone further than the various national initiatives. The governments ought to have shown, he said, a better understanding of their responsibility and given more definite and effective support to the unanimous resolutions of the Conference which most of them have approved. Nothing had happened which would justify them in thinking that these resolutions required to be modified. They were not the views of visionaries but of practical business men who had no time for idle dreams. The principles of a liberal economic policy proclaimed in Geneva in 1927 and reaffirmed by the Economic Consultative Committee in 1928, had been enunciated with particular clearness and force by the International Chamber of Commerce, which was undoubtedly the organisation best qualified to represent the interests of the business world. Certain States might, perhaps, object to the severity of his criticism and declare that their policy was inspired by the Geneva principles as far as possible, but it was difficult to discuss generalities of this kind. To take an actual case: The Conference for the abolition of import and export prohibitions and restrictions did not come as a surprise; it was attended by official representatives thoroughly conversant with the problem, and a number of very moderate and reasonable results were obtained, but so far only the British and Belgian governments had deposited their ratifications. There were hopes that the convention would secure within the appointed time the eighteen ratifications required, but they could not count with certainty on this result, and now was the psychological moment to urge their views on the governments. If any members of the Committee could give the reasons for the difficulties which apparently prevented their governments from ratifying,—they would be doing a real service. " One thing we cannot agree to," he said, " is that conventions that have been discussed, approved and signed should become dead lettters because they have not been ratified by a sufficient number of governments." Private interests and private advantages must be subordinated to the well-being and the progress of the world at large,—and if that principle were neglected it would lead to disastrous consequences. M Theunis put forward one or two suggestions to the Commission, the most important of which was perhaps that it should consider the division of customs duties into distinct categories, and that tariff policies should definitely not be applied to some of them. It would, perhaps, be well to distinguish between tariffs protecting industries whose existence in a particular country could reasonably be considered as based on normal economic conditions,—and tariffs protecting industries which found no justification in the natural resources or traditions of a country, but whose existence constituted a permanent economic burden on the country. In the same way, an examination of the customs duties in force in Europe would enable them to distinguish those which scarcely served to maintain existing industries within a country, but whose effect was rather to prevent or abolish the consumption of a particular product. It might also be a good thing to condemn especially customs tariffs which had no other aim than to protect essentially exporting industries, with the effect and usually with the purpose of permitting them to organise a system of dumping on the world market, which led in the end to losses which had to be borne by everyone. A special effort should be made to secure the abolition of those duties which were contrary to sound economic policy.

The American Tariff.—Only partial details have so far reached England of the new tariff Bill now before Congress, and so it is as yet impossible to deliver a considered judgment upon the proposals. But to judge from the news so far available, the Bill seems likely to become the centre of an embittered controversy between the farmers and manufacturers. The farmers are complaining that the manufacturers are being given increased protection, and that they themselves are receiving very inadequate compensation for the higher prices that they will have to pay. They are, therefore, reviving their debenture scheme, which in effect is a subsidy on exported wheat, to be financed by the proceeds of the tariff. To the foreign onlooker these and other clashes of rival *interests* that will be provoked by the new Bill are nothing more than a further example of the evils that ultimately lie in wait for the nation that once sets its foot on the slippery slope of the path leading to protection. *Facilis descensus Averno* is a saying which finds more justification in tariff history than in that of any other branch of Government interference with trade. It is true that the proposals, popularly ascribed to President Hoover, to reorganise the constitution of the Tariff Board are understood to represent an attempt to " take the tariff out of politics," but it remains equally true that once a country has abandoned Free Trade fiscal policy and politics become inseparable from each other. Nor can other ingredients be left out of the mixture. For good or for evil, America to-day ranks among the chief creditor nations of the world. Each raising of her tariff wall increases the difficulty her debtors find of discharging their obligations, and it is true to say that so far this difficulty has mainly been overcome by reborrowing from America in the form of private and commercial loans. This process cannot continue indefinitely, and while it last merely postpones and aggravates the final day of reckoning. Sooner or later the American

people will have to learn the lesson that in the long run Europe can only discharge her debts to her giant creditor if that creditor will help her to export her surplus production.

The Tacna-Arica Dispute Settled.—The announcement last week that the Tacna-Arica dispute had been settled means the termination of a diplomatic controversy that has contrived to last out more than 45 years. The settlement, now that we have it, comes as an anticlimax to the immense and abortive diplomatic labours of nearly half a century; for after either Chile or Peru or both had rejected almost every alternative solution that the wit of men could suggest, they have at last precipitately agreed upon the obvious. Peru is to take the Tacna Province, which is the nearer of the two to her, Chile is to take Arica Province; and they have settled this all by themselves, after the controversy had been handled gingerly and vainly by the League of Nations and vigorously, but with no better success, by the United States. The dispute originally arose out of a peace-treaty concluded between Chile and Peru as far back as 1883, under which Chile was to remain in occupation of both these two formerly Peruvian provinces—which she had just conquered in a victorious war—for a period of ten years, whereafter the definitive destiny of the two provinces was to be settled by a plebiscite. That plebiscite was not taken in 1893 and it has never been taken since. Hence these tears; for, as the decades passed, the two parties exchanged their respective policies. The Peruvians, who had been eager for a plebiscite at the date originally laid down, became less keen as, with the passage of years, the Chilean element in the population of the provinces increased and the Chilean Government more and more strengthened its hold. The Peruvians gradually came to base their case upon historic right, while it was now the turn of the Chileans to press for a plebiscite which, in the changed circumstances, they expected to result in their favour and so to gloss over their naked right of conquest with a more respectable title to ownership. In the autumn of 1920, the question of the peace-settlement after the war of 1879-1883 was brought up before the First Assembly of the League of Nations not only by Peru but also by Bolivia, who had likewise lost territory to Chile in that war. (Indeed, Bolivia had suffered more severely than Peru, for the territory taken by Chile from her included the whole of her sea-board.) This reference to the League came to nothing—partly because Bolivia alarmed the Assembly by invoking Article 19 of the Covenant concerning the revision of treaties that have become out of date, but still more because Geneva was afraid of offending the susceptibilities of Washington. Nevertheless, this incident spurred the United States Government to take the matter up; Chile and Peru submitted their dispute to the United States President's arbitration; the arbitrator decreed a plebiscite; and in 1925 a United States plebiscitary commission arrived on the spot—only to come to the conclusion that the behaviour of the Chilean Government in the disputed territory rendered the taking of a fair plebiscite impossible. The plebiscite having fallen through, the United States Government tried direct mediation, but this, too, failed. It was only after all these efforts of third parties had proved abortive that the two parties directly interested have settled the business between themselves. We congratulate them in having put an end to the most bitter international controversy in Latin America.

Berlin and Bombay.—Last week, two of the great cities of the world were thrown out of the ordinary workaday tenor of their busy lives by acts of organised violence, leading to bloodshed. One city was Asiatic, the other European; but in these days the world has become one; and in these simultaneous disturbances at places so far distant from one another, the same morbid symptoms point, under diagnosis, to an identical disease. This disease is the importation of religious fanaticism into the field of modern social relations, in which fanaticism is peculiarly barren and destructive. Of course, our modern industrialism produces social stresses and strains; for industrialism is not so much a condition or a system as a tide in human affairs which demands constant mutual adjustments between individuals and classes as they are carried along in the swirling current of this mighty stream. Thus, our modern civilisation is eminently a process that calls for the civilised virtues: sweet reasonableness, patience, resourcefulness, human kindness, good nature, good will. This is our indispensable psychological atmosphere; and, therefore, when it is replaced by its antithesis, the fanatical temper, the effect upon our social health is far more deleterious than the effect of fanaticism upon cruder and simpler societies. This is the moral of the painful events that have just been happening in Bombay and Berlin. In Bombay, the trouble began with an ordinary industrial strike—a conflict of wills between employers and employed, which cut quite across the religious division between Hindus and Muslims. In itself the strike, though sudden and unexpected, might have yielded to discussion and conciliation. But social tranquility had no sooner been disturbed than the disturbance passed out of the industrial on to the religious plane and transformed itself into communal rioting between Hindus and Muslims on traditional lines. Meanwhile, at Berlin, the demonstrations with which May Day is customarily celebrated by Labour throughout Europe and America were deliberately turned to violence and bloodshed, not by any spontaneous uprising of the Social Democratic masses, who are peaceable and orderly, but by the action of a tiny organised Communist minority, apparently obeying instructions from the headquarters of the Third International at Moscow. The Communist rioting in Berlin and the communal rioting in Bombay are on all fours with each other; for Communism—as the Third International preaches and practises it—is a fanatical religion of the same type as the Hinduism and Islam in whose names men commit murders in India. *Tantum religio potuit suadere malorum.* Fanaticism, animated by this misguided spirit, is responsible for these barbarous and tragic occurrencies both in India and in Germany. And the rest of us cannot afford to be either indifferent or pharisaical; for this spirit is the supreme danger to the life of the modern world; and no country or people is immune.

Export Credits.—Particulars made available this week of the working of the Export Credits Department, up to the end of last March, indicate that a considerable expansion is taking place in the volume of business transacted. In the first three months of 1929 the face value of policies issued by the department amounted to £1,716,835, as compared with £1,026,479 in the last three months of 1928, and £740,813 in the corresponding quarter a year ago. It is clear that exporters have taken much advantage of the new form of contract which the department instituted last November. Before that date the facilities provided under the Guarantee Scheme sanctioned by Parliament in 1926 enabled traders to cover the risk of non-payment at maturity of bills drawn in connection with the export of British goods on approved customers in all markets except Russia and—in the case of textiles—India and the Far East. Guarantees could be arranged either for a specific transaction or for deliveries up to a stated amount for a forward period (usually six months) in respect to a list of approved names. Such insurance, however, did not constitute an instrument whereby a trader could finance transactions with customers who required credit terms which he was not in a position to provide without special assistance. To meet this need the department introduced, last November, with the close co-operation of the banks, a form of contract by which the exporter is not only covered, up to the limits of the guarantee, against the risk of bad debts, but is given facilities for obtaining, without recourse to himself, advances from his bankers. Already £700,000 of new business is reported to have been arranged under this form of contract. The Balfour Committee, in its final report, expressed apprehension lest the operation of Government schemes for affording financial facilities to overseas trade might lead in other countries to " a concealed subsidy to the disadvantage of British exports." The Committee hoped that the British scheme would not be extended beyond 1931, and that " in the meantime suitable machinery will be established by private enterprise to provide any necessary assistance to trade in the matter of long-term credits." We agree that there are weighty objections to the participation of the State in any form of overseas trade. The report of the expert committee appointed by the Government a few months ago " to suggest any changes in the working of the scheme likely to facilitate transference of the business from Government control " will be welcome if it indicates means for establishing in private hands adequate mechanism for the insurance of export trade credits.

Threatened Cotton Trade Lock-out.—A serious labour situation, writes our Manchester correspondent, has arisen in the Lancashire cotton industry, and at the end of last week, at a mass meeting of the members of the Master Spinners' Federation, it was decided to post lock-out notices at the mills, to be effective on May 18th. The situation has arisen as a result of a dispute at the Alma Mill, Oldham. Early this year this mill was stopped for several weeks. When it reopened the management announced that the wage rates, although according to the list, would be reduced compared with the previous payments. The card room operatives came out on strike, without the usual joint conferences between the employers' association and the trade union officials. The Masters' Federation considered this action to be a breach of the existing agreements, and as the card room operatives refused to return to the mill this strong action has been taken by the federated employers. It is important to point out that the Oldham Card Room Association has been requested by the Card Room Operatives' Amalgation to instruct their members to return to work, but the local association has refused to do so. The trouble is undoubtedly partly due to personal animosities amongst the trade union officials. Although at the time of writing no further attempt has been made to settle the dispute the position of affairs has had no effect upon the market. There is confidence that a way out of the difficulty will be found without its being necessary for the employers to carry out their threat. It may be pointed out that nearly 600 mills are involved and if the worst happens about 160,000 operatives will be affected. It is said in some quarters that action of this kind by the Masters' Federation should not be necessary on a simple dispute, but it is most important that the agreements between the trade unions and the employers for settling disputes should be observed by all parties, and undoubtedly the workpeople at the Alma Mill, Oldham, were in the wrong when they came out on strike before the usual joint conferences both locally and centrally had been held.

Lancashire Cotton Corporation.—Our Manchester correspondent writes: " At the beginning of this week Sir Kenneth Stewart, the Chairman of the Lancashire Cotton Corporation, Limited, issued an important statement on the work of the Corporation. The officials have prepared a combined balance sheet of the first 200 cotton mills that have been presented to the Corporation for analysis. These 200 mills comprise 19,750,034 mule equivalent spindles and 24,358 looms. These companies have a paid-up ordinary share capital of £28,239,608. The amount due to secured and unsecured creditors is £28,890,933, making a total of £57,130,541. Uncalled capital amounts to approximately £10,000,000. It is pointed out that to pay interest at 6 per cent. on the amount owing to creditors a sum of £1,733,456 per annum would be required and the earning of this amount would not reduce the debt at all, and the shareholders' position would not be improved. If these 200 mills were combined in the Lancashire Cotton Corporation, Limited, they would appear in the balance sheet after the uncalled capital is paid up as follows:—Liabilities: 5½ per cent. income debentures, £12,548,768; 6 per cent. preference shares, £383,311; ordinary shares, £13,212,923; and deferred shares, £2,371,617, making a total of £28,516,619. The assets would be: Mill valuations (fixed stock), £20,991,245; stocks, &c., (other assets), £4,759,842, and cash, £2,765,532, or a total of £28,516,619. A yearly profit sufficient to pay present interest on mills indebtedness (£1,733,456) would find the Corporation in a position to pay income debentures at 5½ per cent., £690,100; sinking fund at 2 per cent., £251,000; preference shares at 6 per cent., £23,000; and ordinary shares at about 6 per cent., £769,356. In order to attain its objects the Corporation intends to pursue two main lines of policy: (1) Savings to be effected by the reorganisation of mills into a single unit; and (2) The seeking of business which has been lost to Lancashire in order to assist in bringing about full time running. The Corporation proposes to effect savings by (1) The standardisation of products and the reorganisation of qualities so that single types or ranges of yarns are allotted to single full-time running mills; (2) the concentration of purchases and sales through a single well financed unit; (3) the avoidance of all duplication of work; and (4) the elimination of uneconomic machinery. It is estimated that these savings, which will arise from the bulk buying of raw cotton and mill stores, economies in salaries and fees, centralised control of selling and administration, standardisation of qualities and control of waste products, will result in an additional profit of £7,000 per 100,000 spindles. The statement published by Sir Kenneth Stewart has been much discussed in trade circles. Some surprise has been expressed that the Corporation expects to effect savings equal to £7,000 per annum per 100,000 spindles. This means a decrease in yarn production costs of about ½d. per lb. It should be pointed out that the majority of mills are losing money to-day equal to this amount. On Tuesday last at a meeting in Manchester of the Bolton Master Cotton Spinners' Association it was decided to abandon short-time working in the mills. Organised curtailment of production in this Egyptian branch of the industry to the extent of one-third began in the middle of February and has continued for twelve weeks. The restriction of output has resulted in stocks being reduced, but it is doubtful whether spinners have been able to improve prices. It is recognised that short time may bring relief if fairly drastic for a limited period, but if maintained for any length of time this kind of action seems to lose its effect as the market has a way of adjusting itself to the changed conditions." Comment on the financial aspect of the statement is offered in an Investment Note in this issue.

A New International Silk Cartel.—Our Paris correspondent writes:—It is reported here that several of the principal companies engaged in the production of artificial silk by the acetate process are on the point of concluding an international agreement on somewhat similar lines to those entered into by the European steel cartel and other industrial combines. The firms interested are reported to include the Glanzstoff, Courtauld, Snia Viscosa, Enka, Tubize and Soie de Chatillon companies. A conference between the representatives of the various concerns is to take place very shortly in Paris. It is understood that the negotiations are already much further advanced than those which are taking place with similar objects in connection with the principal firms engaged in the viscose industry.

Canadian Preference. — Our Ottawa correspondent writes:—The Canadian Government, under pressure from a Progressive member, has now made public the greater part of the correspondence between itself on the one hand and Sir William Clark, the British High Commissioner, and the Federation of British Industries, on the other, on the subject of the recent change in the Canadian Customs regulations which increase the percentage of Empire labour and materials required in goods seeking the benefit of the British preferential rates, from 25 to 50 per cent. The documents reveal that a controversial exchange of letters has been proceeding for the last four months. Sir William Clark's letters draw attention to the serious effect which the new regulations will have upon the exports to Canada of various British manufactures whose raw materials cannot be procured in Britain, and at the same time exceed in value half the cost of the finished article. He asks in his letters for substantial modifications of the regulations to avert such handicaps being imposed, and suggests that the Canadian Government should follow the

example of the administrations of Australia and New Zealand, which, when they imposed parallel regulations, later permitted exemption lists for the benefit of British manufacturers who could not comply with them, and were faced with the prospect of losing the preference. Sir William Clark also asks the Canadian Government to suspend the operation of the new regulations until April 1 or May 1, in order that British exporters might at least have time to adjust themselves to the new conditions. The Federation of British Industries makes an even stronger protest, and in one letter the blunt assertion is made that the new regulations, instead of benefiting British trade with Canada, as its sponsors had suggested, would do serious damage to it. In its replies the Canadian Government makes the usual formal promise of sympathetic consideration for the British requests. It, however, points out that the 50 per cent. labour and material required under the new regulations can have their origin anywhere in the British Empire, and need not necessarily come from Great Britain. It suggests that Sir William Clark should provide it with a detailed list of such British exports as cannot meet the new requirements, and promises that when these data are available sympathetic consideration will be given to the plea for modification. Accordingly it has now been arranged that the Canadian Trade Commissioner in London and his subordinates shall make an investigation on the spot into the merits of the British representations, and the Government will be guided by their report. Meanwhile, it is being subjected to strong pressure by various papers and interests in Canada who dislike the new regulations and feel that they are merely a device for the augmentation of the protection previously accorded to certain Canadian domestic industries. The Western Progressives are attacking them on this score, and intend to press for the cancellation in Parliament.

Canadian National Railways.—The report of the Canadian National Railway system for the year 1928 reveals encouraging features. Gross revenue from railway operations increased from $248,716,374 in 1927 to $276,631,921 last year, an advance of 11.2 per cent. Although rather fewer passengers were carried, passenger receipts were higher; but the chief increase of earnings arose from freight traffic, which advanced from 6,304,155 tons in 1927 to 6,813,493 tons in 1928. This great increase was to a large extent due to the heavy Western crop of the last two years, and to weather conditions, which brought an abnormal proportion of two years' crops to the terminal elevators in 1928. This, of course, cannot be expected as a regular feature, so it is satisfactory that of the 70 groups of commodities carried 55 increased and only 15 diminished. Pulpwood and wood pulp were conspicuous in the classes which showed a falling-off. Operating expenditure advanced by only 7.3 per cent., thanks to consistent economy, and so net earnings increased from $45,400,690 to $58,383,577. From this fall to be deducted certain miscellaneous charges amounting to approximately $5 million; then some $8 million of non-operating income must be added, bringing gross income up to $61,454,750. The chief charge to be paid is over $75 million of interest on funded and unfunded debt and on Dominion Government advances; the net deficit becomes $24,730,410, compared with $31,576,193 in 1927, and after certain appropriations have been made the debit balance carried forward is increased from $444 million to $477 million. Over $33 million, therefore, still lie between the actual situation and a net profit. It must be remembered, however, that the advantage to the Dominion Government is not to be measured by the $39 million which had to be voted in the 1928 Appropriation Accounts for National Railway purposes. The railways do a great service in connection with colonisation and temporary immigration at harvest time, 40,120 permanent European settlers being carried in 1928, and the advantage to the country of an efficient railway system is by no means proportioned to its profits. The efficiency of the Canadian National system is being steadily improved. Maintenance expenditure increased by $8.2 million in the year, while considerable betterments were undertaken, notably the modernisation of the Point St. Charles locomotive shops, the installation of automatic signals on certain double-track main line sections, and the putting into service of a Diesel-electric locomotive of greater power than any hitherto developed. An appreciable saving has been effected by substituting motor-car service for 78,260 miles of steam service. Given a continuance of active economic conditions, a gradual reduction in the deficit should be in prospect.

The Bank of Greece.—At the first ordinary general meeting of the Bank of Greece, a full report of which appears on a later page, the Governor, M Alex. N. Diomede, gave an exhaustive survey of the initial history of the bank and of the progress made in the financial and economic recovery of the country. The part of his speech dealing with the bank's own affairs included one or two very valuable comments upon the duty and practice of a modern and especially of a new Central Bank. His own bank, during the period May 14th to December 31, 1928, bought gold and gold exchange to the value of £9,421,997, and sold them to the value of £8,742,224, leaving a surplus on the year of £679,773. This, he claimed, proved that transactions between Greece and foreign countries resulted in a credit balance, though he was careful to add that this result was partly due to the influx of foreign capital. On this last point he made a comment which applies to many other countries besides Greece. He said "It should also not be forgotten that an important percentage of our external debt is now in the hands of Greek residents. The annual service of this debt, amounting to £4,670,000, appears only on the debit side of our accounts, whereas an important percentage of it is imported and spent in the country." In other words, the apparent size of a country's foreign debt, and equally of its investments abroad, rarely corresponds with reality. M Diomede's review of Greek public finance was also of interest, though in his comparison of the pre-war and current national debt he made no reference to the scaling-down of the burden that must have followed the revaluation of the drachma. Still, his insistence that dead-weight debt had been replaced by productive debt was timely, especially as he followed it by a defence of a vigorous sinking fund policy. Finally, reference must be made to his discussion of recent Greek budgets. Here, too, he contrasted plainly the evils arising from a succession of unbalanced budgets with the rewards of sound National Finance.

Shipping Freight Index Number.—Further weakness occurred last month in whole-cargo shipping freights, our Index Number recording a decline of 3.5 per cent., following a fall of 3.8 per cent. in March. The general "tramp" freight level, thus calculated, is now over 12 per cent. lower than at the end of last year. The recent movements of the various groups in the Index are summarised below:—

AVERAGE 1898–1913 = 100.

	Average 1913.	April, 1928.	Feb., 1929.	March, 1929.	April, 1929.
European waters	110·0	101·6	122·7	123·8	117·7
North America	113·1	103·7	125·1	122·7	120·5
South America	123·4	106·6	121·5	118·5	118·4
India	106·3	105·8	117·4	112·2	106·3
Far East and Pacific	117·4	116·2	122·0	118·3	114·7
Australia	127·9	126·4	136·2	121·1	113·9
Total	116·3	110·0	124·1	119·4	115·3

The River Plate grain trade again provided the bulk of last month's business. Apart from this market, cereal shipments were restricted by instability in grain prices, North American demand for tonnage being disappointing. Eastern chartering was extremely dull. Outward coal freights were a shade lower to South America and the Mediterranean, and declined sharply in the Home Trade. The month's changes in the Index of each Group and Sub-group are shown in the following table, the figure

100 representing in each case the average rate during the basic period 1898-1913:—

	Index Number.	Inc. or Dec. Points.		Index Number.	Inc. or Dec. Points
Home Trade ...	97·9	−14·9	S. America—Outwards	88·6	− 0·3
Bay—Outwards	132·1	−3·7	S. America—Homewards	148·2	...
Bay—Homewards	135·5	...	India—Outwards	115·8	− 2·1
Mediterranean—Outwards ...	135·1	− 3·2	India—Homewards	96·9	− 9·6
Mediterranean—Homewards	107·9	+ 0·4	Far East, &c.	114·7	− 3·6
North America	120·5	− 2·2	Australia.....	113·9	− 7·2

Expressed as a percentage of the average for 1913, the total figure of our Index Number for April works out at 99.1, as compared with 102.6 in March, and 94.6 a year ago.

Germany's Chemical Trade.—German imports of chemicals and allied products in 1928 were of value £25,000,000, and exports were £62,000,000, the balance of excess exports being 10 per cent. greater than in 1927 and much above 1913. This is largely due to development of synthetic fertiliser output, which has now reached 4,000,000 tons per annum, or 800,000 tons actual nitrogen (assuming average nitrogen content to be 20 per cent.). Of this total some 2,500,000 tons is used at home, mainly in agriculture, and remainder exported. Despite this huge total of synthetic exports, German imports of Chilean nitrate rose from 26,000 tons in two preceding years to 114,000 tons in 1928, owing to lower prices and a more intensive Chilean sales campaign in which the advantages of iodine in the Chilean product were loudly proclaimed. Potash production and export also increased in bulk but not in value, export being 560,000 tons in terms of K_2O out of a total output of 1,400,000 tons, chiefly as kainite, mixed fertiliser, potassium sulphate and chloride. Numerous by-products of potash industry, such as Glauber salts (sodium sulphate), magnesium salts, and bromine were also exported. Coal-tar dyes now take second place on export list, totalling 47,311 tons in 1928 as compared with 110,000 tons in 1913. Here are some details of exports:—

TABLE 1.
GERMAN EXPORTS OF SYNTHETIC FERTILISER
(in 1,000 metric tons).

	1926.	1927.	1928.
Ammonium sulphate	464·1	669·1	837·2
Calcium nitrate and urea	126·1	268·5	395·6
Ammonium chloride	24·1	25·5	35·6
Sodium nitrate	27·9	60·3	32·4
Potassium nitrate	13·1	21·2	23·2
Nitrophoska, &c.	5·5	15·7	46·5
Nitric acid	17·2	28·7	31·1
Ammonium nitrate	11·0	13·9	12·7
Ammonium carbonate, nitrites, calc. cyanamide, cyanides	12·7	9·0	11·0

TABLE 2.
GERMAN EXPORTS OF COALTAR DYES
(in metric tons).

	1926.	1927.	1928.
Aniline dyes	21,168	29,735	30,651
Alizarin dyes	2,502	3,088	2,180
Alizarin red	499	975	2,357
Indigo	12,432	14,301	11,970
Indigo carmine	541	704	153

Home demand remains constant at about 30,000 tons. Exports of pharmaceuticals, sulphuric acid and soda ash show little change. Exports of synthetic methanol (methyl alcohol), acetone and formaldehyde declined to 12,563 tons, and synthetic acetic acid remained at about 8,500 tons.

The Sub-normal Child.—At the Conference of the Central Association for Mental Welfare, Lord Eustace Percy delivered himself concerning the recent report of the Mental Deficiency Committee, a joint committee of the Board of Education and the Board of Control. This body, which was set up by Sir George Newman, the Chief Medical Officer of the Board of Education, took the view that the real criterion of mental deficiency is a social and not an educational one, and that a mentally defective person is one who, by reason of incomplete mental development, is incapable of independent social adaptation. A special investigation led the committee to the conclusion that the actual number of mentally deficient children is far greater than the number ascertained and certified by local education authorities. Besides 35,000 children educationally but not socially defective, there were found to be about 150,000 children below the age of 16 who were mentally defective within the meaning of Section 55 of the Education Act. The committee concluded that the existing system made too rigid a division between certifiable and other children for it to be capable of treating adequately the innumerable grades of deficiency between the normal child and the lunatic. They therefore made a number of important recommendations, including these: That educable mentally deficient children and dull or backward children should be treated as a single "retarded" group, for whom provision should be made within the public elementary school system; and that the requirement that a particular child should be certified as mentally deficient by the local education authority before he can be provided with the type of education he requires should be abolished. The connection between mental deficiency and crime, and the duty of education authorities to prevent crime by proper treatment of sub-normal children, was recognised by the committee in a recommendation that the local education authority should be consulted whenever a child or young offender is brought before the court and becomes liable to be sent to a reformatory or industrial school, and that such children should undergo a special medical and psychological examination. After urging all education authorities to devote themselves to the problems of mental deficiency, the committee strongly emphasised the need for further research and investigation. The speech of the President of the Board of Education concerning their report was conspicuously undecided. He commended the work of the committee, endorsed their view of the importance of the problem, and of the need for more individual treatment, but the reports of his speech contain no suggestion of definite approval even of the general outline of the recommendations. Lord Eustace Percy did at least promise that if he were returned to office he would pay every attention to the problem of the mentally defective child, and certainly few more important tasks could be found for the next President of the Board of Education.

A public lecture on "The City and the Bank of England" will be given at the London School of Economics on Thursday, May 16th, at 5 p.m., by Dr Georg Tugendhat. The chair will be taken by Professor T. E. Gregory.

INSURANCE NOTES.

Commercial Union Assurance.—The pruning-knife has again been severely applied to the premium income, not only in the fire department, but on this occasion also in the accident department. The curtailment of fire premium income in 1927 was officially stated to be the result of a reorganisation of the American business, and the further reduction in 1928 is presumably due to the same cause. At any rate, the result is that the fire premiums have fallen from £8,020,000 to £7,500,000, and accident premiums have fallen from £9,255,000 to £8,760,000. The detailed results of the underwriting for the past two years are set out below:—

	1927. Amount. £	1927. % of Prems.	1928. Amount. £	1928. % of Prems.
Fire	802,151	10·0	552,365	7·3
Accident	218,657	2·4	399,327	4·5
Marine	100,000	16·9	100,000	15·7
Life:—				
Commercial Union	17,262		28,088	
Union Life Fund	5,000		5,000	
Hand in Hand Fund	20,000		20,000	
Sinking Fund	34,000		5,000	
	1,197,070		1,109,780	
Less items debited to profit and loss account	297,220		286,902	
Total net trading surplus	899,850		822,878	

It will be observed that the fire profit shows a considerable diminution in 1928, although the results are better than in either of the years 1925 or 1926. The result of the accident department, on the other hand, is very satisfactory, considering the difficult conditions prevailing in the motor-car section, which is now the largest contributor to this account. Of the total premiums of £8,760,000 in this account, £5,900,000 was written direct by the Commercial Union's subsidiary, the Ocean. After deducting debenture interest, the net interest earnings in 1928 amounted to £987,777, compared with £895,479 in 1927. The dividend has on this occasion been declared subject to tax, and works out at 41 per cent. for 1928, compared with 55 per cent. free of tax in 1927. The cost has risen from £1,070,850 to £1,176,231. The yield on Commercial Union shares at their present price of £26½ is £3 17s. per cent. on dividend, but £5 18s. per cent. on total 1928 earnings. In the Commercial Union life department, new life policies were issued for total net sums assured amounting to £4,105,082, compared with £3,959,942 in 1927, and the fund now amounts to £16,094,818.

North British and Mercantile Insurance.—One of the largest composite offices, transacting a world-wide business, the North British is also one of the strongest and most successful. Like other similar institutions it has acquired, from time to time, a number of other subsidiary companies, the principal of which are the Railway Passengers, the Fine Art and General and the Ocean Marine. The fire business is transacted direct by the parent company, the accident and general business by the Railway Passengers and Fine Art and General, and the marine business by the Ocean Marine. The fire profit earned in 1927 was a record for the company, being equal to 11.7 per cent. of the premium income, and although this has not been repeated last year, the actual result, viz., 10.7 per cent. is still extremely good, and as it has been earned on a premium income greater by £236,000 than in the preceding year, the amount of profit works out at much the same. The fire department is the largest department, the premium income of £4,549,000 being responsible for 70 per cent. of the total. The detailed underwriting results for the last two years are set out below:—

	1927. Profit. £	% of Prems.	1928. Profit. £	% of Prems.
Fire	503,226	11·7	486,030	10·7
Accident and General—				
(Railway Passengers)	118,980	10·7	111,381	9·6
(Fine Art and General)	57,767	14·9	37,183	9·3
Marine (Ocean Marine)	25,000	6·0	25,000	6·1
Annuities	35,000		35,000	
Total	739,973		694,594	
Less written off business acquired	100,000		...	
Other items debited to P. and L.	157,464		174,530	
Total net trading surplus	482,509		520,064	

The total net interest earnings, after allowing for cost of the preference dividend, rose by £45,000 to £464,000, and, although the dividend has been raised from 76 per cent. to 84 per cent., the increased cost is still just within the interest earnings. Adding together the total net trading surplus and the net interest earnings, it will be seen that, although a dividend of 84 per cent. is paid, the actual rate earned was 178 per cent. The margin, which was added to free surplus resources, amounts to as much as 15s. per share. In addition to the fire and general business, there is also, of course, a very large life department, with a fund amounting at the end of last year to just under £24,000,000. The new business written in 1928, amounting to £4,257,232, was some £45,000 smaller than in 1927, but the difference is more than accounted for by the reduced amount received in single premiums. The expense ratio of the life department last year was 15.2 per cent., compared with 14.7 per cent. in 1927, and the net rate of interest earned worked out at £4 10s. 9d. per cent., compared with £4 12s. 11d. per cent.

Alliance Assurance.—For many years now the fire department of the Alliance has been characterised by the unusually high rate of profit earned. The company has the advantage of an exceptionally fine connection in home business, particularly in the London area, and since it transacts no business in America it is relieved from all anxiety in that direction. The final results of 1928, compared with those of the preceding year, are affected largely by the fact that, on the one hand, the fire profit last year fell to 21.9 per cent. from 25.9 per cent., and, on the other hand, that a large contribution was derived from the result of the quinquennial valuation of the life department current series. The details of the last two years' results are set out below:—

	1927. Amount. £	% of Prems.	1928. Amount. £	% of Prems.
Fire	522,663	25·9	447,361	21·9
Personal accident	2,887	9·2	2,048	5·5
Employers' liability	31,189	13·2	33,668	14·6
Miscellaneous	59,669	8·6	78,134	9·9
Marine	18,559	3·6	7,378	1·3
Life	13,035		177,573	
Sinking fund	Nil		100,000	
Released from War contingencies reserve	70,000		Nil	
Transfer fees, &c.	10,272		11,618	
	728,274		857,780	
Less:—	£	£		
Taxes	72,510	106,654		
Expenses	47,114	56,642		
Widows' & orphans' fund	16,000	16,000		
Office premises	40,210	25,487		
Pension fund	Nil	175,834	250,000	454,783
Total net trading surplus		552,440		402,997

The dividend is maintained at the same rate as for 1927, namely, 18s. per share, and the cost last year was £507,937, compared with interest earnings of £338,074. Thus the Alliance is exceptional in this respect, that a substantial portion of the dividend is paid out of trading surplus, although the general strength of the company's position fully justified this course. It will be seen that practically the whole of the contributions to profit and loss account in respect of the quinquennial profits of the life and sinking fund departments have been appropriated partly for the existing widows' and orphans' fund, but more particularly for the purpose of inaugurating a staff pension fund. Hitherto it is understood that the practice of the company has been to include the cost of pensions amongst its expenses, but it is presumably intended to regularise the position by creating a proper pension fund for meeting all these charges. With regard to the life department, the year 1928, being the closing year of the quinquennium, witnessed a large increase in the amount of new business, the amount having risen from £2,465,190 to £2,992,678. The life fund of the current series now amounts to £14,221,000, but in addition to this there are three funds amounting in the aggregate to over £6 million belonging to closed funds of offices acquired by the Alliance in the past. A valuation has been made of the current series on a basis which is stated to be more stringent than formerly, and the results of this compared with the corresponding figures five years earlier, are set out below.

	1919-1923. £	1924-1928. £
Surplus earned during the quinquennium	1,336,884	1,884,218
Brought forward	183,481	272,476
	1,520,365	2,156,694
Allocations:—		
To bonuses to policyholders	1,077,420	1,598,161
To shareholders	170,469	177,573
To carried forward to next quinquennium	272,476	380,960
	1,520,365	2,156,694

The increased allocation to policyholders has permitted of a larger reversionary bonus amounting to 42s. per cent. compound per annum, compared with 34s. per cent. compound per annum five years ago, but it is clear from the figures that even this increasing rate is conservative.

Royal Exchange Assurance.—In the years 1926 and 1927 the losses in the marine department cost the corporation no less than £467,000. The 1928 report shows that the premium income has been curtailed, and that the fund is now in a comparatively strong position at over 125 per cent. of the premium income. There was a further loss in this department in 1928, but it is of small dimensions, viz., £16,000, and represents only the interest revenue left in the account. The life department report shows that this department continues to make satisfactory progress, the new assurances completed during the year having increased by £270,000 to £2,496,000. The average sum assured under the new policies written was £750, and this is an indication that the class of business transacted is satisfactory, particularly bearing in mind the fact that the figures are not swollen by large single premium policies. The trustee and executor department is evidently in a flourishing condition. The Royal Exchange was a pioneer in the transaction of trustee business, and the department was established some 25 years ago. It is stated that the total of capital in hand and under administration by that department, both in debenture and private trusts, now amounts to over £93,000,000. The total underwriting results for the last two years are set out below:—

	1927. Profit. £	% of Premiums. %	1928. Profit. £	% of Premiums. %
Fire	178,272	10·4	111,951	6·4
General Accident	28,061	2·7	34,758	3·0
Marine	− 170,981	−26·2	− 15,892	− 2·7
Trustee and Executor	12,178	...	15,121	...
Life	15,087	...	15,087	...
Annuity	8,248	...	8,248	...
Sinking fund	1,311	...	1,311	...
	£72,176	...	£170,584	...
Less items debited to profit and loss a/c	£70,916	...	£81,940	...
Total net trading surplus	£1,260	...	£88,644	...

The dividend has been maintained at 27 per cent. for the third year in succession, but the cost, owing to the issue of fresh capital to finance the purchase of the Motor Union, has increased from £172,000 to £184,000, but is still comfortably within the total interest earnings. The new issue of capital referred to above was made at a premium which produced for reserve the sum of £868,000. This amount has been applied to writing down the holdings of affiliated companies, which are now for the first time shown as a separate item in the accounts. The subsidiary companies of the Royal Exchange are:—The Car and General, the State, the Motor Union, and two small concerns, viz., the National Provincial and the Local Government Guarantee Society. It is interesting to calculate the total yield to the Royal Exchange last year on these investments, which stand in the balance sheet at £2,056,000. Assuming that the 1927 dividends of the two smallest societies are repeated in 1928, and allowing for the fact that the Motor Union has paid no dividend in 1928, the return to the Royal Exchange on its investments in subsidiary companies works out at 3.8 per cent. per annum.

Equitable Life Assurance.—The accounts for 1928 disclose a further large expansion in new life assurance business transacted, the amount having risen from £818,323 to £1,002,328. Two other specialised classes of business have, however, produced smaller totals last year than formerly, namely, the Sinking Fund account and the Annuity account. In 1927 new sinking fund policies were issued for the large total of £469,823, but last year the corresponding figure was only £110,652. As regards annuities, there were issued last year deferred and contingent annuities for amounts totalling £41,859, compared with more than double in the preceding year, namely £84,069. It is interesting to observe how quickly this branch of the Society's business has grown. According to the Board of Trade Returns, the amount of deferred and contingent annuities in force advanced from £37,660 per annum at the end of 1921 to £164,638 at the end of 1926. Thus the total existing at the end of 1926 has been very nearly doubled in the succeeding two years. It is understood that the Society has greatly developed this class of business recently, and has secured a large accession of policies in connection with various staff insurance schemes. The expenses of management considered as a percentage of the premium income worked out last year at 6.87 per cent., compared with 6.47 per cent. in 1927, these exceptionally low figures being due to the well-known policy of the Society of pay-no commission. The net rate of interest earned on the whole of the Society's funds, including reversions and the holding in subsidiary reversionary companies, which stand in the balance sheet at a figure of £1,462,000, equal to 21 per cent. of the total assets, was in 1928 £4 13s. per cent. net of income tax and in 1927 £4 9s. 4d. per cent. net of income tax.

Motor Union Insurance.—Following upon a year in which the results were far from favourable, it is pleasing to observe an all-round improvement in the 1928 report. Not only are the trading profits much better, but the balance sheet also has been re-cast and re-modelled. The greatest improvement has occurred, fortunately, in the company's most important department, namely, the motor and general department, where the premium income has risen from £1,495,000 to £1,631,000, and a profit of 2.4 per cent. of the premiums is shown, compared with a loss of 1.6 per cent. of the premiums. The experience in this department has fluctuated within very wide limits recently. The underwriting profits have worked out at 5.8 per cent. in 1925, 1.5 per cent. in 1926, a loss of 1.6 per cent. in 1927 and a profit last year of 2.4 per cent. The most unfavourable feature in 1927 was in the marine account, which required support to the extent of £154,000. On this occasion the premium income has been drastically reduced from £270,000 to only £65,000, and as nothing has been transferred to profit and loss account, the fund is now in a much stronger position. Detailed results of the last two years are set out below:—

	1927. Amount. £	% of Premiums. %	1928. Amount. £	% of Premiums. %
Fire	3,375	1·2	2,099	·8
Accident	2,334	6·3	5,031	13·1
Employers' liability	11,529	26·4	4,475	9·1
Motor & General	− 22,767	1·6	39,651	2·4
Marine	− 153,952	−56·9	...	...
Life	...	...	276	...
	− 159,481	...	51,532	...
Add sundry items	619	...	2,020	...
Total net trading surplus	− 158,862	...	53,552	...
Net interest earnings	36,494	...	42,496	...
Net increase in surplus assets	− 122,368	...	96,048	...

No dividend has been paid in either of the last two years. Before that a dividend of 50 per cent. had been paid, but this distribution, since it absorbed nearly twice the amount of interest earnings, and in view of unsatisfactory trading results, was scarcely justified. The share capital of the company is now held by the Royal Exchange. The balance sheet is presented in a much improved form, showing the life department separate from the general fund. The shares in associated companies which had hitherto been carried in the balance sheet at a figure much in excess of market value, have been written down from £600,000 to £476,000, practically the whole of the investment reserve fund being employed in the process.

United British Insurance.—Once again this company has produced a very poor report. On this occasion, out of five trading departments, four have yielded a loss in 1928, and the fifth, viz., the Marine Department, which produced a disastrous loss of £123,000 in 1927, has regis-

tered neither a profit nor a loss last year. The detailed underwriting results are set out below:—

	1927. Profit. £	1927. % of Prems.	1928. Profit. £	1928. % of Prems.
Fire	2,893	1·9	— 4,309	— 3·1
Accident	348	8·7	— 477	—11·4
Employers' liability	106	1·1	— 319	— 2·9
Motor and General	— 13,032	— 7·9	— 11,850	— 8·9
Marine	— 122,698	—51·3	Nil	
Life	Nil		32	
Loans written off and recovered	...		30,000	
	— 132,383		13,077	
Add items credited to profit and loss account	5,044		5,093	
Total net trading surplus	— 127,339		18,170	
Add net interest earnings	27,018		22,742	
Total amount available	— 100,321		40,912	
Less—Preference dividend	22,400		22,400	
Ordinary dividend	...		...	
Total net increase in surplus assets	— 122,721		18,512	

It will be remembered that, towards the close of last year, an announcement was made of an arrangement whereby a proportion of the ordinary and preference shares of the United British held by the Motor Union, were purchased by the General Reinsurance Corporation of New York. The purpose of this arrangement was stated to be the transaction of certain classes of insurance business in the United States and Canada in conjunction with this American Company. The 1928 report shows that, presumably as a consequence of this transaction, the Board and the Management have been largely reconstituted and that, in addition to the London Board, there is now an Advisory Board in New York to control the United States Branch. The directors state that since the close of the financial year, the whole of the company's holdings in associated companies, viz., the Motor Union and British Commonwealth, have been disposed of for cash at the figure at which they appear in the balance sheet, viz., £310,111. The name of the purchaser is not disclosed, but since the Motor Union is controlled by the Royal Exchange, it is not unnatural to assume that the Royal Exchange has acquired these shares.

Oversea Correspondence.

UNITED STATES.—MONETARY DEVELOPMENTS —INDUSTRIAL ACTIVITY—CORPORATE EARNINGS—MARKET OUTLOOK.

(FROM OUR CORRESPONDENT.)

NEW YORK, April 26.

WHILE a good deal of concern is felt in financial quarters over the Reparations problem, the sentiment of the public towards speculative markets continues to improve. Obviously people would like to buy shares again, and, in the face of a hardening tendency in the call money market, prices have moved forward in most groups. Recovery in fixed-interest bearing securities also has been noticeable. The call money market is operating at delicate balance and small withdrawals or accretions of funds make wide movements in rates. This week the interior took funds, partly in preparation for end-of-the-month settlements, and the share market again had to pay as high as 12 per cent. for its money. However, time money is easing up somewhat and the long-term outlook is less hazy than it was.

In spite of dear money the public is so impressed with reports of great industrial activity and high earnings that it is not easy to frighten it out of stocks. Although the steel industry usually reaches its peak of operations in late March or early in April, this year it is operating to the limit of its capacity at the end of April. Some falling off in new orders is visible, but only mechanical facilities and labour are holding output down. Not all industries are doing as well, but in view of the generally good barometric nature of the steel trade the increasingly wide uses of steel give assurance that at present our industrial pace is very fast.

Corporate earnings for the first quarter are running largely above those of a year ago, but the percentage of gain is not so great as it was last year compared with 1927. Several leading corporations in basic industries have not, in fact, done quite so well as they did last year. Steel, copper and oil company earnings are uniformly higher, but more irregularity is noticeable in the motor industry. Output of motor cars has risen, but the margin of profit appears to be falling. General Motors reports a drop in net income during the first three months of from $69.4 million last year to $61.9 million. The lower net income was largely due, however, to the charging to operations of the expense of producing an additional model.

United States Steel report will not be published until next week, but it is expected to show that the corporation earned between $5 and $6 a share on its stock. The next largest unit in the steel industry, the Bethlehem Steel Corporation, earned $4.05 a share in the first quarter, as against 94 cents a share in the same period of last year. Both the Steel Corporation and Bethlehem are operating at 100 per cent. capacity. Recently, United States Steel sold to its stockholders $142,000,000 of additional common stock, which, with treasury cash, will be used to retire some $277,000,000 of the corporation's 5 per cent. bonds. Meanwhile, tax refunds covering the war period secured from the Treasury Department, amounting to $26,000,000, have been received. This money has been spent, or is being spent, on improvement to plants and on some additions. Bethelem Steel has just announced an offer of 33⅓ per cent. additional common stock, which shareholders will get at $85 a share. The proceeds, instead of being used to retire bonded debt, will be devoted entirely to plant expansion and improvement. These operations suggest that the fears of a business slump brought on by high money rates, which discourage the raising of capital for expansion and improvement purposes, are perhaps somewhat exaggerated. New capital issues are, nevertheless, growing smaller if anything. This week's public offerings of both bonds and shares fell to around $40,000,000, as compared with $95,000,000 last week. New enterprises rather than existing concerns are feeling the blight of tight money.

Hope of substantial relief cannot, of course, be entertained so long as the share market remains at high levels or advances, and so long as business is running along at such high speed. The modest imports of gold which have come from Germany may have helped slightly, but they have now apparently been cut off. After four weeks of declining brokers' loans, this week's report shows a rise of $67,000,000. This leaves the total reduction since the share market broke so sharply a month ago at only $301,000,000. Since February 6th, when the first Federal Reserve Board warning was issued, there has been a reduction in loans of only $167,000,000. In the same period the reduction in loans on securities of the reporting member banks for the system, estimated to include about 40 per cent. of the banking resources of the country, has amounted to $200,000,000. Commercial loans of the same banks, according to the latest report, April 17th, were up $376,000,000, owing to seasonal credit demands. Member banks also reduced their investments $132,000,000, but the deflationary tactics of the Reserve Banks, which sold $320,000,000 of Government securities and bankers' bills, have made it impossible for the member banks to cut down their borrowings, which are up about $100,000,000. Even this failure to reduce member bank dependence on the Federal Reserve might be regarded as satisfactory from a Reserve Board standpoint if at the same time speculation on the Stock Exchange had been definitely stopped. Prices, however, are firming up again with rising volume of trading and average prices are now within three or four points of the record high level.

The rather novel suggestion of Chairman Charles E. Mitchell, of the National City Bank, that the way to bring about liquidation in the share market was to abolish the income tax on capital gains made no very great stir. It was scarcely expected that Congress would care for the idea, which the demagogues at least would hail as a scheme whereby rich men could sell out and escape a tax on their profits. The law provides that profits on securities held for two years or longer fall under capital gains and are subject to a tax averaging about half the normal and surtax charges on yearly profits. Mr Mitchell argued that large amounts of stocks are held by those who would sell were it not that they shrink from paying the tax. Most people in Wall Street feel, however, that the effect of tax abolition on capital gains, which in any event is quite unlikely for some time to come, would make no appreciable difference to the market.

Farm-relief legislation is making slow progress. Hoover has taken a firm stand again the unsound principle of the "debenture" plan proponents, and it is doubtful if Congress will be able to override his views. At any rate, the wheat market has given up all hopes of any measure which tend to lift prices. Farmers generally have perhaps never taken seriously the promises of the politicians, but traders on the wheat exchanges apparently expected something. Wheat prices have declined until now they are the lowest for this season in five years.

FRANCE.—REPARATIONS—THE YOUNG PLAN —COAL INDUSTRY.

(FROM OUR CORRESPONDENT.)

PARIS, May 8.

DR SCHACHT'S latest proposals, as modified by Mr Owen Young and laid before the Experts' Committee yesterday, have aroused intense interest here, but it is obvious that the French recognise that there is no need for them to express any considered opinion on the new situation until Great Britain, which is much more seriously affected by the changed factors, makes its view officially known. Little doubt is entertained as to what the British reply will be. Moreover, all the evidence available this evening suggests that the new figures are little more acceptable to the French than those of Dr Schacht's original offer. In particular, it is feared that the conditions which the Germans will attach to their new offer will prove to be unsatisfactory. Until late this afternoon Dr Schacht had not communicated to his colleagues the text of his reservations, but some idea of what they will be can be gathered from reading between the lines of the known factors.

On Monday night Mr Owen Young laid before his colleagues the outline of fresh proposals which it was understood he had, although not without considerable difficulty, induced the German delegate to accept in principle, subject to reservations, the nature of which had not, down till late this afternoon, become known to the experts as a whole. What is known is that, under American pressure, Dr Schacht is now willing to increase his offer to 37 annuities, rising from 1,750,000,000 gold marks to 2,360,000,000 marks (giving an average of 2,050 millions a year), of which 650,000,000 marks a year should be free of transfer clause conditions, and (as before) 20 subsequent annuities of 1,700 millions and one of 900 millions. The first series of 37 annuities, it is proposed, shall cover the inter-allied debt payments, plus a balance for their respective war losses, the other 20 annuities being destined solely to meet the balance of inter-allied debts still outstanding as from the 38th year.

The effect of the German-American offer is to reduce the actual present value of the German payments from the 39,500 million marks demanded by the Allied experts to 36,500 millions; in other words, France calculates that as the inter-allied debt annuities may be assumed to remain unaltered, unless the Washington Government thinks fit to reduce its demands, that part of the proposed German payments which would be devoted to compensating the Allied Powers for their actual war losses, would be £150,000,000 (in round figures) less than they have agreed as being the lowest they can accept. This means, so far as this country is concerned, that whereas the French have already reduced their demands for reparations to asking Germany to pay the cost of rebuilding one out of every two houses destroyed as the result of the war, the Germans offer to pay the cost of reconstructing two houses out of every five destroyed.

Even so, on the bulk figures, the new offer which Mr Owen Young appears to have extracted from his German colleagues marks an enormous advance on their previous proposals. On April 17 they offered the Allies 26,000,000,000 marks in full settlement; by May 6 they had been induced to work this up to 36,500,000,000 marks. Just what this offer is worth—quite apart from the fatal fact, from the British point of view, that the new proposals for the distribution of the payments among the Allied Powers discriminate seriously against Great Britain—depends largely on Dr Schacht's as yet undisclosed reservations.

Under the agreement arrived at during the inter-allied financial conference in Paris in 1925 the French share of the annuities payable under the Dawes Plan, included, in addition to sufficient to cover this country's foreign war debt, a sum of 506,000,000 gold marks (or over 3,000,000,000 frs.), which would ensure the extinction in 37 years, of 50,000,000,000 frs. of the French internal debt. Under the present American proposals the money available for internal debt extinction would appear to render it possible to wipe out only 43,500,000,000 frs. of debt. It is stated here that Mr Young is considering certain measures (such as the possibility of taking a supplementary amount from the money earmarked for English and American debt payments) to keep the total available for French internal debt extinction up to the figure fixed in 1925. The new proposals, it is clear, are by no means final ones, particularly in so far as those for the distribution of the annual payments are concerned, and they will be ready for serious discussion only after to-morrow, when it is expected the text of Dr Schacht's reservations will be made known to the rest of the experts.

The British thesis that the sole duty of the experts is to determine the amount of the German debt, and that they have no mandate to discuss and revise the distribution of the annuity payments between the creditor powers, is criticised here as being in contradiction with the attitude hitherto adopted by the British experts on the committee. The memorandum of April 17, signed by the British, French, Italian and Belgian experts, it is argued, was based on the principle laid down at Geneva that the experts should prepare "a complete and definite settlement of the reparations problem," which would cover the determination of the amount to be received by each creditor power. This, the *Temps* claims, in what appears to be a semi-official note published this evening, was recognised by the British delegates in the memorandum of April 17, in which it was agreed to increase slightly the 10 per cent. share attributed to Italy by the Spa Conference, and to lower slightly the 23 per cent. allotted by the same conference to Great Britain.

Coal production figures for March, which are issued this week, indicate a total output of 4,668,722 tons for 26 working days, as against 4,188,468 tons in February (24 days). The average daily extraction in March was 176,666 tons (with a total working force of 296,225), as against 174,152 tons in January (with 297,058 employees), 170,863 tons in January, 1928 (with 316,130), 185,179 tons in January, 1927 (with 333,151) and 136,147

LEGAL & GENERAL
ASSURANCE SOCIETY LIMITED
Established 1836.
SINKING FUND POLICIES
Head Office: 10, FLEET STREET, LONDON, E.C.4.
near Temple Bar.
Assets Exceed - - £20,750,000
General Manager: W. A. WORKMAN, F.I.A.

in 1913 (with 203,208), Alsace-Lorraine pits included. The Nord and Pas de Calais pits in March produced a daily average of 112,140 tons, or 20,843 tons more than in 1913. The output of metallurgical coke by the colliery plants in March exceeded 400,000 tons for the first time in history, the exact total being 411,328 tons, or 155,000 tons more than in 1913. As was expected, the recent increase in wages has been quickly followed in most parts of the country by a rise in selling prices of all categories of the product (industrial coal, coke and briquettes) except domestic fuel, the rise varying between 3 frs. and 5 frs. per ton, according to category. The only exceptions to this general rule are in districts where French combustibles have to compete with English coal, in which case prices are unchanged; and in those regions where Belgian competition has to be met, and where French coal is sufficiently superior to permit of an average rise of from 2 frs. to 3 frs. a ton. Under a recent new law miners' old age pensions have been raised from 3,500 frs. a year to 5,000 frs. To meet the extra charge, coalowners' and miners' contributions have alike been increased by 1 per cent., and the State's quota has been increased from 1 per cent. to 4½ per cent., the Budget charge thus incurred being increased from 30,000,000 frs. a year to 135,000,000 frs. This extra money is to be obtained from taxpayers by an increase in the tax on production or imports of coal.

GERMANY.—REICHSBANK—MONEY AND CAPITAL—NEW FEDERAL LOAN—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, May 7.

THE advance to 7½ per cent. of the Reichsbank's discount rate on April 25th had no immediate effect upon the exchange situation. The drain upon the Bank's reserves continued up to the end of the month, and, though no later return has appeared, continued, it seems, into the new month. This week the exchange market is quieter. The week began with the official dollar rate at 4,217, as against a maximum since the crisis began of 4,218, and to-day the rate dropped sharply to 2.145. Last week sales of marks for no other motive than fear took place. This year, up to the end of April, the Reichsbank has lost 894 million marks from its gold and legal-cover exchange reserves, and a further 325 million marks, according to report, from its free exchange holdings. The gold reserve has fallen heavily. At the end of 1928 it was 2,623 million marks; at the end of April this year 1,891 million marks. The loss of gold this year was equivalent to almost the whole accumulation (864 million marks) of 1928. The ratio of reserves to circulation has heavily fallen. Circulation at the end of January, immediately before the Bank's intervention in support of the mark began, was 4,454 million marks; at the end of April 4,631 million marks; the reserve ratio (to the reichsmark issue only) declined from 64.64 to 43 per cent. and nearly touched the legal minimum of 40 per cent. In the first weeks of May, unless the drain on the reserves continues, the ratio will probably rise as a result of the decline in circulation which normally takes place in the first three weeks of the month. The Reichsbank's position gives no cause for anxiety. The fear of a new inflation, which seems to have misled many mark-sellers, is unfounded. Under the provisions of the Bank law the normal effect of any drain threatening the 40 per cent. reserve margin would be to reduce the circulation; so that not inflation but a deflation crisis, with undesirable reactions on business activity, is the worst to be feared. Apparently a limitation upon the absolute volume of re-discount credits, such as was tried after the currency reform, is not intended; but already the Bank has made a beginning by requiring its branches to submit bills presented for re-discount to severer scrutiny, to resist any attempts to raise mark credits for the purpose of buying exchange, and to discourage or reject bills with a long time to run. There is no confirmation of New York reports of pending international action "for support of the reichsmark." The suggestion is made that the Reichsbank might go below the 40 per cent. cover limit.. Under Article 29 of the Bank Law of August, 1924, this may be authorised by resolution of the Bank General Council on the proposal of the managing board. In such case, the Bank has to pay to the Republic in respect of the deficit in the reserves a note tax, which begins at 3 per cent. and is progressive. The discount rate must not be below 5 per cent., and must be raised by at least one-third of the percentage of the tax. It is hoped that the Bank will not take any such step. Although there is no prospect of any considerable foreign loans coming in, it is believed that the situation will improve. The passivity of the foreign-trade balance, one cause of the exchange demand, is declining. The import surplus in the first quarter (Reparation deliveries in kind omitted) was 470 million marks as against 1,007 million marks in the same quarter of 1928. A settlement in Paris, whether through its moral effect upon panicky currency speculators or through reduction of the immediate annuities and transfers, would certainly have a good effect. The past month's exchange crisis seems, however, to prove that no transfer protection system can ensure against a serious attack upon the Reichsbank's reserves. In April the Reparation cash transfers were only 87 million marks, and the total transfers in foreign currencies, including services of the 1924 loan, were only 131 million marks. As the Reichsbank in April lost some 800 million marks of gold and exchange, the transfers were only a minor factor in the drain. Had the Transfer Committee, out of concern for the mark's stability, abstained from transferring the 131 million marks, the demand for exchange for non-Reparation payments might easily have increased by the same 131 million marks or by more. For this would have been needed only a slight intensification of the international trade, capital, and money conditions witnessed in the past few weeks.

The private discount rate was raised on May 3rd to 7½ per cent., which is also the official rate. Month loans have been hard to obtain. The day loan demand has been fully met, at however the very high rate for this part of the month, of 10-11 per cent. Fixed-interest securities are under heavy pressure. In April the average yield at Bourse prices of home loans and bonds of nominal interest varying from 4½ to 10 per cent. rose from 7.9 to 8.5 per cent. This high yield has not been touched for about three years. For well-secured first mortgage loans up to 10½ per cent. is being paid, and for second mortgage loans 13½ per cent. The Government nevertheless announces the impending flotation of a home loan of 500 million marks. The last federal loan, also of 500 million marks, 5 per cent., was floated in early 1927. Although the interest rate was later raised to 6 per cent., and although the Government has invested 100 million marks in intervention purchases, the Bourse quotation cannot be kept above 87½. The issue price of the new loan is unknown. The interest rate, it is believed, will be 7 per cent. The loan will be free from property, income and (to original subscribers) inheritance tax. The effect will be to attract wealthy subscribers, because all the three taxes are progressive—income tax to 40 per cent. The effective interest rate received by a wealthy subscriber would be up to 11-12 per cent. For the Republic, owing to the loss of taxes, the loan will be a very unprofitable transaction. Already many millions of marks are lost annually through exemption of private foreign loans from taxation on the mere ground that private enterprise is in the public interest.

The Cabinet announces an impending reform of the Unemployment Insurance system. The immediate aim is to check certain costly abuses. A general reform will later be put through. The Food Minister is about to submit a Tariff measure. His not very clear statement to the Reichstag indicates that Protection is to be increased. The business situation shows no change. The Deutsche Bank expresses the view that the trade reaction is at an end, but adds that this does not mean that a recovery will soon begin. Unemployed persons drawing insurance pay on April 15th numbered 1,480,000, against 1,984,000 on March 31st. The wholesale-prices index number has again dropped, to 136.1 on May 1st. The cost-of-living index number for April is 153.6, as against 156.5 in March. Bankruptcies in April numbered 906 against 940 in March.

Coal production on the Ruhr is well maintained at around the highest volume of this year, and no shifts are being passed. The home iron and steel market is a little more active. The Stahlwerksverband and its subordinate syndicates will meet on May 16th in order to formulate wishes in regard to the renewal of the International Steel Cartel. It is probable that Germany will demand that her quota shall be re-fixed on basis of her actual (greatly increased) production in the last two years and that the limitation of her export (at present to 330,000 tons a month) shall be removed. The prolongation of the expiring home syndicates is, however, not yet assured. The home Tubes and A-Products syndicates are in danger; and unless these are renewed the Western Steel Trust (Verein. Stahlwerke) will oppose all syndicalisation. In this case Germany could not remain in the International Cartel. The Vulkan Shipyard, of Hamburg, is being scrapped, as part of the Deschimag Co.'s policy of rationalisation and reduction of building capacity. Business in the chemicals industry is reported good, with unemployment considerably lower than the average for all the industries which turn out means of production. The Potash Syndicate's home and foreign sales in the first four months of this year totalled (in pure potash) 654,831 metric tons as against 639,382 tons in the same months of 1928. Russian competition in matches has increased. Figures given in a trade journal indicate that at present about one-fifth of all matches sold in Germany are of Russian manufacture. The present German duty of 50 marks per double-centner, which is about 25 per cent. *ad valorem* is ineffective.

ITALY.—STABILISATION—STOCK EXCHANGE—COMPANY PROFITS—UNEMPLOYMENT—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

TURIN, May 6.

A NEWSPAPER statement that the restriction policy shall be unflinchingly pursued at any cost, and the subsequent more authoritative assurance given by the King in his speech, at the opening of the new Parliament, that the "rate of stabilisation of the lira will be strictly maintained, and that the paper issues will be subject to a drastic and systematic restriction," eliminated rumours which had been current in some industrial and financial circles that the rate of stabilisation would be raised above 92.70. The rumour was absurd; as nothing would be more dangerous to industry and to saving than the fear that the monetary basis of all contracts is not stable. I explained in my last letter that the reduction of issues and of reserves going on in Italy at present is natural and perfectly in accordance with orthodox rules. But some people imagined that the reduction of gold bills reserves meant a net loss for the Bank of Italy and made her task of maintaining the rate of stabilisation more and more difficult. The task would be difficult only if the note issues did not decrease at about the same rate as the reserves; whereas, if both decrease, the process is bound to restore the balance of international payments and put an end to the export of gold bills.

The Stock Exchange, however, took the short view of the matter, and, forgetting the distant and beneficial effects of the policy of joint issues and reserves restriction, looked exclusively at the immediate one, i.e., shortness of money in the Bourses, and sold heavily. The general index number of shares which was, according to the Milan Economy Council, 90.21 at February 23rd, weakened to 87.10 at March 29th, and went down to 82.52 at April 20th.

Bank of Italy shares, which were quoted 2,215 at February 23rd, are down to 1,885 at May 3rd; Banca Commerciale Italiana went down between the same date from 1,462 to 1,371, Snia Viscosa from 111 to 100, Soie de Châtillon from 232 to 213, Montecatini (fertilisers) from 282 to 251, Edison Electric Co. from 950 to 780, Real Estate of Rome (Beni Stabili) from 757 to 638, and Fiat from 619 to 533, after having fallen below the 500 level. The end of April settlement proved somewhat difficult, owing to high differences to be paid by bulls; but no trouble ensued. Markets are now better, because people are beginning to think that stabilisation may be costly at first, but must end in assuring a more stable life to agriculture and industry and more lasting profits even to Stock Exchange operators.

The Joint Stock Companies' Association has compiled, and the Bulletin of the Central Statistical Institute, publishes for the first time a collection of very interesting statistics on the profits of the joint-stock companies in Italy. The number of companies accounted for is 237, and the years from 1925 to 1928 (figures in millions of lire):—

	1925.	1926.	1927.	1928.
Capital	6,779·7	7,500·9	7,995·9	8,510·9
Reserves	1,588·2	2,061·1	2,375·1	2,175·2
Total	8,367·9	9,562·0	10,371·0	10,686·1
Profits	1,019·2	966·8	931·7	1,005·1
Losses	— 2·5	— 7·6	— 58·4	—12·5
Net profits	1,016·7	989·2	873·3	992·6
Percentage of capital	14·99	13·18	10·92	11·66
Percentage of capital and reserves	12·15	10·34	8·42	9·28
Dividends distributed	667·0	784·4	692·9	750·0
Percentage of capital	9·88	10·45	8·66	8·81
Percentage of capital and reserves	7·97	8·20	6·68	7·01

The worst year was 1927, owing to the stabilisation crisis; but, even then, the total losses were only 6.27 per cent. of the profits. The biggest losses in that year fell on the engineering group, with 40.3 million lire out of the total 58.4, and with only 26.4 millions profit for the companies which closed the accounts with a balance on the right side. The next in point of losses was the iron and steel industry, with 8.5 million lire losses, against 11.0 profits; the third was the export and trading companies, with 3.3 millions losses and 3.8 profits. In 1928 the tide was apparently already subsiding. At the top of the list of absolute losses are the iron and steel companies, with 6.5 million lire out of a total loss of 12.5; engineering companies lost only 0.6; export and trading companies 2.7, against 2.6 profits. Agricultural and food companies fared somewhat worse, with 1.7 losses against 1.2 in 1927. Not all the difference between net profits and dividends distributed went to reserves; as various allocations to directors' fees, pension funds for employees, &c., are to be deducted. It would be useful to have the figure of reserves distinguished, but perhaps it would not be as illuminating as in the *Economist's* statistics for Great Britain, because the general rule is to allocate to reserve only the legal proportion fixed in the articles of association. Hidden reserves are usually bigger than the legal one; and they are drawn upon in lean years to maintain dividends. It is possible, and from many points of view it would have been useful, that in 1927 and 1928 hidden reserves had been utilised to some, perhaps not important, degree, in equalising dividends.

The number of unemployed was 461,900 at the end of January, 1929, 489,300 at the end of February, 293,300 at the end of March, against 499,200, 413,400 and 411,800 respectively at the end of the corresponding months of past year. Imports in the first quarter of 1929 were 5,619.3 million lire, against 5,081.1 in the corresponding period of 1928; while exports totalled 3,282.2 against 3,418.5 millions. The adverse balance increased thus from 1,662.6 to 2,337.1 million lire. The increase in the deficit is due not so much to decrease of exports as to increase of imports; and it may be remarked that in the month of March exports, too, increased a little from 1,169 to 1,184.5 million lire. Big increases of imports are signalled in raw textiles, minerals, metals, coal, rubber; so that it can be hoped that exports will also increase in due time.

RUSSIA.—AGRICULTURE—CREDIT—FIVE YEARS' PLAN—INDUSTRY—FOREIGN TRADE.

(FROM OUR CORRESPONDENT.)

THE long latent political crisis in Russia has recently been aggravated. It is reported that the President of the Council of Commissaries, Rykoff, the editor of the *Pravda* and chief theorist of Bolshevism Bucharin, and the President of the Council of Trade Unions, Tomsky, this month offered to resign. New negotiations between M. Stalin and the "Right Opposition" are believed to have some prospect of success. The Moscow Communist organisation has formally demanded the expulsion from their political offices of the three officials mentioned. The agitation of the big farmers ("kulaks") against the grain-collection system is increasing, and in West Siberia has taken organised and violent forms. Tests made with the winter crops have, according to official report, shown satisfactory conditions, but the area sown is 3 per cent. less than a year ago. The food situation has grown worse. "The regulation of consumption of bread," states an official report, "is extending." In many districts, in particular in West Siberia, sugar, butter, and soap cards have been introduced. Whereas the gross production of agriculture increased 5.4 per cent. in the crops year 1926-27, it fell in 1927-28 by 1 per cent. This year a new increase of 4 per cent. is expected, but the increase will be due to larger production of technical crops.

The currency and credit situation is not promising. The plan for contraction of circulation, which is normal in the first quarter of the calendar year, has not been fulfilled. According to the Plan, circulation was to decline by 150 million roubles; in fact, it declined by 31 million roubles. As circulation must increase in the other three-quarters of the year, this result is unsatisfactory; and the effect, according to M. Piatkoff, of the State Bank, is that the planned supplementary credits to industry and trade in the new quarter will have to be reduced. A chief ground for the unsatisfactory circulation development is the increase of grain prices by 20 per cent. According to the new Five-Years' Plan, circulation will increase by 1932-33 to 3¼ milliard roubles. Retail prices after rising 2.2 per cent. in February, rose again by 3.1 per cent. in March. Officially this rise is attributed to private trading. The agricultural private index (1 in 1913) is put at 3.13, as against 1.92 for "Socialised" trading.

Revenue is coming in normally. The Five-Years' Plan ("maximum" version of the Gosplan) provides for long-term loans totalling 6,000 million roubles, out of which, however, 2,750 million roubles will go on interest, amortisation, and premiums. The Finance Commissariat complains that a very great part of loans (which are often subscribed to under official pressure) is immediately sold by the subscribers. The Five-Years' Plan of economic development has appeared in a "maximal" and in an "initial" version. The maximal version assumes that crops will be normal and that better relations with other countries will bring in long-term loans; the initial version assumes that there will be some serious crop failures and no improvement in relations with international finance. The five years' term is to witness "reconstruction" of industry and trade, whereas in the past five years "restoration" was, it is claimed, accomplished. The underlying principle, as laid down by the Fifteenth Congress of the Communist Party is "industrialisation and strengthening of the Socialised elements." By 1932-33, the Socialised elements in Industry, Trade, and Agriculture will embrace 63.6 per cent. of capital, as against 51.4 per cent. in 1927-28. Socialisation is to be furthered not only by expansion of State industry but also by extension of "Soviet" and "collective" farming. Elaborate measures of mechanisation of farming and of land amelioration are laid down. According to the maximal version 20,300 km. of new railways are to be built. Production of coal is to rise from 35 to 75 million tons; oil from 12 to 22 million tons; pig-iron from under 4 to 10 million tons (maximal version); 64.5 milliard roubles are to be invested (as against 25.1 milliard roubles in the "restoration" five years 1923-24 to 1927-28), whereof 15.6 milliard roubles in industry, 8.1 milliard roubles in electrification, 9.6 milliard roubles in transport, and 24 millard roubles in agriculture; and the total capital value is to rise in the five years from 70,012 million roubles to (maximal version) 128,621 million roubles. If the optimistic expectations upon which the maximal plan is based are not realised, the plan can be carried out in six years instead of in five. The financing of this plan has not yet been worked out in detail, but a report to the Congress of Planning Organs, which puts the total new capital investment, including some 2,000 million roubles for social enterprises at 76 milliard roubles, assumes that Budgets will provide 41 milliard roubles (of which 27 milliard roubles from the Union Budget), that about 6 milliard roubles will be raised by credit, 8 milliards from state insurance, and 17 milliards from the resources (retained profits) of industrial, commercial, and agricultural concerns.

The "rationalisation" of industry is being much advertised, but little progress has been made. The iron and steel production programme is not being fulfilled. In the first five months of the current business year pig-iron production was 1,521,400 metric tons, steel 1,889,100 tons, and rolled goods 1,526,300 tons, increases of 14.6, 9.9 and 8.6 per cent. above the figures of the corresponding months of the last business year. The programme of collection of wood for home use and export will this year, it is affirmed, be realised. The Workmen's and Peasants' Inspectorate has completed a minute investigation into the wood industries, and has decided that this branch lags far behind the general industrial development. Although in 1927-28 export was only 60 per cent. of the pre-war total, no more than 70 per cent. of the home construction demand can be supplied. The proportional share of wood in all exports is, however, increasing, and was 12.2 per cent. in 1927-28, as against 8.6 per cent. in 1925-26. The Baku (Azneft) Trust's oil output in the half-year October-March was 4,050,074 tons, which is a little less than the programme. Exports in this period are to total 6,972 million roubles, imports 6,180 million roubles. By 1932-33 export is to reach 2,047.5 million roubles. Export is to be made less dependent upon agriculture. Import in the last year of the term is to rise to 1,704.7 million roubles. With certain exceptions import of raw materials is to decline in consequence of increased home production.

In the six months October-March the trade balance improved as compared with the same period of the last business year. Export (European frontiers only) was 340.8 million roubles, as against 300.6 million roubles; import 310.5 million roubles, against 352.4 million roubles. Adding the four months of trade over Asiatic frontiers for which statistics have appeared, export was 391.6 million roubles; import 357.8 million roubles; the active balance being 33.8 million roubles, as against a passive balance of 56.3 million roubles in the same months of the preceding business year. There has been some success in replacing grain exports with other goods. Exports other than grain increased by 24 per cent., and exports of goods classified as "industrial" increased by 48.9 per cent. Import of goods for the equipment of industry show a heavy decline. The local "export councils," created for collection and preparation of goods for abroad, are not working well; the Council of Labour and Defence's decision that this work should be forced has been ignored. Many of the councils, complains *Ekonomitcheskaya Zhizn*, "exist only on paper."

AUSTRALIA.—GOVERNMENT RAILWAYS—PUBLIC FINANCE—FALLING CUSTOMS REVENUE—DRIED FRUIT.

(FROM OUR CORRESPONDENT.)

MELBOURNE, April 4.

THE operations of the Government railways in Australia and New Zealand during the 1927-28 financial year, taken in the aggregate, show the effects of the falling off in the Australian wheat harvest in that season, a slight decline in gross revenue being accompanied by increases in working expenses and interest payable, with the result that the net deficit to be met out of taxation amounted to £6,181,509, against £4,875,775 for 1926-27. A comparison of the principal aggregates for Australia and New Zealand for the last three financial years is as follows:—

	1925–26.	1926–27.	1927–28.
	£	£	£
Gross revenue	53,368,621	56,290,533	55,922,128
Working expenses	41,874,938	44,654,359	45,100,386
Net earnings	11,493,683	11,636,174	10,821,742
Interest	15,673,329	16,511,949	17,003,251
Deficit	4,179,646	4,875,775	6,181,509
Capital	342,070,113	359,216,289	368,965,581
Average miles operated	28,264	28,597	28,894

In these figures the gross revenue is exclusive of Treasury subsidies in aid of railway revenue in Victoria and New Zealand. While the gross revenue for 1927-28 shows a decrease of £368,405, the wheat traffic alone showed a net reduction of approximately £600,000 (after allowing for the increase in Western Australia). That expenses continued to increase is partly due to increased rates of wages under awards which the Railway Departments cannot control.

A comparison of the aggregates for Australia and New Zealand for 1927-28, as shown above, with those for 1913-14, shows that during the interval of fourteen years gross revenue increased by £29,991,149 and working expenses by £27,272,998, leaving an increase of £2,718,151 in the net earnings, before meeting interest. As interest is larger by £9,214,062, the final result for 1927-28 is worse than that for 1913-14 by £6,495,911. In 1913-14 the net final result (setting deficits in a few cases against surpluses in other instances) was a surplus of £314,402 for Australia and New Zealand together.

Public finances are receiving rather more attention than usual owing to the manner in which the Customs revenue is flagging. The Commonwealth Budget estimate for 1928-29 was based on the assumption that imports would increase after the decline during 1927-28, but this has not happened, and the revenue from Customs and Excise together for the nine months ended March 31st, £31,151,955, shows a decrease of £1,231,993, as compared with the corresponding period in 1927-28, leaving little or no prospect of the estimate for the twelve months to June 30th being realised. Under these circumstances the feeling in business circles is that closer control should be exercised over expenditure in order to avoid additional direct taxation. Large imports and the consequent expansion of the Customs revenue were the principal reasons for buoyancy in Commonwealth finance a few years ago, but it is now experiencing the reaction, the effect of which falls upon the Commonwealth and not upon the States.

The weather lately has taken a decidedly favourable turn, with rainfall in the Eastern States well suited to wool and wheat growers and dairy farmers. The latest news with regard to the Queensland rainfall of the last few days describes it as the best since 1921. In the wheat-growing States it is hoped that a large area will be placed under crop for the 1929-30 season. In the dairying districts the immediate effect will be to maintain the autumn butter production at a good level for this period of the year.

The Australian dried fruit production for the season is officially estimated at 64,000 tons, of which 51,900 tons will be available for export after providing for local consumption. The exportable quantity includes 10,700 tons currants, 36,100 tons sultanas, and 5,100 tons lexias.

Books and Publications.

THE HISTORY OF BRITISH BANKING.*

THE literature of Political Economy since the war is rich in texts which are of first-class importance for the study of monetary theory, but it is doubtful whether there has yet been published anything which is likely to be so illuminating to the interested reader, and so indispensable to teachers of Economics, as the work which now lies before us. Professor Gregory's "Select Statutes, Documents and Reports relating to British Banking, 1832-1928," is a work which is likely to be for the student of British banking what Stubbs' Charters are for the general historian. It is the first time an attempt has been made to make generally available the materials necessary for a first-hand knowledge of the causes which have made British banking what it is to-day, and Professor Gregory has done the work so well that it is unlikely that it will be necessary to do it again. As its title implies, the material may be grouped under three different headings. First come the main Acts of Parliament which have influenced the development of the British credit system since 1833. Secondly come a series of carefully chosen extracts from evidence given before the various Government inquiries which from time to time have investigated British banking conditions. Lastly come reports from the *Times* and the *Economist* descriptive of the main financial crises of the post-1844 period. The various documents are classified according to subject matter, and then arranged chronologically, the whole being bound together by an elegant and scholarly introduction by the Editor. The only complaint we have against this admirable work is that it is too short. We could have done with more of Lord Overstone. We are not glutted with Vincent Stuckey.

Two reflections are uppermost as we read these fascinating volumes. The first is that progress has been made so far as banking structure is concerned. This, of course, is common knowledge. As one reads these documents it is no less obvious as regards banking theory. The men who laid the foundations of banking theory in this country were great men, but, in some things at least, we have gone beyond them. Monetary science has not stood completely still. This is nowhere more patent than in those departments of theory which involve that obscure and difficult conception, demand for money. As we read the old controversies on this matter, it becomes clear that, in the more complicated constructions of our own day, a reconciling principle has been discovered, which incorporates the core of truth in the contentions of each party. Confront Lord Overstone and the more reasonable of his antagonists with the Marshallian expression for demand for money, with its clear distinction between changes in the number of units demanded at a given price level, and changes in the amount demanded as the price level changes, and much of the occasion for their differences on matters of policy ceases. Here, at any rate, an advance may be registered.

And yet—and this is our second reflection—how much there remains to do. To what a great extent do our present controversies merely repeat in new terms and phrases the controversies of the past. How little do we profit by what has gone before us. It is here that the value of works such as the collection we are discussing becomes most evident. In the past monetary theory has suffered much from its unhistorical character. There has been too little comparison of different doctrines. The child of practical requirements, it has grown up largely in the form of a series of *ad hoc* contributions hastily adapted to particular emergencies, without regard either to the lessons of the past or the continuity of termin ology. In a word, monetary theory is still in much th same state of confusion as was general economic theor before the critical researches of Dr Cannan and others and one of the chief needs of to-day, if progress is to b made and unnecessary dispute avoided, is a searchin collation of the controversies of the past with a view t discovering what is of permanent value and what merely transitory significance in the tradition whic springs from them. In this collection of documents, in his introduction to the new edition of Poole and Ne march, Dr Gregory has made a notable contribution this work of elucidation. May we venture to hope th this contribution will be yet further extended?

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

Principles of Public Finance. By Hugh Dalton. Fifth edition. (London) George Routledge and Sons, Ltd., 68-74 Carter Lane. 5s. net.

The improvements in this edition include the addition of two new chapters on "The Conversion of Public Debts" and "Inter-governmental Debts" respectively, and the provision of an index.

Fixation of Wages in Australia. By George Anderson. (London) Macmillan and Co., St. Martin's Street. 21s. net.

The experience of Australia in state wage regulation is of the greatest interest to the rest of the world, and this very well-documented volume makes it accessible in considerable detail. Part I. deals with the constitution and powers of industrial tribunals; Part II. with the fixation of wages. There are tables of cases and statutes and an excellent index.

Dreiser Looks at Russia. By Theodore Dreiser. (London) Constable, 10-12 Orange Street. 5s. net.

Theodore Dreiser's very extensive travels in Russia were made at the request of the Soviet Government, but he has recorded his disapproval, as well as his approval, with apparent freedom, and the result is a remarkably interesting account of his impressions.

Les Effets Economiques et Sociaux de la Guerre en Grèce. By André Andréades. (London) Oxford University Press, Warwick Square. 8s. 6d. net.

This volume belongs to the Greek series of the Carnegie Endowment Publications. The author, with the collaboration of five other Greek experts, has produced a comprehensive survey of the effects of the war on every aspect of Greek social and economic life.

The Spirit of Conservatism. By Arthur Bryant. (London) Methuen and Co., Limited, 36 Essex Street. 2s. 6d. net.

In the snowstorm of ephemeral expositions of party policy which precedes the General Election, this more serious, though frankly *ex parte*, examination of the historic ideals of conservatism is a welcome change.

Can Lloyd George Do It? By J. M. Keynes and H. D. Henderson. (London) The Nation and Athenæum, 38 Great James Street, Holborn. 6d.

An examination and defence of Mr Lloyd George's pledge.

Heather, Hay, Houses, Heath. By the Author of "Garden First in Land Development." (Bournemouth) A. Sutton and Co., Limited. 2s.

Contains a chapter on chemical manures by Dr. Bernard Dyer.

Guide Formulaire des Services de la Caisse-Contrôle et des Lettres de Crédit. By Charles Penglaou et Stéphane Gagnol. (Paris) Les Presses Universitaires de France, 49 Boulevard Saint-Michel.

A French monograph on the technique and the uses of current accounts. Where national practice varies, the custom or the legal requirements of the principal countries is indicated.

University of Reading. Economic and Financial Results on Five Dairy Farms. By Edgar Thomas and C. H. Blagburn. (Reading) Advisory Agricultural Economist, University of Reading. 1s.

This is the second of the accounting studies of the Department of Agricultural Economics. The results are for the three years, 1924-1927.

Italy To-day. Is Fascism an Economic Success? Edited and Published by Mrs V. M. Crawford, 32 Upper Gloucester Place, London, N.W. 1. 6d. net.

Reprints of letters from the *Scotsman* and the *Observer*. There are also a few tables of official statistics.

Australasian Public Utility Companies. Compiled and published by J. B. Were and Son, 31 Lombard Street, London, E.C.3.

This pamphlet contains the usual information about each company, for the use of investors.

The Stock Exchange Official Intelligence for 1929. Supplementary Index. (London) Spottiswoode, Ballantyne and Co., Limited, 1 New Street, E.C. 4. 2s. 6d.

Official Year Book of the Commonwealth of Australia, 1928. (London) Australia House.

This year book is exceptionally exhaustive and offers a wealth of information. The statistics do not always go beyond 1926, but the majority are complete to the end of 1927.

New Zealand Official Year Book, 1929. (London) New Zealand Government Office, 415 Strand. 7s. 6d.

Contains the usual comprehensive information and statistics on all matters social and economic.

International Cotton Bulletin, April, 1929. (Manchester) International Federation of Master Cotton Spinners' and Manufacturers' Association, 238 Royal Exchange. 5s.

Contains the usual valuable statistics, reports on the state of trade, and accounts of the progress of cotton growing in new countries.

The Journal of Political Economy, April, 1929. (Chicago) University of Chicago Press. (London) Cambridge University Press, Fetter Lane. 4s.

This issue includes articles on: "Agrarian Problems of Modern Japan," by Dorothy J. Orchard; "Integration in the Automobile Industry," by Eva Flügge; and "Sherman Law and Trade Union Activities," by G. W. Terborgh.

The Bankers' Magazine, May, 1929. (London) Waterlow and Sons, Limited, London Wall. 2s. 6d. net.

The special articles in this issue are: "Nationalisation of Banking" by Frank Morris; and "Conversion of the Third War Loan," by E. G. Peake.

The Journal of the Royal Agricultural Society of England. (London) John Murray, Albemarle Street. 15s.

Among a number of articles which are of interest almost exclusively to people connected with agriculture, are two which should have a wider appeal: "Sugar Beet: Position and Outlook," by the Rt Hon Ernest C. Pretyman; and "Forestry and Labour," by the Rt Hon Lord Clinton.

Kyoto University Economic Review, December, 1928. (Tokyo) Published by the University. Sold by Mareizen and Co., Limited.

Among other articles in this issue are: "Specific Progressions in the Inheritance Tax," by Professor M. Kambe; and "A Short History of Social Problems in Japan Before the Restoration."

The Sociological Review, April, 1929. (London) The Leplay House Press, 65 Belgrave Road. 5s.

This number includes: "A Survey of Social Conditions and Problems in Margate"; "Normal and Abnormal Psychology in Relation to Social Welfare"; and "Social Studies in Majorca."

World Trade. (Paris) Journal of the International Chamber of Commerce, 38 Cours Albert 1er. 1s.

This issue includes, among others, the following articles: "China: From Revolution to Reconstruction"; "Collective Action for the Reduction of Customs Tariffs," by Richard Riedl; and "Ten Years of German Commercial Aviation," by Otto Merkel.

Manchester Association of Importers and Exporters. Report for the year ended February, 1929. (Manchester) Published by the Association at National Buildings, St. Mary's Parsonage.

OFFICIAL PUBLICATIONS RECEIVED.

The Stock Exchange.

ARGENTINA AND THE INVESTOR.

For many decades the financial, economic and political relations of Great Britain and Argentina have been both close and friendly. Argentina's early financial visits to London may be described, indeed, as having afforded a liberal education to Great Britain in the science of foreign lending, and to the New World countries in that of foreign borrowing. Since her achievement of independence in 1816, and more especially since the 'eighties of last century—that halcyon period in Argentine borrowing finance, which terminated in the "bad days" of the 'nineties, with their lasting effects on British banking structure and policy—Argentina has been a magnet for the surplus resources of the older countries. A recent estimate placed the total foreign capital invested in Argentina at about £800,000,000, approximately half of which stood to Great Britain's account, about £85,000,000 to that of France, £70,000,000 to that of the United States, £30,000,000 to that of Holland, and £27,000,000 to that of Belgium, while Italian and Spanish investment was also represented. British capital has played the leading part in the development of the national railway system and of other public utilities. Argentina supplies the United Kingdom with a larger share of her total imports than any other country, British or foreign, except the United States of America. She is the third most influential of the world's purchasers of British merchandise and the largest foreign market for British cotton and woollen goods and railway material, while the River Plate gives employment annually to some 5,000,000 tons of British shipping. The ties between the two countries, incidentally, extend beyond the realm of the material, British traditions in art, literature and sport having found a more congenial atmosphere and influenced the national life to a more decisive extent in Argentina than in any other part of South America.

The investor, reviewing Argentina's economic status and potentialities, is naturally tempted to compare her position with that of the United States. The latter has attained a place of decisive importance in the affairs of the northern half of the American continent which Argentina is in process of asserting in the southern half. Both countries enjoy the indubitable advantages of a temperate climate, vast natural resources and a population of European stock. Both are seats of the republican form of government (though Argentina's constitution is junior to that of the United States by nearly eighty years), in which the energy of a powerful executive frequently, but not invariably, tends to compensate for the more leisurely methods of a separately elected legislabetween the position of the two countries are more crucial than those of similarity. The area of Argentina is little more than one-third of that of the United States, the population less than one-tenth, and the density of fourth. Expressed in relation to the number of inhabiof the United States, but her highway system is markedly inferior, extending to no more than 2.88 kilometres per 1,000 persons, as compared with 40.65 kilometres in the United States—a disadvantage for which an extensive range of natural inland waterways and a *terrain* peculiarly adaptable to cross-country transport do not adequately compensate. The mineral wealth of Argentina, outside the oil industry, is of comparative unimportance. Her manufacturing industries have definitely advanced beyond the embryonic state, particularly during the last few years, but, nevertheless, the prosperity of the Republic has been, and will almost certainly continue to be, based on the production and export of raw material and foodstuffs, a condition reflected in the following comparison of the national trade figures for 1927 with those of the United States:—

	Value of Imports per Head.	Value of Exports per Head.	Distribution of Total Exports. Live Animals.	Food and Drink.	Raw or Partly Manufactured Materials.	Manufactured Goods.	Gold and Silver.
	(U.S. $.)	(U.S. $.)	%	%	%	%	%
Argentina ...	79·85	94·05	0·8	78·5	19·5	1·2	...
United States of America	34·79	39·72	0·1	16·8	40·5	37·4	5·2

Argentina, in short, has not yet reached the same stage of national development or of independence of foreign capital supplies as the United States, and the nature of her resources precludes her from advantageously seeking the position of virtual self-sufficiency characteristic of the United States to-day. Apart from the question of interest payments on her debt, she must always tend, like Great Britain, to rely on intensive foreign trade for the maintenance of her standard of living. Comparison with the United States is best regarded as intriguing but fallacious. One may better arrive at an approximate working idea of the security Argentina offers to the investor by enquiring to what extent she has developed her own "strong suits" during recent years. The following table sets out a number of the figures on which such a judgment may be based:—

ARGENTINE PRODUCTION AND TRADE.

Product.	Units.	Production. Average 1909–14.	1920–21.	1927–28.	Increase (+) or Decrease (−) in 1927–8, as compared with 1909–14.	1920–21

Sheep	,, 43,225	36,209	−16 2

The main security of the investor in Argentine stocks and shares is the exceedingly rapid growth, during recent years, of the national output of those products for which the country is best fitted, and the corresponding increase in the traffic of the railways which move that produce, and in the national income out of which interest and dividend remittances must come. It is this process of economic evolution which is reflected in the 32 per cent. rise in the volume of exports since 1913, and the recent conversion of an "unfavourable" into a "favourable" visible trade balance. A further source of reassurance to the investor is the fact that Argentina's prosperity is not based on the exploitation of a single group of products, which may by one year's failure throw the whole country into the depths of depression. Of the total national exports, cereals accounted for 57½ per cent. in 1927, and 61 per cent. in the first nine months of 1928, meat for 13½ per cent. and 12½ per cent. respectively, hides and leather for 9 per cent. and 8 per cent., and wool for 8 per cent. and quebracho and other forestal products for 2½ per cent. in both periods.

A summary of the recent investment history of a number of representative Argentine stocks and shares is given in the table annexed:—

	Originally issued.	Outstanding.	Middle Prices. 1913.	1921.	1929.	Present Day. Price.	Yield.*

The price of practically every security in the list has shown a substantial recovery since the depression of 1921, but comparison of present prices with those of 1913 suggests, in most cases, less satisfactory conclusions. Quotations for all fixed interest stocks, naturally, reflect the rise in interest rates throughout the world since the war. It is uncertain how far investors have been perturbed by the action of the Argentine Government in enforcing a reduction of rates and fares, last year, on two of the most important British-owned railways, by a method the complete legality of which neither company has admitted, but the ordinary shares of all the Argentine railways continue to be regarded as coming within the semi-speculative category, despite the significant enhancement of traffic and net revenues during the last few years.

Argentine stocks, in short, are rated highly among foreign securities, but are not regarded as immune from the risks attaching to even the best investments of their class. Though the increased national production, to which reference has already been made, reflects a real growth in the permanent economic status of the country, and not a mere flash in the pan, an agricultural nation must expect to meet bad as well as good times, arising out of circumstances largely beyond its control, however well its several activities may be "spread." The investor, further, would welcome tangible evidence of an effective endeavour to arrest the growth of the national debt, which was valued some months ago at the equivalent of £344,500,000 (or nearly £32½ per head). of which £96,400,000 represented the external debt of the Central Government, £91,800,000 the internal debt (at December 31, 1927), £39,100,000 the floating debt, £84,500,000 the debts of the provincial Governments, and approximately £20,000,000 the debts of the municipalities. As H.B.M. Commercial Counsellor at Buenos Aires, Mr H. O. Chalkley, pointed out in his report last October, the consolidated debt has been almost doubled in six years, and authority exists for a further 30 per cent. increase. Increased productive activity will both demand and justify fresh imports of capital into the country for some years to come, but that such a pace can be indefinitely maintained without danger is improbable. Holders of Argentine securities, again, would be gratified were the central authorities to succeed in transferring some of the energy, courage and determination shown by the present administration and its immediate predecessor, to Congress and certain of the provincial Governments, so that the former might fulfil its budgetary duties with greater promptitude and efficiency, and the latter avoid all occasion for "Federal intervention" (i.e., the temporary assumption of all the functions of provincial administration by a commissioner appointed at the instance of the National Government) such as was recently deemed necessary in San Juan and Mendoza. The authorities, indeed, are confronted with their full share of formidable problems, among which may be mentioned recurrent labour unrest, particularly in the transport industry and at such centres as Rosario; the slow "natural" growth of the population, and the heavy infantile mortality rate, especially in the northern provinces; dissatisfaction with the system of short-term leases for agricultural land, which is tending to retard the more intensive colonisation of certain districts; and the imperative demand for the construction of a body of trunk and branch "metalled" roads, adequate to the needs of a great trading nation. British investors will follow with sympathy the efforts of all concerned to overcome these difficulties, and thereby to provide a logical conclusion to the progress lately achieved by the country.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

TICKET. May 28.	ACCOUNT. May 30.

Though there was no large increase in business, except as regards certain "features" (in which America frequently, though not invariably, was interested), the undertone of the markets was firmer—a symptom the more noteworthy since the present account is of three weeks' duration, pay-day falling on the day of the General Election. The carry-over this week disclosed, as expected, an open position of small dimensions. On the whole the markets are taking their cue from America, and are expected to show little in the way of a genuine accession of activity until the elections are over, though a certain discriminate buying is in progress in some quarters which up to quite recently were staying outside the market.

The leading factors in the gilt-edged market were the unfavourable nature of the latest Reparation proposals, the tighter conditions in the money market, the weakness of the New York exchange and the addition of approximately £2,000,000 to the Bank of England's gold holdings. The net result left quotations generally unchanged in a quiet market not over-well provided with stock. Five per cent. War Loan was firm after going *ex* dividend, but Funding Loan was weak after an early appearance of activity. Indian Loans failed entirely to shake off the dullness of recent weeks, but Dominion and Colonial stocks, when changed, were fractionally higher. The market's reception of the new £12,300,000 Commonwealth conversian issue, to be made at 97, was unenthusiastic.

The volume of dealings in the foreign market was as limited as ever, but sentiment was more cheerful. The decline in Brazilian bonds was arrested, partly as a result of the publicity given to the President's speech. Greek loans continued in demand. The effect of the Reparations news was, paradoxically, increased firmness in German Seven Per Cents. and dullness in French issues. Apart from a slightly easier tendency in Chinese Bonds, Far Eastern descriptions were without interest.

A steadier tone pervaded the Home Railway market, and was not checked by the week's traffic figures, which showed a small gain in revenue as compared with last year on the North-Eastern and Great Western, and a negligible fall on the other two lines. Business was restricted, but informed buying took place of Great Western, which alone of the four groups shows higher aggregate gross receipts for this year than last. Foreign rails were quiet but firm, Brazilians sharing in the recovery of the national Government stocks, while Antofagasta was strong on anticipation of a higher dividend. Argentine traffic returns were good, and fractional rises occurred in all the leading stocks.

After showing a certain firmness on a moderate week-end accumulation of orders, the industrial markets became irregular, but a more confident note was heard as the week progressed, though the volume of business failed markedly to expand. Columbias fluctuated extensively, the market being unwilling to accept the strong rumours of a breakdown in the merger negotiations. Much interest centred in aviation shares, partly on American buying and partly owing to the stimulating effect of the publicity recently given to aviation possibilities in this country. De Havilland were the most active shares, though Imperial Airways and Handley Page preference also recorded appreciable gains. The rise in the latter attracted attention to Rolls Royce, which were in limited supply, while the commercial motor group as a whole came in for increased attention, Leyland being purchased on the high rate of earnings envisaged on the ordinary shares, after the repayment of the remaining preference arrears. Textile shares were firmer, Courtaulds on reports of increased trade demand for rayon, J. and P. Coats on the enhanced bonus declaration. Investment buying of tobaccos was in evidence, Carreras being prominent by reason of the favourable public response to the new "brand" recently put on the market by the company. Cable stocks were steady. The Marconi dividend was in accordance with expectation, and had no effect on quotations. Interest was drawn to electrical shares by the announcement of an offer to purchase the whole "A" and "B" capital of the Shropshire, Worcestershire and Staffordshire at 50s. per share—the market regarding the purchasers as having made a good bargain—and by arrangements for an issue of £1,600,000 by the British Power and Light Corporation, a holding company formed by the Benson group to take over the North Wales and other provincial power concerns. Dunlops improved after going *ex* dividend, the market being impressed by the chairman's defence (described in a later "Investment Note"). Nickels were sold from America. Newspapers were steady, shipping shares rather easier, but iron and steel firmer on the acceptance of the United Steel offer. Bank shares were quiet and irregular, and insurance shares inclined to further dullness.

Raw rubber was stronger on better buying by American consumers, and most of the leading shares were marked up, though actual business remained on a small scale. Tea shares values continued to droop, though better competition characterised the mid-week tea auctions, after a quiet start. The tone of the oil market was good, though business was mainly professional. Trinidad Leaseholds were in demand before the increased interim dividend declaration, and Royal Dutch on the forthcoming extension of the company's activities on the Continent. The Anglo-Persian's labour troubles at Abadan had no effect on the shares. Kaffirs were harder, on a modest recrudescence of interest in Paris and Johannesburg, but Rhodesians were less active, "shop" support being called for in some cases. Tinto was sold from Paris on a decline in copper on the Metal Exchange, but tin shares enjoyed a moderate improvement, the market being impressed by the optimistic case made by the chairman at the Anglo-Oriental meeting, and by the week's recovery in the price of the metal.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The share market is dullish under the blighting influence of 14 per cent. call money and the absence of any present hope of much easing in the rate. Bonds are also weaker, and there has been an advance of ⅛ in the open market rate for bills. The supply of these exceeds the demand, owing partly to the increase in wheat movement with the opening of navigation of the Great Lakes, and partly to the unattractiveness of the old rates in view of the sharp rise in the call market. The money position will probably be a trifle easier by about next week, but June is a month of heavy requirements; subscription to new stock offers totals nearly a billion dollars, and Government financing and mid-month and mid-year settlements in all involve a turnover of close on three thousand millions.

PARIS.

The low yield of French stocks, judged by the profits distributed, should not be taken as precluding necessarily any future rise of quotations. Its bearish influence is really compensated for and outweighed by an encouraging one, namely, the existence of substantial reserves, occasionally visible but more often hidden. These stimulate prices, on the one hand by increasing the intrinsic value of the stock, on the other by developing the expansive power of the business and, consequently, the equity attaching to the shares which represent it. The smallness of the dividends, moreover, does not prevent purchasers from inclining towards the stocks that have been most affected by the reaction of these last months, and this week there was good buying in evidence on behalf of clients, which gave to every quotation an unaccustomed appearance of firmness. Hesitation is still predominant, nevertheless, while the definite issue of the Conference of Experts is being awaited. French Rentes have had a very marked rise, particularly the Five per Cent. of 1920. Bank shares, Péchiney, and Lyonnaise des Eaux made noticeable advances. The Bourse was closed on Ascension Day.

BERLIN.

The *Frankfurter Zeitung* stocks index for May 3 was 124.56, as compared with 131.95 a month before. What was thought to be an improvement in the outlook for the Paris Conference had a strong influence on the Bourse, and in spite of dear money and an unfavourable Reichsbank return for April 30, the general movement at the end of last and the beginning of this week was an upward one. Leading potash, electrical, steel and coal securities were in demand, and foreign buying of Farbenindustrie was reported. On Tuesday a weak beginning was followed by an all-round rise, with large purchases for London and Paris account, French interest being chiefly directed to potash stocks, whereas on Wednesday the opening was firm, and a general reaction came later. The Bourse was closed on Thursday.

AMSTERDAM.

The Bourse is showing some signs of recovery, and among industrials especially a cheerful tendency has been observed. Interest centred chiefly on Philips, which showed a sharp advance, with a large volume of transactions. Margarine Unie also was strong, and artificial silks had a better tone, but the Ford issue fell back Tobaccos were irregular, but oils fluctuated little, and rubbers were dull. Sugars weakened, and shipping shares were easier. The money market remained firm, with the private discount rate 5⅛-5⅜ per cent., and the prolongation rate 6 per cent. On Thursday the Bourse was closed.

INVESTMENT NOTES.

Nitrate Prospects.—In the course of the next few weeks the world's largest producers of nitrogen will announce their schedule of prices for the 1929-30 season, and the British holder of Chilean nitrate company securities will be able to form some idea of the extent to which the industry's prospects are likely to be affected. The quotations of representative securities, despite the recent activity of such shares as Lautaro—largely on American buying—continue to reflect the unfavourable dividend record of the last few years rather than the undoubted improvement in the situation since the interests concerned, through their Association (which is receiving financial assistance from the Chilean Government, and has been strengthened by the adhesion of the Guggenheim interests of America), decided to adopt an energetic "forward" policy. Recent developments on these lines were discussed in the course of an article on Chile's economic position, in the *Economist* of April 27, 1929 (page 930-1). Special interest centres, therefore, in the estimates of world nitrogen production, present and future, which have just been published by Messrs Aikman (London) Limited. The figures are as follows:—

(Thousand Ton of Pure Nitrogen.)

Period (July 1 to June 30).	Production. Synthetic Products. Nitrogen.	Production. Synthetic Products. By-product Ammonia.	Production. Chilean Nitrate of Soda.	Production. Total World Production.	Consumption. Synthetic Products. Nitrogen.	Consumption. Synthetic Products. By-product Ammonia.	Consumption. Chilean Nitrate of Soda.	Consumption. Total World Consumption.
1926–27	735	310	200	1,245	735	310	271	1,316
1927–28	875	390	387	1,652	825	390	389	1,604
1928–29	1,100	405	500	2,005	1,050	405	430	1,885
1929–30	1,430	425	510	2,365	1,330	425	510	2,265
1930–31	1,725	425	530	2,680	1,760	425	530	2,715

The figures suggest a number of important considerations for the investor. The well-informed authority responsible for them estimates that in the season just closing Chile's production will be two and a half times as large as during the "restricted" season, 1926-27. No great increase in effective output is looked for during the next two seasons, but the firm believes that world consumption of Chilean nitrate, which this season has fallen short of the production figure by approximately 70,000 tons, will expand sufficiently next year to absorb the whole output of the industry. The extent of the estimated increase in synthetic nitrogen production, however, is calculated to give shareholders in the companies producing the "natural" product considerable food for thought. Between the present season and the next, an expansion of 30 per cent. is forecast; between 1929-30 and 1930-31, a further expansion of 20 per cent. In consequence, the share of the Chilean product in the world's total production now 25 per cent., will have fallen in two years' time to 19.8 per cent. Messrs Aikman believe that world consumption will increase sufficiently by

1930-31 to absorb the whole of the enhanced production, but whether this process will not involve some further reduction in selling prices—which would automatically involve the Chilean Government in further "assistance"—is an open question. The present position, however, is not unfavourable, deliveries to consumers showing a consistent monthly increase, while the world's visible stocks of nitrogen on June 30 next will, it is believed, represent not much more than two months' supply. Ultimately, the stage may be set for the substitution of co-operation for competition between natural and synthetic producers.

Brazilian Finances and Coffee.—Since the *Economist* dealt with the borrowing status of Brazil in a leading article on February 23rd, there has been a good deal of discussion in the Press with regard to the coffee situation. At the general meeting of the British Bank of South America, Mr R. J. Hose, the president, defended the operations of the San Paulo Coffee Institute on the ground that without it the Brazilian coffee industry would have been reduced to chaos. Mr Hose remarked that it was believed in coffee circles in Brazil and elsewhere that Brazil would continue to supply about 65 per cent. of the world's coffee requirements for some time to come, and that any increase in world production would be absorbed by the expansion of consumption. On that point there would appear to be a conflict of expert opinion. The coffee grown in East Africa and Central America is declared to be steadily improving in quality, and while Brazil produces large crops of low-grade coffee, other producers are offering a better quality at favourable prices. The accumulation of low-grade coffee in Brazil, therefore, is not without its elements of danger. The fact that short crop sequences usually alternate with heavy crops, and result in a temporary reduction of stocks, affords no permanent solution of the problem. Indeed, not a few critics believe that the policy of the San Paulo Coffee Institute will have to be drastically revised. Another, or part of the same, problem is the further shrinkage in the favourable trade balance of Brazil during 1928. Since 1924 the excess of exports over imports has been steadily declining, last year's figure being £6,700,000, as compared with £9,050,000 in 1927 and £26,760,000 in 1924. In view of the heavy interest commitments abroad, which are estimated at £34 million to £35 million a year, this shrinkage in the export surplus is undoubtedly disturbing. The dependence of Brazilian economics upon coffee is emphasised by the fact that 71.5 per cent. of the value of last year's exports was accounted for by coffee shipments. Apart from the trade situation, the Government's finances have shown decided improvement. The President, in his message to the new session of Congress, has stated that the 1928 budget resulted in a surplus of 198,354 contos, against an estimate of 117,000 contos, that the liquidation of the floating debt had been almost completed, that the foreign debt had been reduced by 131,586 contos and internal debt by 79,000 contos, and that the gold cover for the currency stood at 37.51 per cent. The President, however, admitted that after deducting the excess of exports from the "invisible" unfavourable balance, there was still a deficit in the balance of foreign payments of some £17,000,000 but he looked to the investment of fresh foreign capital in the country to meet this deficit. Clearly, as Mr Hose remarked at the meeting of the British Bank of South America, the necessity has become increasingly urgent for Brazil to increase and diversify her exports rather than to be so largely dependent upon coffee.

United Steel Offer Accepted.—Holders of a large majority of the securities of the United Steel Companies and the preference shares of the United Strip and Bar Mills having accepted the offer made by the Austin Friars Trust (particulars of which were given in the *Economist* of April 20th and 27th), the offer will become absolute as at May 20th. The purchase price will be paid on June 1st, while transfer documents will be in the hands of the holders not later than May 30. Holders who have not yet communicated their decision may do so up to May 20th, to which date the original time limit (April 30th) has been extended by the Trust. The percentage of acceptances received by the end of last month was as follows:—

THE UNITED STEEL COMPANIES, LIMITED.

	Per Cent.
"A" Debentures	95·2
"B" Debenture Stock	89·7
"C" Debenture Stock	98·6
Obligations	94·4
Preference shares	87·5
Ordinary shares	91·5

UNITED STRIP AND BAR MILLS, LIMITED.

	Per Cent.
Preference shares	83·3

In view of the size of the majorities in favour of the Trust's terms, many of the minority holders will doubtless decide to take advantage of the extension of the time limit, their position otherwise being an unfavourable one. "A large proportion" of the acceptors will, it is stated, exercise their option to reinvest in the shares of the holding company, which is understood to include other iron and steel interests in addition to United Steel, the scope of the proposed merger having been enlarged since the inception of the scheme. Particulars will, it is hoped, be available by May 20th, and should set at rest the market's curiosity as to what proportion of the United Steel holders have transferred their interests to the new company, how much of the latter's capital (if any) will be offered to the public, and what are the identity and scope of the interests comprised within the merger.

Lancashire Cotton Corporation—Financial Details.—The progress of the negotiations for the setting up of the Lancashire Cotton Corporation, Limited, which is to amalgamate and "rationalise" the activities of a large number of Lancashire mills spinning American cotton, has been described in earlier issues of the *Economist*. The corporation has now published a very full statement of the position, the details of which are summarised by our Manchester correspondent on page 1041. A more convincing case for the corporation's inception could not have been made out. In the absence of some effort on the lines it is proposed to adopt, the financial condition of the companies concerned, taken as a whole, may well be described as hopeless. The 200 mills whose balance sheets have been submitted to the corporation, comprising 19,750,034 mule equivalent spindles (*i.e.*, about half the total "American" spindles in the country) and 24,358 looms, have a paid-up share capital of £28,239,608 (with uncalled capital of approximately £10,000,000), and a total debt, secured and unsecured, of £28,890,933. Since interest on this debt, reckoned at 6 per cent., calls for £1,733,456 a year, and the companies are, in fact, not merely making no profits but losing (on a fair allowance for depreciation) approximately £340,000 per annum, every year sees them sinking deeper into debt to the tune of over £2,000,000. The corporation proposes, ultimately, to have a capital of

OTIS & CO.

£28,516,619, including £12,548,768 in 5½ per cent. income debentures, £383,311 in 6 per cent. preference shares, £13,212,923 in ordinary and £2,371,617 in deferred shares. Present shareholders would receive new capital at the rate of about 5s. 4d. in the £, on the average, of which over 4s. would be in income debentures and ordinary shares, and the remainder in deferred shares. The service of the income debentures (including sinking fund) would call for £941,000 each year. Under the existing system (or absence of it) the companies concerned would be required to earn approximately £2¼ million a year for 35 years before the shareholders could look for a dividend. Under the corporation's plan the ordinary shares, given profits of this amount, would receive dividends of 8 per cent. and the deferred of 8¾ per cent. immediately, while after the repayment of the income debentures the ordinary would receive 11½ per cent., and the deferred 28½ per cent. The corporation hopes to achieve increased earnings through economies in operating—such as standardisation of products, concentration of purchases and sales, and elimination of uneconomic machinery,—and through a positive policy of obtaining new business for Lancashire. The corporation's financial plans, as a whole, have been soundly conceived, and it is to be hoped that the individual firms, whose co-operation is essential to the success of the project, will appreciate the gravity of the situation and lend their wholehearted support.

Dunlop Meeting.—At the general meeting of the Dunlop Rubber Co., on May 3, Sir Eric Geddes addressed himself to two questions which have been perplexing the company's shareholders: first, why the Dunlop Rubber Co. had made losses of over £1,500,000 as a result of the sudden abolition of the rubber restriction scheme in April, 1928; and, secondly, why the directors had issued new ordinary shares of 6s. 8d. at 25s. in May, 1928, after the fall in rubber prices had occurred. As regards the first point, Sir Eric Geddes placed the responsibility on the Colonial Office. In July, 1927, the Colonial Secretary announced in the House of Commons that he did not contemplate the withdrawal of the restriction scheme, and that if any change in the scheme were necessary he would endeavour to give as long notice as possible. On October 21 the Colonial Office intimated there would be no change in the existing bases of restriction. These official announcements, Sir Eric declared, left no doubt in the minds of the industry that the Government intended to maintain restriction. On that assumption, he said, "we followed our normal practice of covering a portion of our 1928 requirements, based upon existing contracts for the supply of tyres and upon a conservative estimate of sales. The present board has never purchased rubber in excess of actual requirements, and has never bought and sold rubber on speculative account." After the appointment, early in 1928, of the Government's Committee of Enquiry the company ceased to make any commitments beyond its day-to-day requirements, but the slump of rubber from 1s. 8d. per lb. in January to 9d. per lb. in April, 1928, left it burdened with commitments and with stocks of raw, processed and finished rubber at high prices. The actual reduction in Dunlop profits as a result of this calamity was about £1,700,000, but the various rubber companies in America apparently fared even worse, for the average reduction in the profits of the twelve largest concerns was 96 per cent. As regards the second question, Sir Eric Geddes stated that when the issue of new shares was made in May, 1928, the price of tyres had been fairly steady, and the company was gradually liquidating its high-priced rubber. There was no reason to anticipate an immediate reduction in selling prices, since it was believed that the company's competitors would also endeavour to liquidate their commitments gradually and maintain their prices. Unfortunately, the industry in America reduced tyre prices extensively in June, causing reductions all over the world in the second half of the year. When the issue of new shares was made at 25s. the market price of the old shares was 30s., and this was considered in the circumstances to represent a fair bonus to shareholders. We doubt whether Sir Eric Geddes' answer to the second question will be as convincing as his answer to the first, but it is reassuring to shareholders to learn that with normal conditions restored the company's prospects have greatly improved. The chairman declared that, in spite of competition, the company's sales for 1928 showed an increase, the factories were working at a higher efficiency, and the plantations producing rubber cheaper than ever before, the present f.o.b. prices being 5d. per lb. Sir Eric Geddes referred in particular to the prosperity of the Australian company, which has amalgamated with its largest competitor, and stated that the American company should show a reasonable profit this year. The market in Dunlop shares has strengthened considerably as a result of Sir Eric's speech.

White Star Line.—The White Star Line was formed early in 1927 to acquire the share capital of the Oceanic Steam Navigation Company. Of the purchase price of £7,000,000, £4,650,000 has been paid; the balance is payable in 1936, but may be paid off earlier, in the meantime being subject to interest at 4 per cent., free of tax. A year ago the Australian Commonwealth Line was purchased for the sum of £1,900,000, payable by ten annual instalments. Thirdly, advantage was taken last year of an opportunity to acquire a large block of ordinary shares in the Shaw, Savill and Albion Company, resulting in almost all the ordinary share capital of that company being now held by the White Star Line in conjunction with the Oceanic Steam Navigation Co. The R.M.S.P. Co. in its turn holds the ordinary share capital of the White Star Line and guarantees its preference shares for capital and dividend, a guarantee which may reassure preference shareholders who observe that their dividends are not too liberally covered. Oceanic Steam Navigation had a good year in 1927 and raised its dividend from 5 to 9 per cent. It is disappointing, therefore, to find that its profits fell from £566,452 to £392,720 in 1928, and the 8 per cent. which it paid to the White Star Line was not quite fully earned. But the latter is not so wholly dependent on the Oceanic as it was a year ago. Its own figures are not, of course, directly comparable with the previous results, as this is the first report covering a complete year.

	Period ended Dec. 31, 1927.	Year ended Dec. 31, 1928.
	£	£
Net profits	255,744	328,347
Preference dividends	158,901	260,001
Number of times covered	1·6	1·2
Ordinary dividend (6% less tax)	21,317	48,000
Formation expenses written off	...	31,262
Increase or decrease in carry-forward	+ 75,526	— 10,916

As before, 6 per cent. is paid to the R.M.S.P., and a start has been made towards writing off formation and issue expenses, of which, however, £241,250 is still left in the balance sheet. Thanks to the acquisitions, the valuation of fixed assets has increased from £7,000,000 to £9,810,820, indicating that the Shaw, Savill and Albion shares are included at £910,820. Of the purchase price of the Australian Commonwealth Line, £250,000 had evidently been paid up to the end of last year. The report mentions that a new twin-screw motor vessel of about 27,000 tons is building at Belfast for the North Atlantic passenger services, and completion is hoped for by the end of this year. These developments explain why "creditors" are up from a mere £4,091 to £707,543, "debtors" being down from £1,053,587 to £614,665. At their present price of 21s. 3d. cum final dividend, the 6½ per cent. cumulative preference shares (guaranteed) yield just 6¼ per cent.

Marks and Spencer.—The full report of Marks and Spencer, bazaar and general store proprietors, is not yet available, but a preliminary statement shows the good progress which had been anticipated. The profit for the year ended March 31, 1929, was £235,116, before deduction of income tax. For the previous twelve months the profit was shown as £139,621, after deduction of tax; adding back the tax to make a true comparison possible, that figure becomes £167,242, so that profits have actually increased by over 40 per cent. The dividend on the preference shares, which are now entitled to a cumulative 10 per cent., their participating rights being cancelled, is covered over 6½ times. After its formation in June, 1926,

the company paid dividends on its ordinary capital at the rate of 7 per cent. for the first few months, and 13 per cent. for the next year; the rate is to be raised for 1928-29 to 15 per cent., requiring £78,502. This is reasonably cautious finance, for over 33⅓ per cent. appears to have been earned. Of the surplus, £10,000 is being put to properties contingency fund, against £5,000 a year ago, £7,500 as before to the preference share reserve fund, and £31,567 (against £27,621) to reserve for income tax. Further, the directors propose to consolidate into a general reserve fund the amounts hitherto separated into capital reserve, share premium account (to which £168,799 accrued last year), and plate glass renewal fund, bringing the grand total, with an allocation of £60,000 from current earnings, to £313,861, or virtually one-third of the present issued capital. The ordinary shareholders are also to receive a bonus of fully-paid "A" shares, one for ten, ranking *pari passu* in all respects with the existing ordinary shares except that they carry no voting rights. Shareholders will probably not look a gift horse in the mouth, but this arrangement would enable a group to keep control of the company with a smaller percentage holding of the ordinary capital. To pave the way for this bonus distribution, it is proposed to create 500,000 of these "A" ordinary shares, presumably of 10s. denomination. Some 380,000 will then remain unissued. This preliminary information was well received in the market; the ordinary shares are now being dealt in around 5½ cum dividend and rights, and calculated on a 15 per cent. dividend, equivalent after this year to 16½ per cent. on the old capital, the yield at that price would be exactly 3 per cent.

British Match Corporation.—The task of comparing trading results of the British Match Corporation for the year ended April 30, 1929, with those of the previous period (which began on August 15, 1927), the date of its incorporation) is difficult in any case, and is rendered practically impossible owing to the meagre information contained in the report. The Corporation was formed to acquire the ordinary shares of Bryant and May and the share capital of the Swedish Match subsidiary, J. John Masters. Its first revenue account, showing net profits of £307,425, included dividends received from Bryant and May for 12 months' trading and from J. Johns Masters for 15 months' trading. The present trading account discloses net profits of £420,673. In the course of the year the Corporation acquired practically the whole of the independently-held shares of Bryant and May (Brazil). For this purpose the issued ordinary capital of the Corporation was increased from £6,000,000 to £6,187,269, while £524,587 5½ per cent. preference shares were issued in exchange for preference shares in Bryant and May (Brazil). After writing off the expenses (£19,657) of the issue of new capital, and paying the preference dividends (£14,426), a final dividend of 4 per cent., tax free, was paid on the ordinary shares, making 6 per cent., tax free, for the year, as before. These profits are equivalent to earnings on the increased ordinary share capital of 6.6 per cent. The balance sheet discloses a strong liquid position, the surplus of current assets over current liabilities being about £320,000. For so important a holding company it is regrettable that a consolidated income account and balance sheet are not issued. In their present form the accounts are largely unintelligible to the outside investor.

Allied Newspapers.—In 1927 the earnings of the Berry newspaper combine, Allied Newspapers, rose by £4,650 and the dividend by 2 per cent.; in 1928 the earnings increased by £9,740, and the dividend was unchanged. Once again the directors report that the circulations and advertising revenue of the company's publications show very satisfactory progress. A dividend of 5 per cent., less tax, amounting to £32,650, was received from the Edward Lloyd Investment Co., the paper-making subsidiary, over 75 per cent. of whose £1,000,000 ordinary share capital is owned by Allied Newspapers, though the holding is included in the balance-sheet at a nominal value. Lest, apparently, it should be inferred that profits otherwise had declined, the report states that the year's provision for taxation has been increased by a sum in excess of this dividend. The latest allocation to general reserve raises that fund to £470,000. Again no dividend is included from Allied Northern Newspapers, though the trading of its subsidiaries is declared, as usual, to have been of a satisfactory character.

	1926.	1927.	1928.
	£	£	£

Ordinary — Amt. of dividend	192,000	224,000	224,000
To general reserve	130,000	110,000	110,000
Increase in carry-forward	13,753	6,404	16,145

In the series of articles entitled "The Contemporary British Press," which we published last November, we described the growth and tabulated the present holdings of the Berry combine (vol. cvii., see especially pp. 786-7 and 833-5). As we have pointed out before, the security of Allied Newspapers preference shares does not compare favourably with that offered by preference shares of the Rothermere group, but, in the case of ordinary shares, whereas the Rothermere companies tend to distribute earnings up to the hilt, Allied Newspapers leave a much wider margin between dividends and earnings. It is difficult to forecast the future earnings of any newspaper company, but the "national" daily newspapers have at least been relieved since the end of last year of some part of their competitive expenditure by the abolition of football competitions and the reduction of the insurance benefits offered. Allied Newspapers £1 ordinary shares are now around 47s. 6d., and, allowing for the final dividend, yield just over 6 per cent.

Leopoldina Railway.—The report for 1928 shows that after making the usual sinking fund provision and putting £25,000 (against £40,000 a year ago) to the reserve for repairing damage caused by floods, the Leopoldina Railway fully earned the extra ½ per cent. which, as we reported last week, it is distributing to its ordinary shareholders. Passenger traffic receipts increased by 7.89 per cent., parcels and baggage receipts by 4.68 per cent., but reductions of £68,864 in respect of coffee and £44,655 in respect of sugar and sugar cane were not wholly set off by various improvements from transport of other commodities, so that goods traffic receipts in the aggregate fell away by 1.79 per cent. As these differences resulted in gross receipts rising by £18,106 on balance, while working expenses rose only by £284, and as the net sum at credit of the floods reserve account has grown by £15,658 during the year, indicating light outgoings in that respect, the general outcome of the year's working can well be regarded as satisfactory.

(Years ended December 31.)	1926.	1927.	1928.
	£	£	£

Number of times covered	*2·6*	*3·0*	*3·2*
Ordinary — *earned*	*3·8%*	*4·5%*	*5·0%*
Ordinary — paid	3½%	4½%	5%
Ordinary — amount of dividend	240,474	309,181	343,534
Increase or decrease in carry-forward	+ 20,550	+ 6,246	+ 2,877

"Renewals reserves" of £634,558 make their first separate appearance in the balance sheet. In previous years this reserve has apparently been included in "sundry creditors and credit balances." As for 1929, traffic prospects are described as satisfactory, in spite of the heavy decreases registered up to the present.

It is certainly true that the chief disappointments of 1928, sugar and coffee, were affected by special causes, sugar by drought and disease, and coffee by export restrictions. Steps have been taken to replant with a variety of sugar cane that is immune to the "Mosaic" disease. The present price of Leopoldina ordinary stock stands round about 61, cum £3 final dividend, and yields £8 12s. per cent.

Nitrate Railways.—Though the dividend on the ordinary and the preferred converted ordinary shares has been raised to 6 per cent., the 1 per cent. increase being apparently fully earned, the Nitrate Railways' report for 1928 is not so good as it might have been, for it shows that the operating ratio, which was cut down from 79.97 in 1926 to 66.51 in 1927 by economies resulting from special expenditure, has now risen again to 73.23. The total traffic carried was 12,728,524 metric quintals, against 10,133,136 in the previous year, an advance of 25½ per cent. Gross receipts rose from £698,540 to £879,169; a striking increase in the receipts from coal and oil traffic, £249,891 against £133,655, accounted for the bulk of the difference, nitrate traffic receipts at £511,807 being only £32,107 higher. Meanwhile working expenses advanced from £464,622 to £643,889, the expenditure on maintenance of ways and works, for instance, having grown greatly. The rise in locomotive running expenses appears disproportionate to the increased traffic. A sum of £31,713, the cost of a new line connecting the north and south Pampas, has been transferred from net revenue account to depreciation reserve, in pursuance of the Company's policy of reserving for capital expenditure in excess of capital issued. No explicit appropriation to renewals and new works account has been made this year, but instead £22,000 for renewals has been charged on the maintenance account.

At the request of the Chilean Government, and in order to assist the nitrate industry further, the directors have agreed to continue the temporary rebate in tariffs of 15 per cent. on nitrate traffic and 10 per cent. on coal and petroleum traffic, until December 31, 1929. The preferred converted ordinary shares are drawing near their maximum dividend of 7 per cent., and the conversion and distribution rights attached to the different classes of shares are worth recording. Each £10 ordinary share may be converted into one £10 preferred converted ordinary and one £10 deferred converted ordinary, or *vice versa*. Dividends are declared on the capital as if no part had been converted, but out of the portion accruing to the converted shares the preferred are entitled to a non-cumulative maximum of 7 per cent., the balance going to the deferred. The ordinary shares, now priced at 8, yield £7 10s., the preferred converted ordinary at 7 yield £8 11s. 5d., while the deferred converted ordinary are quoted at 1¼. During 1928, 8,927 ordinary shares were evidently converted.

Blue Bird Petrol.—At the hearing of the petition, on May 6th, brought by a shareholder, for the winding-up of Blue Bird Petrol, Limited, on the grounds of default in convening the statutory meeting and filing the report, it was stated that an offer had been received by the petitioner from a French gentleman for the purchase of the whole of his shareholding and that of his friends, as well as those of the petitioners in the case of Blue Bird Importers. The petition was therefore allowed to stand over for a week to allow the intended purchase of shares to be completed. Meanwhile, the statutory report of Blue Bird Petrol has been issued and shows a sorry state of affairs. As at April 6th the subscribed capital was £238,698 and the balance of cash in hand only £697. Calls in arrear were £13,301, preliminary expenses amounted to £19,189, and amounts paid on account of preliminary expenses of Blue Bird Petrol (Foreign) and Blue Bird Holdings to £28,726; underwriting commissions to £16,932; the amount paid to Blue Bird Motor in respect of a process to £80,600, in respect of pump installations to £36,775, and in respect of wages £459; payments on account to Blue Bird Oil Importers in respect of petrol to be delivered to £49,775; and directors' fees, travelling expenses, &c., to £4,870. In respect of the payments to Blue Bird Motor and Blue Bird Oil Importers, the auditors state that they have been informed by the directors that these amounts, or some of them, have not actually been received by the respective companies, but have been disbursed under authorities to other parties for various considerations. The receipts for these payments were signed by directors and secretaries of the associated companies who are also directors of Blue Bird Petrol. The auditors also state that shares of the par value of £210,000 were issued to Blue Bird Petrol in consideration of the foreign rights sold to Blue Bird Petrol (Foreign). Certificates to the par value of £163,077 were produced for the auditors' inspection, but the balance had been transferred to other persons for other considerations. The *Economist* has dealt with the peculiar finances of the family of Blue Bird companies in its issues of January 19, 1929 (page 111) and January 26, 1929 (page 169). It is clear from the statutory report of Blue Bird Petrol that the whole position calls for independent investigation.

Vereinigte Glanzstoff.—This artificial silk company has retained unchanged for 1928 its 18 per cent. dividend, despite falling prices, a result attributed to rationalisation, improvement of the home and foreign sales organisation, and to increased output of higher-quality goods.

Year ending December 31.	1926.	1927.	1928.
	(Millions of Marks.)		
Operating profit	12·3	17·29	24·16
Net profit	6·84	10·56	13·66
Ordinary dividend—			
Rate	15%	18%	18%
Amount	5·85	9·18	12·15

The balance sheet has been markedly affected by fusions and by the expansion of the old works. Fusion with the Vereinigte Kunstseide A.G. of Frankfurt-on-Main has been completed. The Cologne works of the Glanzstoff-Courtauld A.G. have been taken into operation, together with the Breslau works of the Neue Glanzstoffe A.G., but full production will be reached only in 1929. The American Glanzstoff Company has started operations, and at the end of the year was working to 50 per cent. of capacity. The value of land and buildings is shown at 20.35 million marks against 14.80 million marks a year earlier; factory equipment at 16.01 million marks against 7.68 million marks; stock-in-trade at 10.6 million marks against 3.95 million marks; and participations in other concerns at 87.2 million marks against 37.13 million marks. The increase in stock in hand apparently reflects the unfavourable selling market. The share capital is 75 million marks against 60 million marks. The legal reserve has been increased from 48.5 million marks to 75 million marks, and now equals the share capital. At the time the report was compiled orders on the books were increasing, but prices have been depressed since the termination of the German Viscose Silk Convention in January.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies: Bank of Greece, Friends' Provident and Century Life Office, Licenses and General Insurance, Equitable Life Assurance Society, Yorkshire Insurance, World Auxiliary Insurance, Rubber Plantations Investment Trust, Anglo-American Debenture, London Asiatic Rubber and Produce, Calcutta Electric Supply, Rio de Janeiro City Improvements, Dunlop Rubber, British Thomson-Houston, Howard and Bullough, Anglo-Oriental Mining, Associated Electrical Industries, Birmingham Small Arms, Spillers, Harland and Wolff, Schweppes, and Whiteaway Laidlaw and Co. At the Harland and Wolff meeting Lord Kylsant expressed his confidence in the ultimate full recovery of British shipbuilding, on the ground that it has shown the capacity to put its house in order. The chairman of the Anglo-Oriental Mining Corporation affirmed that every indication pointed to a mutual understanding being reached among tin producers, presaging the rationalisation of the industry and the beginning of stability. The unexpected entry of Russia into the wheat market as a large buyer last June was referred to by the chairman of Spillers. On a previous page comment is made on Sir Eric Geddes' speech at the Dunlop meeting.

MINING NOTES.

The Anglo-Oriental Mining Corporation.—The first report has been issued of the Anglo-Oriental Mining Corporation, which was formed last year to take over the Anglo-Oriental and General Investment Trust and to develop the technical organisation and finance of the Anglo-Oriental group of both of these mining companies. The public issue in February, 1928, consisted of 880,000 7½ per cent. cumulating participating preference shares of £1 at 21s. and 220,000 ordinary shares of 5s. at 10s. per share. This issue gave the Corporation, after paying all preliminary expenses, aproximately £955,000, of which £500,000 was devoted to financing the present Malayan programme of development of the Anglo-Oriental Group. For the seven months ended February 9th the profits of the Anglo-Oriental and General Investment Trust were stated in the prospectus to be £95,625. The present report shows that the net profit for the period ended February 28, 1929, amounted to £220,227, which compares favourably with the prospectus figures. After allowing for the preference dividends of 7½ per cent., and a participating dividend of 1½ per cent. on the preference capital of £1,018,000 as from the dates of payment of calls, these profits were equivalent to earnings of over 60 per cent. of the ordinary share capital of £250,000. In order to conserve resources at this early state of the company's existence, the directors have limited the ordinary share dividends to 15 per cent., transferring £30,268 to investment reserve and £10,000 to taxation reserve, and leaving £83,493 to be carried forward. The company's investments are shown in the balance sheet at cost at £1,013,043, of which the present market value is about £979,111. The largest investment is in the shares of Anglo-Oriental and General Investment Trust, acquired at a cost of £315,000. The remaining investments represent unquoted securities costing £30,196 and valued at £47,911 and quoted securities costing £667,846, of which the market value at February 28th was £600,255. More than half the quoted securities is accounted for by shares in Tin Selection Trust, London Tin Syndicate and London Malayan Tin Trust, the balance being spread over some fourteen tin and other mining companies. The directors propose to establish an investment reserve account with a credit of £29,731 from share premium account and £30,268 from revenue account. The cash position of the Corporation is shown in the balance sheet as strong, the surplus of current assets over current liabilities being £168,450. Since its formation the Corporation has had falling tin prices and an adverse share market to contend with, and the depreciation in its tin holdings since February must have become larger. The position in regard to tin has now reached a critical stage, but with the good management for which the Anglo-Oriental group is credited, no doubt the Corporation will emerge successfully from this difficult period.

Anglo-American Corporation of South Africa.—Our mining correspondent writes:—The outstanding feature of the 1928 accounts consists in the expansion of the balance sheet total. Shares and interests now figure for £5,311,300, as against £3,620,500, the difference being partly due to the subscription for Rand Selection Corporation shares at 17s. 6d. under an option. Debtors stand at £1,229,000, against £931,400; loans £3,121,700, against £2,685,300; gilt-edged securities £1,011,000, against £1,210,000, and cash at £707,900, against only £15,700. On the other side, deposits by affiliated companies and others total £4,516,660 in place of £1,903,500; creditors £741,300, against £698,000. By the appropriation of £250,000 the reserve has been raised to a million and a quarter. Last year proved a less profitable period than 1927. At £815,600 the receipts and profits were lower by £61,200; and as general expenses showed an increase the net surplus came out at £771,300 in place of £840,200. As usual, a substantial part of the profit is absorbed by special appropriations. In lieu of the £300,000 transferred to "reserve for stabilisation of diamond interests" twelve months ago, £250,000—as already mentioned—is now added to general reserve. The balance of £549,100 remaining to be carried forward, subject to 12½ per cent. dividend (as before), is virtually the same as brought over from 1927. The company's Northern Rhodesian mining interests have been transferred to the Rhodesian Anglo-American in exchange for shares; otherwise the interests held are much the same as before. Anglo-American £1 shares are quoted at nearly £2.

Rhodesian Copper.—Next Monday, meetings are to be held to consider the new "All British" scheme for the financing of the Rhodesian-Congo Border and its subsidiary, the N'Changa Copper Mines. Briefly, the capitals of both companies are to be increased; Congo Border shareholders will be offered approximately 300,000 shares at £5, and out of the proceeds the company will subscribe for 100,000 N'Changa shares at £3, a further 200,000 being offered to the shareholders of that concern at the share price. The former issue will be guaranteed by a group, which comprises the Rio Tinto Co., Messrs. N. M. R. Rothschild and Sons, the "Chartered" Co., British Metals Corporation, Johannesburg Consolidated Investment, Rhodesian Anglo-American, Union Corporation, Anglo Metal Co., and Minerals Separation—probably the strongest combination which has ever backed a mining enterprise; the N'Changa issue will be guaranteed by the Congo Border Co. With the funds thus provided the N'Changa will be able to proceed with the development and equipment of its property, and the Congo Border to investigate thoroughly the remainder of its concession. The present scheme represents a great advance upon the earlier American offer. It embodies no options on shares at low prices, and has apparently been drawn up with a view to discouraging rather than encouraging speculation in the share market.

South African Townships.—Profit on sale of properties and the like in 1928 amounted to £150,400, as compared with £24,200 in 1927. Hence, although the revenue from other sources decreased, the net profit came out £94,300 higher, at £183,300. No change was made in the dividend rate—10 per cent.—absorbing £98,800—the balance, apart from an allocation of £20,000 to reserve, being added to the carry forward, which now figures at £133,600. In the circumstances above-mentioned, property account naturally shows a reduction, figuring at £769,000, as against £881,200; otherwise the balance sheet items indicate no very material alteration on the year. An increase has taken place in the company's holding of Potgietersrust Platinum shares. On the basis of the last two dividends "Townships" yield about 8 per cent.

Lonely Reef.—A distinct improvement in both profits and developments occurred during 1928. The total net surplus amounted to £86,500, as against £24,900, and after the payment of dividends totalling 25 per cent. in place of 10 per cent, a balance of £9,800 remained to be carried forward, or more than double the sum brought in. At 96,200 tons, value 15.19 dwts. the ore reserves display an advance on the year of some 9,000 tons in quantity and

nearly 4 dwts. in value; the estimate does not include 15,000 tons having an indicated value of over 30 dwts. There are in addition 57,000 tons of low-grade ore in the deeper levels, which can, it is thought, be profitably mined in conjunction with the rich material from the 11th and 12th levels, while the accumulated slimes on hand exceed 800,000 tons. Of the profit above-mentioned, £30,000 was obtained from the treatment of the slimes; the new plant also gave better results from current ore, thus more than paying for itself in twelve months. Unfortunately the rich discoveries on the upper levels, upon the strength of which the shares were last year run up to 48s., proved to be of limited extent; while exploration at depth revealed only low values. The " profit in sight " approximately covers the current price of the shares.

Chemical and Metallurgical Corporation.—Those who urchased shares in this undertaking on the strength of ıe participations taken by influential groups have had n object-lesson that such participations do not necesarily spell early success. At one time last year the hares crossed 10s; they are now quoted under 3s. It nay be recalled that some four years ago the concern nderwent a drastic financial reorganisation, the arrears f preference dividend being cancelled and the ordinary hares written down by 19s., every two 1s. shares being ubsequently consolidated into one. Although the first nit of plant was brought into operation in January, nd others—in whole or part—followed, 1928 has been egarded as a transition period, the net proceeds of sales f products being deducted from general expenditure—a ery uninformative procedure. A deficit of £72,800 is hown, less £3,600 balance of interest, raising the debit o £169,800. Outlay on plant, buildings, etc., during the ear amounted to £345,700, raising the total to practially half a million. On December 31st creditors stood at £97,700 and there was a bank loan for £30,000. Since then 2,000,000 ordinary shares have been privately subscribed at 3s. 6d. for the purpose of completing the Runcorn plant " on a considerably broader basis than was originally intended "; the erection of the projected electrolytic zinc plant is in abeyance. The company has a chain of processes for the treatment of complex ores and the utilisation of the bye-products. It should in time develop to a very big concern; but patience will be required. Meanwhile the dividend on the preference shares is three years in arrears.

CAPITAL ISSUES.

Five prospectus issues were made this week totalling £1,200,000 and covering a wide variety of enterprise. The total for th eyear to date is £141,634,618, as compared with £194,583,900 for the corresponding period last year. The speculative flavour predominated this week. Two issues were made by new " talking film " companies—*Associated Talking Pictures* and *International Screen Productions*. If these are to be the forerunners of another " gold rush " among promoters, we would call the attention of investors to the results which attended the " silent " film promotions of the 1927-28 boom, set out in a leading article in the *Economist* on April 20. The fact that certain British theatrical producers have been successful in the presentation of West End plays in London is no criterion of their ability to make successful talking pictures for European, American and Asiatic audiences. Mr Basil Dean, managing director of *Associated Talking Pictures*, is the only one of the directors who has had film experience, which was limited to one production. *International Screen Productions* is a merger between British Screen Productions, a German concern, and an American independent producing concern. No financial details are given of British Screen Productions, which was one of the film promotions of the 1928 boom. The Corporation is subscribing for a block of new shares of British Screen Productions at par (5s.), whereas the market price is about 3s. 6d. A commercial issue of the speculative type was that of *Young Accumulator, 1929, Limited*, which has been formed to acquire and develop rights in a secret process for making non-sulphating paste for use in connecting with electric batteries. No estimate of profits is given, but the accumulators have apparently been tried out for two years with satisfactory results *Automotor Finance, Limited*, is a company formed to finance the purchase of motor vehicles and is taking over a business of this character which has been handled by the Scottish Automobile and General Insurance Co., of Glasgow. This was a small issue of interest chiefly to Glasgow. The only preference issue of the week was that of *Darwins, Limited*. This company takes over the undertakings of a well-known Sheffield steel firm which had been forced into liquidation as a result of the coal strike of 1926. Dividends are well covered by profits on the basis of the last two year's results and the shares, being participating, have speculative attractions.

The Lists for Conversion and Cash Applications will close on Friday, 24th May, 1929.

Government of the Commonwealth of Australia Conversion Loan

OFFER OF CONVERSION TO HOLDERS OF

£12,403,734 of Queensland Government 5½ per cent. Inscribed Stock, 1926-1929

(Being balance of the Loan falling due at the Bank of England on 1st July, 1929, totalling £12,703,734, of which £300,000 is being paid off out of a recently created Sinking Fund),

INTO

Government of the Commonwealth of Australia 5 per cent. Registered Stock, 1945-1975

at £97 per cent.

Interest payable 1st January and 1st July. Six months' interest payable 1st January, 1930.

Principal will be repaid in London at par on 1st July, 1975, the Government having the option of redemption, in whole or in part, at par, on or after 1st July, 1945, on giving three months' notice.

The Government of the Commonwealth of Australia will comply with the requirements of the Colonial Stock Act, 1900, in order that TRUSTEES MAY INVEST IN THIS STOCK, subject to the provisions set forth in the Trustee Act, 1925.

The Loan is authorised by Act No. 4 of 1929, of the Parliament of the Commonwealth of Australia.

COMMONWEALTH BANK OF AUSTRALIA is authorised by the Government of the Commonwealth of Australia to offer to holders of £12,403,734 Queensland Government 5½ per Cent. Inscribed Stock due July 1, 1929, conversion, in whole or in part, into an equal amount of Government of the Commonwealth of Australia 5 per Cent. Registered Stock, 1945-1975.

Holders who convert will receive a cash payment on 1st July, 1929, of £3 per cent., being the difference between the nominal amount of the maturing Stock and the issue price of the new Stock. The half-year's interest, due 1st July, 1929, on the *Stock converted and unconverted, will be paid by the* Bank of England. A full six months' interest on the new Stock will be payable on 1st January, 1930.

This Conversion Loan has been approved by the *Australian Loan Council*, and is issued in accordance with a law passed by the Parliament of the Commonwealth of Australia, by which the Commonwealth of Australia, as from 1st July, 1929, takes over the debts of the several States.

Holders of the *Queensland Government 5½ per Cent. Stock* and Stock Certificates to Bearer, exercising the option to convert, will receive preferential allotment, and must lodge their applications for conversion on the prescribed form at the **Colonial and Corporation Stocks Office, Bank of England, 18, Finsbury Circus, E.C.2.** *Any Stock not converted will* be paid off on 1st July, 1929, by the Bank of England.

Commonwealth of Australia Stock and Bonds issued and payable in London and the interest thereon, the property of persons not domiciled in Australia, are not, and will not be, subject to any taxes, duties or levies in Australia.

All Commonwealth Loans carry a Sinking Fund in accordance with the provisions of the National Debt Sinking Fund Acts.

In the case of debts taken over from the States, the following contributions must be made to the Sinking Fund:—

(*a*) On Loans existing on 30th June, 1927, including such loans when converted into other loans, 7s. 6d. per £100 per annum.

(*b*) On any new Loans 10s. per £100 per annum.

The policy of the National Debt Commission of the Commonwealth of Australia is to use a portion of the Sinking Fund for the repurchase of Loans in London. The high standing of the personnel of the National Debt Commission affords ample guarantee to British Investors that they will continue to receive equitable treatment as regards repurchases on the London Market. During the present financial year ending on 30th June next, the National Debt Commission has made £1,663,000 available for repurchase of Loans issued in London by the Commonwealth and States.

COMMONWEALTH BANK OF AUSTRALIA is further authorised to offer for subscription in cash Government of the Commonwealth of Australia 5 per Cent. Registered Stock, 1945-1975 (to an amount sufficient to make up, with the Stock converted, the above total of £12,403,734), payable as follows:—

£5	0	0	per cent. on Application.	
£92	0	0	„ „ „	1st July, 1929.
£97	0	0	per cent.	

Cash Applications on the form prescribed will be received at Commonwealth Bank of Australia, 36-41, New Broad Street, London, E.C. 2, and must be for even hundreds of Stock, and be accompanied by a deposit of £5 per cent. on the nominal amount applied for.

Script Certificates to bearer will be issued, if desired, and such Certificates, when fully paid, will be convertible into Registered Stock.

In case of partial allotment, the balance of the amount paid as deposit will be returned to the Applicant. In case of default in the payment of the final instalment at its due date, the amount previously paid will be liable to forfeiture, and the relative Allotment to cancellation.

Payment in full may be made after allotment, and discount at the rate of 4½ per cent. per annum will be allowed from 5th June, 1929, or from any subsequent date.

The Stock will be registered and transferable in any amount by deed, free of stamp duty, at Commonwealth Bank of Australia, 36-41, New Broad Street, London, E.C. 2, and *Interest Warrants will be transmitted by post at the Stockholder's risk.* In the case of joint accounts the warrants will be forwarded to the person first named in the account unless instructions to the contrary be given.

The revenues of the Commonwealth of Australia alone are liable in respect of this Stock and the Dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of His Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the Stock or of the Dividends thereon, or for any matter relating thereto.—40 and 41 Vict., cap. 59, sec. 19.

A commission of 5s. per £100 of Stock will be paid to Bankers and Stockbrokers on allotments made in respect of *conversion and cash applications* bearing their stamp.

Prospectuses, forms for conversion and cash applications with statistical statement relating to the *Commonwealth of Australia* may be obtained from Bank of England, Threadneedle Street, London, E.C. 2, and Commonwealth Bank of Australia, 36-41, New Broad Street, London, E.C. 2; from Messrs. R. Nivison and Co., Bank Buildings, Princes Street, *London, E.C. 2; from* the High Commissioner for Australia, Australia House, Strand, London, W.C. 2; and from the Agent-General for Queensland, 409-410, Strand, London, W.C. 2.

GOVERNMENT OF THE COMMONWEALTH OF AUSTRALIA 5 PER CENT. CONVERSION LOAN, 1945-1975.

Issue of £12,403,734 Registered Stock.

74

To Commonwealth Bank of Australia,
36-41, NEW BROAD STREET, LONDON, E.C. 2.

GENTLEMEN,

I/We hereby apply for £_____ say_____ of the Commonwealth of Australia 5 per Cent. Loan, 1945-1975, according to the Prospectus of 11th May, 1929, and undertake to pay £97 for every £100 of Stock, and to accept the same or any less amount that may be allotted to me/us, and to pay for the same in conformity with the terms of the said Prospectus.

I/We enclose the required deposit of £ , being £5 per cent. on the nominal amount applied for.

*Ordinary Signature*_____

Please write distinctly.

*Full Name*_____
(State whether Mr. Mrs. or Miss and Title, if any.)

*Address*_____

May, 1929.

N.B.—Applications must be for multiples of £100, and must be Accompanied by the amount of deposit thereon.

Cheques should be made payable to BEARER and should be crossed thus:

Commonwealth Bank of Australia,
a/c Australian Loan.

cent. to the "A" shares, and an equal sum to the "B" shares; 3rd, sufficient to make up 7½ per cent. on the "B" shares; 4th, of the balance, 20 per cent. to the "A," 33⅓ per cent. to the "B," and 46⅔ per cent. to the ordinary shares. The company acquires a Sheffield business, which includes some 12 separate companies carrying on established businesses in the steel and allied trades. Net assets are valued at £354,056. The purchase price is £330,000 in shares as above. The business acquired was incorporated in 1926, but went into liquidation in 1927, since when profits have been, before charging tax or loan interest:—June 9-November 30, 1927, £16,188; year to November 30, 1928, £42,114; 4 months to March 31, 1929, £24,155. Working capital is £274,000, subject to issue expenses. The unissued shares are under option at 21s. 6d.

Young Accumulator Company 1929, Limited.—Issue at par of 300,000 (out of 450,000) 10s. ordinary shares. The company acquires an existing business (including factory and plant valued at £27,695), together with world rights in a secret process for making non-sulphating paste for use in connection with electric batteries. The total purchase price is £85,000, payable as to £10,000 in cash and £75,000 in shares, and royalties; the company will also discharge any surplus of liabilities of the vendor company, not exceeding £26,000. After providing £20,000 for additional plant and issue expenses, working capital is estimated at £68,500.

Automotor Finance, Limited.—Issue at par of 150,000 (out of 250,000) £1 shares. The company will carry on the business of financing the purchase of motor vehicles and other articles of commerce, having made an agreement to pay in cash to an existing firm £3,000 in respect of its goodwill and £7,000 for preliminary expenses.

Associated Talking Pictures, Limited.—Issue at par of 400,000 (out of 500,000) 5s. ordinary shares. The company will produce talking and sound films, and acquire the benefit of arrangements in respect of rights, etc., by purchase of the whole share capital of an existing company for £25,000 in shares. Working capital is estimated at £85,000.

Horsham Gas Company, Limited.—Offer for sale by tender of 535 £10 "B" ordinary shares (minimum price, £10) ranking for a maximum dividend of 7 per cent. equally with existing shares, which have received this rate for the last 5 years. Issued share capital amounts to £24,650, and £1,000 has been borrowed on mortgage. Net revenue for 1928, after charging £1,700 for new installation, was £2,209. Reserve fund and carry-forward aggregate £6,766.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introductions:—**Silent Sales, Limited**; issued capital, £40,000 in 1s. shares; acquires rights for parts of the United Kingdom to install Pascall automatic machines, and to sell Pascall's products therefrom; purchase price is £4,000 in cash and £21,000 in shares; a further 410,000 shares are under option at par. **Yorkshire Products Investment Company, Limited**; issued capital, 186,589 £1 7½ per cent. cumulative preference and 3,183,417 2s. ordinary shares; formed to acquire controlling interests in companies producing and merchanting cement concrete aggregates, bricks, limestone products, refractory materials and building requisites; a further 625,000 ordinary shares are under option at par. **Hector Whaling Limited**; issued capital, £285,000 in £1 shares; incorporated in 1928, to enter into a trading agreement with a Norwegian whaling company, providing for the purchase of all its whaling products, and to acquire interests in that company. **Neverest Automatic Supply, Limited**; issued capital, £60,000 in 1s. shares; acquires an existing company, with the benefit of contracts to sell and distribute automatic machines, and to sell goods therefrom; the purchase price is £4,000 in cash and £21,000 in shares.

COMPANY MEETINGS, &c.

BANK OF GREECE.

FINANCIAL AND ECONOMIC CONDITIONS IN GREECE.

MR DIOMEDE'S INTERESTING REVIEW.

"ENTIRELY SATISFACTORY RESULTS"

The first ordinary general meeting of the shareholders of the Bank of Greece was held on April 6th last at the head office of the Bank, Athens.

The governor (Mr Alex. N. Diomede), in submitting the report for the year 1928, said:—

Gentlemen,—The past year was the first of the administration of the Bank of Greece, and the first period of the application of our currency reform, which fixed by law the value of the drachma and assured its unhindered conversion into gold currencies.

From the date of the introduction of this reform the value of the drachma has no longer been subject to shocks.

The uncertainty, which previously distinguished our national economy, and which struck at the root of all the phenomena of the economic life of the country, gave way to a sentiment that the measure, with which all commodities are measured and priced, will be in future stable and sure.

VALUE OF THE DRACHMA.

During the first year of administration, the principle actuating us was this: how to maintain intact the value of the drachma.

In our opinion this task ought to take precedence of all other banking activities. The results were entirely satisfactory. During the whole period, from May until this day (and it should be remembered that the first steps in reform, especially a reform of such a radical nature, are the most slippery), the Bank of Greece has not for a moment felt the least sign of a menace to our currency, nor have its firm foundations been for a moment affected. Indeed, on the contrary, at the close of the year these foundations had become firmer, owing to the increase of the cover and the sentiment of absolute conviction that the basis of the drachma is unshakable, permitted the administration to begin to turn its attention to other important lines of the bank's work as well.

MOVEMENT IN EXCHANGE.

The movement in exchange, the cover and circulation of the bank since May 14th, 1928, are as follows:—

From May 14th to December 31st, 1928, exchange and gold were purchased to the value of..... £9,421,997
Exchange was sold £8,742,224
Leaving a balance in the bank's favour of £679,773

Offers of exchange were abundant during the past year. With the exception of the normally barren months of June to August, during which we supported the market out of our own resources, an excess of purchases over sales was the rule during the year.

For this reason the rates of exchange remained continually at low levels, not exceeding the rate of stabilisation, *i.e.*, 375 drachmas per £.

The offer of exchange over and above the requirements of the market, and the surplus of £679,773 remaining undisposed of at the end of the year, prove that our transactions with foreign countries left a credit balance.

But the fact must not be lost sight of that the assistance coming from abroad during recent years, in the shape of loans, brought in additional exchange.

This exchange, however, is entering the country very slowly, because the loans contracted are not intended for the payment of unfulfilled obligations on the part of the Government. The country imports this exchange only so long as the works for which the capital imported is intended, are being carried out. This capital does not exceed £2,500,000 yearly, and it represents the cost of works which enrich the country with new assets. On the other hand, considerable amounts of the national debt are being paid off by means of an ordinary sinking fund out of the revenue of the Budget, as we shall see later on, and this extinction of debt, which is of itself important, should be set off against the new charges.

We can obtain no statistical accuracy for estimating our international accounts. It would be a mistake, on the other hand, to place implicit faith in the figures shown in the tables of our import and export trade, because it is certain that the calculation of the volume and the value of the trade cannot claim to be accurate. It should also not be forgotten that an important percentage of our external debt is now in the hands of Greek residents. The annual service of this debt, amounting to £4,670,000, appears only on the debit side of our accounts, whereas an important percentage of it is imported and spent in the country. Again, the remittances from emigrants, notwithstanding a slight abatement, continue to come in plentifully. During the past year, the sums transmitted through the banks alone amounted to £6,425,839, a sum which is by £1,531,000 less than the figure for 1927, but the amount actually received by the country is certainly greater, though, as it does not all come through the banks, it cannot be known.

MERCHANT MARINE ACTIVITIES.

It is also certain that the activity of our merchant marine during the past year was more profitable than in the past, and this tendency in the direction of more intensive work fortunately continues. This is shown by what is known as percentage of unemployment, which was 14 per cent. in 1927, but fell in 1928 to 9 per cent., without this reduction being accompanied by lower freights. These items—to confine myself to tangible items—constitute a most important factor on the credit side of our accounts, which we may reasonably hope to see increasing.

But we should not forget either, that since the value of the drachma began to consolidate, and especially since its stabilisation by law, the flow of capital abroad and back again has become more intense. This factor constitutes a very important element of the economy of a country. It is not easy to express this movement by statistics, nor can the figures given claim any accuracy. In any case, this factor has exercised recently, and still exercises in our country also, no small influence, and has become stronger with the tendency of interest abroad to rise, a tendency which makes the investment of the disposable funds of the country at short dates on foreign markets, extremely attractive.

CIRCULATION AND COVER.

Our circulation, since the bank commenced operations on May 14th, presents that natural increase which is observable in all those countries which have restored their currency to health.

On December 31st our circulation amounted to 5,689,550,300 drachmas.

But whilst we have this increase on the one hand, on the other, the proportion of cover to circulation has been increased from 53·67 per cent. to 54·24 per cent. of the total sight liabilities of the bank, and this because, in the meantime, foreign gold exchange was acquired, which increased the cover by about £679,773.

Our cover consists of gold and foreign gold exchange. On May 14th, it amounted to £10,570,678.

PROPORTION OF COVER TO SIGHT LIABILITIES.

During the seven months under review, the cover presented certain downward curves during the months of July and August, and upward trends during the other months. The greatest observed fall was on August 31st, when the proportion declined to 50·24 per cent. The bank assisted the market from its own reserves for a moment, and to the extent of £1,211,724, without adversely affecting the price. This exchange was, however, speedily and without difficulty recovered from the abundant offers of October and November. Thus, by December 31st, the bank's reserves had not only recovered the amount temporarily disposed, but they even showed an increase, and reached the figure of £11,308,348. Hence their proportion to the total liabilities reached 54·24 per cent.*

The strength and elasticity of the economy of the country is shown, however, by the fact that, during the periods of stringency of the exchange market, the proportion of cover to circulation did not fall below 50·24 per cent. on our total liabilities.

Our cover is, however, higher than 50 per cent. to 54 per cent. of our actual circulation, and fluctuates as a matter of fact, between 70 per cent. and 76 per cent., which proves that our currency has behind it a gold backing equal to 75 per cent. of the circulation. These proportions, we thus maintain, rank us amongst the most healthy banks of issue.

---

* On March 31st of this year the reserves, notwithstanding the requirements of the market, remained at a figure higher than the original figure by £249,000.

BUSINESS OF THE BANK.

During the period under review, our discount operations in general amounted to Drs. 135,112,524, whilst loans and open accounts granted against securities, &c., amounted to Drs. 33,661,950.

The business of the bank under this head was not, of course, extensive. We shall, however, gradually develop it, and later on, when the projected establishment of branches in the great economic centres of the country is realised, it will become possible for us to exercise a direct and beneficial influence on the movement of the business of the country.

Meanwhile, we are attending to the organisation of those institutions and services the establishment of which is laid down by our statutes and by the Geneva Protocol.

In the first place, we have undertaken to establish a clearing office among the different banks in Greece.

We are also working at the concentration of the cash transactions of the State, and the expected gradual realisation of this scheme will contribute to bringing about not only considerable rapidity in the functioning of the respective departments of the State but also clearness, unity and completeness in its accounts, besides which it will give an impulse to the utilisation, in favour of production, of much capital in the country, which is at present unproductive and stagnates in the various treasuries of the State.

In accordance with the Protocol of Geneva, during the first three years of the Bank's existence, the results of the Bank's business have to be communicated to the Financial Committee of the League of Nations. The Committee expressed itself very favourably concerning the manner in which the Bank of Greece had comprehended and carried out its mission and considered the results of the year's work to be entirely satisfactory. This opinion is a very valuable asset for the credit of the country.

FINANCIAL AND ECONOMIC POSITION OF GREECE.

On reviewing the financial and economic position of the country we have the following remarks to make :

PUBLIC FINANCES. PAST DEFICITS.

From the year 1926-7 the perception of the precipice towards which we were being rapidly hurried, made it imperative that certain measures should immediately be taken to prevent disaster. Since the year 1920, deficits in the Budget have followed one after the other :—

In 1921 the deficit was	Drs.		1,408,000,000.
„ 1922	„	„	1,663,000,000.
„ 1923	„	„	1,660,000,000.
„ 1924	„	„	789,000,000.
„ 1925	„	„	1,278,000,000.
„ 1926-7	„	„	1,685,000,000.

The means employed to meet these deficits were those temporary expedients and measures which are characteristic of destructive periods of economic history. But, beside this, the requirements of the Government absorbed all the disposable capital in the country.

At a time when production was recovering from the vicissitudes of the war, and displayed an admirable desire for fruitful work, the Government, with the continual deficits in its budget, was all the time immobilising more capital. It consequently created by its requirements an intolerable stringency of capital, and an irresistible trend of interest to higher levels.

IMMOBILISATION OF CAPITAL IN THE NATIONAL BANK.

The capital immobilised during that period in the assets of the National Bank was in

1923	...	...	Drs. 835,907,000
1924	...	...	„ 742,452,000
1925	...	...	„ 1,006,790,000
1926	...	...	„ 644,000,000

The accumulating requirements of the budget entailed increased expenditure every year. The expenditure rose from Drs. 5,396,000,000 in 1924, to Drs. 6,938,000,000 in 1925, and jumped suddenly in 1926 to Drs. 8,249,000,000.

The inevitable result was, that we were being driven into a complete confusion between the Public Treasury and the National Bank. We should in such case have entered upon a period of heavy issues of paper money which would have dealt a final blow to our exhausted organism.

Those who, in those sad times, had the heavy responsibility of dealing with questions, on the solution of which the economic fate of the country depended, remember the menace to the country like a nightmare.

It is easy to-day, when matters have been put right, to find arguments for criticising the situation as it then was. We were then confounded with an inexorable dilemma. Either to adopt measures which, by their extremeness, would have led to a forcible liquidation of the situation in the ultimate hope that this profound upheaval would contribute to remedy the evil, or, on the contrary, to put a sudden end to every risky system and, in collaboration with foreign capital, endeavour to bring about the smooth and gradual restoration of the financial and economic condition of the country. Without any reservation, the latter path was chosen, and the results obtained have proved the correctness of this judgment.

RESULTS OF THE NEW POLICY.

The complete change of methods, the clearance of the future, so that future budgets should possess completeness and sincerity, the radical restoration of the finances of the country; all these difficult problems, before which more than one had shrunk, were studied, discussed from all sides, subjected to a strict and scientific test, and, with assistance from abroad, which the League of Nations willingly granted, were settled in a practical manner; thenceforward secure foundations were laid for the finances of the country. Whereas, up to the year 1926-7, the deficits in the budget were enormous, the budget of 1927-8, with all its comprehensiveness, left a real surplus, which has since been assessed, of Drs. 550,000,000. The budget of 1928-9, in spite of the necessary increase in expenditure, also left an assessed surplus of over Drs. 100,000,000. The new budget under consideration can thus be based upon firm foundations of revenue, so that, notwithstanding the increase of expenditure, a surplus may safely be expected. This new budget is characterised by a spirit of absolute conservatism in its estimates, so that its execution will present no surprises. It contains also a strong reserve fund, so that any additional expenditure may be covered from this reserve, without the equilibrium being threatened therefrom. But in addition, although a loan of £3,000,000 net had been approved and issued, for the purpose of settling all the arrears of the Treasury, nevertheless, the automatic increase of the revenue, and the collection of arrears of taxation have had the result that the whole of the amount provided will not be required to liquidate the past. The free balance that remains, and which is estimated at about half the amount of the loan, will remain at the disposal of the State, to be utilised for extraordinary purposes as the Government may consider well. At the present moment, the whole amount of the loan of £3,000,000 remains intact with the Bank of Greece, at interest to the credit of the State.

Finally, the immobilisation of the disposable capital of the National Economy, which was caused by the continual absorption of capital by the State, has been put an end to. From the time when the period of creation of deficits closed, and the work of restoration and *de facto* stabilisation commenced, the Public Treasury immediately acquired creditor balances in the bank. To-day the State is burdened with no floating debt which has not been provided for and instead of the Treasury obtaining temporary advances from the bank under various forms (as was the case up to 1926), and leaving unsettled accounts to be renewed and to accumulate with the interest continually in arrears, it is now completely up to date. Since 1927 the Treasury possesses a balance to its credit—Drs. 100,000,000 on December 31, 1927; Drs. 565,000,000 on December 31, 1928; Drs. 715,000,000 on March 15, 1929—and this balance has never during that period fallen below 450,000,000 drachmas.

And with all this, no payment is in arrears—a fact unknown in the finances of the country up to 1927—whilst every provision has been made for the expenditure expected; whilst the amount required for the service of the public debt is being converted into foreign exchange and put aside six months in advance; whilst there lies at the Bank of Greece a deposit in favour of the State, and arising from the revenues assigned for our external and internal loans—after deduction of the current service of the loans secured thereby—and referring to future requirements of Drs. 410,000,000 on December 31, 1928, and Drs. 432,000,000 on March 15th of this year.

THE BUDGET—A REAL SURPLUS.

It now has happened, for the first time in Greece, that the Budget has closed, for three years in succession, with a real surplus, obtained without the aid of loans, thanks to the innate strength given to public finances by the natural yield of the revenue and the reduction of expenditure within strict limits. This favourable position makes it possible for the Government to think of adopting milder methods as regards certain taxes which will mainly benefit private economy. The surpluses realised and deposited with the Bank of Greece, at the free disposal of the Treasury, permit the latter to incur expenditure outside the Budget of a more advanced social character, and to do this out of resources which it derives from the surplus of its financial administration.

PUBLIC CREDIT.

These are the tangible results which appear to-day—results of a lengthy and painful endeavour to restore our public finances, to

introduce order in them and to inspire strict administrative methods The easy covering of public expenditure by public revenue, clearness in the State accounts and the consequent rise of credit, and the impression of strength left upon all those who impartially examine Greek finance—these are the fruits of the policy adopted.

The appreciation of the financial strength of Greece on the part of the realists of London, who are accustomed to weigh things calmly, is shown in the prices of Greek securities—prices which are formed freely and naturally.

The improvement in the prices of Greek securities which commenced in 1924, after a short relapse, has continued at a more rapid rate since the reconstruction policy was decided upon and put in execution.

NEW PUBLIC DEBT. COMPARISON WITH THE PAST.

The restoration of the public finances and the rehabilitation of credit made it possible for attention to be turned to the carrying out of works, requiring larger capital, through which the economic level of the country is raised and production becomes more intensive, yielding more plentiful and varied returns. Further, through this capital, which is being brought in from abroad, it is possible for works to be undertaken, the execution of which gave employment to, and will for a long series of years employ, the surplus population, especially that of the towns. At the present day, when we are passing through a period which represents a critical curve in our social life, we must not overlook the necessity of employing many classes of the population in productive work. To abandon these people would be to swell the ranks of unemployment, and would create fresh sources of danger. The liquidation of the past, however, is at an end. And one may assert with certainty that the days of loans devoted to fruitless objects have now been succeeded by a new policy with completely different aims. Nowadays, all our borrowing activity aims at supplying and enriching the country with fresh assets which, by giving an impetus to increased work, will yield in return, many times over, the amount of expenditure incurred in acquiring them.

Let nobody say that the policy of deriving capital from abroad for these objects results in a barren and harmful burdening of the country. Two facts, I think, sufficiently prove the prudence of the policy adopted by Greece in this direction.

In the year 1912, when Greece was still a comparatively small country, with a small production and meagre returns, the public debt amounted to 1,080,000,000 gold drachmas, equal to a debt of gold drs. 400, or £16 per head of a population of 2,700,000. The final destination of the greatest part of the loans represented by this debt was unfortunate. They were spent for requirements of a barren nature, for the most part, and but a very small fraction was transmuted into works of permanent utility. In the end, as they failed to increase proportionately the productiveness of the country, they became a crushing burden which caused the resisting power of the nation to give way.

At the present day, our public debt, after the disaster which we have suffered, and the reparation of the losses which we have undertaken, amounts to £82,000,000 approximately and Drs. 16,000,000,000 or £43,000,000, or a total of £125,000,000 This is equivalent to pre-war gold drachmas 500, or to £20 per capita for a population of 6,200,000.

However, we now have an incomparably higher productive power, a population which uses an altogether different technical equipment, territory more fertile, a credit organisation converted in a thick network all over the country, considerably increased savings-bank deposits, a consumptive capacity widely developed, and, generally speaking, a present, and especially a latent, strength out of all comparison with that of the Greece of days gone by.

The comparison between them and now gives indisputably satisfactory results in favour of the present, not only because a considerable portion of the public debt contracted since then has been utilised in supplying the country with a better equipment and has enriched it with new assets, but also because the £20 of the debt per head of to-day have not the same intrinsic value as the same amount in pre-war days; in fact, they are of much less value because it is calculated that gold has lost more than 30 per cent. of its pre-war value. In other words, the actual debt per head is certainly less than in 1912, and amounts to £14 or £15 only.

A POLICY OF HEAVY DEBT AMORTISATION.

But there is another point which I think deserves especial notice. This point is the policy of amortisation which has been adopted.

From 1923 to 1928, Greece was obliged to contract indebtedness, amounting to Drs. 9,600,000,000, or about £25,000,000, in internal loans, and £26,000,000 in external loans. That is to say, the public debt increased during that period by £51,000,000. But the country was aware that these charges must not be allowed to continue for ever, but that it would be advisable to pay them off as rapidly as possible, even if the Budget was to be excessively burdened at first by this policy.

For this reason an unusually large sinking fund was fixed. Thus, amounts of £3,340,500 and about Drs. 1,300,000,000 were expended in six years, from 1923 to 1928 inclusive, for ordinary and extraordinary sinking funds, and debts to this amount were definitely extinguished, not including conversions. It is estimated on a sure but moderate computation that, within ten years from now, we shall have paid off, through the sinking funds fixed in the conventions, about Drs. 9,500,000,000-10,000,000,000 out of our debt in drachmas, and £20,000,000 out of our foreign debt, or a total of between £47,000,000 and £48,000,000.

In other words, our present public debt will be reduced by two-fifths, and in this way, the capital borrowed from the commencement of the Great War to date, either for the liquidation of war losses or for the economic restoration of the country will be almost entirely extinguished in a period of between 10 and 12 years.

This absolutely prudent policy, which arranges that the present generation shall contribute largely to the reduction of the charges incurred for the most part for its benefit, so that it may leave a less burdensome inheritance to its successors, makes it easier for the country, from a general economic point of view, to undertake obligations connected with the execution of works which create fresh resources, without which the Greece of to-day, and still less the Greece of to-morrow, cannot live and progress.

CONVERSION OF PUBLIC DEBT.

The compcsition of our public debt, however, and especially of the internal debt, bears the impress of the onerous loans of the period of the war and that immediately following the war. These loans were contracted under unfavourable economic conditions, as were all the similar loans of most countries. Our credit was then low, money was suspicious and dear, but our needs were urgent. These facts led to very heavy obligations being assumed for the amortisation of those loans. The policy of all those States, which came out of the war with their finances encumbered, was to apply the so-called conversion policy on a large scale, immediately they had achieved the restoration of their finance and currencies. The restoration of credit and the cheapness of international capital are indispensable conditions for the application of such a programme. For this reason, directly Greek stocks rise above their nominal price; directly the real interest descends to a low level; directly cheap money shall be offered in the international markets we must, without fail, study the conditions of a more general unification and conversion of some of our loans, by which means not only will the budget be appreciably relieved but the State will be able at its convenience and without embarrassment, to discuss the needs of the future, because it will be able within the limits of the existing expenditure to minister to fresh obligations, undertaken for productive purposes.

CONDITIONS OF PRIVATE ECONOMY.

The consolidation of our public finances is a fact which cannot be disputed by calm observers of our affairs. But, in the case of the private economy of the country, it may be said that it has not yet attained to a state of equilibrium, and the conditions it is labouring under still remain unfavourable for a more intensive development. The restoration of the currency to health removed from the midst a powerful hindrance to the smooth working of private economy, and created a stable medium of exchange. But the habits of the past, which had been formed in an atmosphere that was vitiated by the continually fluctuating value of the currency, still exercise certain hurtful influences over the present. For it is not easy to re-educate the people under conditions which preclude easy profit, and demand work which creates only restricted gain.

Economic conditions during the war, and still more after the war, gave an impulse to the creation of a large number of enterprises, which subsisted thanks to the special conditions of an entirely artificial protection and the lack of any competition—conditions which characterised the years in which they were established. In this way a considerable amount of capital was immobilised, attracted by the dream of enormous profits, which were assured to the detriment of consumers by the various measures of protection imposed by the extraordinary circumstances. But, from the time when an endeavour began to be made to restore normality in the world, above all, when free competition once more began to exercise its automatic adjusting influence, then these enterprises suddenly found themselves in the midst of surroundings differing from those which were presupposed for their existence. And the inevitable result was, elsewhere, just as in Greece, that these enterprises are vegetating, and will continue to vegetate—that the capital invested in them cannot be remunerated. Even to-day these enterprises continue to burden the national economy, and create a

heavy liability in that economy, which it is not easy to liquidate, nor is it possible for it to be gradually cleared off without leaving disagreeable traces behind it.

CAUSES OF STAGNANCY.

It is true that greater smoothness is now observable in business than during the past, interest shows some tendency to fall (our discount rate has been reduced from 10 per cent. to 9 per cent.), deposits, especially savings bank deposits, are increasing, and the deposits of the principal banks, taken together, show an increase at the end of the past year of about 800,000,000 drachmas over those of the foregoing year, or an increase of 12 per cent. Investments have also been more plentiful, and the country has absorbed for its business more capital than before, estimated at a figure well over Drs. 1,000,000,000. But the economic life of the country will enter upon a safe path of progress only when there is stability in the conditions of every class of work; when all expenditure can, within reasonable limits, be foreseen; when unstable factors which cast the seed of doubt into every enterprise and deter the average man who is not by nature a bold *entrepreneur* from engaging in productive work—are reduced to a minimum.

This uncertainty frightens away capital, and puts a stop to real savings, the only source which, when it is plentifully supplied, will render us really independent of foreign countries. The high rate of interest still observable is due exclusively to the hesitation of Greek capital either to return home or even to make an appearance. To this fear, which is certainly exaggerated by rumour, is due the reduction last year by £1,150,000 of the remittances of emigrants. Capital, justifiably or not, is afraid to display activity, because it is apprehensive of being badly treated. This is the reason of its abstention from any permanent investment in business. But such investments only enrich the country, increase production and foster the fruitful enterprising spirit of the people. This is the reason of the continually high rates of interest. But under these conditions production also cannot be cheap, nor can those commodities which constitute the necessary supplies of life ever be offered at lower prices in order to contribute to the reduction in the cost of living.

THE NECESSITY FOR SAVING.

If, on the contrary, we adopt a policy which both by legislation and by the administration protects and incites to saving, we shall then certainly behold local capital automatically appearing on the surface in order to be invested in business with courage and conviction. Capital also is an article of commerce; it, too, is governed by laws which fix its price, that is to say, interest. But capital belongs to the class of valuable goods, for it is the indispensable element of the production of all other goods. It is, however, at the same time the most sensitive and nervous of all products. That is why a crisis affecting it produces an immediate repercussion upon the whole economy of the country, because the chief elements of production suddenly become dearer.

The safest criterion of the prosperity and economic equilibrium of a country, at any given time, is, under normal conditions, the rate of interest. Prosperity is the more certain when interest is low generally—that is to say, for all classes of business. The slackness of business observable in Greece, the tendency to abstain from it, its meagre and irregular returns—which have been described by many as a crisis—all this is principally nothing else than the lack of offers of cheap capital. This disease is easily curable, because it is not true that there is a scarcity of capital in the country. On the contrary, I do not think that it lacks capital, or that it has not the means to find capital abroad. The proof of this fact, which I think cannot be disputed, is the increase in the deposits in the five principal Greek banks during the past year. A further proof is seen in the continually increasing investments in productive business properly so called, by these banks, and yet another proof is the issue of so many internal loans during the past two years, for the payment of compensations fixed by treaties. A large proportion of the bonds of these loans was absorbed by the market, and only in this way did the refugees and others who needed it, receive ready money.

SOUND MONETARY AND FINANCIAL SITUATION.

Another proof is to be found in the firm maintenance of our public credit, and the evident readiness of foreign capital to find employment in Greece, because the present sound monetary and financial situation inspires confidence, because there exists a confidence in the latent potentialities of the country. It is enough to prepare, by legislation and administration, a fertile soil for the employment of foreign and local capital, and to create a framework of security within which the various agents of production may move freely and fruitfully.

I do not think that, with the data we possess, there is any room for hesitation as to the policy to be followed. With the assistance of credit, that policy, by opening new business and assisting old ones, will absorb the whole of the unemployed population; and by giving an impulse to production, it will increase saving, will bring down prices, will multiply consumption, and will then lay the foundations of social and political well-being.

SCHWEPPES, LIMITED.

RECORD NET PROFIT.

The thirty-second annual ordinary general meeting of Schweppes, Limited, was held, on the 9th instant, at Marble Arch House, 1 Connaught Place, London.

Sir Ivor Phillips, K.C.B., D.S.O. (the chairman), who presided, in moving the adoption of the report and accounts, said that gross profit was £317,000, as against £307,000 last year, while the net profit was £172,000, against £157,000—a new record for the company. They had had another satisfactory year, and were able to recommend a dividend of £9 6s. 3d. per cent. to the ordinary shareholders and 10 per cent. to the deferred shareholders. Inasmuch as the deferred shareholders had received one new deferred share for every two previously held, they were now receiving 15 per cent. on their original holding, as against 10 per cent. last year. By settling the long outstanding question of arrears of deferred dividend, not only had the deferred shareholders benefited, but the ordinary shareholders had also at last received an increased dividend.

Their trade generally was satisfactory and he took the opportunity of giving a review of the past 10 years' work of the board. In 1918 goodwill stood at £1,039,000; to-day it stood at £450,000. The mortgage on the Vauxhall factory of £30,000 had been paid off, while the "A" debentures, which stood in 1918 at £103,000, were now £22,000—the difference of £81,000 having been paid off. To-day, beyond the £300,000 4 per cent. permanent debenture stock and the small balance of £22,000 "A" debenture stock, there were no charges on the property. New factories had been built at Glasgow, Brighton, Cardiff, Leeds and Dublin, while additions had been made to their factories at Hendon and Vauxhall. At the Sydney factory there had been large extensions and additions, and the Melbourne factory had been almost entirely rebuilt. In addition to all this, a number of new depots, both in this country and in New South Wales, had been formed for the better distribution of the company's products and for the convenience of their customers. Three freehold cider factories, and a large acreage of orchards planted with cider-producing apples had been purchased. Their cider was second to none, and was daily increasing in popularity. Their sales were already large and were steadily increasing. At the last Brewers' Exhibition in London Schweppes cider was awarded the Gold Medal in open competition.

Profits in the last 10 years had risen from £55,000 to £173,000. In 1918 the ordinary shares had received 7 per cent. and the deferred shares nothing. To-day the ordinary shares were receiving £9 6s. 3d. per cent. and the deferred shares 10 per cent., or, on their previous holding, 15 per cent. That was a record which he thought the company should be proud of.

Mr Brian Kemp-Welch seconded the resolution, which was carried unanimously.

CAPITAL AND RESERVES: Fmk.417,000,000.
TOTAL ASSETS (31/12/28): Fmk.2,934,742,000.

KANSALLIS-OSAKE-PANKKI

(National Joint Stock Bank)

HEAD OFFICE: HELSINKI (HELSINGFORS), FINLAND

Established 1889.

YORKSHIRE INSURANCE COMPANY, LIMITED.

INCREASED DIVIDEND—EXCELLENT POSITION.

The one hundred and fifth annual meeting of shareholders of the Yorkshire Insurance Company, Limited, was held, on the 7th instant, at the Station Hotel, York, Sir James Hamilton presiding.

In moving the adoption of the report and accounts, the Chairman said that the total of new life sums assured was £1,730,000, an increase of £215,000 over that for last year, the average sum assured per policy being £683. The consideration received for annuities was £54,000, and the life and annuity fund had risen from £5,753,468 to £6,192,286, an increase of £438,000. The net sum paid under claims by death showed a reduction as compared with the previous year of £15,000 and was a satisfactory feature. The expenses ratio had also been somewhat reduced.

QUINQUENNIAL VALUATION.

The quinquennial valuation just completed showed a most excellent position. It had been made on the most stringent lines and showed a surplus of £570,000, which enabled a distribution to be made to the participating policyholders, inclusive of the interim bonuses paid during the quinquennium, of £432,450, and carrying forward £112,000, as compared with £70,208 brought in from the previous valuations. Coupled with the fact that they were one of the few companies which maintained the bonus throughout the period of the war should appeal to all those contemplating life assurance.

The shareholders received as usual one-tenth of the disposable surplus. The new premiums in the sinking fund account amounted to £35,000 and the fund was increased to £285,000. The net fire premiums were £1,065,000 and showed a decrease of £37,000, which was more than accounted for by a decline in the United States premiums, there being otherwise an increase. While partly due to their underwriting policy in the United States, it was also a result of the large nnmber of new insurance companies recently incorporated in America, with consequent increased competition and wider distribution of the available business. They had, therefore, considered it wise to take a substantial interest in the company newly organised by their friends, which would operate alongside themselves under the control of their managers, and they looked forward confidently to deriving material benefit both in the acquisition of desirable business and reduction in their expenses.

FIRE, ACCIDENT AND MARINE DEPARTMENTS.

The fire loss ratio of 47·5 per cent. was well within the average expenditure for many years, and they were able, as in the previous year, to carry £150,000 to profit and loss account and to increase the fire funds from £757,000 to £775,000.

In the accident and general account the net premiums had risen from £1,183,000 to £1,244,000. The claim ratio was 3 points higher, and after setting aside the increased 40 per cent. reserve for unexpired liability, the resulting fund was increased from £721,000 to £754,000, and they were able to transfer £80,000 to the profit and loss account the same as last year.

In the marine account the premiums were £484,000, a very slight increase, and were again absorbed by the outgo, but as was done last year, £10,000 was transferred to profit and loss, really a portion of the interest earned in this account, and the fund increased by £2,000 to £556,000.

The departmental sums brought into profit and loss account were identical with those of last year, while interest was £6,000 more. Profit on reversions also showed an increase of £1,000 or £2,000 a year more for this and the next four years. The general reserve, after providing £6,000 for purchase of business, now stood at £853,800, and the total assets side of the balance-sheet had risen from £10,593,265 to £11,353,876, an increase of £760,000. The net rate of interest earned by the company was £4 11s. 9d. per cent., showing an increase of 1s. 10d. per cent.

I think, added the Chairman, you will regard the account as an eminently satisfactory one, and your directors consider they can safely recommend a further increase in the dividend, which they propose shall be 19s. on the fully-paid shares and 9s. 6d. on the partly-paid shares, free of tax.

The proposed rearrangement of capital will be effected without trenching upon the general reserve, being financed entirely from the profit and loss account. The fact that they could so finance the proposed capital rearrangement and at the same time transfer £60,000 to their general reserve was a source of particular satisfaction.

Mr. de Neufville seconded, and the resolution was carried.

The extra-ordinary general meeting which followed immediately afterwards approved the resolutions doubling the amount of paid-up share capital from the sum specially reserved in profit and loss account and altering the articles of association.

ASSOCIATED ELECTRICAL INDUSTRIES, LIMITED.

SUCCESSFUL RESULT OF GROUPING.

The twenty-ninth annual general meeting of Associated Electrical Industries, Limited, was held, on the 7th instant, Bush House, Aldwych, London, Mr Howard C. Levis (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—At the last ordinary general meetings of this company and the British Thomson-Houston Company, Limited, it was stated that negotiations between the two had reached a stage where we could look forward with confidence to close cooperation which should lead to eliminating unnecessary duplication of effort and expenditure and to effecting economies generally in various directions, such as research, engineering development, manufacturing processes, and the purchase of materials. Reference was also made to similar negotiations with the Edison Swan Electric Company, Limited, and Ferguson, Pallin, Limited. Since these meetings the plans have been brought to a successful conclusion, and, while it will of necessity take time fully to realise the expected economies, the important fundamental steps have been taken. Several plans were considered, and that which was finally adopted involved the use of this company, as the holding company, as the easiest plan to put into effect and with a minimum of expense. Following the successful completion of the negotiations with the various interests, a circular was issued on November 9 to the shareholders of this company setting forth the terms of the arrangement.

It is not necessary for me to outline the various activities of the companies now brought into such close cooperation, as they are well known, but it may be of interest to state that together we employ nearly 30,000 people in England, and also possess manufacturing facilities in Australia. With the exception of the output of the Australian shops and of an insignificant number of specialised articles for which the demand in this country has not as yet justified manufacturing here, all the products sold by this group are at present, and will continue to be, entirely manufactured in Great Britain.

PROFITS AND DIVIDENDS.

The total profits, after providing for expenses, bad and doubtful debts, maintenance of buildings, machinery, taxation, &c., and adjusting certain reserves amount to £258 772, or £4,000 more than those of the previous year, and I must remind you that so far as the operations are concerned, it covers the same field as the operations of the previous year, in that nothing is received in the way of dividends from the shares of other companies which have been acquired, and, on the other hand, no dividends are paid on the new stock, the latter only ranking for dividend from January 1 last. The directors recommend that there should be paid a dividend of 8 per cent., less income tax, on the cumulative preference shares, and there should be paid on the 1,136,950 old ordinary shares a dividend of 6 per cent., less income tax, the aggregate amount of the two dividends being £133,488, which, deducted from the profits available for distribution, leaves a balance to be carried forward of £101,850.

SEVERE COMPETITION.

The situation as regards competition, both at home and in markets abroad, has become more severe even than indicated at the general meeting a year ago. The large orders placed by the Central Electricity Board in connection with the grid scheme have undoubtedly increased the volume of business offering, and the group has had a fair share of these, but this work has had the effect of attracting the efforts of such a large number of competitors that the price levels have fallen as the result. It is a matter for regret that the facilities available for the manufacture of electrical apparatus in this country continue to extend at a greater rate than the increasing demand, with the inevitable result of fiercer competition and a lower level of price. These enlarged facilities also result in increased competition in the foreign markets, with resulting lower levels of prices there, created in many cases by competition between English firms. This all points to the advisability of every effort being made by those in control of the industry in England to secure cooperative arrangements which will tend to produce an adequate return for the investment of money and brains in the industry.

The results of the year under review are satisfactory, considering the circumstances, but the profits are not adequate, having in mind the efforts put forth, the quality of the products sold, and the service rendered to our customers. The constant developments in the electrical field involve very large staffs on both the engineering and production sides, and entail very heavy overhead expenses if the companies in the group are to hold their position, and it is only by maintaining such staffs that they can hope to secure an adequate volume of business and occupy their factories at anything like an economic level of production.

The resolution was unanimously adopted.

FRIENDS' PROVIDENT AND CENTURY LIFE OFFICE.

RECORD LIFE ASSURANCES.

FAVOURABLE MORTALITY RESULTS.

The annual meeting of the Friends' Provident and Century Life Office was held on the 8th instant, at the Holborn Restaurant, London. Mr Harold J. Morland, M.A., F.C.A. (the Chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The adaptation of the new head office building, No. 7 Leadenhall Street, London, was completed in July last. It has been found to be conducive to convenience and efficiency for the central activities of the Friends' Provident and most of the associated companies to be concentrated in one building, and the situation in the heart of the City affords increased opportunities of securing suitable investments and eligible insurance business.

New Assurances.

I will now turn to our report and accounts for 1928. The new life assurances of £1,567,483 constituted a record. In addition, the Century Life Fund issued policies for £71,606, making together £1,639,089 as compared with £1,548,236 for 1927.

FAVOURABLE LIFE CLAIMS.

The amount of the life claims incurred was particularly favourable, being only 54 per cent. of the amount expected. The annuitants also exceeded their expected longevity. Still, on balance the excellent profit of £69,000 from favourable mortality emerged in the two sections of the business.

INTEREST EARNINGS.

For the third year in succession the net rate of interest earned on the funds after deduction of income-tax was in excess of 5 per cent. The average of the net rates for the first four years of the current quinquennium was £5 1s. 6d. per cent., as compared with the corresponding average for the years 1920-23 of £4 11s. 5d. per cent. The rate of profit arising from surplus interest was therefore almost one-third more in the last four years than in the comparative period of the previous quinquennium.

EXPENSES.

The past two years have witnessed a rapid growth in the volume of life business. As the obtaining of new business carries with it special charges of various kinds, this increased growth involves a natural rise in the total expenses and also in their percentage to premium income.

CENTURY ACCOUNTS.

The premium income in the general departments of our associated company, the Century, advanced by £72,727, and amounted to £684,210. Trading profits of £6,441 were transferred to profit and loss account. The fire department had a fair year. The accident account had an unfortunate experience both in motor insurance and workmen's compensation. The marine account for 1926 was closed, showing a loss of £1,042, which was provided out of the additional reserve in the marine fund. The marine fund is liable only for the running off of the 1927 and 1928 underwriting accounts.

The Century Life Fund valuation will take place as at the end of 1929, and the result is awaited with considerable confidence.

The valuation of the permanent sickness fund for the five years 1924-28 was made on a stringent basis, and there was transferred from the surplus to the credit of the profit and loss account the sum of £20,000.

PROFIT AND LOSS ACCOUNT.

The profit and loss account showed as its most important item interest not carried to other accounts £37,958, this being £3,512 more than in 1927. The net profit of the Century, after provision for taxation and all known expenses, amounted to £60,479, which, with the exception of the profit for 1927 (£72,546), was the largest in the history of the company. The usual dividend of 12 per cent. (yielding the Friends' Provident 6 per cent. on its investment) cost £33,600, leaving £26,879 to be added to the balance carried forward, making it up to £89,742.

The Century funds, including paid-up capital, amounted at the close of 1928 to £3,245,673, an increase of £104,813 in the year.

FRIENDS' PROVIDENT BALANCE SHEET.

The total funds of the Friends' Provident advanced during 1928 by £431,893, and amounted at the end of the year to £5,966,427. There was no change of particular significance in the constitution of the assets, unless it were a rise of £106,000 to £336,000 in the holdings in preference and ordinary stocks, representing further purchases on a modest scale of these types of investments.

FAVOURABLE VALUATION PROSPECTS.

As at the close of the current year, 1929, the valuation of the assets and liabilities for the five years then ending will be made, and from the progress of our affairs until now it is evident that, subject to nothing unforeseen of a serious character taking place in the meantime, a surplus will be shown which will justify the allocation of bonuses on the basis of at least the most recent rate of interim bonus declared—namely, £2 per cent. compound.

There is no doubt that in recent years life offices have attained a profit-earning capacity which affords the means to declare bonuses at rates in most instances without precedent in their history. This prosperity arises mainly from the high interest rates earned on the funds in comparison with the low interest rates estimated to be earned, supplemented by large profits from the favourable mortality of the lives assured as compared with the mortality rate on which the premiums were based. The high rates of interest earned are due in large measure to the huge wastage of capital during the Great War, but the more active investment policy adopted is a contributing factor. As the normal rate of interest on the trustee type of security becomes adjusted more nearly to pre-war standards, the maintenance of a favourable average return on the funds will depend on the extent to which sound knowledge and prudent enterprise are characteristic of our investment departments, thus enabling the transfer of funds to a wider range of investment to be carried through advantageously.

LIFE OFFICES AND INVESTMENT.

It is evident from a study of the balance-sheets of life offices that such a transfer has been on the way for several years past, and the affiliations between insurance companies and other organisations (including trust companies) engaged in the business of investment which are from time to time arranged demonstrate the careful attention which is being given to a satisfactory solution of the problem. There is thus every prospect that the prosperity now enjoyed by life offices may continue in the future, enabling them to act as investors for their members on the co-operative principle, in addition to fulfilling their primary purpose of providing monetary protection to dependents against early loss of the breadwinner.

It appears to be the custom now with many investors to buy ordinary stocks for capital appreciation rather than for interest yield, and in doing so the price of this stock is generally based on the fact that there are surplus reserves accumulated and that not all the profits earned have been divided. Such an investor is content with a low rate of dividend in consideration of possible bonus prospects later.

On the other hand, in the case of a life office new members may come in "on the ground floor," so to speak, and may, without additional monetary consideration, immediately share fully in the benefits of the organisation which has been created and of the reserves that have been made.

BENEFITS OF LIFE ASSURANCE.

Life assurance is generally treated either from the point of view of the prospective benefit to the dependents or of the advantage to the life assured as an investment, but it may be claimed that the life assured himself derives other important, even if intangible, advantages. In the past few decades the average rate of mortality has considerably improved. This improvement is ascribed to growth in medical and surgical science. Social reforms have also made their contribution, for worry has a depressing effect on health, while peace of mind conduces to long life as well as good health. It is this last reason which it is admitted largely accounts for the much greater longevity of annuitants as compared with non-annuitants.

Is it not reasonable to believe that he who has effected adequate assurances for the protection of his family against privation and poverty enjoys greater peace of mind and is more free from worry, whether during health or more particularly in the case of illness, than the equally well-intentioned but careless man who has either inadequate assurances or none at all?

MEDICAL PRACTICE PURCHASE SCHEME.

As another illustration of the possible benefits of life assurance I may mention that in the endeavour to be of service we have recently introduced a unique scheme whereby members of the medical profession may be assisted to purchase practices, the security being in addition to the practice itself, life and permanent sickness assurances of suitable amounts, and no personal guarantors being normally required. A considerable number of cases have already been arranged, and the scheme has been much appreciated by those taking advantage of it, as in most instances they have been able to anticipate by many years the time of acquiring their own practice.

The resolution was carried unanimously.

EQUITABLE LIFE ASSURANCE SOCIETY.

NEW BUSINESS RECORD.

The 167th annual general meeting of the Equitable Life Assurance Society was held, on the 8th instant, at the registered office of the society, 19 Coleman Street, London, Sir Evan Spicer (the president) presiding.

The President, in moving the adoption of the report, drew attention to the fact that they had obtained more new life assurance business this year than for over one hundred years. Once—it was in 1810—they issued new policies for one and a half million pounds of sums assured, and then, owing to a feeling of uncertainty with regard to future profits, it was decided that only five thousand policies might share in profits at one time. Consequently a new member had to wait for his first bonus until one of the eixsting five thousand died. This discouraged people from coming to the society, and business dropped down steadily until some fifty years ago, when the new assurances each year were less than £100,000. Now they were over £1,000,000, and he hoped the society would never make that sort of mistake again! It would have been something of a tragedy if the first company that granted real life assurance had ceased to exist. The society was full of life, and the list of claims at the end of the report showed the wonderful bonuses now being paid. The claims under with-profit policies payable at death produced last year, on the average, nearly two and a half times the original sum assured, and in five cases produced more than four times the sum assured. The list of claims relating to whole-life policies was supplemented by examples of endowment assurances that had matured because the life assured had survived to the end of the term for which the assurances were effected, and they would see that these results were very satisfactory. Ever since the Equitable started it had been in the habit of issuing not only policies to its members which were increased by bonuses, but other assurances which were not entitled to share in profits and had a sum assured which was definitely fixed. As their bonuses were so good, it was becoming obvious that the terms formerly granted for these non-participating assurances should be made more attractive, and during the past year the society issued new tables for this kind of business. So far as they were aware, no insurance office publishes lower rates than theirs.

The report was unanimously adopted.

WORLD AUXILIARY INSURANCE CORPORATION, LIMITED.

SUCCESSFUL YEAR—INCREASED PREMIUM INCOME.

The tenth ordinary general meeting of the World Auxiliary Insurance Corporation, Limited, was held, on the 9th instant, at Winchester House, Old Broad Street, London.

Capt the Rt Hon C. C. Craig, M.P. (chairman of the corporation), said:—In accordance with our usual custom, I will deal with the accounts in the order in which they appear before you. In the fire, accident and general account the premium income amounted to £275,725, an increase as compared with the previous year of over £75,000, which shows that we are extending our activities and enlarging our field of operations. To the premium income must be added the fund of £93,756 brought forward from 1927, making a total of £369,481.

The claims paid and outstanding, commission charges and expenses amount to £234,003, leaving a balance of £135,478, from which we have transferred £5,000 to profit and loss account, thus showing the fund at the end of the year under review to amount to £130,478, or 47.3 per cent. of the year's premiums. I venture to think you will agree with me that this is a satisfactory position. The marine fund at the commencement of the year amounted to £197,459, to which is added the premium income of £171,076, giving a total of £368,536. The claims paid on 1927 and previous years accounts amount to £115,678, and for 1928 to £46,145, or 26.9 per cent., a slightly lower ratio than that for the corresponding period for 1927. After paying expenses there remains a balance of £199,669, from which we have transferred the sum of £12,500 to profit and loss, leaving a marine fund of £187,169, or 109.4 per cent., to be brought forward to 1929.

It may be within the recollection of some of the shareholders that at our meeting last year I ventured to prophesy that, though 1926 was generally accepted as a bad year, we did not anticipate making any loss; so that to be able to transfer £12,500 to profit and loss and retain a fund of 109 per cent. is, I think, a matter for congratulation, and reflects great credit upon our underwriter, Mr Sharman, and his colleague, Mr Taylor.

Balance Sheet.—Our investments, which are taken at cost price, have increased from £747,911 in 1927 to £839,615. The investment reserve fund still stands at £20,000, which your directors consider sufficient, but in addition to this there is an appreciation in value of our investments at December 31st last of £6,641.

The report and accounts were unanimously adopted.

THE BRITISH THOMSON-HOUSTON COMPANY, LIMITED.

CO-OPERATION IN ELECTRICAL INDUSTRY.

IMPORTANT ARRANGEMENTS CONCLUDED.

The thirty-fourth ordinary general meeting of the British Thomson-Houston Co., Limited, was held on the 8th instant, at the offices, Crown House, Aldwych, London, W.C. 2.

Mr H. C. Levis (the chairman) presided.

After the notice convening the meeting was read the Chairman referred with great regret to the resignation of Mr Owen H. Smith, who had been a director of this company since March, 1902. He also referred to the appointment of Major-General Sir Philip Nash, the managing director of Associated Electrical Industries, Limited, to fill the vacancy.

The Chairman mentioned that Associated Electrical Industries, Limited, had acquired from the previous owners all of the ordinary shares of the British Thomson-Houston Co., Limited, the majority of the ordinary shares of the Ediswan Co., and some of the preference, and practically all of the preference and ordinary shares of Ferguson, Pailin, Ltd. He also referred to his speech made yesterday, at the general meeting of the Associated Co., wherein he enlarged somewhat fully upon this matter.

YEAR'S PROFIT.

He then reviewed the figures in the balance sheet and profit and loss statement, and observed that the profits for the year, after deducting all expenses and charges other than interest on dividends and loans, were £422,729; to this there is to be added the amount brought forward from the preceding year, £200,512, making a total to be dealt with of £623,241. The total carry-forward from the last financial year was £230,512, but, as set forth in the report, £30,000 was deducted from this before bringing the balance into the accounts for the current year, and therefore the amount brought forward was £200,512 as above stated.

ALLOCATION.

From the amount above mentioned, of £623,241, there had been first deducted £152,224 interest on debentures and loans (which is £27,500 less than the previous year) and the directors recommended there should be appropriated for depreciation £119,950.

After deducting the dividends paid on the preference shares during the year at the rate of 7 per cent. per annum, less income tax, £84,000, the directors recommended the payment of a dividend on the ordinary shares at the rate of 4 per cent. per annum less income tax, absorbing £64,000 and leaving an amount of £203,066 to carry forward to the new account.

BALANCE SHEET CHANGES.

The balance sheet showed some important changes.

The amount of loans had been reduced from £1,310,000 to £335,000, this reduction being possible from the payments received for the Ediswan and Ferguson Pailin shares, which this company previously owned. This reduction in loans would have a substantial effect upon the amount of interest which the company would have to pay hereafter.

The share capital remained the same; both the 4½ per cent. and 7 per cent. mortgage debenture stock had been reduced by drawings under the respective trust deeds.

The reserve account stood at the same figure as last year.

On the credit side of the account the principal changes were the disappearance of the item of nearly a million pounds, covering shares in affiliated companies—the shares of the Ediswan and Ferguson Pailin companies now having been acquired by the Associated Company as stated—and shares and debentures in lighting, traction and other companies having been reduced from £516,352 to £369,638.

STRONG FINANCIAL POSITION.

The item apparatus, supplies, etc., finished and in process of manufacture, less reserve, had increased from £1,238,636 to £1,409,064. "Sundry debtors, retention moneys, payments in advance and other outstanding accounts" had increased about £200,000. The amount in Government securities was £44,971, and the cash at bankers £220,509. The quick assets, eliminating shares and debentures in lighting, traction and other companies, aggregated £3,770,794, while the current liabilities—in which was now included loans, and, as heretofore, included employees' savings

certificates, together with sundry creditors, retentions, &c.—were £1,561,054. The financial position, therefore, was strong.

NEARLY 12,500 EMPLOYEES.

The number of employees was nearly 12,500. The company's policy always had been to manufacture in this country everything that they sell, excepting an inappreciable number of items where the volume of sales is too small to warrant their being put into production; this policy would continue, not only for this company, but for the companies with which it was associated.

Finally, the Chairman referred to the appreciation of the efforts of the company's employees, who had always been ready to help promote the company's interests in every possible way.

The report of the directors, together with the annexed statement of the Company's accounts to December 31, 1928, duly audited, was then received, approved and adopted.

Messrs. E. Wilbur Rice, Gerard Swope, Francis Fraser, and Major-General Joly de Lotbiniere, the retiring directors, and Major-General Sir Philip A. M. Nash, who had been appointed a director since the last general meeting, were re-elected directors of the company.

Messrs Price, Waterhouse & Co., were re-appointed auditors for the ensuing year.

LICENSES AND GENERAL INSURANCE COMPANY, LIMITED.

GOOD RESULTS.—NEW SHARES TO BE ISSUED.

The thirty-ninth ordinary general meeting of this company was held, on the 8th instant, at 24, 26 and 28 Moorgate, London.

Mr A. W. Ruggles-Brise, D.L., J.P., C.C. (the chairman), said that when he addressed the shareholders a year ago the directors did not anticipate, following on the very big advance then reported, anything like a repetition in the year to follow. They had presumed that 1928 was to be no more than a year of consolidation. It was food for satisfaction that they could improve upon that faith. They were able to report the very substantial increase in general income of £48,517, and, after deducting £11,543 further decrease in marine income, there was a net increase of £36,974, thus definitely lifting the company's income above the £500,000 mark, which had for some years been their object of attainment.

Last year especially, but in reality for eight consecutive years, they had had to provide substantial amounts with which to maintain the reserve for unexpired risks at its required level in the various revenue accounts. With a further substantial increase of income, no less than £20,000 in round figures was required this year for this especial purpose.

Referring to the individual accounts, the chairman said that in the fire account, for the first time for many years, the ratio of claims exceeded their usual annual average of 51 per cent. In the personal accident department there was an increase of income, while in the employers' liability section any change had been of an upward nature. The income from the marine department was now on such a level that it could definitely give no cause for concern.

Since the inception of the company in 1890, the capital had remained unaltered at £73,850 paid up. With the important changes which had taken place from time to time, the character of the company had changed, and it had become enlarged and extended in every direction. To-day they faced a world-wide position: they stood as an active, progressive company of no mean reputation, with a substantial income and the tide of public approval flowing strongly in their favour. The directors felt that the time had come when fresh capital could be usefully employed in many ways. Such an increase would strengthen the reserves and improve the liquid strength, and be more in keeping with the importance of the concern. Foreign and even colonial Governments required from insurance companies that substantial deposits be made before business was commenced. As a company they were not concerned with the correctness or otherwise of the theory governing such demands; if they saw opportunities for good business in a foreign land, were they to avoid and lose that business because they felt that the transference of some of their present securities abroad might impair their home strength. The directors therefore proposed to issue within the next few days an offer of new shares to present holders on what they considered their shareholders would find attractive terms. The Chairman concluded by moving the adoption of the report and accounts and the declaration of the dividend recommended.

The resolution was carried unanimously.

LONDON ASIATIC RUBBER AND PRODUCE COMPANY, LIMITED.

15 PER CENT. DIVIDEND.—IMPROVED OUTLOOK.

The twenty-first ordinary general meeting of the London Asiatic Rubber and Produce Co., Limited, was held, on the 6th instant, in the Council Room of the Rubber Growers' Association (Incorporated), 2, 3 and 4 Idol Lane, London. Mr H. J. Welch (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said:—The balance sheet before you shows the company's issued capital and reserve accounts standing at the same figures as a year ago. Capital expenditure to date is greater by a net amount of £9,599. Our expenditure on development of the estates during the year amounted to £14,205, and we have also spent £3,411 on buildings, machinery and plant, &c., but from the value of our assets of the latter class we have written off £8,017 for depreciation.

Our profit for the year, at £53,951, is much smaller than that for 1927 or for several years previously. This, of course, was because the market price of our product has been at a low level since February, 1928, when the Government's decision to reconsider the question of restriction was announced, and especially since April of that year, when it was decided to abolish restriction entirely from the following October.

When we met a year ago it was impossible to judge how serious the effects on the market might be of the Government's decision to abandon the restriction policy, and accordingly, although the company was well provided with liquid assets, we did not distribute in dividends the whole of the profit earned in 1927, but increased the amount carried forward by over £38,000.

With the rapid increase in the consumption of rubber and with the estates in full production, and prices at a level which, though very low, does allow of a profit being made, the outlook appears to contain no such dangers as faced us at our last meeting. Your directors accordingly considered it fair to the shareholders now to recommend the payment of a dividend at the rate of 15 per cent., and to reduce the amount carried forward to £95,612, which is still a substantial sum for a company of this size.

The amount which we recommend should be transferred to the taxation reserve is £7,000. Under the rules of our employees' retirement fund £710 has to be transferred to that fund, and we recommend also an allocation of £500 for a gratuity to one of the company's managers who has retired on the ground of age after many years of loyal service. Our thanks are again due to our agents, visiting agents and staff for their loyal and efficient services throughout the year.

CROPS AND PLANTED AREAS.

Our restricted crop in 1928 amounted to 3,643,000 lb., against 2,902,000 lb. in 1927. For the current year we anticipate a crop of about 4,500,000 lb. at a lower estimated f.o.b. cost than last year. You will remember that we state in the report that last year's cost was a record for the whole 21 years of the existence of the company, and next year's estimated f.o.b. cost, if achieved, will be another record.

The development expenditure which I have mentioned included the planting of 220 acres of land, mostly on Tamok and Batang Benar Estates. For the current year we have in view similar extensions totalling some 285 acres. As in the past, we shall use the most carefully selected material available for this planting, and the most up-to-date methods.

At the present time the planted areas of our nine estates total 12,940 acres—or over 20 square miles—of which 2,387 acres are immature. The balance sheet cost per acre of the planted area, ascertained by deducting the excess of liquid assets over liabilities from the issued capital and allowing for the dividend now recommended, is under £27 per acre.

The properties are in excellent condition: we have never grudged expenditure on cultivation, and undoubtedly this expenditure has been highly remunerative in securing greater yields from and better health of the trees. Labour has been adequate during the year and health has been good.

At the levels of prices ruling since our last meeting, your directors have not considered it desirable to enter into forward contracts for the sale of ordinary grades. Sales of a special grade for delivery in 1929, totalling 52 tons, have been made at an average price for London delivery of 1s. 2d. per lb.

I think we can look to the future with confidence. The somewhat threatening situation which faced us a year ago has passed with its worst possibilities unrealised, and the world's consumption of rubber has been lifted to a level which seems to indicate clearly that supply will not, at least for a year or two, be seriously ahead of demand.

The resolution was carried unanimously.

RUBBER PLANTATIONS INVESTMENT TRUST, LIMITED.

CONDITIONS IN RUBBER AND TEA INDUSTRIES. STRONG FINANCIAL POSITION.

The twentieth ordinary general meeting of this company was held, on the 8th instant, at the Cannon Street Hotel, London, Mr H. J. Welch (the Chairman) presiding.

Mr E. J. Johnson, F.C.I.S. (representing the Secretaries, Messrs Harrison and Crosfield, Limited), having read the notice convening the meeting and the report of the auditors,

The Chairman, reviewing the position of the rubber industry, said that during the past six months there had been placed upon the market the large stocks in the restriction areas brought in from 1927, the accumulations during the first ten months of 1928, and the output of rubber during the best producing period of the year, temporarily enhanced by the previous resting. The difficulty of forming a reliable estimate of the output of new rubber during 1929 would therefore be obvious, but it seemed unlikely that it would exceed 720,000 tons. The total world absorption during 1928 was over 680,000 tons, an increase of 90,000 tons over 1927.

ESTIMATES FOR 1929.

In considering the requirements of manufacturers during 1929 the most striking factor so far observable was the high rate of absorption in the United States during the first quarter of the year, when 130,000 tons of crude rubber were converted into rubber goods. The absorption during the second quarter was also continued on a large scale, and for the whole year should show a substantial increase over 1928. The estimates made at the beginning of the year were now being increased, and some authorities expected the United States to use 480,000 tons during 1929. The deliveries of rubber to manufacturers in the rest of the world during the first quarter of the current year had also been high. After making allowance for necessary additions to working stocks the available data indicated that the absorption of the rest of the world in 1929 was likely to be not less than 265,000 tons.

If these estimates of production and consumption for 1929 proved correct world stocks would be further reduced during this year by not less than 20,000 tons, following an estimated reduction during 1928 of over 40,000 tons. The present world stocks, including stocks on estates, at ports, and in hands of dealers, quantities afloat, and manufacturers' stocks, were estimated at about 350,000 tons, or less than 50 per cent. of the estimated consumption this year. These, if sufficient, were certainly not too heavy, and all the known statistics seemed to point to a rise in price.

TEA INDUSTRY.

The most striking event during recent months in the tea industry had been the abolition of all duties upon tea imported, making tea free of duty for the first time, he believed, since the days of Queen Elizabeth. The removal of the duty should have an important effect on the total consumption of tea in this country, which at 9½ lb. per head of the population was now the highest in the world. Australia came next with a consumption of 8¼ lb. per head. Production in India, Ceylon, and the Dutch East Indies during 1928 totalled 787,000,000 lb., as compared with 761,000,000 lb. in 1927 and 744,000,000 lb. in 1926. World consumption—not imports or market absorption—was estimated at 920,000,000 lb. in 1928, as compared with 888,000,000 lb. in 1927 and 856,000,000 lb. in 1926. As to stocks the latest figures available—namely, those for March 31—were 259,750,000 lb. in comparison with 239,750,000 lb. at the end of March, 1928. The increase in stock was partly due to an increase in shipments to this market during the past few months and a decrease in the shipments from the producing countries to out-markets. During 1928 the average prices obtained for all tea sold in public sale on garden account was 1s. 4¾d., against 1s. 7d. during 1927. From January 1 to April 18, 1929, such prices averaged 1s. 6¼d., against 1s. 5d. for the same period of 1928. The striking feature of the market for some time past had been the relatively strong demand for good medium and better kinds of tea.

INVESTMENTS.

Dealing with the immediate affairs of the company, the Chairman said that their investments had increased to a total of over £3,175,000, of which about 72 per cent. was invested in rubber, tea, and coconut plantations and the balance in British Government securities, commercial undertakings, etc. The investments in rubber plantation companies were 45½ per cent. as compared with 36 per cent. at the end of the previous year. This increase represented new investments in well-managed and first-class companies purchased at a low cost per acre, and these, the board had no doubt, would in the future prove to be very remunerative investments. There was a considerable slump in rubber companies' share values during 1928, but at all times during the year the valuation of the company's investments showed a substantial surplus over their net cost. This valuation on December 31st last amounted to £2,856,004, as against £2,504,640, at which the investments other than properties stood in the balance-sheet, and consequently showed a surplus of £351,364. At the present time this surplus had increased to £703,063 in excess of the book figure.

PROPERTIES.

The company's properties now stood in the books at £671,008, a net reduction of £16,000, representing the difference between the amounts written off for depreciation and amortisation and the expenditure for the year. Without allowing anything for the value of the unplanted lands their tea properties stood in the books at £70 per planted acre of tea. The profit per acre of their tea in bearing amounted in 1928 to £17 17s. and the average profit per acre for the last three years was £15 15s. The real value of their properties was therefore obviously much above the figure at which it stood in their books, and consequently constituted a considerable additional reserve to those shown in the accounts.

The tea crop for 1928 was the highest total crop ever harvested from their present planted areas, and the yield per acre plucked had only twice previously been exceeded—viz., in 1916 and in 1920. Despite the expenditure on manuring the cost of production, owing mainly to the larger crop, was reduced by ¾d. per pound, an appreciable amount when taken over so large a quantity. The net profit from their tea showed an increase of £44,005 compared with the previous year, but this pleasant feature was more than set off by the generally decreased dividend paid by rubber companies.

PROFIT AND ALLOCATIONS.

The net profit was £310,564, and to the available balance of £199,007 it was proposed to transfer from dividend equalisation reserve £50,000, making £244,007, out of which the board recommended a final dividend of 10 per cent., making 15 per cent. for the year. They carried forward £63,382.

PROSPECTS.

In conclusion, the Chairman said: As regards the prospects for this year, we have good reason to expect a harvest a larger crop of tea from our estates, and to obtain higher prices for it. No forward sales have so far been made, and we are therefore in a position to reap the full benefit from any increased value of our tea brought about by the improvements which are being effected in its manufacture, and by the abolition of the duty upon tea.

In recent years the portion of our tea crop imported into this country has been subject to duty at a higher rate than that imposed on "British-grown" teas. The complete abolition of the tea duty is therefore welcomed by us, not only because it will tend to increase the consumption of tea generally, but also because it will enable this company's teas to compete on level terms with British-grown teas of the same class and quality.

The income from our investments is difficult to estimate, as the dividends from our holdings in rubber companies depend to a great extent upon the immediate future of the commodity, but we still have a large sum standing to "dividend equalisation" reserve which will, if necessary, again be used for the purpose for which it was created.

Interested as this company is in the tea and rubber industries, we are bound to have greater fluctuations of income than that experienced by the general trust companies who invest so widely in "fixed dividend and interest" securities. By the dividend equalisation reserve we endeavour to average the return to shareholders over the good and bad years. Probably we shall have to draw upon that reserve again at the end of this year, but it is my considered opinion, and that of my colleagues, that the company was never in a stronger or more healthy position than it is to-day, nor has it ever had greater promise of a substantial and improving return in dividends from all classes of investment.

The Chairman concluded by moving the adoption of the report and accounts, which was seconded by Mr Eric Macfadyen (vice-chairman) and carried unanimously.

The retiring directors, Mr E. L. Hamilton and Mr W. R. Hoare, were re-elected, and the auditors, Messrs Ford Rhodes and Ford, having been reappointed, a cordial vote of thanks was accorded to the Chairman and directors and to the staff in London and the East.

At the close of the ordinary general meeting an extra-ordinary general meeting of the company was held, at which a resolution was passed to alter the articles of association so as to restrict the voting power to British subjects.

DUNLOP RUBBER COMPANY, LIMITED.

ABOLITION OF RESTRICTION AND ITS EFFECTS.

CHAIRMAN OPTIMISTIC OF THE FUTURE.

The thirtieth ordinary general meeting of the Dunlop Rubber Co., Limited, was held, on the 3rd instant, at the Hotel Cecil, Strand, London. The Rt Hon Sir Eric Geddes, G.C.B., G.B.E., (chairman of the company), presiding.

The Chairman said: I propose to vary my usual practice in the sequence of my speech, and to defer going through the accounts in detail until I have dealt with the abnormal situation which arose in 1928, a situation which you have been told in the report is consequent upon the cancellation of the rubber restriction on inadequate notice. For a complete understanding of the position and policy of the company, however, it is necessary that I should explain to you briefly the situation of the automobile industry, with which is indissolubly bound up the situation of the tyre industry, our main business.

The world, outside of the United States, produced 894,500 motor cars and trucks in 1928, while American automobile production in that year was 4,600,000. The total registration of motor vehicles in the United States is 24,500,000 vehicles, or 80 per cent. of the total world registration. The United States export business is at a comparatively higher level. These figures of American automobile development are very striking, and since what applies to automobiles applies to tyres, no one considering our business as tyre makers can do so adequately without fully realising the great influence of the American automobile industry. An industrial undertaking such as ours, doing a world business such as we do, must have the closest regard to its American competitors' actions and position. A very large proportion of the Dunlop Company's tyre business is either exported from this country or is overseas manufacture. Our world trading position is closely bound up and is absolutely interdependent with the American automobile industry, and it is as well that this point should be clearly before the proprietors when they are considering the remainder of my speech, in which I deal with the abnormal situation which arose in 1928.

The Chairman, having criticised at length the Government's abrupt abolition of restriction, continued:—I quote from the recent speech of the chairman of the Rubber Growers' Association on this point:—

"I will end my remarks on this subject by saying that I do not regret the fact that restriction is a thing of the past, but I do deeply deplore the Government's way of ending it, and the enormous losses which have been inflicted upon producers and owners of stocks alike, losses which, I believe, could have been obviated had the advice tendered by the council of this association, in collaboration with other branches of the industry, been acted upon."

The chairman of the Ceylon Association, also speaking on April 29, 1929, said about the announcement of the withdrawal of restriction:—

"The Prime Minister could not have made a more disastrous announcement than he did on April 4, 1928. The Government decision resulted in enormously heavy losses to producers, manufacturers and shareholders."

Could any more striking testimony be given.

COMPARISON WITH WORLD COMPETITORS.

The tyre industry is highly competitive, and particularly so for large concerns doing a world business. Moreover, the business of the great companies is, as I have said, very largely interdependent, and in considering the result of last year's rubber situation in regard to our own concern, we are therefore entitled, so far as the figures are available, to compare our results with the results of those world competitors. We have been able to do this with the twelve largest American rubber companies. Comparing 1927 and 1928, the profits of those 12 companies have dropped by 96 per cent. In considering, therefore, our own reduced profits, and comparing 1928 and previous years, I submit with confidence that we compare favourably with the industry as a whole.

Our policy was based upon the Government's pronouncements and actions which we were justified in believing to be beyond doubt, as did our friends in the industry. Had adequate notice been given in accordance with the unanimous request of the rubber industry (producers, manufacturers and users), the greater part of this loss need never have been suffered. As things stand, the loss has been experienced by the manufacturing and planting side of the industry in common, and we would indeed be unreasonable if we expected to emerge unscathed from what I rightly described to you as a "convulsion," but a convulsion which I said I was sure we had "the ability to weather."

EFFECT ON THE COMPANY'S PROFITS.

Now as to the effect of the abolition of restriction on our profit and loss account. We have transferred £1,500,000 from reserve in the abnormal circumstances which I have explained. The actual reduction of profits, as nearly as we can arrive at it, is about £1,700,000, and I would like here to make it perfectly clear that the only forward commitments and stocks of raw rubber carried over at the end of the year are below present market level. Our stock of manufactured articles brought forward on our usual conservative basis was, broadly speaking, all sold in the first quarter of the year at fairly profitable prices.

THE FUTURE.

In my speech to you last year I said that the confidence of the board in the future of the company was demonstrated by the dividend which we recommended you to pay. I indicated that once we had passed through the anxiety and dislocation caused by the abolition of restriction the future was bright. We are to-day through that convulsion and anxiety, and I can confirm what I said then. Our position *vis-à-vis* our competitors has been well maintained, which is evidenced by the fact that our sales for 1928 show an increase on the previous year. Our factories everywhere are working at a higher efficiency than ever before. Our plantations are producing rubber cheaper than they have ever produced it, the present f.o.b. cost being 5d. per pound, far cheaper than it possibly could have been during the restriction period.

Our Northern factories are working at an increasing profit, and we have consolidated the Dunlop interest throughout the world by acquiring the control of the Dunlop Far East and Canadian Companies, the territories of which were parted with by our predecessors some years ago to our detriment. That investment is a remunerative one with great possibilities. Sir George Beharrel, our managing director, visited the Canadian and Japanese factories last autumn, and reports very favourably upon them. He also visited the Dunlop factory in the United States, and we have the fullest confidence in its administration, which is at the very highest state of economy and efficiency.

AMERICAN AND AUSTRALIAN COMPANIES.

The American and Australian Dunlop Companies, in which we are such large shareholders, have suffered in common with the rest of the industry by the rubber collapse, but we have every reason to believe that America will show a reasonable profit this year, and the Australian company, which has amalgamated with two of its principal competitors, and is by far the largest manufacturer of rubber in Australasia, is this year operating at substantial profits, and has excellent prospects. It has just declared a 7½ per cent. interim dividend.

I was personally in Australia at the time this merger was carried through. The Australian Dunlop Company has amalgamated with the Perdriau Company, its largest competitor, and the Dunlop Perdriau Company has acquired practically all the ordinary shares in the Barnet Glass Rubber Company. In our view the potential value of our Australian investment is considerably enhanced as a result of this important merger and the economies which should result therefrom. The *personnel* of the higher administrative posts is excellent. The board is a strong and highly efficient one; we have also substantial representation upon it. While this merger will remain essentially Australian in character and control, it will, I hope, become more and more a helpful factor in the Dunlop world situation, which is an important point.

EFFICIENCY, ECONOMY AND QUALITY.

Our cotton mills and rim and wheel works operate profitably and are models of efficiency and economy.

There is not the slightest doubt that our quality is higher than it has ever been, and the new "Fort" tyre, with its great reserves of strength, is winning favour everywhere. Equally there is not the slightest doubt that we have never had a closer knit or more efficient organisation in all branches or as fine a *personnel* as we have to-day.

In these circumstances, and bearing in mind how abnormally our profits were adversely affected in 1928, he would be a pessimist indeed who took a gloomy view of the affairs of the Dunlop Rubber Company.

SOUND CONSERVATIVE POLICY.

I agree that it is disappointing that we have had to withdraw £1,500,000 from our reserve—never a pleasing operation for any body of shareholders or for any board—but you will forgive me for reminding you of what was said about those reserves. Speaking to you upon the 1926 accounts, and justifying our conservative policy, I stated that "with a product in which raw material representing 60 per cent. of its total cost is subject to violent fluctuation in value, we have a major hazard to contend with, and must be conservative in finance if our stock is to rank as a first-class industrial investment." That "major hazard," as must have been apparent to you, was the hazard of rubber prices. It has now almost disappeared, as at present prices rubber only represents 40 per cent. of our total cost, and the market is much more stable. Speaking on the 1927 accounts, I said: "Had it not been for that conservative policy, we would not have faced a competitive world with the confidence which we are happy to have to-day in our ability to meet whatever conditions may befall. Personally, I would say to you that once we have passed through the convulsions caused by the Government's action in reference to restriction, I will feel at least 10 years younger."

The convulsion has necessitated a draft upon reserves which, as I indicated most clearly at the time when they were made, were set aside in anticipation of some such contingency as has occurred. Apart from the ordinary vicissitudes of competitive trading, this great undertaking was never in a healthier condition. The accounts we are presenting to you are made up strictly upon our usual conservative basis, and no attempt has been made to influence the results shown either for better or for worse. The diminution of profit is consequent solely upon the Government's abolition of restriction without adequate notice. I hope that from my remarks you will feel as we do, that had it not been for this the results for the year would have been equal or superior to 1927.

THE ACCOUNTS.

The accounts show a consolidated net result for the year 1928 of £2,859,000 (including the sum of £1,500,000 from reserve), as against £2,953,000 in 1927, these figures being before deducting debenture interest, but after providing for full depreciation in the accounts for all companies.

Out of the net results a sum of £309,750 is absorbed in the payment of dividends on their preference shares by the Dunlop Cotton Mills, Limited, Dunlop Plantations, Limited, and Dunlop Rubber Co. (India), Limited, and £375,000 in the payment of dividends on this company's preference shares. Debenture interest absorbs £412,237.

The proposed dividend of 20 per cent. on the ordinary shares requires £1,540,000.

The reserve account after the adoption of the last report and accounts stood at £2,600,000. You will see that to-day this account stands at £3,029,000, after the £1,500,000 has been transferred. We, therefore, commence this year with reserves showing an increase of £429,000, and a carry-forward of £801,000, as against £578,000, an increase of £223,000.

BALANCE SHEET ITEMS.

With these remarks I will turn to the balance sheet, and go through the figures in the usual way. Referring to the liabilities side, the issued capital has been increased by £967,000, which is represented by shares issued to the shareholders and to the Tyre Investment Trust in respect of the transfer of the assets of that company.

In accordance with the trust deed, First Mortgage Debenture stock to the value of £84,228 has been redeemed during the year. The item which appeared in the balance sheet last year under the heading of Income stock no longer exists, since the whole amount has been redeemed. Sundry creditors and credit balances have increased by £143,000. This is due to many causes, but actually our creditors are lower than previously.

On the assets side of the balance sheet, freehold and leasehold land and buildings, plant, etc., have increased by £257,000, this being due to additional buildings and equipment necessary to deal with the business of the company. Sundry debtors and debit balances have increased to a slight extent.

The value of the stock of finished and unfinished materials shows a small decrease. This is mainly due to the fall in the value of raw material. Stocks generally are valued in accordance with our usual conservative practice, and have never been in a healthier condition.

Investments and advances in total show an increase of £1,250,000. This in the main is due to the acquisition of the Dunlop Rubber Co. (Far East), Limited, and its subsidiary companies, and of a majority interest in the Dunlop Tire and Rubber Goods Co., Toronto. The increase in the amount invested in the estates is due to additional capital expenditure arising in connection with extensions of planted areas.

At this stage I think it will be convenient if I refer to a point which ought to be brought prominently to your notice—namely, the progressive increase in the capital employed in the business. If we compare the capital shown in the first balance sheet after the company's reconstruction—namely, the balance sheet of December 31, 1924—and that in the balance sheet before you we find that, roughly, the capital employed in the whole business has risen from £12,500,000 to £26,875,000, or more than double. This increase of capital is, of course, very largely debenture and preference capital and reserves, carrying a limited rate of interest or no interest at all.

Under present-day industrial conditions, especially in the comparatively new rubber industry, improved methods of manufacture and the introduction of machinery are ceaselessly and increasingly going on in a company such as ours.

FOUR MAIN HEADS.

Capital expenditure, therefore, must necessarily be progressive, and I would divide the causes of expenditure of this kind under the following main heads:—

(1) Capital expenditure on increased capacity and increased working capital to deal with increased trade.

(2) Capital expenditure incurred with the object of yielding *per se* satisfactory profits. In this I would in the main class such expenditure as is incurred in the development of our plantations.

(3) Capital expenditure incurred to broaden the basis of our trade and so limit the hazard of trade fluctuations or capital expenditure incurred with the object of strengthening our world position *vis-à-vis* our competitors. The first of these I would illustrate by our acquisition of the Macintosh group of companies, where we entered into general rubber manufacture so that we should not be entirely dependent upon the growth of the automobile industry and the tyre demand. As an illustration of the second of these heads, I would cite our recent acquisition of the Tyre Investment Trust properties in the Far East and Canada. These territories were parted with at a time when any one country was a more or less isolated unit so far as tyre supply was concerned. Under modern conditions it is essential that a manufacturer such as we are should establish as far as possible a worldwide organisation under central control. By this means only can he ensure that one standard of development and quality and one sales policy is maintained. It is becoming increasingly necessary to quote prices at one centre for the supply of tyres in any part of the world, and anyone who cannot do so is at a serious disadvantage with his competitors.

MODERNISATION OF THE WORKS.

(4) Capital expenditure on continued *modernisation of your* works. We provide for depreciation and obsolescence in our annual account, but any rubber manufacturer who to-day does not spend capital freely on the installation of plant to increase and cheapen output will be hopelessly left behind in competition. Looking round the industry one sees that the companies which have been parsimonious in expenditure on improvement of plant have steadily lost place, and only those who, like ourselves, have spent liberally, though prudently, upon improved equipment can be regarded as prosperous and likely to remain so.

In the years which I am dealing with, namely, 1924 to 1928, very largely due to prudent modernisation of our factories, our productive efficiency has increased by no less than 130 per cent. This improvement is largely brought about by the means I have suggested, and by successful organisation and scientific development. It has also been brought about by the improved productive capacity of the employee, and I am glad to see from figures that they in their earnings have benefited by the increased output, which is attributable, in the main, to the causes I have given. I have thought it well to bring before the meeting to-day in a concise form the figures of this large increase of capital, and to give you the reasons for it.

A WELL-CONSIDERED PROGRAMME.

Our capital expenditure follows a well-considered and a well-thought-out programme forecast in the main a year or two ahead, and while I cannot hold out any suggestion that we have reached the limit of that expenditure (and, indeed, I should be sorry to feel that we had, as that would mean stagnation and retrogression), I do feel that, with the acquisition of the Macintosh group of companies, and of our interests in the Far East and Canada and Australasia, also having regard to the high state of development of our properties everywhere, we need not contemplate the same rate of expenditure which has obtained in the last four years. This was attributable to a great extent to leeway which had to be made up after that unfortunate period in this company's history which led to the reconstruction of your capital in 1923.

There is one other matter which I wish to mention. We have had representations from many quarters urging us to pay interim dividends. We did not feel justified in doing so while we had hanging over our head the possible cataclysm of modifications in the Rubber Restriction Scheme, and, as I explained to you on a previous occasion, as long as that uncertainty lasted we could not see our way to paying interim dividends.

Happily, the Rubber Restriction Scheme, with its removal, has passed into history, from which I devoutly hope it will never be resurrected, and, after very careful consideration, the board has decided that it will pay interim dividends in the future, and that these will commence this year as soon as the board has been able to satisfy itself as to the likely result of the half-year's trading. This dividend must, however, in no way be taken as an indication of the trading results of the company.

The report and accounts were unanimously adopted.

HARLAND AND WOLFF, LIMITED.

IMPROVED RESULTS—HIGHER OUTPUT.
ANNUAL WAGE BILL EXCEEDS £6,000,000.
IMPORTANT WORK IN HAND.
LORD KYLSANT'S CONFIDENCE IN THE FUTURE.

The forty-fourth annual meeting of Harland and Wolff, Limited, was held, on the 7th instant, at the London office of the company, 1A, Cockspur Street, London, S.W.

The Rt. Hon. Lord Kylsant, G.C.M.G. (the chairman), presided.

The Secretary (Mr John Philp) having read the notice convening the meeting and the report of the auditors,

The Chairman said: My lord, ladies and gentlemen,—The firm of Harland and Wolff was established in Belfast three-quarters of a century ago, and has been gradually built up and extended so that it has long been universally recognised as one of the greatest if not the greatest, shipbuilding and engineering establishments in the world.

In 1885 the business was incorporated as a limited company, and this is the forty-fourth annual meeting.

THE ACCOUNTS.

When addressing you 12 months ago I ventured to predict that the results for 1928 would show some improvement over those of the previous year. The accounts for the past year, which have been in your hands for some time, show that this forecast has been fulfilled. After paying the dividend on the first preference shares and providing for wear and tear of the plant and machinery, there is a credit balance of £107,558, which we propose to carry forward. The reserve remains at the substantial figure of £1,000,000.

In view of the fact that the shipbuilding and engineering industries are passing through difficult times and that it is still hard to procure orders which leave a reasonable margin of profit, I think the results for 1928 can be considered as not unsatisfactory, although no dividend has been earned on over £6,000,000 of the company's capital.

As mentioned in the report, no dividend was received from the company's associated steel and coal undertakings in Scotland—namely, Messrs David Colville and Sons, Limited, and Messrs Archibald Russell, Limited. As is well known, the position in regard to the steel and coal industries of this country continues to be abnormal.

LABOUR AND ECONOMIC CAPACITY.

Taking a survey of the position of our company as a whole, and bearing in mind the exceptionally severe and prolonged depression in shipbuilding and allied industries, we may look back on the recent difficult years with reasonable satisfaction, and, considering the volume of work we have in hand, we may face the future with a moderate degree of confidence, provided the tendency towards improvement is not checked by demands on the part of labour beyond the economic capacity of the industry to afford. There is at least this to be said regarding the trying years that followed the post-war boom—namely, that we have taken the fullest advantage of the opportunity to reorganise and modernise our establishments so as to equip them for undertaking every kind of work with the maximum of high quality and efficiency at the minimum of cost.

OUTPUT OF SHIPYARDS AND ENGINE WORKS.

Throughout the year 1928 our shipyards and engine works at Belfast and at Glasgow had a considerable quantity of work in hand, and, as you will observe from the report, the company's output in respect both of gross tonnage and horse-power was higher than for 1927. In the British shipbuilding returns for 1928, Harland and Wolff (apart from its associated companies) heads the list as regards the number of vessels, and is second on the list as regards gross tonnage and I.H.P. of engines.

A considerable proportion of our work consisted of the construction of the highest class of passenger and cargo vessel, which is the type of work for which our establishments are more especially equipped. During 1928, competition in the shipbuilding industry continued to be very keen and prices remained low. Costs have been cut down to a minimum, and it is hardly likely that they can go much lower. Competition among British shipbuilders has been intensified by the fact that several great firms which formerly were largely occupied with Government work in the form of naval construction have turned their attention to securing orders for merchant ships, owing to the reduction in orders from the Admiralty. Undoubtedly some of the contracts placed with shipbuilders have been due to a desire on the part of some shipowners to take advantage of the low prices ruling, as during recent years shipbuilders have had to make many sacrifices to maintain their organisation intact and to keep their workmen employed. In our own case, with an annual output during the past five years of, roughly, 130,000 tons in our main works and associated yards, we have made a large contribution to the shipbuilding output of the country (roughly, one-tenth), in addition to the extensive repair and overhaul work carried out in our repair establishments on the Thames, and at Liverpool and Southampton.

40,000 MEN EMPLOYED—WAGES EXCEED £6,000,000.

Taking the whole of our operations in basic industries—shipbuilding, engineering, steel, &c.—with our controlled companies, we employ about 40,000 men, with an annual wage bill of over £6,000,000. The compulsory contribution made by us to social services under various legislative enactments (such as National Insurance, &c.) amounts to considerably over £200,000 per annum, which constitutes a very severe tax on employment, and a reduction in which should be seriously considered as an effective means of inducing further employment.

It will, I think, be appreciated that the maintenance, under present conditions, by one organisation, of this large amount of employment, including so many skilled tradesmen, has only been possible by the most unremitting attention, assiduity and enterprise, the sparing of no effort and the mutual and hearty co-operation of all concerned. With the enormous burdens bearing on industry to-day, we welcome the moderate relief to be obtained under the Derating Act, but the absence of any other remission of the still unduly high rate of taxation is a definite handicap to the recovery and expansion of trade.

WORK IN HAND.

I am glad to be able to tell you that, with the exception of our Greenock shipyard, which is temporarily closed, our establishments at Belfast and on the Clyde have been and are fairly well occupied with work. Our programme is of a varied nature, all sizes and types of vessels and machinery being within our compass. While engaged largely on motor vessels, we have also carried out important steam installations, including the high-pressure turbine machinery for the mail steamer "Statendam," of the Holland-America Line, and also for a Canadian Pacific liner. Our output of motor machinery included large engines for both passenger and cargo vessels, and I think it is generally recognised that we have attained a leading position in this development.

Whatever views are held as to what may be the paramount type of marine engine in the future, Harland and Wolff have been pioneers in one of the most successful of the present types of motor engines, and, as builders, we are to-day represented on every sea by motor vessels, as well as steamers, plying the world's trade routes with regularity and precision.

ADVANCE IN MARINE ENGINEERING SCIENCE.

The advance in marine engineering science of late years has been remarkable, and it is gratifying to feel that we are in a good position to meet the requirements of shipowners in all the latest developments for improved propulsion of ships.

During the present year, if nothing unforeseen occurs and provided the present labour troubles are of brief duration, we hope to maintain the improvement recorded in 1928, as the work we have at present in hand comprises a number of large mail, passenger, and cargo vessels for various important ocean trades. Our engine works and foundries are occupied with a fairly satisfactory amount of work, while our engineering and repair establishments in London, Liverpool, and Southampton are also well employed. At our London works we have latterly undertaken the construction of dumb barges for use on the Thames, large numbers of which, in the past, have had to be obtained from the Continent. The steady increase in the amount of work and consequent employment in our establishment on the Thames is a pleasing feature.

WORKING COSTS.

Our managing directors and officials have continued to direct close attention to the task of reducing the cost of production by the exercise of economy in every branch of our establishments, as we realise that, in the face of present-day competition, it is only by combining good work with moderate costs that orders can be secured. Much has been heard lately of the principle of rationalisation as a means towards assisting to revive and stimulate the important industries in this country which have suffered most from the prolonged and severe period of depression. It was in furtherance of this principle that we decided very reluctantly last year to close the yard at Greenock, on which the firm had spent a very considerable sum, and which we hope it may be possible, when shipbuilding becomes more normal, to reopen and develop still further. During 1928 there were no serious labour troubles to add to our existing burdens of high taxation, etc., which are sufficiently onerous in themselves. Peace and harmony are essential if we are to cope with the problems with which we are faced in industry to-day. It is, therefore, regrettable that our joiners should have left work, but I hope that wiser counsels will soon prevail and that they will revert to the reasonable attitude of friendly co-operation that has been observed in the past.

After the period of war-time inflation the shipbuilding industry was one of the first to feel the effects of the inevitable depression, and I think it can claim to have been among the first to recognise the changed position and to take the steps necessary to deal with it. During the difficult and trying years through which we have been passing our primary object and endeavour has been to keep the firm's great organisation together and to provide the maximum employment for our men, who have won such a deservedly high reputation for the reliability and first-class character of their workmanship. In view of the good relations that have existed throughout the difficult times to which I have referred, we are all the more anxious that the industry should not experience a setback and that employers and employed shall continue to pull together in the interests of British trade. If this course is pursued I believe we can look forward hopefully to a gradual further improvement in shipbuilding, in which the workers will naturally participate.

OUTLOOK FOR THE INDUSTRY.

Viewing the shipbuilding industry as a whole, in common with our other basic industries, while recovery from the long period of depression is proving a slower process than many of us had anticipated, there has, nevertheless, been some progress, and undoubtedly many valuable lessons have been learned, so that I believe we shall profit in future by the changes and improved methods that have been introduced during the difficult times with which we have been contending. I have confidence in the ultimate full recovery of British shipbuilding, because it has shown the capacity to put its house in order, and the other conditions necessary to improvement will follow from natural causes. We ourselves are doing everything calculated to meet modern requirements.

Fortunately our works are admirably situated in the best localities in the kingdom, while, thanks to the wisdom and foresight of the late Viscount Pirrie, they are replete with the latest and best equipment, which has been constantly modernised; our experience in every phase of shipbuilding and engineering is unrivalled; and, given a fair market, with improving trade and freedom from labour troubles, we should make steady progress towards renewed prosperity.

I beg to move: That the report and accounts to December 31, 1928, be approved and adopted.

The resolution was seconded by Mr J. W. Kempster, and carried unanimously.

The chairman then moved the re-election of Mr J. W. Kempster, the retiring director, which was seconded by the Viscountess Pirrie and unanimously approved.

The auditors (Messrs Price, Waterhouse and Co.) were reappointed on the motion of Mr D. I. Conradi, seconded by Mr Joseph P. Baillie.

The meeting then terminated.

HOWARD AND BULLOUGH, LIMITED.
DIFFICULT CONDITIONS OF PAST YEAR.

The thirty-fifth annual ordinary general meeting of the shareholders of Howard and Bullough, Ltd., was held on the 8th instant, at Accrington, Sir George Bullough, Bt. (chairman of the company) presiding. The Chairman, in moving the adoption of the report and accounts, said:—

When I addressed you a year ago I alluded to the keen competition and restricted demand then prevailing. There has since been no improvement in this respect, the demand having, indeed, been insufficient to keep the works occupied to full capacity. The home trade, as you will be aware, is still in a languishing condition and as yet shows no sign of revival.

Regarding the export trade, I may say that there has been a good demand from Japan in anticipation of the abolition of late night work, which will come into force as from June 30th next. Even then the cotton mills in the country will have the advantage of seventeen actual working hours per day in two shifts. In China we have experienced a resumption of business activity, and if we may look for a favourable outcome of the present political situation there, a considerable development of that activity is likely to follow.

From India a very appreciable amount of work has been forthcoming, despite the disturbing elements which have so seriously affected the Bombay district. The business with other European markets has not been of an extensive character. On the continent of Europe generally there has been moderate activity, but in certain important sections which previously had done very well, trade in our line has been but indifferent.

During the year under review, to Russia we delivered a complete cotton mill plant, and at the moment we are in negotiation for an order approaching a quarter of a million pounds. It has been a year of low demand and consequently of low prices, and, after all, demand governs the situation.

Another factor which cannot be ignored is that we have now to face a more pronounced competition from our foreign competitors in the textile machine-making industry, who already enjoy advantages in the matter of working hours and wages compared with those ruling in this country.

The question of amalgamation has on several occasions been placed before the directors by various parties, and has had their serious consideration. Your directors have not yet been able to discover any real advantages that would accrue to your firm from an amalgamation, nor have those who have propounded such schemes been able to do so.

In the report and balance sheet you will notice the reduced turnover brought about by the adverse conditions in the cotton industry almost the world over, and the reduced profits resulting therefrom. During this year the turnover has been considerably less than in the previous year, and at lower prices. Owing to the depressed state of the cotton trade the works have therefore only been employed four days per week on the average, while standing overhead charges, as well as local rates and taxes, remained the same. This has considerably reduced our margin.

We had hoped that an improvement would set in during the second half of the year, enabling us to bring the works to full output capacity, but in this we were disappointed. In the circumstances, your directors recommend the payment of a final dividend of 1¼ per cent. on the ordinary shares, making 8¾ per cent. for the year and leaving £3,092 to be carried forward to next account.

The report and accounts were adopted.

ANGLO-AMERICAN DEBENTURE CORPORATION, LIMITED.
INCREASED REVENUE AND DIVIDENDS.

The thirty-ninth ordinary general meeting of the Anglo-American Debenture Corporation, Limited, was held, on the 9th instant, at Winchester House, London.

Mr Richard S. Guinness (the chairman) said he was sure the stockholders would note with satisfaction that the accounts submitted reflected a further growth in revenue and enabled the directors to increase the dividend for the year by 1 per cent. Last December an issue was made to the ordinary stockholders of new shares of £5 each at par in the proportion as nearly as might be of six new shares for every £100 stock. These shares immediately commanded, and had maintained, a handsome premium on the Stock Exchange, and the intention of the directors to give a substantial bonus to the stockholders had therefore been fulfilled. The present price of the new shares represented a bonus of about 20 per cent. The bulk of the proceeds of the issue was not received until the middle of March, and the year's revenue, which was nearly £7,500 more than that of the previous year, had not received any benefit from the investment of this money. The total revenue for the year was £155,852, and after transferring £25,000 to reserve and paying a dividend of 14 per cent. for the year, they were increasing the carry-forward from £20,392 to £24,025.

The amount invested in the various classes of securities had naturally undergone many changes in recent years. The principal alteration was in the reduction of the amount invested in debentures and loans, which had fallen from 68 per cent. of the amount invested in 1920 to 52 per cent., but at that time they had over £400,000 invested in British Government securities, practically all of which had since been sold and invested at higher rates of interest in other securities. A corresponding increase in the amount invested in ordinary shares had taken place, and at the present time about three-quarters of their investments were in Government and municipal loans, bonds and preference shares, and the remainder was in ordinary shares. The company's funds were well spread geographically, and there was no preponderating investment in any one country outside Great Britain.

The report was unanimously adopted.

ANGLO-ORIENTAL MINING CORPORATION, LIMITED.

A SUCCESSFUL FIRST YEAR.

MR JOHN HOWESON ON TIN PROSPECTS.

PROGRESS TOWARDS STABILISATION OF TIN.

The first annual general meeting of Anglo-Oriental Mining Corporation, Limited, was held, on the 8th instant, at Winchester House, London.

Mr John Howeson (the chairman), in moving the adoption of the report and accounts, said that the first year of the Corporation's history had been a difficult period for tin producers, but a year of the greatest importance to everybody concerned with the non-ferrous metal industries. On all sides there had been a movement towards rationalisation—co-operation of producers among themselves, between producer and consumer, and even between industry and industry. Copper, by means of a strongly organised cartel, had all but dominated its own market, lead had made sensible progress in that direction, zinc had evolved one of the most efficient and desirable forms of co-operation in the metal industry, and tin, which had started the year some distance behind with co-operation, had made great strides. Co-operation was not a panacea for all their ills, because the mining industry, possibly most of all industries, needed technical skill, financial adequacy, and modernised equipment, and it was for that reason, reinforced by the constantly decreasing values of the unworked deposits, that tin producers the world over had been increasingly turning their attention towards the advantages to be obtained by the application of scientific knowledge, in the vanguard of which movement shareholders would agree that their corporation had been prominent. By joining forces with the Yuga engineering group they had paved the way for large-scale dredge mining of low-grade alluvial deposits; through the London Malayan Tin Trust they had been responsible for the vast consolidation of present and future production in the East; by the acquisition of the business and technical organisation of the Alluvial Tin Malaya group they had been able to bring in the requisite practical experience of dredge mining in Malaya, and in Nigeria their group had played an important part in centralising technical management and making the best of modern engineering practice available over the widest possible territory. In the smelting branch of the industry they had participated in the erection of the most modern and best-equipped smelter in the world. The tin-mining industry was now substantially re-equipped, better organised, better administered, and infinitely better able to face the future than ever before. It was in a state in which co-operative action was possible, and when that was effected there would be no more over-stimulus of production, no more reaction, but an efficient and orderly progress.

THE ACCOUNTS.

Dealing with the accounts, the chairman said that the revenue of the company had amounted to a total sum of £235,086, and as by far the greater part had been derived from dividends paid less tax, the gross revenue was actually a much larger sum. As to dividends received, a number of their investments had not yet reached the dividend-earning stage, and they might look forward to better average returns in the future.

In conclusion, the chairman said: I should like now to touch upon the present position of the supply and consumption of metallic tin and the probable course of events in the future of the industry. From the point of view of supplies, so long as the world's producing resources can continue on the present selling basis, things may go well; but a time must come when output will again sink below consumption, and, since consumption is continually growing and 1929–30 is recognised as the period that is likely to see the apex of production, it is clear that this time of reckoning cannot be very far distant.

Co-operation is a policy with certain inherent dangers, particularly the danger of over-enhancement of prices. This corporation will not be party to any policy tending to force prices to an unreasonable level—not alone, let me hasten to add, upon ethical grounds, but because we consider it bad business. But the price of tin must be such as to encourage the augmentation of the world's payable reserves in proportion as they are depleted by consumption. I am grateful to be able to affirm that every indication now points to a mutual understanding being reached among producers—such an understanding as implies sane and vigorous co-operation in the common cause, and which presages the rationalisation of the industry and the beginning of stability, to the permanent benefit of all concerned therein.

The report and accounts were adopted and the dividends recommended were agreed to.

THE BIRMINGHAM SMALL ARMS COMPANY, LIMITED.

SOUND FINANCIAL POSITION.

DIVIDEND PROSPECTS.

ACTIVITIES OF THE SUBSIDIARY COMPANIES.

The annual meeting of The Birmingham Small Arms Company, Limited, was held on the 3rd instant, at the Small Heath Works, Birmingham.

Sir Edward Manville (the chairman), in dealing with the accounts of the company, referred to its sound financial position, and in particular, mentioned the decision of the Board to place £200,000 to general reserve, thus bringing that figure back to its 1921 level of £500,000.

A gross saving of £42,500 had been secured by the redemption of the £2,500,000 Six-and-a-Half per Cent. Notes and the substitution of £2,000,000 Six per Cent. Debenture stock.

FURTHER GENERAL MEETING THIS YEAR.

While the directors had decided not to pay a dividend on the ordinary share capital, the chairman stated that it had been decided in future to close the accounts of all subsidiaries at the end of July, and in consequence another general meeting will be held towards the end of the present year—possibly in October—at which a balance sheet will be presented to shareholders on the trading results of all the subsidiary companies up to July 31st next. He intimated that the directors hoped then to be in a position to give favourable consideration to the payment of an ordinary dividend, as already indicated in the report attached to the balance sheet.

Referring to the activities of the subsidiary companies the chairman stated that he was pleased to say that B.S.A. Cycles, Limited, were maintaining the deservedly high reputation of their products, and also their commanding position at home and abroad. This condition is all the more satisfactory in view of the fact that the total number of all makes of machines sold in this country showed a serious decline over the previous year. This company's satisfactory position in the market, the chairman continued, was being well maintained in the current year.

GROWING POPULARITY OF DAIMLER CARS.

In connection with the company's business in Daimler cars the chairman referred to an order for one of the new "Double-Six" models from his Majesty the King, and also to the growing popularity of the new 20 h.p. Daimler which has been put on the market as an owner-driver saloon at the very attractive figure of £695. In connection with this side of the company's business, the chairman took the opportunity of drawing attention to the regrettable action on the part of some leading public men not only in buying imported cars, but in allowing their names to be used in connection with Press advertisements to the detriment of British industry.

As from August 1st last, Messrs Stratton Instone, Limited, of 27 Pall Mall, and Berkeley Street, were appointed sole distributors for Daimler cars in England and Wales, and have opened exclusive showrooms for that purpose in a number of important provincial centres.

LUXURY TRAVEL.

The Daimler Company is especially interested in the development of the luxury motor-coach and high-grade motor-bus, which business, it is apparent to all, is making very rapid strides at the present time.

The business of Daimler Hire, Limited, continues to be highly satisfactory.

Notwithstanding the absence of Government contracts, the chairman stated it was satisfactory to be able to say that B.S.A. Guns, Limited, has been able to pay its way on its private business.

B.S.A. Tools, Limited, has made continued progress, and its definite entry into the machine-tool world with a range of specially designed products, which were exhibited at the Olympia Exhibition, created a most favourable impression in the minds of all visitors, and the genuine character of their interest has been well shown by the subsequent inquiries and orders placed. In the small tool branch of B.S.A. Tools, Limited, business competition continues to be extremely severe.

Burton, Griffiths and Co., Limited, who are associated with B.S.A. Tools, Limited, on the sales side, has been strengthened by the recent acquisition of Arthur Andrews, Limited, and an increased sphere of activity is anticipated as the result of this association.

IMPROVEMENT IN STEEL INTERESTS.

The company's steel interests in Sheffield have shown some definite improvement during the year, but the conditions in this basic trade continue to be exceptionally difficult. Economies are being effected in the administration by the closer working of Jessops' and Saville's under a common management.

During the year under review the chairman explained that the Birmingham Small Arms Company, Limited, had initiated two new lines of activity from which favourable results were anticipated in due course. One is the renewed interest in aircraft engineering brought about by a special arrangement with the Bristol Aeroplane Company, Limited, who are famous the world over for their renowned "Jupiter" engine. The other is a new development related to aluminium forgings, which aims at taking advantage of the growing importance of the use of these light high-duty alloys in modern engineering.

Sir Hallewell Rogers seconded, and the report was adopted.

Sir Hallewell Rogers and Mr. A. H. E. Wood were re-elected directors, and Messrs Carter and Co. and Messrs George A. Touche and Co. auditors.

SPILLERS, LIMITED.

MR. EDGAR BAKER ON THE MILLING TRADE.

NEW BUSINESSES ACQUIRED.

DIFFICULT MARKET CONDITIONS.

Mr Edgar A. V. Baker, presiding at the forty-second annual ordinary general meeting of Spillers, Limited, at Cardiff, on the 4th instant, referred in feeling terms to the loss the company had sustained by the death last year of Mr Jackson, who had been a member of the board since the amalgamation with John Jackson and Son, Limited, in 1921. They had lost not only a wise and resourceful colleague, but a well-loved personal friend.

THE ACCOUNTS.

Turning to the accounts, the 5½ per cent. ten-year sinking fund notes outstanding had been reduced during the year by purchases on the market to the extent of £10,350. General creditors were £116,000 higher at £349,000, due to outstanding liabilities in connection with the acquisition of the new businesses referred to in the directors' report. £50,000 had been transferred from contingent reserves to the investments depreciation reserve in order to meet the position caused by writing down the capital of the British Oak Insurance Co., Limited, in which the company were the principal shareholders, by 1s. 6d. per share, and the contingent reserves had been further reduced owing to agreement and settlement of outstanding taxation matters right up to date.

Stocks on hand were £368,000 higher at £2,163,000, mainly owing to the increase in the stocks arising out of the acquisition of the Leetham businesses. Taking the investments in total, ignoring the reserve for depreciation and adding in cash in hand and at bank, there was a total reduction, compared with last year, of £344,000, which was balanced by the increased figures of stocks and properties.

PROFIT AND DISTRIBUTION.

The profit for the year, £176,668, was not as satisfactory as last year, mainly owing to the difficulties of the wheat market. On that occasion, however, the company had a good deal of leeway to make up, notably in the direction of re-establishing their carry-forward to a normal figure, and £80,000 had been utilised for the purpose. Having now consolidated the position in that respect, a large proportion of the amount available could be used for dividend purposes, and accordingly the directors recommended a distribution of 7½ per cent.

The company's milling trade had been very satisfactory, both the output and the quality reaching a high level. The milling trade of the country as a whole, however, showed no better conditions, but nevertheless there seemed to be a general desire to improve matters exhibited by millers, who appeared to be appreciating the lesson that no advantage could come from such reckless cutting of prices as had obtained in the past.

The businesses acquired during the year, viz., those of Henry Leetham and Sons, Limited, York, Roger Shackleton and Sons, Limited, Leeds, and C. D. Mills, Limited, York, had been more or less available for a number of years, a fact which had had an adverse influence on the whole of the trade in the wide area previously served by those companies. Eventually, in co-operation with Messrs Joseph Rank, Limited, the whole of the businesses controlled by Messrs Leetham had been purchased at a reasonable price and had been divided on satisfactory lines.

RUMOURS CONTRADICTED.

He desired to contradict the rumours as to there being a fusion of interests with Messrs Ranks or any other firm in contemplation.

Very heavy fluctuations in the wheat market during the year had made trading especially difficult. The unexpected entry of Russia into the market as a large buyer in June had been a specially unsatisfactory feature. The return, even to a limited extent, of Russia to her previous position as a large exporter of wheat and other grain would be a marked benefit to the importing countries and to this country in particular.

In the coarse grain trade, the European demand, which had reached a record figure in the previous year, had returned more nearly to the 1926 level.

In feeding stuffs the company were making a new departure in putting on the market under open formulæ what are known as "Balanced Rations," that is to say, mill offals, meals derived from barley and maize, and other products all compounded under scientific direction with a view to meeting the special requirements of different varieties of stock. The results so far obtained by stock-breeders from the company's balanced rations had been remarkable.

CANADIAN INVESTMENTS.

In regard to the Canadian investments the minority interests in the Vancouver Milling and Grain Co., Limited, which had been acquired, was a relatively small additional investment. The other milling business in Canada in which the company was interested, viz., Spillers Canadian Milling Co., Limited, had been working full time, mainly owing to the highly satisfactory demand from the Orient. This demand, however, was at all times spasmodic, and too much confidence could not be placed upon it.

In conclusion, he recorded the thanks of the shareholders and directors to the staff.

The report was adopted and the directors' recommendation in regard to dividend approved.

The retiring directors and auditors were re-elected and the proceedings then terminated.

RIO DE JANEIRO CITY IMPROVEMENTS COMPANY, LIMITED.

GOOD RESULTS.—DIVIDEND MAINTAINED.

The meeting of the Rio de Janeiro City Improvements Company, Limited, was held, on the 7th instant, at Winchester House, Old Broad Street, London.

The Rt. Hon. Lord Hudson, the chairman of the company, in moving the adoption of the report and accounts, said that a year ago he had told the shareholders that as the capital had been increased by £238,555 in bonus shares, the board could make no promise that the dividend of 10 per cent. free of tax would be maintained; they had, however, seen their way to maintain that dividend. He could not pretend that even last year he thought that the dividend would not be maintained, but it seemed obvious that although the company's gross revenue was bound to increase with the increase in the number of houses drained, costs would increase to a greater extent, and they could not tell how far those conditions might affect the net revenue. As a fact drainage rents had increased by £6,500, and the cost of maintenance by £10,400. There was no doubt that wages would tend to rise to something approximating their former sterling value, so that the company would almost certainly lose some of the advantages which they still obtained from the comparatively low sterling value of the milreis in which wages were paid. He thought, therefore, they must look forward to an increase in the cost of maintenance, but on the other hand they might reasonably expect some reduction in the charges for amortisation, which had hitherto been made in the company's revenue account.

The total debenture debt, amounting now to only £104,700, was all due to be repaid by the end of 1931, and the time was approaching for a review, and possibly for a revision, of the policy of accumulating reserves by means of a conservative amortisation of the capital expenditure hitherto adopted. It had always been the board's policy to have sufficient cash in hand to meet the reasonable wishes of the Government for new works, and the board were inclined to think that when the debentures were paid off in 1931 there would be sufficient funds for any probable emergency, and that to some extent the provisions in their amortisation scheme might be reduced. In view of the outbreak of yellow fever in Rio it was difficult to believe that sanitary conditions in undrained areas were not to some extent responsible, and he could not help feeling that the authorities would invite them to the open negotiations for the carrying out of the works, the contract for which was signed in 1926, but not implemented.

The report and accounts were unanimously adopted.

CALCUTTA ELECTRIC SUPPLY CORPORATION, LIMITED.
LARGER PROFIT—INCREASE OF CAPITAL APPROVED.

The thirty-second annual general meeting of the Calcutta Electric Supply Corporation, Limited, was held, on the 8th instant, in the Public Hall, Bush House, Kingsway, London, the Rt. Hon. Lord Meston of Agra and Dunottar, K.C.S.I. (the chairman) presiding.

The secretary (Mr Ivor C. Thomas, M.V.O., O.B.E.) having read the notice convening the meeting.

The chairman first paid a tribute to the memory of the two members of the board who had died early this year—Major-General Mahon and Mr P. V. Luke. Their places have been taken by Sir James Donald and Mr G. G. Gooding. Continuing, he explained that the increased sale of current (148 million units in 1928 against 129 millions in 1927) had more than balanced the loss of revenue from the reduction of the domestic charge to 3 annas a unit. The divisible profits were £261,000, against £240,000 in the previous year, and the same dividend of 12 per cent. on the ordinary shares was proposed, with again a bonus of 4d. per share. At the same time an amount equivalent to this bonus, £22,500, was kept in reserve for distribution to the consumers by way of rebate or discount under a scheme which is now being worked out. This was in accordance with a policy of allowing the company's customers to participate with the shareholders in any surplus of profits after payment of a 12 per cent. dividend on the ordinary shares. The large power users will be benefited by a reduction of about 10 per cent. on the kilowatt charges in standard Rate "A," and a seven years' contract had been made with the municipality, on favourable terms, for the lighting of streets and public buildings.

Among several other developments now in progress, the company had obtained a licence for supply to the Serampore Municipality, 13 miles north of Howrah, and had constructed a ring-main extension, which began to carry current on April 20th. The year had been free from labour troubles, and relations with the Calcutta public remained cordial. In order to be prepared for further advance, the shareholders were asked to authorise the increase of the share capital from £3,000,000 to £4,000,000, the additional amount to be raised as and when required, in either preference or ordinary shares. No immediate issue was contemplated.

The report and accounts were adopted, and the proposed increase of capital was agreed to.

WHITEAWAY, LAIDLAW AND COMPANY, LIMITED.
BUSINESS CONDITIONS IN THE EAST.

The twenty-first annual general meeting of Whiteaway, Laidlaw, and Co., Limited, was held, on the 8th instant, at the offices, 5 Cripplegate Buildings, London, Mr Mence Wilkinson (chairman and managing director) presiding.

The chairman, in moving the adoption of the report and accounts, said :—I have to express the regret of your directors that the results for the year have proved less favourable than they could have wished.

General conditions in the East have been, and still are, difficult. In India political unrest, together with serious strikes, have curtailed the spending capacity of our customers, while in Burma the falling off in the export of rice has interfered with normal trade to a greater extent than in any previous year in my experience.

In Ceylon, the F.M.S., and in Java and Sumatra, the low prices realised for rubber and tin, their principal exports, have been adversely felt by all classes, and although the demand for our goods has not been much less we have been compelled to sell them at a smaller margin of profit.

Our business in China has shown varying results. Trade in Hong-Kong and Shanghai has been good, but, owing to the unsettled conditions in Northern China, our managers in Hankow and Tientsin have not been able to show a satisfactory return on the smaller trade they have been able to do. The latest figures from these branches, I am glad to say, are distinctly more hopeful.

Siam, almost alone, has had a prosperous year, and the profits made at our Bangkok branch have been equal to our expectations.

Our trade in Kenya Colony and Uganda has shown a modest expansion, but there, too, the net result has not been equal to that of the previous year.

The chairman, having criticised the high rate of import duty in India and Burma, continued :—Turning to the profit and loss account, the balance carried to balance sheet is £92,157. In order to pay a final dividend of 5 per cent., making 10 per cent., free of tax, for the year, we have had to draw upon the balance brought forward to the extent of £9,280. It would, of course, have been possible to maintain the dividend at 15 per cent. by withdrawing the amount needed from the reserve account, but your directors have judged it best, in the interests of the company, to leave the reserve undisturbed.

The resolution was carried unanimously.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 4, 1929 :—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	6,550	From Revenue	12,181
Interest, &c., on Debt	8,353	Increase in Balances	724
Sinking Fund	630	Increase in Debt	2,664
Sundries	36		
	15,569		15,569

The total ordinary revenue for the week amounted to £12,181,000, as compared with £11,570,000 in the corresponding week last year. Property and income tax amounted to £2,135,000, and super-tax to £680,000, against £2,351,000 and £690,000 respectively. Customs brought in £2,158,000 as compared with £2,364,000 a year ago, and excise £979,000, against £1,216,000. Ordinary receipts totalled £382,000, against last year's figure of £37,000, whilst special receipts showed a decrease, being £1,850,000, against £2,220,000.

The National Debt was increased by £2,664,000, as shown below :—

(000's omitted.)

	£		£
Treasury Bills	− 1,472	Public Department Advances	+ 4,285
Treasury Bonds	− 213	National Savings Certificates	+ 50
		Sundries	+ 14
	− 1,685		+ 4,349

The floating debt was increased by £2,820,000 to £745,605,000.

	Sovs. for export ...	2,000
,, 9	Bars bought	13,636
	Total	37,890

Net arrivals, £1,976,040.

Messrs. Samuel Montagu and Co. write as follows on May 8, 1929 :—

GOLD.

The Bank of England gold reserve against notes amounted to £158,216,669 on the 1st instant (as compared with £156,043,567 on the previous Wednesday), and represents an increase of £4,310,354 since April 29, 1925, when an effective gold standard was resumed.

The bulk—about £720,000—of the £804,000 bar gold available in the open market this week was secured by the Bank of England, as shown in the figures below, and the balance was disposed of as follows :—£34,000 for the home trade, £35,000 for the Continental trade, and £15,000 for India. There was a net influx of gold of £1,991,901 during the week.

SILVER.

Sellers have been inclined to hesitate following the decline in the market, and more steadiness has been maintained during the past week. China has worked both ways, but support from this quarter caused a hardening of prices, culminating yesterday in a rise of 1/16d. for both positions, thus carrying the quotations to 25⅛d. and 25 5/16d. for cash and two months' delivery respectively. The upward movements have corresponded to some setback in the Japanese exchange, and it is thought, therefore, that the silver operations formed the counterpart of operations in yen. Indications that the market was overstrained proved well founded, as following the advance, holders of silver on China account were willing sellers, and to-day prices reacted sharply, a fall of 3/16d. and ⅛d. in the respective deliveries bringing quotations down to 25 1/16d.

Until yesterday, when American operators were keen to take advantage of the rising market, offerings from America had been more restricted, but the Indian bazaars have made forward sales besides small purchases for prompt shipment.

The 3rd instant saw the cash quotation once more at a discount as compared with that for two months' delivery—a premium of 1/16d. on the latter being then established; to-day, however, rates were again quoted even at 25 1/16d.

The following were the United Kingdom imports and exports of silver registered from midday on the 29th ultimo to midday on the 6th instant :—

IMPORTS.	£	EXPORTS.	£
Mexico	141,670	Egypt	22,797
British West Africa	31,602	Persia	46,100
Canada	13,000	British India	8,449
Other countries	25,535	Other countries	3,145
	211,807		80,491

GOVERNMENT, &c.

REPUBLIC OF PERU FIVE PER CENT. GOLD BONDS, 1920.—REPAYMENT OF BONDS.—The Government of Peru advises that the outstanding bonds of the above-mentioned loan will be redeemed at par, plus five months' interest, on June 1st next. Such bonds, which must have coupons series 19-52 inclusive attached, may now be presented between the hours of 11 and 2 (Saturdays excepted) at the London office of the Anglo-South American Bank, Limited, 117 Old Broad Street, E.C. 2, where special listing forms can be obtained upon application. An interval of seven clear days will be required for examination of the bonds, which must be lodged personally, or by a London bank or other London agent. Bonds will not be accepted for payment through the post.

INSURANCE.

THE LONDON AND LANCASHIRE INSURANCE CO., LIMITED.—The directors of the London and Lancashire Insurance Co., Limited, announce the following executive changes, dated from May 2, 1929 :—Mr F.W. Mills, hitherto one of the managers of the company, retires on pension after 44 years' service. Mr Charles Hendry, hitherto one of the managers of the company, is appointed general manager. Mr A. S. Rogers, hitherto assistant manager, is appointed deputy-general manager. Mr Thomas Wallas will continue to be secretary. Mr Frank Henderson, hitherto home fire superintendent, is appointed home fire manager.

ROYAL INSURANCE CO., LIMITED.—The Royal Insurance Company, Limited, announces that interim bonuses on Royal participating policies which may become claims or be surrendered during the twelve months ending April 30, 1930, will be at the rate of 42s. per cent. per annum, as compared with 40s. per cent. per annum which was fixed for policies terminating in the previous twelve months.

MISCELLANEOUS.

WHITEAWAY, LAIDLAW, AND CO., LIMITED.—The report for year ended February 28, 1929, shows a profit of £92,158, against £139,747 for preceding year. The carry forward is £24,827. The principal items of balance-sheet over past five years are below :—

	Years Ended Feb. 28.			
	1926.	1927.	1928.	1929.

THE BRITISH SHAREHOLDERS TRUST, LIMITED.—The Seventh annual report and accounts shows a net profit, after providing for all expenses, of £170,096 (last year £77,014), which, with the amount brought forward, makes a total of £195,314. Deducting the interim dividend of 3 per cent. paid in December last, £125,000 transferred to general reserve, and £2,500 to staff pension fund, there is a balance of £51,667, from which the directors recommend the payment of a final dividend of 4 per cent., making 7 per cent. for the year (last year 6 per cent.), leaving £30,139 to be carried forward (last year £25,217). The total of reserves is now £300,000.

THE HOME AND FOREIGN INVESTMENT TRUST, LIMITED.—On Investments realised during the year ended March 31, 1929, there is a profit of £40,161, of which £9,620 has been applied in writing off the whole of the expenses in connection with the creation of the debenture stock, and the discount on the debenture stock issued to date, and the balance of £30,541 has been placed to Capital Reserve Account, which now stands at £40,668. The net revenue for the year was £24,533. A dividend of 6 per cent. is paid on the ordinary stock for the year. It is proposed to increase the authorised and registered capital to £1,000,000.

WHITWORTH AND MITCHELL, LIMITED.—Apart from the Registered Offices and Warehouse at 55 Whitworth Street, two additional warehouses are already occupied by this firm in Great Bridgewater Street. New freehold premises have now been secured, which will house the entire Manchester staff, by the purchase of 46-48 Sackville Street, at present occupied by Messrs Grahams Trading Co., Limited.

UNITED MOLASSES COMPANY.— An extraordinary general meeting of the United Molasses Co., Limited, was held, on May 6th, at Winchester House, London, for the purpose of passing the following extraordinary resolution :—That the action of the directors in setting aside 20,000 ordinary shares of £1 each in the capital of the company, and offering same for subscription at the price of £2 10s. per share to the members of their own body (other than the Chairman) and certain members of the staff, including directors and staffs of subsidiary or affiliated companies, on the basis that no one person shall be entitled to subscribe for more than 500 shares, be and the same is hereby ratified, approved and confirmed.

The resolution was put to the meeting and carried unanimously.

RHODESIA-KATANGA COMPANY, LIMITED.—The directors have issued a circular in connection with the formation of a new company, to be called the "Rhodesia-Katanga Co., Limited," to take over the present assets of the Rhodesia-Katanga Junction Railway and Mineral Co., Limited. The shareholders are to receive exactly the same interest in the new company as they hold in the old one, and no fresh issue of capital is to be made.

THE SHROPSHIRE, WORCESTERSHIRE AND STAFFORDSHIRE ELECTRIC POWER COMPANY.—The Directors of the Shropshire, Worcestershire and Staffordshire Electric Power Co. have received an offer to purchase the whole of the "A" and "B" ordinary shares of the company, at the price of 50s. per share, ex the dividends payable on May 15, 1929. Shareholders will in due course receive a circular from the board recommending the acceptance of this offer.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Copious rainfalls over the United Kingdom during the past week accompanied with a higher temperature considerably enhanced agricultural prospects, but sunshine and warmth is necessary in order to stimulate growth, as cereal crops are backward in this respect owing to unseasonable climatic conditions of late. Native wheat remained steady on light offerings despite the marked decline in prices of imported varieties, but further supplies will no doubt be adversely affected. In the floating and forward cargo section, trading was virtually suspended, the market being demoralised owing to the sharp break in American and Canadian prices, occasioned by congestion of supplies at shipping ports and a flood of selling orders. Failure to stimulate buying on this side also added to the difficulty, as apart from some interest in near at hand cargoes to cover immediate needs, millers were content to await further developments in the situation, particularly in face of competitive offers from Argentina. The United States is now pressing to sell her surplus in order to make room for the coming crop, and this tends further to depress the market. Feeding stuffs also registered a heavy decline. Wheat declined sharply owing to the sharp break in forward values. No. 2 Northern Manitoba, ex ship, 46s.; No. 3 ditto, 44s. 3d.; No. 4 Manitoba, 42s. 9d.; No. 5, 40s.; No. 6, 35s. 6d.; Rosafe, 64 lbs., 42s.; Barusso, 63½ lbs., for shipment, 42s.; Australian, 44s. 6d., ex ship, per 496 lbs.; English, 9s. 9d.–9s. 11d. per 112 lbs. AMERICAN WHEAT MARKETS.

After a small rise on improved demand and rumours of crop damage abroad, there was a steady decline, due to persistent selling pressure, until Wednesday, when a sharp rally occurred. This was the result of a revival of export interest, in conjunction with a number of contributory factors, including the reported activities of hessian fly. Quotations :—

NEAREST FUTURE.	Jan. 4, 1928.	Jan. 2, 1929.	May 9, 1928.	Apr. 24, 1929.	May 1, 1929.	May 8, 1929.
Winnipeg (No. 1 Manitoba) —Cents per 60 lb.)	156¼	122	154	121¼	121	113¾
Chicago (No. Winter)— Cents per 60 lb.....	166¼	116⅜	158½	114¼	113	106¾

Visible supplies of wheat in Canada at 75,496,000 bushels show a decrease of 1,616,000 bushels as compared with the previous figure. Supplies a year ago stood at 68,973,000.

THE COAL TRADE.

Our Sheffield correspondent writes :—Quietness in colliery industry has increased. Bookings for forward export business have fallen off owing to expectations of easier prices. Production has been reduced at a number of the pits. The industrial demand for fuel is by no means brisk, and small coals have come down in price. The demand for house coal is moderate. Prices generally are on the easy side, but there are no substantial reductions.

Our Glasgow correspondent writes :—There has been a marked improvement in the demand for nuts during the past week or so, and as supplies are rather limited owing to the restricted outputs of large coal, some of the collieries are now crushing coal. Prices for nuts are firm. There has been no change in the position of large coal, which is still dull in all districts. Shipping prices are approximately as follows (f.o.b. district ports) :—LANARKSHIRE.—Ell best, 14s. 6d.; splint best, 16s. 3d.; splint second, 15s. 6d.; navigation second, 15s.; steam, 13s. 6d.; Hartley, 16s. 6d.; trebles, 14s.; doubles, 13s.; singles, 12s.; pearls, 11s.; dross, 10s. FIFE.—Screened navigation, 17s. 6d.; first-class steam, 13s. 6d.; third-class steam, 12s.; trebles, 14s.; doubles, 13s.; singles, 12s.; pearls, 11s. LOTHIANS.—Prime steam, 13s.; secondary steam, 12s. 6d.; trebles, 14s.; doubles, 13s.; singles, 12s.; pearls, 11s. AYRSHIRE: Unscreened navigation, 16s. 6d.; jewel, 17s.; steam, 14s.; trebles, 13s. 9d.; singles, 12s. 3d.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes :—There has been no improvement this week in the position on the Cardiff coal market. Collieries have been fairly regularly employed and the outputs since the Easter holidays have again exceeded a million tons per week, but the market is finding it difficult to absorb these relatively large outputs, and prices for all classes of large coal and also for most of the grades of small coal are distinctly easier for spot or prompt shipment. Admiralty large descriptions have been done down to between 20s. 6d. and 20s.; Black Veins down to 18s. 6d.; and Eastern Valleys between 17s. 9d. and 18s. Current inquiries are inactive and stocks are accumulating both at the colliery and railway sidings. The market is still without official news of the placing of the Egyptian State Railways contract. The following are the current approximate quotations :—Best Admiralties, 20s. 6d. to 20s. 9d.; seconds, 19s. 9d. to 20s. 6d.; best drys, 19s. 3d. to 19s. 6d.; Black Veins, 19s. 3d. to 19s. 6d.; Western Valleys, 19s. to 19s. 3d.; Eastern Valleys, 18s. 9d. to 19s. 3d.; best small steams, 13s. to 13s. 6d.; cargo smalls, 11s. 6d. to 12s.; anthracite, best large, 33s. to 36s.; Red Vein, large, 23s. to 27s.; machine-made cobbles, 40s. to 43s. 6d.: French nuts, 42s. to 44s.; stove nuts, 39s. to 42s.; rubbly culm, 9s. 3d. to 9s. 9d.; foundry coke, 27s. 6d. to 36s. 6d.; patent fuel, 20s. to 21s. 6d.; pitwood, ex-ship, 25s. 6d. to 25s. 9d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange :—Although the iron and steel markets are not so active as they were a few weeks ago, business continues to run on steady lines. Somewhat irregular conditions, however, exist in the British pig-iron market. On the North-East Coast the demand is considerably in excess of the iron available and as a consequence premiums are being paid on forward business, but in the Midlands trading has been somewhat slow. On the whole, however, the demand for pig iron appears to be gradually expanding, and in this connection encouraging reports are being received from the consuming industries. The demand for British semi-finished steel continues good and the works producing this class of material have little to complain of. Competition from the Continent in this department has slackened considerably during the past month or two. Not only are the prices of Continental material scarcely competitive but the quantities offered are limited. The market, however, seems to think that of late there have been indications that easier conditions may develop on the Continent and if this occurs it would influence the British market. At present, however, Continental manufacturers profess themselves satisfied with the situation. In the finished steel department business has been somewhat quieter than of late. The oversea inquiry improved again, but a comparatively small proportion has developed into actual business. Home buyers, however, continue to do a steady business.

Our Middlesbrough correspondent writes :—The chief feature of the market is the scarcity of pig iron, principally Cleveland and basic. Makers are so well booked up until well into the second half of the year that they have been unable to accept orders for pig iron for early delivery. The shortage is largely owing to the big demand by the steelworks for the basic quality, leaving very little, if any, for the open market. The prices of Cleveland iron have, however, undergone no change and are still on the following basis : No. 1, 71s.; No. 3, 68s. 6d.; No. 4 foundry, 67s. 6d.; No. 4 forge, 67s. As regards hematite, the position is not so acute, although makers are unable to give delivery until after June and firmly adhere to 74s. per ton for mixed numbers. The steelworks are busy and orders are coming in more freely. There have been no further alterations in prices, which are as follows and subject to the usual rebates : Steel ship plates, £8 7s. 6d.; steel ship angles, £7 17s. 6d.; iron bars, £10 15s.; steel rails, £8 10s. The ore market is strong with best rubio still quoted 23s. per ton. The bigger home consumption of coke and the better export demand has hardened the price to about 18s. 9d. to 19s. delivered furnaces.

Our Sheffield correspondent writes :—The local iron market continues to be depressed owing mainly to the slackness of the foundries, but makers of pig iron are strongly maintaining their prices which, they say, are barely remunerative. Steel makers are busy in the basic department but quiet in the superior acid steels. The scarcity and dearness of scrap has sent up costs considerably and makers are reluctant to increase selling prices at this juncture. They are proposing to ask the Government to control export of scrap as is done in France and Germany. Exports so far this year are at the rate of nearly 500,000 tons per annum compared with 117,000 tons in 1913. The material is scarce at present and fetching 15s. per ton more than at the beginning of the year. More than 50 per cent. of the charge of a steel furnace consists of scrap. The depression in railway steel and wagon building continues. Wire and wire rope makers are doing better and good business is reported in magnet steel, stainless steel and a number of more or less special lines. Recent trade improvement and the improved outlook are inducing a renewal of confidence in the future of local industry.

Our Glasgow correspondent writes :—There has been a little more activity in the pig iron market, but the amount of business passing is by no means satisfactory. At the majority of the steel works there is a steady business being done and steelmakers are able to keep plants fairly well employed. At the sheet mills booking has been heavier than in the immediately preceding weeks, the increased booking for black sheets being rather greater than for galvanised corrugated sheets. Prices are maintained at recent levels in almost all branches.

FIRE. LIFE. ACCIDENT. MARINE.
Edinburgh: 35, St. Andrew Square.
London: 5, Walbrook, E.C.4, and 4, St. James's Street, S.W.1.

Our Cardiff correspondent writes:—Shipments of tinplates last week at Swansea were exceptionally heavy, totalling 186,721 boxes, compared with 90,064 boxes in the previous week, and 161,499 boxes in the corresponding week last year. Stocks have consequently been reduced to 235,574 boxes. Prices of tinplates have remained unchanged at 18s. 6d. to 18s. 9d. per basis box, but the drop in the price of tin is having reactions on the market, and is more than enough to balance the recent increase in the cost of steel bars. Galvanised sheets, however, are firmer and have been quoted up to £13 15s. per ton, compared with £13 10s. the previous week. Local bars are unchanged at £6 6s. 3d. per ton, but imported tinplate bars are a shade easier at £5 15s.–£5 16s. 6d., compared with £5 16s. 3d.–£5 16s. 6d. the previous week.

OTHER METALS.

TIN.—Firm conditions prevailed in the standard market, seller being more reserved in face of higher Eastern advices, but buyer somewhat reluctant to follow the upward trend. Stocks in London and Liverpool warehouses for week ending May 4th were returned at 8,169 tons, compared with 1,749 tons at corresponding period last year. Standard cash changed hands at £197 to £201 10s. and £200 15s.; three months, £199 10s. to £202 10s. In the East, sales were reported at £201 10s. to £204 7s. 6d. per ton, c.i.f. terms.

COPPER.—Increased activity in America resulted in a firmer tone on this side, but higher rates led to realisations which imparted irregularity and subsequent weakness. Standard cash sold £79 10s., £80 5s., and £78; three months, £75 15s., £77 7s. 6d., £74 15s., and £75 2s. 6d.

LEAD in fair support, but market barely steady on liberal offerings. Good soft foreign pig, May, sold £24 8s. 9d. to £24 3s. 9d.; June, £24 7s. 6d. to £24 5s.; July, £24 6s. 3d. to £24 5s.; August, £24 1s. 3d. ton.

SPELTER market quiet, and with sellers more in evidence, prices disclosed a weaker tendency, but steadied later on improved buying. May sold at £26 8s. 9d. to £26 7s. 6d. and £26 12s. 6d.; July, £26 13s. 9d., £26 12s. 6d. and £26 15s.

ALUMINIUM steady. Ingots and bars for home delivery, £95 ton.

ANTIMONY easier for foreign. English regulus, spot, £50 to £55; China regulus, spot, £36 10s., May–June, £32 10s. ton c.i.f.

WOLFRAM.—Straits and Chinese, May–June quoted, 33s. to 35s. per unit c.i.f.

QUICKSILVER steady. Spot quoted £22 2s. 6d. to £22 7s. 6d. per bottle.

TIN PLATES maintained. I.C. coke prompt and forward 18s. 6d. to 18s. 9d. per box f.o.b. Swansea.

THE COTTON TRADE.

LIVERPOOL, May 8th.

A great deal of the "bull" liquidation now seems to be over. The market has a less one-sided appearance, but is very susceptible to any change in the weather news. Spot sales for the week, 2nd to 8th inst. (inclusive), are 36,000 bales, of which 25,880 bales are American, 350 Brazilian, 1,650 Argentine, 3,300 Peru, 2,800 Egyptian, 650 African, 1,100 East Indian, and 270 sundries. Imports for the same period are 64,238 bales, of which 32,536 are American, 717 Peru, 15,578 Egyptian, 3,867 African, 10,968 East Indian, 572 sundries. Quotations to-day are: American Middling, 10·17; Egyptian Sakel, 17·85, Uppers, 11·75; Brazil Fair, 10·42; Peru G.F. Mod-Rough, 12·50, Smooth, 11·17; West African Middling, 10·27, and East African G.F., 11·75.

MANCHESTER, May 8th.

Inquiry in the market during the past week has been fairly plentiful, and some spinners and manufacturers have secured useful contracts, but activity has been checked by the wider fluctuations in raw material rates and general uncertainty as to the future level of values. As is usual at this time of the year, great interest is being taken in the weather reports from the American belt. Rather more cables have been received from India making offers for cloth, and a fair turnover has taken place, chiefly in the lighter styles, most of these orders being for Calcutta. There has been little news from China, but fresh business of moderate extent has been done in fancies. A little more activity has shown itself for Egypt and the Near East. Home trade demand has been rather quieter, and according to some reports the approaching General Election is having an adverse effect upon this branch. Quotations in American yarns have been irregular when tested, and very few users have been prepared to purchase more than small lots. There has not been any general buying movement in Egyptian counts.

THE WOOL TRADE.

Our Bradford correspondent writes:—Traders are waiting "for something to turn up" but do not quite know what that "something" is. Lack of confidence in current values, especially in the finer qualities of wool, tops and yarns, is as pronounced as ever, but no doubt the real cause of the stagnation is the lack of activity in the consuming centres. Anything that gave an impetus to consumption would very soon bring about the remedy, for it is common knowledge that neither spinners nor manufacturers are carrying large stocks. But as things are to-day, the turnover is so restricted that it is almost impossible to name a real market price for anything above 56's quality. In medium and low crossbreds, on the other hand, there is a steady demand, and prices are steady. The report of the Safeguarding Committee is eagerly awaited, though few traders seem to expect much immediate result. Meanwhile, opinion rather inclines to the view that the application will be rejected. The industrial situation at the moment is also clouded by the wages trouble in the West Riding, and it seems that the time is ripe for a new general agreement to remain in operation for a definite period.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The wool sales in London have been conducted under favourable conditions during the past week, and while no definite advance can be recorded each day's sale has shown that prices have been well maintained, and the demand for the raw material is encouraging. We attach more importance to the fact that the different sections of the trade are buying freely than to any upward tendency in values. There is nothing to justify higher values, and the fact that the raw material continues to be absorbed freely can be taken as indicating fairly satisfactory manufacturing conditions. The outstanding feature is the ready way in which the big weights of crossbreds are absorbed. The home trade is certainly the biggest buyer of this description, but France continues to absorb some fair weights, and Germany is taking medium greasy crossbreds. There is hardly that keen call for greasy halfbreds that one would like to see, but apparently the movement of these is in sympathy with merinos, and values are mostly a good 1d. below last sales level for 56's and upwards. The demand for medium and low crossbreds is very keen, and prices are all firm. The home trade is apparently confident that good business will be done in 50's and below, and some fair sales have been made of matchings and tops. The impression prevails that Russia will be a considerable buyer of medium crossbreds during the next six months. Scoured crossbreds are none too plentiful, and are selling very firmly indeed. Slipes are also moving very freely, making prices in harmony with those ruling last series, especially for pelt wools. The opening rates for all classes of crossbreds are fully maintained, and all sections of the trade are buying this description. The offering of merinos leaves very much to be desired. London has apparently got through most of the straight growers' clips, and the second-hand parcels, which are numerous, are not selling too well, particularly as limits are very often definitely above current values. Most of the Tasmanians catalogued were taken in at the Launceston and Hobart sales last January, and the prices paid this time are satisfactory. Some of the New England greasies have also sold up to 30d. Bradford is purchasing merinos steadily, but warp 64's tops are costing at least 3s. 8d., a price that cannot be made in Bradford to-day.

HIDE, LEATHER AND ALLIED TRADES.

The continued instability in hide and skin prices still causes anxiety in the leather trades, and is a bar to steady improvement. Prices at provincial auctions have again showed declines, and expert opinion is that the end of the lane has not by any means been reached. All classes of oversea hides share the prevailing weakness, and speculation is absent, tanners only working enough to keep yards going. South American hides are quotably lower, and Argentine fregorific ox are now down to 7½d., with little trade passing. Dry hides are weaker, and B.A. Americanos are now offered at 9¾d.; African Mombasas at 9¾d., and Queensland Meatworks, dry salted hides, at 9d. It is also significant that the Chicago market has broken after a period of steadiness, and that best heavy packer steers are now offered at 14½ cents—a fall of half cent on the week. There is a slightly better tone in the leather market. Shoe manufacturers having received a fair amount of orders, are now re-stocking themselves with sole leather, with the consequence that light dry bends have come in for attention. Prices are rather fluid, but tanners are holding out for quotations rather more firmly. Offal is selling better, and a good deal of Continental leather is being used for the cut sole trade. Much satisfaction is felt in trade circles that under

the American tariff Bill there is no proposal to tax either sole or dressed leather. The demand for dressed leather is improving, and a fair amount of box and willow calf has gone into consumption. Prices are variable, and Continental tannages come into this market at very low prices. Glace kid in brown and black still continues to sell well, whilst there is a revival in suede leathers in some centres. Reptile leathers in snake and lizard are still very popular, and the supply of some sorts has become very limited. Shoe manufacturers are better placed for orders, although these seem to be distributed rather unevenly.

JUTE TRADE.

DUNDEE, May 8th.

Irregularity in prices of raw jute is destroying confidence in the trade, and consumers are afraid to depart from their hand-to-mouth method of buying. Producers are compelled to curtail their output to a certain extent, besides reducing their prices in their endeavours to induce buyers to operate. Competition for any orders going is keen. The raw jute section of the market is entirely dominated by weather reports of the growing crop, the bulk of which has now been sown. If conditions are favourable, sellers are more inclined to take a view of the market, and reduce their prices of the fibre, but the latest intelligence indicates that too much rain has fallen in many of the districts and the reserve of sellers is very pronounced at higher rates. Last week, a much brighter feeling was introduced into the market by a great recovery in values of Calcutta made goods, which had fallen to a very low level, but whenever an easier tone became apparent in the market, prospective buyers immediately lost interest. Old crop jute is now of very little interest in this market, and only a few small sales of spot material are being made at low prices. The value of new crop Firsts has been down to £33 10s. and Lightnings to £31 10s. for August shipment, at which a fair business was done. Rising to £34 10s. and £32 10s. respectively, the present rates are now £34 5s. for Firsts and £32 5s. for Lightnings, August, with 5s. less named for September. Daisee assortment was sold at £30, October, rose to £31 5s. and now possible at £30 10s. Some little buying has been done of jute yarns, bringing out the values of 3s. 4½d. for common 8 lb. cops and 3s. 5½d. for 8 lb. spools. The majority of buyers are waiting for still further reductions, but spinners are not inclined to take less. Sacking, 24 lb. weft, is now at 3⅜d. and 8 lb. chains at 5⅜d. to 5½d., while twist is offered at 5½d. to 5⅝d. for 3-ply 8 lb. Rove is slow at £17 for 200 lb. and £27 for 48 lb. Fine yarns are firm, as they are well foresold, and carpet yarns are meeting with little business at the reduced rates of 5½d. to 5¾d. for 14 lb. warp. Only small quantities of jute cloth are being bought, even at the lower rates of 4 7/16d. for 10½ oz. 40-in. hessians and 3⅜d. for 8 oz. So little has been done for many weeks past that consumers must be allowing their stocks to run to a very low point. There is absolutely no business passing in linoleum hessians, and prices are nominal. A few fair orders have been entered by some firms for heavy goods, especially narrow tarpaulin, but the prices which makers were forced to accept were very unsatisfactory.

VEGETABLE OIL AND OILSEED.

Markets in the past few days have been more active, and a fair business is reported. Consumers have bought linseed oil freely, crushers having met the market, but the tone is now quieter, current value of raw oil being £28 15s. per ton naked ex Hull mill for spot and May, with business done in July–August delivery at £28 17s. 6d. Interest in cotton oil has subsided, and crude Egyptian offers at £26 10s. and common edible at £30 5s. for spot and May–August. Palm kernel oil is lower, but other seed oils are about unchanged. In the oilseed section scarcity of linseed in near positions is not so pronounced, and the premium over shipment has all but disappeared. Plate on passage is quoted £15 17s. 6d. to £16, and the former figure has been conceded for June–July. Calcutta linseed to London has been in good demand at the lower level, which is now £17 13s. 9d. for shipment to June–July. The quantity of linseed on passage to Europe has increased to 189,900 tons, which is 19,000 tons advance on the previous week. Trade in cottonseed is not so active, and business has been done in black Egyptian at £9 2s. 6d. May and £9 3s. 9d. June loading. Oilcakes are in steady demand for the time of year.

OVERSEAS PRODUCE.

FOOD, BEVERAGES, &c.

SUGAR.—Without exception, prices took a slight dip to-day. British refined reduced 3d. and a similar decline was registered on home-grown, while imported kinds moved against the seller. Meantime, business is still confined to moderate limits, both on grocery and manufacturing account, and with ample offers from producing countries, the commodity is afforded no encouragement. Raw refining kinds quiet and easy. Tate and Lyle's cubes now quoted 25s. 6d. to 26s. as to quality; T.L. granulated, 22s. 4½d.; ditto, month forward, 22s. 3d. White Mauritius sold 20s. 1½d. to 21s. according to sample. Home-grown ranges from 21s. 9d. to 22s. for ready delivery, according to factory. Shipment parcels more or less nominal. Czecho granulated, ready, 10s. 6d. f.o.b. to the U.K. Java markets idle at the moment. Cuban, 96 per cent., May sellers, 8s. 10½d., and June, 8s. 11½d. c.i.f. U.K. Terminal sections easier. Raw, May, sold 8s. 1½d.; August, 8s. 4½d. to 8s. 4¾d.; December, 8s. 9d. to 8s. 6d.; March, 9s. to 8s. 9½d. White, May quoted, 10s.; August, sold, 10s. 7½d. to 10s. 6¾d.; December, 11s. 0½d. to 10s. 10½d. cwt. Cuban receipts for the past week, 165,427 tons, against 93,552 last year; exports, 137,076, against 74,745; stocks, 1,538,695, against 1,341,560; Central workings, 40, against 18. Stocks of raw sugar in the three chief ports of the United Kingdom for the week ending May 4th amounted to 135,009 tons, compared with 127,172 at corresponding period last year.

BORNEO MALAYA JAVA CANADA
1-4, Great Tower Street, London, E.C.3.

COFFEE.—There was no change to note in prices, but demand is decidedly quieter than for some little time past. This in a measure is accounted for by offerings being rather unattractive. Fair to good bold Costa Rica sold 150s. to 160s. 6d.

COCOA.—Market dull on spot and prices favour buyers. Forward positions easier. Accra F/F, October–December, sold 42s. 6d. f.o.b. Terminal, May sold 43s. 3d.; July, 44s. 9d. to 44s. 6d., 44s. 7½d., and 44s. 4½d.; June, 44s.; September, 46s. 3d. to 45s. 6d. and 45s. 9d.; December, 47s. 1½d. to 47s. and 46s. 9d.; March, 47s. to 47s. 6d.

TEA.—Indian auctions for the week amounted to 49,736 packages. Competition was more active than recently, and for all desirable qualities previous rates were secured. Clean common tended against buyers, but thin liquoring and stalky teas disclosed irregularity; 27,753 packages Ceylon met a good market for fine and finest invoices, but owing to falling off in quality other grades were easier. Java and Sumatra auctions met a fairly good reception, at full to rather dearer rates.

RICE.—A quiet but steady market for all qualities.

BEANS.—Meet a very dull market and prices, in the case of butters, move against sellers. Rangoon haricots very unsettled and actual rates difficult to gauge while subject to negotiation and bids solicited. Madagascar butters, spot, 38s.–40s. 6d., per "Clan Macaulay," 36s.; per "Clan Macbeth," 35s. Rangoon haricots, afloat, 16s. cwt., c.i.f.

PEAS.—General quietness continued and slight weakness observable. Japanese, afloat, 18s.–18s. 9d. as to position; April to August, 18s., c.i.f.

SPICE.—Pepper continued in demand, mostly in forward positions and with reserve on the part of the sellers, stability again ensued. Lampong, May–July, sold, 1s. 3½d.; August–October, 1s. 2½d. Muntok, white, May–July, 2s. 2d.; August–October, 1s. 11⅝d. lb. London stocks increased 101 tons on the week for black and 4 regarding white. Tellicherry, March–May steamer, sellers, 147s. cwt. Cloves steady, quiet. No change to note in sago flour or tapioca. African ginger, spot, London, sold, 55s.; May–June, quoted, 53s. cwt. c.i.f.

FRUIT (Dried).—Currants. With stocks on a reduced scale, particularly the finer grades, and high forward offers, a firm tone governed the market. Pyrgos quoted 45s.–46s.; Amalias, 47s.–47s. 6d.; Zante, 47s. 6d.; Vostizza, 50s.–55. Australians move off readily at 47s.–55s. Sultanas: Smyrna in limited supply, so that attention is mainly centred on Australian fruit, which sells readily. Smyrna, medium to good, ranges from 42s.–53s.; Cretan, 50s.–58s.; Australian, new crop, 45s.–68s. as to quality. Raisins slow. Valencias, common to good, 45s.–52s.; Lexias, 28s.–30s. New crop Cape shows fairly good quality but fruit small, while ranging from 33s.–42s. Figs, quiet. Genuine, spot, 28s.–33s. Dates in fair demand and market steady. Siar, spot, quoted 14s. 6d.–16s. 9d.; first tide, 14s. cwt. Evaporated fruits experienced a fair demand and prices firm, following advanced forward offers. Californian plums, 20's–30's, quoted 66s.–67s.; 30's–40's, 58s.–59s.; 60's–70's, 45s.–46s. Pears, Lake County, 76s.–100s. Apricots, South African Royal, 57s. 6d.–117s. 6d.; Australian, 75s.–85s. Peaches, Californian choice, 54s.; extra choice, 56s.; fancy, 60s. Apples, Californian, spot, sliced, extra choice, 75s. Almonds, dull. Mazagan, 135s.; Mogador, 132s. 6d.; Majorcas, 140s.; Bitter Jordan, 185s.–210s. cwt.

CANNED GOODS.

CANNED FRUITS.—An improved demand for Californian fruits was dealt with, the market being very firm, especially for apricots and peaches, while quotations for other descriptions are hardening. Small quantities of Australian offering were readily absorbed. Singapore pines in better request and prices steady, with forward offers more reservedly made. Hawaiian firm and South African clear readily. Italian tomatoes in fair request and forward offers are receiving better attention.

CANNED FISH.—Sardines steady with moderate sales. Portuguese clubs, 5s. per dozen tins. Lobsters scarce, and best halves realise 140s.–145s. Salmon steady and demand improving. Red, talls, spot, 43s.–45s.; pink ditto, 26s.–27s.; halves, 33s.–35s. Japanese crab in small supply, with finest quality ruling at 97s. 6d.–100s.

CANNED MEATS.—Corned beef quiet, but market firmer for both ox and lunch tongues. Danish boned hams also firmly held. Brawn also firmer and a good business done in Dutch brands.

CONDENSED MILK AND MILK POWDERS—Market firmer for powders. Full-cream, sweetened, English, spot, 42s. 6d.; Dutch ditto, 37s.; May–June, 37s. 3d. Machine-skimmed, sweetened.

COMMERCIAL TIMES—WEEKLY PRICE CURRENT.

The prices in the following list are revised with the assistance of an eminent firm in each department.

English, spot, 25s.; Dutch ditto, 22s. 9d.; May–June, 23s., all in 5-cwt. barrels. Powders, Spray process, F.C. 26 per cent., 2 by 56-lb. tins, crated, 92s.; M.S. (1-cwt. cases), 42s.; Roller ditto, F.C. 26 per cent., 73s. 6d.; M.S., 30s., all nett, duty paid ex-wharf London. On the grocery side, F.C.S., 20s.; M.S.S., 9s. 9d., basis per case, usual packing. Danish cream, evaporated, unsweetened, 48 by 16 oz., 18s. 6d.; 96 by 6 oz., 19s. 6d.; condensed, sweetened, 48 by 14 oz., 20 per case.

HONEY.—Market firm, especially for manufacturing grades, with sustained inquiries. New crop, Jamaican, spot, good amber to good pale, 50s.–55s.; dark to fair amber, 43s.–49s.; New Zealand, dark amber, 50s.–55s.; medium, 55s.–65s.; light, 65s.–85s.; white and water whites, 65s.–87s. 6d. per cwt.

RUBBER.

The upward move was continued, sustained buying, mainly on covering and outside account, causing sellers to adopt increased reserve, particularly in view of prospects regarding American consumption, being indeed roseate. Standard sheet, spot, and May sold, 10¾d.; June, 10⅞d.; July–September, 11d. to 11⅛d.; October–December, 11¼d. to 11⅜d.; January–March, 11½d. London stocks increased 367 tons on the week, landings being 1,760; deliveries, 1,393; stocks, 31,580 against 52,015 last year. Liverpool stocks, 165 tons down at 4,614; landings, 132; deliveries, 297.

GENERAL.

JUTE.—A steady market as sellers were reserved, and reports from Calcutta speak of too much rain in many growing districts. Firsts, May–June, quoted £31; new crop, August–September, £31 15s. ton c.i.f. Hamburg stocks, 10,597 bales higher on the fortnight at 134,317.

HEMP.—Manila steady but at the same time quiet, with supplies afloat on quite an ample scale. K grade, June–August, quoted £31 15s.; L1, £32 5s.; M1, £29 15s. ton c.i.f. Sisal, dull. Manila receipts for last week, 34,000 bales against 33,000 at same time last year; estimate for next week, 28,000, and following week, 32,000. Shipments to Europe last week totalled 13,000 bales; U.S.A., 5,000; Japan, 15,000; other countries, 1,000; leaving stocks at 204,000.

SHELLAC.—Firmer, good demand. T.N., spot, 197s. 6d.; May 196s.; August sold, 202s.; and October, 205s. cwt.

COPRA.—Market fully steady, but business in a general sense moves quietly. Straits S.D., May–June, Rotterdam, quoted, £22 10s.; June–July, £22 10s. Dutch East Indies about 5s. under these figures. South Sea S.D., June–July, £21 17s. 6d. Ceylon, May–June, £23 10s. South Sea Islands, May–June, to Marseilles, smoked, quoted, £21 10s.; sun-dried, £21 12s. 6d.; plantation rabaul, £21 15s.; hot-air dried, £21 17s. 6d., and mixed, excluding Padang, at £21 12s. 6d. Manila F.M., £21 16s. 3d. c.i.f.

PALM KERNELS.—Quiet. For shipment, April–May, £17 15s. sellers to Hull ex ship; to Hamburg, May–June, £17 15s. c.i.f.

BABASSU KERNELS.—Market slow, and April–May quoted £21 5s. c.i.f.

MISCELLANEOUS.—Coconuts quoted 18s. to 25s. per 100. Coir yarn, Ceylon, £19 to £38; Cochin, £22 10s. to £40 10s.; Ceylon bristle, £18 10s. to £25; cinnamon leaf oil, 5½d.; citronelle, Ceylon, 1s. 10½d.; Java, 2s.

METROPOLITAN CATTLE.—May 8.

THE MONEY MARKET.

MONEY was again tight in the earlier part of this week, when the joint-stock banks made considerable calls on the market preparatory to the forthcoming holiday demand for cash. Turnover of funds, however, was on a small scale, and by Thursday the position became somewhat easier,

day-to-day money being obtainable at under 4½ per cent. The Bank continued to keep a firm hand on the market.

* * * *

Impressed by the uncertainty of the monetary outlook, the market has endeavoured to strengthen discount rates, but with only a small measure of success. Bills have been sparingly offered, but foreign buying fell off a little after Tuesday, and by Thursday the rate for three months' fine bills had hardened to a firm 5⅛ per cent. In some quarters Germany was reported to be a seller of bills, a development possibly associated with the strength of the mark.

* * * *

The Bank acquired £775,000 in sovereigns from South Africa on Monday, and the following day bought £164,900 in bar gold. The Bank return shows that stocks stand now at almost exactly the same figure as at this time last year. This is satisfactory as far as it goes, but the Bank had to pay 84s. 10⅞d. for its gold on Tuesday, and by Thursday the market price had risen to 84s. 11⅛d. At the same time the sterling-dollar exchange has shown disquieting weakness. On Thursday afternoon the rate was barely 4.85$\frac{1}{16}$, heavy French buying of dollars via London tending to depress the pound. With call money up to 15 per cent. again in Wall Street the margin of profit on transfer of funds to New York is again likely to be attractive, and the Bank cannot be expected to relax monetary conditions until the exchange moves more in our favour.

A feature of this week's strong Bank return is a fall of £2 million in bankers' deposits, reflecting, probably, further sales by the Bank of Treasury Bonds. It is believed, also, that the decline of £2 million in discounts and advances resulted from the Bank's becoming a considerable seller of bills, with a view, presumably, to bringing market discount rates into closer correspondence with Bank rate.

* * * *

The Clearing Banks' statement for April shows several important changes. For the first time advances exceeded a thousand million pounds, though the nine English banks showed the comparatively small increase, since March, of £5½ million. Such a rise is an indication of hopeful trade conditions, since, when advances are at a high level, their commercial backing is scrutinised with especial care. At the same time acceptances show a decline of £16 million, and the movement may be partly due to change in the method of financing trade. The following table summarises the figures of the nine English banks:—

	Dec., 1928.	Jan., 1929.	Feb., 1929.	Mar., 1929.	April, 1929.
Capital and reserves.....	130·8	130·8	130·8	130·8	130.8
Acceptances	217·3	232·4	230·8	222·1	206·3
Deposits (including undivided profits, &c.)	1,806·3	1,809·6	1,773·4	1,739·3	1,743·4
Total liabilities	2,154·4	2,172·8	2,139·0	2,092·2	2,080·5
Coin, notes, balance at bank, and cheques in course of collection	268·9	255·1	240·5	239·5	251·0
Money at call	159·9	145·1	133·4	131·3	140·8
Investments.....	269·0	274·3	270·8	268·9	244·1
Discounts	258·7	274·2	260·2	214·3	191·5
Loans and advances.....	944·5	956·1	967·5	980·3	985·8
Cover for accept., premises, &c.	253·4	268·0	266·6	257·9	267·3
Total assets	2,154·5	2,172·8	2,139·0	2,092·2	2,080·5

Deposits, after the drop occasioned by the tax stringency at the end of the quarter, rose again by £4 million, which is less than was expected. Discounts, which have been falling steadily, declined by another £23 million, probably thanks to the appearance of strong foreign buyers of sterling bills. At a time when the Bank was also a seller of securities, investments fell off by £25 million, presumably in order to strengthen the cash position in preparation for the forthcoming holiday and election drains. Cash increased by £11½ million, and money at call by £9½ million.

NEW YORK MARKETS.

Our New York correspondent cables:—The share market has been disturbed by evidences that the Federal Reserve deflation policy is being continued, and the weekly Bank statement confirms this view; revealing a drop of $57 million in the total credit extended, which is now $94 million below the figure of a year ago. Most of the drop is in discounts. This direct action policy is thoroughly distrusted in conservative quarters. The system's ratio is 75.1, a rise of 5.4 on the year. Industrial news remains good; the steel industry is maintaining its momentum in remarkable fashion without the usual signs of seasonal slackening. The report of the committee on recent economic changes (a committee of the President's conference on unemployment) traces the extraordinary economic progress of the past seven years and attributes it to the acceleration of old forces, instead of structural changes in the economic order. It sounds a mild warning regardng economic development, stating also that "we seem only to have touched the fringe of our potentialities."

THE STOCK MARKETS

Business in the Stock Markets was again quiet, with a steady undertone and narrow price fluctuations. New capital issues by industrial concerns were exceptionally numerous. Gilt-edged stocks were slightly easier as a result of the tightness of the money market and the absence of a recovery in the New York exchange. Home railway stocks improved on satisfactory traffic figures, but dealings continued on a small scale. Activity in the industrial markets was confined largely to American-favoured securities. Rubber shares were marked up on a rise in the price of the commodity, though little or no increase of business resulted. Tea shares were again irregular. The oil market was dull in the absence of any new development, and public interest was conspicuously lacking in the mining markets, where a fall in copper and tin prices was an additional depressing factor in the early days of the week.

THE COMMODITY MARKETS.

This week's reports are not altogether encouraging, though there is so far no serious indication of a set-back in trade. There are signs of greater stability in the coal market, and the minimum prices in South Wales have been raised. The probability of agreement regulating output appears greater than of late. Conditions in the iron and steel trades vary very much according to districts, but on the whole there is a fair demand and no very serious Continental competition. There has been more inquiry for cotton goods, but not much increase in trade activity. Bradford trade continues to suffer from the absence of a workable demand in the yarn section. No improvement is yet visible in the leather trades. Vegetable oils and oilseeds are in poor demand.

THE FOREIGN EXCHANGES.

The Foreign Exchange market has been fairly active this week. The chief features were the weakness of sterling, the continued irregularity of the peseta and the recovery of the mark. New York lost $\frac{1}{16}$ at 4.85$\frac{3}{32}$, after being up to 4.85$\frac{3}{16}$ and down to 4.85$\frac{1}{16}$. Montreal gained ¼ at 4.88. Paris was stronger by four points at 124.16 after touching 124.24 and 124.14. Brussels was decidedly better at 34.94. Madrid was only slightly worse on balance at 34.05 after considerable irregularity, during which business was done at 34.18. Amsterdam moved steadily against us and settled at 12.06$\frac{7}{8}$ after touching $\frac{8}{8}$. Berlin went from 20.46½ to 20.42. Of the South American currencies, Montevideo gained $\frac{3}{4}$d. at 4.83½d., but Buenos Aires lost $\frac{1}{32}$d. at 47$\frac{9}{32}$d. In the Far East, the rupee lost $\frac{1}{64}$d. at 1s. 5$\frac{59}{64}$d. with the lowering of the Indian Bank rate. The yen showed weakness again, and fell away by $\frac{3}{32}$d. to 1s. 10$\frac{3}{32}$d. In the forward market, New York was unchanged. Paris was less sought at narrow premiums of 5 and 10 centesimi, but Milan was firmer at discounts of 7 and 22 centesimi. Madrid was practically unchanged. The silver market stood up well on the whole to the recent decline in the China exchanges, spot being unchanged at 25$\frac{5}{16}$d., whilst forward lost $\frac{1}{16}$d. at 25½d. The China exchanges showed little movement, but Shanghai lost ⅛d. at 2s. 5$\frac{3}{4}$d.

THE UNEMPLOYMENT ISSUE.

In spite of the great importance of several other issues, the question of ways and means of making a special attack upon the large and persistent volume of unemployment continues to be the focal point of the electoral battle. The matter is not, of course, equally urgent in all parts of the country, and in some constituencies other national, or even local, topics will no doubt determine the result. But even in districts where unemployment is not actually acute it is realised that the existence of over a million unemployed for over seven years has been a terrible drain on the vitality and recuperative power of the whole economic life of the nation, and that if this millstone could be removed a new forward move could be made with confidence and vigour. In the last few days fresh material has been provided for all who are interested in the economic aspects of this question.*

The Conservative view is presented in a White Paper—a use of official machinery and procedure for electoral purposes on which we have something to say in another column. The Liberal case is defended by Mr Keynes and Mr Henderson in what even its critics admit is the most brilliant piece of election literature produced during the present controversy, while the Labour Party have hurled into the smoke and dust a pamphlet which consists of a long commination service on Mr Lloyd George interspersed with reluctant blessings on most of his proposals excused by the plea that they have been stolen from the Labour Party.

The White Paper—particularly the Treasury Memorandum — contains many important points which would have to be taken into account in considering the scope, distribution and method of financing big schemes for improving the unemployment position by what may be called "shock" tactics. But on the principles of the project on its financial side, frankly, Mr Keynes and Mr Henderson have the best of the argument. After outlining Mr Lloyd George's proposals, the Treasury paper begins by pointing out that for the last four years we have been spending £63 millions of capital a year on the kind of schemes under discussion—roads, telephones, housing &c. It is, therefore, in no sense a question whether it is appropriate for the State to undertake capital expenditure of this kind, but, as the Treasury observes, merely a question of degree. On this, two broad questions arise. The first is whether a greatly increased capital expenditure on development works could in fact be quickly organised and put in hand so as to reduce substantially the present number of the unemployed; and, secondly, whether, if this were done, it would involve financial reactions that would cause unemployment in other directions.

On the first point, the Minister of Labour argues that the scheme would not create the right kind of work in the right place, and that some compulsion would have to be used; while we may recall that the Balfour Committee also expressed scepticism as to the effect on employment of a large programme of public works on the ground that the efforts made five or six years ago to stimulate employment, through loans to public authorities, etc., were very slow in coming into effect, and that few plans were in fact found to be immediately ripe for execution. Experience, however, would quickly show whether additional inducements were necessary or not, and, if it were, we are satisfied that the country would approve some change in the Insurance Act, not, of course, for conscripting labour, but to make it very much worth while for a man to move from his home to take up new employment rather than to remain indefinitely on the dole in an area where there was clearly a permanent surplus of labour. The conclusion that men of the right kind are not available for the schemes proposed is reached by a detailed analysis of the unemployed figures. But the analysis shows that

> The total number of men 18 to 50 years of age, who could be regarded as available for direct employment in State-aided schemes of road work and land drainage and other public works involving manual labour in the open under commercial conditions of employment and rates of wages, lies between a figure of 250,000 and 300,000.

It appears to be generally agreed that for every man *directly* employed at least one more would be employed in producing materials, transport, &c. If this is correct, the schemes would absorb from half a million to 600,000 unemployed, half of whom would be re-engaged in their normal occupations. If anything like this number were removed from the unemployment list the back of the problem would be broken.

The objection of the Balfour Committee is largely met by the statements of Ministers themselves, who claim to have been working out schemes of the kind in question, and, in particular, by that of the Minister of Transport, who declares that the maps and proposals in the Liberal pamphlet are borrowed from the programme that the Ministry of Transport itself has been working out. If this is the case, Mr Lloyd George's claim merely amounts to this—that a big effort to speed up the programme of capital expenditure which Governments are continually undertaking, now slowly, now rapidly, and for which plans are already in existence, would at this juncture be successful in making a big reduction of unemployment.

The more serious problem is, however, the Treasury's question as to whether this speeding up can only happen under present conditions at the expense of employment in other directions. We confess that, in our view, even if the Treasury's case were proved, there would still be strong arguments for the scheme. At the worst, the reaction on other trades would be diffused over the rest of the industries of the country, some of which are now very active. It is difficult for people in London to appreciate how heavy is the hindrance to progress of the existence of large pools of permanent or semi-permanent unemployment in the depressed areas. The draining of these pools by the attraction of men and women into other trades is extremely slow, and we believe it would help matters to stimulate transfer on a large scale.

The conclusion suggested in the Treasury memorandum is, however, unsound for two main reasons. In the first place the total expenditure on the schemes in question does not involve an equivalent substraction from what the Treasury seems to imply is a fixed total of spending power. If, by the expenditure of £100,000,000, work were provided for say 500,000 unemployed (we are not here concerned with precise figures, but only use them as an illustration), unemployment benefit payments would be reduced to the tune of about £25 millions. Unemployment benefit is paid out of the subscriptions of other workers and employers as well as from the contributions of the State. If these contributions were reduced, the various parties would find themselves with increased purchasing power. If they were maintained, a surplus would flow through the insurance funds into the Government's accounts and hence back into the pool of purchasing power through the reduction of the floating debt. In either case a present charge on our resources would be removed. To this should be added the saving of a very large expenditure now made from Poor Law or charitable funds. In short, the essence of the plan is to make an addition to the purchasing power which is to-day transferred to the unemployed in the form of unemployment benefit, and to obtain useful work from them in exchange. Again, the workpeople taken into employment would contribute to the sugar, tobacco, entertainment, alcohol, and other taxes. Local or central taxes absorb about one-fifth of the whole national income of the country. If we take a conservative estimate and assume one-tenth in this case it means that of £100 millions some £10 millions would return to the State in one form or another.

Moreover, the contention that the new expenditure will create equivalent unemployment in other directions is not

* "Memoranda on Certain Proposals relating to Unemployment." London: H.M. Stationery Office. 1s. net. Cmd. 3331.
"Can Lloyd George Do It?" By J. M. Keynes and H. D. Henderson. London: "The Nation," 38, Great James Street, Holborn. 6d. net.
"How to Conquer Unemployment." London: The Labour Party, Transport House, Smith Square. 2d.

valid even for that part of it which is in excess of the important items mentioned in the last paragraph. The argument of the memorandum is based on the assumption that the amount of capital available for investment is a definitely fixed amount. This is, of course, not the case. If the Government borrows money to put into public works, the effect is the same as when a private firm raises capital and puts it into plant and machinery. That is to say, it tends at first to raise the rate of interest, and this has the effect of stimulating saving, of attracting money from the money market or from speculative uses, of retaining capital that would otherwise go abroad, or of attracting foreign capital from abroad. The capital market is, in fact, the most fluid and international in the world. The scheme proposed would unquestionably delay, or make a little more difficult, favourable conversion operations, but it is certainly a misconception to suppose that it would make any appreciable difference to the amount of capital available for other industrial enterprises at home.

Nor need we fear a serious restriction of our capital investments abroad, which would hit the export trades that normally receive orders as the result of these investments. It is quite possible, as we have said, that the raising of a substantial loan might have the effect of causing some influx of capital, either for short or long period investment, and this would reduce our *net* export of capital. It need not, however—as the Treasury memorandum seems to assume—reduce our foreign issues, or our physical exports in proportion; but would rather tend to increase our imports on account of the increased demand for food, &c., by the wage-earners and for raw materials by industries providing the commodities used in the enterprises.

But the most important consideration of all is this. The purchasing power of the nation is not to be regarded as a fixed amount, but as something which is constantly changing and, except under unusual circumstances, growing. By getting the whole nation to work we should increase the total of goods and services—some of immediate, others of more remote or more prolonged utility—on which the total purchasing power, and incidentally the volume of savings, depends.

If we look at the problem in a broad way there is no sign whatever that Britain has been making an excessive investment of fixed capital during the eight years of depression. Indeed, investment, whether in industrial plant or in municipal or other public amenities, has been far less in proportion than in the United States, and probably less than in Germany since stabilisation. The sums proposed are not large in proportion to those seeking investment in the capital markets of the world, and, if a speeding up of public works to-day would have a substantial effect on chronic unemployment, it would have a very valuable psychological and economic effect.

The scheme can, however, only be approved subject to certain conditions. In the first place, it is only a stop-gap to tide over the time until normal employment is available for the whole population. While not in agreement with the Treasury that "a large programme of Government expenditure, if it were successful in increasing employment temporarily, would tend to prejudice our export trades by encouraging our industries to struggle along on an uneconomic basis," we heartily concur that it would be fatal if the scheme checked the process so conveniently expressed by the word "rationalisation." But we see no reason to think that this would be the case, and, indeed, though possibly undue emphasis has been laid on immediate aspects of unemployment, it is only fair to say that the report from which Mr Lloyd George's scheme arose spends much more space in discussing and making proposals with regard to the ultimate recovery of British industry than it does on the question of national development. Secondly, the programme must be as well balanced as possible and cover the utmost variety of undertakings which naturally fall within the province of the State. And, thirdly, the finances of the scheme must be handled with a very watchful eye on possible repercussions. If these conditions are fulfilled, we believe that a stimulus to works of public utility would have the effect that Mr Lloyd George expects, for it undoubtedly seems to be the case that conditions of competition are becoming more equal between this country and others, and the time is now not far distant when we shall return to normal conditions of employment.

BRITISH FOREIGN POLICY.

In this General Election, and in many others to come, Foreign Policy will be a most important issue, though it may not be the issue which is most prominent in the minds of the electorate.

Its importance is both negative and positive. The negative aspect is simple and obvious. If the general peace is broken again—if there is another international war—then the whole structure of Western civilisation will go to pieces, including our political institutions, general elections and all. While His Majesty's present Government in Great Britain has been in office the penalties of another war in the West have been stated emphatically several times by Mr Baldwin, and, in issuing these warnings with the authority attaching to his position, the Prime Minister has performed a national service for which he deserves full credit from all parties. There is also a positive side to the importance of foreign policy which is rather less obvious, but which cannot be overlooked with impunity. The fact is that, nowadays, the scale on which the main work of the world is done has come to be world-wide. The units of economic activity, though nominally national, are really international; and, therefore, any single nation which sets out seriously to solve its own national problems—for example, to remedy unemployment among its own people—is unlikely to succeed unless it accustoms itself to think and act on this larger scale on which modern life is now being lived. In this matter the outlook of the Victorian Liberals was prophetic. They divined the fundamental tendency of the new age when that age was still in its infancy; and they saw that this country could not afford to aim at anything less than to be "the workshop of the world." It is strange that their political opponents should have dubbed them "Little Englanders," and have exhorted us to "think Imperially" as though that were a larger vision, instead of being, as it is, an immense contraction of a horizon which ought to embrace, not a mere "Imperial," but a "planetary" view. When we move from the old-fashioned political plane on to the economic plane, which is destined to be the principal field of action of the future, we see at once that the policy which takes the whole world into account is the policy that is suited to the age in which we are living.

When men and women are dividing themselves into political groups it is inevitable that their point of view towards international affairs should be one of the deciding factors. But this does not mean that points of Foreign Policy should be made into party capital and exploited for party ends. On the contrary, just because the issue is so grave, all parties should work together in this sphere to maintain the closest possible continuity of policy on the widest possible common ground. For this reason we deprecate any idea of using the outstanding events in foreign affairs during the lifetime of the present Administration as party munitions of war. We do not want to see the Conservatives appealing to be returned to office because Sir Austen Chamberlain negotiated the Locarno Pact in 1925 and made a praiseworthy attempt to negotiate an Anglo-Egyptian settlement in 1927-28. Equally, we do not want to see the Liberal Party and the Labour Party asking the electorate to turn the Conservatives out because they negotiated the abortive Anglo-French naval compromise of 1928 or because they were jointly responsible with President Coolidge's Administration for the failure of the Three Power Naval Conference of 1927, or because they made a mess of the first attempt, in March, 1926, to get Germany admitted to membership in the League of Nations. What we want is to see an enlightened and instructed and determined public opinion insisting that each new Government which successively takes office in this country shall carry out an agreed national policy in a spirit of international understanding and co-operation.

In our belief it is this spirit that is at the root of the matter. All the political parties sincerely want peace; and all alike subscribe to the corollary that the necessary international action ought to be taken for the prevention of war. The issue does not arise over conscious purposes and formal policy so much as over the instinctive and habitual attitudes of mind in the background—but we hasten to add that, in our opinion, the spirit in which a Foreign Policy is carried out is of the essence of the policy, every bit as much as the concrete aims which can be formulated in words and put down on paper.

It is in this matter that we regard His Majesty's present Government as open to criticism. We do not question the sincerity of their will to peace; we do not quarrel with their general formula for ensuring peace; but the spirit in which they have gone about their work seems to us to be behind the times.

Here are some examples of these anachronistic and dangerous habits of thought and action. When there has been any conflict between the claims of national sovereignty and the claims of the new international order of society which is now beginning to emerge, they have almost always shown a very strong prepossession in favour of national sovereignty. This has appeared both in their attitude towards the Permanent Mandates Commission of the League of Nations and in their attitude towards the procedure for carrying out the treaties for the protection of minorities. Again, in issues on which the States concerned have lined up in the old formation of ex-allies and ex-enemies in the war of 1914-18, the present Government have betrayed a certain feeling that, whatever the texts of treaties may say, the Powers in the victorious camp ought to have the advantage. This attitude came out in Sir Austen Chamberlain's handling of the controversy between Hungary and Roumania over the "Optants." It has come out still more unfortunately in his attitude towards the issues between France and Germany. We do not doubt his sincerity when he professes to be inspired by the Locarno spirit of conciliation and impartiality. But we do feel that in him this spirit has often been overborne (no doubt unconsciously) by a much deeper feeling, based on tradition, that, in the last resort, France has a right to have her way and that Germany must go to the wall—partly because France was our ally and Germany our opponent in the late war, and partly because Germany is now disarmed while France is a great military Power, and as such is entitled to the consideration which great military Powers have traditionally received in the days before the masters of economic resources came to have the last word in international affairs.

This instinctive feeling that the victor must be a privileged person comes out in another way in the Government's attitude towards the problem of security and disarmament. They have assumed the attitude of a Power which is in an impregnably strong position itself but which is willing to make certain renunciations and to undertake certain commitments in order to help its less fortunately situated neighbours—so long as the demands made upon its generosity and its public spirit are kept within severely moderate limits. Now this is an attitude which the United States might not unreasonably assume to-day and which Great Britain did assume after the Napoleonic Wars, when her position in the world, *mutatis mutandis*, resembled that of the United States now. But only a British Government which is living mentally in the past could feel like this in the present situation of the British Empire. To see a British Government assuming this grand manner in 1925 or 1929 is a fearful and a wonderful spectacle. It is as though the sole surviving man of great possessions in a predatory community were to protest that he really could not be expected to tie his hands and to distrain upon his purse by voting for a police force and a criminal code and a court to administer it—just for the comfort and convenience of his propertyless neighbours. Yet that is what the attitude of His Majesty's present Government in Great Britain has amounted to when the question of international security has been under consideration. No doubt there is next to no vice in it; it is simply a frame of mind. But it is just the most dangerous frame of mind in a world that is undergoing unprecedently rapid changes.

The MERCANTILE BANK *of* INDIA
LIMITED.
Head Office: 15, Gracechurch St., London, E.C.3
Branches and Agencies throughout the East.
BILLS OF EXCHANGE accepted for collection or advance.
Enquiries from merchants regarding shipments to the East and the special facilities available are invited.

THE TARIFF QUESTION IN EUROPE AND AMERICA.

The report of the Consultative Economic Committee of the League of Nations is not a very satisfactory one. If the situation is no worse than a year ago, it is disappointing that little progress, if any, has been made in the policy of lowering trade barriers, which was recommended by the World Economic Conference. Small amendments here and there, sometimes in an upward and sometimes in a downward direction, have been made, and though a large number of commercial treaties have been completed, very few of them contain new rates of duty. It is satisfactory that they practically all contain the most-favoured-nation clause, and are therefore putting an end to discrimination, but it is uniformity on too high a tariff level. It is, moreover, a matter for concern that certain countries are considering increasing their duties. Seven or eight new tariffs are actually under construction. If the recommendations of the Roumanian Commission are carried out, the new tariff will be lower than before. In most of the other cases the results of the revision cannot yet be forecast; but in one or two cases, notably those of Spain and the United States (one of which has with difficulty been retained in the League, and the other has never been in it) substantial increases are contemplated.

The high level—which it is now intended to raise still higher—of the American tariff is undoubtedly a serious obstacle to the policy of the World Economic Conference. Another temporary cause of hesitation is uncertainty as to the future fiscal policy of Great Britain, while a third, which particularly affects Central Europe, is the failure of Poland and Germany to negotiate a commercial treaty. It was hoped that the Franco-German treaty of 1927 would be followed by a settlement of Germany's commercial relations on her eastern frontier. This, unfortunately, has not happened, and the failure of these countries to reach agreement has even imperilled the success of the most substantial effort that the League has yet made in the direction of a collective commercial agreement, namely, the Convention for the Abolition of Import and Export Restrictions. This Convention was drawn up in the autumn of 1927, and a second meeting was held in 1928, to consider the various exceptions claimed by different nations. The list of these demands was a very long one, and it says much for the diplomatic ability of M Colijn, who presided at the Conference, that most of these were withdrawn. The Convention has been signed by 29 countries, but it requires eighteen ratifications before September of this year in order to bring it into force in 1930. Ratifications are being prepared in a number of countries. That of Britain is passed, that of Belgium is also passed, but is contingent upon ratification by Poland, and it is thought that many other nations may make this same condition. Poland refuses to ratify until she has made what she considers a satisfactory commercial treaty with Germany.

At this week's meeting M Colijn made a weighty appeal to Poland not to nullify the first enterprise of the League of this kind. One of the Polish members replied in a moderate and friendly speech in which he set out Poland's difficulties. A short speech followed from a German delegate (who happens to be the man in charge of the proposed negotiations) in which he deprecated discussion of individual cases in public, but repeated the conditions under which Germany would negotiate. The general impression was that the incident did good and that the prospect of removing this particular obstruction had been improved, rather than the reverse.

In view of the fact that the recommendations of the World Conference in favour of individual action by States in securing the reduction of tariffs have so far only been carried into effect to a very limited extent, not withstanding the acceptance of the principles by the great majority of the countries of the world, the Committee suggests that the example of certain countries, such as Australia and Roumania, in conducting an examination of the actual economic position, might usefully be followed. It believes that such an examination would reveal the existence of barriers which constitute a burden on the agriculture and industry of the country imposing them, and call for immediate revision even from the purely selfish point of view.

A further suggestion is that the detailed examination of single, narrowly defined groups of commodities, which remains at present the best method of exploring possibilities of tariff reduction, should be supplemented by business conferences representative directly of producers, traders and consumers of more comprehensive groups of articles. They suggest as the first group one of substantial importance both to industry and agriculture, as, for example, agricultural implements and machinery. There is also a proposal to associate agricultural experts with the work of the League, and the Economic Committee is invited to consider the advisability of an investigation of the present widespread depression in agriculture.

The Economic Committee has been proceeding with its plans for uniform nomenclature and has been negotiating a general agreement on the meaning of the most-favoured-nation clause and discussing the appropriate form of tariffs. Among other significant events of the year it should be noted that Germany has voluntarily removed from her tariff certain duties put there for purposes of reprisal. She has also negotiated a treaty with South Africa which gives her the right to the preferential rates granted to Great Britain. This has raised a matter of very great importance to this country. Generally speaking the impression is one of hesitation. While Geneva is steadily preparing the ground-work, the world awaits some new impulse to remove existing obstacles to trade.

In the meantime, however, the United States is setting an example in the wrong direction in the new tariff bill, some details of which are given elsewhere. During the last few decades America has taught the world a number of lessons in the economic sphere which are fraught with great benefit to humanity. She has given the most remarkable object lesson of the fact that a high standard of living is compatible with cheap production; she has demonstrated the possibility and advantage of enlisting the active co-operation of all employees in any given undertaking and the value in business of studying the interests of the consumer. In these and many other ways she has been the propagandist of new and fruitful ideas. But when it comes to external commercial relations and those economic matters which fall to be dealt with in the political sphere, her policies and the doctrines by which they have been supported have been in certain instances deplorably crude. It is obvious that the economic well-being of the United States, which has shown so marvellous a development in recent decades, both in low tariff periods and in high, does not depend upon or require the protection of almost the highest tariff in the world; the theory behind the Fordney tariff of imposing duties equal to the cost of production at home and abroad—which would stop trade altogether if it were strictly applied—has broken down owing to its inherent ambiguities and the impossibility of getting accurate data of foreign costs; the elastic provisions of the tariff which, according to President Harding's declaration were intended to mitigate the harsher provisions of a tariff which was drawn up in a period of great economic confusion and uncertainty have operated almost entirely to raise and not lower duties; the disproportion between the prices of agricultural and manufactured products gave rise to a project designed to maintain agricultural prices in the United States combined with the dumping abroad of food and raw material products on the greatest scale the world has ever seen; and now it appears that a period of manœuvre has begun in the course of which new plans for the assistance of the farmers are to be traded against higher duties for the manufacturers. Meanwhile, the United States is steadily exporting capital which has the effect of increasing industrial capacity abroad, but the products of which—so far at all events as Europe is concerned—are effectively prevented from entry into the most rapidly-expanding market in the world. It is to be hoped that President Hoover, whose Committee on Recent Economic Changes has just issued a sane and illuminating report, which stresses the danger of ignoring economic principles and of adopting artificial methods of price advance will prove himself strong enough to restrain some of these wilder extravagancies. It is not to be expected that American politicians concerned with the conflicting economic influences within a great continent will attach much weight to the effect of these proceedings on foreign countries. But, nevertheless, the effect is there, for so great a country as America cannot live to herself alone. It is very desirable that the rest of the world, in watching these proceedings—as it inevitably must—with great interest, should distinguish the wheat from the chaff.

THE DIRECTION OF OVERSEAS TRADE.

THE current issue of the *Board of Trade Journal* contains an analysis of the geographical distribution of our overseas trade in the first quarter of 1929, detailed data with regard to the origin of imports and destination of exports being published, as is customary, with the April returns of Trade and Navigation. The following table summarises the general results in comparison with the corresponding quarter of 1928 and 1913, excluding throughout our trade with the Irish Free State:—

Jan.-Mar.	Imports from		British Exports to		Re-exports to	
	Foreign Countries.	British Empire.	Foreign Countries.	British Empire.	Foreign Countries.	British Empire.
	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.
1913.....	74·71	25·29	62·04	37·96	88·41	11·59
1928.....	70·65	29·35	58·29	41·71	89·65	10·35
1929.....	70·68	29·32	57·99	42·01	89·20	10·80

Comparing the proportions for the first quarter of 1929 with those for the corresponding quarter of last year, it will be seen that as between foreign countries and the British Empire the direction of our trade, both import and export, shows little change.

The next table, from which trade with the Irish Free State is again omitted, summarises the distribution of our imports and exports from the geographical aspect:—

Class of Trade.	Europe.	Africa.	Asia.	North America.	South America.	Oceania, &c.	Total.
Imports: Jan.-Mar.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.
1913	36·69	8·03	12·78	23·48	9·46	9·56	100·00
1928	32·75	9·25	13·23	22·96	10·56	11·25	100·00
1929	30·98	9·75	13·21	25·17	9·73	11·16	100·00
Exports: Jan.-Mar.							
1913	33·84	9·95	24·67	12·21	9·78	9·55	100·00
1928	30·54	11·81	24·71	12·60	9·81	10·53	100·00
1929	30·01	11·95	24·38	13·59	9·79	10·28	100·00
Re-exports: Jan.-Mar.							
1913	53·40	2·92	2·54	35·87	1·69	3·58	100·00
1928	70·94	3·32	2·43	19·31	1·40	2·60	100·00
1929	69·88	3·77	2·44	19·91	1·35	2·65	100·00

As compared with a year ago, our imports from North America represent a substantially higher share of the total, whereas decreases are recorded in the case of Europe and South America. Exports to North America form a larger proportion of the export aggregate, declines being shown by Europe, Asia and Oceania.

Including trade with the Irish Free State, our total imports in the first quarter of 1929 amounted to £305,975,160, of which £206,818,816 originated in foreign countries and £99,156,344 represented the value of shipments from within the Empire. Exports of British products totalled £181,167,939, of which £81,662,121 was consigned to British and £99,505,818 to foreign countries.

Turning to individual countries, we give below an analysis of imports and exports in the first quarter of each of the past three years, adding the 1913 figures for purposes of comparison. The following table shows the fluctuations in trade with the principal European countries, including their overseas colonies and dependencies:—

JANUARY TO MARCH.
(000's omitted).

	Imports From.				British Exports To.			
	1913.	1927.	1928.	1929.	1913.	1927.	1928.	1929.

Latvia	...	1,346	1,790	909	...	225	188	196
Poland	...	1,933	1,264	1,039	...	711	1,326	948
Total of above ...	74,705	110,303	105,976	99,607	46,571	52,134	57,746	56,130

The aggregate figures of this group show that the balance of trade between Great Britain and the Continent is still moving in favour of this country. Exports are £1.6 million lower than a year ago, but imports have declined by £6.4 million, the adverse visible balance falling from £48.2 to £43.5 million. Notable features disclosed in the table are a drop of £2.4 million, as compared with 1928, in our purchases from France, and decreases of £1.8 million and £1.1 million respectively in imports from Belgium and Germany. On the other hand, imports from Russia increased by over a million. The rise in the value of exports to France, Italy and Spain was offset by lower figures of shipments to Germany, Belgium, Norway and Holland.

The next table gives similar figures for the United States and other foreign countries:—

JANUARY TO MARCH.
(000's omitted.)

	Imports from.				British Exports to.			
	1913.	1927.	1928.	1929.	1913.	1927.	1928.	1929.
	£	£	£	£	£	£	£	£
United States	39,704	65,338	51,150	57,843	7,728	10,915	11,609	11,145
Cuba	449	1,091	1,864	1,111	549	594	486	582
Mexico	655	1,531	659	730	644	541	740	752
Argentina ...	10,845	19,759	20,983	20,098	5,232	6,313	8,549	7,417
Brazil	3,806	1,288	1,068	1,299	3,348	3,387	4,017	4,038
Chile	1,107	1,993	2,231	1,934	1,612	1,204	1,353	1,876
Peru	663	2,036	1,004	1,249	364	561	511	490
Uruguay	838	1,656	3,373	1,792	712	727	697	835
Japan	1,156	2,172	2,839	2,324	3,204	3,528	3,507	3,168
China	1,167	3,319	3,266	3,379	3,246	3,549	2,927	4,115
Turkey (Asia)	989	322	256	736	1,269	212	209	143
Egypt	8,579	7,791	7,234	7,491	2,324	2,775	3,070	3,507
Other countries ...	1,987	7,666	8,770	7,626	2,189	4,979	4,673	5,308
Total of above	71,945	115,962	104,697	107,212	32,421	39,285	42,348	43,376
Total all foreign countries	146,650	226,265	210,673	206,819	78,992	91,419	100,094	99,506

It will be seen that in this group of non-European countries, British exports are up by one million, increased sales to China, Egypt, Chile, and "other countries" being nearly counter-balanced by lower values of exports to the United States, the Argentine Republic and Japan. Imports record on balance an increase of £2.6 milion, the chief change in comparison with 1928 being a rise of £6.7 million in the value of purchases from the United States—a reflection of larger cotton shipments which is not without significance in view of the recent weakness of sterling exchange *vis à vis* the dollar.

The corresponding figures for Imperial trade are given hereunder:—

JANUARY TO MARCH
(000's omitted).

	Imports from				Exports to			
	1913.	1927.	1928.	1929.	1913.	1927.	1928.	1929.
	£	£	£	£	£	£	£	£
Canada	4 682	12,747	11,230	10,983	5,878	6,173	7,029	9,311
Australia	11,469	15,423	15,753	15,927	9,239	16,000	13,489	12,488
New Zealand	7,018	14,176	16,621	16,538	2,781	5,172	4,562	5,161
India and Ceylon	13,827	19,144	20,980	19,983	18,227	21,379	24,964	23,429
South Africa	3,982	7,982	9,209	8,802	5,614	7,756	8,056	8,156
West Africa	1,222	3,697	3,998	4,350	1,446	3,485	3,733	3,220
Straits Settlements	4,514	4,270	3,124	3,360	1,412	2,875	3,012	3,167
West Indies	375	869	1,001	1,181	420	1,008	1,152	1,026
Irish Free State ...	...	8,580	8,736	9,504	...	8,560	8,708	8,013
Other possessions	2,560	7,824	7,423	8,528	3,300	6,646	7,138	7,691
Total	49,639	94,712	99,075	99,156	48,317	79,054	81,843	81,662

On the import side, the aggregate figure records little variation as compared with 1928, the chief individual changes being a drop in the cost of purchases from Australia (the result largely of lower wool prices), a decrease in imports from India, and a rise in shipments from the Irish Free State. The export total also shows little change in comparison with a year ago, a decline in the case of sales to the Irish Free State, West Africa, India and Australia being compensated by higher figures of consignments to Canada and New Zealand.

The concluding table summarises the course of the re-export trade. Here, it will be seen, a fairly general decline, as compared with a year ago, has occurred in the case of foreign countries, with whom our total *entrepôt* trade in the first quarter of 1929 amounted to only three-fourths of the figure recorded five years ago.

RE EXPORTS—JANUARY TO MARCH.

THE BANK AFFORDS EVERY FACILITY FOR BANKING BUSINESS WITH SCANDINAVIA.

THE CENTRAL ELECTRICITY BOARD.

THE news this week of two important industrial amalgamations, one in the waggon building and the other in the fine cotton industry, is a welcome proof that the progress of rationalisation in important branches of British industry is being slowly and steadily, if unostentatiously, maintained. The appearance of the first report of the Central Electricity Board is another reminder that the pursuit of large-scale efficiency is proceeding energetically in at least some important directions.

Owing to the fact that Great Britain was one of the pioneers of electricity, and that development took place at an early stage on inadequate lines, this country has fallen behind its competitors, who were able to profit by our experience. At the present time the consumption of electricity per head of population is about 250 units as compared with 1,200 units per head of population in America (California). The need for reorganisation became apparent during the war, and from 1918 onwards the Government appointed a series of committees to consider the question, besides setting up the Electricity Commissioners in 1919 as a Government department to control the industry.

It became increasingly clear that reorganisation, to be effectual, must be national, and, at the same time, take into account what was best in the existing industry. The outcome of seven years' deliberation was the Electricity Supply Act of 1926. This set up the Central Board and imposed on it the duty of reorganising the generation and main transmission of electricity or, in other words, the wholesale side of the industry.

The Board is charged with the duty of carrying into effect the regional schemes for the reorganisation of electricity supply, prepared by the Electricity Commissioners. These schemes necessitate the construction or acquisition by the Board of main transmission lines, which have finally to form a "grid" throughout the Kingdom (consisting of some 3,000 miles of overhead lines) and the making of arrangements with the owners of selected stations (in which ultimately the generation of all supplies of electricity required by authorised undertakers will be concentrated) for the operation by the Board of such stations, the owners being under obligation to sell to the Board the whole of the electricity so generated, the Board thus becoming finally the sole wholesale supplier of electricity for the whole country. The Act envisages that in this way substantial over-all economies will be effected in generating costs and that there will result a more rapid opening up of new territory for distribution purposes. Up to date the Board have adopted five schemes, namely, Central Scotland, South East England (which includes London), Central England, North-West England and Mid-East England. These schemes cover 42 per cent. of the area of the country, nearly 75 per cent. of the population and some 80 per cent. of the total sales of electricity.

By the end of March 31, 1929, contracts had been placed, all with British firms, for transmission lines and transforming stations to the total value of about £8,150,000. Under the financial provisions of the Act the Board is empowered to borrow £33,500,000, subject to the consent of the Electricity Commissioners. Up to date, such consents have been given for a total borrowing of £8,500,000 for construction of transmission lines and £5,400,000 for standardisation of frequency. In order to provide for expenses during the initial period before the disbursements of the Board become sufficient to justify raising a loan, the Board arranged with their Banker (Bank of England) for temporary advances, the total of such advances to December 31, 1928, being £339,000.

Broadly speaking, there is no question but that the electricity supply of the country will benefit immensely by the co-ordination which will come about under the Central Board and which could not otherwise be effected. The process, however, will by the nature of the case be gradual, and rapid and spectacular results must not be expected. The effect in existing undertakings will roughly be in inverse proportion to their size; that is, the smaller and more undeveloped undertakings stand to gain most, at least, in the earlier stages of the co-ordination scheme. The fact that moderate-size or small undertakings will be relieved of all capital expenditure in regard to generating plant and be able to "tap" supply to an unlimited extent, will place such undertakings on a very much more stable financial footing. Also, as the "grid" becomes complete, there will be increased opening for new distributing undertakings in areas at present uncatered for.

Besides opening up the possibility of giving supplies in areas at present undeveloped and a chance of tapping the waste heat and water power resources of the country, inter-connection will result in savings both in capital expenditure and in operating costs. The savings in capital expenditure will arise out of the fact that larger stations are cheaper to construct per kilowatt installed. It will not be necessary to provide so large a margin of spare plant, and it is hoped to reduce the present percentage of something about 50 per cent. to about 20 per cent. There will be better control over extensions, which must be built in advance of the demand, and there will be a saving in overhead charges due to the elimination of the multiplicity of small stations. The saving in operating costs will arise partly out of the fact that sites can be chosen with an eye to a plentiful supply of water and cheap coal, and partly by the fact that larger units of plant are more economical, and partly by the better use which can be made of the most economical plant.

The new régime, in fact, has not modified, but rather increased, the confidence of the investing pulbic as regards the prospects of the industry, and confidence will be increased as successive reports of the Control Board reveal the progress of this very important step in rationalisation.

GROUP PENSION SCHEMES.

In our issue of March 16th we printed an article by a correspondent extolling the merits of group pension schemes on the American pattern. Below we print a reply to that article by a well-known London actuary, who champions the private pension scheme. In a later issue we hope to print a further contribution examining this important problem from the point of view of the British Life Offices.

THE article on Group Pension Schemes in your issue of March 16th will, I fear, have been read by some people as an authoritative statement on the best method of establishing a Contributory Staff Pension Scheme, whereas, in fact, it is simply an *ex-parte* advocacy of the establishment of a scheme on the methods adopted by American life offices. In order that the many important employers who are readers of your journal should not be misled, it is most desirable that the facts about pension schemes should be set out fully and clearly.

There are two methods available for the establishment of pension schemes in this country, viz., (*a*) By means of a fund set up under a private trust and approved by the Inland Revenue authorities pursuant to Section 32 of the Finance Act, 1921; and (*b*) through the medium of an assurance company.

The fact that there are now nearly 1,000 "approved" pension funds established under private trusts proves the popularity of the first method. There can be no question that where numbers are large enough for the law of averages to operate a private scheme is more advantageous to the employers and employees, both from a social and from an economic point of view, each of which is of prime importance. Employers are not slow to recognise the advantages that the establishment of a pension scheme carries with it. They realise that it promotes a better feeling between the management and the staff, whilst the knowledge that proper provision is being made for old age tends to secure continuous and loyal service. In general, all the advantage lies on the side of the private trust. The committee which controls the trust generally consists of representatives of employer and employees, both of whom benefit from the association which management entails, and the employees in particular appreciate, and benefit morally, by the responsibility and authority they enjoy in the joint control of the scheme. These important advantages are entirely absent when the services of an assurance company are called in. The private trust scheme can be adapted to the requirements of any staff, and there need be no limitation of the form benefits and contributions take; whereas an assurance company scheme only consists of the purchase of a certain definite amount of deferred annuity as from a certain age by contributions paid in each year according to the age of the employee.

The only case in which an insurance company scheme can offer any advantage (and then it is mainly the advantage of convenience only) is in dealing with a small staff or a group of small staffs. Its inflexibility alone hampers it. It is impossible of application where pensions are to be based on retiring salary or wages, or on an average salary or wage paid during an agreed number of years prior to retirement; it does not meet properly the incapacity position; and if contributions are fixed the almost essential relation between pension and retiring salary has necessarily to be abandoned.

Apart altogether from these objections, assurance company schemes compare very unfavourably as regards cost with private schemes set up under an irrevocable trust and approved by the Inland Revenue authorities. The investment income of an "approved" fund is free from income tax, and consequently the income from interest at a gross rate in an approved fund is greater than the interest usually allowed by assurance companies in their calculations, viz., 4 per cent. per annum. At the present time the interest earned by a well-managed "approved" fund is at least 1 per cent. greater than this. Since the cost of pensions is met from the contribution and interest income, it follows that, given the same scale of pensions if the interest earned is greater, the contributions required must be smaller. Moreover, it is very doubtful whether an assurance company could put forward an acceptable scheme for a body of factory workers with varying wages, and consequently varying contributions from week to week, and whose pensions would eventually be required to be paid weekly.

It is argued by insurance companies that their guarantee is worth such a great deal to the employers, but surely this must be mainly a question of cost. To take an example. An approved fund under a private trust was recently established, with an initial past-service liability of about £5,000,000 and securities to this amount, yielding about 5¼ per cent., were handed over to trustees. In this case, therefore, the actual cost of an insurance company's guarantee would have been represented by the margin of 1¼ per cent. on the interest income, and would have amounted to about £60,000 per annum, a price which is outside every business consideration.

The illustrations given at the end of your contributor's article, quoting cost of certain types of pension schemes expressed as a percentage of the pay-roll, are quite valueless, and can, indeed, be only guesswork. They are misleading, for it is well known that the actual percentage rate of contribution for any particular type of pension scheme varies considerably according to the shape of the salary or wages curve. Further, the criticisms levelled against the establishment of contributory pension schemes under private trusts are as curious as they are unwarranted, and an employer desirous of establishing a contributory pension scheme should proceed with the utmost caution, and should secure the best advice obtainable, which can be done by consulting the actuaries' profession which has given years of study to the scientific solution of pension problems.

Notes of the Week.

The Civil Service and the Elections.—Even its best friends recognise that the Government has blundered in issuing a detailed reply to Mr. Lloyd George's unemployment proposals on the eve of the election, and after Parliament had risen, in the form of a White Paper. All but one of the memoranda contained in this document are signed by the Ministers concerned, and consist in substance of material which has already been used by them in speeches. If these are statements issued merely on the authority of the Ministers concerned there is no justification for the use of official machinery for publishing and circulating literature of this kind. But, as a matter of fact, the form of this paper, which is presented to Parliament "by command of His Majesty," is calculated to give the impression that it is the result of impartial and expert examination. Every Minister who has been in office for any length of time naturally profits by the accumulated experience of his staff, and can use his knowledge in political controversy. But it is important at all times, and most of all during the heat of an election, to prevent the Civil Service being dragged into the political arena. From this point of view the final memorandum of the White Paper is particularly deplorable, for it is entitled "Memorandum on the Finance of Development Loans, prepared by the Treasury on the direction of the Chancellor of the Exchequer." There is no pretence here that the document, which expresses very definite views, represents Mr Churchill's personal opinion, but the public is given to understand that the Treasury have definitely taken sides in the most acutely debated issue of the election. This is frankly an impossible position, for if the result of the election were to put in power a party, or combination of parties, pledged to carry out the policy under discussion, the new Government would find itself—if we have *interpreted* the wording of the White Paper aright—at loggerheads with the officials of their principal Civil Department. In defence of this procedure it is urged that in the Press and on the hustings the claim has been made that certain Government experts are friendly disposed towards Mr Lloyd George's programme. Such statements ought not to be made, and, indeed, no attempt has been made to bring forward any evidence to substantiate them. But, in any case, it is quite improper for the Government to answer such vague accusations by producing documents to prove that the Civil Servants in question hold in fact the opposite view. It is also suggested that the famous fiscal inquiries of 1903 and 1904, when the Board of Trade collected and published voluminous material bearing upon Mr Joseph Chamberlain's tariff campaign, supply a precedent. These famous blue books were, indeed, forwarded to the President of the Board and presented to Parliament over the signatures of the then permanent officials of the Board of Trade. But though the facts contained in them played a very important part in defeating the "raging and tearing" propaganda of the Tariff Reformers, the most scrupulous care was taken to present all the material objectively and without the expression of any opinion whatsoever. For the protection of Civil Servants it is imperative that this incident should not be allowed to become a precedent.

Mr Baldwin and Tariffs.—Revealing in his Election Address the essentially Protectionist character of his party's fiscal policy, Mr Baldwin has sought support for tariffs in the use of equivocations which do him little credit. "Safeguarding" is placed at the forefront of his programme of measures for stimulating trade and creating permanent employment. It is a policy which, he declares, he is "determined to continue." True, there is to be "no protective taxation of food" and "no general tariff." Subject to those qualifications, the Government "intend that no manufacturing industry, large or small shall be debarred from presenting its case for a safeguarding duty to an impartial tribunal, which will judge each case on its merits and make recommendations accordingly." After this declaration it is idle for Mr Baldwin to pretend that no "general" tariff is to be feared, should his party be returned to power. At the risk of wearying our readers, we repeat that no country, no matter how "high-protectionist," ever contemplated a universal tariff on all articles, and since every industry "great and small" is pronounced in advance to be potentially suitable for Protection, it is clear that Mr Baldwin is inviting the electorate to vote for the establishment of machinery capable of erecting a system of tariffs which would demand the title of "general" in the plainest, most obvious sense of that word. The Prime Minister's pledge not to impose a "general" tariff is palpably incompatible with his avowed intentions, and to pretend otherwise is sheer mystification. Scarcely less equivocal is the argument on which he bases his claim that "Safeguarding" has been a success. In

spired, it may be, by the enthusiasm of the Empire Industries Association, which has issued this week a nonsensical statement that "Safeguarding" has provided work for 350,000 persons, Mr Baldwin claims in his address that since the imposition of "Safeguarding" duties "exports over the whole range of dutiable articles have materially increased." As it stands, this sentence can mean nothing else than that exports of every "safe-guarded" industry have risen—a statement which is flatly untrue. Mr Baldwin is presumably aware of the facts and knows that his claim is correct only in reference to the aggregate exports not only of "safeguarded" industries, but also of motors and silk. Moreover, the increase in this aggregate is due, in the main, to the great increase in the exports of the artificial silk industry, whose expansion has been world-wide and has nothing to do with Protection. Mr Baldwin, therefore, is guilty of the use of highly misleading phraseology, and when he proceeds to contend, as he does in his manifesto, that Protection has encouraged, and is therefore likely to encourage, "efficiency" in industry, he is ignoring not only the experience of all who have studied the results of tariffs, but the testimony of common sense.

The Postal Union.—In stamping our letters during the last few days we have been reminded of the fact that the Congress of the Postal Union has been meeting for the ninth time in all, and for the first time in London. At first sight there seems to be nothing eventful about this—but that is a superficial view. The Postal Union appears dull because we so completely take its existence for granted; and our interest is quickened when we are reminded that it has only been in existence for a little more than half a century. How did the world get on, so short a time ago, without an organisation which we now regard as an indispensable part of the order of civilised society? The establishment of the Union in 1874 must have responded to a very urgent need; and it may well be that, in the historical perspective of our descendants several centuries hence, this date will be thought of as epoch-making. At present, the foundation of the Postal Union means little to us, because we are still mainly thinking in terms of politics and not of economics and on the scale of the national unit and not of the international unity. Hence we are aware of epochs like the *years* 1870-1, *in which* Italy and Germany respectively completed their political unification, or 1918-19, in which the principle of political nationality triumphed in Eastern Europe as it had done in Western Europe half a century earlier. Yet, if we look closely enough at the lines along which the world is moving to-day we may begin to suspect that these landmarks in the history of political nationalism may not, after all, be the most important features in the historical landscape through which we have been passing. In the perspective of the future, our present obsession with politics and with nationalism will assuredly seem most strangely and perversely old-fashioned. For political nationalism, we may already suspect, is the last act of an old play, and while it is being played out there is a new play afoot, in which the stage is world-wide and the action not so much political as economic. The great fact which is shaping the future is that, on the economic plane, the whole habitable world has become a unity; and the establishment of the Postal Union in 1874 was epoch-making because it was the first important recognition of this new fact in the field of official organisation. Indeed, 1874 may come to be regarded as the birthday of the World State, for since that date an official organisation of world-wide scope has been in existence for the universal provision of one great technical facility. The characteristic of the half-century which has elapsed has been the multiplication of international technical organisations of this kind; and the movement has received a great impetus since the foundation of the League of Nations. This great work of international construction is not only furnishing modern civilisation with the facilities which it most urgently needs; it is also providing it with the most effective safeguards against another outbreak of the forces of self-destruction. For Postal and Telegraphic and Railway Unions and Air Conventions and Transit Conventions and the like, by stimulating the growth of the network of international trade, are fostering a process which, more than any other, is inimical to war. Therefore we greet the Postal Union as the harbinger of the new international age.

The Anarchy in Afghanistan.—As the snows melt in Afghanistan the war of all against each and each against all, which started last autumn and was checked by the rigours of winter, has broken out again. Habibullah Khan, holding Kabul and the surrounding area, is reported to have inflicted a severe defeat on Nadir Khan, lately Afghan Minister in Paris, who was endeavouring to advance on Kabul from Khost. With the trade routes to India blocked, and the Hazara tribes hostile, the Bachcha's financial position is precarious, but he has apparently won the support of the Ghilzais. These powerful tribes command from the east the Kandahar-Kabul road, and, in face of their enmity, King Amanullah's chances of a successful advance northwards are at present dubious. The situation is confused by cross-currents of religious antagonism between the Shiah and Sunni sects; the allegiance of the districts on the left bank of the Oxus that march with the U.S.S.R. is in doubt; and, more and more, it seems as if tribal confederations and even single tribes were reasserting their sovereign right to pay no taxes to anybody and to raid their neighbours. The serious feature in this situation is that it is a reversion to the normal state of the country. From time immemorial there have been Afghans living in anarchy, whereas a more or less organised State called Afghanistan has only existed for about a century and a half, and then only intermittently. Politically Afghanistan is an artificial creation. It started by the ruling house of one group of tribes establishing a certain authority over the rest of the tribes. And this state was maintained, or restored, after it had reached the natural term of its existence, by pressure from outside. If the British Raj had not established itself at Peshawar and the Russian Empire at Merv it is almost certain that there would have been no throne in Afghanistan for Amanullah to mount in 1919. The existence of modern Afghanistan is due in the first place to the effect of foreign pressure upon the Afghan tribesmen themselves, in whom it inspired a certain rudimentary and transitory sense of political solidarity. In the second place—and this is the more important factor—modern Afghanistan is the deliberate creation of one of the two great European empires in Asia, which wanted to erect here a buffer-state against its rival. At the end of the Great War this external pressure, which had been the making of Afghanistan, was suddenly relaxed on both sides. After the second Russian revolution of 1917 the Soviet Government reversed the traditional Russian policy and set out to conciliate the Asiatic border States by representing itself as their champion against "British Imperialism." Again, after the third Anglo-Afghan War of 1919, the British Government, unwilling to see Russian diplomacy "steal its thunder," rewarded King Amanullah for having made a war of aggression and been defeated in it by renouncing the control which it had exercised for half a century over the foreign policy of the Government at Kabul, and by rectifying the Afghan-Indian frontier in the Khyber Pass in Afghanistan's favour. The consciousness, in Afghanistan, of this relaxation of foreign pressure is the key to the melodramatic events of the last ten years; for everybody in Afghanistan has been feeling that he possesses, once more, a margin of security against the danger of foreign interference, and they have all been taking advantage of this margin in different ways. King Amanullah indulged in a precipitate career of Westernisation; the tribesmen, exasperated by this, have indulged in a reversion to their traditional and congenial anarchy. Hence the buffer State of Afghanistan is now in the melting pot—and who knows what will emerge?

A Northern Wembley.—The successful organisation of the great Exhibition which the Prince of Wales opened this week at Newcastle-upon-Tyne is a testimony to the courage of its promoters and of the firms whose support has enabled the project to be realised. The North-East Coast has suffered so severely from depression in the heavy industries on which the prosperity of the area largely depends that the Exhibition is a bid for fortune whose gallantry deserves admiration. In his speech at the formal opening on Tuesday the Prince justly commended the spirit in which the exhibitors were "announcing to the whole world that the great shop of this industrial district is still open, is determined to carry on, and is prepared to meet all orders with the highest traditions of a not unworthy past." At the same time, referring to the effect which the world's economic development since the war has had upon the basic industries of the district, he deprecated the attitude of "looking back regretfully to the past and hoping that the spacious Victorian days would somehow return." These are wise words. As the Prince went on to say, "To restore our economic prestige we need courage and imagination—courage in ruthlessly scrapping all methods and machinery that do not come up to the most modern standards, and imagination in exploring every commercial avenue overseas." It may be that, with all the "rationalisation" in the world, the heavy industries alone cannot hope to restore the pre-war level of employment and prosperity on the Tyne and the Wear. A permanent curtailment of the old trades may have to be balanced by the establishment of new manufacturing processes in the north-east before a return to good times can be achieved. But the basic industries can still be revitalised and restored to better conditions if all concerned in their management determine to display the "courage and imagination" which the Prince of Wales very eloquently and wisely enjoined.

Overseas Trade in April.—The beginning of the second quarter is a critical point in the year's overseas trade, and the April returns indicate that so far there is no definite evidence of the setback which has been so much feared. Imports are 7.6 per cent. higher than in April of last year, and exports of British goods 9 per cent. higher. The decline of 5.3 per cent. in re-exports is more than accounted for by a drop of over £1 million in exports of rubber. Similar, though,—except in the case of re-exports,—less pronounced movements, are apparent in the figures for the first four months of the year, as shown in the second table below:—

MONTH OF APRIL.

	1929.	Increase or Decrease compared with 1928.		Increase or Decrease compared with 1927.	
	£	£	%	£	%
Imports	104,168,093	+7,358,702	+7·6	+3,572,623	+ 3·6
British exports	60,244,405	+4,976,432	+9·0	+7,634,358	+14·5
Re-exports	10,376,448	− 578,652	−5·3	−1,437,670	−11·9
Total exports	70,620,853	+4,397,780	+6·6	+6,196,688	+ 9·6
Excess of imports over total exports	33,547,240	+2,960,922	+9·7	−2,624,065	− 7·2

FIRST FOUR MONTHS.

	1929.	Increase or Decrease compared with 1928.		Increase or Decrease compared with 1927.	
	£	£	%	£	%
Imports	410,074,140	+3,510,409	+0·9	−11,456,681	− 2·7
British exports	241,412,344	+4,207,367	+1·8	+18,328,903	+ 8·2
Re-exports	40,474,489	−3,719,464	−8·4	− 2,778,933	− 6·4
Total exports	281,886,833	+ 487,903	+0·2	+15,549,970	+ 5·8
Excess of imports over total exports	128,187,307	+3,022,506	+2·4	−27,006,651	−26·7

Of the increase of £3½ million in imports only £0.3 million is due to imports of finished manufactures, while almost £1 million consists of raw materials. There is a gratifying increase in retained imports of iron ore, raw cotton, timber and wood pulp, raw silk and crude rubber, but declines in wool and hides are evidence of an unsatisfactory state of affairs in the industries using those materials. The most marked changes in the other two classes are a decline of £2 million in retained imports of grain and flour, an increase of over £3 million in those of meat, a decline of nearly half a million in those of iron and steel and an increase of nearly £2½ million in retained imports of manufactured oils, fats and resins. The final table shows some of the more important British exports:—

SOME LEADING EXPORTS.

	First Four Months.		
	1927.	1928.	1928.
Coal ..... tons	17,203,162	15,745,017	17,882,080
Railway material ..... tons	134,023	257,920	169,533
Total of iron and steel ..... tons	1,158,655	1,402,846	1,491,208
Textile machinery ..... tons	35,463	41,208	42,493
Total machinery ..... tons	155,409	188,940	184,707
Cotton yarns ..... lbs.	66,763,900	58,642,100	57,296,600
Cotton piece-goods ..... sq. yds.	1,331,974,800	1,365,742,600	1,388,797,400
Wool tops ..... centals	139,037	126,782	111,145
Woollen tissues ..... sq. yds.	39,936,100	44,752,700	37,559,800
Worsted tissues ..... sq. yds.	13,707,100	11,712,400	17,165,700
Linen piece-goods ..... sq. yds.	25,367,400	27,161,500	24,221,500
Jute piece-goods ..... sq. yds.	48,066,300	60,536,800	58,010,300
Boots and shoes.....doz. pairs	295,250	358,577	292,950
Leather ..... cwts.	117,837	154,072	103,456
Locomotives ..... tons	5,727	14,570	11,509
Motor cars and chassis ... number	16,113	9,798	14,165

Coal is up, even as compared with the abnormal early months of 1927; iron and steel, cotton piece-goods, worsted tissues and motor cars also show a satisfactory achievement. The remaining textiles, however, fail to show up very well, as do also railway material, total machinery and leather manufactures, while the decline in the export of locomotives, as compared with January-April, 1928, is particularly disappointing as the first quarter's returns showed an increase. The total of chemicals, drugs, dyes and colours has increased by £0.16 million to £8,442,400 for the four-month period. The fact that the returns of total imports and exports are improving while those of some leading items remain unsatisfactory, suggest that, while the modest trade revival has not yet reached all our staple industries, it is, so far, just managing to hold its own.

Proposed Changes in the United States Tariff.—According to the *Bill at present before Congress*, the proposed changes in the American tariff will affect principally staple foods and textiles. The exception to this is the provision for an increase up to 50 per cent. in the present 25 per cent. duty on cars, in the case of countries (as for example Great Britain) whose own import duty exceeds the United States rate. No change is recommended in the duties on pig iron, live cattle, apples, cherries, fish, wheat, coal-tar, tobacco and sugar beets, while long staple cotton and Philippine sugar remain on the free list. World duties on raw sugar are to be raised from 2.2 to 3 cents per lb.; on refined, from 2.39 to 3.50. The corresponding Cuban rates are to be raised from 1.76 to 2.4 and from 1.91 to 2.8 cents per lb. respectively. The beef duty, at 6 cents per lb., is doubled, those on lamb and pork are to rise from 4 cents and ¾ cents to 1 and 2½ cents per lb.; the rate on live hogs is increased fourfold, and on sheep, lambs and goats from $2 to $3 per head. The duty on cream is to rise from 20 to 48 cents per gallon; on sweetened condensed milk from 1½ to 2½ cents per lb.; on cheese from 5 to 7 cents per lb.; on oleomargarine from 8-12 cents per lb. On unbleached cotton cloth a graduated *ad valorem* duty is proposed with a ratio of 41½ per cent. (as compared with 30 per cent. at present) when the grade number exceeds 90. The proposed scale of rates on woven wool fabrics is to begin at 40 (against 37 at present) cents per pound and 50 per cent. *ad valorem* on fabrics not exceeding 4 oz. per sq. yd. and 80 cents per lb. in value, and rises gradually for the better cloths to a maximum of 50 cents per lb. and 55 per cent. *ad valorem*.

Egyptian Cotton Mill Merger.—Our Manchester correspondent writes:—Although negotiations have been taking place for over two months with regard to the amalgamation of a number of cotton spinning mills in Lancashire using Egyptian cotton, and reports have appeared from time to time as to the progress made, no official announcement has been issued until this week. It is now stated that this important merger of mills in Bolton, Leigh, Atherton, Stockport and Manchester districts is nearing completion. The directors of the companies concerned have agreed provisionally to the terms suggested and within the next few days meetings of shareholders and others interested are to be called to ratify these agreements. It is understood that nearly 30 mills will be

involved controlling about 3,000,000 spindles. Considerable interest has been taken in the official statement that the promoters of this combine have arranged for the introduction of a large sum of new money, estimated at between £2,500,000 to £3,000,000. Messrs M. Samuel and Co., Limited, and the British, Foreign and Colonial Corporation, Limited, have taken part in the negotiations. It is understood that the mills forming the merger will retain their identity and no material changes are contemplated in the personnel of the management. The idea of the amalgamation is to prevent price-cutting and arrange for the pooling of interests. Most of the mills concerned have excellent profit-earning records. When the shareholders of the individual companies are called together, a factor of importance will be that they will be offered fully paid shares on an agreed basis in the merger company and this will mean that all uncalled share capital will be cancelled. It is believed that with wise direction the combine will be a means of reorganising an important section of the Lancashire cotton industry.

Cotton Trade Problems.—The Joint Committee of Cotton Trade Organisations was formed in 1925 for the purpose of the exchange of opinion between different sections and for the examination of difficulties which affected all sections alike. In 1927 the need for more exact information on some of the problems under discussion led to the establishment of the Cotton Trade Statistical Bureau. Last year it was decided that a number of sub-committees, each charged with the investigation of some particular problem, should be set up, and since then valuable reports have been published on different aspects of the industry. It may be pointed out that this Joint Committee is representative of all sections of the trade, including the trade unions. Some of the most important problems of the industry are dealt with in three reports just published. Two of the reports, writes our Manchester correspondent, are concerned with foreign competition, and the third is an examination of the difficulties of the manufacturing section. It has been decided not to publish them, at all events until the views of the various trade organisations have been ascertained. It can be said, however, that one report is devoted to an analysis of Lancashire costs of production, having regard to the prices at which competitors sell their goods in the same market. The Committee which has conducted this inquiry is of opinion that, given some measure of co-operation between the different sections of the trade, certain classes of goods can be made in Lancashire to sell at prices which are as low as those of our competitors. Another Committee has examined the possibilities of mass production and standardisation, and recommends steps which it believes would enable Lancashire to effect considerable economies in production and marketing. The Manufacturers' Committee has dealt with the efficiency and flexibility of manufacturing with special reference to some of the suggestions made for developing both these qualities. Such questions as the training of operatives, the potential savings arising from the introduction of new machinery and new methods, and the possibility of modifying the present system of wage payment, without affecting earnings, are the main topics of this report. Although the Joint Committee does not necessarily endorse in detail the findings of its sub-committees, it considers the issues raised and the evidence produced of sufficient importance to justify close examination of every section of the trade. It is in complete agreement with the general opinion expressed by the reports that fuller co-operation and frankness between all sections will assist Lancashire to regain much of the trade she has lost.

Iron and Steel Production in April.—Production of iron and steel continued to expand during April, for although the volume of steel production was 6 per cent. less than in March, this decline was due to the Easter holidays. The number of furnaces in blast increased by seven during the month to 152—eight furnaces having been blown in and one blown out—a number higher than at any time since November, 1927, while the production of pig iron rose to 611,800 tons, a figure higher than in any month since July, 1927. The increase has been most marked in basic pig iron for steel making, which has risen from 226,700 tons in January to 260,300 tons in April. Steel production in April amounted to 808,600 tons, compared with 859,900 tons in March and 644,100 tons in April, 1928, when production was also affected by Easter. The suggestion that imports of iron and steel during February and March (160,000 tons and 182,100 tons respectively) were unduly low, owing to transport difficulties on the Continent in February and early March, is confirmed by the rise in imports in April to 261,900 tons, a figure higher than in any month since August last, and one which has been exceeded only four times since the beginning of 1928. Imports in the first four months this year have totalled 848,300 tons, of which 29,000 tons were pig iron, compared with 1,095,000 tons in the same four months of 1928, of which 53,700 tons were pig iron. In relation to the improved production figures exports of iron and steel in April were disappointingly low, as they amounted to only 339,800 tons, compared with 350,100 tons in March, and were, in fact, lower than in any month since September. Prices continue firm, and the Board of Trade's price index number for iron and steel, which was 113.0 in March (1913=100) rose to 113.9 in April. The price index reached its lowest point in August last at 111.7, since when it has slowly risen to the 113.9 recorded for April. Scrap continues to be exported in large quantities, exports in April amounting to 34,800 tons. The improvement in production is naturally reflected in the employment figures and the percentage unemployed in the industry, which, according to the Ministry of Labour's figures, was 20.05 of the numbers insured in January, was 17.0 in March.

Beauty and the Pump.—The Petroleum (Consolidation) Act, 1928, contained a section, which occasioned some opposition from Conservative members during the passage of the Bill through the House, empowering county and borough councils to regulate the appearance of petroleum filling stations in specified areas, and in particular to specify requirements as to their "position, design, size, colour and screening." The report* has now been issued of a Committee appointed by the Home Secretary to advise as to the most suitable measures for giving effect to these powers. The Committee has reached certain conclusions, which it has embodied in a model code of by-laws. With many of the recommendations there will be general agreement. The prohibition of advertisements and flashing lamps at filling stations, and the imposition of a ban on visible galvanised iron and other "unsightly material" are proposals which public opinion will unanimously endorse. It is when the Committee passes from the task of censorship to that of constructive suggestion that its proposals give rise to some doubt. It is recommended that uniform colouring should be employed throughout each filling station, but that the competing petrol companies should be allowed to advertise their products by displaying on each pump the name of the brand and by painting on the pump "a band of distinctive colouring not exceeding nine inches in depth." The difficulty here is that though a filling station may be induced by a local authority to adopt a pleasing general colour scheme in harmony with its surroundings, the "distinctive bands," however unobjectionable in themselves, may clash hideously in some cases with the pumps. The charge of unsightliness cannot fairly be levelled at many of the large specially constructed filling stations on main roads. The offenders against beauty in the English countryside are the owners of the small concerns once devoted unostentatiously to the repair of local cycles, and now disfiguring picturesque village streets by a row of pumps inconvenient for traffic, and calculated to displease the eye, whatever their colour. The filling station has become an integral part of English life, but every motorist will admit that the number of stations is excessive and could well be curtailed by eliminating many of the small retailers whose pumps have been erected incongruously and haphazard with no regard for the amenities of their surroundings.

The B.B.C. Report.—In its report for 1928 the British Broadcasting Corporation states that the total hours of transmission (68,000) and the relative proportions of the various types of programmes showed little change from 1927. Attention has been given to raising the standard of programmes and to securing suitable artistes; perhaps the most important achievement in this direction was the formation of the National Chorus. The demand for dramatic items is said to have increased, but a difficulty in the way of perfecting the technique of radio drama is the lack of specialist artistes. Broadcast performances by variety artistes have, however, been very successful. The removal of the ban on controversial matter has very much increased the scope for "talks," but full advantage of this has not yet been taken. As a medium for special news bulletins, prompt notification of price movements, gale warnings, S.O.S.'s, and special appeals the radio has proved increasingly valuable, and there is said to be some evidence that its services are not without effect in curbing the activities of those holiday makers who abandon their domestic pets to starvation, drive their cars inefficiently and recklessly to woods or commons, whence they remove the wild flowers and substitute paper, broken bottles and orange peel. Progress is recorded in the B.B.C. education activities, both in schools and among adults. About 5,000 schools were on the London and Daventry register, as against 4,000 in the preceding year. A Central Council for Broadcast Adult Education has been set up and numerous conferences have been held in conjunction with the British Institute of Adult Education. The "listening groups" which follow the talks now amount to some 200. The number of wireless licences issued at December 31, 1928, amounted to 2,628,392, an increase of 233,218 on the previous year. The average circulation of the *Radio Times* increased by 130,000 during the year; that of *World Radio* by 30,000, and the distribution of supplementary publications by 2,000,000. The percentage of breakdown of .035 in 68,000 hours' transmission shows an increase of .005 per cent. over the 1927 percentages, which is attributed to exceptional gales in November.

Registration for Accountants.—The first meeting held in Astor House, since it became Incorporated Accountants' Hall, was the occasion of an important speech before the Society of Incorporated Accountants and Auditors by its President, Mr Thomas Keens. The chairman reminded the society that, since an Accountants Registration Bill was dropped, in 1911, owing to an accident of procedure in the House of Commons, no suitable opportunity of reviving it had occurred until now. The society's present project of proceeding with the promotion of a Bill has been fortified by the recent statement in the House by Sir Thomas Robinson that, in the view of the Local Legislation Committee, the time is opportune for the establishment of a registry of properly qualified accountants; since sound, reliable accountancy is of the greatest importance to industry, commerce and the investing public. The society received this announcement with enthusiasm, and it may be hoped that the existence of a strong body of professional opinion on this subject will speed the preparation and passage of the proposed Bill. At present, according to the President, there are, in addition to ten organisations outside the great bodies of Chartered and Incorporated Accountants, a large number of persons practising as accountants whose methods are frequently unprofessional. That the public should be protected against these, as it is protected against quack doctors and unqualified lawyers, is eminently desirable. A measure which, while providing the necessary safeguards against undue restriction, would compel practitioners of the profession of accountancy to submit their qualifications to the scrutiny of a competent authority and to conform to recognised standards of professional practice would safeguard alike the public and the great body of responsible and public-spirited accountants.

The Prospective Supply of Juvenile Labour.—The probable repercussions on industry during the next quinquennium of the vagaries of the birth-rate during and immediately after the war have been the subject of an investigation by the Ministry of Labour.* The results show a remarkable degree of variation between different districts, but for the country as a whole the supply of juvenile labour is expected to decline up to 1933, to rise in 1934, and then decline further to 1940. The decline will be least marked in the munitions areas, and in a few districts there will be an actual increase, but in the majority of areas a decline of from 15 to 30 per cent. is anticipated, while in a few it may run as high as 50 per cent. It is difficult to estimate the effect of this, as the demand for labour depends on so many unpredictable factors, such as the general state of trade; the introduction of new industries into a given district; changes in the school-leaving age; and the possibilities of labour-saving machinery. On the whole, the Juvenile Employment Committees and Juvenile Advisory Committees through which this inquiry was conducted are not disposed to contemplate the likelihood of any serious problem, though they think there may be some temporary inconvenience. Many of them welcome the prospect of a shortage, and anticipate that the growing disinclination of parents to subordinate their children's future to immediate earnings will receive a great impetus, as there will be more scope for picking and choosing. If the result of the temporary shortage is to diminish the attractiveness of blind-alley occupations and to improve the conditions and prospects of juvenile workers it will perform a valuable and much-needed social service. In those districts where the shortage is expected to be acute, the Committees hope that it will be dealt with by daily travelling, by the abolition of short time, and by the extended use of labour-saving machinery. They are opposed to migration, especially for children under 16, and the difficulties and dangers of uprooting adolescents and turning them loose in unfamiliar surroundings are too well recognised to need elaboration. In a few districts, however, especially the mining areas of South Wales and Durham, the surplus is likely to be so great that migration is felt to be the only possible solution. It is strongly urged that children so transferred should only be employed as learners or apprentices and should have a guaranteed period of employment. Great emphasis is laid on the necessity of organisation and supervision to ensure that their accommodation is suitable and that they make wise use of their spare time. Many of these committees reported before the special arrangements were made by the Ministry of Labour for the transference of boys from the depressed areas, and the success of these arrangements bears witness to the general soundness of the Committees' recommendations.

Suez Canal Traffic.—Shipping passing through the Suez Canal has resumed the steady increase which was interrupted by the falling off in British tonnage during the coal dispute. As the following table shows, the British tonnage using the Canal, though it is increasing substantially, has not quite kept pace in recent years with the increase in the tonnage of other nationalities:—

NET TONNAGE passing through SUEZ CANAL (in thousands).

Year.	British.	Foreign.	Total.	Percentage British.
1900	5,605	4,133	9,738	57·6
1910	10,424	6,158	16,582	62·9
1913	12,052	7,982	20,034	60·2
1920	10,839	6,736	17,575	61·7
1924	14,995	10,115	25,110	59·7
1925	16,016	10,746	26,762	59·9
1926	14,969	11,091	26,060	57·4
1927	16,534	12,428	28,962	57·1
1928	18,124	13,782	31,906	56·8

Next, in order of their respective percentages, were Holland (10.4); Germany (10.3); France (6.0); Italy (5.2); Japan (3.0); United States (2.3). These propor-

* "Memorandum on the Shortage, Surplus and Redistribution of Juvenile Labour during the years 1928 to 1933." H.M. Stationery Office. Cmd. 3227. 3d. net.

tions are almost identical with those of 1927, except in the case of the German percentage, which rose from 9.6 to 10.3 per cent. This successful bid on the part of Germany for a revival of her Eastern trade, which has been proceeding steadily for some years, accounts for the slight decline, since 1925, in the British percentage. The mean net tonnage per vessel was 5,244 tons, as compared with 5,223 in 1927. Passengers carried numbered 317,718, as against 340,318 in 1927, but the decrease is entirely due to the diminished number of troops transported, and civilian passengers have increased. In the distribution of tonnage among the principal individual lines the P. & O. group ranks first with 3,213,000 tons, as against 3,312,000 in 1927; British Tanker second with 2,583,000 tons, against 2,148,000; the Ellerman Lines third with 1,966,000 (1,898,000 in 1927). Alfred Holt and Co. remain fourth, while the fifth place is occupied for the first time by the Cunard group with a net tonnage of 1,443,000. The North German Lloyd has moved higher up the list, and the British Government has moved down, with a tonnage diminished from 801,000 in 1927 to 625,000 in 1928.

Conference of Leather Trades.—A conference of the members of the leather trade is to be held at Leathersellers' Hall, St. Helens Place, Bishopsgate, E.C.3, on Tuesday, June 4th, next. This is one of a series which has been inaugurated by the Federation of Curriers, Light Leather Tanners and Dressers, the idea being to bring the scientific and practical sides together to discuss and elucidate the many problems connected with the leather industry. A dinner is also to be held at the Waldorf Hotel on the evening of the conference. The conference agenda contains a list of subjects to be discussed, many of them taking the form of papers on various matters connected with the science and practice of leather manufacture. The tanning industry is perhaps one of the most conservative trades in this country, and this "getting together" has been productive of much good in breaking down the aloofness of its members.

Transvaal Output of Gold.—The gold output of the mines of the Transvaal for April amounted to 872,123 ozs. of fine gold. For April, 1928, the output was 825,907 ozs. of fine gold. The following table shows the monthly output since the beginning of 1923:—

Months of	1923.	1924.	1925.	1926.	1927.	1928.	1929.
	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.	Fine Ozs.
January ...	764,469	796,768	823,692	796,270	839,782	843,857	876,452
February	704,970	760,617	753,925	753,924	779,339	816,133	815,284
March ...	761,586	795,671	825,479	834,340	860,511	877,380	866,529

October ...	793,842	827,583	812,832	853,296	855,743	897,720	...
November	780,639	802,313	787,633	840,276	848,059	872,484	...
December	778,849	825,273	791,455	836,157	851,225	859,761	...
Total ...	9,133,060	9,597,634	9,599,702	9,962,852	10,130,630	10,358,596	3,430,388

The number of natives employed by members of the Witwatersrand Native Labour Association and Contractors over the past few months was as follows:—

	Aug., 1928.	Sept., 1928.	Oct., 1928.	Nov., 1928.	Dec., 1928.	Jan., 1929.	Feb., 1929.	Mar., 1929.	April, 1929.
Gold mines	194,788	194,936	193,147	190,870	187,970	192,526	196,150	197,646	197,412
Coal mines	16,767	16,803	16,506	16,241	16,059	15,845	15,940	16,065	15,900
Diamond mines	4,807	4,889	4,762	4,481	4,444	5,056	5,635	5,787	5,554
	216,362	216,628	214,415	211,592	208,473	213,427	217,725	219,498	218,866

There was a decline in the number of natives employed in all branches of mining during April.

At a meeting of the Royal Statistical Society, on Tuesday, May 28th, in the Hall of the Royal Society of Arts, John Street, Adelphi, W.C.2., Mr A. Loveday will read a paper entitled "The Measurements of Tariff Levels."

Oversea Correspondence.

UNITED STATES.—LIVELY SHARE MARKET—MONEY POLICY—ACTIVE INDUSTRY—TARIFF REVISION—REPARATIONS.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 8.

AFTER a wave of optimism that coincided with the attainment of new high levels for the price averages of industrial shares, doubt again prevails in Stock Exchange circles. The advance that produced the new high level occurred on a moderate volume of trading, the turnover on the Exchange standing at about 4,000,000 shares a day. It should be noted, moreover, that a four million share day is not what it was a year ago. A recent compilation that compared the trading on May 1st, when the turnsized day a year ago disclosed the fact that approximately 1,000,000 shares of the May 1st volume was accounted for by trade in shares that had been listed on the Exchange since a year ago. It also showed that a considerable part of the current volume represented the splitting of shares during the past year. On this basis it would appear that the apparent volume of trading has been increased by something like one-third by the new listings of the past year. This factor also has played an important part in the increase in brokers' loans. In any event, the optimism of a week ago has been tempered by the reappearance of firmness in the call money market and by a fair-sized reaction in shares that followed it. The increase in the Federal Reserve system's holdings of bills purchased in the open market, which amounted to $29,000,000 in the week ended May 1st, had prompted hopes that the Federal Reserve authorities might be modifying their hard money policy; but the return of a 14 per cent. call money rate and its persistence shattered these hopes. At the time the bills were bought there were strong intimations from official quarters that the purchases represented no change in policy, and that they reflected the difficulties of bill dealers over the month-end. Certainly the bill market appears to be in a disturbed condition. During April a reduction of one-eighth was made in bill rates. Last week the 30-day rate was increased one-eighth and for the first time stood higher than those on longer maturities. Yesterday the other maturities were advanced one-eighth, but apparently without bringing any increased demand. Today the rate on five- and six-months bills was reduced one-eighth, and there are some indications that the coming Federal Reserve statement will show another increase in purchases. Meanwhile a new suggestion has appeared with regard to Federal Reserve policy, which is that the board, having seen industrial shares rise to a new high level, will abandon its direct action policy and permit the Reserve Banks to increase their discount rates. However, predictions on Federal Reserve policy, with the present dissensions within the system, are extremely hazardous.

Industrial news continues bullish. The steel industry is maintaining its remarkable rate of operations at what amounts to capacity, and the earnings of the steel companies must be very large. The automobile industry also is holding its record-breaking pace remarkably well. Railway traffic also is running well above a year ago, and the net earnings of the carriers during the first quarter of the year broke previous records for that period. They are particularly interesting in that the favourable financial results clearly are obtained through greater efficiency of operations. With business news of this character there are no signs of commodity price inflation. The indices of *Dun* and *Bradstreet* both declined during April, following decreases during March. Since then wheat has fallen back close to $1 a bushel in the Chicago market.

The current tariff bill is taken as illustrating the dangers of bringing the subject of revision before Congress. The proposed increase in the duty on sugar is generally regretted hereabouts as doing a grave injury and injustice to Cuba, and as tending to foster an undesirable industry in this country. The beet sugar growers have been quite ready to exploit the propaganda for "farm relief."

Hopes still are entertained for a successful outcome of the Reparations Conference. It is thought that the differences on the size of annuities have been reduced to too small a range for the Conference to fail now. However, the many difficulties that attend the reconciliation of conflicting interests are fully appreciated, and much sympathy is displayed with the position of the various creditors who have to pare down their requirements. Sympathy also is felt for the members of the American delegation, who must act as conciliators, and yet, because of the circumstances of their participation, are unable to make any concessions in the requirements of the United States.

FRANCE.—REPARATIONS—PRICES—INDUSTRY—UNEMPLOYMENT—BOURSE—INCOME TAX.

(FROM OUR CORRESPONDENT.)

PARIS, May 15.

THE most delicate point in the negotiations between the experts has now been reached, but it is regarded this afternoon as extremely doubtful whether the delegates will be able to come to a final agreement on their general report before next week. The utmost reticence is being observed as to the exact points now at issue, but it is evident that serious difficulties still remain. Alarmed, it is believed, by the opposition on the part of the German industrials to the increased figures proposed by Mr Owen Young, Dr Schacht paid a flying visit to the Ruhr during the week-end and conferred with some of the leading German magnates. His efforts appear to have been successful, for it is now announced that yesterday Dr Schacht formally agreed in principle to Mr Owen Young's suggested new basis of settlement, subject to certain reservations which have not yet been disclosed. In order apparently to prevent these reservations being presented in too crude and direct a form they have been incorporated (by arrangement between Dr Schacht and Sir Josiah Stamp) in the draft report of the committee's recommendations, which was handed to the President of the committee last night. Copies of the draft will be distributed immediately to the various delegations for individual and general consideration. Then will come the general discussion on the report in regard to the amount and number of the annuities, the German reservations and the distributions of the payments between the Allied Governments. Mr Owen Young conferred yesterday with Dr Schacht and Mr Parker Gilbert. Sir Josiah Stamp left on a hasty visit to London until to-morrow. M Franqui returned to Paris to-day after consulting with his Government in Brussels on the new proposals, which, it is asserted, will have the result of reducing the Belgian percentage from 8 per cent., as provided by the Spa agreement, to 3¼ per cent. It is now claimed here that, if Great Britain would lose 1,000,000,000 marks under the new project, France would lose nearly half as much again. The only creditor, it is bitterly commented, who will lose nothing if the Schacht-Young plan be adopted will be the United States, the wealthiest Power and by far the greatest profiter from the war, which demands payment in full.

Nothing reliable can yet be ascertained as to the German reservations. It is unofficially stated that Dr Schacht has accepted the new project solely on condition that the Reichsbank shall be able (1) in case of exchange difficulties, to suspend for two years the transfer of one-half of the unprotected part of her annuity; (2) in the case of more general economic trouble to carry over to subsequent years payment of the whole of the protected portion; and that (3) in the event of the present situation being appreciably modified, Germany shall have the right to demand revision of certain parts of the new plan. German reports state that it has been agreed in principle between Dr Schacht and Sir Josiah Stamp (1) that Great Britain and France shall renounce the 26 per cent. tax on German imports at the end of ten years, when the system of reparation payments in kind will come to an end; (2) that the Allies shall renounce the controlled revenues, so far as German Customs on tobacco, sugar and alcohol are concerned, and retail only the security constituted by the railway bonds; (3) that Germany shall have the right, in the case of "serious difficulties," to demand from the international bank a moratorium (not exceeding two years) in respect of its annuities (except the "unconditional" portion), this latter part, in consideration of this concession, to be increased from 650 millions to 700 millions, and thus to become immediately mobilisable. Other reservations, according to unofficial sources, include the suppression of the financial and economic control organisation provided by the Dawes Plan; commercial facilities; a large share in the profits of the proposed International Bank, and recovery of the last twenty-one annuities by an amortization system. No confirmation can be obtained of any of these statements, which are, of course, reproduced under all reserve.

HEAD OFFICE:
54, LOMBARD STREET, LONDON, E.C.3.

The index figures representing wholesale prices in France at the end of April disclose the interesting fact that, for the first time during recent years, prices of goods imported into this country have fallen substantially below the level of domestic products. The general index figure returned by the Statistique Générale for the end of April is 640 (as compared with 100 in July, 1914), which is equivalent in gold to 128 (as against March index figures of 146 in Great Britain, 140 in Germany, 124 in Belgium, 147 in Holland, 142 in Switzerland, and 144 in Sweden). The detailed comparative table is as follows:—

	Articles.	End of the month of Feb.	March.	April.
General index figure	(45)	652	653	640
French products	(29)	648	647	648
Imported products	(16)	658	665	625
Foodstuffs (general figure) ...	(20)	611	610	610
Vegetable foods	(8)	629	641	622
Meats	(8)	590	579	599
Sugar, coffee, cacao	(4)	617	611	606
Raw materials (general figure)	(25)	687	691	667
Minerals and metals.....	(7)	627	669	623
Textiles	(6)	774	765	738
Various	(12)	672	659	652

The sharp drop of 40 points in imported goods was due chiefly to the fall of 46 points in minerals and metals and of 27 points in textiles. Wholesale prices of French products recovered the point lost in March and returned to the same level as at the end of February. The figure for retail prices in Paris, based on those of bread, meat, butter, eggs, cheese, milk and other articles of prime necessity, is returned for April as 615, a rise of eight points on the same month, of 19 since January 1, and of 115 since November, 1927. The figure representing the cost of living (food, light, heating, rent, clothing, etc.) for a Paris working-class family of four persons (based on 100 as representing the same factors in 1914) is returned for the first quarter of 1929 as 547 (109), as against 507 in the third quarter of 1927, and 545 at the end of 1926.

Production figures for March indicate increased output in practically all industries. The general index figure for the seven leading industries is returned for the month as 138 (on the basis of 100 as representing the mean for 1913), as against 136 in February, 137 in January, 131 last October, 129 in July, and 123 in March, 1928. Mechanical industries gained five points on the month. The motor-car industry stands at 704, against 579 in March, 1928;

metallurgy at 127, against 123; building, 93, against 75; rubber, 768, against 540; and extractive industries, 120, against 115. Textile industry remains the weak spot, with 95, against 105 a year ago. Railway receipts during March averaged 293,655,000 frs. per week, as against 263,866,000 frs. in February, 255,753,000 frs. in January, and 284,890,000 frs. in December. The daily average of trucks loaded in March was 65,185, as against 61,193 in February, 59,184 in January, and 62,805 in December. Inward-bound shipping in March totalled 4,813,000 tons, bringing in 3,303,000 tons, as against 3,683,000 tons in February, bringing 2,680,000 tons. Outward-bound bottoms totalled 4,034,000 tons, exporting 1,037,000 tons (as against 3,236,000 tons in February, carrying 848,000 tons).

Unemployment continues nominal. Last week's return showed that the total number in receipt of unemployment pay throughout the country was 661 (as against 706 the previous week), of whom 355 were in the Paris area. During the week 3,981 foreign labour units entered the country and 739 left for home.

Under the unsettled prospects of the experts committee, the index figures representing Bourse quotations in April of stock and shares of variable yield show a downward trend in every category except that for insurance shares. The general figure, covering 288 French descriptions, is returned at 518, against 535 for March, 548 for February, 543 for January, 1928, and 345 for January, 1927. The figures for bank shares lost 20 points on the month, collieries 34, iron and steel concerns 16, metallurgical companies 15, construction material companies 29, chemical products 16, railways three, shipping shares 10, and electrics and textile shares 34 each. Insurance shares were seven points higher. New issues of capital in April totalled 1,475,200,000 frs., of which 106,600,000 frs. represented new companies, 357,500,000 frs. new bond issues, and 1,011,100,000 frs. increases of share capital issues. The average rate offered for new bond issues was 5.90 per cent., against 6.20 per cent. in March, 6.5 per cent. in December, and 6.75 per cent. in April, 1928. Bankruptcies in March numbered 930, as against 750 in February, 757 in January, and 536 in April last year.

A return just published shows the rapid development of the yield from income tax in France during recent years. The French income-tax law came into existence in 1914, but was not applied until the second year of the war, and then only to a nominal extent. Schedule rates did not come into operation until 1918, after which the yield progressively increased as follows:—

	Yield.
1918	512,499,000f
1919	869,323,003f
1920	1,326,261,515f
1921	2,820,509,153f
1922	2,631,980,095f
1923	3,795,854,972f
1924	4,941,851,459f
1925	6,477,124,174f
1926	5,997,944,751f
1927	7,716,853,363f

The yield for 1928 is not yet definitely known. The demand notes levied down to the end of March totalled 8,616,735,000 frs.

GERMANY.—REICHSBANK—MONEY AND EXCHANGE—NEW LOAN—INDUSTRY—WHEAT PROTECTION.

(FROM OUR CORRESPONDENT.)

BERLIN, May 14.

AT the time of writing there is little expectation that the Reichsbank intends to raise its discount rate immediately. The last advance, it is now clear, had no influence upon borrowing, and very little upon the exchange market. A new advance, it seems, would be justified only if it drew back foreign short-term credits. Whether it would have this effect is doubtful in view of the condition of foreign markets. Instead of advancing its rate the Bank is using direct means to limit credit. During May the commercial banks are not to be allowed to present new bills to the full value of those repaid. It is understood that by the end of the third week of the month the discount portfolio is to be not more than 75 per cent. of the volume of April 30th. This would mean a somewhat larger reduction than took place naturally at the same point in each of the last two years; but as discounts normally decline considerably until the last week of the month the new measure cannot be considered stringent. The effect will be to prevent any expansion of credit for the purpose of financing purchases of exchanges, and, perhaps, to compel hoarders of exchange to realise. That some such measure was necessary is proven by the unsatisfactory return for May 7th. While the gold and legal-cover exchange reserves lost respectively 126 and 46 million marks, discounts declined by only 7 million marks, and a drop in advances by 53 million marks was offset by a rise in treasury bill discounts by 65 million marks. Of this last issue, of 400 million mark, more than half is now in the Reichsbank's hands. The decline of 189 million marks in circulation shows that the Bank had ceased to finance indirectly purchases of exchange. The ratio of reserves (both gold and exchange) to reichsmark circulation fell during the week from 43 to 41 per cent., and so nearly touched the legal minimum. A semi-official communiqué, however, indicates that discounts, advances, and circulation declined satisfactorily in the second week of the month. The present position, as compared with that of immediately before the discount rate reduction of January, is (in millions of marks):—

	May 7th.	January 7th.
Gold and legal cover exchange	1,819	2,887
Discounts	2,985	2,101
Advances	209	54
Circulation (reichsmarks)	4,442	4,484

Of 837 million marks gold lost this year up to April 30th, 755 million marks went to the United States, 17 million marks to France, 11 million marks to Switzerland, 10 million marks to Holland, and 37 million marks to Great Britain. The exchange position has much improved, the dollar official rate being to-day back to 4.216 (later, in unofficial dealings, 4.215). It seems that the voluntary export of German funds for profitable employment in the New York money market has been larger than was at first supposed, and the withdrawals of foreign funds rather smaller. The money market is entirely under the influence of the credit restrictions. Last week the day-loan rate never fell below 8½-10 per cent., and first-class borrowers at times paid the higher rate. To-day the rate rose to 9¼-11 per cent., and month loans were hard to obtain at 9-10½ per cent. Commercial bills are hardly saleable at 1 per cent. above the Bank rate. There have been large offers of private discounts, of which for days the Reichsbank took only 10 per cent. The rate remained 7½ per cent., the same as the Bank rate. A further advance, to above the Bank rate, was even talked of, although this would have had the unreasonable effect of making credit-raising with the highest quality bills dearer than with the not-quite-so-good quality, which the Reichsbank treats as discountable. The large offers of private discounts were partly due to the fact that credit seekers knew in advance that they could not sell all that they offered. For the present a return to normal money-market conditions is not expected. But an agreement in Paris, which in spite of the unfavourable reception in England of Mr Young's latest proposals is expected, would accelerate the return of foreign short-term credits and lead to a further improvement in the exchange position.

The Finance Minister's Bill authorising the tax-free 500 million mark loan, to relieve the Republic's cash difficulties, has been sanctioned by the Reichsrat, which, however, added the proviso that loans of the states floated in the present and next financial year, to a total not exceeding 40 per cent. of the federal loan, may, like the latter, be freed from income, property, and inheritance taxes. This proviso is based on the conclusion that a tax-free federal loan must spoil the capital market for other taxable public loans. The tax-exemption plan is strongly opposed. The exemption from income tax in particular badly hits the states and municipalities, which receive 75 per cent. of income tax yield. Socialists strongly object to an exemption which favours the well-to-do and favours most of all the very wealthy. The Finance Minister rejects the Reichsrat's demand for tax-exemption also for state loans, and the Reichstag will have to choose between the two versions. Dr Hilferding is not too pleased with his own plan, but he holds that the chronic cash deficits and the resultant necessary resort to short-term borrowing are impediments to satisfactory finance; and describes the loan as a necessary first step towards improvement. The issue price of the loan is not known. Nominal interest will be 7 per cent., and the loss of taxes will be 10½ million marks a year, or 2 per cent., so that the effective interest burden on the Republic will be around 9 per cent.

An official return shows the present indebtedness of the Republic, states, and municipalities arising from old paper-mark debts at 5,722 million marks, of which sum 4,548 million marks fall to the Republic, only 28½ million marks to the states (whose railway debts were taken over by the Republic), and 1,048½ million marks to municipalities and unions of municipalities. This is the so-called "old-owned" loan. If the "new-owned" loan, the real value to its owners of which is problematical, is added at nominal value, the whole public debt arising out of former paper-mark claims is 6,600 million marks.

The wholesale prices index has further slightly fallen to 136.0 on May 8th. The labour market shows a very rapid improvement, the official estimate for May 1st being 1,100,000 unemployed, which means a decline of about 56 per cent. in the preceding eight weeks. The general trade position is rather better. Ruhr average coal output in April was about the same as in March, and the coal dumps were reduced. Pig-iron production in April was 1,105,098 metric tons, as against 1,047,548 tons in April, 1928. A meeting of the Rohstahlgemeinschaft, the Stahlwerksverband, and other steel interests this week is expected to throw light on the attitude to be adopted in negotiations for renewal of the International Steel Cartel. Some of the larger steel concerns still profess not to care whether the Cartel is renewed or not. The Schuckert Electrical Co. (Nürnberg), which is a holding company, announces a dividend of 11 per cent. for the business year ending March 31st, as against 8 per cent. in the preceding business year. Net profit is 6,523,000 marks against 4,637,000 marks. The inundation of cheap matches from Russia, mentioned last week, is rising. The recent heavy fall in international wheat prices has given new life to the agitation for increased Protection, whether by way of higher import duties or of state regulation, or both. Wheat and rye prices here have heavily fallen. The wholesale foodstuffs index price is only 127.2, as against 137.8 average of 1927. The American "export debenture plan," which has incurred President Hoover's disapproval as the McNary-Haugen Bill incurred President Coolidge's, is made an excuse for demanding state measures aimed at the putting up of prices and their maintenance at a profitable level.

POLAND.—THE NEW CABINET—Mr DEWEY'S REPORT—STOCK EXCHANGE PRICES—TRADE DEPRESSION—BUDGET—BANK.

(FROM OUR CORRESPONDENT.)

WARSAW, MAY 11.

UPON the resignation of the former Premier, Mr Bartel, the new Cabinet, with Mr Switalski at its head, has been formed. All the new Ministers belong to the "colonel party," an indication that this wing of the Government has the upper hand. Mr Bartel tried to co-operate with the Diet, while the "colonels" advocated a decidedly anti-parliamentary course. As the co-operation with the Sejm, in which the Government has no majority, met with great difficulties, they aimed at a dissolution and some of them even declared themselves in favour of the proclamation of a new Constitution without its acceptance by the two Chambers. It would be wrong, however, to draw from this the conclusion that the Constitution will be changed by a *coup d'état*. Conditions are often stronger than men and principles. During recent months the economic situation has changed. The upward tendency has been replaced by a trade depression. The number of unemployed has increased and exports are declining. Under such conditions it seems improbable that the Government will accentuate the situation by sharp political measures. It is characteristic that the papers representing the "colonel party," which advocated hitherto a rash anti-parliamentary policy, have modified their intransigent attitude. The problem of constitutional reform is not discussed and it is probable that the new Cabinet, though its composition is quite different, will not deviate from the course of Mr Bartel's Government.

Mr Dewey, the American financial adviser, will shortly publish his report for the first quarter of this year. Extracts communicated to the Polish press contain a very interesting criticism of the economic policy of the Government. Mr Dewey shares the view of those Polish economists who consider that the Government has gone too far in the direction of the development of State undertakings. The public economy has outgrown the economic forces of the country and this has accentuated the dearth of capital. Trade and industry have been left without the necessary reserves and the lack of circulating capital is so great that the smallest disturbance entails immediately an increase of protested bills. Mr Dewey makes the great investments financed in the first instance from current revenues partly responsible for this state of affairs. He declares himself in favour of curtailing all investments. He criticises the method applied by the railways, which have invested the total revenues, amounting for the last year to 20 million dollars. It would be more rational to transfer these revenues to the general budget and to float a loan, redeemable in 30-35 years, which could be used for the development of the railway system. Mr Dewey thinks that such a policy would help to lower taxes, which he considers too high and unjust in their distribution. The turnover tax is burdening the industry of the country too much. In the case of the iron industry the cost of production is increased by the turnover tax by more than 14 per cent. Mr Dewey dwells equally on the detrimental effects of double taxation.

The trade depression is characteristically accompanied by a downward tendency of the stock exchange. The index of 45 shares fell from 92.96 in February to 87.44 in March. In comparison with April of last year (114.97) the decline amounts to 27.53 points. According to present quotations mortgage banks yield 13.06 to 13.07 per cent. and Government loans 0.54 per cent.

The prices of commodities taken as a whole have changed very little. The wholesale index has been maintained almost unchanged since last year (103.1 in March, 1928, 97.5 January, 1929, 98.8 February, 99 March). The price movements of agricultural products and of manufactured goods moved, however, in opposite directions, showing great divergencies, as may be seen from the figures below. (1927 = 100):—

	Wholesale Prices.		Retail Prices
	Agricultural products.	Manufactured goods.	of manufactured goods.
April, 1928	104·5	105·3	106·9
January, 1929	89·5	104·5	108·6
February, 1929	92·3	103·9	108·7
March, 1929	91·6	104·7	108·6

While the index of agricultural products has declined from 104.5 to 91.6, the wholesale prices of manufactured goods have remained nearly stationary, and the retail index has increased. This has had a very detrimental influence on the economic condition of the rural populations. The peasant is obliged to restrict his consumption of manufactured goods and this reacts again unfavourably on the state of industry. In the first instance, the textile industry is affected by the small purchasing capacity of the rural districts. In the cotton industry 5,000 to 7,000 workmen have been dismissed, of the remainder only 35 per cent. are working 6 days, 45 per cent. 4 to 5 days, the rest 2 to 3 days.

It seems that the climax of the trade depression has been already passed. The spring has brought an improvement. The number of unemployed, which has increased from 65,000 in September, 1928, to 180,000 in March of this year, has steadily declined until the beginning of April. According to the last returns 160,000 are actually unemployed.

The budget estimates for 1929-30, voted by the Diet, contemplate a general treasury revenue of 2,955 million

zlotys and general expenditure of 2,935 millions. The revenue side of the 1929-30 budget is based on a continuance of existing taxes and monopolies. The revenues amounted in 1927-8 to 2,768.4 millions, and in 1928-9 to 3,000.0 millions.

During the first two decades of April the reserve of foreign currencies held by the Polish Bank decreased by 88 million zlotys. This decided the Bank to raise, on April 18, its discount rate from 8 to 9 per cent. The return for the last decade of April shows that the drain has ceased, and the reserve of foreign currencies has increased by 6.3 millions. In comparison with the end of 1927 the situation was, on April 30th, as follows: the reserve of foreign currencies has decreased by 318.3 millions, the reserve of gold has increased by 105.7 millions, so that there remains a net loss of 212.5 millions. The percentage of the legal cover remains high. Gold and foreign currencies included in the reserve amount to 63 per cent. of notes and deposits.

HUNGARY.—FOREIGN POLICY—AGRICULTURE —TARIFFS—BANK RATE.

(FROM OUR CORRESPONDENT.)

BUDAPEST, May 11.

THE visit to Budapest of Signor Grandi, the Italian Under-Secretary of Foreign Affairs, afforded good evidence of the friendly relations between Hungary and Italy. Relations with the States of the Little Entente—Roumania, Czechoslovakia and Jugoslavia—though slowly improving, are far from being satisfactory. The long-delayed case of the Roumanian Optants who lost their property by the application of the Agrarian Law in that country is on the way to solution. Direct representatives of Hungary and Roumania will meet at the end of May in Vienna, and there is good reason to hope that an agreement will be found, though there are considerable difficulties still to be settled. Similar differences between Hungarians whose land was expropriated by the Czechoslovak and Jugoslav Agrarian Law still await solution. The unsatisfactory treatment of the Hungarian minorities, numbering three and a half millions, under the sovereignty of Roumania, Czechoslovakia and Jugoslavia is the main cause of the strained relations between Hungary and the Little Entente. Hungarian public opinion is following with great interest the deliberations of the Minority Committee of the League of Nations and the Hungarian Government forwarded a memorandum to the next Session of the Council of the League on the grievances of the Hungarian racial minorities.

Home politics do not show any change. Count Bethlen recently completed the eighth year of his stable administration. In spite of disagreement with his methods of administration, the fact that his government brought back this country from the ruin of war and revolution to financial and economic order proves that political stability amidst the ever-changing régimes of the Succession States of the Old Monarchy is the best way to economic and political consolidation.

The greatest merit of Count Bethlen's government is the wholehearted co-operation with the League of Nations to re-organise Hungary's finances, paralysed up to 1924, by the inflation. Five years of stabilised currency, sound finance and the resultant economic recovery proved that the rising standard of living, which was the natural corollary to the application of the League's reconstruction scheme, is the only possible commonsense policy in the war-stricken Danubian States. It would be idle to assume that the work of reconstruction has come to an end. The high tariff walls and the dislocation of trade between States which formerly composed an ideal economic unit is a constant reminder that the future welfare of Central Europe depends on the applications of the recommendations of the World Economic Conference Hungary complains that her gesture lowering the duties in the Austrian and Czechoslovak commercial treaty has not met with the response which was anticipated, as Austria, Czechoslovakia, Poland and Germany are persisting in high agricultural protection which greatly hinders the marketing of Hungarian products. It is true that the refusal of Germany to come to a veterinary agreement with Hungary is nothing short of a veiled prohibition of Hungarian livestock export, which is all the more keenly resented as Germany's export to Hungary is steadily increasing.

Hungarian agriculture is passing through a very difficult time. The severe frost of the unusually long winter damaged the crops, but it is hoped that the good weather in May will improve the prospects. Prices are low and exports are very difficult. Credit conditions are somewhat better owing to the financial settlement of the Land Reform, which will enable farmers to repay their most burdensome short-term debts and re-equip their land with modern implements. The future of Hungarian agricultural prosperity depends on the adoption of a new policy with due regard to marketing possibilities abroad. This was emphasised by Dr Bud, the Minister of Economic Affairs, who laid recently before Parliament the Government's Economic Programmes. The main features of the programmes are: drainage and irrigation schemes, afforestation, fruit growing, better communication for agricultural districts and a new tariff policy. Agrarian circles are now realising how high protection of the staple industrial commodities damages their interests and are now urging the Government to do away with the burdensome duties which make agricultural production so difficult. The Government is pledged to introduce legislation in order to control trusts and cartels, the severe criticism in Parliament of whose activities found wide echo in the Press. Of course, industrial circles do everything to counteract the growing tendency against protectionism and combinations, and do not hesitate to declare that the country's credit would be damaged abroad if the Government were to introduce a bill for the control of cartels. It is very unfortunate that even official circles are somewhat influenced by that campaign, which is obviously intended to divert public opinion from the unduly high prices of protected industrial commodities. The fact is that the financial committee appointed by the League of Nations some years ago observed "that the new industries which have no basis in Hungary's natural resources are diverting capital from her main production where it is urgently needed and are increasing the cost of living with reaction on the whole of her economic life, including the power to export." This is exactly what has happened. Hungary cannot go on borrowing so heavily as she did in 1927 and 1928, when the indebtedness of the country amounted to 1,000 million pengös approximately. This heavy borrowing resulted in a large adverse balance of trade and the Hungarian industrialists would do better to observe the advice of the financial experts than to divert the none too large resources of Hungarian agriculture to inefficient and expensive industrial production.

The money market is tight and the Bourse is dull. The stoppage of foreign loans and the drain on the National Bank gold reserves compelled the Bank to raise its discount rate on April 23rd from 7 to 8 per cent. The rise in the bank rate was anticipated and did not cause any surprise, though its effect will be severe, especially for agriculture. The credit situation depends entirely on the international money market, for Hungary, as a debtor nation, still requires foreign accommodation for the development of her resources. The economic situation is good; public revenue is satisfactory, production and employment is on the same level as last year, and the adverse balance of foreign trade in the first quarter of 1929 amounted to only 66.4 million pengös, as against 102.1 millions in 1928.

CANADA.—SEEDING OPERATIONS—WHEAT— BUSINESS CONDITIONS—GRAIN INQUIRIES— THE HUDSON BAY ROUTE.

(FROM OUR CORRESPONDENT.)

OTTAWA, May 3.

SEEDING operations in Canada have been hampered by cold, wet weather, but the heavy rains which fell on the prairies during the latter half of April were not unwelcome as the lightness of last winter's snowfall had given rise to apprehensions of a dry seedbed and a shortage of moisture reserves. Moreover, despite the interruptions, the amount of seeding accomplished on the prairies up to May 1st was equal to the volume at the parallel date in 1928; wheat seeding is about 70 per cent. completed in Manitoba, 35 to 40 per cent. in Saskatchewan, and 25 to 30 per cent. in Alberta. All the evidence points to a substantial increase in the crop acreage, and some authorities place it as high as two million acres. For the large exportable surplus which is still in the country there has been a good foreign demand in recent weeks, but the situation may be altered by the measures now being taken in the United States to stimulate the export of American wheat, which has found great difficulty in meeting Canadian competition in European markets. In order to relieve the blockage of wheat which has jammed full all the interior storage space, the leading American railways propose to make a cut in their freight rates for export wheat which will average nine cents per bushel, and the avowed object is to facilitate the sale of American wheat abroad and obviate what threatens to become a disastrous glut as soon as the new crop of American winter wheat reaches the market. The official decision of the Canadian railways has not, at the time of writing, been announced, but it is probable that they will meet the American cut in rates by corresponding reductions, and not allow Canadian wheat to lose its present advantage in export markets. Such a course will involve a diminution of earnings, but the latter have been quite satisfactory for the first four months of the year, although the net income of the C.P.R., owing to expenditure on repairs which were held over from last year, shows a slight fall. The carloading returns, which had been lower most weeks, have now caught up with last year's aggregate, and the cumulative total up to May 20th was 998,514 cars, a gain of 3,624 over the parallel figure for the previous year.

Business conditions in general remain very satisfactory, and in some lines of manufacturing the rate of operation is placing a strain upon the facilities for production. The output of steel in Canadian mills was in March larger than in any month since October, 1918, when there was abnormal demand for munitions material, and the output of motor cars and trucks for the same month, placed at 40,000 units, was the largest on record for any single month. The volume of new building construction was, at the end of April, 12 per cent. ahead of the figure for the first four months of 1928. Employment at the beginning of April showed the usual seasonal decline compared with March owing to the cessation of certain forestry activities, but it was very small, and the Bureau of Statistics employment index number stood at 110.4, as compared with 102.3, 97.4 and 92.5 on April 1, 1928, 1927 and 1926, respectively. The last two months have witnessed a good inflow of immigrants, and the Government agencies report that there is no difficulty in finding employment for them. The newsprint industry has not yet emerged completely from its difficulties, and there are rumours of more mergers as the result of pressure from the banks, but its production is being well maintained and exports of paper and manufactures thereof for March were valued at $15,242,661, as compared with a value of $14,611,572 for March, 1928. There have been no new developments of importance in the mining world, and mining stocks are still, with the exception of a few special favourites, under a cloud with the public. The ordinary stock markets have also been dull and disposed to show a recessionary tendency; they have made no really sympathetic response to the burst of "bull" activity in New York in the early days of May.

The banks are still keeping a very tight hold over the credit situation, and there is some surprise that practically no gold has been shipped to New York to improve the position of the Canadian dollar, which has been standing at between ½ and 1 per cent. discount for some time. It is stated that the Finance Minister has placed a virtual embargo upon the export of gold. The Federal Parliament is still in session, and, as the Opposition groups have developed a militant and aggressive spirt, and have adopted tactics of blocking the estimates of the Postmaster-General, in order to convict him of restoring the "spoils" system in his department, prorogation is not now looked for until at least the middle of June. The standing agricultural committee of the House of Commons is holding regular sessions to hear evidence about the Canada Grain Act, and it may be guided in framing its report by an interim report of the Saskatchewan Royal Commission, which recommends a wholesale reorganisation of the Board of Grain Commissioners and many changes in its administrative practices and regulations; it also urges that all the grain elevators which are to be erected at Fort Churchill should be owned and operated by the Government. This Commission is to continue its investigations, and will visit not only numerous places in Eastern Canada and the United States, but also some of the more important grain markets of Europe.

Some interesting light has been shed upon the possibilities of the new Hudson Bay route by the publication of the report of an expedition sent by the Dominion Government to investigate navigation and other conditions in the Hudson Bay, and particularly in the Hudson Strait, which is its eastern outlet. The expedition spent part of the year 1927 and 1928 in this locality, and, while its report contains a caveat that the observations of two years may be an inadequate basis for a final judgment, its findings practically confirm the conclusions of a committee of the Senate which some years ago heard evidence about the navigability of the Hudson Bay route. Mr N. B. McLean, the leader of the expedition, asserts his confident belief that the route can be profitably used for commercial purposes, and that the strait, which is the crucial point in it, ought to be navigable for about four months each year without the aid of ice-breakers. He gives July 19th as the probable date for the opening of navigation and November 16th for its closing, and believes that the length of the navigation season could be extended by the use of ice breakers. The report admits the frequent occurrence of foggy weather in the strait; last year during the navigation season fog prevailed on 39 days and on 14 of these it could be described as dense. Stress is, therefore, laid upon the necessity of providing every possible aid to navigation, and the report urges an accurate survey and charting of the straits, an exhaustive study of its tides and current, the establishment of a sufficient number of observations and direction-finding stations, and the provision of two large ice breakers, one to be stationed at Fort Churchill and the other at a suitable harbour on the straits; it believes that such measures would increase the confidence of navigators and shipowners, and help to ensure reasonable rates of marine insurance, which will be an important factor in freight rates for the route. The report has been favourably received by the Western Press, which points out that grain will each year be the chief commodity exported by this route, and that, if navigation remains open till November 16th, the grain-shipping season by the new route will each autumn be just as long as by the Great Lakes-Montreal route, which is usually closed before the middle of November. During the summer a great deal of construction work on piers and wharves will be undertaken at Fort Churchill, which is steadily accumulating population; it has become the base of operation for a great deal of prospecting activity in the highly-mineralised terrain of the western shores of the Hudson Bay.

Letters to the Editor.

ENGLISH ELECTRIC POWER COMPANIES AND FOREIGN CONTROL.

TO THE EDITOR OF THE ECONOMIST.

SIR,—There has been a considerable stir in City and Parliamentary circles over the sale of the Shropshire, Worcestershire and Staffordshire Electric Power Company to the Utilities Power and Light Corporation of Chicago through their English agency, the Greater London and Counties Trust, of which Lord Birkenhead is chairman.

The Power Company is a large and progressive concern, and its activities have been continuously on the increase since the war and its supply area now covers a matter of some 1,800 square miles. The company has erected, with Government money, a fine and admirably placed power station at Stourport-on-the-Severn, and has, with commendable enterprise, anticipated the coming of "the grid." According to the latest published balance-sheet, the company has a paid-up share and loan capital of £3,071,546 (including a loan of £716,146 advanced under the Trades Facilities Act). Its capital

expenditure under all heads—viz., lands, buildings, plant, mains, Acts and Orders, and investments in subsidiary companies—stands at £3,464,108.

All this, however, is of comparatively recent date. Until after the war the company did business in a very modest way and paid equally modest dividends. Of late years it has paid 5, 6 and 7 per cent., and for 1928 it paid 7½ per cent. The company's area, taken as a whole, is by no means rich; indeed, with the exception of the heavy industrial districts of Smethwick, Oldbury and Dudley, the area may be termed lean. Nevertheless, under continued careful management, including in that term sober finance, the company's future should be good.

Such is the undertaking for the £1 ordinary shares of which the Greater London and Counties Trust, Limited, has thought it good business to offer two and a half times their nominal value. The question now is, "What will they do with it?" As an investment it yields precisely 3 per cent. on the purchase price: a low yield even for America. The only alternative would appear to be some complicated merger, by which, under an aggressively British name, this particular property, mixed up with similar stuff recently acquired, will be offered to the English investor. If we may judge from what Lord Birkenhead has communicated to the Press, it is this latter which is in contemplation.

So much for the purely business aspect of this transaction. Important as this may be to the investing public, it is the national aspect of the deal which is the more important. The general idea underlying that very imperfect piece of legislation, the Electricity (Supply) Act, 1926, and its immediate predecessors, the Acts of 1919 and 1922, was just this: That it was to the interest of this country that there should be made generally available a cheap and abundant supply of electricity. When the Government Bill of 1926 was in Grand Committee, the Labour Party made the Electric Power Companies who formed part of Government scheme the target for their fiercest attacks. Public control was lessened rather than added to during the journey of the Bill towards Royal Assent. It was urged that the power companies had borne the heat and burden of the day and for the most part had so far earned but a modest return upon their capital, that they were pioneers who deserved well of the State. Those responsible for their management were, it was said, fully alive to the duty they owed the public. Further, it was argued that the Joint Electricity Authority idea had been a failure up to date. All of which contentions were substantially true. And so it came about that the power companies were left in unhampered possession.

It seems, therefore, peculiarly unfortunate that one of the best exemplars of the electric power companies should have become a counter in a trust company gamble; it can only lend strength to the Socialist demand for complete public control. If, however, electricity supply is in reality of the paramount national importance which all three parties loudly proclaim it to be, then it surely follows that we cannot allow this power company and that power company to become a Stock Exchange plaything and then to pass under the control of a group of foreign gentlemen seated in Chicago. Those who pay the piper call the tune. It is idle to talk about British this and British that, so long as the nerve centre remains on the other side of the Atlantic. It is worse than idle talk: it is deliberately throwing dust in the eyes of the public. The boards of these aggressively British concerns may be left British through and through, but the hands that pull the strings will be American.

The £1 shares of the Shropshire Power Company, having regard to the past, present and future dividends, the size of its reserves and its loan and debenture debt, were probably intrinsically worth round about 25s. Yet, during the past few months they have been forced up and up by the purchases of well-informed speculators to 30s., 35s., and 40s., to be finally taken over by the Americans at 50s. ex-dividend. To have to pay £2,637,500 for 1,055,000 £1 shares, as the gentlemen from Chicago have done, cannot be conducive to a cheap and abundant supply of electricity.

This is clearly not a case of investment pure and simple. We are all ready to extend a warm welcome to the bona-fide foreign investor, but it is futile to suggest that a deservedly prosperous and well-run undertaking such as the Shropshire Worcestershire and Staffordshire Electric Power Company could not have raised all the money it required on reasonable terms on the London market. It has been doing so now for years, and we feel sure that those responsible for the day-to-day operation of the Shropshire Power Company, whose hard work and skill have built up the business now sold to the Americans, must have watched with dismay this Stock Exchange game of push-pin.—Yours faithfully,

Birmingham, May 15, 1929. ONLOOKER.

Books and Publications.

THE PARTY POLICIES.*

THE almost simultaneous publication of a confession of faith by a prominent member of each of the three parties, endorsed as representative, though unofficial, by Lord Melchett, Mr Lloyd George, and Mr MacDonald respectively, provides a tempting opportunity for a reopen-minded voter whose political allegiance is still in the making. He turns first to the Conservative publication, to which a wealth of historical reference and an absence alike of promises for the future and of boasting as to the recent past lends a superficial air of dignity. Alas, it soon becomes apparent that their absence makes it not more than an electioneering pamphlet, but less. Finding nothing to boast about in the achievements of the last four and a half years, the author appeals, almost throughout, to that distinguished, but now somewhat remote period in Tory history when the party was the champion of the manual workers against the newly emergent capitalist class, pitifully reminding the reader that, like Sir Andrew Aguecheek, it was adored once. The chapter on "The Standard of Living" reaches its climax with an extract from one of Disraeli's speeches. True, reference is made to the Pensions Act of 1925, but the reader must have been a very little pitcher indeed in 1909 if his ears were not long enough to catch some echoes of the struggle which accompanied the establishment of this principle against Tory opposition.

The apologist of the Conservative party is a sound psychologist, and contrives somehow implicitly to indentify his party with the preservation of everything which the Englishman abroad, in his moments of nostalgia, feels to be most typical of his native country. Lines of outstanding beauty from Masefield, passages of descriptive prose from Mr Baldwin, which suggest that the Prime Minister would have found his true vocation as Poet Laureate, are produced as evidence of what the Tory party stands for. But where was the Tory party when Shakespeare wrote his over-quoted passage in "HenryV."? To adapt a transatlantic idiom, is Mr Baldwin the boy that put the green in the English landscape? There are no references to petrol stations or wild flowers in this book, but the reader might reasonably infer that Mr Lloyd George will sow his new roads with rainbow petrol stations, while Mr MacDonald will grub up all the primrose roots along their margins. This is a skilful line of attack at this moment, but it is singularly illfounded.

In foreshadowing a possible reform of the House of Lords, Mr Bryant advances a naïve defence of the hereditary principle. Admitting that it results in a mediocre level of ability, he claims that as an advantage, on the ground that as electors tend to choose members of the House of Commons who are above the average in capacity, they need also to be represented "by a few men of the same mental and moral calibre as their own," and this is where "The-Lord-in-the-Street" comes in.

The most disappointing feature of this apology for Conservatism, which cannot fairly be taken as representative, is its complete lack of any evidence of an international spirit. One might suppose the world bounded by the confines of the British Empire, but for the fact that there are two short chapters on "Foreign Policy and "National Defence," in which the horrors of war are strangely subordinated to delighted contemplation of the nobility it calls forth. Strange doctrine this, to put before an electorate that remembers 1914-18.

Perhaps the greatest strength of "The Labour Outlook" is at this very point. Nobody doubts the sincerity of the Labour party's internationalism, however misguided some of its manifestations may be, and some of its best work while it was in office was done in the field of foreign relations. The two main articles of its creed, as expounded here, are internationalism and socialism, but it has learnt to wear its socialism with a difference. It is to be no longer "in our time," but "as and when the opportunity arises, and as experience beckons us onward." Moreover, "socialism" does not seem to mean anything more formidable than the nationalisation of land (not agriculture), coalmining and certain essential services.

The main points in the Labour thesis are comprehensive programmes for public health, housing, education, pensions and insurance. There is little in the first three of these, at least, to which either of the other parties could take exception in principle, and the education programme is almost identical with that on which Lord Eustace Percy recently discoursed. But when it comes to financing these vast schemes of reform, simultaneously with the abolition of food taxes and the lightening of the burden of direct taxation on small incomes which is promised, it appears that they are part of a scheme for the redistribution of wealth in which more heavily graduated surtax and the taxation of land values are an essential element. The possibility of raising the necessary funds by this means without destroying industry in the process is assumed without discussion.

In order to deal with the present abnormal volume of unemployment—for which the Conservative volume in this trilogy suggests little (protection apart) except Lord Melchett's now almost forgotten scheme on the lines of the fatal "Speenhamland Act" of 1795—Mr Greenwood's programme includes a scheme of public works which has its origin in the same dictates of common sense that inspired Mr Lloyd George's programme. It is, however, not confined to roads, and would require for its materialisation funds the raising of which would present no small problem. It hopes much from the reorganisation of industry, an instrument in which is to be yet another Royal Commission on the coal industry, and from the nationalisation of banking, while, as minor contributory influences, there would be the raising of the school-leaving age and the lowering of the qualifying age for pensions.

On the whole this programme is not the bogey wherewith to frighten electors that it has often been represented to be. The only formidable elements in it are the extent to which nationalisation is proposed, and the confiscatory taxation projects, and there is no pretence that either of these could be brought into effect otherwise than gradually, which might well mean never. Shorn of these the programme becomes a close approximation to that of the Liberal party, and this no doubt accounts for the fact that the two volumes appear decked out in covers of identical design, though, symbolically, of different colour. Even the ballot paper which dominates the picture contains a cross against the same name in each case. Both parties are sincerely and actively internationalist; both are opposed to protection; both have a progressive education policy—so much so that in both booklets the point is made that many of those who oppose maintenance grants for schoolchildren were glad enough themselves to accept scholarships at Eton or Trinity which were originally designed to benefit the people as a whole. The Liberal statement of policy attaches great importance to programmes for industrial peace, in which elaborate statutory machinery plays a large part. Essential as this matter is, the detail in which it is here worked out occupies a disproportionate space, and might give rise to an accusation of padding. Just because the Liberal programme concentrates on matters of immediate policy and promises little that it could not set about performing, immediately on being returned to office, it makes less impressive reading than "The Labour Outlook." "The *immediate* objectives of the Labour Party," says Mr Phillips, "are based for the most part upon the intellectual foundation of Liberalism, and it is not unlikely that the future relationships of the two parties will be largely determined by this fact." This is a very significant utterance.

BOOKS RECEIVED.

[Brief mention of a book in this column does not necessarily mean that it will not receive fuller notice in a subsequent issue.]

British Documents on the Origins of the War, 1898-1914. Edited by G. P. Gooch and Harold Temperley. 12s. 6d. net.

This is the fourth volume of this important series, and deals with the Anglo-Russian rapprochement, 1903-07.

The Economic Effects of Monopoly on British Power Stations. By A. H. Swain. (London) Messrs Simpkin, Marshall, Limited, 4 Stationers' Hall Court, G.P.O., Box 77. 10s. net.

The chairman of the Leicester Electricity Committee criticises with some vigour the activities of price rings in the electricity supply industry, which, in his opinion, are driving British local authorities more and more into the arms of foreign producers.

Free Trade To-day. By H. L. Nathan. (London) Victor Gollancz, Limited, 14 Henrietta Street, Covent Garden. 5s. net.

A considered, well-informed restatement of the Free Trade case.

Confederazione Generale Fascista dell'Industria Italiana. Annuario 1928-29. (Rome) Società An. Tip "Castaldi."

This volume consists principally of reports to the first National Congress of Italian Industries and to the General Assembly of Delegates. Between them they constitute a wide survey of social and economic affairs in Italy in 1928.

Gli Effetti della Variazone del Valore della Moneta sui Tributi. By Francesco Antonio Rèpaci. (Turin) Ditta Fratelli Pozzo.

A short historical and theoretical discussion, in Italian, of the effects on taxation of fluctuations in the value of money.

Wirtschaftsprobleme der Freien Stadt Danzig. By Dr A. Proeller. (Danzig) Druck und Verlag von A. L. Kafemann, G.m.b.H.

A compact discussion, in German, of the economic problems of the City of Dantzig.

The Mystery of the Trade Depression. By Frederic E. Holsinger. (London) P. S. King and Son, Limited, 14 Great Smith Street. 7s. 6d.

In his preface the author thus summarises his work:—"I can conceive of no more precise, comprehensive and decisive indictment of an economic system than the indictment I have made of the capitalist system in this book."

Journal of the Parliaments of the Empire. April, 1929. (London) Empire Parliamentary Association, Westminster Hall, Houses of Parliament. 10s. net.

Extracts from the most important debates of the winter session.

Guide to House Purchase and Building Society Investment. Compiled by the Metropolitan Building Societies' Association. (Walthamstow) Metropolitan Building Societies' Association, 201 and 203 Hoe Street. 6d.

A little pamphlet which briefly answers the questions most commonly asked by people contemplating this sort of investment.

How to Conquer Unemployment. With a Preface by the Right Hon J. Ramsay MacDonald, M.P. (London) The Labour Party, Transport House, Smith Square. 2d.

An attack on Mr Lloyd George's scheme, and a statement of the Labour policy on the same question.

Nationalisation. By A. Emil Davies. (London) The Labour Party, Transport House, Smith Square. 1d.

Freedom of the Seas. Foreword by the Right Hon J. Ramsay MacDonald. (London) The Labour Party, Transport House, Smith Square. 2½d. post free.

Two election leaflets by the Labour Party.

Le Marché de Paris et les Acceptations de Banque. By Louis Pommery. (Paris) Librairie du Recueil Luey, 22 Rue Soufflot.

An article, in French, on the Paris market and bank acceptances.

" *Family Allowances*" *as a Means of Preventing Emigration.* By Leon Lebel. With a Foreword by Frederick Wright. Published by the Author at 1855 Rachel Street, East, Montreal. 15 cents.

The emigration in question is emigration from Canada. The case for family allowances in Canada is here stated with very little discussion of possible arguments against it, and with almost no reference to the experience of other countries.

World Economic Suicide. By Sir George Paish. (London) London General Press, 8 Bouverie Street. 1s.

A plea for the immediate carrying out of the recommendations of the World Economic Conference.

The Central Association of Accountants. List of Members, Articles, By-Laws, Examination Papers, etc., 1929. (London) Central Association of Accountants, Limited, 5, Salter's Hall Court. 5s.

The Banker, May, 1929. (London) Eyre and Spottiswoode, Limited, 9 East Harding Street, Fleet Street. 2s. 6d.

This interesting number includes articles by C. H. Kisch on "State Influence and the Management of Central Banks"; by Professor Bowley on "The Low Birth-rate and Unemployment"; by Joseph Caillaux on "The Committee of Experts"; and by H. Parker Willis on "Bank Amalgamations in the United States."

Archiv für Eisenbahnwesen. (Berlin) Verlag von Julius Springer.

Other countries, besides Germany, whose railways receive consideration in the principal articles of this issue are :—Switzerland; Brazil; Iraq; East China; Italy and Denmark. There is also a number of minor notes.

The Rubber and Tea Quarterly. London General Press, 8, Bouverie Street, E.C. 4. 1s.

Contains an article of special interest on "The Repeal of the Tea Duty." Other articles in this issue are :—"The Rubber Outlook," "Rubber in the United States, Malaya and Ceylon," "Tea in Northern India, Ceylon, and the Dutch East Indies."

The Stock Exchange.

THE COMPANY PROMOTER.

AFTER a few weeks of relative inactivity, due to dear money and the dullness of the Stock Exchange, the last few days have seen a revival in new company share issues recalling the hectic period of 1927-28, when no proposition appeared too speculative, no new idea too flimsy or impracticable to be embodied in a prospectus and offered to the investing public. From time to time we have deemed it necessary to caution our readers against some of the undesirable features of that movement—the abuse of the shilling deferred share, the dangers of "parent and offspring" finance, the dubious investment appeal of many companies formed to exploit untried and imperfectly protected "patents," the over-abundance of new gramophone and film concerns, and the like. Experience has already gone far to confirm our views. Most of the speculative shares which sold so readily at a premium a few months ago are now quoted at substantial discounts, a number of companies have appeared in the Bankruptcy Court, others have declared that sales and profits have not come up to expectation, and altogether there is only too good reason to believe that the recent boom will be followed by a considerable crop of failures. In the latter event it is by no means unlikely that an outcry may be heard, as so often in the past, against the "promoter" who fathered the unsuccessful schemes. The present moment, therefore, may not be entirely inopportune for consideration of the question of company promotion, as it affects the investor—the more so as accurate knowledge of this branch of company finance is much less widespread and accurate than might be desired.

To most investors the company promoter is an elusive personality, heard of, as a rule, only when things go wrong. Despite the dubious connotation sometimes attached to his name and office, however, he is an indispensable part of the machinery of the capital market. His function is comparable with that of the merchant in the sphere of commerce. He obtains "supplies" of new openings for the investment of capital, holds them "in stock" as long as may be necessary, renders them available for purchase by the "consumer"—the investing public—when required, and takes his "profit" on the transaction. Like the merchant, he is a specialist, who is expected to apply his expert knowledge in judging of the real worth of the "goods" in which he deals, and, though he is at liberty to extol the virtues of his merchandise, and the doctrine of *caveat emptor* applies to all who exchange their money for his wares, he is expected to give at least a moral warranty of their fitness for the purpose for which they are destined.

This is the theory of the matter. How far is it borne out by experience? An informed answer is difficult to give, since the great banking institutions of this country, unlike their counterparts on the Continent, do not engage in company promotion, and the individuals and private syndicates to whom the business is remitted come into public notice only when one of the less reputable of their number has abused his position and come within reach of the law. During the present month, however, a substantial contribution to the scanty literature on the subject has been made by the memoirs* of Mr H. Osborne O'Hagan, a gentleman whose experience of company promotion in Great Britain extended over half-a-century and covered a wide range of industries, including tramways, tobacco, breweries, American railroads, meat and cement. Due allowance being made for the personal element in all autobiography, and the fact that Mr O'Hagan's reminiscences were written after a long interval and without notes, the book is the most valuable "inside" commentary on company promotion the investor is likely to meet with for some time to come. Left to make his living at sixteen, in poor circumstances and with an indifferent education, the writer played a conspicuous part behind the scenes in the City of London for fifty-five years, introduced the now universal practice of "underwriting" new issues, and retired shortly after the war without having become a millionaire or impaired his reputation. Not all his companies achieved immediate and striking success, but he left few wrecks behind him, and may well stand as a not unworthy representative of his profession.

A study of O'Hagan's memoirs suggests that the company promoter's main qualifications are *personal*. The large amount of accounting and legal work involved in his duties, crucial as it is, can be left to trustworthy experts, but the element of sound judgment, by which, ultimately, a given proposition must stand or fall, is his alone. Ability to conduct a successful negotiation, again, is a personal characteristic. As the writer in question rightly points out, the negotiator is not always looked upon as a specialist, as he should be. Negotiation "is a very special art, requiring many qualifications and high training." Much the most valuable asset of the promoter, however, is his *clientèle*. He should never be driven to search the highways and byways for new company propositions, but should be able to pick and choose among the more promising openings submitted by others for his consideration. On the "sales" side his "underwriting book" should be influential and extensive, embracing the best "names" inside and outside the City. Through its agency alone can he fulfil his indispensable function of providing industry with long-term capital resources as and when they are required, weeks and months in advance, possibly, of the time when the resulting securities are finally absorbed by the investing public at large.

When all is said and done, the promoter's own professional standards must figure largely in the equation. Can one compile a code of working principles, the observance of which will effectively safeguard both the promoter's reputation and the investor's bank balance? The dicta scattered throughout the pages of the work previously mentioned certainly go some way to suggest an affirmative answer. The following are among the observations of the writer, whose experience was certainly derived at first hand. "My custom, before putting forward any project where I felt my judgment might be at fault, was to apply this test: 'Is this a concern in which you would embark your own capital?'" . . . "A financier of any standing has, as a rule, a large *clientèle* ready to follow him, knowing that in any deal he will probably have lowered the purchase price first asked beyond the amount he puts on to cover his profit and expenses." . . . "If he (the company promoter) allows himself to be influenced only by whether the public would take up a venture, he will not be long before he finds that ugly chickens come home to roost." . . . "In every case . . . I stipulated that the vendors and managers should remain with the company to secure continuity of management." . . . "I spoke strongly against directors gambling in the shares of a company they directed. It was unwholesome and immoral." . . . "He (the promoter) must know when to face a heavy loss to escape loss of reputation."

Other of O'Hagan's principles may be deduced from the pages of his book. He classed breweries as "among the best of manufacturing concerns," but considered they should be capitalised to yield 12 to 15 per cent. on their ordinary shares over and above debenture interest and preference dividend. He limited his promotions, for the most part, to reflotations of established and profit-earning concerns. He broke off negotiations for a meat flotation on learning that the current profits of two of the companies concerned were less than those shown in the prospectus. In the case of Associated Cement, he stood by what he regarded as a sound issue, which had had a bad reception until the company's position was assured beyond doubt.

Few people will quarrel with these principles, or deny that their regular observance by promoters as a body would greatly diminish the mortality rate among new

* "Leaves from my Life." By H. Osborne O'Hagan (London), The Bodley Head. Two volumes, 36s. net.

companies. Indeed, some persons would argue that they carry financial conservatism to extreme lengths, and would, if consistently applied, have prevented many of the most successful of present-day companies from coming into existence at all. Supporters of this view are entitled to point out that O'Hagan's insistence on continuity of management lost him the opportunity of floating Harrods, that his distrust of new and unproved concerns caused him to turn down the Gramophone Co., that his rigid code prevented his assisting a Napoleon of retail trade like Mr Gordon Selfridge, and his decision to stand by Associated Cement cost him twenty years of his life. His retirement from business left him wondering whether promotion was a very remunerative business after all. " With the same brains and the same hard work . . . combined with the capital employed and the risks undertaken, would not the rewards have been as great in other walks of life? "

The truth would seem to be that, while a certain elasticity is desirable in practice, and exceptional cases must constantly be allowed for, O'Hagan's code does embody a fundamental concept of legitimate company promotion—that the promoter cannot divest himself of trusteeship for the interests of those who subscribe to his ventures. That the percentage of unsound flotations remains considerable is not to be laid wholly at the promoter's door — the sanguine spirit of subscribers to new issues, as a body, must carry its due share of responsibility. The pages of O'Hagan's book, however, which deal with some of his less reputable contemporaries, suggest that deliberate bad faith has played but a small part in the history of ill-starred promotion. The " profession " has tended to be overcrowded, especially in times of boom, and the amateur promoter (not infrequently found in high places) is a constant source of danger, together with the brilliant, but unbalanced, financier, the reckless, vain or over-optimistic individual, and the man of uncreative bent who floods the market with repeated issues after his abler predecessors have exhausted a profitable " vein." Ultimately, the remedy lies with the investor himself. Every prospectus carries its history on its face for those who are willing to read its text closely and critically, and the exercise of a sound judgment will go far to insure the potential subscriber against issues carrying risks over and above those inevitable to business in any shape or form.

THE WEEK IN THE MARKETS.

THE LONDON STOCK EXCHANGE.

SETTLING DAYS.

Ticket.	Account.
May 28.	May 30.

The quietude of markets was unshaken, but the undertone remained satisfactory. The present technical position of the markets is such that none of the ordinary incidents of Stock Exchange life is calculated to change prices significantly. The professional interest is awaiting some outstanding development which could be taken as " giving a lead " which the outside public would be likely to follow. Whether such a lead will be forthcoming this side of the General Election is now more than doubtful. In the meantime, the vicissitudes of American sentiment are insufficient to disturb the stability of values in London, except in a few cases where special conditions affect individual stocks.

Dealings in gilt-edged stocks were on a small scale, the tone being steady early in the week but easier later on. Money was anything but plentiful, and though the Bank of England obtained a further £923,715 of gold, the market was more concerned with the low level maintained by the New York exchange. War Loan and Conversion Loan hardened slightly at the outset, but declines of $\frac{1}{16}$ were fairly general throughout the list on Wednesday and Thursday. India Loans, with one or two exceptions, were steadier than last week. Dominion and Colonial stocks showed a number of small gains. The Commonwealth Conversion issue created little enthusiasm, though the terms were regarded as eminently fair to Queensland holders. Some buying of Australian stocks was induced by the result of the Queensland elections, and Melbourne and Metropolitan Board of Works scrip improved to $\frac{3}{8}$ premium on inside support.

The Foreign market was irregular, with business greatly restricted. French bonds rallied after initial dullness, and German loans were firmer, despite the absence of definite Reparations news. Chilean Six per cents. were in steady request, but Brazilians turned dull again, and Mexican bonds were depressed. Far Eastern stocks remained inactive, though a number of Chinese showed a modest gain on a small amount of investment inquiry.

The week's batch of traffic figures was a cheering factor in the Home Railway market, though, in the absence of willing sellers, little increase in actual business resulted. All the four groups, except the Southern, showed larger gross receipts than in the corresponding week of last year. Great Western gained a point, and Midland and Scottish $\frac{3}{4}$, on the figures. Underground Electrics were an idle market, the latest traffic returns showing a small falling off in comparison with 1928. Among Foreign Railways, the Antofagasta dividend disappointed those who had looked for an increase and a bonus, but after initial selling the stock rallied above the level preceding the announcement. Leopoldina was in demand despite a moderate traffic return, and Argentine railways were supported.

Industrials had again no decided trend, the professional element seeing little to go for, and obtaining but slight guidance from New York. Some small amount of discriminate buying quietly went on, and was a factor in the generally steady undertone of markets. A small range of selected stocks, however, displayed conspicuous activity, particularly Margarine Union and Unie, which were heavily bought from Amsterdam. Imperial Continental Gas suffered a sharp reaction on the dividend and new issue announcement. In the motor group further efforts were made to obtain Rolls Royce shares for America, and Leyland Motors were active on reports of increased business, stimulated by the attention given to the shares in the Press. America bought General Electrics and Associated Electrics, London being unwilling to follow the latter's rise in view of the last balance sheet figures. Artificial silk shares were irregular, despite the report of the discovery of a new and improved rayon product by British Celanese. The announcement of a merger of 3,000,000 Egyptian spindles in Lancashire coincided with a decreased dividend declaration by the Fine Cotton Spinners and the latter's shares suffered a slight reaction. J. and P. Coats failed to hold all the ground gained last week. In the gramophone share market Columbia's were lower, especially during the early part of the week, in the absence of any new announcement regarding the " combine's " Paris negotiations. Electric lighting shares were firm and tobaccos remained steady on a moderate investment demand. The issue of the reports of two more subsidiaries of Distillers strengthened the market's hopes of a forthcoming increased dividend from the latter, which closed its financial year on Wednesday. Bank shares were steady, and insurance shares firmer than of recent weeks.

Rubber share quotations were marked up following the rise in the price of the commodity on the publication of " record " American consumption figures for April, but the public showed no interest in the movement, and a noteworthy reaction occurred on Thursday, when rubber opened $\frac{1}{2}$d. lower. Idle conditions prevailed in tea shares, market quotations again showing no definite trend. Apart from a certain judicious buying by holders taking the long view, dealings in oil shares were subnormal, the V.O.C. dividend being badly received.

The mining markets reflected the dullness of other parts of the " House." The shadow of the coming Whitsun holidays lay across the Kaffir market, with Johannesburg undecided and Paris apathetic. Rhodesians attracted slight interest, though the " insiders " were reported to be cautiously taking in shares again—a reversal of their recent policy. Copper opened the week with a fresh fall, which was reflected in a heavy drop in Rio Tinto, on Paris selling, which brought down other shares in the same group. The metal, however, showed some recovery on Thursday. Tin similarly lost ground on the Metal Exchange, with a moderate subsequent rally, and share values continued to sag in the absence of public interest.

FOREIGN STOCK EXCHANGES.

NEW YORK.

The share market has been disturbed in the past week by evidences of a continuation of the Federal Reserve deflation policy, which have been confirmed by the weekly Bank statement. This reveals a drop of $57 million in the total credit extended, which is now $94 million below the figure of a year ago. Most of the fall is in discounts, resulting from continuation of the policy of direct action by compelling member banks to reduce loans on securities. This direct action policy is thoroughly distrusted in conservative quarters. Meanwhile the President of the Stock Exchange, in the course of a speech, has been vigorously defending Stock Exchange call loans and urging that they be made rediscountable at Reserve banks; he stated that the Federal Reserve policy had failed. While the market has certainly been disturbed, liquidation has failed to develop, and the occasional rallies have been of fair strength. The volume of business has been moderate. Meanwhile industrial news remains good.

PARIS.

In a market entirely devoid of business, offerings of stock that would not otherwise be regarded as large caused an appreciable reaction in the majority of securities. Those most affected were, once again, banks; French industrials showed relatively more resistance. The copper group was the scene of important realisations, Rio Tinto losing several hundred francs and influencing Tharsis and Huelva. Rubbers were firm; Terres Rouges, Padang, and Caoutchouc de l'Indochine all gained ground. At the declaration of options the termination of conditional engagements went against buyers. Large supplies of money brought the contango rate down to 3¼ per cent. at the mid-month settlement.

BERLIN.

The Bourse ended last week firm, with buying of Schuckert in connection with an increase of the dividend from 8 to 11 per cent. Business was not active, however, as the very high money rates caused reserve. This week opened with a general decline, until the market revived owing to heavy buying of General Electricity. Rumours of a coming cut in the dividend led to a sharp

fall in the Nordwolle A.G., under which the market weakened again. Tuesday's Bourse was dull and weak, the chief influence being a new rise in money rates. The same conditions were emphasised on the following days by disappointment that the Farbenindustrie dividend was not increased. Some buying of A.E.G. took place.

AMSTERDAM.

Easier money conditions in New York and lower money rates in Amsterdam stimulated the Bourse somewhat. Interest centred chiefly on industrials, among which Philips and Margarine Unie were notably strong on a large volume of transactions, while the Ford issue also advanced. Artificial silks fluctuated little, but tobaccos had a better tone, and rubber improved. Shipping shares, on the other hand, moved irregularly, sugars were easier, and oils weakened. In the money market the private *discount rate was 5⅛-5⅜ per cent., and the prolongation* rate 6 per cent.

INVESTMENT NOTES.

Rubber Prospects.—The rise in rubber prices from 9 7/16d. a pound at the end of April to 11⅜d. (after 11 7/16d.) gives special point to the review of the outlook for the plantation industry given by Mr H. J. Welch at last week's meeting of the Rubber Plantations Investment Trust. Mr Welch was quite definitely optimistic. He believed that supplies of rubber from all sources in 1929, allowing for the liquidation of post-restriction surplus stocks, would not exceed 720,000 tons. The high rate of consumption during the first three months of the year in the United States encouraged hopes of a total absorption over the whole year, in that country, of as much as 480,000 tons, while consumption elsewhere was likely to be not less than 265,000 tons—the total world consumption thus being put at about 745,000 tons. World rubber stocks, Mr Welch declared, were equal to about six months' supply. These, if sufficient, were certainly not too heavy, and all the known statistics seemed to point to a rise in price. A more cautious view is taken by Messrs Wm. Jas. and Hy. Thompson, the Mincing Lane brokers, in their *Rubber and Tea Quarterly*, issued this week. There the point is made that existing stock figures must be conservatively regarded. The Malayan statistics alone showed a discrepancy of nearly 72,000 tons as between October 31, 1928, and March 31, 1929, attributable in part to the fact that no data whatever are available for native-owned estates, which account for nearly one-fourth of the total rubber acreage of Malaya. The American correspondent of the journal mentioned above took occasion to point out that the arrivals of crude rubber into the United States this year have largely outstripped even the increased consumption, so that stocks, both of the raw material and of finished products, such as rubber tyres and tubes, have significantly increased. In other words, it is suggested that "the large consumption of crude rubber is due to demand, not from the ultimate consumer, but from the manufacturers." Messrs Thompson's base their confidence in the future of the rubber industry less on "nearby" considerations than on such long-term factors as the absence of any extensive rubber-growing areas which are likely to come into production in the near future, and the steady increase in rubber consumption, not only in the United States, but in other countries, which has accompanied the growth of the motor industry. In this connection they point out that imports of rubber last year, as compared with those of five years earlier, showed an increase of 37½ per cent. in France, of 46 per cent. in Italy, 47 per cent. in Japan, 104 per cent. in Germany, and 134½ per cent. in Canada.

"Parent" Promotions.—Orders for the compulsory winding up of Blue Bird Petrol and Blue Bird Oil Importers were made in the Companies Winding-up Court this week. In the *Economist* of May 11th last we gave particulars of the statutory report of Blue Bird Petrol, which made it clear that the whole position called for independent enquiry. In making the order in the case of Blue Bird Oil Importers, Mr Justice Maughan remarked that there had seldom been a case which required more careful and stringent investigation. The Blue Bird family belong to a type of promotion to which we applied the term "parent and offspring" in an earlier article (January 19, 1929), dealing with the finances of a number of these companies. In the course of that article, in addition to the Blue Bird group, we mentioned Photo-Matik Portraits and Photo-Matik Foreign Corporation as other instances of this type of promotion. At a meeting of shareholders of Photo-Matik Portraits, held on Friday of last week, to consider proposals for amalgamation with Photo-Matik Foreign Corporation and Auto-Portraits, the director who presided confessed that the company was not operating at a profit, and that its chief assets had proved a liability. The meeting was reported to have been stormy, and a committee of shareholders was appointed. On the same day Anty-Sag Parent Co.—another of these peculiar promotions—issued a circular to its shareholders informing them that the sales of Anty-Sag mattresses and chair springs had fallen short of expectations, and that the affairs of another company of a similar name—Ner-Sag—had had an adverse effect upon its business. It is worthy of note that the chairman whose name headed the Anty-Sag prospectus has since resigned from the board, a fact which seems to require some explanation. The Duophone group was another of the "parent and offspring" promotions which we criticised. The Duophone parent company escaped from a winding-up petition, but has had to sell its chief asset—a new record factory—to Decca Gramophones, and its 10s. shares, which at one time went to over £4, are now standing at 2s. 6d., while Duophone Foreign 10s. ordinary shares, which at one time were over 20s., are now quoted at 6d. Photomaton Parent Corporation, which was perhaps the first to start this "parent and offspring" boom, has held its price in comparison fairly well, the 5s. shares being quoted at 17s. 6d. The accounts of this first "parent" concern are awaited with considerable interest.

American Buying of Electrical Shares.—America's growing interest in British securities continues to provoke comment in financial circles. The proposal of the Buenos Ayres and Pacific Railway to disfranchise American stockholders—a course which other Argentine railway boards may follow—is avowedly a precautionary measure, such stockholders being largely non-existent at the moment. Recent developments in the electrical power and supply industry, however, suggest that in that sphere the "danger"—if it be regarded as such—is more pressing. The news, made public some months ago, that various electrical and telephone enterprises in Mexico, Argentina and elsewhere in South America had passed from British to United States' ownership was followed by the announcement of a dominant American interest in the Greater London and Counties Trust, which controls, among other concerns, Bedfordshire, Cambridgeshire and Huntingdonshire Electricity, East Anglian Electric Supply, Edmundson's Electricity Corporation, Oxford Electric, Wessex Electricity, and Western Electricity. Within the last fortnight has come the news of an offer through the Greater London and Counties Trust for the "A" and "B" shares (*i.e.*, for all the voting capital) of the Shropshire, Worcestershire and Staffordshire Electric Power Company, which, on May 2nd, stood at 42s. 6d. and 40s. respectively, at a price of 50s. per share. It is understood, further, that a block of shares

in the British Power and Light Corporation—which offered 1,602,500 (out of 2,000,000) £1 shares to the public on Monday last—was reserved for American subscribers. The company will acquire a controlling interest in the North Wales Power Company and the Electricity Distribution of North Wales and District, and the whole issued capital of various companies in East Suffolk, South Somerset, the Trent Valley, West Hampshire and Ringwood. So largely is the Stock Exchange obsessed with the idea of American buying for control that a sharp rise in the shares of the Egham and Staines Company on Tuesday was immediately ascribed to that cause without any better reason. The electrical industry has not yet taken steps either to limit American acquisition of company shares or of voting power. One section of opinion within the industry, whose views are not unfairly expressed by the writer of a letter which appears on page 1112 of this issue, holds that there is a distinct element of danger in the passage into other than British hands of control of a public utility industry which must necessarily play a leading part in future industrial development. Those who hold this opinion contend, further, that the British Government, which has inaugurated a scheme of internal electrical development, has a moral responsibility in the matter, while British holders of electrical company shares, who sell out at the tempting prices offered by Americans, must inevitably lose their equity in the cautious finance of their companies in the past, and the substantial benefits to be expected from future developments. Holders of other views emphasise the importance of a "free market" for capital in the electrical as in other industries, and the practical difficulty of preventing outside interests, who are willing to pay a sufficiently high price, from obtaining a substantial shareholding either by means of attractive offers to existing holders or of unostentatious buying on the Stock Exchange. The question would seem destined to remain in the forefront of public attention for some time to come.

J. and P. Coats.—The preliminary statement shows that profits rose last year by over 5 per cent., from £3,729,642 to £3,929,058. This is the highest total ever recorded apart from the exceptional years 1918-19 and 1919-20, and is accompanied by an unlooked for increase in the bonus on the ordinary shares, which brings the total distribution for the year to 20 per cent., after remaining unchanged at 17½ per cent. since 1919-20. Even so, there is an excess of earnings over dividends amounting almost to a further 4½ per cent.

	6 months ended Dec. 31, 1926. £	Year ended Dec. 31, 1927. £	Year ended Dec. 31, 1928. £

*Equivalent rate per annum.

The directors are making another new departure, and instead of putting any portion of the undistributed profits to the dividend reserve fund, as was done a year ago, are writing off £500,000 as extra depreciation on buildings and machinery installed during the inflation period after the war. The large sum of £825,954 is being carried forward. Thanks to the steadiness of dividends, quotations of J. and P. Coats ordinary shares have fluctuated relatively little during the last few years by comparison with those of many firms of similar prominence. Helped by the bonus announcement, the price is now 70s. 0d., offering a yield (on the 20 per cent. distribution rate) of £5 14s. per cent.

Marconi's Wireless Telegraph Co.—The report of Marconi's Wireless Co. for the year ended December 31, 1927, says little regarding the company's trading and throws no light on the question, which is of great importance, in view of the cable-wireless merger, as to what proportions of the company's revenue are derived from manufacturing and patent royalties and from the transmission of wireless messages respectively. Perhaps Lord Inverforth at the general meeting on May 29th will enlighten shareholders on this point. The directors in the report merely state that the progress of the company under the reorganised management can best be demonstrated by the following figures of annual profits after deductions for depreciation and debenture interest:—

	Net Profits. £	Ord. Shrs. Divs. Per cent.	Excess Divs. on Pref. Shrs. Per cent.
1925	177,938	Nil	Nil
1926	198,947	5	Nil
1927	430,471	20	10
1928	426,000	20	10

The figures for 1928 are not yet made up or audited, but are estimated at *£408,500 after payment of debenture interest* and preference dividends. Out of the profits for 1928 an interim of 20 per cent. less tax is to be paid on the ordinary shares and an additional 10 per cent. less tax on the 7 per cent. cumulative participating preference shares, which will leave a balance of £3,252 to carry forward. These dividends require a larger amount than the profit actually earned during the year, but, seeing that the merger of the company with the Eastern and Associated Telegraph companies takes effect from April 1, 1928, the directors feel justified in making the same distribution as for 1927. The following table gives a comparison between the 1926, 1927 and 1928 trading results:—

	1926. £	1927. £	1928. £
Ordinary capital	1,625,019	1,625,019	1,625,019
Preference capital.....	250,000	250,000	250,000
Trading profit	325,958	551,696	*
Directors' fees	5,000	5,000	*
Depreciation	38,081	36,513	*
Debenture interest	83,930	79,711	*
Net profit	198,947	430,471	426,000
7 per cent. preference dividend ...	17,500	17,500	17,500
	181,447	412,971	408,500
Per cent earned on total share capital	9·67	22·02	‡
Per cent. paid on total share capital†	5·00	20·00	20·00

* Not available.

† After the ordinary share capital has received 10 per cent., the preference and ordinary shares rank *pari passu*.

‡ This figure cannot be stated, since no information is as yet available as to the extent of conversions of debentures during the year.

The directors' report includes an argument supporting the merger terms offered to the £1 ordinary shareholders. It is, the directors say, impossible to forecast accurately the revenue either of the Marconi Co. or of Cables and Wireless, but assuming the latter is in a position to pay interest on its 5½ per cent. preference and 7½ per cent. "A" ordinary shares, and the Marconi Co. to pay a dividend of 20 per cent. on its ordinary shares, the dividend position of the holders of 100 ordinary shares of £1 each will be as follows:—

	£	s.	d.
Shareholders who do not exchange their holdings for shares in Cables and Wireless, Limited, will receive	20	0	0
Shareholders who exchange their holdings for shares in Cable and Wireless, Limited, will receive ...	22	12	9

In the case of the preference shareholders, the directors state that the difference is even greater. The holders of 100 7 per cent. preference shares who retain their shares in the Marconi Co. will receive £17, whereas if they exchange their holdings for shares in Cables and Wireless, Limited, they will received £22 12s. 9d. Should Cables and Wireless in the future be in a position to make a distribution not only on its preference and "A" ordin-

ary shares, but also on its " B " ordinary shares, the Marconi directors argue that the £1 shareholders who do not exchange their shares will be in an even less favourable position. This argument is not easy to follow, because the increased revenue of Cables and Wireless will presumably be derived from the Marconi Co. (the revenue from cables being a declining one), so that it is reasonable to assume that Marconi dividends will rise above 20 per cent., provided always that the consideration received by the Marconi Co. in shares of Imperial and International Communications, Limited, for its communication assets is fair. The directors state that they are satisfied that this consideration is fair. If so, there seems to be little ground for refusing to divulge the allocation of the shares in the Communications Company as between Marconi and the cable companies. No amount of argument can alter the fact that a £1 ordinary share of the Marconi Company at present receives double the dividend of a 10s. ordinary share. The £1 shareholders will hardly be convinced that they will improve their status by putting themselves in a dividend position identical with that of the 10s shares, apart from a slightly larger return on their holding of 5½ per cent. preference shares.

Armstrong, Whitworth.—The report of Armstrong, Whitworth for 1928, it may be hoped, closes an epoch and marks the opening of a new and better one, inaugurated by the capital reconstruction to which the Court gave sanction on March 19th last. The net income for the year ended December 31, 1928, before allowing for depreciation, was £137,219, as compared with a 1927 figure of £138,667, arrived at after deducting £250,000 as provision for certain contingencies. The net loss on the year, after deducting debenture and loan interest, was £551,970, against £527,953 in 1927 and £531,210 in 1926. The reconstruction scheme was fully dealt with in the *Economist* of February 16th last (pp. 347-8 and 373). To the total of £14,117,536 for losses certified as at June 30, 1928, has now been added £83,636, representing the net loss for the six months to December 31st, after applying the share premium and debenture redemption account. In the last balance sheet this account stood at £189,297, so the real six months' loss appears to have been £272,933. In addition to the balance sheet as at December 31st, a consolidated balance sheet is also provided as at the same date, giving effect to the terms of the scheme of arrangement. This is comparable with the approximate balance sheet, based on the figures of June 30, 1928, published some weeks ago. Since that estimate was drawn up reserves for contingencies have been reduced by £187,025 to £236,877, the surplus of gross assets over creditors and credit balances now amounting to £6,235,704 on a share and loan capital of £5,998,826—a satisfactorily liquid position at last, though the surplus of working capital has, to outward appearance, fallen by £371,914 since the June 30th estimate. As for the future, the directors report that the development of the iron and steel departments of the Pearson and Knowles group is receiving attention by special experts, and it is hoped that better conditions will prevail as the outcome of the reorganisation of the group during 1928. On April 30th Armstrong, Whitworth had orders on hand amounting to some £1,500,000; although prices are generally unremunerative, efforts are being made to effect an improvement—whatever that may mean. Meanwhile, active steps are being taken to carry out the provisions of the reconstruction scheme, including the issue of the new securities, and the directors hope to make an announcement at the meeting on May 24th as to the future administration of the company, the advisory committee meanwhile having ceased to act.

Amalgamated Press.—The second report of Amalgamated Press, the Berry periodical and magazine company, is not directly comparable with its predecessor, which covered a period of twenty months from July 1, 1926. It was stated there, however, that the profits for the twelve months ended February 29, 1928, were in excess of the figure (£870,788) shown in the prospectus as the average for 1922-26. The profits for 1928-29, therefore, at £873,717, show little, if any, expansion. The balance available is larger this time, however, as there is no longer interest on the purchase consideration to be paid. A year ago nothing was paid on the ordinary shares, but a sum equivalent to the preliminary expenses was put to reserve; that sum is now being taken from reserve and used to to reserves out of profits. The ordinary shareholders receive a final dividend of 8 per cent., making 15 per cent. for the year. Though this, being less than half of the actual earnings, appears at first sight to be a conservative distribution, it must be remembered that the ordinary shares only represent a small proportion of the total capital, £1,200,000 out of £9,145,813, and, considering the relative smallness of reserves and the fact that the preference dividends are covered little more than twice, it might be argued that the ordinary shares are lucky to be receiving anything so soon.

	20 months to Feb. 29, 1928.	Year to Feb. 28, 1929.

* Equivalent for year.

The balance of the purchase price, including goodwill, copyrights, freehold land and buildings, plant, machinery, etc., after adding additions and deducting depreciation, stands now in the balance sheet at £6,725,065, against £6,794,199 a year ago, whereas investments in and amounts owing by subsidiary companies have risen by £124,346 to £2,549,955. Neither of these, the two preponderant items on the assets side, appears to indicate great changes. The gross total of assets has, in fact, increased by less than 2 per cent., but in respect of liquidity the position is decidedly more comfortable than that of a year ago. Moreover, £54,187 of debentures have been redeemed within the year. The present price of the 10s. ordinary shares is 27s. 6d. cum final dividend; the yield at that price, on the 15 per cent. dividend rate, is £5 11s. 6d. per cent.

British Cotton and Wool Dyers.—The 1928-29 report is disappointing, since the recovery indicated a year ago, after a poor year in 1926-7, has not been maintained. After charging, among other expenses, £4,786 (against £4,593) for specific depreciation and £55,399 (against £59,653) for repairs and renewals, allocating £25,000 (as usual) to depreciation fund and meeting debenture charges, net earnings work out at £94,196, a reduction of £44,722. The dividend is maintained at the 10 per cent. level reinstated a year ago, but the margin between earnings and dividends has shrunk from nearly 8 to a little more than 2 per cent., and for the first time for many years nothing is put to reserve.

(Years ended March 31)	1927.	1928.	1929.
	£	£	£
Profits	106,806	188,918	144,196
Debenture charges	25,000	25,000	25,000
Depreciation fund	25,000	25,000	25,000
Net earnings	56,806	138,918	94,196
Ordinary *Earned*	*7·3%*	*17·9%*	*12·1%*
Ordinary Paid	5%	10%	10%
Ordinary Amount of dividend	38,708	77,416	77,416
To reserve fund	20,000	50,000	Nil
To employees' benefit fund	5,000	10,000	5,000
Increase or decrease in carry-forward	−6,903	+1,502	+11,780

Important alterations have been made in the balance sheet, resulting in a reduction of the total of gross assets from £2,199,015 to £1,945,925. Fixed assets, which stood at £1,588,299 (including goodwill) a year ago, have evidently been revalued. Goodwill, the confusion of which among other capital assets is always undesirable, has been written off, £40,905 being taken for this purpose, and a downward adjustment of £244,989 has been made in accordance with the revaluation. The £285,894 required for these two purposes has been taken from the depreciation fund, which is left with a credit balance of £54,106. The reserve fund and the investment contingency fund remain at £230,000 and £45,000 respectively, so that, with the carry-forward, the reserves aggregate £362,313. On an issued share and loan capital of £1,394,165, with an up-to-date valuation of the fixed and a comfortable surplus of liquid assets, this position has a sufficiently healthy appearance, provided that the fall in profits can be arrested. The 5s. shares at their market price of 7s. (against 9s. at this time last year) yield £7 2s. 10d.

Philips Gloeilampenfabrieken.—The report of this Dutch company shows that considerable expansion has taken place during the past year, with favourable results. Despite the increased profit of 29 million guilders (against 14 million in 1927), the dividend is maintained at 21 per cent. on the increased capital:—

	(In thousand guilders.) 1926	1927	1928
Operating profit	9,067	14,106	29,209
Depreciation	2,884	2,546	10,499
Net profit	6,183	11,560	18,710
Extra depreciation	1,300	4,400	8,000
Employees	642	1,381	2,271
"Tantièmes"	700	1,358	2,124
Taxes	294	378	588
Preference dividend Amount	450	506	791
Preference dividend Per cent.	8	9	9
Ordinary dividend Amount	2,800	3,675	5,742
Ordinary dividend Per cent.	16	21	21

During the year the capital was increased from 21,875,000 guilders to 32,813,000 guilders of ordinary shares, and from 7,032,000 guilders to 10,548,000 guilders of preference shares. An issue is to be made of ordinary shares at 250 in the proportion of one new for two old shares. Profits for the first quarter of 1929 are declared to be considerably higher than during the same period of 1928. The International General Electric Co. has a large holding of ordinary shares in the company. The present price of the ordinary is 790 ex rights.

Gramophone Developments.—In view of recent reports regarding the merging of the talking machine, talking film and wireless industries into one great trust, interest attaches to the negotiations which have been taking place in Paris between representatives of the Columbia Graphophone Co. and Mr Sarnoff, the vice-president of the American Radio Corporation. Our Paris correspondent states that, according to reports received in that centre from New York several months ago, the possibility of a fusion of the Victor Talking Machine Company and the American Radio Corporation was then under consideration. It is understood that more than half the capital of the Columbia Company is already in American hands. The reported projected combination would place the most important talking machine and disc factories in the world under the same control. The importance which such a combination would have is increased by the close relations that are understood to exist between the American Radio Corporation, the Brunswick, Balke and Callender group of Chicago and the German Polyphon group. Further, behind these combinations are the powerful General Electric, Western Electric and associated concerns, which in one form or another are now making their influence strongly felt in the French telephone and film industries. Columbia share values have reacted this week on unofficial reports of a serious hitch in the negotiations.

Anglo-Egyptian Oilfields, Limited.—It has been said that the benefits of output-restriction in any industry are enjoyed chiefly by those companies which do not restrict. Whether this truism applies to Anglo-Egyptian Oilfields, Limited, is not disclosed in the directors' report for 1928, but it is significant that production, profits and dividends again show considerable increases. The following table compares the results of the last three years:—

	1926.	1927.	1928.
	£	£	£
Capital	1,808,000	1,808,000	1,808,000
Gross profit	611,973	649,287	819,988
Net profit (after expenses and depreciation)	245,136	328,099	424,266
Dividends	233,500	328,388	423,277
Dividend per cent. on "B" shares	12½	17½	22½
Carried forward	249,490	249,201	250,190
Production (tons)	169,211	180,230	264,234

It will be seen from this table that the company distributes its profits up to the hilt, but carries forward each year an amount equal to over 13 per cent. on the ordinary share capital. According to the directors' report, the increase in production in 1928 was obtained chiefly from the northern extension of the main Hurghada field. The attempt to develop production in the Farsan Islands has been abandoned, and the loss, amounting to £69,452, has been written off the exploration reserve account, bringing that account down to £30,548. Such are the risks of an oil-producing company. Meanwhile, exploration work in Somaliland is being undertaken. It may be added that the balance sheet shows the strong liquid position usual with subsidiaries of the Royal-Dutch-Shell group, the surplus of current assets over current liabilities being £895,911. The company's capital consists of £1,708,000 in " B " shares of £1 and £100,000 in " C " shares of £1, the " C " shares being held by the Egyptian Govrenment. The " B " shares are entitled in each year to a sum of £78,500. The " C " shares then rank for a non-cumulative dividend of 5 per cent., and the surplus profits are distributed as to 90 per cent. to the " B " and 10 per cent. to the " C " shares. At the present price of 2$\frac{15}{16}$ the " B " shares return a yield of 7.64 per cent.

Marks and Spencer.—Our readers are asked to note that the figure of 3 per cent. which appeared in our " Investment Note " on Marks and Spencer in our last week's issue (page 1058), as the yield on the 10s. ordinary shares at 5½ *cum* dividend and rights, on the basis of a 15 per cent. dividend on the increased capital, should read 1½ per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Hambros Bank, Alliance Assurance, Commercial Union Assurance, Gresham Fire and Accident Insurance, Gresham Life Assurance, Liverpool and London and Globe Insurance, Leopoldina Railway, Cluny Rubber, Lanadron Rubber Estates, Ledbury Rubber Estates, Lunuva (Ceylon) Tea and Rubber Estates, Cawnpore Electric Supply, British Shareholders Trust, Forestal Land, Timber and Railways, Margarine Union, Sphinx Electric, and British Match Corporation. The chairman of the Gresham Life referred to the fact that during the last four years mortality claims had averaged only 62½ per cent. of the amount expected according to the table used in the valuation. Baron d'Erlanger declared that the Forestal Land, Timber and Railways Company was not prepared to sacrifice its stocks of quebracho, but would take measures to carry its stock until consumption had recovered from the present "temporary crisis." It was stated at the Margarine Union meeting that the work of moulding together the Jurgens and Van den Bergh concerns had been practically carried out. The results would be felt partly in 1929, and, possibly, completely in 1930.

MINING NOTES.

Central Mining.—Our *Mining* Correspondent writes:—Last year's earnings on the part of this, the doyen of Kaffir finance undertakings, correspond extraordinarily closely to those of 1927. The expenses also exhibit little variation. After deduction of dividends and special appropriations on the same scale as before, the sum carried forward is practically identical with that brought

in. The balance sheet, however, shows a considerable expansion in both the debtor and creditor items, and also a jump in the cash. Reserve now stands at £1,900,000. In their customary brief statement, the directors devote chief attention to the company's oil interests—which are located in Trinidad and Venezuela. The operations of Messrs. Bernhard Scholle and Co. and of the British Metal Corporation permitted the maintenance of the previous year's dividends with increased allocations to reserves.

	1926.	1927.	1928.
	£	£	£

* After deduction of directors' percentage.

There are numerous points of interest in the detailed report of the consulting engineer in regard to the Rand and the Corporation's interests in South Africa. At current price of £18 10s. for the £8 share the yield afforded is about 5½ per cent. tax free.

Tin Company Results.—As a whole the results shown by the annual statements recently published are disappointing—the chief factor being, of course, the fall in the price of the metal. At £46,300 the net profits of the Pengkalen come within a litte of the 1926-27 total, but would have been less save for an expansion in the tribute on alluvial workings. Costs came down substantially from the inflated level of the preceding year, although still higher than those of 1925-26. Dividends upon the ordinary shares totalled 25 per cent., as against 22½ per cent. A second and very powerful dredge came into operation last September. Market calculations as to the resultant additional profits will be upset by the managers' intimation not only that the revenue from the sale of power is likely to be much lower during the current session, but that the company's tribute mine in the enrichment area has been stopped "in accordance with the scheme of work." It is possible that the Government licence to sell power, which expires in October, may not be renewed. Tekka-Taiping experienced certain difficulties in working, a reduced yardage being treated for a slightly lower average yield than before. The output declined by 95¼ tons to 564 tons, and the profit came out at £45,850 in place of £72,200—depreciation allowed for in each case. Accordingly the distributions remain at 10 per cent., there being no repetition of the 6¼ per cent. bonus paid in regard to 1926-27. A third dredge is in process of erection. These two undertakings operate in Malaya. Somewhat surprisingly, the experiences of the two Kaduna undertakings (Nigeria) were not at all similar. At £17,200 the gross profit of the Syndicate amounted to little more than one-half the 1926-27 total. The payment of a final dividend of 10 per cent., making 20 per cent. for the year (as against 55 per cent.) leaves the somewhat reduced balance of £2,700 to go forward. For the current year to date the output exceeds that of the corresponding period of 1927-28; on the other hand, the price of tin has ruled lower. *Per contra* the Prospectors, by largely increasing its output, earned £10,200, or rather more than the 1926-27 amount; the final dividend of 10 per cent. makes 20 per cent. for the year, as against 30 per cent., but meantime the capital has been increased. The output for the first five months of the current financial year shows a slight decrease. Both companies have taken a small interest in Maroc, a concern prospecting virgin territory in Sierra Leone. In all cases the accounts are made up to October 31 last. The Mongu (Nigeria) accounts for the year to December 31st indicate a profit of only £8,300, as compared with £19,100 for 1927. Accordingly the shareholders will receive 5 per cent. as against two dividends totalling 20 per cent. in respect of each of the preceding four years. As a result of the installation of additional plant the output of the current year should exceed that of 1928.

Mining Corporation of Canada.—Although the operating companies last year treated a larger quantity of ore, its average value was so much lower than before that the production of silver amounted to no more than 1,314,000 ozs., as against 2,119,800 ozs. in 1927. The reserves in the Cobalt mines are computed at 25,000 tons containing 600,000 ozs., the tonnage being the same as that of twelve months ago and the contents 100,000 ozs. less. As above indicated, last year's output substantially exceeded that reckoned to be available at the end of 1927, and a further year's supply was in reserve at the end of 1928; but both these and the South Lorrain properties are approaching exhaustion, and the future depends upon the company's new interests. Of these the principal are the Quemont, an undeveloped property adjoining the Noranda; 700,000 shares of the Base Metals Mining Corporation, whose property is situated in British Columbia; and 80 per cent. of the issued capital of the Mincor Exploration and Development Co., owning claims in the Sudbury district. Opportunities of acquiring further interests will be taken; in this connection it may be noted that the company's net cash resources approach a quarter of a million. With regard to the 1928 accounts, the profit on mining amounted to £31,500, as against £111,900 in 1927. Interest, exchange and profit on investments brought in £439,500, as compared with only £6,500. Of the present total of £471,000, some £328,800 was devoted to the writing down of mining rights. The two dividends of 12½ cents cash (as before) absorbed £85,200, and after providing for depreciation on plant the slightly enhanced balance of £10,600 remained to be carried forward. An interim dividend of 12½ cents in respect of the current year has just been declared.

Vereeniging Estates.—A detailed examination of the accounts for 1928 considerably modifies the impression created by the summary given in the directors' report. Here the net profit is set out as £184,200, comparing with about £141,000 for each of the two preceding years, and only £17,500 in 1922. All but £8,000 of last year's expansion arises from two book-keeping transactions. In the first place, £17,500 discount on debenture issue, previously debited to profit and loss account, is now transferred back, the amount being debited to share premium account; in the second place, £18,000 previously written off Vereeniging Brick and Tile shares is now written up to cost, this subsidiary having entered the dividend list. Once again a final dividend of 7½ per cent. is declared, making 12½ per cent. for the year, a point to which no reference is made in the report. Doubtless the absence of any expansion in the rate may be attributed to the circumstance that the 1927 distributions entailed a draft upon the carry-forward, and that in the meantime the issued capital has been increased by 316,000 shares to £1,582,000. The issue in question was made to enable the company to acquire the controlling interest in the Coronation Collieries. This transaction, with a further recent acquisition, gives a commanding position in the coal trade of the Vryheid district. At 2,200,300 tons, last year's output of the collieries worked by the Vereeniging Co. showed an increase of 83,300 tons. The condition of the forests and orchards is reported to be satisfactory, and the Vereeniging Milling Co. is stated to be now making profits. At 2$\frac{1}{16}$ cum final dividend Vereeniging Estates shares give a yield of 6½ per cent.

CAPITAL ISSUES.

The rush of new issues before the Whitsun holidays has beaten all previous records. Six prospectuses were advertised on Monday, five on Tuesday, three on Wednesday, and two on Thursday, the total for the week amounting to £17,562,218, of which £5,158,484 represents new money. The most important issue in this week's list was the *Commonwealth of Australia* offer of conversion to holders of £12,403,734 of Queensland Government 5½ per cent. stock falling due on July 1st next. This is the first time that a Commonwealth loan has been offered for the conversion of a State loan. Now that the Commonwealth Government has taken over the debts of the States, the prospect of issues of Commonwealth Stock (in this case the 5 per cent. 1945-75 issue) assuming unwieldy proportions must be guarded against, as far as possible. The price of issue of this 5 per cent. stock for cash applications was 97, and holders of the maturing Queensland 5½ per cent., which is quoted in the market at 101½, were offered stock plus £3 in cash. The terms of conversion were not unreasonable. The existing Commonwealth 5 per cent. 1945-75 is quoted at 97 to yield 5.13 per cent., while the new stock at 97 allows a yield of 5.15 per cent. Unless holders of the Queensland 5½ per cent. stock wish to go outside Australia for an investment, they will doubtless convert. Of the industrial issues several were of more than market interest. The movement towards rationalisation in the heavy industries was responsible for the issue of *Allied Ironfounders*, which is an amalgamation of a number of manufacturers of cast-iron goods, mainly used in the building trades, who have been fiercely competing with one another. The issue was made under the auspices of the house of Bernhard, Scholle and Co., and took the form of a reasonably well-secured 6 per cent. convertible debenture. The issue of *British Power and Light* was interesting, because it represented the combination and development of British power and light companies under British control. Two well-known members of the smaller City finance houses—Robert Benson and Edward de Stein—were the promoters of this issue. The china clay industry of Cornwall rarely figures in the capital issue market, but this week an issue of debentures and ordinary shares was made by *Lovering China Clays*, a company formed to take over the old-established business of John Lovering and Co. *Argus Press Holdings* invited subscriptions to 7½ per cent. preference shares and ordinary shares for the purpose of acquiring the business of the Argus Press, which prints the *Morning Post*, the *Financial News* and *The Observer*. A wide variety of trade issues was offered to the speculative investor—*Triumph Auto Pianos*, which acquires a business of player piano manufacturers and hopes to finance hire purchase agreements; *Rothmans* (1929), which takes over the well-known retail and export business that claims to supply tobacco and cigarettes direct to the consumer at wholesale prices, and *Pass and Joyce* (1929), which acquires a much-advertised business of motor-car distributors and agents. All of these companies offered semi-speculative preference shares. *Berkeley Property and Investment* required funds to repay loans and acquire further flats and houses in London, while *Virginia Tobacco* (*Rhodesia*) made a more speculative ordinary share issue for the purpose of acquiring and developing estates in Rhodesia for tobacco cultivation. The inevitable "patent" issues were provided by *N. T. Artificial Wool*, a company formed to exploit a French invention for the making of a wool substitute from vegetable fibres; *Lactagol*, a company which makes and sells a product "invaluable for the nursing mother"; *Rubber Processes* which makes, under "secret processes," various rubber products (a highly-coloured prospectus which made but slight appeal to the investor); and *Marco Refrigerators* (1929), which takes over an established business, but gives no figures of past profits. Thursday's issues comprised an offer of 10s. shares at a premium of 1s. 6d. by a Chilean nitrate company, *Tarapaca and Tocopilla*, which has shown a satisfactory revival in earnings after the recent depression in the industry, and of ordinary shares in *Walkers* (*Stourbridge*) *Fireclay*, which gives a single unimpressive profit figure in respect of certain brickworks, and says nothing whatever as to the earnings of a colliery which is being taken over.

Commonwealth of Australia Conversion Loan.—Offer of conversion to holders of £12,403,734 of Queensland Government 5½ per cent. inscribed stock, 1926-29 (balance of loan falling due on July 1), into Government of the Commonwealth of Australia 5 per cent. registered stock, 1945-75, at 97. Trustees may invest in this stock. Holders who convert will also receive a cash payment of £3 per cent.

Offer for public subscription of an amount of the new stock sufficient to make up, with the stock converted, the total of £12,403,734. The following annual sinking fund contributions must be made in the case of all debts taken over by the Commonwealth from the States:—On loans existing on June 30, 1927, including such loans when converted into other loans, 7s. 6d. per £100, and on any new loans 10s. per £100.

India Bills.—The Secretary of State for India gives notice that tenders will be received at the Chief Cashier's Office, at the Bank of England, on Thursday, May 23rd, at 1 o'clock, for India Bills to the amount of £6,000,000 to provide funds for capital expenditure on railways and for general purposes. Persons whose tenders are accepted will be informed on Friday, May 24th, and payment in full of the amounts of the accepted tenders must be made to the Bank of England, not later than 2 o'clock on Monday, May 27th.

British Power and Light Corporation (1929), Limited.—Offer for sale at par of 1,600,000 (out of 2,000,000) £1 shares, each of which the directors may at any time convert into 10s. of 6 per cent. cumulative preference and 10s. of ordinary stock. The corporation acquires a controlling interest in two electricity companies and the whole share capital of five others, and will centralise their technical and commercial organisations. The purchase price is £1,048,000 in shares.

Allied Ironfounders, Limited.—Issue at 96 of £780,000 (out of £1,200,000) 6 per cent. debenture stock, convertible till 1935 into 9 £1 ordinary shares for each £10 stock, and carrying corresponding rights to participate in any offer to shareholders meanwhile; a first specific mortgage on all shares in the constituent companies, and redeemable by 1958 by a sinking fund applied in purchase up to or drawings at par, the company having the right to redeem after 1936 at 103. Issued share capital is 795,527 (out of 1,500,000) £1 7 per cent. cumulative preference and 798,625 (out of 1,500,000) £1 ordinary shares; a further 600,000 ordinary shares are to be authorised. The company was formed in March, 1929, to amalgamate a number of companies producing cast-iron goods mainly for use in the building trades. Combined net assets were valued at £2,032,639, excluding goodwill. Combined profits have been: 1925, £335,990; 1926, £363,893; 1927, £288,329; 1928, £137,824—less small amounts attributable to unacquired shares. Total purchase price was £2,335,729, payable as to £865,954 in cash, £736,842 in preference and £732,933 in ordinary shares. Promoters received 58,335 preference and 58,335 ordinary shares.

Lovering China Clays, Limited.—Issue of 380,000 (out of 400,000) £1 shares at par and 2,500 £100 6 per cent. registered debentures (1964) at 96. Debentures are redeemable by a 1 per cent. cumulative sinking fund operating annually by purchases up to or drawings at 101 and accrued interest; at company's option redemption may be accelerated by drawings at 102 and accrued interest. The company acquires an old-established Cornwall business of china clay producers and merchants and a freehold property connected therewith, valued in all at £690,623, excluding goodwill. The total purchase price is £552,602 in cash; promoters receive £5,000 in cash and £20,000 in shares. Profits have been:—1923, £60,969; 1924, £55,608; 1925, £51,184; 1926, £30,433; 1927, £48,989; 1928, £58,051. The company receives the profits since January 1, 1928, less interest at the rate of £40,000 per annum. Working capital is estimated at £41,000.

The Argus Press Holdings, Limited.—Issue of 275,000 £1 7½ per cent. cumulative preference shares at par and 200,000 £1 ordinary shares at 21s. The company acquires the whole issued ordinary share capital of The Argus Press, Limited, which owns a newspaper printing business. Net assets, excluding goodwill, attributable to the shares acquired have been valued at £278,161, but including profits to date exceed £300,000. Profits available for those shares have been:—1926, £30,829; 1927, £65,582; 1928, £74,937. The vendors receive £480,000 in cash, but will apply for 100,000 ordinary shares on the terms of the prospectus.

Berkeley Property and Investment Company, Limited.—Issue at 21s. of 433,485 £1 ordinary shares, additional to 241,515 already issued, out of a total of 750,000 authorised. The company, formed in 1924, carries on business as a real property company, in particular as proprietor of residential flats and other properties situated principally in the County of London. Net assets are valued at £246,218. Profits have been:—Year ended September 29, 1928, £15,321; period ended March 25, 1929, £16,528. Out of the proceeds of this issue £78,700 will be paid to complete the purchase of certain properties.

Triumph Auto Pianos, Limited.—Issue at par of 63,750 (out of 75,000) £1 8 per cent. cumulative preference and 1,062,500 (out of 1,500,000) 2s. ordinary shares. The company acquires a business, established in 1903, of manufacturers of player pianos and accessories. Net assets are valued at £31,005 (including trade marks and patents, £500). The purchase price is £30,000, payable in 11,250 preference and 187,500 ordinary shares. Profits (adjusted) have been:—1925, £24,318; 1926, £23,787; 1927, £24,240; 1928, £24,745. Approximately £47,650 will be provided as additional working capital. The unissued shares are under option at par.

Walker's (Stourbridge) Fireclay, Limited.—Issue at par of 660,000 (out of 1,000,000) 5s. shares. The company will manufacture fire bricks and engineering bricks, particularly a uniform refractory brick, and retorts for gas companies, and is acquiring two brickworks and a colliery, valued at £160,640. The purchase price is £150,000, payable as to £70,000 in cash and £80,000 in shares. Profits of the brickworks for 19 months to December 31, 1928, were £11,810. Working capital, after allowing for the cost of new works, is estimated at £30,000.

Rothmans (1929), Limited.—Issue of 156,000 (out of 190,000) £1 7 per cent. cumulative participating preference shares at 21s., entitled to one-fifth of the surplus distributed profits after payment of 7 per cent. on 150,000 4s. ordinary shares. The company acquired a business, founded in 1890, of manufacturers of and dealers in tobacco, &c. Net assets are valued at £95,783, excluding goodwill and trade marks. The purchase price is £129,000, payable as to £65,000 in cash, £34,000 in preference and £30,000 in ordinary shares; in addition, premises in Glasgow are being acquired for £5,750. Profits have been (to February 20th):—1925, £22,423; 1926, £30,127; 1927, £30,248; 1928, £39,970; 1929, £41,169. Working capital is estimated at £80,000.

N.T. Artificial Wool Company, Limited.—Issue at par of 120,000 (out of 150,000) £1 10 per cent. cumulative participating preference and 120,000 (out of 500,000) 4s. ordinary shares, the former entitled to one-fourth of surplus distributed profits. The company acquires inventions for the manufacture of an artificial wool, with the benefit of patent applications, the whole share capital of a French company, and the sole right to all improvements. The purchase consideration is £78,000, payable as to £50,000 in cash and £28,000 in ordinary shares. Working capital is estimated at £73,000. The unissued ordinary shares are under option at par.

Tarapacá and Tocopilla Nitrate Company, Limited.—Issue of 223,000 10s. shares at 11s. 6d., to rank *pari passu* with existing shares. Authorised share capital is £1,000,000 in 10s. shares, all of which have been or are to be issued. Loan capital outstanding consists of £328,000 6½ per cent. first mortgage debentures. The company was formed in 1906, and recent profits, before providing for debenture amortisation, have been: 1925, £38,835; 1926 (loss), £673; 1927, £23,843; 1928, £74,740. An additional nitrate property is being acquired in consideration of 977,000 10s. shares. The present issue is to provide further working capital.

Pass and Joyce (1929), Limited.—Issue at par of 100,000 £1 7½ per cent. (participating to 10 per cent.) cumulative preference and 100,000 (out of 400,000) 5s. ordinary shares. The company acquires, as from September 30, 1928, a business of motor-car distributors, concessionaires, and agents, established in 1924 and carried on in London and Manchester. Net assets were valued at £110,769, excluding the value of concessions, contracts and goodwill. The purchase price is £100,000, payable as to £50,000 in cash and £50,000 in ordinary shares, and the unissued shares are under option to the vendors at par. Profits have been (to September 30):—1926, £13,388; 1927, £23,214; 1928, £31,065. Working capital is estimated at £55,000.

Marco Refrigerators (1929), Limited. — Issue at par of 2,420,000 (out of 4,000,000) 1s. shares. The company acquires as from December 31, 1928, a business, established in 1904, of manufacturers and sellers of refrigerators, including a general engineering and woodworking business, factory, trade mark, patents, and all assets other than book debts. Certain assets have been valued at £80,250. The company takes over all profits and liabilities accrued since the above day, and also a bank loan of £16,456. The purchase consideration is £60,000, payable as to £6,000 in cash and £54,000 in shares, together with a call on the unissued shares at 1s. 3d. Working capital is estimated at £94,000.

Virginia Tobacco Company (Rhodesia), Limited.—Issue at par of 190,000 (out of 200,000) 10s. shares. The company will acquire tobacco plantations or land or properties in Southern Rhodesia suitable for the cultivation of Virginia tobacco and for other agricultural purposes. The purchase price for a 2,500-acre estate and two options on other estates is £20,000, payable as to £15,000 in cash and £5,000 in shares.

Rubber Processes, Limited.—Issue at par of 1,650,000 (out of 2,500,000) 1s. ordinary shares. The company acquires a rubber undertaking in Yorkshire, together with secret processes. The purchase consideration is £35,100, payable as to £7,600 in cash and £27,500 in shares. Working capital is estimated at £57,000. The unissued shares are under option at par.

Lactagol, Limited.—Issue at par of 100,000 10s. 8 per cent. cumulative preference and 100,000 (out of 500,000) 1s. ordinary shares. The company acquires the formulae, manufacturing and selling rights of a milk preparation. Profits of vendors attributable to this article, before charging tax, administration expenses or advertising, have been (to September 30):—1924, £14,303; 1925, £14,245; 1926, £13,617; 1927, £13,186; 1928, £13,721. The purchase consideration is £32,000 in cash; the vendors will apply for 400,000 ordinary shares at par. Working capital is estimated at £34,000.

Particulars of the following have been issued "for information only" with a view to Stock Exchange introduction:—**Forestal Land, Timber and Railways Company, Limited**; issued capital, 1,865,852 6 per cent. cumulative preference and 3,708,837 ordinary shares of £1 each; £1,000,000 6 per cent. ten-year registered notes, redeemable at par in 1939 or at 102 after 1934, have recently been sold at 95. **Base Metals Mining Corporation, Limited**; issued capital, 1,850,005 £1 shares; incorporated in Canada as a mining, milling, production and development company. **Cassell and Company (Holdings), Limited**; capital issued or to be issued, 100,000 £1 7½ per cent. cumulative preference and 497,740 5s. ordinary shares; incorporated in 1928 to acquire the whole issued share capital of Cassell and Co., Limited, publishers.

OIL OUTPUTS.

ANGLO-ECUADORIAN OILFIELDS, LIMITED.—The production for April is cabled as 13,204 tons.

APEX (TRINIDAD) OILFIELDS.—The results for month of April are:—Production of oil, 35,820 tons; deliveries, 32,940 tons.

BRITISH CONTROLLED OILFIELDS, LIMITED.—Production for the week ended May 1st: Venezuela, 37,105 barrels; Trinidad, 15,429 barrels; total, 52,534 barrels. Production for April, Venezuela, 153,109 barrels; Trinidad, 71,623 barrels; total, 224,732 barrels. Deliveries for April, Venezuela, 157,551 barrels; Trinidad, 77,654 barrels; total 235,205 barrels. Production for the week ended May 8th: Venezuela, 36,755 barrels; Trinidad, 19,211 barrels; total, 55,966 barrels.

LOBITOS OILFIELDS, LIMITED.—The production of the Peruvian Company for April is cabled as 26,899 tons.

SERVICE PETROLEUM CO., LIMITED.—Production from the company's oil wells at Gura-Ocnitzei and Ceptura for the week ending May 5th was 1,611 tons (11,277 barrels).

STEAUA ROMANA (BRITISH).—The production of the Steaua Romana Company, Bucharest, for the month of April, was 61,850 tons.

TAMPICO OIL, LIMITED.—The total production on the company's properties in Mexico during April was 19,619 barrels, in respect of which the royalty due to Tampico Oil, Limited, amounted to 1,471 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during the month of April amounted to 109,249 barrels, or approximately 15,607 tons.

THE MEXICAN EAGLE OIL COMPANY, LIMITED.—The production for the week ended April 27, 1929, was 165,000 barrels; week ended May 4th, 187,000 barrels.

TRINIDAD LEASEHOLDS.—Oil produced in April, 32,500 tons; oil purchased in April from other companies, 35,800 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Production for the week ending Wednesday, May 1, 1929, amounted to 2,500 tons. Week ended May 8, 1929, 3,078 tons.

VENEZUELAN CONSOLIDATED OILFIELDS, LIMITED.—Production for month of April, 15,095 barrels (2,157 tons). Week ended 11th instant, 2,548 barrels (364 tons).

VENEZUELAN OIL CONCESSIONS.—Production for the week ended May 4th was 126,103 metric tons (previous week ended April 27th, 127,213 metric tons). Week ended May 11th, 130,549 metric tons (previous week ended May 4th, 126,103 metric tons).

§ Eight months' accounts.

FINANCES OF BRAZIL.

PRESIDENT'S MESSAGE TO CONGRESS.

The Brazilian President, Dr Washington Luiz, was able to record encouraging progress in his message presented on May 3rd to the new Session of Congress. The message referred to every aspect of administration, and pointed out that there was a gratifying indication of improvement in every branch of the public service. This could not have occurred except for the complete absence of political disturbances. The President rightly placed the reference to the preservation of order throughout the country in the forefront of his message, since political stability was the foundation of the economic progress which he had to record. Dr Washington Luiz's policy has been largely concerned with financial reform, and the successful efforts which have been made to this end were reviewed in some detail. Improved methods in the collection of taxes, which were only recently introduced, were shown to have resulted in a tangible increase in revenue.

THE BUDGET.

Referring to the Budget results for 1928, the message pointed out that the estimates for revenue had been exceeded. A revenue of 2,088,933 contos paper and an expenditure of 2,088,816 contos paper had been anticipated. Actually revenue was 2,216,512 contos and expenditure 2,018,158 contos, receipts exceeding the estimates by 127,579 contos, while expenditure was less by 70,658 contos. The surplus realised was 198,354 contos, compared with an estimate of 117 contos. The excess of revenue over expenditure is a clear indication that the Presidential command, given in the early part of 1928, for rigorous departmental economy has been duly heeded.

CURRENCY.

Dealing with currency the message stated that the stabilisation policy had given good results. Transactions had much increased in number, while the exchange had been firm and kept rigorously within the gold point. Stabilisation had resulted in doubling the reserve of the "Caixa de Estabilisação," which on April 8th last was £30,919,000. A further sum of £50,000,000 represented the value of coffee retained at the official warehouses. The deposits at the "Caixa de Estabilisação" of the Banco do Brasil and other national and foreign banks totalled 403,007 contos. The banking turnover totalled Rs. 24,800,000,000$ to which Brazilian banks contributed Rs. 18,299,000,000$ and foreign banks Rs. 6,501,000,000$. The grand total had exceeded that recorded last year by Rs. 4,064,000,000$. The message reported that the liquidation of the floating debt had been almost completed, and that the gold cover for the currency stood at 37·51 per cent. The monetary circulation had been reduced by about 26,000 contos, internal debt by 79,000 contos and foreign debt by 131,586 contos. The reduction in debt has, of course, been reflected in higher prices both for internal and external bonds. In terminating the reference to the currency position, the message alluded to the forthcoming reform of the "Banco do Brasil" which will render this institution suitable for controlling the note issue and providing rediscount facilities. It will be recalled that the "Caixa de Estabilisação" which controls the issue of new notes, authorised by the stabilisation laws, works in conjunction with the "Banco do Brasil." The latter has a right of note issue granted at an earlier date. This right has not lapsed, though the conditions under which it will be exercised are still the subject of negotiation. The notes issued by the Caixa are in large part retained by the "Banco do Brasil" as a portion of its cash reserve. The "Banco" thus remains the principal controller of credit in the country.

INDUSTRY AND TRADE.

Turning to the subject of industry and trade, the President intimated that there had been an increase in agricultural, textile and mineral productions. Exports had increased and surpassed those of 1927 by £9,137,000, while the trade balance was favourable, having a margin of £6,757,433. Commercial activity was reported as being greater than last year, while new capital had been found for the exploitation of agriculture as well as other natural sources of wealth in Brazil. Up to the present only a small fraction of the soil of Brazil has been brought under cultivation, though the area settled will increase with the improvement of the road system, which has already been commenced. The development of motor transport is also bound to have a very favourable effect on the production of the chief crops—coffee, rubber, cotton, sugar and cocoa. Regarding the first of these, the President announced that production was 37,000,000 bags (60 kilos), which gave Brazil 78 per cent. of the world's output. The value of the coffee exported in 1928 was nearly £70,000,000, which was £7,000,000 more than in 1927. The importance of the coffee crop to the economic life of Brazil is obvious from these figures, but in addition, of course, the crop is of vital interest to the federal finances. In view of the controversy which has occurred concerning the control of the market by the Coffee Institute and the suggestion that such control would lead to a great increase in coffee production in other parts of the world, it is of interest to note the high percentage which Brazil can still claim. It is well appreciated that the interest of cultivators should not be concentrated too exclusively upon coffee, and increasing attention is being given to other crops such as cotton and fruits, particularly oranges and bananas. Fruit-growing is still but little developed, though there is obviously a great future for it. Both the forests and the mines of Brazil are beginning to receive the interest which their importance deserves. The forest area is vast, and only the vaguest estimates of resources have been made. Commercial interests are primarily concerned with the pine forests, which in Rio Parana cover a district 1,000 miles long. Here again the improvement in transport facilities will accelerate the development of a most important source of wealth.

TRANSPORT DEVELOPMENTS.

The President referred specifically in his message to the extension of highways to the hinterland which will connect all the large and small cities. A better appreciation of the task involved in providing a road system for Brazil is obtained by bearing in mind that the area of the country exceeds that of the United States of America. Over wide districts old tracks still provide adequate accommodation for transport needs which are met by the ox-cart and the mule-train. More developed areas, however, require facilities for motor traffic, and in such States as Sao Paulo and Minaes Geraes several thousand kilometres of good roads are in existence. The road connection between Rio de Janeiro and Sao Paulo links up the Federal capital with many of the main road systems which, as the President stated, are still in process of extension. Brazil has taken advantage of the commercial possibilities of aerial transport. The President pointed out that the facilities granted to aviation companies developing the national and transoceanic services are proving profitable. It will be recalled that an aerial mail service between Europe and South America was inaugurated in 1927, and aviation bases for this service are already constructed, or are in course of construction, in various parts of Brazil. The transport of passengers, mails and merchandise between the most important towns of the country is also undertaken. Reference was also made in the message to the improvement of port facilities. Increased dock accommodation is becoming an urgent necessity owing to the growing trade of the country. Coastal trade in 1928 totalled Rs. 3,026,398,775$000 compared with Rs. 2,802,894,190$000 in 1927, representing an increase of Rs. 223,504,585$000.

RAILWAYS.

Railway results for 1928 had proved satisfactory, according to Dr Washington Luiz's message. Brazil is a union of autonomous states, and the railways are therefore not under the absolute control of the Federal Government. The latter, however, can influence the general railway policy of the country through its financial control. The various systems are either operated directly by the Federal or the State governments, or are worked on a concession or lease by private (chiefly British) companies. Referring to the Central Brazil Railway, which is the principal railway in the Union, Dr Washington Luiz reported that revenue was approximately Rs. 175,000,000$ and showed a surplus of nearly Rs. 2,000,000$. The other railways, including those worked under concession or lease, had in the aggregate also enjoyed a substantial surplus. The railway results, suggested the President, were a clear indication that the condition of the most important economic activities—farming and mining—had improved. Certain trades, which had been passing through economic crises since the end of the war, and which were only partly protected by tariffs, were not yet prosperous, but the President reported that measures were being taken to effect their re-establishment. Terminating his message with a review of foreign relations, the President said that Brazil continued to be on most friendly terms with every country in the world.

COMPANY MEETINGS, &c.

THE LIVERPOOL & LONDON & GLOBE INSURANCE COMPANY LIMITED.

RECORD TOTAL INCOME OF £12,890,000.
INCREASED DIVIDEND AND LIFE BONUS.

The ninety-third annual general meeting of the Liverpool and London and Globe Insurance Company, Limited, was held on Tuesday, the 14th instant, at the Company's Head Office, 1 Dale Street, Liverpool.

INSURANCE SALESMANSHIP.

Mr A. Kentish Barnes, the chairman, prior to a summary of the company's operations, made reference to the recent speech of the Prince of Wales upon "British Salesmanship." Mr Barnes wondered how far the words of the Prince were applicable to insurance salesmanship. He felt that the companies were fully alive to the changing business needs of the day.

It was necessary now, perhaps more than ever, to choose and train men not only for executive and managerial posts—a matter to which the chairman had referred at the last annual meeting—but also to provide a constant stream of young officials equipped to deal with the requirements of the insuring public at home and abroad.

COLD WEATHER LOSSES.

The total estimated fire damage in this country during the year under review was the highest since 1923, and the early months of the present year showed no improvement. This raised an interesting point—the influence of a long, dry, cold spell upon insurance loss ratios.

During the wintry conditions experienced in this country, not only did the company's fire losses rise abnormally, but there was also a marked increase in the claims upon its accident, sickness, life and motor departments. Though it could not be asserted that the cold spell was wholly responsible for this state of affairs, the coincidence was too strong to be entirely ignored.

MOTOR CLAIMS.

The chairman mentioned that in 1928 the motor policyholders of the company received over £1,250,000 in settlement of their claims—about £250,000 in excess of the amount paid in 1927. At the moment there appeared little sign of improvement in the claims' cost of this branch of the accident department.

YEAR'S RESULTS.

Reviewing the 1928 results, the chairman said that once again the total income showed a satisfactory expansion standing at the record figure of £12,890,000 against £12,640,000 for the preceding year, an increase of £250,000.

Total underwriting profits, including the contribution from the life department, amounted to £601,989 against £556,916 in 1927, which, omitting only the war inflation period, was the best result recorded.

Total funds were £23,141,526, an increase of £941,619.

The directors recommended raising the dividend to 25s., against 24s. for 1927.

INCREASED LIFE BONUS.

The chairman said that the life department had just completed its quinquennial valuation. After strengthening the reserves, an increased reversionary bonus of 42s. per cent. per annum was declared for whole-life policies, and 40s. per cent. per annum for endowment assurances. This announcement would be very satisfactory to policyholders, following as it did on the high rate of bonus declared even through war and post-war periods, a record achieved by only a small minority of British offices. An even greater cause for congratulation was the decision further to raise the interim bonus on whole-life policies for the present quinquennium to 45s. per cent. per annum, and on endowment assurances to 43s. per cent. per annum.

THE GENERAL MANAGER.

The chairman said that after the excellent figures recorded it was with very great regret that he had to announce the resignation of Mr Lewis, the general manager. Mr Lewis was now approaching the age of retirement, and he felt that, taking all circumstances into consideration, he would like to give up the reins of office.

His resignation had been accepted by the directors with a real sense of loss.

He had joined the company as junior clerk in the company's Birmingham branch in 1883, and had occupied his present position since 1920.

Mr Lewis's record of management was well known. He had presented a series of rapidly improving accounts culminating with the present year's results, which, apart from the inflation years of the war, were the best in the annals of the company.

The chairman said he had been intimately associated with Mr Lewis as his chairman during the whole term of his managership. Mr Lewis brought with him to the company, when appointed general manager, a freshness of outlook, a directness of purpose and great courage, all of which were so essential at that difficult period. In Mr Lewis there were no relaxed fibres, no pauses of lethargy; he gave all that was in him to the service of this great company, which owed him a real debt of gratitude. (Hear, hear. Applause.)

The period of over eight years during which he had held office had been among the most eventful in its history.

Almost immediately on his appointment he was faced with the task of reorganising our American fire business, a matter calling for penetrating judgment.

The chairman was glad to have this opportunity, on behalf of the directors, to pay a tribute to the firmness, combined with patience, with which Mr Lewis had dealt with this and the many problems calling for solution during his period of office.

Whilst the company was losing a great servant, Mr Lewis would be missed by each individual of the staff, for above all he was an inspiring leader at whose hands ambition and endeavour would be certain of recognition. Mr Barnes with confidence could say that the company was fortunate in the personnel of the executive both at home and in the U.S.A.—a body of first-class officials who had for years worked under Mr Lewis's managership, and who were, in the opinion of the directors, thoroughly capable of carrying on.

Mr Lewis and the chairman had worked together all these years, and Mr Barnes knew he had always looked upon him as his friend as well as his chairman. He could only say he felt in his resignation a keen personal loss.

The chairman was happy to add he had been invited to join the boards of this company and the Royal, who would obtain the benefit of his valuable advice and co-operation in these positions. (Applause.)

The report and accounts were adopted unanimously; the dividend, as recommended, was declared; the retiring directors were re-elected as follows: Mr W. F. Moore; Mr W. J. Orr; Mr E. S. Parker; Mr R. Q. Wilson.

The auditors, Messrs. Stead, Taylor and Stead, were reappointed.

THANKS TO OFFICERS, STAFF AND AGENTS.

Colonel Sir James P. Reynolds, Bart., D.S.O., D.L., in proposing that the best thanks of the meeting be presented to the officers and staff and agents at home and abroad, expressed the great pleasure which it gave him once again to propose such a resolution. It was, Sir James said, always a pleasure to say "well done" to those who had, as was the case to-day, so well deserved it. At home, and wherever one travelled throughout the world, said Sir James, one could not fail to be greatly impressed by the fine, efficient and courteous services of "Globe" officials.

Referring to the general manager, Sir James said: We have been fortunate in the leadership we have had from Mr Lewis, who had played a conspicuous part in the history of the company at an important juncture, and he expressed his gratification at th thought that in the future the directors were to have the benefit of Mr Lewis's counsel on the board of the two companies. Sir James also referred, in appreciative words, by name to leading officials of the company at home and abroad.

Mr Evelyn S. Parker seconded the resolution, which was carried with applause.

MR HUGH LEWIS'S REPLY.

Mr Hugh Lewis (general manager), in responding, expressed his thanks to the chairman, Sir James P. Reynolds, and to Mr Parker. He referred particularly to the frank and friendly relationship he had enjoyed with the chairman and directors during the eight years he had been chief executive officer of the company. In promising to convey to the officers and staff of the Globe and all its associated companies the generous words of appreciation to which they had listened, Mr Lewis made special reference to Mr Harold Warner (United States manager), Mr J. Dyer Simpson (London manager), and Mr Duncan Reid (Globe Indemnity Company, New York), and o officials of the Thames and Mersey and Central Insurance Companies.

Mr Lewis voiced his inevitable feelings of regret at relinquishing his position of general manager of the company and emphasised the certainty he felt that officials and staff would continue to render in the future the splendid services which he acknowledged having received from them during his term of office. He said he believed this combination of great British insurance companies embracing the Liverpool and London and Globe and Royal offered one of the finest opportunities in business to-day for the exercise of talent and for the fulfilment of ambition. Mr Lewis endorsed the chairman's remarks that the organisation was in first-rate order, sound from top to bottom.

In conclusion, Mr Lewis expressed his appreciation of the kindness shown to him by the chairman and directors, and thanked them for the honour conferred upon him in inviting him to a seat on the board of the Royal and Liverpool and London and Globe.

THANKS TO THE CHAIRMAN.

Mr W. R. Glazebrook proposed a vote of thanks to the chairman for presiding, and spoke in a complimentary way of the work of Mr Barnes in the interests of the company.

Mr Glazebrook proceeded to add a personal tribute of his own to the general manager and voiced the regret which he, as chairman of the Royal and everyone associated with the two companies felt, at the termination of Mr Lewis's control as chief executive officer of the Globe and associated companies. He, too, was pleased Mr Lewis would have a seat on the board of the Royal and the Globe, and, further, that Mr Barnes would become a deputy-chairman of the Royal.

Mr Glazebrook made reference to the increased profits which the Globe had earned, indicating the enhanced dividend, now 25s. per share, which was in 1929 17s., representing an income of almost £200,000 a year.

Mr W. S. Crichton seconded the resolution, which the chairman briefly acknowledged, and the proceedings terminated.

The directors of the Liverpool and London and Globe Insurance Company, Limited, have re-elected Mr A. Kentish Barnes and Mr R. Q. Wilson as chairman and deputy-chairman respectively of the company.

GRESHAM FIRE AND ACCIDENT INSURANCE SOCIETY, LIMITED.

STRENGTHENED POSITION.
SUCCESSFUL YEAR'S TRADING.

At the nineteenth annual general meeting of the Gresham Fire and Accident Insurance Society, Limited, held on Tuesday, the 14th instant, at the head office of the society, 188-190 Fleet Street, London, E.C., the Chairman, Sir Reginald MacLeod (of MacLeod), K.C.B., in moving the adoption of the directors' and auditors' reports and the payment for the year 1928 of a dividend at the rate of 7 per cent., less income tax, stated that in the fire account there was a reduction in the premiums, but this was largely in respect of business purposely discontinued. The account resulted in a profit of £3,200, which had been transferred to the credit of the profit and loss account, and it was with considerable satisfaction that the board had found themselves in a position to allocate £8,573 from the available balance in the latter account to strengthen the fire reserve, increasing the rate to 40 per cent. The profit realised in the accident department was £6,011, and this compared favourably with the preceding year.

PROFIT AND LOSS ACCOUNT.

Coming to the profit and loss account, Sir Reginald pointed out that the interest income, owing to the largely augmented funds at the disposal of the society, had increased by over 50 per cent. The total profit for the year was £25,102 against £15,039 in 1927, and after adding £5,330 brought forward from 1927, the total available balance was £30,432. After making the provision for a 40 per cent. reserve in the fire account, as already mentioned, the directors recommended the payment of a dividend at the rate of 7 per cent. (less income tax) for the year 1928, and there remained £6,940 to be carried forward. The position of the society had undoubtedly been strengthened by the year's operations, and the funds of the society, including paid-up capital, amounted to 127 per cent. of the premium income. The Chairman concluded by referring to the fact that during the year Mr Brand Miller had resigned his position as general manager, and that the board had been successful in securing the consent of Mr Alexander Lawson, the general manager of the Gresham Life Assurance Society, to assume a like office for this society, and that he had also, at their request, taken a seat on the board.

The Deputy Chairman (Mr Courtenay C. S. Fooks) seconded the resolution, which was (unanimously) adopted.

On the motion of Mr Laurence Currie, seconded by Mr H. Hoare, the retiring directors, Mr Alexander Lawson, the Right Hon Lord Monk Bretton, C.B., and the Right Hon Lord Southborough, G.C.B., G.C.M.G., were re-elected. The auditors, Messrs Price, Waterhouse and Co., were re-elected, and the proceedings terminated with a cordial vote of thanks to the chairman.

BRITISH SHAREHOLDERS TRUST, LIMITED.

INCREASED DIVIDEND.
AN ACTIVE AND PROGRESSIVE YEAR.
LARGE ADDITION TO RESERVE.

The seventh ordinary general meeting of the British Shareholders Trust, Limited, was held on the 13th instant, at Cannon Street Hotel, London, E.C.

Mr Follett Holt, Chairman of the company, presided.

The Secretary (Mr F. Charlton Fry, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Ladies and gentlemen,—With feelings of satisfaction we will now ask you to consider the report and accounts for the past 12 months. The year, as far as we were concerned, proved to be an active and progressive one. Our investments, which are very widely spread, mainly at home, are, as you will see, approaching the million mark; the care of these alone is no small task, but the work on the issuing house side of our business proved to be very heavy and gave satisfactory results. I need hardly mention the great care that has to be exercised in the interests of our clients in selecting from the many businesses that come before the Trust those which we consider should be undertaken, and I take this opportunity of expressing the high opinion we all have of the patience, discrimination and ability of our managing director, Mr Crammond, in these and all our affairs.

THE YEAR'S PROFIT.

The balance sheet before you calls for little comment or, I think, explanation from me. The net profit arising from the year's operations amounted, as you will have seen, to the substantial sum of £170,096, a result which, on a capital of £538,212, we must not expect to achieve except in some very exceptional year.

Our policy, as you are aware, is to continue to strengthen the financial position of the Trust, and, therefore, in our best judgment we have transferred £125,000 to reserve, raising the total of this account to £300,000, and now recommend you to increase the dividend for the year from 6 per cent. to 7 per cent. and to increase the carry-forward by £5,000 to £30,139. In accordance with the policy foreshadowed at the last annual meeting, we paid an interim dividend of 3 per cent. on December 18 last, and the final dividend of 4 per cent., if now approved, will be paid on the 21st inst.

FINANCIAL STRENGTH.

Since the formation of the company some six years ago the effect of the conservative policy we have observed in our domestic affairs, as well as in our placings and public issues, has been to ensure our position in the City of London and in the provincial centres, and to place a high appreciation on the value of your shareholding. I hope within this policy, and with good fortune in the future, that we shall go from great to even greater financial strength, and so at all times be in a position to widen our field and to accept with equanimity good times and bad times as they may occur.

Since our last meeting we invited Sir John Ferguson to join our board, for we had not a Scotsman upon it. Sir John's wide banking and business experience will be of great benefit in our councils, and we are all very pleased indeed that he agreed to join us.

The report and accounts were unanimously adopted, and the meeting closed with a vote of thanks to the chairman and directors.

ALLIANCE ASSURANCE COMPANY, LIMITED.

FAVOURABLE QUINQUENNIUM RESULTS.
LARGELY INCREASED BONUS.

The annual general court of the Alliance Assurance Company, imited, was held, on the 15th instant, at the head office of the ompany in Bartholomew Lane, London, E.C., Mr. C. E. Barnett he chairman) presiding.

The secretary (Mr Sidney T. Smith) having read the notice conening the meeting and the auditors' report,

The chairman, in moving the adoption of the report and accounts, aid that as the year 1928 was the closing year of a quinquennium, hich quinquennium was itself the first of the company's second entury, he thought a comparison of the figures at the beginning nd the end of the five years would be interesting. In the life epartment the premium income had risen from £975,000 in 1923 o £1,373,000 in 1928. The fire department had shown an increase premiums from £1,877,000 to £2,042,000. The increase, though mall, had been steady, and the income in each year had exceeded hat of the previous year. The premiums in the marine department ad risen from £495,000 to £555,000, while the accident department howed the most striking increase—namely, from £602,000 to 1,054,000. These figures showed that the company was advancing, nd he thought they might claim a fair measure of success during he quinquennium. With regard to the accounts of 1928 the new usiness in the life account, after taking reassurances into account, ad increased from £2,465,190 in 1927 to £2,922,678, which was by ar the largest figure they had yet attained. Of the total life premiums shown in the accounts the Alliance share was about 1,373,000, and of the total claims the Alliance share was about 885,000. The claims by death had been rather heavier than usual, ut still only reached 72 per cent. of the amount expected. The lliance life fund had been augmented during the year by close on £700,000.

LARGE INCREASE IN BONUS.

Referring to the valuation made at the close of the year, the hairman said he would like to emphasise the large increase which t had been possible to make in the bonus allotted to holders of with-profit policies—namely, from 34s. per cent. per annum which was declared five years ago to 42s. which they were now declaring. The directors believed that in the absence of any catastrophic disasters they would be able to maintain this figure. The results of the valuation of the economic life fund were also very favourable.

The fire account again showed a good return, although the surplus was not quite so good as that of 1927, which was an exceptional year. The premiums at £2,042,779 were about £23,000 up on 1927, but the claims at £705,709 were nearly £70,000 higher. So far as the year 1929 had progressed fires had been unusually heavy. Taking it all round, the result of the 1928 fire account was not unsatisfactory, and it was pleasing to record that the contributions to that result by their associated companies had been very substantial.

MARINE ACCOUNT.

In the marine account £53,658 had been transferred to profit and loss account. Of this, £7,378 represented a surplus in respect of the 1926 underwriting account which was now closed, a further £20,000 having been retained as provision for possible claims on that year's account. He could not say that the outlook for marine insurance was very bright.

Efforts were still being made to improve rates and conditions, but so far nothing tangible had resulted. Meanwhile strict caution and careful selection of risks at fair rates and on reasonable conditions was the plan on which their underwriting was carried on. The income from the three divisions of accident business totalled £1,054,175, and it was the first time that for these kinds of insurance they had exceeded the million mark.

The year, if uneventful, had been favourable, and they carried to profit and loss a total including interest of £164,312. The principal contributor to the increase in premiums was the motor insurance business, which was now reaching considerable proportions and continued to yield a fair margin of profit. The business of the National Boiler Company, of which the Alliance Company was the principal shareholder, had again proved satisfactory.

The directors consider that the time had arrived for the inception of a scheme which they had long had in mind—namely, the formation of a reserve which might serve for the provision of pensions for retiring members of the staff. Accordingly, they had appropriated £250,000 for that purpose and felt sure that the shareholders would approve of that allocation.

The report and accounts were unanimously adopted, and a dividend of 18s. per share (less income tax) for the year was declared.

COMMERCIAL UNION ASSURANCE COMPANY, LIMITED.

GOOD RESULTS.—TOTAL ASSETS EXCEED £60,000,000.

The sixty-seventh annual general meeting of this company was held on the 14th instant in London.

The Hon Walter D. Gibbs (the chairman), in the course of his speech, said: In reviewing the business of the Company for the year 1928, the results of the three underwriting departments—fire, marine, and accident—may be summarised as follows: The total premiums were £16,894,809, the losses £9,231,056, and expenses and commission £6,962,100. After adjusting the reserves set aside for unexpired liability the underwriting profits amounted to £997,255, as against £1,162,016 for 1927. Although the difference between these figures of underwriting profits is £164,000 in favour of 1927, on the other hand, the trading surpluses of 1928, apart from the variations in the reserves, exceeded those of 1927 by £178,000.

REVIEW OF DEPARTMENTS.

In the fire department the premium income amounted to £7,498,537, a reduction of £520,000 as compared with the previous year. This reduction was to a great extent due to the revision of our business in the United States of America. Our returns during the current year from the United States show a larger premium income than that for the corresponding period of 1928, which indicates that the full effect of the revision on our premium income has now been experienced.

In the colonial and general foreign fields we maintained our premium income notwithstanding the keenest competition. In the home field the direct premium income has also been maintained, and this has been achieved in face of the gradual fall in rates of premium which takes place as permanent improvements are made in the conditions of many of the risks insured.

After adjusting the reserve for unexpired liability the fire business for the year resulted in an underwriting profit of £552,363, of which £400,000 was transferred to profit and loss account. A further sum of £400,000 has been transferred to the general reserve fund, leaving the fire fund at £7,742,782, which, though less than the amount brought forward, represents 103 per cent. of the premium income, as against 102 per cent. at the close of the previous year.

The premium income of the marine department, £636,925, shows an increase of £45,840 compared with 1927, and the increase in the surplus shows that the percentage of profit has been maintained. We have been able to transfer £100,000 from the marine account to profit and loss and to increase the marine fund to £1,204,541, at which figure it is nearly double the premium income.

The premiums in the accident department amounted to £8,759,346, a reduction of £495,000 on the previous year. This is due to the policy of revision of our accident business in the foreign fields, including the United States of America, which, although it is not yet completed, has already brought about an improvement in our loss experience. After adjusting the reserve, the accident business for the year resulted in an underwriting profit of £295,127, of which £150,000 was transferred to profit and loss account, leaving the accident fund at £5,985,197, representing 68·33 per cent. of the premium income, as against 64·12 per cent. at the close of the previous year.

In the life department, partially, no doubt, as a result of the very favourable distribution of profits which we made last May, the new business both gross and net shows a substantial increase, the gross figures at just over £4,350,000 exceeding those of 1927 by over £177,000, and the net figures at £4,105,000 being nearly £150,000 higher. The premium income also is greater by almost £90,000, and notwithstanding that there have been special payments of about £225,000 on account of cash bonuses and £140,000 to the shareholders, the life fund has increased by £781,000, and now exceeds £16,000,000. These figures do not include the British General life business, which continues to make satisfactory progress.

THE ACCOUNTS.

Turning to the profit and loss account, the balance carried forward is £1,544,851, which compares with £1,308,104 last year. The directors recommended the payment of a final dividend for the year 1928 of 10s. 3d. per share, less income tax, which, with the interim dividend of the same amount paid in November last, will make a total distribution for the year 1928 of £1 0s. 6d. per share, less income tax.

On the balance sheet the general reserve fund amounts to £3,152,480. Our total assets, including those of the various life funds which we administer, exceed £60,000,000. The market value of the Stock Exchange securities at December 31, 1928, exceeded the values at which they appear in the balance sheet by a considerable amount.

The report was unanimously adopted.

GRESHAM LIFE ASSURANCE SOCIETY, LIMITED.

FAVOURABLE MORTALITY RATE.
INCREASE OF NEW BUSINESS.
PROMISING QUINQUENNIUM OUTLOOK.

The ordinary general meeting of the Gresham Life Assurance Society, Limited, was held, on the 14th instant, at the head office of the society, 188-190 Fleet Street, London.

Sir Reginald Macleod (of Macleod), K.C.B., chairman of the company, presided.

The Assistant Manager (Mr Robert S. B. Savery) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—Our report has been circulated, and I assume you will take it as read. You will all notice with great regret that our general manager does not occupy his usual seat. He has been seriously ill, but I am happy to tell you he is rapidly regaining strength, and we expect his return in renewed vigour at an early date. In laying before you our eightieth annual report I am pleased to be able to congratulate you upon the society's continued prosperity. On this occasion the new sums assured amount to £2,414,746—an increase of £350,000—with a new premium income of £117,944—an increase of £8,000. Five thousand five hundred and ninety-five policies were issued and 349 proposals were declined. We received during the year the sum of £24,642 as purchase money for annuities, representing an annual payment of £3,454. On the other hand, owing to the death of 94 annuitants, the society was released from payments to the extent of £3,350 a year.

The income of the society amounted to £1,241,489, showing the satisfactory increase of £69,835. The total premiums received amounted to £857,056, being an increase of £38,648 on the previous year, and the interest, less tax, amounted to £374,052, representing an increase of £31,275. The death claims with bonus additions required £202,298, a figure greater by £5,138 than the corresponding amount in the preceding year. But notwithstanding this increase we have again been fortunate in experiencing a very low mortality rate, the claims for the year being only 66 per cent. of the amount expected according to the table used in the valuation.

This is the fourth year of the society's quinquennium, and throughout the whole of these four years the mortality has been continuously favourable, averaging only 62½ per cent. of that expected for the entire period. We are all aware that death has been busy among us during the early months of the current year, but the ratio is in our case still greatly below the expected, and we can look forward to a remarkably favourable showing for the next five years' period terminating next December. The claims under matured endowments amount to £303,434. The amount is again large, and indicates the growing popularity of this class of assurance during many years past. There was an increase in the new business ratios in all three sections of the operations, British, Colonial and Foreign, which accounts for the increase of the expense ratio by nearly 1 per cent. of the premium income. In this connection it is well to remind you that the society's operations extend to many foreign countries, where the cost of production and of administration exceeds that with which companies transacting purely British life business are confronted, and also that our premium rates charged in those countries are based upon conditions appropriate to them.

The rate of interest realised on the funds after deduction of income tax was £5 4s. 2d. per cent., representing an increase of 3s. 4d. on the figures realised in 1927. Thus, for the first four years of the quinquennium an average net yield of £5 per cent. on the funds has been obtained—and remembering that profit from interest forms one of the chief sources of the profits of a company, the result is extremely gratifying. (Applause.)

Our assets have increased during the year by no less than £370,839, and now stand at £7,753,742. As will be seen from the directors' certificate, this figure is below the actual value according to a valuation of the assets at market prices and rates of exchange current on December 31st last. I would call your attention to an item in the revenue account, viz., £66,755 10s., referring to the adjustment of the rates of exchange for French, Greek and Indian currencies. As regards French francs and Greek drachmas, the society has on two previous occasions modified its exchange rates in order to approximate more closely to the current quotations then ruling. A comparatively small change has therefore now been required in order to bring our rates into accord with the recently stabilised figures. As regards Indian rupees, we are still awaiting stabilisation, but in the meantime it has been considered advisable to adopt as our basis the central rate which has governed market quotations for several years past. The society has issued a large number of policies in these three currencies, and as our net liability under the contracts is reduced by the adoption of the altered exchange rates, this means that the change now made does not involve any loss to the society. (Applause.) But for this adjustment the life fund would have been £7,524,074, showing an increase for the year of £42[illegible]5,009. At our meeting last year I mentioned a step we had taken with a view to popularising insurance by offering facilities for payment of premiums by monthly instalments, and I am happy to say that full advantage of those facilities has been taken by a considerable number of recent entrants. I am also glad to be in a position to report to you that considerable progress is being made under other of the society's schemes—e.g., assurances with cessation of premiums during invalidity, assurances without medical examinations, house purchase combined with insurance, etc., with results satisfactory both to our assured and to the society. (Applause.)

It is with a very special sense of appreciation that I refer on this occasion to the services rendered by the staff. Mr. Savery, the assistant manager, and Mr. Stebbing, the assistant secretary, have ably met the calls on their time and ability during the absence of the general manager and the secretary, while the other officers of the society and the staff at large, both at head office and the branches, have carried out their duties with all loyalty to the entire satisfaction of the board. (Applause.) I beg to move: "That the directors' and auditors' reports be approved and adopted."

Mr Courtney C. S. Fooks, the deputy chairman, seconded the resolution, which was unanimously adopted.

Mr Walter Parker Rocke, F.C.A. (Messrs. Price, Waterhouse and Co.) was reappointed auditor for the ensuing year on the part of the shareholders.

Mr Rocke, in acknowledging his reappointment, said he would like to take the opportunity of again congratulating the meeting on the excellent progress which the society had made during the past year.

Sir Albert William Wyon, K.B.E., F.C.A., was reappointed auditor on the part of the policyholders.

Sir John H. Davidson, K.C.M.G., moved a resolution that the best thanks of the meeting be given to the local committees abroad for their interest in, and their attention to, the affairs of the society during the past year.

Mr C. H. Beadnell seconded the resolution, which was unanimously adopted.

The Rt Hon Lord Monk Bretton, C.B., in proposing a vote of thanks to the chairman, said that during the seven years Sir Reginald had been chairman of the society he had been assiduous in his attendance and unremitting in his efforts on their behalf; his ear was always open to anyone who really had something to say.

The vote of thanks was unanimously accorded, and the chairman having acknowledged the compliment, the proceedings terminated.

HAMBROS BANK, LIMITED.

DEMAND FOR LONDON ACCEPTANCES.

The annual meeting of Hambros Bank, Limited, was held, on the 16th instant, at 41, Bishopsgate, London.

Sir Eric Hambro, K.B.E., the chairman, said that from their point of view, the most important event of the past year had been the rise in money rates here and all over the world, the first symptom of which was the spectacular rise in call money rates in America. Although those rates had nothing to do with the discount quotations for fine or commercial bills, either in New York or in other centres, it had soon become apparent that American and also European money would be attracted by them; also, the threat of the Federal Reserve to use its rate to stop speculation had caused considerable uneasiness, as any real move in that direction would have meant extreme and penal rates here.

The result of that, however, had been to increase the demand for London acceptances, and one could say that practically the whole of the pre-war acceptance business was now back in London, where it would probably remain, and international traders had found that London was the only stable money market and that its central banking system was the best in the world. He considered the opportunity ripe for accepting houses and bankers to come together to fix minimum acceptance commissions, which had been cut far too low.

Norway had successfully weathered the conditions which were inevitably entailed with the return to the gold standard. Her system had been subjected, during the summer of 1928, to a severe strain, but he was glad to say that all their confidence in its inherent stability had been more than justified, and conditions were fast becoming normal. Italy had continued to suffer during the past year from that stringency which followed stabilisation and the readjustment of internal to foreign prices. That readjustment was now completed.

In January of the present year they, in co-operation with other friends, had issued the London tranche of the Roumanian Stabilisation Loan. While they had in the past had financial relations with Roumania, they were hoping that in the future those would show continued development. None of the allied countries were faced with such problems of reconstruction as Roumania, and he could only admire the success with which they had been tackled. Given a stable currency, he regarded that country's future as assured, based as it was on its immense natural resources.

The report was adopted and a dividend of 15 per cent. was declared, making 22½ per cent., less tax, for the year.

LANADRON RUBBER ESTATES, LIMITED.

CHAIRMAN ON FUTURE OF RUBBER INDUSTRY.

The twenty-first ordinary general meeting of the Lanadron Rubber Estates, Limited, was held, on the 15th instant, in the council room of the Rubber Growers' Association, 2–4, Idol Lane, London, E.C. Mr Eric Macfadyen (the chairman) presiding.

The chairman, in moving the adoption of the report and accounts, said: Since our last meeting the company has attained its majority. Founded in October, 1907, it belongs to the relatively small section of our industry which dates from before the great rubber boom. Under the fostering care of our late chairman, Mr F. W. Barker, supported on the board by my colleagues Mr Hunt and Mr McArthur, its financial health has been sedulously protected. Only twice in its history has a dividend not been forthcoming; over the whole period of 21 years the annual distributions have averaged over 13 per cent., a very large extension programme has been accomplished, and substantial cash resources have been accumulated out of profits. It would be ungrateful, upon this occasion, to omit an acknowledgment of the loyal and devoted service which the company has been able to count upon on the part of its Eastern staff. I am glad to think that Lanadron was among the very earliest of rubber companies to establish a provident scheme for the benefit of its employees.

OUTLOOK FOR RUBBER INDUSTRY.

A year ago, when the abandonment of control of output had recently been decided upon, we felt it incumbent upon us to deal with our profit and loss account upon conservative lines. That is still necessary to-day, but, although the outlook for rubber is by no means clear, it is certainly less obscure than 12 months ago. We consider it would be unwise to distribute a sum which would reduce our carry-forward, but as more than a clear 5 per cent. was earned in 1928, we feel justified in recommending a dividend at that rate. The increase of consumption, particularly in the United States, has justified the more optimistic hopes of those concerned in growing rubber, and if the policy advocated by the trade associations a year ago of supporting the price on a diminishing scale over two or three years, had been followed, it is now clear that the industry would have been tided over its bad time without a collapse in the market. Whether expanding consumption can care for the immense weight of uncontrolled output over the immediate future is uncertain. The market outlook is a trifle more cheerful within the last few days. The air at the moment is thick with promises and predictions, and I am not going to add to them. But it is impossible to be pessimistic about the long view for rubber.

The unique qualities of rubber ensure it an ever-growing demand. The traffic problem by itself promises that, for more and more it becomes evident that it can only be solved in terms of rubber. Transport, we are told, is civilisation, and with every year modern transport means more vehicles, heavier vehicles, and faster vehicles. No modern community can afford to allow its costly roads to be broken up and its costly buildings shaken down by the incessant vibration of modern transport, when a material of the shock-absorbing capacity of rubber is available for use. It will soon be compulsory for all motor vehicles to run on pneumatic tyres, and the time is not far distant when city streets at any rate will have to be surfaced with rubber.

STRONG FINANCIAL POSITION.

As a result of forethought in the past our financial position is a strong one. Our issued capital is £360,000, and we have 5,391 acres of rubber to represent it. In addition, we have a reserve of £61,000 which is wholly unspent. We are engaged, in partnership with our friends of the Ledbury Company, in developing a new estate, of which our share is two-thirds, which is being planted up with the very best obtainable bud-grafted material. As our old rubber gradually becomes less valuable—as it must do sooner or later, for rubber cannot last for ever—we rely upon these new bud-grafted clearings to take its place. Indeed, we expect it to more than replace an equivalent acreage of old rubber, for we anticipate that its yields will considerably surpass the best results of our older estates.

Mr Charles McArthur seconded the motion, which was carried.

The meeting closed with a vote of thanks to the chairman and directors and to the manager and the staff on the estates.

LUNUVA (CEYLON) TEA AND RUBBER ESTATES, LIMITED.

15 PER CENT. DIVIDEND MAINTAINED.

The twenty-second ordinary general meeting of the Lunuva (Ceylon) Tea and Rubber Estates, Ltd., was held, on the 14th instant, at 2-4 Idol Lane, London.

Mr H. J. Welch (the Chairman) said: During 1928, capital expenditure on buildings, machinery, etc., amounted to £75,492, which sum includes the cost of the new tea factory on the Sapumalkande estate. Expenditure on development amounted to £23,229, and on the purchase of additional plantable land £1,492. This expenditure increased the balance-sheet cost per acre of the planted area, which, if calculated by deducting the excess of liquid assets over liabilities from the issued capital, and allowing for the dividend recommended, is now under £41 per acre, as against £37, the figure at which it stood last year.

The company now owns 13 estates, consisting of 14,044 acres, of which 6,607 acres are planted with tea, 4,135 with rubber and 860 acres with coconuts. The average profit per acre of tea in bearing was £17 3s. 9d., against £16 17s. last year. In spite of the rubber crop being severely restricted, the net profit for the year amounted to £120,721, or only £721 less than in 1927. It represents 19 per cent. upon our paid-up capital. As rubber represents about 32 per cent. of the company's mature areas, I think you will agree that the results for 1928 were satisfactory.

YEAR'S DIVIDEND.

The directors propose to pay a final dividend of 10 per cent., less tax, making 15 per cent. for the year, being the same dividend as that paid for 1927. They also propose to transfer to taxation reserve the sum of £23,000, and to increase the general reserve to £235,000 by transferring to it £15,637.

They further propose to transfer £2,500 to the staff retirement fund and staff special reserve. As was the case last year, part of this sum will be allocated to certain of the older members of the staff, and the balance, after meeting obligations to the staff retirement fund, will be added to the staff special reserve created last year. A sum of £46,453, which is a small increase over last year, will remain to be carried forward.

The company's prospects for the current year are, in my opinion, better than they were at this time last year. The market prospect for teas of the class now being produced by this company appears to be very good, and, as far as we can see at present, we shall realise an increased profit from this product. Even at the present low prices we can produce rubber and coconuts at a profit. If the prices for our teas are maintained, a return to reasonably remunerative prices for rubber and coconuts would enable us to make substantially larger profits than those of last year.

The Chairman concluded by moving the adoption of the report and accounts and the declaration of the dividend recommended.

MR THOMSON ON HIS VISIT TO ESTATES.

Mr G. Nicol Thomson, in seconding the resolution, said: I have lately returned from a long visit to Ceylon, where I had the opportunity of investigating on the spot the many problems that arise in the working and the development of your various estates. I am glad to say that much progress has taken place since my previous visit of two years ago, especially in connection with our new tea factories and the generally improved conditions of tea manufacture. The excellent comparative prices our teas are now fetching in the open market are proof of this. The agricultural conditions on the estates are all in good order as the result of careful supervision and a plentiful supply of labour. We hope to maintain, and I think we may increase, our tea crops by somewhat more liberal manuring. I can only assure you that, in my opinion, our tea areas will continue to give increasing profits. I am also glad to report progress in our rubber areas, with the resting and cultivation done during the past three years. We can look forward to good yields from all except our oldest fields. In a year or two's time it may be possible and desirable to replant these old fields with approved high-yielding stock.

I had the opportunity of seeing large and widely spread areas of rubber during my recent visit to the East and also of discussing the agricultural position of rubber with many planters of high standing. Although during the current year we may see very large crops from the rested rubber where restriction was really enforced, such as the F.M.S., and from the fuller tapping that is taking place, in the general desire to reduce costs, I doubt if the high yields will continue beyond this year, which may very well turn out to be the apex year of rubber production from the present planted areas. Before sitting down I would like to remind shareholders that the 1,000 odd acres of young rubber we have, not yet tapped, will, in my opinion, be a very valuable asset, as most of it should be yielding well when rubber may not be so plentiful nor so cheap as it is to-day.

The resolution was carried unanimously.

CLUNY RUBBER ESTATES, LIMITED.
FAVOURABLE FORWARD CONTRACT.
MR C. McARTHUR ON THE PROSPECTS.

The nineteenth ordinary general meeting of Cluny Rubber Estates, Limited, was held, on the 15th instant, in the Council Room of the Rubber Growers' Association (Inc.), 2 Idol Lane, London, E.C., Mr Charles McArthur (the chairman) presided.

Mr John McInnes, representing the secretaries (Messrs Harrisons and Crosfield, Limited), read the notice convening the meeting and the report of the auditors.

The Chairman said: Gentlemen, I propose, with your permission, to take as read the directors' report and accounts as published. Supplementing the printed report, the following comments may be of general interest. In regard to the balance sheet, general reserve has been increased by the transfer of £3,000 which you authorised a year ago. Taxation reserve, plus the tax to be deducted from the dividend which we ask you to sanction for 1928, will more than suffice to pay all known tax liability, due or to become due in respect of profits to December 31st last.

On the assets side of the balance sheet, development expenditure for the year of £2,466 5s. 1d. on the immature area, including the planting up of 14 acres more in 1928, has increased the total by that amount. Buildings, machinery, plant, &c., stand at the moderate figure of £3,148 5s. 4d., and no prospective expenditure is anticipated that will exceed the annual amount of normal depreciation. Rubber in stock and in transit at £8,228 10s. 9d. is in excess of normal, and is due to conditions following on the removal of Government restriction. Practically the whole of this stock has been sold since the close of the year.

Dealing with the profit and loss account and your directors' recommendations for disposal of the profits, you will no doubt recognise that the position is more satisfactory than could reasonably have been expected when we met on a similar occasion a year ago. In addressing you then, I said: "The only thing fairly certain regarding prospects for the next year or two is that rubber companies that earn a profit in producing and marketing their produce will be fortunate."

We have had our small share in the general good fortune. To some extent it was due to the small forward sale at 1s. 9¾d., London landed terms, of which I advised you a year ago, that we averaged 11·78d. per pound for 1928 production. Our total profit for the year of £6,195 4s. 3d. is as satisfactory as it was at one time unexpected, and we trust you will accept our proposals as to its disposal.

PROVISION FOR STAFF.

In recommending that we transfer £300 for the benefit of staff, I should perhaps explain that your directors do not on this occasion propose to pay more to the revenue of the staff provident fund than the annual contribution they undertook to make. Out of the amounts you have from time to time authorised for this purpose, your directors set aside a reserve fund—separately invested—which was intended to ensure under any conditions of the rubber market, that we should at no time fail to provide the company's annual contribution to the provident fund. As you are aware, this fund is common to the group of Lanadron, Ledbury and Cluny companies, but whereas the first two companies each had a previous provident fund of their own and started with reserves from which to meet their liabilities in the joint fund, Cluny had to create her reserve, and it is as yet barely adequate for complete safety of her obligations to the joint fund.

It is in the interests of a loyal staff that Cluny's reserve should be strengthened. In years of prosperity we have also, out of the transfers from profits that you have sanctioned, made supplementary contributions to the revenues of the fund on the same scale as Lanadron and Ledbury, and in attempting nothing additional on this occasion Cluny is still on exact equality with the other two companies. I have explained this at some length because I know you will agree with your directors in the desire to be as fair and generous to the staff as circumstances will permit.

BOARD'S EXTENSION POLICY.

The proposal to place £1,500 to general reserve is for the purpose of enabling us to continue the policy of small extensions of the planted area as labour and other conditions will permit. This sum, with the balance of capital and reserves still unspent, will suffice to cover all development expenditure on our immature area and to plant up and bring to the bearing stage a further 50–60 acres. As I mentioned last year, these extensions make the estate a more economical unit and provide an insurance against the possible contingency of decreasing yields from the older planted areas.

The balance of £6,969 2s. 3d. proposed to be carried forward provides reasonable provision for financing the ordinary needs of the company and for safeguarding the financial position in the uncertain market conditions that have so long prevailed.

Throughout the past year we have received the same high standard of loyal and efficient service from estate manager and staff, our Eastern agents, and the visiting agent, and I am sure that shareholders will wish to convey to them an expression of appreciation.

CURRENT YEAR'S ESTIMATE.

Regarding the future, we estimate to produce this year a crop of 420,000 lb., which we regard as our optimum crop, though it is certainly not the maximum we might produce. So far as profits are concerned, the chief determining factor will, as usual, be the course of the rubber market, regarding which I will not trouble you with any personal views of my own. I can, however, assure you that both in the East and at home every effort will continue to be made to achieve successful and satisfactory results.

For the benefit of current year's production we have forward sales of 203,255 lb. (90¾ tons) at an estimated average net price of 10·75 per lb., equal to 1s. per lb. London landed terms.

I now move: "That the report and accounts for the year to December 31, 1928, be received and adopted," and shall ask Mr Macfadyen to second that, and after he has done so I shall endeavour to answer any questions that shareholders may desire to ask.

Mr Eric Macfadyen seconded the resolution, which was carried unanimously, and the dividend of 6 per cent. approved.

Mr S. L. Hunt was re-elected a director, Messrs Wyatt, Williams and Co. were reappointed auditors, and the proceedings terminated with a vote of thanks to manager, the staff, and the agents in the East.

LEDBURY RUBBER ESTATES, LIMITED.
STRONG FINANCIAL POSITION.

The twentieth ordinary general meeting of the Ledbury Rubber Estates, Limited, was held, on the 15th instant, in the council room of the Rubber Growers' Association, 2–4 Idol Lane, London, Mr Eric Macfadyen (chairman of the company) presiding

The Chairman, in moving the adoption of the report and accounts, said:—Our issued capital stands as before at £108,600 and general reserve at £35,000. With the amount of £5,000 we are proposing to-day to transfer to depreciation reserve the total of the three items will be £148,600. This exceeds by more than £11,000 the total cost of our planted areas, with the equipment of buildings, machinery and plant (after depreciation). This capital surplus is, therefore, available to meet future development of our own estates and the new property, we are gradually planting up in partnership with the Lanadron Company—Sungei Sabaling Estate.

INVESTMENTS—SIONE TIN.

Among our investments you will see we now hold 3,300 £1 shares in Prang Besar, the nursery estate which specialises in the provision of improved seed and budding material, and we retain £13,000 in £1 shares in the Sione Tin Co. This latter, which was formed to mine a portion of our Sione estate, has lately commenced operations. Mr Cook, who represents us on the board of the company, and his colleagues are to be congratulated on the clockwork precision with which all the preliminary stages and development of the company have been carried through, and we believe the mining prospect to be excellent. The level of price to which tin has fallen recently is still one at which we may reasonably look for a satisfactory return on this investment. We held, further, at the date of the balance sheet over £20,000 in cash and gilt-edged securities. Our finances may be considered to be in a sound condition, and I calculate that our capitalisation per planted acre, leaving out our share in the estates I have mentioned and in the tin mine, is under £37 per acre. On this showing we may hope to be able to continue to pay dividends even with rubber at prices which would show no profit to many plantation companies.

There is no change in the acreage of our own estates, which stand at 2,431 acres planted, of which all but 7½ per cent. is mature. On Sungei Sabaling 400 acres is now planted, as against 200 a year ago, and a further small extension is being made this year. Our share in this estate is one-third. It will have the advantage of having been planted up from the start, under expert advice with trees which may be expected in due time to give an exceptional yield of rubber. Something like an additional year is likely to be required for rubber planted on the new lines to reach maturity, and on account both of that and of the extra expense on nursery work the capital outlay will be greater than in the case of older estates. But sufficient experience has now been accumulated to promise that both output and net profit will be on a definitely higher scale.

CURRENT YEAR'S PROSPECTS.

With the drop in the price of rubber our profits fell from £51,781 in 1926 to £18,324 in 1927, and have further fallen to £11,398 for 1928. We expect to harvest a full 10 per cent. increase of crop, and we have contracted for delivery out of 1929 crop some 200,000 lb., or rather more than a quarter of the estimated total, at 10¾d. per lb. London. Inasmuch, however, as we realised last year practically 11½d. per lb., some further shrinkage in net profit must be anticipated, unless we are to see some recovery in price before the end of the year.

I am sorry to inform you that our visiting agent, Mr. Sidney Morgan, whose services in that capacity we have greatly appreciated, has lately decided to retire from active visiting work. Mr Morgan's latest reports on all our estates record a very satisfactory condition of things. We have every confidence in our staff—and may I say here how pleased we are to see Mr Godward with us to-day, and also our old manager, Mr Sharpe Smith?—and we believe the company will continue to give a good account of itself, subject to the vicissitudes of the market.

The report was adopted, the payment of the dividend, as recommended, was approved, and the retiring director and auditors having been re-elected the proceedings closed with a vote of thanks to the managers, the staff on the estates, and the Eastern agents.

MARGARINE UNION, LIMITED.
CONSOLIDATION AND DEVELOPMENT OF THE COMBINE.
IMPROVED LIQUID POSITION.

The first annual general meeting of Margarine Union, Limited, was held, on the 10th instant, at the company's offices, Union House, St. Martin's-le-Grand, London, E.C.

The chairman of the company, the Right Honourable the Earl of Bessborough, C.M.G., presided.

He explained that it was important that there should be no clash of interests between Margarine Union and Margarine Unie, and that, therefore, an agreement was concluded between them for the equalisation of capital value on liquidation and of dividends of corresponding classes of shares, which resulted in the rights of the shareholders of both companies being identical, and he, therefore, proposed to talk of the combined results of the two companies.

STRENGTHENED POSITION.

The formation of Margarine Union and Margarine Unie made it possible to obtain controlling interests in a considerable number of competitive factories on distinctly favourable terms, by which the position of Margarine Union and Margarine Unie became even more preponderating than that of Jurgens and Van den Berghs in the past. This position had been further strengthened by the successful negotiations with the important Schicht and Hartog concerns, the boards being extended by the inclusion of Messrs Heinrich and Georg Schicht and Mr Jacob Hartog. He mentioned incidentally that the allied and subsidiary companies of Margarine Union and Margarine Unie amounted to between 300 and 400 in number.

LARGER YIELD ANTICIPATED.

The profits earned by the businesses acquired during 1928 were not reflected in the present accounts, but the 1929 profits of these businesses would be included as a matter of course in dealing with the 1929 figures; the directors confidently expecting that the total capital outstanding would show a yield in excess of that on the smaller capital during the period now under review.

The work of moulding together the Jurgens and Van den Bergh concerns, which were spread over twenty European countries, and controlled sometimes as many as twenty to forty factories in each country, has been practically carried out. The full result, however, would only be felt as time went on, partly in 1929, perhaps completely in 1930.

Raw materials for the whole concern were now purchased at one centre and dealt with by one administration.

CONTINUALLY INCREASING CONSUMPTION.

He mentioned that over £1,600,000 had been spent on advertising during 1928, and had been fully charged to profit and loss. The consumption of margarine was continually increasing, no doubt due to the fact that it occupied a rather unique position because, whilst being one of the cheapest and best food commodities in existence, it was sold at the same price to the public as before the war.

Alterations and improvements during the year had cost £900,000. On the other hand, depreciation amounting to over £1,000,000 had been written off, and £1,200,000 had been charged against the 1928 results for the cost of upkeep and repairs; the factories were, without exception, in a high state of efficiency.

CAPITALISATION AND RESERVES.

He dealt with the capitalisation of the two companies on December 31st, explaining that the combined capital at December 31, 1928, amounted to £11,396,731, as against £6,391,666 at the time the two companies were first formed, the increase resulting from the acquisition of the remaining ordinary shares of the Jurgens and Van den Bergh concerns against shares of Margarine Union and Margarine Unie.

The latter shares were taken into account at their approximate market value on the date when the offer for exchange was made, the surplus so derived being in the nature of a premium which, together with premiums received on the issue of shares for cash and other exceptional profits, were carried to the general reserves, which at the end of December amounted to £2,357,197.

He went on to explain that since the end of the year the liquid position was greatly improved by the issue of ordinary shares to existing shareholders at 150 per cent., which had resulted in the issued capital of the combine being raised to £14,851,753 and the general reserve fund being increased to £4,147,043.

PROFIT FAR EXCEEDS EXPECTATIONS.

He was glad to state that whereas at the formation of the companies the profit expected to be available for the ordinary shareholders might amount to 9 per cent. on the then existing ordinary capital, the actual profit available for 1928 on the materially increased ordinary capital was about 16½ per cent.

The preliminary expenses, registration, and stamp duties, in connection with the formation of the companies, amounted to £479,129, and the directors proposed that this amount should be charged against the 1928 results.

The report and accounts submitted to the meeting were adopted, and it was resolved to pay a final dividend of 6 per cent. on the ordinary shares, making 10 per cent. for the year.

The retiring directors and auditors were re-elected, and Messrs Heinrich and Georg Schicht and Mr Jacob Hartog were elected to the board.

At an extraordinary general meeting which followed the ordinary general meeting, the alteration in the articles of association made necessary by the increase in the number of directors was agreed to.

A hearty vote of thanks was accorded to the chairman, directors, and the staff, and the proceedings terminated.

SPHINX ELECTRIC, LIMITED.
IMPORTANT EXPANSIONS OUTLINED.

The statutory meeting of Sphinx Electric, Limited, was held, on the 14th instant, at Sphinx House, Hatton Garden, London, E.C.

Sir A. Cecil T. Beck, J.P. (the Chairman) said: The progress made is in excess of the programme outlined in our prospectus.

Dealing with the volume of sales, although the large advertising campaign planned by the company is only just starting—it might be interesting to quote a few comparative figures—*i.e.*, our sales for the week ended May 4 show an increase over the preceding week of 33 per cent., 150 per cent. over the corresponding week of 1928, and 52 per cent. over 1927, which was the previous peak year for the Sphinx enterprises, while for week (ended May 11th) the increase was 45 per cent. over the corresponding week of 1928.

We have to-day 7,800 active trading accounts on our books, and since our inception no week has passed without appreciable additions to our trading connections.

Our manufacturing programme includes a greatly increased output in readiness for the coming lamp season, due to the excellent reception that has been extended to our English-made lamps.

Negotiations have reached an advanced stage for the acquisition of a large provincial electrical manufacturing house, with a factory in Birmingham and branches in the important industrial centres. This business is a well-established one with an unusually good record of increasing profits over many years.

We are also in treaty for a controlling share interest in two associated companies manufacturing and selling patented electrical equipment of almost universal application, contracts now being negotiated in respect of which amount to several hundreds of thousands of pounds. Should negotiations for the absorption of these additional businesses be satisfactorily completed an increase in our share capitalisation will be necessitated, but no issue of additional capital will be made except upon favourable, probably bonus, terms to shareholders.

Your board, as I have said, are aiming at the most rapid expansion of the business consistent with soundness and caution. No step, however, is or will be taken without the most careful consideration.

In conclusion, I feel justified in saying that we have a business built on well-set foundations and showing every sign of healthy and vigorous growth.

FORESTAL LAND, TIMBER AND RAILWAYS COMPANY, LIMITED.

PROPOSED ISSUE OF SIX PER CENT. TEN-YEAR NOTES.

The twenty-third ordinary general meeting of Forestal Land, Timber and Railways Co., Limited, was held, on the 10th instant, at River Plate House, London, E.C.

Baron Emile B. d'Erlanger (the chairman), dealing with the balance sheet, said that he had again recently received inquiries from shareholders as to the probable life of the company's quebracho forests. On the basis of the present reserves, present average annual purchases of logs from forests other than their own, and their average annual production of extract and export of logs, the directors had been given the assurance that anything below twenty years was a conservative estimate. This assurance was last given in 1926. They never missed an opportunity of adding to their reserves, and it would be surprising indeed if such opportunities on a moderate scale should not present themselves from time to time.

Last year when he had the pleasure of meeting the shareholders, the sky had never looked set to finer weather. They had sold at that date a very large proportion of their year's output, and yet, like an old sea dog, he sensed bad weather, and told his colleagues of his forebodings. Trade began to fall off in the summer, and the demand for tanning extract had dropped to a lower level during the past six months than he had known it fall to for many years past. Undoubtedly this was due to a very great extent to the bad times through which the leather trade was passing the world over. The directors believed that for a couple of years past previous to the semi-crisis too much leather was manufactured, and that the accumulation of these high-priced stocks corresponded with a momentary adverse swing in the pendulum of consumption, thus producing a temporary crisis.

OUTLOOK FOR QUEBRACHO INDUSTRY.

During the twenty-three years of his connection with the quebracho industry, he had seen the trade grow from under 40,000 tons to 250,000 tons a year. Over these years the world's stock did, in normal times, correspond to three to four months' production; production and consumption being equal at present, the world's stock did not exceed—if it attained—six months' stock, calculated on the average consumption of the past two years, but consumption was at present much lower. The bulk of this stock was in their hands, and there was no reason whatsoever why they should sacrifice it and drop their selling price, especially as they were convinced that a reduction in price would not stimulate demand They must therefore be prepared, and take such measures as they might deem necessary, to carry their stock comfortably whilst not only the consumption caught up with the average of the past two years, but recovered the rhythmical progress of its yearly increases over the past twenty years. Barring the contingency of a substitute for quebracho extract—a contingency they had heard of for twenty years—the resumption of progress was certain and only a question of time.

A CONSERVATIVE POLICY.

To be strong they must insure as far as humanly possible their dividend for 1929, for heavy fluctuations in dividends were harmful to the high credit of a company and against the best interests of the shareholders. They must further make themselves independent of overdrafts and short-term credits. In pursuance of this policy, they had adopted a conservative policy in dealing with their accounts and profits for 1928. If they had reduced their dividend from 9 per cent. to 7½ per cent., they had increased their carry-forward to £253,450. With such a carry-forward he had little doubt that they had made sufficient provision to be able to pay a fair dividend in almost any circumstances they could foresee for 1929. If things were to mend meantime, they would be able to resume a more generous dividend policy.

In past years they had devoted large sums to capital expenditure both in Argentina and in South Africa, and the necessity of carrying heavy stocks had not only exhausted their cash resources but incurred short-term liabilities. The directors considered that to make the company strong and independent they ought to raise approximately £1,000,000, and they intended doing this by an issue of six per cent. ten-year notes, especially as another £300,000 would be required over the next three to four years to bring their African estates to full maturity and productivity. These notes would be placed at the highest possible price without underwriting or advertising expenses. They had decided to suspend production in their factories for three months so as to bring about the desired reduction in their stocks.

The report and accounts were unanimously adopted.

BRITISH MATCH CORPORATION, LIMITED.

BRYANT AND MAY'S REMUNERATIVE INVESTMENTS. A YEAR OF QUIET PROGRESS.

The second annual ordinary general meeting of British Match Corporation, Limited, was held, on the 15th instant, at Winchester House, Old Broad Street, London, E.C.

Mr George W. Paton (chairman and managing director) presided.

The secretary (Mr H. W. Williams) having read the notice convening the meeting and the auditors' report,

The chairman, in the course of his address, said: It is a great pleasure to me to move the adoption of the report. The accounts show that your company has made considerable and satisfactory progress since last we met. The report goes on, he added, to refer to the increase of the share capital sanctioned at the meeting held in November of last year. Of the new ordinary shares 187,269, and of the 5½ per cent. cumulative preference shares 524,587 have been issued, in connection with the acquisition of the business of Bryant and May (Brazil), Limited. The whole of the issued capital of that company, with the exception of 307 ordinary shares and 275 preference shares, has been exchanged for shares in your company.

PROSPECTS IN BRAZIL.

Bryant and May (Brazil) has now been formed into a private limited liability company, the shares being all held by your company with the exception of the two small lots which I have just mentioned. The business in Brazil has improved during recent months, and I feel justified in saying that your company will have no reason to regret this investment. Conditions in Brazil, generally, are not yet as satisfactory as one could wish, but that immense country has a great future in store, and as we are firmly established there with up-to-date factories and methods, we are entitled to, and are sure to get, our fair proportion of the match business in the future.

BRYANT AND MAY'S ACCOUNTS.

At our meeting last year I gave you a summarised account of the corporation's holdings. The principal of these, of course, is your holding of the whole of the ordinary shares of Bryant and May, Limited.

That company's accounts for the year ended March 31st last and submitted to the annual meeting on April 29th, proved very satisfactory, the net profit for the year having increased from £412,758 to £531,642. The investments which are shown in their balance sheet at £2,354,400, consist of Government securities £492,403, shares in subsidiary companies £1,649,304, and other shares and debentures, £212,693. All of these items have been taken at cost, less substantial reserves. These investments have proved highly remunerative, producing a large portion, if not the larger, of the total profit. During the year £202,787 of Bryant and May's reserve fund was capitalised and issued in the form of a share bonus to the ordinary shareholders, who are, of course, your company. Out of the available profit, £102,787 was added to the reserve fund, bringing it up to £350,000, and dividends were declared amounting to £455,603, £95,922 of which was distributed under the co-partnership scheme equally between the ordinary shareholders and the employees. In the home trade your business continues to progress satisfactorily, and sales have shown a steady increase.

OVER-PRODUCTION IN GREAT BRITAIN.

At the extraordinary general meeting of your company held in November last I took the opportunity of saying that there was a good deal of talk about new ventures in the match industry, and that more than one company had been floated with very glowing prospectuses. I should like, again, to tell you and the public generally that there is machinery in the existing factories in the country with sufficient capacity to produce all the matches, and more than the country can consume. Much of this was installed during the war period to cope with the exceptional demand created by the cessation of imports, and, as a matter of fact, our factories are only working 40 hours instead of 47 hours per week in order that as many people as possible may be kept in employment.

In Canada the reorganisation of the factories of the Eddy Match Company is proceeding satisfactorily, and the new company has already been put on a dividend-paying basis. In Australia, New Zealand, and elsewhere the business also continues progressive and satisfactory.

Mr Clarence E. Bartholomew, O.B.E., seconded the motion for the adoption of the report and accounts, which was carried unanimously.

The formal business having been transacted, a cordial vote of thanks to the chairman, directors, and the staff and workers, both at home and abroad, terminated the proceedings.

CAWNPORE ELECTRIC SUPPLY CORPORATION, LIMITED.

SUCCESSFUL RESULTS OF THE YEAR.

The annual ordinary general meeting of the Cawnpore Electric Supply Corporation, Limited, was held, on the 14th instant, at Winchester House, Old Broad Street, London, Mr John G. B. Stone, chairman of the company, presiding.

The chairman said, in the course of his speech: The efficiency of distribution remained the same as it was in 1927. The units sold for lighting and fans increased by about 11 per cent., and those for power purposes by meter by about 4 per cent. Public lighting and special contract supplies each show an increase of about 8 per cent. The maximum demand went up 12 per cent., and this corresponds closely with the increase in connections to our mains.

Our expenditure on generating and distributing energy was some £500 less than in 1927. We have a revenue of £165,891, an increase of approximately 10 per cent., giving a return of 1·27 As. per unit, against 1·25 As. in 1927. The management and general charges increased £1,600 and interest on debentures, now £11,798, is less than in 1927 and will continue to fall as a result of the operation of the sinking fund, the contributions to which will increase in like amount. Finally, we carry to profit and loss account £75,063, as compared with £55,524 in 1927.

The board have allocated to depreciation and renewals account £27,500—a considerable increase on the figure of £15,000 provided in 1927. The sum of £4,002 has been applied to writing off the issue expenses, £2,000 has been transferred to income-tax account and £7,587 15s. is required for the sinking fund, £18,600 has been distributed in the preference dividend and in an interim dividend on the ordinary shares, and the board recommend a final dividend of 7 per cent., leaving £3,824 to be carried forward.

I think the result of our operations during 1928 has been satisfactory, and it should be noted that the year under review has been one of great depression in the cotton trade, on which Cawnpore so largely depends, and upon which we rely for a large proportion of our business. In spite of bad times, we are steadily increasing our connection among the various industries in Cawnpore, and as a result of last year's experience we have been able to make reductions in our charges for electricity for power purposes. These supplies absorb over 75 per cent. of our output, and we anticipate that with an improvement in the cotton trade we shall experience a marked increase in the demand for bulk supplies.

The report and accounts were unanimously adopted.

LEOPOLDINA RAILWAY COMPANY, LIMITED.

The ordinary general meeting of the Leopoldina Railway Company, Limited, was held on the 15th instant, at the Cannon Street Hotel, London. Mr Oliver R. H. Bury (the chairman) presiding.

The chairman, in moving the adoption of the report and accounts, said that the net receipts for the year were £788,176, and the board now recommended a balance dividend of 3 per cent., less income tax (making 5 per cent. for the year) on the ordinary stock, leaving £103,457 to be carried forward. The passenger traffic showed an increase of 1,295,050 in numbers; over 19,000,000 passengers were carried to and from the immediate suburbs of Rio de Janeiro at only a fraction over one penny per journey, and obviously all at a loss.

The addition of 10 per cent. to the tariffs authorised in 1927 for the purpose of applying the money so produced to the purchase of additional locomotives and rolling stock, and other improvements, had been of great advantage to the Government, to the public and to the company; the company had spent £342,803, and had received £350,508.

Regarding prospects for 1929, gross receipts to date showed a decrease of £243,859, and they could not hope for such a large saving in the coal bill this year as was the case last year. On the other hand, the opinion of the General Manager, Mr Bayne, was that before the end of this year the decrease in gross traffics would be entirely wiped out.

The report and accounts were unanimously adopted.

THE CASE FOR FREE TRADE

A pamphlet of 56 pages reprinted from "The Economist."

The fundamental arguments against Trade Restriction are set out; and the claims of "Safeguarders" examined.

Price 4d.

(Special terms for quantities.)

INCORPORATED ACCOUNTANTS.

PROPOSALS FOR REGISTRATION.

Astor House, which was recently opened as Incorporated Accountants' Hall by H.R.H. the Duke of York, was used for the first time on Tuesday last for a general meeting of the Society of Incorporated Accountants and Auditors, when the forty-fourth ordinary general meeting of the society was held.

The freehold of this magnificent building, the President, Mr Thomas Keens, F.S.A.A., said, had been acquired mainly owing to the co-operation of incorporated accountants in all parts of the world, who had subscribed the major portion of its cost of over £100,000.

The traditional policy of the Society of Incorporated Accountants and Auditors had been to secure registration for the accountancy profession. Outside the great bodies of chartered and incorporated accountants, however, there were ten other organisations claiming to be part of the accountancy profession. In addition, all sorts of persons were tempted to commence practice as accountants, many resorting to methods flagrantly unprofessional. Registration would do away with this state of affairs. Application to be placed on the original register would have to be made to the competent authority, which should be endowed with wide powers to investigate applications by those who claimed to be in actual *bona fide* public practice. Cultivated by the prospect of a Registration Bill, there would be a mushroom growth of new public accountants, but they would find no place on the register. Incorporated accountants ought not to be deterred by the number of those who might become registered at the outset. The chief consideration should be the benefit to the public and the profession in the future, which would be brought about by a proper standard of qualification and a reasonable measure of control by which all those on the register would be bound.

The profession of accountancy was entitled to ask for similar statutory protection to that given to law, medicine and dentistry. In 1911 an Accountants Registration Bill, supported by the Lord Chancellor and the Lord Chief Justice and having the interest of the Board of Trade, was dropped only because of an accident of procedure in the House of Commons. Until the present time no favourable opportunity of reviving the matter had presented itself, but in unanimously reaffirming its belief in registration and in deciding to proceed with the promotion of a Bill, the society had been fortified by the recent remarks of Sir Thomas Robinson, M.P., in the House of Commons. He said the view of the Local Legislation Committee was that the time was opportune for the establishment of a register of properly qualified accountants, the committee believing that sound, reliable accountancy was of paramount importance to industry, commerce and the investing public.

Government Returns, &c.

NATIONAL ACCOUNTS.

The following table shows the national income and expenditure during the week ended May 11, 1929:—

(000's omitted.)

Expenditure.	£	Receipts.	£
Supply Services	4,100	From Revenue	9,212
Interest, &c., on Debt	901		
Sinking Fund	500		
Decrease in Balances	321		
Decrease in Debt	3,226		
Sundries	164		
	9,212		9,212

The total ordinary revenue for the week amounted to £9,212,000, as compared with £8,398,500 in the corresponding week of last year. Property and income tax amounted to £799,000, and super-tax to £540,000, against £301,000 and £760,000 respectively a year ago. Customs brought in £2,295,000 against £2,242,000 in the corresponding week of last year, whilst Excise receipts were lower than a year ago, being £1,061,000 against £1,201,000. Ordinary receipts totalled £381,600 for the week as against last year's figure of £25,700, and special receipts £56,600 against £34,800.

The National Debt was reduced by £3,226,000, as shown below:—

(000's omitted.)

	£
Treasury Bills	−1,851
National Savings Certificates	− 50
Public Department Advances	− 925
Sundries	− 400
	−3,226

The floating debt was reduced by £2,785,000 to £742,820,000.

Financial Year, 1929-30, April 1 to May 11.

„ 16	Bars bought	1,088	„ 16	„	Nil
	Total	945,435		Total	7,000

Net arrivals, £938,435.

Messrs. Samuel Montagu and Co. write as follows on May 15, 1929 :—

GOLD.

The Bank of England Gold Reserve against notes amounted to £160,213,172 on the 8th instant (as compared with £158,216,669 on the previous Wednesday), and represents an increase of £6,306,857 since the 29th April, 1925—when an effective gold standard was resumed.

About £289,000 bar gold was available in the open market this week. The Bank of England secured £164,900, as shown in the figures below, the Home and Continental Trade £72,000, India £25,000 and Egypt £25,000. There was a net influx of gold of £923,715 during the week.

SILVER.

Following the rather fluctuating prices of last week the market has since ruled comparatively steady. Nevertheless buyers at first proved reluctant and quotations drooped to 25 7/16d., the rate fixed for both cash and two months' delivery on the 13th instant. During the earlier part of the week there was some re-selling on the part of China, but the same quarter subsequently made fresh purchases of silver for forward delivery. The buying, however, was offset by freer offerings from America, whilst supplies have also been forthcoming from Continental sources.

Cash silver was to-day quoted at a premium of 1/16d. over two months' delivery, prices being fixed at 25 7/16d. and 25 1/2d. respectively. *This is the first time since February 1st last that silver for cash delivery has commanded a premium.*

The following were the United Kingdom imports and exports of silver registered from mid-day on the 6th instant to mid-day on the 13th instant :—

Imports.	£	Exports.	£
Mexico	123,574	Egypt	15,913
Canada	17,008	Persia	30,489
New Zealand	15,000	British India	69,898
Other countries	10,148	Other countries	9,898
	165,730		126,198

THE BROKEN HILL PROPRIETARY COMPANY, LIMITED.—Report for four weeks ended March 24, 1929 :—COKE OVENS : The average number of coke ovens in operation was 143, the production for the period being : Coke, 22,017 tons; tar, 245,157 gallons; sulphate of ammonia, 264 tons. BENZOL : Satisfactory quantities of refined motor spirit continue to be produced by this plant. BLAST FURNACE DEPT. : The production of pig iron amounted to 18,772 tons. OPEN HEARTH DEPT. : With an average of 6·43 furnaces in commission during the four weeks, the production of ingot steel amounted to 27,252 tons.

THE BROKEN HILL PROPRIETARY COMPANY, LIMITED.—Report for 4 weeks ended April 21st, 1929—Iron and Steel Works. *Coke Ovens : Produced 12,733 tons* of Coke, 134,500 gallons of Tar, and 164 tons of Sulphate of Ammonia. Blast furnace (No. 3) : Produced 14,972 tons of Pig Iron. Open hearth : Produced 20,418 tons of Steel. Slimes flotation plant working without interruption—treated 12,191 tons Oxidised Slimes Tailings producing 1,646 tons Lead Concentrates assaying 40 per cent. Lead, 17 ozs. Silver per ton. Despatches to Port Pirie amounted to 1,472 tons.

BURMA CORPORATION, LIMITED (*Incorporated in India*).—Cable advices received this day report :—During the month of April, 38,232 tons of ore were mined, including 3,614 tons of high-grade ore. 29,000 tons of ore were milled in the treatment plant, producing 10,035 tons of lead concentrates. 11,054 tons of lead-bearing material, including 2,761 tons of high-grade ore, were smelted in the blast furnaces, producing 5,981 tons of hard lead for treatment in the refinery. Refinery products were 6,554 tons refined lead, and 625,327 ounces refined silver. Of silver production, 41,185 ounces were recovered from the treatment of copper matte. Zinc plant produced 5,180 tons zinc concentrates, assaying 9·1 ozs. silver, 4·6 per cent. lead, and 51·7 per cent. zinc.

In addition to the above, 1,350 tons copper matte were produced from the treatment of accumulated smelter by-products and 6,233 tons copper ore.

100 tons of refined antimonial lead were also produced.

Included in the tonnage of refined lead is 337 tons recovered from the smelting of copper ore.

Reports and Notices.

The New Zealand Insurance Co., Limited, have received cabled advice from their head office in New Zealand that the General Manager of the company, Mr H. P. Kissling, died on May 11th.

The directors of the Liverpool and London and Globe Insurance Co. have to announce, with great regret, that Mr Hugh Lewis, who is approaching retiring age, resigns his position as General Manager and Secretary. It has been unanimously decided to invite Mr Lewis to join the boards of the Royal and the Liverpool and London and Globe Insurance Companies.

The Directors of the Alliance Assurance Company regret to announce the death of Mr. T. B. Ponsonby—the General Manager of the Company.

Mr. Charles Edward Barnett, a Director of Lloyds Bank, Limited, has been elected a Director of the Yorkshire Penny Bank, Limited.

INSURANCE.

THE LONDON ASSURANCE.—The following resolution which was passed by the shareholders at the annual general court of the Corporation, held on the 24th ultimo, was duly confirmed at the extraordinary general court held May 15:—Resolved that the regulation of the Corporation made pursuant to the provision of the London Assurance Act, 1891, be altered by the addition of the following regulation after Regulation No. 65:—65A. The Court of Directors may, from time to time, pay to the Members such interim dividends as, in their judgment, the position of the Corporation justifies.

RAILWAYS.

THE ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY COMPANY LIMITED.—The accounts of the Company are not yet completed, but at a meeting of the board it was resolved to recommend the payment of a final dividend in respect of the year 1928 of 4 per cent. (less income tax at 4s. in the £) on the Consolidated Ordinary Stock of the company, making, with the interim dividend of 3 per cent. already paid, 7 per cent. for the year, the same as for 1927. It is proposed to transfer £100,000 to the reserve account, and, after making provision for a contribution to the company's Staff Benevolent Fund, the balance forward will be approximately £242,000, compared with £251,312 last year. It has been decided to summon the general meeting for Tuesday, June 11th, at 12.30 p.m.

MISCELLANEOUS.

BUCHANAN-DEWAR, LIMITED.—The net profit for year ended March 31, 1929, is £1,226,175, against £1,166,792 for year ended March 31, 1928. The ordinary dividend is 30 per cent. for the year, against 28 per cent. for preceding year. The carry-forward is increased from £104,438 to £105,447. Reserve fund remains at £750,000. Cash is at £57,635 against £60,531.

AFRICAN AND EASTERN TRADE CORPORATION, LIMITED.—The Report for year ended September 30, 1928, discloses a loss of £96,953, comparing with a credit of £407,612 in preceding year. Deducting the loss from a credit of £266,453 brought in there is £169,499 available. Preference dividend for 12 months on the "A" shares and for 9 months on the "B" shares absorbed £124,782, leaving £44,717 to go forward. Nothing goes to ordinary shareholders, who received 8 per cent. dividend for the preceding year.

FINE COTTON SPINNERS, ETC., LIMITED.—The statement for the year ended March 31, 1929, shows that the profits for the year, after charging £200,000 to depreciation, and providing for directors' fees and bonuses to management, amount to £632,617, against £1,104,223 for previous year. To the profits must be added the balance brought forward from last year, viz., £200,449 3s. 10d., and £100,000 transferred from reserve for equalisation of dividends, making a total of £933,067. After providing interest on debenture stocks, welfare fund, and after payment of 1nterim dividends on the preference, preferred ordinary, and ordinary shares, there remains an unappropriated balance of £533,167. Out of this the directors recommend the payment of the usual half-yearly dividends on the preference and preferred ordinary shares and a final dividend on the ordinary shares at the rate of 10 per cent. per annum (making 9 per cent. for the year), against 15 per cent. for preceding year, absorbing together £319,000 and the carrying forward of the balance, £214,167. The transfer books will be closed from the 17th to the 31st instant, both days inclusive.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Thursday evening.

Further rains over the United Kingdom during the past week, together with intermittent spells of sunshine, had a beneficial effect upon cereal crops and pastures, but more warmth is needed to stimulate growth. The recent sharp break in prices of imported wheat adversely affected the sale of native varieties, which are now ruling on a lower basis at most of the Statute markets. The general tone however was less depressed, and in the floating and forward cargo section values marked a slight recovery, as attractive offers from North America found acceptance both here and on the Continent. A large movement from Canada is assured, over forty vessels being engaged for May loading, apart from the usual liner space, while it is evident that shipments must continue on a liberal scale for some while ahead in order to make any appreciable inroad into existing stocks. Rail rates were substantially reduced both in Canada and the United States to facilitate the movement of grain to the shipping ports, and thus make room for the coming crops, which are making satisfactory progress. The Farm Relief Bill has

apparently passed the United States Senate, and brings into existence another controlling Board for the regulation of prices and crop surpluses, presumably to work on similar lines to the Australian and Canadian "Pools." This event, naturally, is not favourably viewed by importing countries, and further tends to restrict the normal flow of supplies usual under a free and open market, while also providing means for the artificial maintenance of prices. An interesting occurrence was the resumption of the London Futures market on Tuesday last after an interval of over twenty-five years. The need of this section was emphasised by the ready support from both buyers and sellers, business proceeding with activity. The contract grade is No. 3 Northern Manitoba, with option of tendering No. 1 ditto at a premium of 2s., No. 2 ditto at 1s., and No. 4 at a reduction of 4s. per qr. of 480 lbs. Minimum quantity 1,000 qrs., and minimum price movement halfpenny per qr. Feeding stuffs were also firmer, but with supplies generally in excess of requirements buyers remained indifferent.

Wheat steadier. No. 2 Northern Manitoba, ex-ship, 46s.; No. 3 ditto, 44s. 6d.; No. 4 Manitoba, 43s.; No. 5, 40s.; No. 6, 35s. 9d.; No. 2 mixed Durum, 39s. 3d.; Rosafe, 64 lbs., 42s.; Barusso, 63¼ lbs., for shipment, 42s.; Australian, 44s. 6d., ex-ship, per 496 lbs. English, 9s. 6d.–9s. 9d. per 112 lbs.

Flour quiet, and home-milled unsettled. London standard grade nominally 32s. to 33s. 6d. per sack delivered. Of imported, Manitoba patents range from 33s. 6d.–36s.; Minneapolis, 34s.–36s. 6d.; Australian, 32s. 9d.–33s. 6d., ex-store per 280 lbs.

Maize steadier forward. Plate landed, 40s.; ex-ship to arrive, 38s.; May-June, 35s. 3d.; June-July, 35s. 6d.; July-August, 35s. 9d. per 480 lbs.

Barley quiet. Californian ex-ship, 43s.–48s.; Chilian Chevalier, ex-store, 45s.–58s.; Australian, 41s.–44s. 6d.; Smyrna, 44s.–47s. per 448 lbs. Algerian/Tunisian, ex-ship, 32s. 3d.; Canadian feed, 28s.; No. 3 Canadian Western, landed, 30s. 6d.; ex-ship, 29s. 3d.; No. 2 Federal, American, landed, 29s. 3d. per 400 lbs. English malting, 10s. 6d.–11s. 3d.; feed, 9s. 8d.–10s. per 112 lbs.

Oats slow. Plate landed, 24s. 6d.; ex-ship to arrive, 23s. 3d.; No. 1 Canadian feed, 23s. 6d.; No. 2 ditto, 21s. 6d. ex-ship; mixed Canadian feed ex-ship to arrive, 19s. 3d.; landed, 20s. 9d.; Chilian, white, ex-ship to arrive, 28s. 3d.; landed, 30s. 9d.; German landed, 28s. 6d.; ex-ship to arrive, 27s. 3d. per 320 lbs. English, 9s. 8d.–10s. 3d. per 112 lbs. Scotch landed, 30s. per 336 lbs.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest years 1928–29, 1927–28, 1926–27, 1925–26:—

	1928–1929.	1927–1928.	1926–1927.	1925–1926.
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to May 11	152,984	278,460	162,543	115,208
35 weeks to May 11	8,874,130	9,264,734	10,444,718	12,053,817
Average price of English wheat per cwt.	s. d. 9 11	s. d. 11 2	s. d. 12 0	s. d. 13 4

The following is a statement showing the Quantities Sold and the Average Price of British Corn in the past two weeks, and for the corresponding week in each of the years from 1925 to 1928:—

May 12, 1928	278,460	28,965	30,425	11 2	10 10	12 11

For Life Assurance.

AMP

The Australian Mutual Provident Society is mutual. That is to say, all divisible Surplus, without deduction, belongs to the Policy-holders themselves and is distributed yearly. Moreover, the Society, established in 1849, has been for many years the largest and most prosperous British Mutual Life Office. Why is this? Because it offers to Assurers the Acme of Security and Profit, and because its satisfied members are its best advertisement. Why are policies with the A.M.P. Society so profitable? Because while its premium rates are below the average, it possesses in a unique degree the combination of a low expense rate, a high interest return and a favourable mortality experience. The A.M.P. Society should be covering you. You will be sent full particulars on application.

EVERY YEAR A BONUS YEAR.

Assets: £70,000,000. Annual Income: £10,000,000.
New Business for 1927: £15,397,528.
Cash Surplus for One Year (1927): £2,895,454.

ROBERT THODEY, F.I.A. Manager for the United Kingdom.

AUSTRALIAN MUTUAL PROVIDENT SOCIETY
Established in Australia, 1849.

LONDON OFFICE: 73-76, King William St., E.C.4.

AMERICAN WHEAT MARKETS.

There has been no large movement during this week. A tendency to liquidation at the beginning, and bursts of short-selling later, have been counteracted by bullish crop reports, rumours of snow in Canada, and an improvement in export demand. Quotations:—

Nearest Future.	Jan. 4, 1928.	Jan. 2, 1929.	May 16, 1928.	May 1, 1929.	May 8, 1929.	May 15, 1929.
Winnipeg (No. 1 Manitoba)—Cents per 60 lb.)	156½	122	146¾	121	113⅜	114
Chicago (No. Winter)—Cents per 60 lb.	166½	116⅜	149⅜	113	106⅛	105⅜

Visible supplies of wheat in Canada at 76,688,000 bushels show a decrease of 1,616,000 bushels as compared with the previous figure. Supplies a year ago stood at 68,973,000.

THE COAL TRADE.

Our Sheffield correspondent writes:—The export coal market has steadied and there are prospects of the present position—which is much better than a year ago—being maintained. The internal industrial demand is on a moderate scale and expands slowly. House coal demand is falling to the usual summer level. Blast-furnace coke sells freely at firm rates, and considerable quantities of all classes of coke are being shipped abroad. The price of the first-named has moved up to 15 per ton at ovens.

Our Glasgow correspondent writes:—There has been little change in the position in the coal trade. Large coal is still a poor market, and the collieries are having difficulty in keeping the outputs moving and are frequently having to resort to short-time working. Nuts are in a fairly good position on the whole, while doubles the strongest feature at the moment. Shipping prices are approximately as follows (all f.o.b. district ports):—Lanarkshire.—Ell best, 14s. 6d.; splint best, 16s. 3d.; splint second, 15s. 6d.; navigation, 17s. 6d.; navigation second, 15s.; steam, 13s. 6d. Hartley, 16s. 6d.; trebles, 14s. 3d.; doubles, 13s. 3d.; singles, 12s.; pearls, 11s.; dross, 10s. Fife.—Screened navigation, 17s. 6d.; first-class steam, 13s. 6d.; third-class steam, 12s.; trebles, 14s. to 14s. 6d.; doubles, 13s. 3d.; singles, 12s.; pearls, 11s. Lothians.—Prime steam, 13s.; secondary steam, 12s. 6d.; trebles, 14s.; doubles, 13s.; singles, 12s.; pearls, 11s. Ayrshire.—Unscreened navigation, 16s. 6d.; jewel, 17s. 6d.; steam, 13s. 6d.; trebles, 13s. 9d.; doubles, 13s.; singles, 12s. 3d.; pearls, 11s.; dross, 10s. 6d.

Our Cardiff correspondent writes:—The most important incident in the South Wales coal trade this week has been the raising of the minimum schedule prices for large coals. Under the scale fixed in May, 1928, these prices ranged from 16s. 3d. per ton in the case of inferior Monmouthshire grade to 19s. 3d. per ton for the best Admiralty large coals, and as from last Monday all these prices have been increased by 6d. per ton. Current prices are still slightly above the revised minima, but it is anticipated that the decision of the Marketing Association will remove a great deal of the uncertainty which has recently existed on the market concerning the course of prices during the next few months, and thus help to improve the prospects of the arrangement of new business. No action has been taken in regard to small-coal prices, which have suffered relatively less than large coal from the recent reaction. Another important decision of the Executive Committee of the Marketing Association was to give further consideration to the question of putting into operation as soon as possible the quota scheme submitted to the trade in December last. On that occasion the scheme failed to secure the necessary support of 85 per cent. of the output in the bituminous area, but there is reason to believe that the objections of some of the dissentient collieries have since been met, and that the prospects of eventual agreement on output regulation are a little more favourable. Current market quotations have shown no material change during the past week and the volume of trade has been, on the whole, well maintained. The following are the current approximate quotations:—Best Admiralties, 20s. to 20s. 6d.; seconds, 19s. 3d. to 19s. 9d.; best drys, 19s. to 19s. 6d.; Black Veins, 18s. to 18s. 6d.; Western Valleys, 18s. to 18s. 3d.; Eastern Valleys, 17s. 9d. to 18s.; best small steams, 13s. to 13s. 6d.; cargo smalls, 11s. 6d. to 12s.; coking smalls, 13s. 6d. to 14s.; anthracite best large, 33s. to 36s. 6d.; Red Vein large, 23s. to 27s.; machine-made cobbles, 40s. to 43s. 6d.; French nuts, 42s. to 44s.; stove nuts, 39s. to 42s.; rubbly culm, 9s. 3d. to 10s.; foundry coke, 27s. 6d. to 36s.; patent fuel, 19s. 6d. to 21s. 6d.; pitwood, ex-ship, 26s. to 26s. 3d.

IRON AND STEEL.

We extract the following from the weekly report of the London Iron and Steel Exchange. Trading in iron and steel continues on a sound basis, and the markets have a moderately active appearance, although it is now approaching the period of the year when trade usually falls off. In the home department the demand has been stimulated by the expectation that the British steel makers would be obliged to raise their prices owing to the increased cost of raw materials. It is known that a section of the steel makers are in favour of taking this course, but, so far, the majority of the makers have preferred to keep the official prices at the long standing minimum rates. Generally speaking, the demand from structural engineering shops has improved recently, while the requirements of the foundries also appear to be expanding. The recent weakness noticeable in the Continental steel market does not seem so pronounced. To some extent this is in consequence of the German steel makers showing less interest in the export market, owing to the strong home trade demand they are experiencing. There has been a fair inquiry for semi-finished steel, which has been largely satisfied by British producers, who are well off for orders in this class of material. The demand for finished steel remains irregular. The export demand is still somewhat weak.

Our Middlesbrough correspondent writes:—The pig-iron market here is still very firm. This particularly applies to the Cleveland iron, and makers are practically fully sold for delivery until September–October. It is now only possible to buy iron up till then from merchants, who are quoting slightly higher prices, which are now on the following basis: No. 1, 72s. 6d.; No. 3 G.M.B., 70s.; No. 4 foundry, 69s.; No. 4 forge, 68s. 6d. There has been no rise in the price of hematite pig iron, although makers are well booked up for some considerable time ahead. The price still remains at about 74s. for East Coast mixed numbers, and if business continues as at present a rise in the price would not be surprising. This more especially so, owing to the recent increase in prices of raw materials. The steel trade still continues busy, and all the works have order books that will keep them so for some time to come. The recent orders for heavy steel rails has improved the position. Subject to the usual rebates, prices remain unchanged on the following basis: Steel ship plates, £8 7s. 6d.; steel ship angles, £7 17s. 6d.; iron bars, £10 15s.; steel rails, £8 10s. The ore market is very firm, with a tendency for prices to increase. New supplies of good ore are practically impossible to get for anything like reasonably early delivery. Owing to the demand for coke for export, the price is slightly better, and for good Durham blast-furnace qualities producers are asking 19s. delivered works.

Our Sheffield correspondent writes:—There is a certain amount of progress in several branches of the steel trade with, however, little expansion taken as a whole. Some of the heavy steel foundries and forges report that work finished is not being replaced by new orders, so that slackness is developing. Business in high-class tool steels is better than it has been for some time past. The overseas returns for April record a small reduction of exports of iron and steel and their manufactures, but a considerable increase of imports. No improvement can be discerned in the position of railway steel and wagons, which continue unsatisfactory both at home and abroad. Steel scrap continues to be exported in considerable quantities, causing scarcity and dearness in the home market. Prices of iron and steel are firm, and the same remark applies to various alloys of steel. Demand for basic steel keeps at a high level, whereas acid steel is neglected. No changes in the pig-iron market are being made, notwithstanding the quietude of the foundries. In the finished departments of the Sheffield steel industry orders are abundant, but of small bulk, and there is a pronounced financial stringency among buyers.

Our Glasgow correspondent writes:—There is no material change in the conditions at the iron and steel works in the West of Scotland this week. The tone is quiet in all departments, and while the recent rate of output is being maintained generally there is no appreciable increase. In the heavy steel trade the demand for sections continues to be more satisfactory than that for plates, and there is a steady demand for the sectional material required by structural engineers, who in this district are fairly busy. Re-rolled steel bars are finding a readier market, but no improvement is reported as regards wrought-iron bars. Sheet makers are also experiencing a rather quiet time, although securing sufficient business to keep works going, and there is a somewhat better demand for very highly-finished sheets. The depression in the pig-iron trade continues. Prices are unchanged as follows:—Boiler plates, £10 10s.; sections, £7 17s. 6d.; black sheets, ⅛ in., £8 15s., all delivered Glasgow stations. G. & C. sheets, £13 12s. 6d., f.o.b. Glasgow. Boiler plates and sections, of course, subject to the 10s. rebate.

Our Cardiff correspondent writes:—The recent improvement in the position of the iron and steel trade in South Wales has been maintained. In the tinplate market, prices have been steady at between 18s. 6d. and 18s. 9d. per box, and galvanised sheets have been fairly firm at the recently improved quotations of £13 12s. 6d. to £13 15s. per ton. Local tinplate bars are unaltered at £6 6s. 3d., but foreign bars have further advanced to £5 17s. 6d., at which they are 10s. higher than at the corresponding period of last year. Shipments of tinplates last week were slightly less than in the previous week, and stocks in warehouse have consequently been increased to 240,078 boxes.

OTHER METALS.

Tin.—The standard market developed weaker features in sympathy with lower Eastern advices and lack of adequate support, sellers being prominent; but later the decline was partially recovered. Stocks in London and Liverpool warehouses for week ending May 11th were returned at 8,028 tons, compared with 1,714 tons at corresponding period last year. Standard cash sold £200 to £197 15s., £198 5s.; three months, £202 10s., £200 5s., £201 15s. and £201. In the East, sales were reported at £205 5s. to £203 5s. ton, c.i.f. terms.

Copper in good support, but prices gave way under heavy realisations, dealings being attended by considerable irregularity, while no encouragement was forthcoming from the United States. The close was firmer. Standard cash sold £73 17s. 6d., £71 15s. to £74 10s., and three months, £74 to £71 7s. 6d. and £72 17s. 6d.

Lead ruled easier on increased selling orders and a quieter trade demand. Good soft foreign pig May sold £24 2s. 6d. to £23 13s. 9d. and £23 15s.; June, £24 2s. 6d. to £23 13s. 9d., £23 15s.; July, £23 13s. 9d. to £23 12s. 6d. and £23 13s. 9d.; August, £24 to £23 12s. 6d.

Spelter in moderate demand and tone barely steady, offerings being in excess of requirements. May sold £26 15s. to £26 13s. 9d.; June, £26 15s. to £26 13s. 9d., £26 11s. 3d.; July, £26 13s. 9d.; August, £26 15s. to £26 11s. 3d.

Antimony quiet and easier for foreign. English regulus quoted £52 to £52 10s.; foreign, spot, £35 10s. to £36, May-June, £32 c.i.f. terms.

Wolfram quiet. Straits quoted 29s. to 30s. per unit c.i.f.

Quicksilver steady. Spot quoted £22 2s. 6d. to £22 5s. per bottle.

Tin Plates maintained. I.C. coke prompt and forward, 18s. 6d. per box f.o.b. Swansea.

THE COTTON TRADE.

Liverpool, May 15th.

Spot sales for the week 9th to 15th (inclusive) are 31,000 bales, of which 18,190 are American, 500 Brazilian, 800 Argentine, 2,450 Peruvian, 3,150 Egyptian, 1,700 African, 3,250 East Indian, and 960 sundries. Imports for the same period are 47,846 bales, of which 21,867 are American, 1,046 Argentine, 823 Peru, 15,413 Egyptian, 4,719 African, 2,673 East Indian, and 1,305 sundries. Quotations to-day are: American Middling, 10·12; Egyptian F.G.F. Sakel, 17·85, Uppers, 11·47; Brazil Fair, 10·37; Peru G.F. Mod-Rough, 12·50, Smooth, 11·12; West African Middling, 10·22; East African G.F., 11·50.

Manchester, May 15th.

Although inquiry in the market during the past week has been fairly extensive, it can scarcely be said that trade has been more active. Buyers are still cautious in placing orders, and there is not sufficient confidence in current prices for customers to commit themselves very far ahead. The fluctuations in raw material rates remain disconcerting. The business offering in piece goods for India has been of fair extent, and scattered transactions have been arranged for Calcutta and Bombay, chiefly in light bleaching descriptions. Advices from China are not encouraging, and only occasional sales have been put through. Not more than a sorting up business has been done for the minor outlets East and West, and developments in the home trade section are being somewhat checked by the absence of warm weather. Manufacturers complain of competition for orders being very keen. American yarns have moved off slowly at irregular rates, and not much has been done in Egyptian counts.

THE WOOL TRADE.

Our Bradford correspondent writes:—Business in all sections has been exceedingly restricted, possibly owing to the approaching holidays, and prices in most cases have shown further weakness. The London wool sales have failed to inspire confidence among spinners, even though the raw material now seems to be on an attractive basis. Compared with prices ruling at the close of the last series of auctions, greasy merinos are about par to 5 per cent. cheaper, fine crossbreds are 7½ per cent. cheaper, and medium qualities par to 5 per cent. cheaper. On the other hand, low crossbreds are firm on last sales' closing rates. The ease in wool values had been fully discounted in Bradford before the opening of the auctions, but there has since been a further decline in tops, especially in fine crossbreds and merinos, and quotations to-day are only nominal. There is no bulk business in any quality, and spinners are offering as low as 3s. 5d. for 64's tops. There is, indeed, no basis upon which to work, for although topmakers assert that wool cannot be bought to bring in tops at the prices offered by users, it is an undoubted fact that the state of trade in the yarn section does not warrant more being paid. No doubt there will be a period of uncertainty during which lower values may prevail, and the duration of this waiting period will be dependent upon the revival in the demand for yarns. At present quotations for Botany yarns

are very irregular, but crossbreds show a steadier tendency in sympathy with the raw material position. The outlook is very obscure, however, and it is significant that conditions in the Continental centres are very similar to those prevailing in this market.

COLONIAL WOOLS.

(FROM A CORRESPONDENT.)

The third series of London sales which closed on Wednesday cannot be regarded as really satisfactory. Some classes of wool have sold quite as well as anyone could have expected, but the supply of merinos has been lacking in both quantity and style, the bulk being second-hand parcels which have not sold well, though a few lots have made quite decent prices. Generally speaking, the decline is a full 5 per cent. compared with the close of the March sales. The speculators' wools sold have all shown a distinct loss. The event of the series has been the offering of large quantities of crossbreds, and these have sold exceedingly well, though most descriptions have shown a slight decline. Apart from greasy half-breds, the fall is no more than 5 per cent., and the reception given to all classes has been most encouraging. Home trade and Continental buyers have competed keenly, the requirements for America being very small indeed. The quantity carried over for the next series is only small, and any development in consuming centres should put the trade into good form for the next series, which will begin on July 9th.

It does not seem likely that any announcement will be made of the findings of the committee appointed by the Board of Trade to investigate the application for the imposition of safeguarding duties until after the new Parliament has assembled. Continental manufacturers have been sending into this country men's and women's fabrics, particularly the latter, as quickly as possible to avoid the payment of any possible duty, but the knowledge that no safeguarding measure can be passed until the new Parliament is sitting will ease the inflow of French and German dress goods, and home trade manufacturers will be given a chance to meet local demands. Preparations for the next Spring season are proceeding, and it is understood that new shades will shortly be offered as a guide to manufacturers respecting what is likely to be popular for next Spring and Summer. The dress goods trade for the current season has been very disappointing. Fancy cloths are likely to be fashionable in worsted coatings for the forthcoming winter season.

The Bank has over 350 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with *Trade* and Industrial conditions is maintained, with special attention to *Commercial and Credit* Intelligence. This service is available to Exporters, Importers and others wishing to develop trade between South and East Africa, the United States of America and the Continent of Europe.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South and East African matters of Trade and Commercial interest.

HIDE, LEATHER AND ALLIED TRADES.

The hide position remains obscure, and in spite of the abstention of tanners, values continue to fall, as much as 1d. to 1½d. per lb. being registered on cattle hides during the past week. Best ox hides are now worth 6½d. to 7d. per lb., and seconds from 5½d. to 5¾d. per lb.; both will probably fall further before stability is reached. Calfskins also share the general weakness, and woolskins are easier. Oversea hides are uncertain with some classes lower. South Americas, however, are fairly steady, and Argentine ox are quoted at 7 7/16d. and cows at 7⅞d. Trading in dry hides is quiet, and B.A. Americanos are quoted at 10⅝d. Africans are weaker and 10½d.-9½d. is quoted for first and second dry salted Capes. Latest Chicago cables report the packer market as steady, with best heavy steers selling at the lower price established, viz., 14½ cents. Shoe manufacturers who are conversant with the weak state of the raw material market, are still looking for cheaper leather, and only order for pressing needs. Speculation is absent, although stories are heard of merchants who have bought big blocks of bends at below replacement values. Light dry hide bends are selling more freely to shoe manufacturers, but the sale of heavy wet salted is slow, and is affected by the many substitutes on the market. Offal is wanted in the cheaper grades with prices barely steady. Business in dressed leather is slow, and curriers are especially short of orders for semi-chrome and wax leather. Willow and box calf is selling better with prices fluctuating, and glacé kid in black and brown shades seems as popular as ever. Patent is slow, with prices weak for the lower grades. Imports of dressed leather for the first four months of the current year have dropped to £2,169,087, as against £3,133,033 for the corresponding period of 1928, and exports of leather footwear for the same periods were valued at £607,015 and £817,388 respectively—a serious decline in both cases.

VEGETABLE OILS AND OILSEEDS.

Markets are not so active, but the *tone* generally is steady. The demand for linseed oil has fallen off again, but, with less severe competition from the Continent, prices are barely maintained at delivery. Cotton oil is in poor request and about unchanged, crude Egyptian offering at £26 10s. and common edible at £30 5s. spot except that castor and rape oils are lower. In the oilseed section linseed is in poor demand, and prices only barely steady at the and for shipment £15 15s. to £15 17s. 6d., A little business has been done in Calcutta linseed, and down to £17 11s. 3d., June loading, for London, has been accepted. The quantity of linseed on passage to Europe has further increased, and is now 198,000 tons. Cottonseed is easier, and black Egyptian June loadings. For Manchurian soya beans to the Continent, April shipment, £11 2s. 6d. has been paid. The trade in oilcakes is declining.

OVERSEAS PRODUCE.

FOOD BEVERAGES, &c.

SUGAR.—Recent improved interest on actual trade account continues, and there is a fair amount of business passing in spot goods at previous prices. Buyers are also to the fore regarding forward deliveries, but with rather reluctant sellers progress of business is somewhat hampered. Raws steady. Java shipments last month total 31,000 tons, against 55,500 same time last year. T.L. granulated, ex refinery, sold 21s. 9d.; white Mauritius, 20s.–20s. 6d. as to quality. Continental parcels for shipment unaltered, also white Java. Cuban, 96 per cent., July quoted, 8s. 9½d. c.i.f. United Kingdom. Terminal sections steadier, fair sales, easier since. Raw, May sold, 7s. 10½d.; August sold, 8s. 1½d. to 8s. 2½d., 8s. 9½d.; white, August quoted, 10s. 4½d.; December, 10s. 9d.; March sold, 11s. 1½d. cwt. Cuban receipts last week, 109,653 tons, against 45,978 last year; exports, 103,331, against 52,747; stocks, 1,542,022, against 1,334,139; central workings, 22, against 13. Stocks of raw sugar in the three chief ports of the United Kingdom for week ending May 11*th* totalled 131,045 tons, against 129,741 last year.

COFFEE.—Spot market is generally quiet, only those qualities suitable to the home trade meeting with any tangible support at steady rates. Common quite neglected. Some fine bold mountain-grown Jamaica sold 230s.

COCOA.—Market firmer. Accra F/F, October–December sold, 42s. f.o.b. Terminal, May sold, 42s.; June, 42s. 3d.; July, 43s. 10½d. to 43s., 45s. 9d.; September, 44s. 9d. to 44s. 3d. and 47s. 4½d.; December, 46s. 4½d.–46s. and 48s. 3d.; March, 47s. 3d.–47s. and 48s. 7½d.

TEA.—Indian auctions during the week totalled 50,258 packages. A strong demand existed for all attractive tippy teas and those possessing autumnal flavour, full to dearer rates being obtained. Useful medium and coloury brokens fully steady, but common and thin liquoring, especially leaf teas, were barely maintained. Ceylon auctions of 31,171 packages accorded good support, but prices manifested some irregularity while occasionally easier, due mainly to quality in many cases showing a falling off. Java sales irregular, and ¼ to ½ lb. lower.

RICE.—Market generally quiet, but prices for Burma gradually harden owing to reduced quantities coming along from up-country and dwindling stocks at ports of shipment. Two Stars, spot, London, selling at 13s. 9d.; ditto, May–June, held for 13s.; No. 3, ditto, to Levant, 13s. 1½d., and Cuba, 13s. 7½d. c.i.f. Brokens firmly held.

BEANS.—Quietly steady for butters and spot lots quoted 39s. 6d. to 41s. 6d., afloat steamer "Clan Macbeth," 36s. 6d. Rangoon haricots nominal.

PEAS.—Market slow. Japanese afloat, 17s. 6d. to 18s.; April–May, 17s. 9d.; June–July, 17s. 9d.; new crop, September–October sold, 19s. and buyers c.i.f.

SPICE.—A sluggish market again resulted for pepper. Spot rates unaltered with but fractional change regarding forward positions. Black Singapore, spot, London, 1s. 4¼d., and this figure is representative of Lampong, Tellicherry, also Aleppy, with Muntok white, 2s. 2½d. Lampong, May–July quoted, 1s. 3d.; August–October, 1s. 2d.; Muntok white, May–July, 2s. 1¾d.; August–October, 1s. 11½d. London stocks increased by 267 tons on the week for black and 55 for white. Tellicherry, March–May, 146s. c.i.f. Cloves quiet, unaltered. Sago flour quiet. Dutch Farina, prompt, 11s. 10½d. f.o.b. African ginger, spot, London, 58s.; May–June, 55s. c.i.f. Tapioca unaltered.

FRUIT (Dried).—Currants firm with stocks on a much reduced scale. Pyrgos, quoted, 45s.–46s.; Amalias, 45s. 6d.–46s. 6d.; Zante, 47s.; Vostizza, 50s.–53. Australians in fair request at 46s.–58s. Sultanas: Smyrna is practically cleared, attention being mainly centred on Australian fruit, which sells freely, new crop at 43s.–66s. as to quality. Raisins slow. Valencias, common to good, 43s.–50s.; Australian, 28s.–31s. New crop, Cape, 33s.–42s. Figs in small supply. Genuine, spot, 27s. 6d.–28s. Dates quietly steady. Siar, spot, quoted, 14s.–16s.; first tide, 14s. cwt.

EVAPORATED FRUITS.—Market firm on light offerings and a good demand. Californian plums tend dearer with a scarcity of medium size fruit. Apricots sell readily at full rates with improved inquiries also circulating for apple rings. Californian plums, 20's–30's, quoted, 66s.–67s.; 30's–40's, 58s.–59s.; 60's–70's, 44s.–46s. Pears: Lake County, 76s.–100s. Apricots: South African Royal, 60s.–120s.; Australian, 75s.–100s. Peaches: Californian, choice, 54s.; extra choice, 56s.; fancy, 60s. Apples: Californian, spot, sliced, extra choice, 77s. 6d. Almonds steady. Mazagan, 130s.; Mogador, 132s. 6d.; Majorcas, 140s.; Bitter-Jordan, 185s.–210s. cwt.

CANNED GOODS.

CANNED FRUITS.—A notable expansion of business occurred in most descriptions of Californian fruits, resulting in a firmer price level. Packers offer sparingly and buyers await further news as to the extent of crop damage. Meanwhile Australian kinds continue to sell readily, the bulk of the pack now being absorbed. Singapore pines in moderate request on spot and steady forward, while South African clears readily on arrival. Hawaiian quiet but firmly held. Tomatoes slow, buyers at present showing little disposition to operate in the new pack.

CANNED FISH.—Sardines steady with a fair demand. Portuguese, clubs, 5s. per dozen tins. Lobsters scarce, and best halves held for 140s.–145s. Salmon firm, with improved inquiries. Red talls, spot, 44s. 6d.–46s. 6d.; pink ditto, 27s. 6d.–28s. 6d.; halves, 35s.–36s. 6d. Japanese crab, firm and in light supply, finest quality ruling at 97s. 6d.–100s.

CANNED MEATS.—Corned beef and tongues quiet but firmly held. Danish boned hams also realise full rates. Brawn firm, with sustained inquiries for Dutch brands.

COMMERCIAL TIMES—WEEKLY PRICE CURRENT.

The prices in the following list are revised with the assistance of an eminent firm in each department.

CONDENSED MILK AND MILK POWDERS.—Market fully steady. Full cream, sweetened, English, spot, 42s. 6d.; Dutch ditto, 37s. 6d.; May–July, 37s. 9d. Machine skimmed, sweetened, English, spot, 25s.; Dutch ditto, 22s. 9d.; May–July, 23s., all in 5-cwt. barrels. Powders: Spray process, F.C. 26 per cent., 2 by 56 lb. tins, crated, 92s.; M.S. (1-cwt. cases), 42s.; Roller ditto, F.C. 26 per cent., 73s. 6d.; M.S., 31s., all nett, duty paid ex-wharf London. On the grocery side, F.C.S., 20s.; M.S.S. 9s. 9d., basis per case, usual packing. Danish cream: Evaporated, unsweetened, 48 by 16 oz., 18s. 6d.; 96 by 6 oz., 19s. 6d.; condensed, sweetened, 48 by 14 oz., 20s. per case.

HONEY.—Demand is somewhat quieter on larger arrivals of new crop. New crop, ivory white, set, Jamaican, 57s. 6d.; good amber to good pale, 50s.–55s.; dark to fair amber, 43s.–49s. Golden, set, Gautemala, 55s. New Zealand, dark amber, 50s.–55s.; medium, 55s.–65s.; light, 65s.–85s.; white and water whites, 65s.–87s. 6d. per cwt.

RUBBER.

Sustained buying was again a feature and prices further improved, while firmness cabled from the East also assisted the market. Standard sheet, spot, and May sold 11½d. to 11⅝d. and 11⅝d.; June, 11 5/16d. to 11 7/16d., 11⅜d.; July–September, 11 11/16d. to 1s. 0⅛d. and 11⅝d.; October–December, 1s. 0⅛d. to 1s. 0⅜d. and 11⅝d.; January–March, 1s. 0⅜d. to 1s. 0⅝d.; January–December, 1930, at 1s. 0⅝d. London stocks reduced 453 tons on the week, landings being 1,188, deliveries 1,641, stocks 31,127, compared with 50,837 at corresponding period last year. Liverpool stocks 230 tons lower, landings being 48, deliveries 278, stocks 4,384. American consumption during last month, 47,512 tons; arrivals, 54,171; quantity afloat, 55,408; stocks, 107,659.

GENERAL.

JUTE.—Business confined to moderate limits but prices firmer. Firsts, May–June, Continent, quoted, £31; new, August–September, sold, £31 10s.–£32; Lightnings, May–June, also August–September, quoted, £30 per ton c.i.f.

HEMP.—No material change to note in position of Manila descriptions and trade conducted quietly. J.2, June–August, quoted, £37; K, £32 10s.; L.1, £33; M.1, £30 10s. ton. African Sisal, No. 1, £37 10s.; No. 2, £36 c.i.f. Manila receipts for last week, 30,000 bales against 28,000 at same time last year; estimate for next week, 30,000; and following week, 26,000. Manila shipments last week to U.K./Continent, 14,000 bales; U.S.A., 9,000; Japan, 8,000. Local stocks amount to 201,000 bales.

SHELLAC.—Market quiet. T.N., spot, 197s. 6d.; May, 194s., 193s.; August, 200s. to 195s. cwt.

COPRA.—A dull and featureless market in the main. Ceylon, however, is in fair request, while offers from shippers become lessened. Straits, S.D., June, to Rotterdam, quoted, £22 6s. 3d.; July, £22 7s. 6d. Ceylon, June–July, £23 10s. South Sea, smoked, to Marseilles, May–June, £21 5s. S.D., quoted, £21 7s. 6d. P.R. ditto, £21 10s.

PALM KERNELS.—Quiet. For shipment April–May, £17 10s., sellers, to Hull, ex-ship; to Hamburg, May–June, £17 10s., paid, c.i.f.

MISCELLANEOUS.—Coconuts quoted 18s. to 25s. per 100. Coir yarn, Ceylon, £19 to £38; Cochin, £22 10s. to £40 10s.; Ceylon bristle, £18 10s. to £25; cinnamon leaf oil, 5½d.; citronelle, Ceylon, 1s. 10½d.; Java, 2s.

METROPOLITAN CATTLE.—May 15.

British Beasts, per stone of 8 lbs. to sink the offal. Sheep per stone.

THE MONEY MARKET.

CONDITIONS in the money market this week have reached a very critical stage. Money was easy at the end of last week, but as a result of Bank Holiday two clearing banks had to call on Tuesday for making-up purposes, and the market was nearly forced into the Bank, 6 per cent.

being paid at one time on that day. On Wednesday came the announcement of the Federal Advisory Council's recommendation that the Federal Reserve Bank should approve increases of Reserve Bank rates if desired, and although money was less wanted on Wednesday and appreciably easier on Thursday, considerable apprehension is displayed concerning the future. On Thursday 4¾ per cent. was being paid for day to day renewals. Another restrictive factor this week has been the £8 million excess of Treasury Bill issues over maturities.

* * * *

The general weakness of sterling on the foreign exchanges has dominated the discount market. Berlin was again a seller of bills, and marks at one time on Wednesday touched 20.35⅜, reacting later. New York stood at 4.84$\frac{15}{16}$ on Tuesday and Wednesday, and on Thursday afternoon weakened further to gold export point at 4.84⅞. In view, further, of the possibility of a 6 per cent. Reserve rate in New York—temporarily averted—discount rates have been very firm. Tuesday saw 3 months fine bills at 5$\frac{7}{32}$; on heavy continental selling the rate went to 5¼-⅜ on Wednesday, but the latter price was largely deterrent and business was done for the most part at 5$\frac{5}{16}$, which remained the working average on Thursday. On that day it was announced that the average rate of allotment of £6,000,000 nine months' India bills was £5 13s. 1.03d.—a dear rate for the borrower. Considerable stringency is foreshadowed for next week.

* * * *

On Wednesday about £780,000 of South African gold came into the market, of which £150,000 went to Germany and £80,000 to India and the trade. The Bank, however, announced the purchase of £663,134 in bar gold, so that about £100,000 must have become available from some unknown source. The price paid was 84s. 11⅜d., which is within ⅛d. of the Bank's legal selling price. Although, therefore, the current position of the Bank is very strong, in the event of a rise in the New York rate to 6 per cent. the Money Market expects our Bank rate to be raised to 6½ per cent. immediately after the Election.

In this week's Bank Return, the £8 million net which the Treasury took from the market is reflected in a £6 million rise in Public Deposits. Against this, bankers' deposits are down by £3½ million, and the note circulation has been reduced by some £500,000 in favour of notes held by the Banking Department. Government Securities, an item which has been steadily falling, is actually up a little this week. The movement of transfer from Discounts and Advances in favour of Other Securities has been continued. It is surmised that the Bank is refraining from the renewal of bill maturities and is taking short-dated bonds off the market instead. This is regarded as a reflection both of the difficulty experienced by brokers in selling bills at the ruling price, and also of the general market tendency to invest in bills rather than securities over the General Election.

NEW YORK MARKETS.

Our New York correspondent cables:—Much attention has been centred on the controversy over the raising of Federal Reserve rates, which has revealed that, while the principal regional banks desire an increase to 6 per cent., the Board is closely divided and continues to refuse permission. This situation has existed for three months, but has only recently obtained publicity. The best students of banking believe the Board wrong in its assumption of authority and its policy. It is felt that the discount rate offers the best medium of control, and that an increase is likely in the absence of striking developments on the stock market and a reduction of brokers' loans. It is, however, being noted that considerable deflation has taken place this year, the credit extended by the Reserve system to-day being $700,000,000 less than at the end of last year, and $200,000,000 less than a year ago. Meanwhile, this week's Reserve statements reveal no particular change. The reduction of $45,000,000 in brokers' loans is somewhat disappointing, but does not reflect Wednesday's weak market.

THE STOCK MARKETS

The approaching General Election, monetary fears, and the uncertain American situation combined to restrict business in the stock markets, though price declines in most cases were of narrower dimensions than might have been expected. The gilt-edged markets were heavy on Wednesday, but improved slightly in tone on the absence of any change in Bank rate next day. Home rails were unresponsive both to political propaganda and improved traffic returns. Heaviness was the dominant feature of the industrial markets, with scarcely a single exception. Rubber shares were marked up and down in sympathy with a fluctuating commodity market, but tea shares were a shade harder. Interest in oil shares was severely restricted. Selling of Kaffirs from Paris more than offset an improvement in Johannesburg sentiment, while activity in Rhodesians was mainly stimulated by inside operations.

THE COMMODITY MARKETS.

When allowance is made for the effect of the holidays this week's market reports appear distinctly promising. Business in most sections of the coal industry is steady, though it is in many cases quieter than it was earlier in the year. Conditions in the iron and steel trades continue to improve generally in spite of weak spots in certain sections. Other metals are steady. The home market for cotton piece-goods has been slightly better, but advices from overseas are still unsatisfactory. The wool industry remains stagnant, but there seems to be slightly more hope of a revival in the near future. Jute and its products are dull. The season has opened well for the timber trade and bids fair to be busy. The hide and leather markets are beginning to revive. Vegetable oils and oilseeds are a stronger market, though there is a seasonal decline in the demand for oilcake. Wheat is slightly down.

THE FOREIGN EXCHANGES.

The Foreign Exchange market last week showed only fair activity, which was further diminished by Bank Holiday. The general trend was against this country, the dollar exchange being particularly weak owing to fears of a rise in Federal Reserve rates and uncertainty as to the General Election. The mark made a spectacular recovery on Wednesday, but reacted later on rumours of repurchases of foreign currencies by the Agent-General for Reparations. New York fell away from 4.85$\frac{3}{32}$ to 4.84⅞. Paris gained four points at 124.12 after 124.16½. Brussels recovered from 34.94 to 34.92¾. Milan lost two points at 92.68. Madrid was again erratic and fell away from 34.05 to 34.17. Amsterdam gained ⅜ at 12.06½. Berlin went from 20.42 steadily to 20.36¾ and then fell to 20.35⅝ but went rapidly back to 20.39¼, being actually 20.38 on Thursday. Switzerland, after being below 25.18, reached to 25.19½. Stockholm gained 1⅛ at 18.15¼. Constantinople, which as a result of heavy imports in anticipation of the new tariff and on account of last year's bad harvest, has been weak for some time at over 1,000, recovered a little at 998. The South American exchanges were very steady, Buenos Aires losing $\frac{3}{32}$d. at 47$\frac{3}{16}$d. whilst Montevideo lost ½d. at 48½d. In the Far East the rupee was weak at 1s. 5$\frac{23}{32}$d. and the yen gained fractionally at 1s. 10$\frac{5}{64}$d. after some irregularity. Batavia gained ¾ at 12.10¾. In the futures market Paris was less in demand at 4 and 7 centimes premium for the two periods; Milan followed suit at wider discounts of 8 and 25 centimes. The premiums on forward Madrid advanced to 12 and 33 centimos, whilst forward reichsmarks were at a nominal quotation of 5 and 10 pfennigs discount—rather higher than last week. Silver lost ½d. for both spot and forward at 25$\frac{1}{16}$d., Eastern demand being quiet and bear covering being sufficient to absorb all offers. The Chinese silver exchanges were little affected, Hongkong being unmoved at 1s. 11⅞d. whilst Shanghai lost ½ at 2s. 5½d.

THE ELECTORATE AND THE ELECTION.

Before our next issue is in the hands of our readers the verdict of the British people will have been given upon the records of achievement (or failure) and the programmes (practical or unpractical) which the three parties have laid before the great National Assize. We await the verdict with a composure which will be shared by all except those few who fail to share our old-fashioned belief in the stratum of commonsense which underlies the ultimate opinion of the British people. That belief is in no way modified by the wide extensions of the franchise recently made, especially in the direction of the female sex. A cynic has said of this Election: "Man proposes. Woman disposes." We remain undismayed. As we look down the vista of electoral possibilities one, and only one, trouble ruffles our serenity, and it is the knowledge that, under our present effete electoral system, the aggregate opinion of the people can hardly find anything approaching a mathematical reflection in the *personnel* of the next House of Commons. It is a blot upon the escutcheon of all recent Governments that they have successively failed to remedy that defect in our machinery of democracy. The blot *must* be removed by the next Government, of whatever political texture it may be.

It is, above all things, the single vote for the single seat in the triangular contest that renders the result of this General Election inscrutable, and stultifies all prophecy. In a later article in this issue we give a number of salient electoral facts and statistics. It is enough here to say that, with an electorate of nearly twenty-nine millions (as compared with twenty-one and a-half millions at the last general election) in which women exceed men by over one million, 1,728 candidates are fighting for 615 seats, and that there are 470 three-(or more) cornered contests. These facts are alone sufficient to warn all political prophets of the foolhardiness of their professions. The Headquarters of each party is, of course, obliged to put out an optimistic forecast. Of these we need not take too much notice. To each it is tactically necessary to "talk prosperity"; and their forecasts must be taken with the proverbial pinch of salt. But to those (and are they not the majority among us?), in whom the love of prophecy is ingrained and ineradicable, we may propose two subjects for thought. As we show on a later page, the figures of the by-elections held during the life-time of the last Parliament suggest that, if at any time during the past four years a general election had been held, no party would have emerged with a clear Parliamentary majority over the other two. The allowances that have to be made, especially in respect of the re-union of the Liberal Party and the spectacular appeal of its unemployment programme, do not tend to make less likely what is commonly called a Parliamentary "deadlock."

If that be the most logical forecast of an inscrutable election, we remain undisturbed. Nor are we impressed by the appeal of each party to be returned with a clear majority in order that we may enjoy the fruits of what is popularly called a "stable Government." That appeal and others of its type are based on the idea of the two-party system. The fact which we have to face, and which the country has not yet faced, is that the two-party system has gone, and gone for ever. The three-party system has come to stay and we have got to learn how to work it. Unless present forecasts are egregiously wrong, we may quite possibly have a result in which Parties A and B are within 30 or 40 seats of each other's strength, and Party C has very substantially more than the 30 or 40 balancing seats. If by Party C we mean the Liberal Party, then two negative but satisfactory results accrue for a start: no measure of Protection and no increase of Socialism could possibly pass through the next Parliament.

That is a solid ground for complacency. But it is incidental to the main issue. What is required is a reorientation of the national idea of the working of constitutional government. For long periods—indefinitely, perhaps—the House of Commons may well be manned by three parties, no one of which has an independent majority, and yet, by the common consent of all shades of opinion, "the King's government must be carried on." The upshot of such a position, in our view, would be that all members of Parliament would be compelled to be a little less for party and a little more for the State. In a brilliant little book* which has just been published, an anonymous writer imagines a position in which Parties A and B are approximately equal and Party C has 33 members (elected, thanks to our anomalous electoral system, by 5¼ million votes). Each of the bigger parties in turn, through inability to surrender one iota of the old ideas of party government, courts and achieves shipwreck in the House of Commons; and eventually tiny Party C forms a government and shows how the new idea of government should be translated into practice:—e.g., it introduces overdue measures for remedying crying evils, against which no party dare vote, lays down the rule that the Cabinet cannot declare for a dissolution unless the House of Commons votes in that sense, and restores something of the free power of members to vote according to conscience and pledge.

Some observers of the progress of the electoral campaign profess disquietude at the apathy which, superficially at least, appears to mark the attitude of the electorate. We believe that this diagnosis of the temper of the people is erroneous, and that the party managers, remembering the partisan enthusiasms and passions of previous elections, are mistaking for indifference what is really a quiet, serious interest in the broad national issues of the day. It is, in fact, fortunate that such a temper prevails at a moment when the country is called upon to prepare itself for a probable Parliamentary position which requires statesmanlike rather than partisan handling.

For there is one thing certain: The country is no mood for a repetition of the situation in which, as was once the case, the Government of this country depended on the support of an Irish *tertium gaudens*. In order to save the institution of democracy from discredit, the task of any party holding the balance as a result of the forthcoming Election must be to keep itself free from "back-stairs" alliances, to avoid giving unconditional support to one party, and to lay down lines of policy on which alone it will co-operate with another party in the public interest.

LORD ROSEBERY.

The death of the Earl of Rosebery marks the end of a life whose public significance had, in fact, ended over twenty years ago. Endowed with high gifts of oratory and statesmanlike vision, Foreign Secretary at the age of 39, Prime Minister in succession to Gladstone before reaching the age of 50, Lord Rosebery renounced without reluctance a greatness to which he had attained with little effort. The most brilliant failure of our age—become in retirement an almost legendary figure to the present generation—his career will long remain a fascinating enigma to the historian.

In explanation of Lord Rosebery's inability to realise the great promise of his earlier days, the much-quoted phrase in which Cory, his tutor at Eton, described him as liking the palm without the dust of the arena, is no more than a half-truth. Resolution may not wholly have marched with imagination in his character, but he evinced more than once in his life great qualities of vigour and courage. Circumstances, and, above all, the circumstance that he was born perhaps a hundred years after his time, played a larger part in his failure. For the rest, we must look to personality as the clue. In the case of Lord Rosebery, more than most men, the truth was exempified of the old saying, ἦθος ἀνθρώπῳ δαίμων—"character is fate." Essentially *grand seigneur*, with the instincts of the Whig aristocracy in his blood, Lord Rosebery was never at heart wholly in sympathy with the political party to which, by accidental circumstance rather than deliberate choice, he became attached. Born of a family whose traditions were to oppose Tory policy, and attracted in his youth by the dominant personality of Gladstone, his convictions were increasingly alienated, as time went on, from modern Liberalism. When he abandoned the leadership of the Liberal Party he was true at last to what was strongest in himself.

* "Robinson the Great," by an Impenitent Politician. (London) Christophers. 3s. 6d. net.

This conflict between conviction and the political exigencies of his position goes far to explain much that is enigmatic in his career. His tour of the world in 1883, after a brief tenure of the Under-Secretaryship of the Home Office, inspired him with a belief in the cause of Imperialism (in the best sense of the word) which became, in his own words, " the dominant passion of my public life," and which was destined to accord ill with the attitude of Radicalism in the days of the South African War. As Foreign Secretary in Gladstone's fourth Administration in 1892, his forcible policy in Egypt and Siam won Lord Salisbury's approval but antagonised many of his colleagues—Sir William Harcourt and Mr. Morley in particular—in the Cabinet. At the beginning of his Premiership in March, 1894, he referred to Home Rule in terms which led his party gravely to question his allegiance to Gladstone's principles in that issue. It is well known that the death duties in Sir William Harcourt's Budget that year received his grudging and reluctant assent. When a snap division in the House of Commons brought defeat in June, 1895, Lord Rosebery resigned with relief at terminating an association in office with colleagues whose opinions had become in many ways repugnant to him.

It is arguable that, realising his own instinctive views, Lord Rosebery should have refused the office of Prime Minister in 1894. It has also been suggested by critics of his career that he should have made a resolute bid to regain the leadership of Liberalism in 1905; but in the ten years which followed his fall from office the trend of politics had widened too greatly the gulf which separated him from his party, whose leadership he resigned in 1896 as a result of a difference of opinion with Gladstone on the question of pro-Armenian intervention. Thus, in 1899, he found himself supporting Unionist policy in South Africa and warmly advocating suspension of party tactics during the war—an attitude which divorced him from the majority of the Opposition. During the tariff controversy of 1903-05 he supported strongly the cause of Free Trade, but at a moment when many expected his return, if not to the active leadership of the Liberal Party, at least to office in the next Liberal Government, he announced that his objection to Home Rule made it impossible for him to serve under Sir H. Campbell-Bannerman. In truth, it was no single issue which now separated him from the party which he once had led. Never a House of Commons man—a misfortune due to the accident of birth—he desired to reform and strengthen a House of Lords which Radicalism was set on emasculating. Doubtful at heart of the merits of democracy, abhorring demagogy, he saw the Liberal Party embarking, as he thought, in the 1906 election on a policy of " bread and circuses " whose prudence and probity he gravely questioned. After the passage of the Parliament Act, a measure which he denounced as " ill-judged, revolutionary and partisan," his withdrawal from politics was complete. Apart from a continued interest in municipal matters, both in Scotland and at Epsom, he assumed the part of " an indolent Cassandra in easy circumstances," viewing the political arena with philosophical detachment.

It may be that to the future student of political history Lord Rosebery will be noteworthy chiefly as a Foreign Secretary who established the valuable principle of continuity in British foreign policy, a principle to which he adhered as Lord Salisbury's successor, and which has been generally accepted by subsequent Foreign Secretaries. Apart from this, he left singularly little enduring impress on his time. A brilliant *littérateur*, a polished rather than an inspiring speaker, he was not a good "mixer," and, over-quick to take offence, alienated more friendships than his natural grace and charm of character won. Revolted by the " hatred and coarse thinking " of twentieth-century politics, he renounced the opportunity which was open to him in 1903 of resolutely cutting across established party frontiers and declaring himself leader of a centrist " New Tory " party, opposed alike to Protection and Socialist experiment. In such a part he might have become a real leader of the nation. As it was, endowed with too much sensitive imagination to feel at ease in the ranks of reaction, too fastidious and conservative in thought to court the favour of democracy, he fell between all the political stools of his age. Temperamentally an oligarch, whose amplitude and keenness of mind fitted him to render great service to his country, the measure of his qualities and his defects is that he refused the *rôle* of Cleon and missed the part of Pericles.

CHINA IN THE WARS AGAIN.

When the Kuomintang armies entered Peking last June there seemed some hope that this might mark the end of the Chinese Civil War. In the space of two years the Kuomintang had completed their astonishing advance from Canton—the southern gateway into China—to the northern capital. Feng Yü-hsiang and Yen Hsi-shan, the most intelligent and the most enlightened of the Northern War Lords, had hoisted the Kuomintang flag and had joined in the final campaigns against the Anknochün—a grand name for the other Northern War Lords in coalition. Moreover, after the death of Chang Tso-lin on his retreat from Peking to Mukden, a dramatic change came over the policy of the local Chinese Government in Manchuria. Under Chang Tso-lin it had been the life and soul of the opposition to the Kuomintang; but Chang Tso-lin's son, Chang Hsüch-liang, had no sooner succeeded to his father's position than he began to make a *rapprochement* towards the Kuomintang Government at Nanking; and though the Japanese Government put some pressure on him to stay his hand, he too had hoisted the the end of the year. Almost simultaneously a disband- or five masters of the soldiers adhering to the Kuomin- tang cause met together to discuss ways and means for an all-round reduction of forces. The necessity for a drastic reduction of armaments was strongly urged by the Nanking Minister of Finance; and the Minister was vigor- ously supported by the Chinese merchants and bankers of Shanghai. These Chinese business men were in a strong position, since they held the only body of capital which the Nanking Government could look forward to borrow- ing, and they were in a position to make their own terms because their assets, being located at Shanghai in the International and the French settlement, could not be distrained upon by violence. The Shanghai business men made it evident that they would not lend their money unless they had a good assurance that an effective dis- armament programme was going to be put into operation; and in taking this stand they were speaking for Chinese public opinion, which was crying out for peace after seventeen years of civil war. Thus, with the peace move- ment gaining force, confidence and expression; with the clash of arms momentarily silent; and with the greater part of China now at least nominally united under the Kuomintang flag, the prospects of the Republic seemed fairer than they had ever seemed before. And this view was taken by foreign observers, as was shown by the acts of foreign Governments. By the close of the year 1928 eleven out of the fifteen surviving " Treaty Powers " had concluded new treaties with the Nanking Government, thus incidentally recognising that Government as the sole legitimate central Government of China. All these eleven new treaties accorded China her tariff autonomy unconditionally, and five of them further provided for the extinction of the extra-territorial privileges enjoyed by " Treaty Powers " as soon as certain conditions had been fulfilled. At the beginning of this year it seemed as though China were at the beginning of a new and less troubled chapter in her history.

This, however, was winter time, when warfare is always suspended in China; and since the return of spring China has found herself in the wars again. The new trouble is the old trouble. The masters of the soldiers either cannot renounce their ambitions at one another's expense, or at any rate they cannot dismiss their mutual fears and suspicions. Each sees his safety in the elimina- tion of the others; and so, as soon as the campaigning season returns, the question arises: Which is to get his

blow in first? A cynical observer might say that every- thing is just as it was before; that the Kuomintang colours are simply a camouflage for mere disingenuous war lords who have usurped the places of the former avowed adventurers; that when Chiang Kai-shek attacks the Kwangsi generals or Feng Yü-hsiang for disloyalty to the Nanking Government he has his tongue in his cheek; and that his opponents have their tongues in their cheeks when they retort that they are the true champions of the Kuomintang against a Generalissimo who has made him- self dictator. There is, of course, a good deal of truth in this; but we believe that it is not the whole truth; and for this reason, though undoubtedly the sky is overcast again in China, we do not take a pessimistic view. In addition to the rivalries of generals, there are two other important factors in the situation. One of these is the reality of the Kuomintang Party as a force which stands apart from and above the various individuals who profess to be serving its cause. The other factor is the great and growing force of public opinion, to which we have alluded already. These imponderable but potent forces have to be taken into consideration in estimating the prospects of the new conflict that has arisen this year.

This conflict is between Chiang Kai-shek, acting in the name of the Nanking Government, on the one side, and the Kwangsi generals and Feng Yü-hsiang on the other. How far Chiang is sincere in his loyalty to the Govern- ment and how far he is playing for his own hand we need not yet inquire. It is possible that, if Chiang emerges as the victor from the present contest, there will be a final trial of strength between him and the Party, as an organi- sation with an interest of its own distinct from the interests of its individual supporters. That, however, is a question for the future; for, so long as the Kwangsi faction and Feng are at large, the interests of Chiang and the Government are inseparable. Confining our atten- tion, therefore, to the immediate issue, we may tenta- tively estimate the strength and weakness of the two rival camps as follows.

It is in Chiang's favour that Chang Hsüch-liang in Manchuria seems to be maintaining a friendly neutrality towards him, while Yen Hsi-shan is preparing to co- operate with him actively in the campaign against Feng. Thus there appears to be no possibility of anything like a new coalition against the Kuomintang among the War Lords north of the Yangtse. Yen, long celebrated as " the model tuchün " of his own province of Shansi, is the one War Lord who, by temperament and conviction, might be expected to adapt himself successfully to a con- stitutional *régime*. As for Chang Hsüch-liang, the remoteness of his Manchurian domain, beyond the Great Wall, makes it easier for the Nanking Government to allow him *de facto* autonomy—and he will never seek more than that, since he needs the diplomatic support of Nanking against Tokyo, while he could not so far outrage Chinese public opinion as to seek the support of Tokyo against Nanking.

Another point in Chiang Kai-shek's favour is that he has won the first round in the game by breaking up the Kwangsi forces on the Middle Yangtse. So long as some of the Kwangsi generals held Hankow it was possible for them to join hands with Feng and thus confine the *de facto* domination of the Nanking Government to the Lower Yangtse Valley. But Chiang's sudden and rapid offensive against Hankow in March took all his opponents by surprise; and he had occupied this central and com- manding position before Feng's troops had arrived on the spot and before Feng himself had decided whether to repeat his old manœuvre of stabbing a colleague in the back while his attention was diverted by another adver- sary. It was by this trick—practised first on Wu P'ei-fu and then on Chang Tso-lin—that Feng rose to power. His fate may have been settled by his failure of nerve when the moment came, this spring, for trying the same trick once again. Chiang, with the Lower and Middle Yangtse in his hands, now holds the interior lines; and though the Kwangsi troops, rallying in their home pro- vince, may descend the West River and enter Canton, that will not help Feng, any more than some local success which Feng might obtain would help the Kwangsi generals in their isolated position on the southern littoral. Even if Feng now definitely enters the lists, Chiang will be able to deal with his opponents piecemeal.

A third point in Chiang's favour is that the Japanese, after occupying the zone of the Tsinanfu-Tsingtao Rail- way for a year, have at length handed it over to Chiang's henchman and not to Feng's. Thus Chiang, in Shantung, is now in direct touch with his colleague Yen in Chihli, while Feng has been baulked of his hopes of obtaining direct access to the sea. The possession of a port in Shantung would have meant much to Feng. It would have put him in touch with foreign countries, and, above all, it would have given him a chance of smuggling in munitions—for scarcity of munitions has been his weak point all through.

Thus Chiang, ignoring for the moment the Kwangsi forces' invasion of Kwangtung, may concentrate upon crushing Feng by a converging movement from south, east and north simultaneously. The troops that he can throw into this movement probably outnumber Feng's considerably. On the other hand, Feng's troops are said to be better led and better disciplined, and, locally, it is Feng who holds the interior lines. In 1926, when Feng was similarly encircled by Wu P'ei-fu and Chang Tso-lin, he slipped away into the north-west, and there, with his rear covered by Russia, awaited better times. This time, however, that line of retreat is not inviting, for the North- Western Province of Kansu has been thoroughly devas- tated by the Muslim insurgents; and since these formid- able fighters are still on the warpath Feng may elect to fight Chiang where he stands rather than to retreat into their arms.

Such is the situation. We can only deplore that China is doomed to pass through another bout of civil war. It

is to be hoped that the days of tribulation will be shortened, and that the result of the campaign will be to confirm the hardly achieved unity of the Chinese Republic under the Kuomintang Government at Nanking.

THE CO-OPERATIVE CONGRESS.

(BY A CO-OPERATIVE CORRESPONDENT.)

THE 61st annual Co-operative Congress, which has met at Torquay this Whitsuntide, has shown a disinclination to tackle the problems which are awaiting inquiry and settlement. The delegates who spoke on the opening day made slight references to the impending General Election—but the absence of the co-operative Parliamentary candidates gave the political aspect the appearance of the play without a Hamlet. Thus it was that the threatened competition of the State and municipal purchasing services advocated by the Labour Party, with which many of the local co-operative societies are working in electoral alliance, was disregarded, and the inequitable effect of the Government's de-rating proposals on the operations of industrial societies was explained by Alderman F. Hayward, the chairman of the Co-operative Union, in an atmosphere of indulgent toleration. Throughout the day it seemed that the political tinge which now colours the movement has destroyed the critical interest in purely co-operative organisation—and that many of the leaders are turning from Rochdale to Westminster for guidance and help. One delegate actually suggested that the alleged unfairness of local rating on the new buildings of co-operative societies could be righted by the election of co-operators and their Labour allies to the rating authorities of their towns. He apparently did not realise that such a plan—already in operation in several towns—is merely perpetuating the prejudiced view that belittles the respect due to local government.

In his presidential address Mr H. J. May, the secretary of the International Co-operative Alliance, naturally dwelt on the accomplishment of European co-operation and the extension of the movement to the countries in the British Empire where, at present, the co-operative idea is mainly developed by the producers. There were indications among the producers in Africa, India, the Australian Commonwealth and Canada that they were ready to cultivate the co-operative spirit; efforts should be made to assure that their produce was co-operatively marketed to co-operative consumers. Meanwhile world co-operation was growing. There were now in the International Co-operative Alliance 37 States, with 206 national organisations, in which were federated 169,000 societies, with an individual membership of 52 million people. The turnover of these societies—from Iceland to China and Japan—including those for retail and wholesale distribution, production, banking, etc., was £4,622,000,000 sterling, while the aggregate capital was £840,000,000. The vastness of these figures was emphasised by several of the deputations from other countries, notably by Mr A. B. Gourevitch, the representative of the Centrosoyus, the Russian co-operative organisation. The Russian co-operative consumers' movement has a membership of 22½ millions, and the turnover for the past year was £1,456,000,000—about 50 per cent. of the trade of that country and nearly a third of the total co-operative trade of the whole world. Its capital is £80,000,000, nearly one-tenth of the aggregate funds of the entire movement. Such figures gave point to the plea of Mr H. J. May that British co-operators should study the varied developments taking place abroad. He claimed that they could usefully consider the rationalisation of their productive and purchasing undertakings, many of which were now a mass of scattered units without co-ordination and unity that eliminated waste and promoted efficiency.

The president of the Congress hoped that political neutrality would be preserved in their international movement. He was careful to avoid reference to the incursions of British co-operators into the political controversy, and wisely accepted as a fundamental principle of international goodwill the tradition of Free Trade—a tradition in which the co-operative movement has been reared and which is essential to the welfare of trading relations on behalf of the consumers. The maintenance of the international economic policy was dependent, he observed, "on the cultivation of all the means of assuring free intercourse between the peoples of the world—the literal removal of all frontiers—which must ever be of the utmost importance to an island people such as we are, with our dense population and the necessity, on the one hand, of importing not less than 70 per cent. of our requirements from other lands, and, on the other, of maintaining our existence—to say nothing of our prosperity—by the export of the finished products of our manufactories." Such a declaration is in direct opposition to the "Safeguarding" and "Protection" cries now being advanced from certain political platforms.

At last year's Congress the president, Mr A. Whitehead (who is now retiring from the secretaryship of the Co-operative Union after 42 years' service, and is being succeeded by Mr R. A. Palmer), deplored the departure of the movement from the cash principle which has been its basis since 1844. As was pointed out in these columns*, he regarded the encouragement of credit as a deflection from the old ideal. This year's president showed the concern of the co-operators of other countries at the departure of the British movement from the principles it had led them to adopt as a basis for their operations. The coining of the term "Mutuality" gave a delusive title, and has led to a decision for an examination of its effects at the International congress at Vienna next year. The use of the word "mutuality" in regard to credit trading he denounced as a "gross abuse of the term," and went on to observe that "members of our societies are slowly discovering that the so-called 'mutuality' means in practice that those who pay cash are subsidising to the extent of not less than 6½ per cent. those who mortgage the future to supply the perishable needs of to-day." The presidential adverse view is strengthened by the estimated accounts owing to societies at the end of last year. The sales of the retail distributive societies for the twelvemonth were estimated at £212,200,329, an increase of only 6 per cent., whereas the members' debts rose to well over £5,300,000, an advance of over 16 per cent.; the credit clubs and hire purchase sales were close upon two millions, a rise of over 30 per cent. Such facts and figures might well have been discussed by the delegates, who were, however, more interested in a resolution congratulating the movement on the purchase of a Sunday paper with a circulation of 400,000, which has increased to 415,000 during its seven weeks of co-operative proprietorship.

Although the co-operative movement has neighbourly relations with the Labour Party, several of whom are labelled as Co-operators, there is some uneasiness among the business leaders as to the likely rivalry between State and municipal departments with the operations of co-operative societies. The proposals for the development of the State activity in relation to Imperial trade and the State purchase and importation of wheat and other foodstuffs and the regulation of supplies by the Government has been seriously considered by the Co-operative Union, which has appointed a special committee to go thoroughly into the matter. Professor F. Hall is acting as secretary to the inquiry, and has promised that an exhaustive report shall be presented to the next Congress. Now that the movement has its own centralised wheat-buying office for the co-operative flour mills, and is also financing some of the wheat pools in the Colonies, there may be a conflict of interest should the idea of State purchases put forward by the Labour leaders materialise. This is recognised by the leaders of co-operation whose inquiries are extending into the regulation of supplies by the Government and their probable effect on the consumers' co-operative societies. Co-operators are also concerned with the recent merging of multiple shop concerns and the trustification and amalgamations. At the Hartlepool Congress the policy of amalgamating small societies into regional organisations to compete effectively with the big commercial firms was endorsed. This has been examined during the year, and a committee for the co-ordination of co-operative effort set up to effect amalgamations of societies with a view to placing them "in a strong enough position to deal with the menace of destructive competition by capitalist combines and rings." Through-

* *Economist*, June 2, 1928.

out this Congress at Torquay the need for the various sections of the movement to unify their efforts have been apparent. This was developed in the revision of the National Conciliation machinery in connection with labour disputes; in the reorganisation of the agricultural department, and in the institution of an annual trading propaganda campaign. In the absence of the politicians, closer attention than usual was given to educational matters and the advocacy of the League of Nations Union. On Tuesday afternoon Mr A. V. Alexander, fresh from his nomination as a Parliamentary candidate at Sheffield, went along to foreshadow the necessity of a national co-operative policy with regard to milk supplies in view of a new agreement between the milk retailers and the dairy farmers. He incidentally reminded the Congress that there were ten million co-operative voters—but although hopeful, did not actually predict that they would all vote the same way. The brilliant weather of the week, the skilful handling by the chairman and the engagement of political candidates in their constituencies contributed to a Congress of earnest purpose somewhat along the lines of that at Glasgow, over which the late Earl Rosebery presided when he defined co-operation as "a State within the State"—a definition that still obtains.

BRITISH FIRE OFFICES IN THE UNITED STATES.

A STUDY of the fire underwriting results of British offices for 1928 reveals two marked characteristics, a slight but very general reduction in profits and a tendency towards a diminution in premium income. Since nearly 75 per cent. of the total business is transacted abroad, and since by far the largest part of the foreign business is derived from the United States, it is natural to look to American underwriting experience for an explanation.

The table which follows has been based on the official reports of the companies furnished to the American insurance authorities and published annually by the Spectator Company of New York. The figures are, of course, published in terms of dollars, and have been converted into sterling at a rate of exchange of $4.80 to £1 for 1924 and 1925 and at $4.86⅔ to £1 for 1926, 1927 and 1928. Twenty-one companies or groups of companies have been selected, comprising all the principal British offices operating in the United States. In the form in which the figures are set out in the Spectator Company publication, allowance has not been made on the British system for a reserve for unexpired risks at the end of each year in respect of policies then current. Accordingly the necessary adjustment for this has been made on the usual standard of 40 per cent. of the premium income, and the underwriting profit or loss has been found by deducting from the premiums the sum of losses, expenses, and unexpired risk reserve as above.

The aggregate results for each of the past five years on this basis are as follows:—

Year.	Premium Income.	Underwriting Profit. Amount.	Percentage of Premium Income.
	£	£	
1924	31,085,285	726,648	2·3
1925	32,814,506	392,925	1·2
1926	33,601,253	752,354	2·2
1927	31,710,646	2,110,373	6·7
1928	31,277,814	2,531,231	8·1

Thus the premium income has exhibited a reduction in each of the last two years, and the tendency noted above in the final accounts of the British offices is, therefore, explained. Now this reduction in American premium income is attributable to two distinct causes. Owing to a tendency in the past to rely too much on interest earnings to counterbalance unfavourable underwriting results, a great deal of indifferent business had been written. The disadvantages of this course soon made themselves felt, and recently the declared policy of many offices has been to undertake a drastic reorganisation of the business for the purpose of eliminating unfavourable risks. The other cause which has led to a curtailment of premium income has been the greatly increased competition of native companies attracted by the more favourable trend of fire losses. The chairman of the "Royal" has estimated recently that £20 million of capital has been raised in the last two years for new fire insurance company flotations in the United States.

Turning, now, to the underwriting results, as shown in the table, it is evident that the falling-off in total profits of the British offices is certainly not due to the American business, and recent speeches at the various annual meetings have made it clear that this falling off has been due rather to the marked increase in home fire losses.

Finally, it is interesting to consider the results of individual companies and groups of companies, and these are set out below for each of the last two years:—

Company or Group of Companies.	1927. Premium Income.	1927. Underwriting Profit or Loss. Amount.	1927. Underwriting Profit or Loss. Percentage of Premium Income.	1928. Premium Income.	1928. Underwriting Profit or Loss. Amount.	1928. Underwriting Profit or Loss. Percentage of Premium Income.

17. Liverpool & London & Globe.....	2,715,279	154,857	5·7	2,857,203	112,636	3·9
18. Royal Exchange...	771,472	25,059	3·3	821,863	56,626	6·9
19. Scottish Union & National	945,922	95,735	10·1	965,222	103,517	10·7
20. Sun	1,105,323	78,462	7·1	1,111,333	94,699	8·5
21. Yorkshire	614,344	54,683	8·9	547,384	11,280	2·1
	31,710,646	2,110,373	6·7	31,277,814	2,531,231	8·1

The most casual study of this table cannot fail to reveal the extraordinary range and variety of the results achieved by different companies. Last year every company succeeded in working at a profit, as against all except one in 1927, but the underwriting profits range from 0.7 per cent. in the case of the Employers' Liability, to the remarkable result of the Eagle Star and British Dominions, with a profit of 16.1 per cent. Moreover, the fortunes of the companies change in a striking fashion from year to year, as a comparison of the 1927 and 1928 figures will show. Again, the Eagle Star and British Dominions is the most noticeable example of this, for a loss of 5.9 per cent. in 1927 has been turned into a profit of 16.1 per cent. in 1928. The most consistent results appear to be shown by the larger companies, the Royal, the North British and Mercantile, and the Commercial Union.

DANGER OF MOTOR TRAFFIC.

PROBLEMS of internal transport are growing rapidly in importance. Last year, as a leading article in last week's *Economist* pointed out, 212,668 new motor vehicles were brought into consumption in Great Britain. Though we are, let us be thankful, still far from the desperate case of the United States, where the week-end automobile trip in a circulating queue has sunk deep into the body of popular national vices, yet in our plodding Old World way we are moving on the same path, as the following figures bear witness:—

MOTOR VEHICLES AND DRIVING LICENCES.

	Number of Licensed Vehicles (a).	Number of Driving Licences.
1922	909,984	1,210,700
1927	1,657,819	2,349,000
1928	1,758,250	2,527,000

(a) Excluding tramcars and trade licences.

It is, of course, scarcely necessary to examine figures to be assured that more and more motor-cars are coming into use. Congested streets tell their own tale. The time has come to ask ourselves whether we are prepared to en-

courage this expansion by building more and straighter roads, or, on the contrary, to check a movement which, to put it at its worst, brings danger to our thoroughfares, din to our towns, and desecration to our countryside. The course of legislation has been divided. The British motor industry is among those favoured at the expense of the rest of the country by a measure of Protection. On the other hand, motoring as a whole is taxed by the horse-power and petrol duties. As yet there is little apparent danger of the State's being abnormally influenced by the vested interests of the motor trade, as it has been influenced by those of alcoholic refreshment.

The law is, as a matter of fact, obviously out of date. The problem of dangerous streets has never been systematically attacked. A few figures illustrate how great it is. In the final quarter of last year 365 persons were killed and 13,132 injured in street accidents in the Metropolitan Police area. Of the 365 deaths, 355 were caused by motor vehicles of all sorts. The drivers were not, of course, always to blame. Death came to 40 persons who hesitated in the middle of the road and to 126 who crossed "without due care." Yet the penalty for carelessness or indecision seems a trifle excessive compared with the sentences of fines and endorsement of licences often awarded to drunken or dangerous drivers. In 1927, when the number of licensed motor vehicles was 1,657,819, there were 99,650 street accidents in which they were involved, resulting in 4,606 deaths and 112,324 injuries. In 1928 the number of licences rose to 1,758,250, and the number of accidents to 111,976, causing 5,378 deaths and 126,875 injuries. If this rate of increase were maintained, between now and nine years hence we should have killed or injured a million folk on the road, and in fifty years 25 million of us, or half the population, would thus have suffered.

These facts can be regarded from many different points of view. The pedestrian asks that the regulations concerning dangerous driving should be tightened up, and sentences made really deterrent; at the same time he wishes to have some certainty of recovering damages if he is knocked down. The motorist desires similar protection against his irresponsible brethren, and asks for straighter, better lighted and better made roads.

There are plenty of signs that these problems are receiving the public attention which they deserve. The London Traffic Bills, designed to relieve the road congestion on the outskirts of the metropolis, have taken their legislative hurdles. The Royal Commission on Transport is masticating fresh meals of evidence. A few days ago the report was presented of the Conference on road traffic noises and priority of traffic at cross-roads. Lord Cecil's Bill, if for sufficient reason it failed to become law, was at least fully examined by a Select Committee, whose report, while rejecting the Bill, contained two important positive recommendations: that legal speed limits should not be maintained which could not be made effective—how reminiscent of the controversy over naval blockade—and that the Ministry of Transport should proceed at the earliest possible moment to bring in its Draft Road Traffic Bill. Many excuses have been officially made for not proceeding with this measure, the most cogent being that as it has been delayed so long its provisions are already out of date.

There is no lack of suggestions for dealing with the trouble. The principle of Lord Cecil's Bill was that motorists should be physically prevented from driving at excessive speed by mechanical devices attached to their cars and by "waving" the roads at critical points, so that the "road hog" would suffer great discomfort and possibly break the springs of his car. It is improbable that much good could come of such provisions. "Flexibility" in rapid manœuvring is essential if accidents are to be diminished, and anything which makes it more probable that the bad driver will upset his car at dangerous points reduces the safety of others.

Again, it has been proposed that insurance against third party risks should be compulsory, and a Bill to this effect was actually introduced last November by Mr Wardlaw-Milne. It failed, however, to secure the support of the Government. This is a question on which opinion is much divided. Some people feel that the greater the extent to which financial responsibility is shifted to insurance companies, the more willing will drivers be to take risks, so that accidents would be, if anything, increased. Against this it may be urged that the interest which the insurance companies have in preventing fire has resulted in a great diminution in the risk of fire; then let the pedestrian also become the protégé of the insurance company. It is said that the companies themselves view the proposal with disfavour.

The fact is that the great majority of accidents, whether or no there is technical culpability, are to be laid at the door of a few bad drivers. They are not necessarily fast drivers. A first important step would be to ensure that licenses were not granted to persons with patent physical defects, such as deafness or the lack of a limb; no instances of one-armed men who have driven for ten years without an accident can undermine the need for such a measure. Then those who have proved themselves a danger should be prevented from continuing in that capacity; suspension of licences for a period of years should be the lot of all found guilty of negligent driving, with life suspension for the grosser cases of dangerous driving. And in this respect intoxication is not necessarily more dangerous than hysteria.

In the meantime we must palliate our misfortunes. We should reconstruct the danger spots on our roads, not so as to enable motorists to drive faster, but so as to make it certain that they drive less riskily. That is the keynote of the report of the conference on cross-roads. And if we are to live shorter lives let them be as peaceful as possible. Compared with some Continental cities, London's motor noises are as the soft cooing of doves, but the motor-horn nuisance can undoubtedly be alleviated. The conference advised the authorities to embark on the quest of the melodious motor horn in the same way as they sought the effective red reflector for pedal cycles. It was proposed, further, that the creation of unnecessary din by faulty construction, maintenance or loading of motor vehicles should be made a legal offence. Workers in city streets will be delighted to read the condemnation of hooter-sounding by stationary vehicles. There is no doubt that the sounding of horns is excessive; making noises is no substitute for taking care, and the sooner the practice dies of inquiring, after a motor accident, "Did he sound his horn?" the better for all concerned.

In such ways can the day when we must face the whole maze of motoring problems be postponed for a little while. We are still far from making this a land safe for foot passengers to live in, but we are, let us hope, shortly to try and exorcise the few bad motorists who get their whole fraternity a bad name.

SOME ELECTORAL POINTERS.

In the happy days before the war when the Labour Party was still in its infancy and the Irish Party could still be regarded as a "guerilla" attacking force on the flank of the opposing armies of the two great parties of the State, the political prophet was able to make very accurate forecasts of general election results by a study of the course of the by-elections. The would-be prophet of to-day can put no such faith in the by-election statistics of the last four years; for there are at least two considerations which introduce elements of uncertainty. The first is the addition of nearly seven million new voters—mostly women—to the register, which now includes approximately 29 million persons instead of 21½ millions as in 1924. No one can say how these new electors will vote. For our part we are inclined to doubt whether it will sensibly modify what would otherwise have been the judgment of the country. It is generally anticipated that the percentage of the new voters polling will be smaller than among the rest of the electorate, and in any case we have heard no convincing reason for assuming that the young women will vote differently from their families or their fellow workers. The larger figures, however, introduce a new element of uncertainty and offer a fresh field from which votes may be garnered by the skilful politician. In the second place, the political situation has varied greatly in the last few years. The Conservative Party has been losing a proportion of by-elections all through its term of office; but in 1926 the losses were temporarily checked. In that year the Liberal Party had a particularly lean time; for out of their thirteen candidates who stood in fourteen elections, not a single one was successful, and six of them actually forfeited their deposits. On the other hand, since the beginning of 1928, the Conservatives have lost nine out of twenty seats. The five years therefore cover a period of varying fortunes. Moreover, no part of the period adequately reflects the present situation, for it is quite impossible to gauge the extent of the undoubted Liberal revival of the last few months by figures for one or two constituencies. The extent of this revival in actual voting strength is a second unknown factor. A third is the incalculable influence of between four and five hundred three-cornered contests on the distribution of seats. In none of the last three Parliaments has the complexion of the House of Commons reflected the voting strength of the parties in the country, and it would be pure chance (almost a miracle) if it did so on this occasion.

It is worth noting, however, that taking the period as a whole, the by-elections of the last five years at least show a substantial divergence from the results of 1924, which were, by common admission, rendered abnormal by the publication of the notorious Zinoviev letter. During the lifetime of the last Parliament there were 61 by-elections. In other words about 10 per cent. of the House of Commons was re-elected. The following tables show first, for purposes of comparison, the results of the last two general elections, and secondly, the results in the 61 seats both in 1924 and in the subsequent by-elections:—

RESULTS IN ALL SEATS.

	1923. General Election.			1924. General Election.		
	Votes.	Candi-dates.	Seats.	Votes.	Candi-dates.	Seats.
Conservative	5,545,000	536	258	7,838,000	534	415
Liberal.....	4,314,000	454	158	2,925,000	342	42
Labour	4,508,000	423	191	5,424,000	516	152

RESULTS IN 61 SEATS.

	1924. General Election.			Subsequent By-elections.		
	Votes.	Candi-dates.	Seats.	Votes.	Candi-dates.	Seats.
Conservative	844,852	58	44	630,795	59	29
Liberal.....	379,372	34	6	447,834	59	10
Labour	523,245	45	11	567,925	56	22

Comparison of the 1924 figures for the whole country and for the 61 seats respectively, shows that the latter do not include quite enough Labour seats, or seats in which there was a Labour candidate, to make it an entirely representative sample. With a larger proportion of Labour seats the by-election results might well have been Conservatives 27, Liberal 10, Labour 24, instead of the figures shown in the table. An outstanding feature of these figures is the rise of the Conservative poll in the General Election poll per candidate from about 10,500 votes per candidate in 1923 to nearly 15,000 in 1924, and a drop back again to 10,600 in the by-elections. The number of seats has risen and fallen in proportion. The increases in the by-election votes of the Liberal and Labour parties is, of course, connected with the increased number of candidates. In the case of the Liberals the by-election contests include, as we have observed, large numbers of forlorn hopes. But if the by-elections are compared with 1923 results it is evident that the margin between the votes of the two parties has widened to the advantage of Labour and this is reflected in Labour's larger proportion of seats.

If we make the adjustment mentioned above, it would not be unreasonable to regard these figures as an index of the state of feeling in the country during the Conservative term of office and to assume that if the election had occurred during the past winter the results would have shown a result of approximately: Conservatives 270, Liberals 100, Labour 240. Such figures, which, curiously enough, are not dissimilar from the present "majority" quotations on the Stock Exchange, give, of course, an unwarranted impression of exactitude—but we believe them to be of value so far as they indicate the probability that in the event of an appeal to the country at no time during the past 4½ years could the Conservative Government have counted on an absolute majority (and we might add on more than 40 per cent. of the votes cast); on the other hand, at no time could they have been dispossessed as the largest party, and at no time could the Liberals (though certain ever since 1924 to improve their position) have counted on more than 100 seats.

But when we have said this we have only touched the fringe of the enigma of May 30th. The most formidable factor is the effect of a ten weeks' concentrated propaganda of the Liberal unemployment plan; while prophecy is still further confounded by the increase in the electorate and the existence of three or more candidates in about three-quarters of the constituencies. Here are the figures of the new electorate registers:—

	Men.	Women.
England and Wales	11,867,380	13,225,156
Scotland	1,413,602	1,566,657
Northern Ireland	384,956	485,815
Grand totals	13,665,938	15,277,628

In 1924 the totals for Great Britain were 12,062,198 men and 9,053,019 women. For these votes 1,729 candidates are appealing. Of this total 590 are Conservatives, 570 Labour, 512 Liberals, 25 Communists, and 32 either are Independents or represent sectional interests. The state of the parties in the House of Commons at the dissolution was: Conservatives 396, Labour 160, Liberals 46, others 7 (six seats being vacant). At the 1924 dissolution the position was as follows:—Conservatives 258, Labour 193, Liberals 158, others 5 (one seat being vacant). Among these figures we must leave the political statistician to roam.

Notes of the Week.

The Reparations Situation.—Up to a point progress was made this week in Paris in regard to Reparations. Our Paris correspondent gives the substance of the revised report. The chief changes as compared with the summaries previously given are, first, that the Allies ask for an additional 25 million marks for 37 years to cover the Belgian war marks claim. The reservations put in by Dr Schacht have been considered and the creditors' views put to the German delegation. The proposal that the Austro-Hungarian Succession States should contribute is believed to have been rejected, while it is also believed that the demand for a moratorium in certain contingencies has been refused on the ground that, though transfer difficulties may arise, there should be no difficulty for Germany in providing the necessary marks. The independent committee, of which much has been heard, which should deal with any threatened transfer difficulties, is to be advisory only, but we must await the report before it is possible to judge whether the plans for a revision or for suspending transfers are practicable. The Germans have asked for the railways to be released from the mortgage under the Dawes Plan. To this the creditors have replied by suggesting plans under which the German railways could raise development loans up to a certain maximum with priority over mortgage.

BANQUE BELGE & INTERNATIONALE EN EGYPTE.

ALL BANKING OPERATIONS TRANSACTED.

Secondly, it is proposed to increase the amount of unconditional payments. The German delegates strongly dislike the raising of the conditional payments and the addition to the annuity of the Belgian marks claim, and following rumours of the resignation of both the German delegates the resignation of Dr Voëgler is officially announced. But Dr Schacht remains, and there is yet hope that a final break in the negotiations can be avoided. The substantial ground for this hope is that, after these long discussions, it is clearly impossible to go back to the old situation, and some new way must be found. Early in the week it was announced that Mr Hoover, who had summoned an emergency meeting of the leaders of the parties at Washington, had secured from them an agreement that if there were to be any scaling down in Reparations payments, America would be prepared in principle to accept a proportionate reduction with the other creditors. This was accepted in Paris as an earnest of goodwill and an additional incentive to come to an agreement. But the proposal does not substantially lighten the problem before the Experts, for the American claim to Reparations is a very small one, and her concession is only worth about £200,000 a year. This gesture from America, however, was quickly followed by an inquiry addressed by the American Government to France, as to whether the United States might expect the French ratification of the Mellon-Bérenger agreement this payment will be spread over a due to pay over 400 million dollars to the United States for war stocks this year. If she ratifies the Mellon-Berenger agreement this payment will be spread over a long period. This is a strong inducement to France to ratify, but she is unwilling to commit herself until a Reparations settlement is assured. This problem, therefore, affords an additional reason for expecting that a settlement will be reached.

The " Safeguarding " Issue.—Although the unemployment problem continues to hold the centre of the stage, the protectionist proposals of the Government have this week been occupying more and more of the general attention of the electorate. We regret to see that certain prominent political and responsible organisations continue to circulate fantastic figures relating to the result of " Safeguarding " experiments of the type which we have frequently exposed in these columns. But the most important development in the fiscal controversy is the conspicuous manner in which Mr. Ramsay MacDonald has nailed the Free Trade flag to the Labour mast. He has definitely committed his party—among whom there are divergencies of opinion on the point—to the repealing of the " Safeguarding " duties. This means that unless the Conservatives obtain a clear majority over the other two parties combined, we shall have in the next House of Commons a majority pledged not merely to resist any extension of Protection but even to make a definite move towards freer trade. As in 1924, so in 1929, a motor manufacturer has joined in the battle. In the former year Mr Morris tried to make the nation's flesh creep by telling them that without Protection the British motor industry would die. Now Sir Herbert Austin tells us that if the McKenna duties are removed his firm will have to put up its shutters. This, of course, is sheer nonsense, and the nonsensity is too apparent to mislead the electorate. Students of " The Case for Free Trade," which we have recently published, will be fully aware of the fact that the jeremiads of 1924 were completely falsified by events. In that statement of the Free Trade case we wrote:—" A review of all the facts and figures reveals no justification for the claim that Protection has caused the expansion of the motor industry. It made its biggest stride in the Free Trade year." We repeat it.

Reassessments and De-rating.—The result of the Rating and Valuation Act of 1925 was, on the whole, to raise the level of rating assessments, chiefly because the economic progress of society, the spread of towns, and the development of road systems, all tend to raise the value of real property except in particularly depressed areas. Even in the latter special causes operated to raise assessments, for instance, in more than one mining district collieries found the rateable value of their cottage property raised in accordance with the increase in rents elsewhere since the last assessment and with the higher standard of house accommodation now provided. Some Opposition election campaigners having attempted to associate these rate increases with the Local Government Act of 1928 (the " De-rating " Act), the Minister of Health has been prompted to issue a formal reply. Mr Chamberlain quite justly points out that the increase in assessments cannot result from the De-rating measure, which provides that, on the basis of present expenditure, county and county borough councils (though not the smaller authorities) will actually receive from the State one shilling per head of population more than they relinquish; he insists, furthermore, that a general rise in assessments need not be accompanied by an increase in the rates paid, since it could be counter-balanced by a corresponding reduction in the rate in the pound. But when he says that the Act of 1925 has no connection with the Local Government Act he is on less sure ground; without the uniform and up-to-date valuation which the 1925 Act provided, the De-rating Act would have been impossible, and we cannot suppose that when the Rating and Valuation Act was introduced the possibility of its serving as the foundation of a measure of rating reform was altogether absent from the minds of the Government. That is by the way. Mr Chamberlain also neglected to draw attention to the inevitable tendency of local authorities to extend expenditure in proportion to enlarged assessments. The increased yield of existing rates in the pound is a temptation to extend expenditure accordingly, and the further a penny in the pound goes, the more readily it is imposed. All this is of great importance in connection with the Local Government Act, because if the obligations of any local authority are increased at the present time they are not accompanied by any increase in the Exchequer grant, which is based on the expenditure of the financial year, 1928-29, and they have, moreover, to be borne on a total rateable value reduced by the rating relief to industry and agriculture. In this way the Local Government Act may become a " Higher Rates Act," but, if so, the local authorities and not Parliament will have been chiefly to blame.

The Pope and Mussolini.—At the moment, when the settlement of the Roman question was first announced, it looked as though Signor Mussolini had got very much the best of the bargain. The Italian State, it seemed, would at last be rid of the thorn in its flesh; while the Vatican, by having come to terms with the Kingdom of Italy, had thrown open the flood-gates for a torrent of national rivalries to inundate the Catholic Church. The competition for places in the College of Cardinals between Italians and others might come to rival the competition for seats on the Council of the League of Nations; and all these embarrassments of the Catholic Church would redound to the Italian State's advantage. These forecasts were based on the assumption that the Vatican had tacitly pledged itself to a complacent and accommodating policy towards Fascismo as part of the bargain; but this assumption—though natural—is not being borne out by the event. Already the Pope has put his foot down, and put it down firmly. The occasion arose out of the speech which Signor Mussolini delivered in presenting the treaty and concordat to the new Italian Chamber. Among other things he remarked that he had given the Pope enough soil to bury the Roman question for ever; that he was intractable on the point that the youth of Italy must be imbued with the Fascist faith and aspirations; and that the State should breed a race of conquerors, bred for conquest. The Pope has ignored the first of these sallies; and, indeed, it may be taken as certain that the Vatican will ratify the agreements, as the Italian Chamber has done already, and that in this sense the Roman question will be put out of the way. It looks, however, as though it might be replaced forthwith by a new kind of Roman question, which will be still less to Signor Mussolini's liking than the old one; for, on the question of education, the Pope has lost no time in joining issue with the Duce. Taking up the phrase about " breeding for conquest," he pertinently remarked that " that which is done in one State might also be done throughout the whole world, and, if all States breed with a view to conquest, what then will happen? " He slily added that perhaps " the meaning was that it was intended to breed for the purpose of the conquest of truth and virtue," in which case " we shall, of course, be in perfect accord." But he went on at once to say that they would never be in accord in anything that aimed at impeding, diminishing or denying that right which Nature and God had given to the Family and the Church in the field of education. " On this point we do not wish to say that we are intractable, because intractability is not a virtue, but we do say that we are merely intransigent." He concluded by declaring that the Church did not dispose of material means for maintaining this intransigence, but that this was not a matter for regret, because " truth and right do not need material forces, since they have a force of their own—a force inconfutable and irresistible." This speech has made the Fascist Press angry, and we should not wonder if it has made Signor Mussolini uncomfortable. There is nothing that baffles the master of material forces so much as being confronted by opposition on another plane, on which the rods and axes ineffectively beat the air. And, in taking up the cause of the Family against the State, the Pope has made a bold bid for the support of all the forces of commonsense and sweet reasonableness. Church and State have their origins in mythology; the human realities are men, women and children, and if Church and State join issue, the victory is likely to fall to whichever of the two institutions shows itself the better servant of humanity. In an age when it is no longer Clericalism but Nationalism that is " the enemy," opinion will rally to the side of any power that has the courage to restrain the State from running amok.

American Cotton Crop.—The Department of Agriculture of the United States Government has now issued the final figures relating to the cotton crop for 1928. The area planted is now given as 46,946,000 acres, against 41,905,000 acres, the revised figures for 1927. The area picked is given as 45,341,000 acres, against 40,138,000 acres in the previous season. The yield per acre has been returned at 152.9 lbs., against 154.5 lbs. for the previous year. The total production is given as 14,478,000 bales, as compared with 12,955,000 bales in the previous season. The Department has published some interesting statistics with regard to the causes that reduced the yield. In this connection it is pointed out that in 1928 the boll weevil was responsible for 14.1 per cent., against 18.5 per cent. in the previous year, and 7.1 per cent. in 1926. The figures for excessive moisture are 7.3 per cent., against 4.9 per cent. in 1927 and 3.2 per cent. in the previous year, whilst the figures for deficient moisture are 4.4 per cent. for 1928, 6.4 per cent. for 1927, and 5.3 per cent. for the previous year. In market circles there has not been any great amount of interest in these statistics, as the attention of traders is now centred on the prospects for the new growth. Although no official information is yet available, it is agreed in most quarters that the crop has made a good start, and owing to the probability of a fair increase in the acreage the yield should be larger than last year, but a great deal will depend upon the weather during the next two or three months. As world consumption is now between 15,000,000 and 15,250,000 bales per annum, it is important that the prospects should indicate a yield of 15½ million bales, if an inroad upon stocks is to be avoided during the next twelve months.

Cotton Lock-Out Averted.—Our Manchester correspondent writes: At the end of last week there seemed to be a distinct danger of the Lancashire cotton-spinning industry landing itself into serious labour trouble, and a lock-out was only averted at the last moment. The trouble arose at the Alma Mill, Oldham. This mill was stopped for many weeks at the beginning of this year owing to bad trade. On reopening the employers gave notice of a revised scale of wages. The cardroom workers made a protest and followed up a week's notice by coming out on strike. The Master Spinners' Federation regarded this action as a violation of a joint agreement made in 1914, and decided to recommend the closing of all spinning mills in the Federation on May 18th. The agreement referred to was to the effect that notices to cease work shall not be posted at any mill until the matter in dispute has been considered by the joint committees of the two organisations, both local and central, and it was quite evident the cardroom operatives had not observed the agreement. A little later the matter was discussed by the Masters' Federation and the Cardroom Operatives' Amalgamation, and the latter body agreed to recommend the Oldham Association to advise its members at the Alma Mills to resume work as the employers had promised that, as soon as work was resumed at the mill, they were willing to agree to set up a joint committee to investigate the trouble. The Oldham Association, however, refused to act upon the recommendation of the amalgamation. In the middle of last week the Mayor of Oldham intervened and Lord Derby also had interviews with the trade union officials and the employers. As very little progress was made Sir Horace Wilson, the permanent secretary of the Ministry of Labour, and other officials took part in the negotiations. Ultimately, late on Saturday afternoon the Oldham Cardroom Operatives' Association agreed to accept the proposal of the employers that the cardroom operatives should return to work on condition that, if on investigation within one month after restarting their earnings are found less than is provided by the universal list, prices should be remedied accordingly and the difference refunded. Although to the outsider this dispute might not have been considered sufficiently important to warrant a general lock-out, a serious violation of an agreement had undoubtedly been committed by the Oldham Cardroom Operatives' Associations. It was feared in some quarters that this dispute may have had a bad effect on the relations between the Lancashire employers and the trade union officials.

Protection in Great Britain and Germany.—Advocates of Safeguarding policy are wont to paint this country as a shorn lamb, condemned by her traditional policy of Free Trade to nakedness amid her amply protected competitors. Mr Churchill attempts to reconcile explicit belief in Free Trade with the imposition or retention of our present tariff. It is interesting, therefore, to see, in a comparison with Germany, how far we have already departed from strict Free Trade, and how extreme is that form of Protection which goes by the pseudonym of Safeguarding. Germany is, by the tradition of fifty years, a Protectionist country; the classic of Protectionist theory, which all undergraduates studying economics are made to read, List's " National Theory of Political Economy " had a German author, and has often been the inspiration of German trade policy. The comparison cannot be made exactly, since our duties are usually *ad valorem*, whereas in Germany they are usually specific, but such comparison as is possible shows that in practically every instance where duties are levied in both countries the British duty is the higher. To take the most important categories, the McKenna duty of 33⅓ per cent. on motor cars compares with German duties estimated at 16.16 per cent. on cars weighing less than 1,100 kg. (a little more than one ton), 8.62 per cent. on cars weighing up to 1,600 kg. (about 1½ ton), and 6.46 per cent. on heavier motor vehicles. Our duties on lace and embroidery are, on the average, about twice as high as the corresponding German rates. The duty on hollow-ware entering Germany ranges from 4.6 per cent. on unfinished wrought iron ware to 11.2 per cent. on finished ware of sheet iron; we have a uniform duty of 25 per cent. Cutlery pays 33⅓ per cent. on importation into the home of Free Trade, against only 2.3 per cent. if unfinished and 5.5 per cent. if finished on importation into Protectionist Germany. And so the tale goes on. Science and art suffer alike, since optical instruments for scientific purposes and surgical glassware, which enter freely into Germany, pay respectively 50 per cent. and 33⅓ per cent. in Great Britain, while musical instruments, paying a uniform rate of 33⅓ per cent. here, are taxed on entering Germany at rates ranging from 13.33 per cent. on organs to 1.37 per cent. on flutes. Many more instances could be brought. Of course, there are also duties in Germany on a great many commodities which enter freely into

Great Britain, but the fact remains that the proposal to give general application to Safeguarding is a threat to set us not only among the Protectionist, but among the high Protectionist, countries of the world.

Employment in April.—Employment continued to improve during April. According to the *Ministry of Labour Gazette*, among the 1.9 million workpeople insured under the Unemployment Insurance Acts of Great Britain and Northern Ireland the percentage unemployed (wholly and temporarily) at April 22nd was 9.9, as compared with 10.1 per cent. at March 25th and 9.5 per cent. at April 23rd, 1928. The total number of registered unemployed at April 22nd was approximately 1,181,400. This compares with 1,203,800 at March 25th and 1,127,700 at April 23rd, 1928. At the end of April, however, the figure had risen to 1,198,000, owing mainly to increased unemployment in the coal mines. The following table gives the monthly movements of the unemployed percentage for some years past:—

PERCENTAGE UNEMPLOYED AMONG INSURED WORKPEOPLE IN GREAT BRITAIN AND NORTHERN IRELAND.

End of—	1922.	1923.	1924.	1925.	1926.	1927.	1928.	1929.
	%	%	%	%	%	%	%	%
January	16·2	12·7	11·9	11·5	11·0	*12·0	10·7	12·3
February	15·7	11·8	10·7	11·3	10·4	10·9	10·4	12·2
March	14·6	11·1	9·9	11·1	9·8	9·8	9·5	10·1
April	14·4	10·9	9·7	10·9	9·1	9·4	9·5	9·9
May	13·5	10·7	9·5	10·9	*14·3	8·7	9·9	...
June	12·7	11·3	9·4	11·9	*14·6	8·8	10·8	...

September	11·9	11·7	10·8	12·0	*13·7	9·3	11·4	...
October	12·0	11·7	11·1	11·4	*13·6	9·5	11·8	...
November	12·4	11·5	11·0	11·0	*13·5	9·9	12·2	...
December	12·2	10·7	10·9	10·4	*11·9	9·8	11·2	...

* Excluding workpeople in the coal-mining industry who were disqualified for unemployment benefit owing to the dispute.

The industries in which improvements were recorded during the month included the mining group, excluding coal mining and slate quarrying; building and public works contracting; brick, tile, cement and pottery manufacture; tinplate manufacture; shipbuilding, ship repairing and marine engineering; the shipping service; silk and artificial silk, and lace manufacture; the clothing trades, and boot and shoe manufacture. In the coal-mining industry an increase in the numbers temporarily without work more than offset a reduction in the numbers of those wholly unemployed. In the cotton, linen and jute industries, in textile bleaching, dyeing and finishing, in the glass bottle industry, and in river, dock and harbour services, there were also increases in the numbers unemployed.

Cost of Living.—There was a further fall in the cost of living during April. At May 1st the index number of the Ministry of Labour stood at 61 per cent. above the level of July, 1914. This compares with 62 per cent. a month ago and 64 per cent. a year ago. For food alone the index stood at 49 per cent. on May 1st, as compared with 50 per cent. at April 1st and 54 per cent. a year ago. The following table shows the monthly movements of the index figures over a number of years:—

AVERAGE PERCENTAGE INCREASE over JULY, 1914.—All Items. (Food, Rent, Clothing, Fuel, and Light, &c.)

1st Day of	1918.	1921.	1924.	1925.	1926.	1927.	1928.	1929.
	%	%	%	%	%	%	%	%
January	85–90	165	77	80	75	75	68	67
February	90	151	79	79	73	72	66	65
March	90	141	78	79	72	71	64	66
April	90–95	133	73	75	68	65	64	62
May	85–100	128	71	73	67	64	64	61
June	100	119	69	72	68	63	65	...
July	100–105	119	70	73	70	66	65	...
August	110	122	71	73	70	64	65	...
September	110	120	72	74	72	65	65	...
October	115–120	110	76	76	74	67	66	...
November	120–125	103	80	76	79	69	67	...
December	120	99	81	77	79	69	68	...

The fall in the cost of living during April is chiefly due to reductions of 4d. per lb. in the price of tea, as a result of the abolition of the import duty.

Appointment of a Patents Committee.—The Board of Trade announces the appointment of a committee to report "whether any, and if so what, amendments in the Patents and Designs Acts, or changes in the practice of the Patent Office, are desirable." The *personnel* of the committee is as follows:—The Right Hon Sir Charles H. Sargant (chairman), Mr Horatio Ballantyne, Mr A. A. Gill, Mr E. H. Hodgson, Sir Herbert Jackson, Mr W. S. Jarratt, Mr Fearnley Owen, Mr J. G. Weir, Mr James Whitehead and Mr R. W. Luce (secretary). At least four of these members are men of considerable direct experience in patent matters, two others at least are directors of large manufacturing firms, and the legal and technical sides of the matter are well represented. We have repeatedly urged in these columns the pressing necessity of a thorough revision of the patent laws, and we welcome the appointment of such a well-balanced body of experts to deal with the matter.

The French Turnover Tax.—The progress and development of the French system of taxation on turnover now constitutes perhaps one of the most interesting experiments in modern taxation methods which the student of economics can study. This tax is levied on each successive change of possession in the case of manufactured goods, in the long and adventurous journey from the raw material stage to the final consumer. The turnover tax, which was first applied by M Klotz, M Clemenceau's Minister of Finance, is now the "best yielder" of the long list of French taxes. It has led, however, to the creation of innumerable "vertical trusts" on a small scale, with the result that the large stores are able to compete on unfairly favourable terms with the small shopkeepers; and, on the other hand, it has transformed a whole army of intermediary buyers and sellers into, from the moral point of view, fraudulent commission agents, who, by wrongfully posing as dealers on commission—instead of as actual wholesalers, or retailers, interposed between the manufacturer and the consumer—have found a means of escaping the greater part of the burden of the tax. All this has brought about a movement in the direction of replacing the turnover tax and its multiple successive applications by a single and final "tax on production," levied at the source. Every year sees a further step in the transformation of the turnover tax and the consequent liberation of whole categories of trades from the irritation of its incidence and the worry of collecting it on behalf of the Government. How far this transformation has already been effected may be gathered from the following dissected results of the yield from the various forms of the tax during the first three months of 1929:—

Turnover tax proper (*i.e.*, tax in its original form, as levied on each stage between producer and consumer)	2,122,901,000f.
Tax "at the source" on teas and coffees (replacing turnover tax)	51,861,000f.
Tax on manures, oilcake, etc.	28,044,000f.
Tax on extraction of coal, levied at pithead	50,799,000f.
Slaughterhouse tax on meat	103,765,000f.
Tax on sugar levied on producers	38,105,000f.
Tax on imported sulphurs	1,324,000f.
Tax on flour, semolina and by-products (since Jan. 1)	12,611,000f
Export tax (as modified and reduced)	127,000f.
	2,409,537,000f.

The extension to other classes of commodities of the replacement of the present turnover tax by variously based taxes on production is now only a question of time.

Canada and the United States.—The proceedings of Congress at Washington are being followed with keen interest in Canada, writes our Ottawa correspondent, and hopes are still cherished by Canadian Liberals that the influence of the Hoover administration will be exercised to restrain protectionist excesses which would virtually act as an embargo upon imports from Canada. Some significance was attached to a speech delivered on April 29th to the Canadian Club of Montreal by Mr W. R. Castle, an Under-Secretary of State at Washington, who was credited with a propagandist mission. *The Montreal Gazette*, which is a vehement opponent of the St. Lawrence Waterway, interpreted his speech as a veiled threat that Canada must agree to the St. Lawrence Waterway development or face a higher tariff on her agricultural products. It declares that such a threat should be disregarded, and that the complaint of Canadians should not be against American policy and tactics but against the inability and reluctance of the present Canadian Government to cope with that policy when Canadian interests are adversely affected. On the other hand, the *Manitoba Free Press*, answering the Conservative argument that Canada's imports from the United States have been increasing at a dangerous rate, recently offered an interesting analysis of the import situation. It points out that in 1924 Canada imported from the United States goods valued at 601 million dollars, or 67.3 per cent. of her total imports, and that although in 1928 these imports had jumped to 825 million dollars, an increase of 224 millions, or 37.3 per cent., yet their proportion of the Dominion's total imports was only 67.5, which is an infinitesimal increase. Furthermore, the *Free Press* showed that in these four years, when Canada's imports from the United States increased 37.3 per cent., Canada's domestic industrial production, which had risen from 2,695 to 3,427 million dollars in value, showed a gain of 41 per cent. The *Free Press* therefore urges that the increase in imports from the United States is nothing more than the normal volume which might be expected from the expansion of the Dominion, and that Canadian industries cannot be suffering seriously from American competition when they have increased their own production so satisfactorily and are employing more people than ever before.

National Exhibitions in Poland and Sweden.—For the first time since her restoration, Poland is holding this year a great national exhibition, on the lines, and almost of the size, of the Wembley Exhibition, which is to be as representative as possible of Polish national, cultural, social and economic achievement. Special pains are being taken to make the fair so illustrative of Polish life that the foreign visitor will be enabled, in the words of its promoters, "To see the country at a glance." As an additional attraction a variety of international sporting events will be organised, and it is hoped to include an international horse show. The fair is to be held in Poznan, from May 16th to September 30th, and special facilities have been provided for foreign visitors. The Swedish Industries Fair, to be held in Gothenberg from May 26th to June 2nd, is of a more purely economic character; a feature of special interest will be the inclusion of a separate department of inventions. It is hoped that the number of foreign visitors to these fairs, which are by no means of purely national interest, will be as great as possible.

INSURANCE NOTES.

Sun Insurance Office.—Judged by comparison with the reports of the last three years, the 1928 report of this, the oldest fire office in the world, reveals a falling off in profits. But previous reports have set a very high standard, and the 1928 accounts really make a very satisfactory showing. The diminution in profits has occurred in the fire department, and a similar tendency has been noticeable in the 1928 reports of a number of other companies. The premium income has been well maintained, that in the general department showing another substantial increase, due, no doubt, largely to expansion of the company's American subsidiary, the Sun Indemnity of New York. For the third year in succession the marine department has yielded neither a profit nor a loss, for although £20,000 has been credited on each occasion to profit and loss account from this section, the same amount has been retransferred to the marine account in order to build up the fund. The marine premium income is relatively small, being under £400,000, and, as the fund now amounts to 103 per cent. of the premiums, the marine position should give no cause for anxiety to the shareholders. The detailed underwriting results are set out below for each of the past two years in our usual form:—

	1927. Profit. £	1927. Percentage of Prems. %	1928. Profit. £	1928. Percentage of Prems. %
Fire	317,603	12·2	281,916	10·7
Personal accident	3,683	9·9	3,022	7·2
Employers' liability	1,107	·7	2,982	2·0
Burglary and general	22,824	2·4	29,689	2·8
Marine	...	...	...	...
	345,217		317,609	
Less items debited to Profit and Loss account	109,577		120,860	
Total net trading surplus	235,640		196,749	

The 1928 dividend is at the rate of 62½ per cent., compared with 57½ per cent. in 1927, and the increased distribution is wholly covered by interest earnings. Consequently the whole of the net trading surplus, equivalent to nearly 17s. per share, is available to augment the free surplus resources. Bearing this in mind, and taking into account also the increased dividend, the rise in the market price of the shares over the past year from £37¾ to £42 appears to be fully justified.

Phœnix Assurance.—The 1928 report of this company reflects the experience common to most large composite insurance offices, namely, a reaction from the very favourable fire underwriting profit of 1927, coupled with some compensatory increase in profits of other departments. Unlike most other companies, the general, and not the fire, account yields the largest premium income, the amounts last year being £3,571,149 and £3,362,031 respectively. The general account premium income, which has shown some diminution in each of the last two years, is attributable largely to the American casualty business of the Phœnix subsidiary, the London Guarantee and Accident, and has yielded a very inadequate rate of profit. In 1925 the account showed a profit of 1.0 per cent., in 1925 1926 a loss of 1.3 per cent., in 1927 a profit of 2.0 per cent. and last year a profit of 2.6 per cent. The marine account has recently been greatly curtailed, and no transfer has been made either to or from profit and loss since 1923. The fund is reasonably strong at 95 per cent. of the 1928 premiums. The results are shown in detail for three underwriting accounts, and it is estimated that the 1927 account will result in a small loss of £5,000, compared with £43,000 in the preceding year. The 1928 account, however, shows more promise, for first year claims have absorbed 33 per cent. of the premiums, as against 33.3 per cent. in 1927 and 35.4 per cent. in 1926. Our usual comparative table of the detailed underwriting results of the past two years is set out below:—

	1927. Profit. £	1927. Percentage of Prems. %	1928. Profit. £	1928. Percentage of Prems. %
Fire	301,836	9·2	204,494	6·1
Personal accident	8,887	5·8	7,417	4·7
Employers' liability	10,814	6·8	15,268	9·4
General	72,464	2·0	93,638	2·6
Marine	...	...	...	...
Life	40,000		70,000	
	434,001		390,817	
Less items debited to Profit and Loss Account	141,540		195,267	
Total net trading surplus	292,461		195,550	

Included among the items debited in 1928 to profit and loss account is a sum of £100,000 stated to be "reserve for pensions." In previous years this item has usually figured for £25,000 (although for 1927 the amount was £50,000), and has been labelled "commutation of pensions." The increase in the amount and the alteration of the label suggests that the company has now decided to set up a proper pension fund on the lines adopted by many other offices. The life department continues to show expansion, and the fund now amounts to the imposing total of over £15 million. Last year new policies for net sums assured of £3,043,304 were issued, compared with £2,881,330 in 1927.

Royal Insurance.—The Royal Insurance Co., Limited, has succeeded in producing a very fine report of its operations for the year 1928. The results for 1927 were spoiled by a considerable loss arising from one department, the general department. In connection with indemnity insurance, guaranteeing the paper of certain automobile finance companies, the Royal's allied company, the Royal Indemnity of New York, sustained in 1927 a serious loss, with the result that the aggregate outcome of this department was a substantial underwriting deficit of £327,000. Last year, however, the department was restored to a profit-earning basis and yielded £127,000 for profit and loss account, equivalent to a modest 2½ per cent. of the premiums. The fire department is the largest department, with premiums of £6,853,000. The effect of lower American fire losses was offset by the unfavourable trend of home fire losses, with the result that the underwriting profit is rather lower at 11.9 per cent. of the premiums, compared with 12.7 per cent. in 1927.

The detailed underwriting results are set out below:—

	1927. Profit. £	1927. Percentage of Premiums. Per cent.	1928. Profit. £	1928. Percentage of Premiums. Per cent.
Fire	865,005	12·7	818,066	11·9
Personal accident	10,055	4·6	6,152	2·7
Employers' liability	54,482	14·0	68,933	17·6
General	327,076	— 6·8	126,546	2·5
Marine	21,334	3·1	85,309	7·2
Life	26,000	...	26,000	
Profit on sales of investments	106,887		53,090	
	756,687		1,184,096	
Less items debited to profit and loss a/c.	300,476		385,616	
Total net trading surplus	456,211		798,480	

The dividend has been raised from 29s. per share to the equivalent of 30s. per share, but owing to the normal increase in interest earnings, the increased distribution requires a draft upon trading surplus to the extent of only £61,000. In fact, the total available earnings would have been sufficient to pay more than half as much again. In the life department a large new business has again been transacted, and the rate of interim bonus has been raised from 40s. per cent. to 42s. per cent.—an indication that the results of the quinquennial valuation due at the end of this year are expected to be favourable.

Liverpool and London and Globe Insurance.—With the exception of the boom period immediately succeeding the war, the aggregate underwriting profits earned in 1928 are the best in the company's history. In every department except the miscellaneous department, where there is a small decline, there has been an advance in the premium income, and the total of £10,971,160 compares with £10,887,963 in 1927. This large amount is made up as to £4,700,000 from the fire department, as to £5,430,000 from the miscellaneous department, including the motor department, and the balance from personal accident, employers' liability and marine insurance. The detailed underwriting results of the past two years are set out below:—

	1927. Amount £	1927. Percentage of Premiums.	1928. Amount £	1928. Percentage of Premiums.
Fire	423,652	9·1	294,848	6·3
Personal accident	5,868	2·3	— 297	...
Employers' liability	26,430	15·6	11,550	6·6
Miscellaneous	68,467	1·2	247,769	4·6
Marine	11,301	3·1	25,117	6·1
Life	21,199		23,000	
	556,917		601,987	
Less items debited to Profit and Loss account	146,918		150,237	
	409,999		451,750	

The total interest earnings of the company, after deducting debenture interest, have increased by £13,000 to £486,000. The dividend has been raised from 60 per cent. to 62½ per cent., and at £535,000 costs another £24,000 compared with 1927. As a result of the year's operations the sum of £402,845 has been added to surplus assets compared with £371,688 in 1927, being equal almost to 40 per cent. of the total paid-up capital. In the life department new policies were issued last year for net sums assured of £1,704,571 compared with £1,575,645 in 1927, and the fund has increased to £8,707,096. A quinquennial valuation of the life department has been made as at December 31, 1928, and the results, compared with those of the preceding valuation five years ago, are exhibited in the following table:—

	1919–23. £	1924–28. £
Surplus earned during the quinquennium	719,271	1,173,796
Brought forward	221,591	308,748
	940,862	1,482,544
Allocations:—		
To Bonuses to policyholders	489,222	764,816
,, Shareholders	98,600	107,493
,, Bonus reserve fund	...	100,000
,, Annuity fund	44,292	27,076
,, Carried forward to next quinquennium	308,748	483,159
	940,862	1,482,544

The reversionary bonus to with-profit policyholders has been increased from 35s. per cent. per annum for all classes of policy to 42s. per cent. per annum for whole-life policies, and 40s. per cent. per annum for endowment assurances. Moreover, the directors have decided to declare an interim bonus for the current quinquennium at still higher rates, namely, 45s. per cent. per annum for whole-life policies and 43s. per cent. per annum for endowment assurances.

Gresham Life Assurance.—Following upon a year in which the new business declined, the 1929 report exhibits an increase in total new business of £317,000 from £1,993,127 to £2,310,575. The society is one of the very few life offices which transact a considerable business in foreign countries and in the Dominions. Actually in 1928 70 per cent. of the total new business is represented by foreign and Dominion business. Moreover the balance sheets shows that £1,532,000, out of total balance-sheet assets of £7,754,000, is deposited in 12 different countries. The society succeeds in earning a high rate of interest on its fund, the figure for 1928 being £5 4s. 2d. per cent., compared with £5 0s. 10d. per cent. in 1927. The expense ratio, however, due no doubt in some part to the higher expense of the foreign business, is unfavourable, the ratio for 1928 being 24.89 per cent. of the premium income, compared with 23.95 per cent. in 1927. The current year is the concluding year of the present quinquennium, and it is safe to assume that the valuation to be made at the end of this year will disclose a considerably larger sum for distribution as bonuses than formerly. Judged by present conditions, however, the Society's last declared bonus of 25s. per cent. is small.

Scottish Equitable Life Assurance.—Notwithstanding that it is a common experience for the first year of a new quinquennium to produce a smaller volume of new business, the Scottish Equitable has succeeded in increasing its new business for the year ended March 1, 1929, by some £41,000 to £1,477,292. A feature of the report to which the chairman drew attention in his speech was the large increase in death claims, from £288,000 to £385,000. The chairman commented on the curious coincidence that death claims have on several occasions in the past been found to be exceptionally heavy in the year after a division of profits. The net rate of interest earned on the funds last year worked out at £4 13s. 4d. per cent., being 1s. higher than in the preceding financial year, and the expenses of management amounted to 11.7 per cent. of the premium income, compared with 12.1 per cent. The balance sheet shows evidence of a good deal of activity during the past financial year. The whole of the mortgages on property, amounting to £85,000, appear to have been paid off with the exception of one small mortgage in the Irish Free State. The holdings of British Government securities have been reduced from £2,625,000 to £2,258,000, it being the declared policy of the society gradually to realise these holdings in order to spread the investments over a wider field offering a more attractive interest income. The holdings in ordinary stocks, while still representing only 3½ per cent. of the funds, have been more than doubled during the year, and now stand at £328,000. It is announced that the increase during the year has been invested partly in investment trust companies and partly in carefully selected industrial corporations. Finally, we note with satisfaction that, following upon our criticism of last year, the annual report is dated exactly a month earlier than its predecessor.

General Accident Fire and Life Assurance Corporation.—In the analysis of this company's accounts, published in a recent issue, we arrived at the conclusion that the company had experienced a net trading loss in 1928 amounting to £6,615. This figure was calculated by taking into account a loss of £176,214, consequent upon the revaluation of the French business at the new par of exchange. It has been brought to our notice that this loss, although it was incurred in 1928, had been provided for by allocations from profit and loss account in previous years. It is, therefore, not unreasonable to regard the result of 1928 as having produced a net trading profit of £169,599.

Oversea Correspondence.

UNITED STATES.—MONEY—STOCK EXCHANGE—PRESIDENT'S SPEED—INDUSTRY.

(FROM OUR CORRESPONDENT.)

NEW YORK, May 15.

WITH industry continuing to maintain its remarkable pace, the share market has come to something of a stalemate. The volume of trading has fallen off considerably and prices are showing no clear trend. After making a new maximum for average industrial share prices, and after continuing strong in the face of 14 per cent. money, the market slipped back rather quickly and, oddly enough, displayed the most marked weakness when the call rate had fallen to 6 per cent. Still continuing its erratic behaviour, the market then rallied rather smartly on a return of 10 per cent. money. Altogether, it would appear that professional operations have played a large part in these movements. On the decline a good deal of short selling developed; but the professionals seem ready to change sides quickly. Existence of this kind of trading market may be explained on the basis of excellent industrial news on the one hand and of continuance of adverse Federal Reserve activities on the other. The market is not likely to go down as long as industrial news remains so satisfactory. At the same time, it is clear that the continued opposition of the Federal Reserve Board has unsettled confidence.

Meanwhile, the debate on Federal Reserve policy continues apace. During the past week Mr Simmons, President of the New York Stock Exchange, made a carefully prepared speech, in which he vigorously defended stock market loans and, at the same time, sharply criticised the Federal Reserve Board. For the past two generations, Mr Simmons declared, call loans made to Stock Exchange members on Stock Exchange collateral have proved the safest method of investing money known in the country. He resented the suggestion that stock market loans do not constitute "legitimate business," asking why dealings in securities are illegitimate while dealings in any other form of property should constitute the basis of all business. He denied that stock market loans withdraw funds from productive purposes, pointing out that these loans make possible the speedy distribution of American securities and so aid in the financing of all types of commercial and industrial enterprises. He declared that it is "absurd to rejoice in our present-day national industrial prosperity and at the same time to bewail the size of the very stock market loans which have played so vital a part in financing it."

With regard to the question whether stock prices are "inflated," Mr Simmons points out that the market has been very selective. He prefers the collective judgment of buyers and sellers throughout the world to judgments of individuals. He maintained that the stock market furnishes a safe outlet for surplus capital, and so prevents commodity inflation. In addition, stock market loans, according to Mr Simmons, furnish American banks with safe and liquid investments. In the crisis of 1920, he declared, the banks found that call loans were the most liquid and available loans they possessed. In the recent real estate deflation in Florida, he said, the banks that weathered the storm and carried the situation were those with the largest proportionate investment in call loans.

Coming to the recent expansion in brokers' loans, Mr Simmons pointed out that the market value of all securities listed on the New York Stock Exchange, which now amounts to $114 billion, increased during the years 1925-28 by $54 billion. Meanwhile, the number of shares listed on the Exchange increased by 50 per cent. He traced the many corresponding changes in American industry and its ownership, and declared that these cannot be dismissed with a wave of the hand as "inflation" or "speculation." As for the rise in prices, he stated that, when all listed stocks are taken as a basis, the appreciation during 1928 amounted to only 18 per cent., and, during the four years mentioned above, to only 66 per cent.

Not the least interesting of the observations of the President of the Stock Exchange are those having to do with the source of the funds employed in stock market loans. Taking his figures from the last report of the Comptroller of the Currency, he stated that, of total resources of our national, State, commercial and private banks and of our loan and trust companies, which aggregated $60 billion, not more than 11 per cent. were invested in loans on securities. Other loans and discounts accounted for another 43 per cent. and security investments for about 25 per cent. He asked in what way the tying up of 25 per cent. of bank resources in long-term fixed investments is preferable to placing of them in call loans, and if there can be a shortage of commercial credit while so large a proportion of resources is employed in investments. He compared the present banking situation with that of 1920, to the immense benefit of the present situation, and drew attention to the fact that, as a result of current Federal Reserve policy, the rate on time loans is now higher than at the earlier period. He challenged the propriety of attempts by the Federal Reserve system to say whether prices are too high, and what forms of property may be speculated in.

Finally, Mr Simmons set up the claim that the recent increases in brokers' loans do not represent a diversion of bank credit but an accumulation of capital attracted by the high rates for call money that have resulted from the Reserve Board's discrimination against call loans. He declared that the Board's policy has failed signally, and concluded by advocating the enactment of legislation that would make loans secured on Stock Exchange collateral rediscountable at the Federal Reserve Banks.

Altogether, Mr Simmons made an effective presentation of his case. In the best quarters there is the strongest criticism of the policy of direct action now being employed by the Board. This policy consists of attempting to make the regional Reserve Banks bring pressure on the Member Banks to reduce their loans on securities. It aims to make the Reserve Banks refuse the rediscount privilege to Member Banks that are making loans on securities. This action is regarded in good quarters as a serious invasion of the rights of Member Banks and of borrowers, as being contrary to the principle that money must always be available at a price, and as carrying serious dangers, if carried to extremes, of giving rise to panic. It is considered a false theory of banking; the classic use of the central bank's discount rate and portfolio is considered the true one. It is fairly well known now that the Board has refused to allow certain of the Reserve Banks to raise their discount rates. Differences of opinion exist as to how serious the situation is with regard to the stock market and brokers' loans; but few Wall Street men have any sympathy with the direct-action policy of the Federal Reserve Board.

Steel production continues practically at capacity, and the usual seasonal indications of slackening are almost

entirely absent. Automobile production, also, continues at full speed, but here there are suggestions that the usual summer slackening may be counted on. Altogether, business indices remain remarkably favourable.

FRANCE.—BUDGET—REPARATIONS—AMERICAN DEBT.

(FROM OUR CORRESPONDENT.)

PARIS, May 22.

IT is now certain that the draft of the 1930 Finance Bill will be ready for submission to the Chamber by the end of the current month at the latest. For the first time since the war the annual Budget, although totalling some 3,000 million francs more than last year, will contain proposals for important reductions of taxation, the total of which is expected to reach 1,000 millions. This relief will especially benefit smaller taxpayers, and particularly those with large families. Measures will also be included to reduce to more reasonable levels the present excessive taxation of yield from coupons, to modify the luxury tax, and, most likely, the special 7 per cent. tax on first transfers of real estate. One of the first duties of the Chamber, which will resume its sittings to-morrow, will be to conclude its deliberations on the modifications of the Rent Law, in order that these may come into operation with the quarterly rent payments due on July 15th next.

After a strenuous week of discussion and negotiation, complete agreement between the experts representing Germany's creditors was reached this morning (1) as to the reply to be made to Dr Schacht's note of May 17th, in which he set forth the reserves accompanying his acceptance of what is known as the Young-Schacht Plan for the final and complete settlement of the Reparation question; (2) as to the acceptance by the Allies of the Schacht-Young compromise; and (3) as to the distribution between the creditors of Germany's annuities. As a consequence Dr. Schacht this afternoon received, with a copy of the revised text of the draft report which is to be sent to the Allies, formal notification of the Allies' acceptance of terms based on the revised report and on a new statement of Germany's reserves. These terms provide: (1) for the payment by Germany of 37 annuities of an average value of 2,050,000,000 gold marks (£102,500,000), as from April 1, 1929, and terminating March 31, 1966, plus the covering (as from April 1, 1966) of 20 annuities of 1,700,000,000 marks (£85,000,000), and one of 900 million marks; (2) the payment to Belgium of a supplementary sum of 25,000,000 marks (£1,250,000) per annum, for a period of 40 years, as compensation in settlement of her claim in regard to depreciated marks; (3) the payment by Germany of a contribution—to stand in addition to the ordinary capital of the new institution—towards the working capital of the proposed new International Bank.

The Allied experts' memorandum sets forth also a proposed scale for the 37 annuities. Their average value remains fixed, but the Allied representatives have modified the scale originally proposed by Mr Owen Young in such a way that the German Reparation payments shall exactly cover, during each of the 37 years, the total of the inter-Allied debt payments for those respective years, and shall at the same time leave a constant available and mobilisable balance of, in round figures, 750,000,000 marks every year. In Mr Young's original proposal the annuities increased regularly by 25,000,000 marks per annum. Under the proposed new scale the annuities will increase irregularly, in order to coincide with the payments due by the inter-Allied debtors (which have been fixed on variable scales) and yet leave the mobilisable portion constant. The first, the third and the last 17 of the 37 annuities are therefore smaller, according to the Allied scale, than they were in the Young proposals, while the others are higher. The reduction of the first annuity is due to the fact that payment has already been made to Great Britain and America for the first six months, portion of the earlier annuity that would be due under the new settlement scheme. The memorandum explains further that certain matters, such as the exact amount of the contribution to be made by Germany towards the working capital of the International Bank, have been left over for verbal discussion between Dr Schacht and the other delegates, which explains why this is set forth merely as "a contribution." As soon as Dr Schacht has considered the memorandum sent to him to-day, the way will be open for him to meet the Allied experts for a final discussion on the points still unsettled and for the general signature of the draft report. In view of the pending British and Belgian General Elections, this will not be submitted to the various Governments until May 31st, when both elections will be over.

The agreement which has led to the extremely optimistic feeling that prevails here this evening has not been arrived at without an enormous amount of persevering effort, for which all the parties concerned must be given credit. As the delegates have all been in exceptionally close communication with their respective Governments throughout the last two or three weeks, little fear is entertained as to the successful conclusion of the long-drawn-out negotiations which now seems to be assured. Exactly how the British opposition to the proposed heavy reduction of its share has been compensated for is not yet clear, owing to the reticence still wisely observed in official quarters. All that is vouchsafed is that the British, Belgian and Italian objections have been satisfactorily met by the readjustments of the past few days. How far the solutions arrived at were aided by the American Government's offer to extend the period over which were spread the instalments necessary to wipe out the expenses incurred by it during the brief period its troops formed part of the army of occupation on the Rhine is also unknown. France, in particular, has been looking for a *beau geste* on the part of the Washington Government for many weeks, but it must be admitted that the microscopic concession which has been made—"Uncle Sam's threepenny-bit," as it has been termed—is scarcely on the scale which it was expected to reach.

The request of the American Government to be informed as soon as possible as to the intentions of the French Government in regard to ratification of the Washington Agreement is only natural, in view of the facts that payment of the $400,000,000 due by this country for the military stocks which the American troops left behind when they recrossed the Atlantic falls due on August 1st, and that the American Parliament is anxious to fix the date of its summer recess. M Poincaré, in his Douaumont speech, pledged himself that no decision shall be taken on the inter-Allied debt agreements except in accord with the Chambers. It is probable, however, that before the latter rise for the summer holidays M Poincaré will ask for authority to ratify the London and Washington Agreements by decree instead of through the usual channel of a formal debate in both Houses. This course, in view of the present general situation, will almost certainly be welcomed by both Houses, and especially by the Chamber of Deputies. The final settlement of the Reparations question and inter-Allied debt problem may, therefore, now be regarded as well in sight.

GERMANY.—CREDIT—FINANCE—INDUSTRY—AGRARIAN PROGRAMME.

(FROM OUR CORRESPONDENT.)

BERLIN, MAY 21.

THE pressure on the exchange market declined further last week and to-day the dollar reached 4.200, which is gold parity, as against 4.218, the high point of April 29th and preceding days. The so-called "panic-selling" of marks by Germans and foreigners has entirely ceased, speculative mark purchases by foreigners, in particular from France, are reported, the Reichsbank's restriction of new rediscounting has had the effect of forcing commercial exchange-hoarders to realise, and short-term credit is again coming in. An undesirable consequence of the crisis is that many industrial and trading firms have resumed the practice, common during and immediately after the inflation, of invoicing in "gold-marks" as distinguished from reichsmarks. This shows that the nervousness as to the mark went very far. The Reichsbank and Reichswirtschaft-Ministry are strongly against a revival of the practice.

The Reichsbank's credit restriction policy began to take effect in the second week of May. The drain on the reserves ceased. The loss of gold was less than 1 million marks, and the legal-cover exchange reserve increased by 2½ million marks. The reserve figures show, however, that of the exchange forced into the market by the money-market stringency only a small part was acquired by the Reichsbank. The improvement in the Bank's status is about normal for the second week of the month. Discounts declined by 215 million marks, and treasury bills by 98 million marks. Advances increased. An increase in advances is normal in connection with the mid-month demand, but the absolute figure, 216½ million marks, is double that of April 15th. Owing to a decline of 275 million marks in reichsmark circulation, the legal cover ratio recovered to 43.7 per cent., or 39.4 per cent. if rentenmark circulation is included. Money last week continued extremely dear. The normal weakening of rates between the end-month and mid-month pressure period did not take place. The minimum day-loan rate for the best class of credit-takers did not fall below 8½ per cent. and the maximum rate was up to 11½ per cent. To-day's day rate was 8¾-10¾ per cent., month loans 9½-10½ per cent., private discount 7½ per cent. Commercial bills cannot be sold, and of offers of private discounts only a part is taken. The monetary stringency is likely to continue for some weeks. Borrowing for the May month-end settlement has begun earlier than usual. The expectation, however, is that if the Paris Conference succeeds, normal credit conditions will return, and that part of the drain on the Reichsbank's reserves will soon be made good.

The federal 500 million marks loan has been sanctioned by the Reichstag. The interest rate is 7 per cent., issue price 99. Only 300 millions will be floated at first, but, in the event of over-subscription, allotments will be made for the amounts subscribed—up to the 500 million marks. The flotation has in advance had a bad effect upon other loans. Fixed-interest securities, already weak, fell last week further, 10 per cent. mortgage bonds dropping to below 100, while many 8 per cent. bonds fell to under 90. This is a result of the fact that the effective yield on the new loan, including the tax exemption to wealthy persons will be much higher than the yield on any other first-class security in the market.

The wholesale-prices index for May 15th shows a further decline, to 135.8 (136.0 on May 8th). The decline is due in the main to weakening of the group "agricultural products." This group is down to 126.7, against a high point of 137.6 for 1928, in August. Unemployment among Trade Union members at the end of April was 11.1 per cent., against 16.8 per cent. at the end of March and 22.3 per cent. at the end of February. Unemployment in the seasonal trades, mainly connected with building, is 19.2 per cent., against a maximum in the past winter of 68.1 per cent.; in the non-seasonal branches 9.2 per cent., against a maximum of 11.4 per cent. The best employment, among the important industries, is shown by mining with 2.2 per cent. of unemployed, paper 4.8 per cent., chemicals 6.1 per cent., and food-products 7 per cent. For the metal industries the figure is 8.7 per cent. Railway traffic returns point to better trade. Car loadings since mid-March have been considerably higher than at the same period of 1928. The Railways Corporation's gross receipts in March were 457,763,000 marks, operating expenditure 355,229,000 marks, total expenditure, including Reparations, bonds, service and allocations to reserves, 435,023,000 marks. The iron and steel industry is becoming more active. Ingot steel output in April was 1,414,916 metric tons, against 1,160,955 tons in April, 1928; in the first four months of the year 5,470,531 tons against 5,377,440 tons. This year's steel output is thus so far at a somewhat higher level than in 1927, the best industrial year so far, when the whole year's output was 16,305,000 tons. The steel syndicates, which met last week, have not altered home prices. The pig-iron syndicate announces an advance of home prices by 2 to 3½ marks per ton. The export prices of bars and thick sheets are still weak. In the ball-bearings branch a fusion is reported between the S.K.F. Norma A.G., which is a German dependent of the Swedish Ball-Bearings Trust, and the two leading German concerns, Fichtel und Sachs and Fries und Höpflinger, both of Schweinfurth. A Ball-Bearing-Steel Syndicate, subordinate to the High-Grade Steel Syndicate, and comprising the Roechling-Buderus, "Silesia," Deutsche Edelstahlwerke, and Becker concerns, has been founded. Negotiations for the renewal of the Rhenish-Westphalian Coal Syndicate, the term of which expires next year, began last week. The prospect of renewal is good. The chief question to be settled is the old opposition between the "pure" concerns, which produce coal for sale only, and the mixed concerns, engaged also in iron and steel production, which have participation rights as consumers. The concentration of the whole sale of coal in the hands of the syndicate's coal-trading concerns is also being discussed. The I.G. Farbenindustrie (Dyes and Nitre Trust) announces an unchanged dividend of 12 per cent.

The prospect of good crops this year has improved. The German-National and the two small Agrarian parties have submitted their Protection programme to the Reichstag. They demand increases of the grain, flour, meat, bacon, and livestock duties, and restoration of a provision of the law of 1900, under which carcases must be imported whole. The interim duties in the law of July, 1927, which are at present in force, and which are lower than commercial treaty rates, should be abolished. The effect of abolition would be to bring into force the grain duties in the commercial treaty with Sweden, for other foodstuffs the duties in other commercial treaties, and for Canada and Australia, with which there are no treaties, the maximum rates of the Minor Tariff of 1925, which are also the rates of the Tariff of 1902, suspended in 1914. It is further claimed in principle that the pre-war food duties, "valorised" to accord with the cost-of-living index, that is increased by more than 50 per cent., should be the proper measure of Protection. The present semi-Socialist Cabinet is not likely to champion these proposals; but as the 1925-27 Tariff expires at the end of this year, some governmental proposal must be made. The Food Minister, Herr Dietrich, has of late expressed himself, though somewhat vaguely, for more effective protection of farming.

HOLLAND.—FOREIGN TRADE—CAPITAL ISSUES—MONEY MARKET—COMPANY REGISTRATIONS.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, May 9.

THAT commercial and industrial life in the Netherlands has continued to develop favourably is clearly shown by the position of trade, which was in all respects satisfactory during the first quarter of 1929. According to the returns for March last, published by the Central Bureau for Statistics, the value of Dutch imports was 216,087,845 guilders; of the exports, 175,091,143 guilders; and of the import balance, 40,996,702 guilders. During the first three months of 1929 these figures were as follows: Imports, 626,638,329 guilders; exports, 450,898,023 guilders; import balance, 175,740,306 guilders.

During the first three months of the years 1926-29 the values were as follows:—

Jan.–March	1926.	1927.	1928.	1929.
	(In millions of guilders.)			
Imports	615·1	604·2	681·2	626·6
Exports	394·4	431·6	464·5	450·9
Import balance	220·7	172·6	216·7	175·7
